

cooling water needed, and continued operation of intake screens and fish return systems when associated water pumps are in operation. CHGE proposed to provide an annual count of the number of shortnose sturgeon impinged at each facility based on sampling during one 24-hour period each week of operation. CHGE will conduct a mark-recapture study designed to estimate the size of the adult shortnose sturgeon population in the Hudson River twice during the 15-year term of the permit (permit years 7 and 14).

On May 19, 2000, NMFS' Office of Protected Resources received a complete application from CHGC requesting an ESA section 10(a)(1)(A) scientific research permit for the conduct of monitoring associated with the operation of the Roseton and Danskammer power plants. As required by 50 CFR 222.24 (a), NMFS published a notice of receipt in the **Federal Register** on June 19, 2000 (65 FR 39869). CHGC has requested approval for the collection of larvae, juvenile, and adult shortnose sturgeon in various location in the Hudson River. The comment period for this research permit application closed on July 23, 2000, and NMFS is currently compiling comments that were received on the application. Details of the research permit application are provided in the Conservation Plan prepared for CHGE's application for an ESA section 10(a)(1)(B) incidental take permit which is announced by this notice.

This notice is provided pursuant to section 10(a) of the ESA and NEPA regulations. The NMFS will evaluate the application, associated documents, and comments submitted to determine whether the application meets the requirements of the Act and NEPA. If it is determined that the requirements are met, permits will be issued for the incidental take of shortnose sturgeon. The final permit decision will be made no sooner than 30 days from the date of this notice.
