SUPPLEMENTARY INFORMATION: The Assistant Secretary for Administration, with the concurrence of the General Counsel, formally determined on July 12, 2000, that portions of the meeting of the Visiting Committee on Advanced Technology which involve discussion of proposed funding of the Advanced Technology Program and the Manufacturing Extension Partnership Program may be closed in accordance with 5 U.S.C. 552b(c)(9)(B), because those portions of the meetings will divulge matters the premature disclosure of which would be likely to significantly frustrate implementation of proposed agency actions; and that portions of meetings which involve discussion of the staffing issues of management and other positions at NIST may be closed in accordance with 5 U.S.C. 552b(c)(6), because divulging information discussed in those portions of the meetings is likely to reveal information of a personal nature where disclosure would constitute a clearly unwarranted invasion of personal privacy.

Announcement of a Meeting To Discuss an Opportunity To Join a Cooperative Research and Development Consortium on Service Life Prediction of Sealant Formulations Consortia

AGENCY: National Institute of Standards and Technology, Commerce.

ACTION: Notice of public meeting.

SUMMARY: The National Institute of Standards and Technology (NIST) invites interested parties to attend a meeting on September 24, 2000 and September 25, 2000 on Service Life Prediction of Sealant Formulations. The goal of the consortium is to demonstrate the effectiveness of a reliability based approach to the prediction of service life for a sealant formulations.

DATES: The meeting will take place on September 24, 2000 from 9:00 a.m. until 5:00 p.m., and on September 25, 2000 from 9:00 a.m. until 12:00 p.m.

Interested parties should contact NIST to confirm their interest at the address, telephone number or FAX number shown below.

ADDRESSES: The meeting will take place in Lecture Room B of the Administration Building (Building 101), National Institute of Standards and Technology, Gaithersburg, MD 20899-0001.

FOR FURTHER INFORMATION CONTACT: Dr. Christopher C. White, Building and Fire Research Building (226), Room B350, 100 Bureau Drive, Stop 8621, National Institute of Standards and Technology, Gaithersburg, MD 20899-8621. Telephone: 301-975-6010; FAX: 301-990-6891; e-mail: Christopher.white@nist.gov.

SUPPLEMENTARY INFORMATION: Any program undertaken will be within the scope and confines of The Federal Technology Transfer Act of 1986 (Public Law 99-502, 15 U.S.C. 3710a), which provides federal laboratories including NIST, with the authority to enter into cooperative research agreements with qualified parties. Under this law, NIST may contribute personnel, equipment, and facilities but no funds to the cooperative research program. This is not a grant program.

The R&D staff of each industrial partner in the Consortium will be able to interact with NIST researchers regarding current experimental methods to determine the service life of sealant formulations. The current state-of-the-art for service life predictions employ outdoor exposure as the only reliable test method. This leads to a choice by the manufacturers of new sealant formulations: Conduct these tests and incur long product introduction times, or omit these tests and incur increased risk of liability exposure. There is little confidence in the relationship between accelerated exposure and service life.

This conference will focus on the implementation of a reliability based protocol to establish confidence in accelerated determination of the service life of sealant formulations. Additionally, the issues of proper installation, joint construction and proper materials selection will be discussed as they relate to durability of in-service sealants.

Dated: August 14, 2000.

Karen H. Brown,
Deputy Director.

Authority: 15 U.S.C. 1512; 47 U.S.C. 902(b)(2)(H); 47 U.S.C. 902(b)(2)(I); 47 U.S.C. 902(b)(2)(M); 47 U.S.C. 904(c)(1).

SUPPLEMENTARY INFORMATION: The .us domain is the country code top level domain ("ccTLD") of the Internet domain name system ("DNS") that

Telecommunications and Information Administration's homepage at <www.ntia.doc.gov>.

corresponds to the United States. Network Solutions, Inc., is responsible for the administration of the .us top level domain ("usTLD") under its Cooperative Agreement with the Department of Commerce. Network Solutions has subcontracted administration of the usTLD to the Information Sciences Institute of the University of Southern California ("USC/ISI" or the "usTLD Administrator"). Dr. Jon Postel established the original structure and administrative mechanisms of the usTLD in RFC 1480, entitled The US Domain. Currently, second-level domain space is designated for states and U.S. territories, and the usTLD space is further subdivided into localities. Individuals and organizations may request an exclusive delegation from the usTLD Administrator to provide a registry and registrar services for a particular locality or localities. Local governments and community-based organizations typically use the usTLD, although some commercial names have been assigned. (Current usTLD policy requires prospective subdomain managers to submit written authorization from the relevant local public authority for the delegation.) Where registration for a locality has not been delegated, the usTLD Administrator itself provides necessary registry and registrar services. The usTLD is a widely distributed registry, currently with over 8000 subdomain delegations to over 800 individuals and entities, who maintain a registry and provide registration services for commercial, educational, and governmental entities. This distributed registration model affords scalable registration services and opportunities for commercial entities to provide name registration services. Nevertheless, because of the relative lack of public awareness about the availability of usTLD domain names and its deeply hierarchical and somewhat cumbersome structure, the usTLD has not attracted a high level of domain name registration activity and remains under-populated in comparison with other ccTLDs. It has been suggested for some time that the general absence of non-locality based registration space in the usTLD has contributed to overcrowding in the generic .com, .net, and .org top level domains ("gTLDs").
