Description: On February 2, 2000, the Department of Labor, Pension and Welfare Benefits Administration, the Department of the Treasury, Internal Revenue Service, and the Pension Benefit Guaranty Corporation announced the new computer scannable "hand print" and "machine print" formats for the revised Form 5500 Series. Using scannable forms and electronic filing technologies under the ERISA Filing and Acceptance System—EFAST, the revised Form 5500 Series was designed to simplify and expedite processing of returns/reports concerning the financial conditions and operations of certain employee benefit plans and fringe benefit plans.

In order to participate in the electronic filing program, applicants are required to submit an Application for EFAST Electronic Signature and Codes for EFAST Transmitters and Software Developers (Form EFAST-1), the subject of this ICR. Applicants who may file the Form EFAST-1 include: (1) individuals applying for an electronic signature to sign a Form 5500 or 5500-EZ; (2) transmitters applying for codes; and (3) software developers applying for codes. The information provided by Form EFAST-1 applicants, combined with the codes supplied to the applicants by EFAST, allows EFAST to verify a filer, transmitter, of software developer's standing as a qualified participant in the electronic filing program. EFAST-1 information also established a means of

contact between the program and the applicant.

SUPPLEMENTARY INFORMATION:

I. Background

Coal mine operators are required by 30 CFR 77.1713 to conduct examinations of each active working

area of surface mines, active surface installations at these mines, and preparation plants not associated with underground coal mines for hazardous conditions during each shift. A report of any hazardous conditions detected must be entered into a record book, along with a description of any corrective actions taken.

A number of potential hazards can exist at surface coal mines and facilities Highwalls, mining equipment, travelways, and the handling of mining materials each present possible hazardous conditions. Since promulgation of 30 CFR 77.1713 in 1971, numerous miners have either lost their lives at the areas affected by the subject standard or received injuries of varying degrees of seriousness. The majority of the injuries and fatalities resulted from hazardous conditions that had not been detected or corrected.

II. Desired Focus of Comments

Currently, the Mine Safety and Health Administration (MSHA) is soliciting comments concerning the proposed extension of the information collection related to the Record of Examinations for Hazardous Conditions. MSHA is particularly interested in comments which:

- evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- enhance the quality, utility, and clarity of the information to be collected; and
- minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

A copy of the proposed information collection request may be viewed on the Internet by accessing the MSHA Home Page (<http://www.msha.gov>) and selecting "Statutory and Regulatory Information" then "Paperwork Reduction Act submission (<http://www.msha.gov/regspwork.htm>)", or by contacting the employee listed above in the For Further Information Contact section of this notice for a hard copy.

III. Current Actions

By conducting an on-shift examination for hazardous conditions, the mine operator better guarantees a safe working environment for the miners and a reduction in accidents. Examinations for hazardous conditions are required to be conducted each shift. To do so less frequently could allow unsafe conditions to go undetected that might result in an accident.
