

PCB-contaminated soil were landfilled at a permitted offsite facility; and 1264 tons of steel were recycled. All wastes were removed from the Site and treated or disposed elsewhere.

During the RI, an analysis was conducted to estimate the health and environmental problems that could result from the residual soil and groundwater constituents at the Ilada Energy Site after the completion of the removal action at the Site.

The Proposed Plan for the Ilada Energy Superfund Site was released for public comment in July 1999. The Proposed Plan identified the "No Further Action" alternative as the preferred and only alternative for the Site. Illinois EPA reviewed all written and verbal comments submitted during the public comment period. None were received. It was determined that no significant changes to the remedy, as originally identified in the Proposed Plan, were necessary or appropriate.

A no further remedial action Record of Decision (ROD) was sign on September 27, 1999. It has been determined that no further remedial action is necessary for the purpose of mitigating environmental or human health threats at this Site. The selected remedy is protective of human health and the environment, attains Federal and State requirements that are applicable or relevant and appropriate for this remedial action, and is cost-effective.

This remedy requires the maintenance of institutional controls. The institutional controls that consist of the following:

- Prohibiting the installation of groundwater wells for the purpose of producing potable water, and;
- Prohibiting the use, improvement or maintenance of any type of Site property for residential purposes.

V. Action

The remedy selected for this Site has been implemented in accordance with the Record of Decision. The remedy along with the previous removal actions have resulted in the significant reduction of the long-term potential for release of contaminants, therefore, threats to human health and the environment have been minimized. EPA and the State of Illinois find that the response actions implemented provide adequate protection of human health the environment.

The Illinois EPA concurs with the EPA that the criteria for deletion of the Site have been met. Therefore, EPA is deleting the Site from the NPL.

This action will be effective January 8, 2001. However, if EPA receives

dissenting comments by December 11, 2000, EPA will publish a document that withdraws this action.
