

nitrate to plutonium dioxide. Other processes can involve the precipitation of plutonium oxalate or plutonium peroxide.

(2) Especially designed or prepared systems for plutonium metal production.

This process usually involves the fluorination of plutonium dioxide, normally with highly corrosive hydrogen fluoride, to produce plutonium fluoride, which is subsequently reduced using high purity calcium metal to produce metallic plutonium and a calcium fluoride slag. The main functions involved in this process are the following: fluorination (e.g., involving equipment fabricated or lined with a precious metal), metal reduction (e.g., employing ceramic crucibles), slag recovery, product handling, ventilation, waste management and process control. The process systems are particularly adapted so as to avoid criticality and radiation effects and to minimize toxicity hazards. Other processes include the fluorination of plutonium oxalate or plutonium peroxide followed by reduction to metal.

25. In appendix K to part 110, paragraph C.2(viii) is added to read as follows:

Appendix K to Part 110—Illustrative List of Equipment and Components Under NRC Export Licensing Authority for Use in a Plant for the Production of Heavy Water, Deuterium and Deuterium Compounds

C.2. * * *
(viii) Complete Heavy Water Upgrade Systems or Columns.

Complete heavy water upgrade systems or columns especially designed or prepared for the upgrade of heavy water to reactor-grade deuterium concentration. These systems, which usually employ water distillation to separate heavy water from light water, are especially designed or prepared to produce reactor-grade heavy water (i.e., typically 99.75% deuterium oxide) from heavy water feedstock of lesser concentration.

Appendix L to Part 100 [Amended]

26. In appendix L to part 110, the following terms are added in alphabetical order: “Californium-253 (Cf 253)”, “Californium-254 (Cf 254)”, and “Neptunium-235 (Np 235)”.

27. A new appendix N to part 110 is added to read as follows:

Appendix N to Part 110—Illustrative List of Lithium Isotope Separation Facilities, Plants and Equipment Under NRC’s Export Licensing Authority

a. Facilities or plants for the separation of lithium isotopes.

b. Equipment for the separation of lithium isotopes, such as:

(1) Packed liquid-liquid exchange columns especially designed for lithium amalgams;

(2) Mercury and/or lithium amalgam pumps;

(3) Lithium amalgam electrolysis cells;

(4) Evaporators for concentrated lithium hydroxide solution.

28. A new appendix O to part 110 is added to read as follows:

Appendix O to Part 110—Illustrative List of Fuel Element Fabrication Plant Equipment and Components Under NRC’s Export Licensing Authority

Note: Nuclear fuel elements are manufactured from source or special nuclear material. For oxide fuels, the most common type of fuel equipment for pressing pellets, sintering, grinding and grading will be present. Mixed oxide fuels are handled in glove boxes (or equivalent containment) until they are sealed in the cladding. In all cases the fuel is hermetically sealed inside a suitable cladding which is designed to be the primary envelope encasing the fuel so as to provide suitable performance and safety during reactor operation. Also, in all cases precise control of processes, procedures and equipment to extremely high standards is necessary in order to ensure predictable and safe fuel performance.

(a) Items that are considered especially designed or prepared for the fabrication of fuel elements include equipment that:

(1) Normally comes in direct contact with, or directly processes or controls, the production flow of nuclear material;

(2) Seals the nuclear material within the cladding;

(3) Checks the integrity of the cladding or the seal; and

(4) Checks the finished treatment of the sealed fuel.

(b) This equipment or systems of equipment may include, for example:

(1) Fully automatic pellet inspection stations especially designed or prepared for checking final dimensions and surface defects of fuel pellets;

(2) Automatic welding machines especially designed or prepared for welding end caps onto the fuel pins (or rods);

(3) Automatic test and inspection stations especially designed or prepared for checking the integrity of completed fuel pins (or rods). This item typically includes equipment for:

(i) X-ray examination of pin (or rod) end cap welds;

(ii) Helium leak detection from pressurized pins (or rods); and

(iii) Gamma-ray scanning of the pins (or rods) to check for correct loading of the fuel pellets inside.

Dated at Rockville, Maryland, this 27th day of October 2000.

Emergency Steel Guarantee Loan Program; Commercial Lending Practices and Re-Opening of Period for Applications

AGENCY: Emergency Steel Guarantee Loan Board.

ACTION: Final rule.

SUMMARY: The Emergency Steel Guarantee Loan Board (Board) is amending the regulations governing the Emergency Steel Guarantee Loan Program (Program). These changes are meant to harmonize certain program requirements with commercial lending practices and to open a second period for the submission of applications. The intent of these changes is to streamline program administration both for the Board and the lenders and to allow submission of additional applications for loan guarantees.

DATES: This rule is effective November 22, 2000.

FOR FURTHER INFORMATION CONTACT: Marguerite S. Owen, General Counsel, Emergency Steel Guarantee Loan Board, 1099–14th Street, NW., Suite 2600 East, Washington, DC 20005, (202) 219–0584.

SUPPLEMENTARY INFORMATION: On October 27, 1999, the Board published a final rule codifying at Chapter 4, Title 13, Code of Federal Regulations (CFR), regulations implementing the Program, as established in Chapter 1 of Public Law 106–51, the Emergency Steel Loan Guarantee Act of 1999 (64 FR 57932). Since those initial regulations were published the Board has made a number of changes to the regulations meant to conform the regulations to the Guarantee Agreement between the government and the lender and to allow for participations in unguaranteed tranches of loans guaranteed under the Program. Today the Board is making additional changes designed to harmonize certain program requirements with commercial lending practices, streamline program operation, and to open a second period for the submission of applications. In addition, several non-substantive changes are being made to change addresses and allow for certain delegations of authority.
