The Federal Register is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The Federal Register provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see http://www.nara.gov/. The Federal Register is published in paper and on 24x microfiche.

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1907, the contents of the Federal Register shall be judicially noticed.

The Federal Register is is published on GPO Access, a service of the U.S. Government Printing Office. The online edition of the Federal Register is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the Federal Register is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward. GPO Access users can choose to retrieve online Federal Register documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the Federal Register at http://www.access.gpo.gov/nara. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov, or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512–1262; or call (202) 512–1530 or 1–888–293–6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the Federal Register paper edition is $636, or $697 for a combined Federal Register, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the Federal Register including the Federal Register Index and LSA is $233. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $9.00 for each issue, or $9.00 for each group of pages as actually bound; or $2.00 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250–7954.

There are no restrictions on the republication of material appearing in the Federal Register.

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 731

RIN 3206-AC19

Suitability

AGENCY: Office of Personnel Management.

ACTION: Final rule.

SUMMARY: The Office of Personnel Management (OPM) is issuing final changes to the rule on personnel suitability which OPM previously issued as a proposed rule for comments. OPM received and considered public comments. This rule addresses the significant concerns expressed and incorporates some of the suggestions received.

FOR FURTHER INFORMATION CONTACT: Thomas DelPozzo, (724) 794-5612.

SUPPLEMENTARY INFORMATION: OPM promulgated the proposed final suitability regulations with a request for comments in Federal Register, Vol. 64, No. 18, p. 4336. Comments were received from 13 sources, including Federal agencies, individuals, and a labor organization. The following summarizes the principal comments and suggestions received and actions that were taken.

Part 731

Non-Specific General Comments

An agency suggested that OPM establish a time limit for investigation and/or adjudication of suitability cases to ensure completion a minimum of 90-120 days before expiration of the probationary period. Certain time frames to ensure timely processing are already in the regulations (for example, section 731.106 provides that investigations should be initiated before appointment or, at most, within 14 calendar days of placement in the position). The variances that are a natural part of investigation and adjudication make it difficult to require specific time limits. Agencies can manage adjudicative time frames in a number of ways, such as by dealing with applicant suitability issues prior to appointment; by investigating prior to appointment; by submitting required case papers for investigation, completed properly, within required time frames; by requesting the appropriate investigation service timeliness levels to ensure completion of the investigation in time to take the adjudicative action before the end of the probationary period; and by processing adjudicative actions more efficiently.

Section 731.101 Purpose

A commenter recommended that the definition of "material, intentional false statement" be altered to define the term "material" rather than the term "material, intentional false statement" since the proposed definition did not include definitions for "intentional" and "false." We agreed to the suggested wording with a slight modification.

One commenter suggested that the proposed definition of "material, intentional false statement" be excessively broad and vague in that virtually any statement would meet this definition. The commenter suggested that it was objectionable for OPM to apply a test for materiality that was not enunciated by the Supreme Court in other contexts. See e.g., United States v. Gaudin, 515 U.S. 506 (1995). Clearly, the Supreme Court did not create and apply a test for materiality that was unlawfully vague. Further, it is entirely appropriate that actions be taken against falsifiers whether or not they succeed in their attempts to deceive. OPM's suitability program seeks to deter applicants from falsifying statements to gain an advantage in the appointment process, as well as to detect applicants who falsify.

Section 731.102 Implementation

Two commenters suggested agencies be afforded up to one year to implement an adjudication program to reassess position designation, develop internal operating procedures, and undergo comprehensive training. We agreed to give agencies up to one year to modify their existing suitability adjudication program to accommodate the increased delegation of applicant suitability authority. Thus, although agencies must implement the new regulations now, OPM will continue to accept applicant suitability referrals, under our current procedures, for up to a year from the effective date of the new regulations. Additionally, OPM will provide supplemental guidance and suitability training to assist agencies.

Section 731.103 Delegation to Agencies

An agency asked whether agencies to which OPM previously had delegated authority will now be required to refer any cases involving falsification to OPM for adjudication. If so, the agency commented that this would be an additional burden. OPM's policy concerning material falsification cases has not changed. In supplemental guidance issued in 1991 with our current regulations, OPM policy stated, "OPM is responsible for adjudicating all cases (applicants, eligibles, appointees, and employees) involving material, intentional false statement, deception, or fraud in examination or appointment." Additionally, as stated in a 1995 Federal Investigations Notice (FIN 95-1), "All agencies, including those with delegated suitability adjudication authority, should refer any competitive service applicant situation where there is evidence of intentional false statement or deception or fraud in examination or appointment process, to the same office (OPM, Federal Investigations Processing Center, Suitability Adjudications Branch)."

In employee cases (a person who has completed the first year of a subject to investigation appointment), this policy applies only to fraud in the examination or appointment process for a "subject to investigation" appointment. Our basis for maintaining adjudicative control in

Rules and Regulations

Federal Register

Vol. 65, No. 250

Thursday, December 28, 2000
these cases is basically two-fold: (1) A violation of the merit system has occurred that affects the integrity of the competitive appointment process; and (2) OPM’s action can include debarment for up to three years.

A commenter objected to any use of confidential sources. The comment suggests that the proposed regulation would permit the unlimited use of corroborated confidential sources. The comment suggests that reliance on information provided by confidential sources would be contrary to due process principles.

The comment mischaracterized the intent and effect of the proposed regulations. Section 731.203(e) [now in 731.302(a) and 731.402] specifically provided that before a final suitability action is taken, an agency or OPM must provide for review, upon request, all materials relied upon in taking the action. Under the regulations, the deciding official, in taking his or her action, must consider all information made available to him or her except information furnished by confidential sources themselves. This satisfies all due process concerns. Any improperly-considered information will be subject to the statutory harmful error rule in any appeal challenging the action.

Of course, the deciding official may rely on any information, including similar or identical information, from any other source. This includes (a) non-confidential sources that are located through information provided by confidential sources or (b) information from a non-confidential source that corroborates information initially provided by a confidential source, as long as the material relied upon is made available under section available.

Upon reflection, we recognize that the reference in the last sentence of the regulation, which uses the phrase “such information,” is ambiguous and confusing. Inasmuch as this sentence was intended to summarize the entire regulation, we believe it to be redundant, and we are deleting it to eliminate any ambiguity.

A commenter believes delegation will have a workload impact on agencies, and supplemental guidance and training from OPM will be required. Although there will be an impact on agencies, we do not believe the impact will be that significant, since OPM will continue to adjudicate material, intentional falsification cases, and cases where a general extended debarment is warranted. The major agency impact occurs in the suitability examining process in application material and deciding the appropriate action to take. The actions most commonly taken would be to favorably adjudicate the applicant’s suitability, or refer to OPM for adjudication if warranted. OPM will also issue supplemental guidance, offer adjudicative products, provide assistance through training, and allow agencies up to a year to train personnel and develop processes to handle their new applicant suitability responsibilities.

An agency asked what skill level would be required for agency personnel assigned to adjudication responsibilities and whether the GS-1800 series was appropriate, as the agency was concerned about limited resources. OPM is not requiring a particular job series to handle this work; however, agencies will need to assess the inherent responsibilities associated with adjudication when determining who will do the work. They will have to ensure employees are properly trained and qualified to do the work.

731.104 Appointments Subject to Investigation and 731.105 Jurisdiction

One commenter suggested that OPM confused rather than clarified the length of time that employees, applicants, and appointees would be subject to investigation by deleting section 731.301(b). The commenter believes that the substitute language in sections 731.104 and 105 may accomplish the same purpose in a more complicated fashion—barring the removal of an employee as unsuitable after a year in the position based on information truthfully set forth in the application.

In the supplementary material accompanying the proposed regulations, we explained that the one-year period applies only to the time period during which OPM or an agency may take a suitability action against an applicant or appointee. It is not a time limitation on an OPM or an agency suitability investigation of an individual. However, our efforts to clarify and simplify the regulatory language have not succeeded. The text of the regulation, as opposed to the explanation in the supplementary material, remains somewhat unclear.

Therefore, we have again modified the language of section 731.104 to conform more clearly to the purpose we have articulated as follows:

- The right of OPM or an agency with delegated authority to conduct a suitability investigation has no time limit even though in some cases, enumerated in section 104, OPM or an agency with delegated authority is not required to conduct a suitability investigation.
- OPM’s authority to take a suitability action for fraud in examination or appointment also has no time limit.
- An agency with delegated suitability authority may not take a suitability action of any kind against an “employee” as defined in 5 CFR 731.101 of the regulations.

For suitability action purposes, an agency that has discerned evidence of material, intentional false statement or deception or fraud in examination or appointment may refer evidence to OPM for possible action.

We have also modified the title of section 731.105 to read “Authority to take suitability actions” instead of “Jurisdiction” to clarify that this regulation concerns only authority to take suitability actions and has nothing to do with an agency or OPM’s authority to conduct investigations.

Commenters felt this section needed clarification to eliminate the perception that if the investigation is not conducted within the first year, it can never be conducted. To address this concern we added language to 731.104(b) and also modified 731.106(c).

An agency requested further clarification of this section to avoid the interpretation that agencies are restricted from conducting investigations on transfers for individuals serving continuously for less than one year.

The agency misreads the regulation. A transfer is not subject to investigation unless investigation is required by a change in risk level or because an investigation required by law did not occur. Therefore, we have not changed the proposed regulation.

A commenter requested that we clarify whether investigation and negative suitability action are permitted when an individual moves from a position that is not subject to investigation to one with a higher risk designation. We revised 731.106(e) to require an investigation at the appropriate level when an individual moves to a position with a higher risk designation. We also added a new section, 731.106(f), to explain how these investigations are adjudicated depends on the person’s employment status.

Section 731.105 Jurisdiction

One commenter found the language in 731.105(d) regarding the authority for agency actions on employees unclear. Another suggested adding specific clarifying language, and that reference to “efficiency of the service” be deleted since all 752 actions, by definition, must promote the efficiency of the service.
investigative requirements should also vary commensurate with the risk level. Furthermore, public trust and national security need to be appropriately considered in tandem when evaluating position responsibilities and investigative levels. A national security case (SF–86) where an individual only needs a secret clearance (relatively low level of investigation) might also be a high risk public trust position (higher level of investigation). A person in a low risk public trust position (low level investigation) might require access to top secret information (high level investigation).

One commenter stated that the proposed regulations imply that where there is no existing authority for agencies to conduct periodic investigations of public trust employees, agencies may grant themselves this authority by promulgating their own regulations. The comment describes this as inconsistent with the position that OPM took in its 1996 proposed regulations, namely, that there was no indication that the provisions of any OPM regulation in order to place affected employees in the number of investigations conducted unless employees occupy positions affecting national security. The 1999 proposed regulations clarify that agencies may possess their own authority to require periodic reinvestigations for employees occupying certain public trust positions. These final regulations do not purport to create any additional authority for agencies to conduct this type of reinvestigation.

There is no inconsistency. Read in its entirety, the supplementary material accompanying the 1996 proposed regulations makes clear that OPM does not possess statutory authority to require that reinvestigations be conducted unless employees occupy positions affecting national security. The 1999 proposed regulations clarify that agencies may possess their own authority to require periodic reinvestigations for employees occupying certain public trust positions. These final regulations do not purport to create any additional authority for agencies to conduct this type of reinvestigation.

Two commenters found “731.106(e) Risk level changes” language confusing. We agreed and changed the wording.

Sections 731.201 Standard and 731.202 Criteria

One commenter suggested that the revised language in section 731.201 represents a significant change in the suitability standard and that the “integrity and efficiency” language was too vague and gave deciding officials too much discretion. The commenter suggested that deletion of language in section 731.202 would mean there is no limitation on criminal misconduct deemed to be unsuitable. The commenter suggested not revising the existing regulation.

The comment is not accepted. The revised regulation is designed primarily to be a rewording and reordering of the regulation in order to place affected applicants and employees on even clearer notice of the suitability standards.

The current efficiency of the service language might inadvertently lead some to believe that efficiency and effectiveness are limited to their dictionary definitions, namely, the capacity to produce desired results with a minimum expenditure of energy, time or money, or the ability to produce results. In fact, the efficiency of the service standard as used by OPM in a suitability context always has been a broader concept that involves, among other things, the integrity of the competitive examination system. To give one example, decisional law correctly recognizes when an applicant obtains an appointment through falsifying an application, he or she is unsuitable and may be removed from his or her position even if he or she efficiently carries out tasks in the job he or she has obtained. McCreary v. OPM, 27 M.S.P.R. 459 (1985); DeAngelis v. OPM, 28 M.S.P.R. 456 (1985). Adding the word integrity makes it even clearer that integrity and honest conduct always have been an important part of the existing efficiency of the service standard.

The revised standard is not vague. Indeed, it is somewhat more specific than the existing efficiency of the service standard. The courts have upheld similar language against legal challenges of constitutional vagueness, for example, in Arnett v. Kennedy, 416 U.S. 134 (1974); see also Meehan v. Macy, 392 F.2d 822 (D.C. Cir. 1968).

The suggestion that the revised regulations recognize no limit on the type of misconduct or criminal misconduct that will justify a suitability action is incorrect. The additional considerations set forth in section 731.202(c) make clear that a suitability determination may be made after considering the nature of the position, the nature and seriousness of the conduct and the circumstances surrounding the conduct, among other things.

An agency asked whether the specific factor at 731.201(b)(4) “Refusal to furnish testimony as required by § 5.4 of this chapter” referred to section 5.4 of 731. It does not. The proposed regulation as written was confusing. Federal regulations are organized by Title in the Code of Federal Regulation rather than by “chapters.”

Therefore, we have modified the proposed regulation by substituting the word “title” for “chapter” to clarify that this provision refers to section 5.4 of title 5, Code of Federal Regulations, one of the Civil Service Rules.
The same agency suggested that we add, in accordance with section 5.4, that this suitability factor also pertains to the requirement to provide forms, releases, answers to questions of investigators, and security adjudicators, among others. We have not adopted this suggestion. Although section 5.4 does list other requirements, the suitability factor is limited to the requirement in section 5.4 to provide testimony when required by OPM. We decline to expand the scope of the disqualifying factor.

Section 731.203 Actions by OPM and Other Agencies

One commenter suggested that there appeared to be a conflict between the procedures set forth in section 731.203(e) and those at subpart C of the regulations.

OPM did not intend a conflict between the two provisions. Section 203(e) was intended to provide general procedures for both agencies and OPM to follow when taking a suitability action. Subpart C was designed to provide the specific procedures OPM was to follow when taking an action.

We acknowledge this could cause some confusion. Therefore, we have eliminated the subsection on general procedures and have substituted a subsection that applies when agencies take an action.

Because we have expanded agencies’ authority in the areas of debarment and applicant adjudication, we decided to set forth several of the procedures applicable to them with greater specificity. We have modified both the regulatory provisions applying to OPM and agencies to make clear that whenever OPM or an agency takes an action, a written notice must be provided of the specific reasons for the action, a written response must be permitted, and notice must be provided of the time limit for the response and appeal rights.

Still, to give agencies a bit more flexibility, we have retained some differences in the provisions. We have not set forth a specific time limit for agency notice. Rather, we clarified that reasonable notice must be afforded. For OPM actions, we have retained a 30-day notice period. Of course, if an action is appealed, the harmful error rule at 5 U.S.C. § 7701(c)(2)(A) applies both to agency and OPM actions.

For clarity, we have added subsection 731.203(a) defining the term “action” for suitability purposes.

Two commenters questioned whether 731.203(f) [now 731.203(e)] represents an additional reporting requirement since agencies are already required to report actions on OPM investigations via INV form 79A, Report of Adjudicative Action on OPM Personnel Investigations. This section does contain a new reporting requirement. All negative adjudications based on delegated 5 CFR 731 authority must now be reported to OPM, even when those actions are not based on an OPM conducted investigation. This is necessary to permit OPM to adequately oversee the suitability adjudication responsibilities we have delegated to agencies. A new form is being created for this purpose, but agencies will not need to provide a duplicate report if the action is based on an OPM investigation and they are already reporting the action on the INV form 79A.

Section 731.204 Debarment by OPM

An agency requested that agencies be given the ability to appeal an OPM-imposed debarment when the position is critical and difficult to fill and there are no other suitable applicants. We made no change since agencies already have the right to respond to an OPM proposed action under section 731.303(b), and may provide evidence upon request in any MSPB appeal.

Section 731.205 Debarment by Agencies

An agency welcomed the opportunity to bar unsuitable employees. Another found the agency debarment language unclear. We believe the language satisfactory, and made no change. The language in this section states that agencies may impose a period of debarment of “no more than” one year, and that the agency has sole discretion to determine length of debarment “under this section.” It is within their discretion to determine the duration of the bar, up to the maximum period of one year.

Section 731.302 Notice of Proposed Action

A commenter objected to the provision “shall be entitled to be retained in a pay status during the notice period” because the individual may be involved in misconduct apart from the reasons for the suitability action which would warrant an agency action.

We have retained the proposed language. But, we emphasize that this provision does not preclude an agency from taking any other appropriate action during the suitability action notice period. Appropriate actions may include an adverse action under chapter 75 U.S. Code or a termination under part 315, title 5, Code of Federal Regulations.

Section 731.303 Answer

One commenter suggested the agency be permitted to determine the time and place of an oral response. Another suggested that reference to agency actions should be added to paragraph (a). No change was made since this section now only applies to OPM. Furthermore, only OPM, not agencies, may take action against “employees” under 731. The reference to the oral response here applies only to employees.

Section 731.304 Decision

A commenter felt the agency should have discretion to allow the employee to remain in an active duty status pending results of an appeal. We made no change for several reasons. OPM directs removal primarily in cases involving fraud in the application or appointment process, and an individual generally should not retain a position obtained fraudulently. Further, OPM gives agencies an opportunity to comment and express their views before OPM takes the action.

Section 731.401 Appeal to the Merit Systems Protection Board

One commenter stated that section 731.401 (now 731.501) should make clear that the Board lacks the authority to reverse a removal action, as well as lacking the authority to modify a debarment period, when it affirms a determination of unsuitability. It noted correctly that under OPM regulation, an agency could remove the employee and not impose a debarment. OPM has adopted this suggestion, which is entirely in keeping with OPM’s intent to clarify that once the Board has found that any of the charges of unsuitability is supported by preponderance of the evidence, it lacks authority to modify the action taken.

Another commenter took issue with OPM’s section 731.401 (now 731.501), asserting that, in the past, the courts have rejected OPM’s attempts to limit the Board’s authority to hear appeals. The comment does not acknowledge the difference between an appeal right to the Board granted by Congress, such as an adverse action appeal under Chapter 75, title 5, United States Code, which OPM may not limit, and one granted solely by OPM through regulation. The comment also does not recognize that when Congress or OPM authorizes the Board to hear a particular kind of appeal, the Board’s grant of authority is limited by the terms of the statute or OPM regulation and its underlying intent.

The Board’s authority to decide matters is strictly limited to those...
agency decisions placed within its jurisdiction by law or regulation. See, for example, King v. Jerome, 42 F.3d 1371 (Fed. Cir. 1994). An OPM suitability action is not taken under the same authority as an adverse action. Unlike adverse action appeals, suitability appeals to MSPB are not created by an act of Congress but by OPM regulations under substantive standards promulgated by OPM in Part 731. These standards need not be the same as those in Chapter 75, just as those contained in Chapter 43, title 5, United States Code pertaining to performance-based actions are not the same as those in Chapter 75. Lisiecki v. Merit Systems Protection Board, 769 F.2d 1588 (Fed. Cir. 1985).

The new regulation seeks to demarcate the differences between suitability actions and adverse actions so that no one will confuse them in the future. Specifically, the regulation is designed to clarify that the Board’s role in reviewing OPM or agency unsuitability decisions always has been a limited one. The Board may determine only whether a charge of unsuitability is sustained by a preponderance of evidence in accordance with the substantive standard set forth in section 731.202.

In addition, the proposed regulation provides OPM or the agency with an additional opportunity to amend the action taken if the Board sustains fewer than all of the suitability charges, something that the existing regulations do not provide for. Therefore, rather than limiting the Board’s authority, as the comment suggests, the new regulation allows the agency or OPM to review the action taken after taking into account only the charges that the Board sustained.

Regulatory Flexibility Act

I certify that this rule will not have significant economic impact on a substantial number of small entities because it affects only Federal applicants, employees and agencies.

List of Subjects in 5 CFR Part 731

Administrative practice and procedure, Government employees.
Office of Personnel Management.
Janice R. Lachance,
Director.

Accordingly, the Office of Personnel Management revises 5 CFR part 731 as follows:

PART 731—SUITABILITY

Subpart A—Scope

§731.101 Purpose.

§731.102 Implementation.

§731.103 Delegation to agencies.

§731.104 Appointments subject to investigation.

§731.105 Authority to take suitability actions.

§731.106 Designation of public trust positions and investigative requirements.

Subpart B—Suitability Determinations

§731.201 Standard.

§731.202 Criteria.

§731.203 Actions by OPM and other agencies.

§731.204 Debarment by OPM.

§731.205 Debarment by agencies.

Subpart C—OPM Suitability Action Procedures

§731.301 Scope.

§731.302 Notice of proposed action.

§731.303 Answer.

§731.304 Decision.

Subpart D—Agency Suitability Action Procedures

§731.401 Scope.

§731.402 Notice of proposed action.

§731.403 Answer.

§731.404 Decision.

Subpart E—Appeal to the Merit Systems Protection Board

§731.501 Appeal to the Merit Systems Protection Board.

Subpart F—Savings Provision

§731.601 Savings provision.

Subpart A—Scope

§731.101 Purpose.

(a) The purpose of this part is to establish criteria and procedures for making determinations of suitability for employment in positions in the competitive service and for career appointment in the Senior Executive Service (hereinafter in this part, “competitive service”) pursuant to 5 U.S.C. 3301 and Executive Order 10577 (3 CFR, 1954–1958 Comp., p. 218), Section 3301 of title 5, United States Code, directs consideration of “age, health, character, knowledge, and ability for the employment sought.” Executive Order 10577 directs OPM to examine “suitability” for competitive Federal employment. This part concerns only determinations of “suitability” based on an individual’s character or conduct that may have an impact on the integrity or efficiency of the service. Determinations made under this part are distinct from determinations of eligibility for assignment to, or retention in, sensitive national security positions made under Executive Order 10450 (3 CFR, 1949–1953 Comp., p. 936), Executive Order 12968, or similar authorities.

(b) Definitions. In this part:

Applicant. A person who has entered on duty and is in the first year of a subject to investigation appointment (as defined in §731.104).

Employee. A person who has completed the first year of a subject to investigation appointment.

Material. A “material” statement is one that is capable of influencing, or has a natural tendency to affect, an official decision.

§731.102 Implementation.

(a) An investigation conducted for the purpose of determining suitability under this part may not be used for any other purpose except as provided in a Privacy Act system of records notice published by the agency conducting the investigation.

(b) Under OMB Circular No. A–130 Revised, issued February 8, 1996, the Director of OPM is to establish policies for Federal personnel associated with the design, operation, or use of Federal automated information systems. Agencies are to implement and maintain a program to ensure that adequate protection is provided for all automated information systems. Agency programs should be consistent with government-wide policies and procedures issued by OPM. The Computer Security Act of 1987 (Public Law 100–225) provides additional requirements for Federal automated information systems.

(c) Policies, procedures, criteria, and guidance for the implementation of this part shall be set forth in OPM issuances. OPM may revoke an agency’s delegation to adjudicate suitability under this part if an agency fails to conform to OPM issuances.

§731.103 Delegation to agencies.

(a) OPM delegates to the heads of agencies limited authority for adjudicating suitability in cases involving applicants for and appointees to competitive service positions in the agency (including limited, agency-specific debarment authority under §731.205). OPM retains jurisdiction in all competitive service cases involving evidence of material, intentional false statement or deception or fraud in examination or appointment. Agencies must refer these cases to OPM for adjudication, or contact OPM for prior approval if the agency wants to take action under its own authority (5 CFR
(b) Any adjudication by an agency acting under delegated authority from OPM which indicates that an extended general, across agency lines, debarment by OPM under § 731.204(a) may be an appropriate action should be referred to OPM for debarment consideration if not favorably adjudicated by the agency. Referral should be made prior to any proposed action, but after sufficient resolution of the suitability issue(s) through subject contact or investigation to determine if an extended general debarment period appears warranted.

(c) Agencies exercising authority under this part by delegation from OPM must show by policies and records that reasonable methods are used to ensure adherence to regulations, standards, and quality control procedures established by OPM.

(d) Before making any applicant suitability determination, the agency should first ensure the applicant is eligible for the position, among the best qualified, and/or within reach of selection. Because suitability issues may not be disclosed until late in the application/appointment process, only the best qualified should require a suitability determination, with appropriate procedures followed and appeal rights provided, if suitability issues would form the only basis for elimination from further consideration.

(e) When an agency, exercising authority under this part by delegation from OPM, makes an adjudicative decision under this part, or changes a tentative favorable placement decision to an unfavorable decision, based on an OPM report of investigation or upon an investigation conducted pursuant to OPM-delegated authority, the agency should:

(1) Ensure that the records used in making the decision are accurate, relevant, timely, and complete to the extent reasonably necessary to ensure fairness to the individual in any determination;

(2) Ensure that all applicable administrative procedural requirements provided by law, the regulations in this part, and OPM policy guidance have been observed;

(3) Consider all available information in reaching its final decision, except information furnished by a non-corroborated confidential source. Information furnished by a non-corroborated confidential source can only be used for limited purposes, such as lead information or in interrogatories to a subject if the identity of the source is not compromised in any way; and

(4) Keep any record of the agency action as required by OPM in its supplemental guidance.

(f) Paragraph (a) of this section notwithstanding, OPM may exercise its jurisdiction under this part in any case when, in its discretion, deems necessary.

(g) Any applicant or appointee who is found unsuitable by an agency acting under delegated authority from OPM under this part may appeal the adverse suitability decision to the Merit Systems Protection Board under the Board's regulations.

§731.104 Appointments subject to investigation.

(a) To establish a person's suitability for employment, appointments to positions in the competitive service require the person to undergo an investigation by OPM or by an agency with delegated authority from OPM to conduct investigations. Certain appointments do not require investigation. Except when required because of risk level changes, a person in the competitive service who has undergone a suitability investigation need not undergo another one simply because the person has been:

(1) Promoted;

(2) Demoted;

(3) Reassigned;

(4) Converted from career-conditional to career tenure;

(5) Appointed or converted to an appointment if the person has been serving continuously with the agency for at least 1 year in one or more positions under an appointment subject to investigation; and

(6) Transferred, provided the individual has served continuously for at least 1 year in a position subject to investigation.

(b) OPM or an agency with delegated suitability authority may investigate and take a suitability action against an applicant, appointee, or employee in accordance with § 731.105. There is no time limit on the authority of OPM or an agency with delegated suitability authority to conduct an investigation of an applicant who has been appointed to a position.

(c) An employee does not have to serve a new probationary or trial period merely because his or her appointment is subject to investigation under this section. An employee’s probationary or trial period is not extended because his or her appointment is subject to investigation under this section.

(3) The subject to investigation condition also does not eliminate the need to conduct investigations required under §731.106 for public trust positions.

§731.105 Authority to take suitability actions.

(a) OPM may take a suitability action under this part against an applicant or appointee based on any of the criteria of §731.202;

(b) An agency, exercising delegated authority, may take a suitability action under this part against an applicant or appointee based on the criteria of §731.202 subject to the agency limitations prescribed in §731.103;

(c) OPM may take a suitability action under this part against an employee only in cases involving material, intentional false statement or deception or fraud in examination or appointment, or refusal to furnish testimony as required by §5.4 of this title, or statutory or regulatory bar. A statement may be a material statement even if an agency does not rely upon it.

(d) An agency may not take a suitability action against an employee under this part. Nothing in this part precludes, or is intended to preclude, an agency from taking an adverse action against an employee under the procedures and standards of part 752 of this title or terminating a probationary employee under the procedures of part 315 of this title.

§731.106 Designation of public trust positions and investigative requirements.

(a) Risk designation. Agency heads shall designate every competitive service position within the agency at a high, moderate, or low risk level as determined by the position's potential for adverse impact to the efficiency and integrity of the service. OPM will provide an example of a risk designation system for agency use in supplemental guidance.

(b) Public Trust positions. Positions at the high or moderate risk levels would normally be designated as “Public Trust” positions. Such positions may involve policy making, major program responsibilities, public safety and health, law enforcement duties, fiduciary responsibilities, or other duties demanding a significant degree of public trust; and positions involving access to or operation or control of financial records, with a significant risk
for causing damage or realizing personal gain.

(c) Investigative requirements. Persons receiving an appointment made subject to investigation under this part must undergo a background investigation. Minimum investigative requirements correlating to risk levels will be established in supplemental guidance provided by OPM. Investigations should be initiated before appointment or, at most, within 14 calendar days of placement in the position.

(d) Suitability reinvestigations. Agencies, relying on authorities such as the Computer Security Act of 1987 and OMB Circular No. A–130 Revised (issued February 8, 1996), may require incumbents of certain public trust positions to undergo periodic reinvestigations. The appropriate level of any reinvestigation will be determined by the agency, but may be based on supplemental guidance provided by OPM.

(e) Risk level changes. If an individual experiences a change in position risk level (moves to a higher risk level position, or the risk level of the position itself is changed) the individual may be held by, or leave in the position. Any upgrade investigation required for the new risk level should be initiated within 14 calendar days after the move or the new designation is final.

(f) Any suitability investigation completed by an agency under provisions of paragraphs (d) or (e) of this section must be adjudicated by the employing agency. The subject’s employment status will determine the applicable agency authority and procedures to be followed in any action taken.

Subpart B—Suitability Determinations

§ 731.201 Standard.

Subject to subpart A of this part, an applicant, appointee, or employee may be denied Federal employment or removed from a position only when the action will protect the integrity or promote the efficiency of the service.

§ 731.202 Criteria.

(a) General. In determining whether its action will protect the integrity or promote the efficiency of the service, OPM, or an agency to which OPM has delegated authority, shall make its determination on the basis of the specific factors in paragraph (b) of this section, with appropriate consideration given to the additional considerations outlined in paragraph (c) of this section.

(b) Specific factors. When making a determination under paragraph (a) of this section, the following may be considered a basis for finding an individual unsuitable:

1. Misconduct or negligence in employment;
2. Criminal or dishonest conduct;
3. Material, intentional false statement or deception or fraud in examination or appointment;
4. Refusal to furnish testimony as required by § 5.4 of this title;
5. Alcohol abuse of a nature and duration which suggests that the applicant or appointee would be prevented from performing the duties of the position in question, or would constitute a direct threat to the property or safety of others;
6. Illegal use of narcotics, drugs, or other controlled substances, without evidence of substantial rehabilitation;
7. Knowing and willful engagement in acts or activities designed to overthrow the U.S. Government by force;
8. Any statutory or regulatory bar which prevents the lawful employment of the person involved in the position in question.

(c) Additional considerations. In making a determination under paragraphs (a) and (b) of this section, OPM and agencies shall consider the following additional considerations to the extent they deem them pertinent to the individual case:

1. The nature of the position for which the person is applying or in which the person is employed;
2. The nature and seriousness of the conduct;
3. The circumstances surrounding the conduct;
4. The recency of the conduct;
5. The age of the person involved at the time of the conduct;
6. Contributing societal conditions; and
7. The absence or presence of rehabilitation or efforts toward rehabilitation.

§ 731.203 Actions by OPM and other agencies.

(a) List of actions. For purposes of this part, an action is one or more of the following:

1. Cancellation of eligibility;
2. Denial of appointment;
3. Removal;
4. Cancellation of reinstatement eligibility;
5. Debarment.

(b) An applicant’s eligibility may be cancelled, an applicant may be denied employment, or an appointee may be removed when OPM or an agency exercising delegated authority under this part finds that the applicant or appointee is unsuitable for the reasons cited in § 731.202 subject to the agency limitations of § 731.103(a).

(c) OPM may require that an employee be removed on the basis of a material, intentional false statement, or deception or fraud in examination or appointment; or refusal to furnish testimony; or a statutory or regulatory bar. OPM may also cancel any reinstatement eligibility obtained as a result of false statement, deception or fraud in the examination or appointment process.

(d) An action to remove an appointee or employee for suitability reasons under this part is not an action under parts 752 or 315 of this title. Where behavior covered by this part may also form the basis for a part 752 or 315 action, agencies may use parts 315 or 752, as appropriate, instead of this part.

(e) Agencies are required to report to OPM all unfavorable adjudicative actions taken under this part, and all actions based on an OPM investigation.

§ 731.204 Debarment by OPM.

(a) When OPM finds a person unsuitable for any reason listed in § 731.202, OPM, in its discretion, may deny that person examination for, and appointment to, a competitive service position for a period of not more than 3 years from the date of determination of unsuitability.

(b) On expiration of a period of debarment, OPM or an agency may redetermine a person’s suitability for appointment in accordance with the procedures of this part.

(c) OPM, in its sole discretion, determines the duration of any period of debarment imposed under this section.

§ 731.205 Debarment by agencies.

(a) Subject to the provisions of § 731.103, when an agency finds an applicant or appointee unsuitable for reasons listed in § 731.202, the agency may deny that person examination for, and appointment to, all, or specific, positions within the agency for a period of not more than 1 year from the date of determination of unsuitability.

(b) On expiration of a period of agency debarment, the agency may redetermine a person’s suitability for appointment by the agency, in accordance with the procedures of this part.

(c) The agency is responsible for enforcing the period of debarment and taking appropriate action should the individual apply or be inappropriately appointed during the debarment period. This does not limit OPM’s ability to exercise jurisdiction and take an action if it deems appropriate.
Subpart C—OPM Suitability Action Procedures

§ 731.301 Scope.

(a) Coverage. This subpart sets forth the procedures to be followed when OPM proposes to take, or instructs an agency to take, a final suitability action against an applicant, appointee or employee.

(b) Definition. In this subpart, days means calendar days.

§ 731.302 Notice of proposed action.

(a) OPM shall notify the applicant, appointee, or employee (hereafter, the “respondent”) in writing of the proposed action and of the charges against the respondent (including the availability for review, upon request, of the materials relied upon). The notice shall state the specific reasons for the proposed action and that the respondent has the right to answer the notice in writing. If the respondent is an employee, the notice shall further state that the employee may also make an oral answer, as specified in § 731.303(a). The notice shall further inform the respondent of the time limits for response as well as the address to which such response should be made.

(b) The notice of proposed action shall be served upon the respondent by such method as OPM deems appropriate, which may include mailing, hand delivery, personal service, or other methods authorized by law. To be timely, a response must be made within 30 days of the date of the notice.

(c) OPM shall send a copy of this notice to any employing agency that is involved.

§ 731.303 Answer.

(a) Respondent’s answer. A respondent may answer the charges in writing and furnish documentation and/or affidavits in support of the response. A respondent who is an employee may also answer orally. The respondent may be represented by a representative of the respondent’s choice, and such representative shall be designated in writing. To be timely, a written answer shall be made no more than 30 days after the date of the notice of proposed action. In the event an employing agency requests an oral answer, the request must be made within this 30 day time frame, and OPM shall determine the time and place thereof, and shall consider any answer the respondent makes in reaching a decision.

(b) Agency’s answer. An employing agency may also answer the notice of proposed action. The time limit for filing an answer is 30 days from the date of the notice. OPM shall consider any answer the agency makes in reaching a decision.

§ 731.304 Decision.

The decision shall be in writing, dated, and inform the respondent of the reasons for the decision. The employing agency shall remove the appointee or employee from the rolls within 5 work days of receipt of OPM’s final decision.

§ 731.401 Scope.

(a) Coverage. This subpart sets forth the procedures to be followed when an agency proposes to take a final suitability action against an applicant or appointee.

(b) Definition. In this subpart, days mean calendar days.

§ 731.402 Notice of proposed action.

The agency shall provide the applicant or appointee (hereinafter, the “respondent”) reasonable notice in writing of the proposed action and of the charges against the respondent (including the availability for review, upon request, of the materials relied upon). The notice shall state the specific reasons for the proposed action, and that the respondent has the right to answer the notice in writing. The notice shall inform the respondent of the time limits for response as well as the address to which such response should be made.

§ 731.403 Answer.

A respondent may answer the charges in writing and furnish documentation and/or affidavits in support of the response.

§ 731.404 Decision.

The decision shall be in writing, dated, and inform the respondent of the reasons for the decision. The respondent shall also be informed that an adverse decision can be appealed in accordance with subpart E of this part. The employing agency shall remove an appointee from the rolls within 5 work days of their final decision.

Subpart E—Appeal to the Merit Systems Protection Board

§ 731.501 Appeal to the Merit Systems Protection Board.

(a) Appeal to the Merit Systems Protection Board. An individual who has been found unsuitable for employment may appeal the determination to the Merit Systems Protection Board. If the Board finds that one or more charges are supported by a preponderance of the evidence, it shall affirm the determination. If the Board sustains fewer than all the charges, the Board shall remand the case to OPM or the agency to determine whether the action taken is appropriate based on the sustained charge(s). This determination of whether the action taken is appropriate shall be final without any further appeal to the Board.

(b) Appeal procedures. The procedures for filing an appeal with the Board are found at part 1201 of this chapter.

Subpart F—Savings Provision

§ 731.601 Savings provision.

No provision of the regulations in this part shall be applied in such a way as to affect any administrative proceeding pending on January 29, 2001. An administrative proceeding is deemed to be pending from the date of the agency or OPM “notice of proposed action” described in § 731.402.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

7 CFR Part 225

RIN 0584–AC23

Summer Food Service Program Implementation of Legislative Reforms

AGENCY: Food and Nutrition Service, USDA.

ACTION: Final rule, with technical amendments.

SUMMARY: This rule makes final an interim rule published in the Federal Register on December 28, 1999. This final rule adopts the changes made to the Summer Food Service Program by the interim rule as mandated by three public laws—the Healthy Meals for
Healthy Americans Act of 1994, the Personal Responsibility and Work Opportunity Reconciliation Act of 1996, and the William F. Goodling Child Nutrition Reauthorization Act of 1998. Program changes include easing restrictions on participation by private nonprofit organizations and food service management companies, streamlining rules for schools to encourage Program sponsorship, and reducing paperwork burdens for State agencies. In addition, this rule makes minor technical changes to conform meal pattern requirements to the standards used in the National School Lunch Program and the School Breakfast Program, to correct errors in meal pattern charts and regional office addresses, and to conform application procedures to the Meal Benefit Form prototype. Finally, this rule restores and revises a paragraph that was inadvertently removed from program regulations by the interim rule.

FOR FURTHER INFORMATION CONTACT: Mr. Robert M. Eadie or Ms. Melissa Rothstein, 703–305–2620.

SUPPLEMENTARY INFORMATION:

I. Background and Discussion of the Final Rule

The Summer Food Service Program (SFSP) is authorized under section 13 of the Richard B. Russell National School Lunch Act (NSLA) (42 U.S.C. 1761). Its primary purpose is to provide nutritious meals to children from low-income areas during periods when schools are closed for vacation.

In 1994, 1996, and 1998, substantive changes to the SFSP were made with the enactment of three public laws. Readers can find information about these laws and details on the corresponding changes we made to the SFSP regulations in the interim rule (64 FR 72474) that was published on December 28, 1999, in the Federal Register.

The 180-day comment period on the interim rule ended June 25, 2000. One comment was received on the interim rule. The commenter supported the changes made to the SFSP regulations by the interim rulemaking and suggested that we continue the process of reducing paperwork burdens and streamlining requirements. This commenter provided a number of recommendations that we may consider in a future rulemaking. The specific comments made, however, did not apply directly to the language in the interim rulemaking.

We want to emphasize that the interim rule primarily brought the SFSP regulations up to date with the statutory requirements. Since these changes were implemented by State agencies based on Department guidance in a timely fashion after the enactment of each public law, there were essentially no new policy proposals in the rule to engender comments.

Following is a chart that lists by program area the provisions contained in the December 28, 1999, interim rule; we also provide regulatory citations in the chart for the reader’s convenience in locating the changes within the SFSP regulations at 7 CFR part 225.

</tbody>
</table>

### 5. Definition of Household Types and Clarifying Language on Application Procedures

All references to “AFDC” are removed and replaced with “TANF”.
“FDPIR household” is added as a definition and as a qualifying program for automatic eligibility for SFSP benefits.

§§225.2 definitions, 225.6(c)(4)(ii)(B), 225.15(e), and 225.15(f)(3),(4), and (5)

### 6. National Youth Sports Program (NYSP)

- Statutory authority for Academic-Year NYSP sites expired; all references to “academic-year NYSP” are removed.

§225.2 - definitions and throughout Part 225

- Definition of “NYSP feeding site” is revised to allow eligibility based on enrollment or area eligibility.

§§225.2

### 7. Consolidated Benefits for Homeless Children

- Administration and delivery of benefits to homeless children was consolidated under the Child and Adult Care Food Program. Homeless shelters may still operate SFSP as either open or enrolled sites.

References to homeless emergency shelters removed at: §§225.2, 225.6(c)(2), 225.6(d), 225.8(e), 225.14(c)(3), 225.14(d)(4), 225.15(a)(2), and 225.16(b)(2).

### 8. Number of Meals and Meal Pattern Requirements

- Reimbursable meals for camps and migrant sites were reduced from 4 to 3 (or 2 meals and 1 snack) per day per child.

 §§225.16(b)(1)(i) and 225.16(b)(4)

- The term “snack” replaced the term “supplement”.

Starting at §225.16(b)

- Equivalencies of egg to meat or meat alternatives are changed to conform to those used in the National School Lunch Program and School Breakfast Programs.

§225.16(d)

### 9. Program Payments

Reimbursement rates for Alaska and Hawaii were adjusted upward to reflect the higher cost of living in those States.

§225.9(d)(9)
Restoring a State Agency Reporting Requirement

Since 1990, FNS has played a special role in monitoring the participation of PNOs in the SFSP. Section 13(p)(1) of the NSLA, which was added by Pub. L. 101–147, the Child Nutrition and WIC Reauthorization Act of 1989, authorizes the Secretary to establish a system of compliance monitoring of PNOs. As mandated in section 13(p)(2), one half of one percent of each annual appropriation of the SFSP funds this monitoring system. FNS regional offices carry out this special monitoring effort by conducting reviews of PNOs in their States. In order to conduct these reviews, regional offices rely on receiving information on a timely basis from the State agencies about the PNOs that are approved each year to operate the Program. Because of the importance of these reviews, the SFSP regulations were amended on April 10, 1990, to require State agency submission of this information to FNS regional offices.

In the December 28, 1999 interim rule, paragraph (e) of §225.8 which contained this submission requirement was mistakenly removed. This paragraph required State agencies to submit to their FNS regional office a list of potential PNO sponsors and their addresses by May 1st each year. For each potential PNO sponsor, State agencies were required to estimate the number of sites, locations, dates of operation per site, and daily attendance per site. This paragraph also referenced the need to gather and analyze information on PNOs that was required in §225.6(a)(3). (The interim rule removed §225.6(a)(3) because the statutory requirement addressed in this paragraph was eliminated by Pub. L. 105–336, the William F. Goodling Child Nutrition Reauthorization Act of 1998). Additionally, State agencies were required to supply additional information and to update previously estimated information about each approved PNO within 5 working days of the approval.

To eliminate the potential for confusion about FNS’ need for this information, we are restoring this requirement in §225.8 in this rulemaking. The new paragraph contains similar language to the old paragraph, with some exceptions. The new paragraph does not require the analysis of information collected in accordance with §225.6(a)(3), since that analysis is no longer required. Similarly, we do not ask State agencies to report homeless sites, since sites are no longer categorized as specifically serving a homeless population.

Accordingly, a new paragraph (d) is added to §225.8 to require State agency submission of a list of potential PNO sponsors by May 1st of each year. New paragraph (d) will also require State agencies to submit additional detailed information of PNO sponsors within 5 days of their approval to participate in the Program.

Corrections

This rule corrects several errors in part 225. We are revising §225.15(f)(4)(vii) to specify that the penalties notice should appear immediately above the signature block on the application for free meals. This is consistent with the Meal Benefit Form prototype (free and reduced price meal application) that FNS revised in spring 2000. Another correction is to the breakfast meal pattern chart found in §225.16(d)(1). The minimum amount for cooked dry beans or peas under the meat and meat alternates component is shown as ½ cup. The correct amount should be ¼ cup. The SFSP meal pattern charts were most recently updated in a final rule entitled “Modification of the ‘Vegetable Protein Products’ Requirements for the National School Lunch Program, School Breakfast Program, Summer Food Service Program and Child and Adult Care Food Program,” which was published on March 9, 2000 (65 FR 12429). Lastly, we are correcting addresses for several FNS regional offices in various paragraphs of §225.19.

II. Procedural Matters

Executive Order 12866

This final rule has been determined to be not significant for purposes of Executive Order 12866, and therefore has not been reviewed by the Office of Management and Budget.

Public Law 104–4

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Pub. L. 104–4, requires Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of the UMRA, the Food and Nutrition Service generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with Federal mandates that may result in expenditures to State, local, or tribal governments, in the aggregate, or to the private sector, of $100 million or more in any one year. When such a statement is needed for a rule, section 205 of the UMRA generally requires the Food and Nutrition Service to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, more cost-effective or least burdensome alternative that achieves the objectives of the rule.

This rule contains no Federal mandates (under the regulatory provisions of Title II of the UMRA) for State, local and tribal governments or the private sector of $100 million or more in any one year. Thus, this rule is not subject to the requirements of sections 202 and 205 of the UMRA.

Executive Order 12372

The Summer Food Service Program is listed in the Catalog of Federal Domestic Assistance under No. 10.559. For the reasons set forth in the final rule in 7 CFR part 3015, subpart V, and related notices (48 FR 29114 and 49 FR 2276), this program is included in the scope of Executive Order 12372, which requires intergovernmental consultation with State and local officials.

Regulatory Flexibility Act

This final rule has been reviewed with regard to the requirements of the Regulatory Flexibility Act of 1980 (5 U.S.C. 601–612). Samuel Chambers, Jr., Administrator of the Food and Nutrition Service (FNS), has certified that this rule will not have a significant economic impact on a substantial number of small entities. Since the provisions contained in this rule were previously implemented, it will have no impact.

Executive Order 12988

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is intended to have preemptive effect with respect to any State or local laws, regulations or policies which conflict with its provisions or which would otherwise impede its full implementation. This rule is not intended to have retroactive effect unless so specified in the EFFECTIVE DATE section of the preamble of the rule. Prior to any judicial challenge to the provisions of this rule or the applications of its provisions, all applicable administrative procedures must be exhausted. This includes any administrative procedures available through State or local governments. SFSP administrative procedures are set forth at: (1) 7 CFR 225.13, which outlines appeals procedures for use by a sponsor or a food service management company; and (2) 7 CFR parts 3016 and 7 CFR, which address administrative appeal procedures for disputes involving...
procurement by State agencies and sponsors.

Paperwork Reduction Act

This final rule contains information collection requirements in §225.8(d) that have been approved by the Office of Management and Budget on February 28, 2000 (control number 0584–0280) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3507).

List of Subjects in 7 CFR Part 225

Food and Nutrition Service, Food assistance programs, Grant programs—health, Infants and children, Labeling, Reporting and recordkeeping requirements.

Accordingly, the interim rule amending 7 CFR part 225, which was published at 64 FR 72474 on December 28, 1999, is adopted as a final rule with the following changes:

PART 225—SUMMER FOOD SERVICE PROGRAM

1. The authority citation for part 225 continues to read as follows:

Authority: Secs. 9, 13, and 14, National School Lunch Act, as amended (42 U.S.C. 1758, 1761, and 1762a).

2. In §225.8, add new paragraph (d) to read as follows:

§225.8 Records and reports.

(d)(1) By May 1 of each year, State agencies must submit to the appropriate FNSRO a list of potential private nonprofit organization sponsors. The list must include the following information for each applicant sponsor:

(i) Name and address;

(ii) Geographical area(s) proposed to be served;

(iii) Proposed number of sites; and

(iv) Any available details of each proposed site including address, dates of operation, and estimated daily attendance.

(2) State agencies must also notify the appropriate FNSRO within 5 working days after they approve each private nonprofit organization to participate as a SFSP sponsor. When State agencies notify the FNSRO of sponsor approval, they must provide the following information:

(i) Any changes to site locations, dates of operation, and estimated daily attendance that was previously provided;

(ii) The hours and type(s) of approved meal service at each site;

(iii) The type of site approval—open, restricted open, closed enrolled, or camp; and

(iv) Any other important details about each site that would help the FNSRO plan reviews, including whether the site is rural or urban, or vended or self-preparation.

3. In §225.15, revise paragraph (f)(4)(vii) to read as follows:

§225.15 Management responsibilities of sponsors.

* * * * *

(f) * * *

(4) * * *

(vii) A notice placed immediately above the signature block stating that the person signing the application certifies that all information provided is correct, that the household is applying for Federal benefits in the form of free Program meals, that Program officials may verify the information on the application, and that purposely provided untrue or misleading statements may result in prosecution under State or Federal criminal laws; and

* * * * *

4. In §225.16, revise the entry for “Cooked dry beans or peas” in the table under Meat and Meat Alternates (Optional) in paragraph (d)(1) to read as follows:

§225.16 Meal service requirements.

* * * * *

(d) * * *

(1) * * *

<table>
<thead>
<tr>
<th>Food components</th>
<th>Minimum amount</th>

</tr>
<tr>
<td>Cooked dry beans or peas</td>
<td>1/4 cup.</td>
</tr>
<tr>
<td>* * * * * *</td>
<td></td>
</tr>
</tbody>
</table>

5. In §225.19, revise paragraphs (b), (c), (d), (e), (f) and (g) to read as follows:

§225.19 Regional office addresses.

* * * * *

(b) In the States of Delaware, District of Columbia, Maryland, New Jersey, Pennsylvania, Puerto Rico, Virginia, Virgin Islands, and West Virginia: Mid-Atlantic Regional Office, FNS, U.S. Department of Agriculture, Mercer Corporate Park, 300 Corporate Boulevard, Robbinsville, NJ 08691–1598.

(c) In the States of Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee: Southeast Regional Office, FNS, U.S. Department of Agriculture, 61 Forsyth Street, SW, Room 8T36, Atlanta, GA 30303–3415.

(d) In the States of Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin: Midwest Regional Office, FNS, U.S. Department of Agriculture, 77 West Jackson Boulevard, 20th Floor, Chicago, IL 60604–3507.

(e) In the States of Arkansas, Louisiana, New Mexico, Oklahoma and Texas: Southwest Regional Office, FNS, U.S. Department of Agriculture, 1100 Commerce Street, Room 5–C–30, Dallas, TX 75242–9980.

(g) In the States of Alaska, American Samoa, Arizona, California, Guam, Hawaii, Idaho, Nevada, Oregon, the Commonwealth of the Northern Mariana Islands, and Washington: Western Regional Office, FNS, U.S. Department of Agriculture, 550 Kearney Street, Room 400, San Francisco, CA 94108–2518.

George A. Braley,
Acting Administrator.

BILLING CODE 3410–30–P

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 930

[Docket No. FV00–930–4 FIR]

Tart Cherries Grown in the States of Michigan, et al.; Authorization of Japan as an Eligible Export Outlet for Diversion and Exemption Purposes

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: The Department of Agriculture (Department) is adopting, as a final rule, without change, the provisions of an interim final rule which authorizes Japan as an eligible export market under the diversion and exemption provisions of the Federal tart cherry marketing order (order). Previously, shipments to Canada, Mexico, or Japan did not qualify for diversion credit and could not be approved as exempt uses. The Cherry Industry Administrative Board (Board) recommended allowing shipments to Japan to qualify as exempt use shipments and to be eligible for diversion credit. The order regulates the
handling of tart cherries grown in the States of Michigan, New York, Pennsylvania, Oregon, Utah, Washington, and Wisconsin and is administered locally by the Board.

**EFFECTIVE DATE:** January 29, 2001.

**FOR FURTHER INFORMATION CONTACT:** Patricia A. Petrella or Kenneth G. Johnson, Marketing Order Administration Branch, F&V, AMS, USDA, Suite 2A04, Unit 155, 4700 River Road, Riverdale, Maryland 20737, (301) 734–5243; Fax: (301) 734–5275, or George Kelhart, Technical Advisor, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, room 2525–S, P.O. Box 96456, Washington, DC 20090–6456; telephone; (202) 720–2491, Fax: (202) 720–5608.

Small businesses may request information on complying with this regulation by contacting Jay Guerber, Marketing Order Administration Branch, Fruit and Vegetable Programs, AMS, USDA, P.O. Box 96456, room 2525–S, Washington, DC 20090–6456; telephone (202) 720–2491; Fax: (202) 720–5608, or E-mail: jay.guerber@usda.gov.

**SUPPLEMENTARY INFORMATION:** This rule is issued under Marketing Agreement and Order No. 930 (7 CFR part 930) regulating the handling of tart cherries grown in the States of Michigan, New York, Pennsylvania, Oregon, Utah, Washington, and Wisconsin, hereinafter referred to as the “order.” This order is effective under the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601–674), hereinafter referred to as the “Act.”

The Department of Agriculture (Department or USDA) is issuing this rule in conformance with Executive Order 12866. This rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule is not intended to have retroactive effect. This rule will not preempt any State or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Act provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the Act, any handler subject to an order may file with the Secretary a petition stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with law and request a modification of the order or to be exempted therefrom. A handler is provided the opportunity for a hearing on the petition. After the hearing the Secretary would rule on the

The Act provides that the district court of the United States in any district in which the handler is an inhabitant, or has his or her principal place of business, has jurisdiction to review the Secretary’s ruling on the petition, provided an action is filed not later than 20 days after the date of the entry of the ruling.

This rule continues to authorize shipments of tart cherries to Japan to qualify as exempt use shipments and to be eligible for diversion credit. Currently, exports to countries other than Canada or Mexico may receive diversion credit, and may qualify as exempt shipments. Prior to the issuance of the interim final rule published June 2, 2000 (65 FR 35265), Japan was not eligible for diversion and exemption in the past because, according to the Board, tart cherry markets were well established in that country. The Board, at its March 2, 2000, meeting, recommended allowing Japan to become an eligible export outlet for diversion credit and exempt uses in order to stimulate sales to that country. This was because exports to Japan have greatly decreased industry-wide.

The order authorizes the use of volume regulation. In years when volume regulation is implemented to stabilize supplies, a certain percentage of the cherry crop is required to be set aside as restricted tonnage, and the balance may be marketed freely as free tonnage. The restricted tonnage is required to be maintained in handler-owned inventory reserve pools. Handlers in volume regulated States may fulfill their restricted tonnage requirements with diversion credits earned by diverting cherries or cherry products. Handlers are permitted to divert (at plant or with grower-diversion certificates from growers choosing not to deliver their crop) as much of their restricted percentage (reserve pool) requirements as they deem appropriate. Handlers also may divert cherries by using cherries or cherry products for exempt purposes, including the development of export markets. Presently, these markets do not include Canada and Mexico.

Section 920.62 of the order (Exemptions) provides that cherries which are diverted in accordance with § 930.59, which are used for new product and new market development, which are used for experimental purposes, or which are used for any other purposes designated by the Board, including cherries processed into products for markets for which less than 5 percent of the 5-year average production of cherries was utilized, may be exempt from the assessment, quality control, volume regulation, and reserve provisions of the order.

Currently, § 930.162 of the rules and regulations under the order authorizes the sale of cherries and cherry products, including the development of sales for new and different tart cherry products or the expansion of sales for existing tart cherry products, to countries other than Canada and Mexico.

When the Board initially recommended regulations for exempt uses and handler diversion in 1997–98, exports to Japan were averaging about 3.0 million pounds per season. The industry considered Japan, as well as Canada and Mexico, to be a premium markets for tart cherries, not outlets for which exemptions and diversion credit should be given. With regard to Canada and Mexico, the industry also was concerned about transshipments of lower-priced cherries because of their close proximity to the primary domestic market. In 1996–99, sales to Japan fell to 1.6 million pounds, and in 1999–00 sales further dropped to 943,000 pounds. The Board, therefore, recommended that exports to Japan be eligible for diversion and exemption. This, in the Board’s opinion, would provide an incentive for handlers throughout the industry to make shipments to that country and stimulate activity.

The Regulatory Flexibility Act and Effects on Small Businesses

The Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities and has prepared this final regulatory flexibility analysis. The Regulatory Flexibility Act (RFA) will allow AMS to certify that regulations do not have a significant economic impact on a substantial number of small entities. However, as a matter of general policy, AMS’ Fruit and Vegetable Programs (Programs) no longer opt for such certification, but rather perform regulatory flexibility analyses for any rulemaking that would generate the interest of a significant number of small entities. Performing such analyses shifts the Programs’ efforts from determining whether regulatory flexibility analyses are required to the consideration of regulatory options and economic or regulatory impacts.

The purpose of the RFA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders instituted pursuant to the Act, and rules thereunder, are unique in that they are brought about through
group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatibility.

There are approximately 40 handlers of tart cherries who are subject to regulation under the order and approximately 900 producers of tart cherries in the regulated area. Small agricultural service firms, which include handlers, have been defined by the Small Business Administration (13 CFR 121.201) as those having annual receipts of less than $5,000,000, and small agricultural producers are defined as those having annual receipts of less than $500,000.

The principal demand for tart cherries is in the form of processed products. Tart cherries are dried, frozen, canned, juiced, and pureed. During the period 1995/96 through 1999/00, approximately 90 percent of the U.S. tart cherry crop, or 280.3 million pounds, was processed annually. Of the 280.3 million pounds of tart cherries processed, 29 percent were frozen, 29 percent canned and 8 percent utilized for juice. Exports to Japan in 1999–00 were 943,000 pounds.

This rule continues to authorize tart cherry shipments to Japan to qualify as exempt use shipments and to be eligible for diversion credit. The objective of this action is to stimulate and expand sales of tart cherries.

This rule is expected to benefit growers and handlers by assisting growers market a greater proportion of their crop to handlers having access to export markets. Handlers, instead of diverting at-plant or in-orchard or placing product in reserves, could ship product to Japan and receive diversion certificates that could be used to offset any restricted percentage obligations. Handlers also would benefit from this action as they would be able to process greater amounts of tart cherries, as a result of receiving more product from growers for shipment to Japan, through their facilities, thus spreading their operation costs and increasing returns to growers.

One alternative to this action considered by the Board was to disallow exemptions and diversion credit for shipments to Japan. However, this was not expected to be favorable to cherry growers and handlers throughout the production area because it might cause a further decline in the Japanese market, as occurred in 1999–00.

The Board's meetings were widely publicized throughout the tart cherry industry and all interested persons were invited to attend them and participate in Board deliberations. Like all Board meetings, the March 2000 meeting was a public meeting and all entities, both large and small, were able to express their views on these issues. The Board itself is composed of 18 members, of which 17 members are growers and handlers and one represents the public. Also, the Board has a number of appointed committees to review certain issues and make recommendations.

This rule will not impose any additional recordkeeping requirements on either small or large tart cherry handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sectors. In addition, the Department has not identified any relevant Federal rules which duplicate, overlap or conflict with this rule.

In compliance with Office of Management and Budget (OMB) regulations (5 CFR part 1320) which implement the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the information and recordkeeping requirements imposed by this order have been previously approved by OMB and assigned OMB Number 0581–0177.

An interim final rule concerning this action was published in the Federal Register on June 2, 2000 (65 FR 35265). Copies of the rule were mailed by the Board's staff to all Board members and cherry handlers. In addition, the rule was made available through the Internet by the Office of the Federal Register. That rule provided a 60-day comment period which ended August 1, 2000. Two comments were received. One comment was received from the Oregon Farm Bureau and the other was received from a tart cherry grower and handler in Oregon.

The two commenters opposed making Japan an eligible export market under the diversion and exemption provisions of the order. Prior to the issuance of the interim final rule, shipments to Canada, Mexico, or Japan did not qualify for diversion credit and could not be approved as exempt uses. Japan was considered a premium market similar to the domestic market. The markets in Canada and Mexico also were considered similar to the domestic market. This was because these markets were in close proximity to the United States and the industry was concerned about transshipments of lower-priced cherries if shipments to these markets were eligible for diversion credit in meeting volume control obligations.

Under the volume control mechanism, the industry has established a price system with diversion credit shipments commanding lower prices than those shipped domestically. Handlers purchase the free percentage portion of the grower deliveries which can be marketed, and pay low prices for the excess cherries which are disposed of under the diversion and exemption provisions of the order. The cherries that are not disposed of in this manner are held in reserve. Some States in the production area, like Oregon, are not subject to volume regulation and handlers purchase all of the marketable production delivered by their growers. Generally, higher quality and condition cherries return more money to the grower.

Total U.S. exports to Japan have fallen from 3.2 million pounds in 1996–97 to 1.6 million pounds in 1998–99. During the 1999–00 crop year, total exports to Japan fell further to 943,000 pounds. This represents a 70 percent decrease in exports from 1996–97. Under the interim final rule, shipments to Japan qualify as exempt use shipments and are eligible for diversion credit. This is expected to stimulate shipments to Japan industry-wide.

Both commenters claim that Japan is a well-established and premium market which should not be eligible for diversion credit. The buyers in Japan are willing to pay a premium for cherries of the quality and condition they desire. One of the commenters, stated that its customers consistently pay top-dollar, and are rewarded with the very best his firm can offer. This commenter indicated that his firm has not experienced a comparable sense of “premium” in its exports to Canada. Nonetheless, the industry concerns on the transshipment of lower-priced cherries to the United States weigh heavily in considering Canada a primary market under the order. Oregon comprised about 1.4 percent of the domestic production during the last three shipping seasons (1997–1999).

Both commenters agree that exports to Japan have fluctuated over the years, but contend that the fluctuations are a function of the size of the Oregon crop and not a softening of the market. The goal of the Board in recommending this action was to stimulate shipments to Japan by providing growers and handlers from other parts of the production area with a means of competing in Japan. The intent of the action is not to negatively impact the Oregon growers and handlers shipping to Japanese markets, but to expand markets in Japan in the interest of the entire U.S. tart cherry industry.

Although the action is intended to enable firms from the other parts of the production area to gain a foothold in the
price conscious markets in Japan, it is not expected to prevent the firms in Oregon from supplying the needs of their quality conscious customers, willing to pay premium prices.

Shipments to markets under the diversion and exemption provisions of the order can be sold at lower prices than those shipped domestically because growers are paid less for the tart cherries subject to the diversion and exemption provisions. Because cherries produced in Oregon are not subject to volume regulation under the order, tart cherries are not subject to the diversion credit and exemption provisions of the order, and growers are paid for all of the cherries delivered.

The primary purpose of the order is to strengthen marketing conditions in the primary domestic market through volume regulation. In implementing volume controls and the related procedures, the Department’s goal is to apply the requirements uniformly in an equitable manner as possible, and to assure that any regulatory action is in the interest of the entire industry covered under the order, not just one segment or part of the industry.

Authorizing Japan as an eligible export market under the diversion and exemption provisions of the order is expected to help the industry further develop the Japanese market. This is in the long term interest of all growers and handlers of tart cherries covered under the order.

In view of this, these comments are denied.

A small business guide on complying with fruit, vegetable and specialty crop marketing agreements and orders may be viewed at: http://www.ams.usda.gov/fv/moab.html. Any questions about the compliance guide should be sent to Jay Guerber at the previously mentioned address in the FOR FURTHER INFORMATION CONTACT section.

After consideration of all relevant material presented, including the information and recommendation submitted by the Board and other available information, it is found that finalizing this interim final rule, without modifications, as published in the Federal Register (65 FR 35265), will tend to effectuate the declared policy of the Act.

List of Subjects in 7 CFR Part 930

Marketing agreements, Reporting and recordkeeping requirements, Tart cherries.

For the reasons set forth in the preamble, 7 CFR part 930 is amended as follows:

PART 930—TART CHERRIES GROWN IN THE STATES OF MICHIGAN, NEW YORK, PENNSYLVANIA, OREGON, UTAH, WASHINGTON, AND WISCONSIN

Accordingly, the interim final rule amending 7 CFR part 930 which was published at 65 FR 35265 on June 2, 2000, is adopted as a final rule without change.

Robert C. Keeney,
Deputy Administrator, Fruit and Vegetable Programs.

[INS No. 2004–99]

RIN 1115–AF53

Clarification of Parole Authority

AGENCY: Immigration and Naturalization Service, Justice.

ACTION: Interim rule with request for comments.

SUMMARY: This rule amends the Immigration and Naturalization Service (Service) regulations concerning the authority to grant the parole of aliens from Service custody by specifically identifying the scope of that authority. This action is being taken to clarify which officials are authorized by the Attorney General, acting through the Commissioner, to grant parole from Service custody.

DATES: Effective Date: This interim rule is effective January 29, 2001.

Comment Date: Written comments must be submitted on or before February 26, 2001.

ADDRESSES: Please submit written comments, in triplicate, to the Director, Policy Directives and Instructions Branch, Immigration and Naturalization Service, 425 I Street NW, Room 4034, Washington, DC 20536. To ensure proper handling, please reference INS No. 2004–99 on your correspondence. Comments are available for public inspection at the above address by calling (202) 514–3048 to arrange for an appointment.

FOR FURTHER INFORMATION CONTACT: Yvette M. LaGonterie, Office of International Affairs, Parole Branch, 111 Massachusetts Avenue NW., ULLICO Building, third floor, Washington, DC 20001, telephone (202) 305–2670.

SUPPLEMENTARY INFORMATION:

How Does This Rule Amend the Existing Regulation?

Section 212(d)(5)(A) of the Immigration and Nationality Act (Act) gives the Attorney General discretion to parole into the United States, temporarily, for urgent humanitarian reasons or significant public benefit, any alien applying for admission to the United States. While the power to delegate this authority clearly flows from the Attorney General through the Commissioner to her designees, § 212.5 appears to delegate this parole authority solely to the district director (DD) and the chief patrol agent (CPA). This rule amends § 212.5 to bring it into conformity with the delegation of authority provisions contained in §§ 2.1 and 103.1. This rule adds a new paragraph (a) to § 212.5 which specifically states that the scope of the authority to grant parole flows from the Commissioner through her designees, so that the Deputy Commissioner, the Executive Associate Commissioner (EAC) for Field Operations, regional directors (RD) and other designees have the power to grant parole.

Why is This Rule Necessary?

This rule is intended to clarify the existing authority of Service officials to grant parole. Some have interpreted § 212.5 to mean that the authority to grant parole is limited to the DD and the CPA. This interpretation is erroneous. See Matter of ACCARDI, 14 I. & N. Dec. 367 (BIA 1973). Under section 212(d)(5) of the Act, parole authority is vested with the Attorney General. It is well established under both precedent decisions and § 2.1 that the Attorney General has delegated authority to the Commissioner to implement and enforce the provisions of the Act, but that the Attorney General retains that authority. Section 103.1 further establishes the power of the Commissioner to delegate her authority to subordinate officials, so that the authority to enforce the Act flows from the Commissioner to her designees, but without divesting the Commissioner or her subordinates of the delegated authority. The specific reference to the DD and the CPA in § 212.5 presumes a delegation of authority from the Commissioner through the chain of command set forth in § 103.1. To clarify this delegation of authority and to avoid an erroneous interpretation, § 212.5 will be amended to specifically recognize that authority. Therefore, the authority to parole aliens under § 212.5 is
clarified to include the Commissioner and officers within the Commissioner’s chain of command, including the Deputy Commissioner, the EAC for Field Operations, the RD, the DD and the CPA.

Exceptions to Notice and Comment

The Service’s implementation of this rule as an interim rule with provisions for post-promulgation public comment is based upon the exceptions to notice and comment found at 5 U.S.C. 553(a)(2) and 553(b)(A) for the following reason: this rule relates to agency management and the rules of agency organization. It does not create a new authority, but merely clarifies the delegation of an existing authority.

Regulatory Flexibility Act

The Commission of the Immigration and Naturalization Service, in accordance with 5 U.S.C. 605(b), has reviewed this regulation and, by approving it, certifies that this rule will not have a significant economic impact on a substantial number of small entities because this rule merely provides parole of aliens from Service custody. The aliens in Service custody are not considered small entities as that term is defined in 5 U.S.C. 601(6).

Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local and tribal governments in the aggregate, or by the private sector, of $100 million or more in any 1 year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Small Business Regulatory Enforcement Fairness Act of 1996

This rule is not a major rule as defined by section 804 of the Small Business Regulatory Enforcement Act of 1996. This rule will not result in an annual effect on the economy of $100 million or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based companies to compete with foreign-based companies in domestic and export markets.

Executive Order 12866

This rule is not considered by the Department of Justice, Immigration and Naturalization Service, to be a “significant regulatory action” under Executive Order 12866, section 3(f), Regulatory Planning and Review, and the Office of Management and Budget has waived its review process under section 6(a)(3)(A).

Executive Order 13132

This rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, it is determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

Executive Order 12988 Civil Justice Reform

This rule meets the applicable standards provided in section 3(a) and 3(b)(2) of Executive Order 12988.

List of Subjects

8 CFR Part 103
Authority delegations (Government agencies), Freedom of information, Privacy, Reporting and recordkeeping requirements, Surety bonds.

8 CFR Part 208

Aliens.

8 CFR Part 245a
Aliens, Immigration, Reporting and recordkeeping requirements.

Accordingly, chapter 1 of title 8 of the Code of Federal Regulations is amended as follows:

PART 103—POWERS AND DUTIES OF SERVICE OFFICERS; AVAILABILITY OF SERVICE RECORDS

1. The authority citation for part 103 continues to read as follows:

§ 103.12 [Amended]
2. Section 103.12 is amended by revising the reference to “212.5(a)(3)” to read “212.5(b)(3)” in paragraph (a)(3)(i).

PART 208—PROCEDURES FOR ASYLUM AND WITHHOLDING OF REMOVAL

3. The authority citation for part 208 continues to read as follows:

§ 208.8 [Amended]
4. Section 208.8 is amended by revising the reference to “212.5(e)” to read “212.5(f)” in paragraph (a) and (b).

PART 210—SPECIAL AGRICULTURAL WORKERS

5. The authority citation for part 210 continues to read as follows:

§ 210.4 [Amended]
6. Section 210.4 is amended by revising the reference to “212.5(e)” to read “212.5(f)” in the last sentence of paragraph (b)(2).

PART 212—DOCUMENTARY REQUIREMENTS; NONIMMIGRANTS; WAIVERS; ADMISSION OF CERTAIN INADMISSIBLE ALIENS; PAROLE

7. The authority citation for part 212 continues to read as follows:

§ 212.5 [Amended]
8. Section 212.5 is amended by:

a. Redesignating paragraphs (a) through (g) as paragraphs (b) through (h) respectively;
b. Adding a new paragraph (a);
c. Revising the reference to “[a](3)(i)” to read “(b)(3)(i)” in the introductory text in newly redesignated paragraph (b)(3);
d. Revising the reference to “paragraph (a)” to read “paragraph (b)” in the first sentence of newly redesignated paragraph (b)(3);
e. Revising the reference to “paragraph (c)” to read “paragraph (d)”
in the first sentence of newly redesignated paragraph (c);  

f. Revising the reference to “paragraph (e)” to read “paragraph (f)” in the second sentence of newly redesignated paragraph (c);  

g. Revising the reference to “paragraph (a) or (b)” to read “paragraph (b) or (c)” in the first sentence of the introductory text of newly redesignated paragraph (d);  

h. Revising the reference to “(d)(2)” to read “(e)(2)” in newly redesignated paragraph (e)(1);  

i. Revising the reference to “(d)(1)” to read “(e)(1)” in newly redesignated paragraph (e)(2)(i);  

j. Revising the reference to “212.5(d)(2)(i)” to read “212.5(e)(2)(i)” in the last sentence of newly redesignated paragraph (e)(2)(i);  

k. Revising the reference to “212.5(d)(5)(A)” to read “212.5(e)(5)(A)” of the Act shall be exercised by the district director or chief patrol agent, subject to the regional director, any of whom in the exercise of discretion may invoke this authority under section 212(d)(5)(A) of the Act.  

§ 212.5 Parole of aliens into the United States.  

(a) The authority of the Commissioner to continue an alien in custody or grant parole under section 212(d)(5)(A) of the Act shall be exercised by the district director or chief patrol agent, subject to the parole and detention authority of the Commissioner or her designees, which include the Deputy Commissioner, the Executive Associate Commissioner for Field Operations, and the regional director, any of whom in the exercise of discretion may invoke this authority under section 212(d)(5)(A) of the Act.  

PART 235—INSPECTION OF PERSONS APPLYING FOR ADMISSION  

9. The authority citation for part 235 continues to read as follows:  

§ 235.3 [Amended]  

10. Section 235.3 is amended by revising the reference to “212.5(a)” to read “212.5(b)” in the second sentence of paragraph (c).  

§ 235.4 [Amended]  

11. Section 235.4 is amended by revising the reference to “212.5(a)” to read “212.5(b)” in the last sentence.  

PART 241—APPREHENSION AND DETENTION OF ALIENS ORDERED REMOVED  

12. The authority citation for part 241 continues to read as follows:  

§ 241.33 [Amended]  

13. Section 241.33 is amended by revising the reference to “212.5(a)” to read “212.5(b)” in the introductory text of paragraph (a).  

PART 245a—ADJUSTMENT OF STATUS TO THAT OF PERSONS ADMITTED FOR LAWFUL TEMPORARY OR PERMANENT RESIDENT STATUS UNDER SECTION 245A OF THE IMMIGRATION AND NATIONAL ACTIVITY  

14. The authority citation for part 245a continues to read as follows:  

Authority: 8 U.S.C. 1101, 1103, 1255a and 1255a note.  

§ 245a.2 [Amended]  

15. Section 245a.2 is amended by revising the reference to “212.5(e)” to read “212.5(f)” in paragraph (m)(1), and in the last sentence of paragraph (n)(2)(i).  

§ 245a.4 [Amended]  

16. Section 245a.4 is amended by revising the reference to “212.5(e)” to read “212.5(f)” in paragraph (b)(13)(i), and in the last sentence of paragraph (b)(14)(i)(A).

INS No. 1972–99  
RIN 1115–AF01  

Temporary Protected Status: Amendments to the Requirements for Employment Authorization Fee, and Other Technical Amendments  

AGENCY: Immigration and Naturalization Service, Justice.  

ACTION: Final rule.  

SUMMARY: This rule adopts without change an interim rule published by the Immigration and Naturalization Service (Service) in the Federal Register on February 1, 1999. The interim rule amended the Service regulations by removing outdated language requiring that only certain El Salvadorans must pay a fee for Temporary Protected Status (TPS)-related employment authorization documents (EADs). Removing the language was necessary to make Service regulations conform to the requirement that instructs all applicants for TPS who desire employment to pay the fee.  

DATES: This final rule is effective January 29, 2001.  

FOR FURTHER INFORMATION CONTACT: Michael Valverde, Adjudications Officer, Office of Adjudications, Room 3040, 425 I Street NW., Washington, DC 20536, telephone: (202) 514–4754.  

SUPPLEMENTARY INFORMATION:  

What Did the February 1, 1999, Interim Rule Change?  

On February 1, 1999, the Service published an interim rule in the Federal Register at 64 FR 4780. The interim rule:  

(1) Amended § 244.6 to remove outdated language requiring that only certain El Salvadorans must pay a fee for TPS-related applications for EADs. Section 244.6 previously stated that “* * * the fee for Form I–765 will be charged only for those aliens who are nationals of El Salvador, and are between the ages of 14 and 65 (inclusive), and are requesting work authorization.” This language pertained to the statutory designation of El Salvador for TPS (under section 303 of the Immigration Act of 1990) that expired June 30, 1992. The El Salvador specific fee language was superseded by the fee requirements contained on the instructions to the Form I–765, Application for Employment Authorization. The Form I–765 instructs applicants filing for initial TPS to pay the fee if they wish to receive employment authorization. The Service generally charges fees for persons who apply for TPS on Form I–821, Application for Temporary Protected Status, and who want employment authorization regardless of nationality. Applicants also have the option of requesting a fee waiver for one or both of these fees in accordance with § 244.20. The Service does not charge a fee when a TPS applicant files the Form I–765 to comply with Service data collection purposes only and does not wish to receive employment authorization.  

(2) Amended 8 CFR part 244 to remove the word “district” when used in a reference to a “district director.” This change provides the Service with the flexibility to determine where an applicant should submit an application for TPS and which Service personnel will adjudicate the application.  

(3) Amended § 244.12 to allow the Service to issue EADs which are valid for a period of up to 18 months to be commensurate with the entire designation period of TPS. Under
section 244(b)(2) of the Act, the Attorney General can authorize an initial designation period for TPS from 6 to 18 months. Previously, § 244.12 limited the validity period of TPS-related EADs to 12 months.

Public Comment

The comment period expired April 2, 1999. The Service did not receive any comments regarding the promulgation of the interim rule. Since there were no comments relating to the interim rule, the Service is adopting the interim rule as a final rule without any changes.

Regulatory Flexibility Act

In accordance with 5 U.S.C. 605(b), the Commissioner certifies that this final rule does not have a significant economic impact on a substantial number of small entities. The factual basis for this certification is that this rule does not make any changes to the regulations. It merely adopts the interim rule, published on February 1, 1999, as final without change.

Unfunded Mandates Reform Act of 1995

This rule will not result in the expenditure by State, local, or tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year, and it will not significantly or uniquely affect small governments. Therefore, no actions were deemed necessary under the provisions of the Unfunded Mandates Reform Act of 1995.

Small Business Regulatory Enforcement Fairness Act of 1996

This rule is not a major rule as defined by section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996. This rule will not result in an annual effect on the economy of $100 million or more; a major increase in costs or prices; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based companies to compete with foreign-based companies in domestic and export markets.

Executive Order 12866

This rule is not considered by the Department of Justice, Immigration and Naturalization Service, to be a “significant regulatory action” under Executive Order 12866, section 3(f), Regulatory Planning and Review, and the Office of Management and Budget has waived its review process under section 6(a)(3)(A).

Executive Order 13132

This regulation will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, the Immigration and Naturalization Service has determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

Executive Order 12988 Civil Justice Reform

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988.

List of Subjects in 8 CFR Part 244

Aliens, Reporting and recordkeeping requirements.

Accordingly, the interim rule amending 8 CFR part 244, which was published in the Federal Register at 64 FR 4780 on February 1, 1999, is adopted as a final rule without change.

Mary Ann Wyrsch,
Acting Commissioner, Immigration and Naturalization Service.

14 CFR Part 25

[Docket No. NM180; Special Conditions No. 25–170–SC]

Special Conditions: Cessna Model 560, Citation V, Series Airplanes; High-Intensity Radiated Fields (HIRF)

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final special conditions; request for comments.

SUMMARY: These special conditions are issued for Cessna Model 560, Citation V, series airplanes modified by Honeywell International Inc. These modified airplanes will have a novel and unusual design feature when compared to the state of technology envisioned in the airworthiness standards for transport category airplanes. The modification incorporates the installation of a new integrated electronic cockpit display system. The cockpit display system will utilize electrical and electronic systems that perform critical functions. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for the protection of this system from the effects of high-intensity-radiated fields (HIRF). These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: The effective date of these special conditions is December 7, 2000. Comments must be received on or before January 29, 2001.

ADDRESSES: Comments on these special conditions may be mailed in duplicate to: Federal Aviation Administration, Transport Airplane Directorate, Attention: Rules Docket (ANM–114), Docket No. NM180, 1601 Lind Avenue SW., Renton, Washington 98055–4056; or delivered in duplicate to the Transport Airplane Directorate at the above address. All comments must be marked: Docket No. NM180. Comments may be inspected in the Rules Docket weekdays, except Federal holidays, between 7:30 a.m. and 4:00 p.m.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA has determined that good cause exists for making these special conditions effective upon issuance; however, interested persons are invited to submit such written data, views, or arguments, as they may desire. Communications should identify the regulatory docket number and be submitted in duplicate to the address specified above. The Administrator will consider all communications received on or before the closing date for comments. These special conditions may be changed in light of the comments received. All comments received will be available in the Rules Docket for examination by interested persons, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerning this rulemaking will be filed in the docket. Commenters wishing the FAA to acknowledge receipt of their comments should submit such written data, views or arguments as they may desire. The docket Invited to the public comment process for this rulemaking contains general information on how to obtain public comment materials.
the following statement is made: “Comments to Docket No. NM180.” The postcard will be date stamped and returned to the commenter.

Background

On February 25, 2000, Honeywell International Inc., 21111 N. 19th Avenue, Phoenix, AZ 85027, applied for a Supplemental Type Certificate (STC) to modify the Cessna Model 560, Citation V, airplane approved under Type Certificate No. A22CE. The subject Cessna Model 560, Citation V, airplane is a straight wing, small transport category airplane. These airplanes, serial numbers 560–001 through 560–0259, are powered by two Pratt & Whitney JT15D–51 turbofans, with a maximum takeoff weight of 15,900 pounds. Serial numbers 560–0260 through 560–0538 are powered by two Pratt & Whitney JT15D–5D turbofans, with a maximum takeoff weight of 16,300 pounds. This series of airplanes operates with a 2-pilot crew and can hold up to 13 passengers.

The Model 560, Citation V, will incorporate integrated electronic PRIMUS EPIC Cockpit Display Systems (CDS), manufactured by Honeywell International Inc., which display altitude and heading information. The PRIMUS EPIC CDS performs a critical function associated with the display of altitude and heading information to the pilot, and must be designed and installed to ensure that its operation is not adversely affected by high intensity radiated fields (HIRF). This critical function can be susceptible to disruption of both command and response signals as a result of electrical and magnetic interference caused by HIRF external to the airplane. This disruption of signals could result in loss of critical flight displays and annunciators, or could present misleading information to the pilot.

Type Certification Basis

Under the provisions of 14 CFR 21.101, Honeywell International Inc. must show that the Cessna Model 560, Citation V, series airplanes, as changed, continue to meet the applicable provisions of the regulations incorporated by reference in Type Certificate No. A22CE, or the applicable regulations in effect on the date of application for the change. The regulations incorporated by reference in the type certificate are commonly referred to as the “original type certification basis.” The regulations included in the certification basis for the Cessna Model 560, Citation V, series airplanes include Title 14, Code of Federal Regulations (14 CFR) part 25, as amended by Amendments 25–1 through 25–8, plus additional requirements listed in the type certificate data sheet that are not relevant to these special conditions.

If the Administrator finds that the applicable airworthiness regulations (i.e., part 25, as amended) do not contain adequate or appropriate safety standards for the Cessna Model 560, Citation V, series airplanes because of a novel or unusual design feature, special conditions are prescribed under the provisions of §21.10.

In addition to the applicable airworthiness regulations and special conditions, the Cessna Model 560, Citation V, series airplanes must comply with the fuel vent and exhaust emission requirements of part 34 and the noise certification requirements of part 36.

Special conditions, as appropriate, are issued in accordance with §11.49, as required by §§11.28 and 11.29, and become part of the airplane’s type certification basis in accordance with §21.101(b)(2).

Special conditions are initially applicable to the model for which they are issued. Should the applicant apply for a supplemental type certificate to modify any other model included on the same type certificate to incorporate the same novel or unusual design features, these special conditions would also apply to the other model under the provisions of §21.101(a)(1).

Novel or Unusual Design Features

As stated earlier, the Cessna Model 560, Citation V, series airplanes modified by Honeywell International Inc. will incorporate the PRIMUS EPIC CDS, which performs critical functions. This system contains electronic equipment for which the current airworthiness standards of part 25 do not contain adequate or appropriate safety standards for the protection of this equipment from the adverse effects of HIRF. The CDS may be vulnerable to HIRF external to the airplane. Accordingly, this system is considered to be a novel or unusual design feature.

Discussion

There is no specific regulation that addresses the requirements for protection of electrical and electronic systems from HIRF. Increased power levels from ground-based radio transmitters and the growing use of sensitive electrical and electronic systems to command and control airplanes have made it necessary to provide adequate protection.

To ensure that a level of safety is achieved that is equivalent to that intended by the regulations incorporated by reference, special conditions are needed for the Cessna Model 560, Citation V, airplanes modified to include the PRIMUS EPIC CDS. These special conditions will require that this system, which performs critical functions, be designed and installed to preclude component damage and interruption of function due to both the direct and indirect effects of HIRF.

High-Intensity Radiated Fields (HIRF)

With the trend toward increased power levels from ground-based transmitters, plus the advent of space and satellite communications coupled with electronic command and control of the airplane, the immunity of critical digital avionics systems to HIRF must be established.

It is not possible to precisely define the HIRF to which the airplane will be exposed in service. There is also uncertainty concerning the effectiveness of airframe shielding for HIRF. Furthermore, coupling of electromagnetic energy to cockpit-installed equipment through the cockpit window apertures is undefined. Based on surveys and analysis of existing HIRF emitters, an adequate level of protection exists when compliance with the HIRF protection special condition is shown with either paragraph 1 OR 2 below:

1. A minimum threat of 100 volts rms per meter electric field strength from 10 kHz to 18 GHz.

   a. The threat must be applied to the system elements and their associated wiring harnesses without the benefit of airframe shielding.

   b. Demonstration of this level of protection is established through system tests and analysis.

2. A threat external to the airframe of the following field strengths for the frequency ranges indicated. Both peak and average field strength components from the Table are to be demonstrated.

<table>
<thead>
<tr>
<th>Frequency</th>
<th>Field strength (volts per meter)</th>

<td>8 GHz–12 GHz</td>
<td>3000</td>
</tr>
</tbody>
</table>
The field strengths are expressed in terms of peak of the root-mean-square (rms) over the complete modulation period.

The threat levels identified above are the result of a FAA review of existing studies on the subject of HIRF, in light of the ongoing work of the Electromagnetic Effects Harmonization Working Group of the Aviation Rulemaking Advisory Committee.

Applicability
As discussed above, these special conditions are applicable to Cessna Model 560, Citation V, series airplanes modified by Honeywell International Inc. to include the PRIMUS EPIC CDS. Should Honeywell International Inc. apply at a later date for a supplemental type certificate to modify any other model included on Type Certificate A22CE to incorporate the same novel or unusual design features, these special conditions would apply to that model as well under the provisions of § 21.101(a)(1).

Conclusion
This action affects only certain novel or unusual design features on the Cessna Model 560, Citation V, series airplanes modified by Honeywell International Inc. It is not a rule of general applicability and affects only the applicant who applied to the FAA for approval of these features on the airplanes.

The substance of the special conditions has been subjected to the notice and comment period in several prior instances and has been derived without substantive change from those previously issued. It is unlikely that prior public comment would result in a significant change from the substance contained herein. For this reason, and because a delay would significantly affect the certification of the airplane, which is imminent, the FAA has determined that prior public notice and comment are unnecessary and impracticable, and good cause exists for adopting these special conditions upon issuance. The FAA is requesting comments to allow interested persons to submit views that may not have been submitted in response to the prior opportunities for comment described above.

List of Subjects in 14 CFR Part 25
Aircraft, Aviation safety, Reporting and recordkeeping requirements.
Airbus AOT A330±71±3012.

The modification involves installing bolts and nuts made of MP159 material, to replace nuts and bolts made of the INCO718 material previously used. The Pratt & Whitney service bulletin, described previously, describes instructions for installing these parts, as referenced by Airbus Service Bulletin A330±71±3012.

Editorial Changes

Certain typographical errors were discovered in the version of AD 2000±25±53 that was sent previously to U.S. owners and operators of Airbus Model A320 series airplanes. Specifically, there were two notes identified as Note “2” and two notes identified as Note “3.” The notes have been correctly identified in this AD.

Interim Action

This is considered to be interim action. The manufacturer reports that further analysis is required to identify the root cause of the barrel nut failure. Continued inspections will provide better insight into the nature, cause, and prevalence of the cracking. If further action is identified to address the unsafe condition, the FAA may consider further rulemaking.

Determination of Rule’s Effective Date

Since it was found that immediate corrective action was required, notice and opportunity for prior public comment thereon were impracticable and contrary to the public interest, and good cause existed to make the AD effective immediately by individual notices issued on December 9, 2000, to all known U.S. owners and operators of Airbus Model A330 series airplanes. These conditions still exist, and the AD is hereby published in the Federal Register as an amendment to section 39.13 of the Federal Aviation Regulations (14 CFR 39.13) to make it effective as to all persons.

Comments Invited

Although this action is in the form of a final rule that involves requirements affecting flight safety and, thus, was not preceded by notice and an opportunity for public comment, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified under the caption ADDRESSES. All communications received on or before the closing date for comments will be considered, and the rule may be amended in light of the comments received. Factual information that supports the commenter’s ideas and suggestions is extremely helpful in evaluating the effectiveness of the AD action and determining whether additional rulemaking action would be needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available both before and after the closing date for comments, in the Rules Docket for examination by
§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

Applicability: Model A330 series airplanes equipped with Pratt & Whitney 4000 series engines, certificated in any category; fitted with engine aft mount nuts and bolts installed in accordance with Airbus Modification 46948 (installed on-in-service airplanes per Airbus Service Bulletin A330±71±3012).

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD, and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To detect and correct cracking of the aft engine mount nut, which could result in reduced structural integrity of the engine-to- pylon aft mount assembly, or, in the case of multiple cracked nuts, possible loss of an engine, accomplish the following:

Inspection

(a) Before the next flight, perform either a detailed visual or borescopic inspection to detect cracking or other damage of all 4 barrel nuts of each engine aft mount, in accordance with paragraph 4.2.1 of Airbus All Operators Telex (AOT) A330±71A3014, dated December 8, 2000. This inspection should be accomplished before further flight, replace nuts and their associated bolts, as applicable, in accordance with paragraph 4.2.2 of the AOT. Repeat the inspection thereafter at least every 50 flight cycles.

Note 2: For the purposes of this AD, a detailed visual inspection is defined as: "An intensive visual examination of a specific structural area, system, installation, or assembly to detect damage, failure, or irregularity. Available lighting is normally supplemented with a direct source of good lighting at intensity deemed appropriate by the inspector. Inspection aids such as mirror, magnifying lenses, etc., may be used. Surface cleaning and elaborate access procedures may be required."

Note 3: Airbus AOT A330±71A3014, dated December 8, 2000, refers to Pratt & Whitney Service Bulletin PW4G±100±71±16, Revision 1, dated September 15, 1999, as an additional source of service information for replacing the nuts and bolts.

Alternative Methods of Compliance

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM±116, Transport Airplane Directorate, FAA. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM±116.

Note 4: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM±116.

Special Flight Permits

(c) Special flight permits may be issued in accordance with sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(d) The actions shall be done in accordance with Airbus All Operators Telex A330±71A3014, dated December 8, 2000. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 5: The subject of this AD is addressed in French telegraphic airworthiness directive T2000±523±134(B), dated December 8, 2000.

Effective Date

(e) This amendment becomes effective on January 2, 2001, to all persons except those persons to whom it was made immediately effective by emergency AD 2000±25±53, issued December 9, 2000, which contained the requirements of this amendment.

Issued in Renton, Washington, on December 18, 2000.

Dorenda D. Baker,
Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910±13±P
DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

RIN 2120–AA64

Airworthiness Directives; Airbus Model A300 B2 and B4 Series Airplanes, and Model A300 B4–600, A300 B4–600R, and A300 F4–600R (A300–600) Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes an existing airworthiness directive (AD), applicable to certain Airbus Model A300 B2 and B4 and A300–600 series airplanes, that currently requires wiring modifications to the engine and auxiliary power unit (APU) fire detection system. This amendment requires new wiring modifications for the engine and APU fire detection system. This amendment is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by this AD are intended to prevent the fire warning from terminating prematurely, which could result in an unnoticed, uncontained engine/APU fire.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of February 1, 2001.

ADDRESSES: The service information referenced in this AD may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

SUPPLEMENTAL INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) by superseding AD 99–27–10, amendment 39–11491 (65 FR 204, January 4, 2000), which is applicable to certain Airbus Model A310 and A300–600 series airplanes, was published in the Federal Register on August 2, 2000 (65 FR 47356). The action proposed to require new wiring modifications to the engine and auxiliary power unit (APU) fire detection system.

Clarification of Model Designation

Since the issuance of the proposed AD, the FAA has changed the manner in which it identifies the airplane models referred to as “Airbus Model A300 and A300–600 series airplanes” to reflect the model designation specified on the type certificate data sheet. This final rule has been revised to show the appropriate model designations for those airplanes.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were submitted in response to the proposal or the FAA’s determination of the cost to the public.

Conclusion

The FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

There are approximately 113 Model A300 B2 and B4 and A300–600 series airplanes of U.S. registry that will be affected by this AD.

The actions required by this AD will take approximately 26 work hours per airplane to accomplish, at an average labor rate of $60 per work hour. Required parts will cost approximately $484 per airplane. Based on these figures, the cost impact of the requirements of this AD on U.S. operators is estimated to be $230,972, or $2,044 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption ADDRESSES.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety. Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing amendment 39–11491 (65 FR 204, January 4, 2000), and by adding a new airworthiness directive (AD), amendment 39–12052, to read as follows:

Applicability: Model A300 B2 and B4 series airplanes, and Model A300 B4–600, A300 B4–600R, and A300 F4–600R (A300–600) series airplanes, certificated in any category; except those on which Airbus Modifications 06267 and 07340 have been accomplished during production.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified,
altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b)(1) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent the fire warning from terminating prematurely, which could result in an unnoticed, uncontained engine/auxiliary power unit (APU) fire, accomplish the following:

Modifications

(a) Within 12 months after the effective date of this AD, accomplish the wiring modifications for the engine and APU fire detection system in accordance with Airbus Service Bulletin A300–26–6038, Revision 03, dated March 30, 2000 (for Model A300–600 series airplanes); or A310–26–2024, Revision 06, dated March 31, 2000 (for Model A310–26–2024, Revision 06, dated March 31, 2000; as applicable). This incorporation by reference is amended as follows: 1 CFR part 51. Copies may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France.

(b) The wiring modifications shall be done in accordance with Airbus Service Bulletin A300–26–6038, Revision 03, dated March 30, 2000; or Airbus Service Bulletin A310–26–2024, Revision 06, dated March 31, 2000; as applicable. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 4: The subject of this AD is addressed in French airworthiness directive 1999–238–286(B) R2, dated May 7, 2000.

Effective Date

(c) This amendment becomes effective on February 1, 2001.

Issued in Renton, Washington, on December 18, 2000.

Dorenda D. Baker,
 Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

14 CFR Part 71

[Airspace Docket No. 00–AAL–16]

RIN 2120–AA66
Modification of Colored Federal Airways; AK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final Rule.

SUMMARY: This action modifies the description of two Colored Federal airways, Green 1 (G–1) and Red 2 (R–2), in Offshore Airspace Area 1234L, Alaska. The FAA is taking this action to create a uniform floor of Class E controlled airspace 2,000 feet above ground level (AGL) throughout Offshore Control Area 1234L.

FOR FURTHER INFORMATION CONTACT: Ken McElroy, Airways and Rules Division, 40103, Office of Air Traffic airspace Management, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone: (202) 267–8783.

SUPPLEMENTARY INFORMATION:

Background

The FAA is taking this action to create a uniform floor of Class E airspace. Colored Federal airways are published in paragraph 7400.9H dated September 1, 2000, and effective September 16, 2000, which is incorporated by reference in 14 CFR 71.1. The colored Federal airways listed in this document will be published subsequently in the order.

The Rule

This action amends title 14 CFR part 71 (part 71) by modifying the description of two Colored Federal airways, G–1 and R–2, in Offshore Airspace Area 1234L, Alaska. Specifically, this action adjusts the floor of G–1 and R–2 to be consistent with the 2,000-foot AGL floor of Offshore Control Area 1234L.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this regulation: (1) Is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

§71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of the Federal Aviation Administration Order 7400.9H, Airspace Designations and Reporting Points, dated September 1, 2000, and effective September 16, 2000, is amended as follows:
Paragraph 6009(a)—Green Federal Airways

From Mt. Moffett, AK, NDB 20 AGL; INT Elfee, AK, NDB 253° and Dutch Harbor, AK, NDB 360° 20 AGL; INT Elfee, AK, NDB 253° and Cold Bay VORTAC 82 DME 20 AGL; to Elfee, AK, NDB.

Paragraph 6009(b)—Red Federal Airways

From Elfee, AK, NDB 20 AGL; to Port Heiden, AK, NDB.

Issued in Washington, DC, on December 21, 2000.

Reginald C. Matthews,
Manager, Airspace and Rules Division.

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 00–AAL–17]

Revision of Class E Airspace; Iliamna, AK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action revises Class E airspace at Iliamna, AK. The establishment of four new Area Navigation (RNAV) instrument approaches to runway (RWY) 7, RWY 25, RWY 17 and RWY 35 at Iliamna Airport, Iliamna, AK, made this action necessary. This rule provides adequate controlled airspace for aircraft flying Instrument Flight Rules (IFR) operations at Iliamna, AK.

FOR FURTHER INFORMATION CONTACT: Robert van Haastert, Operations Branch, Federal Aviation Administration, 222 West 7th Avenue, Box 14, Anchorage, AK 99513–7587; telephone number (907) 271–5863; fax: (907) 271–2850; email: Robert.ctr.van-Haastert@faa.gov. Internet address: http://www.alaska.faa.gov/at.

SUPPLEMENTARY INFORMATION:

History

On October 25, 2000, a proposal to amend part 71 of the Federal Aviation Regulations (14 CFR part 71) to revise the Class E airspace at Iliamna, AK, was published in the Federal Register (65 FR 63821). The proposal was necessary due to the establishment of four new RNAV instrument approaches to RWY 7, RWY 25, RWY 17, and RWY 35 at Iliamna, AK.

Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No public comments to the proposal were received, thus, the rule is adopted as written.

The area will be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as surface areas are published in paragraph 6002 and the Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 in FAA Order 7400.9H, Airspace Designations and Reporting Points, dated September 1, 2000, and effective September 16, 2000, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 revises the Class E airspace at Iliamna, AK, through the establishment of four new RNAV instrument approaches to RWY 7, RWY 25, RWY 17, and RWY 35 at Iliamna, AK. The intended effect of this proposal is to provide adequate controlled airspace for IFR operations at Iliamna, AK.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9H, Airspace Designations and Reporting Points, dated September 1, 2000, and effective September 16, 2000, is amended as follows:

Paragraph 6002 Class E airspace designated as surface areas.

AAL AK E2 Iliamna, AK [Revised]

Iliamna Airport, AK

(Lat. 59° 45′ 16″ N, long. 154° 54′ 39″ W)

Iliamna NDB

(Lat. 59° 44′ 53″ N, long. 154° 54′ 35″ W)

Within a 4-mile radius of the Iliamna Airport and within 2.5 miles east of the 189° bearing and 2.5 miles west of the 200° bearing from the Iliamna NDB extending from the 4-mile radius to 7.4 miles south of the airport. This Class E airspace area is effective during specific dates and times established in advance by a Notice to Airmen. The effective date and time will thereafter be continuously published in the Supplement Alaska (Airport/Facility Directory).

Paragraph 6005 Class E airspace extending upward from 700 feet or more above the surface of the earth.
153° 00' 00" W, lat. 59° 28' 00" N long. 154° 13' 00" W, lat. 59° 18' 00" N long. 154° 04' 00" W, lat. 59° 11' 00" N long. 155° 17' 00" W, lat. 59° 32' 00" N long. 155° 31' 00" W, lat. 59° 41' 00" N long. 156° 35' 00" W, to the point of beginning.

Issued in Anchorage, AK, on December 19, 2000.

Anthony M. Wylie,
Acting Manager, Air Traffic Division, Alaskan Region.

14 CFR Part 71
[Airspace Docket No. 00–AAL–5]

Revision of Class E Airspace; Gulkana, AK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action amends 14 CFR part 71 to revise the Class E airspace at Gulkana, AK, to establish new RNAV instrument approach procedures to RWY 14 and RWY 32 at Gulkana, AK.Interested parties were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the FAA. No public comments to the proposal were received, thus, the rule is adopted as written.

The area will be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as surface areas are published in paragraph 6002 and the Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 in FAA Order 7400.9H, Airspace Designations and Reporting Points, dated September 1, 2000 and, effective September 16, 2000, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document will be published subsequently in the Order.

The Rule

This amendment to 14 CFR part 71 revises the Class E airspace at Gulkana, AK, through the establishment of two new RNAV instrument approaches and revision of the VOR and NDB instrument approach procedures to RWY 14 and RWY 32 at Gulkana, AK. The intended effect of this proposal is to provide adequate controlled airspace for IFR operations at Gulkana, AK.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9H, Airspace Designations and Reporting Points, dated September 1, 2000, and effective September 16, 2000, is amended as follows:

AAL AK E2 — Gulkana, AK [Revised]

Gulkana Airport, AK
(Lat. 62° 09' 18" N., long. 145° 27' 24" W.)
Gulkana VORTAC
(Lat. 62° 09' 08" N., long. 145° 27' 01" W.)

Glenallen NDB
(Lat. 62° 11' 43" N., long. 145° 28' 05" W.)
That airspace extending upward from the surface to and including 4,100 feet MSL within a 4 mile radius of the Gulkana Airport, and within 2.8 miles west of the Gulkana VORTAC 344° radial clockwise to 2.8 miles east of the 352° radial extending from the Gulkana airport to 9.4 miles north of the airport, and within 2.5 miles east of the Gulkana VORTAC 172° radial clockwise to 2.5 miles west of the Gulkana 180° radial extending from the Gulkana airport to 7 miles south of the Gulkana airport. This airspace is effective during specific dates and times established in advance by Notice to Airmen. The effective dates and times will thereafter be continuously published in the Airport/Facility Directory.

Paragraph 6005 — Class E airspace designated as surface areas.

AAL AK E5 — Gulkana, AK [Revised]

Gulkana Airport, AK
(Lat. 62° 09' 18" N., long. 145° 27' 24" W.)
Gulkana VORTAC
(Lat. 62° 09' 08" N., long. 145° 27' 01" W.)

Glenallen NDB
(Lat. 62° 11' 43" N., long. 145° 28' 05" W.)
That airspace extending upward from 700 feet or more above the surface of the earth.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION
Federal Aviation Administration
14 CFR Part 97
[Docket No. 30223; Amdt. No. 2029]

Standard Instrument Approach Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference-approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination—
1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;
2. The FAA Regional Office of the region in which affected airport is located; or
3. The Flight Inspection Area Office which originated the SIAP.

For Purchase—Individual SIAP copies may be obtained from:

1. FAA Public Inquiry Center (APA–200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or
2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, US Government Printing Office, Washington, DC 20402.

FOR FURTHER INFORMATION CONTACT: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS–420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954–4164.

SUPPLEMENTARY INFORMATION: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description on each SIAP is contained in the appropriate FAA Form 8260 and the National Flight Data Center (FDC)/Permanent (P) Notices to Airmen (NOTAM) which incorporate by reference the amendment under 5 U.S.C. § 552(a), 1 CFR part 51, and § 97.20 of the Federal Aviation’s Regulations (FAR). Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the Federal Register expensive and impractical. Further, airmen do not use the regulatory text of the regulatory text of the SIAPs, but refer to their graphic depiction of charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR (and FAR) sections, with the types and effective dates of the SIAPs. This amendment also identifies the airport, its location, the procedure identification and the amendment number.

The Rule

This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes SIAPs. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained in the content of the following FDC/P NOTAMs for each SIAP. The SIAP information in some previously designated FDC/Temporary (FDC/T) NOTAMs is of such duration as to be permanent. With conversion to FDC/P NOTAMs, the respective FDC/T NOTAMs have been canceled.

The FDC/P NOTAMs for the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these chart changes to SIAPs by FDC/T NOTAMs, the TERPS criteria were applied to only these specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a National Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. the circumstances which created the need for all these SIAP amendments requires making them effective in less than 30 days.

Further, the SIAPs contained in this amendment are based on the criteria contained in the TERPS. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs is impracticable and contrary to the public interest and, where applicable, that good cause exists for making these SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Navigation (air).
Issued in Washington, DC on December 22, 2000.
L. Nicholas Lacey,
Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

### PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

1. The authority citation for part 97 is revised to read as follows:

   Authority: 49 U.S.C. 40103, 40113, 40120, 44701; 49 U.S.C. 106(g); and 14 CFR 11.49(b)(2).

2. Part 97 is amended to read as follows:

   Effective Upon Publication

Amendments Procedures; Miscellaneous Standard Instrument Approach

Summary: This amendment establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, addition of new obstacles, or changes in air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

Dates: An effective date for each SIAP is specified in the amendatory provisions.

Incorporation by reference-approved by the Director of the Federal Register on December 31, 1980, and reapproved as of January 1, 1982.

Addresses: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—
1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591;
2. The FAA Regional Office of the region in which the affected airport is located; or
3. The Flight Inspection Area Office which originated the SIAP.

For Purchase—Individual SIAP copies may be obtained from:
1. FAA Public Inquiry Center (APA-200), FAA Headquarters Building, 800 Independence Avenue, SW., Washington, DC 20591; or
2. The FAA Regional Office of the region in which the affected airport is located.

By Subscription—Copies of all SIAPs, mailed once every 2 weeks, are for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

For Further Information Contact: Donald P. Pate, Flight Procedure Standards Branch (AMCAFS-420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd, Oklahoma City, OK 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK 73125) telephone: (405) 954–4164.

Supplementary Information: This amendment to part 97 of the Federal Aviation Regulations (14 CFR part 97) establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs). The complete regulatory description of each SIAP is contained in official FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 522(a), 1 CFR part 51, and § 97.20 of the Federal Aviation Regulations (FAR). The applicable FAA Forms are identified as FAA Forms 8260–3, 8260–4, and 8260–5. Materials incorporated by reference are available for examination or purchase as stated above.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the Federal Register expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. The provisions of this amendment state the affected CFR and FAR sections, with the types and effective dates of the SIAPs. This amendment also identifies

</table>
the airport, its location, the procedure identification and the amendment number.

The Rule

This amendment to part 97 is effective upon publication of each separate SIAP as contained in the transmittal. Some SIAP amendments may have been previously issued by the FAA in a National Flight Data Center (NFDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP amendments may require making them effective in less than 30 days. For the remaining SIAPs, an effective date at least 30 days after publication is provided.

Further, the SIAPs contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 97

Air Traffic Control, Airports, Navigation (Air).

Issued in Washington, DC on December 22, 2000.

L. Nicholas Lacey,
Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, part 97 of the Federal Aviation Regulations (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

1. The authority citation for part 97 is revised to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120, 44701; and 14 CFR 11.49(b)(2).

2. Part 97 is amended to read as follows:

§§ 97.23, 97.25, 97.27, § 97.29, § 97.31, § 97.33, and § 97.35 [Amended]

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME, SDF, SDF/DME; § 97.29 ILS, ILS/DME, ILS/MLS, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, identified as follows:

BILLING CODE 4910–13–M

FEDERAL TRADE COMMISSION

16 CFR Part 301

Rules and Regulations Under the Fur Products Labeling Act

AGENCY: Federal Trade Commission.

ACTION: Final rule.

SUMMARY: The Federal Trade Commission (FTC or Commission) amends the Rules and Regulations under the Fur Products Labeling Act (Fur Rules) pursuant to the Dog and Cat Protection Act of 2000. That Act prohibits importing, exporting, manufacturing, selling, advertising, transporting, or distributing any dog or cat fur product. The Dog and Cat Protection Act also amends the Fur Act to exclude dog and cat fur products from items the Commission may exempt
from Fur Act requirements because they contain only a small amount of fur. The amendments announced herein concern the Fur Rules to the amended Fur Act by making clear that the exemption from the Fur Act does not apply to dog and cat fur products. Because the amendments are technical in nature and merely incorporate the statutory change, the Commission finds that notice and comment are not required. See 5 U.S.C. 553(b). For this reason, the requirements of the Regulatory Flexibility Act also do not apply. See 5 U.S.C. 603, 604.

**EFFECTIVE DATE:** The amended Rules are effective January 29, 2001.

**ADDRESSES:** Requests for copies of the amended Rules should be sent to the Consumer Response Center, Room 202, Federal Trade Commission, 600 Pennsylvania Avenue, NW, Washington, DC 20580. The notice announcing the amendments is available on the Internet at the Commission’s website: http://www.ftc.gov.

**FOR FURTHER INFORMATION CONTACT:** Carol Jennings, Attorney, (202) 326–3010, cjennings@ftc.gov, or Stephen Ecklund, Senior Investigator, (202) 326–2841, secklund@ftc.gov, Division of Enforcement, Bureau of Consumer Protection, Federal Trade Commission, 600 Pennsylvania Avenue NW, Washington, DC 20580.

**SUPPLEMENTARY INFORMATION:** The Fur Products Labeling Act (Fur Act), 15 U.S.C. 69, and Commission rules pursuant to the Act, 16 CFR Part 301, require that sellers of covered fur products mark each product to show: (1) The name of the animal that produced the fur; (2) that the fur product contains or is composed of used fur, if such is the fact; (3) that the fur product contains or is composed of artificially colored fur, if such is the fact; (4) that the fur product is composed in whole or in substantial part of paws, tails, bellies, or waste fur, if such is the fact; (5) the name under which the manufacturer or other responsible company does business, or in lieu thereof, the RN issued to the company by the Commission; and (6) the country of origin of imported furs. The statute and rules also include advertising and recordkeeping requirements. The Fur Act authorizes the Commission to exempt products containing a relatively small amount of fur, and the rule amendments continue to make clear that the exemptions are available in lieu thereof, the RN issued to the company by the Commission, or the country of origin of imported furs. The Commission is also making certain technical corrections to the rule amendments.

The Dog and Cat Protection Act of 2000, Pub. L. 106–476, prohibits importing, exporting, manufacturing, selling, advertising, transporting, or distributing any dog or cat fur product. Violations may result in the imposition of civil penalties ranging from $3,000 to $10,000 for each separate violation; forfeiture of the illegal products; and debarment from importing, exporting, manufacturing, transporting, distributing, or selling any fur product in the U.S.

In addition, the Dog and Cat Protection Act amends the Fur Act, 16 U.S.C. 69(d), to exclude dog and cat fur products from those items the Commission is authorized to exempt from the labeling and other requirements of the Fur Act and implementing regulations. The amendments to the Fur Rules announced herein implement this amendment to the Fur Act.

**List of Subjects in 16 CFR Part 301**

Furs, Labeling, Trade Practices.

For the reasons set forth above, the Commission amends 16 CFR Part 301 as follows:

**PART 301—RULES AND REGULATIONS UNDER THE FUR PRODUCTS LABELING ACT**

1. The authority citation for Part 301 continues to read as follows:

2. Section 301.1(a) is amended by adding paragraphs (6), (7), and (8) to read as follows:

   § 301.1 Terms defined.

   (a) * * *

   (6) The term cat fur means the pelt or skin of any animal of the species Felis catus.

   (7) The term dog fur means the pelt or skin of any animal of the species Canis familiaris.

   (8) The term dog or cat fur product means any item of merchandise which consists, or is composed in whole or in part, of any dog fur, cat fur, or both.

   3. In § 301.39, the second sentence of paragraph (a) is revised to read as follows:

   § 301.39 Exempted fur products.

   (a) * * *

   The exemption provided for herein shall not be applicable: (1) to any dog or cat fur product; (2) if any false, deceptive, or misleading representations as to the fur contained in the fur product are made; or (3) if any representations as to the fur are made in labeling, invoicing, or advertising without disclosing: (i) in the case of labels, the information required to be disclosed under section 4(2)(A), (C), and (D) of the Act; (ii) in the case of advertising, the information required to be disclosed under section 5(a)(1), (3), and (4) of the Act; and (iii) in the case of invoicing, the information required to be disclosed under section 5(b)(1)(A), (C), and (D) of the Act.

   By direction of the Commission.

   Donald S. Clark.
   Secretary.

   BILLING CODE 6750–01–M

**COMMODITY FUTURES TRADING COMMISSION**

17 CFR Part 1

RIN 3038–AB56

Investment of Customer Funds

**AGENCY:** Commodity Futures Trading Commission.

**ACTION:** Final rules; change of effective date.

**SUMMARY:** The Commodity Futures Trading Commission (Commission) is moving forward the effective date of its recent rule amendments concerning the investment of customer funds by futures commission merchants (FCMs) and clearing organizations to permit FCMs and clearing organizations to engage in the expanded investment activity at an earlier date. The Commission is also making certain technical corrections to the rule amendments.

**DATES:** The revision of § 1.25 published on December 13, 2000 (65 FR 77993) as amended by this rule is effective December 28, 2000. The revision of § 1.26 and the amendments to §§ 1.20, 1.27, 1.28 and 1.29 published on December 13, 2000 (65 FR 77993) are effective December 28, 2000.

**FOR FURTHER INFORMATION CONTACT:** Lawrence B. Patent, Associate Chief Counsel, Paul H. Bjarnason, Jr., Special Advisory for Accounting Policy, or Ky Tran-Trong, Attorney-Advisor, Division of Trading and Markets, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street, NW., Washington, DC 20581. Telephone: (202) 418–5450.

**SUPPLEMENTARY INFORMATION:**
I. Background

On December 13, 2000, the Commission published final rules and rule amendments in the Federal Register revising its rules relating to intermediation of commodity futures and commodity options (commodity interest) transactions. As part of the new rules and rule amendments, the Commission has amended Rule 1.25 to expand the range of instruments in which FCMs and clearing organizations may invest customer funds to include such highly liquid and readily marketable instruments as certain sovereign debt, agency debt, money market mutual funds, and corporate notes (permitted investments). Additional provisions to minimize credit, volatility and liquidity risk have also been adopted. Previously, investments of customer funds had been limited to U.S. government securities, municipal securities, and instruments fully guaranteed as to principal and interest by the U.S. government. When the Commission proposed the amendments to Rule 1.25, it stated that “an expanded list of permitted investments could enhance the yield available to FCMs, clearing organizations and their customers without compromising the safety of customer funds.”

As provided in the adopting release, the new rules and rule amendments relating to intermediaries, including the changes to Rule 1.25, are to become effective on February 12, 2001. The Commission established an effective date 60 days following publication in the Federal Register for the new rules and rule amendments relating to intermediaries, as well as for the other elements of regulatory reform adopted simultaneously by the Commission, to allow time for entities affected by the rule changes to make the necessary adjustments to their operations. The Commission has been apprised by the futures industry, however, that the implementation of new Rule 1.25 does not require such a lengthy delay, and that it may be more efficient if FCMs are permitted to implement the rule revisions relating to Rule 1.25 on an earlier date. The Commission agrees with the industry request and has determined to move forward the effective date for the amendments to Rule 1.25 to December 28, 2000. The Commission has further determined to move forward the effective date of related amendments to Rules 1.20 and 1.26–1.29.

II. Technical Corrections

Paragraph (a) of Rule 1.25 sets forth the types of permissible investments of customer funds, e.g., U.S. Treasury obligations, commercial paper, corporate notes. Each type of investment must meet certain quality requirements, including requirements for marketability, credit ratings, restrictive features and concentration limitations. Currently, these quality requirements are all contained in separate provisions of paragraph (b) of the rule, except for the requirements regarding sovereign debt, which are contained in paragraph (a)(1)(vii). The Commission believes that this placement could be confusing. Therefore, in order to clarify Rule 1.25, the requirements for all types of permitted investments are now placed together, in the same paragraphs, as follows: (i) the requirement that foreign sovereign debt be rated in the highest category by at least one nationally recognized statistical rating organization has been moved from paragraph (a)(1)(vii) to paragraph (b)(2)(i)(D) and, concurrently, the reference to permit sovereign debt contained in paragraph (b)(2)(i)(A) is no longer necessary and, therefore, has been deleted; and (ii) the requirement that investments in a particular country’s sovereign debt be limited to amounts owed in that currency has been moved from paragraph (a)(1)(vii) to paragraph (b)(4)(i)(D).

III. Other Matters

The Commission has determined that there is good cause to move forward the effective date of the amendments to Rule 1.25, as well as the amendments to Rules 1.20 and 1.26–1.29, and to make the clarifying revisions discussed above to Rule 1.25 because it is not contrary to the public interest to permit FCMs and clearing organizations to invest customer funds in an expanded range of permissible investments. Such investments could potentially provide a higher yield to those FCMs and clearing organizations without compromising the safety of customer funds. The Commission has further determined that these rules may be made effective less than 30 days following their date of publication in the Federal Register because these are substantive rules that relieve a restriction on those FCMs and clearing organizations seeking to invest customer funds in a wider range of financial instruments.

List of Subjects in 17 CFR Part 1

Brokers, Commodity futures, Consumer protection, Reporting and recordkeeping requirements.

In consideration of the foregoing, and pursuant to the authority contained in the Commodity Exchange Act, and in particular, Sections 4(c), 4d(2) and 8a(5) thereof, 7 U.S.C. 6(c), 6d(2) and 12a(5), the Commission hereby makes the amendments to rules 1.20 and 1.25 through 1.29 that were published on December 13, 2000 at 65 FR 77993, 78009–13 as further amended in this release, effective December 28, 2000.

PART 1—GENERAL REGULATIONS UNDER THE COMMODITY EXCHANGE ACT

1. The authority citation for Part 1 continues to read as follows:

Authority: 7 U.S.C. 1a, 2, 2a, 4, 4a, 6, 6a, 6b, 6c, 6d, 6e, 6f, 6g, 6h, 6i, 6j, 6k, 6l, 6m, 6n, 6o, 6p, 7, 7a, 7b, 8, 9, 12, 12a, 12c, 13a, 13a–1, 16, 16a, 19, 21, 23 and 24.

2. Section 1.25 is amended by revising paragraphs (a)(1)(vii), (b)(2)(i)(A) and (b)(2)(i)(C), by redesignating paragraph (b)(2)(i)(D) as paragraph (b)(2)(i)(E), by adding a new paragraph (b)(2)(i)(D), by adding a new paragraph (b)(4)(i)(A) and by adding a new paragraph (b)(4)(i)(D). For the convenience of the reader, printed below is revised paragraph (a)(1)(vii) as well as the complete paragraphs (b)(2)(i) and (b)(4)(i) as revised:

§ 1.25 Investment of customer funds.

(a) * * *

(1) * * *

(vii) General obligations of a sovereign nation; and

* * * * *

(b) * * *

(2) Ratings. (i) Initial requirement. Instruments that are required to be rated by this section must be rated by a nationally recognized statistical rating organization.

7 5 U.S.C. 553(d) generally provides that the publication or service of a substantive rule shall not be made less than 30 days before its effective date, except for: (1) a substantive rule which grants or recognizes an exemption or relieves a restriction; (2) interpretative rules and statements of policy; or (3) as otherwise provided by the agency for good cause found and published with the rule.
organization (NRSRO), as that term is defined in § 270.2a-7 of this title. For an investment to qualify as a permitted investment, ratings are required as follows:

(A) U.S. government securities need not be rated;

(B) Municipal securities, government sponsored agency securities, certificates of deposit, commercial paper, and corporate notes, except notes that are asset-backed, must have the highest short-term rating of an NRSRO or one of the two highest long-term ratings of an NRSRO;

(C) Corporate notes that are asset-backed must have the highest ratings of an NRSRO;

(D) Sovereign debt must be rated in the highest category by at least one NRSRO; and

(E) Money market mutual funds that are rated by an NRSRO must be rated at the highest rating of an NRSRO.

* * * * *

(4) Concentration and other limitations. (i) Direct investments. (A) U.S. government securities and money market mutual funds shall not be subject to a concentration limit or other limitation.

(B) Securities of any single issuer of government sponsored agency securities held by a futures commission merchant or clearing organization may not exceed 25 percent of total assets held in segregation by the futures commission merchant or clearing organization.

(C) Securities of any single issuer of municipal securities, certificates of deposit, commercial paper, or corporate notes held by a futures commission merchant or clearing organization may not exceed 5 percent of total assets held in segregation by the futures commission merchant or clearing organization.

(D) Sovereign debt is subject to the following limits: a futures commission merchant may invest in the sovereign debt of a country to the extent it has balances in segregated accounts owed to its customers denominated in that country’s currency; a clearing organization may invest in the sovereign debt of a country to the extent it has balances in segregated accounts owed to its clearing member futures commission merchants denominated in that country’s currency.

* * * * *

Issued in Washington, DC on December 21, 2000 by the Commission.

Jean A. Webb,
Secretary of the Commission.

BILLING CODE 6351–01–M

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Parts 100 and 165

[USCG–2000–8541]

Safety Zones, Security Zones, and Special Local Regulations

AGENCY: Coast Guard, DOT.

ACTION: Notice of temporary rules issued.

SUMMARY: This document provides required notice of substantive rules adopted by the Coast Guard and temporarily effective between July 1, 2000 and September 30, 2000 which were not published in the Federal Register. This notice also contains 9 temporary final rules issued during the period of April 1, 2000, thru June 30, 2000, that were not included in the docket USCG 2000–7757. This quarterly notice lists temporary local regulations, security zones, and safety zones of limited duration and for which timely publication in the Federal Register was not possible.

DATES: This notice lists temporary Coast Guard regulations that became effective and were terminated between April 1, 2000, and September 30, 2000.

ADDRESSES: The Docket Management Facility maintains the public docket for this notice. Documents indicated in this notice will be available for inspection or copying at the Docket Management Facility, U.S. Department of Transportation, Room PL–401, 400 Seventh Street SW., Washington, DC 20593–0001 between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays. You may electronically access the public docket for this notice on the Internet at http://dms.dot.gov.

FOR FURTHER INFORMATION CONTACT: For questions on this notice, contact Lieutenant Bruce Walker, Office of Regulations and Administrative Law, telephone (202) 267–6233. For questions on viewing, or on submitting material to the docket, contact Dorothy Beard, Chief, Dockets, Department of Transportation (202) 866–9329.

SUPPLEMENTARY INFORMATION: District Commanders and Captains of the Port (COTP) must be immediately responsive to the safety needs of the waters within...
their jurisdiction; therefore, District Commanders and COTP's have been delegated the authority to issue certain local regulations. Safety zones may be established for safety or environmental purposes. A safety zone may be stationary and described by fixed limits or it may be described as a zone around a vessel in motion. Security zones limit access to vessels, ports, or waterfront facilities to prevent injury or damage. Special local regulations are issued to enhance the safety of participants and spectators at regattas and other marine events. Timely publication of these regulations in the Federal Register is often precluded when a regulation responds to an emergency, or when an event occurs without sufficient advance notice. However, the affected public is informed of these regulations through Local Notices to Mariners, press releases, and other means. Moreover, actual notification is provided by Coast Guard patrol vessels enforcing the restrictions imposed by the regulation. Because mariners are notified by Coast Guard officials on-scene prior to enforcement action, Federal Register notice is not required to place the special local regulation, security zone, or safety zone in effect. However, the Coast Guard, by law, must publish in the Federal Register notice of substantive rules adopted. To meet this obligation without imposing undue expense on the public, the Coast Guard periodically publishes a list of these temporary special local regulations, security zones, and safety zones.

Permanent regulations are not included in this list because they are published in their entirety in the Federal Register. Temporary regulations may also be published in their entirety if sufficient time is available to do so before they are placed in effect or terminated. The safety zones, special local regulations and security zones listed in this notice have been exempted from review under Executive Order 12866 because of their emergency nature, or limited scope and temporary effectiveness.

The following regulations were placed in effect temporarily during the period April 1, 2000 and September 30, 2000, unless otherwise indicated.

S.G. Venckus,
Chief, Office of Regulations and Administrative Law.

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 117

[CGD08–00–032]

Supplementary Information: The LA 77 bridge across the Lower Grand River, mile 47.0 (Alternate Route) at Grosse Tete, Iberville Parish, Louisiana, has a vertical clearance of 2 feet above high water in the closed-to-navigation position and unlimited clearance in the open-to-navigation position. Navigation on the waterway consists mainly of tows with barges and some recreational craft. The Louisiana Department of Transportation and Development requested a temporary deviation from the normal operation of the bridge in order to accommodate the final repairs to the bridge caused by an allision in June of 2000.

This deviation allows the draw of the LA 77 pontoon drawbridge across the Lower Grand River, mile 47.0 (Alternate Route) at Grosse Tete, Iberville Parish, Louisiana, to remain in the closed-to-navigation position from 6 a.m. until 11 a.m. and from 1 p.m. to 6 p.m., Monday through Friday, from January 8, 2001 until January 26, 2001. Presently, the draw of the LA 77 bridge, mile 47.0 (Alternate Route) at Grosse Tete, shall open on signal at any time for an emergency aboard a vessel.

Paul J. Pluta,
U.S. Coast Guard, Commander, Eighth Coast Guard District.

ACTION: Final rule.

SUMMARY: The Coast Guard is creating a new anchorage area on the eastern side of the Sabine Pass Safety Fairway, opposite the Sabine Bank Offshore (North) Anchorage area in the Gulf of Mexico south of Sabine Pass. This will help alleviate the need for in-bound deep draft vessels to cross the Sabine Pass Safety Fairway and navigate around a charted shallow area just to the southeast of the North anchorage. This rule allows deep draft vessels to enter and depart Sabine Bank anchorages on a safer, lower risk course.

DATES: This final rule is effective January 29, 2001.

ADDRESSES: Comments and material received from the public, as well as documents mentioned in this preamble as being available in the docket, are part of docket CGD 08–00–012 and are available for inspection or copying at the Coast Guard Marine Safety Office, Federal Building, 2875 Jimmy Johnson Blvd., Port Arthur, TX 77640–2099 between 8 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule or on viewing the docket, call Lieutenant Lamont Bazemore, Waterways Management, Coast Guard Marine Safety Office Port Arthur, telephone 409–723–6509 ext. 243.

SUPPLEMENTARY INFORMATION:

Regulatory History

On June 21, 2000, we published a notice of proposed rulemaking entitled “Anchorage Regulation; Sabine Pass, TX, Gulf of Mexico” in the Federal Register (65 FR 38474). We received no letters commenting on the proposed rule. No public hearing was requested and none was held. For the Semi-Annual Agenda, we changed the RIN and title of this rule to “Shipping Safety Fairways and Anchorage Areas, Gulf of Mexico, 2115–AG02”, to correctly reflect the CFR part that we are affecting.

Background and Purpose

In 1997, the in-bound tank vessel CROSBY ran aground just outside the
Sabine Bank Offshore (North) Anchorage area located in the Gulf of Mexico, approximately 13 miles south of Sabine Pass, TX. This vessel was carrying over 650,000 barrels of crude oil. Although no oil was spilled, the result could have been disastrous.

The subsequent investigation revealed that the vessel’s master crossed the safety fairway and attempted to navigate into the North anchorage. However, a strong westerly current pushed the CROSBY toward the shallow area southeast of the anchorage area. The master was unable to maneuver away from the shallows and the vessel grounded. Four tugboats took 15 hours to refloat the CROSBY.

In-bound petroleum laden deep draft vessels invariably have a need to anchor and wait for daylight transit. The new anchorage east of the Sabine Bank Offshore (North) Anchorage eliminates the need for these vessels to cross the safety fairway and navigate the surrounding shallow areas to reach anchorage. The new anchorage is also free of shallow areas immediately surrounding it. This significantly reduces navigational risks to in-bound deep draft vessels.

Discussion of Comments and Changes

No comments were received regarding the notice of proposed rulemaking and no changes were made.

Regulatory Evaluation

This rule is not a “significant regulatory action” under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order. It is not “significant” under the regulatory policies and procedures of the Department of Transportation (DOT) (44 FR 11040, February 26, 1979). We expect the economic impact of this rule to be so minimal that a full Regulatory Evaluation under paragraph 10e of the regulatory policies and procedures of DOT is unnecessary.

There are no fees, permits, or specialized requirements for the maritime industry to utilize this anchorage area. Use of the Sabine Bank Offshore (East) Anchorage Area is voluntary. This regulation is solely for the purpose of advancing safety of maritime commerce.

Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we considered whether this rule would have a significant economic impact on a substantial number of small entities. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

Since there are no fees, permits, or specialized requirements for the maritime industry to utilize this anchorage, and the use of the anchorage is voluntary, the Coast Guard certifies under 5 U.S.C. 605(b) that this final rule will not have a significant economic impact on a substantial number of small entities.

Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Public Law 104–121), we offered to assist small entities in understanding the rule so that they could better evaluate its effects on them and participate in the rulemaking. No assistance was requested or provided.

Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

Federalism

We have analyzed this rule under Executive Order 13132, Federalism, and have determined that it does not have implications for federalism under that Order.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their regulatory actions not specifically required by law. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

Taking of Private Property

This rule will not effect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not concern an environmental risk to health or risk to safety that may disproportionately affect children.

Environment

We considered the environmental impact of this rule and concluded that, under figure 2–1, paragraph (34)(f), of Commandant Instruction M16475.1C, this rule is categorically excluded from further environmental documentation. Implementation of this action will not result in any—

• Significant cumulative impacts on the human environment;
• Substantial controversy or substantial change to existing environmental conditions;
• Impacts which are more than minimal on properties protected under 4(f) of the DOT Act as superceded by Public Law 97–449, and Section 106 of the National Historic Preservation Act; and
• Inconsistencies with any Federal, State, or local laws or administrative determinations relating to the environment.

A “Categorical Exclusion Determination” is available in the docket where indicated under ADDRESSES.

List of Subjects in 33 CFR Part 166

Anchorage grounds, Marine Safety, Navigation (water), Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 166 as follows:

PART 166—SHIPPING SAFETY FAIRWAYS

1. The authority citation for part 166 continues to read as follows:

Authority: 33 U.S.C. 1223; 49 CFR 1.46.

2. In §166.200, add paragraph (d)(13)(iv) to read as follows:

§166.200 Shipping safety fairways and anchorage areas, Gulf of Mexico.

POSTAL SERVICE

39 CFR Part 20

Global Express Guaranteed: Changes in Postal Rates

AGENCY: Postal Service.

ACTION: Amendment to interim rule.

SUMMARY: On December 11, 2000, a Federal Register notice (65 FR 77302) was published with correct new rates but erroneously omitted the revised country group listing. In addition, the rate groups were listed with an alpha-character designation, when in fact the rate groups have numeric designations. This amendment publishes the rate charts and the revised country group listing.

EFFECTIVE DATE: The effective date is concurrent with the effective date for the new domestic rates, January 7, 2001. Comments on the amendment to the interim rule must be received on or before January 6, 2001.

ADDRESSES: Written comments should be mailed or delivered to Business

ENvironmental Protection AGENCY

40 CFR Part 52

[Region 7 Tracking No. 113–1113a; FRL–6923–2]

Approval and Promulgation of Implementation Plans; State of Missouri

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is announcing final approval of a statewide NO\textsubscript{X} rule to reduce the emissions of nitrogen oxides (NO\textsubscript{X}) and establish a NO\textsubscript{X} emissions trading program for the state of Missouri. This rule is a critical element in the state’s plan to attain the ozone standard in the St. Louis ozone nonattainment area.

DATES: This rule is effective on January 29, 2001.

ADDRESSES: Copies of the state submittals are available at the following address for inspection during normal business hours: Environmental Protection Agency, Air Planning and Development Branch, 901 North 5th Street, Kansas City, Kansas 66101.

FOR FURTHER INFORMATION CONTACT: Kim Johnson at (913) 551–7975.

SUPPLEMENTARY INFORMATION:

Throughout this document whenever “we, us, or our” is used, we mean EPA. This section provides additional information by addressing the following questions:

What is a SIP?

What is the Federal approval process for a SIP?

What does Federal approval of a state regulation mean to me?

What is being addressed in this action?

Have the requirements for approval of a SIP revision been met?

What action is EPA taking?

What is a SIP?

Section 110 of the Clean Air Act (CAA) requires states to develop air pollution regulations and control strategies to ensure that state air quality meets the national ambient air quality standards established by EPA. These ambient standards are established under section 109 of the CAA, and they currently address six criteria pollutants. These pollutants are: carbon monoxide, nitrogen dioxide, ozone, lead, particulate matter, and sulfur dioxide.

Each state must submit these regulations and control strategies to EPA for approval and incorporation into the Federally enforceable SIP.

Each Federally approved SIP protects air quality primarily by addressing air pollution at its point of origin. These SIPs can be extensive, containing state regulations or other enforceable documents and supporting information such as emission inventories, monitoring networks, and modeling demonstrations.

What is the Federal Approval Process for a SIP

In order for state regulations to be incorporated into the Federally enforceable SIP...
enforceable SIP, states must formally adopt the regulations and control strategies consistent with state and Federal requirements. This process generally includes a public notice, public hearing, public comment period, and a formal adoption by a state-authorized rulemaking body.

Once a state rule, regulation, or control strategy is adopted, the state submits it to us for inclusion into the SIP. We must provide public notice and seek additional public comment regarding the proposed Federal action on the state submission. If adverse comments are received, they must be addressed prior to any final Federal action by us.

All state regulations and supporting information approved by EPA under section 110 of the CAA are incorporated into the Federally approved SIP. Records of such SIP actions are maintained in the Code of Federal Regulations (CFR) at Title 40, Part 52, entitled “Approval and Promulgation of Implementation Plans.” The actual state regulations which are approved are not reproduced in their entirety in the CFR but are “incorporated by reference,” which means that we have approved a given state regulation with a specific effective date.

What Does Federal Approval of a State Regulation Mean to Me?

Enforcement of the state regulation before and after it is incorporated into the Federally approved SIP is primarily a state responsibility. However, after the regulation is Federally approved, we are authorized to take enforcement action against violators. Citizens are also offered legal recourse to address violations as described in section 304 of the CAA.

What is Being Addressed in This Document?

We are taking final action to approve, as an amendment to Missouri’s SIP, rule 10 CSR 10–6.350, “Emissions Limitations and Emissions Trading of Oxides of Nitrogen,” submitted to us on November 15, 2000. The Missouri rule was adopted by the Missouri Air Conservation Commission on May 25, 2000, and submitted to EPA for parallel processing on June 29, 2000. The rule became effective under state law on August 30, 2000. The Missouri Air Conservation Commission on May 25, 2000, and submitted to EPA for parallel processing on June 29, 2000. The rule became effective under state law on August 30, 2000. The November 15, 2000, submittal included the adopted rule, the comments on the rule during the state’s adoption process, and the state’s response to comments, and other information necessary to meet EPA’s completeness criteria. For additional information on the completeness criteria and on parallel processing, the reader should refer to EPA’s August 24, 2000, proposal, 65 FR 51564, and to 40 CFR Part 51, Appendix V.

The rule requires reductions in NOX emissions by establishing NOX emissions limitations for large electric generating units (EGU) which includes any EGU with a nameplate capacity greater than 25 megawatts across the state, beginning May 1, 2003. EGUs located in the eastern third of the state are limited to an emission rate of 0.25 lbs. NOX per million British thermal units per hour (mmBtu/hr) of heat input during the control period. The EGUs located in the western two-thirds of the state are limited to the less stringent rate of 0.35 lbs. NOX mmBtu/hr of heat input during the control period. The control period begins on May 1 and ends on September 30 of the same calendar year, which is when ozone formation is most likely to occur at unhealthful levels.

This rule is a critical element in the state’s plan to attain the ozone standard in the St. Louis area. The state of Missouri has assessed the statewide impacts of NOX emissions and has imposed the reductions specified in this rule to demonstrate attainment of the ozone NAAQS in the St. Louis nonattainment area. The state of Missouri has assessed the statewide impacts of NOX emissions and has imposed the reductions specified in this rule to demonstrate attainment of the ozone standard in the St. Louis area.

As also explained in the proposal, our evaluation of the statewide NOX rule is not related to the obligations which Missouri may subsequently have under EPA’s regional NOX reduction rule (the NOX SIP call). That rule requires that certain states develop regional NOX controls to address contributions to downwind nonattainment of the ozone standard in the eastern portion of the country. In response to a recent judicial remand of the SIP call as it relates to Missouri, EPA intends to undertake rulemaking to establish regional NOX requirements for a portion of Missouri. When that rulemaking is completed, we anticipate that it will establish separate NOX reduction requirements to address contributions by Missouri sources to ozone nonattainment in other areas. The state would then be required to take subsequent action, pursuant to the NOX SIP call, to ensure NOX emissions address long-range transport, and we would then take separate rulemaking action on Missouri’s response to the NOX SIP call.

Have the Requirements for Approval of a SIP Revision Been Met?

The state submittal has met the public notice requirements for SIP submissions in accordance with 40 CFR 51.102. The submittal also satisfied the completeness criteria of 40 CFR Part 51, Appendix V. In addition, as explained above and in more detail in the technical support document which is part of this document, the revision meets the substantive SIP requirements of the CAA, including section 110 and implementing regulations.

What Action is EPA Taking?

We are taking final action to approve as an amendment to the Missouri SIP rule 10 CSR 10–6.350, “Emissions Limitations and Emissions Trading of Oxides of Nitrogen,” submitted to us on November 15, 2000. This rule is a critical element in the state’s plan to attain the ozone standard in the St. Louis ozone nonattainment area.

Administrative Requirements

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this action is not a “significant regulatory action” and therefore is not subject to review by the Office of Management and Budget. This action merely approves state law as meeting Federal requirements and imposes no additional requirements beyond those imposed by state law. Accordingly, the Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601
et seq.). Because this rule approves preexisting requirements under state law and does not impose any additional enforceable duty beyond that required by state law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Public Law 104–4). For the same reason, this rule also does not significantly or uniquely affect the communities of tribal governments, as specified by Executive Order 13084 (63 FR 27655, May 10, 1998). This rule will not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it merely approves a state rule implementing a Federal standard, and does not alter the relationship or the distribution of power and responsibilities established in the CAA. This rule also is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it is not economically significant.

In reviewing SIP submissions, our role is to approve state choices, provided that they meet the criteria of the CAA. In this context, in the absence of a prior existing requirement for the state to use voluntary consensus standards (VCS), we have no authority to disapprove a SIP submission for failure to use VCS. It would thus be inconsistent with applicable law for EPA, when it reviews a SIP submission, to use VCS in place of a SIP submission that otherwise satisfies the provisions of the CAA. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. As required by section 3 of Executive Order 12988 (61 FR 4729, February 7, 1996), in issuing this rule, we have taken the necessary steps to eliminate drafting errors and ambiguity, minimize potential litigation, and provide a clear legal standard for affected conduct. EPA has complied with Executive Order 12630 (53 FR 8859, March 15, 1988) by examining the takings’’ implications of the rule in accordance with the “Attorney General’s Supplemental Guidelines for the Evaluation of Risk and Avoidance of Unanticipated Takings” issued under the Executive Order. This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.).

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. We will submit a report containing this rule and other required information to the United States Senate, the United States House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the Federal Register. A major rule cannot take effect until 60 days after it is published in the Federal Register. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by February 26, 2001. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).

List of Subjects 40 CFR Part 52

Environmental protection, Air pollution control, Carbon monoxide, Hydrocarbons, Incorporation by reference, Intergovernmental relations, Lead, Nitrogen dioxide, Ozone, Particulate matter, Reporting and recordkeeping requirements, Sulfur oxides.

Thomas F. Hogan,
Acting Regional Administrator, Region 7.
Chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—[AMENDED]

1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 et seq.

Subpart AA—Missouri

2. Section 52.1320 is amended:

a. In the table to paragraph (c) by adding in numerical order an entry “10–6.350”; and

b. In the table to paragraph (e) by adding to the end of that table a new entry.

The additions read as follows:

EPA-APPROVED MISSOURI REGULATIONS

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[OPP–301089; FRL–6756–4]

RIN 2070–AB78

Cyprodinil; Extension of Tolerance for Emergency Exemptions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation extends a time-limited tolerance for residues of the fungicide cyprodinil in or on canebberries at 10 parts per million (ppm) for an additional 1-year period. This tolerance will expire and is revoked on December 31, 2001. This action is in response to EPA’s granting of emergency exemptions under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act authorizing use of the pesticide on canebberries. Section 408(l)(6) of the Federal Food, Drug, and Cosmetic Act requires EPA to establish a time-limited tolerance or exemption from the requirement for a tolerance for pesticide chemical residues in food that will result from the use of a pesticide under an emergency exemption granted by EPA under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act.

DATES: This regulation is effective December 28, 2000. Objections and requests for hearings, identified by docket control number OPP–301089, must be received by EPA on or before February 26, 2001.

ADDRESSES: Written objections and hearing requests may be submitted by mail, in person, or by courier. Please follow the detailed instructions for each method as provided in Unit III. of the SUPPLEMENTARY INFORMATION. To ensure proper receipt by EPA, your objections and hearing requests must identify docket control number OPP–301089 in the subject line on the first page of your response.

FOR FURTHER INFORMATION CONTACT: By mail: Stephen Schaible, Registration Division (7505C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: 703–308–9362; and e-mail address: schaible.stephen@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. Potentially affected
categories and entities may include, but are not limited to:

<table>
<thead>
<tr>
<th>Categories</th>
<th>NAICS codes</th>
<th>Examples of potentially affected entities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Industry</td>
<td>111 112 311 32532</td>
<td>Crop production Animal production Food manufacturing Pesticide manufacturing</td>
</tr>
</tbody>
</table>

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in the table could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether or not this action might apply to certain entities. If you have questions regarding the applicability of this action to a particular entity, consult the person listed under FOR FURTHER INFORMATION CONTACT.

B. How Can I Get Additional Information, Including Copies of this Document and Other Related Documents?

1. Electronically. You may obtain electronic copies of this document, and certain other related documents that might be available electronically, from the EPA Internet Home Page at http://www.epa.gov/. To access this document, on the Home Page select “Laws and Regulations,” “Regulations and Proposed Rules,” and then look up the entry for this document under the “Federal Register—Environmental Documents.” You can also go directly to the Federal Register listings at http://www.epa.gov/fedrgstr/.

2. In person. The Agency has established an official record for this action under docket control number OPP–301089. The official record consists of the documents specifically referenced in this action, and other information related to this action, including any information claimed as Confidential Business Information (CBI). This official record includes the documents that are physically located in the docket, as well as the documents that are referenced in those documents. The public version of the official record does not include any information claimed as CBI. The public version of the official record, which includes printed, paper versions of any electronic comments submitted during an applicable comment period is available for inspection in the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1921 Jefferson Davis Hwy., Arlington, VA, from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The PIRIB telephone number is (703) 305–5805.

II. Background and Statutory Findings

EPA issued a final rule, published in the Federal Register of June 30, 1999 (64 FR 35032) (FRL–6086–3), which announced that on its own initiative under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, as amended by the Food Quality Protection Act of 1996 (FQPA) (Public Law 104–170) it established a time-limited tolerance for the residues of cyprodinil in or on caneberries at 10 ppb, with an expiration date of December 31, 2000. EPA established the tolerance because section 408(l)(6) of the FFDCA requires EPA to establish a time-limited tolerance or exemption from the requirement for a tolerance for pesticide chemical residues in food that will result from the use of a pesticide under an emergency exemption granted by EPA under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Such tolerances can be established without providing notice or period for public comment.

EPA received a request to extend the use of cyprodinil on caneberries for this year's growing season due to the widespread development of pest resistance to previously-used standard fungicides benomyl, iprodione and vinclozolin; no currently available alternatives appear to provide suitable disease control and significant economic losses are expected with moderate to severe disease pressure. After having reviewed the submission, EPA concurs that emergency conditions exist. EPA has authorized under FIFRA section 18 the use of cyprodinil on caneberries for control of gray mold in Oregon and Washington.

EPA assessed the potential risks presented by residues of cyprodinil in or on caneberries. In doing so, EPA considered the safety standard in FFDCA section 408(b)(2), and decided that the necessary tolerance under FFDCA section 408(l)(6) would be consistent with the safety standard and with FIFRA section 18. The data and other relevant material have been evaluated and discussed in the final rule of June 30, 1999 (64 FR 35032) (FRL–6086–3). Based on that data and information considered, the Agency reaffirms that extension of the time-limited tolerance will continue to meet the requirements of section 408(l)(6).

Therefore, the time-limited tolerance is extended for an additional 1-year period. EPA will publish a document in the Federal Register to remove the revoked tolerance from the Code of Federal Regulations (CFR). Although this tolerance will expire and is revoked on December 31, 2001, under FFDCA section 408(l)(5), residues of the pesticide not in excess of the amounts specified in the tolerance remaining in or on caneberreries after that date will not be unlawful, provided the pesticide is applied in a manner that was lawful under FIFRA and the application occurred prior to the revocation of the tolerance. EPA will take action to revoke this tolerance earlier if any experience with, scientific data on, or other relevant information on this pesticide indicate that the residues are not safe.

III. Objections and Hearing Requests

Under section 408(g) of the FFDCA, as amended by the FQPA, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. The EPA procedural regulations which govern the submission of objections and requests for hearings appear in 40 CFR part 178. Although the procedures in those regulations require some modification to reflect the amendments made to the FFDCA by the FQPA of 1996, EPA will continue to use those procedures, with appropriate adjustments, until the necessary modifications can be made. The new section 408(g) provides essentially the same process for persons to “object” to a regulation for an exemption from the requirement of a tolerance issued by EPA under new section 408(d), as was provided in the old FFDCA sections 408 and 409. However, the period for filing objections is now 60 days, rather than 30 days.

A. What Do I Need to Do to File an Objection or Request a Hearing?

You must file your objection or request a hearing on this regulation in accordance with the instructions provided in this unit and in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket control number OPP–301089 in the subject line on the first page of your submission. All requests must be in writing, and must be mailed or delivered to the Hearing Clerk on or before February 26, 2001.

1. Filing the request. Your objection must specify the specific provisions in the regulation that you object to, and the grounds for the objections (40 CFR 178.25). If a hearing is requested, the objections must include a statement of the factual issues(s) on which a hearing is requested, the requestor’s contentions on such issues, and a summary of any evidence relied upon by the objector (40 CFR 178.27). Information submitted in connection with an objection or hearing
request may be claimed confidential by marking any part or all of that information as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the information that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice.

Mail your written request to: Office of the Hearing Clerk (1900), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460. You may also deliver your request to the Office of the Hearing Clerk in Rm. C400, Waterside Mall, 401 M St., SW., Washington, DC 20460. The Office of the Hearing Clerk is open from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Office of the Hearing Clerk is (202) 260–4865.

2. Tolerance fee payment. If you file an objection or a request, you must pay the fee prescribed by 40 CFR 180.33(i) or request a waiver of that fee pursuant to 40 CFR 180.33(m). You must mail the fee to: EPA Headquarters Accounting Operations Branch, Office of Pesticide Programs, P.O. Box 360277M, Pittsburgh, PA 15251. Please identify the fee submission by labeling it “Tolerance Petition Fees.”

EPA is authorized to waive any fee requirement “when in the judgement of the Administrator such a waiver or refund is equitable and not contrary to the purpose of this subsection.” For additional information regarding the waiver of these fees, you may contact James Tompkins by phone at (703) 305–5697, by e-mail at tompkins.jim@epa.gov, or by mailing a request for information to Mr. Tompkins at Registration Division (7505C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460.

If you would like to request a waiver of the tolerance objection fees, you must mail your request for such a waiver to: James Hollins, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460.

3. Copies for the Docket. In addition to filing an objection or hearing request with the Hearing Clerk as described in Unit III.A., you should also send a copy of your request to the PIRIB for its inclusion in the official record that is described in Unit I.B.2. Mail your copies, identified by docket control number, to: Public Information and Records Integrity Branch, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460. In person or by courier, bring a copy to the location of the PIRIB described in Unit I.B.2. You may also send an electronic copy of your request via e-mail to: opp-docket@epa.gov. Please use an ASCII file format and avoid the use of special characters and any form of encryption. Copies of electronic objections and hearing requests will also be accepted on disks in WordPerfect 6.1/8.0 file format or ASCII file format. Do not include any CBI in your electronic copy. You may also submit an electronic copy of your request at many Federal Depository Libraries.

B. When Will the Agency Grant a Request for a Hearing?

A request for a hearing will be granted if the Administrator determines that the material submitted shows the following: There is a genuine and substantial issue of disputed fact; there is a reasonable possibility that available evidence identified by the requestor would, if established resolve one or more of such issues in favor of the requestor, taking into account uncontested claims or facts to the contrary; and resolution of the factual issue(s) in the manner sought by the requestor would be adequate to justify the action requested (40 CFR 178.32).

IV. Regulatory Assessment Requirements

This final rule extends the expiration date of a time-limited tolerance under FFDCA section 408. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled Regulatory Planning and Review (58 FR 51735, October 4, 1993). This final rule does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 et seq., or impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Public Law 104–4). Nor does it require any prior consultation as specified by Executive Order 13041, entitled Consultation and Coordination with Indian Tribal Governments (63 FR 27655, May 19, 1998). Special considerations as required by Executive Order 13272, entitled Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (59 FR 7629, February 16, 1994); or require OMB review for any Agency action under Executive Order 13045, entitled Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19985, April 23, 1997). This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104–113, section 12(d) (15 U.S.C. 272 note). Since tolerances and exemptions that are established on the basis of a FIFRA section 18 petition under FFDCA section 408, such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.) do not apply. In addition, the Agency has determined that this action will not have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132, entitled Federalism (64 FR 43235, August 10, 1999). Executive Order 13132 requires EPA to develop an accountable process to ensure “meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.” “Policies that have federalism implications” is defined in the Executive Order to include regulations that have “substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.” This final rule directly regulates growers, food processors, food handlers and food retailers, not States. This action does not alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4).

V. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of this final rule in the Federal Register.
rule is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

James Jones,
Director, Registration Division, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180—[AMENDED]

1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), (346a) and 371.

§ 180.532 Amended

2. In § 180.532, by amending the table in paragraph (b), by revising the expiration/revocation date for Canberries from “12/31/00” to read “12/31/01”.

BILLING CODE 6560–50–S

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[OPP–301090; FRL–6756–5]

RIN 2070–AB78

Desmedipham; Extension of Tolerances for Emergency Exemption

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation extends time-limited tolerances for residues of the herbicide desmedipham in or on red beet roots at 0.2 part per million (ppm) and red beet tops at 15 ppm for an additional 1–year period. These tolerances will expire and are revoked on December 31, 2001. This action is in response to EPA’s granting of an emergency exemption under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act authorizing use of the pesticide on garden (red) beets.

Section 408(l)(6) of the Federal Food, Drug, and Cosmetic Act requires EPA to establish a time-limited tolerance or exemption from the requirement for a tolerance for pesticide chemical residues in food that will result from the use of a pesticide under an emergency exemption granted by EPA under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act.

DATES: This regulation is effective December 28, 2000. Objections and requests for hearings, identified by docket control number OPP–301090, must be received by EPA on or before February 26, 2001.

ADDRESSES: Written objections and hearing requests may be submitted by mail, in person, or by courier. Please follow the detailed instructions for each method as provided in Unit III. of the SUPPLEMENTARY INFORMATION. To ensure proper receipt by EPA, your objections and hearing requests must identify docket control number OPP–301090 in the subject line on the first page of your response.

FOR FURTHER INFORMATION CONTACT: By mail: Stephen Schaible, Registration Division, Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: 703–308–9362; and e-mail address: schaible.stephen@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. Potentially affected categories and entities may include, but are not limited to:

<table>
<thead>
<tr>
<th>Categories</th>
<th>NAICS codes</th>
<th>Examples of potentially affected entities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Industry</td>
<td></td>
<td></td>
</tr>
<tr>
<td>111</td>
<td>Crop production</td>
<td></td>
</tr>
<tr>
<td>112</td>
<td>Animal production</td>
<td></td>
</tr>
<tr>
<td>311</td>
<td>Food manufacturing</td>
<td></td>
</tr>
<tr>
<td>32532</td>
<td>Pesticide manufacturing</td>
<td></td>
</tr>
</tbody>
</table>

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in the table could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether or not this action might apply to certain entities. If you have questions regarding the applicability of this action to a particular entity, consult the person listed under FOR FURTHER INFORMATION CONTACT.

B. How Can I Get Additional Information, Including Copies of this Document and Other Related Documents?

1. Electronically. You may obtain electronic copies of this document, and certain other related documents that might be available electronically, from the EPA Internet Home Page at http://www.epa.gov/. To access this document, on the Home Page select “Laws and Regulations,” “Regulations and Proposed Rules,” and then look up the entry for this document under the “Federal Register—Environmental Documents.” You can also go directly to the Federal Register listings at http://www.epa.gov/fedregstr/.

2. In person. The Agency has established an official record for this action under docket control number OPP–301090. The official record consists of the documents specifically referenced in this action, and other information related to this action, including any information claimed as Confidential Business Information (CBI). This official record includes the documents that are physically located in the docket, as well as the documents that are referenced in those documents. The public version of the official record does not include any information claimed as CBI. The public version of the official record, which includes printed, paper versions of any electronic comments submitted during an applicable comment period is available for inspection in the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1921 Jefferson Davis Hwy., Arlington, VA, from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The PIRIB telephone number is (703) 305–5805.

II. Background and Statutory Findings

EPA issued a final rule, published in the Federal Register of August 29, 1997 (62 FR 45741) [FRL–5738–5], which announced that it was taking its own initiative under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a, as amended by the Food Quality Protection Act of 1996 (FQPA) (Public Law 104–170) it established time-limited tolerances for the residues of desmedipham in or on red beet roots at 0.2 ppm and red beet tops at 15 ppm, with an expiration date of August 31, 1998. EPA extended this expiration date to December 31, 2000 in a final rule published in the Federal Register of August 25, 1999. EPA established these tolerances because section 408(l)(6) of the FFDCA requires EPA to establish a time-limited tolerance or exemption from the requirement for a tolerance for
pesticide chemical residues in food that will result from the use of a pesticide under an emergency exemption granted by EPA under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Such tolerances can be established without providing notice or period for public comment.

EPA received a request to extend the use of desmedipham on red beets for this year's growing season due to the continued non-routine situation facing red beet growers in New York; the voluntary cancellation of diethylthiocarbamate in 1993 has left growers with no registered alternatives which provide adequate or dependable weed control. After having reviewed the submission, EPA concurs that emergency conditions exist. EPA has authorized under FIFRA section 18 the use of desmedipham on red beets for control of broadleaf weeds in New York.

EPA assessed the potential risks presented by residues of desmedipham in or on red beets. In doing so, EPA considered standards in FFDCA section 408(b)(2), and decided that the necessary tolerances under FFDCA section 408(l)(6) would be consistent with the safety standard and with FIFRA section 18. The data and other relevant material have been evaluated and discussed in the final rule of August 29, 1997 (62 FR 45741) (FRL–5738–5). Based on that data and information considered, the Agency reaffirms that extension of the time-limited tolerances will continue to meet the requirements of section 408(l)(6). Therefore, the time-limited tolerances are extended for an additional 1-year period. EPA will publish a document in the Federal Register to remove the revoked tolerances from the Code of Federal Regulations (CFR). Although these tolerances will expire and are revoked on December 31, 2001, under FFDCA section 408(l)(5), residues of the pesticide not in excess of the amounts specified in the tolerances remaining in or on red beet roots or tops after that date will not be unlawful, provided the pesticide is applied in a manner that was lawful under FIFRA and the application occurred prior to the revocation of the tolerances. EPA will take action to revoke these tolerances earlier if any experience with, scientific data on, or other relevant information on this pesticide indicate that the residues are not safe.

III. Objections and Hearing Requests

Under section 408(g) of the FFDCA, as amended by the FQPA, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. The EPA procedural regulations which govern the submission of objections and requests for hearings appear in 40 CFR part 178. Although the procedures in these regulations require some modification to reflect the amendments made to the FFDCA by the FQPA of 1996, EPA will continue to use those procedures, with appropriate adjustments, until the necessary modifications can be made. The new section 408(g) provides essentially the same process for persons to "object" to a regulation for an exemption from the requirement of a tolerance issued by EPA under new section 408(d), as was provided in the old FFDCA sections 408 and 409. However, the period for filing objections is now 60 days, rather than 30 days.

A. What Do I Need to Do to File an Objection or Request a Hearing?

You must file your objection or request a hearing on this regulation in accordance with the instructions provided in this unit and in 40 CFR part 178. To object or request a hearing by EPA, you must identify docket control number OPP–301090 in the subject line on the first page of your submission. All requests must be in writing, and must be mailed or delivered to the Hearing Clerk on or before February 26, 2001.

1. Filing the request. Your objection must specify the specific provisions in the regulation that you object to, and the grounds for the objections (40 CFR 178.25). If a hearing is requested, the objections must include a statement of the factual issue(s) on which a hearing is requested, the requestor's contentions on such issues, and a summary of any evidence relied upon by the objector (40 CFR 178.27). Information submitted in connection with an objection or hearing request may be claimed confidential by marking any part or all of that information as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the information that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice.

Mail your written request to: Office of the Hearing Clerk (1900), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460. You may also deliver your request to the Office of the Hearing Clerk in Rm. C400, Waterside Mall, 401 M St., SW., Washington, DC 20460. The telephone number for the Office of the Hearing Clerk is (202) 260–4865.

2. Tolerance fee payment. If you file an objection or request a hearing, you must also pay the fee prescribed by 40 CFR 180.33(i) or request a waiver of that fee pursuant to 40 CFR 180.33(m). You must mail the fee to: EPA Headquarters Accounting Operations Branch, Office of Pesticide Programs, P.O. Box 360277M, Pittsburgh, PA 15251. Please identify the fee submission by labeling it "Tolerance Petition Fees."

EPA is authorized to waive any fee requirement "when in the judgement of the Administrator such a waiver or refund is equitable and not contrary to the purpose of this subsection." For additional information regarding the waiver of these fees, you may contact James Tompkins by phone at (703) 305–5697, by e-mail at tompkins.jim@epa.gov, or by mailing a request for information to Mr. Tompkins at Registration Division (7505C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460.

If you file a request for a waiver of the tolerance objection fees, you must mail your request for such a waiver to: James Hollins, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460.

3. Copies for the Docket. In addition to filing an objection or hearing request with the Hearing Clerk as described in Unit III.A., you should also send a copy of your request to the PIRIB for its inclusion in the official record that is described in Unit I.B.2. Mail your copies, identified by docket control number OPP–301090, to: Public Information and Records Integrity Branch, Information Resources and Services Division (7502C), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460. In person or by courier, bring a copy to the location of the PIRIB described in Unit I.B.2. You may also send an electronic copy of your request via e-mail to: opp-docket@epa.gov. Please use an ASCII file format and avoid the use of special characters and any form of encryption. Copies of electronic objections and hearing requests will also be accepted on disks in WordPerfect 6.1/8.0 file format or ASCII file format. Do not include any CBI in your electronic copy. You may also submit an electronic copy of your request at many Federal Depository Libraries.

B. When Will the Agency Grant a Request for a Hearing?

A request for a hearing will be granted if the Administrator determines that the
material submitted shows the following: There is a genuine and substantial issue of fact; there is a reasonable possibility that available evidence identified by the requestor would, if established resolve one or more of such issues in favor of the requestor, taking into account uncontested claims or facts to the contrary; and resolution of the factual issues(s) in the manner sought by the requestor would be adequate to justify the action requested (40 CFR 178.32).

IV. Regulatory Assessment Requirements

This final rule extends the expiration date of time-limited tolerances under FFDCA section 408. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled Regulatory Planning and Review (58 FR 51735, October 4, 1993). This final rule does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 et seq., or impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) (Public Law 104-4). Nor does it require any prior consultation as specified by Executive Order 13084, entitled Consultation and Coordination with Indian Tribal Governments (63 FR 27655, May 19, 1998); special considerations as required by Executive Order 12898, entitled Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations (59 FR 7629, February 16, 1994); or require OMB review or any Agency action under Executive Order 13045, entitled Protection of Children from Environmental Health Risks and Safety Risks (62 FR 19885, April 23, 1997). This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act of 1995 (NTTAA), Public Law 104-113, section 12(d) (15 U.S.C. 272 note). Since tolerances and exemptions that are established on the basis of a FIFRA section 18 petition under FFDCA section 408, such as the tolerances in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 et seq.) do not apply. In addition, the Agency has determined that this action will not have a substantial direct effect on States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132, entitled Federalism (64 FR 43255, August 10, 1999). Executive Order 13132 requires EPA to develop an accountable process to ensure “meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.” “Policies that have federalism implications” is defined in the Executive Order to include regulations that have “substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.” This final rule directly regulates growers, food processors, food handlers and food retailers, not States. This action does not alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4).

V. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 et seq., as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of this final rule in the Federal Register. This final rule is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

James Jones,
Director, Registration Division, Office of Pesticide Programs.

Therefore, 40 CFR chapter I is amended as follows:

PART 180—AMENDED

1. The authority citation for part 180 continues to read as follows: Authority: 21 U.S.C. 321(q), (346a) and 371.

§180.353 [Amended]

2. In §180.353, by amending the table in paragraph (b), by revising the expiration/revocation date from “12/31/00” to read “12/31/01” wherever it appears.

[F.R. Doc. 00-33171 Filed 12-27-00; 8:45 a.m.]

BILLING CODE 6560-50-S

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 20

[CC Docket No. 94-102; FCC 00-436]

Wireless Radio Services; Compatibility with Enhanced 911 Emergency Calling Systems

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document the Commission takes steps to ensure that persons with hearing and speech disabilities using text telephone (TTY) devices will be able to make 911 emergency calls over digital wireless systems. With this in mind, the Commission establishes June 30, 2002, as the deadline by which digital wireless service providers must be capable of transmitting 911 calls made using TTY devices. The Commission also imposes a reporting requirement on carriers, which may be fulfilled through an industry forum that has been actively involved in resolving TTY/digital compatibility problems.

DATES: The amendment to 47 CFR part 20 is effective February 26, 2001.

ADDRESSES: A copy of any comments on the information collection contained herein should be submitted to Judy Boley, Federal Communications Commission, Room 1–C804, 445 12th Street, SW., Washington, D.C. 20554, or via the Internet to jboley@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission’s Fourth Report and Order (Fourth R&O) in CC Docket No. 94–102; FCC 00–436, adopted December 11, 2000, and released December 14, 2000. The
complete text of this Fourth R&O is available for inspection and copying during normal business hours in the FCC Reference Information Center, Courtyard Level, 445 12th Street, SW., Washington, DC, and also may be purchased from the Commission’s copy contractor, International Transcription Services (ITS, Inc.), CY–B400, 445 12th Street, SW., Washington, DC.

Synopsis of the Fourth Report and Order

1. In this Fourth Report and Order (Fourth R&O), the Commission takes steps to ensure that persons with hearing and speech disabilities using text telephone (TTY) devices will be able to make 911 emergency calls over digital wireless systems. In light of recent technological advances related to TTY/digital compatibility, the Commission establishes June 30, 2002, as the deadline by which digital wireless service providers must be capable of transmitting 911 calls made using TTY devices. In order to monitor the development and implementation of this capability within carrier networks, the Commission imposes a reporting requirement on carriers, which may be fulfilled by reporting through an industry forum that has been actively involved in resolving TTY/digital compatibility problems.

2. As indicated in paragraphs 8, 9, and 10 of the full text of the Fourth R&O, the Commission establishes December 31, 2001, as the deadline for carriers operating digital wireless systems to have obtained all software upgrades and equipment necessary to make their systems capable of transmitting 911 calls from TTY devices. However, the Commission allows carriers an additional six-month period, until June 30, 2002, to integrate, test, and deploy the technology in their systems in conjunction with the public safety community.

3. In addition to amending the Commission’s rules to reflect the modified implementation deadline for digital wireless systems to be capable of transmitting 911 calls using TTY devices, the Fourth R&O also addresses pending petitions seeking waiver of the TTY regulations of 47 CFR 20.18(c). As indicated in paragraph 11 of the Fourth R&O, the majority of these petitions were filed on or before December 4, 1998, and, due to technological advances that have occurred since that time, and the revised implementation schedule adopted in the Fourth R&O, the Commission finds that these waiver petitions are moot and thus dismisses them.

4. Paragraphs 12 through 18 of the Fourth R&O considers methods that the Commission could use to monitor the carriers’ progress toward attaining digital TTY accessibility, as well as the progress of technological developments and the adoption of standards. The Fourth R&O, in response to this need, adopts a requirement that carriers submit quarterly reports, but to allow them to fulfill this requirement by reporting through the TTY Forum. As detailed in paragraph 14 of the Fourth R&O, wireless carriers formed the TTY Forum for the purpose of sharing information and developing solutions to the TTY/digital incompatibility problem. The TTY Forum has done an excellent job of helping carriers move toward the goal of making digital wireless systems widely accessible to TTY devices. Most carrier and equipment manufacturer commenters agree that reports by the TTY Forum should be required in lieu of individual reports by carriers. The Commission finds that providing carriers with the flexibility to either file an individual quarterly report or to fulfill this requirement by reporting through the TTY Forum. The quarterly reports must be filed either by the individual carrier or by the carrier through the TTY Forum 15 days after the end of each quarter, beginning on April 15, 2001, with a report for the quarter ending March 31, 2001, and continuing through the implementation deadline of June 30, 2002. This requirement contains information collection requirements that are not effective until approved by the Office of Management and Budget. The FCC will publish a document in the Federal Register announcing the effective date for this requirement. Public comment on the information collection is due February 26, 2001.

5. The quarterly reports should contain updates on the status of the various solutions and should distinguish between different air interfaces. The reports should provide information concerning deployment “milestones” and issues as detailed in paragraph 17 of the Fourth R&O. Paragraph 18 of the Fourth R&O provides information on how and where to file the quarterly reports.

6. The Fourth R&O, in paragraphs 20 through 32, notes several additional consumer issues related to the solutions, including the effect of the solutions on TTYs with proprietary enhanced protocols, the support of voice carry over in the solutions, and concerns about the capability of certain handsets to allow for simultaneous connections to the audio jack and the power cord input. With respect to these issues, the Commission encourages handset and TTY manufacturers and carriers to work toward resolution of these issues. In response to consumer concerns about the availability and cost of analog wireless services, the Commission encourages carriers to work with TTY users to provide an analog service plan comparable to what is offered to digital customers.

Regulatory Flexibility Act

7. The Commission hereby certifies pursuant to section 605(b) of the Regulatory Flexibility Act (RFA), 5 U.S.C. 605(b), that the progress monitoring reporting requirement adopted in this Fourth R&O will not have a significant economic impact on a substantial number of small entities. The report is much like the reporting requirements the Commission previously adopted in the E911 proceeding. The Commission is only requiring the filing of these reports for a limited period of time. Finally, the Commission has adopted (at the suggestion of the industry) a mechanism for filing the reports that minimizes any burdens on small entities. The Commission therefore concludes that there will not be a significant economic impact as a result of this reporting requirement.

8. Report to Congress: The Commission will send a copy of the Fourth R&O, including the Final Regulatory Flexibility Act Certification, in a report to Congress pursuant to the Congressional Review Act, see 5 U.S.C. 801(a)(1)(A). In addition, the Commission will send a copy of the Fourth R&O, including the Final Regulatory Flexibility Act Certification, to the Chief Counsel for Advocacy of the Small Business Administration.

Ordering Clauses:

9. Part 20 of the Commission’s Rules is amended as set forth in the Rule Changes section of this summary. The rule amendments made by this Fourth R&O shall become effective February 26, 2001.

10. The information collections contained in this order will become effective following approval by the Office of Management and Budget. The Commission will publish a document in the Federal Register at a later date establishing the effective date for these collections.

11. All petitions for waiver of section 20.18(c) of the Commission’s rules are dismissed as moot in light of the rule changes adopted in this Fourth R&O.

12. The Commission’s Consumer Information Bureau, Reference Information Center shall send a copy of this Fourth R&O, including the Final
Regulatory Flexibility Certification, to
the Chief Counsel for Advocacy of the
Small Business Administration.

**Paperwork Reduction Act**

1. This Fourth R&O contains a new
information collection. As part of the
Commission’s continuing effort to
reduce paperwork burdens, the
Commission invites the general public
and the Office of Management and
Budget to take this opportunity to
comment on the information collections
contained in this Fourth R&O, as
required by the Paperwork Reduction
and agency comments are due February
26, 2001. Comments should address: (a)
Whether the new collection of
information is necessary for the proper
performance of the functions of the
Commission, including whether the
information shall have practical utility;
(b) the accuracy of the Commission’s
burden estimates; (3) ways to enhance
the quality, utility, and clarity of the
information collected; and (4) ways to
minimize the burden of the collection of
information on the respondents,
including the use of automated
collection techniques or other forms of
information technology.

**OMB Approval Number:** N.A.

**Title:** Revision of the Commission’s
Rules To Ensure Compatibility with
Enhanced 911 Emergency Calling
Systems, Fourth R&O.

**Form No.** N.A.

**Type of Review:** New information
collection.

**Respondents:** Business or other for
profit.

**Number of Respondents:** 4,000.

**Estimated Time Per Response:** 2
Hours.

**Total Annual Burden:** 32,000 Hours.

**Cost to Respondents:** $0.

**Needs and Uses:** The information
submitted in the quarterly reports will
be used by the Commission to keep
track of the carriers’ progress in
complying with E911 TTY requirements
and also to monitor the progress
technology is making towards
compatibility with TTY devices.

**List of Subjects in 47 CFR Part 20**

Communications common carrier,
Communications equipment, Radio.

Federal Communications Commission.

Magalie Roman Salas,
Secretary.

**Rule Changes**

For the reasons discussed in the
preamble, The Federal Communications
Commission amends 47 CFR part 20 as
follows:

**PART 20—COMMERCIAL MOBILE
RADIO SERVICES**

1. The authority citation for part 20
continues to read as follows:

*Authority:* 47 U.S.C. 154, 160, 251–254,
303, and 332 unless otherwise noted.

2. In §20.18, is amended by revising
the note to paragraph (c) to read as
follows:

**§20.18 911 Service.

* * * * *

(c) * * *

Note to Paragraph (c): Operators of
digital wireless systems must begin
complying with the provisions of this
paragraph on or before June 30, 2002.

* * * * *

[FR Doc. 00–33025 Filed 12–27–00; 8:45 am]

BILLING CODE 6712–01–U

**FEDERAL COMMUNICATIONS
COMMISSION**

47 CFR Part 73

[DA 00–2887; MM Docket Nos. 00–189, 00–
190, 00–191, 00–192; RM–9984, RM–9985,
RM–9986, RM–9987]

**Radio Broadcasting Services (Heber,
Snowflake, Overgaard, and Taylor,
Arizona)**

**AGENCY:** Federal Communications
Commission.

**ACTION:** Final rule.

**SUMMARY:** The Commission, at the
request of New Directions Media, Inc.,
allots Channel 288C2 at Heber, Arizona,
Channel 258C2 at Snowflake, Arizona,
Channel 232C3 at Overgaard, Arizona,
and Channel 278C3 at Taylor, Arizona
as each community’s first local aural
service. See 65 FR 64924 (October 31,
2000). Channel 288C2 can be allotted to
Heber in compliance with the
Commission’s minimum distance
separation requirements, with respect to
domestic allotments, without the
imposition of a site restriction at
coordinates 34–27–54 NL and 110–05–
26 WL. A filing window for Channel
288C2 at Heber, Arizona, Channel
258C2 at Snowflake, Arizona, Channel
232C3 at Overgaard, Arizona, and
Channel 278C3 at Taylor will not be
opened at this time. Instead, the issue of
opening a filing window for each
channel will be addressed by the
Commission in a subsequent order.

**DATES:** Effective February 5, 2001.

**FOR FURTHER INFORMATION CONTACT:**
Victoria M. McCauley, Mass Media
Bureau, (202) 418–2180.

**SUPPLEMENTARY INFORMATION:** This is a
synopsis of the Commission’s Report
and Order, MM Docket No., adopted
December 13, 2000, and released
December 22, 2000. The full text of this
Commission decision is available for
inspection and copying during normal
business hours in the FCC Reference
Center (Room 239), 445 12th Street,
SW., Washington, DC. The complete
text of this decision may also be
purchased from the Commission’s copy
contractor, International Transcription
Services, Inc., (202) 857–3800, 1231
20th Street, NW., Washington, DC
20036.

List of Subjects in 47 CFR Part 73

Radio broadcasting.

Part 73 of Title 47 of the Code of
Federal Regulations is amended as follows:

**PART 73—RADIO BROADCAST SERVICES**

1. The authority citation for Part 73
continues to read as follows:

**§73.202 [Amended]**

2. Section 73.202(b), the Table of FM
Allotments under Arizona is amended by
adding Heber, Channel 288C2;
Snowflake, Channel 258C2; Overgaard,
Channel 232C3; and Taylor, Channel
278C3.

Federal Communications Commission.

John A. Karousos,
Chief, Allocations Branch, Policy and Rules
Division, Mass Media Bureau.

FEDERAL COMMUNICATIONS
COMMISSION

47 CFR Part 73

[DA 00–2885; MM Docket No. 98–155; RM–9082; RM–9133]

Radio Broadcasting Services; Alva, Mooreland, Tishomingo, Tuttle and Woodward, OK

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The Commission, at the request of FM 92 Broadcasters, Inc., allocates Channel 283C1 to Mooreland, OK, as the community’s first local aural service. This action also denies the request of Ralph Tyler to reallocate Channel 259C3 from Tishomingo, OK, to Mooreland, OK, as its first local aural service. This action also denies the request of FM 92 Broadcasters, Inc., to reallocate Channel 283C1 from Tishomingo, OK, to Mooreland, OK, as the community’s first local aural service. The FCC Reference Center (Room 239), 445 12th Street, SW, Washington, DC 20546, telephone: (202) 358–1645; email: cdalton@hq.nasa.gov.

FOR FURTHER INFORMATION CONTACT: Leslie K. Shapiro, Mass Media Bureau, (202) 418–2180.

SUPPLEMENTARY INFORMATION: This is a final rule amending the NASA FAR Supplement (NFS) to make miscellaneous administrative and editorial changes.

SUMMARY: This is a final rule amending the NASA FAR Supplement (NFS) to make miscellaneous administrative and editorial changes.

PART 73—RADIO BROADCAST SERVICES

1. The authority citation for Part 73 continues to read as follows:

§ 73.202 [Amended]

2. Section 73.202(b), the Table of FM Allotments under Oklahoma, is amended by adding Mooreland, Channel 283C1.

Federal Communications Commission.

John A. Karousos,
Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau.

BILLING CODE 6712–01–P

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

48 CFR Parts 1807, 1813, 1816, 1835, 1842, 1845, 1852, and 1872

Acquisition Regulations;

Miscellaneous Changes

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: This is a final rule amending the NASA FAR Supplement (NFS) to make miscellaneous administrative and editorial changes.

PART 1807—ACQUISITION PLANNING

1807.105 [Amended]

2. Remove paragraph (b)(1) in section 1807.105.

PART 1813—SIMPLIFIED ACQUISITION PROCEDURES

3. Add section 1813.301–71 to read as follows:

1813.301–71 Training.

All cardholders and approving officials must complete training prior to receiving a purchase card. Training will address the responsibilities of the cardholder and approving official, prohibited purchases, purchase limitations, and sources of supply.

PART 1816—TYPES OF CONTRACTS

4. In section 1816.203–4, revise paragraph (a) to read as follows:

1816.203–4 Contract clauses.

(a) In addition to the approval requirements in the prescriptions at FAR 52.216–2 through 52.216–4, the contracting officer shall coordinate with the installation’s Deputy Chief Financial Officer (Finance) before exceeding the ten-percent limit in paragraph (c)(1) of the clauses at FAR 52.216–2 and 52.216–3 and paragraph (c)(4) of the clause at 52.216–4.

C. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because the changes to the NFS do not impose any recordkeeping or information collection requirements that require the approval of the Office of Management and Budget under 44 U.S.C. 3501, et seq.

List of Subjects in 48 CFR Parts 1807, 1813, 1816, 1835, 1842, 1845, 1852, and 1872

Government procurement.

Tom Luedtke,
Associate Administrator for Procurement.

Accordingly, 48 CFR Parts 1807, 1813, 1816, 1835, 1842, 1845, 1852, and 1872 are amended as follows:

1. The authority citation for 48 CFR Parts 1807, 1813, 1816, 1835, 1842, 1845, 1852, and 1872 continues to read as follows:

Authority: 42 U.S.C. 2473(c)(1)

Bill to

1807.105 [Amended]

2. Remove paragraph (b)(1) in section 1807.105.

PART 1813—SIMPLIFIED ACQUISITION PROCEDURES

3. Add section 1813.301–71 to read as follows:

1813.301–71 Training.

All cardholders and approving officials must complete training prior to receiving a purchase card. Training will address the responsibilities of the cardholder and approving official, prohibited purchases, purchase limitations, and sources of supply.

PART 1816—TYPES OF CONTRACTS

4. In section 1816.203–4, revise paragraph (a) to read as follows:

1816.203–4 Contract clauses.

(a) In addition to the approval requirements in the prescriptions at FAR 52.216–2 through 52.216–4, the contracting officer shall coordinate with the installation’s Deputy Chief Financial Officer (Finance) before exceeding the ten-percent limit in paragraph (c)(1) of the clauses at FAR 52.216–2 and 52.216–3 and paragraph (c)(4) of the clause at 52.216–4.

* * * * *

PART 1807—ACQUISITION PLANNING

1807.105 [Amended]

2. Remove paragraph (b)(1) in section 1807.105.

PART 1813—SIMPLIFIED ACQUISITION PROCEDURES

3. Add section 1813.301–71 to read as follows:

1813.301–71 Training.

All cardholders and approving officials must complete training prior to receiving a purchase card. Training will address the responsibilities of the cardholder and approving official, prohibited purchases, purchase limitations, and sources of supply.

PART 1816—TYPES OF CONTRACTS

4. In section 1816.203–4, revise paragraph (a) to read as follows:

1816.203–4 Contract clauses.

(a) In addition to the approval requirements in the prescriptions at FAR 52.216–2 through 52.216–4, the contracting officer shall coordinate with the installation’s Deputy Chief Financial Officer (Finance) before exceeding the ten-percent limit in paragraph (c)(1) of the clauses at FAR 52.216–2 and 52.216–3 and paragraph (c)(4) of the clause at 52.216–4.

* * * * *

PART 1807—ACQUISITION PLANNING

1807.105 [Amended]

2. Remove paragraph (b)(1) in section 1807.105.

PART 1813—SIMPLIFIED ACQUISITION PROCEDURES

3. Add section 1813.301–71 to read as follows:

1813.301–71 Training.

All cardholders and approving officials must complete training prior to receiving a purchase card. Training will address the responsibilities of the cardholder and approving official, prohibited purchases, purchase limitations, and sources of supply.
PART 1835—RESEARCH AND DEVELOPMENT CONTRACTING

1835.017–71 [Amended]

5. In section 1835.016–71, amend the first sentence of paragraph (b)(2) by removing “and 1805.201”.

PART 1842—CONTRACT ADMINISTRATION AND AUDIT SERVICES

6. Revise section 1842.1501 to read as follows:

1842.1501 General.

Communications with contractors are vital to improved performance and this is NASA’s primary objective in evaluating past performance. Other objectives include providing data for future source selections. While the evaluations must reflect both shortcomings and achievements during performance, they should also elicit from the contractors their views on impediments to improved performance emanating from the Government or other sources.

7. Revise section 1842.7301 to read as follows:

1842.7301 NASA external audit follow-up system.

(a) This section implements OMB Circular No. A–50 and NASA Policy Directive (NPD) 1200.10 “Internal Management Controls and Audit Liaison and Followup”, which provide more detailed guidance. Recommendations from external audits (OMB Circular No. A–133, Audits of States, Local Governments, and Non-Profit Institutions) shall be resolved by formal review and approval procedures analogous to those at 1815.406–171.

(b) The external audit followup system tracks all contract and OMB Circular No. A–133 audits where NASA has resolution and disposition authority. The objective of the tracking system is to ensure that audit recommendations are resolved within 6 months after receipt of the audit report and corrected as expeditiously as possible.

(c)(1) The identification and tracking of contract audit reports under NASA cognizance are accomplished in cooperation with the DCAA.

(2) Identification and tracking of OMB Circular No. A–133 audit reports are accomplished in cooperation with the NASA Office of the Inspector General (OIG).

(d)(1) All reportable contract audit reports as defined by Chapter 15, Section 6, of the DCAA Contract Audit Manual (CAM) shall be reported quarterly to the Headquarters Office of Procurement (Code HK); and

(2) Only OMB Circular No. A–133 audit reports involving the following shall be reported quarterly to Code HK:

(i) A significant management control issue; or

(ii) Questioned costs of $10,000 or more due to an audit finding (see Subpart E–Auditor, paragraph 510 of OMB Circular No. A–133).

(3) NASA contracting officers will maintain a dialogue with DOD Administrative Contracting Officers (ACO) who have been delegated activities on NASA contracts. A review will be conducted no less frequently than semiannually, and the status and disposition of significant audit findings will be documented in the contract file. During this review, NASA contracting officers should discuss with the ACO both prime and subcontract audit reports that have been delegated to DOD. Should these reports contain any findings or recommendations, the NASA contracting officer should obtain their status and document the contract file accordingly.

(e)(1) The terms “resolution” and “disposition” are defined in as follows:

(i) Resolution—The point at which the IG and Management agree on the action to be taken on audit report findings and recommendations.

(ii) Corrective action—Management action responsive to an agreed upon audit recommendation.

(2) The resolution and disposition of OMB Circular No. A–133 audits are handled as follows:

(i) Audit findings pertaining to an individual NASA award are the responsibility of the procurement officer administering that award.

(ii) Audit findings having a Governmentwide impact are the responsibility of the cognizant Federal agency responsible for oversight. For organizations subject to OMB Circular No. A–133, there is either a cognizant agency or an oversight agency. The cognizant agency is the Federal agency that provides the predominant amount of direct funding to the recipient organization unless OMB makes a specific cognizant agency for audit assignment. To provide for the continuity of cognizance, the determination of the predominant amount of direct funding will be based on the direct Federal awards expended in the recipient’s fiscal years ending in 1995, 2000, 2005, and every fifth year thereafter. When there is no direct funding, the Federal agency with the predominant indirect funding is to assume the oversight responsibilities. In cases where NASA is the cognizant or oversight Federal agency, audit resolution and disposition is the responsibility of the procurement officer for the Center having the largest amount of direct funding, or, if there is no direct funding, the largest amount of indirect funding for the audited period. A copy of the memorandum dispositioning the findings shall be provided by each Center having resolution responsibility for the particular report to the Headquarters OIG office and Code HK.

PART 1845—GOVERNMENT PROPERTY

8. In section 1845.7101–1, revise paragraph (c) to read as follows:

1845.7101–1 Property classification.

(c) Buildings. Includes costs of buildings, improvements to buildings, and fixed equipment required for the operation of a building which is permanently attached to and a part of the building and cannot be removed without cutting into the walls, ceilings, or floors. Contractors shall report buildings with a unit acquisition cost of $100,000 or more. Examples of fixed equipment required for functioning of a building include plumbing, heating and lighting equipment, elevators, central air conditioning systems, and built-in safes and vaults.

PART 1852—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

1852.247–73 Shipment by Government Bills of Lading.

9. Amend the date of the clause at section 1852.247–73 by removing “(MARCH 1997)” and adding “(OCTOBER 2000)” in its place.

PART 1872—ACQUISITIONS OF INVESTIGATIONS

1872.305 [Amended]

10. Amend section 1872.305 by removing “Appendix A” in paragraph (b).

1872.306 [Amended]

11. Amend section 1872.306 by removing “Appendix B” and adding “1872.705–2” in its place.

12. Revise section 1872.307 to read as follows:

While not all of the guidelines outlined in 1872.705–2 will be applicable in response to every AO, the investigator should be informed of the
relevant information required. The proposal may be submitted on a form supplied by the Program Office. However, the proposal should be submitted in at least two sections: (a) Investigation and Technical Plan; and (b) Management and Cost Plan as described in 1872.705–2.

1872.705 [Amended] 13. Amend Part VI of section 1872.705 by removing “Appendix C” in paragraph (b)(5) and adding “Appendix B” in its place and removing “General Instructions and Provisions” in paragraphs (d) and (e) and adding “Guidelines for Proposal Preparation” in its place.

[FR Doc. 00–32962 Filed 12–27–00; 8:45 am]
BILLING CODE 7510–01–P

DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration

50 CFR Part 679
[Docket No. 001213348–0366–02; I.D. 121100A]
RIN 0648-AO44

Fisheries of the Exclusive Economic Zone Off Alaska; Removal of Groundfish Closure

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: NMFS revises an existing closure to commercial fishing for Pacific cod within critical habitat designated for Steller sea lions in the exclusive economic zone (EEZ) off Alaska west of 144° W. long. through December 31, 2000. The revision of the existing closure is necessary to permit relatively small-scale, fixed-gear fisheries for Pacific cod to continue for a limited period of time. The revised closure is intended to ensure that Steller sea lions are adequately protected based on conclusions in a biological opinion issued November 30, 2000, while mitigating short-term social and economic effects on fixed-gear fisheries for Pacific cod.

FOR FURTHER INFORMATION CONTACT: Jay Ginter, 907–586–7228 or jay.ginter@noaa.gov.

SUPPLEMENTARY INFORMATION: NMFS manages the U.S. groundfish fisheries in the EEZ of the Bering Sea and Aleutian Islands Management Area (BSAI) and Gulf of Alaska (GOA) under the fishery management plans (FMPs) for groundfish in the respective areas. The North Pacific Fishery Management Council (Council) prepared, and NMFS approved, the FMPs under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act), 16 U.S.C. 1801 et seq. Regulations implementing the FMPs appear at 50 CFR part 679. General regulations governing U.S. fisheries appear at 50 CFR part 600.

NMFS also has statutory authority to promulgate regulations governing the groundfish fisheries under the Endangered Species Act (ESA), 16 U.S.C. 1531 et seq. The ESA requires that each Federal agency ensure that any action authorized, funded, or carried out by such agency is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of critical habitat of such species.

On August 7, 2000, the United States District Court for the Western District of Washington issued an order dissolving the injunction issued on August 7, 2000. Based on that Order, NMFS issued a final rule on December 14, 2000 (65 FR 79784, December 20, 2000) revoking the closure of all groundfish trawl fishing in designated critical habitat that was published on August 15, 2000 (65 FR 49766). However, because the BiOp concluded that the fisheries for Pacific cod, along with pollock and Atka mackerel, as currently prosecuted, jeopardize the continued existence of the western population of Steller sea lions and adversely modify their critical habitat, NMFS reached this conclusion based on information that the pollock, Pacific cod, and Atka mackerel fisheries and the Steller sea lions compete for the same species, that this competition causes reduced availability of prey for the Steller sea lions, that reduced availability of prey leads to nutritional stress, and that nutritional stress, especially of juveniles and to a lesser extent adult females, is the leading hypothesis to explain the continued decline of the western population of Steller sea lions.

On December 5, 2000, the United States District Court for the Western District of Washington issued an order dissolving the injunction issued on August 7, 2000. Based on that Order, NMFS issued a final rule on December 14, 2000 (65 FR 79784, December 20, 2000) revoking the closure of all groundfish trawl fishing in designated critical habitat that was published on August 15, 2000 (65 FR 49766). However, because the BiOp concluded that the fisheries for Pacific cod, along with pollock and Atka mackerel, as currently prosecuted, jeopardize the continued existence of the western population of Steller sea lions and adversely modify their critical habitat, and because only Pacific cod was still available for harvest in certain fisheries, the December 20, 2000, final rule prohibited commercial fishing for Pacific cod in designated critical habitat through December 31, 2000. Commercial fisheries for pollock and Atka mackerel were not included in the final rule because fisheries for those species already were prohibited through...
December 31, 2000, pursuant to other regulatory requirements.

This final rule revises the December 14, 2000, final rule by permitting directed fishing for Pacific cod by vessels using non-trawl gear and continuing the prohibition on directed fishing for Pacific cod by vessels using trawl gear in designated critical habitat. This action is being taken to allow three previously authorized fisheries for Pacific cod with non-trawl gear to continue through the end of the fishing year (i.e., December 31, 2000) or until otherwise closed sooner due to attainment of catch or bycatch limits. The three previously authorized Pacific cod fisheries include: (1) fishing in the BSAI under the Community Development Quota (CDQ) Program, (2) fishing in the BSAI by vessels less than 60 ft (18.3 m) length overall (LOA), and (3) fishing in the GOA by vessels using pot gear for processing by the offshore component.

The number of vessels that were participating in these three fisheries and the remaining catch quota of Pacific cod to be harvested is small relative to the BSAI and GOA groundfish fisheries generally. Based on current participation and harvest information, the CDQ fishery could have about 10 vessels using hook-and-line gear to harvest a remaining quota of 1,800 mt of Pacific cod in critical habitat in the BSAI. The under 60 ft (18.3 m) LOA fishery could have about 4 vessels using non-trawl gear to harvest a remaining quota of 1,200 mt of Pacific cod in critical habitat in the BSAI. Through December 15, 2000, this fishery harvested only 62 mt of this quota and, based on previous harvest rates, NMFS anticipates that another 33 mt will be harvested before January 1, 2001. No vessels were operating in the GOA “offshore” fishery for Pacific cod as of December 15, 2000. Only vessels using pot gear can operate in this fishery because restrictions on Pacific halibut bycatch prevent vessels using hook-and-line gear from participating in the GOA “offshore” fishery for Pacific cod through December 31, 2000. Hence, these are relatively small-scale fisheries and NMFS has determined that allowing them to continue within designated critical habitat would not contravene the Reasonable and Prudent Alternative described in Section 9 of the BiOp. In addition, this action expires on December 31, 2000, thereby severely limiting the potential effect of this action on Steller sea lions.

Classification

The Assistant Administrator for Fisheries, NOAA (AA), has determined that this final rule is consistent with the Court’s Order and is authorized by the ESA.

Because prior notice and opportunity for public comment are not required for this final rule by 5 U.S.C. 553, or any other law, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601 et seq., do not apply to this action. This final rule has been determined to be not significant under section 3(f)(1) of E.O. 12866.

The AA, under 5 U.S.C. 553(b)(B), finds there is good cause to waive providing prior notice and an opportunity for public comment for the partial removal of the existing closure. This removal stems from a United States District Court Order dissolving, as of December 5, 2000, the injunction requiring the closure. Delaying this action to provide prior notice and opportunity for comment would cause unnecessary economic harm to the affected fishermen and thus would be contrary to the public interest. Because this action relieves a restriction, under 5 U.S.C. 553(d)(1) it is not subject to a 30-day delay in the effective date.

List of Subjects in 50 CFR Part 679

Alaska, Fisheries, Recordkeeping and reporting requirements.

Penelope D. Dalton
Assistant Administrator for Fisheries, National Marine Fisheries Service.

For reasons set forth in the preamble, 50 CFR part 679 is amended as follows:

PART 679—FISHERIES OF THE EXCLUSIVE ECONOMIC ZONE OFF ALASKA

1. The authority citation for 50 CFR part 679 continues to read as follows:

2. In § 679.22, paragraph (k) is removed and reserved and paragraph (l) is added, effective through December 31, 2000, to read as follows:

§ 679.22 Closures.

(k) Closure of critical habitat.

(Applicable through December 31, 2000.) Vessels using trawl gear within Steller sea lion critical habitat within the EEZ and west of 144° W. long., as such critical habitat is defined by regulations codified at 50 CFR 226.202 and Tables 1 and 2 to 50 CFR part 226, must not retain at any time amounts of Pacific cod that exceed the maximum retainable bycatch amounts at § 679.20(e) and (f).

[FR Doc. 00-33162 Filed 12-22-00; 3:10 pm]
This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Airspace Docket No. 00–AAL–21]

Proposed Establishment of Class E Airspace; Egegik, AK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking.

SUMMARY: This action establishes Class E airspace at Egegik, AK. The establishment of Area Navigation (RNAV) instrument approaches at the Egegik Airport has made this action necessary. The Egegik Airport status will change from Visual Flight Rules (VFR) to Instrument Flight Rules (IFR). Adoption of this proposal would result in adequate controlled airspace for IFR operations at Egegik, AK.

DATES: Comments must be received on or before February 12, 2001.

ADDRESSES: Send comments on the proposal in triplicate to: Manager, Operations Branch, AAL–530, Docket No. 00–AAL–21, Federal Aviation Administration, 222 West 7th Avenue, Box 14, Anchorage, AK 99513–7587.

The official docket may be examined in the Office of the Regional Counsel for the Alaskan Region at the same address.

An informal docket may also be examined during normal business hours in the Office of the Manager, Operations Branch, Air Traffic Division, at the address shown above and on the Internet at Alaskan Region’s homepage at http://www.alaska.faa.gov/at or at address http://162.58.28.41/at.

FOR FURTHER INFORMATION CONTACT: Robert Durand, Operations Branch, AAL–531, Federal Aviation Administration, 222 West 7th Avenue, Box 14, Anchorage, AK 99513–7587; telephone number (907) 271–5988; fax: (907) 271–2850; email: Bob.Durand@faa.gov. Internet address: http://www.alaska.faa.gov/at.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. Communications should identify the airspace number and be submitted in triplicate to the address listed above. Commenters wishing the FAA to acknowledge receipt of their comments on this notice must submit with those comments a self-addressed, stamped postcard on which the following statement is made: “Comments to Airspace Docket No. 00–AAL–21.” The postcard will be date/time stamped and returned to the commenter. All communications received on or before the specified closing date for comments will be considered before taking action on the proposed rule. The proposal contained in this notice may be changed in light of comments received. All comments submitted will be available for examination in the Operations Branch, Air Traffic Division, Federal Aviation Administration, 222 West 7th Avenue, Box 14, Anchorage, AK, both before and after the closing date for comments. A report summarizing each substantive public contact with FAA personnel concerned with this rulemaking will be filed in the docket.

Availability of Notice of Proposed Rulemaking’s (NPRM’s)

An electronic copy of this document may be downloaded, using a modem and suitable communications software, from the FAA regulations section of the Fedworld electronic bulletin board service (telephone: 703–321–3339) or the Federal Register’s electronic bulletin board service (telephone: 202–512–1661).

Internet users may reach the Federal Register’s web page for access to recently published rulemaking documents at http://www.access.gpo.gov/su_docs/aces/aces140.html.

Any person may obtain a copy of this NPRM by submitting a request to the Operations Branch, AAL–530, Federal Aviation Administration, 222 West 7th Avenue, Box 14, Anchorage, AK 99513–7587. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for future NPRM’s should contact the individual(s) identified in the FOR FURTHER INFORMATION CONTACT section.

The Proposal

The FAA proposes to amend 14 CFR part 71 by establishing Class E airspace at Egegik, AK, to create controlled airspace for the RNAV instrument approaches to RWY 12 and RWY 30. The Egegik Airport status will be upgraded from VFR to IFR. The intended effect of this proposal is to provide adequate controlled airspace for IFR operations at Egegik, AK.

The area would be depicted on aeronautical charts for pilot reference. The coordinates for this airspace docket are based on North American Datum 83. The Class E airspace areas designated as 700/1200 foot transition areas are published in paragraph 6005 in FAA Order 7400.9H, Airspace Designations and Reporting Points, dated September 1, 2000, and effective September 16, 2000, which is incorporated by reference in 14 CFR 71.1. The Class E airspace designations listed in this document would be published subsequently in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.
List of Subjects in 14 CFR Part 71
Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment
In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, CLASS B, CLASS C, CLASS D, AND CLASS E AIRSPACE AREAS; AIRWAYS; ROUTES; AND REPORTING POINTS

1. The authority citation for 14 CFR part 71 continues to read as follows:

§ 71.1 [Amended]
2. The incorporation by reference in 14 CFR 71.1 of Federal Aviation Administration Order 7400.9H, Airspace Designations and Reporting Points, dated September 1, 2000, and effective September 16, 2000, is to be amended as follows:

Paragraph 6005 Class E airspace extending upward from 700 feet or more above the surface of the earth.

AAL AK E5 Egegik, AK [New]
Egegik Airport, AK
That airspace extending upward from 700 feet above the surface within a 6.3 mile radius of the Egegik Airport.

Issued in Anchorage, AK, on December 19, 2000.

Anthony M. Wylie,
Acting Manager, Air Traffic Division, Alaskan Region.

[Docket No. 2000–8056]

Federal Highway Administration

23 CFR Part 772

For Abatement of Highway Traffic Noise and Construction Noise

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Advance notice of proposed rulemaking (ANPRM); request for comments.

SUMMARY: The FHWA is requesting comments on whether its regulations on noise insulation of private residences should be revised to allow Federal participation when a traffic noise impact occurs, i.e., when predicted traffic noise levels substantially exceed the existing noise levels. Currently, Federal participation in the noise insulation of private residences is allowable only in situations where: Severe traffic noise impacts exist or are expected, and normal abatement measures are physically infeasible or economically unreasonable. In these instances, the FHWA may approve a State’s request for unusual or extraordinary abatement measures on a case-by-case basis. When considering extraordinary abatement measures, the State must demonstrate that the affected activities experience traffic noise impacts to a far greater degree than other similar activities adjacent to highway facilities. For example, residential areas experience absolute noise levels of at least 75 decibels or residential areas experience noise level increases of at least 30 decibels over existing noise levels. The noise insulation of private residences is an example of an extraordinary abatement measure.

DATES: Comments must be received on or before February 26, 2001.

ADDRESSES: Mail or hand deliver comments to the U.S. Department of Transportation, Dockets Management Facility, Room PL–401, 400 Seventh Street, SW., Washington, DC 20590, or submit electronically at http://dmses.dot.gov/submit. All comments received will be available for examination and copying at the above address from 9 a.m. to 5 p.m., e.t., Monday through Friday, except Federal holidays. Those desiring notification of receipt of comments must include a self-addressed, stamped postcard or you may print the acknowledgment page that appears after submitting comments electronically.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Armstrong, Office of Natural Environment, HEPN–20, (202) 366–2073, or Mr. Robert Black, Office of the Chief Counsel, HCC–30, (202) 366–1359, Federal Highway Administration, 400 Seventh Street, SW., Washington, DC 20590–0001. Office hours are from 7:45 a.m. to 4:15 p.m., e.t., Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION: Electronic Access and Filing
You may submit or retrieve comments online through the Document Management System (DMS) at: http://dmses.dot.gov/submit. Acceptable formats include: MS Word (versions 95 to 97), MS Word for Mac (versions 6 to 8), Rich Text File (RTF), American Standard Code Information Interchange (ASCII) (TXT), Portable Document Format (PDF), and Wordperfect (versions 7 to 8). The DMS is available 24 hours each day, 365 days each year. Electronic submission and retrieval help and guidelines are available under the help section of the web site.

Background
The FHWA noise regulations were developed as a result of the Federal-Aid Highway Act of 1970 (Public Law 91–605, 84 Stat. 1713) and apply to projects where a State department of transportation has requested Federal funding for participation in the project. Under FHWA noise requirements found at 23 CFR part 772, the State transportation department must determine if there will be traffic noise impacts in areas adjacent to federally-aided highways when a project is proposed for the construction of a highway on a new location or the reconstruction of an existing highway to either significantly change the horizontal or vertical alignment or increase the number of through-traffic lanes. Such a project is termed a “Type I” project. If the State transportation department identifies potential traffic noise impacts, it must consider noise abatement measures and implement the measures when they are determined to be reasonable and feasible.

Federal law and FHWA regulations do not require the State departments of transportation to implement noise abatement along existing highways. However, they may voluntarily initiate this type of abatement, termed a “Type II” project, but they are solely responsible for making this decision. Federal participation in the funding of such projects is limited to those that propose abatement measures along lands that were developed or were under substantial construction before approval of the acquisition of the right-of-way for, or construction of, the existing highway.
Noise abatement measure which may be incorporated in “Type I” and “Type II” projects include the following: (1) Traffic management measures (e.g., traffic control devices and signing for prohibition of certain vehicle types, time-use restrictions for certain vehicle types, modified speed limits and exclusive land designations); (2) alteration of horizontal and vertical alignments; (3) acquisition of property rights (either in fee or lesser interest) for construction of noise barriers; (4) construction of noise barriers (including landscaping for aesthetic purposes), whether within or outside the highway right-of-way; (5) acquisition of real property or interests therein (predominantly unimproved property) to serve as a buffer zone to preempt development which would be adversely impacted by traffic noise (this measure may be included in “Type I” projects only); and (6) noise insulation of public use or nonprofit institutional structures.

In establishing the noise regulations, the FHWA limited routine noise insulation to public use or nonprofit institutional structures.

1. Should the FHWA revise its noise regulation to routinely allow Federal participation in the noise insulation of private residences whenever a traffic noise impact occurs, not only when a severe traffic noise impact occurs?

2. Should the FHWA revise its noise regulation to routinely allow Federal participation in the noise insulation of private residences, i.e., add it to the listing of abatement measures which may be included in “Type I” and “Type II” projects, or should Federal participation in the noise insulation of private residences be allowed only after all the other listed abatement measures have been determined not to be reasonable and feasible?

3. Should the FHWA revise its noise regulation to address the noise insulation of private residences in a manner which is different from that discussed in the first two questions?

Rulemaking Analyses and Notices

All comments received before the close of business on the comment closing date indicated above will be considered and will be available for examination using the docket number appearing at the top of this document in the docket room at the above address or via the electronic addresses provided above. The FHWA will file comments received after the comment closing date in the docket and will consider late comments to the extent practicable. In addition to late comments, the FHWA will also continue to file in the docket relevant information becoming available after the comment closing date, and interested persons should continue to examine the docket for new material. An NPRM may be issued at any time after close of the comment period.

Executive Order 12866 (Regulatory Planning and Review) and DOT Regulatory Policies and Procedures

The FHWA has determined that this action is not a significant regulatory action within the meaning of Executive Order 12866, nor would it be a significant regulatory action within the Department of Transportation’s regulatory policies and procedures. Due to the preliminary nature of this document and lack of necessary information on costs and benefits, the FHWA is unable to evaluate the impact of potential changes to the regulatory requirements concerning the noise insulation of private residences.

Comments, information, and data are solicited on the economic and other related costs and/or possible benefits of the potential changes. Based on the information received in response to this notice, the FHWA intends to carefully consider the costs and benefits associated with various alternative requirements.

Regulatory Flexibility Act

In compliance with the Regulatory Flexibility Act (5 U.S.C. 601–612), the FHWA has determined that the potential regulatory changes will have no economic impacts on small entities. This action would merely seek information concerning the noise insulation of private residences. Based on this evaluation, the FHWA certifies that this action would not have a significant economic impact on a substantial number of small entities.

National Environmental Policy Act

The FHWA will analyze any actions that might be proposed in response to comments received here for the purpose of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 et seq.) to assess whether there would be any effect on the quality of the environment.

Unfunded Mandates Reform Act of 1995

Due to the preliminary nature of this document and lack of necessary information on costs, the FHWA is unable to evaluate the effects of the potential regulatory changes in regards to imposing a Federal mandate involving the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of $100 million or more in any one year (2 U.S.C. 1532). Nevertheless, the FHWA will evaluate any regulatory action that might be proposed in subsequent stages of this rulemaking to assess the effects on State, local, and tribal governments and the private sector.

Executive Order 12988 (Civil Justice Reform)

The FHWA will evaluate any action that may be proposed in response to comments received here to ensure that such action meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.
Executive Order 13045 (Protection of Children)

The FHWA will evaluate any rule that may be proposed in response to comments received here under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. We do not, however, anticipate that any such rule would be economically significant or would present an environmental risk to health or safety that may disproportionately affect children.

Executive Order 12630 (Takings of Private Property)

The FHWA will evaluate any rule that may be proposed in response to comments received here to ensure that any such rule will not effect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

Executive Order 13132 (Federalism)

Any action that may be initiated in response to comments received here will be analyzed in accordance with the principles and criteria contained in Executive Order 13132, dated August 4, 1999. The FHWA anticipates that such action would not have a substantial direct effect or sufficient Federalism implications on States that would limit the policymaking discretion of the States. Nor do we anticipate that such action would directly preempt any State law or regulation.

Executive Order 12372 (Intergovernmental Review)

Catalog of Federal Domestic Assistance Program Number 20.205 Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.

Paperwork Reduction Act of 1995

Regulation Identification Number

A regulation identification number (RIN) is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN contained in the heading of this document can be used to cross reference this action with the Unified Agenda.

Coast Guard

33 CFR Part 164

46 CFR Parts 25 and 27

[USCG–2000–6931]

Fire-Suppression Systems and Voyage Planning for Towing Vessels

AGENCY: Coast Guard, DOT.

ACTION: Notice of meeting; request for comments.

SUMMARY: The Coast Guard will hold a public meeting to discuss proposed rules for improving the safety of towing vessels. A supplemental notice of proposed rulemaking published on November 8, 2000, would require the installation of fixed fire-extinguishing systems in towing vessels’ engine rooms, and it would require owners or operators, and masters, to ensure that voyage plans are complete before their towing vessels commence trips with any barge in tow. These rules would reduce the number of uncontrolled fires in engine rooms, and other fire-related or operational mishaps on towing vessels; as a result, they would save lives, diminish property damage, and reduce the associated threats to the environment and maritime commerce.

The Coast Guard encourages interested parties to attend the meeting and submit comments for discussion during the meeting. In addition, the Coast Guard seeks written comments from any party who is unable to attend the meeting.

DATES: The Coast Guard will hold this public meeting on February 8, 2001, from 1 p.m. to 5 p.m. This meeting may close early if all business is finished. Written material for discussion during the meeting should reach the Docket Management Facility on or before February 2, 2001. Other written comments must reach the Docket Management Facility on or before March 8, 2001.

ADDRESSES: The Coast Guard will hold this public meeting at the U.S. Department of Transportation, Nassif Building, rooms 2230 and 2232, 400 Seventh Street SW., Washington, DC 20590–0001. The telephone number is 202–267–1181. You may mail your comments to the Docket Management Facility [USCG–2000–6931], U.S. Department of Transportation, room PL–401, 400 Seventh Street SW., Washington, DC 20590–0001, or deliver them to room PL–401 on the Plaza level of the Nassif Building at the same address between 9 a.m. and 5 p.m., Monday through Friday, except for Federal holidays. The telephone number is 202–366–9329.

The Docket Management Facility maintains the public docket for this notice. Comments, and documents as indicated in this notice, will become part of this docket and will be available for inspection or copying at room PL–401, on the Plaza level of the Nassif Building at the same address between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. You may also access this docket on the Internet at http://dms.dot.gov.

FOR FURTHER INFORMATION CONTACT: For questions on this notice, contact Randall Eberly, P.E., Project Manager, Lifesaving and Fire Safety Division of the Office of Design and Engineering Standards (G–MSE–4), Coast Guard, telephone 202–267–1861. For questions on viewing, or submitting material to the docket, contact Dorothy Beard, Chief, Dockets, Department of Transportation, telephone 202–366–9329.

SUPPLEMENTARY INFORMATION:

Requests for Comments

The Coast Guard encourages interested persons to submit written data, views, or arguments. Persons submitting comments should include their names and addresses, identify this notice [USCG–2000–6931], and give the reason for each comment. Please submit all comments and attachments in an unbound format, no larger than 8 1/2 by 11 inches, suitable for copying and electronic filing to the Docket Management Facility at the address under ADDRESSES. Persons wanting acknowledgement of receipt of comments should enclose stamped, self-addressed postcards or envelopes.

The Coast Guard will consider all comments received during the comment period.

Information on Service for Individuals With Disabilities

For information on facilities or services for individuals with disabilities
The spill led Congress to amend the law of its contents into the coastal waters. The incident on January 19, 1996, off the coast of Rhode Island when the tugboat SCANDIA, with the tank barge NORTH CAPE in tow, caught fire five miles off the coast. The spill led Congress to amend the law to permit the Secretary of Transportation—“in consultation with the Towing Safety Advisory Committee” (TSAC)—to require fire-suppression and other measures on all towing vessels. The measures outlined in the SNPRM would likely decrease the number and severity of injuries to crews, prevent damage to vessels, structures and other property, and protect the environment.

**Public Meeting**

This meeting is open to the public. Please note that the meeting may close early if all business is finished. Members of the public make oral presentations during the meeting. If you would like to make an oral presentation at the meeting, please notify the Coast Guard point of contact listed under FOR FURTHER INFORMATION CONTACT no later than February 2, 2001.

Joseph J. Angelo,
Director of Standards, Marine Safety and Environmental Protection.

**Great Lakes Pilotage Regulations**

**AGENCY:** Coast Guard, DOT.

**ACTION:** Notice of meeting; request for comments.

**SUMMARY:** The Coast Guard’s Office of Great Lakes Pilotage will hold a public meeting. This meeting is in response to the marine industry’s request for a comprehensive review of the Great Lakes Pilotage System. The purpose of the meeting is to discuss options for improving the safety, reliability, and efficiency of the Great Lakes Pilotage System. We encourage interested parties to attend the meeting and submit comments for discussion during the meeting. We also seek written comments from any party who is unable to attend the meeting.

**DATES:** Public Meeting: We will hold the meeting on January 30, 2001, from 10 a.m. to 4 p.m.

**ADDRESSES:** Public Meeting: We will hold the meeting in room B1, The Federal Building, 1240 East 9th Street, Cleveland, Ohio 44199.

Written Comments: The Docket Management Facility must receive your comments on or before January 22, 2001.

For information concerning this notice or the public meeting, contact Tom Lawler, Chief Economist, Office of Great Lakes Pilotage (G–MW), U.S. Coast Guard Headquarters, 2100 Second Street, SW., Washington, DC 20590, telephone 202–267–6164. For questions on viewing or submitting material to the docket contact Dorothy Beard, Chief, Dockets, Department of Transportation, telephone 202–366–9329.

**SUPPLEMENTARY INFORMATION:**

How Do I Participate in This Action?

The Coast Guard encourages you to participate by submitting comments and related material, and by attending the public meeting. If you submit written comments, please include—

• Your name and address;

• The docket number for this notice (USCG–2000–8569);

• The specific section of this notice to which each comment applies; and

• The reason for each comment.

You may mail, deliver, fax, or electronically submit your comments and attachments to the Docket Management Facility, using an address or fax number listed in the ADDRESSES section of this notice. Please do not submit the same comment or attachment by more than one method. If you mail or deliver your comments, they must be on 8½ by 11 inch paper and the quality of the copy should be clear enough for copying and scanning. If you mail your comments, and you would like to know if the Docket Management Facility received them, please enclose a stamped, self-addressed postcard or envelope. We will consider all
comments and material received during the comment period.

How Can I Get Additional Information, Including Copies of This Notice or Other Related Documents?

The Docket Management Facility maintains the public dockets for this notice. The docket number for this notice is USCG–2000–8569. Comments, and other documents related to this notice will become part of this docket and will be available for inspection or copying as follows:

- **In person:** You may access the docket in room PL–401, on the Plaza Level of the Nassif Building at the same address, between 9 a.m. and 5 p.m., Monday through Friday. The facility is closed on Federal holidays.

- **Electronically:** You may access the docket on the Internet at [http://dms.dot.gov](http://dms.dot.gov).

Where Can I Get Information on Service for Individuals With Disabilities?

To obtain information on facilities or services for individuals with disabilities or to request that we provide special assistance at the public meeting, please contact Mr. Tom Lawler as soon as possible. You will find his address and phone number in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

Why Is the Coast Guard Holding This Public Meeting?

This meeting is in response to requests for a comprehensive review to improve the safety, reliability, and efficiency of the Great Lakes pilotage system. The requests came from all facets of the marine industry operating on the Great Lakes. We are holding the meeting to discuss ways to design a safer, more reliable and efficient pilotage system for the Great Lakes.

What Issues Should I Discuss at the Meeting or Address in Written Comments?

The public meeting on January 30, 2001 will provide a forum for members of the public to discuss ways to improve the safety, reliability and efficiency of the Great Lakes Pilotage System. You can discuss or comment on any ideas you have for improving the safety, reliability, and efficiency of the Great Lakes pilotage system. Interested parties are strongly encouraged to submit issues for discussion at the public meeting to the docket prior to January 22, 2001.

**What Is the Agenda for the Public Meeting?**

**Agenda**

The agenda for the meeting on January 30, 2001 is as follows:

- **Session I—Introduction and Overview.**
- **Session II—Presentation and discussion of Concept Papers on centralized dispatch, centralized billing, and the possible advantages and disadvantages of combining the existing three pilotage Districts into one District or one Pilots’ Association.**
- **Session III—Discussion of issues submitted to the docket.**

**Joseph J. Angelo,**

**Acting Assistant Commandant for Marine Safety and Environmental Protection.**

**Broadcast Services; Radio Stations, Television Stations**

**AGENCY:** Federal Communications Commission.

**ACTION:** Proposed rule.

**SUMMARY:** This document proposes to revise the Commission’s methodologies for defining radio markets, counting the number of stations in a radio market, and determining the number of stations that a party owns in a radio market for the purposes of determining compliance with its multiple ownership rules. Experience in applying those methodologies since the enactment of the Telecommunications Act of 1996, has indicated that the Commission’s current framework may be having results that may frustrate the structure of the Telecommunications Act and that are not in the public interest.

**DATES:** Comments are due by January 26, 2001; reply comments are due by February 12, 2001.

**ADDRESSES:** Federal Communications Commission, 445 12th Street, SW., Washington, DC 20554.

**FOR FURTHER INFORMATION CONTACT:**

**SUPPLEMENTARY INFORMATION:** This is a synopsis of the Notice of Proposed Rule Making (“NPRM”) in MM Docket No. 00–244, FCC 00–427, adopted December 6, 2000, and released December 13, 2000. The complete text of this NPRM is available for inspection and copying during normal business hours in the FCC Reference Center, Room CY–A257, 445 12th Street, SW., Washington, DC and may also be purchased from the Commission’s copy contractor, International Transcription Service (202) 857–3800, 445 12th Street, SW., Room CY–B402, Washington, DC. The NPRM is also available on the Internet at the Commission’s website: [http://www.fcc.gov](http://www.fcc.gov).

**Synopsis of Notice of Proposed Rule Making**

1. We are adopting this NPRM to seek comment on whether and how we should modify the way in which we determine the dimensions of radio markets and count the number of stations in them. We are also seeking comment on whether and how we should amend the method by which we determine the number of radio stations owned by a party in a radio market for the purpose of applying our multiple ownership rules.

**Overview**

2. In 1991, we commenced a proceeding to relax our local and national radio ownership rules. We ultimately established two market sizes that would determine the number of radio stations in which an entity could have an attributable interest in a local area. One tier included markets with 15 or more commercial radio stations. The other market tier consisted of markets with fewer than 15 stations. A party could have attributable interests in a different number of stations depending on the tier into which its market fell. This decision required that we establish both how we would define a market and, because of the different treatment of markets with less than 15 stations and those with 15 or more, how we would count the number of stations in a market. We determined that:

- we will define the radio market as that area encompassed by the principal community contours (i.e., predicted or measured 5 mV/m for AM stations and predicted 3.16 mV/m for FM stations) of the mutually overlapping stations proposing to have common ownership.

With regard to how we would count the number of stations in a market, we stated: [the number of stations in the market will be determined based on the principal community contours of all commercial stations whose principal community contours overlap or intersect the principal...](/28DEP1.SGM)
community contours of the commonly-owned stations.

In section 202(b)(1) of the Telecommunications Act of 1996 (Public Law 104–104, 110 Stat. 56 (1996) ("1996 Act")), Congress directed the Commission to increase the number of stations in a market in which a party could have a cognizable ownership interest, providing that in the largest markets a single entity could own up to eight stations. The number of stations in which it could have such an interest would depend upon the number of commercial stations in the market. Our methods of defining a radio market and determining the number of stations in a market, however, were not altered by the 1996 Act or by our Orders implementing that statute.

3. Using this methodology, we evaluate whether a proposed transaction complies with our ownership rules by first determining the boundaries of each market created by the transaction. Thus, we look to all stations that will be commonly owned after the proposed transaction is consummated and group these stations into “markets” based on which stations have mutually overlapping signal contours. A market is defined as the area within the combined contours of the stations to be commonly owned that have a common overlap. For example, suppose an applicant proposes to own stations A, B, C, and D. The contours of stations A, B, and C each overlap the contours of the other two stations—that is, there is some area which the contours of all three stations have in common. Station D, on the other hand, overlaps the principal community contour of station A, but not those of stations B or C. Under our current definitions, the area encompassed by the combined contours of stations A, B, and C form one “market” and the area within the combined contours of stations A and D form another market.

4. To determine the total number of stations “in the market,” as defined above, we count all stations whose principal community contours overlap the principal community contour of any one or more of the stations whose contours define the market. Thus, in the market formed by the contours of stations A, B, and C, any station whose contour overlapped the contour of A, B or C would be counted as “in the market.” We use a different methodology, however, to determine the number of stations that any single entity is deemed to own in a given market. For this purpose, we only count those stations having principal community contours overlap the common overlap area of all of the stations whose contours define the market. Thus, a station owned by the applicant that is counted as being “in the market” because its contour overlaps the contour of at least one of the stations that create the market will not be counted as a station owned by the applicant in the market unless its contour overlaps the area which the contours of all of the stations that define the market have in common. Referring to our example of the market formed by the contours of stations A, B, and C, station D would be counted as “in the market” because its contour overlaps the contour of station A. But, station D would not be counted as a station owned by the applicant in the ABC market because station D’s contour does not also overlap the contours of stations B and C. In short, the applicant’s ownership of station D would not be counted against it in determining compliance with the ownership cap in the ABC market.

5. Our experience has led us to conclude that this framework may be having results that may frustrate the structure of the statute and that are not in the public interest. For example, under the existing policies and rules, the Commission’s Mass Media Bureau recently determined that Wichita, KS, is a market containing 52 stations and granted the assignment application for station KOEZ(FM) from Kansas Radio Assets to Journal Broadcasting Corporation, giving Journal six stations, including 5 FM stations, in the Wichita market. This is well within the eight stations that a single owner would be permitted to own in a market with more than 45 stations under our rules implementing the 1996 Act. Yet Arbitron, which defines radio markets for commercial purposes, classifies Wichita as a 24-station market in which, under these rules, a single entity could only have an interest in six radio stations, no more than 4 of which could be in the same service. Similarly, under the existing policies and rules, BIA data show that one party seeks to own nine stations in Youngstown, OH. (Appendix B describes how our radio definitions and counting methodologies may be applied in Youngstown.) Yet Arbitron data show only 23 commercial radio stations in the Youngstown metropolitan area. In another transaction, using the Commission’s methodology, an applicant was able to show that Ithaca, NY, was a market with at least 32 commercial radio stations. Yet Arbitron data show only 9 commercial radio stations in the Ithaca metropolitan area.

6. Given such results, we question whether the use of overlapping signal contours is an appropriate means of defining market boundaries and counting the number of stations in a market. Our methodology sometimes leads to results that are completely at odds with commercial market definitions and economic reality, and may undermine the structure of the statute to allow levels of ownership that increase commensurately with the size of the market. Additionally, our methodology may encourage applicants to structure transactions to fragment what are commercially considered single markets into a number of smaller markets. While a licensee may be within our ownership limit as to each of these fragmented markets, in the aggregate it owns more stations than our rules would permit were these markets considered to be a single market, as they are by commercial rating services and would be under any economically meaningful market definition.

7. The Commission has used this methodology for defining markets and counting stations in markets since 1992. While the methodology has produced some odd results since its inception, it was not until the ownership limits were substantially increased in 1996 that the methodology’s potential to cause results at odds with economic reality became clearly discernible. Until then, the number of problems and their impact were constrained, by the more modest numerical ownership limits and by a 25 percent audience share cap in markets with 15 or more stations.

8. Another problem with this methodology was highlighted in the Commission’s recent Pine Bluff decision. (In re Application of Pine Bluff Radio, Inc., 14 FCC Rcd 6594 (1999).) In that case, Seark Radio, Inc., sought to purchase one AM and two FM stations in Pine Bluff, Arkansas. Seark already had direct or attributable interests in three other stations in Pine Bluff and environs. A petitioner (Bayou Broadcasting, Inc.) filed a Petition to Deny claiming, in part, that the relevant market contained 11 stations and that grant of the subject application would give Seark direct or attributable interests in 6 of those stations. Were this the case, it would have caused Seark to exceed the “cap” that one party can have in an 11-station market because it would give it interests in more than 5 of the stations in the market. In a decision which we recently reaffirmed on review, the Mass Media Bureau determined that, under the Commission’s method for defining markets and counting the number of stations in a market, the stations involved actually formed three separate markets. Market 7 was formed by two mutually overlapping stations attributable to Seark. Two other stations...
were determined to contribute to this market. One of those two stations was owned by Seark. However, because this station’s principal community contour did not overlap the principal community contours of both of the stations whose overlapping principal community contours established the market, it was not counted as an attributable interest of Seark’s in this market. Thus, application of our existing methodologies led to the determination that this Seark station would be counted as being “in the market” for purposes of determining the base number of stations in that market. But, the same station would not be considered to be “in the market” for the purposes of determining how many stations in the market were and would be owned by Seark, and thus whether Seark complied with the numerical station caps. Seark could not have owned three stations in this market because that would have given it an attributable interest in more than half of the four stations considered to be in Market 3. Section 73.3555(a)(1)(iv) allows a party to own, operate, or control up to 5 commercial stations in markets with 14 or fewer stations provided that “a party may not own, operate, or control more than 50 percent of the stations in such market.” Accordingly, strict compliance with our precedents in this area led to the conclusion that Seark had an attributable interest in only two of the four stations in this market, notwithstanding its attributable interest in a third station which counted as a station for the purpose of determining the total number of stations in the market. (We recognized that this appeared to be an anomalous result but pointed out that it was produced by methodology that had been consistently used since 1992 and that subsequent events in the market had rendered harmless the impact of this anomaly in that case.)

**Options**

9. Several options or approaches present themselves as possible means of addressing the definitional issues raised in the preceding discussion. With respect to the counting consistency issue exemplified by the Pine Bluff case, the most direct solution might be simply to alter our counting methodology and count against an applicant’s ownership allowance in a given market any station that it owned and that was included in determining how many stations were “in the market” for purposes of assessing compliance with the local radio ownership rules. Under this proposed approach, the applicant in the Pine Bluff case would have been charged with ownership of three stations in a four-station market, rather than two, and the transaction would not have complied with the numerical limits in our rules. This would clearly and logically resolve the inconsistency in our present approach and produce more rational results. Moreover, this approach may better reflect the statute’s structure, and lend consistency and predictability to the commercial marketplace. We invite comment on this approach. Alternatively, we could exclude from the count of the number of stations in a market, any stations owned by the applicant, except the commonly owned stations that form the market. We seek comment on this approach.

10. Another, broader approach might address both the counting anomaly and the discontinuity between the Commission’s and commercial rating services’ definition of radio markets generally. Under this approach, we would eliminate our current market definition and, instead, rely on commercially determined market definitions. For example, we could adopt Arbitron radio metro market definitions and simply rely on these commercial delineations to determine the total number of stations in any given market and how many stations an applicant would control in that market. Arbitron-defined markets have the advantage that they attempt to reflect accurately the location of a station’s listeners and the identity of stations that are actually perceived by advertisers to be in a market. Additionally, the Department of Justice utilizes Arbitron markets in its competition analysis of radio station mergers. However, the use of Arbitron markets has the disadvantage that many radio stations are not in an Arbitron market. Out of 3100 counties in the United States, slightly less than 850 (containing, however, nearly 80 percent of the nation’s population) are in Arbitron markets. Arbitron defines a geographic area based on county lines. We recognize that Arbitron metros do not encompass all the counties that can receive some of the radio signals of the metro radio stations. However, the radio stations included in the Arbitron metro do a significant portion of their business in the counties that are included in the Arbitron metro.

11. In our 1992 decision (on reconsideration) concerning radio markets we decided not to utilize Arbitron markets to define radio markets. The Commission accepted petitioners’ arguments that Arbitron markets change regularly, the number of rated stations continually fluctuate and that Arbitron tends to undercount the number of stations in a market because it has minimum reporting standards or overcount them because it counts out-of-market stations with reportable shares in the market. See Memorandum Opinion and Order and Further Notice of Proposed Rule Making in MM Docket No. 91–140, supra at 6394–95, 57 FR 42701 (September 16, 1972). We do not believe these to be insurmountable problems and, for the reasons discussed above, we believe the use of Arbitron markets or equivalent commercial markets may result in more accurate measures of the number of stations in a market than do our current methodologies.

12. We seek comment on whether we should use Arbitron or other commercially defined markets. How should we determine the dimensions of a market when the stations involved are not located in a commercially defined market? If we use Arbitron or another commercially defined market, what should we do when a market changes? For example, population growth might result in a county that was in a single market to later be split between two markets. This could cause the number of stations in the market to drop, placing some existing ownership combinations above the local ownership limits. One approach to such changes would be to disregard them (effectively grandfathering existing combinations) until such time as a relevant application is filed, at which point we would apply the market definition in effect at the time of the application’s filing or grant. We seek comment on these and on alternative proposals.

13. Alternatively, should we determine the number of stations in a market using a different contour overlap standard? For example, we could count as being in a market only those stations whose principal community contours overlap or intersect the overlap area of the principal city contours of the stations whose ownership is to be merged. This might provide a superior gauge relative to the area with which we are most concerned in merger situations with respect to both competition and diversity. However, this standard might be too restrictive and thus inappropriately thwart the relaxation of the ownership rules that the 1996 Act contemplated. Is there some other overlap standard that might more accurately provide a count of the number of stations in a market? Perhaps counting only those stations that overlap a certain percentage of the contour of one or more of the mutually overlapping stations would provide
accurate results. What percentage would be appropriate? Another option would be simply to count only those stations that are actually heard in a market. What methodology should we use in the event we adopt this option? We invite comment on all of these alternatives.

**Procedural Matters**

14. We do not propose that any rules and policies we adopt herein should be applied retroactively to existing ownership arrangements. Those ownership arrangements were granted as being in the public interest and in accordance with applicable Commission rules and policies. There is no reason to disturb these ownership combinations. If multiple docket or rulemaking numbers appear in the caption of this proceeding, commenters must submit two additional copies for each additional docket or rulemaking number. All filings must be sent to the Commission’s Secretary, Magalie Roman Salas, Office of the Secretary, Federal Communications Commission, 445 Twelfth Street, SW., TW—A325, Washington, DC 20554.

15. Merger applications now pending or filed after the adoption of this NPRM but before our final decision in this proceeding present another case. As a general matter, we will continue to process applications under the existing standards, unless and until they are changed in this proceeding. In cases raising concerns about how we count the number of stations a party owns in a market, however, we will defer decision pending resolution of that issue in this proceeding. As we concluded in the 1998 Biennial Review Report, the “shifting market definition” in our counting methodology “appears illogical and contrary to Congress’ intent.” Given this conclusion, it would be inappropriate to continue to apply this standard to pending and newly filed applications. We believe that the harm caused by application of this standard would not harm caused by the deferment of decision on these applications. We intend to act expeditiously in this proceeding to ensure that any such deferments are few in number and short in duration.

**Administrative Matters**

17. Comments filed through the ECFS can be sent as an electronic file via the Internet to <http://www.fcc.gov/e-file/ecfs.html>. Generally, only one copy of an electronic submission must be filed. If multiple docket or rulemaking numbers appear in the caption of this proceeding, commenters must transmit one electronic copy of the comments to each docket or rulemaking number referenced in the caption. In completing the transmittal screen, commenters should include their full name, Postal Service mailing address, and the applicable docket or rulemaking number. Parties may also submit an electronic comment by Internet e-mail. To get filing instructions for e-mail comments, commenters should send an e-mail to ecf@fcc.gov, and should include the following words in the body of the message, “get form <your e-mail address>.” A sample form and directions will be sent in reply. Parties who choose to file by paper must file an original and four copies of each filing. If more than one docket or rulemaking number appear in the caption of this proceeding, commenters must submit two additional copies for each additional docket or rulemaking number. All filings must be sent to the Commission’s Secretary, Magalie Roman Salas, Office of the Secretary, Federal Communications Commission, 445 Twelfth Street, SW., TW—A325, Washington, DC 20554.

18. Parties who choose to file by paper should also submit their comments on diskette. Diskettes should be submitted to: Wanda Hardy, 445 Twelfth Street, SW., Room, 2—C207, Washington, DC 20554. Such a submission should be on a 3.5 inch diskette formatted in an IBM compatible format using MS Word 97 for Windows or compatible software. The diskette should be accompanied by a cover letter and should be submitted in “read only” mode. The diskette should be clearly labeled with the commenter’s name, proceeding (including the docket number in this case, MM Docket No. 00—244, type of pleading (comment or reply comment), date of submission, and the name of the electronic file on the diskette. The label should also include the following phrase “Disk Copy—Not an Original.” Each diskette should contain only one party’s pleadings, preferably in a single electronic file. In addition, commenters must send diskette copies to the Commission’s copy contractor, International Transcription Service, Inc., 445 Twelfth Street, SW., CY—B402, Washington, DC 20554.

19. Comments and reply comments will be available for public inspection during regular business hours in the FCC Reference Center, Federal Communications Commission, 445 Twelfth Street, SW., CY—A257, Washington, DC 20554. Persons with disabilities who need assistance in the FCC Reference Center may contact Bill Cline at (202) 418—0270, (202) 418—2555 TTY. Comments and reply comments will also be available electronically at the Commission’s

20. This document is available in alternative formats (computer diskette, large print, audio cassette, and Braille). Persons who need documents in such formats may contact Martha Conteet at (202) 4810—0260, TTY (202) 418—2555, or mconteet@fcc.gov.

21. **Ex Parte Rules.** This is a permissive but-disclose notice and comment rulemaking proceeding. Ex parte presentations are permitted except during the Sunshine Agenda period, provided they are disclosed as provided in the Commission’s Rules. See generally 47 CFR 1.1202, 1.1203, and 1.1206(a).

22. **Initial Regulatory Flexibility Analysis.** As required by Section 603 of the Regulatory Flexibility Act, the Commission has prepared the following IRFA of the possible significant economic impact on small entities of the proposals contained in this NPRM. Written public comments are requested on the IRFA. In order to fulfill the mandate of the Contract with America Advancement Act of 1996 regarding the Final Regulatory Flexibility Analysis, we ask a number of questions in our IRFA regarding the prevalence of small businesses in the radio broadcasting industry. Comments on the IRFA must be filed in accordance with the same filing deadlines as comments on the NPRM, but they must have a distinct heading designating them as responses to the IRFA.

23. As required by the Regulatory Flexibility Act (RFA), the Commission has prepared this present Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on small entities by the policies and rules proposed in this NPRM. Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments on the NPRM provided above in paragraph 16. The Commission will send a copy of the NPRM, including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA). See 5 U.S.C. 603(a). In addition, the NPRM and the IRFA (or summaries thereof) will be published in the Federal Register.

A. **Need for, and Objectives of, the Proposed Rules**

24. Section 202(h) of the Telecommunications Act of 1996 (1996 Act) requires the Commission to review all of its broadcast ownership rules
every two years commencing in 1998, and to determine whether any of these rules are necessary in the public interest as the result of competition. The 1996 Act also requires the Commission to repeal or modify any regulation it determines to be no longer in the public interest. The Commission adopted a Notice of Inquiry (63 FR 15353, March 31, 1998) in 1998 in compliance with this requirement. The Commission believes that its present method of determining the dimensions of radio markets and/or of counting the stations available in those markets may be having results that do not reflect the structure of the Telecommunications Act with regard to local radio station ownership and are not in the public interest. Present methodology may result in radio markets whose dimensions do not reflect actual listening patterns or availability, artificially enhance the number of stations in those markets or artificially fragment what may be single individual markets into several independent smaller markets, thereby allowing a single owner to own a number of stations in a market in excess of what Congress intended. Our methodology sometimes leads to results that are completely at odds with commercial market definitions and economic reality, and thus does not advance the statute structure which allows levels of ownership that increase commensurately with the size of the market. Additionally, the Commission determined in its biennial review proceeding (MM Docket No. 98–35) that it appears that the way in which it determines the number of radio stations that a party owns in a market may have lead to unintended results. This NPRM is designed to solicit comment on proposals to assure that our definitions and methodologies more closely reflect commercial realities and the intent of Congress. Because Section 202(h) of the 1996 Act directs the Commission to repeal or modify any broadcast ownership regulation it finds no longer in the public interest the Commission has adopted this NPRM to solicit comment on the modification of the subject policies and rules. 

B. Legal Basis

25. This NPRM is adopted pursuant to sections 1, 2(a), 4(i), 303, 307, 309, 310, of the Communications Act of 1934, as amended, 47 U.S.C. 151, 152(a), 154(i), 303, 307, 309, 310, and Section 202(h) of the Telecommunications Act of 1996.

C. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

26. The RFA directs agencies to provide a description of, and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted. The RFA defines the term “small entity” as having the same meaning as the terms “small business,” “small organization,” and “small governmental jurisdiction.” In addition, the term “small business” has the same meaning as the term “small business concern” under the Small Business Act. A small business concern is one which: (1) Is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the SBA.

27. The SBA defines a radio broadcasting station that has $5 million or less in annual receipts as a small business. A radio broadcasting station is an establishment primarily engaged in broadcasting aural programs by radio to the public. Included in this industry are commercial, religious, educational, and other radio stations. The 1992 Census indicates that 96 percent of radio station establishments produced less than $5 million in revenue in 1992. Official Commission records indicate that 11,334 individual radio stations were operating in 1992. As of September 30, 2000, Commission records indicate that 12,717 radio stations (both commercial and noncommercial) were operating of which 2,140 were noncommercial educational FM radio stations. (Our multiple ownership rules, however, do not apply to noncommercial educational radio stations.) Applying the 1992 percentage of station establishments producing less than $5 million in revenue (i.e., 96 percent) to the number of commercial radio stations in operation, (i.e., 10,577) indicates that 10,154 of these radio stations would be considered “small businesses” or “small organizations.”

D. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements

28. There currently are no recordkeeping or other compliance requirements associated with the subject rule and policies. The NPRM proposes no new recordkeeping or other compliance requirements.

E. Steps Taken To Minimize Significant Impact on Small Entities, and Significant Alternatives Considered

29. The RFA requires an agency to describe any significant alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): (1) The establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance or reporting requirements under the rule for small entities; (3) the use of performance, rather than design, standards; and (4) an exemption from coverage of the rule, or any part thereof, for small entities.

30. In fashioning its Report in the Commission’s Biennial Review Proceeding (MM Docket No. 98–35) the Commission considered a number of alternatives to the subject counting methodology policy. These alternatives were: (1) Retention of the existing radio market definition policy; (2) modification of the existing radio market definition policy; (3) retention of the existing rule (47 CFR 73.3555(a)(3)(iii)) concerning counting the number of stations in the radio market; (4) modification of the existing rule concerning counting the number of stations in the radio market; (5) retention of the existing policy for counting the number of stations a party owns in a radio market; and (6) modification of the existing policy for counting the number of stations a party owns in a radio market. The Biennial Review Report tentatively concluded that the existing policy for determining radio markets and counting methodology rule and policy should be modified. An alternative considered in this item is to maintain the status quo. However, the NPRM does propose to modify the current method of defining radio markets and to modify our station-counting methodologies. Alternatives (2), (4), and (6) may have a beneficial effect on small entities. A more accurate and predictable definition of radio markets, and improved counting methodologies may more precisely determine the size of markets and the number of stations in them and allow the Commission to achieve the results intended by Congress in passing the 1996 Act. This could result in some small radio stations facing competition from commonly owned local station groups that are more of the size Congress intended than is the case under current Commission rules and policies. Any significant alternatives presented in the comments received in response to the instant NPRM will certainly be considered.
SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission’s Report and Order, MM Docket No. 99–352, adopted December 13, 2000, and released December 22, 2000. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC’s Reference Information Center (Room CY–A257), 445 Twelfth Street, SW., Washington, DC.

The complete text of this decision may also be purchased from the Commission’s copy contractor, International Transcription Service, Inc., 1231 20th Street, NW., Washington, DC 20036, (202) 857–3800.

Federal Communications Commission.

John A. Karousos,
Chief, Allocations Branch, Policy and Rules Division, Mass Media Bureau.

DEPARTMENT OF THE INTERIOR
Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife

Endangered and Threatened Wildlife and Plants; Notice of Designation of the Gunnison Sage Grouse as a Candidate Species

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of designation of a candidate species.

SUMMARY: In this document, we present information on the recent addition of the Gunnison sage grouse (Centrocercus minimus) found in Colorado and Utah to the list of candidates for listing under the Endangered Species Act of 1973, as amended. Identification of candidate taxa can assist environmental planning efforts by providing advance notice of potential listings, allowing resource managers to alleviate threats and, thereby, possibly remove the need to list taxa as endangered or threatened. Even if we subsequently list this candidate species, the early notice provided here could result in fewer restrictions on activities by prompting candidate conservation measures to alleviate threats to this species.

We also announce the availability of the candidate and listing priority assignment form for this candidate species. This document describes the status and threats that we evaluated to determine that Gunnison sage grouse warrants consideration for listing, and to assign a listing priority to this species.

We request additional status information that may be available for the Gunnison sage grouse. We will consider this information in evaluating, monitoring, and developing conservation strategies for this species.

DATES: We will accept comments on this document at any time.

ADDRESSES: Submit written comments and data regarding the Gunnison sage grouse to the U.S. Fish and Wildlife Service, Western Colorado Field Office, 764 Horizon Drive, South Annex A, Grand Junction, Colorado 81506–3946.

FOR FURTHER INFORMATION CONTACT: Terry Ireland, at the above address, e-mail <terry_ireland@fws.gov>, or telephone (970) 243–2778.

SUPPLEMENTARY INFORMATION: Background

The Endangered Species Act of 1973, as amended (Act) (16 U.S.C. 1531 et seq.), requires that we list taxa of wildlife and plants that are endangered or threatened, based on the best available scientific and commercial information. As part of this program, we also identify taxa that we regard as candidates for listing. Candidate taxa are those taxa for which we have on file sufficient information to support issuance of a proposed rule to list under the Act. In addition to our annual review of all candidate taxa (64 FR 57534; October 25, 1999), we have an on-going review process, particularly to update taxa whose status may have changed markedly.

Section 3 of the Act generally defines an endangered species as any species which is in danger of extinction throughout all or a significant portion of its range, and a threatened species as any species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in section 4(a)(1) of the Act.

(A) The present or threatened destruction, modification, or curtailment of the species’ habitat or range;

(B) Overutilization of the species for commercial, recreational, scientific, or educational purposes;

(C) Disease or predation affecting the species;

(D) The inadequacy of existing regulatory mechanisms to protect the species; and

(E) Other natural or manmade factors affecting the species’ continued existence.

We are required to make the listing determination “solely on the basis of the
that either positively or negatively affect other specific conservation measures, regulations, ordinances, programs, or us to consider any State or local laws, Sections 4(a)(1) and 4(b)(1)(A) and our predator control, protection of habitat subdivision of a State or foreign nation, State or foreign nation, or any political efforts that create, exacerbate, reduce, or remove threats identified through the section 4(a)(1) analysis.

We maintain the list of candidate species for a variety of reasons, including—to provide advance knowledge of potential listings that could affect decisions of environmental planners and developers; to solicit input from interested parties to identify those candidate taxa that may not require protection under the Act or additional taxa that may require the Act’s protections; and to solicit information needed to prioritize the order in which we will propose taxa for listing. We encourage consideration of candidate taxa in environmental planning, such as in environmental impact analysis under the National Environmental Policy Act of 1969 (implemented at 40 CFR parts 1500–1508) and in local and Statewide land use planning.

According to our 1983 Listing Priority System (48 FR 43098; September 21, 1983), all species that are candidates for listing are assigned a listing priority number. This system ranks species according to—(1) the magnitude of threats they face, (2) the immediacy of these threats, and (3) the taxonomic distinctiveness of the entity that may be listed. Listing priority numbers range from 1 (highest priority) to 12 (lowest priority). We will complete proposals to list candidate species, based on their listing priority, to the extent that our resources for listing activities and our workload for other listing activities will allow.

This document provides specific explanation for the classification of Gunnison sage grouse as a candidate. It is important to note that candidate assessment is an ongoing function and changes in status should be expected. If we remove taxa from the candidate list, they may be restored to candidate status if additional information supporting such listing becomes available to us. We issue requests for such information in a Candidate Notice of Review published in the Federal Register every year.

Findings

In 1977, Dr. Clait Braun, formerly with the Colorado Division of Wildlife, noticed that sage grouse (Centrocercus sp.) wings collected in the Gunnison Basin of southwestern Colorado were smaller than sage grouse wings collected in northern Colorado. Over the 2 decades since then, Dr. Braun and others have been studying the morphological (Hupp and Braun 1991), behavioral (Young et al. 1994, Braun and Young 1995) and genetic differences (Quinn et al. 1997, Kahn et al. 1999, Oyler-McCance 1999) between the sage grouse. The differences are great enough that the American Ornithologists’ Union has determined that the sage grouse in southwestern Colorado are a distinct species, the Gunnison sage grouse (C. minimus). The American Ornithologists’ Union included a footnote about the Gunnison sage grouse potentially becoming a distinct species in their latest list of bird species. The July 2000 issue of Auk is planned to contain the American Ornithologists’ Union’s next list of bird species that will formally include the Gunnison sage grouse as a distinct species (Dr. Richard Banks, National Museum of Natural History, pers. comm. 2000).

Through museum specimens or written accounts, Braun (1995) determined that the Gunnison sage grouse’s historic range occurred in southwestern Colorado, southwestern Kansas, northwestern Oklahoma, northern New Mexico, northeastern Arizona, and southeastern Utah. There are currently believed to be seven population areas in Colorado and one population in Utah. The Gunnison Basin breeding population is the largest with up to 3,000 birds. The other 6 populations in Colorado only have 6 to 300 breeding birds, and the Monticello, Utah, population also is only around 120 birds for a total breeding population around 4,000. Long-term trends since at least the 1970s have shown steady declines in the number of males/lek, and one area, Sims Mesa, may have recently been extirpated. The overall population numbers have increased the last 2 to 3 years in the Gunnison Basin; however, this may be attributed to increased survey efforts. The number of males/lek in the Crawford Area population has increased since 1993, though the overall population estimate is not greater than 320. Other populations appear to be stable in the last 3 to 4 years but remain small.

The Gunnison sage grouse uses a variety of habitats throughout the year but the primary component necessary is species of Artemisia spp. (sagebrush) (Braun 1995). The most important sagebrushes are subspecies of A. tridentata (big sagebrush). Sagebrush is used for hiding and thermal cover as well as a major source of food in the winter (Hupp and Braun 1989). From mid-March to early June males will display on leks (strutting grounds) that are open areas with good visibility (for predator detection) and acoustics (for transmission of male display sounds). After mating, females will select nest sites, typically in relatively tall and dense stands of sagebrush from 200 yards (183 meters) to 5 miles (8 kilometers) away from the leks. Nest sites selected have residual grass and forbs that provide additional hiding cover. Hens with chicks remain in sagebrush uplands if hiding cover is adequate and if food consisting of succulent forbs and insects are available. As chicks mature and vegetation in the uplands desiccates, hens will move their broods to wet meadow areas that retain succulent forbs and insects through the summer (Klebenow 1969, Wallestad 1971). Preferred wet meadow areas also contain tall grasses for hiding and at least 165-yard (150-meter) wide sagebrush stands (Dunn and Braun 1986) along the periphery for hiding and foraging areas. From mid-September into November all sage grouse will use upland areas with 20 percent or greater sagebrush cover and some green forbs. As winter progresses and snow cover is extensive (greater than 80 percent) and deep (greater than 12 inches (30 centimeters)), sage grouse forage in tall sagebrush (greater than 16 inches (41 centimeters)) in valleys and lower flat areas (Hupp and Braun 1989) and roost in shorter sagebrush along ridge tops. Roosting and foraging is typically restricted to south or west facing slopes where snow is often shallower and less extensive (Hupp and Braun 1989). Small foraging areas that have 30–40 percent big sagebrush canopy cover also are important.

Potential threats include reduction in habitat by direct habitat loss, fragmentation, and degradation from building development, road and utility corridors, fences, energy development, conversion of native habitat to hay or other crop fields, alteration or destruction of wetland and riparian areas, inappropriate livestock management, competition for winter range by big game, and creation of large reservoirs.
Other factors affecting the Gunnison sage grouse include fire suppression allowing encroachment of its habitat by *Pinus edulis* (pinyon) and *Juniperus* spp. (juniper) invasion, fire suppression resulting in decadent stands of the sagebrush community, overgrazing by elk (*Cervus elaphus*) and deer (*Odocoileus hemionus*), drought, disturbance or death by off-highway-vehicles, disturbance by construction projects, harassment from people and pets, continuous noise that impairs acoustical quality of leks, genetic depression, herbicides, pesticides, pollution, and competition for habitat from other species.

Despite development of the Conservation Plans and numerous actions implemented under those Plans to date, all of the threats to the Gunnison sage grouse, under the five listing factors, should be considered non-imminent threat with a high magnitude of occurring, or have potential to occur. In addition, the reduction of about 75 percent of the range and uncertain continued existence of the small, disjunct, populations outside of the Gunnison Basin population, leads us to believe that listing the Gunnison sage grouse as threatened is warranted. Therefore, we have assigned the Gunnison sage grouse a listing a priority of five under our Listing Priority System.

**Request for Information**

We request you submit any further information on the Gunnison sage grouse as soon as possible or whenever it becomes available. We are seeking the following types of information:

1. Biological, commercial trade, or other relevant data concerning any threat (or lack thereof) to the Gunnison sage grouse;
2. Reasons why any habitat of this species should or should not be determined to be critical habitat pursuant to section 4 of the Act;
3. Additional information concerning the range, distribution, and population size of this species; and,
4. Current or planned activities in the subject area and their possible impacts on this species.

Information regarding the range, status, habitat needs, and listing priority assignment for the Gunnison sage grouse is available for review by contacting the Service as specified in the **ADDRESSES** section.

Our practice is to make comments, including names and home addresses of respondents, available for public review during regular business hours. Individual respondents may request that we withhold their home address from the rulemaking record, which we will honor to the extent allowable by law. In certain circumstances, we would withhold from the rulemaking record a respondent’s identity, as allowable by law. If you wish for us to withhold your name and/or address, you must state this request prominently at the beginning of your comment. However, we will not consider anonymous comments. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, available for public inspection in their entirety.

**References Cited**

A complete list of all references cited herein, as well as others, is available upon request from the Marine Mammals Management Office (see **ADDRESSES** section).

Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Submission for OMB Review; Comment Request

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104–13. Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency’s estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), Washington, DC 20503 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250–7602. Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission(s) may be obtained by calling (202) 720–6746.

An Agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number.

Cooperative State Research, Education, and Extension Service

Title: Grant Application Forms for Higher Education Programs.

OMB Control Number: 0524–0030.

Summary of Collection: The Cooperative State Research, Education, and Extension Service (CSREES), Science and Education Resources Development (SERD) division, though its Higher Education Program (HEP) office, administers several competitive peer-reviewed research and teaching programs under which grants of a high-priority nature are awarded. These programs are authorized pursuant to the authorities contained in the National Agricultural Research, Extension, and Teaching Policy Act of 1977, as amended (7 U.S.C. 3101), section 1417(b)(1) for the Challenge Grants Program (7 U.S.C. 3152), section 1417(b)(4) for the 1890 Institution Capacity Building Grants Program (7 U.S.C. 3152), section 1455 for the Hispanic-Serving Institutions Education Grants Program (7 U.S.C. 301 et seq.) for the Tribal Colleges Education Equity Grants Program. Before grants can be awarded, certain information is required from applicants as part of the overall package. CSREES will collect the information using several forms.

Need and Use of the Information: CSREES will collect information to evaluate proposals. The information collected will reduce the potential for errors or omissions of important data essential in the proposal review and award process.

Description of Respondents: Not-for-profit institutions; State, Local or Tribal Government.

Number of Respondents: 450.

Frequency of Responses: Recordkeeping; Reporting; On occasion.

Total Burden Hours: 5,376.

Cooperative State Research, Education, and Extension Service

Title: Application Kit for Research and Extension Programs.

OMB Control Number: 0524–NEW.

Summary of Collection: The United States Department of Agriculture (USDA), Cooperative State Research, Education, and Extension Service (CSREES) administers several competitive, peer-reviewed research and extension programs, under which awards of a high-priority nature are made. These programs are authorized pursuant to the authorities contained in the National Agricultural Research, Extension, and Teaching Policy Act of 1977, as amended (7 U.S.C. 3101), the Smith-Lever Act, and a variety of other legislative authorities. Before grants can be awarded, certain information is required from applicants as part of an overall package. Because the proposals submitted are competitive in nature and necessitate review by peer panelists, it is particularly important that applicants provide the information in a standardized fashion to ensure equitable treatment for all. CSREES will collect information using forms CSREES 2002, 2003, 2004, 2005, 2006, 2007, and 2008.

Need and Use of the Information: CSREES will collect the following information: Program Summary and Narrative, Credentials, Budget, Identification of Conflicts of Interest, Narrative, Budget, need and Use of the Information: CSREES will collect information to evaluate proposals. The information collected will reduce the potential for errors or omissions of important data essential in the proposal review and award process.

Description of Respondents: Not-for-profit institutions; State or Local; Federal Government; Tribes or Tribal Government.

Number of Respondents: 8,900.

Frequency of Responses: Reporting: Annually.

Total Burden Hours: 144,700.

Rural Housing Service

Title: 7 CFR 1927–B, “Real Estate Title Clearance and Loan Closing”.

OMB Control Number: 0575–0147.

Summary of Collection: Rural Development and the Farm Service Agency are the credit agencies for the Department of Agriculture. They offer a supervised credit program to build family farms, modest housing, sanitary water and sewer systems, essential community facilities, businesses and industries in rural areas. Section 501 of Title V of the Housing Act of 1949, as amended, authorizes the Secretary of Agriculture to extend financial assistance to construct, improve, alter, repair, replace or rehabilitate dwellings, farm buildings and or related facilities to provide decent, safe, and sanitary

Federal Register

Vol. 65, No. 250

Thursday, December 28, 2000

82313
living conditions and adequate farm buildings and other structures in rural areas. Title clearance is required to assure the agency(s) that the loan is legally secured and has the required lien priority.

Need and Use of the Information: Forms and/or guidelines are provided to assist in the collection and submission of information. The agency personnel use the required information to verify that the required lien position has been obtained. The information is collected at the field office responsible for processing a loan application through loan closing and is also used to insure the program is administered in a manner consistent with legislative and administrative requirements. If the information were not collected, the agency would be unable to determine if the loan is adequately and legally secured.

Description of Respondents: Individuals or households; Business or other for-profit; Not-for-profit institutions; Farms.

Number of Respondents: 32,000.

Frequency of Responses: Reporting:
On occasion.

Total Burden Hours: 41,296.

Food and Nutrition Service

Title: Evaluation of the School Breakfast Pilot Project.

OMB Control Number: 0584–NEW.

Summary of Collection: Section 109(b) of the William F. Goodling Child Nutrition Act of 1998 (Pub. L. 105–336) amended Section 18 of the Richard B. Russell National School Lunch Act (42 U.S.C. 1769) to authorize a pilot study that provides free school breakfast to all students regardless of family income in up to six school districts. The evaluation will rigorously assess the impact of this universal-free school breakfast program on program participation and a board range of student outcomes, including academic achievement, school attendance and tardiness, classroom behavior and attentiveness, and dietary status.

Need and Use of the Information: The Food and Nutrition Service (FNS) will collect information from school district personnel to examine how school districts and schools administer the universal-free breakfast program and the impact it has on their costs and administrative duties. FNS will also collect information from students, parents, teachers, and school records to determine effects on students.

Description of Respondents: Not-for-profit institutions; Individual or households.

Number of Respondents: 9,792.

Frequency of Responses: Reporting:
On occasion.

Total Burden Hours: 7,817.

Sondra Blakey,
Departmental Clearance Officer.

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

Announcement of the Foreign Market Development Cooperator Program for Fiscal Year 2002

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Notice.

SUMMARY: This notice announces the application period for the Fiscal Year 2002 Foreign Market Development Cooperator (Cooperator) Program.

DATES: All applications must be received by 5 p.m. Eastern Standard Time, March 12, 2001.

SUPPLEMENTARY INFORMATION:

Introduction

The Commodity Credit Corporation (CCC) announces that applications are being accepted for participation in the Fiscal Year 2002 Cooperator program. The program is designed to create, expand, and maintain foreign markets for United States agricultural commodities and products through cost-share assistance. Financial assistance under the Cooperator program will be made available on a competitive basis and applications will be reviewed against the evaluation criteria contained herein. The Cooperator program is administered by personnel of the Foreign Agricultural Service (FAS).

Under the Cooperator program, CCC enters into agreements with nonprofit U.S. trade organizations that have the broadest possible producer representation of the commodity being promoted and gives priority to those organizations that are nationwide in membership and scope. Cooperators may only receive assistance for the promotion of generic activities that do not involve promotions targeted directly at consumers. The program generally operates on a reimbursement basis.

Authority

Eligible Applicants

To participate in the Cooperator program, an applicant must be a nonprofit U.S. agricultural trade organization.

Application Process

To be considered for the Cooperator program, an applicant must submit to FAS information required by the Cooperator program regulations set forth in 7 CFR part 1484. Incomplete applications and applications that do not otherwise conform to this announcement will not be accepted for review.

We also point out that FAS administers various other agricultural export assistance programs, including the Market Access Program (MAP), Cochran Fellowships, the Emerging Markets Program, the Quality Samples Program, Section 108 foreign currency guarantee programs, and several Export Credit Guarantee programs. Organizations which are interested in applying for Cooperator program funds are encouraged to submit their requests using the Unified Export Strategy (UES) format. The UES format allows interested entities to submit a consolidated and strategically coordinated single proposal that incorporates requests for funding and recommendations for virtually all FAS marketing programs, financial assistance programs, and market access programs. The suggested UES format encourages applicants to examine the constraints or barriers to trade they face, identify activities which would help overcome such impediments, consider the entire pool of complementary marketing tools and program resources, and establish realistic export goals.

Applicants are not required, however, to use the UES format. Organizations can submit applications in the UES format by two methods. The first allows an applicant to submit information directly to FAS through the UES application Internet site. FAS highly recommends applying via the Internet, as this format virtually eliminates paperwork and expedites the FAS processing and review cycle. Applicants also have the option of submitting electronic versions (along with two paper copies) of their applications to FAS on diskette.

Applicants planning to sue the Internet-based system must contact the
Marketing Operations Staff of FAS at (202) 720–4327 to obtain site access information. The Internet-based application, including step-by-step instructions for its use, is located at the following URL address: http://www.fas.usda.gov/cooperators.html.

Applicants who choose to submit applications on diskette can download the UES handbook, including the suggested application format and instructions, from the following URL address: http://www.fas.usda.gov/mos/ues/unified.html. A UES handbook may also be obtained by contacting the Marketing Operations Staff at (202) 720–4327.

All Cooperator program applicants, whether applying via the Internet or diskette, must also submit by March 12, 2001, via hand delivery or U.S. mail, an original signed certification statement as specified in 7 CFR section 1484.20(a)(14). The UES handbook contains an acceptable certification format.

Any organization which is not interested in applying for the Cooperator program but would like to request assistance through one of the other programs mentioned, should contact the Marketing Operations Staff at (202) 720–4327.

Review Process and Allocation Criteria

FAS allocates funds in a manner that effectively supports the strategic decision-making initiatives of the Government Performance and Results Act (GPRA) of 1993. In deciding whether a proposed project will contribute to the effective creation, expansion, or maintenance of foreign markets, FAS seeks to identify a clear, long-term agricultural trade strategy and a program effectiveness time line against which results can be measured at specific intervals using quantifiable product or country goals. These performance indicators are part of FAS’ resource allocation strategy to fund applicants which can demonstrate performance based on a long-term strategic plan and address the performance measurement objectives of the GPRA.

Following is a description of the FAS process for reviewing applications and the criteria for allocating available Cooperator program funds.

1) Phase 1—Sufficiency Committee and FAS Divisional Review

Application received by the closing date will be reviewed by FAS to determine the eligibility of the applicants and the completeness of the applications. These requirements appear at § 1484.14 and § 1484.20 of the Cooperator program regulations. Applications which meet the application requirements will then be further evaluated by the applicable FAS Commodity Division. The Divisions will review each application against the criteria listed in § 1484.21 and § 1484.22 of the Cooperator program regulations. The purpose of this review is to identify meritorious proposals and to recommend an appropriate funding level for each application based upon these criteria.

(a) Contribution Level

• The applicant’s 6-year average share (1997–2002) of all contributions (contributions may include cash and goods and services provided by U.S. entities in support of foreign market development activities) compared to
• The applicant’s 6-year average share (1997–2002 of all Cooperator marketing plan budgets.

(b) Past Export Performance

• The 6-year average share (1996–2001) of the value of exports promoted by the applicant compared to
• The applicant’s 6-year average share (1996–2001 of all Cooperator marketing plan budgets plus a 6-year average share (1995–2000) of MAP program ceiling levels and a 6-year average share (1995–2000) of foreign overhead provided for co-location within a U.S. agricultural trade office.

(c) Past Demand Expansion Performance

• The 6-year average share (1996–2001) of the total value of world trade of the commodities promoted by the applicant compared to
• The applicant’s 6-year average share (1996–2001 of all Cooperator marketing plan budgets plus a 6-year average share (1995–2000) of MAP program ceiling levels and a 6-year average share (1995–2000) of foreign overhead provided for co-location within a U.S. agricultural trade office.

(d) Future Demand expansion Goals

• The projected total dollar value of world trade of the commodities being promoted by the applicant for the year 2007 compared to
• The applicant’s requested funding level.

(e) Accuracy of Past Demand expansion Projections

• The actual dollar value share of world trade of the commodities being promoted by the applicant for the year 2000 compared to
• The applicant’s past projected share of world trade of the commodities being promoted by the applicant for the year 2000, as specified in the 2000 Cooperator program application.

The Commodity Divisions’ recommended funding level for each applicant is converted to a percentage of the total Cooperator program funds available and multiplied by the total weight factor to determine the amount of funds allocated to each applicant.

Closing Date for Applications

All Internet-based applications must be properly submitted by 5:00 p.m. Eastern Standard Time, March 12, 2001. Signed certification statements also must be received by that time at one of the addresses listed below.

All applications on diskette (with two accompanying paper copies and a signed certification statement) and any other applications must be received by 5:00 p.m. Eastern Standard Time, March 12, 2001, at one of the following addresses:

Hand Delivery (including FedEx, DHL, UPS, etc.): U.S. Department of Agriculture, Foreign Agricultural Service, Marketing Operations Staff, Room 4932–S, 1400 Independence Avenue, SW., Washington, DC 20250–1042.

Timothy J. Galvin, Administrator, Foreign Agricultural Service, and Vice President, Commodity Credit Corporation.

BILLING CODE 3410–10–M

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

Announcement of the Market Access Program for Fiscal Year 2001

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Notice.
SUMMARY: This notice announces the application period for the Fiscal Year 2001 Market Access Program (MAP).

DATES: All applications must be received by 5 p.m. Eastern Standard Time, March 12, 2001.

SUPPLEMENTARY INFORMATION:

Introduction

The Commodity Credit Corporation (CCC) announces that applications are being accepted for participation in the Fiscal Year 2001 MAP. The MAP is designed to create, expand, and maintain foreign markets for United States agricultural commodities and products through cost-share assistance. Financial assistance under the MAP will be made available on a competitive basis and applications will be reviewed against the evaluation criteria contained herein. The MAP is administered by personnel of the Foreign Agricultural Service (FAS).

Under the MAP, CCC enters into agreements with eligible participants to share the costs of certain overseas marketing and promotion activities. MAP participants may receive assistance for either generic or brand promotion activities. The program generally operates on a reimbursement basis.

Authority

The MAP is authorized under section 203 of the Agricultural Trade Act of 1978, as amended, and MAP regulations appear at 7 CFR part 1483.

Eligible Applicants

To participate in the MAP, an applicant must be: A nonprofit U.S. agricultural trade organization, a nonprofit state regional trade group (i.e., an association of State Departments of Agriculture), a U.S. agricultural cooperative, a State agency, or a small-sized U.S. commercial entity (other than a cooperative or producer association).

Available Funds

$90 million of cost-share assistance may be obligated under this announcement to eligible MAP applicants.

Application Process

To be considered for the MAP, an applicant must submit to FAS information required by the MAP regulations set forth in 7 CFR part 1485. Incomplete applications and applications that do not otherwise conform to this announcement will not be accepted for review. We also point out that FAS administers various other agricultural export assistance programs, including the Foreign Market Development Cooperator (Cooperator) program, Cochran Fellowships, the Emerging Markets Program, the Quality Samples Program, the Section 108 foreign currency program, and several Export Credit Guarantee programs.

Organizations which are interested in applying for MAP funds are encouraged to submit their requests using the Unified Export Strategy (UES) format. The UES allows interested entities to submit a consolidated and strategically coordinated single proposal that incorporates requests for funding and recommendations for virtually all FAS marketing programs, financial assistance programs, and market access programs. The suggested UES format encourages applicants to examine the constraints or barriers to trade they face, identify activities which would help overcome such impediments, consider the entire pool of complementary marketing tools and program resources, and establish realistic export goals. Applicants are not required, however, to use the UES format.

Organizations can submit applications in the UES format by two methods. The first allows an applicant to submit information directly to FAS through the UES application Internet site. FAS highly recommends applying via the Internet, as this format virtually eliminates paperwork and expedites the FAS processing and review cycle. Applicants also have the option of submitting electronic versions (along with two paper copies) of their applications to FAS on diskette.

Applicants planning to use the Internet-based system must contact the Marketing Operations Staff of FAS at (202) 720–4327 to obtain site access information. The Internet-based application, including step-by-step instructions for its use, is located at the following URL address: http://www.fas.usda.gov/cooperators.html. Applicants who choose to submit applications on diskette can download the UES handbook, including the suggested application format and instructions, from the following URL address: http://www.fas.usda.gov/mos/ues/unified.html. A UES handbook may also be obtained by contacting the Marketing Operations Staff at (202) 720–4327.

All MAP applicants, whether applying via the Internet or diskette, must also submit by March 12, 2001, via hand delivery or U.S. mail, an original signed certification statement as specified in 7 CFR 1485.13(a)(2)(i)(G). The UES handbook contains an acceptable certification format.

Any organization which is not interested in applying for the MAP but would like to request assistance through one of the other programs mentioned, should contact the Marketing Operations Staff at (202) 720–4327.

Review Process and Allocation Criteria

FAS allocates funds in a manner that effectively supports the strategic decision-making initiatives of the Government Performance and Results Act (GPRA) of 1993. In deciding whether a proposed project will contribute to the effective creation, expansion, or maintenance of foreign markets, FAS seeks to identify a clear, long-term agricultural trade strategy and a program effectiveness time line against which results can be measured at specific intervals using quantifiable product or country goals. These performance indicators are part of FAS’ resource allocation strategy to fund applicants which can demonstrate performance based on a long-term strategic plan and address the performance measurement objectives of the GPRA.

Following is a description of the FAS process for reviewing applications and the criteria for allocating available MAP funds.

(1) Phase 1—Sufficiency Committee and FAS Divisional Review

Applications received by the closing date will be reviewed by FAS to determine the eligibility of the applicants and the completeness of the applications. These requirements appear at § 1485.12 and § 1485.13 of the MAP regulations. Applications which meet the application requirements will then be further evaluated by the applicable FAS Commodity Division. The Divisions will review each application against the criteria listed in § 1485.14 of the MAP regulations. The purpose of this review is to identify meritorious proposals and to recommend an appropriate funding level for each application based upon these criteria.

(2) Phase 2—Competitive Review

Meritorious applications will then be passed on to the Office of the Deputy Administrator, Commodity and Marketing Programs, for the purpose of allocating available funds among the applicants. Applications which pass the Divisional Review will compete for funds on the basis of the following allocation criteria (the number in
Department of Agriculture and Extension Service

The Commodity Divisions’ recommended funding level for each applicant is converted to a percentage of the total MAP funds available and multiplied by the total weight factor as described above to determine the amount of funds allocated to each applicant.

Closing Date for Applications

All Internet-based applications must be properly submitted by 5 p.m. Eastern Standard Time, March 12, 2001. Signed certification statements also must be received by that time at one of the addresses listed below.

All applications on diskette (with two accompanying paper copies and a signed certification statement) and any other applications must be received by 5 p.m. Eastern Standard Time, March 12, 2001, at one of the following addresses:

Timothy J. Galvin, Administrator, Foreign Agricultural Service, and Vice President, Commodity Credit Corporation.

DEPARTMENT OF AGRICULTURE

Cooperative State Research, Education, and Extension Service Guidelines for State Plans of Work for the Agricultural Research and Extension Formula Funds

AGENCY: Cooperative State Research, Education, and Extension Service.

ACTION: Final notice.

SUMMARY: The Cooperative State Research, Education, and Extension Service (CSREES) published Guidelines for the State Plans of Work for Agricultural Research and Extension Formula Funds on July 1, 1999 [64 FR 35910–35919]. The guidelines describe the procedures to be followed by the eligible institutions receiving Federal agricultural research and extension formula funds under the Hatch Act of 1887, as amended (7 U.S.C. 361a et seq.); sections 3(b)(1) and (c) of the Smith-Lever Act of 1914, as amended (7 U.S.C. 343(b)(1) and (c)); and sections 1444 and 1445 of the National Agricultural Research, Extension, and Teaching Policy Act of 1977, as amended (7 U.S.C. 3221 and 3222). The recipients of these funds are commonly referred to as the 1862 land-grant institutions and the 1890 land-grant institutions, including Tuskegee University. CSREES is publishing this notice to inform these institutions that the due date for the Annual Report of Accomplishments and Results is changed from December 31 to March 1.

FOR FURTHER INFORMATION CONTACT: Dr. George Cooper; Deputy Administrator, Partnerships; Cooperative State Research, Education, and Extension Service; U.S. Department of Agriculture; Washington, DC 20250; at 202–720–5285 or 202–720–5369, 202–720–4924 (fax); or via electronic mail at bhewitt@ree.usda.gov.

SUPPLEMENTARY INFORMATION: The guidelines for State Plans of Work provide guidance for the submission of a 5-Year Plan of Work for the use of the agricultural research and extension formula funds described above. The first 5-Year Plan of Work was due July 15, 1999, for the period covering October 1, 1999, through September 30, 2004. In addition, the Guidelines prescribe procedures for updating the 5-Year Plan of Work, if necessary, and for reporting annually on the accomplishments and results of the plan. The latter report is referred to as the Annual Report of Accomplishments and Results. CSREES has decided, in consultation with the land-grant institutions, to change the due date for the Annual Report of Accomplishments and Results from December 31 to March 1. Therefore, the first report will be due March 1, 2001, and not December 31, 2000. It is anticipated that the additional two months will provide the institutions more time each year to report on their accomplishments and results for the fiscal year ending September 30.

Done at Washington, DC, this 21st day of December 2000.

Colien Hefferan, Administrator, Cooperative State Research, Education, and Extension Service.

DEPARTMENT OF AGRICULTURE

Foreign Agricultural Service

Announcement of the Emerging Markets Program for Fiscal Year 2001

AGENCY: Foreign Agricultural Service, USDA.

ACTION: Notice.

SUMMARY: This notice announces the application period for the Fiscal Year 2001 Emerging Markets Program.

DATES: All proposals must be received by 5 p.m. Eastern Standard Time, March 12, 2001.

SUPPLEMENTARY INFORMATION: Authority

The Emerging Markets Program is authorized by Section 1542(d)(1)(D) of the Food, Agriculture, Conservation, and Trade Act of 1990, as amended (the Act). Up to $10 million is available to fund the program each fiscal year.
Introduction

The Foreign Agricultural Service (FAS) announces that proposals are being accepted for participation in the Fiscal Year 2001 Emerging Markets Program (EMP). The purpose of the EMP is to assist U.S. organizations, public and private, to improve market access and develop and promote U.S. agricultural products in emerging markets by providing, or paying the costs of, approved technical assistance activities. The EMP generally operates on a reimbursement basis.

The Act defines an emerging market as any country that the Secretary of Agriculture determines:

1. Is taking steps toward a market-oriented economy through the food, agriculture, or rural business sectors of the economy of the country; and
2. Has the potential to provide a viable and significant market for United States agricultural commodities or products of United States agricultural commodities. Because funds are limited and the range of potential emerging market countries is worldwide, proposals for funding technical assistance activities ("proposals") will be considered which target those countries with (1) per capita income less than $9,360 (the ceiling on upper middle income economies as determined by the World Bank [World Development Indicators 2000]); and (2) population greater than 1 million. Proposals may address suitable regional groupings, e.g., the islands of the Caribbean Basin.

Eligible Applicants, Commodities, and Activities

Any United States agricultural or agribusiness organization, university, or state department of agriculture is eligible to participate in the EMP. Activities may seek to develop, maintain, or expand markets for any agricultural commodities or products except tobacco. Proposals will be considered under this announcement from any U.S. private agricultural or agribusiness organization, with certain restrictions as indicated below. Proposals from research and consulting organizations will be considered if they provide evidence of substantial participation by the U.S. industry. Proposals may include multiple commodities.

Only technical assistance activities are eligible for reimbursement. Following are examples of the types of activities that may be funded:

- Projects designed specifically to improve market access in emerging foreign markets. **Examples:** activities intended to mitigate the impact of sudden political events or economic and currency crises in order to maintain U.S. market share; responses to time-sensitive market opportunities;
- Marketing and distribution of more value-added products, including new products or uses. **Examples:** food service development; market research on potential for consumer-ready foods or new uses of a product;
- Studies of food distribution channels in emerging markets, including infrastructural impediments to U.S. exports; such studies may include cross-commodity activities which focus on problems, e.g., distribution, which affect more than one industry. **Examples:** grain storage handling and inventory systems development; distribution infrastructure development;
- Projects that specifically address various constraints to U.S. exports, including sanitary and phytosanitary issues and other non-tariff barriers. **Examples:** seminars on U.S. food safety standards and regulations; assessing and addressing pest and disease problems that inhibit U.S. product exports;
- Assessments and follow up activities designed to improve country-wide food and business systems, to reduce trade barriers, to increase prospects for U.S. trade and investment in emerging markets, and to determine the potential use for general export credit guarantees, including especially the Facilities Guarantee Program, for commodities, facilities and services. **Examples:** product needs assessments and market analysis; assessments for using facilities credits to address infrastructural impediments;
- Projects that help foreign governments collect and use market information and develop free trade policies that benefit American exporters as well as the target country or countries. **Examples:** agricultural statistical analysis; development of market information systems; policy analysis;
- Short-term training in broad aspects of agriculture and agribusiness trade that will benefit U.S. exporters, including seminars and training at trade shows designed to expand the potential for U.S. agricultural exports by focusing on the trading system. **Examples:** retail training; marketing seminars; transportation seminars; training keying to opening new or expanding existing markets. Ineligible activities include restaurant promotions; branded product promotions (including labeling and supplementing normal company sales activities intended to increase awareness and stimulate sales of branded products); advertising; administrative and operational expenses for trade shows; and the preparation and printing of brochures, flyers, posters, etc., except in connection with specific technical assistance activities such as training seminars. Other items excluded from funding are detailed in the FY 2001 EMP Guidelines.

Project Suitability and Allocation of Funds

The underlying premise of the EMP is that there are distinctive characteristics of emerging agricultural markets that necessitate or benefit significantly from U.S. governmental assistance before the private sector moves to develop these markets through normal corporate or trade promotional activities. The emphasis is on marketing opportunities where there are risks that the private sector would not normally undertake alone, with funding provided for successful activities on a project-by-project basis. The EMP complements the efforts of other FAS marketing programs. Once a market access issue has been addressed by the EMP, further market development activities may be considered under other programs such as GSM–102 or GSM–103 credit guarantee programs, the Facilities Guarantee Program, the Suppliers’ Guarantee Program, the MAP, or the Cooperator Program.

In general, priority consideration will be given to proposals that identify and seek to address specific problems or constraints in rural business systems or food and agribusiness systems in emerging markets through technical assistance to expand or maintain U.S. agricultural exports. Priority will also be given to those proposals that include the willingness of the applicant to commit its own funds, or those of the U.S. industry, to seek export opportunities in an emerging market. The EMP is intended to supplement, not supplant, the efforts of the U.S. private sector. The percentage of private funding proposed for a project will therefore be a critical factor in determining which proposals are funded under the EMP. Proposals will also be judged on their ability to provide benefits to the organization receiving EMP funds and to the broader industry which that organization represents.

The following marketing criteria will be used to determine the suitability of projects for funding by the EMP:

1. Low U.S. market share and significant market potential;
Quick Response Market Fund. More details concerning these specialty funds are contained in the EMP Guidelines.

Application Process
This notice is complemented by concurrent notices announcing other foreign market development programs administered by FAS including the Market Access Program (MAP), the Foreign Market Development Cooperator (Cooperator) Program, the Section 108 Program, and the Quality Samples Program (QSP). The MAP and Cooperator Program notices detail a Unified Export Strategy (UES) application process which provides a means for interested applicants to submit a consolidated and strategically coordinated single proposal that incorporates funding requests for any or all of these programs. Some applicants to the EMP, particularly those who are applying for funding under more than one program, may wish to use the UES application procedure. The Internet-based UES application, including step-by-step instructions for its use, is located at the following URL address: http://www.fas.usda.gov/cooperators.html. Other applicants, particularly those who are applying for funding only under the EMP, should follow the application procedures contained in this notice. Interested applicants that are unsure of which application is appropriate are urged to contact the Marketing Operations Staff at the address above. The deadline for all applications to the EMP, regardless of format, is 5 p.m. Eastern Standard Time, March 12, 2001. FAS recommends that applications not be longer than ten (10) pages.

It is strongly recommended that applicants obtain a copy of the 2001 EMP Guidelines prior to submitting an application. Requests for the 2001 EMP Guidelines and additional information may be obtained from the Marketing Operations Staff at the address above. The Guidelines are also available at the following URL address: http://www.fas.usda.gov/excredits/em-markets/em-markets.html.

Application Information
To assist FAS in making determinations regarding funding, FAS recommends that proposals contain the following information: (1) Name and address of person/organization submitting proposal; (2) organization qualifications (this may be submitted as an attachment to the application); (3) telephone and fax numbers; (4) Federal tax ID number of the responsible organization; (5) full title of proposal; (6) projected starting date for the proposal and time line(s) for project implementation; (7) precis of the proposal, including objectives, summary of proposed activities, targeted country/countries for proposed activities, and funding amount requested; (8) statement of problem (specific trade constraint) to be addressed through the proposed project; (9) supporting market analysis of the targeted market(s)—brief economic analysis for each commodity and country, including current market conditions, relevant trade data, existing percentage of U.S. export market share, and the basis or source(s) for this data; (10) benefits to U.S. agricultural exports as a result of the proposed project, including specific performance measures; (11) detailed description of proposed activities and budgets, including other sources of funding for the project and contributions from participating organizations (refer to the EMP Guidelines for additional details); (12) information on whether similar activities are or have previously been funded in targeted country/countries (e.g., under other Federal assistance programs); (13) and a clearly stated justification as to why participating organization(s) are unlikely to carry out the proposed activities without EMP funding.

Reporting Requirement
A performance report detailing the results of each project supported with EMP funds must be submitted to the Marketing Operations Staff at the address above. Because public funds are used to support EMP projects, these reports will be made available to the public.

Closing Date for Applications
All Internet-based applications, plus the supplemental information, must be properly submitted by 5 p.m. Eastern Standard Time, March 12, 2001. All applications on diskette (with two accompanying paper copies) must be received by 5 p.m. Eastern Standard Time, March 12, 2001, at one of the following addresses:

Hand Delivery (including FedEx, DHL, UPS, etc.): U.S. Department of Agriculture, Foreign Agricultural Service, Marketing Operations Staff, Room 4932-S, 1400 Independence Avenue, SW., Washington, DC 20250–1042.

Timothy J. Galvin,
Administrator, Foreign Agricultural Service.

DEPARTMENT OF AGRICULTURE

Forest Service

Rio Sabana Day Use Picnic Area, Caribbean National Forest, Naguabo, Puerto Rico; Revised Notice of Intent To Prepare an Environmental Impact Statement

AGENCY: Forest Service, USDA.

ACTION: Revised notice.

SUMMARY: This notice is to announce that the Caribbean National Forest is revising the date for filing a Draft Environmental Impact Statement (DEIS) for the Rio Sabana Day Use Picnic Area; and that the USDA Forest Service and the Puerto Rico Department of Transportation and Public works have agreed to act as joint lead agencies in the preparation of the EIS. This revises the notice of intent for this project, originally published in the Federal Register on Friday, September 18, 1998, Vol. 63, No. 181, pp. 49894-49895, and revised notices of intent published December 21, 1998, Vol. 63, No. 244, pp. 70385–70386; and December 28, 1998, Vol. 63, No. 248, pp. 71441–71442. The agency expects to file a DEIS with the Environmental Protection Agency (EPA) and make it available for public comment March 2001.

DATES: Comments on the DEIS, to be considered in preparation of the Final Environmental Impact Statement (FEIS), must be received 45 days following the publication of notice of availability of the DEIS.

ADRESSES: Send written comments to Ricardo Garcia, Forest Planner; Caribbean National Forest, P.O. Box 490, Palmer, Puerto Rico 00721.

FOR FURTHER INFORMATION CONTACT: Ricardo Garcia, Forest Planner, 787–888–5640.

SUPPLEMENTARY INFORMATION: The Caribbean National Forest is proposing to develop a day use picnic area located in the vicinity of the Rio Sabana Bridge, on Highway PR 191 at Km. 20.0, in the Cubuy Sector of the Municipality of Naguabo, and to reconstruct the Rio Sabana Trail (approximately 2.5 miles). In order to provide vehicular access to the proposed picnic area, the Puerto Rico Department of Transportation and Public Works is proposing to reconstruct the section of Highway PR 191 from Km. 21.3 to Km. 20.0 (approximately 0.8 miles), that is currently closed to public traffic.

Scoping actions which have been completed to date include: (1) a field trip to the site with local residents, elected officials, and agency representatives (2/4/98); (2) a meeting with interested parties at a local residence (2/23/98); (3) a meeting with Rep. Robert Baez, Puerto Rico House of Representatives (8/28/98); and (4) mailing of scoping letters to approximately 75 potentially interested individuals, organizations and government agencies (12/98).

The following preliminary issues have been identified through scoping; (1) lack of developed recreation sites and trails on the south side of the Forest; (2) inadequate budget for operation and maintenance of additional recreation facilities on the Forest; (3) possible adverse impacts on wilderness values; (4) possible adverse impacts on primary forest and endangered, threatened or sensitive plants or animals; (5) potential for increased soil erosion and stream sedimentation; (6) possible improvement in water quality due to providing toilets at the site which is receiving heavy recreation use; (7) potential adverse impacts on cultural resources; (8) potential for increased traffic congestion on Highway PR 191; and (9) potential to increase law enforcement and public safety problems.

A DEIS is expected to be available for public review, beginning about March 2001. The comment period on the DEIS will be 45 days from the date the EPA publishes the notice of availability in the Federal Register.

The Forest Service believes, at this early stage it is important to give reviewers notice of several court rulings related to public participation in the environmental review process. First, reviewers of DEIS, must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer’s position and contentions.

Vermont Yankee Nuclear Power Corp. v. NRDC, 435 U.S. 519, (1978). Also, environmental objections that could be raised at the DEIS stage, but that are not raised until after completion of the FEIS, may be waived or dismissed by the courts. City of Angoon v. Hodel, 803 F.2d 1016, 1022 (9th Cir. 1986) and Wisconsin Heritage, Inc. v. Harris, 490 F. Supp. 1334, 1338 (E.D. Wis. 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the comment period (45 days after publication in the Federal Register of the notice of availability of the DEIS, estimated to be March 2001) so that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them and respond to them in the FEIS.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the DEIS should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the DEIS or the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

After the comment period on the DEIS ends, the comments will be analyzed, considered, and responded to by the Forest Service in preparing the FEIS. The Responsible Official will consider the comments, responses, environmental consequences discussed in the FEIS, and applicable laws, regulations, and policies in making a decision. The Responsible Official will document the decision and rationale for the decision in a Record of Decision.

The decision will be subject to appeal in accordance with 36 CFR Part 215. The Responsible Official is: Pablo Cruz, Forest Supervisor, Caribbean National Forest, P.O. Box 490, Palmer, Puerto Rico 00721.

Dated: December 1, 2000.

Pablo Cruz,
Forest Supervisor.

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

(Docket 71–2000)

Foreign-Trade Zone 50, Long Beach, CA; Proposed Foreign-Trade Subzone; ARCO Products Company, (Oil Refinery Complex); Long Beach, CA, Area

An application has been submitted to the Foreign-Trade Zones Board (the Board) by the Board of Harbor Commissioners of the City of Long Beach, grantee of FTZ 50, requesting special-purpose subzone status for the oil refinery complex of Atlantic Richfield Company (ARCO), a wholly-owned subsidiary of BP America, located in the Long Beach, California, area. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a-81u), and the regulations
of the Board (15 CFR part 400). It was formally filed on December 14, 2000.

The ARCO refinery complex (854 acres) is located at 7 sites in the Long Beach area (Los Angeles County). California: Site 1 (268,000 BPD capacity, 6.7 million barrel capacity, 646.5 acres)—main refinery complex, located at 1801 East Sepulveda Blvd., some 25 miles south of downtown Los Angeles; Site 2 (5.5 acres)—Berth 121 of Terminal 1, Long Beach Harbor, for receiving crude oil; Site 3 (24 tanks, 1.7 million barrel capacity, 19 acres)—Terminal 2, Long Beach Harbor, crude oil and product storage; Site 4 (27 tanks, 2.1 million barrel capacity, 73 acres)—Hynes facility for crude and product storage, located at 5900 Cherry Avenue, Long Beach, some 4 miles northwest of the refinery; Site 5 (4 tanks, 1.2 million barrel capacity, 15 acres)—“Southern California Edison-Long Beach” leased storage facility, located at 2665 Seaside Blvd., Long Beach, some 6 miles south of the refinery; Site 6 (12 tanks, 3.6 million barrel capacity, 75 acres)”—“Southern California Edison-Dominguez” leased storage facility, 2500 East Victoria, Compton, some 5 miles northeast of the refinery; and Site 7 (20 tanks, 1 million barrel capacity, 20 acres)—Hathaway terminal, 2350 Hathaway Drive, Signal Hill, some 5 miles east of the refinery.

The refinery (920 employees) is used to produce fuels and petrochemical feedstocks. Fuel products include gasoline, jet fuel, distillates, residual fuels, naphthas and motor fuel blendstocks. Petrochemical feedstocks and refinery by-products include methane, ethane, propane, propylene, butane, petroleum coke and sulfur.

Some 15 percent of the crude oil (91 percent of inputs) is sourced abroad. The application also indicates that the company may in the future import under FTZ procedures some naphthas, virgin gas oil, natural gas condensate, and motor fuel blendstocks.

Zone procedures would exempt the refinery from Customs duty payments on the foreign products used in its exports. On domestic sales, the company would be able to choose the duty rate that applies to certain imported components currently range from 2.5 to 4.0 percent. Caterpillar also indicates that other components will be purchased from abroad as the company progresses with its planned transfer of additional production stages to the Waco site.

This application requests authority to allow Caterpillar to conduct the activity under FTZ procedures, which would exempt the company from Customs duty payments on the foreign components used in export activity. On its domestic sales, the company would be able to choose the duty rate that applies to finished dump trucks (duty free) for foreign components, such as those noted above. The company would also be exempt from duty payments on foreign merchandise that becomes scrap/waste.

In accordance with the Board’s regulations, a member of the FTZ Staff has been designated examiner to investigate the application and report to the Board.

The company indicates that the following foreign components will be admitted initially under FTZ procedures: cabs, axles, radial tires, and dump bodies (duty rates on these imported components currently range from 2.5 to 4.0 percent). Caterpillar also indicates that other components will be purchased from abroad as the company progresses with its planned transfer of additional production stages to the Waco site.

In accordance with the Board’s regulations, a member of the FTZ Staff has been designated examiner to investigate the application and report to the Board.

Public comment is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board’s Executive Secretary at the address below.

The closing period for their receipt is February 26, 2001. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period (to March 13, 2001).

A copy of the application and accompanying exhibits will be available for public inspection at each of the following locations:

U.S. Department of Commerce, Export Assistance Center, One World Trade Center, Suite 1670, Long Beach, CA 90831;
Office of the Executive Secretary, Foreign-Trade Zones Board, Room 4008, U.S. Department of Commerce, 14th & Pennsylvania Avenue, NW, Washington, DC 20230.

Dennis Puccinelli,
Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[Docket 69–2000]

Request for Manufacturing Authority within Proposed Foreign-Trade Zone, Caterpillar Inc. (Construction Equipment), Waco, Texas

An application has been submitted to the Foreign-Trade Zones Board (the Board) by the City of Waco (Texas), which has an application pending for Foreign-Trade Zone status, requesting authority on behalf of Caterpillar Inc. (Caterpillar) for the manufacture/processing of off-road articulated dump trucks under FTZ procedures within Site 2 of the proposed FTZ. The application was submitted pursuant to the provisions of the Foreign-Trade Zones Act, as amended (19 U.S.C. 81a–81u), and the regulations of the Board (15 CFR part 400). It was formally filed on December 12, 2000.

Caterpillar operates a 103-acre facility (110 employees projected) within the proposed foreign-trade zone for the manufacture/processing of off-road articulated dump trucks (imported duty-free under HTSUS heading 8704.10.50). Currently, components purchased from foreign sources comprise up to 48 percent of the finished product’s value.

In accordance with the Board’s regulations, a member of the FTZ Staff has been designated examiner to investigate the application and report to the Board.

Public comment is invited from interested parties. Submissions (original and 3 copies) shall be addressed to the Board’s Executive Secretary at the address below. The closing period for their receipt is February 26, 2001. Rebuttal comments in response to material submitted during the foregoing period may be submitted during the subsequent 15-day period to March 13, 2001.

A copy of the application and the accompanying exhibits will be available for public inspection at each of the following locations:

Office of the Executive Secretary, Foreign-Trade Zones Board, U.S. Department of Commerce, Room 4008, 14th and Pennsylvania Avenue, NW, Washington, DC 20230;
Greater Waco Chamber of Commerce, 101 South University Parks Drive, Waco, TX 76701.

Dennis Puccinelli,
Executive Secretary.

During any administrative review covering all or part of a period falling between the first and second or third and fourth anniversary of the publication of an antidumping duty order under section 351.211 or a determination under section 351.218(f)(4) to continue an order or suspended investigation (after sunset review), the Secretary, if requested by a domestic interested party within 30 days of the date of publication of the notice of initiation of the review, will determine whether antidumping duties have been absorbed by an exporter or producer subject to the review if the subject merchandise is sold in the United States through an importer that is affiliated with such exporter or producer. The request must include the name(s) of the exporter or producer for which the inquiry is requested.

Interested parties must submit applications for disclosure under administrative protective orders in accordance with 19 CFR 351.305.

These initiations and this notice are the result of investigations of (1994-1995) procedures and based on information received in the reviews of the antidumping duty orders on antifriction bearings (other than tapered roller bearings) and parts thereof from Japan. On February 28, 1995, the Department published its final results of administrative reviews of the antidumping duty orders on antifriction bearings and parts thereof from Japan, Germany, Italy, Japan, Singapore, Sweden, and the United Kingdom, covering the period May 1, 1992, through April 30, 1993 (60 FR 10900). The classes or kinds of merchandise covered by these reviews are ball bearings and parts thereof, cylindrical roller bearings and parts thereof, and spherical plain bearings and parts thereof. The period of review is May 1, 1992, through April 30, 1993. As there is now a final and conclusive court decision in this action, we are amending our final results of reviews, as appropriate, and we will subsequently instruct the U.S. Customs Service to liquidate entries subject to these reviews.

**SUMMARY:** The United States Court of International Trade and the United States Court of Appeals for the Federal Circuit have affirmed the Department of Commerce’s final remand results affecting final assessment rates for the administrative reviews of the antidumping duty orders on antifriction bearings (other than tapered roller bearings) and parts thereof from Japan with regard to NTN Corporation, Koyo Seiko Co., Ltd., and Honda Motor Company Limited. The classes or kinds of merchandise covered by these reviews are ball bearings and parts thereof, cylindrical roller bearings and parts thereof, and spherical plain bearings and parts thereof. The period of review is May 1, 1992, through April 30, 1993 (60 FR 10900) (AFBs 4). The classes or kinds of merchandise covered by these reviews are ball bearings and parts thereof (BBs), cylindrical roller bearings and parts thereof (CRBs), and spherical plain bearings and parts thereof (SPBs). Subsequently, one domestic producer (The Torrington Company), NSK Ltd., NTN Corporation (NTN), and Koyo Seiko Co., Ltd. (Koyo), filed lawsuits with the U.S. Court of International Trade (CIT) challenging the final results. These lawsuits were consolidated and litigated at the CIT and the United States Court of Appeals for the Federal Circuit (CAFC). The CIT and CAFC affirmed the Department’s final remand results for AFBs 4 with respect to all companies except NTN, Koyo, and Honda Motor Company Limited (Honda) in the proceedings concerning antifriction bearings from Japan. On
September 13, 1999, the Department published its amended final results of administrative reviews of the antidumping duty orders on antifriction bearings (other than tapered roller bearings) and parts thereof, from France, Germany, Italy, Japan, Singapore, Sweden, and the United Kingdom, covering the period May 1, 1992, through April 30, 1993, with respect to all companies except NTN, Koyo, and Honda [64 FR 49442].

The CIT and CAFC have affirmed the Department’s original determination in AFBs 4 with respect to Honda. Therefore, since neither court remanded the determination with respect to Honda to the Department, the Department has not changed its final results of review with respect to Honda and no amendment to AFBs 4 is necessary with respect to this company.

However, the Department received remand instructions during the litigation pertaining to NTN and Koyo. The CIT and CAFC issued a number of orders and opinions of which the following have resulted in changes to the antidumping margins we had calculated for NTN and Koyo in AFBs 4:

- NTN—(1) apply a tax-neutral methodology in computing the value-added tax adjustment, (2) deny the adjustment to foreign market value (FMV) for home-market discounts, (3) deny the adjustments to FMV for billing adjustments that were not made solely to in-scope merchandise, (4) exclude sample sales from the home-market database for which NTN received no consideration, (5) allow the adjustment to U.S. indirect selling expenses for interest expense incurred in financing antidumping duty cash deposits, (6) recalculate the cost of production and constructed value without resort to best information available, and (7) correct a clerical error; Koyo—(1) apply a tax-neutral methodology in computing the value-added tax adjustment, (2) reopen the record to allow Koyo to submit documentation showing the nature of the expenses it characterized as non-operating expenses and subsequently exclude certain items from general expenses for purposes of calculating cost of production and constructed value, (3) re-examine the acceptance of the allocation of air-freight expenses, (4) explain further the basis for accepting Koyo’s efficiency variance without adjustment, and (5) correct a clerical error.

The CIT and CAFC have affirmed the Department’s final remand results affecting final assessment rates for these reviews of NTN and Koyo. As there are now final and conclusive court decisions in these actions, we are amending our final results of review in these matters and we will subsequently instruct the U.S. Customs Service to liquidate entries subject to these reviews.

Amendment to Final Results

Pursuant to section 516A(e) of the Tariff Act, we are now amending the final results of administrative reviews of the antidumping duty orders on antifriction bearings (other than tapered roller bearings) and parts thereof from Japan and the period May 1, 1992, through April 30, 1993, with respect to NTN and Koyo. The revised weighted-average margins are as follows:

<table>
<thead>
<tr>
<th>Company</th>
<th>BBs</th>
<th>CRBs</th>
<th>SPBs</th>
</tr>
</thead>
<tbody>
<tr>
<td>NTN</td>
<td>14.90</td>
<td>6.53</td>
<td>(1)</td>
</tr>
<tr>
<td>NTN Seiko</td>
<td>9.25</td>
<td>7.99</td>
<td>0.43</td>
</tr>
</tbody>
</table>

(1) No shipments or sales subject to this review.

Accordingly, the Department will determine and the U.S. Customs Service will assess appropriate antidumping duties on entries of the subject merchandise made by firms covered by these reviews. Individual differences between United States price and FMV may vary from the percentages listed above. The Department has already issued appraisement instructions to the Customs Service for certain companies whose margins have not changed from those announced in AFBs 4 and the September 13, 1999, amendment. The Department will issue appraisement instructions to the U.S. Customs Service for NTN, Koyo, and Honda after publication of these amended final results of reviews.

This notice is published pursuant to section 751(a) of the Tariff Act.

Troy H. Cribb, Assistant Secretary for Import Administration.

BILLING CODE 3510–05–P

DEPARTMENT OF COMMERCE

International Trade Administration

AGENCY: NAFTA Secretariat, United States Section, International Trade Administration, Department of Commerce.

ACTION: Notice of consent motion to terminate the panel review of the final antidumping duty administrative review made by the International Trade Administration, respecting certain corrosion resistant carbon steel flat products from Canada (Secretariat File No. USA–CDA–99–1904–01).

SUMMARY: Pursuant to the Notice of Consent Motion to Terminate the Panel Review by the complainants, the panel review is terminated as of December 15, 2000. No panel has been appointed to this panel review. Pursuant to Rule 71(2) of the Rules of Procedure for Article 1904 Binational Panel Review, this panel review is terminated.

FOR FURTHER INFORMATION CONTACT: Caratina L. Alston, United States Secretary, NAFTA Secretariat, Suite 2061, 14th and Constitution Avenue, Washington, DC 20230, (202) 482–5438.

SUPPLEMENTARY INFORMATION: Chapter 19 of the North American Free-Trade Agreement ("Agreement") establishes a mechanism to replace domestic judicial review of final determinations in antidumping and countervailing duty cases involving imports from a NAFTA country with review by independent binational panels. When a Request for
Panel Review is filed, a panel is established to act in place of national courts to review expeditiously the final determination to determine whether it conforms with the antidumping or countervailing duty law of the country that made the determination.

Under Article 1904 of the Agreement, which came into force on January 1, 1994, the Government of the United States, the Government of Canada and the Government of Mexico established Rules of Procedure for Article 1904 Binational Panel Reviews ("Rules"). These Rules were published in the Federal Register on February 23, 1994 (59 FR 8686). The panel review in this matter was requested and terminated pursuant to these Rules.

Caratina L. Alston,
United States Secretary, NAFTA Secretariat.

NAFTA Panel Reviews; Request for Panel Review

AGENCY: NAFTA Secretariat, United States Section, International Trade Administration, Department of Commerce.

ACTION: Notice of first request for panel review.

SUMMARY: On November 21, 2000, CEMEX, S.A. de C.V. ("CEMEX") filed a First Request for Panel Review with the United States Section of the NAFTA Secretariat pursuant to Article 1904 of the North American Free Trade Agreement. On November 22, 2000 a second request for panel review was filed by Cementos de Chihuahua, S.A. de C.V. Panel review was requested of the five-year sunset review of the antidumping duty order made by the International Trade Commission, respecting Gray Portland Cement and Clinker from Mexico. This determination was published in the Federal Register (65 FR 65527) on November 1, 2000. The NAFTA Secretariat has assigned Case Number USA–MEX–00–1904–10 to these requests.
review.

review and the procedural and investigating authority, that are set out to the allegations of error of fact or law, for filing a Notice of Appearance in accordance with Rule 40 the panel review by filing a Notice of support of any reviewable portion of the Complaint but that intends to appear in a Complaint is December 21, 2000); for Panel Review (the deadline for filing days after the filing of the first Request in accordance with Rule 39 within 30 whole or in part by filing a Complaint challenge the final determination in above.

Article 1904 of the Agreement, on the NAFTA Secretariat, pursuant to Rules of Procedure for Article 1904 Binational Panel Reviews (“Rules”). These Rules were published in the Federal Register on February 23, 1994 (59 FR 8686).

A first Request for Panel Review was filed with the United States Section of the NAFTA Secretariat, pursuant to Article 1904 of the Agreement, on November 21, 2000, requesting panel review of the five-year sunset review of the antidumping countervailing duty order described above.

The Rules provide that:

(a) A Party or interested person may challenge the final determination in whole or in part by filing a Complaint in accordance with Rule 39 within 30 days after the filing of the first Request for Panel Review (the deadline for filing a Complaint is December 21, 2000);

(b) A Party, investigating authority or interested person that does not file a Complaint but that intends to appear in support of any reviewable portion of the final determination may participate in the panel review by filing a Notice of Appearance in accordance with Rule 40 within 45 days after the filing of the first Request for Panel Review (the deadline for filing a Notice of Appearance is January 5, 2001); and

(c) the panel review shall be limited to the allegations of error of fact or law, including the jurisdiction of the investigating authority, that are set out in the Complaints filed in the panel review and the procedural and substantive defenses raised in the panel review.

Dated: December 5, 2000.

Caratina L. Alston,

DEPARTMENT OF COMMERCE
National Institute of Standards and Technology
Manufacturing Extension Partnership National Advisory Board

AGENCY: National Institute of Standards and Technology, Department of Commerce.

ACTION: Notice of partially closed meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act, 5 U.S.C. app. 2, notice is hereby given that the Manufacturing Extension Partnership National Advisory Board (MEPNAB), National Institute of Standards and Technology (NIST), will meet Thursday, January 18, 2001 from 8 a.m. to 3:30 p.m. The MEPNAB is composed of eight members appointed by the Director of NIST who were selected for their expertise in the area of industrial extension and their work on behalf of smaller manufacturers. The Board was established to fill a need for outside input on MEP. MEP is a unique program consisting of centers in all 50 states and Puerto Rico. The centers have been created by state, federal, and local partnerships. The Board works closely with MEP to provide input and advice on MEP’s programs, plans, and policies. The agenda will include a review by program managers of their programs for 2000 with updates and accomplishments in the areas of center management, tool and product development and national marketing activities, and a discussion of program goals and strategies for 2001. The portion of the meeting which involves personnel and proprietary budget information will be closed to the general public. All other portions of the meeting will be open to the public.

DATES: The meeting will convene January 18, 2001 at 8 a.m. and will adjourn at 3:30 p.m. on January 18, 2001.

ADDRESSES: The meeting will be held in the Tenth Floor Conference Room, Administration Building, at NIST, Gaithersburg, Maryland.

FOR FURTHER INFORMATION CONTACT: Linda Acierio, Senior Policy Advisor, Manufacturing Extension Partnership, National Institute of Standards and Technology, Gaithersburg, MD 20899–4800, telephone number (301) 975–5033.

SUPPLEMENTARY INFORMATION: The Assistant Secretary for Administration with the concurrence of the General Counsel formally determined on December 18, 2000, that portions of the meeting which involve discussion of proposed funding of the MEP may be closed in accordance with 5 U.S.C. 552b(c)(9)(B), because that portion will divulge matters the premature disclosure of which would be likely to significantly frustrate implementation of proposed agency actions; and that portions of the meeting which involve discussion of the staffing of positions in MEP may be closed in accordance with 5 U.S.C. 552b(c)(6), because divulging information discussed in that portion of the meeting is likely to reveal information of a personal nature, where disclosure would constitute a clearly unwarranted invasion of personal privacy.

Raymond G. Kammer, Director.

FOR FURTHER INFORMATION CONTACT: Madeleine Clayton, Departmental Forms Clearance Officer, Department of Commerce, Room 6086, 14th and Constitution Avenue, NW., Washington, DC 20230 or via the Internet (MClayton@doc.gov).

DEPARTMENT OF COMMERCE
Technology Administration
National Medal of Technology

ACTION: Proposed collection; Comment request.

SUMMARY: The Department of Commerce (DOC), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to comment on the continuing and proposed information collection, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A))

DATES: Written comments must be submitted on or before February 26, 2001.

ADDRESSES: Direct all written comments to Madeleine Clayton, Departmental Forms Clearance Officer, Department of Commerce, Room 6086, 1401 Constitution Avenue, NW., Washington, DC 20230 or via the Internet (MClayton@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information should be directed to the attention of Mildred Porter, Director, National Medal of Technology Program, Technology Administration, 1401
Constitution Avenue, NW., Room 4226, Washington, DC 20230. In addition, written comments may be sent via fax, (202) 501–8153, and e-mail to mporter@ita.doc.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

This information collection is critical for the Nomination Evaluation Committee to determine selection eligibility and merit according to specified criteria or the annual selection of the Nation’s leading technological innovators honored by the President of the United States. The information is needed in order to comply with P.L. 96–480 and P.L. 105.309. Comparable information is not available on a standardized basis.

II. Method of Collection

By mail, but the nomination forms and instructions are electronically posted on the National Medal of Technology web site so interested parties can review criteria and informational requirements at their convenience.

III. Data

OMB Number: 0692–0001.

Type of Review: Revision of a currently approved collection.

Affected Public: Individuals or households; business or other for-profit organizations; not-for-profit institutions; and, Federal Government.

Estimated Number of Respondents: 102.

Estimated Time Per Response: 25 hours.

Estimated Total Annual Respondent Burden Hours: 2550.

Estimated Total Annual Respondent Cost Burden: None.

IV. Requests for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency’s estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, e.g., the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice should summarize or be included in the request for OMB approval of this information collection; it will also become a matter of public record.

Madeleine Clayton,

Departmental Forms Clearance Officer, Office of the Chief Information Officer.

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

                                                                                       Extension of Temporary Amendment to the Requirements for Participating in the Special Access Program for Caribbean Basin Countries

AGENCY: Committee for the Implementation of Textile Agreements (CITA).

ACTION: Issuing a directive to the Commissioner of Customs extending amendments of requirements for participation in the Special Access Program for a temporary period.

SUPPLEMENTARY INFORMATION:

Authority: Section 204 of the Agricultural Act of 1956, as amended (7 U.S.C. 1854); Executive Order 11651 of March 3, 1972, as amended.

A notice published in the Federal Register on December 18, 1998 (63 FR 70112), amended on December 24, 1998 (64 FR 149, published on January 4, 1999), extended the exemption period for women’s and girls’ and men’s and boys’ chest type plate, “hymo” piece or “sleeve header” of woven or felt-inserted warp knit construction of coarse animal hair or man-made filaments used in the manufacture of tailored suit jackets and suit-type jackets in Categories 433, 435, 443, 444, 633, 635, 643 and 644, which are entered under the Special Access Program, for the periods December 23, 1998 through December 31, 2000 for women’s and girls’ “hymo” type interlinings and September 23, 1998 through December 31, 2000 for men’s and boys’ “hymo” type interlinings. See also directive dated September 16, 1996 (61 FR 49439), as amended.

Effective on January 1, 2001, by date of export, you are directed to extend through December 31, 2002, the amendment to treat non-U.S. formed, U.S.-cut interlinings for chest type plate, “hymo” piece or “sleeve header” of woven or felt-inserted warp knit construction of coarse animal hair or man-made filaments used in the manufacture of tailored suit jackets and suit-type jackets in Categories 433, 443, 633 and 643 as qualifying for exception for findings and trimmings, including elastic strips less than one inch in width, created under the Special Access Program effective September 1, 1986 (see 51 FR 21208). In the aggregate, such interlinings, findings and trimmings must not exceed 25 percent of the cost of the components of the assembled article. Non-U.S. formed, U.S.-cut interlinings may be used in imports of women’s and girls’ and men’s and boys’ suit jackets and suit-type jackets entered under the Special Access Program (9802.00.8015) provided they are cut in the United States and of a type described above.
The Committee for the Implementation of Textile Agreements has determined that this action falls within the foreign affairs exception of the rulemaking provisions of 5 U.S.C. 553(a)(1).

Sincerely,
Richard B. Steinkamp,
Chairman, Committee for the Implementation of Textile Agreements.

DEPARTMENT OF DEFENSE

Department of the Navy

Meeting of the Chief of Naval Operations (CNO) Executive Panel

AGENCY: Department of the Navy, DOD.

ACTION: Notice of closed meeting of the CNO Executive Panel.

SUMMARY: The CNO Executive Panel is to conduct the final briefing of the Expeditionary Sensors Task Force to the Chief of Naval Operations. This meeting will consist of discussions relating to how to best bring a robust sensor system with supporting networks into being.

DATES: The meeting will be held on January 19, 2001 from 9:30 to 11 a.m.

ADDRESSES: The meeting will be held at the office of the Chief of Naval Operations, 2000 Navy Pentagon, Washington, DC 20350–2000.

FOR FURTHER INFORMATION CONCERNING THIS MEETING CONTACT: Commander Christopher Agan, CNO Executive Panel, 4825 Mark Center Drive, Alexandria, Virginia 22311, (703) 681–6205.

SUPPLEMENTARY INFORMATION: Pursuant to the provisions of the Federal Advisory Committee Act (5 U.S.C. App. 2), these matters constitute classified information that is specifically authorized by Executive Order to be kept secret in the interest of national defense and are, in fact, properly classified pursuant to such Executive Order. Accordingly, the Secretary of the Navy has determined in writing that the public interest requires that all sessions of the meeting be closed to the public because they will be concerned with matters listed in section 552(b)(1) of title 5, United States Code.

James L. Roth,
Lieutenant Commander, United States Navy, Judge Advocate General’s Corps, Federal Register Liaison Officer.

DEPARTMENT OF ENERGY

Agency Information Collection Under Review by the Office of Management and Budget

AGENCY: Department of Energy.

ACTION: Submission for OMB review; comment request.

SUMMARY: The Department of Energy (DOE) has submitted renewals for an additional three years for the information collection(s) listed at the end of this notice to the Office of Management and Budget (OMB) for review under sections 3507(h)(1) of the Paperwork Reduction Act of 1995 (Pub. L. 104–13) (44 U.S.C. 3501 et seq).

Each entry contains the following information: (1) The collection number and title; (2) a summary of the collection of information, type of request (new, revision, extension, or reinstatement), response obligation (mandatory, voluntary, or required to obtain or retain benefits); (3) a description of the need and proposed use of the information; (4) a description of the likely respondents; and (5) an estimate of the total annual reporting burden (i.e., the estimated number of likely respondents times the proposed frequency of response per year times the average hours per response).

DATES: Comments must be filed by January 29, 2001. If you anticipate that you will be submitting comments but find it difficult to do so within the time allowed by this notice, you should advise the OMB DOE Desk Officer listed below of your intention to do so, as soon as possible. The OMB Desk Officer may be telephoned at (202) 395–7318. (Also, please notify the DOE contact listed below.)

ADDRESSES: Address comments to the Department of Energy Desk Officer,
Office of Information and Regulatory Affairs, Office of Management and Budget, 725 17th Street, NW, Washington, DC 20503. (Comments should also be addressed to the Records Management Division, Office of the Chief Information Officer, at the address below.)

FOR FURTHER INFORMATION, CONTACT: Requests for additional information should be directed to Susan L. Frey, Director, Records Management Division, Office of Records and Business Management (SO–312), U.S. Department of Energy, Germantown, MD 20874–1290. Ms. Frey can be contacted by telephone at (301) 903–3666, or e-mail at Susan.Frey@hq.doe.gov

SUPPLEMENTARY INFORMATION: The information collections submitted to OMB for review were: 1. Current OMB No.: 1910–0400. Package Title: Financial Assistance. Summary: A three-year extension is requested, which includes both mandatory and response to obtain or retain benefits. Purpose: This information is required by the Department to manage all phases of the process of awarding, administering, and closing out financial assistance awards. The package contains 58 information and/or recordkeeping requirements. Type of Respondents: DOE management and operating contractors and offsite contractors. Estimated Number of Burden Hours: 664,673.

2. Current OMB No.: 1910–1000. Package Title: Personal Property. Summary: A three-year extension is requested for these mandatory response obligations. Purpose: This provides the Department with the information necessary for the management, control, reutilization, and disposal of government personal property. The package contains 29 information and/or recordkeeping requirements. Type of Respondents: DOE management and operating contractors and offsite contractors. Estimated Number of Responses: 3,857. Estimated Total Burden Hours: 247,374.

3. Current OMB No.: 1910–1800. Package Title: Safeguards and Security. Summary: A three-year extension is requested for these mandatory response obligations. Purpose: This information is required by the Department for guard service contracts, security classified records, facility security, nuclear facility safety, and nuclear facility security. The package contains information and/or recordkeeping requirements. Type of Respondents: DOE management and operating contractors and offsite contractors. Estimated Total Burden Hours: 612,985.

[DOCKET NO. RP01–166–001]

ANR Pipeline Company: Notice of Proposed Changes in FERC Gas Tariff

Take notice that on December 15, 2000, ANR Pipeline Company (ANR) tendered for filing as part of its FERC Gas Tariff, Original Volume No. 2, the following revised tariff sheets, to be effective January 1, 2001:

Substitute Fifteenth Revised Sheet No. 570
Substitute Second Revised Sheet No. 573

ANR states that the above-referenced tariff sheets are being filed to correct a clerical error in ANR’s December 1, 2000 filing in the captioned proceeding, which sought a continuance of the suspension of ANR’s tariff provisions regarding the requirement to annually redetermine the monthly charge for services provided to High Island Offshore System under ANR’s Rate Schedule X–64. The December 1st filing did not reflect that (a) the proposed charge was an annual fee, and (b) the term extension commences on January 1, 2001 and expires December 31, 2015.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with section 385.211 of the Commission’s Rules and Regulations. All such protests must be filed in accordance with section 154.210 of the Commission’s Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protesters parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/online/rims.htm (call 202–208–2222 for assistance). Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(9)(iii) and the instructions on the Commission’s web site at http://www.ferc.fed.us/efi/doorbell.htm.

Linwood A. Watson, Jr., Acting Secretary.

Columbia Gas Transmission Corporation; Notice of Proposed Changes in FERC Gas Tariff

Take notice that on December 15, 2000, Columbia Gas Transmission Corporation (Columbia) tendered for filing as part of its FERC Gas Tariff, Second Revised Volume No. 1, the following revised tariff sheets, bearing a proposed effective date of January 1, 2001:

Forty-seventh Revised Sheet No. 25
Forty-seventh Revised Sheet No. 26
Forty-seventh Revised Sheet No. 27
Twenty-first Revised Sheet No. 30A

Columbia states that this filing is being submitted pursuant to Stipulation I, Article I, Section E, True-up Mechanism, of the Settlement (Settlement) in Docket No. RP05–408 et al., approved by the Commission on April 17, 1997 (79 FERC ¶ 61,044 (1997)). Under the approved section of the Settlement, Columbia is required to true-up its collections pursuant to the Settlement Component for 12-month periods commencing November 1, 1996 and ending October 31, 2004. The fourth 12-month Period (Period IV) ended October 31, 2000. Columbia is making this true-up filing in compliance with the Settlement to return a net over-recovery of $2,130,235 for Period IV, which includes interest and the true-up of the Period III Settlement Component adjustment, through an adjustment to the Settlement Component of the base rates for the period January 1, 2001 through October 31, 2001.

Columbia states that copies of its filing have been mailed to all firm customers, interruptible customers, and affected state commissions. Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426, in accordance with sections 385.214 or 385.211 of the Commission’s
Rules and Regulations. All such motions or protests must be filed in accordance with section 154.210 of the Commission’s Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/efi/doorbell.htm. Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission’s web site at http://www.ferc.fed.us/efi/doorbell.htm.

Linwood A. Watson, Jr., Acting Secretary.

[Docket No. RP95–408–038]

Columbia Gas Transmission Corporation; Notice of Compliance Filing

Take notice that on December 15, 2000, Columbia Gas Transmission Corporation (Columbia) tendered a filing in compliance with Stipulation II, Article III, Section F, of the settlement filed in Docket No. RP95–408 et al. approved on April 17, 1997 (79 FERC ¶ 61.044 (1997)) [Settlement].

In accordance with this provision, Columbia is required to share with its customers the gain or loss on the sale of certain gathering and products extraction facilities. On December 15, 1999, Columbia shared the initial gain on the disposition of its stranded gathering and products extraction facilities. In the instant filing, Columbia is filing to share an additional excess of $0.676. Columbia is also filing a report on its plan to dispose of its remaining gathering facilities as required under the terms of Stipulation II, Article III, Section F of the Settlement.

Columbia states further that copies of this filing have been mailed to all of its customers and affected state regulatory commissions.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, DC 20426, in accordance with section 385.211 of the Commission’s Rules and Regulations. All such protests must be filed in accordance with section 154.210 of the Commission’s Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing maybe viewed on the web at http://www.ferc.fed.us/efi/doorbell.htm. Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission’s web site at http://www.ferc.fed.us/efi/doorbell.htm.

Kern River Gas Transmission Company; Notice of Filing of Pro Forma Tariff Sheets

Take notice that on December 15, 2000, Kern River Gas Transmission Company (Kern River) tendered for filing as part of its FERC Gas Tariff, Second Revised Volume No. 1, the pro forma tariff sheets listed in Appendix A to the filing.

Kern River states that the purpose of the filing is to establish in Kern River’s tariff a mechanism for converting the maximum daily quantities (MDQs) stated in transportation service agreements that were executed on a volumetric (i.e., Mcf) basis to demand maximum daily quantities (DMDQs), transportation maximum daily quantities (TMDQs), and receipt and delivery point entitlements, all on a thermal (i.e., Dth) basis, and all as more fully described in the filing.

Kern River states that it has served a copy of this filing upon its customers and interested state regulatory commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, N.E., Washington, DC 20426, in accordance with sections 385.214 or 385.211 of the Commission’s Rules and Regulations. All such motions or protests must be filed on or before December 27, 2000. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/efi/doorbell.htm. Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission’s web site at http://www.ferc.fed.us/efi/doorbell.htm.

[Docket No. RP96–272–022]

Northern Natural Gas Company; Notice of Proposed Changes in FERC Gas Tariff

Take notice that on December 18, 2000, Northern Natural Gas Company (Northern) tendered for filing to become part of Northern’s FERC Gas Tariff, Fifth Revised Volume No. 1, the following tariff sheet, proposed to become effective on December 19, 2000.

Third Revised Sheet No. 66A

Northern states that the above sheet is being filed to amend the negotiated rate transaction with OGE Energy Resources, Inc. filed on December 12, 2000 in accordance with the Commission’s Policy Statement on Alternatives to Traditional cost-of-Service Ratemaking for Natural Gas Pipelines. Specifically, the amendment sets forth the MDQ that the negotiated rate applies to through the end of December, 2000.

Northern further states that copies of the filing have been mailed to each of its customers and interested State Commissions.

Any person desiring to protest said filing should file a protest with the
Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with section 385.211 of the Commission’s Rules and Regulations. All such protests must be filed in accordance with section 154.210 of the Commission’s Regulations. Protests will be considered by the commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/efi/doorbell.htm (call 202-208–2222 for assistance). Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission’s web site at http://www.ferc.fed.us/efi/doorbell.htm.

Northern Natural Gas Company; Notice of Compliance Filing

Take notice that on December 15, 2000, Northern Natural Gas Company (Northern), tendered for filing in its FERC Gas Tariff, Fifth Revised Volume No. 1, the following tariff sheet proposed to be effective November 1, 2000:

Substitute Eleventh Revised Sheet No. 66

Northern states that the purpose of this filing is to comply with the Commission’s Order issued on November 30, 2000 in Docket No. RP96–272–019. Northern is filing the revised tariff sheet to specify separately the components of the negotiated rate between the transmission component and the construction cost reimbursement component in Footnote 7 which details the negotiated rate agreement with Midwest Natural Gas, Inc.

Northern further states that copies of the filing have been mailed to each of its customers and interested State Commissions.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with sections 385.214 or 385.211 of the Commission’s Rules and Regulations. All such motions or protests must be filed in accordance with section 154.210 of the Commission’s Regulations. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings.

Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the web at http://www.ferc.fed.us/efi/doorbell.htm (call 202–208–2222 for assistance).

Northern further states that copies of the purpose of this filing is to comply with the Commission’s Order issued on November 30, 2000 in Docket No. RP96–272–019. Northern is filing the revised tariff sheet to specify separately the components of the negotiated rate between the transmission component and the construction cost reimbursement component in Footnote 7 which details the negotiated rate agreement with Midwest Natural Gas, Inc.

Northern further states that copies of the filing have been mailed to each of its customers and interested State Commissions.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 2194; Project No. 135]

North Fork Hydroelectric Project, Oak Grove Hydroelectric Project, Portland General Electric Company, Portland, Oregon; Notice of Intent To Conduct Public Scoping Meetings

The Federal Energy Regulatory Commission (Commission or FERC) allows an applicant in the relicensing of a hydroelectric project, the option of filing a Third Party Contractor prepared Environmental Impact Statement (EIS) in lieu of Exhibit E of the license application. Portland General Electric (PGE—Applicant) has requested, and the Commission has approved this alternative procedure for the relicensing of the North Fork Hydroelectric Project No. 2195 and the Oak Grove Hydroelectric Project No. 135. The 121-megawatt North Fork project is located on the Clackamas River, Oregon and the 44-megawatt Oak Grove Project is located on the Oak Grove Fork of the Clackamas River. Public and agency scoping meetings will be held on February 6, 2001, for preparation of a preliminary Environmental Impact Statement.

Scoping Meetings

FERC staff will conduct one agency scoping meeting and one public meeting. The agency scoping meeting will focus on resource agency and non-governmental organization (NGO) concerns, while the public scoping meeting is primarily for public input. All interested individuals, organizations, and agencies are invited to attend one or both of the meetings, and to assist the staff in identifying the scope of the environmental issues that
should be analyzed in the EIS. The times and locations of these meetings are as follows:

Agency Scoping Meeting

Date: February 6, 2001.
Time: 9:00 a.m.–noon.
Place: Two World Trade Center (Mezzanine).
Address: 121 SW Salmon Street, Portland, Oregon.

Public Scoping Meeting

Date: February 6, 2001.
Time: 7:00 p.m.–9:00 p.m.
Place: Mt. Hood National Forest, Clackamas River Ranger District Office.
Address: 595 N.W. Industrial Way, Estacada, Oregon.

The Ranger District Office is located off of Highway 224, one-half mile west of the town of Estacada. Industrial Way runs parallel to Hwy. 224 and is one block south. There is a sign for the office on Hwy. 224.

To help focus discussions, we will distribute a Scoping Document (SD1) outlining the subject areas to be addressed at the meeting to the parties on the Commission’s mailing list. Copies of the SD1 also will be available at the scoping meetings.

Objectives

At the scoping meetings, the staff will: (1) Summarize the environmental issues tentatively identified for analysis in the EIS; (2) solicit from the meeting participants all available information, especially quantifiable data, on the resources at issue; (3) encourage statements from experts and the public on issues that should be analyzed in the EIS, including viewpoints in opposition to, or in support of, the staff’s preliminary views; (4) determine the relative depth of analysis for issues to be addressed in the EIS; and (5) identify resource issues that are of lesser importance, and, therefore, do not require detailed analysis.

Procedures

The meetings will be recorded by a stenographer and will become part of the formal record of the Commission proceeding on the project. Individuals presenting statements at the meetings will be asked to sign in before the meeting starts and to clearly identify themselves for the record. Speaking time for attendees at the meetings will be determined before the meeting, based on the number of persons wishing to speak and the approximate amount of time available for the session. All speakers will be provided at least 5 minutes to present their views.

Individuals, organizations, and agencies with environmental expertise and concerns are encouraged to attend the meetings and to assist the staff in defining and clarifying the issues to be addressed in the EIS.

Submitting Comments

Persons choosing not to speak at the meetings, but who have views on the issues, may submit written statements for inclusion in the public record at the meeting, or mail their comments to: Mr. David Heintzman, Portland General Electric (3 WTC–BRHL), 121 SW Salmon Street, Portland, OR 97204, (503) 464–8162.

All correspondence must identify the projects on the first page as: Clackamas River Hydroelectric Relicensing, Oak Grove Project—FERC No. 135 and North Fork Project—FERC No. 2195. All correspondence should be postmarked no later than March 7, 2001.

For further information, please contact David Heintzman, FGE, (503) 464–8162 or John Blair, FERC, (202) 219–2845.

Notice of Intent To Prepare an Environmental Assessment and Solicit Written Scoping Comments

Take notice that the following hydroelectric application has been filed with Commission and is available for public inspection:

a. Type of Application: Subsequent License.

b. Project No.: 2103–002.

c. Date filed: June 29, 2000.

d. Applicant: Cominco American Incorporated.

e. Name of Project: Cedar Creek.

f. Location: On Cedar Creek, a tributary of the Pend Oreille River, in Stevens County, Washington. The Project occupies 2.058 acres of land managed by the Bureau of Land Management, 0.298 acre of International Boundary Reserve land controlled by the International Joint Commission, and 0.44 acre of private land.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Bruce DiLuzio, Cominco American Incorporated, 15918 E. Euclid Avenue, Spokane, WA, 99216, (509) 747–6111.

i. FERC Contact: Brandi Bradford, (202) 219–2789, brandi.bradford@ferc.fed.us.

All documents (original and eight copies) should be filed with: David P. Boegers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426.

The Commission’s Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

Scoping comments may be filed electronically via the internet in lieu of paper. See 18 CFR 385.001(a)(iii) and the instructions on the Commission’s web site at http://www.ferc.gov.

k. This application is not ready for environmental analysis at this time.

l. The existing Cedar Creek Project consists of 2.4 acres of land periodically inundated by operation of the Waneta Project located in British Columbia, Canada. The Cedar Creek Project area is located in the United States. All Waneta Project facilities, including the dam and power generation facilities, are located in Canada and are outside FERC jurisdiction. Within the confines of the Cedar Creek Project, the maximum pool is EL 1517.8 (Canadian Geodetic Survey of Canada Datum) and minimum pool is EL 1502. Cominco American Incorporated currently has flowage rights to lands in the Cedar Creek Project boundary up to EL 1521.

m. A copy of the application is available for inspection and reproduction at the Commission’s Public Reference Room, located at 888 First Street, NE., Room 2A, Washington, DC 20426, or by calling (202) 208–1371. The application may be viewed on http://www.ferc.gov (call (202) 208–2222 for assistance). A copy is also available for inspection and reproduction at the address in item h above.

n. Scoping Process.

The Commission intends to prepare an Environmental Assessment (EA) on the project in accordance with the National Environmental Policy Act. The EA will consider both site-specific and cumulative environmental impacts and reasonable alternatives to the proposed action.
We are asking agencies, Native American tribes, non-governmental organizations, and individuals to help us identify the scope of environmental issues that should be analyzed in the EA, and to provide us with information that may be useful in preparing the EA by submitting written scoping comments.

To help focus comments on the environmental issues, a Scoping Document 1 that outlines subject areas to be addressed in the EA will soon be mailed to those on the mailing list for the project. The Scoping Document 1 will also be available from the address and website listed in item m above. For further information, please contact Brandi Bradford at (202) 219–2789.

Notice of Settlement Agreement and Soliciting Comments

Take notice the following Settlement Agreement has been filed with the Commission and is available for public inspection:

a. Type of Application: Settlement on New Minor License Application.

b. Project No.: 2694–002, Project Name: Queens Creek, Applicant: Nantahala Power and Light, a Division of Duke Engineering Corporation.

c. Date Settlement Agreement Filed: October 30, 2000.

d. Location: On Queens Creek, near the town of Topton, in Macon County, North Carolina. The project would not utilize federal lands.

 e. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

 f. Applicant Contact: John Wishon; 301 NP&L Loop Road; Franklin, NC 28734; (828) 369–4604.

 g. FERC Contact: Kevin Whalen [202] 219–2790.

i. All documents (original and eight copies) should be filed with: David P. Boergers, Secretary; Federal Energy Regulatory Commission; 888 First Street, NE; Washington, DC 20426.

The Commission’s Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

Protests, comments on filings, comments on environmental assessments and environmental impact statements, and reply comments may be filed electronically via the internet in lieu of paper. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission’s web site at http://www.ferc.fed.us/efi/doorbell.htm.

A Settlement Agreement was filed with the Commission on October 30, 2000. The agreement is the final, executed Queens Creek Settlement Agreement for Project No. 2694. The purpose of the agreement is to resolve among the signatory parties issues related to reservoir operating limits, recreational facility improvements, and minimum flows in the bypass reach, as well as other resolved subjects. Comments and reply comments on the Settlement Agreement are due as indicated in item h. above.

1. A copy of the offer of settlement is available for inspection and reproduction at the Commission’s Public Reference Room, located at 888 First Street, NE, Room 2A, Washington, DC 20424, or by calling (202) 208–1371. The Settlement Agreement may be viewed on the web at http://www.ferc.fed.us/online/rims.htm (call (202) 208–2222 for assistance). A copy is also available for inspection and reproduction at the address in item f above.

Notice of Application Accepted for Filing and Soliciting Motions To Intervene and Protests

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. Type of Application: New Major License.

d. Applicant: Reliant Energy Mid-Atlantic Power Holdings, LLC.

e. Name of Project: Piney Hydroelectric Project.

f. Location: On the Clarion River in Clarion County, Pennsylvania. The project would not utilize any federal lands or facilities.

g. Filed Pursuant to: Federal Power Act, 16 U.S.C. 791(a)–825(r).

h. Applicant Contact: Mr. Thomas Teitt; Reliant Energy Mid-Atlantic Power Holdings, LLC; 1001 Broad Street; Johnstown, Pennsylvania 15905–1050; (814) 533–8028.

i. FERC Contact: Kevin Whalen (202) 219–2790.

j. Deadline for filing interventions and protests: 60 days from the issuance date of this notice.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426.

The Commission’s Rules of Practice and Procedure require all intervenors filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

Protests, comments on filings, comments on environmental assessments and environmental impact statements, and reply comments may be filed electronically via the internet in lieu of paper. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission’s web site at http://www.ferc.fed.us/efi/doorbell.htm.

k. Status of environmental analysis: This application is not ready for environmental analysis at this time.

1. Description of the Project: The project consists of the following: (1) the 427-foot-long and 139-foot-high concrete arch dam with crest elevation at 1,075 feet msl, and 84-foot-long left non-overflow wall, and a 200-foot-long right non-overflow wall; (2) and 800-acre surface area reservoir; (3) an 84-foot-wide integral intake; (4) three 230-foot-long, 14-foot-diameter penstocks; (5) a powerhouse with 3 generating units totaling 28,300 kilowatts; (6) a 250-foot-long tailrace; (7) 700-foot-long and 900-foot-long transmission lines; and (8) appurtenant facilities.

m. Locations of the application: A copy of the application is available for inspection and reproduction at the Commission’s Public Reference Room, located at 888 First Street, NE, Room 2A, Washington, DC 20426, or by calling (202) 208–1371. The application may be viewed on the web at www.frc.fed.us/onlineirms.htm (call (202) 208–2222 for assistance). A copy is also available for inspection and reproduction at the addresses in time h above.

m. Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission’s Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

n. Filing and Service of Responsive Documents—Any filings must bear in all capital letters the title “COMMENTS”, “NOTICE OF INTENT TO FILE COMPETING APPLICATION”, “COMPETING APPLICATION”, “PROTEST”, “MOTION TO INTERVENE”, as applicable, and the Project Number of the particular application to which the filing refers. An additional copy must be sent to Director, Division of Hydropower Administration and Compliance, Federal Energy Regulatory Commission, at the above-mentioned address. A copy of any notice of intent, competing application or motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

o. Agency Comments—Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency’s comments must also be sent to the Applicant’s representatives.

Linwood A. Watson, Jr.,
Acting Secretary.

AGENCY: Environmental Protection Agency.

ACTION: Proposed policy.

SUMMARY: The Environmental Protection Agency is revising its 1981 Public Participation Policy. The revised policy is being issued as the Draft 2000 Public Involvement Policy for 120-day public comment. The Draft Policy was updated to reflect changes over the past nineteen years such as additional Agency responsibilities, new regulations, expanded public involvement techniques, and the changed nature of public access due to the Internet. The Policy will provide guidance and direction to EPA officials on reasonable and effective means to involve the public in its regulatory and program decisions.

DATES: Comments will be accepted until April 27, 2001.

ADDRESSES: Submit comments to Patricia A. Bonner, United States Environmental Protection Agency, Office of Policy, Economics and Innovation (MC 1802), 1200 Pennsylvania Ave, NW, Washington, DC 20460, by facsimile at 202–260–4903 or by electronic mail to bonner.patricia@epa.gov.

FOR FURTHER INFORMATION CONTACT: Patricia Bonner at 202–260–0599. In addition to sending comments by mail, interested parties may file comments electronically to: stakeholders@epa.gov.

The Draft Public Involvement Policy may be downloaded from http://www.epa.gov/stakeholders. Any additional opportunities for public involvement on the Draft Policy will also be posted on the same web site.

EPA particularly seeks comments on how the Agency can improve involvement opportunities for minority, low-income and underserved populations and how it can encourage involvement opportunities in programs delegated or authorized to states, tribes and local governments.

SUPPLEMENTARY INFORMATION:

Background

On January 19, 1981, the EPA published its first Agency-wide Public Participation Policy “to ensure that managers plan in advance needed public involvement in their programs, that they consult with the public on issues where public comment can be truly helpful, that they use methods of consultation that will be effective both for program purposes and for the members of the public who take part, and finally that they are able to apply what they have learned from the public in their final program decisions.” (46 FR 5736, Jan. 19, 1981)

The 1981 Policy complemented regulations on “Public Participation in Programs Under the Resource Conservation and Recovery Act, the Safe Drinking Water Act, and the Clean Water Act,” 40 CFR Part 25 (2000) which EPA promulgated in 1979. Part 25 covers procedures that the Agency (or state, tribe, etc.) should or must follow. Like the 1981 Policy, these procedures include matters associated with information, notification, consultation responsibilities, public hearings, public meetings, advisory committees, responsiveness summaries, permit enforcement, rulemakings, and work elements in financial assistance agreements.

In the nearly two decades following issuance of the 1981 Policy, Congress and three Presidents added to EPA’s responsibilities, EPA promulgated many new regulations, public involvement techniques expanded, and the Internet revolutionized the nature of public access. EPA also developed and extended its methods of ensuring compliance with environmental regulations through partnerships, technical assistance, information and data access, and public involvement under the laws it implements. Legislation and executive orders established new government-wide administrative procedures and public involvement requirements. Since many EPA programs are authorized or delegated to the states, tribes and in some instances, local governments, many of these organizations developed their own public policies and procedures for public involvement.

Most importantly, EPA itself made public involvement an increasingly important part of its decision-making at all levels, ranging from advisory committees for national rules to local involvement in permitting, cleanups, and a host of other initiatives. Further, the Agency developed tools to assist EPA staff and regulatory partners to conduct public involvement and consultation, such as the “RCRA Public Involvement Manual” (EPA530-R–96–007, September 1996), “Public Involvement in Environmental Permits: A Reference Guide (EPA599-R00–007, August 2000), the Model Plan for Public Participation” (EPA300–K–96–003, November 1996), “Environmental Justice in the Permitting Process” (EPA/300-R-00–004, December 1999), and the Office of Pesticide Program’s “How to Participate in EPA Decision-making” (63 FR 58038, October, 1998).

It was in that context that EPA stated in its July 1999 publication “Aiming for Excellence: Actions to Encourage Stewardship and Accelerate Environmental Progress” (EPA 100-R–99–006) that the Agency would evaluate and update EPA’s public involvement requirements and assess how well its regulations and policies ensure public involvement in decision-making. In November 1999 the Agency sought the public’s opinion on whether the 1981 Policy needed to be revised and updated (64 FR 66906, November 30, 1999). EPA collected, analyzed, and posted public comments on the Internet http://www.epa.gov/stakeholders.

Based on the comments received, EPA believes that, while the 1981 Policy required updating, it is basically sound and workable. Therefore, EPA is issuing today this Draft 2000 Public Involvement Policy (hereinafter called the Draft Policy) which updates and strengthens (but does not fundamentally change) the 1981 Policy. It incorporates many comments submitted in response to the 1999 Federal Register notice. After comments are received on this Draft Policy, EPA will issue a Final Public Involvement Policy.

Many of the 1999 comments can be grouped into several themes which are reflected in this Draft Policy. They suggest that the Agency should:

(a) increase efforts to identify groups or individuals interested in or affected by an issue and who represent a balance of views;

(b) provide notices and outreach materials in “plain English,” and in other languages when appropriate;

(c) listen to, seek to understand, and involve stakeholders in issues of critical importance to them;

(d) select the most appropriate level of effort and mechanisms for public involvement in any specific circumstance;

(e) incorporate Environmental Justice considerations;

(f) inform and involve the public earlier; and

(g) evaluate EPA public involvement policies and practices.

Certain other suggestions were not fully reflected in this Draft Policy, for the following reasons:

(a) Expand the length of public comment periods.

The Agency’s response: Some comment periods are set in regulations and statutes, and Executive Orders in some instances. EPA managers already choose the length of a specific comment period based on the complexity and
other aspects of the rule or other proposed actions. Because the Draft Policy is meant to enhance public involvement, its implementation should ensure better planning and enable managers to engage the public in discussions during the development of proposals, prior to opening a formal comment period on proposals, and to set the length of comment periods that give the public adequate time to develop comments.

The Agency's response: Implementing this suggestion would create unnecessary barriers rather than expand public access to staff and managers. Its effect would be to lessen public involvement in Agency activities and to greatly expand the administrative procedures and costs. The public would be overwhelmed with notices to review and receive information. If every such session were subject to public notice, the administrative burdens created would interfere with the environmental protection and public health functions of the Agency, and the public would not be well served.

(c) Think broadly about the environmental issues in an area (e.g., a watershed) and how all stakeholders can work together to identify: (1) Their information needs and how they prefer to obtain information; (2) issues that concern them; and (3) reach joint solutions, whenever possible; and (d) Advance the concept of stewardship.

The Agency's response on (c) and (d): EPA's environmental education programs, community based and watershed focused activities, pollution prevention activities, and related outreach and public access activities are attempting to promote and provide opportunities for holistic approaches to environmental problems. Though the stewardship philosophy is not stated in the Draft Policy, the Agency strongly supports such efforts. EPA has encouraged and actively participated in several industry stewardship programs and sustainability efforts, and in June 2000, EPA launched the National Environmental Performance Track. This new program rewards facilities that do more to protect the environment than they are legally required to do, and motivates them to become environmental stewards. Program participants are also required to share environmental information with their communities and involve them in relevant decisions.

In requesting public input on today's Draft Policy, EPA is particularly interested in comment on the following topics:

What EPA can do to encourage, promote and ensure effective public involvement in programs that have been delegated to states, tribes and local governments;

How EPA can improve involvement opportunities for minority, low-income and underserved populations; and

How EPA can more fully address the comments received earlier regarding place-based approaches.

The Draft 2000 Public Involvement Policy builds upon the 1981 Policy on Public Participation, not fundamentally changing its message. The strongest advice we received in response to the 1999 Federal Register notice was not to make major changes, but to place a high priority on carrying out the Draft Policy consistently at EPA national and regional levels. Therefore, the Administrator is directing that EPA staff and managers implement the Draft Policy while the Agency receives and considers public comments, and that they continue to implement other statutory and regulatory public involvement requirements. This directive is appropriate because in most respects this Draft Policy simply formalizes what has been the Agency's intent and widespread practice in recent years.

The Administrator also is charging the Agency's Reinvention Action Council, through a cross-Agency work group for public involvement, with developing a Draft Strategic Plan for Public Involvement during 2001. This group will design the plan to: Ensure full implementation of the Final Policy (when released); enhance Agency-wide public involvement; increase access to environmental information and involvement processes for under-served communities; and track and report progress on efforts to improve public involvement to the Agency and to the public. EPA will solicit input on the Plan from stakeholders and request public comments. The workgroup will also review EPA's Part 25 regulations and, if necessary, other regulations relating to public participation, to ensure consistency with Part 25.

The Administrator is further directing the Agency to develop the means to measure progress in implementing public involvement, evaluate the effectiveness of their involvement activities, and encourage our regulatory partners to implement the intent of this Draft Policy and other statutory and regulatory public involvement requirements.

EPA Draft Agency-wide 2000 Public Involvement Policy

Introduction

This Draft 2000 Public Involvement Policy (hereinafter called the Draft Policy) addresses public involvement in all of the Environmental Protection Agency's (EPA) decision-making, rulemaking, and program implementation activities. The fundamental premise of this Draft Policy is that, in all its programs, EPA should provide for meaningful public involvement. This requires that everyone at EPA remain open to receive all points of view and extend every effort to solicit input from those who will be affected by decisions. This openness to the public furthers our mission to protect public health and safeguard the natural environment by increasing our credibility and improving our decision-making. Our willingness to remain open to new ideas from our constituents, and to incorporate them where appropriate, is absolutely essential to the execution of our mission. At the same time, we should not accord privileged status to any special interest, nor accept any recommendation or proposal without careful, critical examination.

Definitions

The term "the public" is used in the Draft Policy in the broadest sense, meaning the general population of the United States. Many segments of the public may have a particular interest or may be affected by Agency programs and decisions. In addition to private individuals, "the public" includes, but is not limited to, representatives of consumer, environmental and other advocacy groups; environmental justice groups; indigenous people; minority and ethnic groups; business and industrial interests, including small businesses; elected and appointed public officials; the media; trade, industrial, agricultural, and labor organizations; public health, scientific, and professional representatives and societies; civic and community associations; faith-based organizations; research, university, education, and governmental organizations and associations, and governments and agencies at all levels. Public agencies that serve as co-regulators may have a dual role; they can be beneficiaries of
public involvement in their decision-making processes as well as stakeholders who provide input into EPA’s decisions.

The term public involvement is used in this document to encompass the full range of actions and processes that EPA uses to engage the public in the Agency’s work, and means that the Agency considers public concerns, values, and preferences when making decisions. Public involvement enables the public to work with the Agency and hold it accountable for its decisions. Though every person living in the United States is an ultimate beneficiary of EPA actions to protect public health and the environment, a relatively small number of individuals directly participate in Agency activities. Individuals and organizations who have a strong interest in the Agency’s work and policies are referred to as stakeholders. Stakeholders also may interact with EPA on behalf of another person or group that seeks to influence the Agency’s future direction. Some stakeholders are, or believe they are, affected parties, that is, individuals or groups who will be impacted by EPA policies or decisions.

What Are the Purposes, Goals and Objectives of This Draft Policy?

The purposes of this Draft Policy are to:

• Reaffirm EPA’s commitment to early and meaningful public involvement;
• Ensure that environmental decisions are made with an understanding of the interests and concerns of affected people and entities;
• Promote the use of a wide variety of techniques to create early and, when appropriate, continuing opportunity for public involvement in Agency decisions; and
• Establish clear and effective procedures for conducting public involvement activities in EPA’s decision-making processes.

Implementing a strong policy and consistent procedures will make it easier for the public to become involved and to affect the Agency’s decisions. This in turn will assist the EPA in carrying out its mission by providing the Agency with a better understanding of the public’s viewpoints, concerns, and preferences. Full implementation of this Draft Policy also should build public trust and make the Agency’s decisions more likely to be accepted and implemented by those who are most concerned with and affected by them.

Finally, implementing this policy will support EPA in meeting statutory requirements regarding public participation, particularly in environmental permitting programs and enforcement activities.

Decision makers are sometimes concerned about delays associated with public involvement. In some circumstances, a compelling need for immediate action may make it appropriate to limit public involvement. However, issues that are not resolved to the satisfaction of the concerned public may ultimately face time-consuming review. Achievement of EPA’s public involvement objectives may reduce delays caused by litigation or other adversarial activities.

EPA has the following goals for public involvement processes:

• To foster a spirit of mutual trust, confidence, and openness between the Agency and the public;
• To fulfill legal requirements imposed by various environmental statutes;
• To ensure that the Agency consults with interested or affected segments of the public and takes public viewpoints into consideration when making decisions;
• To ensure that the Agency provides the public with information at a time and in a form that it needs to participate in a meaningful way;
• To ensure that the public understands official programs and the implications of potential alternative courses of action;
• To learn from the public the information it is uniquely able to provide (community values, concerns, practices, local norms, and relevant history, such as locations of past contaminant sources, or potential impacts on small businesses, etc.);
• To solicit assistance from the public in understanding potential consequences of technical issues, identifying alternatives to be studied, and selecting among the alternatives considered;
• To keep the public informed about significant issues and changes in proposed programs or projects;
• To foster, to the extent possible, equal and open access to the regulatory process for all interested and affected parties;
• To ensure that the government understands public goals and concerns, and is responsive to them;
• To anticipate conflicts and encourage early discussions of differences among affected parties;
• To promote the public’s involvement in implementing environmental protection laws; and
• To ensure that the Agency communicates to the public how its input affected the Agency’s decision.

To achieve the purposes and goals, while also recognizing resource constraints, Agency officials will strive to provide for, encourage, and assist public involvement in the following ways:

• Beginning public involvement early in the decision-making process and continuing it throughout the process as necessary to provide the best information possible;
• Striving to identify, communicate with and listen to all affected sectors of the public. The role of Agency officials is to plan and conduct public involvement activities that provide equal opportunity for all individuals and groups to be heard. Where appropriate, implementation of this Draft Policy will require Agency officials to give extra encouragement and consider providing assistance to some sectors, such as minorities and low-income populations, or small businesses, which may have fewer opportunities or resources to participate;
• Involving members of the public in developing options and alternatives (when possible) and, before making decisions, seeking the public’s opinion on options or alternatives. Agency officials must avoid advocacy and pre-commitment to any particular alternative or option prior to decision-making, unless statutory or regulatory requirements dictate otherwise (e.g. when EPA proposes a Plan for a Superfund site);
• Actively developing options that address the conflicts in underlying issues expressed by disagreeing stakeholders, thereby seeking to facilitate discussion; and
• Making every effort to match the design of public involvement programs with the complexity and potential for controversy surrounding the issue being addressed, the segments of the public affected, the time frame for decision-making, and the overall desired outcome of the public involvement process.

When Does This Draft Policy Apply?

This Draft Policy applies to all EPA programs conducted under the laws and Executive Orders that EPA implements. Appendix 1 contains a list of these laws and orders.

The activities covered by this Draft Policy include:

• EPA rulemaking, when the regulations are classified as significant (under the terms of Executive Order 12866);
• The issuance or significant modification of permits or licenses;
Meaningful Public Involvement?

What Should EPA Do to Ensure Full and Meaningful Public Involvement?

Each Assistant Administrator, Associate Administrator, Office Director, or Regional Administrator should ensure that the Agency fully carries out this Draft Policy and all public involvement provisions of the laws that they are responsible for implementing. They should ensure that, to the greatest extent possible, authorized and delegated program partners provide opportunities for the public to participate in decision-making related to implementing their EPA-related programs. EPA officials are responsible for determining forthcoming decisions or activities to which this Draft Policy and applicable laws and Executive Orders should be applied, and taking the steps needed to ensure that applicable public involvement processes are developed and implemented.

This Draft Policy identifies six key functions that should be considered when planning for public involvement. Agency officials must exercise judgment and take into consideration the particular circumstances of each situation in determining how those functions will be carried out. Agency employees should strive to provide the most meaningful public involvement opportunities appropriate to each situation. The issues, locations, potential environmental and public health consequences of the activities, potential for controversy, specific needs of the public and the Agency, and other circumstances will influence the design of public involvement processes. The Draft Policy recognizes the Agency’s need to set priorities for its use of resources. It also emphasizes involvement by the public in decisions where options are available and alternatives must be weighed, or where EPA is seeking substantial agreement from the public to carry out a program.

The six basic functions for effective public involvement in any decision or activity are:

1. Plan and budget for public involvement activities;
2. Identify the interested and affected public;
3. Consider providing technical or financial assistance to the public to facilitate involvement;
4. Provide information and outreach to the public;
5. Conduct public consultation and involvement activities; and
6. Assist in information and provide feedback to the public.

The goals(s) and recommended actions for each of these functions are described below.

1. Plan and budget for public involvement activities

Goal: To ensure effective public involvement processes through advance planning, early notice to stakeholders, adequate time and resources, and evaluation.

a. Recommended actions: When preparing budgetary documents for programs affecting the public, Agency officials should include resources for conducting and evaluating public involvement activities. These may be included as an element of regulatory development plans, analytic blueprints, program plans, or EPA’s plans for complying with the Government Performance and Results Act. Programs also should plan for complying with the Unfunded Mandates Reform Act, the Regulatory Flexibility Act, as amended by the Small Business Regulatory Enforcement Fairness Act, Executive
Order 13132 (Federism), and Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments).

Such planning documents should set forth, at a minimum:
- Key decisions subject to public involvement;
- Staff contacts and budget resources to be allocated to public involvement;
- Segments of the public targeted for involvement and plans for identifying organizations and individuals, consistent with the Paperwork Reduction Act if the plans involve the collection of information;
- Proposed schedule for public involvement activities consistent with the Federal Advisory Committee Act;
- Mechanisms to apply the six basic functions—Planning and Budgeting, Identification, Providing Assistance, Information and Outreach, Public Consultation and Involvement, and Assimilation and Feedback—outlined above; and
- Measures or methods to evaluate the effectiveness of public involvement.

When identified in an approved grant work plan, grant funds may be used, subject to any statutory or regulatory limitations, to support reasonable costs of public involvement incurred by assisted agencies, including advisory group expenses.

Assistant Administrators, Associate Administrators and Regional Administrators should ensure that program and activity planning documents include public involvement activities and that they are developed in a timely manner for use in the annual budget planning process.

2. Identify the interested and affected public

Goal: To identify groups or members of the public who may have expressed an interest in, or may by the nature of their location, purposes or activities be affected by or have an interest in an upcoming activity or action.

a. Recommended actions: The responsible official should develop a contact list for each program, activity or project, and add to the list those members of the public who request to be added. Each list should be updated frequently, and will be most useful if subdivided by category of interest or geographic area. The nature and intensity of the involvement activities will drive the updating frequency. Pro-active efforts should be made to ensure that all points of view are represented on the lists. The contact lists should be used for announcements of involvement opportunities; notices of meetings, hearings, field trips, and other events; notices of available information, reports and documents; and to identify members of the public who may be considered for advisory group membership and other activities. Where circumstances ("lesser actions" such as minor program guidance or minor amendments to a permit) do not warrant identifying individual interested parties to this extent, Agency officials should, at a minimum, be aware of who the interested parties are and how best to provide them notice.

b. Methods: Construction of this list of contacts may be accomplished by any number of activities, including, but not limited to the following (Note: Where the above activities involve the collection of information from non-agency parties, they may be subject to the Paperwork Reduction Act (PRA). For advice, staff should consult with the Office of General Counsel):

- Requesting the names of interested and affected individuals from others in the Agency; from facilities/companies; state, tribal, regional and local governments; or from key non-governmental for-profit and not-for-profit groups;
- Using questionnaires or surveys to find out levels of awareness;
- Reviewing dockets, depositories, research papers or other publications for previous similar or related activities;
- Including an EPA point of contact on EPA documents (fact sheets, public notices, sign-up sheets at meetings, etc.) so that individuals may ask to be placed on lists;
- Soliciting interest through notices in the Federal Register; trade and trade association publications; local print, radio, cable and television outlets; not-for-profit secular and religious publications; or through the Internet or other electronic means;
- Asking those who attend events what, if any, interests or key individuals are missing; and
- By using other comprehensive or creative means that consider the community structure, languages spoken, local communications preferences and the locations (such as libraries and other centers) where the community regularly congregates.

3. Consider Providing Technical or Financial Assistance to the Public to Facilitate Involvement

Goal: To assist stakeholder groups and members of the public who may not have resources to obtain the technical assistance or funding that would enable them to contribute effectively and in a timely manner.

a. Recommended actions: EPA recognizes that responsible involvement by the various elements of the public in some of the highly technical and complex issues addressed by the Agency requires substantial commitments of time, study, research, analysis, and discussion. Where it is possible to provide technical or financial assistance, doing so can improve the quality of public involvement.

In some circumstances, direct financial assistance may be available. For example, depending on annual budget authorizations, Assistant and Associate Administrators, Regional Administrators and Office Directors may have authority to provide funds to outside organizations and individuals for public involvement activities associated with rules under development that they, as EPA managers, deem appropriate and essential for achieving program goals. However, funds for such purposes are generally very limited. When funding is provided, the primary purpose must be consistent with the Federal Grant and Cooperative Agreement Act and appropriate authority for the funded activities must be provided in one or more of EPA's statutes. In other cases, assistance in forms other than direct financial support can be provided. Examples of such assistance are provided below.

b. Methods: There are numerous ways to provide assistance to members of the public who lack the ability to participate in an effective or timely manner in Agency public consultation or involvement activities. Agency managers should consult with knowledgeable staff to determine the most feasible and legal methods to follow. Methods may include staff resources or funding for:

- Access to Agency experts or contractors to obtain information and analyses as resources allow;
- Access to technical personnel through grants to universities (e.g.: The Superfund Program’s Technical Outreach Services to Communities project has provided independent university-based scientific and engineering expertise to 115 communities dealing with hazardous substance contamination questions);
- Travel and per diem to consult and provide advice directly to Agency officials;
- Compensation for time spent on Federal Advisory Committee meetings;
- Technical Assistance Grants (TAGs) under Section 117 of CERCLA awarded to groups of individuals who may be affected by a release or a threatened release at Superfund sites to obtain assistance in interpreting and
To ensure that the public understands the legal requirements for Agency action and the significance of the related technical data so that the public can provide meaningful comments that assist the Agency in its decision-making.

a. Recommended actions: Agency officials should:

1. Ensure that adequate, timely information concerning a forthcoming action or decision reaches the public;
2. Provide policy, program, and technical information to the affected public and interested parties at the earliest practicable times, to enable those potentially affected or interested persons to make informed and constructive contributions to decision-making;
3. Ensure that information is provided at places easily accessible to interested and affected persons and organizations;
4. Fully implement the goals of the Agency’s Public Access Strategy when released (to provide the public with integrated, online, user-friendly access to environmental data and information) and, to the extent practicable, enable communities, including minority, low-income, and underserved populations, to have access to relevant data and information;
5. To the extent practicable, direct that information and educational programs be developed so that all levels of government and the public have an opportunity to become familiar with the issues and the technical data from which they emerge;
6. Ensure that informational materials clearly identify the role of the public in the specific decisions to be made;
7. Highlight significant issues that will be the subject of decision-making;
8. Make special efforts to summarize complex technical materials for the public;
9. Write documents in plain language that the public will easily understand; and
10. Consider whether EPA should provide documents in languages in addition to English in order to reach the affected public or interested parties.

b. Methods: Information and outreach programs require the use of appropriate communication tools, and should be tailored to accommodate the public’s level of familiarity with the subject. The following, among many other approaches, may be used for this purpose:

1. Publications, fact sheets, technical summaries, bibliographies, resource guides and other printed materials which may be made available through the mail and at information depositories (e.g., EPA regional and field offices, federal repository libraries and local public libraries, and state/tribal/local agencies);
2. Videos and CD ROMs;
3. Questionnaires, surveys, and interviews, subject to approval by the Office of Management and Budget under the Paperwork Reduction Act;
4. Public service announcements and news releases;
5. Educational publications, programs or activities;
6. Electronic communications such as Web pages, chat rooms, on-line dialogues, and list servers;
7. Participation in conferences, workshops, or meetings;
8. Telephone communications such as hotlines, clearinghouses and toll-free comment lines;
9. Video conferences and satellite downlinks; and
10. Participation at public events, such as fairs and festivals.

c. Content: Outreach materials may include:

- Background information (e.g., statutory basis, rationale, specific goal(s) of involvement activities, or the triggering event of the action);
- A timetable of proposed actions;
- Summaries of lengthy documents or technical material if relevant;
- A delineation of issues and the interests that they may affect;
- Alternative courses of action or tentative determinations that the Agency may have made;
- Information on whether an Environmental Impact Statement or Environmental Assessment is, or will be, available;
- Specific encouragement to stimulate active involvement by the public, including describing the nature of its influence, roles, and potential impact on the decisions;
- The name and contact information (address, e-mail address, telephone and telefax numbers) to reach an individual for further information;
- Whenever possible, the social, economic, and environmental consequences of proposed decisions and alternatives; and
- Technical evidence and research methodology explained in non-technical language. (Summaries of technical documents should be footnoted to refer to the original data.)

Fact sheets, news releases, summaries, and similar publications in print and on the Internet may be used to provide notice of availability of materials and to facilitate public understanding of more complex documents, but should not be a substitute for public access to the complete documents. When practicable,
information should be provided in formats and locations that match the public's needs. Some information (e.g., Confidential Business Information) is not available for public review and the Agency cannot release it.

d. Notification. Responsible officials should seek to ensure that parties on the contact list and the media are aware of the outreach materials available and that they have adequate time and opportunity to receive and review the information before any additional public involvement activities are conducted. Notices should include information about the repository (address, hours of operation, etc.) or other information relating to access to all documents referred to in the notice, including the name of a contact person when appropriate.

e. Timing. To enable effective and meaningful public involvement, outreach materials that make the public aware of the planned activity and that outline the issue(s) should be distributed as early as such information is available. The more complex the issue and greater the potential for controversy or misunderstanding, the earlier the materials should be distributed. When the Agency holds a formal public comment process, notification should take place as soon as possible when the Agency takes an action to permit the public to obtain and review the materials, and prepare responses in a timely and meaningful way. Minimum public comment periods are often specified in statutes or rules. Generally, materials for public comment should be provided as soon as they are available and should allow for not less than 30 days for the public review and comment (or longer, as specified in program-specific requirements), or 45 days in the case of public hearings.

When unusually complex issues or lengthy documents are presented for public review this period generally should be no less than 60 days. (For Superfund actions, regardless of complexity, the public is provided 30 days to submit comments on proposed remedies. Upon a timely request, the public comment period can be extended by a minimum of 30 additional days.)

1. Fees for Copying: Whenever possible, the Agency should provide copies of relevant documents, free of charge. Free copies may be reserved for private citizens, public interest organizations, or small businesses with limited funds. Any charges must be consistent with requirements under the Freedom of Information Act as set forth in 40 CFR Part 2.

g. Depositions or docketing: The Agency should provide one or more central collections of documents, reports, studies, plans, etc., relating to controversial issues or significant decisions in a location or locations convenient to the public. Suitable locations will depend on the nature of the action; for national rules a single central docket is generally appropriate whereas local repositories may be preferable when decisions relate to individual facilities or sites. RCRA authorizes EPA to require a facility to set up and maintain a repository. In all other instances, for actions at local facilities or sites, Agency officials should work with community representatives and the facility to determine the most accessible repository site(s) within the community. Consideration should be given to accessibility, travel time, parking, transit, and availability during off-work hours. Copying facilities, at reasonable charges, should be available at depositories. Agency officials are encouraged to determine the accessibility to the interested public and feasibility of electronic depositories that take advantage of the Internet to reach directly into homes, libraries and other facilities throughout a community and across the nation. If the public has reasonably convenient, well advertised electronic repositories, this can achieve significantly enhanced accessibility at a very modest cost.

5. Conduct public consultation and involvement activities.

Goals: To understand the interests and needs of the affected public. To provide for the exchange of information and views and open exploration of issues, alternatives and consequences between interested and affected members of the public and officials responsible for the forthcoming action or decision.

a. Recommended actions: Agency officials should:

• Ensure that public consultation and involvement are preceded by timely outreach activities, including timely distribution of information;

• Notify the public of potential consultation and involvement activities early enough to ensure that the public has adequate time to obtain and evaluate information; conduct any additional data gathering; consult experts and formulate their opinions, options, and suggestions prior to Agency action;

• Conduct public consultation and involvement activities at times and places which, to the maximum extent feasible, facilitate attendance or involvement by the affected public. Whenever possible, public meetings concerning local facilities or sites should be held during non-work hours, such as evenings or weekends, and at locations accessible to public transportation:

• Identify and select the public consultation or involvement process appropriate to the decision being made, and the time frame and resources available. When possible, consult or involve the affected public in identifying and selecting appropriate public involvement processes. This ensures that the approaches selected consider and, if appropriate, accommodate the potentially affected parties' needs, preferences, schedules and resources, as well as the Agency's needs;

• Provide guidance, resources, training, and professional assistance to Agency staff, interested delegated program partners, and the public to assist them in conducting or participating in public consultation and involvement activities in an effective and credible manner. Consider comments on how best this can be accomplished, particularly with respect to including those from minority, low-income, and other underserved communities;

• Consider the appropriate use of third parties in the development and implementation of programs, projects and activities; and

• Be knowledgeable of and comply with provisions of open meetings laws and regulations, such as the Federal Advisory Committee Act, whenever they apply to the public involvement process being conducted.

b. Methods: Consultation and involvement processes may take a variety of forms, depending upon the issues to be addressed, the timing of the decision-making action, and the needs and resources of the public whose involvement is sought. Public hearings and public meetings are two familiar forms of consultation and often are legally required, but their use should not serve as the only forum for citizen input. When required, public hearings and meetings should be held at the end of a process that has previously given the public more informal and interactive opportunities for becoming informed and involved. Alternative Dispute Resolution (ADR) is another tool that the Agency uses to consider and seek to resolve differences among various stakeholders. ADR is a consensual resolution of disputes and issues in controversy. ADR allows EPA to obtain the services of neutral parties on an expedited basis to manage a public dialogue in which neighbors, business interests, environmental groups, and
other interested parties have an opportunity to raise concerns to the parties involved in the enforcement action or other controversy. EPA and other public agencies employ a wide variety of consultation techniques that can be divided into three categories based upon the outcomes of the process:

(1) Information Exchange;
(2) Recommendations; and
(3) Agreements.

Information exchange involves EPA staff and management sharing data, options, issues, and ideas with the public in a way that encourages dialogue. Information exchange activities include workshops, forums, joint fact finding, interactive public meetings, focus groups, surveys (subject to provisions of the Paperwork Reduction Act), roundtables, and informal consultation such as meetings with interest groups, attendance at conferences, and other opportunities for informal dialogue. These activities are not meant to reach agreement or consensus on future action. Their purpose is to compile a mutually developed knowledge base of everyone’s interests, ideas, and needs. Though not a fully interactive method, the notice and comment process also serves as a limited form of information exchange. Recommendations activities involve a number of stakeholder representatives collaborating with each other and with Agency staff to develop recommendations. The Agency may accord significant deference to the recommendations, but is generally not bound to implement the recommendations, nor are the parties bound to accept them. (See Appendix 2 for FACA requirements.) Examples of recommendations activities include FACA committees established by EPA, external technical committees (such as those conducted with the American Society for Testing and Materials), peer review panels, and various technical advisory groups, citizens advisory groups, or panels.

Agreement activities involve EPA management and representatives of stakeholders who reach an agreement by consensus. Agreement activities include negotiated rulemaking committees and other mediated agreements. If the agreement activity used does not produce a legally binding agreement, the desired outcome of such an activity is a commitment on the part of the participants to full implementation.

The list above is not exhaustive but it indicates the need for program officials to be flexible and choose the right techniques for the right occasion. These activities are not mutually exclusive; they form a progression. They can and should be used as part of a thorough, well-planned system of consultation and public involvement. Successful agreement or recommendation processes occur only with significant information exchange and outreach. However, progressing to a recommendation process or agreement process is not necessary, practical or affordable in all decision-making processes.

c. Content—Agency officials should clearly identify issues to be discussed, negotiated or decided prior to and throughout the engagement process so that the public understands which decisions are subject to its input. The type of process to be conducted, the schedule, and the assumptions and expectations for the outcomes of the process should also be clearly stated so that the public and its representatives understand whether they are being invited to an information exchange or a negotiation and can set their expectations accordingly. If possible, the public should be involved in determining the design of the processes. The Agency will comply with all applicable open meeting requirements, such as FACA and all information gathering requirements, such as the Paperwork Reduction Act, in the design of its public outreach processes.

d. Notification—The Agency should ensure that all parties on the contact list and the media are notified of opportunities to participate and provided with appropriate information. Agency officials should not assume that the general public reads printed legal notices or Federal Register notices which are often required by statute or regulation. Although these methods serve as legal notice to the public, they can be augmented by broader notice to the media or interested persons on the contact list, and other tailored notifications. Notification should give the time, date and location of the consultation process, a general description of the topics or agenda, a contact person and contact information, and a general description of the nature of the process to be conducted, as well as the role of the public. Agency officials should consider the use of multilingual notices of upcoming activities and/or translator services, when appropriate.

e. Timing—Agency officials should provide early advance notice of public involvement processes so that the public can obtain background information, obtain and evaluate additional data, formulate their needs and interests, and obtain expert assistance, if necessary. Generally, notice should be given not less than 15 days in advance of an impending meeting or consultation process. If the issues are unusually complex or involve review of lengthy documents this period generally should be no less than 60 days. Program specific notice requirements should be consulted; for example, for Superfund actions, regardless of complexity, the public is provided 30 days to submit comments on proposed remedies. Upon a timely request, the public comment period can be extended by a minimum of 30 additional days.

f. Summaries: Detailed summaries of advisory committee meetings under FACA are required by law. [Appendix 2 contains requirements for formation and use of EPA advisory committees.] In addition, some statutes also require minutes of public meetings. Even when not required, when possible and appropriate, Agency officials should make summaries of public hearings and public meetings available to participants and other interested parties. When possible and appropriate, Agency officials should be open to participants’ comments that might correct or add to the summary. In rulemaking proceedings under the Administrative Procedure Act, a memorandum summarizing any significant new factual data or information likely to affect the final decision received during an informal meeting or other conversations should be placed in the public docket for the rule. In other situations, it may be helpful to document discussions that contribute information useful to decision-making and make that information available to participants and interested parties.

6. Assimilate information and provide feedback to the public.

Goal: To consistently earn and retain the public’s trust and credibility for EPA consultation processes, by examining and assimilating public viewpoints and preferences into final decisions, where appropriate and possible, and communicating to the public the decisions made and how their input affected those decisions.

Assimilating public viewpoints and preferences into decisions and final actions involves examining and analyzing public input, considering if and how to incorporate that input into final program decisions, and making or modifying decisions according to carefully considered public views. The Agency should demonstrate, in its decisions and actions, that it has understood and fully considered public concerns. Finally, the Agency should communicate the decision and discuss
the influence of the public’s input in the final decision.

a. Recommended actions:
   (1) Assimilate the information:
      Agency officials should briefly and clearly document consideration of the public’s views in Responsiveness Summaries, regulatory preambles, ELIs or other appropriate forms. This should be done at key decision points. Each Responsiveness Summary (or similar document) should:
      - Include a statement of the action that was taken;
      - Explain briefly the type of public involvement activity that was conducted;
      - Identify or summarize those who participated and their affiliation;
      - Describe the matters on which the public was consulted;
      - Summarize the public’s views, important comments, criticisms and suggestions;
      - Disclose the Agency’s logic in developing decisions;
      - Indicate the effect the public’s comments had on that action; and
      - Discuss the Agency’s specific responses to significant issues, in terms of modifying the proposed action, or explaining why the Agency rejected proposals made by the public.
   (2) Provide feedback to the public: For all major actions and whenever practical for lesser actions, the Agency should provide feedback to participants and interested parties concerning the outcome of the public’s involvement. The Agency should publish, post on a web site or in public places, distribute, mail, or e-mail a Responsiveness Summary or similar document for those who participated in or observed the public involvement processes, those who provided public comments and to those on the contact list. In addition, where circumstances and resources permit, or where the number of participants was small, feedback may be in the form of personal letters. Feedback provided in meetings or through other means should be documented.

Who is responsible for ensuring that this Draft Policy is applied appropriately?

Public involvement is an integral part of any program. It should routinely be included in decision-making and not be treated as an independent or secondary function. Managers should ensure that personnel are properly trained, supported and counseled, and that adequate funding needs are incorporated in their specific budgets. Under the overall direction of the Administrator, the Assistant, Associate, and Regional Administrators are responsible and accountable for the adequacy of public involvement programs. They are ultimately responsible for making certain that, for the activities under their jurisdiction, all Agency staff implement the purpose of this Draft Policy. They are responsible for ensuring that the level of effort in public involvement is commensurate with the potential impact of the upcoming action or decision. The Regional, Assistant, or Associate Administrators will make certain that concerns about the adequacy of public involvement are heard and, where necessary, acted upon as resources allow. Citizens who have questions or objections about the substance of this Draft Policy or the appropriateness of applying it in a particular case should raise that issue with the Agency officials involved.

Although this Draft Policy is not binding on states, tribes and local governments, EPA encourages these entities to adopt similar policies where they administer federal programs authorized, approved or delegated by EPA. The Agency intends to include public involvement among the issues discussed during the annual reviews of state, tribal or local program(s), and during any other program audit or review.

1. The Administrator maintains overall direction and responsibility for the Agency’s public involvement activities. Specifically, the Administrator will:
   a. Establish policy direction and guidance for all EPA public involvement programs;
   b. Provide incentives to Agency personnel to ensure commitment to and competence in implementing this Draft policy; and
   c. Evaluate the adequacy of public involvement activities conducted under this Draft Policy, the appropriateness and results of public involvement expenditures, and the effectiveness of this Draft Policy.

2. Assistant Administrators and Associate Administrators have the following responsibilities:
   a. Identify and address those activities and major decisions where application of this Draft Policy is appropriate;
   b. Ensure that plans developed for these programs or activities include and provide adequate time and resources for effective public involvement;
   c. Consider providing guidance and assistance to support regional office public involvement activities at the request of Regional Administrators;
   d. Implement the public information and public involvement portions of approved plans;
   e. Evaluate the effectiveness and appropriateness of public involvement expenditures and activities under their jurisdiction, revising and improving them as necessary;
   f. Encourage coordination of public involvement activities;
   g. Ensure that, as regulations for the programs cited in Appendix 1 of the Draft Policy are amended, they incorporate the Draft Policy’s provisions;
   h. Consider funding authorized pilot and/or innovative demonstration projects;
   i. Consider measures to ensure Draft Policy implementation in appropriate managers’ performance standards;
   j. Provide financial assistance, as appropriate and available, for authorized public involvement activities at the national level;
   k. Coordinate public involvement funding to outside groups to ensure the most economical expenditures;
   l. Provide guidance and technical assistance and training as appropriate to support authorized and delegated program activities of state, tribal, regional and local entities;
   m. Develop guidance and training needed to ensure that program personnel are equipped to implement the Draft Policy;
   n. Provide incentives to Agency staff to ensure commitment to and competence in implementing this Draft Policy;
   o. Seek public involvement in decisions to modify or develop major national policies, at their discretion; and
   p. Ensure that applicable legal requirements associated with public involvement are adhered to, such as the Federal Advisory Committee Act and the Paperwork Reduction Act.

3. Regional Administrators have the following responsibilities:
   a. Identify and address those EPA activities, policies, and programs where this Draft Policy should be applied;
   b. Ensure that plans developed by the programs for activities, programs and policies subject to this Draft Policy provide for adequate public involvement;
   c. Implement the public information and public involvement portions of approved Agency plans;
   d. Provide information and technical assistance to staff and participants in delegated programs on the conduct of public involvement activities;
   e. Discuss with state, tribal, regional and local entities the effectiveness and appropriateness of their public involvement activities during periodic meetings;
   f. Encourage coordination of public involvement activities;

This Draft Policy also applies to EPA activities under the following Executive Orders:

- E.O. 12580—Superfund Implementation
- E.O. 12856—Federal Compliance with Right-to-Know Laws and Pollution Prevention Requirements
- E.O. 12866—Regulatory Planning and Review
- E.O. 13132 Federalism (which replaced E.O. 12875—Enhancing the Intergovernmental Partnerships)
- E.O. 12898—Federal Actions to Address Environmental Justice in Minority Populations and Low IncomePopulations
- E.O. 13045—Protection of Children from Environmental Health Risks and Safety Risks
- E.O. 13007—Indian Sacred Sites
- E.O. 13175—Consultation and Coordination with Indian Tribal Governments
- E.O. 11988—Floodplain Management
- E.O. 13166—Improving Access to Services for Persons with Limited English Proficiency

In addition, this Draft Policy is effective for EPA activities conducted under the following statutes for which other agencies have primary responsibility:

Implementing public involvement activities may also involve complying with the following Acts, Executive Orders, Executive Memoranda, and Regulation:

- Negotiated Rulemaking Act 5 U.S.C. 561–570a
- E.O. 12862—Setting Customer Service Standards
- E.O. 12999—Educational Technology Ensuring Opportunity for all Children in the Next Century
- E.O. 11593—Protection of and Enhancement of the Cultural Environment
- E.O. 11990—Protection of Wetlands
- Presidential Memorandum on Plain Language in Government Writing (June 1, 1998)
- Presidential Memorandum on Electronic Government (December 17, 1999)
- Presidential Memorandum on Government-to-Government Relations with Native American Tribal Governments (April 29, 1994)
- Minority Business Enterprise and Women’s Business Enterprise Program, contained in portions of 40 CFR Parts 30, 31, 35 and 40

Appendix 2: Advisory Committees

To gain advice from a representative group of stakeholders or experts, one of the methods that the Agency may choose is forming an advisory committee. These committees are usually subject to the
chartering, balanced membership, and open meeting requirements of the Federal Advisory Committee Act (FACA). The Office of General Counsel or the Regional Counsel should be consulted to determine whether FACA applies to a particular group.

In general, the Agency forms a group of non-federal people to provide EPA with collective advice, the requirements of the Federal Advisory Committee Act (FACA) may apply. Such groups shall not meet until the requirements of FACA are met. Staff may contact the Office of Cooperative Environmental Management for advice on complying with these requirements, and to learn about the exceptions to FACA.

The primary function of an advisory group is to assist elected or appointed officials by making recommendations to them on issues that the decision-making body considers relevant. These issues may include policy development, project alternatives, financial assistance applications, work plans, major contracts, interagency agreements, and budget submissions, among others. Advisory groups can provide a forum for addressing issues, promote constructive dialogue among the various interests represented on the group, and enhance community understanding of the Agency’s action.

These requirements are:
- The development of a Charter that has been approved by the General Services Administration and Office of Management and Budget. It must contain the committee’s objectives and the scope of its activities, the period of time necessary for the committee to carry out its objectives, the agency responsible for providing the necessary support for the committee, and a description of the duties for which the committee is responsible. The Charter must be renewed every two years. 5 U.S.C. App. 2, sec. 9.
- The Establishment Federal Register Notice. At least 15 days before the charter is filed for a new committee, EPA is required to publish an establishment notice in the Federal Register. Such notice describes the nature and purpose of the committee, the agency’s plan to attain fairly balanced membership, and a statement that the committee is necessary and in the public interest. 5 U.S.C. App. 2, sec. 9.
- Balanced Membership. Advisory committees must be “fairly balanced” in points of view represented. 5 U.S.C. App. 2, sec. 5.
- The Meeting Federal Register Notice. Each advisory committee meeting must be noticed in the Federal Register at least 15 days prior to the meeting. 5 U.S.C. App. 2, sec. 10.
- To close a meeting to the public, you must obtain the approval of both the Administrator and the General Counsel. 5 U.S.C. App. 2, sec. 10.

Detailed minutes must be kept of all advisory committee meetings. 5 U.S.C. App. 2, sec. 10.

- Open Meetings. Interested persons may file written statements with any advisory committee, attend any advisory committee meeting (unless properly closed), and appear before any advisory committee. 5 U.S.C. App. 2, sec. 10.
- DFO Attendance. Each meeting must be attended by a Designated Federal Official (DFO), a full-time federal employee who is authorized to adjourn the meeting and approve the agenda. 5 U.S.C. App. 2, sec. 10.
- Documents Available to the Public. All advisory committee documents (including drafts) shall be available to the public upon request. 5 U.S.C. App. 2, sec. 10.
- B. State and Local Advisory Committees: In instances where regulations, program guidance, or the public involvement plans of state, substate, or local agencies, call for advisory groups, they should follow applicable state and local laws.

Note: Find information about EPA's FACA committees at http://www.epa.gov/ocem/websites.htm#faca

ENVIRONMENTAL PROTECTION AGENCY

[OPP–00693; FRL–6762–2]

Pesticides; Final Guidance for Pesticide Registrants on Applicability of the Treated Articles Exemption to Antimicrobial Pesticides

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability.

SUMMARY: The Agency is issuing PR Notice 2000–10 which extends the effective date of when it will begin to rely upon PR Notice 2000–1 (issued March 6, 2000). PR Notice 2000–1 provides guidance on the applicability of the “treated articles exemption” in 40 CFR 152.25(a) to antimicrobial pesticide products.

FOR FURTHER INFORMATION CONTACT: Jeff Kempter (75110C), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: (703) 305–5448; fax number: (703) 308–6467; e-mail address: kempter.carlton@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

This action is directed to the public in general. This action may be of particular interest to those persons who produce pesticides or who produce articles treated with pesticides. Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. If you have any questions regarding the information in this notice, consult the person listed under FOR FURTHER INFORMATION CONTACT.

B. How Can I Get Additional Information, Including Copies of this Document and Other Related Documents?

1. Electronically. You may obtain electronic copies of this document and the PR Notice from the Office of Pesticide Programs' Home Page at http://www.epa.gov/pesticides/. You can also go directly to the listings from the EPA Internet Home Page at http://www.epa.gov/. To access this document, on the Home Page select “Laws and Regulations,” “Regulations and Proposed Rules,” and then look up the entry for this document under the “Federal Register—Environmental Documents.” You can also go directly to the Federal Register listings at http://www.epa.gov/fedregstr/.

2. In person. The Agency has established an official record for this action under docket control number OPP–00693. The official record consists of the documents specifically referenced in this action, any public comments received during an applicable comment period, and other information related to this action, including any information claimed as confidential business information (CBI). This official record includes the documents that are physically located in the docket, as well as the documents that are referenced in those documents. The public version of the official record does not include any information claimed as CBI. The public version of the official record, which includes printed, paper versions of any electronic comments submitted during an applicable comment period, is available for inspection in the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA, from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The PIRIB telephone number is (703) 305–5805.

II. Background

A. What Guidance Does this PR Notice Provide?

On March 6, 2000, the Agency issued PR Notice 2000–1 concerning the applicability of the “treated articles exemption” in 40 CFR 152.25(a) to antimicrobial pesticide products. The intent of that notice was to clarify current Agency policy with respect to the scope of the treated articles exemption. Specifically, the notice addressed the types of claims which are or are not permitted on treated articles,
and explained the requirement that the pesticide in a treated article be "registered for such use."

Section VI of PR Notice 2000–1, titled “Effective Date and Procedures,” encouraged producers, distributors, and other persons selling or distributing pesticide-treated articles and substances to bring their products into compliance with 40 CFR 152.25(a). That section also indicated that the Agency would begin to rely on the guidance provided in that notice on February 11, 2001, and that products in commerce after that date which make statements or claims that do not reflect the clarifications offered in that notice, would risk being considered out of compliance with 40 CFR 152.25(a).

The Agency has since learned that certain segments of the industry which produce treated articles will not be able to meet the February 11, 2001 date, both in production of treated articles and in their sale and distribution in commerce. Further, the Agency is concerned that some distributors of treated articles may not be aware that their products are subject to PR Notice 2000–1 due to the fact that the notice was sent primarily to registrants and not generally to the distributors of treated articles. Finally, the Agency is concerned that the current date of February 11, 2001, and the inclusion of all treated articles in commerce could have an unintended adverse economic impact on affected companies.

For these reasons, the Agency is extending the effective date of when it will begin to rely upon PR Notice 2000–1 from February 11, 2001 to April 30, 2001. In addition, the Agency is changing the guidance in that notice such that treated articles produced on or before April 30, 2001, may continue to be sold or distributed by anyone through commerce without being subject to the clarifying guidance in PR Notice 2000–1. Thus, only treated articles produced after April 30, 2001, which make statements or claims that do not reflect the clarifications offered in that notice, would risk being out of compliance with 40 CFR 152.25(a). Producers of treated articles produced on or before April 30, 2001, would need to be able to provide adequate documentation of the production date of such articles found in commerce. All other elements of PR Notice 2000–1, as well as the current enforcement approach, will remain as stated or referenced in that notice.

B. PR Notices are Guidance Documents

The PR Notice discussed in this notice is intended to provide guidance to EPA personnel, the public, pesticide registrants, and producers of pesticide-treated articles. This notice is not binding on EPA, pesticide registrants, or treated article producers, and EPA may depart from the guidance where circumstances warrant and without prior notice. Likewise, pesticide registrants and treated article producers may assert that the guidance is not appropriate generally or not applicable to a specific pesticide, treated article, or situation.

List of Subjects

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides, Antimicrobials, and pests.

Marcia E. Mulkey,
Director, Office of Pesticide Programs.

Federal Register Volume 65, Number 250 / Thursday, December 28, 2000 / Notices
Section 3(c)(2)(B)(iv) of FIFRA provides that any hearing may be held and a determination issued within 75 days after receipt of a hearing request. This 75-day period may not be extended unless all parties in the proceeding stipulate to such an extension. If a hearing is requested and the Agency will issue a final order at the conclusion of the hearing governing the suspension of your product(s).

A request for a hearing pursuant to this Notice must 1) include specific objections to the basis of any of the issues which may be heard at the hearing, 2) identify the registrations for which a hearing is requested, and 3) set forth all necessary supporting facts pertaining to any of the objections which you have identified in your request for a hearing. If a hearing is requested by any person other than the registrant, that person must also state specifically why he asserts that he would be adversely affected by the suspension action described in this Notice. Three copies of the request must be submitted to:

Hearing Clerk
U.S. Environmental Protection Agency
1200 Pennsylvania Avenue, NW
Washington, DC 20460

and an additional copy should be sent to the signatory listed below. The request must be received by the Hearing Clerk by the 30th day from your receipt of this Notice in order to be legally effective. The 30-day time limit is established by FIFRA and cannot be extended for any reason. Failure to meet the 30-day time limit will result in automatic suspension of your registration(s) if operated in violation of FIFRA.

The suspension of the registration of each product listed in Attachment I will become final unless at least one of the following actions is completed:

1. You may avoid suspension under this Notice if you or another person adversely affected by this Notice properly request a hearing within 30 days of your receipt of this Notice. If you request a hearing, it will be conducted in accordance with the requirements of section 6(d) of FIFRA and the Agency’s Procedures for Procedural Regulations in 40 CFR Part 164.

Section 3(c)(2)(B), however, provides that the only allowable issues which may be addressed at the hearing are whether you have failed to comply with the terms of the 3(c)(2)(B) Data Call-In Notice. The specific basis for issuance of this Notice is stated in the Explanatory Appendix (Attachment III) to this Notice. The affected product(s) and the requirement(s) which you failed to satisfy are listed and described in the following three attachments:

Attachment I Suspension Report—Product List
Attachment II Suspension Report—Requirement List
Attachment III Suspension Report—Explanatory Appendix

The suspension of the registration of each product listed in Attachment I will become final unless at least one of the following actions is completed:

1. You may avoid suspension under this Notice if you or another person adversely affected by this Notice properly request a hearing within 30 days of your receipt of this Notice. If you request a hearing, it will be conducted in accordance with the requirements of section 6(d) of FIFRA and the Agency’s Procedures for Procedural Regulations in 40 CFR Part 164.

The Agency’s Rules of Practice at 40 CFR 164.7 forbid anyone who may take part in the proceeding from discussing the merits of the proceeding in any manner which would have been unlawful prior to the suspension.

The suspension of the registration(s) of your product(s) described in this Notice is ineffective if you or another person, by showing cause, can demonstrate that:

1. The suspension of your product(s) is inconsistent with the public interest.
2. The suspension of your product(s) is not in accordance with law.
3. The suspension of your product(s) is not in accordance with the terms of the 3(c)(2)(B) Data Call-In Notice.

The suspension of the registration(s) of your product(s) is effective until such time as the suspension is rescinded.

The suspension of the registration(s) of your product(s) is based on your failure to comply with the registration requirements that are the bases of this Notice.

Persons other than the registrant subject to this Notice, including all supplemental registrants of product(s) listed in Attachment I, may not legally distribute, sell, use, offer for sale, hold for sale, ship, deliver or receive and (having so received) deliver or offer to deliver, to any person, the product(s) listed in Attachment I.

Nothing in this Notice authorizes any person to distribute, sell, use, offer for sale, hold for sale, ship, deliver for shipment, or receive and (having so received) deliver or offer to deliver, to any person, the product(s) listed in Attachment I.

The suspension of the registration(s) of your product(s) is effective as of the date of this Notice.

The suspension of the registration(s) of your product(s) is suspended when the Agency determines you have complied fully with the requirements which were the bases of this Notice. Such compliance may only be achieved by submission of the data/information described in the attachments to the signatory listed below.

Your product will remain suspended, however, until the Agency determines you are in compliance with the requirements which are the bases of this Notice and so informs you in writing.

After the suspension becomes final and effective, the registrant subject to this Notice, including all supplemental registrants of product(s) listed in Attachment I, may not legally distribute, sell, use, offer for sale, hold for sale, ship, deliver for shipment, or receive and (having so received) deliver or offer to deliver, to any person, the product(s) listed in Attachment I.

Nothing in this Notice authorizes any person to distribute, sell, use, offer for sale, hold for sale, ship, deliver for shipment, or receive and (having so received) deliver or offer to deliver, to any person, the product(s) listed in Attachment I.

The suspension of the registration(s) of your product(s) is suspended as of the date of this Notice.

The suspension of the registration(s) of your product(s) is suspended when the Agency determines you have complied fully with the requirements which were the bases of this Notice. Such compliance may only be achieved by submission of the data/information described in the attachments to the signatory listed below.

Your product will remain suspended, however, until the Agency determines you are in compliance with the requirements which are the bases of this Notice and so informs you in writing.

After the suspension becomes final and effective, the registrant subject to this Notice, including all supplemental registrants of product(s) listed in Attachment I, may not legally distribute, sell, use, offer for sale, hold for sale, ship, deliver for shipment, or receive and (having so received) deliver or offer to deliver, to any person, the product(s) listed in Attachment I.

Nothing in this Notice authorizes any person to distribute, sell, use, offer for sale, hold for sale, ship, deliver for shipment, or receive and (having so received) deliver or offer to deliver, to any person, the product(s) listed in Attachment I.

The suspension of the registration(s) of your product(s) is suspended as of the date of this Notice.

The suspension of the registration(s) of your product(s) is suspended when the Agency determines you have complied fully with the requirements which were the bases of this Notice. Such compliance may only be achieved by submission of the data/information described in the attachments to the signatory listed below.

Your product will remain suspended, however, until the Agency determines you are in compliance with the requirements which are the bases of this Notice and so informs you in writing.

After the suspension becomes final and effective, the registrant subject to this Notice, including all supplemental registrants of product(s) listed in Attachment I, may not legally distribute, sell, use, offer for sale, hold for sale, ship, deliver for shipment, or receive and (having so received) deliver or offer to deliver, to any person, the product(s) listed in Attachment I.

Nothing in this Notice authorizes any person to distribute, sell, use, offer for sale, hold for sale, ship, deliver for shipment, or receive and (having so received) deliver or offer to deliver, to any person, the product(s) listed in Attachment I.
all supplementary registered distributors of your basic registered product that this suspension action also applies to their supplementary registered products and that you may be held liable for violations committed by your distributors.

If you have any questions about the requirements and procedures set forth in this suspension notice or in the subject section

3(c)(2)(B) Data Call-In Notice, please contact Frances Liem at (202) 564–2365.

Sincerely yours,
Rick Colbert, Director
Agriculture and Ecosystems Division
Office of Compliance

### Attachment III—Explanatory Appendix

#### III. Registrants Receiving and Affected by Notices of Intent to Suspend: Date of Issuance, Active Ingredient, and Products Affected

The following is a list of products for which a letter of notification has been sent:

<table>
<thead>
<tr>
<th>Registrant affected</th>
<th>EPA registration no.</th>
<th>Active ingredient</th>
</tr>
</thead>
<tbody>
<tr>
<td>Kanoria</td>
<td>66951–1</td>
<td>Lindane</td>
</tr>
<tr>
<td>Kanoria</td>
<td>66951–2</td>
<td>Lindane</td>
</tr>
</tbody>
</table>

### IV. Basis for Issuance of Notice of Intent: Requirement List

The following companies failed to submit the following requirement data or information.

<table>
<thead>
<tr>
<th>Active ingredient</th>
<th>Registrant affected</th>
<th>Guideline no.</th>
<th>Requirement name</th>
<th>Due date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lindane</td>
<td>Kanoria</td>
<td>870–6300</td>
<td>Developmental Neurotoxicity Study</td>
<td>February, 1999</td>
</tr>
<tr>
<td></td>
<td></td>
<td>870–4200</td>
<td>Oncogenicity Study-Mouse</td>
<td>December, 2000</td>
</tr>

* The arbitrator's award and decision regarding KCIL's default did not specify any apportionment of over-due costs among subject study requirements.

### V. Attachment III Suspension Report—Explanatory Appendix

A discussion of the basis for the Notices of Intent to Suspend follows:

#### Lindane

On September 30, 1985, EPA issued a Registration Standard for Lindane (gamma isomer of hexachlorocyclohexane, CAS Registry No. 58–89–9). The Registration Standard imposed certain data requirements to maintain the registration of pesticide products containing Lindane. Subsequent data requirements pertaining to Lindane were required in Data Call-In ("DCI") Notices on September 30, 1991, March 3, 1995, October, 1995 and March 31, 1997. Kanoria Chemicals & Industries Limited ("KCIL") registered two technical Lindane products on May 1, 1995, for use in the United States. KCIL became a member of the Centre International D'Etudes du Lindane ("CIEL"), which was conducting studies intended to satisfy EPA's data requirements. On June 9, 1997, KCIL notified EPA it was terminating its membership in CIEL, that it had made a written offer to compensate CIEL and/or to share in the cost of developing data required by the March 31, 1997, DCI, and that it agreed to be bound by an arbitration decision under FIFRA section 3(c)(2)(B)(iii) if the parties failed to reach agreement on terms of the cost sharing.

Following earlier employment of the American Arbitration Association to assist the parties' efforts to reach a cost-sharing agreement, on December 10, 1998, CIEL and KCIL notified the arbitrator that they had reached an agreement to share the costs of producing data in support of registration of pesticides containing lindane required under the September 30, 1985, Registration Standard and the four Data Call-In Notices issued by the Agency on September 30, 1991, March 3, 1995, October, 1995 and March 31, 1997. The arbitrator overseeing the negotiations leading to this agreement entered the cost-sharing agreement as an arbitral Award on January 11, 1999.

In January 2000, KCIL was presented with invoices for DCI cost-sharing expenses by CIEL, and KCIL refused to pay its share of certain costs related to the DCIs. Pursuant to the dispute resolution procedures of the January 11, 1999, Award, CIEL referred this non-payment to the arbitrator and KCIL cross-claimed. After reviewing the claims of both parties, the arbitrator issued an Order dated May 12, 2000, finding CIEL entitled to reimbursement of the disputed monies and interest from KCIL, and declaring KCIL in default of the cost-sharing agreement. The arbitrator reaffirmed KCIL's default in a July 20, 2000, ruling.

On May 19, 2000, CIEL requested EPA to issue a Notice of Intent to Suspend KCIL's lindane product registrations pursuant to FIFRA section 3(c)(2)(B)(iv), and to prohibit sale of existing stocks. EPA has reviewed materials provided by both CIEL and KCIL and has determined that KCIL has failed to "comply with the terms of an agreement or arbitration decision concerning a joint data development arrangement" under FIFRA section 3(C)(2)(B). Accordingly, at this time, EPA is issuing this Notice of Intent to Suspend KCIL's registrations for pesticides containing lindane due to non-compliance with the March 31, 1997, DCI.

### VI. Conclusions

EPA has issued a Notice if Intent to Suspend on the dates indicated. Any further information regarding these notices may be obtained from the contact person above.

#### List of Subjects

Environmental protection.

Richard Colbert,
Director, Agriculture and Ecosystems Division, Office of Compliance.

[FR Doc. 00–33173 Filed 12–27–00; 8:45 am] BILLING CODE 6560–50–S

ENGLISH PROTECTION AGENCY

[PF–990; FRL–6761–6]

Notice of Filing a Pesticide Petition to Establish a Tolerance for a Certain Pesticide Chemical in or on Food

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces the initial filing of a pesticide petition proposing the establishment of regulations for residues of a certain pesticide chemical in or on various food commodities.

DATES: Comments, identified by docket control number PF–990, must be received on or before January 29, 2001.

ADDRESSES: Comments may be submitted by mail, electronically, or in person. Please follow the detailed instructions for each method as provided in Unit I.C. of the SUPPLEMENTARY INFORMATION. To ensure proper receipt by EPA, it is imperative that you identify docket control number PF–990 in the subject line on the first page of your response.

FOR FURTHER INFORMATION CONTACT: By mail: Shaja R. Brothers, Registration Programs, Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: (703) 308–3194; e-mail address: brothers.shaja@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

You may be affected by this action if you are an agricultural producer, food manufacturer or pesticide manufacturer. Potentially affected categories and entities may include, but are not limited to:

<table>
<thead>
<tr>
<th>Categories</th>
<th>NAICS codes</th>
<th>Examples of potentially affected entities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Industry</td>
<td></td>
<td></td>
</tr>
<tr>
<td>111</td>
<td>Crop production</td>
<td></td>
</tr>
<tr>
<td>112</td>
<td>Animal production</td>
<td></td>
</tr>
<tr>
<td>311</td>
<td>Food manufacturing</td>
<td></td>
</tr>
</tbody>
</table>

This listing is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. Other types of entities not listed in the table could also be affected. The North American Industrial Classification System (NAICS) codes have been provided to assist you and others in determining whether or not this action might apply to certain entities. If you have questions regarding the applicability of this action to a particular entity, consult the person listed under FOR FURTHER INFORMATION CONTACT.

B. How Can I Get Additional Information, Including Copies of this Document and Other Related Documents?

1. Electronically. You may obtain electronic copies of this document, and certain other related documents that might be available electronically, from the EPA Internet Home Page at http://www.epa.gov/. To access this document, on the Home Page select “Laws and Regulations,” “Regulations and Proposed Rules,” and then look up the entry for this document under the “Federal Register—Environmental Documents.” You can also go directly to the Federal Register listings at http://www.epa.gov/fedreg/. You may submit comments electronically by e-mail to: opp-docket@epa.gov, or you can submit a computer disk as described above. Do not submit any information electronically that you consider to be CBI. Avoid the use of special characters and any form of encryption. Electronic submissions will be accepted in Wordperfect 6.1/8.0 or ASCII file format. All comments in electronic form must be identified by docket control number PF–990. Electronic comments may also be filed online at many Federal Depository Libraries.

D. How Should I Handle CBI That I Want to Submit to the Agency?

Do not submit any information electronically that you consider to be CBI. You may claim information that you submit to EPA in response to this document as CBI by marking any part or all of that information as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. In addition to one complete version of the comment that includes any information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public version of the official record. Information marked confidential will be included in the public version of the comment received during an applicable comment period, and other information related to this action, including any information claimed as confidential business information (CBI). This official record includes the documents that are physically located in the docket, as well as the documents that are referenced in those documents. The public version of the official record does not include any information claimed as CBI. The public version of the official record, which includes printed, paper versions of any electronic comments submitted during an applicable comment period, is available for inspection in the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA, from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The PIRIB telephone number is (703) 305–5805.

C. How and to Whom Do I Submit Comments?

You may submit comments through the mail, in person, or electronically. To ensure proper receipt by EPA, it is imperative that you identify docket control number PF–990 in the subject line on the first page of your response.

1. By mail. Submit your comments to: Public Information and Records Integrity Branch (PIRIB), Information Resources and Services Division (7502C), Office of Pesticide Programs (OPP), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460.

2. In person or by courier. Deliver your comments to: Public Information and Records Integrity Branch (PIRIB), Information Resources and Services Division (7502C), Office of Pesticide Programs (OPP), Environmental Protection Agency, Rm. 119, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA. The PIRIB is open from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The PIRIB telephone number is (703) 305–5805.

3. Electronically. You may submit your comments electronically by e-mail to: opp-docket@epa.gov, or you can submit a computer disk as described above. Do not submit any information electronically that you consider to be CBI. Avoid the use of special characters and any form of encryption. Electronic submissions will be accepted in Wordperfect 6.1/8.0 or ASCII file format. All comments in electronic form must be identified by docket control number PF–990. Electronic comments may also be filed online at many Federal Depository Libraries.
of the official record without prior notice. If you have any questions about CBI or the procedures for claiming CBI, please consult the person identified under FOR FURTHER INFORMATION CONTACT.

E. What Should I Consider as I Prepare My Comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible.
2. Describe any assumptions that you used.
3. Provide copies of any technical information and/or data you used that support your views.
4. If you estimate potential burden or costs, explain how you arrived at the estimate that you provide.
5. Provide specific examples to illustrate your concerns.
6. Make sure to submit your comments by the deadline in this notice.
7. To ensure proper receipt by EPA, be sure to identify the docket control number assigned to this action in the subject line on the first page of your response. You may also provide the name, date, and Federal Register citation.

II. What Action is the Agency Taking?

EPA has received a pesticide petition as follows proposing the establishment and/or amendment of regulations for residues of a certain pesticide chemical in or on various food commodities under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 346a. EPA has determined that this petition contains data or information regarding the elements set forth in section 408(d); however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the petition. Additional data may be needed before EPA rules on the petition.

List of Subjects

Environmental protection, Agricultural commodities, Food additives, Food additives, Pesticides and pests, Reporting and recordkeeping requirements.

James Jones,
Director, Registration Division, Office of Pesticide Programs.

Summary of Petition

The petitioner summary of the pesticide petition is printed below as required by section 408(d)(3) of the FFDCA. The summary of the petition was prepared by the petitioner and represents the view of the petitioners. EPA is publishing the petition summary verbatim without editing it in any way. The petition summary announces the availability of a description of the analytical methods available to EPA for the detection and measurement of the pesticide chemical residues or an explanation of why no such method is needed.

Research Project Number 4 and Gowana Company

0E6198 and 0E6215

EPA has received pesticide petitions (0E6198 and 0E6215) from the Interregional Research Project Number 4 (IR-4), Technology Centre of New Jersey, 681 U.S. Highway #1 South, North Brunswick, New Jersey 08902-3390 proposing, pursuant to section 408(d) of the FFDCA, 21 U.S.C. 346a(d), to amend 40 CFR part 180 by establishing tolerances for residues of the miticide, heptythiazox, trans-5-(4-chlorophenyl)-N-cyclohexyl-4-methyl-2-oxothiazolidine-3-carboxamide and its metabolites containing the (4-chlorophenyl)-methyl-2-oxo-3-thiazolidine moiety (expressed as parts per million (ppm) of the parent compound in or on the following raw agricultural commodities (RAC) at the tolerance levels listed:

- PP 0E6198 proposes the establishment of a tolerance for mint at 0.0 ppm.
- PP 0E6215 proposes the establishment of a tolerance for the caneberry subgroup at 1.0 ppm.

EPA has determined that the petitions contain data or information regarding the elements set forth in section 408(d)(2) of the FFDCA; however, EPA has not fully evaluated the sufficiency of the submitted data at this time or whether the data support granting of the petitions. Additional data may be needed before EPA rules on these petitions. This notice includes a summary of the petitions prepared by Gowana Company, POB 5569, Yuma AZ 85366-5569.

A. Residue Chemistry

1. Plant metabolism. The metabolism of heptythiazox as well as the nature of the residues in plants is adequately understood for purposes of these tolerances. Metabolism studies were conducted in four crops, viz.: pears, grapes, citrus, and apples. The major residue component is unmetabolized parent. The metabolites are hydroxyhexthiazox and ketocyclohexyl analogs of heptythiazox, and the amide formed by loss of the cyclohexyl ring.

Parent heptythiazox and its metabolites are converted to a common moiety for residue analysis.

2. Analytical method. A practical analytical method, high pressure liquid chromatography with a ultraviolet ray (UV) detector which detects and measures residues of heptythiazox and its metabolites as a common moiety, is available for enforcement purposes with a limit of detection that allows monitoring of food with residues at or above the levels set in these tolerances.

B. Toxicological Profile

1. Acute toxicity. A battery of acute toxicity studies places technical grade heptythiazox in toxicity category IV for acute oral lethal dose LD₅₀ (LD₅₀ >5,000 milligrams/kilogram (mg/kg)), category III for dermal LD₅₀ (LD₅₀ >5,000 mg/kg), category III for inhalation lethal concentration (LC₅₀ >2.0 mg/L), category III for primary eye irritation (showed mild irritation (reddened conjunctival), and category IV for dermal irritation (non irritant). Heptythiazox is a non-sensitizer. Acute toxicological studies place technical grade heptythiazox in toxicology category III.

2. Genotoxicity. The following genotoxicity studies were all negative: Ames gene mutation, Chinese hamster ovary (CHO) gene mutation, chromosome aberration, mouse micronucleus, and rat hepatocyte unscheduled DNA synthesis.

3. Reproductive and developmental toxicity. In a developmental toxicity study in rats, the maternal no observed adverse effect level (NOAEL) was 240 mg/kg/day and the maternal lowest observed adverse effect level (LOAEL) was 720 mg/kg/day based on increased ovarian weights and decreased bone ossification.

In a developmental toxicity study in rabbits, the maternal NOAEL was 1,080 mg/kg/day highest dose tested (HDT); the maternal LOAEL was not determined. In a 2-generation reproduction study in rats, the parental...
NOAEL was 35 mg/kg/day and the parental LOAEL was 200 mg/kg/day based on decreased body weight (bw) gain, decreased food consumption and efficiency, and increased liver, kidney and ovarian weights. The reproductive NOAEL was 35 mg/kg/day and the reproductive LOAEL was 200 mg/kg/day based on decreased pup bw during lactation, delayed hair growth and eye opening.

4. Subchronic toxicity. In a 1–month feeding study in dogs, the NOAEL was 1.75 mg/kg/day and the LOAEL was 12.5 mg/kg/day, based on increased liver, and adrenal weights.

5. Chronic toxicity. In a 1-year feeding study in dogs, the NOAEL was 2.5 mg/kg/day and the LOAEL was 12.5 mg/kg/day, based on increased alkaline phosphatase, increased adrenal, and liver weights, liver, and adrenal lesions. In a carcinogenicity study in mice, the NOAEL was 36 mg/kg/day and the LOAEL was 215 mg/kg/day. Effects were decreased bw in males and increased hepatocellular adenomas and combined adenoma/carcinomas.

In a chronic feeding/carcinogenicity study in rats, the NOAEL (systemic) was 26 mg/kg/day and the LOAEL (systemic) was 180 mg/kg/day based on decreased bw gain, and increased liver weights in both sexes.

The chronic reference dose (RFD) for hexythiazox is based on the 1-year dog feeding study with a NOAEL of 2.5 mg/kg/day and an uncertainty factor of 100. The Agency has classified hexythiazox as a category C (possible human) carcinogen based on an increased incidence of hepatocellular carcinomas (p = 0.028) and combined adenomas/carcinomas (p = 0.024) in female mice at the HDT (1500 ppm) when compared to the controls as well as a significantly increased (p<0.001) incidence of pre-neoplastic hepatic nodules in both males and females at the HDT. The decision supporting a category C classification was based primarily on the fact that only one species was affected and mutagenicity studies were negative. In classifying hexythiazox as a category C carcinogen, the Agency concluded that a quantitative estimate of the carcinogenic potential for humans should be calculated because of the increased incidence of liver tumors in the female mouse. A Q^2 of 0.022 (mg/kg/day)^2 in human equivalents was published in the Federal Register, October 16, 1998, 63FR 55540 (FRL-6035-2).

6. Animal metabolism. The metabolism of hexythiazox has been studied in rats, hens, and rats. Metabolic pathways in the animal are similar to those in plants.

7. Metabolite toxicology. There are no metabolites of toxicological concern based on a differential metabolism between plants and animals.

8. Endocrine disruption. No specific tests have been conducted with hexythiazox to determine whether the chemical may have an effect in humans that is similar to an effect produced by a naturally occurring estrogen or other endocrine effects. However, there were no significant findings in other relevant toxicity tests, i.e., developmental and multi-generation reproduction studies, which would suggest that hexythiazox produces effects characteristic of the disruption of the estrogenic hormone.

C. Aggregate Exposure

1. Dietary exposure—i. Food. Tolerances have been established (40 CFR 180.479) for residues of hexythiazox trans-5-[4-(chlorophenyl)-N-cyclohexyl-4-methyl-2-oxothiazolidine-3-carboxamide] and its metabolites containing the (4-chlorophenyl)-4-methyl-2-oxo-3-thiazolidine moiety in or on apples at 0.02 ppm, pears at 0.3 ppm, and hops (imported) at 2 ppm. Additional tolerances are pending for a variety of plant and animal RACs and process fractions including apple pomace at 0.7 ppm, apples at 0.4 ppm, almond hulls at 10 ppm, cattle fat at 0.05, cattle meat at 0.05 ppm, cattle MBTP at 0.01 ppm, cotton gin by-products at 3 ppm (California), cottonseed at 0.2 ppm (California), milk at 0.05 ppm, prunes at 5 ppm, raisins at 10 ppm, stone fruit at 1 ppm, strawberries at 3 ppm, and tree nuts (crop group 14) at 0.2 ppm. Additional tolerances are being requested in this petition by IR-4 for mint at 2.0 ppm, and caneberrys at 1.0 ppm.

Chronic exposure. A chronic dietary exposure analysis for existing and pending proposed uses was conducted for the general U.S. population and 26 population subgroups. Mint and caneberry did not contribute to dietary exposure. In this analysis it was assumed that 100% of crops were treated for both crops. Chronic exposures of 0.000172 mg/kg/day and 0.000203 mg/kg/day were calculated for mint and caneberry respectively for the average U.S. population. Non-nursing infants, the most heavily exposed subgroup, had a calculated exposure of 0.000972 mg/kg/day and 0.001080 mg/kg/day respectively for mint and caneberry. Actual exposures would be much lower, however, because far less than 100% of crops would be treated. The Agency has not conducted a detailed analysis of potential exposure to hexythiazox via drinking water or outdoor ornamental plants from existing or pending proposed uses.

However, it is believed that chronic exposure from these sources is very small.

Acute exposure. No developmental, reproductive or mutagenic effects have been observed with hexythiazox. Therefore, an analysis of acute exposure has not been conducted.

ii. Drinking water. The environmental fate of hexythiazox has been evaluated, and Gowan Company believes that the compound is not expected to contaminate groundwater or surface water to any measurable extent.

2. Non-dietary exposure. Hexythiazox is also registered for use on outdoor ornamental plants by commercial applicators only. It is believed that non-occupational exposure from this use is very low. Hexythiazox is not registered for greenhouse, lawn, garden, or residential use.

D. Cumulative Effects

Gowan Company does not have, at this time, available data to determine whether hexythiazox has a common mechanism of toxicity with other substances or how to include this pesticide in a cumulative risk assessment. Unlike other pesticides for which EPA has followed a cumulative risk approach based on a common mechanism of toxicity, hexythiazox does not appear to produce a toxic metabolite produced by other substances. For purposes of these petitions only, the potential risks of hexythiazox in its aggregate exposure will be considered.

E. Safety Determination

1. U.S. population—i. Chronic risk. Chronic risk was calculated using anticipated residue concentrations from all current and proposed uses of hexythiazox and assuming that 100% of each crop is treated. Dietary exposure of the general U.S. population was equivalent to 0.7% of the RFD. Exposure of the most heavily exposed subgroup, non-nursing infants, was equivalent to 3.9% of the RFD.

ii. Carcinogenic risk. Carcinogenic risk was evaluated using anticipated residue concentrations and taking into account the percent of crop known or expected to be treated. Lifetime carcinogenic risk for the U.S. population was calculated, to be 4.5 X 10^-7.

iii. Acute risk. An estimate of acute risk with this compound has not been conducted since no acute reproductive
or developmental effects have been observed.

2. Infants and children. In assessing the potential for additional sensitivity of infants and children to residues of hexythiazox, EPA considered data from developmental toxicity studies in the rat and rabbit, and a 2-generation study in the rat. The developmental toxicity studies are designed to evaluate adverse effects on the developing organism resulting from pesticide exposure during prenatal development to 1 or both parents. Reproduction studies provide information relating to effects from exposure to the pesticide on the reproductive capability of mating animals and data on systemic toxicity.

No developmental or reproductive effects have been observed in any study with hexythiazox. The lowest acute NOAEL was 2,400 ppm in the diet (200 mg/kg/day), HDT, in the 2-generation rat reproduction study. In the rat developmental study, the maternal and fetotoxic NOAEL was 240 mg/kg/day and the developmental NOAEL was 2,160 mg/kg/day, HDT. In the rabbit developmental study, the maternal and developmental NOAEL was 1,080 mg/kg/day, HDT.

Taking into account current toxicological data requirements, the data base for hexythiazox relative to prenatal and postnatal effects is complete. In the rat developmental study, the NOAELs for maternal toxicity and fetotoxicity were the same, which suggests that there is no special prenatal sensitivity in the absence of maternal toxicity. Furthermore, the lowest developmental or reproductive NOAEL is 2 orders of magnitude higher than the chronic NOAEL on which the RfD is based. It is concluded that there is a reasonable certainty of no harm to infants and children from aggregate exposure to hexythiazox residues.

F. International Tolerances

Codex MRLs for 12 commodities, not including mint, have been established. A MRL for blackberries at 0.2 ppm has been established in the Netherlands. There are no Canadian or Mexican MRLs for hexythiazox.

ENVIRONMENTAL PROTECTION AGENCY
[OPP–50875; FRL–6757–3]

Experimental Use Permit; Receipt of Application of a Transgenic Plant-Pesticide

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces receipt of an application to amend/extend 524–EUP–93 from Monsanto Company, requesting an experimental use permit (EUP) for the plant-pesticide Bacillus thuringiensis Cry3Bb protein and the genetic material necessary for its production (Vector ZMIR13L) in corn plants. The Agency has determined that the application may be of regional and national significance. Therefore, in accordance with 40 CFR 172.11(a), the Agency is soliciting comments on this application.

DATES: Comments, identified by docket control number OPP–50875, must be received on or before January 29, 2001.

ADDRESSES: Comments and data may be submitted by mail, electronically, or in person. Please follow the detailed instructions for each method as provided in Unit I. of the SUPPLEMENTARY INFORMATION. To ensure proper receipt by EPA, it is imperative that you identify docket control number OPP–50875 in the subject line on the first page of your response.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this Action Apply to Me?

This action is directed to the public in general. This action may, however, be of interest to those persons who are interested in agricultural biotechnology or may be required to conduct testing of chemical substances under the Federal Food, Drug and Cosmetic Act (FFDCA), or the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. If you have any questions regarding the applicability of this action to a particular entity, consult the person listed under FOR FURTHER INFORMATION CONTACT.

B. How Can I Get Additional Information, Including Copies of this Document and Other Related Documents?

1. Electronically. You may obtain electronic copies of this document, and certain other related documents that might be available electronically, from the EPA Internet Home Page at http://www.epa.gov/. To access this document, on the Home Page select “Laws and Regulations,” “Regulations and Proposed Rules,” and then look up the entry for this document under the “Federal Register—Environmental Documents.” You can also go directly to the Federal Register listings at http://www.epa.gov/fedrgstr/.

2. In person. The Agency has established an official record for this action under docket control number OPP–50875. The official record consists of the documents specifically referenced in this action, and other information related to this action, including any information claimed as Confidential Business Information (CBI). This official record includes the documents that are physically located in the docket, as well as the documents that are referenced in those documents. The public version of the official record does not include any information claimed as CBI. The public version of the official record, which includes printed, paper versions of any electronic comments submitted during an applicable comment period is available for inspection in the Public Information and Records Integrity Branch (PIRIB), Rm. 119, Crystal Mall #2, 1921 Jefferson Davis Hwy., Arlington, VA, from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The PIRIB telephone number is (703) 305–5805.

C. How and to Whom Do I Submit Comments?

You may submit comments through the mail, in person, or electronically. To ensure proper receipt by EPA, it is imperative that you identify docket control number OPP–50875 in the subject line on the first page of your response.

1. By mail. Submit your comments to: Public Information and Records Integrity Branch (PIRIB), Information Resources and Services Division (7502C), Office of Pesticide Programs (OPP), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460.

2. In person. Submit your comments to: Public Information and Records Integrity Branch (PIRIB),
Information Resources and Services Division (7502C), Office of Pesticide Programs (OPP), Environmental Protection Agency, Rm. 119, Crystal Mall #2, 1921 Jefferson Davis Hwy., Arlington, VA. The PIRIB is open from 8:30 a.m. to 4 p.m., Monday through Friday, excluding legal holidays. The PIRIB telephone number is (703) 305–5805.

3. Electronically. You may submit your comments electronically by e-mail to: opp-docket@epa.gov, or you can submit a computer disk as described above. Do not submit any information electronically that you consider to be CBI. Avoid the use of special characters and any form of encryption. Electronic submissions will be accepted in WordPerfect 6.1/8.0 or ASCII file format. All comments in electronic form must be identified by docket control number OPP–50875. Electronic comments may also be filed online at many Federal Depository Libraries.

D. How Should I Handle CBI That I Want to Submit to the Agency?

Do not submit any information electronically that you consider to be CBI. You may claim information that you submit to EPA in response to this document as CBI by marking any part or all of that information as CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. In addition to one complete version of the comment that includes any information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public version of the official record.

Information not marked confidential will be included in the public version of the official record without prior notice. If you have any questions about CBI or the procedures for claiming CBI, please consult the person listed under FOR FURTHER INFORMATION CONTACT.

E. What Should I Consider as I Prepare My Comments for EPA?

You may find the following suggestions helpful for preparing your comments:

1. Explain your views as clearly as possible.
2. Describe any assumptions that you used.
3. Provide copies of any technical information and/or data you used that support your views.
4. If you estimate potential burden or costs, explain how you arrived at the estimate that you provide.
5. Provide specific examples to illustrate your concerns.

6. Offer alternative ways to improve the notice.

7. Make sure to submit your comments by the deadline in this document.

8. To ensure proper receipt by EPA, be sure to identify the docket control number assigned to this action in the subject line on the first page of your response. You may also provide the name, date, and Federal Register citation.

II. Background

Monsanto Company has applied for an amendment of Experimental Use Permit No. 524–EUP–93 to continue testing and evaluation from 2/1/2001 until 2/28/2002 of genetically modified corn that has been developed to resist damage from corn rootworm (Diabrotica spp.) larval feeding. The experimental program will include: (1) breeding and observation trials; (2) inbred seed increase trials; (3) agronomic performance trials; (4) efficacy trials; (5) product characterization, performance and labeling trials; (6) insect resistance management trials; (7) non-target organism trials; and (8) seed treatment trials. Monsanto proposes to plant 4,000 acres in Alabama, Arkansas, California, Colorado, Delaware, Florida, Georgia, Hawaii, Iowa, Idaho, Illinois, Indiana, Kansas, Kentucky, Louisiana, Maryland, Michigan, Minnesota, Missouri, Mississippi, Montana, North Carolina, North Dakota, Nebraska, New Mexico, New York, Ohio, Oklahoma, Pennsylvania, Puerto Rico, South Dakota, Tennessee, Texas, Utah, Virginia, and Wisconsin. All plantings of corn containing the Bacillus thuringiensis Cry3Bb protein under these experimental programs will be contained. No portion of the crops will be used as food or feed.

III. What Action is the Agency Taking?

Following the review of the Monsanto Company application and any comments and data received in response to this notice, EPA will decide whether to issue or deny the EUP request for this EUP program, and if issued, the conditions under which it is to be conducted. Any issuance of an EUP will be announced in the Federal Register.

IV. What is the Agency’s Authority for Taking this Action?

40 CFR Part 172.

List of Subjects

Environmental protection, Experimental use permits.

Janet L. Anderson, Director, Biotechnology and Pollution Prevention Division, Office of Pesticide Programs.

BILLING CODE 6560–50–S

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Submitted to OMB for Review and Approval

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection, as required by the Paperwork Reduction Act of 1995, Public Law 104–13. An agency may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number. Comments are requested concerning (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission’s burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

DATES: Written comments should be submitted on or before January 29, 2001. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all comments to Les Smith, Federal Communications Commission, Room 1–A804, 445 12th Street, SW., Washington, DC 20554 or via the Internet to lessmith@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collections contact Les Smith at (202) 418–0217 or via the Internet at lessmith@fcc.gov.

SUPPLEMENTARY INFORMATION:
OMB Control Number: 3060–0929.
Title: Application for Multipoint Distribution Service or Instructional Television Fixed Service Modification to Main Station, Booster Station, Response Station Hub, or 125 KHz (I Channels) Point to Multipoint Transmissions.

Form Number: FCC 331.
Type of Review: Extension of a currently approved collection.
Number of Respondents: 4,000.
Estimate Time Per Response: 2 hours.
Frequency of Response: On occasion and “open window” reporting requirements.

Total Annual Burden: 8,000 hours.
Total Annual Costs: $19,465.

Needs and Uses:
On September 17, 1998, the FCC adopted a Report and Order (R&O) in MM Docket No. 97–217. The rule changes in this R&O enhance the flexibility of MDS and ITFS operations through facilitated use of response stations, use of cellular configurations, use of signal booster stations with program origination capability, and use of variable bandwidth (subchanneling or superchanneling). Thus, MDS and ITFS frequencies in the 2 GHz band may be used by licensees, or leased to operators, for broadband data, video, or voice transmissions to and/or from subscribers’ premises, promoting the competitive position of the relevant industry, augmenting the educational uses of these frequencies by ITFS entities, and increasing services to consumers. The FCC has adopted an initial one-week filing window, in which it will accept FCC Form 331 applications from MDS and ITFS licensees. Following this initial filing window, the FCC will accept FCC Form 331 applications via a rolling, one-day filing window. FCC Form 331 may be used by licensees of MDS, MMDS, ITFS, or Commercial ITFS to apply for modification to main station, response station hub, high-power signal booster station, notification of low-power signal booster station, or 125 KHz (I channel(s)) point to multipoint transmitters.

OMB Control Number: 3060–XXXX.
Title: Section 79.2, Accessibility of Programming Providing Emergency Information.
Form Number: N/A.
Type of Review: New collection.
Number of Respondents: 200.
Estimate Time Per Response: 1 to 2 hours.

Frequency of Response: On occasion reporting requirements.

Total Annual Burden: 275 hours.
Total Annual Costs: $5,400.

Needs and Uses: On July 21, 2000, the FCC adopted a Report and Order (R&O), MM Docket No. 99–339, that adopted video description rules to make television more accessible to persons with visual disabilities. Among other things, the R&O requires any broadcast station or multiple video programming distributor (MVPD) that provides local emergency information as part of a regularly scheduled newscast, or as part of a newscast that interrupts regularly scheduled programming, to make the critical details of the information accessible to persons with visual disabilities in the affected local area. Any broadcast station or MVPD that provides emergency information through a crawl or scroll must also accompany that information with an aural tone to alert persons with disabilities that the station or MVPD is providing this information. In addition, 47 CFR Section 79(c) contains a complaint procedure—a complaint alleging a violation of this section may be transmitted to the FCC. The FCC then will notify the video programming distributor of the complaint, giving the distributor 30 days to reply to the complaint.

Federal Communications Commission.
Magalie Roman Salas,
Secretary.

FEDERAL COMMUNICATIONS COMMISSION
Notice of Public Information Collection(s) Being Submitted to OMB for Review and Approval

December 12, 2000.

SUMMARY: The Federal Communications Commission, as part of its continuing effort to reduce paperwork burden invites the general public and other Federal agencies to take this opportunity to comment on the following information collection, as required by the Paperwork Reduction Act of 1995, Public Law 104–13. An agency may not conduct or sponsor a collection of information unless it displays a currently valid control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the Paperwork Reduction Act (PRA) that does not display a valid control number. Comments are requested concerning (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission’s burden estimate; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology.

DATES: Written comments should be submitted on or before January 29, 2001. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all comments to Les Smith, Federal Communications Commission, Room 1–A804, 445 12th Street, SW., Washington, DC 20554 or via the Internet to lesmith@fcc.gov.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collections contact Les Smith at (202) 418–0217 or via the Internet at lesmith@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0963.
Title: Sections 101.527, Construction Requirements for 24 GHz Operations, and 101.529, Renewal Expectancy Criteria for 24 GHz Licensees.
Form Number: N/A.
Type of Review: New collection.
Respondents: Business and other for-profit entities.
Number of Respondents: 952.
Estimate Time Per Response: 30 mins. to 20 hrs.
Frequency of Response: Once every 10 years reporting requirement.

Total Annual Burden: 14,399 hours.
Total Annual Costs: $952,000.

Needs and Uses: The information required by 47 CFR Sections 101.527 and 101.529 is used to determine whether a renewal applicant of a 24 GHz Service system has complied with the requirement to provide substantial service by the end of the ten-year initial license term. The FCC uses this information to determine whether an applicant’s license will be renewed at the end of the license period.

Federal Communications Commission.
Magalie Roman Salas,
Secretary.

BILLING CODE 6712–01–U
Notice of Intent To Implement a Pilot Inspection Procedure of Insured Structures Under the National Flood Insurance Program

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Notice of intent.

SUMMARY: We, FEMA, give notice that we will implement the pilot inspection procedure for Monroe County, Florida, and the Village of Islamorada, located in Monroe County, under the National Flood Insurance Program (NFIP). We established the pilot inspection procedure and the criteria for implementing the procedure by a rule published on June 27, 2000 in the Federal Register.

DATES: The starting date for the inspection procedure is January 1, 2001 for Monroe County and the Village of Islamorada. The termination date for Monroe County is December 31, 2007. The termination date for the Village of Islamorada is January 1, 2004.

SUPPLEMENTARY INFORMATION: We established the pilot inspection procedure and the criteria to implement it under 44 CFR 59.30 in a final rule published in the Federal Register on June 27, 2000, 65 FR 39726. We established the procedure: (1) To help the communities of Monroe County and the Village of Islamorada verify that structures comply with the community’s floodplain management ordinance; and (2) to ensure that property owners pay flood insurance premiums to the NFIP commensurate with their flood risk. The inspection procedure requires owners of insured buildings to obtain an inspection from community officials and to submit a Community Inspection Report as a condition of renewing the Standard Flood Insurance Policy on the building.

The community inspection procedure applies only to insured post-FIRM (Flood Insurance Rate Map) buildings located in the Special Flood Hazard Areas of the communities participating in the inspection procedure.

The final rule requires the Associate Director for Mitigation and the Federal Insurance Administrator to establish the starting and termination dates for the pilot inspection procedure based on the recommendation of the Regional Director. The Regional Director has consulted with each community. The final rule further requires that before the inspection procedure starts the Associate Director and the Federal Insurance Administrator must publish a notice in the Federal Register that the communities will undertake the inspection procedure, stating the purpose and effective time that the pilot inspection procedure will cover. Each community must also publish a similar notice in a prominent local newspaper and publish other notices as appropriate.

The starting date for the inspection procedure for Monroe County and the Village of Islamorada is January 1, 2001. For Monroe County, the termination date is December 31, 2007 and for the Village of Islamorada, the termination date is January 1, 2004.

After the starting date, the insurers will send endorsements to the Standard Flood Insurance Policy to policyholders notifying all policyholders in the two communities that we may require them to obtain a community inspection as a condition of renewing the Standard Flood Insurance Policy. All new and renewed policies effective February 15, 2001 and thereafter must contain the endorsement, which we established in the final rule.

For insured buildings that the community identifies as possible violations of the community’s floodplain management ordinance, the insurer will send a subsequent notice to the policyholder six months before the flood insurance policy renewal date. We anticipate that the insurers will start sending the six-month notice August 15, 2001 and thereafter must contain the endorsement, which we established in the final rule.

For insured buildings that the community identifies as possible violations of the community’s floodplain management ordinance, the insurer will send a subsequent notice to the policyholder six months before the flood insurance policy renewal date. We anticipate that the insurers will start sending the six-month notice August 15, 2001 and thereafter must contain the endorsement, which we established in the final rule.

For insured post-FIRM buildings that the community inspects and determines to violate the community’s floodplain management regulations, the community must demonstrate that it is undertaking measures to remedy the violation to the maximum extent possible.

A major goal of the NFIP is to reduce flood losses by implementing floodplain management regulations that protect new and substantially improved construction in flood prone areas from flood damages. Community adoption and enforcement of a floodplain management ordinance is critical in protecting a building from future flood damages, in reducing taxpayer funded disaster assistance, and in keeping flood insurance rates affordable.

James L. Witt,
Director.

[FR Doc. 00–33175 Filed 12–27–00; 8:45 am]

FEDERAL MARITIME COMMISSION

Notice of Agreement(s) Filed

The Commission hereby gives notice of the filing of the following agreement(s) under the Shipping Act of 1984. Interested parties can review or obtain copies of agreements at the Washington, DC offices of the Commission, 800 North Capitol Street, NW., Room 940. Interested parties may submit comments on an agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, by January 8, 2001.

Agreement No.: 011528–017.
Title: Japan–United States Eastbound Freight Conference Agreement.
Synopsis: The amendment restates the extension of the suspension of the agreement through July 31, 2001.

Agreement No.: 011649–003.
Title: Joint Operating Agreement Between Interoceran Lines, Inc. and Trinity Shipping Lines, S.A.
Parties: Interoceran Lines, Inc. Trinity Shipping Line, S.A.
Synopsis: The modification restates the agreement to specify that the vessels will be committed to the service; exclude revenue sharing and otherwise narrow the terms of the agreement to
those required of a vessel sharing arrangement; extend the term of the agreement through January 31, 2003, with automatic yearly renewal; and specify ports served in the trade between South Florida and Pananma, Ecuador, Peru, and Colombia.

**Agreement No.:** 011739.  
**Title:** YML/HJS U.S. East and Gulf Coast Slot Charter Agreement.  
**Parties:** Yangming Marine Transport Corp., Hanjin Shipping Co., Ltd.  
**Synopsis:** The slot charter agreement permits Yangming to charter space to Hanjin in the trade between the U.S. East and Gulf Coast and Europe.

**Agreement No.:** 011740.  
**Title:** Maersk Sealand/Nordana/CGM Antilles/Gyuane/Marfret, Mediterranean/Caribbean Sea Vessel Sharing Agreement.  
**Parties:** A.P. Moller-Maersk Sealand, CGM Antilles Gyuane, Compagnie Maritime Marfret, S.A., Nordana Line AS.  
**Synopsis:** The proposed agreement authorizes a vessel sharing arrangement among the parties for the purpose of operating of a new direct weekly service between Puerto Rico and the Virgin Islands and the Mediterranean and other Caribbean points.

**Agreement No.:** 011741.  
**Title:** U.S. Pacific Coast-Oceania Agreement.  
**Parties:** P&O Nedlloyd Limited/P&O Nedlloyd B.V., Australia New Zealand Direct Line, Hamburg-Dampfschiffahrtsgesellschaft KG (Columbus Line), Fesco Ocean Management Ltd.  
**Synopsis:** The proposed agreement authorizes the parties to discuss and agree on the number of vessels deployed and to charter space to/from one another in the trades between the U.S. Pacific Coast and Australia, New Zealand, and the Pacific Islands, and between the U.S. Pacific Coast and Canada and Mexico. It also authorizes the parties to engage in limited related cooperative activities.

By Order of the Federal Maritime Commission  
Bryant L. VanBrakle, Secretary.

BILLING CODE 6730–01–P

**FEDERAL RESERVE SYSTEM**

**Agency Information Collection Activities: Proposed Collection; Comment Request**

**AGENCY:** Board of Governors of the Federal Reserve System (Board).

**ACTION:** Notice and request for comment.

**SUMMARY:** In accordance with the requirements of the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the Board, the Federal Deposit Insurance Corporation (FDIC), and the Office of the Comptroller of the Currency (OCC) (the “agencies”) may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The Federal Financial Institutions Examination Council (FFIEC), of which the agencies are members, has approved for public comment proposed revisions to the Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks (FFIEC 002). The Board is publishing the proposed revisions on behalf of the agencies. At the end of the comment period, the comments and recommendations received will be analyzed to determine the extent to which the FFIEC should modify the proposed revisions prior to giving its final approval. The Board will then submit the revisions to OMB for review and approval.

**DATES:** Comments must be submitted on or before February 26, 2001.

**ADDRESSES:** Interested parties are invited to submit written comments to the agency listed below. All comments, which should refer to the OMB control number, will be shared among the agencies.

Written comments should be addressed to Jennifer J. Johnson,
Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW., Washington, DC 20551, submitted by electronic mail to regs.comments@federalreserve.gov, or delivered to the Board’s mail room between 8:45 a.m. and 5:15 p.m., and to the security control room outside of those hours. Both the mail room and the security control room are accessible from the courtyard entrance on 20th Street between Constitution Avenue and C Street, NW. Comments received may be inspected in room M–P–500 between 9:00 a.m. and 5:00 p.m., except as provided in section 261.12 of the Board’s Rules Regarding Availability of Information, 12 CFR 261.12(a).

A copy of the comments may also be submitted to the OMB desk officer for the Board: Alexander T. Hunt, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 3208, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: A draft copy of the proposed FFIEC 002 reporting form may be obtained at the FFIEC’s web site (www.ffiec.gov). A copy of the proposed revisions to the collection of information may also be requested from Mary M. West, Federal Reserve Board Clearance Officer, (202) 452–3544, Board of Governors of the Federal Reserve System, 20th and C Streets, NW., Washington, DC 20551. Telecommunications Device for the Deaf (TDD) users may contact Diane Jenkins, (202) 452–3544, Board of Governors of the Federal Reserve System, 20th and C Streets, NW., Washington, DC 20551.

SUPPLEMENTARY INFORMATION: Proposal to revise the following currently approved collection of information:

Form Number: FFIEC 002.

OMB Number: 7100–0032.

Frequency of Response: Quarterly.

Affected Public: U.S. branches and agencies of foreign banks.

Estimated Number of Respondents: 354.

Estimated Total Annual Responses: 1,416.

Estimated Time per Response: 2.25 burden hours.

Estimated Total Annual Burden: 31,860 burden hours.

General Description of Report

This information collection is mandatory: 12 U.S.C. 3105(b)(2), 1817(c)(1), 121 (3), and 3102(b). Except for select sensitive items, this information collection is not given confidential treatment (5 U.S.C. 552(b)(8)). Small businesses (that is, small U.S. branches and agencies of foreign banks) are affected.

Abstract

On a quarterly basis, all U.S. branches and agencies of foreign banks (U.S. branches) are required to file detailed schedules of assets and liabilities in the form of a condition report and a variety of supporting schedules. This information is used to fulfill the supervisory and regulatory requirements of the International Banking Act of 1978. The data are also used to augment the bank credit, loan, and deposit information needed for monetary policy and other public policy purposes. The Federal Reserve System collects and processes this report on behalf of all three agencies.

Current Actions

The agencies propose to implement a number of revisions to streamline the existing reporting requirements of the Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks (FFIEC 002), consistent with eliminations and reductions in detail proposed to the Reports of Condition and Income (Call Report) (proposed FFIEC 031 and 041) filed by insured commercial banks and FDIC-supervised savings banks. The agencies are also endeavoring to improve the relevance of the FFIEC 002 by identifying new types of information necessary to monitor new activities and other recent developments that may expose institutions to new or different types of risk.

The proposed revisions to the FFIEC 002 summarized below have been approved for publication by the FFIEC. The agencies would implement these proposed changes, except for new information proposed on fiduciary and related services, as of the June 30, 2001, reporting date. Proposed new information on fiduciary and related services would be effective with the December 31, 2001, reporting date.

A. Specific Proposed Deletions, Reductions in Detail, and Redefinitions

Schedule RAL—Assets and Liabilities

3. Memorandum item 9, “Mutual fund and annuity sales during the quarter,” would be redefined as “Assets under the reporting branch or agency’s management in proprietary mutual funds and annuities.” For branches and agencies with proprietary mutual funds and annuities, reporting the amount of assets under management should be significantly less burdensome than reporting the quarterly sales volume of both proprietary products and nonproprietary products. Branches and agencies without proprietary mutual funds and annuities will no longer need to report any information on their involvement with these products.

4. Memorandum item 12, “Amount of assets netted against liabilities to nonrelated parties (excluding deposits in insured branches) on the balance sheet in accordance with generally accepted accounting principles,” would be eliminated.

5. Statutory or Regulatory Requirement item S.3.a, “FDIC asset maintenance requirement (for FDIC-insured branches only): Average liabilities,” currently collects average liabilities for the quarter ending on the report date. The agencies propose to redefine this item to collect average liabilities for the calendar quarter preceding the quarter ending on the report date. This redefinition would ensure that, as of a given report date, the asset maintenance requirement calculation for FDIC-insured branches in Section 347.211 of the FDIC’s regulations can be accomplished by using only data filed on the current FFIEC 002 report. For example, using the FFIEC 002 report for the third quarter, eligible assets on the last day of the third quarter (reported in item S.3.b) would be divided by average liabilities for the second quarter (reported in item S.3.a).

Schedule A—Cash and Balances Due from Depository Institutions

Memorandum item 1, “Noninterest-bearing balances due from commercial banks in the U.S. (including their IBFs),” would be deleted.

Schedule C—Loans

The separate loan categories for “Loans to depository institutions” and “Acceptances of other banks” (items 2 and 5, respectively) would be combined.

Schedule E—Deposit Liabilities and Credit Balances

1. The reporting of demand deposits by category of depositor in column B of
the body of the deposits schedule would be eliminated, with branches and agencies reporting instead only the total amount of their demand deposits in this column. Branches and agencies would continue to provide a category-by-category breakdown of their total transaction accounts in column A, which includes their demand deposits, but the current duplicate reporting of demand deposits by category in both columns A and B would end.

2. Item 6, “Certified and official checks,” would be combined with deposits of “Individuals, partnerships, and corporations” (item 1).

Schedule L—Derivatives and Off-Balance-Sheet Items

1. Item 6, “Participations in acceptances acquired from the reporting (non-accepting) branch or agency,” would be deleted.

2. Item 11.b for the gross notional amount of derivative contracts held for purposes other than trading that are not marked to market would be deleted. All derivative contracts, including those held for purposes other than trading, will be marked to market once a branch or agency adopts FASB Statement No. 133, Accounting for Derivative Instruments and Hedging Activities, which is effective for fiscal years beginning after June 15, 2000. Thus, item 11.b will no longer have any relevance in 2001.

3. For branches and agencies with $100 million or more in total assets: Items 12.c.(1) and (2) for the gross positive and gross negative fair values of derivatives held for purposes other than trading that are not marked to market would be deleted because of the effect of FASB Statement No. 133.

Schedule N—Past Due, Nonaccrual, and Restructured Loans

Memorandum item 2.b, “Replacement cost of [past due derivative] contracts with a positive replacement cost,” would be deleted. Once branches and agencies adopt FASB Statement No. 133, Accounting for Derivative Instruments and Hedging Activities, all of their derivative contracts will be carried on the balance sheet at fair value. Since the replacement cost of a derivative contract is its fair value and its book value will also be its fair value, Memorandum items 2.a, “Book value of amounts carried as assets,” and 2.b would duplicate each other. The caption for Memorandum item 2.a would be revised to read “Fair value of amounts carried as assets.”

B. Proposed New Information

Securitization and Asset Sale Activities

The agencies propose to revise and expand the information collected in the FFIEC 002 report to facilitate more effective analysis of the impact of securitization and asset sale activities on credit exposures. In this regard, the agencies are proposing to introduce a separate new schedule (Schedule S) that would comprehensively capture information related to securitization and asset sale activities.

Under this proposal, branches and agencies involved in securitization and asset sale activities would report quarter-end data for seven loan and lease categories. These data would cover 1–4 family residential loans, home equity lines, credit card receivables, auto loans, other consumer loans, commercial and industrial loans, and all other loans and all leases. For each loan category, branches and agencies would report: (1) The outstanding principal balance of assets sold and securitized with servicing retained or with recourse or seller-provided credit enhancements, (2) the maximum amount of credit exposure arising from recourse or credit enhancements to securitization structures (separately for those sponsored by the reporting branch or agency and those sponsored by other institutions), (3) the past due amounts on the underlying securitized assets, (4) the amount of any commitments to provide liquidity to the securitization structures, (5) the outstanding principal balance of assets sold with servicing retained or with recourse or seller-provided credit enhancements that have not been securitized, and (6) the maximum amount of credit exposure arising from assets sold with recourse or seller-provided credit enhancements that have not been securitized.

A limited amount of information would also be collected on credit exposures to asset-backed commercial paper conduits. For the home equity line, credit card receivable, and the commercial and industrial loan categories, branches and agencies would also report the amount of any ownership (or seller’s) interests in securitizations that are carried as securities and as loans and the past due amounts on the assets underlying the seller’s interests carried as securities.

Although the proposed new schedule would collect a considerable amount of information on these securitization and asset sale activities, most branches and agencies will not be affected by Schedule S and the increase in reporting burden associated with the schedule’s new information will be confined to a relatively small segment of the industry.

On a related matter, the agencies also propose to collect information to facilitate more effective assessments of credit and other exposures related to branch and agency portfolios of asset-backed securities. Currently all asset-backed securities are reported in Schedule RAL, item 1.b, “U.S. Government securities,” or item 1.c, “Other bonds, notes, debentures, and corporate stock (including state and local securities),” depending on the issuer or guarantor. The agencies propose to add two new items on Schedule RAL to segregate branch and agency holdings of mortgage-backed securities and other asset-backed securities. Collection of this information would promote risk-focused supervision by enhancing the agencies’ ability to assess credit exposures and asset concentrations.

Reporting of Trust Data

The agencies propose to change the manner in which branches and agencies report information on their trust activities. Branches and agencies that file the existing Annual Report of Trust Assets (FFIEC 001) would instead file a new Fiduciary and Related Services Schedule (Fiduciary Schedule) (Schedule T) as part of the FFIEC 002. Under this proposal, branches and agencies that have fiduciary or related activity would be required to report
certain trust information in Schedule T annually as of December 31. This information includes the number of accounts and the market value of trust assets for eight categories of fiduciary activities. These institutions would also report data on corporate trust activities, collective investment funds and common trust funds, and types of managed assets held in personal trust and agency accounts.

In creating proposed Schedule T, modifications have been made to some of the existing items currently reported on the FFIEC 001 to improve their value and usefulness. However, the total number of separately reportable data items in the proposed Fiduciary Schedule represents a decrease of more than 60 percent in the number of reportable items in the FFIEC 001. Thus, the agencies believe this proposal would not produce an increase in reporting burden for trust institutions.

The agencies are proposing to add the new Fiduciary Schedule to the FFIEC 002 instead of retaining separate trust reports in order to facilitate the timely collection and processing of the information. Institutions filing the current annual trust reports generally must submit their reports within 45 days after year-end. Electronically submitted annual trust reports, first allowed for year-end 1998 reporting, have a 75-day filing deadline. By moving the reporting of fiduciary information into the FFIEC 002, the submission deadline for the FFIEC 002 would apply to this reporting requirement. The length of time that trust institutions would have for completing the Fiduciary Schedule would be reduced from 45 days to 30 days for most institutions and from 75 days to 30 days for institutions that file electronically. The proposed implementation of this Fiduciary Schedule and the modification of the submission deadline for this reporting requirement is consistent with the reporting treatment currently proposed for insured commercial banks and FDIC-supervised savings banks.

C. Other Issue for Which Public Comment Is Requested

Eliminating Confidential Treatment for Certain Past Due and Nonaccrual Data

An important public policy issue for the agencies has been how to use market discipline to complement supervisory resources. Market discipline relies on market participants having information about the risks and financial condition of banking organizations. Disclosure that increases transparency should lead to more accurate market assessments of risk and value. This, in turn, should result in more effective market discipline on banking organizations.

Despite this emphasis on market discipline, the FFIEC and the agencies currently accord confidential treatment to the information branches and agencies report in Schedule N of the FFIEC 002 report on the amounts of their loans, leases, and other assets that are past due, in nonaccrual status, or restructured and in compliance with modified terms. In order to give the public, including branches and agencies, more complete information on the level of and trends in asset quality at individual institutions, the agencies are proposing to eliminate the confidential treatment currently provided for this information beginning with the amounts reported as of June 30, 2001.

Some financial institutions have held that information on loans, leases, and other assets that are past due 30 through 89 days is not a reliable indicator of future loan losses or of general asset quality. They further note that market discipline would be reduced, rather than enhanced, by the release of information that is highly susceptible to misinterpretation to the extent that it could cause an unjustifiable loss of funding to the industry. However, banking supervisors have consistently found information on loans and leases past due 30 through 89 days to be helpful in identifying financial institutions with emerging asset quality problems. Therefore, the agencies believe that such information is a useful indicator of general asset quality and would not represent misleading information to the public.

Currently the agencies publicly disclose information reported by insured commercial banks, FDIC-supervised savings banks, and bank holding companies on loans and leases that are past due 90 days or more and still accruing, in nonaccrual status, or restructured and in compliance with modified terms. The agencies have proposed to publicly disclose reported information on loans and leases that are past due 30 through 89 days and still accruing for these institutions effective as of March 31, 2001. Disclosing the information reported on Schedule N of the FFIEC 002 would also provide for a consistent reporting treatment with other U.S. banking institutions.

Request for Comment

Comments submitted in response to this Notice will be shared among the agencies and will be summarized or included in the Board’s request for OMB approval. All comments will become a matter of public record. Written comments should address the accuracy of the burden estimates and ways to minimize burden as well as other relevant aspects of the information collection requests. Comments are invited on:

(a) Whether the proposed collection of information is necessary for the proper performance of the agencies’ functions, including whether the information has practical utility;
(b) The accuracy of the agencies’ estimate of the burden of the information collection, including the validity of the methodology and assumptions used;
(c) Ways to enhance the quality, utility, and clarity of the information to be collected;
(d) Ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology; and
(e) Estimates of capital or start up costs and costs of operation, maintenance, and purchase of services to provide information.

Jennifer J. Johnson,
Secretary of the Board.

BILLING CODE 6210-01-P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 et seq.) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be
available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States. Additional information on all bank holding companies may be obtained from the National Information Center website at www.ffiec.gov/nic/.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than January 22, 2000.

A. Federal Reserve Bank of Richmond (A. Linwood Gill, III, Vice President) 701 East Byrd Street, Richmond, Virginia 23261–4528:

B. Federal Reserve Bank of Chicago (Phillip Jackson, Applications Officer) 230 South LaSalle Street, Chicago, Illinois 60690–1414:

1. First BancTrust Corporation, Paris, Illinois; to become a bank holding company by acquiring 100 percent of the voting shares of First Bank & Trust, S.B., Paris, Illinois (upon the bank’s conversion to stock form).

Jennifer J. Johnson
Secretary of the Board.

BILLING CODE 6210–01–S

FEDERAL RESERVE SYSTEM

[Docket No. R–1095]

Federal Reserve Bank Services; Private Sector Adjustment Factor

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Notice with request for comments.

SUMMARY: The Board requests comment on a proposal to modify the method for calculating the private sector adjustment factor (PSAF). The PSAF imputes the costs that would have been incurred and profits that would have been earned had the Federal Reserve Banks’ priced services been provided by a private firm. The Monetary Control Act of 1980 (MCA) requires that the Federal Reserve set fees for its services to recover, over the long term, its actual costs of providing the services, as well as these imputed costs and profits. The Board reviews its method for calculating the PSAF periodically to assess whether it is still appropriate in light of the changing environment.

Specifically, the Board requests comment on a proposal to modify the current method for imputing debt and equity, to enhance the method for determining the target rate of return on equity, and to continue using the fifty largest bank holding companies’ financial data as a proxy for Federal Reserve priced-services activities. If adopted, the changes would be effective for the 2002 PSAF and fees for Federal Reserve priced services.

DATES: Comments must be submitted on or before April 6, 2001.

ADDRESSES: Comments, which should refer to Docket No. R–1095, may be mailed to Ms. Jennifer J. Johnson, Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW, Washington, DC 20551 or mailed electronically to: regs.comments@federalreserve.gov. Comments addressed to Ms. Johnson also may be delivered to the Board’s mail room between 8:45 a.m. and 5:15 p.m. and to the security control room outside of those hours. Both the mail room and the security control room are accessible from the courtyard entrance on 20th Street between Constitution Avenue and C Street, NW. Comments may be inspected in Room MP–500 between 9 a.m. and 5 p.m. weekdays, pursuant to §261.12, except as provided in §261.14 of the Board’s Rules Regarding Availability of Information, 12 CFR 261.12 and 261.14.

FOR FURTHER INFORMATION CONTACT: Gregory L. Evans, Manager (202/452–3945); Brenda Richards, Sr. Financial Analyst (202/452–2753); or Rebecca Kenyon, Financial Analyst (202/452–2974), Division of Reserve Bank Operations and Payment Systems. For users of Telecommunication Device for the Deaf (TDD) only, please contact Janice Simms, (202/872–4984). Copies of a research paper describing the theoretical basis and detailed application of each of the proposed models (“The Federal Reserve Banks’ Imputed Cost of Equity Capital”) may be obtained from the Board through the Freedom of Information Office (202/452–3684) or at the Board’s web site at www.federalreserve.gov by accessing the press release for this proposal.

SUPPLEMENTARY INFORMATION:

I. Background

The current method for calculating the PSAF involves determining the value of Federal Reserve assets to be used in providing priced services during the coming year, the financing mix used to fund them, and the rates used to impute financing costs. Assets are determined using Reserve Bank information on actual assets and projected disposals and acquisitions. The priced-services portion of mixed-use assets is determined based on the allocation of related depreciation expense. Historically, short-term assets are assumed to be financed with short-term liabilities and long-term assets are assumed to be financed with a combination of long-term debt and equity. The financing rates and the combination of financing types are based on data developed from the “bank holding company (BHC) model,” a model that contains consolidated financial data for the nation’s fifty largest (asset size) BHCs.

Imputed taxes are captured using a pre-tax return on equity (ROE). The use of the pre-tax ROE assumes that a 100 percent recovery of expenses, including the targeted ROE, will be achieved. Should the pre-tax earnings be more or less than the targeted ROE, the PSAF is adjusted (“variable PSAF”) for the tax expense or savings associated with the adjusted recovery. The variable PSAF tax rate is the median of the rates paid by the BHCs over the past five years.
adjusted to the extent that the BHCs are invested in municipal bonds.

In addition, the PSAF includes the estimated priced-services expenses of the Board of Governors, imputed sales taxes, and an assessment for FDIC insurance, imputed based on current FDIC rates and projected clearing balances (deposits) held with the Reserve Banks.

B. Net Income on Clearing Balances (NICB)

Depository institutions may hold both reserve and clearing balances with the Federal Reserve Banks. Reserve balances are held pursuant to a regulatory requirement and are separate from the Reserve Banks’ priced-services activities. Clearing balances, based on contractual agreements with Reserve Banks, are held to settle transactions arising from use of Federal Reserve priced services. In some cases, depository institutions hold clearing balances in excess of the contractual agreements. The NICB calculation assumes that the Reserve Banks invest the clearing balances net of imputed reserves, and imputes an equal investment in three-month Treasury bills. The calculation also determines the actual priced-services cost of earnings credits (amounts available to offset future service fees) on contracted clearing balances held, net of expired earnings credits, based on the federal funds rate. Because they are held for clearing priced-services transactions, clearing balances are directly related to priced services. Therefore, the net earnings or expense attributable to the imputed Treasury-bill investments and clearing balances are considered income or expense for priced-services activities.

II. Proposed Methodology Changes

Since the adoption of the PSAF and NICB framework, certain finance theories have gained industry acceptance and the levels of clearing balances held by depository institutions with the Reserve Banks have increased significantly. In addition, mergers, acquisitions, and the expansion of allowable BHC activities may alter the comparability of the top fifty BHCs to the Reserve Bank priced-services activities. The criteria used for evaluating alternatives proposed for various components of the calculation were based on the conceptual framework of the PSAF and its relationship to private-sector practice.

As a result, the Board requests comment on a proposal that seeks to create a priced-services balance sheet that resembles that of a private business firm, using real assets and liabilities, imputing liabilities and equity only to the extent necessary, and more appropriately reflecting the risk inherent in priced-service activity.

A. Imputed Debt and Equity

The current method for computing the PSAF and NICB unnecessarily imputes larger amounts of certain assets and liabilities and the related income and expenses to priced services. Considering the growth in the size of clearing balances since the inception of the NICB and the stable nature of the majority of the balances, it is likely that rather than incur additional debt costs, a private business firm would use a portion of these balances to finance its capital needs. Assuming a sensible business use of clearing balances is necessary to provide an appropriate cost comparison between Reserve Banks and private-sector service providers. For the Federal Reserve, such an assumption requires the integration of the PSAF and NICB computations to effectively eliminate imputed debt and reduce imputed investments in Treasury securities. Essentially, the Reserve Bank priced-services activity will forgo earnings at the Treasury-bill rate to reduce long-term and short-term debt expenses. Under the proposal, a portion of the contracts clearing balances would be considered “core deposits,” that is, deposits that will remain stable without regard to the magnitude of actual clearing balances. This use is consistent with a banking organization’s use of deposits. Banking and regulatory practice recognizes that core deposits, while technically short-term, are largely stable over time. This stability provides confidence that a substantial portion of the balances can appropriately be used to fund longer-term assets.

1. Imputed Debt

When the PSAF methodology was established, clearing balances were new, quite small, and did not offer a significant source of funding. Since 1992 the balances have not fallen below $4 billion. This proposal recommends that $4 billion of clearing balances (out of more than $7 billion clearing balances currently maintained) could initially be considered available to finance long-term assets. The Board considers this a conservative level of core balances. Based on the current level of priced services, an insubstantial part of these balances would actually be used for financing. The Board expects that the definition of core deposits may be adjusted over time to consider clearing balance trends.

The Board requests comment on the benefits and drawbacks of using core clearing balances as a source of financing long-term assets. The Board is also interested in commenters’ opinions on whether establishing an initial level of core balances of $4 billion is reasonable. If commenters have an opinion on how the core balance should be determined, the Board would be interested in learning the details of that method.

2. Imputed Equity

Another important aspect of the PSAF calculation is determining an appropriate level of equity from which to impute a target ROE. The proposal’s use of clearing balances to determine the appropriate amount of imputed debt, rather than using a debt-to-equity ratio from the BHC model, requires a new method of imputing equity.2 A private business firm would generally maintain equity, an expensive financing source, at the minimum level necessary to finance assets, to manage risk, and to meet regulatory requirements. The current PSAF method for imputing equity is not based on these considerations and imputed equity has historically been either more or less than regulatory requirements, depending on the BHC model debt-to-equity ratio. The Board proposes targeting an equity level sufficient to satisfy the FDIC requirement for a well-capitalized institution, which is currently 5 percent of total assets and 10 percent of risk-weighted assets.3 This proposal is consistent with how the Board believes rational bank management would target its equity level. The Board requests comment on whether basing priced-services equity on regulatory requirements is a reasonable method.

B. Imputed Return on Equity

The Board proposes that the target ROE used for the PSAF be calculated using a combination of the current comparable accounting earnings model.

---

1 Clearing balances, unless otherwise indicated, refer to contracted and excess clearing balances held by depository institutions with the Federal Reserve Banks.

2 The BHC model debt-to-equity ratio is currently used to determine imputed debt and equity necessary to finance long-term priced-services assets.

3 The FDIC requirements for a well-capitalized financial institution are (1) a ratio of total capital to risk-weighted assets of 10 percent or greater; and (2) a ratio of Tier 1 capital to risk-weighted assets of 6 percent or greater; and (3) a leverage ratio of Tier 1 capital to total assets of 5 percent or greater. The Federal Reserve priced-services balance sheet total capital has no components of tier 1 or total capital other than equity; therefore, requirements 1 and 2 are essentially the same measurement.
and two additional economic models, a capital asset pricing model and a discounted cash flow model.4

1. Current Method

The target return on equity for Reserve Bank priced services is calculated using BHC data from publicly available audited financial statements. The PSAF BHC equity cost of capital, or ROE, is calculated as an average of the ratios of the BHCs' net income and average book value of equity. An example of a comparable accounting earnings (CAE) model, the BHC model can be duplicated and is readily accepted in industry practice. Its shortcomings are that it uses historical data from the two to seven years before the target year to predict future earnings and is based on book rather than market values.5

2. Capital Asset Pricing Model (CAPM)

The CAPM approach estimates the imputed BHC ROE from the return on a stock portfolio of the fifty largest (asset size) BHCs over a one-year period. The ROE estimated using this approach is the sum of a measure of the one-year risk-free rate and an equity risk premium for the BHC sample. This risk premium is the product of the sensitivity of the specified portfolio of BHC sample stocks to the overall stock market (the portfolio’s beta) plus a historical measure of the one-year stock market return relative to the risk-free rate. As proposed, the portfolio weights are based on BHC equity market capitalization. This model provides a strong theoretical framework for addressing risk and its effect on the required rate of return. The CAPM requires judgment in determining the risk-free rate, the average risk premium for the market, and the data used for measuring beta. The Board proposes using the three-month Treasury-bill rate as the risk-free rate and a standard data series on returns for the stock market from 1927 (earliest available data) forward using a rolling ten-year period to determine the average risk premium for the market. The proposed beta compares the returns based on BHC data with the stock market as a whole.

The Board requests comment on whether the three-month Treasury-bill rate is an appropriate Treasury maturity for use as the risk-free rate in the CAPM, if stock market activity since 1927 is an appropriate source for data in determining the average risk premium for the market, and whether using a rolling ten-year average of BHC data provides a reasonable beta.

3. Discounted Cash Flow Model (DCF)

The DCF model assumes that a firm’s stock price is equal to the present discounted value of all expected future dividends. If the price and expected future dividends are known, the implied discount rate for the firm can be calculated and is considered to be the firm’s equity cost of capital. The DCF approach requires as inputs the BHC stock prices as well as forecasts of their future dividends and long-term dividend growth rates. As proposed, consensus forecasts of future dividends and long-term growth rates would be transformed into earnings forecasts by multiplying them by the BHC’s dividend pay-out ratios. The equity costs of capital for the individual BHCs are then combined into a single measure using a weighted average, in which the weights are proposed to be based on the BHC equity market capitalization. The Board proposes using commercially available consensus forecasts, such as those published by Institutional Brokers Estimate System (I/B/E/S). Academic studies have found consensus forecasts to be more accurate than individual forecasts.

The Board requests comment on whether commercially available consensus forecasts are an appropriate measure of future dividends and long-term growth rates.

4. Combining the Models

Unlike the CAE, the CAPM and DCF use data that predict future earnings and reflect current academic practice. All three models are widely used in industry and in regulatory consideration of an appropriate rate of return. For example, for several years the New York State Public Service Commission has used a weighted average of different ROEs in determining its allowed cost of equity capital for the utilities it regulates.

Academic studies have demonstrated that use of multiple models can improve estimation techniques when each model provides new information. The CAE, CAPM, and DCF models each use different data and examine different factors. The Board proposes to calculate the target ROE for Reserve Bank priced services as a weighted average of the results from the three models. This combination will incorporate additional data and conceptual frameworks into the current practice and will minimize the impact of outlying observations to provide a more predictable series over time.

The Board requests comment on the economic models and whether the three economic models are theoretically sound and should be used to calculate the PSAF. The Board also requests comment on the appropriateness of using a simple average of the three models.

5. Weighting the Data

Currently, the PSAF ROE is calculated by taking an equally-weighted average of the BHC ROEs from the CAE. The weighting used in the CAE model has the practical benefit of avoiding illogical results such as a negative target ROE in a year when a large bank holding company encounters financial difficulties. How observations are weighted in the models is relevant because the bank holding companies in the peer group are imperfect proxies, that is, they engage in a wider spectrum of activities than the range of Reserve Bank payment services for which the PSAF methodology is used to estimate an appropriate cost of equity capital.

Alternative weighting schemes can be constructed. One alternative would be to take a value-weighted average of the ROEs by multiplying each BHC’s ROE by that company’s market valuation and then dividing the sum of these weighted returns by the total market valuation of the fifty BHCs. Such market weighting places more emphasis on large BHCs and reflects current academic and industry practice when applying it to the CAPM and DCF models. The Board proposes to use a market capitalization weight to determine the CAPM and DCF ROEs while retaining the commonly used equal weighting of BHC ROEs under the CAE. The Board requests comment on the appropriateness of this proposal.

Other methods for weighting BHC data in the three models were considered, such as weighting based on balances due to depository institutions. Such weighting attempts to measure the significance of a BHC’s correspondent banking activities to the total bank holding company activities and as a result, gives BHCs with the largest correspondent-banking business lines greater weight. Deposits due to depository institutions are not typically reported separately in BHC annual reports but are reported at the commercial bank level in publicly available Call Report data. The Board requests comment on BHC weighting.

4. A research paper (“The Federal Reserve Banks’ Imputed Cost of Equity Capital”) describing the theoretical basis and detailed application of each of the models is available at the Board’s web site at www.federalreserve.gov by accessing the press release for this proposal.

5. The target ROE for 2001, for example, is calculated using data from BHC financial statements for the years 1995 to 1999.
based on due-to balances to determine the ROEs.

C. Peer Group

The Board considered whether organizations other than the top fifty BHCs would provide a better basis for imputing the costs that would have been incurred and the profits that would have been earned had the Reserve Banks’ priced-services activities been provided by a private-sector firm. Specifically, the consideration included whether segment data from BHC financial reports could be used to match more closely the BHC capital structure to the System’s priced-services activity, or whether service bureaus should be used as proxy for private-sector firms engaged in priced-services activity.

Bank holding company activities are far more diverse than Reserve Bank priced-services activities and payment services are generally a small segment of BHC activities. For this reason, BHCs are not a precise counterpart, but they do provide the most reasonable alternative available as a peer group given the similarity of services provided, the competition between BHCs and the Reserve Banks, and the availability of useful financial data.

Service bureaus are also diverse; they do not provide settlement or other services comparable to those of Reserve Banks, and they do not generally view the Reserve Banks as primary competitors. Therefore, the Board does not believe service bureaus to be a preferred substitute for the BHCs in the PSAF model. Maintaining the BHC sample size at fifty encompasses the majority of banking assets nationwide and minimizes the effects of any one BHC’s financial performance on the data.

The Board considered using BHC segment data in order to exclude the effect of BHC non-comparable activities on the PSAF. Although these data increasingly are included in financial reports, the Board identified several obstacles to using segment data. There is no standard definition of “segment” for use in financial reporting. Segments may be reported based on any combination of customer type, product, or service provided and compilation of specific segment data may reflect a total return on equity that is greater or less than the return on equity for the entity as a whole. It is often impossible, with the data available, to determine in which BHC segments activities comparable to priced-services activities are included to ensure inclusion of those that are related to Reserve Bank priced services and exclusion of those that are not. As a result, information is not reliable, complete, or consistent across BHCs or even within one BHC over time.

The Board requests comment on whether the fifty largest (in asset size) bank holding companies continue to be a reasonable data peer group for Reserve Bank priced-services activities. Further, the Board would like commenters’ views on whether there are ways to adjust BHC data to resemble more closely the Federal Reserve Banks’ priced-services activities.

D. Pension Financing Costs

The Board considered the current treatment for pension accounting, financing the pension assets net of the retirement liabilities, and concluded that it is consistent with that at BHCs and other firms, follows current rules for recognizing increases in pension assets, and is theoretically sound.

E. Priced-Services Balance Sheet

Table 1 represents the elements of the priced-services balance sheet and how they will be derived under the proposal. All actual assets and liabilities presented on the priced-services balance sheet are based on projected average daily balances.

F. Effects of Proposal

The combination of the current equally-weighted CAE and the proposed market-weighted DCF and CAPM models produces the following pre-tax ROE based on the BHC performance data used for the 2001 PSAF:

<table>
<thead>
<tr>
<th>CAE</th>
<th>DCF</th>
<th>CAPM</th>
<th>Combined</th>
</tr>
</thead>
<tbody>
<tr>
<td>24.0</td>
<td>21.6</td>
<td>23.7</td>
<td>23.1</td>
</tr>
</tbody>
</table>

From year to year, the proposed combined model for calculating ROE can yield a target ROE that is higher or lower than the current method. On the average during the period from 1983 to 2001, the combined model yielded a pre-tax ROE that is 230 basis points higher than the current method.

Using core clearing balances as a source of financing for actual priced-services assets reduces imputed short- and long-term debt and imputed investments in marketable securities. As a result, the income and expenses associated with these imputed elements is reduced as well. Establishing equity at the level required by FDIC requirements for a well-capitalized bank results in setting equity equal to five percent of total assets, which is a slight reduction from the level planned in 2001 under the current methodology (5.3 percent). Applying the proposed changes to the 2001 priced-services balance sheet would reduce PSAF costs $33.8 million or 90 percent. This result is a net reduction of costs to priced services of $19.5 million or slightly more than 2 percent of total actual and imputed costs, including the target ROE of $138.2 million. Table 3 illustrates the effects of the proposal on the various elements of the PSAF and NICB calculations.

III. Competitive Impact Analysis

All operational and legal changes considered by the Board and the changes to payment system participants are subject to competitive impact analysis described in the March 1990 policy statement “The Federal Reserve in the Payments System.” Under this policy, the Board assesses whether the change would have a direct and material adverse effect on the ability of other service providers to compete effectively with the Federal Reserve in providing similar services because of differing legal powers or constraints or because of a dominant market position of the Federal Reserve deriving from such legal differences. If the fees or fee structures create such an effect, the Board must further evaluate the changes to assess whether their benefits—such as contributions to payment system efficiency, payment system integrity, or other Board objectives—can be retained while reducing the hindrances to competition.

Because the PSAF includes costs that must be recovered through fees for priced services, changes made to the PSAF may have an effect on fees. This proposal is intended to refine the PSAF to more closely mirror the costs and profits of other service providers as required by the MCA. By mirroring these costs and profits, the fees adopted by the Reserve Banks should be based on the types of costs and expected profits that are more comparable to those of other providers. Accordingly, the Board believes this proposal will not have a direct and material adverse effect on the ability of other service providers to compete effectively with the Federal Reserve in providing similar services.

IV. Summary of Comments Requested

The Board believes the proposed changes to the PSAF methodology are consistent with the requirements of the MCA. The Board evaluated each alternative proposed for various components of the PSAF calculation based on the following framework principles: (1) To provide a conceptually sound basis for economically efficient pricing in the market for payments processing and collection services; (2) to maintain consistency with actual Reserve Bank financial information and practice; (3) to maintain consistency with private-sector practice; and (4) to use data in the public domain so others could replicate the PSAF calculation.

To assist commenters in the preparation of their responses to this notice, the Board requests comment on the following questions:

A. Overall Proposal

1. Are the CAE, DCF, and CAPM economic models theoretically sound and should they be used to calculate the PSAF?

2. Is an initial core clearing balance of $4 billion reasonable? If not, what would be a reasonable amount and what would be the best method for determining it?

3. Is basing priced-services equity on regulatory requirements a reasonable method?

C. Imputed Return on Equity

1. Are the CAE, DCF, and CAPM economic models theoretically sound and should they be used to calculate the PSAF?

2. Is the three-month Treasury-bill rate an appropriate Treasury maturity for use as the risk-free rate in the CAPM?

3. In determining the average risk premium for the market in the CAPM model, is stock market activity since 1927 an appropriate source for data?

4. Does using a rolling ten-year average of bank holding company data provide a reasonable beta for use in the CAPM?

5. Are commercially available consensus forecasts an appropriate measure of future dividends and long-term growth rates for use in the DCF economic model?

6. Does a simple average of the results of the three economic models provide an appropriate ROE?
FEDERAL RESERVE SYSTEM

Sunshine Act Meeting

AGENCY HOLDING THE MEETING: Board of Governors of the Federal Reserve System

TIME AND DATE: 11:00 a.m., Tuesday, January 2, 2001.
PLACE: Marriner S. Eccles Federal Reserve Board Building, 20th and C Streets, NW., Washington, DC 20551.
STATUS: Closed.

MATTERS TO BE CONSIDERED:
1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.
2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION:
Lynn S. Fox, Assistant to the Board; 202–452–3204.

SUPPLEMENTARY INFORMATION: You may call 202–452–3206 beginning at approximately 5 p.m. two business days before the meeting for a recorded announcement of bank and bank holding company applications scheduled for the meeting; or you may contact the Board’s Web site at http://www.federalreserve.gov for an electronic announcement that not only lists applications, but also indicates procedural and other information about the meeting.

Jennifer J. Johnson, Secretary of the Board.

FEDERAL TRADE COMMISSION

[File No. 001–0181; Docket No. C–3991]

Computer Sciences Corporation and Mynd Corporation; Analysis To Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed Consent Agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached consent agreement, and the terms of the consent agreement, and the methods of competition. The attached consent agreement and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before January 19, 2001.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, Room H–159, 600 Pennsylvania Avenue, NW., Washington, DC 20580.

SUPPLEMENTARY INFORMATION: Pursuant to section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46, and section 2.34 of the Commission’s Rules of Practice (16 CFR 2.34), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text to the consent agreement package can be obtained from the FTC Home Page (for December 20, 2000), on the World Wide Web, at “http://www.ftc.gov/os/2000/12/index.htm.” A paper copy can be obtained from the FTC Public Reference Room, Room H–130, 600 Pennsylvania Avenue, NW., Washington, DC 20580, either in person or by calling (202) 326–3267.

Public comment is invited. Comments should be directed to: FTC/Office of the Secretary, Room H–159 600 Pennsylvania Avenue, NW., Washington, DC 20580. Two paper copies of each comment should be filed, and should be accompanied, if possible, by a 3½ inch diskette containing an electronic copy of the comment. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with section 4.9(b)(6)(ii) of the Commission’s Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Analysis of the Complaint and Proposed Consent Order To Aid Public Comment

I. Introduction

The Federal Trade Commission (the “Commission”) has accepted, subject to final approval, a proposed Decision and Order (the “Order”) that would require CSC to divest Mynd’s claims assessment systems business to Insurance Services Office, Incorporated ("ISO"). Mynd develops and sells a claims assessment system known as COA, and CSC develops and sells a claims assessment system known as Colossus. The Consent Agreement also includes an Order to Maintain Assets that requires respondents to preserve the assets they are required to divest as a viable, competitive, and ongoing operation until the divestiture is achieved.

The Order, if finally issued by the Commission, would settle charges that CSC’s proposed acquisition of Mynd may have substantially lessened competition in the United States market for claims assessment systems. The Consent Agreement includes an Order to Maintain Assets that requires respondents to preserve the assets they are required to divest as a viable, competitive, and ongoing operation until the divestiture is achieved.

II. Description of the Parties and the Proposed Merger

CSC, headquartered in El Segundo, California, is a large computer-services provider, which also sells vertical software applications in the financial services industries. CSC’s Financial Services Group (“FSG”), headquartered in Austin, Texas, provides consulting and support services along with application software to insurance companies, banking, consumer finance companies, and investment companies.

Mynd, headquartered in Columbia, South Carolina, provides consulting and services and packaged software solutions to the insurance and other financial services industries.

Pursuant to an agreement, CSC will make a $16 per share cash tender offer for outstanding Mynd shares. Mynd will then become a wholly-owned subsidiary of CSC.

III. The Proposed Complaint

According to the Commission’s proposed complaint, the relevant line of commerce in which to analyze the effects of CSC’s proposed acquisition of Mynd is the provision of claims assessment systems, and the relevant geographic market is the United States. Claims assessment systems are computer software and other intellectual property used by insurance companies and others to evaluate appropriate payments for claims for bodily injury or to evaluate return-to-work plans in workers compensation claims. Claims assessment systems are designed to aid claims adjusters by providing a consistent methodology for analyzing information that an adjuster would take into account in assessing the appropriate settlement values for claims. Mynd sells the claims assessment system known as COA, and CSC sells the claims assessment system known as Colossus. The proposed complaint alleges that the market for claims assessment systems in the United States is highly concentrated and that CSC and Mynd are the only significant competitors in the provision of claims assessment systems. The proposed complaint also alleges that entry into the relevant market would not be timely, likely, or sufficient to deter or offset adverse effects of the acquisition on competition. Entry is difficult in this market because the time expense necessary to develop software systems such as these are great. Claims
assessment systems involve the use of expert-system technology, which is a set of computerized methods for exploiting information drawn from relevant knowledge domains through rules or algorithms so as to assist in the solution of realworld problems, such as claims assessment. Entry is difficult in this market because of the time and expense necessary for finding and choosing the appropriate domain information, choosing or developing the appropriate rules or algorithms, and integrating the expert-system technology into a computing platform that is sufficiently robust, scalable, and stable while incorporating a domain-appropriate user interface.

The proposed complaint alleges that CSC's proposed acquisition of Mynd would eliminate actual, direct, and substantial competition between CSC and Mynd. Elimination of this competition would likely result in increased prices for claims assessment systems and reduced innovation as a result of delayed or reduced product development.

IV. Terms of the Agreement Containing Consent Order

The proposed Order is designed to remedy the anticompetitive effects of the acquisition in the United States market for claims assessment systems, as alleged in the complaint, by requiring the divestiture to ISO of Mynd's claims assessment business. The Order would also require respondents to dismiss with prejudice all of CSC's intellectual-property litigation claims against Neuronworks, the original developers of COA, so as to enable Neuronworks to perform COA-related consulting or other work in conjunction with ISO or another acquirer. Further, the Order would require respondents to release, hold harmless, and indemnify ISO or other acquirer from liability for any past, current, or future claims arising out of Mynd's and Neuronworks's acts prior to the divestiture date related to COA. The purpose of these provisions is to allow the acquiring to compete in the market by selling COA free from claims by CSC of intellectual property infringement. The proposed Order would also require respondents to divest other assets related to Mynd's claims assessment systems business, including customer lists, contracts, intellectual property, and other intangible assets so as to put ISO or another acquirer into a position to compete as soon as possible following the divestiture.

ISO, based in New York City, is a leading vendor of statistical, actuarial, and underwriting information for and about the property and casualty insurance industry. ISO uses these statistics to develop advisory prospective loss costs—projections of average future claim payments and loss adjustment expenses, for various lines of insurance and classifications of policy holders. Insurance companies use these loss costs to develop their own independent rates for their insurance policies. ISO also provides aggregate insurance statistics to state regulators.

If the Commission, at the time that it accepts the proposed Order for public comment, notifies respondents that it does not approve of the proposed divestiture to ISO, or the manner of the divestiture, the proposed Order provides that respondents would have three months to divest Mynd's claims assessment business to a different Commission-approved acquirer. If respondents did not complete the divestiture in that period, a trustee would be appointed who, upon Commission approval, would have the authority to divest Mynd's claims assessment business to a Commission-approved acquirer.

The proposed Order to Maintain Assets that is also included in the Consent Agreement requires that respondents preserve the Mynd assets they are required to divest as a viable and competitive operation and conduct the Mynd claims assessment business in the ordinary course of business until those Mynd assets are transferred to the Commission-approved acquirer.

The Consent Agreement requires respondents to provide the Commission with an initial report setting forth in detail the manner in which respondents will comply with the provisions relating to the divestiture of assets. The proposed Order further requires respondents to provide the Commission with a report of compliance with the Order within thirty (30) days following the date the Order becomes final and every thirty (30) days thereafter until they have complied with the terms of the Order.

V. Opportunity for Public Comment

The proposed Order has been placed on the public record for thirty days for receipt of comments by interested persons. Comments received during this period will become part of the public record. After thirty days, the Commission will again review the proposed Order and the comments received and will decide whether it should withdraw from the proposed Order or make it final. By accepting the proposed Order for final approval, the Commission anticipates that the competitive problems alleged in the proposed complaint will be resolved. The purpose of this analysis is to invite public comment on the proposed Order, including the proposed divestiture, to aid the Commission in its determination of whether to make the proposed Order final. This analysis is not intended to constitute an official interpretation of the proposed Order, nor is it intended to modify the terms of the proposed Order in any way.

By direction of the Commission.

Donald S. Clark,
Secretary.

AGENCY: Federal Trade Commission.
ACTION: Proposed Consent Agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the draft complaint that accompanies the consent agreement and the terms of the consent order embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before January 17, 2001.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, Room H-159, 600 Pennsylvania Avenue, NW., Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT: Molly S. Boast or Jacqueline K. Mendel, FTC/H-374, 600 Pennsylvania Avenue, NW., Washington, DC 20580, (202) 326-2039 or 326-2603.

SUPPLEMENTARY INFORMATION: Pursuant to section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46, and section 2.34 of the Commission's Rules of Practice (16 CFR 2.34), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An
electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for December 18, 2000), on the World Wide Web, at “http://www.ftc.gov/os/2000/12/index.htm.” A paper copy can be obtained from the FTC Public Reference Room, Room H–130, 600 Pennsylvania Avenue, NW., Washington, DC 20580, either in person or by calling (202) 326–3627.

Public comment is invited. Comments should be directed to: FTC/Office of the Secretary, Room H–159, 600 Pennsylvania Avenue, NW., Washington, DC 20580. Two paper copies of each comment should be filed, and should be accompanied, if possible, by a 3½ inch diskette containing an electronic copy of the comment. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with section 4.9(b)(i) of the Commission’s Rules of Practice (16 CFR 4.9(b)(i)).

Analysis of Proposed Consent Order To Aid Public Comment

The Federal Trade Commission (“Commission”) has accepted, subject to final approval, an agreement containing a proposed Consent Order from Glaxo Wellcome plc (“Glaxo”) and SmithKline Beecham plc. (“SB”) which is designed to remedy the anticompetitive effects of the merger of Glaxo and SB. Under the terms of the agreement, the companies would be required to: (1) Divest all of SB’s worldwide rights and intellectual property relating to its antiemetic drug, Kytril, to F. Hoffman-LaRoche; (2) divest SB’s intellectual property rights to manufacture and market ceftazidime to Abbott Laboratories; (3) divest SB’s worldwide rights and intellectual property relating to its antiviral drugs, Famvir and Denavir, including the rights to the base active ingredients, penciclovir and famciclovir, to Novartis Pharm AG and Novartis Pharmaceuticals Corporation; (4) return to Cantab Pharmaceuticals plc all rights to use Cantab’s DISC technology for the development of a prophylactic herpes vaccine; (5) divest Glaxo’s U.S. and Canadian Zantac trademark rights to Pfizer (formerly Warner-Lambert) and thereby remove restrictions on the ability of Pfizer’s Zantac 75 to compete in the over-the-counter (“OTC”) H–2 blocker acid relief market; (6) assign all of SB’s relevant intellectual property rights and relinquish all options to the drug renzapride, a drug to treat irritable bowel syndrome, to Alizyme plc; (7) assign all of SB’s relevant intellectual property rights and relinquish all of Glaxo’s reversionary rights to GI147211C, a topoisomerase I inhibitor to treat certain types of cancer, to Gilead Sciences, Inc.; and (8) assign all of SB’s relevant intellectual property rights and relinquish all options to regain control over frovatriptan, a drug to treat migraine headaches, to Vernalis Ltd.

The proposed Consent Order has been placed on the public record for thirty (30) days for receipt of comments by interested persons. Comments received during this period will become part of the public record. After thirty (30) days, the Commission will again review the agreement and the comments received, and will decide whether it should withdraw from the agreement or make final the agreement’s proposed Consent Order.

Pursuant to a scheme of arrangement announced on January 17, 2000, Glaxo and SB propose to combine their two companies in a transaction valued at approximately $182 billion. Thereafter, the merged entity will be renamed Glaxo SmithKline plc. The proposed Consent Order requires the proposed merger, if consummated, would constitute a violation of Section 7 of the Clayton Act, as amended, 15 U.S.C. 18, and section 5 of the FTC Act, as amended, 15 U.S.C. 45, in the markets for the research, development, manufacture and sale of: (1) 5HT–3 antiemetic drugs; (2) ceftazidime; (3) second generation oral and intravenous antiviral drugs for the treatment of herpes virus infections; (4) prescription topical antiviral cremes for herpes labialis or oral herpes, commonly referred to as cold sores; (5) prophylactic herpes vaccines; (6) OTC H–2 blockers; (7) topoisomerase I inhibitors marketed or in development for the treatment of ovarian, non-small cell lung, colorectal and other solid tumor cancers; (8) drugs for the treatment of irritable bowel syndrome (“IBS”); and (9) triptan drugs for the treatment of migraine headaches. The proposed Consent Order would remedy the alleged violations by replacing the lost competition that would result from the merger in each of these markets.

5HT–3 Antiemetic Drugs

Antiemetic drugs are administered to cancer patients undergoing chemotherapy and radiation therapy to prevent or lessen the nausea and vomiting associated with those medical procedures. 5HT–3 antiemetic products have revolutionized the treatment of patients with cancer because they are more effective than any of the older antiemetic products. Today, oncologists can pursue more aggressive chemotherapy and radiation regimens because patients are much less likely to experience debilitating nausea and vomiting, side effects that can curtail aggressive cancer treatment.

The United States market for 5HT–3 antiemetic drugs is highly concentrated. In the $778 million dollar 5HT–3 antiemetic market, Glaxo markets Zofran and SB markets Kytril, which together represent approximately 90% of the market. Only one other firm, Aventis, markets a 5HT–3 antiemetic product, called Anzemet.

Entry into the manufacture and sale of prescription pharmaceutical drugs is difficult, expensive, and time-consuming. De novo entry for pharmaceutical products has been estimated to take between 12 and 24 years and cost upwards of $359 million. No other pharmaceutical company is expected to enter the United States market with a 5HT–3 antiemetic product in the foreseeable future.

The merger of SB and Glaxo would reduce the number of 5HT–3 antiemetic competitors from three to two; create a dominant firm with a greater than 90%, share of the overall market; and leave Anzemet as the only remaining competitor against the combined Glaxo SmithKline. Currently, health care provider customers benefit enormously by competing Zofran and Kytril against one another to achieve favorable pricing.

The Consent Agreement effectively remedies the anticompetitive effects in the market for 5HT–3 antiemetic drugs by requiring that: (1) SB divest all of its worldwide rights and intellectual property relating to Kytril (granisetron) to F. Hoffman-LaRoche Ltd. (“Roche”); (2) SB submit all confidential information and know-how regarding Kytril to Roche; (3) the former SB sales force and management who participated in the marketing of Kytril maintain the confidentiality of this information; and (4) the former SB sales and marketing personnel be prohibited from selling products that compete with Kytril, i.e., Zofran, for a period of six to twelve months (depending on the status of the employee).

The Consent Agreement also requires SB to contract manufacture Kytril for Roche until Roche obtains approval from the U.S. Food and Drug Administration (“FDA”) to manufacture Kytril for itself.

Second Generation Oral and Intravenous Antiviral Drugs for the Treatment of Herpes

SB manufactures and markets Famvir, and Glaxo manufactures and markets Valtrex, the only two second generation oral and intravenous antiviral prescription drugs for the treatment of
herpes infections. Due to their greater bioavailability, superior efficacy, and requirements for less frequent dosing, Famvir and Valtrex have a significant advantage in treating herpes simplex virus Type 1 ("HSV–1"), herpes simplex virus Type 2 ("HSV–2") and the herpes varicella zoster virus ("herpes zoster") over the first-generation drug acyclovir.

New entry into the manufacture and sale of second generation antiviral drugs for the treatment of HSV–1, HSV–2 and herpes zoster infections is difficult, time-consuming, and expensive. SB and Glaxo are the only firms that have introduced second generation products to the market, and no other companies are developing drugs for these indications. Thus, given the amount of time it would take for a new product to obtain regulatory approval, entry cannot occur in a timely fashion to counter the anticipated anticompetitive effects of the proposed merger.

The proposed merger of SB and Glaxo would eliminate the only competition that exists in the $500 million market for second generation prescription oral and intravenous antiviral drugs for the treatment of HSV–1, HSV–2, and herpes zoster. As a result of the proposed merger, American consumers are likely to pay higher prices for Valtrex and Famvir, and because SB and Glaxo offer the only second generation drugs available to treat HSV–1, HSV–2, and herpes zoster infections, the merger will result in a monopoly for an extended period, as there are no other drugs in research or development for these indications.

The proposed divestiture to Novartis remedies the anticompetitive effects of the merger in both the oral and intravenous antiviral herpes infection treatment market as well as those in the topical oral herpes prescription creme market, which is discussed below. In the oral and intravenous herpes antiviral market, the divestiture resolves the anticompetitive effects of the proposed merger by requiring that: (1) SB divest all of its worldwide rights and intellectual property relating to Famvir, including rights to the base active ingredient famciclovir, to Novartis; (2) SB submit all confidential information and know-how regarding Famvir to Novartis; (3) the former SB sales force and management who participated in the marketing of Famvir maintain the confidentiality of this information; and (4) the former SB sales and marketing personnel be prohibited from selling products that compete with Famvir, i.e., Valtrex for a period of six to twelve months (depending on the status of the employee).

The Consent Agreement also requires SB to contract manufacture Famvir for Novartis until Novartis obtains FDA approval to manufacture Famvir for itself.

**Prescription Topical Antiviral Cremes for Oral Herpes**

SB's Denavir is currently the only prescription topical antiviral medication approved by the FDA for the treatment of oral herpes infections, commonly called cold sores. Meanwhile, Glaxo's Zovirex creme is the dominant prescription cold sore product in much of Europe. Glaxo was in the final stages of seeking FDA approval to market its creme formulation of Zovirex for the treatment of oral cold sores in the United States. But, in April of 2000, after the announcement of its proposed merger with SB, Glaxo withdrew the Zovirex creme application then pending at the FDA, but without prejudice to refiling. At the time, Glaxo was little more than six months from bringing its Zovirex creme to the U.S. market to compete against Denavir.

*De novo* entry into prescription topical antiviral cremes for the treatment of oral herpes is difficult, time-consuming, and expensive. No other companies are currently developing prescription topical medications for the treatment of cold sores.

The proposed merger eliminates the only potential entrant into the market for prescription topical antiviral medications for the treatment of cold sores—the Zovirex creme which Glaxo was close to bringing to market. If SB and Glaxo merge, it is highly unlikely that the merged firm would bring the Zovirex creme to market to compete against Denavir.

As noted above, the proposed divestiture to Novartis remedies the anticompetitive effects of the merger in both the oral and intravenous antiviral herpes infection treatment market as well as those in the prescription topical oral herpes antiviral market. In the prescription topical oral herpes antiviral market, the divestiture resolves the anticompetitive effects of the proposed merger by requiring that: (1) SB divest all of its worldwide rights and intellectual property relating to Denavir, including rights to the base active ingredient penciclovir, to Novartis; (2) SB submit all confidential information and know-how regarding Denavir to Novartis; (3) the former SB sales force and management who participated in the marketing of Denavir maintain the confidentiality of this information; and (4) the former SB sales and marketing of Denavir maintain the confidentiality of this information; and (4) the former SB sales and marketing personnel be prohibited from selling products that compete with Denavir, i.e., topical Zovirex creme, for a period of six to twelve months (depending on the status of the employee).

The Consent Agreement also requires SB to contract manufacture Denavir for Novartis until Novartis obtains FDA approval to manufacture Denavir for itself.

**Ceftazidime**

Ceftazidime is an injectable antibiotic administered to hospitalized patients who are critically ill and at risk of contracting, and possible dying from, pseudomonas infection, a serious hospital-borne infection. Ceftazidime is considered the "gold standard" for treating patients who are either at risk of contracting pseudomonas or who have such infections. Ceftazidime is a third-generation of a class of antibiotics called cephalosporins and is considered a "broad spectrum" antibiotic effective at treating a broad range of hospital-borne infection. Nearly all hospitals in the U.S. have ceftazidime on their formularies for use in combating pseudomonas infections.

Last year, sales of all ceftazidime products were approximately $82 million dollars in the U.S. Currently, only two firms, SB and Glaxo, manufacture ceftazidime. Three firms market ceftazidime products: Glaxo manufactures and markets Fortaz and Ceptaz; Lilly markets Tazidime, which is manufactured by SB; and Abbott Labs markets SB’s Tazicef brand in the U.S. In 1999, sales of Glaxo’s Fortaz and Ceptaz and of SB’s Tazicef amounted to 85% of the market.

There are significant barriers to entry into the manufacture and sale of ceftazidime. The production of ceftazidime requires an aseptic facility for both the manufacture and sterile filling processes, greatly increasing the costs and complexities of manufacturing the product. Building and obtaining FDA approval for this type of facility takes much longer than two years, and patents covering the manufacture of ceftazidime that do not expire for a number of years prevent generic production of ceftazidime at this time.

The proposed merger of Glaxo and SB would create a monopoly in the manufacture of ceftazidime and would reduce the number of firms marketing ceftazidime from three to two. Glaxo SmithKline would not likely continue its relationship with Abbott as a marketer, removing a competing marketer of branded ceftazidime. Lilly, the only other competitor to Glaxo
SmithKline, would be dependent on Glaxo SmithKline for its supply. The presence of three ceftazidime competitors in the market allows customers to negotiate more favorable pricing than would be possible with only two firms. Consequently, after the merger, customers’ ability to negotiate lower prices for ceftazidime would diminish, likely resulting in higher prices.

The Consent Agreement effectively remedies the anticompetitive effects in the market for ceftazidime by requiring: (1) SB to provide all necessary intellectual property rights to manufacture and market ceftazidime to Abbott Laboratories; and (2) the creation of a new stream of supply for ceftazidime to Abbott that is independent of SB. Thereby, the Consent Agreement replaces SB’s manufacturing and marketing rights and capabilities in the United States ceftazidime market.

**Prophylactic Herpes Vaccines**

The evidence shows that the development of prophylactic vaccines to prevent infection by HSV–1 and HSV–2 is a relevant product market. Currently, no vaccines exist for the prevention of HSV–1 and HSV–2 infection, but SB and Glaxo are two of very firms developing prophylactic vaccines to prevent herpes infections. SB is one of the world’s three leading vaccine suppliers, and currently, SB has the most advanced development effort toward a prophylactic herpes vaccine. Glaxo is relatively new in the vaccine area, but has a significant effort underway to develop vaccines against genital herpess. Glaxo has been developing a vaccine for genital HSV infection using the Disabled Infectious Single Cycle (“DISC”) technology developed by Cantab Pharmaceuticals. With Cantab, Glaxo is currently pursuing a therapeutic indication, and had planned to begin work with Cantab designing Phase III clinical trials on a prophylactic indication this year, exercising its option to do so pursuant to its contract with Cantab.

New entry into the research, development, manufacture and sale of vaccines to prevent HSV–1 and HSV–2 infection is extremely difficult, time-consuming, and expensive. Development of vaccines for other diseases have generally taken more than a decade and the time frames for vaccine development tend to be longer than those for prescription drugs. Other firms that have undertaken efforts to develop a prophylactic herpes vaccine either have failed in their efforts or are far behind and Glaxo/Cantab.

The merger is likely to chill innovations in a very complex area as a combined Glaxo SmithKline would potentially forego the development efforts of one of the firms. Even if both products were developed, the merger would eliminate future price competition between the two prophylactic vaccines.

The Consent Agreement effectively remedies the anticompetitive effects in the market for prophylactic vaccines for the prevention of infection by HSV–1 and HSV–2 by requiring Glaxo to return to Cantab all rights and information and results from clinical trials that are necessary for Cantab to develop a prophylactic herpes vaccine. This will permit Cantab to pursue a prophylactic indication for the vaccine developed by the joint venture, and, should that effort be unsuccessful, to develop a different prophylactic herpes vaccine using its DISC technology.

**OTC H–2 Blockers**

Histamine-2 blockers, more commonly known as “H–2 blockers,” are a class of drugs available over-the-counter (“OTC”) for acide relief. H–2 blocker products originated as prescription products and were later approved by the FDA for OTC sale. As their name implies, H–2 blockers work by blocking histamine (acid) production, acting in essence like corks to prevent the release of stomach acid.

Today, the $502 million OTC H–2 blocker market is comprised of four branded products—SB’s Tagamet, Glaxo’s Zantac 75 (marketed by Pfizer, formerly Warner-Lambert), Johnson & Johnson’s Pepcid AC and Whitehall-Robin’s Axid, along with private label equivalents of Tagamet, Zantac 75, and Pepcid AC. SB’s Tagamet and Glaxo’s Zantac 75 have a combined market share of approximately 41%.

Entry into the OTC H–2 blocker acid relief market is time-consuming, difficult, and expensive. New products take several years to develop; each must be approved by the FDA for OTC sale, or alternatively, approved to switch from prescription to OTC status; and furthermore, expensive advertising and promotion is required to establish a brand name in the OTC market. Currently, no additional H–2 blockers are expected to enter the OTC market.

The merger of SB and Glaxo is likely to lessen the competitiveness of Zantac 75 in the OTC market where it is marketed by Pfizer. Currently, the trademark license under which Pfizer sells Zantac 75 requires the approval of Glaxo to make any changes or improvements. Prior to the merger, as licensor to Pfizer, Glaxo had the incentive to approve changes or improvements that would enhance the competitiveness of Zantac 75 in the OTC H–2 blocker market. But after the merger, it is likely that Glaxo SmithKline will be less inclined to approve changes to enhance the competitiveness of Zantac 75, an OTC H–2 rival to its Tagamet. Furthermore, Pfizer would be in the difficult position of having to ask its close rival for permission to make product improvements, thereby exposing its future competitive strategy, which the rival might preemptively counter. Such a situation could prevent or discourage Pfizer from pursuing such competitive product improvements, as Glaxo SmithKline would be provided with direct access to competitive intelligence on a product that competes directly against its own.

The Consent Agreement effectively remedies the anticompetitive effects in the market for OTC H–2 blockers by: (1) Requiring Glaxo to divest all of its U.S. and Canadian trademark rights to Zantac to Pfizer; (2) removing all requirements on Pfizer to seek prior approval from Glaxo for any product line extensions; (3) removing all restrictions on Pfizer’s ability to seek FDA approval of higher OTC dosage strengths for Zantac; (4) reducing the cost to Pfizer if a higher dosage strength is approved by the FDA for the OTC market to a payment not to exceed $3 million; and (5) allowing Pfizer to use any FDA approved form of the base active, ranitidine, in Zantac products. In the United States and Canada, Glaxo only retains the exclusive use of the Zantac name for prescription products that contains ranitidine. This gives Pfizer the unrestricted ability to market the OTC Zantac products, improve those products, and use the Zantac trademarks unfettered, which will allow Pfizer to compete vigorously and effectively in the OTC H–2 blocker market.

**Topoisomerase I Inhibitors for the Treatment of Ovarian, non-SCLC, Colorectal, and Other Solid Tumor Cancers**

zSB’s drug Hycamptin is currently a leading therapy for ovarian and non-small cell lung cancer (“non-SCLC”), and SB is pursuing indications for these cancers as well as a second-line indication for treating colorectal and other solid-tumor cancers. Gilead Sciences, in conjunction with Glaxo, is developing a topoisomerase I inhibitor, G14722C, that is being developed for ovarian, breast, non-SCLC, and other solid-tumor indications, including colorectal cancer. The only other topoisomerase I inhibitor on the market...
is Pharmacia’s Camptosar, which is indicated as a second-line treatment for colorectal cancer, and is being tested for non-SCLC.

The proposed merger is likely to create anticompetitive effects in the topoisomerase I inhibitor market by potentially eliminating one of the few research and development efforts in this area. As a result of the merger, the combined entity could unilaterally delay, terminate or otherwise fail to develop the GI147211C topoisomerase I inhibitor, resulting in less product innovation, fewer choices, and higher prices for consumers.

The Consent Agreement effectively remedies the anticompetitive effects in the market for topoisomerase I inhibitors for the treatment of certain cancers by requiring Glaxo to assign all relevant GI147211C intellectual property to Gilead and to relinquish its reversionary rights to Gilead’s drug. Thus, the Consent Agreement eliminates Glaxo’s ability to regain control over GI147211C, a drug likely to compete against SB’s Hycamptin in combating ovarian, non-SCLC, colorectal, and other solid tumor cancers.

**Drugs for the Treatment of Irritable Bowel Syndrome**

Irritable bowel syndrome (“IBS”) is not well understood and often has been labeled as several different conditions, including irritable colon and spastic colon. People with IBS experience varying symptoms, with some sufferers experiencing symptoms of diarrhea, others constipation, and still others a mix of both. The symptoms of IBS may include cramping, abdominal pain and other forms of abdominal discomfort. Seventy percent of IBS sufferers are women. IBS is estimated to affect up to 15% of the U.S. population.

Glaxo currently owns a drug called Lotronex for the treatment of IBS. Though effective in treating IBS sufferers, Lotronex was recently taken off the market by Glaxo because of concerns about serious side effects in some patients, but Glaxo continues to conduct clinical trials for Lotronex. Lotronex is the only FDA-approved drug for the treatment of IBS. SB currently does not have a drug in this market, but has an option to acquire and market renzapride, a drug being developed by Alizyme Therapeutics plc for the treatment of IBS. Alizyme’s renzapride drug is about 2–3 years from being on the market. In addition to the Alizyme/SB renzapride development effort, only two other IBS drugs are in clinical development; thus, timely entry will not occur to deter or counteract the likely anticompetitive effects of the proposed merger.

The proposed merger likely would eliminate one of the few research and development efforts on drugs to treat IBS. As a result of the merger, Glaxo SmithKline would likely delay, terminate or otherwise fail to develop renzapride which would compete against Lotronex, resulting in less product innovation, and consequently, fewer product choices, and higher prices for consumers.

The Consent Agreement effectively remedies the anticompetitive effects in the market for drugs to treat IBS by requiring SB to assign all relevant intellectual property rights to Alizyme and to relinquish all options in renzapride, thus removing any possible influence over Alizyme’s development of an IBS drug that is likely to compete directly against Glaxo’s Lotronex.

**Triptan Drugs for the Treatment of Migraine Headaches**

Glaxo is the leading seller of triptan drugs for the treatment of migraine headaches with its two triptan migraine drugs—Immitrex (sumatriptan succinate) and Amerge (naratriptan hydrochloride). SB has a reversionary interest in another triptan drug for migraines—SB209509 (frovatriptan)—which is being developed by Vernalis Ltd. The only other approved migraine drugs in the triptan class are Maxalt (rizatriptan benzoate) from Merck and Zomig (zolmitriptan) from Astra Zeneca. Vernalis expects to submit final data to the FDA by the end of 2000, and hopes to launch its frovatriptan drug in the second half of 2001.

In addition to the SB/Vernalis frovatriptan effort, only two other triptan drugs for migraine are in clinical development and are well behind the SB/Vernalis efforts. Thus, timely entry will not occur to deter or counteract the likely anticompetitive effects of the proposed merger.

The proposed merger likely would eliminate one of the few research and development efforts on triptan drugs to treat migraines. As a result of the merger, Glaxo SmithKline would likely delay, terminate or otherwise fail to develop frovatriptan which would compete against Glaxo’s Immitrex and Amerge, resulting in less product innovation, and consequently, fewer product choices and higher prices for consumers.

To resolve the merger’s anticompetitive effects in this market, SB renegotiated its agreement with Vernalis. SB will assign all relevant intellectual property to Vernalis and relinquishing its options in frovatriptan, which likely will compete directly against Glaxo’s Immitrex and Amerge. The Consent Agreement also allows the Commission to appoint a Monitor Trustee to ensure Glaxo SmithKline’s compliance with all of the requirements of the Order. In addition, the Commission may appoint a Divestiture Trustee in the event that Glaxo SmithKline fails to divest all of the assets required to be divested. Finally, the Consent Agreement imposes reporting requirements on Glaxo SmithKline until such time as it has fully complied with all of the provisions of the Order.

The purpose of this analysis is to facilitate public comment on the proposed Consent Order, and it is not intended to constitute an official interpretation of the proposed Consent Order or to modify its terms in any way.

By direction of the Commission.

Donald S. Clark,
Secretary.

**FEDERAL TRADE COMMISSION**

[File No. 001 0215; Docket No. C–3987]

Philip Morris Companies, Inc., and Nabisco Holdings Corp.; Analysis To Aid Public Comment

**AGENCY:** Federal Trade Commission.

**ACTION:** Proposed consent agreement.

**SUMMARY:** The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis To Aid Public Comment describes both the allegations in the draft complaint that accompanies the consent agreement and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

**DATES:** Comments must be received on or before January 8, 2001.

**ADDRESSES:** Comments should be directed to: FTC/Office of the Secretary, Room H–159, 600 Pennsylvania Avenue, NW., Washington, DC 20580.

**FOR FURTHER INFORMATION CONTACT:** Richard Parker or Joseph Brownman, FTC/H–374, 600 Pennsylvania Avenue, NW., Washington DC 20580.

notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC Home Page (for December 7, 2000), on the World Wide Web, at “http://www.ftc.gov/os/2000/12/index.htm.” A paper copy can be obtained from the FTC Public Reference Room, Room H-130, 600 Pennsylvania Avenue, NW., Washington, DC 20580, either in person or by calling (202) 326-3627.

Public comment is invited. Comments should be directed to: FTC/Office of the Secretary, Room 159, 600 Pennsylvania Avenue, NW., Washington, DC 20580. Two paper copies of each comment should be filed, and should be accompanied, if possible, by a 3½ inch diskette containing an electronic copy of the comment. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with Section 4.9(b)(6)(ii) of the Commission’s Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Analysis To Aid Public Comment on the Provisionally Accepted Consent Order

I. Introduction

The Federal Trade Commission (“Commission”) has accepted for public comment from Philip Morris Companies, Inc. (“Philip Morris”) and Nabisco Holdings Corp. (“Nabisco”) an Agreement Containing Consent Orders (“Provisionally Accepted Consent Order”). Philip Morris and Nabisco (“Proposed Respondents”) have also reviewed a Draft Complaint that the Commission contemplates issuing. The Commission and the Proposed Respondents have also agreed to an Order to Maintain Assets that requires the Proposed Respondents to maintain the competitive viability of certain assets pending divestiture. The Proposed Consent Order will remedy the likely anticompetitive effects in five relevant product markets arising from the proposed acquisition by Philip Morris of Nabisco.

II. Parties and Transaction

Proposed Respondent Philip Morris is a Virginia corporation with its headquarters and principal place of business at 120 Park Avenue, New York, New York 10017-5592. In 1999, Philip Morris had total worldwide sales of approximately $79 billion, and total United States sales of approximately $48 billion. Philip Morris, through its Kraft Foods Inc. subsidiary, is the nation’s largest food and beverage company.

Proposed Respondent Nabisco is a Delaware corporation with its headquarters and principal place of business located at 7 Campus Drive, Parsippany, New Jersey 07054-0311. In 1999, Nabisco had total worldwide sales of approximately $8.3 billion, and total United States sales of approximately $5.9 billion. Nabisco is the nation’s seventh largest food and beverage company.

On June 25, 2000, Philip Morris and Nabisco entered into an agreement for Philip Morris to acquire Nabisco. The value of the transaction is approximately $19.4 billion.

III. Proposed Complaint

According to the Draft Complaint that the Commission intends to issue, Philip Morris, through its Kraft Foods subsidiary, and Nabisco compete in the United States to market and distribute (a) dry-mix gelatin, (b) dry-mix pudding, (c) no-bake desserts, (d) baking powder, and (e) intense mints.

The Commission is concerned that the proposed acquisition would eliminate substantial competition between Philip Morris and Nabisco, and increase concentration substantially, in each relevant market, and result in higher prices. The Commission stated it has reason to believe that the proposed acquisition would have anticompetitive effects and violate Section 7 of the Clayton Act and Section 5 of the Federal Trade Commission Act.

IV. Competitive Concerns

A. Dry-Mix Gelatin Market

Total United States sales of all dry-mix gelatin dessert products are about $212 million. In this market, Philip Morris, through its Jell-O brand, is the largest competitor with about an 86% share, and Nabisco, through its Royal and My-T-Fine brands, has about a 9% share. After the acquisition, Philip Morris will control approximately 91% of all dry-mix pudding sales. The proposed acquisition will increase the HHI by more than 1400 points and result in a market concentration of over 8300 points.

B. Dry-Mix Pudding Market

Total United States sales of all dry-mix pudding dessert products are about $202 million. In this market, Philip Morris, through its Jell-O brand, is the largest competitor with about an 82% share, and Nabisco, through its Royal and My-T-Fine brands, has about a 9% share. After the acquisition, Philip Morris will control approximately 91% of all dry-mix pudding sales. The proposed acquisition will increase the HHI by more than 1400 points and result in a market concentration of over 8300 points.

V. The Consent Order

The Proposed Consent Order, if finally issued by the Commission, would settle all of the charges alleged in the Commission’s Draft Complaint. Under the terms of the Proposed Consent Order, Philip Morris and Nabisco will be required to divest the...
Nabisco dry-mix desserts and baking powder businesses to The Jel Sert Company and the intense mints business, together with related Ice Breakers gum and Breath Savers mint businesses, to Hershey Foods Corporation.

Philip Morris and Nabisco will be required to complete the required divestitures within ten (10) business days from the date they consummate their proposed acquisition. In the event Philip Morris and Nabisco do not complete the required divestitures in the time allowed, procedures for the appointment of a trustee to sell the assets have been agreed to and will be triggered. The Proposed Consent Order empowers the trustee to sell such additional ancillary assets as may be necessary to assure the marketability, viability, and competitiveness of the businesses that are required to be divested.

Accompanying the Proposed Consent Order is an Order to Maintain Assets. This order requires Philip Morris and Nabisco to preserve and maintain the competitive viability of all of the assets required to be divested in order to insure that the competitive value of these assets will be maintained after the merger but before the assets are actually divested.

VI. Opportunity for Public Comment

This Proposed Consent Order has been placed on the public record for thirty (30) days for receipt of comments from interested persons. Comments received during this period will become part of the public record. After the thirty (30) days, the Commission will again review the Proposed Consent Order and the comments received, and will decide whether it should withdraw from the agreement or make final the Consent Order in the agreement.

By accepting the Proposed Consent Order subject to final approval, the Commission anticipates that the competitive problems alleged in the Draft Complaint will be resolved. The purpose of this analysis is to invite and facilitate public comment concerning the Proposed Consent Order. It is not intended to constitute an official interpretation of the Proposed Consent Order, nor is it intended to modify the terms of the orders in any way.

By direction of the Commission.

Donald S. Clark,
Secretary.

FEDERAL TRADE COMMISSION

[File No. 001–0197]

The Valspar Corporation; Analysis to Aid Public Comment

AGENCY: Federal Trade Commission.

ACTION: Proposed consent agreement.

SUMMARY: The consent agreement in this matter settles alleged violations of federal law prohibiting unfair or deceptive acts or practices or unfair methods of competition. The attached Analysis to Aid Public Comment describes both the allegations in the draft complaint that accompanies the consent agreement and the terms of the consent order—embodied in the consent agreement—that would settle these allegations.

DATES: Comments must be received on or before January 18, 2001.

ADDRESSES: Comments should be directed to: FTC/Office of the Secretary, Room H–159, 600 Pennsylvania Avenue, NW., Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT: Christina R. Perez, FTC/H–374, 600 Pennsylvania Avenue, NW., Washington, DC 20580. (202) 326–2048.

SUPPLEMENTARY INFORMATION: Pursuant to section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46, and section 2.34 of the Commission’s Rules of Practice (16 CFR 2.34), notice is hereby given that the above-captioned consent agreement containing a consent order to cease and desist, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of thirty (30) days. The following Analysis to Aid Public Comment describes the terms of the consent agreement, and the allegations in the complaint. An electronic copy of the full text of the consent agreement package can be obtained from the FTC's Web site at “http://www.ftc.gov/os/2000/12/index.htm.” A paper copy can be obtained from the FTC’s Public Reference Room, Room H–130, 600 Pennsylvania Avenue, NW., Washington, DC 20580, either in person or by calling (202) 326–3627.

Public comment is invited. Comments should be directed to: FTC/Office of the Secretary, Room H–159, 600 Pennsylvania Avenue, NW., Washington, DC 20580. Two paper copies of each comment should be filed, and should be accompanied, if possible, by a 31⁄2 inch diskette containing an electronic copy of the comment. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with section 4.9(b)(6)(ii) of the Commission’s Rules of Practice (16 CFR 4.9(b)(6)(ii)).

Analysis of Agreement Containing Consent Order To Aid Public Comment

The Federal Trade Commission ("Commission") has accepted, subject to final approval, an Agreement Containing Consent Order ("Consent Agreement") from Valspar Corporation ("Valspar"), which is designed to remedy the anticompetitive effects resulting from Valspar’s acquisition of Lilly Industries, Inc. ("Lilly"). Under the terms of the agreement, within ten days of the date the Consent Agreement is placed on the public record, Valspar will be required to divest its mirror coatings business, which is comprised of silver, tin and copper solutions, mirror backing paint, and any other coating researched, developed, manufactured or sold by Valspar that is used in the production of a mirror, to Spraylat Corporation. Should Valspar fail to do so, the Commission may appoint a trustee to divest the mirror coatings business.

The proposed Consent Agreement has been placed on the public record for thirty (30) days for reception of comments by interested persons. Comments received during this period will become part of the public record. After thirty (30) days, the Commission will again review the proposed Consent Agreement and the comments received, and will decide whether it should withdraw from the proposed Consent Agreement or make final the Decision & Order.

Valspar and Lilly are the two leading suppliers of silver, tin and copper solutions (“mirror solutions”) in the United States and two of three suppliers of mirror backing paint in the United States. Five basic inputs are needed to make a mirror: glass, a tin solution, a silver solution, a copper solution, and mirror backing paint. Most mirrors are made by placing clean pieces of glass flat on a conveyor belt, which moves the glass through the various stations where the solutions and paint are applied to
the back of each piece of glass. The first layer applied to the glass is a tin solution, which is an adhesion promoter so that the silver will bond to the glass. After the tin solution, a silver solution is applied, which creates a metal film on the glass surface, giving the mirror its reflective surface. The third step is to apply a copper solution, which helps keep the silver from oxidizing and creates a surface to which the mirror backing paint will adhere. Finally, the mirror backing paint is applied. This adds a hard coating that protects the solutions from becoming scratched or damaged and further protects the silver solution from corrosion.

Both Lilly and Valspar produce all of the components, other than glass, necessary to make a mirror. The United States mirror solutions and mirror backing paint markets are highly concentrated, and the proposed acquisition would produce a firm controlling over 90% of the mirror solutions markets and over 60% of the mirror backing paint market. Both companies have frequently competed against each other for customers. By eliminating competition between the two most significant competitors in these highly concentrated markets, the proposed acquisition would allow the combined firm to exercise market power unilaterally, thereby increasing the likelihood that purchasers of mirror solutions as well as mirror backing paint would be forced to pay higher prices and that innovation and service levels in these markets would decrease.

Significant impediments to new entry exist in the mirror solutions and mirror backing paint markets. A new entrant into any of these markets would need to undertake the difficult, expensive and time-consuming process of developing a competitive product, establishing reliable U.S. distribution and technical support, and developing a reputation among mirror manufacturers for consistently producing a high-quality product. Because of the difficulty of accomplishing these tasks, new entry into either the mirror solutions markets or the mirror backing paint market could not be accomplished in a timely manner. Additionally, new entry into any one of these markets is made more unlikely because of the limited sales opportunities available to new entrants.

The Consent Agreement effectively remedies the acquisition’s anticompetitive effects in the United States mirror solutions and mirror backing paint markets by requiring Valspar to divest its mirror coatings business. Pursuant to the Consent Agreement, Valspar is required to divest its mirror coatings business to Spraylat Corporation within ten days of the date the Commission places the Order on the public record. Should Valspar fail to do so, the Commission may appoint a trustee to divest the business.

The Commission’s goal in evaluating possible purchasers of divested assets is to maintain the competitive environment that existed prior to the acquisition. A proposed buyer of divested assets must not itself present competitive problems. The Commission is satisfied that Spraylat is a well-qualified acquirer of the divested assets. Based in Mount Vernon, New York, Spraylat is a family owned company that manufactures and sells specialty paints and coatings for industrial uses. Spraylat possesses the necessary industry expertise to replace the competition that existed prior to the proposed acquisition. Furthermore, Spraylat poses no separate competitive issues as the acquirer of the divested assets.

The Consent Agreement includes a number of provisions that are designed to ensure that the transfer of Valspar’s mirror coatings business to the acquirer is successful. The Consent Agreement requires Valspar to provide incentives to certain key employees to accept employment, and remain employed, by the acquirer. Valspar is also prohibited from inducing key customers from terminating their contracts with the acquirer for a period of one year. Finally, Valspar employees involved with its mirror coating business are prohibited from disclosing any confidential information to employees involved with the Lilly business.

In order to ensure that the Commission remains informed about the status of the Valspar mirror coatings business pending divestiture, and about efforts being made to accomplish the divestiture, the Consent Agreement requires Valspar to report to the Commission within 30 days, and every thirty days thereafter until the divestiture is accomplished. In addition, Valspar is required to report to the Commission every 60 days regarding its obligations to provide transitional services and facilities management.

The purpose of this analysis is to facilitate public comment on the Consent Agreement, and it is not intended to constitute an official interpretation of the Consent Agreement or to modify in any way its terms.

By direction of the Commission.

Donald S. Clark,
Secretary.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

Office for Civil Rights; Statement of Delegation of Authority

Notice is hereby given that I have delegated to the Director, Office for Civil Rights (OCR), with authority to redelegate, the following authorities vested in the Secretary of Health and Human Services:

1. The authority under section 262 of the Health Insurance Portability and Accountability Act of 1996 (HIPAA), Public Law 104–191, as amended, to the extent that these actions pertain to the Standards for the Privacy of Individually Identifiable Health Information, to:

   A. impose civil monetary penalties, under section 1176 of the Social Security Act, for a covered entity’s failure to comply with certain requirements and standards;

   B. make exception determinations, under section 1178(a)(2)(A) of the Social Security Act, concerning when provisions of State laws that are contrary to the federal standards are not preempted by the federal provisions; and

2. The authority under section 264 of HIPAA, as amended, to administer the regulations, “Standards for the Privacy of Individually Identifiable Health Information,” 45 CFR Part 164, and General Administrative Requirements, 45 CFR Part 160, as these requirements pertain to Part 164, and to make decisions regarding the interpretation, implementation and enforcement of these Standards and General Administrative Requirements.

I hereby affirm and ratify any actions taken by the Director of OCR, or any subordinates, involving the exercise of the authorities delegated herein prior to the effective date of this delegation. This Delegation of Authority is effective concurrent with the effective date of the regulations, 45 CFR Parts 160 through 164.

Donna E. Shalala,
Secretary.

Administration for Children and Families

Proposed Information Collection Activity; Comment Request

Proposed Projects:
About: Runaway and Homeless Youth Management Information System (RHYMIS).
OMB No. 0970–0123.
Description: In the Runaway and Homeless Youth Act (42 U.S.C. 5701 et seq.) Congress mandated that the
Department of Health and Human Services (HHS) report regularly on the status of HHS-funded programs serving
runaway and homeless youth in Basic Center programs (BC), Transitional Living programs (TLP) and Street
Outreach programs. Organizations funded under the Runaway and Homeless Youth program are required by statute (42 U.S.C. 5712, 42 U.S.C. 5714–2) to meet several data collection and reporting requirements, including maintaining client statistical records and submitting annual program reports regarding the profile of the youth and families served and the services
provided to them. The RHYMIS data supports these organizations as they carry out a variety of integrated, ongoing
responsibilities and projects, including legislative reporting requirements, planning and public policy
development for runaway and homeless youth programs, accountability monitoring, program management,
research, and evaluation. RHYMIS has been redesigned and streamlined to reduce the collection burden upon
respondents and to capture key information previously not requested.
Respondents: Not-for-profit
institutions.

In compliance with the requirements of section 3506(c)(2)(A) of the
Paperwork Reduction Act of 1995, the Administration for Children
and Families is soliciting public comment on the specific aspects of
the information collection described above. Copies of the proposed
collection of information can be obtained and
comments may be forwarded by writing to the Administration for Children
and Families, Office of Information Services, 370 L’Enfant Promenade, SW.,
Washington, DC 20447, Attn: ACF
Reports Clearance Officer. All requests should be identified by the title of the
information collection.

The Department specifically requests comments on: (a) whether the proposed
collection of information is necessary for the proper performance of the
functions of the agency, including whether the information shall have
practical utility; (b) the accuracy of the agency’s estimate of the burden of the
proposed collection of information; (c) the quality, utility, and clarity of the
information to be collected; and (d) ways to minimize the burden of the
collection of information on respondents, including through the use
of automated collection techniques or other forms of information technology.
Consideration will be given to
comments and suggestions submitted
within 60 days of this publication.

Bob Sargis,
Reports Clearance Officer.

HRSA AIDS Advisory Committee;
Notice of Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Public Law 92–463), announcement is
made of the following National Advisory body scheduled to meet during the month of February 2001.

Name: HRSA AIDS Advisory Committee (HAAC).
Date and Time: February 8, 2001; 8:30 a.m.—5:00 p.m., February 9, 2001; 8:30 a.m.—1:30 p.m.
Place: Four Points Sheraton Bethesda, 8400 Wisconsin Avenue, Bethesda, Maryland 20814, Telephone: (301) 941–2704.
The meeting is open to the public.
Agenda: Agenda items for the meeting include: implementation update of the Ryan White CARE Act, program
updates, and discussion of HIV prevention and care linkages.
Anyone requiring further information should contact Joan Holloway, HIV/AIDS
Bureau, Parklawn Building, Room 7–13, 5600 Fishers Lane, Rockville, Maryland 20857, telephone (301) 443–5761.

Proposed Collection; Comment Request; Case-Control Study of Cancer and Related Disorders Among Benzene-Exposed Workers in China
SUMMARY: In compliance with the requirement of Section 3506(c)(2)(A) of the
Paperwork Reduction Act of 1995, for opportunity for public comment on
proposed data collection projects, the National Cancer Institute (NCI), the
National Institutes of Health (NIH) will publish periodic summaries of proposed
projects to be submitted to the Office of Management and Budget (OMB) for
review and approval.
Proposed Collection: Title: Case-Control Study of Cancer and Related Disorders Among Benzene-Exposed Workers in China. Type of Information
Collection Request: Extension. (OMB No. 0925–0454 expires 3/31/01) Need
and Use of Information Collection: A case-control study will examine the relationship between exposure to benzene and the risk of lymphohematopoietic malignancies and related disorders and lung cancer in Chinese workers. Cases and controls will be selected from participants in a recent cohort study of benzene-exposed workers in China. The data will be used by the NCI to examine risk among workers exposed to low levels of benzene, and to characterize the dose and time-specific relationship between benzene exposure and disease risk. Frequency of Response: One-time study. Affected Public: Individuals or households. Type of Respondents: Workers. The annual reporting burden is as follows: Estimated Number of Respondents: 1,545; Estimated Number of Responses per Respondent: One; Average Burden Hours per Response: 0.75; and Estimated Total Annual Burden Hours Requested: 386.

There are no Capital Costs, Operating Costs, and/or Maintenance Costs to report.

Request for Comments: Written comments and/or suggestions from the public and affected agencies are invited on one or more of the following points: (1) Whether the proposed collection or information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

FOR FURTHER INFORMATION: To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact Dr. Richard Hayes, Project Officer, National Cancer Institute, Executive Plaza South, Room 8114, Rockville, Maryland 20852, telephone: 301/402-0220, or fax: 301/402-0220. A signed Confidential Disclosure Agreement will be required to receive copies of the patent applications.

Transcranial Magnetic Stimulation Coil for Specific Non-Invasive Deep Brain Stimulation

The invention is a magnetic stimulator that is placed in contact with the head of a subject to magnetically stimulate the brain. The invention has applications in the treatment of neurophysiological or cardiovascular conditions, and may be of particular utility in the treatment of disorders associated with deep regions of the brain, such as drug addiction and depression. The unique coil shape of the stimulator is designed to target deep brain regions like the nucleus accumbens, which are associated with the biological mechanism underlying drug abuse. Deep regions of the brain are also implicated in depressive disorders, and this coil is likely to offer an improvement in the transcranial magnetic stimulation therapy currently being tested for treatment of depression.

Peroxynitrite Generators, Compositions Comprising Same, and Methods for Treating Biological Disorders Using Same

Challice L. Bonifant, Joseph E. Saavedra and Larry K. Keefer (NCI)

DHHS Reference No. E–175–00/0 filed 02 June 2000
Diazoniumdiolates are a class of compounds which release nitric oxide (NO) under physiological conditions. Nitric oxide performs a number of regulatory functions in vivo such as controlling vascular tone and platelet function, but it can also combine with superoxide ion to produce peroxynitrite ion, as especially reactive species. Peroxynitrite-mediated cellular toxicity may have several therapeutic applications. Because of the relatively low amounts of superoxide ion present in some cells, the peroxynitrite mechanism of diazoniumdiolate toxicity is not uniformly available. In order to generate peroxynitrite ions in tissues or other media lacking adequate levels of superoxide ion, this invention provides a new class of compounds which release NO and superoxide ion simultaneously to generate peroxynitrite ions.

Molecules of this invention can be designed to generate peroxynitrite ion at specific biochemical targets. For one type of targeting, the release of NO is designed to be triggered by nucleophilic attack on the diazoniumdiolate drug while superoxide generation is simultaneously occurring at a quinone moiety elsewhere in the molecule. If the required nucleophilic attack is designed to be specifically catalyzed in the active site of glutathione S-transferase-pi, a cytoprotective enzyme overexpressed by certain tumors to render them drug-resistant, compounds of this invention could restore the susceptibility of tumor cells to chemotherapy by knocking out the excess enzyme, thereby preventing the tumor cells from inactivating the chemotherapeutic agents. Attachment of the compounds to polymeric compositions would physically localize the peroxynitrite activity. Physical localization in vivo may have utility against the recently recognized chronic infections caused by biofilms, and generation of peroxynitrite ions in vitro may have utility against infectious biofilms on medical devices.

Geological Survey

Technology Transfer Act of 1986

ACTION: Notice of proposed Cooperative Research and Development Agreement (CRADA) negotiations.

SUMMARY: The United States Geological Survey (USGS) is contemplating entering into a Cooperative Research and Development Agreement (CRADA) with Montgomery Watson Laboratories (“MWL”), a division of Montgomery Watson Americas, a Colorado Company, which has its principal place of business at 533 E. Walnut, Pasadena, CA 91101; Hach Company (“Hach”), a Colorado Company, which has its principal place of business at P.O. Box 389, Loveland, Colorado 80539–0389; Office of Water (“OW”), Office of Groundwater and Drinking Water, Technical Support Center (“TSC”), of the U.S. Environmental Protection Agency (“EPA”); Regions 2’s Division of Environmental Science and Assessment (“DESA”), of the U.S. Environmental Protection Agency (“EPA”); Region 3’s Environmental Science Center, of the U.S. Environmental Protection Agency (“EPA”); Unified Sewerage Agency (“USA”), a XXX of the State of Oregon, located at 155 N. First Avenue, Suite 270, Hillsboro, OR 97124, Hampton Roads Sanitation District (“HRSD”), a XXX of the State of Virginia, located at 1432 Air Rail Avenue, Virginia Beach, Virginia 23471; Oregon Department of Environmental Quality (“OREDEQ”) Laboratory Division, a Department of the State of Oregon, located at 1712 SW 11th Avenue, Portland, OR 97201; Demonstrate the validity of the Performance Based System (PBMS) by establishing a pilot study to verify a non-USEPA approved method for the measurement of Chemical Oxygen Demand (COD). The currently approved method for COD requires mercury, a
hazardous and potentially carcinogenic metal, which results in high disposal and recycling costs and potentially hazardous exposure to analysts. The new method is potentially advantageous because hazardous or carcinogenic reagents are not used, making this procedure a more environmentally sound practice. This new analytical method, as with all other methods, is only approved after validation. This CRADA deals with an approach to validate new analytical methodology.

**ADDRESSES:** Inquiries may be addressed to the National Water Quality Laboratory, U.S. Geological Survey, P.O. Box 25046, Denver Federal Center, Building 95, MS 407, Denver, CO 80225–0046; Telephone (303) 236–3501, facsimile (303) 236–0499; Internet mshockey@usgs.gov.

**FOR FURTHER INFORMATION CONTACT:** Merle W. Shockey, address above.

**SUPPLEMENTARY INFORMATION:** This notice is to meet the USGS requirement stipulated in Survey Manual 8341.2. The vehicle closure is required to validate new analytical methodology.

Notice of Emergency Closure

**AGENCY:** Bureau of Land Management, Interior.

**ACTION:** Notice of emergency closure.

**SUMMARY:** Notice is hereby given that effective immediately, certain public lands in Oneida County, Idaho shall be closed to all vehicle traffic to prevent erosion and allow vegetation to recover from the Taylor Mountain wildfire. The restriction will remain in effect until March 1, 2003.

The fire burned approximately 8,197 acres of public land within portions of each of the following sections: From Boise Meridian; T. 16S., R. 33E., sections: 2, 3, 4, 5, 6, 8, 9, 10, 11, 12, 14, 15 and T. 15S., R. 33E., sections: 15, 22, 25, 26, 27, 28, 32, 33, 34, 35.

**SUPPLEMENTARY INFORMATION:** The closure is in conformance with principles established by the Federal Land Policy and Management Act of 1976 and in accordance with 43 CFR 8341.2. The vehicle closure is required to prevent environmental damage by motorized vehicles to soils, vegetation, wildlife values, and associated resources. This closure does not apply to Bureau of Land Management personnel, or an authorized representative of the Bureau of Land Management, or Idaho Department of Fish & Game personnel.

**FOR FURTHER INFORMATION CONTACT:** Jeff Steele, Field Office Manager, Pocatello Field Office, Bureau of Land Management—1111 N 8th Ave, Pocatello, ID (208)–478–6340. Maps of the closed areas are available in the Pocatello Field office and the Malad Field Station—138 So. Main St., Malad City, ID (208)–766–4866.

Notice of Closure to Livestock Grazing Use and Notice of Intent To Impound

**AGENCY:** Bureau of Land Management, Interior.

**ACTION:** Notice of closure to livestock grazing use and notice of intent to impound.

**SUMMARY:** Effective immediately, the entire East Holbrook allotment, #06361, is closed to livestock grazing, as well as the burned portions of the following areas: Hansel Mountain allotment, #06365, referred to as the Hansel Mountain pasture; Ridgedale allotment, #06360; and Grandine pasture of the Curlew allotment, #16001. This closure will remain in effect until March 1, 2003; or until such time as the authorized officer of the Bureau of Land Management (BLM) Pocatello Field Office determines the closure may be lifted.

This closure is a direct result of a wildland fire which burned this area in September of 2000 and of the subsequent rehabilitation efforts of the BLM. The closure will promote the reestablishment of vegetation on this site and improve the potential for recovery of wildlife and livestock forage.

This notice is also to inform the public/permittees that any unauthorized livestock grazing upon public land or other lands under the BLM’s control is in violation of 4140.1(b)(1) and may be impounded. The unauthorized livestock may be impounded after 5 days from delivery of this notice or any time after 5 days from publishing and posting this notice. Unauthorized livestock within the entire East Holbrook allotment, #06361 as well as those portions of the other allotments listed above may be impounded without further notice any time in the 12 month period beginning 5 days from receipt of this notice as authorized by 43 CFR 4150.4–2. This notice is issued in accordance with 43 CFR 4150.4–1(a) and (b); any impoundment of unauthorized livestock in connection with this notice will be done in accordance with 43 CFR 4150.4–2. Pursuant to 43 CFR 4150.4–4, any owner or his agent, or both, or lien-holder of record of the impounded livestock may redeem them under these regulations or, if a suitable agreement is in effect, in accordance with State law, prior to the time of sale upon settlement with the United States under Sec. 4150.3 or adequate showing that there has been no violation.

**SUPPLEMENTARY INFORMATION:** The area of closure and impoundment affected by this notice is specifically the following allotments within the Upper Snake River Districts: East Holbrook, Hansel Mountain, Ridgedale, and Curlew, and is more specifically described wholly or partially: From Boise Meridian, T. 15 S., R. 33 E., secs. 1, 2, 10, 11, 15, 22, 23, 27, 32, 33, 34; and T. 16 S., R. 33 E., secs. 2, 3, 4, 5, 6, 9, 10, 14, and 15. Detailed maps of the area closed to livestock grazing are available at the Malad Field Station, Malad, Idaho.

**FOR FURTHER INFORMATION CONTACT:** The BLM Malad Field Station, 138 S. Main, Malad, ID 83252 or the BLM Pocatello Field Office, 1111 N. 8th Avenue, Pocatello, ID 83201.

Jeff S. Steele, Pocatello Field Manager.

Red Rock Canyon National Conservation Area, Las Vegas, NV

**AGENCY:** Bureau of Land Management; Interior

**ACTION:** Notice of availability.

**SUMMARY:** Pursuant to Public Law 103–621 (11/2/94) which expanded the boundaries of RRCNCA as designated in the Red Rock Canyon National Conservation Establishment Act (Public
Law 101-421 11/16/90) and amends portions of the Act, the Las Vegas Field Office, BLM, has completed the Proposed General Management Plan/ Final Environmental Impact Statement (GMP/FEIS) for Red Rock Canyon National Conservation Area.

The Proposed Plan and FEIS is available to the public for a 30-day protest period. The Proposed Plan may be protested by any person who participated in the planning process and who has an interest which is or may be adversely affected by the approval of the Proposed Plan. A protest may raise only those issues which were submitted for the record during the planning process (see 43 CFR 1610.5-2).

All protests must be written and must be postmarked on or before February 28, 2001 and shall contain the following information:

The name, mailing address, telephone number and interest of the person filing the protest.

A statement of the issue or issues being protested.

A statement of the part or parts of the part or parts of the document being protested.

A copy of all documents addressing the issue or issues previously submitted during the planning process by the protesting party, or an indication of the date the issue or issues were discussed for the record.

A concise statement explaining precisely why the Bureau of Land Management, Nevada State Director’s decision is wrong.

Upon resolution of any protests, an Approved Plan and record of Decision will be issued. The approved Plan/Record of Decision will be mailed to all those issues which were submitted for the record during the planning process.

Southeast Oregon Resource Advisory Council Meeting

AGENCY: Bureau of Land Management (BLM), Burns District, Interior.

ACTION: Meeting notice for the Southeast Oregon Resource Advisory Council.

SUMMARY: The Southeast Oregon Resource Advisory Council (SEORAC) will meet at the Shilo Inn, Klamath Falls Suites Hotel and Conference Center, 2500 Almond Street, Klamath Falls, Oregon 97601, 8 a.m. to 5 p.m., Pacific Standard Time (PST), on Monday, January 22, and conduct a field tour to view baid eagles, Tuesday, January 23, 2001. The tour will begin early Tuesday morning and should last approximately 2 hours. Contact the BLM office listed below for exact time as the tour date approaches.

The meeting will resume after the tour and should adjourn by 2 p.m., PST, Tuesday, January 23, 2001. Topics to be discussed by the Council include the Forest Service (FS) Roads Restoration Program, the FS Roadless Final Environmental Impact Statement, BLM off-highway vehicle strategy update, a report from the Lakeview Resource Management Plan subcommittee, update on the Malheur Landscape Area Management Plan, a presentation on minerals in the southeast Oregon area, Klamath Falls water issues update, Pelican Butte ski area update, Federal officials’ update, reports on FS/BLM fire program expansion, County payment program, and such other matters as may reasonably come before the Council.

The entire meeting is open to the public. Information to be distributed to the Council members is requested in written format 10 days prior to the start of the Council meeting. Public comments is scheduled for 11 a.m. to 11:30 a.m., PST, on January 22, 2001.

FOR FURTHER INFORMATION CONTACT:

Gene Arnesen, GMP Team Leader, at BLM’s Las Vegas Field Office listed above or telephone (702) 647-5068.

Mark T. Morse,
Las Vegas Field Office Manager.

Bureau of Land Management

[CO-930-1430-ET; COC-28257]

Public Land Order No. 7476; Revocation of Bureau of Land Management Order dated December 22, 1949; Colorado

AGENCY: Bureau of Land Management, Interior.

ACTION: Public land order.

SUMMARY: This order revokes, in its entirety, a Bureau of Land Management order as to the remaining 328.13 acres of public lands withdrawn for the Bureau of Reclamation’s Missouri Basin Project, Bijou No. 2 Reservoir. The lands are no longer needed for reclamation purposes.

FOR FURTHER INFORMATION CONTACT:

Doris Chelius, BLM Colorado State Office, 2850 Youngfield Street, Lakewood, Colorado 80215-7093, 303-239-3706.

By virtue of the authority vested in the Secretary of the Interior by Section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714 (1994), it is ordered as follows:

1. The Bureau of Land Management Order dated December 22, 1949, which withdrew the following described lands for the Bureau of Reclamation’s Missouri Basin Project, Bijou No. 2 Reservoir, is hereby revoked in its entirety:

Sixth Principal Meridian

T. 4 N., R. 59 W.,
Sec. 6, lot 4; Sec. 21, SE1/4; Sec. 22, SW1/4; Sec. 27, NW1/4; E1/2SW1/4, and W1/2SE1/4.

The areas described aggregate 328.13 acres in Morgan County.

2. At 9 a.m. on January 29, 2001, the lands will be opened to the operation of the public land laws generally, subject to valid existing rights, the provisions of existing withdrawals, other segregations of record, and the requirements of applicable law. All valid applications received at or prior to 9 a.m. on January 29, 2001, shall be considered as...
3. At 9 a.m. on January 29, 2001, the lands will be opened to location and entry under the United States mining laws subject to valid existing rights, the provisions of existing withdrawals, other segregations of record, and the requirements of applicable law. Appropriation of any of the lands described in this order under the general mining laws prior to the date and time of restoration is unauthorized.

Any such attempted appropriation, including attempted adverse possession under 30 U.S.C. 38 (1994), shall vest no rights against the United States. Acts required to establish a location and to initiate a right of possession are governed by State law where not in conflict with Federal law. The Bureau of Land Management will not intervene in disputes between rival locators over possessory rights since Congress has provided for such determination in local courts.

Sylvia V. Baca,
Assistant Secretary of the Interior.

[OR–955–1430–ET; HAG01–0025; WA–19679]

Public Land Order No. 7475; Partial Revocation of the Geological Survey; Order Dated July 25, 1952; Washington

AGENCY: Bureau of Land Management, Interior.

ACTION: Public land order.

SUMMARY: This order partially revokes a Geological Survey order insofar as it affects 1,159.54 acres of lands withdrawn for Bureau of Land Management Power Site Classification No. 426. The lands are no longer needed for the purpose for which they were withdrawn. This action will open 56.22 acres to surface entry. These lands have been and will remain open to mining and mineral leasing. The remaining 1,103.32 acres of lands are included in overlapping withdrawals or have been conveyed out of Federal ownership, and will remain closed to surface entry and mining.

By virtue of the authority vested in the Secretary of the Interior by Section 204 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714 (1994), it is ordered as follows:

1. The Geological Survey Order dated July 25, 1952, which established Power Site Classification No. 426, is hereby revoked insofar as it affects the following described lands:

**Willamette Meridian**

T. 3 N., R. 18 E., Sec. 22, NW1/4NE1/4 and SE1/4NE1/4.

T. 4 N., R. 22 E., Sec. 23, SE1/4SW1/4; Sec. 24, NE1/4NW1/4; Sec. 28, SE1/4NE1/4, NE1/4SW1/4, and NW1/4SE1/4.

T. 4 N., R. 23 E., Sec. 12, SE1/4NE1/4; Sec. 18, SE1/4NE1/4 and NE1/4SW1/4.

T. 5 N., R. 24 E., Sec. 32, SW1/4NE1/4SW1/4 and S1/2N1/2SE1/4; sec. 34, S1/2S1/2SW1/4SW1/4; Sec. 35, S1/2SW1/4; Sec. 36, S1/2NE1/4, SE1/4NW1/4, and S1/2.

T. 5 N., R. 25 E., Sec. 12, lot 2; Sec. 13, lot 5; Sec. 14, lots 3, 4, 6, 7, 8, and 9; Sec. 22, lot 9.

T. 5 N., R. 26 E., Sec. 12, W1/2SW1/4SE1/4NW1/4, SE1/4SW1/4SE1/4NW1/4, W1/2SW1/4NE1/4SE1/4, SE1/4SW1/4NE1/4SE1/4, and SW1/4SE1/4NE1/4SE1/4.

The areas described aggregate 1,159.54 acres in Benton and Wallowa Counties.

2. At 8:30 a.m., on January 12, 2001, the following described lands, which are included in paragraph 1, will be opened to the operation of the public land laws generally, subject to valid and existing rights, other segregations of record, and the requirements of applicable law.

**Willamette Meridian**

T. 4 N., R. 23 E., Sec. 12, NW1/4NW1/4 SE1/4NE1/4; Sec. 18, N1/2SE1/4NE1/4 and N1/2SW1/4SE1/4.

T. 5 N., R. 25 E., Sec. 14, lots 6 and 8.

The areas described aggregate 56.22 acres in Benton and Klickitat Counties.

3. The lands described in paragraph 1, excluding those described in paragraph 2, are within the John Day Lock and Dam Project, the Umatilla National Wildlife Refuge, or have been conveyed out of Federal ownership, and will remain closed to surface entry and mining.

Sylvia V. Baca,
Assistant Secretary of the Interior.

National Park Service

National Capital Memorial Commission; Notice of Public Meeting

Notice is hereby given in accordance with the Federal Advisory Committee Act that a meeting of the National Capital Memorial Commission (the Commission) will be held at 1 p.m. on Tuesday, January 16, at the National Building Museum, Room 312, 5th and F Streets, NW., Washington, DC.

The purpose of the meeting will be to discuss currently authorized and proposed memorials in the District of Columbia and environs. In addition to discussing general matters and routine business, the Commission will consider:

Action Item

Consideration of a recommendation relative to placement, within Area I as established by the Commemorative Works Act of 1986, of the Memorial of Honor Veterans Who Become Disabled While Serving in the Armed Forces of the United States of America.

The Commission was established by Public Law 99–652, the Commemorative...
Works Act, to advise the Secretary and the Administrator, General Services Administration, (the Administrator) on policy and procedures for establishment of (and proposals to establish) commemorative works in the District of Columbia and its environs, as well as such other matters as it may deem appropriate concerning commemorative works.

The Commission examines each memorial proposal for conformance to the Commemorative Works Act, and makes recommendations to the Secretary and the Administrator and to Members and Committees of Congress. The Commission also serves as a source of information for persons seeking to establish memorials in Washington, DC, and its environs.

The members of the Commission are as follows: Director, National Park Service; Chairman, National Capital Planning Commission; Architect of the Capitol; Chairman, American Battle Monuments Commission; Chairman, Commission of Fine Arts; Mayor of the District of Columbia; Administrator, General Services Administration; and Secretary of Defense.

The meeting will be open to the public. Any person may file with the Commission a written statement concerning the matters to be discussed. Persons who wish to file a written statement or testify at the meeting or who want further information concerning the meeting may contact Ms. Nancy Young, Executive Secretary to the Commission, at (202) 619–7097.

Joseph M. Lawler,
Regional Director, National Capital Region.

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act

Notice is hereby given that a proposed Consent Decree in United States v. American Home Products, Corp., et al., Civil Action No. C00–4173MWB, was lodged on December 8, 2000, with the United States District Court for the Northern District of Iowa.

In this action the United States sought to recover, pursuant to Section 107 of the Comprehensive Environmental Response, Compensation, and Liability Act (“CERCLA”), 42 U.S.C. 9607, response costs incurred and to be incurred by the U.S. Environmental Protection Agency (“EPA”) in response to the release of hazardous substances into the environment at or from the InterChem Superfund Site (hereinafter “the Site”) located in Alton, Iowa.

The proposed Consent Decree embodies an agreement with four potentially responsible parties (“PRPs”) pursuant to Section 107 of CERCLA, 42 U.S.C. 9607, to pay $212,400 in past response costs for EPA’s unreimbursed oversight costs. The PRPs, American Home Products, Corp., American Cyanamid Company, Solvay America, Inc., and Salsbury Chemicals, Inc., are successors to Salsbury Laboratories, Inc. (“SLI”). SLI had sent raw pesticide ingredients including malathion, which is a hazardous substance, to the Site for formulation, which was then returned to SLI as finished pesticide products. A removal action at the Site to remove hazardous substances, including malathion, was undertaken by other PRPs with EPA oversight and was completed in 1996. The defendants are paying $212,400 which is proportionate to the costs incurred by the other PRPs who undertook the prior removal. This payment leaves EPA’s outstanding unreimbursed response costs at less than $25,000, at a Site where the total response action expenditures, including expenditures by PRPs, were over $1.5 million.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the proposed Consent Decree. Comments should be addressed to the Assistant Attorney General for the Environmental and Natural Resources Division, Department of Justice, P.O. Box 7611, Washington, DC 20044–7611, and should refer to United States v. American Home Products, Corp., et al., DOJ Ref. No. 90–11–3–06738.

The proposed Consent Decree may be examined at the Office of the United States Attorney, Northern District of Iowa, Hach Building, Suite 400, 401 1st Street, SE., Cedar Rapids, Iowa 52401, and the Region VII Office of the Environmental Protection Agency, Region VII Records Center, 901 N. 5th St., Kansas City, KS 66101. A copy of the proposed Consent Decree may be obtained by mail from the Consent Library, U.S. Department of Justice, Environmental Enforcement Section, Post Office Box 7611, Washington, DC 20044. In requesting a copy, please refer to the referenced case and enclose a check in the amount of $5.50 (25 cents per page reproduction costs), payable to the Consent Decree Library.

Bruce Gelber,
Chief, Environmental Enforcement Section
Environment and Natural Resources Division.

DEPARTMENT OF JUSTICE

Notice of Consent Judgment Pursuant to the Comprehensive Environmental Response, Compensation and Liability Act

In accordance with Departmental Policy, 28 CFR 50.7, 38 Fed. Reg. 19029, and 42 U.S.C. 9622(d), notice is hereby given that two proposed consent decrees in United States v. Champion Chemical Company, Inc., Imperial Oil Company, Inc., Emil Stevens and June Stevens, DOJ # 90–11–2–946, Civ. No. 96–1521 (AET), were lodged in the United States District Court for the District of New Jersey on December 7, 2000. The consent decrees resolve or partially resolve the liability of defendants Champion Chemical Company, Inc., Imperial Oil Company, Inc., Emil Stevens, and June Stevens under Sections 107(a) and 106(b) of the Comprehensive Environmental Response, Compensation and Liability Act (“CERCLA”), 42 U.S.C. 9607(a) and 9606(b), relating to the Imperial Oil Company, Inc./Champion Chemical Superfund Site located in Marlboro Township, Monmouth County, New Jersey (the “Imperial Site”). The consent decrees also resolve the liability of these settling defendants under Section 107(a) of CERCLA, 42 U.S.C. 9607(a), for the Burnt Fly Bog Superfund Site located within Marlboro Township and Old Bridge Township, New Jersey (the “Burnt Fly Bog Site”).

Under the proposed consent decree between the United States, Champion Chemical Company, Inc. (“Champion”), Imperial Oil Company, Inc. (“Imperial”), and the State of New Jersey, settling defendants Champion and Imperial, based on their representations of a limited ability to pay, will make payments toward reimbursement of the United States’ response costs for the Imperial Site and the Burnt Fly Bog Site. These payments, totaling at least $1.375 million (additional amounts are owed as a percentage of profits), will be deposited into site special accounts for the Imperial Site and the Burnt Fly Bog Site to fund future response actions. Settling defendants will also reimburse the United States and/or to the State of New Jersey a portion of their insurance recoveries.
related to the sites and proceeds from the sale of property at the Imperial Site. Additionally, Champion and Imperial will jointly pay the sum of $75,000 as a civil penalty for violations of EPA’s unilateral administrative orders for the Imperial Site. In return, the United States and the State will provide to Champion and Imperial covenants not to sue as to (a) past response costs incurred in connection with the Imperial Site and (b) past and future response costs incurred in connection with the Burnt Fly Bog Site.

Under the proposed consent decree between the United States, Emil Stevens and June Stevens, the settling defendants agree to pay to the United States $300,000 toward the Imperial Site and $100,000 toward the Burnt Fly Bog Site in reimbursement of response costs incurred in connection with the two sites. These amounts will be deposited into site specific accounts for the Imperial Site and the Burnt Fly Bog Site to fund future response actions. The settling defendants also agree to limit their future involvement with, and income, from Champion and Imperial. In return, the United States will provide to Emil and June Stevens covenants not to sue as to past and future response costs incurred in connection with the Imperial Site and the Burnt Fly Bog Site.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, written comments relating to the proposed consent decrees. Comments should be addressed to the Assistant Attorney General for the Environment and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to United States v. Champion Chemical Company, Inc., et al., DOJ # 90–11–2–946. The proposed consent decrees may be examined at the Office of the United States Attorney, District of New Jersey, 402 East State Street, Room 502, Trenton, New Jersey 08608; and at the Region II Office of the U.S. Environmental Protection Agency, 200 Broadway, New York, New York 10278. Copies of the Consent Decree may be obtained by mail from the Consent Decree Library, United States Department of Justice, P.O. Box 7611, Ben Franklin Station, Washington, DC 20044. In requesting a copy of the consent decree between the United States, Emil Stevens, and June Stevens, please enclose a check in the amount of $11.00 (25 cents per page reproduction costs) payable to the Consent Decree Library.

Bruce Gelber,
Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

DEPARTMENT OF JUSTICE
Notice of Lodging of Consent Decree for Payment of Civil Penalty for Violations of the Clean Air Act

Under 28 CFR 50.7, notice is hereby given that on December 4, 2000, a proposed Consent Decree in United States v. Columbus McKinnon Corporation, Civil Action No. C00–3096MWB, was filed with the United States District Court for the Northern District of Iowa.

In this action, the United States seeks civil penalties for Columbus McKinnon Corporation’s (“Columbus”) violations of Section 112 of the Clean Air Act, 42 U.S.C. 7412, and of the National Emission Standards for Hazardous Air Pollutants for Chromium Emissions from Hard and Decorative Chromium Electroplating and Chromium Anodizing Tanks, codified at 40 CFR part 63, subpart N. The allegations occurred at a facility located in Laurens, Iowa, which is owned by Columbus McKinnon Corporation, and concern the failure to comply with the Chromium emission limitations, untimely submission of initial notification, and conducting an untimely performance test. Under the Consent Decree, Columbus will pay a civil penalty of $60,000.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the Consent Decree. Comments should be addressed to the Assistant Attorney General for the Environment and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to United States v. Columbus McKinnon Corporation, DOJ #90–5–2–1–06754.

The Consent Decree may be examined at the Office of the United States Attorney, 401 1st St. SE, Cedar Rapids, Iowa, 52401; at EPA Region VII, 901 N. 5th Street, Kansas City, KS, 66101; or can be obtained by mail from the Consent Decree Library, P.O. Box 7611, United States Department of Justice, Washington, DC 20044–7611. In requesting a copy, please enclose a check of $5.25 (25 cents per page reproduction cost) payable to the Consent Decree Library.

Stephen J. Rapp,
United States Attorney, Northern District Iowa.

BILLING CODE 4410–15–M

DEPARTMENT OF JUSTICE
Notice of Lodging of Consent Decrees Pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as Amended

Notice is hereby given that on December 18, 2000, a proposed consent decree in United States v. Hexagon Laboratories of New York, Inc., et al., Civil Action No. 96 Civ. 2911 (DAB), was lodged with the United States District Court for the Southern District of New York.

In this action, the United States sought the recovery of response costs incurred by the United States with respect to the Hexagon laboratories Superfund Site (the “Site”) in the Bronx, New York. The proposed consent decree resolves the United States’ claims under the Comprehensive Environmental Response, Compensation, and Liability Act (“CERCLA”), 42 U.S.C. 9601 et seq., against defendant Louis P. Wiener relating to the Site. Under the terms of the proposed consent decree, Mr. Wiener will pay $110,000, in installments, in satisfaction of the United States’ claims.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General of the Environment and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to United States v. Hexagon Laboratories of New York, Inc., et al., Civil Action No. 96 Civ. 2911 (DAB), D.J. Ref. 90–11–3–1662.

The proposed consent decree may be examined at the Office of the United States Attorney, Southern District of New York, 100 Church Street, New York, New York 10007, and at U.S. EPA Region II, 290 Broadway, New York, New York 10007. A copy of the proposed consent decree may be obtained by mail from the Consent Decree Library, P.O. Box 7611, Washington, DC 20044–7611. In requesting a copy, please enclose a
check in the amount of $5.00 (25 cents per page reproduction cost).

Bruce Gelber,
Chief, Environmental Enforcement Section, Environmental and Natural Resources Division.

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Pursuant to the Comprehensive Environmental Response, Compensation and Liability Act and the Oil Pollution Act

In accordance with Departmental policy, 28 CFR 50.7, the Department of Justice gives notice that a proposed consent decree, in United States v. Petroleum Specialties, Inc., et al., Civil No. 99–72421 (E.D. Mich.), was lodged with the United States District Court for the Eastern District of Michigan on December 7, 2000, pertaining to the Petroleum Specialties, Inc. Site (the “Site”), located in Flat Rock, Wayne County, Michigan. The proposed consent decree would resolve the United States’ civil claims against Petroleum Specialties, Inc. (“PSI”) and Marvin Fleischman (collectively, the “Settling Defendants”), under Sections 107(a) and 113(g) of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended (“CERCLA”), 42 U.S.C. §§ 9607(a) and 9613(g), and against PSI under Sections 1002, 1015 and 1017 of the Oil Pollution Act of 1990 (“OPA”), 33 U.S.C. §§ 2702, 2715 and 2717, in connection with the Site.

Under the proposed consent decree, PSI stipulates to entry of a judgment against itself in the amount of $6 million for federal Response Costs and Removal Costs incurred at the Site. In addition, the proposed consent decree requires Marvin Fleischman to make payments totaling $150,000 to the United States for federal Response Costs and Removal Costs incurred at the Site following entry of the proposed consent decree. The consent decree includes, inter alia, a covenant not to sue by the United States under Sections 106 and 107 of CERCLA, 42 U.S.C. §§ 9606 and 9607, and under Section 1002(b)(1) of OPA, 33 U.S.C. § 2702(b)(1), and provisions relating to Settling Defendants’ receipt of insurance proceeds for the Site.

The Department of Justice will receive, for a period of thirty (30) days from the date of this publication, comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General, Environmental and Natural Resources Division, United States Department of Justice, Washington, DC 20530, and should refer to United States v. Petroleum Specialties, Inc., et al., Civil No. 99–72421 (E.D. Mich.), and DOJ Reference Nos. 90–11–2–1374 and 90–5–1–1–4530.

The proposed consent decree may be examined at: (1) The Office of the United States Attorney for the Eastern District of Michigan, Suite 2001, 211 West Fort Street, Detroit, Michigan 48226–3211 (313–226–9700); and (2) the United States Environmental Protection Agency (Region 5), 77 West Jackson Boulevard, Chicago, Illinois 60604–3590 (contact: Diana Embil (312–886–7899)). A copy of the proposed consent decree may be obtained by mail from the Consent Decree Library, U.S. Department of Justice, P.O. Box 7611, Washington, DC 20044–7611. In requesting a copy, please refer to the referenced case and DOJ Reference Numbers and enclose a check in the amount of $5.00 (25 cents per page reproduction costs), made payable to the Consent Decree Library.

Bruce S. Gelber,
Chief, Environmental Enforcement Section, Environmental and Natural Resources Division.

DEPARTMENT OF JUSTICE

Notice of Lodging of Consent Decree Pursuant to the Clean Water Act and the Safe Drinking Water Act

In accordance with 28 CFR 50.7, 38 Fed. Reg. 19029, notice is hereby given that on December 8, 2000, a proposed consent decree in United States v. Puerto Rico Aqueduct and Sewer Authority, Civil Action No. 00–2554 (JAF), was lodged with the United States District Court for the District of Puerto Rico. The complaint in this action alleged that the Puerto Rico Aqueduct & Sewer Authority (“PRASA”) has been violating the Clean Water Act (“CWA”), 33 U.S.C. 1251, et seq., by discharging wastewater from 23 of its drinking water treatment plants in excess of the effluent limitations in the applicable National Pollutant Discharge Elimination System (“NPDES”) permits or without possessing such permits. The complaint also alleged that PRASA failed or is failing to provide filtration of the surface waters it uses to supply drinking water to 20 of its public water systems in violation of the Surface Water Treatment Rule (“SWTR”), 40 CFR 141.70, et seq., and the Safe Drinking Water Act (“SDWA”), 42 U.S.C. 300f, et seq. The complaint sought injunctive relief and civil penalties.

The Consent Decree requires PRASA to pay a total cash penalty of $550,000 to settle these violations of the CWA and the SDWA, as well as to implement two supplemental environmental projects (“SEPs”). The two SEPs involve the connection of two non-PRASA drinking water systems, which currently do not have filtered water, to one of PRASA’s public water systems that receives filtered drinking water. The estimated cost of these two SEPs is $490,600.

With regard to the PRASA drinking water treatment plants violating the CWA, the Consent Decree requires PRASA to achieve compliance in accordance with schedules for individual plants which vary from two to four years in duration. As to the PRASA public water systems that have not achieved compliance with the SWTR, the Consent Decree requires PRASA to remedy its noncompliance by constructing filtration facilities, connecting public water systems to other PRASA public water systems that have filtration plants, or installing groundwater well systems in lieu of the use of unfiltered surface water supplies. The completion dates in the SDWA compliance schedules for individual public water systems are in 2000–2002.

The Department of Justice will receive comments relating to the proposed consent decree for a period of thirty (30) days from the date of this publication. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, Department of Justice, P.O. Box 7611, Washington, DC 20044, and should refer to United States v. Puerto Rico Aqueduct and Sewer Authority, D.J. Ref. 90–5–1–1–06179, 90–5–1–1–06475.

The proposed consent decree may be examined at the office of the United States Attorney, Federal Office Building, Rm. 101, Carlos E. Chardon Avenue, Hato Rey, Puerto Rico 00918 and at the Region II office of the Environmental Protection Agency, 290 Broadway, New York, New York 10007. A copy of the proposed consent decree may also be obtained by mail from the Department of Justice Consent Decree Library, P.O. Box 7611, Washington, DC 20044. In requesting a copy, please enclose a check (there is a 25 cent per page reproduction cost) in the amount of...

Employment and Training Administration

Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Division of Trade Adjustment Assistance, Employment and Training Administration, has instituted investigations pursuant to section 221(a) of the Act.

The purpose of each of the investigations is to determine whether the workers are eligible to apply for adjustment assistance under title II, chapter 2, of the Act. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Division of Trade Adjustment Assistance, at the address shown below, not later than January 8, 2001.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Division of Trade Adjustment Assistance, at the address shown below, not later than January 8, 2001.

The petitions filed in this case are available for inspection at the Office of the Director, Division of Trade Adjustment Assistance, Employment and Training Administration, U.S. Department of Labor, Room C-5311, 200 Constitution Avenue, NW., Washington, DC 20210.

Dated: Signed at Washington, DC this 11th day of December, 2000.

Edward A. Tomchick.
Trade Adjustment Assistance.

Dearborn Brass, 21st Century Companies, Inc., Media, PA; Notice of Termination of Investigation

Pursuant to section 221 of the Trade Act of 1974, an investigation was initiated on October 4, 2000 in response to a petition filed on behalf of workers at Dearborn Brass, 21st Century Companies, Inc., Media, Pennsylvania.

The petition verification stage of the investigation revealed the petitioning group of workers are actually located in Tyler, Texas. The worker group is subject to an ongoing investigation for which a determination has not yet been issued (TA-W-38,349). Consequently, further investigation in this case would serve no purpose, and the investigation has been terminated.

Signed in Washington, DC this 12th day of December, 2000.
Linda G. Poole,
Certifying Officer, Division Trade Adjustment Assistance.

DEPARTMENT OF LABOR
Employment and Training Administration
[TA-W-37,919]

Guess?, Inc., Los Angeles, California; Notice of Negative Determination Regarding Application for Reconsideration

By application dated December 1, 2000, the petitioners request administrative reconsideration of the Department’s negative determination regarding eligibility to apply for Trade Adjustment Assistance (TAA), applicable to workers and former workers of the subject firm. The denial notice was signed on November 3, 2000, and published in the Federal Register on December 6, 2000.

Pursuant to 29 CFR 90.18(c) reconsideration may be granted under the following circumstances:
(1) If it appears on the basis of facts not previously considered that the determination complained of was erroneous;
(2) if it appears that the determination complained of was based on a mistake in the determination of facts not previously considered; or
(3) if in the opinion of the Certifying Officer, a mis-interpretation of facts or of the law justified reconsideration of the decision.

The November 3, 2000, denial of TAA for workers of Guess?, Inc., was based on the finding the workers separated from employment at the subject firm in Los Angeles, California, were engaged in distribution of apparel and not in the production of an article as required in the group eligibility requirements of the Trade Act of 1974.

The petitioners, in the application for reconsideration, state that some of the distribution workers were formerly employed in production operations (cutting, samples and embroidery). Workers were transferred to distribution before being separated from employment.

Although not elaborated on in the negative determination, sales and production at Guess?, Inc., Los Angeles, California, increased in the relevant time period. Consequently, there was no basis for further investigation.

Conclusion

After review of the application and investigative findings, I conclude that there has been no error or misinterpretation of the law or of the facts which would justify reconsideration of the Department of Labor’s prior decision. Accordingly, the application is denied.

Signed at Washington, DC this 18th day of December 2000.

Rugged Sportswear, Siler City, NC and Walstonburg, NC; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on May 30, 2000, applicable to workers of Rugged Sportswear, Siler City, North Carolina. The notice was published in
the Federal Register on June 29, 2000 (65 FR 40134).

At the request of the company, the Department reviewed the certification for workers of the subject firm. New findings show that worker separations occurred at subject firms’ Walstonburg, North Carolina facility when it closed in October, 2000. The workers were engaged in the production of sweat shirts, sweat pants and sweat shorts.

Accordingly, the Department is amending the certification to include the workers at the Walstonburg, North Carolina location of Rugged Sportswear. The intent of the Department’s certification is to include 11 workers of Rugged Sportswear who were adversely affected by increased imports.

The amended notice applicable to TA–W–37,571 is hereby issued as follows:

All workers of Rugged Sportswear, Siler City, North Carolina (TA–W–37,571) and Walstonburg, North Carolina (TA–W–37,571A) who became totally or partially separated from employment on or after March 31, 1999 through May 30, 2002 are eligible to apply for adjustment assistance under Section 223 of the Trade Act of 1974.

Signed in Washington DC this 15th day of December, 2000.

Linda G. Poole,
Certifying Officer, Division of Trade Adjustment Assistance.

• Enhance the quality, utility, and clarity of the information to be collected; and
• Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms technology, e.g., permitting electronic submissions of responses.

III. Current Actions

The proposed collection of information must be approved so that the Department can effectively manage and evaluate the WIA National Farmworker Jobs Program authorized under Title I section 167 of the Act in compliance with the requirements set forth in Public Law 105–220 and 20 CFR 652 et al., Workforce Investment Act; Final Rules, dated August 11, 2000.

Type of Review: New.
Agency: Employment and Training Administration.
Title: Workforce Investment Act (WIA), Employment and Training Administration, Financial Reporting Requirements for National Farmworker Jobs Program.

OMB Number: 1205–0NEW.
Agency Numbers: ETA 9092.
Frequency: Quarterly.
Affected Public: State agencies; private, non-profit corporations; and consortia of any and/or all of the above.

Reporting Burden: See the following Reporting Burden Table for NFJP grantees to report requested WIA financial data electronically on form at ETA 9092.

Johnson and Johnson Medical, Inc., El Paso, Texas; Notice of Termination of Investigation

Pursuant to title V of the North American Free Trade Agreement Implementation Act (Pub. L. 103–182) concerning transitional adjustment assistance, hereinafter called NAFTA–TAA and in accordance with section 250(a), subchapter D, chapter 2, title II, of the Trade Act of 1974, as amended (19 USC 2331), an investigation was initiated on November 14, 2000, in response to a petition filed by a company official on behalf of workers at Johnson and Johnson Medical, Inc.

The petitioner has requested that the petition be withdrawn. Consequently, further investigation in this case would serve no purpose, and the investigation has been terminated.

Signed in Washington, DC this 12th day of December, 2000.

[NAFTA–03838 and NAFTA–03838A]

Rugged Sportswear, Siler City, NC; Rugged Sportswear Walstonburg, NC; Amended Certification Regarding Eligibility to Apply for NAFTA Transitional Adjustment Assistance

In accordance with section 250(a), Subchapter 2, Title II, of the Trade Act of 1974, as amended (19 U.S.C. 2273), the Department of Labor issued a Certification of Eligibility to Apply for NAFTA Adjustment Assistance on May 30, 2000, applicable to workers of Rugged Sportswear, Siler City, North Carolina. The notice was published in the Federal Register on June 8, 2000 (65 FR 36470).

At the request of the company, the Department reviewed the certification for workers of the subject firm. New information shows that worker separations occurred at the subject firms’ Walstonburg, North Carolina facility when it closed in October, 2000. The workers were engaged in the production of sweat shirts, sweat pants and sweat shorts.

Accordingly, the Department is amending the certification to include the workers at the Walstonburg, North Carolina location of Rugged Sportswear.

The intent of the Department’s certification is to include all workers of Rugged Sportswear who were adversely affected by a shift of production to Mexico.

The amended notice applicable to NAFTA–03838 is hereby issued as follows:

All workers of Rugged Sportswear, Siler City, North Carolina (NAFTA–03838) and Walstonburg, North Carolina (NAFTA–03838A) who becomes totally or partially separated from employment on or after March 31, 1999 through May 30, 2002 are eligible to apply for NAFTA–TAA under Section 250 of the Trade Act of 1974.

Signed at Washington, DC this 15th day of December, 2000.

Linda G. Poole,
Certifying Officer, Division of Trade Adjustment Assistance.

[NAFTA–4202]

Samsonite Corporation, Tucson, AZ; Amended Notice of Revised Determination on Reconsideration

In accordance with section 250(a), subchapter D, chapter 2, title II, of the Trade Act of 1974, as amended (19 USC 2273), the Department of Labor issued a Notice of Revised Determination on Reconsideration regarding eligibility to apply for NAFTA Transitional Adjustment Assistance, on December 8, 2000, applicable to workers of Samsonite Corporation, Tucson, Arizona. The notice will soon be published in the Federal Register.

At the request of the State agency, the Department reviewed the decision for workers of the subject firm. The State pointed out that workers of the subject firm were covered under a previous certification, NAFTA–2263, which expired on April 20, 2000. Based on this information, to avoid overlap in worker coverage, the Department is amending the September 29, 1999, impact date set in the revised determination for NAFTA–4202, to April 21, 2000.

The amended notice applicable to NAFTA–4202 is hereby issued as follows:

- All workers of Samsonite Corporation, Tucson, Arizona, who became totally or partially separated from employment on or after April 21, 2000, through December 8, 2002, are eligible to apply for NAFTA–TAA under Section 250 of the Trade Act of 1974.

Signed in Washington, DC this 15th day of December 2000.
Linda G. Poole,
Certifying Officer, Division of Trade Adjustment Assistance.

BILLING CODE 4510–30–M

Investigations Regarding Certifications of Eligibility to Apply for NAFTA Transitional Adjustment Assistance

Petitions for transitional adjustment assistance under the North American Free Trade Agreement–Transitional Adjustment Assistance Implementation Act (Pub. L. 103–182), hereinafter called (NAFTA–TAA), have been filed with State governors under section 250(b)(1) of subchapter D, Chapter 2, title II, of the Trade Act of 1974, as amended, are identified in the Appendix to this notice. Upon notice from a Governor that a NAFTA–TAA petition has been received, the Director of the Division of Trade Adjustment Assistance (DTAA), Employment and Training Administration (ETA), Department of Labor (DOL), announces the filing of the petition and takes action pursuant to paragraphs (c) and (e) of section 250 of the Trade Act.

The purpose of the Governor’s actions and the Labor Department’s investigations are to determine whether the workers separated from employment on or after December 8, 1993 (date of enactment of Pub. L. 103–182) are eligible to apply for NAFTA–TAA under Subchapter D of the Trade Act because of increased imports from or the shift in production to Mexico or Canada.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing with the Director of DTAA at the U.S. Department of Labor (DOL) in Washington, DC provided such request if filed in writing with the Director of DTAA not later than January 8, 2001.

Also, interested persons are invited to submit written comments regarding the subject matter of the petitions to the Director of DTAA at the address shown below not later than January 8, 2001.

Petitions filed with the Governors are available for inspection at the Office of the Director, DTAA, ETA, DOL, Room C–5311, 200 Constitution Avenue, NW., Washington, D.C. 20210.

Signed at Washington, DC this 19th day of December, 2000.
Edward A. Tomchick,
Director, Division of Trade Adjustment Assistance.

DEPARTMENT OF LABOR
Employment and Training Administration

[NAFTA—04106]

United States Leather, Lackawanna Leather, Including Leased Workers of Snelling Personnel Services Employed at United States Leather, Lackawanna Leather, El Paso, TX; Amended Certification Regarding Eligibility To Apply for NAFTA-Transitional Adjustment Assistance

In accordance with Section 250(A), Subchapter D, Chapter 2, Title II, of the Trade Act of 1974 (19 USC 2273), the Department of Labor issued a Certification for NAFTA Transitional Adjustment Assistance on October 6, 2000, applicable to workers of United States Leather, Lackawanna Leather, El Paso, Texas. The notice was published in the Federal Register on November 1, 2000 (65 FR 65331).

At the request of the State agency, the Department reviewed the certification for workers of the subject firm. New information shows that some workers of United States Leather, Lackawanna Leather were leased from Snelling Personnel Services to produce leather hides used for the production of car seats at the El Paso, Texas facility. Information also shows that workers separated from employment at the subject firm had their wages reported under a separate unemployment insurance (UI) tax account for Snelling Personnel Services.

Based on these findings, the Department is amending the certification to include workers of Snelling Personnel Services leased to United States Leather, Lackawanna Leather, El Paso, Texas.

The intent of the Department’s certification is to include all workers of United States Leather, Lackawanna Leather adversely affected by imports from Mexico.

The amended notice applicable to NAFTA—04106 is hereby issued as follows:

All workers of United States Leather, Lackawanna Leather, El Paso, Texas and leased workers of Snelling Personnel Services, El Paso, Texas engaged in employment related to the production of leather hides used for the production of car seats for United States Leather, Lackawanna Leather, El Paso, Texas who became totally or partially separated from employment on or after August 14, 1999 through October 6, 2002 are eligible to apply for NAFTA-TAA under Section 250 of the Trade Act of 1974.

Signed at Washington, DC this 19th day of December, 2000.

Linda G. Poole,
Certifying Officer, Division of Trade Adjustment Assistance.

Mine Safety and Health Administration

Fee Adjustments for Testing, Evaluation, and Approval of Mining Products

AGENCY: Mine Safety and Health Administration (MSHA), Labor.

ACTION: Notice of fee adjustments.

SUMMARY: This notice revises our (MSHA Approval and Certification Center (A&CC)) user fees. Fees compensate us for the costs that we incur for testing, evaluating, and approving certain products for use in underground mines. We based the 2001 fees on our actual expenses for fiscal year 2000. The fees reflect changes both in our approval processing operations and in our costs to process approval actions.

[FR Doc. 00–33060 Filed 12–27–00; 8:45 am]

BILLING CODE 4510–30–M
DATES: These fee schedules are effective from January 1, 2001 through December 31, 2001.

FOR FURTHER INFORMATION CONTACT:
Steven J. Luzik, Chief, Approval and Certification Center (A&CC), 304–547–2029 or 304–547–0400.

SUPPLEMENTARY INFORMATION:

Background

On May 8, 1987 (52 FR 17506), we published a final rule, 30 CFR part 5—Fees for Testing, Evaluation, and Approval of Mining Products. The rule established specific procedures for calculating, administering, and revising user fees. We have revised our fee schedule for 2001 in accordance with the procedures of that rule and include this new fee schedule below. For approval applications postmarked before January 1, 2001, we will continue to calculate fees under the previous (2000) fee schedule, published on December 28, 1999.

Fee Computation

In general, we computed the 2001 fees based on fiscal year 2000 data. We calculated a weighted-average, direct cost for all the services that we provided during fiscal year 2000 in the processing of requests for testing, evaluation, and approval of certain products for use in underground mines. From this cost, we calculated a single hourly rate to apply uniformly across all of the product approval categories during 2001.

J. Davitt McAteer, Assistant Secretary for Mine Safety and Health.

¹ Full approval fee consists of evaluation cost plus applicable test costs.

² Fee based upon the approval schedule in effect at the time of retest.

Note: When the nature of the product requires that we test and evaluate it at a location other than our premises, you must reimburse us for the traveling, subsistence, and incidental expenses of our representative in accordance with standardized government travel regulations. This reimbursement is in addition to the fees charged for evaluation and testing.

LEGAL SERVICES CORPORATION

Program Letter 2000–7—State Planning and Performance Measures

AGENCY: Legal Services Corporation.

SUMMARY: This Notice sets forth the text of Program Letter 2000–7—State Planning and Performance Measures. The program letter announces three strategies to advance LSC’s efforts to create comprehensive integrated, coordinated, client-centered state justice communities in each state:

1. The creation of a team within LSC specifically assigned responsibility for state planning;

2. A period of self-evaluation by and in each state justice community, with an evaluation report to be issued to LSC at the end of the evaluation period; and

3. The linking of state planning with the development of new performance measurement tools.

This Program Letter has been sent to each LSC grant recipient and is also posted to the LSC website at www.lsc.gov.

FURTHER INFORMATION CONTACT:
Randi Youells, Vice President for Programs, Legal Services Corporation, 750 First Street, NE, Washington, DC 20002–4250; 202/336–7269 (phone); youellsr@lsc.gov.

SUPPLEMENTARY INFORMATION:

Program Letter 2000–7

To: All LSC Program Directors.

From: Randi Youells, Vice President for Programs.
Date: December 13, 2000.

Program Letters 98–1 and 98–6 launched LSC’s most recent state planning activities approximately three years ago. Pressured by funding shortfalls and the changing needs of clients and concerned with enhancing system efficiency, effectiveness and the ability to meet clients’ legal needs, legal services programs throughout the United States were challenged by these two program letters to become actively engaged in a process of reassessing their delivery policies and programs, restructuring their legal services delivery systems and reallocating their legal services dollars. Essentially, LSC Program Letters 98–1 and 98–6 asked grantees to look at their roles in a new way—to expand their horizons from what’s best for the clients in my service area to what is best for clients throughout the state. Using this new lens, programs were asked to report on how they would coordinate and integrate their work in seven important areas—enhancing client access, efficiently delivering high quality legal assistance, using technology to expand access to legal services, improving client self-help and preventive legal education and advice, coordinating legal work and training staff, coordinating and collaborating with the private bar; developing additional resources to support legal services delivery; and designing a legal services delivery configuration that enhanced client services, reduced barriers and operated efficiently and effectively.

On January 28, 2000, the LSC Board of Directors approved LSC’s 5-year Strategic Direction Plan. This document commits LSC to dramatically enhance the impact of Legal Services programs throughout the nation by improving access to legal services among eligible persons while enhancing the quality of the services delivered. The Plan highlighted LSC’s State Planning Initiative as the primary strategy for expanding access to and availability of services throughout the United States.

Over the course of the last three years, many states have begun to develop comprehensive and integrated legal services delivery systems that:

1. (1) recognize that state justice communities must be broader than just LSC-funded grantees to include both LSC-funded and non-LSC funded sectors of the legal services delivery system, and
   (2) provide a continuum of services that encompasses individual representation, extended representation, advice, pro se advocacy, preventative education, community involvement and support, and the use of technology to expand essential services to all low-income persons within a state.

   These are exciting developments. However, it continues to be apparent that in many states and territories, the legal services delivery system remains a fragmented set of disconnected services. In many states we continue to find a wide divergence in the availability of services, client access capabilities and civil equal justice resources. This stands in stark contrast to our expectation that the statewide delivery system be constructed and maintained to provide:
   (a) Relative equity of client access to the civil legal services delivery system throughout the state; and
   (b) relative equity in the availability of the full range of client service capacities necessary to meet the full continuum of client legal needs regardless of where in the state clients live;
   (c) relative equity in the capacity to serve client communities in all of their diversity; and
   (d) relative equity in the investment of civil equal justice resources (federal, state, private, and in-kind/pro bono) throughout the state.

   A hallmark of an integrated delivery system is its flexibility to deploy resources in geographic or substantive areas so that quality of services is improved, funds are increased and outcomes for clients are expanded in areas where they are weak. In this context, then, relative equity considers the system’s various capacities throughout the state, from region to region, and directs necessary resources to locales where improvement of any sort is required to assure that all low-income people in the state have similar degrees of access to the full spectrum of equal justice services.

   In this program letter we are announcing three strategies to advance LSC’s efforts to create comprehensive, integrated, coordinated, client-centered state justice communities in each state:
   (1) The creation of a team within LSC specifically assigned responsibility for state planning;
   (2) A period of self-evaluation by and in each state justice community, with an evaluation report to be issued to LSC at the end of the evaluation period; and
   (3) The linking of state planning with the development of new performance measurement tools.

   The information received from the field on the State Planning Process and Program Letters 98–1 and 98–6 after publication of these two documents in the Federal Register and input derived from more than two years of on-site engagement by LSC staff and consultants in the field were instrumental in the development of these strategies.

   The Creation of a State Planning Team within LSC

   LSC’s Strategic Plan emphasizes that LSC’s State Planning Initiative is our primary strategy for expanding access to and availability of services throughout the United States. To stress the importance of this effort and to facilitate the development of state justice communities, LSC will create a planning team to coordinate our state planning activities. This team will be directly attached to and supervised by the LSC Vice-President for Programs.

   A Period of Self-Evaluation by and in Each State Justice Community

   We are in a period of significant transition moving from an LSC-centric legal services model to comprehensive, integrated and client-centered state justice communities. We acknowledge that the journey is not over and that significant effort remains to ensure that comprehensive justice communities exist and function within every state and territory. As we move forward with our efforts, we must remain conscious of the need to address several questions of fundamental relevance. These include:

   (1) To what extent has a comprehensive, integrated client-centered legal services delivery system been achieved in a particular state?
   (2) To what extent have intended outcomes of a comprehensive, integrated and client-centered legal service delivery system been achieved including but not limited to service effectiveness/quality; equity in terms of client access; greater involvement by members of the private bar in the legal lives of clients; and client-community empowerment?
   (3) Are the best organizational and human resource management configurations and approaches being used?

   We believe that the next several months are an appropriate time to try to begin to answer these questions. We have been involved in state planning activities for approximately three years, and LSC believes that states need a period of introspection about where

   1To download a copy, go to http://www.lsc.gov/press/pr_pi_pl.htm.
they have been and where they are going. Moreover, we can all acknowledge that self-evaluation is a worthwhile and important part of our planning for the creation of comprehensive, integrated, client-centered legal services delivery systems within each state. We are, accordingly, requiring our grantees and requesting that other state planners begin a period of evaluation of their planning efforts and activities over the last three years using the above questions as a framework for the evaluation report. These self-evaluations will inform each state justice community and LSC of what has worked, what has not worked and why, what obstacles stand in planners path, and what steps and support might assist each state to better achieve a comprehensive, integrated, client-centered delivery system that delivers upon the promise of equal justice for all.

Evaluations can be performed by state planners themselves or by outside consultants hired to perform this task. We ask that a single evaluation report for each state be submitted to LSC on or before July 1, 2001 unless LSC has granted your state an extension of time in which to file the report. Please submit your extension requests no later than May 15, 2001, to Robert Gross, Senior Program Counsel for State Planning at LSC. Reports should be no longer than 30 pages (not more than 10 pages single-spaced for each area of inquiry) and should contain the name and telephone number of a contact person(s). Attachments will be accepted as long as they provide additional information that clarifies a particular issue or area of inquiry as identified in the body of the report. The report should assume that the effort to create state justice communities is ongoing and that we do not expect that you have completed your work. Self-evaluation reports should be a candid and honest assessment of the progress that each state has made in creating a comprehensive, integrated and client-centered delivery system as well as of the work that remains to be done. Reports should address the following issues in the order presented:

To what extent has a comprehensive, integrated and client-centered legal services delivery system been achieved in a particular state?

Areas of exploration include:

(1) What are the important issues that impact upon low income people within your state? How is your state responding to these issues?
(2) What are the components of the delivery system?
(3) Has this system created mechanisms to assess its performance in relationship to commonly-accepted external guides such as the ABA Standards for Providers of Civil Legal Services to the Poor, the LSC Performance Criteria or some other set of objective criteria? What is the protocol for undertaking system performance review and when was a review last undertaken?
(4) Does your statewide system work to ensure the availability of equitable legal assistance capacities to clients—regardless of who the clients are, where they reside or the languages they speak? How does your system ensure that clients have equitable access to necessary assistance including self-help, legal education, advice, brief service, and representation in all relevant forums? Please describe what steps you anticipate taking to ensure equitable access in the coming years.
(5) How does the legal service delivery system employ technology to provide critical legal services to low-income clients including hard to reach groups such as migrant farmworkers, Native Americans, the elderly, those with physical or mental disabilities, those confined to institutions, immigrants and the rural poor?
(6) Has the legal service delivery system expanded its resources to provide critical legal services to low-income clients including hard to reach groups such as migrant farmworkers, Native Americans, the elderly, those with physical or mental disabilities, those confined to institutions, immigrants and the rural poor?
(7) What steps have been implemented within the legal service delivery system and among client communities to identify and nurture new leaders? Do the existing leaders reflect the diversity within the state and within client communities that your delivery system serves? Do your state’s equal justice leaders reflect the gender, race, ethnic and economic concerns of important but sometimes overlooked groups within your state? Does the leadership provide opportunities for innovation and experimentation; does it support creative solutions to meet changing needs; are new ideas welcomed; are clients nurtured as leaders? Has the leadership been given sufficient authority and resources to implement needed changes?
(8) What do you envision will be your next steps to achieve a client-centered integrated and comprehensive delivery system within your state or territory? How will clients be actively involved in the determination of these next steps?
(9) What has been the greatest obstacle to achieving a statewide, integrated, client-centered delivery system and how was that obstacle overcome or, alternatively, how do you plan to overcome that obstacle?
(10) Has any benefit-to-cost analysis been made in terms of creating a comprehensive, integrated and client-centered legal services delivery system in your state? If yes, what does your analysis show?
(11) What resources, technical assistance and support would help you meet your goals?
To what extent have intended outcomes of a comprehensive, integrated client-centered legal service delivery system been achieved including but not limited to service effectiveness/quality; efficiency; equity in terms of client access; greater involvement by members of the private bar in the legal lives of clients, and client-community empowerment?

Areas of exploration include:

(1) In terms of the issues impacting upon low-income persons within your state, what strategies have you designed to address these issues and how do you plan to measure your future success in addressing your objectives?
(2) Has the legal services delivery system expanded access and services through coordination with providers throughout the state? Can this be quantified?
(3) Has the quality of services provided by the legal services delivery system improved. How?
(4) Since 1998, has there been improvement in the relative equity of client access throughout the state for all low income clients regardless of who they are, where in the state they reside, what languages they speak, their race/ gender/national origin, or the existence of other access barriers? How is this equity achieved?
(5) Since 1998, has there been improvement in the relative equity in terms of the availability of the full range of civil equal justice delivery capacities throughout the state? What mechanisms have been developed to ensure such relative equity is achieved and maintained? Since 1998, has there been improvement in the relative equity in the development and distribution of civil equal justice resources throughout the state? Are there areas of the state that suffer from a disproportionate lack of resources (funding as well as in-kind/ pro bono)? If so, is there a strategy to overcome such inequities?
(6) Does this legal services delivery system operate efficiently? Are there areas of duplication?
(7) Has the system expanded the way it involves private lawyers in the
delivery of essential services to low-income persons? Does the system effectively and efficiently use the private bar to deliver essential services to low income people?

Are the best organizational and human resource management configurations and approaches being used?

Areas of exploration include:
(1) For calendar year 2001, what is the current configuration of programs (LSC and non-LSC) that deliver services to low income clients—i.e., what are the components (size, areas of responsibility, governance) of the delivery system? What are the funding sources and levels for each of these components of the delivery system?
(2) Since October 1998, what other configurations and/or approaches have been seriously explored? Were any adopted? Were any rejected? Are any changes contemplated in the coming year?
(3) Is there any identifiable duplication in capacities or services in the state? How many duplicative systems—accounting systems, human resources management systems, case management systems, etc.—currently exist? Does the service delivery system now in use minimize or eliminate duplications that existed prior to October 1, 1998?
(4) Since October 1998, what innovative service delivery systems/mechanisms/initiatives have been adopted in the state? Have any been explored and then rejected?

**Linking State Planning with the Development of New Performance Measurement Tools**

Simultaneously with these self-evaluations, LSC will proceed to contract with a private research firm to formally evaluate legal services delivery systems in a selected number of states. LSC plans to select several states that we believe are at important stages of the planning-implementation process for an outside evaluation. If your state is chosen, you will not have to do the self-evaluation discussed in this program letter. Moreover, LSC will provide discretionary grants and/or technical assistance to assist with and help defray any in-kind program costs associated with this project.

The purpose of these evaluations will be to determine whether or not the delivery model in use in the state has effectively implemented the concepts and principles of a comprehensive, integrated and client-centered legal services delivery system. LSC will study the relationship between the structure of the delivery system and desired outcomes as articulated by the selected states in prior planning documents. The findings of these formal evaluations—together with the material presented in the self-evaluations—will assist LSC and other interested stakeholders in understanding how best to conceptualize, design and deliver comprehensive, integrated and client-centered legal services. We will use this information to begin to develop new performance measurement tools.

### NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

#### Meetings of the Humanities Panel

**AGENCY:** The National Endowment for the Humanities.

**ACTION:** Notice of meetings.

**SUMMARY:** Pursuant to the provisions of the Federal Advisory Committee Act (Public Law 92–463, as amended) notice is hereby given that the following meetings of the Humanities Panel will be held at the Old Post Office, 1100 Pennsylvania Avenue, NW., Washington, DC 20506.

##### FOR FURTHER INFORMATION CONTACT:
Lauras S. Nelson, Advisory Committee Management Officer, National Endowment for the Humanities, Washington, DC 20506; telephone (202) 606–8322. Hearing-impaired individuals are advised that information on this matter may be obtained by contacting the Endowment’s TDD terminal on (202) 606–8282.

##### SUPPLEMENTARY INFORMATION:
The proposed meetings are for the purpose of panel review, discussion, evaluation and recommendation on applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including discussion of information given in confidence to the agency by the grant applicants. Because the proposed meetings will consider information that is likely to disclose trade secrets and commercial or financial information obtained from a person and privileged or confidential and/or information of a personal nature the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, pursuant to authority granted me by the Chairman’s Delegation of Authority to Close Advisory Committee meetings, dated July 19, 1993, I have determined that these meetings will be closed to the public pursuant to subsections (c)(4), (6) of section 552b of Title 5, United States Code.

1. **Date:** January 5, 2001.
   **Time:** 8:30 a.m. to 5:00 p.m.
   **Room:** 315.

   **Program:** This meeting will review applications for Asia and Africa in Collaborative Research, submitted to the Division of Research Programs at the September 1, 2000 deadline.

2. **Date:** January 8, 2001.
   **Time:** 8:30 a.m. to 5:00 p.m.
   **Room:** 315.

   **Program:** This meeting will review applications for American Studies II in Collaborative Research, submitted to the Division of Research Programs at the September 1, 2000 deadline.

3. **Date:** January 9, 2001.
   **Time:** 8:30 a.m. to 5:00 p.m.
   **Room:** 415.

   **Program:** This meeting will review applications for a New Millennium, submitted to the Division of Education Programs at the October 1, 2000 deadline.

4. **Date:** January 9, 2001.
   **Time:** 8:30 a.m. to 5:00 p.m.
   **Room:** 315.

   **Program:** This meeting will review applications for European Studies in Collaborative Research, submitted to the Division of Research Programs at the September 1, 2000 deadline.

5. **Date:** January 10, 2001.
   **Time:** 8:30 a.m. to 5:00 p.m.
   **Room:** 415.

   **Program:** This meeting will review applications for National Education Projects, submitted to the Division of Education at the October 15, 2000 deadline.

6. **Date:** January 11, 2001.
   **Time:** 9:00 a.m. to 5:00 p.m.
   **Room:** 315.

   **Program:** This meeting will review applications for Ancient and Medieval Studies in Collaborative Research, submitted to the Division of Research Programs at the September 1, 2000 deadline.

7. **Date:** January 11, 2001.
   **Time:** 8:30 a.m. to 5:00 p.m.
   **Room:** 415.

   **Program:** This meeting will review applications for Schools for a New Millennium, submitted to the Division of Education Programs at the October 1, 2000 deadline.

8. **Date:** January 12, 2001.
   **Time:** 8:30 a.m. to 5:00 p.m.
   **Room:** 415.

   **Program:** This meeting will review applications for National Education Programs at the September 1, 2000 deadline.

This meeting will review applications for National Education Programs at the September 1, 2000 deadline.
NUCLEAR REGULATORY COMMISSION

[Docket No. 50–400]

Carolina Power & Light Company; Notice of Issuance of Amendment to Facility Operating License and Final Determination of No Significant Hazards Consideration

The U.S. Nuclear Regulatory Commission (Commission) has issued Amendment No. 103 to Facility Operating License No. NPF–63 issued to Carolina Power & Light Company (CP&L, the licensee), which revised the Technical Specifications (TS) for operation of the Shearon Harris Nuclear Power Plant, Unit 1 (HNP), located in Wake and Chatham Counties, North Carolina. The amendment is effective as of the date of issuance.

The amendment modified the TS to support a modification to HNP to increase the spent fuel storage capacity by adding rack modules to spent fuel pools (SFPs) C and D and placing the pools in service. Specifically, the amendment consists of: (1) A revision to TS 5.6 to identify pressurized water reactor fuel burnup restrictions, boiling water reactor fuel enrichment limits, pool capacities, heat load limitations, and nominal center-to-center distances between fuel assemblies in the racks to be installed in SFPs C and D; (2) an alternative plan in accordance with the requirements of 10 CFR 50.55a to demonstrate an acceptable level of quality and safety in completion of the component cooling water (CCW) and SFPs C and D cooling and cleanup system piping; and (3) an unreviewed safety question for additional heat load on the CCW system.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission’s rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission’s rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Notice of Consideration of Issuance of Amendment to Facility Operating License and Opportunity for a Hearing in connection with this action was published in the Federal Register on January 13, 1999 (64 FR 2237). A request for a hearing was filed on February 12, 1999, by the Board of Commissioners of Orange County, North Carolina (BCOC).

On July 12, 1999, the Atomic Safety and Licensing Board (ASLB) ruled that BCOC had standing and had submitted two admissible contentions. The two contentions related to (1) whether General Design Criterion 62 allows the use of administrative controls to prevent criticality (TC–2); and (2) the adequacy of the licensee’s proposed alternative plan for the cooling system piping (TC–3). On July 29, 1999, the ASLB granted CP&L’s request to hold the hearing in accordance with the hybrid hearing procedures of 10 CFR Part 2, Subpart K. On January 4, 2000, all parties filed written summaries and on January 21, 2000, the ASLB heard oral arguments related to the two admitted contentions. On May 5, 2000, the ASLB issued a decision in favor of CP&L, stating that “(1) there is no genuine and substantial dispute of fact or law that can only be resolved with sufficient accuracy by the introduction of evidence in an evidentiary hearing; and (2) contentions TC–2 and TC–3 are disposed of as being resolved in favor of CP&L.”

On January 31, 2000, BCOC filed four late-filed environmental contentions that challenged the adequacy of the staff’s December 21, 1999, environmental assessment related to CP&L’s amendment request. On March 3, 2000, the NRC and CP&L responded to the late-filed contentions, and on March 13, 2000, BCOC submitted its reply to the responses. On August 7, 2000, the ASLB issued its Ruling on Late-filed Environmental Contentions. In its ruling, the ASLB admitted one environmental contention (EC–6) regarding the probability of occurrence of BCOC’s postulated accident scenario. On November 20, 2000, all parties filed written summaries and on December 7, 2000, the ASLB heard oral arguments related to EC–6.

Under its regulations, the Commission may issue and make an amendment immediately effective, notwithstanding the pendency before it of a request for a hearing from any person, in advance of the holding or completion of any request for hearing. Where it has determined that no significant hazards considerations are involved.

The Commission has applied the standards of 10 CFR 50.92 and has made a final determination that the amendment involves no significant hazards considerations. The basis for this determination is contained in the Safety Evaluation related to this action. Accordingly, as described above, the amendment has been issued and made immediately effective and any hearing will be held after issuance.

The Commission has prepared an Environmental Assessment related to the action and has determined not to prepare an environmental impact statement. Based upon the environmental assessment, the Commission has concluded that the issuance of the amendment will not have a significant effect on the quality of the human environment (64 FR 71514).

For further details with respect to the action see (1) the application for amendment dated December 23, 1998, as supplemented on March 15, April 5, April 30, June 14, July 23, September 3, October 15, and October 29, 1999, and April 14, and July 19, 2000, (2) Amendment No. 103 to License No. NPF–63, (3) the Commission’s related Safety Evaluation, and (4) the Commission’s Environmental Assessment. All of these items are available for public inspection at the Commission’s Public Document Room, located at One White Flint North, 11555 Rockville Pike (first floor), Rockville, Maryland, and accessible electronically through the ADAMS Public Electronic Reading Room link at the NRC Web site (http://www.nrc.gov).

Dated at Rockville, Maryland, this 21st day of December 2000.

For the Nuclear Regulatory Commission.

Richard P. Correia,
Chief, Section 2, Project Directorate II, Division of Licensing Project Management, Office of Nuclear Reactor Regulation.

[FR Doc. 00–33152 Filed 12–27–00; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–305]

Nuclear Management Company, LLC; Notice of Withdrawal of Application for Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has granted the request of Nuclear Management Company, LLC (the licensee) to withdraw the June 7, 1999, as supplemented February 4, and
September 26, 2000, application for proposed amendment to Facility Operating License No. DPR–43 for the Kewaunee Nuclear Power Plant, located in Kewaunee County, Wisconsin.

The proposed amendment would have revised the Kewaunee Nuclear Power Plant Technical Specifications for the facility’s reactor pressure vessel Pressure-Temperature limit curves.

The Commission had previously issued a Notice of Consideration of Issuance of Amendment published in the Federal Register on November 15, 2000 (65 FR 69061). However, by letter dated December 18, 2000, the licensee withdrew the proposed amendment change, but the licensee did not withdraw the exemption requests in the submittals dated June 7, 1999, as supplemented February 4, September 26, and December 18, 2000. The exemption requests are being processed separately.

For further details with respect to this action, see the application for amendment dated June 7, 1999, as supplemented February 4, and September 26, 2000, and the licensee’s letter dated December 18, 2000, which withdrew the application for license amendment. Documents may be examined, and/or copied for a fee, at the NRC’s Public Document Room, located at One White Flint North, 11555 Rockville Pike (first floor), Rockville, Maryland, and accessible electronically through the ADAMS Public Electronic Reading Room link at the NRC Web site (http://www.nrc.gov).

Dated at Rockville, Maryland, this 21st day of December 2000.

For the Nuclear Regulatory Commission.

John G. Lamb,
Project Manager, Section 1, Project Directorate III, Division of Licensing Project Management, Office of Nuclear Reactor Regulation...

[FR Doc. 00–33151 Filed 12–27–00; 8:45 am]

BILLING CODE 7590–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–272 and 50–311]

In the Matter of PSEG Nuclear LLC, Philadelphia Electric Company, (PESCO Energy Company), Delmarva Power and Light Company, Atlantic City Electric Company, (Salem Nuclear Generating Station, Units 1 and 2);

Supplemental Order Regarding Approval of Transfer of Licenses and Conforming Amendments

I

PSEG Nuclear LLC, Philadelphia Electric Company (PESCO Energy Company), Delmarva Power and Light Company (DP&L), and Atlantic City Electric Company (ACE) are the joint owners of the Salem Nuclear Generating Station, Unit Nos. 1 and 2 (Salem), located in Salem County, New Jersey. They hold Facility Operating Licenses Nos. DPR–70 and DPR–75, issued by the U.S. Nuclear Regulatory Commission (NRC or Commission) on August 13, 1976, and May 20, 1981, respectively, pursuant to Part 50 of Title 10 of the Code of Federal Regulations (10 CFR Part 50). Under these licenses, PSEG Nuclear LLC (currently owner of 42.59 percent of each Salem unit) is authorized to possess, use, and operate the Salem units. The current combined nonoperating ownership interests of DP&L and ACE are 14.82 percent of each Salem unit. They own 7.41 percent of each Salem unit individually.

II

By an application dated December 20, 1999, as supplemented February 11, and February 25, 2000, PSEG Nuclear LLC, DP&L, and ACE requested approval by the NRC of the transfer to PSEG Nuclear LLC of the Salem licenses, to the extent held by DP&L and ACE, in conjunction with the proposed acquisition of DP&L’s and ACE’s combined ownership interests in the Salem units by PSEG Nuclear LLC. DP&L and ACE are both subsidiaries of Conectiv. In response to that request, the NRC staff published a notice of the license transfer application, the related conforming amendment request included in the application, and an opportunity for a hearing in the Federal Register on February 18, 2000 (65 FR 8452). No hearing requests were filed. The NRC approved the transfer request by an Order dated April 21, 2000. That Order, which contained several conditions of approval, was based in part on the premise that the DP&L and ACE interests would be transferred concurrently as a combined interest. In a supplemental application dated October 10, 2000, DP&L and ACE indicated that due to certain delays in receiving other necessary regulatory approvals, their interests in the Salem licenses need to be transferred independently in two phases to PSEG Nuclear LLC, namely the DP&L interest would be transferred first, followed by the transfer of the ACE interest. They asked that the effectiveness of the Order approving the license transfers be extended until December 31, 2001, due to the delays in receiving the other regulatory approvals, and that any necessary actions be taken to allow the transfers to occur in two phases.

PSEG Nuclear LLC also requested approval of conforming license amendments, modified from the amendments previously approved to reflect the transfers as they may occur in two phases. The amendments would still delete references to DP&L and ACE to reflect the transfer of each of their interests, as they occur, in the licenses to PSEG Nuclear LLC.

Approval of the transfers, as they may now occur in two phases, and corresponding modified conforming license amendments was requested pursuant to 10 CFR 50.80 and 50.90. The NRC staff determined that the supplemental application dated October 10, 2000, related only to schedular matters and did not involve any material changes to the underlying basis for the transfer approval Order dated April 21, 2000. Therefore, the supplemental application was within the scope of the PSEG Nuclear LLC Order dated April 18, 2000, Federal Register notice and did not require remoting or a new opportunity for a hearing.

Pursuant to 10 CFR 50.80, no license, or any right thereunder, shall be transferred, directly or indirectly, through transfer of control of the license, unless the Commission shall give its consent in writing. After reviewing the information submitted in the October 10, 2000, submittal and other information before the Commission, the NRC staff has determined that its previous findings set forth in the Order dated April 21, 2000, remain valid notwithstanding the transfers occurring in two phases, namely, PSEG Nuclear LLC is qualified to hold the license for each Salem unit to the same extent the licenses are now held by DP&L and ACE, and that the transfer of the licenses, as previously described herein, is otherwise consistent with applicable provisions of law, regulations, and orders issued by the Commission subject to the conditions described herein. The NRC staff has further found that the...
supplemental application for the proposed license amendments to reflect the transfers occurring in two phases complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission’s rules and regulations set forth in 10 CFR Chapter I; the facility will operate in conformity with the application, the provisions of the Act, and the rules and regulations of the Commission; there is reasonable assurance that the activities authorized by the proposed license amendments can be conducted without endangering the health and safety of the public and that such activities will be conducted in compliance with the Commission’s regulations; the issuance of the proposed license amendments will not be inimical to the common defense and security or to the health and safety of the public; and the issuance of the proposed license amendments will be in accordance with 10 CFR Part 51 of the Commission’s regulations and all applicable requirements have been satisfied. These findings are supported by a safety evaluation dated December 21, 2000.

III

Accordingly, pursuant to Sections 161b, 161i, and 184 of the Atomic Energy Act of 1954, as amended, 42 U.S.C. §§ 2201(b), 2201(i), and 2234, and 10 CFR 50.80, It Is Hereby Ordered that the effectiveness of the Order dated April 21, 2000, is extended to December 31, 2001. Any concurrent transfer of the DP&L and ACE interests to PSEG Nuclear LLC shall remain subject to the terms and conditions of the April 21, 2000, Order.

It Is Further Ordered that the license transfers from DP&L and ACE to PSEG Nuclear LLC may occur in two phases, as described above, subject to the following conditions:

1. DP&L shall transfer to the PSEG Nuclear LLC decommissioning trusts for Salem at the time its interests in the Salem licenses are transferred to PSEG Nuclear LLC, all of ACE’s accumulated decommissioning trust funds for Salem Unit Nos. 1 and 2. Immediately following such transfer, the amounts in the PSEG Nuclear LLC decommissioning trusts must, with respect to the interests in Salem Unit Nos. 1 and 2 PSEG Nuclear LLC would then hold, be at a level no less than the formula amounts under 10 CFR Section 50.75.

2. ACE shall transfer to the PSEG Nuclear LLC decommissioning trusts for Salem at the time its interests in the Salem licenses are transferred to PSEG Nuclear LLC, all of ACE’s accumulated decommissioning trust funds for Salem Unit Nos. 1 and 2. Immediately following such transfer, the amounts in the PSEG Nuclear LLC decommissioning trusts must, with respect to the interests in Salem Unit Nos. 1 and 2 PSEG Nuclear LLC would then hold, be at a level no less than the formula amounts under 10 CFR Section 50.75.

3. Conditions 3.a. through 3.e. of the April 21, 2000, Order, which have now been incorporated into the Salem licenses by a separate licensing action, shall remain applicable to the PSEG Nuclear LLC decommissioning trust agreements for Salem Unit Nos. 1 and 2. The citation in the foregoing condition 3.e. is corrected to read “10 CFR 35.32(a)(3)”.

4. PSEG Nuclear LLC shall inform the Director, Office of Nuclear Reactor Regulation, in writing, of the date of closing of each subject transfer no later than 2 business days before the date of each closing. If the transfer of the DP&L or ACE interests is not completed by December 31, 2001, this Order shall become null and void with respect to any such transfer not yet completed; however, on application and for good cause shown, such date may be extended.

It Is Further Ordered that, consistent with 10 CFR 2.1315(b), license amendments that make changes, as indicated in Enclosure 2 to the cover letter forwarding this Order, to conform each Salem license to reflect each subject license transfer are approved. To the extent the license pages in Enclosure 2 reflect intervening events and completed licensing actions that have occurred since the issuance of the April 21, 2000, Order, and therefore are inconsistent with the license pages referenced in that Order showing the changes to the licenses approved by that Order, the amendment pages approved by this Order supersede the previously approved license pages. Those amendments approved by this Order appropriate to the particular license transfers in fact occurring shall be issued and made effective at the time the corresponding license transfers are completed.

This Order is effective upon issuance. For further details with respect to this Order, see the submittal dated October 10, 2000, the previous related application dated December 20, 1999, and supplements thereto dated February 11, and February 23, 2000, which may be examined, and/or copied for a fee, at the NRC’s Public Document Room, located at 11555 Rockville Pike (first floor), Rockville, MD, and are accessible electronically through the ADAMS Public Electronic Reading Room link at the NRC Web site http://www.nrc.gov.

Dated at Rockville, Maryland, this 21st day of December 2000.

For the Nuclear Regulatory Commission.

Samuel J. Collins,
Director, Office of Nuclear Reactor Regulation.

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Nuclear Waste; Notice of Meeting

The Advisory Committee on Nuclear Waste (ACNW) will hold its 124th meeting on January 16–18, 2001, at 11545 Rockville Pike, Rockville, Maryland, Room T–2B3. The entire meeting will be open to public attendance.

The schedule for this meeting is as follows:

Tuesday, January 16, 2001

A. 8:30–10:00 A.M.: Opening Statement/Planning and Procedures (Open)—The Chairman will open the meeting with brief opening remarks. The Committee will then review items under consideration at this meeting and consider topics proposed for future consideration by the full Committee.

B. 10:15–12:00 Noon: Progress on ACNW’s Sufficiency Review Application Task Action Plan (TAP) (Open)—The Committee will discuss the ACNW’s TAP, its approach to conducting a sufficiency review and its progress on proposed vertical slices.

C. 1:00–2:00 P.M.: Entombment Option for Decommissioning Power Reactors (Open)—The Committee will discuss with cognizant NMSS staff selected issues related to this topic.

D. 2:00–7:00 P.M.: Discussion of Proposed ACNW Reports (Open)—The ACNW Chairman will make opening remarks regarding the conduct of the meeting.

Wednesday, January 17, 2001

E. 8:30–8:40 A.M.: Opening Remarks by the ACNW Chairman (Open)—The ACNW Chairman will make opening remarks regarding the conduct of the meeting.

F. 8:40–9:40 A.M.: Institutional Control Status (Open)—The Committee will discuss and hear a presentation
from the NRC staff on the status of considerations regarding long-term custodial responsibilities for sites whose license is terminated under restricted release conditions.

H. 11:00–12:30 P.M.: Meeting with the Director, Office of Nuclear Material Safety and Safeguards, (NMSS) (Open)—The Committee will meet with the Director, NMSS to discuss items of mutual interest.

Thursday, January 18, 2001

1. 8:30–8:35 A.M.: Opening Remarks by the ACNW Chairman (Open)—The ACNW Chairman will make opening remarks regarding the conduct of the meeting.

K. 8:35–11:30 A.M.: Preparation for Meeting with the NRC Commissioners (Open)—The next meeting with the Commissioners is scheduled to be held in the Commission Conference Room in One White Flint North on March 22, 2001. The Committee will review its proposed presentations.

L. 12:30–5:00 P.M.: Discussion of Proposed ACNW Reports (Open)—The Committee will continue its discussion of proposed ACNW reports.

M. 5:00–5:30 P.M.: Miscellaneous (Open)—The Committee will discuss matters related to the conduct of Committee activities and matters and specific issues that were not completed during previous meetings, as time and availability of information permit.

Procedures for the conduct of and participation in ACNW meetings were published in the Federal Register on October 11, 2000 (65 FR 60475). In accordance with these procedures, oral or written statements may be presented by members of the public, electronic recordings will be permitted only during those portions of the meeting that are open to the public, and questions may be asked only by members of the Committee, its consultants, and staff. Persons desiring to make oral statements should notify Howard J. Larson, ACNW, as far in advance as practicable so that appropriate arrangements can be made to schedule the necessary time during the meeting for such statements. Use of still, motion picture, and television cameras during this meeting will be limited to selected portions of the meeting as determined by the ACNW Chairman. Information regarding the time to be set aside for taking pictures may be obtained by contacting the ACNW office, prior to the meeting. In view of the possibility that the schedule for ACNW meetings may be adjusted by the Chairman as necessary to facilitate the conduct of the meeting, persons planning to attend should notify Mr. Larson as to their particular needs.

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, the Chairman’s ruling on requests for the opportunity to present oral statements and the time allotted therefore can be obtained by contacting Mr. Howard J. Larson, ACNW (Telephone 301/415–6805), between 8:00 A.M. and 5:00 P.M. EST.

ACNW meeting notices, meeting transcripts, and letter reports are now available for downloading or viewing on the internet at http://www.nrc.gov/ACRS/ACNW.

Videoteleconferencing service is available for observing open sessions of ACNW meetings. Those wishing to use this service for observing ACNW meetings should contact Mr. Theron Brown, ACNW Audiovisual Technician (301/415–8066), between 7:30 a.m. and 3:45 p.m. EST at least 10 days before the meeting to ensure the availability of this service. Individuals or organizations requesting this service will be responsible for telephone line charges and for providing the equipment and facilities that they use to establish the videoteleconferencing link. The availability of videoteleconferencing services is not guaranteed.

Annette Vietti-Cook,
Acting Advisory Committee Management Officer.

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards Subcommittee Meeting on Planning and Procedures Notice of Meeting

The ACRS Subcommittee on Planning and Procedures will hold a meeting on January 22–24, 2001, in Room T–2B3, 11545 Rockville Pike, Rockville, Maryland.

The entire meeting will be open to public attendance, with the exception of a portion that may be closed pursuant to 5 U.S.C. 552(b)(2) and (6) to discuss organizational and personnel matters that relate solely to internal personnel rules and practices of ACRS, and information the release of which would constitute a clearly unwarranted invasion of personal privacy.

The agenda for the subject meeting shall be as follows:

Monday, January 22, 2001—8:30 a.m. until the close of business: The Subcommittee will discuss stakeholder views of ACRS activities, self-assessment of ACRS performance in CY 2000, potential operational areas for improved effectiveness, and other activities related to the conduct of ACRS business. It will also discuss identification and quantification of design margins, adequacy of PRA models and codes, risk-informed regulation, AP1000 review issues, and potential future ACRS activities.

Tuesday, January 23, 2001—8:30 a.m. until the conclusion of business: The Subcommittee will continue to discuss self-assessment of ACRS performance in CY 2000, potential operational areas for improved effectiveness, and other activities related to the conduct of ACRS business. It will also continue the discussion on the identification and quantification of design margins, adequacy of PRA models and codes, risk-informed regulation, AP1000 review issues, and potential future ACRS activities.

Wednesday, January 24, 2001—8:30 a.m.–1:00 p.m.: The Subcommittee will discuss the annual ACRS report to the Commission on the NRC Safety Research Program and potential future ACRS activities.

The purpose of this meeting is to gather information, analyze relevant issues and facts, and to formulate proposed positions and actions, as appropriate, for deliberation by the full Committee.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman; written statements will be accepted and made available to the Committee. Electronic recordings will be permitted only during those portions of the meeting that are open to the public, and questions may be asked only by members of the Subcommittee, its consultants, and staff. Persons desiring to make oral statements should notify the cognizant ACRS staff person named below five days prior to the meeting, if possible, so that appropriate arrangements can be made.
Further information regarding topics to be discussed, the scheduling of sessions open to the public, whether the meeting has been canceled or rescheduled, the Chairman’s ruling on requests for the opportunity to present oral statements, and the time allotted therefor can be obtained by contacting the cognizant ACRS staff person, Dr. John T. Larks (telephone: 301/415–7360) between 7:30 a.m. and 4:15 p.m. (EST). Persons planning to attend this meeting are urged to contact the above-named individual one or two working days prior to the meeting to be advised of any changes in schedule, etc., that may have occurred.

James E. Lyons,
Associate Director for Technical Support, ACRS/ACNW.

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards and Advisory Committee on Nuclear Waste Joint Subcommittee Meeting; Notice of Meeting

The Advisory Committee on Reactor Safeguards (ACRS) and the Advisory Committee on Nuclear Waste (ACNW) Joint Subcommittee will hold a meeting on January 19, 2001, Room T–2B3, 11545 Rockville Pike, Rockville, Maryland.

The meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows: Friday, January 19, 2001—8:30 a.m. until the conclusion of business: The ACRS and ACNW Joint Subcommittee will discuss risk assessment methods associated with Integrated Safety Analysis (ISA) and the status of risk-informed activities in the Office of Nuclear Material Safety and Safeguards.

The Joint Subcommittee will also discuss risk analysis methods and applications associated with the Department of Energy (DOE) Integrated Safety Management (ISM) program. The purpose of this meeting is to gather information, analyze relevant issues and facts, and formulate proposed positions and actions, as appropriate, for deliberation by the ACRS and ACNW full Committees.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman. Written statements will be accepted and made available to the ACRS and ACNW full Committees.

Electronic recordings will be permitted only during those portions of the meeting that are open to the public, and questions may be asked only by members of the Subcommittee, its consultants, and staff. Persons desiring to make oral statements should notify the cognizant ACRS/ACNW staff member named below five days prior to the meeting, if possible, so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittee, along with any consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting. The Subcommittee will then hear presentations by and hold discussions with representatives of the NRC staff, its consultants, and other interested persons regarding these matters.

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, the Subcommittee’s ruling on requests for the opportunity to present oral statements and the time allotted therefor can be obtained by contacting the cognizant senior staff engineer, Michael T. Markley (telephone 301/415–6885) between 7:30 a.m. and 4:15 p.m. (EST) or by e-mail MTM@NRC.gov. Persons planning to attend this meeting are urged to contact the above-named individual one to two working days prior to the meeting to be advised of any potential changes in the proposed agenda, etc., that may have occurred.

James E. Lyons,
Associate Director for Technical Support, ACRS/ACNW.

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards Meeting of the ACRS Joint Subcommittees on Materials and Metallurgy and on Thermal-Hydraulic Phenomena; Notice of Meeting

The ACRS Subcommittees on Materials and Metallurgy and on Thermal-Hydraulic Phenomena will hold a joint meeting on January 18, 2001, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows: Thursday, January 18, 2001—8:30 a.m. until the conclusion of business: The Subcommittees will discuss the treatment of uncertainties in both the FAVOR Probabilistic Fracture Mechanics Code, and the associated thermal-hydraulic analyses which are being developed as part of the Pressurized Thermal Shock (PTS) Technical Basis Reevaluation Project. The purpose of this meeting is to gather information, analyze relevant issues and facts, and to formulate proposed positions and actions, as appropriate, for deliberation by the full Committee.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman. Written statements will be accepted and made available to the Committee. Electronic recordings will be permitted only during those portions of the meeting that are open to the public, and questions may be asked only by members of the Subcommittees, their consultants, and staff. Persons desiring to make oral statements should notify the cognizant ACRS staff engineer named below five days prior to the meeting, if possible, so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittees, along with any of their consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittees will then hear presentations by and hold discussions with representatives of the NRC staff and other interested persons regarding this review.

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, and the Chairman’s ruling on requests for the opportunity to present oral statements and the time allotted therefor, can be obtained by contacting the cognizant ACRS staff engineer, Mr. Paul A. Boehnert (telephone 301/415–8065) between 7:30 a.m. and 4:15 p.m. (EST). Persons planning to attend this meeting are urged to contact the above-named individual one to two working days prior to the meeting to be advised of any potential changes to the agenda, etc., that may have occurred.

James E. Lyons,
Associate Director for Technical Support, ACRS/ACNW.

Advisory Committee on Reactor Safeguards Subcommittee Meeting on Thermal-Hydraulic Phenomena; Notice of Meeting

The ACRS Subcommittee on Thermal-Hydraulic Phenomena will hold a meeting on January 16–17, 2000, Room T–2B1, 11545 Rockville Pike, Rockville, Maryland.

A portion of the January 17 meeting session may be closed to public attendance to discuss proprietary information per 5 U.S.C. 552b(c)(4) pertinent to the Siemens Power Corporation.

The agenda for the subject meeting shall be as follows: Tuesday, January 16, 2001—8:30 a.m. until the conclusion of business.

Wednesday, January 17, 2001—8:30 a.m. until the conclusion of business.

The Subcommittee will continue its review of the: (1) Revised Electric Power Research Institute Report, TR–113594, “Resolution of Generic Letter 96–06 Waterhammer issues”, (2) Siemens Power Corporation S–RELAP5 thermal-hydraulic code and its application to small-break LOCA analyses. The purpose of this meeting is to gather information, analyze relevant issues and facts, and to formulate proposed positions and actions, as appropriate, for deliberation by the full Committee.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman. Written statements will be accepted and made available to the Committee. Electronic recordings will be permitted only during those portions of the meeting that are open to the public, and questions may be asked only by members of the Subcommittee, its consultants, and staff. Persons desiring to make oral statements should notify the cognizant ACRS staff engineer named below five days prior to the meeting, if possible, so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

BILLING CODE 7590–01–M

OFFICE OF PERSONNEL MANAGEMENT

Proposed Collection; Comment Request for Review of an Expiring Information Collection: OPM FORM 1644

AGENCY: Office of Personnel Management.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Public Law 104–13, May 22, 1995), this notice announces that the Office of Personnel Management (OPM) intends to submit to the Office of Management and Budget a request for review of an expiring information collection. OPM Form 1644, Child Care Provider Information: Child Care Tuition Assistance Program for Federal Employees, is used to verify that child care providers are licensed and/or regulated by local and/or State authorities. Agencies need to know that child care providers to whom they make disbursements in the form of tuition assistance subsidies, are licensed and/or regulated by local and/or State authorities.

Pub. L. 106–58, passed by Congress on September 29, 1999, permits Federal agencies to use appropriated funds to help their lower income employees with their costs for child care. It is up to the agencies to decide on whether to implement this law. This is a new law and the extent to which it will be implemented, including the number of providers that will be involved, cannot be easily predicted. We estimate approximately 3000–5000 OPM 1644 forms will be completed annually. The form will take approximately 10 minutes to complete by each provider.

The annual estimated burden is 83.5 hours.

Comments are particularly invited on:
• Whether the form adequately captures the information needed to verify child care provider State and/or local licensure and regulation;
• Whether our estimate of the public burden of this collection is accurate, and based on valid assumptions and methodology; and
• Ways in which we can minimize the burden of the collection of information on those who are to respond, through use of the appropriate technological collection techniques or other information collection strategies.

For copies of this proposal, contact Mary Beth Smith-Toomey on (202) 606–8358, or E-mail to mbtoomey@opm.gov.

DATES: Comments on this proposal should be received on or before February 26, 2001.

ADDRESSES: Send or deliver comments to: Patricia F. Kinney, Director, Office of Work/Life Programs, U.S. Office of Personnel Management, 1900 E St., NW., Washington, DC 20415.

Office of Personnel Management.

Janice R. Lachance,
Director.

OFFICE OF PERSONNEL MANAGEMENT

Proposed Collection; Comment Request for Review of an Expiring Information Collection: OPM 1536

AGENCY: Office of Personnel Management.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Public Law 104–13, May 22, 1995), this notice announces that the Office of Personnel Management (OPM) intends to submit to the Office of Management and Budget a request for review of an expiring information collection. OPM 1536, Application for Survivor Annuity Under the Civil Service Retirement System, is designed for use by former spouses of Federal employees and annuitants who are applying for a monthly Civil Service Retirement System benefit. The application collects information about whether the applicant is covered by the Federal Employees Health Benefits Program and about any court order which awards the applicant retirement benefits.

Comments are particularly invited on: Whether this information is necessary for the proper performance of functions of OPM, and whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

Approximately 500 OPM Forms 1536 will be completed annually. The form takes approximately 45 minutes to complete. The annual burden is 375 hours.

For copies of this proposal, contact Mary Beth Smith-Toomey on (202) 606–8358, or E-mail to mbtoomey@opm.gov.

DATES: Comments on this proposal should be received on or before February 26, 2001.

OFFICE OF PERSONNEL MANAGEMENT

Proposed Collection; Comment Request for Revision of an Information Collection: RI 30–31

AGENCY: Office of Personnel Management.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Public Law 104–13, May 22, 1995), this notice announces that the Office of Personnel Management (OPM) intends to submit to the Office of Management and Budget (OMB) a request for revision of an information collection. RI 30–31, Request for Information About Your Disability Annuity and Employment, is used by persons who are not yet age 60 and who are receiving disability annuity and are subject to inquiry as to their medical condition as OPM deems reasonably necessary. RI 30–1 collects information as to whether the disabling condition has changed.

Approximately 8,000 RI 30–1 forms will be completed annually. We estimate it takes approximately 60 minutes to complete the form. The annual burden is 8,000 hours.

Comments are particularly invited on:
—Whether this collection of information is necessary for the proper performance of functions of the Office of Personnel Management, and whether it will have practical utility;
—Whether our estimate of the public burden of this collection is accurate and based on valid assumptions and methodology; and
—Ways in which we can minimize the burden of the collection of information on those who are to respond, through use of the appropriate technological collection techniques or other forms of information technology.

For copies of this proposal, contact Mary Beth Smith-Toomey on (202) 606–2150, or E-mail to mbtoomey@opm.gov.

DATES: Comments on this proposal should be received on or before February 26, 2001.

and based on valid assumptions and methodology; and
—Ways in which we can minimize the burden of the collection of information on those who are to respond, through use of the appropriate technological collection techniques or other forms of information technology.

For copies of this proposal, contact Mary Beth Smith-Toomey on (202) 606–8358, or E-mail to mbtoomey@opm.gov.

DATES: Comments on this proposal should be received within 60 calendar days from the date of this publication.

Janice R. Lachance,

Director.

OFFICE OF PERSONNEL MANAGEMENT

Proposed Collection; Emergency Request for Review of an Information Collection: OPM Form 1644

AGENCY: Office of Personnel Management.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104–13, May 22, 1995), this notice announces that the Office of Personnel Management (OPM) will submit to the Office of Management and Budget an emergency request for review of an expiring information collection, OPM Form 1644, Child Care Provider Information: Child Care Tuition Assistance Program for Federal Employees, is used to verify that child care providers are licensed and/or regulated by local and/or State authorities. Agencies need to know that child care providers to whom they make disbursements in the form of tuition assistance subsidies are licensed and/or regulated by local and/or State authorities.

Pub. L. 106–58, passed by Congress on September 29, 1999, permits Federal agencies to use appropriated funds to help their lower income employees with their costs for child care. It is up to the agencies to decide on whether to implement this law. This is a new law and the extent to which it will be implemented, including the number of providers that will be involved, cannot be easily predicted. We estimate approximately 5000 OPM 1644 forms will be completed annually.

The form will take approximately 10 minutes to complete by each provider. The annual estimated burden is 835 hours.

Comments are particularly invited on:
—Whether the form adequately captures the information needed to verify child care provider State and/or local licensure and regulation;
—Whether our estimate of the public burden of this collection is accurate, and based on valid assumptions and methodology; and
—Ways in which we can minimize the burden of the collection of information on those who are to respond, through use of the appropriate technological collection techniques or other information collection strategies.

For copies of this proposal, contact Mary Beth Smith-Toomey on (202) 606–8358, or E-mail to mbtoomey@opm.gov.

DATES: Comments on this proposal should be received on or before January 8, 2001.

ADDRESSES: Send or deliver comments to:

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; Chicago Board Options Exchange, Inc.; Order Approving and Notice of Filing and Order Granting Accelerated Approval of Amendment Nos. 1, 2, 3, 4, 5, 6, and 7 to the Proposed Rule Change Relating to the Evaluation of Trading Crowd Performance

I. Introduction

On October 23, 1998, the Chicago Board Options Exchange, Inc. ("CBOE" or "Exchange") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19e–4 thereunder,² a proposed rule change to amend CBOE Rule 8.60, Evaluation of Trading Crowd Performance, to provide limited remedial actions for Designated Primary Market Makers ("DPMs"), market makers, and other members and trading crowds (collectively referred to as "Market Participants") who have failed to satisfy their market responsibilities. The proposed rule change was published for comment in the Federal Register on December 10,

the proposal. On April 12, 1999, CBOE filed Amendment No. 2 to the proposal. On June 17, 1999, CBOE filed Amendment No. 3 to the proposal. On October 23, 2000, CBOE filed Amendment No. 4 to the proposal. On November 13, 2000, the Commission received a faxed copy of CBOE's Amendment No. 5 to the proposal. On December 4, 2000, CBOE filed Amendment No. 6 to the proposal. On December 19, 2000, the CBOE filed Amendment No. 7 to the proposal. The Commission received one comment regarding the proposal. The Commission is approving the proposed rule change, as amended, and publishing this notice to solicit comments on Amendment Nos. 1, 2, 3, 4, 5, 6, and 7. The Commission is also approving Amendment Nos. 1, 2, 3, 4, 5, 6, and 7 on an accelerated basis.

II. Description of the Proposal

The Exchange proposes to modify CBOE Rule 8.60 to clarify and improve the market performance evaluation of Market Participants on the Exchange.

The proposed rule change should provide the appropriate Market Performance Committee ("Committee") greater procedural flexibility in addressing the performance of Market Participants, while clarifying the due process safeguards that apply to the exercise of the Committee's authority.

The purpose of CBOE Rule 8.60 is to provide the appropriate Committee with a means to work with Market Participants to improve market quality and competition. The market performance evaluation process is designed to assist the appropriate Committee in working with Market Participants to improve their market performance. Currently, under CBOE Rule 8.60, the Committee must hold a formal hearing to impose serious sanctions such as: (1) Suspension, termination, or restriction of registration of a market maker; (2) suspension, termination or restriction of an appointment to one or more option classes; (3) restriction of appointments to additional option classes; (4) relocation of option classes; and (5) prohibiting a member from trading at a particular trading station. However, under the current Rule, the appropriate Committee does not have explicit authority to take limited remedial actions. Under the proposed rule change, the Committee would be able to take certain limited remedial actions after an informal meeting with Market Participants who have been identified through the evaluation process.

The proposed rule would amend CBOE Rule 8.60(a) to indicate that the Committee in evaluating whether a Market Participant is satisfying its market responsibilities may consider: (1) Quality of markets; (2) extent of competition in the crowd; (3) due diligence in representing orders as agent; (4) adherence to ethical standards; (5) carrying out administrative responsibilities; and (6) other matters as the Exchange may deem relevant. Under the proposal, in addition to the survey, the Committee may also consider any other relevant information including, but not limited to, statistical measures of performance and such other factors and data as the Committee may determine to be pertinent to the evaluation of Market

See letter from Andrew D. Spiwak, Managing Director, Legal Department, Office of Enforcement, CBOE, to Marc McKayle, Attorney, Division, dated April 8, 1999 ("Amendment No. 2"). In Amendment No. 2, CBOE clarified that there is no automatic stay of an action during the appeal of a remedial sanction, but that a Market Participant could request a stay of action during an appeal. CBOE also reorganized the primary difference between the sanctions that presently exist under the Rule and the limited remedial actions introduced by this proposal is the severity of the sanctions. The Exchange registered pursuant to CBOE Rule 19.1, Interpretations and Policies .01, a Market Participant would be considered aggrieved in an economic sense if sanctioned under the proposed revisions to CBOE Rule 8.60, and thus entitled to appeal any action taken by a Market Performance Committee under the rule. The Exchange also noted that, pursuant to Rule 19.5, any decision of the Appeals Committee is subject to review by the Exchange's Board of Directors. The Exchange also explained that limited remedial actions taken under the proposal by the appropriate Market Performance Committee would not constitute a disciplinary action, and thus Exchange reporting requirements under Rule 19d—1(e) of the Act, 17 CFR 240.19d—1(e), would not be triggered. Finally, the Exchange assured the Commission that the three Market Performance Committees have exclusive, non-overlapping jurisdiction, and thus Market Participants would not be subject to duplicative sanctions stemming from one course of conduct.

See letter from Andrew D. Spiwak, Managing Director, Legal Department, Office of Enforcement, CBOE, to Nancy Sanow, Assistant Director, Division, dated November 13, 2000 ("Amendment No. 5"). Amendment No. 5 was replaced in its entirety by Amendment No. 6.

See letter from Andrew D. Spiwak, Managing Director, Legal Department, Office of Enforcement, CBOE, to Nancy Sanow, Assistant Director, Division, dated November 27, 2000 ("Amendment No. 6"). Amendment No. 6, in addition to technical changes, amended CBOE Rule 8.60(d) to require the Committee to provide the appropriate Market Performance Committee with a report of its findings and recommendations. This change, the Committee's recommendation of suggested actions, and such other factors and data as the Committee may determine to be pertinent to the evaluation of Market

See letter from Andrew D. Spiwak, Managing Director, Legal Department, Office of Enforcement, CBOE, to Nancy Sanow, Assistant Director, Division, dated December 12, 2000 ("Amendment No. 7"). Amendment No. 7, proposed CBOE Rule 8.60(g) was amended to specify that the Committee's recommendation of suggested actions, and such other factors and data as the Committee may determine to be pertinent to the evaluation of Market
Participants. CBOE Rule 8.60(a) is also being amended to clarify that the Rule pertains to DPMs (both market-making and agency responsibilities), market makers, and other members (individually or collectively as trading crowds).

Under the proposal, CBOE Rule 8.60(b) would be amended to indicate that the Committee may find that a Market Participant has failed to satisfy its market responsibilities, if the evaluation of the Market Participant results in a ranking that is one or more standard deviations from the mean score of all Market Participants within the Committee’s jurisdiction, or if such a finding may reasonably be supported by any other relevant information known to the Committee. Currently, under CBOE Rule 8.60(b), the Committee must presume a failure to meet minimum performance standards exists for all members of a trading crowd, if the trading crowd is ranked in the bottom 10% of trading crowds in the aggregate results of the Crowd Evaluation Questionnaire.

Under the proposal, the rule language in current CBOE Rule 8.60(a) listing the sanctions for a market-maker’s failure to meet minimum performance standards would be moved to paragraph (c) of the proposed rule. In addition to the more serious sanctions that are currently listed in the Rule, the proposal would amend CBOE Rule 8.60(c), to clarify that the Committee has the authority to take limited remedial actions if a Market Participant fails to satisfy its market responsibilities. Thus, under the proposed CBOE Rule 8.60(c) the Committee may take one or more of the following actions, if it finds that a Market Participant has failed to satisfy its market responsibilities:

1. Suspension, termination, or restriction of registration of a Market Participant (which may also include the termination of a DPM appointment);
2. Suspension, termination or restriction of an appointment to one or more option classes or other securities;
3. Relocation or reallocation of option classes or other securities to other trading crowds;
4. Prohibiting a Market Participant from trading at a particular trading station;
5. Requiring the Market Participant to submit a business plan to the Committee detailing those steps that the Market Participant intends to take to improve its performance;
6. Requiring that one or more Market Participants in a crowd execute 100% of their opening transactions in that crowd in person;
7. Restricting the ability of Market Participants to participate in the Exchange’s Retail Automatic Execution System (“RAES”);
8. Restricting the eligibility of a crowd to be allocated new option classes or other securities;
9. Requiring that one or more Market Participants attend a meeting or series of meetings as the Committee shall require for the purpose of education or improving their performance as Market Participants;
10. Requiring that all bookable orders be booked if not executed immediately upon presentation in the crowd; and
11. Restricting the ability of Market Participants to participate in ROS.

The Exchange has indicated that it may in the future add comparable limited remedial sanctions to the Rule by filing a proposed rule change with the Commission pursuant to 19(b)(3)(A) of the Act. CBOE Rule 8.60(c) is also being amended to delete language pertaining to the distribution of a crowd evaluation questionnaire on a six-month periodic basis. Under the proposal, the Exchange will conduct market performance evaluations twice a year as it deems necessary, but generally on a six-month periodic basis.

The proposed rule change would amend CBOE Rule 8.60(d) to include the Rule’s formal hearing and informal meeting procedures. Under the proposal, before taking any remedial action, the Committee would be required to give written notice to the Market Participant to indicate that the Committee is considering taking action and the basis for the action, and that the Market Participant is entitled to an opportunity to appear before the Committee (or a panel thereof). If the Committee contemplates taking any of the actions listed in proposed CBOE Rule 8.60(c)(1) through (4), a formal hearing with a verbatim record would be required, although the Committee would have the authority to take any action listed in CBOE Rule 8.60(c) after a formal hearing. If the Committee contemplates taking any of the actions listed in proposed CBOE Rule 8.60(c)(5) through (11) that will not be imposed for a period longer than one year, an informal meeting without the requirement of a verbatim record would be permitted. In addition, under proposed CBOE Rule 8.60(d), a Market Participant receiving written notice of potential Committee action would be required to appear at the formal hearing or informal meeting, as applicable, and could also submit a written statement to the Committee in addition to an appearance. At such a hearing or meeting, the formal rules of evidence would not apply and the Committee would decide all questions of procedure and admissibility of evidence. If after the hearing or meeting the Committee determined that the Market Participant failed to satisfy its market responsibilities, the Committee would give written notice to all affected Market Participants reflecting the sanction ordered, the length of the sanction, and the basis for the Committee’s findings and conclusions.

The proposed rule change would also amend CBOE Rule 8.60(e) to provide the Committee with the authority to impose any sanction under CBOE Rule 8.60(c) if the Market Participant failed to appear before or meet with the Committee pursuant to proposed CBOE Rule 8.60(d) and did not have a reasonable justification or excuse. CBOE Rule 8.60(e) would also be amended to indicate that a Market Participant’s unexcused absence before the Committee could result in a referral to the Business Conduct Committee.

The proposal also amends CBOE Rules 8.60(f) and (g) to specify the process for taking appeals from a Committee action. Under proposed CBOE Rule 8.60(f), consistent with the current Rule, Committee actions taken after a formal hearing may be appealed directly to the Board of Directors. Proposed CBOE Rule 8.60(g) specifies any action taken by the Committee after an informal meeting in accordance with CBOE Rule 8.60(c)(5) through (11) may be appealed pursuant to Chapter XIX of the Exchange Rules. CBOE believes that Chapter XIX appeals would be procedurally duplicative for Committee actions taken after a formal hearing where a verbatim record is kept.

Finally, the proposal amends Interpretation and Policy .01 under CBOE Rule 8.60 to provide the Committee discretion in defining whether a market maker is a member of a trading crowd.

III. Comments

The Commission received one comment letter on the proposal. The commenter inquired: (1) Whether the proposed restriction of RAES participation as a limited remedial
sanction would supercede the remedial actions in CBOE Rule 8.16.\(^{18}\) (2) whether appealing parties must be aggrieved in an economic sense when appealing pursuant to Chapter XIX of the Exchange Rules; and (3) whether inequitable results would occur because of overlapping jurisdictions of the Market Performance Committees.\(^{19}\) In Amendment No. 1, the Exchange stated that the proposed limited remedial sanction restricting RAES participation would not supercede remedial actions under CBOE Rule 8.16. The Exchange explained that CBOE Rule 8.16 and CBOE Rule 8.60, as proposed, are not facially inconsistent with each other and may co-exist within the CBOE regulatory framework because action may be taken under one rule without implicating the other. The Exchange also explained its view that, despite the separate and distinct jurisdictions of the three Market Performance Committees, a Market Participant could not be sanctioned by more than one Committee for a single course of conduct. The Exchange also clarified that if a Market Participant received a limited remedial sanction under the proposal, it would be considered to have been aggrieved in an economic sense, and thus the sanction would be appealable pursuant to Section 6(b)(5) of the Exchange Rules.\(^{20}\)

**IV. Discussion**

The Commission finds that the proposed rule change is consistent with the Act\(^{21}\) and, in particular, with section 6(b) of the Act.\(^{22}\) Specifically, the Commission believes that the proposal is consistent with the sections 6(b)(5), (b)(6), and (b)(7) of the Act.\(^{23}\) Section 6(b)(5) of the Act\(^{24}\) requires that rules of an exchange be designed to promote just and equitable principles of trade, perfect the mechanism of a free and open market, prevent fraudulent and manipulative acts, and, in general, protect investors and the public interest.

Section 6(b)(6) of the Act\(^{25}\) requires an exchange to provide rules to appropriately discipline its members for violation of the provisions of the Act, the rules or regulations thereunder, or the rules of the exchange, by expulsion, suspension, limitation of activities, functions, and operations, fine, censure, being suspended or barred from being associated with a member, or any other fitting sanction. Section 6(b)(7) of the Act\(^{26}\) requires the rules of an exchange generally to provide a fair procedure for the disciplining of members.

The Commission finds that proposed CBOE Rule 8.60(a) is consistent with Section 6(b)(5)\(^{27}\) because it is designed to help the Exchange maintain market quality and integrity by providing the appropriate Market Performance Committee with a means to identify Market Participants that fail to satisfy their market responsibilities. The proposed rule change amends CBOE Rule 8.60(a) to enumerate, and add, factors that the Committee may consider in evaluating whether a Market Participant satisfactorily meets its market responsibilities. The proposed rule change also amends CBOE Rule 8.60(a) to specify that the Rule pertains to DPMs, market makers, and other members (individually or collectively as trading crowds). The Commission believes that the ability of the Committee to evaluate the market performance of Market Participants should be enhanced by the addition of new factors and clarification of existing factors to be contained in the survey of members that is a part of the market performance evaluation. The proposal should also provide the Committee and Market Participants with appropriate guidance on how the Exchange evaluates the market performance of its members. The Commission notes that CBOE Rule 8.60(a) is also being amended to enable the Committee to consider any other relevant information that the Committee determines is pertinent to the evaluation of Market Participants. In such instances, where non-enumerated factors have been included in a Market Participant’s evaluation, the Exchange has represented that the factors beyond those explicitly mentioned in the Rule’s text would be detailed in the written notice of a Market Participant’s potential failure to satisfy its market responsibilities, as required by CBOE Rule 8.60(d).\(^{28}\) Further, the Commission notes that in order to provide appropriate guidance in the future, the Exchange should inform Market Participants of any additional factors determined to be pertinent in evaluating whether a Market Participant has satisfied its market responsibilities.

The Commission finds that proposed CBOE Rule 8.60(b) is consistent with the Act,\(^{29}\) including section 6(b)(6),\(^{30}\) because the Rule is part of the scheme that provides the Exchange with a means to appropriately discipline its members. The proposed rule change would amend CBOE rule 8.60(b) to indicate that the Committee may determine that a Market Participant has failed to satisfy its market responsibilities if the Market Participant evaluation results in a ranking that is one or more standard deviations from the mean score of all Market participants within the Committee’s jurisdiction, or if such a finding may reasonably be supported by any other relevant information known to the Committee. The Commission believes that it is reasonable for the Committee to find that a Market Participant has failed to satisfy its market responsibilities if the Market Participant evaluation results in a ranking that is one or more standard deviations below the mean score of all Market Participants within the Committee’s jurisdiction. Moreover, this evaluation should provide an objective measure as to whether Market Participants have failed to satisfy their market responsibilities.

The Exchange has represented that each Committee has exclusive jurisdiction over discrete market performance issues, and that such specialization provides the separate Committees added competence to review certain market performance matters. The Commission believes that the structure of the Exchange’s market performance evaluation should permit the appropriate Committee to properly evaluate whether satisfactory market performance has been achieved by Market Participants based on the factors set forth in revised CBOE Rule 8.60(a). As indicated above, the Commission considers it essential that a Market Price Participant be fully cognizant of the factors that may bear upon the Committee’s evaluation, particularly if that evaluation could result in remedial action by the Committee. Thus, the Commission expects that the Exchange
will fully apprise Market Participants of any other relevant information known to the Committee that influences a Committee finding that a Market Participant has failed to meet his market responsibility.

The Commission also finds that proposed CBOE Rule 8.60(c) is consistent with the Act, particularly Section 6(b)(6).\(^31\) CBOE Rule 8.60(c) will be amended to include the more serious sanctions found in current CBOE Rule 8.60(a), and to clarify that the Committee also has the authority to take more remedial actions if a Market Participant fails to satisfy its market responsibilities. The Commission believes that the proposed rule change should enhance the flexibility of the Exchange’s market performance evaluation. Presently, the Exchange does not have an express mechanism to address market performance matters that may warrant remedial action, but are not serious enough to warrant suspension, termination, or restriction of a market-maker’s registration under the current Rule. The proposed rule change should permit the CBOE to implement appropriate, limited remedial sanctions that will permit the Committee to take corrective measures to enhance the performance of Market Participants before more serious sanctions, such as suspension or termination, are warranted. The Commission believes that the proposed rule change should enhance the performance of Market Participants before more serious sanctions, such as suspension or termination, are warranted. The Commission finds that the proposed rule change should enhance the flexibility of the Exchange’s market performance evaluation.

Further, the Commission believes that amended CBOE Rule 8.60(d) should provide Market Participants with adequate procedural safeguards under the Rule. For instance, before any action is taken, the Committee would be required to give written notice to the Market Participant to indicate that the Committee is considering taking action and the basis for the action, and that the Market Participant is entitled to an opportunity to appear before the Committee (or a panel thereof). The Commission believes that Market Participants should be provided with reasonable due process safeguards and that CBOE Rule 8.60(d), as amended, should provide a fair procedure for disciplining members, and thus is consistent with Section 6(b)(7) of the Act.\(^34\)

The Commission also finds that proposed CBOE Rule 8.60(e) is consistent with Section 6(b)(6) of the Act.\(^35\) The proposed rule change amends CBOE Rule 8.60(e) to authorize the Committee to impose any sanction listed under CBOE Rule 8.60(c) if a Market Participant fails to appear before the Committee, without reasonable justification or excuse, as required by proposed CBOE Rule 8.60(d). CBOE Rule 8.60(e) would also be amended to indicate that a Market Participant’s unexcused absence before the Committee could result in a referral to the Business Conduct Committee. The Commission believes that CBOE Rule 8.60(e) provides appropriate discipline for violation of the provisions found in amended CBOE Rule 8.60(d), and thus is consistent with section 6(b)(6) of the Act.\(^36\)

The Commission finds that proposed CBOE Rules 8.60(f) and (g) are consistent with Section 6(b)(7) of the Act.\(^37\) The proposal amends CBOE Rule 8.60(f) to specify that Market Participants may appeal Committee action taken after a formal hearing directly to the Board of Directors. The proposal also amends CBOE Rule 8.60(g) to specify that after an informal meeting, a Market Participant may appeal a Committee action imposed under CBOE Rule 8.60(c)(5) through (11) to an Appeals Committee in accordance with Chapter XIX of the Exchange Rules. The Commission believes that direct appeals to the Board of Directors for Committee action taken after a formal hearing with a verbatim record should provide Market Participants with adequate procedural protections. The Commission also believes that CBOE Rule 8.60(g), which allows Market Participants to appeal in accordance with Chapter XIX of the Exchange Rules any Committee action pursuant to CBOE Rule 8.60(c)(5) through 11 after an informal meeting, should provide adequate procedural safeguards. The Commission therefore finds that CBOE Rules 8.60(f) and (g) are consistent with Section 6(b)(7) of the Act because they provide fair procedures for the disciplining of Exchange members.\(^38\)

V. Commission’s Findings and Order Granting Accelerated Approval of Proposed Rule Change

For the reasons discussed below, the Commission finds good cause for approving Amendment Nos. 1 through 7 to the proposed rule change prior to the thirtieth day after the date of publication of notice thereof in the Federal Register.

In Amendment No. 1, as outlined above, CBOE responded to various issues raised by a commenter. In Amendment No. 2, CBOE explained and clarified the procedural impact of the proposal. Specifically, Amendment Nos. 1 and 2 were of a technical, non-substantive nature, and did not significantly alter the original proposal, which was subject to a full notice and comment period. Thus, the Commission finds that granting accelerated approval to Amendment Nos. 1 and 2 is appropriate and consistent with section 19(b)(2) of the Act.\(^39\)

In Amendment No. 3, CBOE amended Rule 8.60 to restrict a member’s ability to participate in the ROS as a limited remedial sanction. CBOE also deleted language from the Rule’s text that would have given the appropriate Market Performance Committee discretion to “take any other limited remedial action.” CBOE also indicated that any additional comparable limited remedial sanctions would be added to the Rule by a proposed rule change filed with the Commission pursuant to section 19(b)(3)(A) of the Act.\(^40\) The changes in proposed Amendment No. 3 should help to ensure that Market Participants are fully notified to the types of limited remedial sanctions that may be imposed under Rule 8.60. Amendment No. 3 also set forth how additional limited remedial sanctions may be added to Rule 8.60 in future. The Commission finds that Amendment No. 3 strengthens and clarifies Rule 8.60 from a procedural perspective. Thus, the Commission finds that granting

accelerated approval to Amendment No. 3 is appropriate and consistent with section 19(b)(2) of the Act.41

In Amendment No. 4, CBOE reorganized the text of Rule 8.60 and consolidated all remedial actions and hearing procedures into paragraphs (c) and (d), respectively, of the Rule, as amended. In addition, CBOE added language to specify that Rule 8.60 pertained to DPMs, market makers, and other members (individually or collectively as trading crowds) and not just market makers. The CBOE also amended the Rule to refer to the “market responsibilities” of market participants instead of “performance standards.” The Exchange also revised the Rule’s text to indicate that the appropriate Market Performance Committee can find a Market Participant has failed to satisfy its market responsibilities if the Market Participant is ranked one or more standard deviations from the mean score of all trading crowds in a periodic examination. The Commission finds that the proposed changes in Amendment No. 4 serve to clarify the intent and application of the proposal. Thus, the Commission finds that granting accelerated approval to Amendment No. 4 is appropriate and consistent with Section 19(b)(2) of the Act.42

In Amendment No. 6,43 in addition to technical changes, CBOE Rule 8.60(d) was amended to clarify that the Committee may take any action listed in CBOE Rule 8.60(c) after a formal hearing, and may take any of the actions listed in CBOE Rule 8.60(c)(5) through (11) after an informal meeting. In addition, a conforming change was made in CBOE Rule 8.60(f) to clarify that a Market Participant may appeal any Committee action taken after a formal hearing directly to the Board of Directors.44 The Commission finds that the proposed changes in Amendment No. 6 serve to clarify the intent and application of the proposal. Thus, the Commission finds that granting accelerated approval to Amendment No. 6 is appropriate and consistent with Section 19(b)(2) of the Act.45

In Amendment No. 7, proposed CBOE Rule 8.60(g) was amended to clarify that Committee actions taken after an informal meeting in accordance with CBOE Rule 8.60(c)(5) through (11) may be appealed in accordance with Chapter XIX of the Exchange Rules. The Commission finds that the proposed change in Amendment No. 7 serves to clarify the intent and application of the proposal. Thus, the Commission finds that granting accelerated approval to Amendment No. 7 is appropriate and consistent with section 19(b)(2) of the Act.46

VI. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning Amendment Nos. 1, 2, 3, 4, 5, 6, and 7, including whether the proposed amendments are consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington DC, 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission’s Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the CBOE. All submissions should refer to File No. SR–CBOE–98–46 and should be submitted by January 21, 2001.

VII. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,47 that the proposed rule change, as amended, (SR–CBOE–98–46) is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority. 

Margaret H. McFarland, 
Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–43745; File No. SR–CBOE–00–58]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Chicago Board Options Exchange, Inc. Relating to an Interim Intermarket Linkage

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) 1 and Rule 19b–4 thereunder, 2 notice is hereby given that on November 15, 2000, the Chicago Board Options Exchange, Inc. (“CBOE” or “Exchange”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the CBOE. On December 13, 2000, the Exchange submitted Amendment No. 1 to the proposed rule change.3 The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is proposing to adopt a rule providing for the implementation of “interim linkages” with the other option exchanges. Below is the text of the proposed rule change. Additions are italicized.

CHAPTER VIII

Section B: Trading Crowds

Pilot Program for Away Market Maker Access

Rule 8.52

(1) Definitions. For the purposes of this Rule, the terms below have the following definitions.

(1) “Corresponding Rule” means a rule of a Participating Exchange that is substantially identical to this Rule 8.52.

(2) “Customer Size” means the lesser of (i) the number of option contracts that the Participating Exchange sending the order guarantees it will automatically execute at its disseminated quotation in an Eligible Option Class for Public Customer Orders and (ii) the number of option contracts that the Participating Exchange receiving the order expiring on January 31, 2002.

3 In Amendment No. 1, the Exchange made technical changes to the proposed rule text and specified that the proposed interim intermarket linkage would be effective for a pilot period expiring on January 31, 2002. See letter from Timothy Thompson, Assistant General Counsel, Legal Department, CBOE, to Nancy Sanow, Assistant Director, Division of Market Regulation, Commission, dated December 12, 2000 (“Amendment No. 1”).
guarantees it will automatically execute at its disseminated quotation in an Eligible Option Class for Public Customer Orders. This number shall be no fewer than 10.

(3) “Eligible Away Market-Maker” (“EAMM”) means, with respect to an Eligible Option Class, a market-maker, as that term is defined in Section 3(a)(22) of the Exchange Act, on a Participating Exchange: (A) is assigned to, and is providing two-sided quotations in the Eligible Option Class; and

(B) that is participating in its market’s automatic execution system in such Eligible Option Class.

(4) “Eligible Away Designated Primary Market-Maker” (“EADPM”) means: with respect to the American Stock Exchange and the Philadelphia Stock Exchange, a Specialist in an Eligible Option Class; with respect to the International Securities Exchange, a Primary Market Maker in an Eligible Option Class; and with respect to the Pacific Exchange, a Lead Market Maker in an Eligible Option Class.

(5) “Eligible Option Class” means all option series underlying a security, including both put and call options, which class is traded by the Exchange and at least one other Participating Exchange, to the extent that such Participating Exchanges have mutually agreed to include the option class in the Pilot Program.

(6) “Eligible Order” means an order for the account of a Designated Primary Market Maker or an Eligible Away Market Maker that can be sent to a Participating Exchange marked as a Public Customer Order pursuant to provisions of paragraphs (b), (c), and (d) of this Rule.

(7) “Participating Exchange” means (i) the Exchange, the Membership of the Exchange, a Designated Primary Market-Maker or an EADPM that complies with the following conditions: (1) the order is an immediate-or-cancel order; (2) the price of the order is equal to the bid (offer) disseminated by the Participating Exchange at the time the market-maker sends an order to sell (buy), and such bid (offer) is equal to the national best bid (offer) in that series of an Eligible Option Class, as calculated by the Exchange; (3) the Exchange’s bid (offer) at the time market-maker sends the order to sell (buy) is not then equal to the national highest bid (offer) in that series of an Eligible Option Class, as calculated by the Exchange; (4) the order is no larger than the Principal Size; and

(5) except with respect to orders a Designated Primary Market-Maker is sending pursuant to paragraph (c) below, the market-maker has not received an execution of another such order in the same series of an Eligible Option Class on the same Participating Exchange pursuant to the Pilot Program in the previous one minute period.

(c) Additional Access to Other Participating Exchanges. In addition to the access to other Participating Exchanges provided in paragraph (b) above, a Designated Primary Market-Maker participating in the Pilot Program may send an order to another Participating Exchange for execution as a Public Customer if:

(1) the Designated Primary Market-Makers complies with subparagraphs (1) through (3) of paragraph (b) above;

(2) the order reflects the same terms as an Underlying Customer Order the Designated Primary Market-Maker is holding; and

(3) the order is no larger than the Customer Size.

(d) Access to the Exchange by Eligible Market-Makers on Other Participating Exchanges. Notwithstanding any other Rule of the Exchange, a Member may send to the Exchange for execution as a Public Customer Order an order for an account of an EAMM or an EADPM that complies with the Governing Rule of the EAMM’s or EADPM’s Participating Exchange.

(e) Order Not Be in Writing. Notwithstanding the terms of Rule 6.24, an Eligible Order need not be in writing.

(f) Implementation of the Pilot Program. The President, or his designee, may implement the Pilot Program, in whole or in part, with respect to specific Participating Exchanges, to the extent that any such Participating Exchange has agreed to implement corresponding aspects of the Pilot Program. Designated Primary Market-Maker participation in the Pilot Program shall be voluntary.

(g) This Rule will be in effect on a pilot basis until January 31, 2002.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the CBOT included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The CBOT has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this proposed rule change is to implement certain aspects of an intermarket options linkage on an “interim” basis. This interim linkage would utilize existing systems to facilitate the sending and receiving of order flow between CBOE market makers and their counterparts on the other option exchanges as an interim step towards development of a “permanent” linkage.

The Commission has approved a linkage plan that now includes all five option exchanges. The option exchanges continue to work towards implementation of this linkage. However, because the implementation may take a significant amount of time, the option exchanges have discussed implementing an “interim” linkage. Such a linkage would use the existing market infrastructure to route orders between market-makers on the participating exchanges in a more efficient manner.

The key component of the interim linkage would be for the participating exchanges to open their automated customer execution systems, on a limited basis, to market-maker orders. Specifically, market-makers would be able to designate certain orders as “customer” orders, and thus would receive automatic execution of those orders on participating exchanges.

This proposed rule would authorize the CBOT to implement bilateral or multilateral interim arrangements with the other exchanges to provide for equal access between market makers on our respective exchanges. The Exchange currently anticipates that the initial arrangements would allow CBOT Designated Primary Market-Makers (“DPMs”) and their equivalents on the other exchanges, when they are holding customer orders, to effectively send those orders to the other market for execution when the other market has a better quote. Such orders would be limited in size to the lesser of the size

4 Under the proposal, the interim linkage would be for a pilot period expiring on January 31, 2002.

of the two markets’ automatic execution size for customer orders. The Exchange expects that the interim linkage may expand to include limited access for pure principal orders, for orders of no more than 10 contracts.

All interim linkage orders must be “immediate or cancel” (that is, they cannot be placed on an exchange’s limit order book), and a market-maker may send a linkage order only when the other (receiving) market is displaying the best national bid or offer and the sending market is displaying an inferior price. This will allow a market-maker to access the better price for its customer. In addition, if the interim linkage includes principal orders, it would allow market-makers to attempt to “clear” another market displaying a superior quote. Any exchange participating in the interim linkage will implement heightened surveillance procedures to help ensure that their market-makers send only properly-qualified orders through the linkage.

DPM participation in the interim linkage will be voluntary. Only when a DPM and its equivalent on another exchange believe that this form of mutual access would be advantageous will the exchanges employ the interim linkage procedures. The CBOE believes that the interim linkage will benefit investors and will provide useful experience that will help the exchanges in implementing the full linkage.

2. Statutory Basis

The proposed rule change meets the requirement of Section 6(b)(5) under the Act in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism for a free and open market and a national market system, and, in general, to protect investors and the public interest.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The CBOE does not believe that the proposed rule change will impose any burden on competition.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (I) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) by order approve such proposed rule change, or
(B) institute proceedings to determine whether the proposed rule change should be disappproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission’s Public Reference Room. Copies of such filing also will be available for inspection and copying at the principal office of the CBOE. All submissions should refer to File No. SR–CBOE–00–58 and should be submitted by January 18, 2001.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Margaret H. McFarland,
Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–43750; File No. SR–CBOE–00–52]

Self-Regulatory Organizations; Notice of Filing and Immediate Effectiveness of Proposed Rule Change by the Chicago Board Options Exchange, Inc., Relating to Participation Entitlements of Designated Primary Market Makers and Time and Priority Rules

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”), and Rule 19b–4 thereunder, notice is hereby given that on November 7, 2000, the Chicago Board Options Exchange, Inc. (“CBOE” or “Exchange”), filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The proposed rule change has been filed by the CBOE as a “non-controversial” rule change pursuant to Rule 19b–4(f)(6) under the Act. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The CBOE is proposing to increase the participation entitlements of Designated Primary Market Makers (“DPMs”) when only one or two market makers are at parity with the DPM, and to clarify the operation of various CBOE rules concerning participation entitlements, time and priority rules, and orders represented by a DPM as agent. The text of the proposed rule change is available at the Office of the Secretary, CBOE, and at the Commission.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the CBOE included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text these statements may be examined at the places specified in Item IV below. The CBOE has prepared summaries, set forth in

---

The CBOE’s current DPM participation entitlement is 30% for all transactions occurring at the DPM’s previously established bid or offer. The 30% entitlement is a flat rate and applies regardless of the volume in a particular class and the number of market makers present in the trading crowd, and regardless of whether the class if multiplied list. The CBOE is proposing to increase its DPM participation entitlements when there are one or two market makers at parity with the DPM 4 as follows:

- 50% when there is one market maker bidding (offering) at the DPM’s previously established bid (offer); and
- 40% when there are two market makers at parity with the DPM.

When there are three or more market makers at parity with the DPM, the DPM’s participation entitlement will remain unchanged at 30%. Accordingly, the changes would only occur in those limited instances where there are just one or two market makers at parity with the DPM, as the case may be. As discussed in more detail below, the CBOE proposes to issue a regulatory circular (“Regulatory Circular”) to establish these changes.

The proposed changes will enable the CBOE to conform its participation entitlement percentages to the entitlements established by the rules and/or practices of the other exchanges. For example, on the Philadelphia Stock Exchange (“Phlx”), a specialist is currently allocated 60% of an order when one “controlled account” is on parity, 40% when two are on parity, and 30% when three or more are on parity. Similarly, on the International Securities Exchange (“ISE”), after all public customer orders have been filled, a Primary Market Maker (“PMM”) is allocated 60% of an order if only one other participant is quoting at the best price, 40% if two other participants are at the best price, and 30% if more than two other participants are at the best price. The American Stock Exchange (“Amex”) and Pacific Exchange (“PCX”) have similar practices and provisions.

The primary purpose of the DPM participation right is to provide Exchange members with an incentive to become and remain DPMs and to assume the additional affirmative obligations imposed on DPMs that other members do not have. These obligations include the obligation to be present at the trading post throughout every business day, the obligation to participate at all times in automated execution and order handling systems such as the Exchange’s Retail Automatic Execution System (RAES), the obligation to act as an Order Book Official and to maintain the public order book, and the obligation to provide high quality markets and services and to promote the Exchange as a marketplace to customers and other market participants.

In this respect, lower DPM participation entitlements on the CBOE make it more difficult to attract and retain qualified DPMs. This puts the CBOE at a competitive disadvantage to those exchanges that provide for higher guarantees. Thus, the Exchange believes that increasing the DPM participation entitlements are necessary to promote the CBOE’s competitiveness within the exchange-traded options marketplace.

The CBOE notes that the proposed changes will not affect the priority currently afforded to public customers in the execution of their option orders. The Exchange will continue to apply the DPM participation entitlement only to that portion of the order that remains

---

4 Certain exceptions apply, as provided in Rule 6.45.
5 Similarly, by the principles set forth in Rule 6.45, if a market maker is first to respond with the best bid (offer) in response to a request for a market, the market maker is entitled to participate up to 100% in any resulting transaction. However, this entitlement applies only if the market maker’s bid (offer) is better than the DPM’s previously established principal bid (offer). If the DPM had previously established its principal bid (offer) at the price at which the transaction is to take place, the DPM entitlement provisions of CBOE Rule 6.87 apply, as explained below. It should be noted further that, by the terms of Rule 6.45, if the best bid (offer) is also represented by an order in the customer limit order book, that order will have priority over any other bid (offer) at the trading post.
6 As specified in rule 8.87, the extent of the entitlement is subject to the review of the CBOE Board of Directors.
7 On the other hand, when a DPM and one or more market makers all announce bids (offers) that establish the best bid (offer) at a price at which the DPM was not previously bidding, the priority rules apply as set forth in Rule 6.45. As such, the member who was first to respond at the best price (be it the DPM, market maker, or a floor broker) is entitled to participate up to the full amount of the order. As further provided by Rule 6.45, after the member with time priority has been satisfied, all other members bidding (offering) at the best price are entitled to participate based upon the sequence of their bids (offers). Concerning the application of the DPM entitlement when a customer order is at the best bid (offer), see further below.
8 According to the CBOE, market makers are deemed to be “at parity” with the DPM when they are bidding or offering at the DPM’s previously established bid or offer; and “at parity” with each other when it is impossible to determine, in the open outcry of the auction floor, which market maker responds first with the best bid (offer) in response to the request for a market. Telephone conversation between Arthur B. Reinstein and Steve Youn, CBOE, and Ira L. Brandriss, Division of Market Regulation, Commission, on December 4, 2000.
9 See Phlx Rule 1014(g)(ii). A “controlled account,” for the purposes of the referenced rule, includes any account controlled by an individual or accounts under common control with a member broker-dealer of the Phlx.
10 The Phlx also discussed Rule 1014(g)(ii), which incorporates additional provisions for situations when a customer order is on parity.
after all public customer orders have been filled. This applies to customer orders in the book as well as those represented in the crowd. Thus, CBOE’s DPM participation entitlement will continue to benefit customers by allowing them to receive full executions of their orders before a DPM can assert its participation entitlement.

As mentioned above, to effect the changes to the DPM participation entitlement level, the CBOE proposes to issue a new regulatory circular. The CBOE further believes that it would be beneficial to its membership if, for ease of access, the Exchange were to combine a discussion of the provisions referencing priority and DPM participation entitlements into one circular. Currently, in order to determine whether and to what extent a DPM is entitled to participate in a transaction, market participants must first reference Rule 6.45 and the corresponding, previously issued circulars to determine whether these entitlements apply and at what level. By combining the relevant provisions of these previously issued circulars and the new changes into one comprehensive circular, CBOE believes that its membership will be in a better position to access this important information more quickly and efficiently.

The first section of the Regulatory Circular, “Price and Time Priority,” contains a brief summary of the price and time priority principles contained in CBOE Rule 6.45. The second section of the Regulatory Circular, “DPM Participation Right,” establishes and describes the participation percentages discussed in this proposal. As such, it explains when a DPM is entitled to a participation entitlement and, if so entitled, under what circumstances a 30%, 40%, or 50% participation entitlement is appropriate.

This section further clarifies a long-held CBOE interpretation that a DPM’s participation entitlement is applicable to all securities traded by a DPM, which includes options as well as non-option securities traded pursuant to Chapter XXX of CBOE’s Rules. Rule 8.87(b) states that, with respect to the DPM entitlement, a DPM has the right to participate for its own account “in securities allocated to the DPM.” The circular makes clear that the term “securities” is restricted to options only and, therefore, that the participation entitlement extends to non-option securities traded on the CBOE.

The third section of Regulatory Circular, “Agency Orders,” is an amplification of the principle that public customer orders, whether in the book or in the trading crowd, take priority over a DPM’s participation right. As such, this section clearly states that a DPM’s participation right is applicable only to that portion of an order that remains after public customer orders have been filled. The proposed circular also contains an example illustrating these principles:

Assume there is an order in the book to buy 150 contracts at $3, a price that represents the national best bid. The DPM’s previously established principal bid is $3 and there are two market makers in the crowd each bidding at $3. If a floor broker enters the crowd with a market order to sell 300 contracts, the order in the book receives full execution of 150 contracts at $3. Thereafter, because the market makers’ bids are at parity with the DPM’s previously established principal bid, the DPM is entitled to a participation right of 40% with respect to the remaining 150 contracts of the market order. Therefore, the DPM receives 40% of the remaining 150 contracts at $3, or 60 contracts. The two market makers in the crowd each receive 45 contracts at $3.

The fourth section of the Regulatory Circular, “Orders in the Order Book,” is primarily a restatement of time priority principles contained in CBOE Rule 6.45 as applied to the Order Book. The first sentence clarifies that because a DPM’s previously established principal bid (offer) could not have been equal to the book, a DPM cannot participate with a market maker that was first to buy the book offer (sell to the book bid). The next sentence explains the operation of this principle in the context of crossed orders. Currently, when the AutoQuote system bid or offer would cross a booked order, AutoQuote will not adjust until the booked order trades. Thus, when a market maker trades with the booked order in this instance, a DPM is not entitled to participate because its previously established best bid or offer could not have matched the book. This section clarifies that this is the case even if the operation of AutoQuote may have prevented the DPM’s quote from automatically adjusting to match the book offer (bid).

The last section of the Regulatory Circular, “Orders Represented by a DPM as Agent,” establishes that, because of its knowledge of orders it represents as agent, a DPM Designee acting on behalf of the DPM’s market maker account cannot be deemed first to respond to the request for a market from another person acting on behalf of the DPM in performing the DPM’s agency function. This is designed to prevent a DPM from using knowledge of orders it represents as agent in order to trade ahead of other market participants. This section clarifies that other market participants must have the opportunity to act upon the order represented by the DPM as agent before the DPM’s principal account can transact with that agency order.

However, a DPM Designee acting on behalf of the DPM’s principal trading account may be the first to make a bid (offer) at a particular price with respect to a previously displayed resting order in the book or a previously represented resting order held by a DPM Designee acting as floor broker.

2. Statutory Basis

The CBOE believes that the proposed rule change will improve the operation of the DPM trading system by making the DPM participation entitlement more equitable for members while retaining the incentive for members to become and remain DPMs. Accordingly, the Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,14 in general, and furthers the objectives of Section 6(b)(5) of the Act,15 in particular, in that it is designed to remove impediments to and perfect the mechanism of a free and open market.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The CBOE does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act16 and Rule 19b–4(f)(6) thereunder17 because the proposed rule change (1) does not significantly affect the protection of

---

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–43746; File No. SR–CBOE–00–62]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Chicago Board Options Exchange, Incorporated to Limit the Meaning of “Public Customer” for Purposes of Determining Who May Use RAES

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) 1 and Rule 19b–4 2 thereunder, notice is hereby given that on November 28, 2000, the Chicago Board Options Exchange, Incorporated (“CBOE” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the provisions of CBOE Rule 6.8 (RAES Operations) that govern the eligibility of the owners of certain types of accounts to submit orders through the Exchange’s Retail Automatic Execution System (“RAES”). 3 The text of the proposed rule change is set forth below. Deleted text is in brackets; new text is in italics.

Rule 6.8 RAES Operations

(a)(i) Firms on the Exchange’s Order Routing System (“ORS”) will automatically be on the Exchange’s Retail Automatic Execution System (“RAES”) for purposes of routing small public customer market or marketable limit orders into the RAES system. Those orders which are eligible for routing to RAES may be subject to such contingencies as the appropriate Floor Procedure Committee (“FPC”) shall approve. Public customer orders are orders for accounts other than accounts in which a member, non-member participant in a joint-venture with a member, or foreign broker-dealer, or member of a futures or securities exchange has an interest. The appropriate Floor

Procedures Committee (“FPC”) shall determine the size of orders eligible for entry into RAES in accordance with paragraph (e) of this Rule. For purposes of determining what a small customer order is, a customer’s order cannot be split up such that its parts are eligible for entry into RAES. Firms on ORS have the ability to go on and off ORS at will. Firms not on ORS that wish to participate will be given access to RAES from terminals at their booths on the floor.

* * * * *

Interpretations and Policies

* * * * *

.12 For purposes of this rule (or Rule 6.8(a)(i)), members, non-member participants in a joint venture with a member, non-member broker dealers, and members of a futures or securities exchange are deemed to have an interest in accounts held by the following:

1. Spouses of, or family members living in the same household with: CBOE members, non-member participants in a joint venture with a member, non-member broker dealers, or members of futures or securities exchange.

2. (a) An affiliate that holds a 5% or more interest in the CBOE member, non-member participant in a joint venture with a member, non-member broker-dealer, or member of a futures or securities exchange; (b) Spouses of, or family members living in the same household with, any affiliate as defined in this rule.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, CBOE included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. CBOE has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

CBOE proposes to amend its rule governing the eligibility of the owners of certain types of accounts to submit orders through the Exchange’s RAES system by: (i) interpreting the term

---

3 RAES is the Exchange’s automatic execution system for public customer market or marketable limit orders of less than a certain size.

Margaret H. McFarland,
Deputy Secretary.

[FR Doc. 00–33123 Filed 12–27–00; 8:45 am]
BILLING CODE 3010–01–M
“interest,” and (ii) providing that members of futures exchanges are not considered “public customers” for purposes of the rule.

CBOE has stated that the RAES system provides a mechanism whereby public customers can receive automatic execution of their small market or marketable limit orders 4 at the National Best Bid or Offer (“NBBO”). 5 For the purposes of determining who is eligible to submit orders through RAES, Rule 6.8(a)[i] defines “public customer orders” as: Orders for accounts other than accounts in which a member, non-member participant in a joint-venture with a member, or any non-member broker-dealer (including a foreign broker-dealer as defined in Rule 1.1(xx)) has an interest.

Accordingly, any account in which a CBOE member or non-member participant in a joint venture with a CBOE member, or any non-member broker-dealer has an interest would not be deemed to be an eligible account for purposes of submitting RAES orders. A problem arises, however, in trying to determine what constitutes an “interest.” The Exchange has received numerous requests to provide interpretive advice with respect to whether certain individuals, who by nature of their relationship to persons who clearly are not public customers, are permitted to trade on RAES. For instance, there have been several inquiries as to whether the spouse or a relative of a CBOE member can trade for his or her own account through RAES. The Exchange notes that there is a strong interrelationship between the futures and securities markets. Futures, futures options, and stock options overlie many of the same indices and, in fact, may be used to hedge each other or to exploit an arbitrage opportunity. Given the specialized knowledge of the member of the futures exchange, CBOE does not believe it would be reasonable to classify this entity as a “public customer.” For purposes of this rule, CBOE proposes to define “affiliate” as a person or entity that holds a 5 percent or more interest in the member of the futures exchange.

Next, the Exchange proposes to add new Interpretation .12 6 to enumerate two categories of accounts in which CBOE members are deemed to have an interest. 7 The first category addresses the status of relatives of CBOE members. The proposal would clarify that a CBOE member is deemed to have an interest in any account maintained by the spouse of, or family members living in the same household with, that CBOE member. The Exchange notes that this prohibition is designed to prevent a CBOE member from trading on RAES by opening an account for a family member and submitting orders through that account. This prohibition applies regardless of whether the account is jointly or individually titled or owned. In this instance, because the parties share the same household and are ostensibly one economic unit, it can reasonably be inferred that the proceeds from the trading account would inure to all individuals in the household.

Furthermore, without this prohibition, it would be easy for a CBOE member to frustrate the purpose of the prohibition. For these reasons, the Exchange believes it is reasonable to impose a RAES-access trading restriction on relatives of CBOE members.

The second category applies to affiliates of CBOE members. Specifically, CBOE members are deemed to have an interest in any account maintained by an affiliate of a CBOE member. The Exchange believes it is necessary to place a restriction on affiliates by virtue of their relationship to CBOE members. In many instances, the affiliate will be an entity that either owns, or is owned by, the CBOE member. Given the relationship of the two entities and the fact that one may exert control over the other, CBOE believes it is proper to impose a prohibition on RAES trading by the affiliate of the CBOE member. In other instances, the affiliate may be a business partner of the CBOE member. In those situations, the two parties will share a common economic bond with respect to the operation of their business venture. Accordingly, CBOE believes it is reasonable to prevent the affiliate from trading on RAES. If the affiliate is an individual, the Exchange notes that the prohibition against RAES trading also extends to spouses and/or family members living in the same household as the affiliate. For purposes of this rule, the exchange defines an affiliate as a person or entity that holds a 5 percent or more interest in the CBOE member, non-member participant in a joint venture with a member, non-member broker-dealer, or member of a futures or securities exchange.

CBOE has asserted that the rules of all of the floor-based options exchanges, which have been approved by the Commission, limit access to their automatic execution systems either to the accounts of public customers or to non-broker-dealer accounts. 8 Given this limitation, the Exchange finds it necessary to provide interpretive guidance to clarify the types of accounts that it does not believe are eligible to submit orders through RAES. The clarifications provided in this proposed

---

4 Currently, RAES permits orders for up to 75 contracts (in all classes for which a greater maximum is not expressly provided for in the rules). Options subject to the 75-contract maximum include all classes of equity options and all classes of sector index options on the S&P 500 Index, the Nasdaq 100 Index, the Dow Jones Industrial Average, and the High Yield Select Ten, as well as interest rate options, currently are subject to a 100-contract limit.

5 The Commission notes, however, that a consolidated NBBO does not currently exist for the options markets. Instead, each options exchange separately calculates the best bid or offer for each multiply traded options class. See Securities Exchange Act Release No. 43086 (July 28, 2000), 65 FR 48023, 48024 n.22 (August 4, 2000).

6 This proposal also excludes members of any securities exchange from trading on RAES. This exclusion is intended to apply specifically to those individuals or entities that have a securities exchange membership but who are not registered as broker-dealers.

7 The text of the notice prepared by the Exchange inadvertently referred to the proposed interpretation here as Interpretation .11. If approved by the Commission, the proposed Interpretation would be in Interpretaion .12. Telephone conversation between Steve Youhn, Attorney, CBOE, and Michael Gaw, Attorney-Advisor, Division of Market Regulation, Commission, on November 30, 2000.

8 For simplification, the Exchange uses the term “CBOE member” to refer to CBOE members, non-member participants in a joint venture with a member, non-member broker dealers, and members of a futures or securities exchange.

9 See, e.g., PCX Rule 6.87(a) (only non-broker-dealer customer orders are eligible for execution on exchange’s Automatic Execution System); Amex Rule 933(a) (same).
rule change serve to ensure that RAES will continue to be for use by public
customers for the automatic execution of their small market or marketable limit
orders. The proposal also makes clear that certain other types of accounts will not be eligible to submit trades through
RAES. The Exchange notes, however, that nothing would prevent the owners
of these accounts from sending their orders to the floor for manual execution
where they would receive firm quote treatment and execution at the NBBO.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act
and the rules and regulations under the Act applicable to a national securities
exchange and, in particular, the requirements of Section 6(b) of the Act. Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) requirements that the rules of an
exchange be designed to promote just and equitable principles of trade, to
prevent fraudulent and manipulative
acts, and in general to protect investors and the public interest.

B. Self-Regulatory Organization’s
Statement and Burden on Competition

The CBOE does not believe that the proposed rule change would impose any
burden on competition not necessary or appropriate in furtherance of the
purposes of the Act.

C. Self-Regulation Organization’s
Statement on Comments on the
Proposed Rule Change Received From
Members, Participants, or Others

No written comments were solicited
or received with respect to the proposed
rule change.

III. Date of Effectiveness of the
Proposed Rule Change and Timing for
Commission Action

Within 35 days of the date of
publication of this notice in the Federal
Register or with such longer period (i) as the Commission may designate up to
90 days of such date if it finds such longer period to be appropriate and
publishes its reasons for so finding, or (ii) as to which the Exchange consents, the Commission will:

(A) By order approve such proposed
rule change; or
(B) institute proceedings to determine
whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to
submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW, Washington DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission’s Public Reference Room. Copies of such filings will also be available for inspection and copying at the principal office of the CBOE. All submissions should refer to File No. SR–CBOE–00–62 and should be submitted by January 18, 2001.

For the Commission, by the Division of
Market Regulation, pursuant to delegated
authority.
Margaret H. McFarland, Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE
COMMISSION

[Release No. 34–43744; File No. SR–CBOE–
00–64]

Self-Regulatory Organizations; Notice of
Filing and Immediate Effectiveness of
Proposed Rule Change by the
Chicago Board Options Exchange,
Inc., Relating to Exchange Fees

Pursuant to Section 19(b)(1) of the
Securities Exchange Act of 1934 ("Act") and
Rule 19b–4 thereunder, notice is hereby given that on December 1,
2000, the Chicago Board Options Exchange, Inc. ("CBOE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the
proposed rule change as described in Items I, II, and III below, which Items
have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the

proposed rule change from interested
persons.

I. Self-Regulatory Organization’s
Statement of the Terms of Substance of
the Proposed Rule Change

The CBOE proposes to make a change
to its fee schedule related to options on the
CBOE Mini-NDX. The test of the
proposed rule change is available at the
CBOE and the Commission.

II. Self-Regulatory Organization’s
Statement of the Purpose of, and
Statutory Basis for, the Proposed Rule
Change

In its filing with the Commission, the
CBOE included statements concerning
the purpose of and basis for the
proposed rule change and discussed any
comments it received on the proposed
rule change. The text of these statements
may be examined at the places specified in
Item IV below. The CBOE has prepared summaries, set forth in
Sections A, B, and C below, of the most
significant aspects of such statements.

A. Self-Regulatory Organization’s
Statement of the Purpose of, and
Statutory Basis for, the Proposed Rule
Change

1. Purpose

On August 29, 2000, the Commission
approved the Exchange’s proposed rule
change to waive all customer fees for options on the CBOE Mini-NDX
("MNXSM"). The Exchange decided to waive these customer fees to promote
the launch of the MNX product, which
started trading on August 14, 2000. The
purpose of the proposed rule change is
to reinstate all customer fees relating to
public customer MNX options orders
effective on December 1, 2000.

Specifically, the Exchange proposes to
reinstate the transaction fee, trade match
fee, floor brokerage fee and RAES fee for
public customer MNX options orders.
These customer fees will revert to the
standard rates that currently apply to
public customer orders for all other
Exchange index options. The Exchange
believes the customer fee waiver served
the purpose of promoting a successful
launch of the MNX product while
generating significant savings for its

(August 29, 2000), 65 FR 54333 (September 7, 2000). The Commission approved the trading of
options on the CBOE Mini-NDX on June 30, 2000. See

4 These “customer fees” are actually those fees
assessed on Exchange members relating to public
customer MNX options orders executed by such
members. Telephone conversation between Jamie
Galvan, Attorney, CBOE, and Geoffrey Pembie,
Attorney, Division of Market Regulation, Commission, on December 19, 2000.

customers. The Exchange now proposes to charge customer fees for MX options orders as it does for any other index product.

2. Statutory Basis
   The CBOE believes that the proposed rule change is consistent with Section 6(b) of the Exchange Act (“Act”), 6 in general, and furthers the objectives of Section 6(b)(4) of the Act, 7 in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees, and other changes among CBOE members.

B. Self-Regulatory Organization’s Statement on Burden on Competition
   The Exchange does not believe that the proposed rule change will impose any burden on competition.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others
   Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action
   Because the foregoing rule change establishes or changes a due, fee or other charge imposed by the Exchange, it has become effective pursuant to Section 19(b)(3)(A)(ii) 7 of the Act and subappropiate (f)(2) of Rule 19b-4 thereunder. 8 At any time within 60 days of the filing of the proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments
   Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying at the Commission’s Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All submissions should refer to the File No. SR-CBOE–00–64 and should be submitted by January 18, 2001.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority. 9
Margaret H. McFarland,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the International Securities Exchange, LLC Relating to an Interim Intermarket Linkage

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) 1 and Rule 19b–4 thereunder, 2 notice is hereby given that on November 15, 2000, the International Securities Exchange LLC (“ISE” or “Exchange”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the ISE. On December 13, 2000, the Exchange submitted Amendment No. 1 to the proposed rule change. 3 The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change
   The Exchange is proposing a rule authorizing implementation of “interim linkages” with the other options exchanges. The interim linkage will permit qualified market makers on participating exchanges to send specified types of principal orders to other participating exchanges for automatic execution as if such orders were customer orders. Below is the text of the proposed rule change. Proposed new language is italicized.

   Rule 721. Pilot Program for Away Market Maker Access
   (a) Definitions. Solely for the purpose of this Rule:

   (1) “Corresponding Rule” means a rule of a Participating Exchange that is substantially identical to this Rule 721.

   (2) “Customer Size” means the lesser of (i) the number of option contracts that the Participating Exchange receiving the order guarantees it will automatically execute at its disseminated quotation in an Eligible Option Class for Public Customer Orders or (ii) the number of option contracts that the Participating Exchange sending the order guarantees sending the order guarantees it will automatically execute at its disseminated quotation in an Eligible Option Class for Public Customer Orders. This number shall be no fewer than 10.

   (3) “Eligible Away Market Maker” (“EAMM”) means, with respect to an Eligible Option Class, a market maker, as that term is defined in Section 3(a)(22) of the Exchange Act, on a Participating Exchange that:

   (i) is assigned to, and is providing two-sided quotations in the Eligible Option Class; and

   (ii) that is participating in its market’s automatic execution system in such Eligible Option Class.

   (4) “Eligible Away Principal Market Maker” (“EAPMM”) means: with respect to the American Stock Exchange and the Philadelphia Stock Exchange, a Specialist in an Eligible Option Class; with respect to the Chicago Board Options Exchange, a Designated Primary Maker in an Eligible Option Class; and with respect to the Pacific Exchange, a Lead Maker in an Eligible Option Class.

   (5) “Eligible Option Class” means all option series overlying a security, including both put and call options, which class is traded by the Exchange and at least one other Participating Exchange, to the extent that such Participating Exchanges have mutually agreed to include the option class in the Pilot Program.

   (6) “Eligible Order” means an order for the account of a market maker, an EAMM or an EAPMM that can be sent to a Participating Exchange marked as a Public Customer Order pursuant to

---

13 In Amendment No. 1, the Exchange specified that the proposed interim linkage would be for a pilot period expiring on January 31, 2002. See letter from Michael Simon, Senior Vice President and General Counsel, ISE, to Nancy Sanow, Assistant Director, Division of Market Regulation, Commission, dated December 11, 2000 (“Amendment No. 1”).
provisions of paragraphs (b), (c), and (d) of this Rule.

(7) “Participating Exchange” means (i) the Exchange and (ii) one or more of the American Stock Exchange, the Chicago Board Options Exchange, the Pacific Exchange, and the Philadelphia Stock Exchange, as the President of the Exchange, or his designee, has designated from time to time as having adopted a Corresponding Rule.

(8) “Pilot Program” means the program established by this Rule and the Corresponding Rules of the other Participating Exchanges.

(9) “Principal Size” means the number of option contracts that two or more Participating Exchanges mutually agree that they will automatically execute during the Pilot Program at their disseminated quotation for orders sent for the principal account of a market maker, an EAMM or an EAPMM that does not correspond to a Underlying Customer Order. This number shall be no fewer than 10.

(10) “Underlying Customer Order” means an associated Public Customer Order for which a Primary Market Maker or EAPMM is acting as agent and which underlies an Eligible Order.

(b) Access to Other Participating Exchanges by Market Makers. Pursuant to the Pilot Program, a market maker participating in the program may send an order to another Participating Exchange for execution as a Public Customer if:

(1) the Primary Market Maker complies with subparagraphs (1) through (3) of paragraph (b), above:

(2) the order reflects the same terms and conditions:

(3) the order is no larger than the Principal Size.

(d) Access to the Exchange by Eligible Market Makers on other Participating Exchanges. Notwithstanding any other Rule of the Exchange, an Electronic Access Member may send to the Exchange for execution as a Public Customer Order an order for the account of an EAMM or an EAPMM that complies with the Corresponding Rule of the EAMM’s or EAPMM’s Participating Exchange.

(e) Implementation of the Pilot Program. The President, or his designee, may implement the Pilot Program, in whole or in part, with respect to specific Participating Exchanges, to the extent that any such Participating Exchange has agreed to implement corresponding aspects of the Pilot Program. Primary Market Maker participation in the Pilot Program shall be voluntary.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the ISE included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The ISE has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to implement certain aspects of an intermarket options linkage on an “interim” basis. This interim linkage would utilize existing order types to facilitate the sending and receiving of order flow between ISE market makers and their counterparts on the other options exchanges as an interim step towards development of a “permanent” linkage.

By way of background, the Commission has approved a linkage plan that now includes all five options exchanges. The options exchanges continue to work towards implementation of this linkage, which likely will include contracting with a third party to build a linkage infrastructure. Since this will take a significant amount of time, the options exchanges have discussed implementing an “interim” linkage. Such a linkage would use the existing market infrastructure to route orders between market makers on the participating exchanges in a more efficient manner.

The key component of the interim linkage would be for the participating exchanges to open their automated customer execution systems, on a limited basis, to market maker orders. Specifically, market makers would be able to designate certain orders as “customer” orders, and thus would receive automatic execution of those orders on participating exchanges.

This proposed rule would authorize the ISE to implement bilateral or multilateral interim arrangements with the other exchanges to provide for equal access between market makers on our respective exchanges. The Exchange currently anticipates that the initial arrangements would allow ISE Primary Market Makers (“PMMs”) and their equivalents on the other exchanges, when they are holding customer orders, to send orders reflecting the customer orders to the other market for execution when the other market has a better quote. Such orders would be limited in size to the lesser of the size of the two markets’ “firm” quotes for customer orders. The Exchange expects that the interim linkage may expand to include limited access for pure principal orders, for orders of no more than 10 contracts.

All interim linkage orders must be “immediate or cancel” (that is, they cannot be placed on an exchange’s limit order book), and a market maker can send a linkage order only when the other (receiving) market is displaying the best national bid or offer and the sending market is an inferior price. This will allow a market maker to access the better price for its customer. In addition, if the interim linkage includes principal orders, it would allow market makers to attempt to “clear” another market.

Under the proposal, the interim linkage would be for a pilot period expiring on January 31, 2002. See Amendment No. 1, supra note 3.

5 Under the proposal, the interim linkage would be for a pilot period expiring on January 31, 2002. See Amendment No. 1, supra note 3.
displaying a superior quote. Any exchange participating in the interim linkage will implement heightened surveillance procedures to help ensure that their market makers send only properly-qualified orders through the linkage.

PMM participation in the interim linkage will be voluntary. Only when a PMM and its equivalent on another exchange believe that this form of mutual access would be advantageous will the exchanges employ the interim linkage procedures. The ISE believes that the interim linkage will benefit investors and will provide useful experience that will help the exchanges in implementing the full linkage.

2. Statutory Basis

The ISE believes that the basis under the Act for this proposed rule change is the requirement under Section 6(b)(5) of the Act, that an exchange have rules that are designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transaction in securities, to remove impediments to and perfect the mechanism for a free and open market and a national market system, and, in general, to protect investors and the public interest.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The CBOE does not believe that the proposed rule change will impose any burden on competition.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission’s Public Reference Room. Copies of such filing also will be available for inspection and copying at the principal office of the ISE. All submissions should refer to File No. SR–ISE–00–15 and should be submitted by January 18, 2001.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Margaret H. McFarland,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–43726; File No. SR–NYSE–00–57]

Self-Regulatory Organizations; Notice of Filing and Immediate Effectiveness of Proposed Rule Change by the New York Stock Exchange, Inc. to Implement a New Trading Floor Regulatory Fee

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) and Rule 19b–4 thereunder, notice hereby is given that on December 13, 2000, the New York Stock Exchange, Inc. (“NYSE” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The NYSE proposes to implement a new Trading Floor Regulatory Fee to be charged to members doing business on the trading floor. Each specialist firm would contribute according to the number of memberships associated with the firm. Other floor members would be assessed an annual fee, subject to a maximum fee per firm. The proposed rule change is available at the principal office of the NYSE and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the NYSE included statements concerning the purpose of and basis for the

proposed rule change and discussed any comments it received regarding the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The NYSE has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The NYSE’s Market Surveillance Division monitors all trading activity on the trading floor on a real-time basis. This surveillance applies to all members doing business on the trading floor. Market Surveillance has become increasingly important, visible, and costly over recent years. The proposed rule change is the requirement under section 19(B)(3)(A)(ii) of the Act and subparagraph (f)(2) of Rule 19b–4 thereunder. At any time within 60 days of the filing of such proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

B. Self-Regulatory Organization’s Statement of Burden on Competition

The NYSE does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The NYSE has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change establishes or changes a due, fee, or other charge imposed by the Exchange and therefore has become effective pursuant to section 19(B)(3)(A)(ii) of the Act and subparagraph (f)(2) of Rule 19b–4 thereunder. At any time within 60 days of the filing of such proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying at the Commission’s Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All submissions should refer to File No. SR–NYSE–00–57 and should be submitted by January 18, 2001.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Margaret H. McFarland,
Deputy Secretary.

[FR Doc. 00–33121 Filed 12–27–00; 8:45 am]

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–43741; File No. SR–NYSE–00–47]

Self-Regulatory Organizations; Notice of Filing and Order Granting Accelerated Approval of Proposed Rule Change by the New York Stock Exchange, Inc. Relating to Listed Company Fees

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) and Rule 19b–4 thereunder, notice is hereby given that on November 29, 2000, the New York Stock Exchange, Inc. (“NYSE” or “Exchange”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons and to approve the proposal on an accelerated basis.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The NYSE proposes to amend Paragraphs 902.02 through .04 of the Exchange’s Listed Company Manual (the “Manual”), concerning the minimum original listing fee for overseas companies to that applied to domestic companies earlier this year, increasing the minimum continuing listing fee applicable to domestic companies, and adopting a specific schedule for closed-end funds. The text of the proposed rule change is available at the Office of the Secretary, the NYSE, and at the Commission.

II. Self-Regulatory Organization’s Statements of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item III below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.
A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Earlier this year the Exchange amended its listing fee schedule to implement a minimum original listing fee for each domestic issuer (excluding closed-end funds).\(^3\) Having had a positive experience with this matter, and to achieve greater consistency in the minimum fee applicable to domestic and overseas companies, the Exchange proposes to raise the minimum original listing fee for overseas companies to $150,000 as well, from its present level of $100,000.

The Exchange also imposes on listed companies continuing annual fees, generally based on the number of shares listed on the Exchange. Currently the Exchange imposes a minimum continuing fee for overseas companies of $35,000, while the minimum for domestic companies is $16,170. Again, having had a positive experience with the minimum continuing annual fee applicable to overseas companies, the Exchange proposes to raise the minimum continuing annual fee for domestic companies to the same level, $35,000. Companies with more than one class of common stock where both issues are below the new minimum fee would incur an increased fee only on the issue with the most shares outstanding. The other class would be charged at the per share and minimum rate in effect today. In addition, companies that listed during 2000 will be billed for the year 2001 only at the per share and minimum rate in effect today, moving to the new schedule in 2002.

The minimum continuing fee for closed-end funds would be $25,000 for funds with ten million shares or less; those with greater than ten million shares would pay a minimum of $35,000. Families of funds with from five to fifteen funds outstanding would receive a discount of 5%, while those with greater than fifteen funds listed on the Exchange would receive a 10% discount on the continuing annual fee applied to each fund.

The Exchange has a separate schedule of fees for “short-term securities,” which are securities having a term of seven years or less (e.g., index warrants, foreign currency warrants, contingent value rights, etc.). The minimum continuing annual fee for short-term securities is being raised to $17,500, in line with the increase discussed above for regular common stock.

Finally, the Exchange considers it appropriate to specify a separate annual continuing fee minimum of $3,600 for other equity issues as specified in Section 902.02 of the Manual.

The Exchange proposes to implement all the foregoing changes as of January 1, 2001.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with Section 6(b) of the Act \(^4\) in general, and further the objectives of Section 6(b)(4) of the Act \(^5\) in particular, in that it provides for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange believes that the proposed fee change will not impose any burden on competition that is not necessary or appropriate in the furtherance of the purposes of the Act.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange neither solicited nor received any written comments on the proposed rule change.

III. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW, Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission’s Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the NYSE. All submissions should refer to File No. SR–NYSE–00–47 and should be submitted by January 18, 2001.

IV. Commission’s Findings and Order

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange. In particular, the Commission finds that the proposed rule change is consistent with Section 6(b)(4) of the Act, which provides for the equitable allocation of reasonable dues, fees, and other charges among an exchange’s members and issuers and other persons using its facilities.\(^6\) The Commission believes that the Exchange’s changes to its listing fees are not unreasonable.

Finally, the Commission, pursuant to Section 19(b)(2) of the Act,\(^7\) finds good cause for approving the proposed rule change prior to the thirtieth day after the date of publication of notice thereof in the Federal Register.\(^8\) The Commission notes that granting accelerated approval to this proposal will allow the NYSE to implement the fee changes by January 1, 2001. Accordingly, the Commission finds that there is good cause, consistent with Section 19(b)(2) of the Act,\(^9\) to approve the proposal on an accelerated basis.

V. Conclusion

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,\(^10\) that the proposed rule change (SR–NYSE–00–47) is hereby approved on an accelerated basis.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.\(^11\)

Margaret H. McFarland,
Deputy Secretary.

[FR Doc. 00–33127 Filed 12–27–00; 8:45 am]
BILLING CODE 8010–01–M

\(^6\) In approving this proposal, the Commission has considered its impact on efficiency, competition, and capital formation. 15 U.S.C. 78f(f).

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-43755; File No. SR–OCC–00–00–12]

Self-Regulatory Organizations; The Options Clearing Corporation; Notice of Filing of Proposed Rule Change Relating to The Creation of a Program to Relieve Strains on Clearing Members’ Liquidity in Connection With Settlements

Pursuant to 19(b)(1) of the Securities Exchange Act of 1934 ("Act") 1 notice is hereby given that on November 27, 2000, The Options Clearing Corporation ("OCC") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which items have been prepared primarily by OCC. The Commission is publishing this notice to solicit comments on the proposed rule change from interested parties.

I. Self-Regulatory Organizations

Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The proposed rule change proposes a program to relieve strains on clearing members’ liquidity in heavy expiration months by reducing inefficiencies in the exercise settlement process. 2

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, OCC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. OCC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of these statements. 3

(A) Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Background

Under the Third Amended and Restated Options Exercise Settlement Agreement (the “Accord”) dated February 16, 1995, between OCC and National Securities Clearing Corporation (“NSCC”), OCC and NSCC each guarantee that if the other sustains a loss on liquidity of a common member 4 with pending settlement activity at NSCC resulting option exercises and assignments, it will make a payment to the other in an amount (which may be zero) determined by a formula set forth in the Accord. 5

Under the Accord, NSCC has until 6:00 a.m. Central Time on the day after an option exercise settlement date (E+4) to notify OCC that it has ceased to act or may cease to act for a common member. If NSCC fails to give such notice by that time, OCC is released from its guarantee obligation with respect to transactions for which E+3 was the settlement date. Because OCC is not released from its guarantee obligation until the morning of E+4, it must continue to hold margin on assignments settling on E+3 until E+4. This means that assets that a clearing member has deposited with OCC as margin for pending assignments cannot be used to settle or to finance settlement of those assignments. Instead, the clearing member must find other sources of financing and that can strain some clearing members’ liquidity in months with heavy exercise and assignment activity.

2. The Proposed Rule Change

In an effort to reduce the strains on liquidity resulting from the after-the-fact release of margin on pending assignments, OCC, in conjunction with NSCC and The Depository Trust Company ("DTC"), has worked out a program to allow OCC clearing member to withdraw equity securities 6 deposited with OCC as margin and pledge them to DTC participant banks as collateral for loans. The proceeds of such loans would be disbursed by the bank directly to OCC and used to discharge settlement obligations of the clearing member at NSCC that were guaranteed by OCC. OCC’s liability exposure to NSCC under the Accord would be correspondingly reduced as would OCC’s need to continue to hold margin until E+4.

The program would work as follows:

- On the morning of E+3, a clearing member would determine from OCC the amount of the loan that it could collateralize with securities held by OCC as a margin. That amount would be no less than the value assigned by OCC to such securities for margin purposes 7 and would be no more than the lesser of (i) the margin requirement for the account from which the securities were to be withdrawn 8 and (ii) the amount of OCC’s guarantee exposure to NSCC (assuming that the clearing member’s NSCC positions liquidated to a deficit). 9
- The clearing member would then contact its bank and arrange for the loan. When the terms of the loan were agreed upon, the clearing member would use a new Participant Terminal System screen developed by DTC to confirm both to the bank and to OCC the amount of the loan and the quantity and description of the securities to be withdrawn from OCC and pledged to the bank as collateral. The bank and OCC would use that information to validate the loan request.
- The date of both the bank and OCC approved the loan, DTC would transfer the securities from a “pledged to OCC” field in the clearing member’s DTC account to a special OCC account at DTC. From that account, the securities would be pledged to the bank against receipt of the loan proceeds. The proceeds would thus be paid directly to OCC without passing through the hands of the clearing member.
- Upon receipt in the special OCC account, the loan proceeds would automatically be paid over to NSCC for the benefit of the clearing member resulting in a corresponding reduction in OCC’s guarantee exposure to NSCC under the Accord.

3. Summary of Comments Received

The text of these statements and the purpose for, and basis of, the proposed rule change, as well as the comments it received on the proposed rule change are published in SECURITIES AND EXCHANGE COMMISSION, Notice of Proposed Rule Change—OCC—The Options Clearing Corporation: Notice of Proposed Rule Change—A Program to Relieve Strains on Clearing Members’ Liquidity in Connection With Settlements, 65 FR 51731 (September 26, 1996), and the public comments thereon are available at the Commission’s Public Reference Section or through OCC.

4. Conclusion

For example, if the clearing member had equity securities with a market value of $10 million on deposit in an account with OCC as margin (which OCC would value at $7 million for margin purposes), the amount of the bank loan collateralized by those securities would have to be no less than $7 million. If the loan amount were, for example, $6 million, OCC would be exchanging $7 million worth of margin for a reduction of only $6 million in its guarantee exposure to NSCC.

5. For example, if, in the preceding example, the margin requirement in the relevant account were only $6 million, the loan would be limited to that amount and OCC would only release equity securities with a market value of $8.57 million ($6 million in margin value). The remaining $1.43 million of securities would be excess margin, which the clearing member would be free to withdraw and pledge separately.

6. If, in the preceding examples, OCC’s guarantee exposure to NSCC were only $5 million, the loan would be limited to that amount and OCC would only release equity securities with a value of $7.14 million ($5 million in margin value). If the loan amount were in excess of $5 million, OCC would be releasing margin worth more than $5 million for a reduction of only $5 million in its guaranteed exposure.
• At the end of the day, DTC would automatically transfer the securities from a “pledged to bank” field in the special OCC account to a “pledged to bank” field in the clearing member’s DTC account, leaving the clearing member in the same position as if it had been able to pledge the securities to the bank without OCC’s intermediation.

Upon allowing securities to be withdrawn and pledged under the program, OCC would reduce its margin requirement in the account from which the securities were withdrawn by an amount equal to the value assigned to the securities for margin purposes. The account would, however, be required to be fully margined the next morning.

Initially, clearing members will be permitted to withdraw and pledge securities held by OCC as margin only on settlement dates for exercises of expiring equity options. OCC may at a future date decide to make it available on other exercise settlement dates as well.

3. Timing

Historically, the heaviest volume of option expirations, and hence exercises, occurs in January. In January 2000, 26,099,346 option contracts expired, accounting for 41.9% of total open interest. Open interest as of November 21, 2000, included 26,378,070 contracts expiring in January 2001 (43.2% of total open interest). OCC believes that it is important to have the new program in place in time for the January 2001 expiration to help relieve potential strains on liquidity resulting from the large volume of exercise activity expected to occur at that time.

The proposed rule change is consistent with the requirements of section 17A of the Act and the rules and regulations thereunder applicable to OCC because it would reduce inefficiencies in the exercise settlement process and relieve strains on clearing members’ liquidity in heavy expiration months thereby promoting the safeguarding of securities and funds.

(B) Self-Regulatory Organization’s Statement on Burden on Competition

OCC does not believe that the proposed rule change would impose any burden on competition.

(C) Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments were not and are not intended to be solicited with respect to the proposed rule change and none have been received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within thirty-five days of the date of publication of this notice in the Federal Register or within such longer period as the Commission may designate up to ninety days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) by order approve such proposed rule change or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission’s Public Reference Section 450 Fifth Street, NW., Washington, DC 20549. Copies of such filing also will be available for inspection and copying at the principal office of OCC. All submissions should refer to File No. SR–OCC–00–12 and should be submitted by January 18, 2001.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.11

Margaret H. McFarland,
Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–43757; File No. SR–Phlx–00–13]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change, as Amended, by the Philadelphia Stock Exchange, Inc. Relating to Timing Guidelines for Application in Disciplinary Hearings

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) and Rule 19b–4 thereunder, notice is hereby given that on July 13, 2000, the Philadelphia Stock Exchange, Inc. (“Phlx” or “Exchange”) filed with the Securities and Exchange Commission (“SEC” or “Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. On August 23, 2000, the Phlx filed Amendment No. 1 to the proposed rule change. On November 9, 2000, the Phlx filed Amendment No. 2 to the proposed rule change. On November 22, 2000, the Phlx filed Amendment No. 3 to the proposed rule change. On December 13, 2000, the Phlx filed Amendment No. 4 to the proposed rule change. The Commission is publishing this notice to solicit comments on the proposed rule change.
change, as amended, from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Phlx proposes to amend Phlx Rule 960.5(a), (b), (c), and (d) to provide timing guidelines for certain procedures conducted pursuant to Phlx Rule 960.5. Revised Rule 960.5 proposes to adopt a timing guideline of 120 days after the filing of a written Answer by a Respondent to a Statement of Charges, within which time a hearing is requested, for the scheduling of a hearing date.\(^7\) Also proposed is a five business day timing guideline\(^8\) for the Chair of the Committee, or its designee, after receiving a request from Counsel for the Exchange, to schedule a hearing date and name a Hearing Panel. Further, it is proposed that, should the request for a hearing come from the Respondent, Counsel for the Exchange must request that a hearing date be set and a Hearing Panel be named ten business days of receiving Respondent’s request.\(^9\) An exchange of evidence and witness lists between the parties, as well as providing same to the members of the Hearing Panel, is to be completed not less than eight business days prior to the scheduled hearing date.\(^10\) The proposed amendments require that a transcript of the hearing be provided to the Hearing Panel members and the Respondent within five business days of receipt of the transcript by Counsel for the Exchange. The Respondent, along with being provided a copy of the transcript, will be issued a bill for its portion of the costs of the transcript.\(^11\) The costs of the transcript, and producing copies, will be borne equally by the Exchange and by Respondent.\(^12\) The Hearing Panel, upon receipt of the transcript, would then have forty-five days to produce a hearing report.\(^13\) Finally, the proposed amendments establish formal procedures for the requesting and granting of adjournments of the hearing date. Such requests are to be presented in writing to the presiding person of the Hearing Panel, and will be considered for just cause.\(^14\)

The proposed amendments also allow the Chair of the Committee to name a designee.\(^15\) This is proposed for administrative purposes, such as the Chair’s unavailability due to illness, the need for recusal, or other circumstances which may arise.

Below is the text of the proposed rule change. Proposed new language is italicized, and proposed deletions are in brackets.

**Rule 960.5. Hearing**

(a) Participants and Selection of Hearing Panels

1. Request for a Hearing—A hearing on the Statement of Charges shall, at the request of Respondent in his answer, or upon motion of the Business Conduct Committee, be held before a Hearing Panel composed of three persons to be appointed by the Chairman of the Business Conduct Committee or their designee. Should the hearing be at the request of the Respondent, counsel for the Exchange must provide notice to the Chairman of the Business Conduct Committee or their designee which requests the naming of a hearing panel within 10 business days of receiving Respondents request for a hearing.

2. Selection of Hearing Panel—The Chairman of the Business Conduct Committee or their designee shall name a Hearing Panel within 5 business days of either (i) receipt of notice from counsel for the Exchange which requests the naming of a Hearing Panel, or (ii) upon motion of the Business Conduct Committee for naming of a Hearing Panel. The Chairman of the Business Conduct Committee or their designee shall then promptly notify counsel for the Exchange and Respondent of the names of the members of the Hearing Panel. The presiding person of each Hearing Panel shall be a member of the Business Conduct Committee. The other persons on the Hearing Panel shall be members of the Exchange, or general partners or officers of member organizations, or such other persons whom the Chairman of the Business Conduct Committee or their designee considers to be qualified. The Chairman of the Business Conduct Committee or their designee shall select these two other persons from those persons who shall have been designated by the Chairman of the Board of Governors to serve on such hearing panels. In making such selections the Chairman or their designee shall, to the extent practicable, choose individuals whose background, experience and training qualify them to consider and make determinations regarding the subject matter to be presented to the Hearing Panel. He shall also consider such factors as the availability of individual hearing officers, the extent of their prior service on Hearing Panels and any relationship between such persons and a respondent which might make it inappropriate for such person to serve on the Hearing Panel.

3. Notice—Promptly after the selection of the panelists, the Chairman of the Business Conduct Committee or their designee shall cause written notice thereof to be given to the accused. If any person involved in the disciplinary proceeding shall have knowledge of a relationship between himself and any person selected for service on the Hearing Panel which might result in such panelist being unable to render a fair and impartial decision, he shall give prompt written notice thereof to the Chairman of the Business Conduct Committee or their designee, specifying the nature of such relationship and the grounds for contesting the qualification of such person to serve on the Hearing Panel. The decision of the Committee or their designee shall be final and conclusive with respect to the qualification of any person to serve on the Hearing Panel.

(b) Notice of Hearing and Pre-Hearing Procedures

1. Scheduling of a Hearing Date—A hearing on the Statement of Charges shall be scheduled for no later than 120 days after the filing of a written Answer by the Respondent wherein a hearing is requested. Should the hearing be at the request of the Respondent, counsel for the Exchange must provide notice to the Chairman of the Business Conduct Committee or their designee which requests the setting of a hearing date within 10 business days of receiving Respondents request for a hearing. The request for a hearing date shall be made in writing to the Chairman of the Business Conduct Committee or their designee by (i) counsel for the Exchange, or (ii) upon motion of the Business Conduct Committee.

2. Notice—The Respondent shall be given at least 15 business days notice of the time and place of the hearing.

\(^7\) See also Chicago Board Options Exchange, Rule 17.8. Offers of Settlement, Interpretations and Policies. 02 (discussing a similar timing guideline for scheduling a hearing date).

\(^8\) See Amendment No. 2, supra note 4; see also Amendment No. 3, supra note 5. The Phlx confirmed that Amendment No. 3 incorrectly indicates that the time periods for filing the hearing date and for providing a transcript of the hearing to the Hearing Panel members and the Respondent was initially ten days and later amended to five days. However, these time periods have, and will remain, five days throughout the filing. Telephone conversation with Les Falgie, Director of Enforcement/Counsel, Phlx, and Sapna C. Panel, Law Clerk, Division, Commission (Nov. 27, 2000).

\(^9\) See Amendment No. 2, supra note 4; see also Amendment No. 3, supra note 5.

\(^10\) See also Cincinnati Stock Exchange, Rule 8.6. Hearings, Sub-Paragraph (b) Notice and List of Documents (discussing a similar time frame for parties to exchange evidence and witness lists).

\(^11\) See Amendment No. 1, supra note 3.

\(^12\) See Amendment No. 1, supra note 3.

\(^13\) See also Pacific Exchange, Rule 10.7. Notice—(discussing a similar time frame after receipt of the transcript in which to produce a report); see also Amendment No. 2, supra note 4; see also Amendment No. 3, supra note 5.

\(^14\) See Amendment No. 1, supra note 3.

\(^15\) See Amendment No. 1, supra note 3.
3. Requests for Adjournments—A request for an adjournment of the hearing date shall be in writing and will be considered for just cause. If the request is made by the Respondent, said request shall be presented to the presiding person of the Hearing Panel with a copy to counsel for the Exchange, who shall enter the request into the Respondent’s file. If the request is made by counsel for the Exchange, said request shall be presented to the presiding person of the Hearing Panel, with a copy to the Respondent, and in Respondent’s file. The presiding person of the Hearing Panel shall promptly consider the request for an adjournment for just cause, rule on the request and inform the parties, in writing if time permits, as to whether the request was, or was not, granted. In the event that the request for an adjournment for just cause is granted, the presiding person of the Hearing Panel shall, at that time, schedule a new hearing date and so inform the parties of the new date.

4. Exchange of Evidence—The Exchange and the Respondent shall, not less than 8 business days in advance of the scheduled hearing date, furnish to the members of the Hearing Panel and to each other (i) copies of all documentary evidence each intends to present at the hearing, and (ii) a list of witnesses, including names, addresses and telephone numbers, that each intends to call at the Hearing.

5. Pre-Hearing Conferences—Where appropriate, the presiding person of the Hearing Panel, where appropriate, shall schedule a pre-hearing conference to be held not less than 8 business days in advance of the scheduled hearing date, to be attended by representatives of the Exchange, each of the Respondents and a member of the Hearing Panel. The pre-hearing conference shall be held for the purpose of clarifying and simplifying issues and otherwise expediting the proceeding. At such conference, and if they have not been done so previously, the Exchange and the Respondents shall furnish to the Hearing Panel and to each other (i) copies of all documentary evidence each intends to present at the Hearing, and (ii) a list of witnesses, including names, addresses and telephone numbers, that each intends to call at the Hearing.

The Exchange and Respondent shall also attempt to stipulate to the authenticity of documents and to facts issues not in dispute, and any other items which will serve to expedite the hearing of the matter.

Section IV. Conduct of Hearing, Rules for the Hearing Panel

(c) Conduct of Hearing. The Hearing Panel shall determine all questions concerning the admissibility of evidence and shall otherwise regulate the conduct of the hearing. Formal rules of evidence shall not apply. The charges shall be present by a representative of the Exchange who, along with Respondent, may present evidence and produce witnesses who shall testify under oath and shall be subject to cross examination. The Hearing Panel may, on its own motion, request the production of documentary evidence and witnesses and may also question witnesses. A transcript of the hearing shall be made and shall become a part of the record. The costs of the making of such a transcript, including, but not limited to, the costs for the court reporter, reproduction of the transcript and producing copies thereof, shall be equally borne by the Exchange and by Respondent. Counsel for the Exchange shall provide a copy of the transcript of the hearing to each member of the Hearing Panel within 5 business days of receiving the transcript. The Respondent shall be issued a bill for its portion of the costs along with its copy of the transcript.

(d) Recommendation of Hearing Panel. Based on its review of the entire record of the proceeding, the Hearing Panel shall submit a written hearing report to the Business Conduct Committee containing: (i) Proposed findings of fact concerning the allegations in the statement of charges; (ii) conclusions as to whether a violation within the disciplinary jurisdiction of the Exchange has occurred and an enumeration of such violations; and (iii) recommendations as to appropriate sanctions. The Hearing Panel shall complete such a hearing report no later than 45 days after counsel for the Exchange has served the members of the Hearing Panel with a copy of the transcript of the hearing. The hearing report shall be presented to the Business Conduct Committee at the next Business Conduct Committee meeting after the report is completed.

Interpretation and Policies

.01 Intervention. Any person not otherwise a party may intervene as a party to the hearing upon demonstrating to the satisfaction of the Hearing Panel that he has an interest in the subject of hearing and that the disposition of the matter, may, as a practical matter, impair or impede his ability to protect that interest. Also, the Hearing Panel may in its discretion permit a person to intervene as a party to the hearing when the person’s claim or defense and the main action have questions of law or fact in common. Any person wishing to intervene as a party to a hearing shall file with the Hearing Panel a notice requesting the right to intervene, stating the grounds therefor, and setting forth the claim or defense for which intervention is sought.

.02 The Hearing Panel, in exercising its discretion concerning intervention, shall take into consideration whether the intervention will unduly delay or prejudice the adjudication of the rights of the original parties.

* * *

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange is proposing to implement certain timing guidelines to promote efficient handling of enforcement matters during the hearing process. Although the Exchange currently utilizes these guidelines as Exchange procedure, the Exchange believes that incorporating them expressly into Exchange rules may promote more effective implementation and monitoring of the timing guidelines, as well as fairness and due process both for respondents to a Statement of Charges authorized by the Committee, and to the Exchange and its Committees.

The Exchange believes that the proposed revisions promote notions of fairness, due process and consistency for the members of the Exchange and its disciplinary arm, the Committee, as they are intended to prevent undue delay, as well alleviate the vexation that such delays may cause.
2. Statutory Basis
The Exchange believes the proposed rule change is consistent with Section 6(b)(7) of the Act in general, and furthers the objectives of Sections 6(b)(6) and 6(b)(7) of the Act in particular, in that it is designed to ensure that Exchange members, and persons associated with members, are appropriately disciplined for violations of the provisions of the Act, the rules and regulations thereunder, or the rules of the Exchange, as well as providing a fair procedure for the disciplining of Exchange members, and persons associated with members, by fostering a prompt, efficient disciplinary process.

B. Self-Regulatory Organization’s Statement on Burden on Competition
The Phlx does not believe that the proposed rule change, as amended, will impose any burden on competition.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others
The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action
Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will:

(A) by order approve such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments
Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change, as amended, is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW, Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission’s Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the Phlx. All submissions should refer to File No. SR–Phlx–00–13 and should be submitted by January 18, 2001.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.
Margaret H. McFarland,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–43747; File No. SR–Phlx–00–62]

Self-Regulatory Organizations; Order Granting Approval to Proposed Rule Change by the Philadelphia Stock Exchange, Inc. Relating to Mandatory Auto-Quote Settings to Update Quotations Based on a Certain Minimum Movement in the Underlying Security

I. Introduction
On August 1, 2000, the Philadelphia Stock Exchange, Inc. (“Phlx” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”) and Rule 19b–4 thereunder, a proposal to grant the Chairman of the Exchange’s Board of Governors (or his designee) the authority to mandate that the Exchange’s Auto-Quote System (“Auto-Quote”) be set to update options quotations based on a certain minimum movement in the underlying security.

On September 14, 2000, the Commission published the proposed rule change in the Federal Register. The Commission received no comments on the proposal. This order approves the proposed rule change.

II. Description of the Proposal
Phlx has proposed to amend Commentary .01 to Exchange Rule 1080, “Philadelphia Stock Exchange Automated Options Market (AUTOM) and Automatic Execution System (AUTO–X),” to allow the Chairman of the Exchange’s Board of Governors (or his designee) (“Chairman”) to increase the increment by which the price of the underlying security would have to change before Auto-Quote would generate new quotes for the overlying options.

Outbound options quotations are forwarded electronically by the Exchange to the Options Price Reporting Authority (“OPRA”), which, in turn, disseminates them to vendors. Recently, due to increased overall options volume and significant increases in the number of quotations generated, OPRA has, at times, been unable to disseminate quotation traffic on a timely basis. To address the capacity constraints, the Commission recently adopted a formula to allocate among the options exchanges a specific allotment of bandwidth capacity for messages transmitted to, and received from, OPRA during peak usage periods.

The proposed rule is intended to enhance the Exchange’s ability to manage quote traffic while various solutions to quote capacity issues are being implemented. Currently, one longstanding method the Exchange has used to manage quote traffic is “throttling,” or capping outbound quote message traffic to OPRA. For many years, the Exchange’s options trading systems have had the ability to throttle outbound message traffic to OPRA by limiting the amount of messages sent to OPRA in a given second. This is accomplished by withholding some Auto-Quote generated messages from dissemination each second until the next second. Throttling may result in some quotations being overridden by subsequent quotations and, thus, prevent older quotations-in-waiting from ever being disseminated.

The proposed rule will allow the Chairman, if the Exchange’s options trading systems throttle quotations for at least three minutes, to mandate that Auto-Quote be set to update quotations based on a certain minimum movement

4 Auto-Quote is the Exchange’s electronic options pricing system that enables specialists to automatically monitor and instantly update quotations, based on incremental changes in the price of the security underlying the option.

in the underlying security. For example, Auto-Quote may be set to update options quotations based on a price change in the underlying security of an eighth of $1.00. Thus, each time the price of the underlying security increased or decreased by an eighth or more, Auto-Quote would update the quotation on the overlying option to reflect such a change. The proposed rule will allow the Chairman to mandate that Auto-Quote be set to update options quotations based on, for example, a price change of a quarter of $1.00 in the underlying security, meaning that Auto-Quote would not update quotations on the overlying option until the price of the underlying security increases or decreases by a quarter. Increasing the incremental price change in the underlying security required for an Auto-Quote update would result in fewer quotes generated and, thus, fewer messages queuing to be sent to OPRA.

The Chairman could exercise the authority described in the proposed rule change with respect to certain securities but not others, or cause Auto-Quote to raise the threshold to different amounts for different underlying securities (e.g., one quarter for Stock A and one half for Stock B). The Commission has determined that the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to a national securities exchange. In particular, the Commission believes that the proposal is consistent with Sections 6(b)(5) and 6(b)(8) of the Act. Section 6(b)(5) requires, among other things, that the rules of an exchange be designed to promote just and equitable principles of trade, to facilitate transactions in securities, to remove impediments to and perfect the mechanisms of a free and open market and a national market system, and, in general, to protect investors and the public interest. Section 6(b)(5) also requires that those rules not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. Finally, Section 6(b)(8) of the Act requires that the rules of an exchange not impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

As the Commission has previously noted, the amount of market data generated by the options markets has, at times, exceeded OPRA’s capacity to disseminate it publicly on a real-time basis. When this occurs, the only market participants with up-to-date quote and trade information are those present on the floor of an exchange. Market participants not physically present on the floor are at an informational disadvantage, which reduces market transparency, impedes efficient pride discovery, and is inconsistent with the goal of fair competition.

As discussed above, because OPRA has not been able to increase its systems capacity in the short-term sufficiently and because the participants in OPRA have not been able to agree to how to allocate existing capacity amongst themselves, the Commission recently adopted certain amendments to the OPRA Plan to allocate among the options exchanges OPRA’s peak-period message handling capacity. In its Order, the Commission asserted its expectation that the options exchanges would continue to “consider and implement other quote message mitigation strategies as both long-term and short-term solutions.” The Commission also noted that “the allocation formula should encourage each individual exchange to establish and utilize quote reduction methods based on the amount of message capacity it has been allocated, thereby promoting efficiency of the market data dissemination process.” Phlx’s proposed rule change is one such quote reduction method. Upon implementation of the new rule, the Chairman of the Exchange’s Board of Directors (or his designee) could require Auto-Quote to be set to update options quotations only if the price of the underlying security were to move more than a designated amount. If Auto-Quote were set in this manner, the options prices determined by Auto-Quote would remain static if the price of the underlying security moved by less than the designated increment. The result of Auto-Quote’s reduced sensitivity to changes in the price of the underlying security would be fewer new quotations generated by Auto-Quote and, consequently, fewer quote messages to be sent to OPRA.

The Commission recognizes that the proposal could affect price competition because, as a result of the restrictions to Auto-Quote, the options prices generated may not reflect the price that otherwise would be dictated by the pricing model used by a Phlx specialist or a specialist or market-maker on another options exchange. As a result, the proposed rule change may increase the likelihood that the prices offered by Phlx specialists—as displayed on OPRA—will differ from those displayed on other options exchanges. These disparities could result in an increased occurrence of locked and crossed markets across the options markets. However, the Commission believes that this minimal impact on competition is necessary and appropriate in furtherance of the purposes of the Act and, thus, is consistent with Section 6(b)(8) of the Act.

In approving this rule, the Commission has considered the proposed rule’s impact on efficiency, competition, and capital formation. See 15 U.S.C. 78f(c)(1). Thus, a price change in the underlying security would not result in a shift to the spread for the overlying option unless that price change triggered a shift in that option’s spread of one eighth or greater (assuming the option was trading over $3.00). The proposed rule will merely give the Chairman the authority to raise the threshold.

9 Telephone conversation between Richard S. Rudolph, Counsel, Phlx, and Michael Gaw, Attorney-Adviser, Division, Commission, on December 18, 2000.

10 In its Order, the Commission asserted its expectation that the options exchanges would continue to “consider and implement other quote message mitigation strategies as both long-term and short-term solutions.” The Commission also noted that “the allocation formula should encourage each individual exchange to establish and utilize quote reduction methods based on the amount of message capacity it has been allocated, thereby promoting efficiency of the market data dissemination process.” Phlx’s proposed rule change is one such quote reduction method. Upon implementation of the new rule, the Chairman of the Exchange’s Board of Directors (or his designee) could require Auto-Quote to be set to update options quotations only if the price of the underlying security were to move more than a designated amount. If Auto-Quote were set in this manner, the options prices determined by Auto-Quote would remain static if the price of the underlying security moved by less than the designated increment. The result of Auto-Quote’s reduced sensitivity to changes in the price of the underlying security would be fewer new quotations generated by Auto-Quote and, consequently, fewer quote messages to be sent to OPRA.

The Commission recognizes that the proposal could affect price competition because, as a result of the restrictions to Auto-Quote, the options prices generated may not reflect the price that otherwise would be dictated by the pricing model used by a Phlx specialist or a specialist or market-maker on another options exchange. As a result, the proposed rule change may increase the likelihood that the prices offered by Phlx specialists—as displayed on OPRA—will differ from those displayed on other options exchanges. These disparities could result in an increased occurrence of locked and crossed markets across the options markets. However, the Commission believes that this minimal impact on competition is necessary and appropriate in furtherance of the purposes of the Act and, thus, is consistent with Section 6(b)(8) of the Act. Given that the Exchange is allocated only a defined percentage of OPRA’s capacity during peak usage periods, it must take steps to ensure that the message traffic it generates does not exceed that allocation.

To address this problem,
the Exchange for many years has had the ability to “throttle” outgoing message traffic by preventing the dissemination to OPRA of certain quotes that have been generated by Auto-Quote. The current proposal takes a slightly different tack by restricting the generation of new quotes rather than “throttling” the transmission to OPRA of new quotes that have been generated. On the whole, the Commission believes that both are reasonable means by which to address the problem of the limited capacity of the OPRA system and, as such, are consistent with the Act.

The Commission believes, though, that the proposed rule change may offer a more effective tool to restrain message traffic than throttling and, thus, may have a more minimal effect on competition. Presently, the throttling function is applied indiscriminately to all quotes generated by Auto-Quote. The approach described in the proposed rule change, however, may be used selectively. Thus, Phlx could choose to continue updating quotes for certain options classes continuously while restraining the generation of new quotes in other options classes. As a result, Phlx would be able to determine—based on competitive factors—which options classes should have a greater share during peak usage periods of the bandwith allocated to it by OPRA. Therefore, the Commission believes the proposal promotes just and equitable transactions in securities, and removes any impediments to a free and open market, consistent with Section 6(b)(5) of the Act.18

IV. Conclusion

It Is Therefore Ordered, pursuant to Section 19(b)(2) of the Act,19 that the proposed rule change (SR–Phlx–00–62) is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.20

Margaret H. McFarland,
Deputy Secretary.

BILLING CODE 8010–01–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 43740; File No. SR–Phlx–00–48]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Philadelphia Stock Exchange, Inc. Relating to Telephone Use on the Options Floor

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”)1 and Rule 19b–4 thereunder,2 notice is hereby given that on June 16, 2000, the Philadelphia Stock Exchange, Inc. (“Phlx” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change described in Items I, II, and III below, which Items have been prepared by the Exchange. The Exchange filed Amendment No. 1 to the proposed rule change on December 1, 2000.3 The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Phlx proposes to amend Exchange Rule 606 and to create new Options Floor Procedure Advice (“OFPA”) F–31 to establish rules and procedures for telephone use on the Phlx’s options floor. The text of the proposed rule change is set forth below. All text is being added.

Wire and Other Connections

Communications and Equipment

Rule 606

(e)(1) Registration. Members and member organizations must register, prior to use, any new telephone to be used on the Options Floor. Each phone registered with the Exchange must be registered by category of user. If there is a change in the category of any user, the phone must be re-registered with the Exchange. At the time of registration, members and member firm representatives must sign a statement that they are aware of and understand the rules and procedures governing the use of telephones on the Options Floor.

(2) Capacity and Functionality. No wireless telephone used on the Options Floor may have an output greater than one watt. No person on the Options Floor may use any device for the purpose of maintaining an open line of continuous communication whereby a person not located in the trading crowd may continuously monitor the activities in the trading crowd. This prohibition covers intercoms, walkie-talkies and any similar devices. Speed-dialing features are permitted on any member telephone.

(3) Specialist and Registered Options Traders.

(a) Specialists and Registered Options Traders (“ROTs”) may use their own cellular and cordless phones to place calls to any person at any location (whether on or off the Options Floor).

(b) ROTs located off the Options Floor may not place an order by calling a Floor Broker who is present in a trading crowd. ROTs located off the Options Floor may not otherwise place an order by calling the specialist phone in the trading crowd. Any telephonic order entered from off the Options Floor must be placed with a person located in a member firm booth.

(4) Floor Brokers.

(a) Floor Brokers may use cellular and cordless telephones, but only to communicate with persons located on the Options Floor. These telephones may not include a call forwarding feature. Headsets are permitted for Floor Brokers, but if the Exchange determines that a Floor Broker is maintaining a continuous open line through the use of a headset, the Floor Broker will be prohibited from further use of any headset for a length of time to be determined by the Exchange.

(b) All orders phoned to the Floor Brokers must be received initially at the Floor Broker’s booth. Floor Brokers may not receive telephonic orders while in the trading crowd except from their booth. Any telephonic order entered from off the Options Floor must be placed with a person located in a member firm booth.

(5) Clerks.

(a) Floor Broker clerks are subject to the same terms and conditions on telephone use as Floor Brokers.

(b) Stock Execution clerks are subject to the same terms and conditions on telephone use as Floor Brokers.

(c) The Options Committee reserves the right to prohibit clerks from using cellular or cordless phones on the floor at any time that it is necessary due to electronic interference problems or capacity problems resulting from the number of such phones then in use on the Options Floor. In such circumstances, the Committee will first consider restricting the use of such phones by Stock Execution Clerks, and then by Floor Broker Clerks.

(6) General Access In-House Phones. The general access in-house telephones located outside of the trading post areas may be used by any member, clerk or floor broker to communicate with persons located on the Options Floor or within the Exchange Complex.

3 The Exchange submitted a new Form 19b–4, which replaces and supersedes the original filing (“Amendment No. 1”). Amendment No. 1 amends the purpose section of the proposed rule change to provide a description of provisions governing floor brokers, registered options traders, general access phones, and exchange liability. Amendment No. 1 also clarifies that registration and maintenance of registration records is handled through the Exchange’s Membership Services Department. Finally Amendment No. 1 amends proposed Phlx Rule 606(e)(3) to include specialists.
(7) Telephone Records. Members must maintain their cellular or cordless telephone records, including logs of calls placed, for a period of not less than one year. The Exchange reserves the right to inspect and/or examine such telephone records.

(8) Exchange Liability. The Exchange assumes no liability to members or member organizations due to conflicts between telephones in use on the Options Floor or due to electronic interference problems resulting from the use of telephones on the trading floor.

Options Floor Procedure Advice F±31
Communications and Equipment

(1) Registration. Members and member organizations must register, prior to use, any new telephone to be used on the Options Floor. Each phone registered with the Exchange must be registered by category of user. If there is a change in the category of any user, the phone must be re-registered with the Exchange. At the time of registration, members and member firm representatives must sign a statement that they are aware of and understand the rules and procedures governing the use of telephones on the Options Floor.

(2) Capacity and Functionality. No wireless telephone used on the Options Floor may have an output greater than one watt. No person on the Options Floor may use any device for the purpose of maintaining an open line of continuous communication whereby a person not located in the trading crowd may continuously monitor the activities in the trading crowd. This prohibition covers intercoms, walkie-talkies and any similar devices. Speed-dialing features are permitted on any member telephone.

(3) Specialists and Registered Options Traders. (a) Specialists and Registered Options Traders (“ROTs”) may use their own cellular and cordless phones to place calls to any person at any location (whether on or off the Options Floor).
(b) ROTs located off the Options Floor may not place an order by calling a Floor Broker who is present in a trading crowd. ROTs located off the Options Floor may not otherwise place an order by calling the specialist phone in the trading crowd. Any telephonic order entered from off the Options Floor must be placed with a person located in a member firm booth.

(4) Floor Brokers. (a) Floor Brokers may use cellular and cordless telephones, but only to communicate with persons located on the Options Floor. These telephones may not include a call forwarding feature. Headsets are permitted for Floor Brokers, but if the Exchange determines that a Floor Broker is maintaining a continuous open line through the use of a headset, the Floor Broker will be prohibited from future use of any headset for a length of time to be determined by the Exchange.
(b) All orders phoned to Floor Brokers must be received initially at the Floor Broker's booth. Floor Brokers may not receive telephonic orders while in the trading crowd except from their booths. Any telephonic order entered from off the Options Floor must be placed with a person located in a member firm booth.

(5) Clerks. (a) Floor Broker clerks are subject to the same terms and conditions on telephone use as Floor Brokers.
(b) Stock Execution clerks are subject to the same terms and conditions on telephone use as Floor Brokers.
(c) The Options Committee reserves the right to prohibit clerks from using cellular or cordless phones on the floor at any time that it is necessary due to electronic interference problems or capacity problems resulting from the number of such telephones in use on the Options Floor. In such circumstances, the Committee will first consider restricting the use of such phones by Stock Execution Clerks, and then by Floor Broker Clerks.

(6) General Access In-House Phones. The general access in-house telephones located outside of the trading post areas may be used by any member, clerk or floor broker to communicate with persons located on the Options Floor or within the Exchange complex.

(7) Telephone Records. Members must maintain their cellular or cordless telephone records, including logs of calls placed, for a period of not less than one year. The Exchange reserves the right to inspect and/or examine such telephone records.

(8) Exchange Liability. The Exchange assumes no liability to members or member organizations due to conflicts between telephones in use on the Options Floor or due to electronic interference problems resulting from the use of telephones on the trading floor.

II. Self-Regulatory Organization’s Statements Regarding the Proposed Rule Change

In its filing with the Commission, the Phlx included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Phlx has prepared summaries, set forth in sections A, B and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to establish rules and procedures for telephone use on the options floor. Proposed Phlx Rule 606(e) and OFPA F±31 would set forth procedures and restrictions regarding telephone use on the options floor. The proposed rule contemplates that certain types of telephones (i.e., cellular phones) may be used for personal purposes. The proposed rule would limit the use of telephones on the options floor for business purposes, depending on the category of user (specialist, registered options trader (“ROT”), floor broker, or clerk).

The proposed rule change would require members and member organizations to register by category of user, any new telephone to be used on the options floor, prior to use. Registration and maintenance of registration records would be handled through the Exchange’s Membership Services Department. If there is a change in the category of user, the telephone must be re-registered with the Exchange. At the time of registration, the user must sign a statement that the user is aware of and understands the rules governing the use of telephones on the options floor. The Exchange believes that this should facilitate record keeping and should also enhance the ability of the Exchange’s Market Surveillance Department to investigate potential violations of the rule.

The proposed rule would also provide that no person on the options floor may use any device, including, but not limited to, intercoms, walkie-talkies, and similar devices, for the purpose of maintaining an open line of communication whereby a person located in a trading crowd may continuously monitor the activities of that crowd.

Capacity and Functionality: The proposed rule specifies the capacity and functionality permitted for use of telephones on the options floor. Specifically, proposed Phlx Rule 606(e)(2) provides that no wireless telephone on the options floor may have an output of more than one watt. The purpose of this provision is to minimize...
the possibility of radio frequency or other interference with the systems of the Exchange or those of other members. The proposed rule would also state that no person on the options floor may use any device for the purpose of maintaining an open line of continuous communication whereby a person not located in the trading crowd may continuously monitor the activities in the trading crowd. This prohibition covers intercoms, walkie-talkies, and any similar devices.

Members and Member Firm Employees. The proposed rule sets forth specific guidelines for each category of user on the options floor, as follows:

Specialists and ROTs. Proposed Phlx Rule 606(e)(3) would provide that specialists and ROTs may use their own cellular and cordless phones to place calls to any person at any location (whether on or off the options floor). The proposal would also provide that specialists and ROTs located off the options floor may not place an order by calling a floor broker located in a trading crowd or directly to the specialist phone. Any telephonic order entered from off the options floor must be placed with a person located in a floor broker booth. The Exchange believes that this should facilitate adequate surveillance of telephonic orders and ensure that there is a record of the order in the event that a problem arises in connection with the order.

Floor Brokers. Proposed Phlx Rule 606(e)(4) would allow floor brokers to use cellular and cordless phones, but only to communicate with persons located on the options floor. The proposed rule would prohibit floor brokers from receiving telephonic orders while in the trading crowd. Orders phoned to floor brokers must be received at the floor broker’s booth.

This should facilitate the adequate surveillance of telephonic orders and should ensure that there is a record of each telephonic order in the event of a trading problem or dispute relating to an order. Moreover, the Phlx believes the prohibition against floor brokers receiving telephonic orders in the trading crowd is consistent with Exchange procedures that require floor brokers to time stamp tickets for each order at the time of receipt of the order, prior to representing the order in the crowd for execution.

Clerks. Proposed Phlx Rule 606(e)(5) would provide that floor broker clerks and stock execution clerks are subject to the same terms and conditions on telephone use as floor brokers. The proposal also states that the Options Committee reserves the right to prohibit clerks from using cellular or cordless phones on the floor at any time that it is necessary due to electronic interference problems.

In such circumstances, the Options Committee would first consider restricting the use of phones by ROT clerks, then by stock execution clerks, and then finally, by floor broker clerks.

General Access In-House Phones, Telephone Records, and Exchange Liability. Proposed Phlx Rule 606(e)(6) states that the general access in-house telephones located outside of the trading post areas may be used by any member, clerk or floor broker to communicate with persons located on the options floor or within the Exchange complex.

Proposed Phlx Rule 606(e)(7) would require members to maintain all cellular or cordless telephone records for at least one year, and provides the Exchange the right to inspect and/or examine these records. The Exchange believes that this requirement should facilitate the review by the Exchange’s Examinations Department of the records of members for whom the Exchange is the Designated Examining Authority, and should allow for investigations and possible enforcement action by the Exchange’s Market Surveillance Department in the event of allegations of violations of the proposed rules.

Finally, Proposed Phlx Rule 606(e)(8) states that the Exchange assumes no liability to members or member organizations due to conflicts between telephones in use on the options floor or due to electronic interference problems resulting from the use of telephones on the trading floor.

Proposed OFPA F–31 contains the same provisions as proposed Rule Phlx 606(e) in order to facilitate on-floor reference to the Exchange’s regulations regarding on-floor communications devices. If a violation of OFPA F–31 is deemed to be minor pursuant to the Exchange’s Minor Rule Plan, a fine schedule, implemented on a three year running calendar basis, would be implemented as follows:

<table>
<thead>
<tr>
<th>Occurrence</th>
<th>Fine</th>
</tr>
</thead>
<tbody>
<tr>
<td>1st Occurrence</td>
<td>$250.00</td>
</tr>
<tr>
<td>2nd Occurrence</td>
<td>$500.00</td>
</tr>
<tr>
<td>3rd Occurrence</td>
<td>$1,000.00</td>
</tr>
<tr>
<td>4th and thereafter</td>
<td>Sanction is discretionary with Business Conduct Committee</td>
</tr>
</tbody>
</table>

The three year running calendar would begin on the date of the first infraction.

2. Statutory Basis

The Exchange believes that the proposed rule change, as amended, is consistent with section 6(b) of the Act in general, and further the objectives of section 6(b)(5) in particular, in that it is designed to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest, by regulating communications to and from the Exchange’s options floor.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Phlx does not believe that the proposed rule change, as amended, will impose any inappropriate burden on competition.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange did not solicit or receive written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days or such date if it finds such...
later period to be appropriate and publishes its reasons for so finding or (ii) as to which the Phlx consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change, as amended, is consistent with the Act. Persons making written submission should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission’s Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the Phlx. All submissions should refer to the File No. SR–Phlx–00–48 and should be submitted by January 18, 2001.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.13

Margaret H. McFarland,
Deputy Secretary.

[FR Doc. 00–33126 Filed 12–27–00; 8:45 am]
rules.4 The Phlx notes that the language of new Commentary .01, however, is not intended to require a ROT to trade with another ROT at a price at which the ROT is unwilling to trade, unless otherwise required by Phlx rule(s).

The Phlx believes that the conduct prohibited in proposed new Commentary .01 to Rule 707 is fundamentally inconsistent with the obligations of members to their customers and each other, and is contrary to the public interest in fair and efficient options markets.5

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b)(5) of the Act 6 in general, and furthers the objectives of Section 6(b)(5) 7 in particular, in that it is designed to prevent fraudulent and manipulative acts and practices and to promote just and equitable principles of trade by prohibiting members, member organizations, or persons associated with or employed by members or member organizations from engaging in harassment and other improper behavior because of listing or competitive practices.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any inappropriate burden on competition.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes it reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

A. by order approve the proposed rule change, or

B. institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549–0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying at the Commission’s Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All submissions should refer to File No. SR–Phlx–00–94 and should be submitted by January 18, 2001.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.8

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010–01–M

SMALL BUSINESS ADMINISTRATION
[Declaration of Disaster #3310]

State of Alabama

As a result of the President’s major disaster declaration on December 18, 2000, I find that the following Counties in the State of Alabama constitute a disaster area due to damages caused by severe storms and tornadoes that occurred beginning on December 16, 2000 and continuing: Dale, Etowah, Geneva, Henry, Houston, Limestone, Macon, St. Clair and Tuscaloosa Counties. Applications for loans for physical damage as a result of this disaster may be filed until the close of business on February 16, 2001 and for economic injury until the close of business on September 18, 2001 at the address listed below or other locally announced locations: U.S. Small
Business Administration, Disaster Area 2 Office, One Baltimore Place, Suite 300, Atlanta, GA 30308.

In addition, applications for economic injury loans from small businesses located in the following contiguous counties may be filed until the specified date at the above location: Barbour, Bibb, Blount, Bullock, Calhoun, Cherokee, Coffee, Covington, De Kalb, Elmore, Fayette, Greene, Hale, Jefferson, Lauderdale, Lawrence, Lee, Madison, Marshall, Montgomery, Morgan, Pickens, Pike, Russell, Shelby, Talladega, Tallapoosa, and Walker Counties in Alabama; Holmes, Jackson, and Walton Counties in Florida; Clay, Early, Quitman, and Seminole Counties in Georgia; and Lincoln and Giles Counties in Tennessee.

The interest rates are:

BILLING CODE 8025–01–P

SOCIAL SECURITY ADMINISTRATION

Agency Information Collection Activities: Proposed Request and Comment Request

The Social Security Administration (SSA) publishes a list of information collection packages that will require clearance by the Office of Management and Budget (OMB) in compliance with Pub. L. 104–13 effective October 1, 1995. The Paperwork Reduction Act of 1995. SSA is soliciting comments on the accuracy of the agency’s burden estimate; the need for the information; its practical utility; ways to enhance its quality, utility and clarity; and on ways to minimize burden on respondents, including the use of automated collection techniques or other forms of information technology.

Written comments and recommendations regarding the information collection(s) should be submitted to the SSA Reports Clearance Officer and to the OMB Desk Officer at the following addresses:

I. The information collections listed below will be submitted to OMB within 60 days from the date of this notice. Your comments should be submitted to SSA within 60 days from the date of this publication. You can obtain a copy of the collection instruments by calling the SSA Reports Clearance Officer at 410–965–4145, or by writing to him at the address listed above.

1. Pre-1957 Military Service Federal Benefit Questionnaire—0960–0120. Form SSA–2512 collects data used in the claims adjudication process to grant gratuitous military wage credits, when applicable, and solicits sufficient information to make a determination of eligibility. The respondents are individuals who are applying for Social Security benefits on the record of a wage earner with pre-1957 military service.

Number of Respondents: 12,000.

Frequency of Response: 1.

Average Burden Per Response: 10 minutes.

Estimated Annual Burden: 2,000 hours.

2. Application for a Social Security Card—0960–0066. The information collected on form SS–5 is needed to assign a Social Security Number (SSN) and issue a card. SSA screens its records to make sure applicants for original SSN cards don’t already have SSNs before assigning an original number. SSA also uses the information from the SS–5 to insure that replacement SSN cards are issued to the correct number holder. Use of SSNs enables SSA to keep an accurate record of each individual’s earnings for the payment of benefits and for administrative purposes as an identifier for health-maintenance and income-maintenance programs, such as the Retirement, Survivors and Disability Insurance programs, the SSI program and other programs administered by the Federal government including Black Lung, Medicare and veterans compensation and pension programs.

The Internal Revenue Service uses the SSN as a taxpayer identification number for those individuals who are eligible to be assigned an SSN. The respondents are applicants for original, duplicate or corrected Social Security cards.

Number of Respondents: 17.6 million.

Frequency of Response: 1.

Average Burden Per Response: 8½–9 minutes.

Estimated Annual Burden: 2,501,667 hours.

3. Certificate of Responsibility for Welfare and Care of Child Not in Applicant’s Custody—0960–0019. SSA uses the information collected on form SSA–781 to decide if “in care” requirements are met by non-custodial parent(s), who is filing for benefits based on having a child in care. The respondents are non-custodial wage earners whose entitlement to benefits depends upon having an entitled child in care.

Number of Respondents: 14,000.

Frequency of Response: 1.

Average Burden Per Response: 10 minutes.

Estimated Annual Burden: 2,333 hours.

4. Questionnaire for Children Claiming SSI Benefits—0960–0499. The information collected on form SSA–3881 is used by SSA to evaluate disability in children who apply for...
Supplemental Security Income (SSI) payments. The respondents are individuals who apply for SSI benefits for a disabled child.

**Number of Respondents:** 272,000.
**Frequency of Response:** 1.
**Average Burden Per Response:** 30 minutes.
**Estimated Annual Burden:** 136,000 hours.

II. The information collections listed below have been submitted to OMB for clearance. Your comments on the information collections would be most useful if received by OMB and SSA within 30 days from the date of this notice. You can obtain a copy of the OMB clearance packages by calling the SSA Reports Clearance Officer on (410) 965-4145, or by writing to him at the address listed above.

**Number of Respondents** | **Frequency of Response** | **Average Burden Per Response (minute)** | **Estimated Annual Burden (hours)** |
---|---|---|---|
SSA-512 | SSA-513 | SSA-512 | SSA-513 |
---|---|---|---|
200,000 | 350,000 | 1 | 1 | 2 | 2 | 6,667 | 11,667 |

3. Affective Disorder Treatment Demonstration Project—0960–NEW

**Background**

There is substantial research evidence that affective disorders (i.e., mental disorders that affect a person’s mood, such as depression and bipolar disorder) usually respond to treatment; there is also evidence that many individuals with affective disorders do not receive effective treatment. The cost of care is one of the reasons for the low treatment rates of individuals with affective disorder. This may be true for many beneficiaries, particularly those in the Medicare waiting period. Therefore, SSA will test the hypothesis that providing access to treatment will result in improved health status of Disability Insurance (DI) beneficiaries with affective disorders, which might, in turn, lead to increased labor force participation and self-sufficiency. This outcome would benefit both participants and taxpayers.

**The Demonstration Project**

SSA plans to implement a 5-year demonstration project that will test the effectiveness of providing better access to quality affective disorders treatments for DI beneficiaries who have an affective disorder as their primary reason for disability. Several forms and survey instruments will be used during the demonstration to collect information for screening program participants, beneficiary protection, and program evaluation. Some of the data will be collected from beneficiaries, and other data will be collected from the medical service providers who treat beneficiaries during the study.

The respondents to this collection will be randomly selected DI beneficiaries with an affective disorder and their health care providers.

DEPARTMENT OF STATE

Bureau of Educational and Cultural Affairs Request for Grant Proposals: Russian-U.S. Young Leadership Fellows for Public Service Program

SUMMARY: The Office of Academic Exchange Programs of the Bureau of Educational and Cultural Affairs announces an open competition for administration of the Russian-U.S. Young Leadership Fellows for Public Service Program for the academic year 2002–2003. Public and private non-profit organizations meeting the provisions described in IRS regulation 26 CFR 1.501(c) may submit proposals to administer recruitment, selection, placement, monitoring, evaluation and follow-on activities. Organizations with less than four years of experience in conducting international exchange are not eligible for this competition.

Program Information

The Russian-U.S. Young Leadership Fellows for Public Service Program began in 1999 as an initiative to provide practical experience in developing personal leadership skills and promoting the importance of community responsibility for young Russian and American students. Under the auspices of the FREEDOM Support Act, the program will enrich the experience and education of young people who show the promise of contributing to the betterment of their own countries and to the increased mutual understanding between the two countries.

The educational exchange program combines academic course-work with complementary community service and an internship, and targets Russian and American college graduates who have demonstrated leadership skills and an interest in public service. The program provides full scholarships for one year of non-degree study in the United States or Russia at qualified universities and colleges. The Russian and American students have different but complementary program designs. Russian students select a concentration in either Community Affairs, Governmental Affairs, or Corporate Affairs. American students focus on Russian Studies.

ECA will award one grant for this program. Should an applicant organization wish to work with other organizations in the implementation of this program, a subgrant agreement must be arranged. Programs and projects must conform with Bureau requirements and guidelines outlined in the Solicitation Package. ECA programs are subject to the availability of funds. Programs must comply with J–1 visa regulations. Please refer to Solicitation Package for further information.

Budget Guidelines

Applicants must submit a comprehensive budget for the entire program. Awards may not exceed $1,700,000. There must be a summary budget as well as breakdowns reflecting both administrative and program budgets. Applicants may provide separate sub-budgets for each program component, phase, location, or activity to provide clarification. Please refer to the Solicitation Package for complete budget guidelines and formatting instructions.

Announcement Title and Number

All correspondence with the Bureau concerning this RFGP should reference the above title and number ECA/A/E/EUR–02–01.

FOR FURTHER INFORMATION CONTACT: The Office of Academic Exchange Programs, ECA/A/E/EUR, Room 246, U.S. Department of State, 301 4th Street, SW., Washington, DC 20547, Phone: 202–205–0525; Fax: 202–260–7985, sgovatsk@pd.state.gov to request a Solicitation Package. The Solicitation Package contains detailed award criteria, required application forms, specific budget instructions, and standard guidelines for proposal preparation. Please specify Bureau Program Manager Sondra Govatski on all other inquiries and correspondence. Please send the complete Federal Register announcement before sending inquiries or submitting proposals. Once the RFGP deadline has passed, Bureau staff may not discuss this competition with applicants until the proposal review process has been completed.

To Download A Solicitation Package via Internet

The entire Solicitation Package may be downloaded from the Bureau’s website: http://exchanges.state.gov/education/RFGPs. Please read all information before downloading.

Deadline for Proposals

All proposal copies must be received at the Bureau of Educational and Cultural Affairs by 5 p.m. Washington, DC time on Friday, March 2, 2001. Faxed documents will not be accepted at any time. Documents postmarked the due date but received on a later date will not be accepted. Each applicant must ensure that the proposals are received by the above deadline.

Applicants must follow all instructions in the Solicitation Package. The original and eight copies of the application should be sent to: U.S. Department of State, SA–44, Bureau of Educational and Cultural Affairs, Ref.: ECA/ A/E/EUR–02–01, Program Management, ECA/EX/PM, Room 534, 301 4th Street, SW., Washington, DC 20547.

Applicants must also submit the “Executive Summary” and “Proposal Narrative” sections of the proposal on a 3.5” diskette, formatted for DOS. These documents must be provided in ASCII text (DOS) format with a maximum line length of 65 characters. The Bureau will transmit these files electronically to the Public Affairs section at the US Embassy for its review, with the goal of reducing the time it takes to get embassy comments for the Bureau’s grants review process.

Diversity, Freedom and Democracy Guidelines

Pursuant to the Bureau's authorizing legislation, programs must maintain a non-political character and should be balanced and representative of the diversity of American political, social, and cultural life. “Diversity” should be interpreted in the broadest sense and encompass differences including, but not limited to ethnicity, race, gender, religion, geographic location, socio-economic status, and physical challenges. Applicants are strongly encouraged to adhere to the advancement of this principle both in program administration and in program content. Please refer to the review criteria under the “Support for Diversity” section for specific suggestions on incorporating diversity into the total proposal. Public Law 104–319 provides that “in carrying out programs of educational and cultural exchange in countries whose people do not fully enjoy freedom and democracy”, the Bureau “shall take appropriate steps to provide opportunities for participation in such programs to human rights and democracy leaders of such countries.” Public Law 106–113 requires that the governments of the countries described above do not have inappropriate influence in the selection process. Proposals should reflect advancement of these goals in their program content, to the fullest extent deemed feasible.
Review Process

The Bureau will acknowledge receipt of all proposals and will review them for technical eligibility. Proposals will be deemed ineligible if they do not fully adhere to the guidelines stated herein and in the Solicitation Package. All eligible proposals will be reviewed by the program office, as well as the Public Diplomacy section overseas, where appropriate. Eligible proposals will be forwarded to panels of Bureau officers for advisory review. Proposals may also be reviewed by the Office of the Legal Adviser or by other Department elements. Final funding decisions are at the discretion of the Department of State’s Assistant Secretary for Educational and Cultural Affairs. Final technical authority for assistance awards (grants or cooperative agreements) resides with the Bureau’s Grants Officer.

Review Criteria

Technically eligible applications will be competitively reviewed according to the criteria stated below. These criteria are not rank ordered and all carry equal weight in the proposal evaluation:

1. Quality of the program idea: Proposals should exhibit originality, substance, precision, and relevance to the Bureau’s mission.

2. Program planning and ability to achieve program objectives: Detailed agenda and relevant work plan should demonstrate substantive undertakings and logistical capacity. Agenda and plan should adhere to the program overview and guidelines described above. Objectives should be reasonable, feasible, and flexible. Proposals should clearly demonstrate how the institution will meet the program’s objectives and plan.

3. Multiplier effect/impact: Proposed programs should strengthen long-term mutual understanding, including maximum sharing of information and establishment of long-term institutional and individual linkages.

4. Support of Diversity: Proposals should demonstrate substantive support of the Bureau’s policy on diversity. Achievable and relevant features should be cited in both program administration (selection of participants, program venue and program evaluation) and program content (orientation and wrap-up sessions, program meetings, resource materials and follow-up activities).

5. Institutional Capacity: Proposed personnel and institutional resources should be adequate and appropriate to achieve the program or project’s goals. Proposals should demonstrate an institutional record of successful exchange programs, including responsible fiscal management and full compliance with all reporting requirements for past Bureau grants as determined by Bureau Grant Staff. The Bureau will consider the past performance of prior recipients and the demonstrated potential of new applicants.

6. Follow-on Activities: Proposals should provide a plan for continued follow-on activity (without Bureau support) ensuring that Bureau supported programs are not isolated events.

7. Project Evaluation: Proposals should include a plan to evaluate the activity’s success, both as the activities unfold and at the end of the program. A draft survey questionnaire or other technique plus description of a methodology to use to link outcomes to original project objectives is recommended. Successful applicants will be expected to submit intermediate reports after each project component is concluded or quarterly, whichever is less frequent.

8. Cost-effectiveness: The overhead and administrative components of the proposal, including salaries and honoraria, should be kept as low as possible. All other items should be necessary and appropriate. Proposals should maximize cost-sharing through other private sector support as well as institutional direct funding contributions.

Authority

Overall grant making authority for this program is contained in the Mutual Educational and Cultural Exchange Act of 1961, Public Law 87–256, as amended, also known as the Fulbright-Hays Act. The purpose of the Act is “to enable the Government of the United States to increase mutual understanding between the people of the United States and the people of other countries * * *; to strengthen the ties which unite us with other nations by demonstrating the educational and cultural interests, developments, and achievements of the people of the United States and other nations * * * and thus to assist in the development of friendly, sympathetic and peaceful relations between the United States and the other countries of the world.” The funding authority for the program cited above is provided through the FREEDOM Support Act.

Notice

The terms and conditions published in this RFGP are binding and may not be modified by any Bureau representative. Explanatory information provided by the Bureau that contradicts published language will not be binding. Issuance of the RFGP does not constitute an award commitment on the part of the Government. The Bureau reserves the right to reduce, revise, or increase proposal budgets in accordance with the needs of the program and the availability of funds. Awards made will be subject to periodic reporting and evaluation requirements.

Notification

Final awards cannot be made until funds have been appropriated by Congress, allocated and committed through internal Bureau procedures.

William B. Bader,
Assistant Secretary for Educational and Cultural Affairs, U.S. Department of State.

BILLING CODE 4710–05–P
inspection and printing on the internet at http://dms.dot.gov; and for inspection from the Commandant (G–CIM–2), U.S. Coast Guard, room 6106, 2100 Second Street SW., Washington, DC, between 10 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Barbara Davis, Office of Information Management, 202–267–2326, for questions on this document; Dorothy Beard, Chief, Documentary Services Division, U.S. Department of Transportation, 202–366–9330, for questions on the docket.

SUPPLEMENTARY INFORMATION:

Regulatory History

This request constitutes the 30-day notice required by OMB. The Coast Guard has already published [65 FR 59884 (October 6, 2000)] the 60-day notice required by OMB. That request elicited no comments.

Request for Comments

The Coast Guard invites comments on the proposed collections of information to determine whether the collections are necessary for the proper performance of the functions of the Department. In particular, the Coast Guard would appreciate comments addressing: (1) The practical utility of the collections; (2) the accuracy of the Department’s estimated burden of the collections; (3) ways to enhance the quality, utility, and clarity of the information that is the subject of the collections; and (4) ways to minimize the burden of collections on respondents, including the use of automated collection techniques or other forms of information technology. Comments, to DMS or OIRA, must contain the OMB Control Numbers of all ICRs addressed. Comments to DMS must contain the docket number of this request, USCG 2000–0832. Comments to OIRA are best assured of having their full effect if OIRA receives them within 30 days or less after the publication of this request.

Information Collection Requests

1. Title: Direct Users’ Fees for Inspection or Examination of U.S. and Foreign Commercial Vessels.

OMB Control Number: 2115–0016.

Type of Request: Extension of a currently approved collection.

Affected Public: Manufacturers of chemicals.

Forms: CG–4355.

Abstract: The Coast Guard requires manufacturers of new chemicals to submit data on the chemicals. From these data, the Coast Guard determines the appropriate precautions to take.

Annual Estimated Burden Hours: The estimated burden is 129 hours a year.

V.S. Crea,
Director of Information and Technology.

DEPARTMENT OF TRANSPORTATION

Coast Guard

[USCG 2000–7933]

AGENCY: Coast Guard, DOT.

ACTION: Request for comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, this request for comments announces that the Coast Guard has forwarded the five Information Collection Requests (ICRs) abstracted below to OMB for review and comment. These ICRs describe the information we seek to collect from the public. Review and comment by OMB ensure that we impose only paperwork burdens commensurate with our performance of duties.

DATES: Please submit comments on or before January 29, 2001.

ADDRESSES: Please send comments to (1) the Docket Management System (DMS), U.S. Department of Transportation (DOT), room PL–401, 400 Seventh Street SW., Washington, DC 20590–0001; and (2) the Office of Information and Regulatory Affairs (OIRA), Office of Management and Budget (OMB), 725 17th Street NW., Washington, DC 20503, to the attention of the Desk Officer for the USCG.

Copies of the complete ICRs are available for inspection and copying in public docket USCG 2000–7933 of the Docket Management Facility between 10 a.m. and 5 p.m., Monday through Friday, except Federal holidays; for inspection and printing on the internet at http://dms.dot.gov; and for inspection from the Commandant (G–CIM–2), U.S. Coast Guard, room 6106, 2100 Second Street SW., Washington, DC, between 10 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Barbara Davis, Office of Information Management, 202–267–2326, for questions on this document; Dorothy Beard, Chief, Documentary Services Division, U.S. Department of Transportation, 202–366–9330, for questions on the docket.

SUPPLEMENTARY INFORMATION:

Regulatory History

This request constitutes the 30-day notice required by OMB. That request elicited no comments.

Request for Comments

The Coast Guard invites comments on the proposed collections of information to determine whether the collections are necessary for the proper performance of the functions of the Department. In particular, the Coast Guard would appreciate comments addressing: (1) the practical utility of the collections; (2) the accuracy of the Department’s estimated burden of the collections; (3) ways to enhance the quality, utility, and clarity of the information that is the subject of the collections; and (4) ways to minimize the burden of collections on respondents, including the use of automated collection techniques or other forms of information technology.

Comments, to DMS or OIRA, must contain the OMB Control Numbers of all ICRs addressed. Comments to DMS must contain the docket number of this request, USCG 2000–7933. Comments to OIRA are best assured of having their full effect if OIRA receives them within 30 days or less after the publication of this request.

Information Collection Requests

1. Title: Alternative Provisions for Reinspection of Offshore Supply Vessels (OSVs) in Foreign Ports.

OMB Control Number: 2115–0571.

Type of Request: Extension of a currently approved collection.

Affected Public: Owners and operators of vessels.

Form(s): This collection of information provides a mechanism for
owners and operators of OSVs based overseas to submit certified examination reports and statements to the Coast Guard as alternatives to reinspection by the Coast Guard.

Annual Estimated Burden Hours: The estimated burden is 143 hours a year.

2. Title: Waterfront Facilities Handling Liquefied Natural Gas (LNG) and Liquefied Hazardous Gas (LHG). OMB Control Number: 2115–0532.

Type of Request: Extension of a currently approved collection.

Affected Public: Owners and operators of waterfront facilities that transfer LNG or LHG.

Forms: This collection of information does not require the public to fill out Coast Guard forms, but an operator of a waterfront facility must submit all requests in writing to the Coast Guard when handling and transferring LNG or LHG in bulk.

Abstract: LNGs and LHGs present a risk to the public when handled at waterfront facilities. These rules should either prevent accidental releases at waterfront facilities or mitigate their results. They are necessary to promote and verify compliance with safety standards.

Annual Estimated Burden Hours: The estimated burden is 3,372 hours a year.

Type of Request: Extension of a currently approved collection.

Affected Public: Owners and operators of self-propelled hopper dredges who request working freeboards.

Forms: This collection of information does not require the public to fill out Coast Guard forms. Owners or operators must submit to the Coast Guard calculations showing that their dredges meet certain structural and stability standards for working freeboards.

Abstract: This collection of information provides a mechanism for owners and operators of self-propelled hopper dredges to request working freeboards.

Annual Estimated Burden Hours: The estimated burden is 46 hours a year.

4. Title: Approval of Plans and Records for Subdivision and Stability. OMB Control Number: 2115–0589.

Type of Request: Extension of a currently approved collection.

Affected Public: Owners, operators, or masters of vessels.

Forms: This collection of information does not require the public to fill out Coast Guard forms. Owners or operators must submit to the Coast Guard plans, technical information, or operating instructions before building or altering vessels.

Abstract: This collection of information requires owners, operators, or masters of certain inspected vessels to obtain or post various documents as part of the program of the Coast Guard for the safety of commercial vessels.

Annual Estimated Burden Hours: The estimated burden is 10,003 hours a year.

5. Title: Discharge of Refuse from Ships. OMB Control Number: 2115–0613.

Type of Request: Extension of a currently approved collection.

Affected Public: Owners, operators, masters, and persons-in-charge of vessels.

Forms: This collection of information does not require the public to fill out Coast Guard forms. Operators of U.S. oceangoing ships must maintain refuse- record books.

Abstract: The Marine Plastic Pollution Research and Control Act of 1987 requires the keeping of records on the discharge of refuse by oceangoing commercial vessels that are 40 feet in length or more. The rules appear in 33 CFR 151.55.

Annual Estimated Burden Hours: The estimated burden is 523,302 hours a year.

V.S. Crea,
Director of Information and Technology.

Voluntary Guidelines on Recreational Activities To Control the Spread of Zebra Mussels and Other Aquatic Nuisance Species

AGENCY: Coast Guard, DOT.

ACTION: Notice of issuance.

SUMMARY: The Coast Guard makes available this final version of the voluntary guidelines for persons engaged in water-related recreational activities (e.g., boating and fishing) to help control the spread of aquatic nuisance species (ANS). The Coast Guard must issue these guidelines per the recommendations prepared by the Aquatic Nuisance Species Task Force.

DATES: These voluntary guidelines are effective January 29, 2001.

ADDRESSES: The Docket Management Facility maintains the public docket for this notice. Comments and material received from the public are a part of this docket and are available for inspection or copying at room PL–401, on the Plaza level of the Nassif Building, 400 Seventh Street SW., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. You may also find this docket on the Internet at http://dms.dot.gov.

FOR FURTHER INFORMATION CONTACT: For questions on this notice or associated guidelines, call Lieutenant junior grade JoAnne Hanson, Project Manager, Office of Operating and Environmental Standards (G–MSO), Coast Guard, telephone, 202–267–2079. For questions on viewing materials in the docket, call Dorothy Beard, Chief, Dockets, Department of Transportation, telephone 202–366–9329.

SUPPLEMENTARY INFORMATION:

What Is the Regulatory History of the Voluntary Guidelines?

On April 13, 2000, we published a notice and request for comments entitled “Voluntary Guidelines on Recreational Activities to Control the Spread of Zebra Mussels and Other Aquatic Nuisance Species” in the Federal Register (65 FR 9953). We received four comment letters. On May 4, 2000, we published a correction notice in the Federal Register (65 FR 25980) citing minor editorial corrections to the notice and request for comments. No public hearing was requested and none was held.

What Comments Did the Coast Guard Receive in Response to Its Notice and Request for Comments and What Changes, if Any, Were Made to the Voluntary Guidelines as a Result of These Comments?

We received four comment letters in response to the notice and request for comments. Each of the four comment letters expresses support for the proposed guidelines, including the distribution of educational and outreach materials.

One comment proposes that the Coast Guard work with associations, educational institutions, or agencies that conduct education and outreach on recreational activities as part of their overall mission.

As a member of the Aquatic Nuisance Species Task Force (ANSTF), the Coast Guard is represented on the Task Force’s Communication, Education and Outreach Committee. This committee was established to provide the Task Force with a way to support the congressional mandates through outreach campaigns. The committee is currently working on creating a National Aquatic Nuisance Species Campaign and these voluntary guidelines will play
an important role in that effort. The Coast Guard will also rely on the Coast Guard Auxiliary to promote these guidelines to the boating public through their boating safety courses.

One comment suggests clarifying the term "natural resource managers and others" used in the guidelines under the heading "What activities do the voluntary guidelines address and what are the recommended procedures?"

The Coast Guard intends for the various county, regional, and State agencies to use the voluntary guidelines as basic guidelines to incorporate into their own aquatic nuisance species materials, which they can distribute in their areas, including specific points of contact.

One comment suggests that the Coast Guard purchase public service television spots to televise the educational videos. The comment also suggests that we make the guidelines available on the Coast Guard's web page.

As noted previously, as a member of the ANSTF's Communication, Education, and Outreach Committee, the Coast Guard is involved in the development of a national campaign to highlight these voluntary guidelines. A variety of outreach materials are being developed to publicize the guidelines. We expect televised publicity to be considered as well. The guidelines are currently available on the Coast Guard's web page.

One comment suggests using a species other than the spiny water flea to illustrate the efficacy of drying because the spiny water flea's resting stage eggs, which it produces seasonally, can dry out. The comment notes that the adult female cannot.

In response to this comment, the ANSTF Recreational Activities Committee (RAC) has recommended that we change the wording at the end of paragraph [e], entitled "Boating," under the "Pathway-Specific Guidelines" heading to read as follows: "* * * reduce the risk * * *" instead of "* * * prevent the transport * * *". We have made this wording change.

One comment suggests that, in the first bullet under "Never do the following," under "Generic Guidelines," we remove the word "from" and add the words "to or from." The sentence would then read as follows: "Never transport plants, animals, mud, or water to or from lakes, rivers, wetlands, and coastal waters."

We have revised the wording under the "Generic Guidelines" based on this suggestion.

**Why Is the Coast Guard Issuing Voluntary Guidelines?**

To comply with the National Invasive Species Act of 1996 (NISA), we are issuing voluntary guidelines for recreational activities to control the spread of zebra mussels and other Aquatic Nuisance Species (ANS). These guidelines will be explained in pamphlets, videos, and other types of outreach materials.

The voluntary guidelines in this notice are based on the ones drafted and recommended by the RAC. The guidelines developed by the Committee are available in the docket and may be accessed on the Internet at http://dms.dot.gov.

**What Are Aquatic Nuisance Species (ANS)?**

ANS are organisms introduced into non-native habitats and are often freed from the natural predators, parasites, pathogens, and competitors that have kept them in check. Once established, these organisms can displace native species; they can impede municipal, industrial, and private water intake systems; and they can degrade aquatic ecosystems.

The introduction of most ANS is the work of humans. In some cases, this is intentional, but, in many, it is accidental. In addition to overland transport of boats, which has long been identified as a key dispersal pathway, there are many others. The other human activities that can disperse ANS include angling, scuba diving, and waterfowl hunting.

Establishing these final voluntary guidelines will help to promote good habits that will control the spread of ANS. Surveys have shown that participants in recreational activities will take necessary precautions if they know what to do. Conversely, they will not take precautions unless they know what to do.

**What Is the Purpose of the Voluntary Guidelines?**

The voluntary guidelines will give the public clear, concise information on how to avoid the transport of ANS. These voluntary guidelines provide specific procedures that individuals engaged in the corresponding recreational activity can follow so they will not accidentally transport ANS.

**What Activities Do the Voluntary Guidelines Address and What Are the Recommended Procedures?**

These voluntary guidelines address the following water-related recreational activities: Scuba diving; waterfowl hunting; harvesting of bait by recreational anglers; angling; boating; operating seaplanes; and operating personal watercraft. These voluntary guidelines are intended to assist natural resource managers and others involved in educating individuals who participate in these recreational activities about the problems associated with the spread of ANS in the United States.

**Voluntary Guidelines for Recreational Activities To Control the Spread of Zebra Mussels and Other Aquatic Nuisance Species**

**Generic Guidelines**

Some guidelines are appropriate for any recreational activity associated with water. The generic preventive-guidelines that follow apply to most recreational activities occurring in marine and inland waters. In addition to these guidelines, States and provinces may include specific laws and guidelines for their areas.

Always do the following:

- Always inspect equipment (in the broadest sense, e.g., boats, planes, trailers, decoy anchors, SCUBA gear, and lures) for visible plants and animals before transporting.
- Always remove visible plants and animals from equipment (expel plants, animals, and water from internal parts).
- Always drain water from equipment before transporting.
- Always clean equipment that has been in infested waters before placing it in other waters (see the "Pathway-specific guidelines" section for specific methods).
- Always report questionable species to your resource agency for identification. Information is available from many sources about identification of ANS; however, specimens are needed to confirm sightings. Many jurisdictions have different rules regarding possession and transport. Always ask your local natural resources management agency for instructions.
- Avoid the following: Transporting plants, animals, mud, or water to or from lakes, rivers, wetlands, and coastal waters.
- Releasing animals or plants (e.g., aquarium species, bait, or water garden plants) into the wild unless you release them into the same waterbody or location where the species came from.

**Pathway-Specific Guidelines**

These guidelines cover recreational activities that are potential pathways for transferring ANS. Individuals engaged in these activities should follow these guidelines to help prevent the spread of ANS. You should note that States and
it is possible to inadvertently spread ANS from one lake or wetland to another via boats, motors, trailers, and decoys. Waterfowlers should assume that any fragments of aquatic plants could be potentially harmful and should not be transported from one wetland, lake, river, or coastal area to another. In addition, zebra mussels and their microscopic larvae can attach to aquatic plants. If fragments of these plants are transported, they can inadvertently transport zebra mussels to other waters. By following the guidelines on recreational activities, you can help prevent the spread of ANS via waterfowl hunting. Guidelines:

Before the hunting season—

• Switch to elliptical, bulb-shaped, or strap anchors on decoys, which avoid collecting submerged and floating aquatic plants; or

• If boats are moored in waters infested with zebra mussels, use the following tips to remove or kill zebra mussels or other aquatic animals and plants that might be in or on your boat:
  (1) Remove any visible zebra mussels from the boat and wash and rinse the boat with hot water; or
  (2) Spray the boat with high-pressure water; or
  (3) Dry all parts of the boat for at least 5 days before placing it into another waterbody.

After hunting—

• Inspect waders or hip boots; remove aquatic plants; and, where possible, rinse mud from them before leaving the waters; or

• Remove aquatic plants, animals, and mud that are attached to decoy lines or anchors; and

• Drain the water from boats before transporting to other waters. Between hunting trips—

• Inspect equipment for any aquatic plants, animals, and mud not removed after hunting; remove and dispose of them on land away from the waters; and

• Follow the guidelines for boaters in paragraph (e).

(c) Recreational Anglers’ Harvest of Live Bait (Non-Commercial Harvest)

The guidelines that follow apply to the non-commercial harvesting of live bait by recreational anglers. Nonindigenous species can lodge in nets and other equipment used to harvest baitfish and can be unintentionally transported into non-infested waters. Some species can survive up to 2 weeks out of water and remain viable when dislodged into another waterbody. Non-target species like ruffe and round gobies, as well as fragments of aquatic nuisance plants, such as hydrilla or Eurasian water milfoil, can be harvested along with target baitfish species. If such species are transferred to non-infested waters, they can have harmful effects on native fish populations. To help prevent the transfer of these species, you should conduct the procedures that follow or after the harvest of live bait for personal use.

Guidelines:

• Inspect harvested live bait for non-target species, and remove them where harvested.

• Always dispose of unwanted live bait on land (away from contact with waters) before leaving the waters. Never release live bait into another body of water or move aquatic plants or animals from one waterbody into a different waterbody.

• Remove all aquatic plants from boats, trailers, nets, or other equipment while on shore before leaving the waterbody access.

• Before reusing nets, roll out, hand clean, and dry them.

• Drain water from boats (cooling stem of motors) and equipment (bilge pump, tubs, live wells, etc.) before leaving any waterbody access.

• Never use water from infested waters to transport live bait to other waters. In many States and provinces, live bait harvested from designated infested waters is illegal. Check with your local State natural resource agency before you collect live bait.

• In areas where harvest of bait from infested waters is legal, avoid using the same equipment in infested and non-infested waters. Some aquatic nuisance species once removed from infested waters can survive up to two weeks in a moist environment. By drying surfaces where they can be lodged or attached, you can substantially reduce the risk of transporting them in boats and equipment.

• Rinse all equipment, including boats and trailers, with tap water and dry them for as long as possible, but for at least 5 days before re-use, especially in other waters. Before re-use, you should roll out nets, hand clean them, and dry them for a minimum of 10 days, or freeze them for 2 days.

• The following applies to disinfection, specific to zebra mussels, of equipment that is difficult to treat with drying and washing methods (use these methods away from the waterbody):

  (1) As an added equipment treatment, a dip of 100 percent vinegar for 20 minutes can kill small zebra mussels and may be effective against other ANS.

  (2) Treatment with other chemicals such as a 1-percent solution of table salt
for 24 hours can be as effective as a dip of vinegar.

The recipes provided in the following table are for a 1-percent solution of table salt (sodium chloride) treatment in water.¹

¹ Based on 312 g per cup.

(d) Angling

The introduction of ANS can cause significant changes in freshwater and marine ecosystems. Populations of prey and game fish can be significantly harmed by the presence of species such as the sea lamprey, Asian swamp eel, Chinese carp, and zebra mussel. Some aquatic nuisance plants (e.g., hydrilla, Eurasian water milfoil, and water hyacinth) may limit the viable fishing area of inland waters. You can help prevent the transfer of ANS by following the guidelines in this section whenever you engage in angling.

Guidelines

- Dispose of unwanted live bait on land before leaving the waterbody.
- Never release live bait into a different body of water or move aquatic plants or animals from one waterbody to another.
- Wash and dry your boat, tackle, downriggers, float tube, waders, and other equipment to remove or kill harmful species that were not visible at the boat launch.
- Inspect all fish caught using seines, dipnets, or other types of netting; remove and properly discard all non-target species.

(e) Boating

ANS, such as the zebra mussel, spiny water flea, and Eurasian water milfoil, can be unintentionally transported through water-related recreation activities because some ANS can survive many days out of water. If you are a water recreationalist (watercraft users), there are some important actions you can take to reduce the risk of transport of ANS from one waterbody to another.

Guidelines

- Before leaving all waters, inspect your boat (sailboats check centerboard and bilgeboard wells, and keel boats check the rudder-post area), trailer (check axles, runners, lights, and rollers), and other boating equipment (check anchors, water-skis, or other tow lines), and remove any plants, animals, or mud that are visible (see diagram 1).
- Drain water from the motor, livewell, bilge, and transoms while on land and before leaving all waters.
- Wash and dry your boat, tackle, fishing lines, downriggers, trailer, and other boating equipment to kill harmful species that were not visible at the boat launch. You can do this on your way home or once you arrive home.
- Before you transport to other waters, do one of the following:
  1. Rinse your boat and boating equipment with hot (greater than 40 °C or 104 °F) tap water.
  2. Spray your boat and trailer with high-pressure water.
  3. Dry your boat and equipment for at least 5 days.

For your information, the U.S. Fish and Wildlife Service, in conjunction with Canadian officials and other partners, are implementing the 100th Meridian Initiative, which focuses on preventing the westward spread of zebra mussels and other ANS by boat inspections and by dissemination of posters, brochures, and other information about ANS. There are many other State and Federal initiatives focusing on controlling the spread of ANS. Consult your local Fish and Wildlife Service facility or other appropriate State or Federal natural resource management agency for additional information.

(f) Seaplanes

Many ANS, such as the zebra mussel and Eurasian water milfoil, can be unintentionally transported from one waterbody to another on the floats of seaplanes. Therefore, it is important to clean the aircraft to remove ANS before traveling, rather than after landing at new locations. In addition, it is important for you to incorporate the procedures listed here into the operation of your seaplane. However, plane safety is the first priority when considering and following these guidelines.

Guidelines:

Before entering the aircraft—

- Inspect and remove aquatic plants from the floats, wires or cables, and water rudders;
- Pump floats, which may contain infested water; and
- If moored in waters infested by zebra mussels for extended periods, check the transom, chine, bottom, wheel wells, and step area of floats (see diagram 2). If zebra mussels are present on the floats, you can use (any) one of the following methods to remove or kill them:
  1. Wash the floats with hot water.
  2. Spray the floats with high-pressure water.
  3. Dry all parts of the floats for at least 5 days. Before takeoff—

Diagram (1)

American Fisheries Society, 1991, by Doug Jensen, University of Minnesota Sea Grant Program.
(g) Personal Watercraft

Personal watercraft that have jet-drive systems require some extra precautions to avoid ANS. A pump pulls water in through an opening under the craft, and the impeller (an internal propeller) forces water out, moving the craft forward. ANS can easily get lodged in the jet-drive system and get transported if the watercraft is taken from one waterbody to another. A small piece of Eurasian water milfoil, or other ANS, caught in the impellers can infest a new lake or river. Zebra mussels can survive in excess water in the jet drive and spread to other waters. By applying the following guidelines, you can help prevent the transfer of ANS via your personal watercraft.

Guidelines:

In the water—
- Avoid running the engine through aquatic plants near the boat access; and
- Push or winch the watercraft up on the trailer without running the engine.

On the trailer—
- After you pull the watercraft from the water, start the engine for 5 to 10 seconds to blow out any excess water and vegetation. (The dark, damp, enclosed area of the impeller provides an ideal environment for aquatic nuisance plants to survive.); and
- After the engine stops, pull plants out of the steering nozzle. Inspect your trailer and any other sporting equipment for fragments of aquatic plants, and remove them before you leave the access area.

After trailering and before re-use—
- Wash and dry your watercraft and equipment to kill or remove harmful species that you did not see at the boat launch. You can do this on your way home or once you arrive home. Choose one of the following methods of disinfection before transporting to another waterbody:
  1. Rinse your watercraft and other equipment with hot (greater than 40 °C or 104 °F) tap water.
  2. Spray your watercraft and trailer with high-pressure water.
  3. Dry your watercraft and equipment for at least 5 days.

R.C. North,

U.S. Coast Guard, Assistant Commandant for Marine, Safety and Environmental Protection.

[USCG–2000–8568]

Revised Recertification Procedure for Alternative Voluntary Advisory Groups in Lieu of Councils, Prince William Sound and Cook Inlet, AK

AGENCY: Coast Guard, DOT.

ACTION: Notice of proposal to change procedure; request for comments.

SUMMARY: Under the Oil Terminal and Oil Tanker Environmental Oversight and Monitoring Act of 1990, the Coast Guard may certify, on an annual basis, alternative voluntary advisory groups in lieu of a Regional Citizen’s Advisory Council for Cook Inlet and Prince William Sound regions of Alaska. The purpose of this notice is to inform the public that the Coast Guard intends to revise the procedure by which the alternative voluntary advisory groups undergo annual recertification with the objective of streamlining the administrative burden to the advisory groups, the Coast Guard and other involved parties.

DATES: Comments must reach the Document Management Facility on or before February 12, 2001.

ADDRESSES: To make sure your written comments and related material are not entered more than once in the docket,
please submit them by only one of the following means:

(2) By hand delivery to room PL–401 on the Plaza level of the Nassif Building, 400 Seventh Street SW., Washington, DC 20590–0001, between 9 a.m. and 5 p.m., Monday through Friday, except holidays. The telephone number is 202–366–9329.

(3) By fax to the Docket Management Facility at 202–493–2251.

The Docket Management Facility maintains the public docket for this notice. Comments will become part of this docket and will be available for inspection or copying at room PL–401, located on the Plaza Level of the Nassif Building at the above address between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. You may electronically access the public docket for this notice on the Internet at http://dms.dot.gov.

FOR FURTHER INFORMATION CONTACT: For questions on viewing or submitting material to the docket, contact Dorothy Beard, Chief, Dockets, Department of Transportation, telephone 202–366–9329; for questions on this notice, contact LT Mark Tennyson, Coast Guard, telephone 202–267–0486.

SUPPLEMENTARY INFORMATION:

Request for Comments:

We encourage you to submit comments and related material on this notice. If you do so, please include your name and address, identify the docket number for this notice (USCG–2000–8568), and give the reasons for each comment. You may submit your comments and material by mail, hand delivery, fax, or electronic means to the Document Management Facility at the address under ADDRESSES; but please submit your comments and material by only one means. If you submit them by mail or hand delivery, submit them in an unbound format, no larger than 8½×11 inches, suitable for copying and electronic filing. If you want acknowledgment of receipt of your comments, enclose a stamped, self-addressed post card or envelope. We will consider all comments and materials received during the comment period. We intend to finalize any procedural changes in time for the 2001 certification season. A notice will be published in a later Federal Register.

Public Meeting:

We do not now plan to hold a public meeting. You may submit a request for a public hearing by writing to Director (G–MW), Commandant, 2100 Second Street SW., Washington, DC 20593–0001. You may also deliver them to the same address in room 1408. The request should include reasons why a hearing would be beneficial. If there is sufficient evidence to determine that oral presentations will aid this process, we will hold a public hearing at a time and place announced by a later notice in the Federal Register.

Background and Purpose:

As part of the Oil Pollution Act of 1990, Congress passed the Oil Terminal and Oil Tanker Environmental Oversight and Monitoring Act of 1990 (33 U.S.C. 2732) (the Act) to foster the long-term partnership among industry, government, and local communities in overseeing compliance with environmental concerns in the operation of crude oil terminals and oil tankers.

Paragraph (o) of the Act permits an alternative voluntary advisory group to represent the communities and interests in the vicinity of the oil terminal facilities in Cook Inlet and Prince William Sound regions of Alaska in lieu of a Council of the type specified in 33 U.S.C. 2732(d), if certain conditions are met. The Act requires that each group enter into a contract to ensure annual funding and receive annual certification from the President that it fosters the general goals and purposes of the Act and is broadly representative of the community and interests in the vicinity of the terminal facilities. Accordingly, in 1991, the President granted certification to both the Cook Inlet Regional Citizen’s Advisory Council (RCAC) and the Prince William Sound RCAC alternative voluntary advisory groups (advisory groups). The authority to certify advisory groups was subsequently delegated to the Commandant of the Coast Guard and redelegated to the Chief, Office of Marine Safety, Security and Environmental Protection. In February 1999, the authority to certify these advisory groups was redelegated to the Command, Seventeenth Coast Guard District in Juneau, Alaska.

The Coast Guard published guidelines on December 31, 1992 (57 FR 62600), to assist groups seeking recertification under the Act. We issued a policy statement on July 7, 1993 (58 FR 36504), to clarify the factors that we would be considering in making our determination as to whether advisory groups should be certified in accordance with the Act; and the procedures which we would follow in meeting our certification responsibilities under the Act. Since then, both the Prince William Sound and Cook Inlet advisory groups have been recertified annually. Based on the experiences of the recertification processes conducted from 1993 to 2000, as well as the evolution of the advisory groups from new, untested organizations to stable, functioning organizations, the Coast Guard believes the recertification procedure should be streamlined, reducing the substantial annual administrative burden placed on the advisory groups, the Coast Guard and the public.

Proposed Action:

This notice proposes two changes to the guidelines available to assist advisory groups seeking recertification under the Act. First, we propose to amend the application procedure. Second, we propose to amend the public review procedure (i.e., the notice and comment period provided under the current procedure).

Under the current guidelines, when an advisory group applies or re-applies for annual certification, it should submit the information relevant to the general criteria set forth in section 2732 (c) through (l) of the Act and, subsequently, in the July 7, 1993 Federal Register (58 FR 36504). This information enables us to review the advisory group’s activities over the past year, as well as future planned activities, including projects, studies, plans, permits, regulations, procedures, membership policies, public accessibility of the advisory group and its work, use of finances, and the establishment of a funding contract with designated industry members.

We now propose that an applicant for recertification should provide us with this comprehensive information once every 3 years (triennially). For each of the 2 years between the triennial application procedure, applicants should submit a letter requesting recertification and describe any substantive changes to the information provided at the last triennial recertification. A copy of the previous year’s annual report, annual financial statement, and Budget and Spending Plan for the coming year should also be included.

Although we will continue to evaluate an advisory group’s request for recertification every year, we believe that an annual collection of information is redundant and unnecessary. Experience gathered from 1993 to present has shown us that the majority of information submitted by advisory
groups seeking recertification remains unchanged year-to-year and both the government and the public would benefit from a streamlined administrative procedure.

The second proposed change pertains to the solicitation of public comments through Federal Register publication. The current guidelines provide that upon receipt of an application for recertification as an alternative advisory group, we will solicit comments from the public by publishing a notice and request for comments in the Federal Register. After a 45 day comment period, we will review the application and all comments received within the comment period and make a determination. The public will then be notified of the decision by Federal Register publication.

We now propose to solicit public comments every three years by publishing a notice and request for comments in the Federal Register. We believe that the public will benefit from a triennial public comment period. The majority of recent comments have expressed general agreement that the advisory groups have fulfilled their role as mandated by the Oil Pollution Act of 1990. Therefore, interested individuals and groups will be able to engage in a more substantial and meaningful dialogue if the comment period is opened triennially rather than annually. This streamlining provision would also reduce the administrative burden to both the government and the public.

This notice proposes to change the procedure for certification only during the 2 intervening years. First, a previously-certified advisory group will not have to re-submit a full application for recertification every year. Instead, an advisory group certified in the triennial certification year will, in the intervening 2 years, only have to submit updates or changes from the previous year’s application. Second, we will only solicit comments from the public during the triennial certification year. We propose that this procedure commences with the 2001 certification season, meaning that applicants seeking recertification in 2001 need only submit the streamlined application and that we will not solicit public comments prior to recertification during 2001. The triennial review process will take place in 2003. However, we will continue to recertify advisory groups annually. We will continue to use our established criteria to evaluate an advisory group’s application for recertification. Finally, we will advise the public of any recertification granted each year, by Federal Register notice.

Joseph J. Angelo,
Acting Assistant Commandant, for Marine Safety and Environmental Protection.

BILLING CODE 4910–15–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Proposed Advisory Circular 20–27E, Certification and Operation of Amateur-Built Aircraft

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: This notice announces the availability of proposed Advisory Circular (AC) 20–27E, Certification and Operation of Amateur-Built Aircraft for review and comment. The proposal Advisory Circular 20–27E provides information and guidance concerning an acceptable means, but not the only means, of demonstrating compliance with the requirements of Title 14, Code of Federal Regulations, part 21, Certification Procedures for Products and Parts, regarding Certification and Operation of Amateur-Built Aircraft.

DATES: Comments submitted must identify the proposed AC 20–27E and be received by February 22, 2001.

ADDRESSES: Copies of the proposed AC 20–27E can be obtained from and comments may be returned to the aforementioned.

FOR FURTHER INFORMATION CONTACT: Rodney Watson, Airworthiness Certification Branch, AIR–210, Production and Airworthiness Division, 800 Independence Avenue, SW., Washington, DC 20591.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 et seq.), the FAA invites public comment on a new public information collection which will be submitted to OMB for approval.

DATES: Comments must be submitted on or before February 26, 2001.

ADDRESSES: Comments may be mailed or delivered to FAA, at the following address: Ms. Judith Street, Room 613, Federal Aviation Administration, Standards and Information Division, APF–100, 800 Independence Avenue, SW., Washington, DC 20591.

FOR FURTHER INFORMATION CONTACT: Ms. Judith Street, at the above address or on (202) 267–8995.

SUPPLEMENTARY INFORMATION: The FAA solicits comments on the following new collection of information in order to evaluate the necessity of the collection, the accuracy of the agency’s estimate of burden, the quality, utility, and clarity of the information to be collected, and possible ways to minimize the burden of collection. The following is a synopsis of the information collection activity which will be submitted to OMB for review and approval:
The FAA published Advisory Circulars (AC) 36±1G, Noise Levels for U.S. Certificated and Foreign Aircraft,” and 36±3G, Estimated Airplane Noise Levels in A-Weighted Decibels in August 1997 and April 1996 respectively. AC 36±1G contains a list of the aircraft noise certification levels. As this AC represents the only publicly available compilation of certificated aircraft noise levels, AC 36±1G is widely used within the aviation industry for various purposes, including determination of compliance with local airport noise restrictions and for various aircraft noise related studies. AC 36±3G contains a list of estimated airplane noise levels in units of a-weighted sound level in decibels (dBA). The users of AC 36±3G include several airport authorities, e.g., Ronald Reagan Washington National Airport, the utilize the noise level information in AC 36±3G to determine compliance with local airport noise restrictions.

The FAA proposes to collect current data from aircraft manufacturer’s (or modifiers) to update the two AC’s. The following will be the method used. First, a draft revision to AC 36±1G and AC 36±3G containing information that resides within the FAA will be produced. The draft AC’s will then be sent to each aircraft manufacturer and modifier advising them that the Advisory Circulars are being updated and asking them to (1) review the draft AC’s for consistency with the aircraft manufacturer’s (or modifier’s) records, and (2) provide any additions or corrections to the information in the draft AC’s.

If the collection were not conducted, the revised Advisory Circulars would be published using only the noise level information that the FAA has on hand. This would leave the possibility that a manufacturer(s) may find inconsistencies (including additional aircraft not in the revised AC’s) between its data and the published revisions to AC 36±1G and AC 36±3G.

The respondents and burden estimate are as follows: We estimate 50 respondents including U.S. and non-U.S. aircraft manufacturers/modifiers. Out of the 50, 5 respondents will take approximately 40 hours each to provide the information. The remaining 45 respondents will take approximately 15 hours. The difference in burden is due to the different number of airplane models manufactured by the various respondents. Our estimated total burden is 875 hours.

It is also noted that an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. When assigned by OMB, the respondents will be notified of the control number.

Issued in Washington, DC on December 21, 2000.

Steve Hopkins, Manager, Standards and Information Division, APF–100.

BILLING CODE 4910–13–M

DEPARTMENT OF TRANSPORTATION
Federal Aviation Administration

Notice of Intent To Request Renewal From the Office of Management and Budget (OMB) of Four Current Public Collections of Information

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (44 U.S.C. 3501 et seq.), the FAA invites public comment on four currently approved public information collections which will be submitted to OMB for renewal.

DATES: Comments must be received on or before February 26, 2001.

ADDRESSES: Comments may be mailed or delivered to the FAA at the following address: Ms. Judy Street, Room 613, Federal Aviation Administration, Standards and Information Division, APF–100, 800 Independence Ave., SW., Washington, DC 20591.

FOR FURTHER INFORMATION CONTACT: Ms. Judy Street at the above address or on (202) 267–9895.

SUPPLEMENTARY INFORMATION: The FAA solicits comments on the following four current collections of information in order to evaluate the necessity of the collection, the accuracy of the agency’s estimate of the burden, the quality, utility, and clarity of the information to be collected, and possible ways to minimize the burden of the collection. Following are short synopses of the information collection activities which will be submitted to OMB for review and renewal:

1. 2120–0075, Airport Security—14 CFR part 107. 14 CFR part 107, Airport Security, implements the provisions of the Public Law 103–272 and the Aviation Security Improvement Act that relate to security of persons and property at airports operating in commercial air transportation. Airport security programs, training records, screenings, bomb threats, and arrest reports are needed to ensure protection of persons and property in air transportation against acts of criminal violence to ensure passenger screening procedures are effective and that information is available to comply with congressional reporting requirements. Currently, we estimate 465 respondents with a burden of approximately 75,500 hours annually.

2. 2120–0085, Certifications and Operations: 14 CFR part 125. Part A of Subtitle VII of the Revised Title 49 USC authorizes the issuance of regulations governing the use of navigable airspace. 14 CFR 125 will prescribe requirements for leased aircraft, Aviation Service Firms and Air Travel Clubs. Information collected shows compliance and the applicant’s eligibility. The current number of respondents is 57 part 125 operators. The current burden is 29,445 hours annually.

3. 2120–0568, Federal Aviation Administration, Flight standards Customer Satisfaction Survey. The Flight Standards Service wishes to continue to survey customers in keeping with its strategic initiative to improve the quality of its service by anticipating customers needs and responding to the public interest. The FAA Flight Standards Offices proposes to continue with follow-up surveys based on information provided in the first phases of the surveys. In the past surveys, the respondents have been an estimated 63,700 Flight Standards customers from the categories of air operators, air agencies and airmen, resulting in a burden of 12,740 hours.

4. 2120–0623, Office of Rulemaking Request for Evaluation of Customer Standards Survey. The FAA Office of Rulemaking proposes to survey exemption customers on customer standards that were developed and published. The data collected will be analyzed by the Office of Rulemaking (ARM) to determine the quality of services provided by ARM to its exemption customers, and make any changes or improvements to the exemption process. In the past survey, the number surveyed was 325 for an estimated burden on 81 hours.

Issued in Washington, DC, on December 21, 2000.

Steve Hopkins, Manager, Standards and Information Division, APF–100.

Aviation Rulemaking Advisory Committee Air Carrier Operations Issues—New Task

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of new task assignment for the Aviation Rulemaking Advisory Committee (ARAC).

SUMMARY: Notice is given of a new task assigned to and accepted by the Aviation Rulemaking Advisory Committee (ARAC). This notice informs the public of the activities of ARAC.

FOR FURTHER INFORMATION CONTACT: Linda Williams, 800 Independence Ave., SW., Washington, DC 20591, 202–267–9685, linda.williams@faa.gov.

SUPPLEMENTARY INFORMATION:

Background

The FAA has established an Aviation Rulemaking Advisory Committee to provide advice and recommendations to the FAA Administrator, through the Associate Administrator for Regulation and Certification, on the full range of the FAA’s rulemaking activities with respect to aviation-related issues.

The Task

This notice is to inform the public that the FAA has asked ARAC to provide advice and recommendations on the following task:

Task: Review Advisory Circular 120–29A Criteria for Approval of Nonprecision, Category I, and Category II Weather Minima for Takeoff, Approach and Landing, dated September 13–22, 2000, all associated comments received in docket FAA–2000–8080, and other documents as necessary to resolve any issues that would cause negative impact to operators. The FAA, JAA, and industry would provide resources necessary to accomplish this task. The end product would be a proposed AC recommended for signature, that reflects the best consensus of the issues related to AC 120–29A. If consensus cannot be reached on any issue, the lack of consensus should be documented and all minority positions should be presented in a letter transmitting the recommendations.

Schedule: The final ARAC recommendations will be provided to the FAA by March 30, 2001.

ARAC Acceptance of Tasks

ARAC has accepted the task and has chosen to assign the task to the All Weather Operations Harmonization Working Group, Air Carrier Operations Issues. The working group will serve as staff to ARAC. Working group recommendations must be reviewed and approved by ARAC. If ARAC accepts the working group’s recommendations, it forwards them to the FAA as ARAC recommendations.

Working Group Activity

The All Weather Operations Harmonization Working Group is expected to comply with the procedures adopted by ARAC. As part of the procedures, the working group is expected to:

1. Recommend a work plan for completion of the task, including the rationale supporting such a plan, for consideration of the ARAC Air Carrier Operations Issues.
2. Give a detailed conceptual presentation of the proposed recommendations.
3. Draft the appropriate documents and required analyses.
4. Provide a status report at each meeting of the ARAC held to consider Air Carrier Operations Issues.

Participation in the working Group

The All Weather Operations Harmonization Working Group is composed of technical experts having an interest in the assigned task. A working group member need not be a representative of a member of the full committee.

An individual who has expertise in the subject matter and wishes to become a member of the working group should write to the person listed under the caption FOR FURTHER INFORMATION CONTACT expressing that desire, describing his or her interest in the task and stating the expertise he or she would bring to the working group. All requests to participate must be received no later than January 12, 2001. The requests will be reviewed by the assistant chair, the assistant executive director, and the working group chair, and the individuals will be advised whether or not the request can be accommodated.

Individuals chosen for membership on the working group will be expected to represent their aviation community segment and participate actively in the working group (e.g., attend all meetings, provide written comments when requested to do so, etc.). They also will be expected to devote the resources necessary to support the ability of the working group in meeting any assigned deadline(s). Members are expected to keep their management chain and those they may represent advised of working group activities and decisions to ensure that the agreed technical solutions do not conflict with their sponsoring organization’s position when the subject being negotiated is presented to ARAC for approval.

The Secretary of Transportation has determined that the formation and use of the ARAC is necessary and in the public interest in connection with the performance of duties imposed on the FAA by law.

Meetings of the ARAC will be open to the public. Meetings of the All Weather Operations Harmonization Working Group will not be open to the public, except to the extent that individuals with an interest and expertise are selected to participate. No public announcement of working group meetings will be made.

Issued in Washington, DC, on December 19, 2000.

Anthony F. Fazio,
Executive Director, Aviation Rulemaking Advisory Committee.

Notice of Intent To Rule on Application To Impose and Use the Revenue From a Passenger Facility Charge (PFC) at Pitt-Greenville Airport, Greenville, NC

AGENCY: Federal Aviation Administration (FAA), DOT.
ACTION: Notice of intent to rule on application.

On December 19, the FAA determined that the application to impose and use the revenue from a PFC submitted by Pitt Company—City of Greenville Airport Authority was substantially complete within the requirements of section 158.25 of Part 158. The FAA will approve or disapprove the application, in whole or in part, no later than March 30, 2001.

The following is a brief overview of the application.

PFC Application No.: 01–02–C–00–PGV.
Level of the proposed PFC: $4.50
Proposed charge effective date: July 1, 2001
Proposed charge expiration date: May 1, 2009
Total estimated net PFC revenue: $1,480,404
Brief description of proposed project(s):
Impose and Use:
Environmental Assessment
Extend Runway 19 (500 ft. to 6,000 ft.)
Update Airport Layout Plan
Taxiway A Extension
Design Rehab/Relocation of Taxiways A & B, and Air Carrier Apron
Disaster Recovery—ARFF Building Rehab
Disaster Recovery—Rehab Runways
Disaster Recovery—Airfield Lighting Rehab
Disaster Recovery—Install Instrument Approach Aids
Disaster Recovery—Rehab Terminal Building
Prepare PFC Application
Runway 2 Safety Area Improvements
Taxiway A Relocation
Air Carrier Apron Rehab
Taxiway B Rehab
Fiscal Service, Treasury. 2001 the prompt payment interest rate January 1, 2001 and ending on June 30, 2001 period. FOR FURTHER INFORMATION CONTACT: In addition, any person may, upon request, inspect the application, notice and other documents germane to the application in person at the Pitt County—City of Greenville Airport Authority. Dated: Issued in Atlanta, GA on December 12, 2000. Rans D. Black, Acting Manager, Atlanta Airports District Office, Southern Region. [FR Doc. 00–33189 Filed 12–27–00; 8:45 am] BILLING CODE 4910–13–M

DEPARTMENT OF THE TREASURY
Fiscal Service

Renegotiation Board Interest Rate; Prompt Payment Interest Rate; Contract Disputes Act

AGENCY: Bureau of the Public Debt, Fiscal Service, Treasury.

ACTION: Notice.

SUMMARY: For the period beginning January 1, 2001 and ending on June 30, 2001 the prompt payment interest rate is 6.375 per centum per annum. ADDRESSES: Comments or inquiries may be mailed to Eleanor Farrar, Team Leader, Debt Accounting Branch, Office of Public Debt Accounting, Bureau of the Public Debt, Parkersburg, West Virginia 26106–1328. A copy of this Notice will be available to download from the http://www.publicdebt.treas.gov.

DATES: This notice announces the applicable interest rate for the January 1, 2001 to June 30, 2001 period.

SUPPLEMENTARY INFORMATION: Although the Renegotiation Board is no longer in existence, other Federal Agencies are required to use interest rates computed under the criteria established by the Renegotiation Act of 1971 Sec. 2, Pub. L. 92–41, 85 Stat. 97. For example, the Contract Disputes Act of 1978 Sec. 12, Pub. L. 95–563, 92 Stat. 2389 and the Prompt Payment Act of 1982 Sec. 2, Pub. L. 97–177, 96 Stat. 85, provide for the calculation of interest due on claims at a rate established by the Secretary of the Treasury pursuant to 31 U.S.C. § 3902(a). Therefore, notice is given that the Secretary of the Treasury has determined that the rate of interest applicable, for the period beginning January 1, 2001 and ending on June 30, 2001, is 6.375 per centum per annum. This rate is determined pursuant to the above mentioned sections for the purpose of said sections.

Dated: December 22, 2000. Donald V. Hammond, Fiscal Assistant Secretary. [FR Doc. 00–33205 Filed 12–27–00; 8:45 am] BILLING CODE 4810–39–M

DEPARTMENT OF THE TREASURY
Internal Revenue Service

[REG–103330–97]

Proposed Collection; Comment Request for Regulation Project

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning an existing final regulation, REG–103330–97 (TD 8893), IRS Adoption Taxpayer Identification Numbers ($ 301.6109–3).

DATES: Written comments should be received on or before February 26, 2001 to be assured of consideration.

ADDRESSES: Direct all written comments to Garrick R. Shear, Internal Revenue Service, room 5244, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the regulation should be directed to Carol Savage, (202) 622–3945, Internal Revenue Service, room 5242, 1111 Constitution Avenue NW., Washington, DC 20224.

SUPPLEMENTARY INFORMATION:

Title: IRS Adoption Taxpayer Identification Numbers.

OMB Number: 1545–1564.

Abstract: The regulations provide rules for obtaining IRS adoption taxpayer identification numbers (ATINs), which are used to identify children placed for adoption. To obtain an ATIN, a prospective adoptive parent must file Form W–7A. The regulations assist prospective adoptive parents in claiming tax benefits with respect to these children.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of a currently approved collection.

The burden for the collection of information is reflected in the burden for Form W–7A.

The following paragraph applies to all of the collections of information covered by this notice: An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.
The following paragraph applies to all of the collections of information covered by this notice:

Title: Treatment of Acquisition of Certain Financial Institutions; Certain Tax Consequences of Federal Financial Assistance to Financial Institutions.

OMB Number: 1545–1300.

Regulation Project Number: FI–46–89.

Abstract: Recipients of Federal financial assistance (FFA) must maintain an account of FFA that is deferred from inclusion in gross income and subsequently recaptured. This information is used to determine the recipient’s tax liability. Also, tax not subject to collection must be reported and information must be provided if certain elections are made.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, and the Federal Government.

Estimated Number of Respondents: 500.

Estimated Time Per Respondent: 4 hr., 24 min.

Estimated Total Annual Burden Hours: 2,200.

Office of the Secretary

45 CFR Parts 160 and 164
Standards for Privacy of Individually Identifiable Health Information; Final Rule
The use of these standards will improve the efficiency and effectiveness of public and private health programs and health care services by providing enhanced protections for individually identifiable health information. These protections will begin to address growing public concerns that advances in electronic technology and evolution in the health care industry are resulting, or may result, in a substantial erosion of the privacy surrounding individually identifiable health information maintained by health care providers, health plans and their administrative contractors. This rule implements the privacy requirements of the Administrative Simplification subtitle of the Health Insurance Portability and Accountability Act of 1996.

DATES: The final rule is effective on February 26, 2001.

164.520 Notice of privacy practices for protected health information.

(a) Standard: notice of privacy practices.

(b) Implementation specifications: content of notice.

(c) Implementation specifications: provision of notice.

(d) Implementation specifications: joint notice by separate covered entities.

(e) Implementation specifications: documentation.

164.522 Rights to request privacy protection for protected health information.

(a) Standard: right of an individual to request restriction of uses and disclosures.

(b) Standard: confidential communications requirements.

164.524 Access of individuals to protected health information.

(a) Standard: access to protected health information.

(b) Implementation specifications: requests for access and timely action.

(c) Implementation specifications: provision of access.

(d) Implementation specifications: denial of access.

(e) Implementation specification: documentation.

164.526 Amendment of protected health information.

(a) Standard: right to amend.

(b) Implementation specifications: requests for amendment and timely action.

(c) Implementation specifications: accepting the amendment.

(d) Implementation specifications: denying the amendment.

(e) Implementation specification: actions on notices of amendment.

(f) Implementation specification: documentation.

164.528 Accounting of disclosures of protected health information.

(a) Standard: right to an accounting of disclosures of protected health information.

(b) Implementation specifications: content of the accounting.

(c) Implementation specifications: provision of the accounting.

(d) Implementation specification: documentation.

164.530 Administrative requirements.

(a) Standard: personnel designations.

(b) Standard: training.

(c) Standard: safeguards.

(d) Standard: complaints to the covered entity.

(e) Standard: sanctions.

(f) Standard: mitigation.

(g) Standard: refraining from intimidating or retaliatory acts.

(h) Standard: waiver of rights.

(i) Standard: policies and procedures.

(j) Standard: documentation.

(k) Standard: group health plans.

164.532 Transition provisions.

(a) Standard: effect of prior consents and authorizations.

(b) Implementation specification: requirements for retaining effectiveness of prior consents and authorizations.

164.534 Compliance dates for initial implementation of the privacy standards.

(a) Health care providers.

(b) Health plans.

(c) Health care clearinghouses.

Purpose of the Administrative Simplification Regulations

This regulation has three major purposes: (1) To protect and enhance the rights of consumers by providing them access to their health information and controlling the inappropriate use of that information; (2) to improve the quality of health care in the U.S. by restoring trust in the health care system among consumers, health care professionals, and the multitude of organizations and individuals committed to the delivery of care; and (3) to improve the efficiency and effectiveness of health care delivery by creating a national framework for health privacy protection that builds on efforts by states, health systems, and individual organizations and individuals.

This regulation is the second final rule to be issued in the package of rules mandated under title II subtitle F section 261–264 of the Health Insurance Portability and Accountability Act of 1996 (HIPAA), Public Law 104–191, titled “Administrative Simplification.” Congress called for steps to improve “the efficiency and effectiveness of the health care system by encouraging the development of a health information system through the establishment of standards and requirements for the electronic transmission of certain health information.” To achieve that end, Congress required the Department to promulgate a set of interlocking regulations, establishing standards and protections for health information systems. The first regulation in this set, Standards for Electronic Transactions 65 FR 50312, was published on August 17, 2000 (the “Transactions Rule”). This regulation establishing Standards for Privacy of Individually Identifiable Health Information is the second final rule in the package. A rule establishing a unique identifier for employers to use in electronic health care transactions, a rule establishing a unique identifier for providers for such transactions, and a rule establishing standards for the security of electronic information systems have been proposed. See 63 FR 25272 and 25320 (May 7, 1998); 63 FR 32784 (June 16, 1998); 63 FR 43242 (August 12, 1998). Still to be proposed are rules establishing a unique identifier for health plans for electronic transactions, standards for claims attachments, and standards for transferring among health plans appropriate standard data elements needed for coordination of benefits. (See section C, below, for a more detailed explanation of the statutory mandate for these regulations.)

In enacting HIPAA, Congress recognized the fact that administrative simplification cannot succeed if we do not also protect the privacy and confidentiality of personal health information. The provision of high-quality health care requires the exchange of personal, often-sensitive information between an individual and a skilled practitioner. Vital to that interaction is the patient’s ability to trust that the information shared will be protected and kept confidential. Yet many patients are concerned that their information is not protected. Among the factors adding to this concern are the growth of the number of organizations involved in the provision of care and the processing of claims, the growing use of electronic information technology, increased efforts to market health care and other products to consumers, and the increasing ability to collect highly sensitive information about a person’s current and future health status as a result of advances in scientific research.

Rules requiring the protection of health privacy in the United States have been enacted primarily by the states. While virtually every state has enacted one or more laws to safeguard privacy, these laws vary significantly from state to state and typically apply to only part of the health care system. Many states have adopted laws that protect the health information relating to certain health conditions such as mental illness, communicable diseases, cancer, HIV/AIDS, and other stigmatized conditions. An examination of state health privacy laws and regulations,
however, found that “state laws, with a few notable exceptions, do not extend comprehensive protections to people’s medical records.” Many state rules fail to provide such basic protections as ensuring a patient’s legal right to see a copy of his or her medical record. See Health Privacy Project, “The State of Health Privacy: An Uneven Terrain,” Institute for Health Care Research and Policy, Georgetown University (July 1999) (http://www.healthprivacy.org) (the “Georgetown Study”).

Until now, virtually no federal rules existed to protect the privacy of health information and guarantee patient access to such information. This final rule establishes, for the first time, a set of basic national privacy standards and fair information practices that provides all Americans with a basic level of protection and peace of mind that is essential to their full participation in their care. The rule sets a floor of ground rules for health care providers, health plans, and health care clearinghouses to follow, in order to protect patients and encourage them to seek needed care. The rule seeks to balance the needs of the individual with the needs of the society. It creates a framework of protection that can be strengthened by both the federal government and by states as health information systems continue to evolve.

Need for a National Health Privacy Framework

The Importance of Privacy

Privacy is a fundamental right. As such, it must be viewed differently than any ordinary economic good. The costs and benefits of a regulation must, of course, be considered as a means of identifying and weighing options. At the same time, it is important not to lose sight of the inherent meaning of privacy: it speaks to our individual and collective freedom.

A right to privacy in personal information has historically found expression in American law. All fifty states today recognize in tort law a common law or statutory right to privacy. Many states specifically provide a remedy for public revelation of private facts. Some states, such as California and Tennessee, have a right to privacy as a matter of state constitutional law. The multiple historical sources for legal rights to privacy are traced in many places, including Chapter 13 of Alan Westin’s Privacy and Freedom and in Ellen Alderman & Caroline Kennedy, The Right to Privacy (1965).

Throughout our nation’s history, we have placed the rights of the individual at the forefront of our democracy. In the Declaration of Independence, we asserted the “unalienable right” to “life, liberty and the pursuit of happiness.” Many of the most basic protections in the Constitution of the United States are imbued with an attempt to protect individual privacy while balancing it against the larger social purposes of the nation.

To take but one example, the Fourth Amendment to the United States Constitution guarantees that “the right of the people to be secure in their persons, houses, papers and effects, against unreasonable searches and seizures, shall not be violated.” By referring to the need for security of “persons” as well as “papers and effects” the Fourth Amendment suggests enduring values in American law that relate to privacy. The need for security of “persons” is consistent with obtaining patient consent before performing invasive medical procedures. The need for security in “papers and effects” underscores the importance of protecting information about the person, contained in sources such as personal diaries, medical records, or elsewhere. As is generally true for the right of privacy in information, the right is not absolute. The test instead is what constitutes an “unreasonable” search of the papers and effects.

The United States Supreme Court has upheld the constitutional protection of personal health information. In Whalen v. Roe, 429 U.S. 589 (1977), the Court analyzed a New York statute that created a database of persons who obtained drugs for which there was both a lawful and unlawful market. The Court, in upholding the statute, recognized at least two different kinds of interests within the constitutionally protected “zone of privacy.” “One is the individual interest in avoiding disclosure of personal matters,” such as this regulation principally addresses. This interest in avoiding disclosure, discussed in Whalen in the context of medical information, was found to be distinct from a different line of cases concerning “the interest in independence in making certain kinds of important decisions.”

Individuals’ right to privacy in information about themselves is not absolute. It does not, for instance, prevent reporting of public health information on communicable diseases or stop law enforcement from getting information when due process has been observed. But many people believe that individuals have some right to control personal and sensitive information about themselves. Among different sorts of personal information, health information is among the most sensitive. Many people believe that details about their physical self should not generally be put on display for neighbors, employers, and government officials to see. Informed consent laws place limits on the ability of other persons to intrude physically on a person’s body. Similar concerns apply to intrusions on information about the person.

Moving beyond these facts of physical treatment, there is also significant intrusion when records reveal details about a person’s mental state, such as during treatment for mental health. If, in Justice Brandeis’ words, the “right to be let alone” means anything, then it likely applies to having outsiders have access to one’s intimate thoughts, words, and emotions. In the recent case of Jaffee v. Redmond, 116 S.Ct. 1923 (1996), the Supreme Court held that statements made to a therapist during a counseling session were protected against civil discovery under the Federal Rules of Evidence. The Court noted that all fifty states have adopted some form of the psychotherapist-patient privilege. In upholding the federal privilege, the Supreme Court stated that it “serves the public interest by facilitating the appropriate treatment for individuals suffering the effects of a mental or emotional problem. The mental health of our citizenry, no less than its physical health, is a public good of transcendent importance.”

Many writers have urged a philosophical or common-sense right to privacy in one’s personal information. Examples include Alan Westin, Privacy and Freedom (1967) and Janna Malamud Smith, Private Matters: In Defense of the Personal Life (1997). These writings emphasize the link between privacy and freedom and privacy and the “personal life,” or the ability to develop one’s own personality and self-expression. Smith, for instance, states:

The bottom line is clear. If we continually, gratuitously, reveal other people’s privacies, we harm them and ourselves, we undermine the richness of the personal life, and we fuel a social atmosphere of mutual exploitation. Let me put it another way: Little in life is as precious as the freedom to say and do things with people you love that you would not say or do if someone else were present. And few experiences are as fundamental to liberty and autonomy as maintaining control over when, how, to whom, and where you disclose personal material. Id. at 240–241.

In 1980, Louis D. Brandeis and Samuel D. Warren defined the right to privacy as “the right to be let alone.” See L. Brandeis, S. Warren, “The Right
To Privacy,” 4 Harv. L.Rev. 193. More than a century later, privacy continues to play an important role in Americans’ lives. In their book, The Right to Privacy, (Alfred A. Knopf, New York, 1995) Ellen Alderman and Caroline Kennedy describe the importance of privacy in this way:

Privacy covers many things. It protects the solitude necessary for creative thought. It allows us the independence that is part of raising a family. It protects our right to be secure in our own homes and possessions, assured that the government cannot come barging in. Privacy also encompasses our right to self-determination and to define who we are. Although we live in a world of noisy self-confession, privacy allows us to keep certain facts to ourselves if we so choose. The right to privacy, it seems, is what makes us civilized.

Or, as Cavoukian and Tapsott observed the right of privacy is: “the claim of individuals, groups, or institutions to determine for themselves when, how, and to what extent information about them is communicated.” See A. Cavoukian, D. Tapsott, “Who Knows: Safeguarding Your Privacy in a Networked World,” Random House (1995).

Increasing Public Concern About Loss of Privacy

Today, it is virtually impossible for any person to be truly “let alone.” The average American is inundated with requests for information from potential employers, retail shops, telephone marketing firms, electronic marketers, banks, insurance companies, hospitals, physicians, health plans, and others. In a 1998 national survey, 88 percent of consumers said they were “concerned” by the amount of information being requested, including 55 percent who said they were “very concerned.” See Privacy and American Business, 1998 Privacy Concerns & Consumer Choice Survey (http://www.pandab.org). These worries are not just theoretical. Consumers who use the Internet to make purchases or request “free” information often are asked for personal and financial information. Companies making such requests routinely promise to protect the confidentiality of that information. Yet several firms have tried to sell this information to other companies even after promising not to do so.

Americans’ concern about the privacy of their health information is part of a broader anxiety about their lack of privacy in an array of areas. A series of national public opinion polls conducted by Louis Harris & Associates documents a rising level of public concern about privacy, growing from 64 percent in 1978 to 82 percent in 1995. Over 80 percent of persons surveyed in 1999 agreed with the statement that they had “lost all control over their personal information.” See Harris Equifax, Health Information Privacy Study (1993) (http://www.epic.org/privacy/medical/polls.html). A Wall Street Journal/ABC poll on September 16, 1999 asked Americans what concerned them most in the coming century. “Loss of personal privacy” was the first or second concern of 29 percent of respondents. All other issues, such a terrorism, world war, and global warming had scores of 23 percent or less.

This growing concern stems from several trends, including the growing use of interconnected electronic media for business and personal activities, our increasing ability to know an individual’s genetic make-up, and, in health care, the increasing complexity of the system. Each of these trends brings the potential for tremendous benefits to individuals and society generally. At the same time, each also brings new potential for invasions of our privacy.

Increasing Use of Interconnected Electronic Information Systems

Until recently, health information was recorded and maintained on paper and stored in the offices of community-based physicians, nurses, hospitals, and other health care professionals and institutions. In some ways, this imperfect system of record keeping created a false sense of privacy among patients, providers, and others. Patients’ health information has never remained completely confidential. Until recently, however, a breach of confidentiality involved a physical exchange of paper records or a verbal exchange of information. Today, however, more and more health care providers, plans, and others are utilizing electronic means of storing and transmitting health information. In 1996, the health care industry invested an estimated $10 billion to $15 billion on information technology. See National Research Council, Computer Science and Telecommunications Board, “For the Record: Protecting Electronic Health Information,” (1997). The electronic information revolution is transforming the recording of health information so that the disclosure of information may require only a push of a button. In a matter of seconds, a person’s most profoundly private information can be shared with hundreds, thousands, even millions of individuals and organizations without our knowledge or consent. While the majority of medical records still are in paper form, information from those records is often copied and transmitted through electronic means.

This ease of information collection, organization, retention, and exchange made possible by the advances in computer and other electronic technology affords many benefits to individuals and to the health care industry. Use of electronic information has helped to speed the delivery of effective care and the processing of billions of dollars worth of health care claims. Greater use of electronic data has also increased our ability to identify and treat those who are at risk for disease, conduct vital research, detect fraud and abuse, and measure and improve the quality of care delivered in the U.S. The National Research Council recently reported that “the Internet has great potential to improve Americans’ health by enhancing communications and improving access to information for care providers, patients, health plan administrators, public health officials, biomedical researchers, and other health professionals.” See “Networking Health: Prescriptions for the Internet,” National Academy of Sciences (2000).

At the same time, these advances have reduced or eliminated many of the financial and logistical obstacles that previously served to protect the confidentiality of health information and the privacy interests of individuals. And they have made our information available to many more people. The shift from paper to electronic records, with the accompanying greater flows of sensitive health information, thus strengthens the argument for giving legal protection to the right to privacy in health information. In an earlier period where it was far more expensive to access and use medical records, the risk of harm to individuals was relatively low. In the potential near future, when technology makes it almost free to send lifetime medical records over the Internet, the risks may grow rapidly. It may become cost-effective, for instance, for companies to offer services that allow purchasers to obtain details of a person’s physical and mental treatments. In addition to legitimate possible uses for such services, malicious or inquisitive persons may download medical records for purposes ranging from identity theft to embarrassment to prurient interest in the life of a celebrity or neighbor. The comments to the proposed privacy rule indicate that many persons believe that they have a right to live in society without having these details of their lives laid open to unknown and possibly hostile eyes. These technological changes, in short, may provide a reason for institutionalizing
privacy protections in situations where the risk of harm did not previously justify writing such protections into law.

The growing level of trepidation about privacy in general, noted above, has tracked the rise in electronic information technology. Americans have embraced the use of the Internet and other forms of electronic information as a way to provide greater access to information, save time, and save money. For example, 60 percent of Americans surveyed in 1999 reported that they have a computer at home; 82 percent reported that they have used a computer; 64 percent say they have used the Internet; and 58 percent have sent an e-mail. Among those who are under the age of 60, these percentages are even higher. See “National Survey of Adults on Technology,” Henry J. Kaiser Family Foundation (February, 2000). But 59 percent of Americans reported that they worry that an unauthorized person will gain access to their information. A recent survey suggests that 75 percent of consumers seeking health information on the Internet are concerned or very concerned about the health sites they visit sharing their personal health information with a third party without their permission. Ethics Survey of Consumer Attitudes about Health Web Sites, California Health Care Foundation, at 3 (January, 2000).

Unless public fears are allayed, we will be unable to obtain the full benefits of electronic technologies. The absence of national standards for the confidentiality of health information has made the health care industry and the population in general uncomfortable about this primarily financially-driven expansion in the use of electronic data. Many plans, providers, and clearinghouses have taken steps to safeguard the privacy of individually identifiable health information. Yet they must currently rely on a patchwork of State laws and regulations that are incomplete and, at times, inconsistent. States have, to varying degrees, attempted to enhance confidentiality by establishing laws governing at least some aspects of medical record privacy. This approach, though a step in the right direction, is inadequate. These laws fail to provide a consistent or comprehensive legal foundation of health information privacy. For example, there is considerable variation among the states in the type of information protected and the scope of the protections provided. See Georgopoulos, supra. See also Executive Summary; Lawrence O. Gostin, Zita Lazzarini, Kathleen M. Flaherty, Legislative Survey of State Confidentiality Laws, with Specific Emphasis on HIV and Immunization, Report to Centers for Disease Control, Council of State and Territorial Epidemiologists, and Task Force for Child Survival and Development, Carter Presidential Center (1996) (Gostin Study).

Moreover, electronic health data is becoming increasingly “national”; as more information becomes available in electronic form, it can have value far beyond the immediate community where the patient resides. Neither private action nor state laws provide a sufficiently comprehensive and rigorous legal structure to allay public concerns, protect the right to privacy, and correct the market failures caused by the absence of privacy protections (see discussion below of market failure under section V.C). Hence, a national policy with consistent rules is necessary to encourage the increased and proper use of electronic information while also protecting the very real needs of patients to safeguard their privacy.

Advances in Genetic Sciences

Recently, scientists completed nearly a decade of work unlocking the mysteries of the human genome, creating tremendous new opportunities to identify and prevent many of the leading causes of death and disability in this country and around the world. Yet the absence of privacy protections for health information endanger these efforts by creating a barrier of distrust and suspicion among consumers. A 1995 national poll found that more than 85 percent of those surveyed were either “very concerned” or “somewhat concerned” that insurers and employers might gain access to and use genetic information. See Harris Poll, 1995 #34. Sixty-three percent of the 1,000 participants in a 1997 national survey said they would not take genetic tests if insurers and employers could gain access to the results. See “Genetic Information and the Workplace,” Department of Labor, Department of Health and Human Services, Equal Employment Opportunity Commission, January 20, 1998. “In genetic testing studies at the National Institutes of Health, thirty-two percent of eligible people who were offered a test for breast cancer risk declined to take it, citing concerns about loss of privacy and the potential for discrimination in health insurance.” Sen. Leahy’s comments for March 10, 1999 Introduction of the Medical Information Privacy and Security Act.

The Changing Health Care System

The number of entities who are maintaining and transmitting individually identifiable health information has increased significantly over the last 10 years. In addition, the rapid growth of integrated health care delivery systems requires greater use of integrated health information systems. The health care industry has been transformed from one that relied primarily on one-on-one interactions between patients and clinicians to a system of integrated health care delivery networks and managed care providers. Such a system requires the processing and collection of information about patients and plan enrollees (for example, in claims files or enrollment records), resulting in the creation of databases that can be easily transmitted. This dramatic change in the practice of medicine brings with it important prospects for the improvement of the quality of care and reducing the cost of that care. It also, however, means that increasing numbers of people have access to health information. And, as health plan functions are increasingly outsourced, a growing number of organizations not affiliated with our physicians or health plans also have access to health information.

According to the American Health Information Management Association (AHIMA), an average of 150 people “from nursing staff to x-ray technicians, to billing clerks” have access to a patient’s medical records during the course of a typical hospitalization. While many of these individuals have a legitimate need to see all or part of a patient’s records, no laws govern who those people are, what information they are able to see, and what they are and are not allowed to do with that information once they have access to it. According to the National Research Council, individually identifiable health information frequently is shared with:

- Consulting physicians;
- Managed care organizations;
- Health insurance companies;
- Life insurance companies;
- Self-insured employers;
- Pharmacies;
- Pharmacy benefit managers;
- Clinical laboratories;
- Accrediting organizations;
- State and Federal statistical agencies; and
- Medical information bureaus.

Much of this sharing of information is done without the knowledge of the patient involved. While many of these functions are important for smooth functioning of the health care system, there are no rules governing how that
information is used by secondary and tertiary users. For example, a pharmacy benefit manager could receive information to determine whether an insurance plan or HMO should cover a prescription, but then use the information to market other products to the same patient. Similarly, many of us obtain health insurance coverage though our employer and, in some instances, the employer itself acts as the insurer. In these cases, the employer will obtain identifiable health information about its employees as part of the legitimate health insurance functions such as claims processing, quality improvement, and fraud detection activities. At the same time, there is no comprehensive protection prohibiting the employer from using that information to make decisions about promotions or job retention.

Public concerns reflect these developments. A 1993 Lou Harris poll found that 75 percent of those surveyed worry that medical information from a computerized national health information system will be used for many non-health reasons, and 38 percent are very concerned. This poll, taken during the health reform efforts of 1993, showed that 85 percent of respondents believed that protecting the confidentiality of medical records is “absolutely essential” or “very essential” in health care reform. An ACLU Poll in 1994 also found that 75 percent of those surveyed are concerned about their personal information being put into a computer information bank to which others have access. Harris Equifax, Health Information Privacy Study 2,33 (1993) http://www.epic.org/privacy/medical/poll.html. Another survey found that 35 percent of Fortune 500 companies look at people’s medical records before making hiring and promotion decisions. Starr, Paul, “Health and the Right to Privacy,” American Journal of Law and Medicine, 1999, Vol. 25, pp. 193–201.

Concerns about the lack of attention to information privacy in the health care industry are not merely theoretical. In the absence of a national legal framework of health privacy protections, consumers are increasingly vulnerable to the exposure of their personal health information. Disclosure of individually identifiable information can occur deliberately or accidentally and can occur within an organization or be the result of an external breach of security. Examples of recent privacy breaches include:

• A Michigan-based health system accidentally posted the medical records of thousands of patients on the Internet (The Ann Arbor News, February 10, 1999).
• A Utah-based pharmaceutical benefits management firm used patient data to solicit business for its owner, a drug store (Kiplingers, February 2000).
• An employee of the Tampa, Florida, health department took a computer disk containing the names of 4,000 people who had tested positive for HIV, the virus that causes AIDS (USA Today, October 10, 1996).
• The health insurance claims forms of thousands of patients blew out of a truck on its way to a recycling center in East Hartford, Connecticut (The Hartford Courant, May 14, 1999).
• A patient in a Boston-area hospital discovered that her medical record had been read by more than 200 of the hospital’s employees (The Boston Globe, August 1, 2000).
• A Nevada woman who purchased a used computer discovered that the computer still contained the prescription records of the customers of the pharmacy that had previously owned the computer. The pharmacy data base included names, addresses, social security numbers, and a list of all the medicines the customers had purchased. (The New York Times, April 4, 1997 and April 12, 1997).
• A speculator bid $4000 for the patient records of a family practice in South Carolina. Among the business man’s uses of the purchased records was selling them back to the former patients. (New York Times, August 14, 1991).
• In 1993, the Boston Globe reported that Johnson and Johnson marketed a list of 5 million names and addresses of elderly incontinent women. (ACLU Legislative Update, April 1998).
• A few weeks after an Orlando woman had her doctor perform some routine tests, she received a letter from a drug company promoting a treatment for her high cholesterol. (Orlando Sentinel, November 30, 1997).

No matter how or why a disclosure of personal information is made, the harm to the individual is the same. In the face of industry evolution, the potential benefits of our changing health care system, and the real risks and occurrences of harm, protection of privacy must be built into the routine operations of our health care system.

Privacy Is Necessary To Secure Effective, High Quality Health Care

While privacy is one of the key values on which our society is built, it is more than an end in itself. It is also necessary for the effective delivery of health care, both to individuals and to populations. The market failures caused by the lack of effective privacy protections for health information are discussed below (see section V.C below). Here, we discuss how privacy is a necessary foundation for delivery of high quality health care. In short, the entire health care system is built upon the willingness of individuals to share the most intimate details of their lives with their health care providers.

The need for privacy of health information, in particular, has long been recognized as critical to the delivery of needed medical care. More than anything else, the relationship between a patient and a clinician is based on trust. The clinician must trust the patient to give full and truthful information about their health, symptoms, and medical history. The patient must trust the clinician to use that information to improve his or her health and to respect the need to keep such information private. In order to receive accurate and reliable diagnosis and treatment, patients must provide health care professionals with accurate, detailed information about their personal health, behavior, and other aspects of their lives. The provision of health information assists in the diagnosis of an illness or condition, in the development of a treatment plan, and in the evaluation of the effectiveness of that treatment. In the absence of full and accurate information, there is a serious risk that the treatment plan will be inappropriate to the patient’s situation.

Patients also benefit from the disclosure of such information to the health plans that pay for and can help them gain access to needed care. Health plans and health care clearinghouses rely on the provision of such information to accurately and promptly process claims for payment and for other administrative functions that directly affect a patient’s ability to receive needed care, the quality of that care, and the efficiency with which it is delivered.

Accurate medical records assist communities in identifying troubling public health trends and in evaluating the effectiveness of various public health efforts. Accurate information helps public and private payers make correct payments for care received and lower costs by identifying fraud. Accurate information provides scientists with data they need to conduct research. We cannot improve the quality of health care without information about which treatments work, and which do not.

Individuals cannot be expected to share the most intimate details of their lives unless they have confidence that such information will not be used or
shaped inappropriately. Privacy violations reduce consumers’ trust in the health care system and institutions that serve them. Such a loss of faith can impede the quality of the health care they receive, and can harm the financial health of health care institutions.

Patients who are worried about the possible misuse of their information often take steps to protect their privacy. Recent studies show that a person who does not believe his privacy will be protected is much less likely to participate fully in the diagnosis and treatment of his medical condition. A national survey conducted in January 1999 found that one in five Americans believe their health information is being used inappropriately. See California HealthCare Foundation, “National Survey: Confidentiality of Medical Records” (January, 1999) (http://www.chcf.org). More troubling is the fact that one in six Americans reported that they have taken some sort of evasive action to avoid the inappropriate use of their information by providing inaccurate information to a health care provider, changing physicians, or avoiding care altogether. Similarly, in its comments on our proposed rule, the Association of American Physicians and Surgeons reported 78 percent of its members reported withholding information from a patient’s record due to privacy concerns and another 87 percent reported having had a patient request to withhold information from their records. For an example of this phenomenon in a particular demographic group, see Drs. Bearman, Ford, and Moody, “Foregone Health Care among Adolescents,” JAMA, vol. 282, no. 23 (1999); Cheng, T.L., et al., “Confidentiality in Health Care: A Survey of Knowledge, Perceptions, and Attitudes among High School Students,” JAMA, vol. 269, no. 11 (1993), at 1404–1407.

The absence of strong national standards for medical privacy has widespread consequences. Health care professionals who lose the trust of their patients cannot deliver high-quality care. In 1999, a coalition of organizations representing various stakeholders including health plans, physicians, nurses, employers, disability and mental health advocates, accreditation organizations as well as experts in public health, medical ethics, information systems, and health policy adopted a set of “best principles” for health care privacy that are consistent with the law laid out here. (See the Health Privacy Working Group, “Best Principles for Health Privacy” (July, 1999) (Best Principles Study). The Best Principles Study states that—

To protect their privacy and avoid embarrassment, discrimination, some people withhold information from their health care providers, provide inaccurate information, doctor-hop to avoid a consolidated medical record, pay out-of-pocket for care that is covered by insurance, and—in some cases—avoid care altogether. Best Principles Study, at 9. In their comments on our proposed rule, numerous organizations representing health plans, health providers, employers, and others acknowledged the value of a set of national privacy standards to the efficient operation of their practices and businesses.

Breaches of Health Privacy Harm More Than Our Health Status

A breach of a person’s health privacy can have significant implications well beyond the physical health of that person, including the loss of a job, alienation of family and friends, the loss of health insurance, and public humiliation. For example:

- A banker who also sat on a county health board gained access to patients’ records and identified several people with cancer and called in their mortgages. See the National Law Journal, May 30, 1994.
- A physician was diagnosed with AIDS at the hospital in which he practiced medicine. His surgical privileges were suspended. See Estate of Behringer v. Medical Center at Princeton, 249 N.J. Super. 597.
- A candidate for Congress nearly saw her campaign derailed when newspapers published the fact that she had sought psychiatric treatment after a suicide attempt. See New York Times, October 10, 1992, Section 1, page 25.

The answer to these concerns is not for consumers to withdraw from society and the health care system, but for society to establish a clear national legal framework for privacy. By spelling out what is and what is not an allowable use of a person’s identifiable health information, such standards can help to restore and preserve trust in the health care system and the individuals and institutions that comprise that system. As medical historian Paul Starr wrote: “Patients have a strong interest in preserving the privacy of their personal health information but they also have an interest in medical research and other efforts by health care organizations to improve the medical care they receive. As members of the wider community, they have an interest in public health measures that require the collection of personal data.” (P. Starr, “Health and the Right to Privacy.” American Journal of Law & Medicine, 25, nos. 2&3 (1999) 193–201). The task of society and its government is to create a balance in which the individual’s needs and rights are balanced against the needs and rights of society as a whole.

National standards for medical privacy must recognize the sometimes competing goals of improving individual and public health and advancing scientific knowledge, enforcing the laws of the land, and processing and paying claims for health care services. This need for balance has been recognized by many of the experts in this field. Cavoukian and Tapscott described it this way: “An individual’s right to privacy may conflict with the collective rights of the public * * *. We do not suggest that privacy is an absolute right that reigns supreme over all other rights. It does not. However, the case for privacy will depend on a number of factors that can influence the balance—the level of harm to the individual involved versus the needs of the public.”

The Federal Response

There have been numerous federal initiatives aimed at protecting the privacy of especially sensitive personal information over the past several years—and several decades. While the rules below are likely the largest single federal initiative to protect privacy, they are by no means alone in the field. Rather, the rules arrive in the context of recent legislative activity to grapple with advances in technology, in addition to an already established body of law granting federal protections for personal privacy.

In 1965, the House of Representatives created a Special Subcommittee on Invasion of Privacy. In 1973, this Department’s predecessor agency, the Department of Health, Education and Welfare issued The Code of Fair Information Practice Principles establishing an important baseline for
information privacy in the U.S. These principles formed the basis for the federal Privacy Act of 1974, which regulates the government’s use of personal information by limiting the disclosure of personally-identifiable information, allows consumers access to information about them, requires federal agencies to specify the purposes for collecting personal information, and provides civil and criminal penalties for misuse of information.

In the last several years, with the rapid expansion in electronic technology—and accompanying concerns about individual privacy—laws, regulations, and legislative proposals have been developed in areas ranging from financial privacy to genetic privacy to the safeguarding of children on-line. For example, the Children’s Online Privacy Protection Act was enacted in 1998, providing protection for children when interacting at websites. In February, 2000, President Clinton signed Executive Order 13145, banning the use of genetic information in federal hiring and promotion decisions. The landmark financial modernization bill, signed by the President in November, 1999, likewise contained financial privacy protections for consumers. There also has been recent legislative activity on establishing legal safeguards for the privacy of individuals’ Social Security numbers, and calls for regulation of on-line privacy in general.

These most recent laws, regulations, and legislative proposals come against the backdrop of decades of privacy-enhancing statutes passed at the federal level to enact safeguards in fields ranging from government data files to video rental records. In the 1970s, individual privacy was paramount in the passage of the Fair Credit Reporting Act (1970), the Privacy Act (1974), the Family Educational Rights and Privacy Act (1974), and the Right to Financial Privacy Act (1978). These key laws were followed in the next decade by another series of statutes, including the Privacy Protection Act (1980), the Electronic Communications Privacy Act (1986), the Video Privacy Protection Act (1988), and the Employee Polygraph Protection Act (1988). In the last ten years, Congress and the President have passed additional legal privacy protection through, among others, the Telephone Consumer Protection Act (1991), the Driver’s Privacy Protection Act (1994), the Telecommunications Act (1996), the Children’s Online Privacy Protection Act (1998), the Identity Theft and Assumption Deterrence Act (1998), and Title V of the Gramm-Leach-Bliley Act (1999) governing financial privacy.

In 1997, a Presidential advisory commission, the Advisory Commission on Consumer Protection and Quality in the Health Care Industry, recognized the need for patient privacy protection in its recommendations for a Consumer Bill of Rights and Responsibilities (November 1997). In 1997, Congress enacted the Balanced Budget Act (Public Law 105–34), which added language to the Social Security Act (18 U.S.C. 1852) to require Medicare+Choice organizations to establish safeguards for the privacy of individually identifiable patient information. Similarly, the Veterans Benefits section of the U.S. Code provides for confidentiality of medical records in cases involving drug abuse, alcoholism or alcohol abuse, HIV infection, or sickle cell anemia (38 U.S.C. 7332).

As described in more detail in the next section, Congress recognized the importance of protecting the privacy of health information by enacting the Health Insurance Portability and Accountability Act of 1996. The Act called on Congress to enact a medical privacy statute and asked the Secretary of Health and Human Services to provide Congress with recommendations for protecting the confidentiality of health care information. The Congress further recognized the importance of such standards by providing the Secretary with authority to promulgate regulations on health care privacy in the event that lawmakers were unable to act within the allotted three years.

Finally, it also is important for the U.S. to join the rest of the developed world in establishing basic medical privacy protections. In 1995, the European Union (EU) adopted a Data Privacy Directive requiring its 15 member states to adopt consistent privacy laws by October 1998. The EU urged all other nations to do the same or face the potential loss of access to information from EU countries.

Statutory Background

History of the Privacy Component of the Administrative Simplification Provisions

The Congress addressed the opportunities and challenges presented by the rapid evolution of health information systems in the Health Insurance Portability and Accountability Act of 1996 (HIPAA), Public Law 104–191, which was enacted on August 21, 1996. Sections 261 through 264 of HIPAA are known as the Administrative Simplification provisions. The major part of these Administrative Simplification provisions are found at section 262 of HIPAA, which enacted a new part C of title XI of the Social Security Act (hereinafter we refer to the Social Security Act as the “Act” and we refer to all other laws cited in this document by their names).

In section 262, Congress primarily sought to facilitate the efficiencies and cost savings for the health care industry that the increasing use of electronic technology affords. Thus, section 262 directs HHS to issue standards to facilitate the electronic exchange of information with respect to financial and administrative transactions carried out by health plans, health care clearinghouses, and health care providers who transmit information electronically in connection with such transactions.

At the same time, Congress recognized the challenges to the confidentiality of health information presented by the increasing complexity of the health care industry, and by advances in health information systems technology and communications. Section 262 thus also directs HHS to develop standards to protect the security, including the confidentiality and integrity, of health information.

Congress has long recognized the need for protection of health information privacy generally, as well as the privacy implications of electronic data interchange and the increased ease of transmitting and sharing individually identifiable health information.

Congress has been working on broad health privacy legislation for many years and, as evidenced by the self-imposed three year deadline included in the HIPAA, discussed below, believes it can and should enact such legislation. A significant portion of the first Administrative Simplification section debated on the floor of the Senate in 1994 (as part of the Health Security Act) consisted of privacy provisions. In the version of the HIPAA passed by the House of Representatives in 1996, the requirement for the issuance of privacy standards was located in the same section of the bill (section 1173) as the requirements for issuance of the other HIPAA Administrative Simplification standards. In conference, the requirement for privacy standards was moved to a separate section in the same part of HIPAA, section 264, so that Congress could link the Privacy standards to Congressional action.

Section 264(b) requires the Secretary of HHS to develop and submit to the Congress recommendations for:

The rights that an individual who is a subject of individually identifiable health information should have.
• The procedures that should be established for the exercise of such rights.
• The uses and disclosures of such information that should be authorized or required.

The Secretary’s Recommendations were submitted to the Congress on September 11, 1997. Section 264(c)(1) provides that:

If legislation governing standards with respect to the privacy of individually identifiable health information transmitted in connection with the transactions described in section 1173(a) of the Social Security Act (as added by section 262) is not enacted by [August 21, 1999], the Secretary of Health and Human Services shall promulgate final regulations containing such standards not later than [February 21, 2000]. Such regulations shall address at least the subjects described in subsection (b).

As the Congress did not enact legislation regarding the privacy of individually identifiable health information prior to August 21, 1999, HHS published proposed rules setting forth such standards on November 3, 1999. 64 FR 59918, and is now publishing the mandated final regulation.

These privacy standards have been, and continue to be, an integral part of the suite of Administrative Simplification standards intended to simplify and improve the efficiency of the administration of our health care system.

The Administrative Simplification Provisions, and Regulatory Actions to Date

Part C of title XI consists of sections 1171 through 1179 of the Act. These sections define various terms and impose several requirements on HHS, health plans, health care clearinghouses, and health care providers who conduct the identified transactions electronically.

The first section, section 1171 of the Act, establishes definitions for purposes of part C of title XI for the following terms: code set, health care clearinghouse, health care provider, health information, health plan, individually identifiable health information, standard, and standard setting organization.

Section 1172 of the Act makes the standard adopted under part C applicable to: (1) Health plans, (2) health care clearinghouses, and (3) health care providers who transmit health information in electronic form in connection with transactions referred to in section 1173(a)(1) of the Act (hereinafter referred to as the “covered entities”). Section 1172 also contains procedural requirements concerning the adoption of standards, including the role of standard setting organizations and required consultations, summarized in subsection F and section VI, below.

Section 1173 of the Act requires the Secretary to adopt standards for transactions, and data elements for such transactions, to enable health information to be exchanged electronically. Section 1173(a)(1) describes the transactions to be promulgated, which include the nine transactions listed in section 1173(a)(2) and other transactions determined appropriate by the Secretary. The remainder of section 1173 sets out requirements for the specific standards the Secretary is to adopt: Unique health identifiers, code sets, security standards, electronic signatures, and transfer of information among health plans. Of particular relevance to this proposed rule is section 1173(d), the security standard provision. The security standard authority applies to both the transmission and the maintenance of health information, and requires the entities described in section 1172(a) to maintain reasonable and appropriate safeguards to ensure the integrity and confidentiality of the information, protect against reasonably anticipated threats or hazards to the security or integrity of the information or unauthorized uses or disclosures of the information, and to ensure compliance with part C by the entity’s officers and employees.

In section 1174 of the Act, the Secretary is required to establish standards for all of the above transactions, except claims attachments, by February 21, 1998. The statutory deadline for the claims attachment standard is February 21, 1999.

As noted above, a proposed rule for most of the transactions was published on May 7, 1998, and the final Transactions Rule was promulgated on August 17, 2000. The delay was caused by the deliberate consensus building process, working with industry, and the large number of comments received (about 17,000). In addition, in a series of Notices of Proposed Rulemakings, HHS published other proposed standards, as described above. Each of these steps was taken in concert with the affected professions and industries, to ensure rapid adoption and compliance.

Generally, after a standard is established, it may not be changed during the first year after adoption except for changes that are necessary to permit compliance with the standard. Modifications to any of these standards may be made after the first year, but not more frequently than once every 12 months. The Secretary also must ensure that procedures exist for the routine maintenance, testing, enhancement, and expansion of code sets and that there are crosswalks from prior versions.

Section 1175 of the Act prohibits health plans from refusing to process, or from delaying processing of, a transaction that is presented in standard format. It also establishes a timetable for compliance: each person to whom a standard or implementation specification applies is required to comply with the standard within 24 months (or 36 months for small health plans) of its adoption. A health plan or other entity may, of course, comply voluntarily before the effective date. The section also provides that compliance with modifications to standards or implementation specifications must be accomplished by a date designated by the Secretary, which date may not be earlier than 180 days from the notice of change.

Section 1176 of the Act establishes civil monetary penalties for violation of the provisions in part C of title XI of the Act, subject to several limitations. Penalties may not be more than $100 per person per violation and not more than $25,000 per person for violations of a single standard for a calendar year. The procedural provisions of section 1128A of the Act apply to actions taken to obtain civil monetary penalties under this section.

Section 1177 establishes penalties for any person that knowingly uses a unique health identifier, or obtains or discloses individually identifiable health information in violation of the part. The penalties include: (1) A fine of not more than $50,000 and/or imprisonment of not more than 1 year; (2) if the offense is “under false pretenses,” a fine of not more than $100,000 and/or imprisonment of not more than 5 years; and (3) if the offense is with intent to sell, transfer, or use individually identifiable health information for commercial advantage, personal gain, or malicious harm, a fine of not more than $250,000 and/or imprisonment of not more than 10 years.

Under section 1178 of the Act, the requirements of part C, as well as any standards or implementation specifications adopted thereunder, preempt contrary state law. There are three exceptions to this general rule of preemption: State laws that the Secretary determines are necessary for certain purposes set forth in the statute; the laws that the Secretary determines address controlled substances; and state laws relating to the privacy of
individually identifiable health information that are contrary to and more stringent than the federal requirements. There also are certain areas of state law (generally relating to public health and oversight of health plans) that are explicitly carved out of the general rule of preemption and addressed separately.

Section 1179 of the Act makes the above provisions inapplicable to financial institutions (as defined by section 1101 of the Right to Financial Privacy Act of 1978) or anyone acting on behalf of a financial institution when “authorizing, processing, clearing, settling, billing, transferring, reconciling, or collecting payments for a financial institution.”

Finally, as explained above, section 264 requires the Secretary to issue standards with respect to the privacy of individually identifiable health information. Section 264 also contains a preemption provision that provides that contrary provisions of state laws that are more stringent than the federal standards, requirements, or implementation specifications will not be preempted.

**Our Approach to This Regulation**

**Balance**

A number of facts informed our approach to this regulation. Determining the best approach to protecting privacy depends on where we start, both with respect to existing legal expectations and also with respect to the expectations of individuals, health care providers, payers and other stakeholders. From the comments we received on the proposed rule, and from the extensive fact-finding in which we engaged, a confused picture developed. We learned that stakeholders in the system have very different ideas about the extent and nature of the privacy protections that exist today, and very different ideas about appropriate uses of health information. This leads us to seek to balance the views of the different stakeholders, weighing the varying interests on each particular issue with a view to creating balance in the regulation as a whole.

For example, we received hundreds of comments explaining the legitimacy of various uses and disclosure of health information. We agree that many uses and disclosures of health information are “legitimate,” but that is not the end of the inquiry. Neither privacy, nor the important social goals described by the commenters, are absolutes. In this regulation, we are asking health providers and institutions to add privacy into the balance, and we are asking individuals to add social goals into the balance.

The vast difference among regulated entities also informed our approach in significant ways. This regulation applies to solo practitioners, and multi-national health plans. It applies to pharmacies and information clearinghouses. These entities differ not only in the nature and scope of their businesses, but also in the degree of sophistication of their information systems and information needs. We therefore designed the core requirements of this regulation to be flexible and “scalable.” This is reflected throughout the rule, particularly in the implementation specifications for making the minimum necessary uses and disclosures, and in the administrative policies and procedures requirements.

We also are informed by the rapid evolution in industry organization and practice. Our goal is to enhance privacy protections in ways that do not impede this evolution. For example, we received many comments asking us to assign a status under this regulation based on a label or title. For example, many commenters asked whether “disease management” is a “health care operation,” or whether a “pharmacy benefits manager” is a covered entity. From the comments and our fact-finding, however, we learned that these terms do not have consistent meanings today; rather, they encompass diverse activities and information practices.

Further, the statutory definitions of key terms such as health care provider and health care clearinghouse describe functions, not specific types of persons or entities. To respect both the Congressional approach and industry evolution, we designed the rule to follow activities and functions, not titles and labels.

Similarly, many commenters asked whether a particular person would be a “business associate” under the rule, based on the nature of the person’s business. Whether a business associate arrangement must exist under the rule, however, depends on the relationship between the entities and the services being performed, not on the type of persons or companies involved.

Our approach is also significantly informed by the limited jurisdiction conferred by HIPAA. In large part, we have the authority to regulate those who create and disclose health information, but not many key stakeholders who receive that health information from a covered entity. Again, this led us to look to the balance between the burden on covered entities and need to protect privacy in determining our approach to such disclosures. In some instances, we approach this dilemma by requiring covered entities to obtain a representation or documentation of purpose from the person requesting information. While there would be advantages to legislation regulating such third persons directly, we cannot justify abandoning any effort to enhance privacy.

It also became clear from the comments and our fact-finding that we have expectations as a society that conflict with individuals’ views about the privacy of health information. We expect the health care industry to develop treatment protocols for the delivery of high quality health care. We expect insurers and the government to reduce fraud in the health care system. We expect to be protected from epidemics, and we expect medical research to produce miracles. We expect the police to apprehend suspects, and we expect to pay for our care by credit card. All of these activities involve disclosure of health information to someone other than our physician.

While most commenters support the concept of health privacy in general, many go on to describe activities that depend on the disclosure of health information and urge us to protect those information flows. Section III, in which we respond to the comments, describes our approach to balancing these conflicting expectations.

Finally, we note that many commenters were concerned that this regulation would lessen current privacy protections. It is important to understand this regulation as a new federal floor of privacy protections that does not disturb more protective rules or practices. Nor do we intend this regulation to describe a set of “best practices.” Rather, this regulation describes a set of basic consumer protections and a series of regulatory permissions for use and disclosure of health information. The protections are a mandatory floor, which other governments and any covered entity may exceed. The permissions are just that, permissive—the only disclosures of health information required under this rule are to the individual who is the subject of the information or to the Secretary for enforcement of this rule. We expect covered entities to rely on their professional ethics and use their own best judgements in deciding which of these permissions they will use.

**Combining Workability With New Protections**

This rule establishes national minimum standards to protect the privacy of individually identifiable health information in prescribed
settings. The standards address the many varied uses and disclosures of individually identifiable health information by health plans, certain health care providers and health care clearinghouses. The complexity of the standards reflects the complexity of the health care marketplace to which they apply and the variety of subjects that must be addressed. The rule applies not only to the core health care functions relating to treating patients and reimbursing health care providers, but also to activities that range from when individually identifiable health information should be available for research without authorization to whether a health care provider may release protected health information about a patient for law enforcement purposes. The number of discrete provisions, and the number of commenters requesting that the rule recognize particular activities, is evidence of the significant role that individually identifiable health information plays in many vital public and private concerns.

At the same time, the large number of comments from individuals and groups representing individuals demonstrate the deep public concern about the need to protect the privacy of individually identifiable health information. The discussion above is rich with evidence about the importance of protecting privacy and the potential adverse consequences to individuals and their health if such protections are not extended.

The need to balance these competing interests—the necessity of protecting privacy and the public interest in using identifiable health information for vital public and private purposes—in a way that is also workable for the varied stakeholders causes much of the complexity in the rule. Achieving workability without sacrificing protection means some level of complexity, because the rule must track current practices and current practices are complex. We believe that the complexity entered in reflecting those practices is better public policy than a perhaps simpler rule that disturbed important information flows.

Although the rule taken as a whole is complicated, we believe that the standards are much less complex as they apply to particular actors. What a health plan or covered health care provider must do to comply with the rule is clear, and the two-year delayed implementation provides a substantial period for trade and professional associations, working with their members, to assess the effects of the standards and develop policies and procedures to come into compliance with them. For individuals, the system may look substantially more complicated because, for the first time, we are ensuring that individuals will receive detailed information about how their individually identifiable health information may be used and disclosed. We also provide individuals with additional tools to exercise some control over those uses and disclosures. The additional complexity for individuals is the price of expanding their understanding and their rights.

The Department will work actively with members of the health care industry, representatives of individuals and others during the implementation of this rule. As stated elsewhere, our focus is to develop broader understanding of how the standards work and to facilitate compliance. We intend to provide guidance and check lists as appropriate, particularly to small businesses affected by the rule. We also will work with trade and professional associations to develop guidance and provide technical assistance so that they can help their members understand and comply with these new standards. If this effort is to succeed, the various public and private participants inside and outside of the health care system will need to work together to assure that the competing interests described above remain in balance and that an ethic that recognizes their importance is established.

**Enforcement**

The Secretary has decided to delegate her responsibility under this regulation to the Department's Office for Civil Rights (OCR). OCR will be responsible for enforcement of this regulation. Enforcement activities will include working with covered entities to ensure voluntary compliance through the provision of technical assistance and other means; responding to questions regarding the regulation and providing interpretations and guidance; responding to state requests for exception determinations; investigating complaints and conducting compliance reviews; and, where voluntary compliance cannot be achieved, seeking civil monetary penalties and making referrals for criminal prosecution.

**Consent**

**Current Law and Practice**

The issue that drew the most comments overall is the question of when individuals’ permission should be obtained prior to use or disclosure of their health information. We learned that individuals’ views and the legal view of “consent” for use and disclosure of health information are different and in many ways incompatible. Comments from individuals revealed a common belief that, today, people must be asked permission for each and every release of their health information. Many believe that they “own” the health records about them. However, current law and practice do not support this view.

Current privacy protection practices are determined in part by the standards and practices that the professional associations have adopted for their members. Professional codes of conduct for ethical behavior generally can be found as opinions and guidelines developed by organizations such as the American Medical Association, American Nurses’ Association, the American Hospital Association, the American Psychiatric Association, and the American Dental Association. These are generally issued though an organization’s governing body. The codes do not have the force of law, but providers often recognize them as binding rules.

Our review of professional codes of ethics revealed partial, but loose, support for individuals’ expectations of privacy. For example, the American Medical Association’s Code of Ethics recognizes both the right to privacy and the need to balance it against societal needs. It reads in part: “conflicts between a patient’s right to privacy and a third party’s need to know should be resolved in favor of the patient, except where that would result in serious health hazard or harm to the patient or others.” AMA Policy No 140.989. See also, Mass. Med. Society, Patient Privacy and Confidentiality (1996), at 14:

Patients enter treatment with the expectation that the information they share will be used exclusively for their clinical care. Protection of our patients’ confidences is an integral part of our ethical training.

These codes, however, do not apply to many who obtain information from providers. For example, the National Association of Insurance Commissioners model code, “Health Information Privacy Model Act” (1998), applies to insurers but has not been widely adopted. Codes of ethics are also often written in general terms that do not provide guidance to providers and plans confronted with specific questions about protecting health information.

State laws are a crucial means of protecting health information, and today state laws vary dramatically. Some states reflect the precedents of conduct, others provide general guidelines for privacy protection, and
others provide detailed requirements relating to the protection of information relating to specific diseases or to entire classes of information. Cf., D.C. Code Ann. § 2–3305.14(16) and Haw. Rev. Stat. 323C, et seq. In general, state statutes and case law addressing consent to use of health information do not support the public’s strong expectations regarding consent for use and disclosure of health information. Only about half of the states have a general law that prohibits disclosure of health information without patient authorization and some of these are limited to hospital medical records. Even when a state has a law limiting disclosure of health information, the law typically exempts many types of disclosure from the authorization requirement. Georgetown Study, Key Findings; Lisa Dahm, “50-State Survey on Patient Health Care Record Confidentiality,” American Health Lawyers Association (1999). One of the most common exemptions from a consent requirement is disclosure of health information for treatment and related purposes. See, e.g., Wis.Stat. § 164.82; Cal. Civ. Code 56:10; National Conference of Commissioners on Uniform State Laws, Uniform Health-Care Information Act, Minneapolis, MN, August 9, 1985. Some states include utilization review and similar activities in the exemption. See, e.g., Ariz. Rev. Stat. § 12–2294. Another common exemption from consent is disclosure of health information for purposes of obtaining payment. See, e.g., Fla. Stat. Ann. § 455.667; Tex. Rev. Civ. Stat. Art. 4495, § 5.08(b); 410 Ill. Comp. Stat. 50/3(d). Other common exemptions include disclosures for emergency care, and for disclosures to government authorities (such as a department of public health). See Gostin Study, at 1–2; 48–51. Some states also exempt disclosure to law enforcement officials (e.g., Massachusetts, Ch. 254 of the Acts of 2000), coroners (Wis. Stat. § 146.82), and for such purposes as business operations, oversight, research, and for directory information. Under these exceptions providers can disclose health information without any consent or authorization from the patient. When states require specific, written authorization for disclosure of health information, the authorizations are usually only required for certain types of disclosures or certain types of information, and one authorization can suffice for multiple disclosures over time.

The states that do not have laws prohibiting disclosure of health information impose no specific requirements for consent or authorization prior to release of health information. There may, however, be other controls on release of health information. For instance, most health care professional licensure laws include general prohibitions against “breaches of confidentiality.” In some states, patients can hold providers accountable for some unauthorized disclosures of health information about them under various tort theories, such as invasion of privacy and breach of a confidential relationship. While these controls may affect certain disclosure practices, they do not amount to a requirement that a provider obtain authorization for each and every disclosure of health information.

Further, patients are typically not given a choice; they must sign the “consent” in order to receive care. As the Georgetown Study points out, “In effect, the authorization may function more as a waiver of consent—the patient may not have an opportunity to object to any disclosures.” Georgetown Study, Key Findings.

In the many cases where neither state law nor professional ethical standards exist, the only privacy protection individuals have is limited to the policies and procedures that the health care entity adopts. Corporate privacy policies are often proprietary. While several professional associations attached their privacy principles to their comments, health care entities did not. One study we found indicates that these policies are not adequate to provide appropriate privacy protections and alleviate public concern. The Committee on Maintaining Privacy and Security in Health Care Applications of the National Information Infrastructure made multiple findings highlighting the need for heightened privacy and security, including:

Finding 5: The greatest concerns regarding the privacy of health information derive from widespread sharing of patient information throughout the health care industry and the inadequate federal and state regulatory framework for systematic protection of health information.

Consent Under This Rule

In the NPRM, we expressed concern about the coercive nature of consents currently obtained by providers and plans relating to the use and disclosure of health information. We also expressed concern about the lack of information available to the patient during the consent process. The fact that patients often were not even presented with a copy of the consent that they have signed. These and other concerns led us to propose that covered entities be permitted to use and disclose protected health information for treatment, payment and health care operations without the express consent of the subject individual.

In the final rule, we alter our proposed approach and require, in most instances, that health care providers who have a direct treatment relationship with their patients obtain the consent of their patients to use and disclose protected health information for treatment, payment and health care operations. While our concern about the coercive nature of these consents remains, many comments that we received from individuals, health care professionals, and organizations that represent them indicated that both patients and practitioners believe that patient consent is an important part of the current health care system and should be retained.

Providing and obtaining consent clearly has meaning for patients and practitioners. Patient advocates argued that the act of signing focuses the patient’s attention on the substance of the transaction and provides an opportunity for the patient to ask questions about or seek modifications in the provider’s practices. Many health care practitioners and their representatives argued that seeking a patient’s consent to disclose confidential information is an ethical requirement that strengthens the physician-patient relationship. Both practitioners and patients argued that the approach proposed in the NPRM actually reduced patient protections by eliminating the opportunity for patients to agree to how their confidential information would be used and disclosed.

While we believe that the provisions in the NPRM that provided for detailed notice to the patient and the right to request restrictions would have provided an opportunity for patients and providers to discuss and negotiate over information practices, it is clear from the comments that many practitioners and patients believe the approach proposed in the NPRM is not an acceptable replacement for the patient providing consent.

To encourage a more informed interaction between the patient and the provider during the consent process, the final rule requires that the consent form that is presented to the patient be accompanied by a notice that contains a detailed discussion of the provider’s health information practices. The consent form must reference the notice and also must inform the patient that he
or she has the right to ask the health care provider to request certain restrictions as to how the information of the patient will be used or disclosed. Our goal is to provide an opportunity for and to encourage more informed discussions between patients and providers about how protected health information will be used and disclosed within the health care system.

We considered and rejected other approaches to consent, including those that involved individuals providing a global consent to uses and disclosures when they sign up for insurance. While such approaches do require the patient to provide consent, it is not really an informed one or a voluntary one. It is also unclear how a consent obtained at the enrollment stage would be meaningfully communicated to the many providers who create the health information in the first instance. The ability to negotiate restrictions or otherwise have a meaningful discussion with the front-line provider would be independent of, and potentially in conflict with, the consent obtained at the enrollment stage. In addition, employers today are moving toward simplified enrollment forms, using check-off boxes and similar devices. The opportunity for any meaningful consideration or interaction at that point is slight. For these and other reasons, we decided that, to the extent a consent can accomplish the goal sought by individuals and providers, it must be focused on the direct interaction between an individual and provider.

The comments and fact-finding indicate that our approach will not significantly change the administrative aspect of consent as it exists today. Most direct treatment providers today obtain some type of consent for some uses and disclosures of health information. Our regulation will ensure that those consents cover the routine uses and disclosures of health information, and provide an opportunity for individuals to obtain further information and have further discussion, should they so desire.

Administrative Costs

Section 1172(b) of the Act provides that “[a]ny standard adopted under this part [part C of title XI of the Act] shall be consistent with the objective of reducing the administrative costs of providing and paying for health care.” The privacy and security standards are the platform on which the remaining standards rest; indeed, the design of part C of title XI makes clear that the various standards are intended to function together. Thus, the costs of privacy and security are properly attributable to the suite of administrative simplification regulations as a whole, and the cost savings realized should likewise be calculated on an aggregated basis, as is done below. Because the privacy standards are an integral and necessary part of the suite of Administrative Simplification standards, and because that suite of standards will result in substantial administrative cost savings, the privacy standards are “consistent with the objective of reducing the administrative costs of providing and paying for health care.” As more fully discussed in the Regulatory Impact and Regulatory Flexibility analyses below, we recognize that these privacy standards will entail substantial initial and ongoing administrative costs for entities subject to the rules. It is also the case that the privacy standards, like the security standards authorized by section 1173(d) of the Act, are necessitated by the technological advances in information exchange that the remaining Administrative Simplification standards facilitate for the health care industry. The same technological advances that make possible enormous administrative cost savings for the industry as a whole have also made it possible to breach the security and privacy of health information on a scale that was previously inconceivable. The Congress recognized that adequate protection of the security and privacy of health information is a sine qua non of the increased efficiency of information exchange brought about by the electronic revolution by enacting the security and privacy provisions of the law. Thus, as a matter of policy as well as law, the administrative standards should be viewed as a whole in determining whether they are “consistent with” the objective of reducing administrative costs.

Consultations

The Congress required the Secretary to consult with specified groups in developing the standards under sections 262 and 264. Section 264(d) of HIPAA specifically requires the Secretary to consult with the National Committee on Vital and Health Statistics (NCVHS) and the Attorney General in carrying out her responsibilities under the section. Section 1172(b)(3) of the Act, which was enacted by section 262, requires that, in developing a standard under section 1172 for which no standard setting organization has already developed a standard, the Secretary must, before adopting the standard, consult with the National Uniform Claim Committee (NUCC), the National Uniform Claim Committee, the Workgroup for Electronic Data Interchange (WEDI), and the American Dental Association (ADA). Section 1172(f) also requires the Secretary to rely on the recommendations of the NCVHS and consult with other appropriate federal and state agencies and private organizations.

We engaged in the required consultations including the Attorney General, NUBC, NUCC, WEDI and the ADA. We consulted with the NCVHS in developing the Recommendations, upon which this proposed rule is based. We continued to consult with this committee by requesting the committee to review the proposed rule and provide comments prior to its publication, and by reviewing transcripts of its public meeting on privacy and related topics. We consulted with representatives of the National Congress of American Indians, the National Indian Health Board, and the self governance tribes. We also met with representatives of the National Governors’ Association, the National Conference of State Legislatures, the National Association of Public Health Statistics and Information Systems, and a number of other state organizations to discuss the framework for the proposed rule, issues of special interests to the states, and the process for providing comments on the proposed rule.

Many of these groups submitted comments to the proposed rule, and those were taken into account in developing the final regulation.

In addition to the required consultations, we met with numerous individuals, entities, and agencies regarding the regulation, with the goal of making these standards as compatible as possible with current business practices, while still enhancing privacy protection. During the open comment period, we met with dozens of groups.

Relevant federal agencies participated in the interagency working groups that developed the NPRM and the final regulation, with additional representatives from all operating divisions and many staff offices of HHS. The following federal agencies and offices were represented on the interagency working groups: the Department of Justice, the Department of Commerce, the Social Security Administration, the Department of Defense, the Department of Veterans Affairs, the Department of Labor, the Office of Personnel Management, and the Office of Management and Budget.
II. Section-by-Section Description of Rule Provisions

Part 160—Subpart A—General Provisions

Part 160 applies to all the administrative simplification regulations. We include the entire regulation text in this rule, not just those provisions relevant to this Privacy regulation. For example, the term “trading partner” is defined here, for use in the Health Insurance Reform: Standards for Electronic Transactions regulation, published at 65 FR 50312, August 17, 2000 (the “Transactions Rule”). It does not appear in the remainder of this Privacy rule.

Sections 160.101 and 160.104 of Subpart A of part 160 were promulgated in the Transactions Rule, and we do not change them here. We do, however, make changes and additions to § 160.103, the definitions section of Subpart A. The definitions that were promulgated in the Transactions Rule and that remain unchanged here are: Act, ANSI, covered entity, compliance date, group health plan, HCFA, HHS, health care provider, health information, health insurance issuer, health maintenance organization, modify or modification, Secretary, small health plan, standard setting organization, and trading partner agreement. Of these terms, we discuss further in this preamble only covered entity and health care provider.

Section 160.102—Applicability

The proposed rule stated that the subchapter (Parts 160, 162, and 164) applies to the entities set out at section 1172(a) of the Act: Health plans, health care clearinghouses, and health care providers who transmit any health information in electronic form in connection with a transaction covered by the subchapter. The final rule adds a provision (§ 160.102(b)) clarifying that to the extent required under section 201(a)(5) of HIPAA, nothing in the subchapter is to be construed to diminish the authority of any Inspector General. This was done in response to comment, to clarify that the administrative simplification rules, including the rules below, do not conflict with the cited provision of HIPAA.

Section 160.103—Definitions

Business Associate

We proposed to define the term “business partner” to mean, with respect to a covered entity, a person to whom the covered entity discloses protected health information so that the person can carry out, assist with the performance of, or perform on behalf of, a function or activity for the covered entity. “Business partner” would have included contractors or other persons who receive protected health information from the covered entity (or from another business partner of the covered entity) for the purposes described in the previous sentence, including lawyers, auditors, consultants, third-party administrators, health care clearinghouses, data processing firms, billing firms, and other covered entities. “Business partner” would have excluded persons who are within the covered entity’s workforce, as defined in this section.

This rule reflects the change in the name from “business partner” to “business associate,” included in the Transactions Rule.

In the final rule, we change the definition of “business associate” to clarify the circumstances in which a person is acting as a business associate of a covered entity. The changes clarify that the business association occurs when the right to use or disclose the protected health information belongs to the covered entity, and another person is using or disclosing the protected health information (or creating, obtaining and using the protected health information) to perform a function or activity on behalf of the covered entity. We also clarify that providing specified services to a covered entity creates a business associate relationship if the provision of the service involves the disclosure of protected health information to an act service provider. In the proposed rule, we had included a list of persons that were considered to be business partners of the covered entity. However, it is not always clear whether the provision of certain services to a covered entity is “for” the covered entity or whether the service provider is acting “on behalf of” the covered entity. For example, a person providing management consulting services may need protected health information to perform those services, but may not be acting “on behalf of” the covered entity. This we believe led to some general confusion among the commenters as to whether certain arrangements fell within the definition of a business partner under the proposed rule. The construction of the final rule clarifies that the provision of the specified services gives rise to a business associate relationship if the performance of the service involves disclosure of protected health information by the covered entity to the business associate. The specified services are legal, actuarial, accounting, consulting, management, administrative accreditation, data aggregation, and financial services. The list is intended to include the types of services commonly provided to covered entities where the disclosure of protected health information is routine to the performance of the service, but when the person providing the service may not always be acting “on behalf of” the covered entity.

In the final rule, we reorganize the list of examples of the functions or activities that may be conducted by business associates. We place a part of the proposed list in the portion of the definition that addresses when a person is providing functions or activities for or on behalf of a covered entity. We place other parts of the list in the portion of the definition that specifies the services that give rise to a business associate relationship, as discussed above. We also have expanded the examples to provide additional guidance and in response to questions from commenters.

We have added data aggregation to the list of services that give rise to a business associate relationship. Data aggregation, as discussed below, is where a business associate in its capacity as the business associate of one covered entity combines the protected health information of such covered entity with protected health information received by the business associate in its capacity as a business associate of another covered entity in order to permit the creation of data for analyses that relate to the health care operations of the respective covered entities. Adding this service to the business associate definition clarifies the ability of covered entities to contract with business associates to undertake quality assurance and comparative analyses that involve the protected health information of more than one contracting covered entity. For example, a state hospital association could act as a business associate of its member hospitals and could combine data provided to it to assist the hospitals in evaluating their relative performance in areas such as quality, efficiency and other patient care issues. As discussed below, however, the business associate contracts of each of the hospitals would have to permit the activity, and the protected health information of one hospital could not be disclosed to another hospital unless the disclosure is otherwise permitted by the rule.

The definition also states that a business associate may be a covered entity, and that business associate excludes a person who is part of the covered entity’s workforce.

We also clarify in the final rule that a business association arises with
respect to a covered entity when a person performs functions or activities on behalf of, or provides the specified services to or for, an organized health care health care arrangement in which the covered entity participates. This change recognizes that where covered entities participate in certain joint arrangements for the financing or delivery of health care, they often contract with persons to perform functions or to provide services for the joint arrangement. This change is consistent with changes made in the final rule to the definition of health care operations, which permits covered entities to use or disclose protected health information not only for their own health care operations, but also for the operations of an organized health care arrangement in which the covered entity participates. By making these changes, we avoid the confusion that could arise in trying to determine whether a function or activity is being provided on behalf of (or if a specified service is being provided to or for) a covered entity or on behalf of or for a joint enterprise involving the covered entity. The change clarifies that in either instance the person performing the function or activity (or providing the specified service) is a business associate.

We also add language to the final rule that clarifies that the mere fact that two covered entities participate in an organized health care arrangement does not make either of the covered entities a business associate of the other covered entity. The fact that the entities participate in joint health care operations or other joint activities, or pursue common goals through a joint activity, does not mean that one party is performing a function or activity on behalf of the other party (or is providing a specified services to or for the other party).

In general under this provision, actions relating to the protected health information of an individual undertaken by a business associate are considered, for the purposes of this rule, to be actions of the covered entity, although the covered entity is subject to sanctions under this rule only if it has knowledge of the wrongful activity and fails to take the required actions to address the wrongdoing. For example, if a business associate maintains the medical records or manages the claims system of a covered entity, the covered entity is considered to have protected health information and the covered entity must ensure that individuals who are the subject of the information can have access to it pursuant to § 164.524.

The business associate relationship does not describe all relationships between covered entities and other persons or organizations. While we permit uses or disclosures of protected health information for a variety of purposes, business associate contracts or other arrangements are only required for those cases in which the covered entity is disclosing information to someone or some organization that will use the information on behalf of the covered entity, when the other person will be creating or obtaining protected health information on behalf of the covered entity, or when the business associate is providing the specified services to the covered entity and the provision of those services involves the disclosure of protected health information by the covered entity to the business associate. For example, when a health care provider discloses protected health information to health plans for payment purposes, no business associate relationship is established. While the covered provider may have an agreement to accept discounted fees as reimbursement for services provided to health plan members, neither entity is acting on behalf of or providing a service to the other.

Similarly, where a physician or other provider has staff privileges at an institution, neither party to the relationship is a business associate based solely on the staff privileges because neither party is providing functions or activities on behalf of the other. However, if a party provides services to or for the other, such as where a hospital provides billing services for physicians with staff privileges, a business associate relationship may arise with respect to those services. Likewise, where a group health plan purchases insurance or coverage from a health insurance issuer or HMO, the provision of insurance by the health insurance issuer or HMO to the group health plan does not make the issuer a business associate. In such case, the activities of the health insurance issuer or HMO are on their own behalf and not on the behalf of the group health plan. We note that where a group health plan contracts with a health insurance issuer or HMO to perform functions or activities or to provide services that are in addition to or not directly related to the provision of insurance, the health insurance issuer or HMO may be a business associate with respect to those additional functions, activities or services. We also note that covered entities are permitted to disclose protected health information to oversight agencies that act to provide oversight of federal programs and the health care system. These oversight agencies are not performing services for or on behalf of the covered entities and so are not business associates of the covered entities. Therefore HCFA, the federal agency that administers Medicare, is not required to enter into a business associate contract in order to disclose protected health information to the Department’s Office of Inspector General.

We do not require a covered entity to enter into a business associate contract with a person or organization that acts merely as a conduit for protected health information (e.g., the US Postal Service, certain private couriers and their electronic equivalents). A conduit transports information but does not access it other than on a random or infrequent basis as may be necessary for the performance of the transportation service, or as required by law. Since no disclosure is intended by the covered entity and the probability of exposure of any particular protected health information to a conduit is very small, we do not consider a conduit to be a business associate of the covered entity.

We do not consider a financial institution to be acting on behalf of a covered entity, and therefore no business associate contract is required, when it processes consumer-conducted financial transactions by debit, credit or other payment card, clears checks, initiates or processes electronic funds transfers, or conducts any other activity that directly facilitates or effects the transfer of funds for compensation for health care. A typical consumer-conducted payment transaction is when a consumer pays for health care or health insurance premiums using a check or credit card. In these cases the identity of the consumer is always included and some health information (e.g., diagnosis or procedure) may be implied through the name of the health care provider or health plan being paid. Covered entities that initiate such payment activities must meet the minimum necessary disclosure requirements described in the preamble to § 164.514.

Covered Entity

We provided this definition in the NPRM for convenience of reference and proposed it to mean the entities to which part C of title XI of the Act applies. These are the entities described in section 1172(a)(1): Health Plans, health care clearinghouses, and health care providers who transmit any health information in electronic form in connection with a transaction referred
to in section 1173(a)(1) of the Act (a "standard transaction").

We note that health care providers who do not submit HIPAA transactions in standard form become covered by this rule when other entities, such as a billing service or a hospital, transmit standard electronic transactions on their behalf. A provider could not circumvent these requirements by assigning the task to its business associate since the business associate would be considered to be acting on behalf of the provider. See the definition of "business associate."

Where a public agency is required or authorized by law to administer a health plan jointly with another entity, we consider each agency to be a covered entity with respect to the health plan functions it performs. Unlike private sector health plans, public plans are often required by or expressly authorized by law to jointly administer health programs that meet the definition of "health plan" under this regulation. In some instances the public entity is required or authorized to administer the program with another public agency. In other instances, the public entity is required or authorized to administer the program with a private entity. In either circumstance, we note that joint administration does not meet the definition of "business associate" in §164.501. Examples of joint administration include state and federal administration of the Medicaid and SCHIP program, or joint administration of a Medicare+Choice plan by the Health Care Financing Administration and the issuer offering the plan.

Health Care

We proposed to define "health care" to mean the provision of care, services, or supplies to a patient and to include any: (1) Preventive, diagnostic, therapeutic, rehabilitative, maintenance, or palliative care, counseling, service, assessment, or procedure with respect to the physical or mental condition, or functional status, of an individual or that affects the structure or function of the body; and (2) Sale or dispensing of a drug, device, equipment, or other item in accordance with a prescription.

We delete the term "providing" from the definition to delineate more clearly the relationship between "treatment," as the term is defined in §164.501, and "health care." Other key revisions include adding the term "assessment" in subparagraph (1) and deleting proposed subparagraph (3) from the rule. Therefore the procurement or banking of organs, blood (including autologous blood), sperm, eyes or any other tissue or human product is not considered to be health care under this rule and the organizations that perform such activities would not be considered health care providers when conducting these functions. As described in §164.512(b), covered entities are permitted to disclose protected health information without individual authorization, consent, or agreement (see below for explanation of authorizations, consents, and agreements) as necessary to facilitate cadaveric donation.

Health Care Clearinghouse

In the NPRM, we defined "health care clearinghouse" as a public or private entity that processes or facilitates the processing of nonstandard data elements of health information into standard data elements. The entity receives health care transactions from health care providers or other entities, translates the data from a given format into one acceptable to the intended payor or payors, and forwards the processed transaction to appropriate payors and clearinghouses. Billing services, repricing companies, community health management information systems, and "value-added" networks and switches would have been considered to be health care clearinghouses for purposes of this part, if they perform the functions of health care clearinghouses as described in the preceding sentences.

In the final regulation, we modify the definition of health care clearinghouse to reflect changes in the definition published in the Transactions Rule. The definition in the final rule is:

Health care clearinghouse means a public or private entity, including billing services, repricing companies, community health management information systems or community health information systems, and "value-added" networks and switches, that does either of the following functions:

(1) Processes or facilitates the processing of health information received from another entity in a nonstandard format or containing nonstandard data content into standard data elements or a standard transaction.

(2) Receives a standard transaction from another entity and processes or facilitates the processing of health information into nonstandard format or nonstandard data content for the receiving entity.

We note here that the term health care clearinghouse may have other meanings and connotations in other contexts, but the regulation defines it specifically, and an entity is considered a health care clearinghouse only if it meets the criteria in this definition. Telecommunications entities that provide connectivity or mechanisms to convey information, such as telephone companies and Internet Service Providers, are not health care clearinghouses as defined in the rule unless they actually carry out the functions outlined in our definition. Value added networks and switches are not health care clearinghouses unless they carry out the functions outlined in the definition. The examples of entities in our proposed definition we continue to consider to be health care clearinghouses, as well as any other entities that meet that definition, to the extent that they perform the functions in the definition.

In order to fall within this definition of clearinghouse, the covered entity must perform the clearinghouse function on health information received from some other entity. A department or component of a health plan or health care provider that transforms nonstandard information into standard data elements or standard transactions (or vice versa) is not a clearinghouse for purposes of this rule, unless it also performs these functions for another entity. As described in more detail in §164.504(d), we allow affiliates to perform clearinghouse functions for each other without triggering the definition of "clearinghouse" if the conditions in §164.504(d) are met.

Health Care Provider

We proposed to define health care provider to mean a provider of services as defined in section 1861(s) of the Act, a provider of medical or health services as defined in section 1861(s) of the Act, and any other person or organization who furnishes, bills, or is paid for health care services or supplies in the normal course of business.
In the final rule, we delete the term "services and supplies," in order to eliminate redundancy within the definition. The definition also reflects the addition of the applicable U.S.C. citations (42 U.S.C. 1395x(u) and 42 U.S.C. 1395x(s), respectively) for the referenced provisions of the Act that were promulgated in the Transactions Rule.

To assist the reader, we also provide here excerpts from the relevant sections of the Act. (Refer to the U.S.C. sections cited above for complete definitions in sections 1861(u) and 1861(s).) Section 1861(u) of the Act defines a "provider of services," to include, for example, a hospital, critical access hospital, skilled nursing facility, comprehensive outpatient rehabilitation facility, home health agency, hospice program, or, for purposes of section 1814(g) (42 U.S.C. 1395f(g)) and section 1835(e) (42 U.S.C. 1395n(e), a fund."

Section 1861(s) of the Act defines the term "medical and other health services," and includes a list of covered items or services, as illustrated by the following excerpt:

The term "medical and other health services" means any of the following items or services:

(1) Physicians' services;
(2) Services and supplies furnished as an incident to a physician's professional service, or kinds which are commonly furnished in physicians' offices and are commonly either rendered without charge or included in the physicians' bills;
(3) Durable medical equipment;
(4) Surgical dressings and splints, casts, and other devices used for reduction of fractures and dislocations;
(5) X-ray, radium, and radioactive isotope therapy, including materials and services of technicians;
(6) Surgical dressings, and splints, casts, and other devices used for reduction of fractures and dislocations;
(7) Ambulance service where the use of other methods of transportation is contraindicated by the individual's condition;
(8) Prosthetic devices (other than dental) which replace all or part of an internal body organ (including colostomy bags and supplies directly related to colostomy care), including items and services paid for as part of an anti-cancer chemotherapy regimen;
(9) Leg, arm, back, and neck braces, and artificial legs, arms, and eyes, including replacements if required;
(10) A pneumococcal vaccine and its administration;
(11) A hepatitis B vaccine and its administration;
(12) Extra-depth shoes with inserts or custom molded shoes with inserts for an individual with diabetes;
(13) Screening mammography;
(14) Screening pap smear and screening pelvic exam; and
(15) Bone mass measurement.

Health Plan

We proposed to define "health plan" essentially as section 1171(S) of the Act defines it. Section 1171 of the Act refers to several definitions in section 2791 of the Public Health Service Act, 42 U.S.C. 300gg-91, as added by Public Law 104-191.

As defined in section 1171(S), a "health plan" is an individual plan or group health plan that provides, or pays the cost of, medical care. We proposed that this definition include, but not be limited to the 15 types of plans (e.g., group health plan, health insurance issuer, health maintenance organization) listed in the statute, as well as any combination of them. Such term would have included, when applied to public benefit programs, the component of the government agency that administers the program. Church plans and government plans would have been included to the extent that they fall into one or more of the listed categories.

In the proposed rule, "health plan" included the following, singly or in combination:

(1) A group health plan, defined as an employee welfare benefit plan (as currently defined in section 3(1) of the Employee Retirement Income and Security Act of 1974, 29 U.S.C. 1002(1)), including insured and self-insured plans, to the extent that the plan provides medical care (as defined in section 2791(a)(2) of the Public Health Service Act, 42 U.S.C. 300gg-91(a)(2)), including items and services paid for as medical care, to employees or their dependents directly or through insurance or otherwise, that:

(i) Has 50 or more participants; or
(ii) Is administered by an entity other than the employer that established and maintains the plan.

(2) A health insurance issuer, defined as an insurance company, insurance service, or insurance organization that is licensed to engage in the business of insurance in a state and is subject to state or other law that regulates insurance.

(3) A health maintenance organization, defined as a federally qualified health maintenance organization, an organization recognized as a health maintenance organization under state law, or a similar organization regulated for solvency under state law in the same manner and to the same extent as such a health maintenance organization.

(4) Part A or Part B of the Medicare program under title XVIII of the Act.

(5) The Medicaid program under title XIX of the Act.
(6) A Medicare supplemental policy (as defined in section 1882(g)(1) of the Act, 42 U.S.C. 1395ss).
(7) A long-term care policy, including a nursing home fixed-indemnity policy.
(8) An employee welfare benefit plan or any other arrangement that is established or maintained for the purpose of offering or providing health benefits to the employees of two or more employers.
(9) The health care program for active military personnel under title 10 of the United States Code.
(11) The Civilian Health and Medical Program of the Uniformed Services (CHAMPUS), as defined in 10 U.S.C. 1072(4).
(12) The Indian Health Service program under the Indian Health Care Improvement Act (25 U.S.C. 1601, et seq.).
(14) An approved state child health plan for child health assistance that meets the requirements of section 2103 of the Act.
(15) A Medicare Plus Choice organization as defined in 42 CFR 422.2, with a contract under 42 CFR part 422, subpart K.

In addition to the 15 specific categories, we proposed that the list include any other individual plan or group health plan, or combination thereof, that provides or pays for the cost of medical care. The Secretary would determine which plans that meet these criteria would be considered health plans for the purposes of this rule.

Consistent with the other titles of HIPAA, our proposed definition did not include certain types of insurance entities, such as workers’ compensation and automobile insurance carriers, other property and casualty insurers, and certain forms of limited benefit coverage, even when such arrangements provide coverage for health care services.

In the final rule, we add two provisions to clarify the types of policies or programs that we do not consider to be a health plan. First, the rule excepts any policy, plan or program to the extent that it provides, or pays for the cost of, excepted benefits, as defined in section 2791(c)(1) of the PHS Act, 42 U.S.C. 300gg–91(c)(1). We note that, while coverage for on-site medical clinics is excluded from definition of “health plan,” such clinics may meet the definition of “health care provider” and persons who work in the clinic may also meet the definition of health care provider.” Second, many commenters were confused by the statutory inclusion as a health plan of any “other individual or group plan that provides or pays the cost of medical care;” they questioned how the provision applied to many government programs. We therefore clarify that while many government programs (other than the programs specified in the statute) provide or pay the cost of medical care, we do not consider them to be individual or group plans and therefore, do not consider them to be health plans. Government funded programs that do not have as their principal purpose the provision of, or payment for, the cost of health care but which do incidentally provide such services are not health plans (for example, programs such as the Special Supplemental Nutrition Program for Women, Infants and Children (WIC) and the Food Stamp Program, which provide or pay for nutritional services, are not considered to be health plans). Government funded programs that have as their principal purpose the provision of health care, either directly or by grant, are also not considered to be health plans. Examples include the Ryan White Comprehensive AIDS Resources Emergency Act, government funded health centers and immunization programs. We note that some of these may meet the rule’s definition of health care provider.

We note that in certain instances eligibility for or enrollment in a health plan that is a government program providing public benefits, such as Medicaid or SCHIP, is determined by an agency other than the agency that administers the program, or individually identifiable health information used to determine enrollment or eligibility in such a health plan is collected by an agency other than the agency that administers the health plan. In these cases, we do not consider an agency that is not otherwise a covered entity, such as a local welfare agency, to be a covered entity because it determines eligibility or enrollment or collects enrollment information as authorized by law. We also do not consider the agency to be a business associate when conducting these functions, as we describe further in the business associate discussion above.

The definition in the final rule also reflects the following changes promulgated in the Transactions Rule:
(1) Exclusion of nursing home fixed-indemnity policies
(2) Addition of the word “issuer” to Medicare supplemental policy, and long-term care policy;
(3) Addition or revision of the relevant statutory cites where appropriate;
(4) Deletion of the term “or assisted” when referring to government programs;
(5) Replacement of the word “organization” with “program” when referring to Medicare + Choice;
(6) Deletion of the term “health” when referring to a group plan in subparagraph (xvi);
(7) Extraction of the definitions of “group health plan,” “health insurance issuer,” and “health maintenance organization” into Part 160 as distinct definitions;
(8) In the definition of “group health plan,” deletion of the term “currently” from the reference to the statutory cite of ERISA, addition of the relevant statutory cite for the term “participant,” and addition of the term “reimbursement;”
(9) In the definition of “health insurance issuer,” addition of the relevant statutory cite, deletion of the term “or other law” after “state law,” addition of health maintenance organizations for consistency with the statute, and clarification that the term does not include a group health plan; and
(10) In the definition of “health maintenance organization,” addition of the relevant statutory cite.

Finally, we add to this definition a high risk pool that is a mechanism established under state law to provide health insurance coverage or comparable coverage to eligible individuals. High risk pools are designed mainly to provide health insurance coverage for individuals who, due to health status or pre-existing conditions, cannot obtain insurance through the individual market or who can do so only at very high premiums. Some states use their high risk pool as an alternative mechanism under section 2744 of HIPAA. We do not reference the definition of “qualified high risk pool” in HIPAA because that definition includes the requirements for a state to use its risk pool as its alternative mechanism under HIPAA. Some states may have high risk pools, but do not use them as their alternative mechanism and therefore may not meet the definition in HIPAA. We want to make clear that state high risk pools are covered entities under this rule whether or not they meet the definition of a qualified high risk pool under section 2744. High risk pools, as described in this rule, do not include any program established under state law solely to provide excepted benefits. For example, a state program established to provide workers’ compensation coverage is not
considered to be a high risk pool under the rule.

Implementation Specification

This definition was adopted in the Transactions Rule and is minimally revised here. We add the words “requirements or” before the word “instructions.” The word “instructions” is appropriate in the context of the implementation specifications adopted in the Transactions Rule, which are generally a series of instructions as to how to use particular electronic forms. However, that word is not apropos in the context of the rules below. In the rules below, the implementation specifications are specific requirements for how to comply with a given standard. The change to this definition thus ties in to this regulatory framework.

Standard

This definition was adopted in the Transactions Rule and we have modified it to make it clearer. We also add language reflecting section 264 of the statute, to clarify that the standards adopted by this rule meet this definition.

State

We modify the definition of state as adopted in the Transactions Rule to clarify that this term refers to any of the several states.

Transaction

We change the term “exchange” to the term “transmission” in the definition of Transaction to clarify that these transactions may be one-way communications.

Workforce

We proposed in the NPRM to define workforce to mean employees, volunteers, trainees, and other persons under the direct control of a covered entity, including persons providing labor on an unpaid basis.

The definition in the final rule reflects one revision established in the Transactions Rule, which replaces the term “including persons providing labor on an unpaid basis” with the term “whether or not they are paid by the covered entity.” In addition, we clarify that if the assigned work station of persons under contract is on the covered entity’s premises and such persons perform a substantial proportion of their activities at that location, the covered entity may choose to treat them either as business associates or as part of the workforce, as explained in the discussion of the definition of business associate. If there is no business associate contract, we assume the person is a member of the covered entity’s workforce. We note that independent contractors may or may not be workforce members. However, for compliance purposes we will assume that such personnel are members of the workforce if no business associate contract exists.

Part 160—Subpart B—Preemption of State Laws

Statutory Background

Section 1178 of the Act establishes a “general rule” that state law provisions that are contrary to the provisions or requirements of part C of title XI or the standards or implementation specifications adopted or established thereunder are preempted by the federal requirements. The statute provides three exceptions to this general rule: (1) In section 1178(a)(2)(A)(i), for state laws that the Secretary determines are necessary to prevent fraud and abuse, ensure appropriate state regulation of insurance and health plans, for state reporting on health care delivery, and other purposes; (2) in section 1178(a)(2)(A)(ii), for state laws that address controlled substances; and (3) in section 1178(a)(2)(B), for state laws relating to the privacy of individually identifiable health information that as provided for by the related provision of section 264(c)(2) of HIPAA, are contrary to and more stringent than the federal requirements. Section 1178 also carves out, in sections 1178(b) and 1178(c), certain areas of state authority that are not limited or invalidated by the provisions of part C of title XI: these areas relate to public health and state regulation of health plans.

The NPRM proposed a new Subpart B of the proposed part 160. The new Subpart B, which would apply to all standards, implementation specifications, and requirements adopted under HIPAA, would consist of four sections. Proposed § 160.201 provided that the provisions of Subpart B applied to exception determinations and advisory opinions issued by the Secretary under section 1178. Proposed § 160.202 set out proposed definitions for four terms: (1) “Contrary,” (2) “more stringent,” (3) “relates to the privacy of individually identifiable health information,” and (4) “state law.” The definition of “contrary” was drawn from case law concerning preemption. A seven-part set of specific criteria, drawn from fair information principles, was proposed for the definition of “more stringent.” The definition of “relates to the privacy of individually identifiable health information” was also based on case law. The definition of “state law” was drawn from the statutory definition of this term elsewhere in HIPAA. We note that state action having the force and effect of law may include common law. We eliminate the term “decision” from the proposed rule because it is redundant.

Proposed § 160.203 proposed a general rule reflecting the statutory general rule and exceptions that generally mirrored the statutory language of the exceptions. The one substantive addition to the statutory exception language was with respect to the statutory exception, “for other purposes.” The following language was added: “for other purposes related to improving the Medicare program, the Medicaid program, or the efficiency and effectiveness of the health care system.”

Proposed § 160.204 proposed two processes, one for the making of exception determinations, relating to determinations under section 1178(a)(2)(A) of the Act, the other for the rendering of advisory opinions, with respect to section 1178(a)(2)(B) of the Act. The processes proposed were similar in the following respects: (1) Only the state could request an exception determination or advisory opinion, as applicable; (2) both required the request to contain the same information, except that a request for an exception determination also had to set out the length of time the requested exception would be in effect, if less than three years; (3) both sets of requirements provided that requests had to be submitted to the Secretary as required by the Secretary, and until the Secretary’s determination was made, the federal standard, requirement or implementation specification remained in effect; (4) both sets of requirements provided that the Secretary’s decision would be effective intrastate only; (5) both sets of requirements provided that any change to either the federal or state basis for the Secretary’s decision would require a new request, and the federal standard, implementation specification, or requirement would remain in effect until the Secretary acted favorably on the new request; (6) both sets of requirements provided that the Secretary could seek changes to the federal rules or urge states or other organizations to seek changes; and (7) both sets of requirements provided for annual publication of Secretarial decisions. In addition, the process for exception determinations provided for a maximum effective period of three years for such determinations.

The following changes have been made to subpart B in the final rules. First, § 160.201 now expressly...
Implied Repeal Analysis

When faced with the need to determine how different federal laws interact with one another, we turn to the judiciary’s approach. Courts apply the implied repeal analysis to resolve tensions that appear to exist between two or more statutes. While the implication of a regulation-on-regulation conflict is unclear, courts agree that administrative rules and regulations that do not conflict with express statutory provisions have the force and effect of law. Thus, we believe courts would apply the standard rules of interpretation that apply to statutes to address questions of interpretation with regard to regulatory conflicts.

When faced with two potentially conflicting statutes, courts attempt to construe them so that both are given effect. If this construction is not possible, courts will look for express language in the later statute, or an intent in its legislative history, indicating that Congress intended the later statute to repeal the earlier one. If there is no expressed intent to repeal the earlier statute, courts will characterize the statutes as either general or specific. Ordinarily, later, general statutes will not repeal the special provisions of an earlier, specific statute. In some cases, when a later, general statute creates an irreconcilable conflict or is manifestly inconsistent with the earlier, specific statute in a manner that indicates a clear and manifest Congressional intent to repeal the earlier statute, courts will find that the later statute repeals the earlier statute by implication. In these cases, the latest legislative action may prevail and repeal the prior law, but only to the extent of the conflict.

There should be few instances in which conflicts exist between a statute or regulation and the rules below. For example, if a statute permits a covered entity to disclose protected health information and the rules below prohibit the use or dissemination of that information, courts would attempt to resolve it so that both laws applied. For example, if a statute or regulation permits dissemination of protected health information, but the rules below prohibit the use or disclosure without an authorization, we believe a covered entity would be able to comply with both because it could obtain an authorization under § 164.508 before disseminating the information under the other law.

Many apparent conflicts will not be true conflicts. For example, if a conflict
appears to exist because a previous statute or regulation requires a specific use or disclosure of protected health information that the rules below appear to prohibit, the use or disclosure pursuant to that statute or regulation would not be a violation of the privacy regulation because § 164.512(a) permits covered entities to use or disclose protected health information as required by law.

If a statute or regulation prohibits dissemination of protected health information, but the privacy regulation requires that an individual have access to that information, the earlier, more specific statute would apply. The interaction between the Clinical Laboratory Improvement Amendments regulation is an example of this type of conflict. From our review of several federal laws, it appears that Congress did not intend for the privacy regulation to override existing statutory requirements in these instances.

Examples of Interaction

We have summarized how certain federal laws interact with the privacy regulation to provide specific guidance in areas deserving special attention and to serve as examples of the analysis involved. In the Response to Comment section, we have provided our responses to specific questions raised during the comment period.

The Privacy Act

The Privacy Act of 1974, 5 U.S.C. 552a, prohibits disclosures of records contained in a system of records maintained by a federal agency (or its contractors) without the written request or consent of the individual to whom the record pertains. This general rule is subject to various statutory exceptions. In addition to the disclosures explicitly permitted in the statute, the Privacy Act permits agencies to disclose information for other purposes compatible with the purpose for which the information was collected by identifying the disclosure as a “routine use” and publishing notice of it in the Federal Register. The Act applies to all federal agencies and certain federal contractors who operate Privacy Act systems of records on behalf of federal agencies.

Some federal agencies and contractors of federal agencies that are covered entities under the privacy rules are subject to the Privacy Act. These entities must comply with all applicable federal statutes and regulations. For example, if the privacy regulation permits a disclosure, but the disclosure is not permitted by the Privacy Act, the federal agency may not make the disclosure. If, however, the Privacy Act allows a federal agency the discretion to make a routine use disclosure, but the privacy regulation prohibits the disclosure, the federal agency will have to apply its discretion in a way that complies with the regulation. This means not making the particular disclosure.

The Freedom of Information Act

FOIA, 5 U.S.C. 552, provides for public disclosure, upon the request of any person, of many types of information in the possession of the federal government, subject to nine exemptions and three exclusions. For example, Exemption 6 permits federal agencies to withhold “personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.” 5 U.S.C. 552(b)(6).

Uses and disclosures required by FOIA come within § 164.512(a) of the privacy regulation that permits uses or disclosures made by law if the uses or disclosures meet the relevant requirements of the law. Thus, a federal agency must determine whether it may apply an exemption or exclusion to redact the protected health information when responding to a FOIA request. When a FOIA request asks for documents that include protected health information, we believe the agency, when appropriate, must apply Exemption 6 to preclude the release of medical files or otherwise redact identifying details before disclosing the remaining information.

We offer the following analysis for federal agencies and federal contractors who operate Privacy Act systems of records on behalf of federal agencies and must comply with FOIA and the privacy regulation. If presented with a FOIA request that would result in the disclosure of protected health information, a federal agency must first determine if FOIA requires the disclosure or if an exemption or exclusion would be appropriate. We believe that generally a disclosure of protected health information, when requested under FOIA, would come within FOIA Exemption 6. We recognize, however, that the application of this exemption to information about deceased individuals requires a different analysis than that applicable to living individuals because, as a general rule, under the Privacy Act, privacy rights are extinguished at death. However, under FOIA, it is entirely appropriate to consider the privacy interests of a decedent’s survivors under Exemption 6. See Department of Justice FOIA Guide 2000, Exemption 6: Privacy Considerations. Covered entities subject to FOIA must evaluate each disclosure on a case-by-case basis, as they do now under current FOIA procedures.

Federal Substance Abuse Confidentiality Requirements

The federal confidentiality of substance abuse patient records statute, section 543 of the Public Health Service Act, 42 U.S.C. 290dd-2, and its implementing regulation, 42 CFR part 2, establish confidentiality requirements for patient records that are maintained in connection with the performance of any federally-assisted specialized alcohol or drug abuse program. Substance abuse programs are generally programs or personnel that provide alcohol or drug abuse treatment, diagnosis, or referral for treatment. The term “federally-assisted” is broadly defined and includes federally conducted or funded programs, federally licensed or certified programs, and programs that are tax exempt.

Certain exceptions apply to information held by the Veterans Administration and the Armed Forces.

There are a number of health care providers that are subject to both these rules and the substance abuse statute and regulations. In most cases, a conflict will not exist between these rules. These privacy rules permit a health care provider to disclose information in a number of situations that are not permitted under the substance abuse regulation. For example, disclosures allowed, without patient authorization, under the privacy rule for law enforcement, judicial and administrative proceedings, public health, health oversight, directory assistance, and as required by other laws would generally be prohibited under the substance abuse statute and regulation. However, because these disclosures are permissive and not mandatory, there is no conflict. An entity would not be in violation of the privacy rules for failing to make these disclosures.

Similarly, provisions in the substance abuse regulation provide for permissive disclosures in case of medical emergencies, to the FDA, for research activities, for audit and evaluation activities, and in response to certain court orders. Because these are permissive disclosures, programs subject to both the privacy rules and the substance abuse rule are able to comply with both rules even if the privacy rules restrict these types of disclosures. In addition, the privacy rules generally require that an individual be given access to his or her own health information. Under the substance abuse
regulation, programs may provide such access, so there is no conflict.

The substance abuse regulation requires notice to patients of the substance abuse confidentiality requirements and provides for written consent for disclosure. While the privacy rules have requirements that are somewhat different, the program may use notice and authorization forms that include all the elements required by both regulations. The substance abuse rule provides a sample notice and a sample authorization form and states that the use of these forms would be sufficient. While these forms do not satisfy all of the requirements of the privacy regulation, there is no conflict because the substance abuse regulation does not mandate the use of these forms.

Employee Retirement Income Security Act of 1974

ERISA was enacted in 1974 to regulate pension and welfare benefit plans established by private sector employers, unions, or both, to provide benefits to their workers and dependents. Under ERISA, plans that provide “through the purchase of insurance or otherwise * * * medical, surgical, or hospital care or benefits, or benefits in the event of sickness, accident, disability, [or] death” are defined as employee welfare benefit plans. 29 U.S.C. 1002(1). In 1996, HIPAA amended ERISA to require portability, nondiscrimination, and renewability of health benefits provided by group health plans and group health insurance issuers. Numerous, although not all, ERISA plans are covered under the rules proposed below as “health plans.”

Section 514(a) of ERISA, 29 U.S.C. 1144(a), preempts all state laws that “relate to” any employee benefit plan. However, section 514(b) of ERISA, 29 U.S.C. 1144(b)(2)(A), expressly saves from preemption state laws that regulate insurance. Section 514(b)(2)(B) of ERISA, 29 U.S.C. 1144(b)(2)(B), provides that an ERISA plan is deemed not to be an insurer for the purpose of regulating the plan under the state insurance laws. Thus, under the deemer clause, states may not treat ERISA plans as insurers subject to direct regulation by state law. Finally, section 514(d) of ERISA, 29 U.S.C. 1144(d), provides that ERISA does not “alter, amend, modify, invalidate, impair, or supersede any law of the United States.”

We considered whether the preemption provision of section 264(c)(2) of HIPAA would give effect to state laws that ERISA otherwise be preempted by section 514(a) of ERISA. As discussed above, our reading of the statutes together is that the effect of section 264(c)(2) is only to leave in place state privacy protections that would otherwise apply and that are more stringent than the federal privacy protections.

Many health plans covered by the privacy regulation are also subject to ERISA requirements. Our discussions and consultations have not uncovered any particular ERISA requirements that would conflict with the rules.

The Family Educational Rights and Privacy Act

FERPA, as amended, 20 U.S.C. 1232g, provides parents of students and eligible students (students who are 18 or older) with privacy protections and rights for the records of students maintained by federally funded educational agencies or institutions or persons acting for these agencies or institutions. We have excluded education records covered by FERPA, including those education records designated as education records under Parts B, C, and D of the Individuals with Disabilities Education Act Amendments of 1997, from the definition of protected health information. For example, individually identifiable health information of students under the age of 18 created by a nurse in a primary or secondary school that receives federal funds and that is subject to FERPA is an education record, but not protected health information. Therefore, the privacy regulation does not apply. We followed this course because Congress specifically addressed how information in education records should be protected in FERPA.

We have also excluded certain records, those described at 20 U.S.C. 1232g(a)(4)(B)(iv), from the definition of protected health information because FERPA also provided a specific structure for the maintenance of these records. These are records (1) of students who are 18 years or older or are attending post-secondary educational institutions, (2) maintained by a physician, psychiatrist, psychologist, or recognized professional or paraprofessional acting or assisting in that capacity, (3) that are made, maintained, or used only in connection with the provision of treatment to the student, and (4) that are not available to anyone, except a physician or appropriate professional reviewing the record as designated by the student. Because FERPA excludes these records from its protections only to the extent they are not available to anyone other than persons providing treatment to students, any use or disclosure of the record for other purposes, including providing access to the individual student who is the subject of the information, would turn the record into an education record. As education records, they would be subject to the protections of FERPA.

These exclusions are not applicable to all schools, however. If a school does not receive federal funds, it is not an educational agency or institution as defined by FERPA. Therefore, its records that contain individually identifiable health information are not education records. These records may be protected health information. The educational institution or agency that employs a school nurse is subject to our regulation as a health care provider if the school nurse or the school engages in a HIPAA transaction.

While we strongly believe every individual should have the same level of privacy protection for his/her individually identifiable health information, we did not provide Congress with authority to disturb the scheme it had devised for records maintained by educational institutions and agencies under FERPA. We do not believe Congress intended to amend or preempt FERPA when it enacted HIPAA.

With regard to the records described at 20 U.S.C. 1232g(a)(4)(B)(iv), we considered requiring health care providers engaged in HIPAA transactions to comply with the privacy regulation up to the point those records were used or disclosed for purposes other than treatment. At that point, the records would be converted from protected health information into education records. This conversion would occur any time a student sought to exercise his/her access rights. The provider, then, would need to treat the record in accordance with FERPA’s requirements and be relieved from its obligations under the privacy regulation. We chose not to adopt this approach because it would be unduly burdensome to require providers to comply with two different, yet similar, sets of regulations and inconsistent with the policy in FERPA that these records be exempt from regulation to the extent the records were used only to treat the student.

Gramm-Leach-Bliley

In 1999, Congress passed Gramm-Leach-Bliley (GLB), Pub. L. 106–102, which included provisions, section 501 et seq., that limit the ability of financial institutions to disclose “nonpublic personal information” about consumers to non-affiliated third parties and require financial institutions to provide customers with their privacy policies and practices with respect to nonpublic
personal information. In addition, Congress required seven agencies with jurisdiction over financial institutions to promulgate regulations as necessary to implement these provisions. GLB and its accompanying regulations define “financial institutions” as including institutions engaged in the financial activities of bank holding companies, which may include the business of insuring. See 15 U.S.C. 6809(3); 12 U.S.C. 1843(k). However, Congress did not provide the designated federal agencies with the authority to regulate health insurers. Instead, it provided states with an incentive to adopt and have their state insurance authorities enforce these rules. See 15 U.S.C. 6805. If a state were to adopt laws consistent with GLB, health insurers would have to determine how to comply with both sets of rules.

Thus, GLB has caused concern and confusion among health plans that are subject to our privacy regulation. Although Congress remained silent as to its understanding of the interaction of GLB and HIPAA’s privacy provisions, the Federal Trade Commission and other agencies implementing the GLB privacy provisions noted in the preamble to their GLB regulations that they “would consult with HHS to avoid the imposition of duplicative or inconsistent requirements.” 65 Fed. Reg. 33646, 33648 (2000). Additionally, the FTC also noted that “persons engaged in providing insurance” would be within the jurisdiction of state insurance authorities and not within the jurisdiction of the FTC. Id.

Because the FTC has clearly stated that it will not enforce the GLB privacy provisions against persons engaged in providing insurance, health plans will not be subject to dual federal agency jurisdiction for information that is both nonpublic personal information and protected health information. If states choose to adopt GLB-like laws or regulations, which may or may not track the federal rules completely, health plans would need to evaluate these laws under the preemption analysis described in subpart B of Part 160.

Federally Funded Health Programs

These rules will affect various federal programs, some of which may have requirements that are, or appear to be, inconsistent with the requirements of these regulations. This programs include those operated directly by the federal government (such as health programs for military personnel and veterans) as well as programs in which health services or benefits are provided by the private sector or by state or local governments, but which are governed by various federal laws (such as Medicare, Medicaid, and ERISA).

Congress explicitly included some of these programs in HIPAA, subjecting them directly to the privacy regulation. Section 1171 of the Act defines the term “health plan” to include the following federally conducted, regulated, or funded programs: Group plans under ERISA that either have 50 or more participants or are administered by an entity other than the employer who established and maintains the plan; federally qualified health maintenance organizations; Medicare; Medicaid; Medicare supplemental policies; the health care program for active military personnel; the health care program for veterans; the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS); the Indian health service program under the Indian Health Care Improvement Act, 25 U.S.C. 1601, et seq.; and the Federal Employees Health Benefits Program. There also are many other federally conducted, regulated, or funded programs in which individually identifiable health information is created or maintained, but which do not come within the statutory definition of “health plan.” While these latter types of federally conducted, regulated, or assisted programs are not explicitly covered by part C of title XI in the same way that the programs listed in the statutory definition of “health plan” are covered, the statute may nonetheless apply to transactions and other activities conducted under such programs. This is likely to be the case when the federal entity or federally regulated or funded entity provides health services; the requirements of part C may apply to such an entity as a “health care provider.” Thus, the issue of how different federal requirements apply is likely to arise in numerous contexts.

There are a number of authorities under the Public Health Service Act and other legislation that contain explicit confidentiality requirements, either in the enabling legislation or in implementing regulations. Many of these are so general that there would appear to be no problem of inconsistency, in that nothing in those laws or regulations would appear to restrict the provider’s ability to comply with the privacy regulation’s requirements.

There may, however, be authorities under which either the requirements of the enabling legislation or of the program regulations would impose requirements that differ from these rules.

For example, regulations applicable to the substance abuse block grant program funded under section 1943(b) of the Public Health Service Act require compliance with 42 CFR part 2, and, thus, raise the issues identified above in the substance abuse confidentiality regulations discussion. There are a number of federal programs which, either by statute or by regulation, restrict the disclosure of patient information to, with minor exceptions, disclosures “required by law.” See, for example, the program of projects for prevention and control of sexually transmitted diseases funded under section 318(e)(5) of the Public Health Service Act (42 CFR 51b.404); the regulations implementing the community health center program funded under section 330 of the Public Health Service Act (42 CFR 51c.110); the regulations implementing the program of grants for family planning services under title X of the Public Health Service Act (42 CFR 59.13); the regulations implementing the program of grants for black lung clinics funded under 30 U.S.C. 437(a) (42 CFR 55a.104); the regulations implementing the program of maternal and child health projects funded under section 501 of the Act (42 CFR 51a.6); the regulations implementing the program of medical examinations of coal miners (42 CFR 37.80(a)). These legal requirements would restrict the grantees or other entities providing services under the programs involved from making many of the disclosures that §§164.510 or 164.512 would permit. In some cases, permissive disclosures for treatment, payment, or health care operations would also be limited. Because §§164.510 and 164.512 are merely permissive, there would not be a conflict between the program requirements, because it would be possible to comply with both. However, entities subject to both sets of requirements would not have the total range of discretion that they would have if they were subject only to this regulation.

Food, Drug, and Cosmetic Act

The Food, Drug, and Cosmetic Act, 21 U.S.C. 301, et seq., and its accompanying regulations outline the responsibilities of the Food and Drug Administration with regard to monitoring the safety and effectiveness of drugs and devices. Part of the agency’s responsibility is to obtain reports about adverse events, track medical devices, and engage in other types of post marketing surveillance. Because many of these reports contain protected health information, the information within them may come within the purview of the privacy rules.
Although some of these reports are required by the Food, Drug, and Cosmetic Act or its accompanying regulations, other types of reporting are voluntary. We believe that these reports, while not mandated, play a critical role in ensuring that individuals receive safe and effective drugs and devices.

Therefore, in §164.512(b)(1)(iii), we have provided that covered entities may disclose protected health information to a person subject to the jurisdiction of the Food and Drug Administration for specified purposes, such as reporting adverse events, tracking medical devices, or engaging in other postmarketing surveillance. We describe the scope and conditions of such disclosures in more detail in §164.512(b).

**Clinical Laboratory Improvement Amendments**

CLIA, 42 U.S.C. 263a, and the accompanying regulations, 42 CFR part 493, require clinical laboratories to comply with standards regarding the testing of human specimens. This law requires clinical laboratories to disclose test results or reports only to authorized persons, as defined by state law. If a state does not define the term, the federal law defines it as the person who orders the test.

We realize that the person ordering the test is most likely a health care provider and not the individual who is the subject of the protected health information included within the result or report. Under this requirement, therefore, a clinical laboratory may be prohibited by law from providing the individual who is the subject of the test result or report with access to this information.

Although we believe individuals should be able to have access to their individually identifiable health information, we recognize that in the specific area of clinical laboratory testing and reporting, the Health Care Financing Administration, through regulation, has provided that access may be more limited. To accommodate this requirement, we have provided at §164.524(1)(iii) that covered entities maintaining protected health information that is subject to the CLIA requirements do not have to provide individuals with a right of access to or a right to inspect and obtain a copy of this information if the disclosure of the information to the individual would be prohibited by CLIA.

Not all clinical laboratories, however, will be exempted from providing individuals with these rights. If a clinical laboratory operates in a state in which the term “authorized person” is defined to include the individual, the clinical laboratory would have to provide the individual with these rights. Similarly, if the individual was the person who ordered the test and an authorized person included such a person, the laboratory would be required to provide the individual with these rights.

Additionally, CLIA regulations exempt the components or functions of “research laboratories that test human specimens but do not report patient specific results for the diagnosis, prevention or treatment of any disease or impairment of, or the assessment of the health of individual patients” from the CLIA regulatory scheme. 42 CFR 493.5(a)(2). If subject to the access requirements of this regulation, such entities would be forced to meet the requirements of CLIA from which they are currently exempt. To eliminate this additional regulatory burden, we have also excluded covered entities that are exempt from CLIA under that rule from the access requirement of this regulation.

Although we are concerned about the lack of immediate access by the individual, we believe that, in most cases, individuals who receive clinical tests will be able to receive their test results or reports through the health care provider who ordered the test for them. The provider will receive the information from the clinical laboratory. Assuming that the provider is a covered entity, the individual will have the right of access and right to inspect and copy this protected health information through his or her provider.

**Other Mandatory Federal or State Laws**

Many federal laws require covered entities to provide specific information to specific entities in specific circumstances. If a federal law requires a covered entity to disclose a specific type of information, the covered entity would not need an authorization under §164.508 to make the disclosure because the final rule permits covered entities to make disclosures that are required by law under §164.512(a).

Other laws, such as the Social Security Act (including its Medicare and Medicaid provisions), the Family and Medical Leave Act, the Public Health Service Act, Department of Transportation regulations, the Environmental Protection Act and its accompanying regulations, the National Labor Relations Act, the Federal Aviation Administration, and the Federal Aviation Administration rules, may also contain provisions that require covered entities or others to use or disclose protected health information for specific purposes.

When a covered entity is faced with a question as to whether the privacy regulation would prohibit the disclosure of protected health information that it seeks to disclose pursuant to a federal law, the covered entity should determine if the disclosure is required by that law. In other words, it must determine if the disclosure is mandatory rather than merely permissible. If it is mandatory, a covered entity may disclose the protected health information pursuant to §164.512(a), which permits covered entities to disclose protected health information without an authorization when the disclosure is required by law. If the disclosure is not required (but only permitted) by the federal law, the covered entity must determine if the disclosure comes within one of the other permissible disclosures. If the disclosure does not come within one of the provisions for permissible disclosures, the covered entity must obtain an authorization from the individual who is the subject of the information or de-identify the information before disclosing it.

If another federal law prohibits a covered entity from using or disclosing information that is also protected health information, but the privacy regulation permits the use or disclosure, a covered entity will need to comply with the other federal law and not use or disclose the information.

**Federal Disability Nondiscrimination Laws**

The federal laws barring discrimination on the basis of disability protect the confidentiality of certain medical information. The information protected by these laws falls within the larger definition of “health information” under this privacy regulation. The two primary disability nondiscrimination laws are the Americans with Disabilities Act (ADA), 42 U.S.C. 12101 et seq., and the Rehabilitation Act of 1973, as amended, 29 U.S.C. 701 et seq., although other laws barring discrimination on the basis of disability (such as the nondiscrimination provisions of the Workforce Investment Act of 1988, 29 U.S.C. 2938) may also apply. Federal disability nondiscrimination laws cover two general categories of entities relevant to this discussion: employers and entities that receive federal financial assistance.

Employers are not covered entities under the privacy regulation. Many employers, however, are subject to the federal disability nondiscrimination laws and, therefore, must protect the
confidentiality of all medical information concerning their applicants and employees.

The employment provisions of the ADA, 42 U.S.C. 12111 et seq., expressly cover employers of 15 or more employees, employment agencies, labor organizations, and joint labor-management committees. Since 1992, employment discrimination complaints arising under sections 501, 503, and 504 of the Rehabilitation Act also have been subject to the ADA’s employment nondiscrimination standards. See “Rehabilitation Act Amendments,” Pub. L. No. 102–569, 106 Stat. 4344. Employers subject to ADA nondiscrimination standards have confidentiality obligations regarding applicant and employee medical information. Employers must treat such medical information, including medical information from voluntary health or wellness programs and any medical information that is voluntarily disclosed as a confidential medical record, subject to limited exceptions.

Transmission of health information by an employer to a covered entity, such as a group health plan, is governed by the ADA confidentiality restrictions. The ADA, however, has been interpreted to permit an employer to use medical information for insurance purposes. See 29 CFR part 1630 App. at §1630.14(b) (describing such use with reference to 29 CFR 1630.16(f), which in turn explains that the ADA regulation “is not intended to disrupt the current regulatory structure for self-insured employers.”) Of current industry practices in sales, underwriting, pricing, administrative and other services, claims and similar insurance related activities based on classification of risks as regulated by the states”). See also, “Enforcement Guidance on Disability-Related Inquiries and Medical Examinations of Employees under the Americans with Disabilities Act,” 4, n.10 (July 26, 2000), FEP Manual (BNA) (“Enforcement Guidance on Disability-Related Questions and Medical Examinations”) (October 10, 1995), 8 FEP Manual (BNA) 405:7191 (1995) (also available at http://www.eeoc.gov). Thus, use of medical information for insurance purposes may include transmission of health information to a covered entity.

If an employer-sponsored group health plan is closely linked to an employer, the group health plan may be subject to ADA confidentiality restrictions as well as this privacy regulation. See Carparts Distribution Center, Inc. v. Automotive Wholesaler’s Association of New England, Inc., 37 F.3d 12 (1st Cir. 1994)(setting forth three bases for ADA Title I jurisdiction over an employer-provided medical reimbursement plan, in a discrimination challenge to the plan’s HIV/AIDS cap). Transmission of applicant or employee health information by the employer’s management to the group health plan may be permitted under the ADA standards as the use of medical information for insurance purposes. Similarly, disclosure of such medical information by the group health plan, under the limited circumstances permitted by this privacy regulation, may involve use of the information for insurance purposes as broadly described in the ADA discussion above.

Entities that receive federal financial assistance, which may also be covered entities under the privacy regulation, are subject to section 504 of the Rehabilitation Act (29 U.S.C. 794) and its implementing regulations. Each federal agency has promulgated such regulations that apply to entities that receive financial assistance from that agency (“recipients”). These regulations may limit the disclosure of medical information about persons who apply to or participate in a federal financially assisted program or activity. For example, the Department of Labor’s section 504 regulation (found at 29 CFR part 32), consistent with the ADA standards, requires recipients that conduct employment-related programs, including employment training programs, to maintain confidentiality regarding any information about the medical condition or history of applicants to or participants in the program or activity. Such information must be kept separate from other information about the applicant or participant and may be provided to certain specified individuals and entities, but only under certain limited circumstances described in the regulation. See 29 CFR 32.15(d). Apart from those circumstances, the information must be afforded the same confidential treatment as medical records. A recipient of federal financial assistance from the Department of Health and Human Services, such as hospitals, are subject to the ADA’s employment nondiscrimination standards. They must, accordingly, maintain confidentiality regarding the medical condition or history of applicants for employment and employees.

The statutes and implementing regulations under which the federal financial assistance is provided may contain additional provisions regulating collection and disclosure of medical, health, and disability-related information. See, e.g., section 188 of the Workforce Investment Act of 1988 (29 U.S.C. 2938) and 29 CFR 37.3(b). Thus, covered entities that are subject to this privacy regulation, may also be subject to the restrictions in these laws as well.

U.S. Safe Harbor Privacy Principles (European Union Directive on Data Protection)

The U.S. Directive became effective in October 1998 and prohibits European Union Countries from permitting the transfer of personal data to another country without ensuring that an “adequate level of protection,” as determined by the European Commission, exists in the other country or pursuant to one of the Directive’s derogations of this rule, such as pursuant to unambiguous consent or to fulfill a contract with the individual. In July 2000, the European Commission concluded that the U.S. Safe Harbor Privacy Principles 1 constituted “adequate protection.” Adoption of the Principles is voluntary. Organizations wishing to engage in the exchange of personal data with E.U. countries may assert compliance with the Principles as one means of obtaining data from E.U. countries.

The Department of Commerce, which negotiated these Principles with the European Commission, has provided guidance for U.S. organizations seeking to adhere to the guidelines and comply with U.S. law. We believe this guidance addresses the concerns covered entities seeking to transfer personal data from E.U. countries may have. When “U.S. law imposes a conflicting obligation, U.S. organizations whether in the safe harbor or not must comply with the law.” An organization does not need to comply with the Principles if a conflicting U.S. law “explicitly authorizes” the particular conduct. The organization’s non-compliance is “limited to the extent necessary to meet the overriding legitimate interests further[ed] by such authorization.” However, if only a difference exists such that an “option is allowable under the Principles and/or U.S. law, organizations are expected to opt for the higher protection where possible.” Questions regarding compliance and interpretation will be decided based on U.S. law. See Department of Commerce, Memorandum on Damages for Breaches

1 The Principles are: (1) Notice; (2) Choice (i.e., consent); (3) Onward Transfer (i.e., subsequent disclosures); (4) Security; (5) Data Integrity; (6) Access; and (7) Enforcement. Department of Commerce, Safe Harbor Principles, July 21, 2000 (“Principles”). They do not apply to manually processed data.
of Privacy, Legal Authorizations and Mergers and Takeovers in U.S. Law 5 (July 17, 2000); Department of Commerce, Safe Harbor Privacy Principles Issued by the U.S. Department of Commerce on July 21, 2000, 65 FR 45666 (2000). The Principles and our privacy regulation are based on common principles of fair information practices. We believe they are essentially consistent and that an organization complying with our privacy regulation can fairly and correctly self-certify that it complies with the Principles. If a true conflict arises between the privacy regulation and the Principles, the Department of Commerce’s guidance provides that an entity must comply with the U.S. law.

Part 160—Subpart C—Compliance and Enforcement

Proposed § 164.522 included five paragraphs addressing activities related to the Secretary’s enforcement of the rule. These provisions were based on procedures and requirements in various civil rights regulations. Proposed § 164.522(a) provided that the Secretary would, to the extent practicable, seek the cooperation of covered entities in obtaining compliance, and could provide technical assistance to covered entities to help them comply voluntarily. Proposed § 164.522(b) provided that individuals could file complaints with the Secretary. However, where the complaint related to the alleged failure of a covered entity to amend or correct protected health information as proposed in the rule, the Secretary would not make certain determinations such as whether protected health information was accurate or complete. This paragraph also listed the requirements for filing complaints and indicated that the Secretary may investigate such complaints and what might be reviewed as part of such investigation.

Under proposed § 164.522(c), the Secretary would be able to conduct compliance reviews. Proposed § 164.522(d) described the responsibilities that covered entities keep records and reports as prescribed by the Secretary, cooperate with compliance reviews, permit the Secretary to have access to their facilities, books, records, and other sources of information during normal business hours, and seek records held by other persons. This paragraph also stated that the Secretary would maintain the confidentiality of protected health information she collected and prohibit covered entities from taking retaliatory action against individuals for filing complaints or for other activities.

Proposed § 164.522(e) provided that the Secretary would inform the covered entity and the individual complainant if an investigation or review indicated a failure to comply and would seek to resolve the matter informally if possible. If the matter could not be resolved informally, the Secretary would be able to issue written findings, be required to inform the covered entity and the complainant, and be able to pursue civil enforcement action or make a criminal referral. The Secretary would also be required to inform the covered entity and the individual complainant if no violation was found.

We make the following changes and additions to proposed § 164.522 in the final rule. First, we have moved this section to part 160, as a new subpart C, “Compliance and Enforcement.” Second, we add new sections that explain the applicability of the regulations and incorporate certain definitions. Accordingly, we change the proposed references to violations of “this subpart” to violations of “the applicable requirements of part 160 and the applicable standards, requirements, and implementation specifications of subpart E of part 164 of this subchapter.” Third, the final rule at § 160.306(a) provides that any person, not just an “individual” (the person who is the subject of the individually identifiable health information) may file a complaint with the Secretary. Other references in this subpart to an individual have been changed accordingly. Fourth, we delete the proposed § 164.522(a) language that indicated that the Secretary would not determine whether information was accurate or complete, or whether errors or omissions might have an adverse effect on the individual. While the policy is not changed in that the Secretary will not make such determinations, we believe the language is unnecessary and may suggest that we would make all other types of determinations, such as all determinations in which the regulation defers to the professional judgment of the covered entity. Fifth, § 160.306(b)(3) requires that complaints be filed within 180 days of when the complainant knew or should have known that the act or omission complained of occurred, unless this time limit is waived by the Secretary for good cause shown. Sixth, § 160.310(b) requires cooperation with investigations as well as compliance reviews. Seventh, § 160.310(c)(1) provides that the Secretary must be provided access to a covered entity’s facilities, books, records, accounts, and other sources of information, including

protected health information, at any time and without notice where exigent circumstances exist, such as where documents might be hidden or destroyed. Eighth, the provision proposed at § 164.522(d) that would prohibit covered entities from taking retaliatory action against individuals for filing a complaint with the Secretary or for certain other actions has been changed and moved to § 164.530. Ninth, § 160.312(a)(2) deletes the reference in the proposed rule to using violation findings as a basis for initiating action to secure penalties. This deletion is not a substantive change. This language was removed because penalties will be addressed in the enforcement regulation. As in the NPRM, the Secretary may promulgate alternative procedures for complaints relating to national security. For example, to protect classified information, we may promulgate rules that would allow an intelligence community agency to create a separate body within that agency to receive complaints.

The Department plans to issue an Enforcement Rule that applies to all of the regulations that the Department issues under the Administrative Simplification provisions of HIPAA. This regulation will address the imposition of civil monetary penalties and the referral of criminal cases where there has been a violation of this rule. Penalties are provided for under section 262 of HIPAA. The Enforcement Rule would also address the topics covered by Subpart C below. It is expected that this Enforcement Rule would replace Subpart C.

Part 164—Subpart A—General Provisions

Section 164.102—Statutory Basis

In the NPRM, we provided that the provisions of this part are adopted pursuant to the Secretary’s authority to prescribe standards, requirements, and implementation standards under part C of title XI of the Act and section 264 of Public Law 104–191. The final rule adopts this language.

Section 164.104—Applicability

In the NPRM, we provided that except as otherwise provided, the provisions of this part apply to covered entities: health plans, health care clearinghouses, and health care providers who transmit health information in electronic form in connection with any transaction referred to in section 1173(a)(1) of the Act. The final rule adopts this language.
Section 164.106—Relationship to Other Parts

The final rule adds a new provision stating that in complying with the requirements of this part, covered entities are required to comply with the applicable provisions of parts 160 and 162 of this subchapter. This language references Subchapter C in this regulation, Administrative Data Standards and Related Requirements; Part 160, General Administrative Requirements; and Part 162, Administrative Requirements. Part 160 includes requirements such as keeping records and submitting compliance reports to the Secretary and cooperating with the Secretary’s complaint investigations and compliance reviews. Part 162 includes requirements such as requiring a covered entity that conducts an electronic transaction, adopted under this part, with another covered entity to conduct the transaction as a standard transaction as adopted by the Secretary.

Part 164—Subpart B—Reserved

Part 164—Subpart E—Reserved

Section 164.500—Applicability

The discussion below describes the entities and the information that are subject to the final regulation. Many of the provisions of the regulation are presented as “standards.” Generally, the standards indicate what must be accomplished under the regulation and implementation specifications describe how the standards must be achieved.

Covered Entities

We proposed in the NPRM to apply the standards in the regulation to health plans, health care clearinghouses, and to any health care provider who transmits health information in electronic form in connection with transactions referred to in section 1173(a)(1) of the Act. The proposal referred to these entities as “covered entities.” We have revised § 164.500 to clarify the applicability of the rule to health care clearinghouses. As we stated in the preamble to the NPRM, we believe that, in most instances health care clearinghouses will receive protected health information as a business associate to another covered entity. This understanding was confirmed by the comments and by our fact finding. Clearinghouses rarely have direct contact with individuals, and usually will not be in a position to create protected health information or to receive it directly from them. Unlike health plans or providers, clearinghouses usually convey and repackage information and do not add materially to the substance of protected health information of an individual.

The revised language provides that clearinghouses are not subject to certain requirements in the rule when acting as business associates of other covered entities. As revised, a clearinghouse acting as a business associate is subject only to the provisions of this section to the definitions, to the general rules for uses and disclosures of protected health information (subject to limitations), to the provision relating to health care components, to the provisions relating to uses and disclosures for which consent, individual authorization or an opportunity to agree or object is not required (subject to limitations), to the transition requirements and to the compliance date. With respect to the uses and disclosures authorized under § 164.502 or § 164.512, a clearinghouse acting as a business associate is not authorized by the rule to make any use or disclosure not permitted by its business associate contract. Clearinghouses acting as business associates and that are subject to the other requirements of this rule, which include the provisions relating to procedural requirements, requirements for obtaining consent, individual authorization or agreement, provision of a notice, individual rights to request privacy protection, access and amend information and receive an accounting of disclosures and the administrative requirements.

We note that, even as business associates, clearinghouses that remain covered entities, like other covered entities, are responsible under this regulation for abiding by the terms of business associate contracts. For example, while the provisions regarding individuals’ access to and right to request corrections to protected health information about them apply only to health plans and covered health care providers, clearinghouses may have some responsibility for providing such access under their business associate contracts. A clearinghouse (or any other covered entity) that violates the terms of a business associate contract also is in direct violation of this rule and, as a covered entity, is subject to compliance and enforcement action.

We clarify that a covered entity is only subject to these rules to the extent that they possess protected health information. Moreover, these rules only apply with regard to protected health information. For example, if a covered entity does not disclose or receive from its business associate any protected health information and no protected health information is created or received by its business associate on behalf of the covered entity, then the business associate requirements of this rule do not apply.

We clarify that the Department of Defense or any other federal agency and any non-governmental organization acting on its behalf, is not subject to this rule when it provides health care in another country to foreign national beneficiaries. The Secretary believes that this exemption is warranted because application of the rule could have the unintended effect of impeding or frustrating the conduct of such activities, such as interfering with the ability of military command authorities to obtain protected health information on prisoners of war, refugees, or detainees for whom they are responsible under international law. See the preamble to the definition of “individual” for further discussion.

Covered Information

We proposed in the NPRM to apply the requirements of the rule to individually identifiable health information that is or has been electronically transmitted or maintained by a covered entity. The provisions would have applied to the information itself, referred to as protected health information in the rule, and not to the particular records in which the information is contained. We proposed that once information was maintained or transmitted electronically by a covered entity, the protections would follow the information in whatever form, including paper records, in which it exists while held by a covered entity. The proposal would not have applied to information that was never electronically maintained or transmitted by a covered entity.

In the final rule, we extend the scope of protections to all individually identifiable health information in any form, electronic or non-electronic, that is held or transmitted by a covered entity. This includes individually identifiable health information in paper records that never has been electronically stored or transmitted. (See § 164.501, definition of “protected health information,” for further discussion.)

Section 164.501—Definitions

Correctional Institution

The proposed rule did not define the term correctional institution. The final rule defines correctional institution as any penal or correctional facility, jail, reformatory, detention center, work farm, halfway house, or residential community program center operated by, or under contract to, the United States,
a state, a territory, a political subdivision of a state or territory, or an Indian tribe, for the confinement or rehabilitation of persons charged with or convicted of a criminal offense or other persons held in lawful custody. Other persons held in lawful custody includes juvenile offenders adjudicated delinquent, aliens detained awaiting deportation, persons committed to mental institutions through the criminal justice system, witnesses, or others awaiting charges or trial. This language was necessary to explain the privacy rights and protections of inmates in this regulation.

Covered Functions

We add a new term, “covered functions,” as a shorthand way of expressing and referring to the functions that the entities covered by section 1172(a) of the Act perform. Section 1171 defines the terms “health plan”, “health care provider”, and “health care clearinghouse”, in functional terms. Thus, a “health plan” is an individual or group plan “that provides, or pays the cost of, medical care * * *.” A “health care provider” “furnish[es] health care services or supplies,” and a “health care clearinghouse” is an entity that represents “groups of health care providers.” The term “covered functions” is not intended to include various support functions, such as computer support, payroll and other office support, and similar support functions, although we recognize that these support functions must occur in order for the entity to carry out its health care functions. Because such support functions are often also performed for parts of an organization that are not doing functions related to the health care functions and may involve access to and/or use of protected health information, the rules below describe requirements for ensuring that workforce members who perform these support functions do not impermissibly use or disclose protected health information. See § 164.504.

Data Aggregation

The NPRM did not include a definition of data aggregation. In the final rule, data aggregation is defined, with respect to protected health information received by a business associate in its capacity as the business associate of a covered entity, as the combining of such protected health information by the business associate with protected health information received by the business associate in its capacity as a business associate of another covered entity, to permit the creation of data for analyses that relate to the health care operations of the respective covered entities. The definition is included in the final rule to help describe how business associates can assist covered entities to perform health care operations that involve comparative analysis of protected health information from otherwise unaffiliated covered entities. Data aggregation is a service that gives rise to a business associate relationship if the performance of the service involves disclosure of protected health information by the covered entity to the business associate.

Designated Record Set

In the proposed rule, we defined designated record set as “a group of records under the control of a covered entity from which information is retrieved by the name of the individual or by some identifying number, symbol, or other identifying particular assigned to the individual and which is used by the covered entity to make decisions about the individual.” We defined a “record” as “any item, collection, or grouping of protected health information maintained, collected, used, or disseminated by a covered entity.” In the final rule, we modify the definition of designated record set to specify certain records maintained by or for a covered entity that are always part of a covered entity’s designated record sets and to include other records that are used to make decisions about individuals. We do not use the means of retrieval of a record as a defining criterion.

For health plans, designated record sets include, at a minimum, the enrollment, payment, claims adjudication, and case or medical management record systems of the plan. For covered health care providers, designated record sets include, at a minimum, the medical record and billing record about individuals maintained by or for the provider. In addition to these records, designated record sets include any other group of records that are used, in whole or in part, by or for a covered entity to make decisions about individuals. We note that records that otherwise meet the definition of designated record set and which are held by a business associate of the covered entity are part of the covered entity’s designated record sets. Although we do not specify particular types of records that are always included in the designated record sets of clearinghouses when they are not acting as business associates, this definition includes a group of records that such a clearinghouse uses, in whole or in part, to make decisions about individuals.

For the most part we retain, with slight modifications, the definition of “record,” defining it as any item, collection, or grouping of information that includes protected health information and is maintained, collected, used, or disseminated.

Direct Treatment Relationship

This term was not included in the proposed rule. Direct treatment relationship means a relationship between a health care provider and an individual that is not an indirect treatment relationship (see definition of indirect treatment relationship, below). For example, outpatient pharmacists and Web-based providers generally have direct treatment relationships with patients. Outpatient pharmacists fill prescriptions written by other providers, but they furnish the prescription and advice about the prescription directly to the patient, not through another treating provider. Web-based providers generally deliver health care independently, without the orders of another provider.

A provider may have direct treatment relationships with some patients and indirect treatment relationships with others. In some provisions of the final rule, providers with indirect treatment relationships are excepted from requirements that apply to other providers. See § 164.506 regarding consent for uses and disclosures of protected health information for treatment, payment, and health care operations, and § 164.520 regarding notice of information practices. These exceptions apply only with respect to the individuals with whom the provider has an indirect treatment relationship.

Disclosure

We proposed to define “disclosure” to mean the release, transfer, provision of access to, or divulging in any other manner of information outside the entity holding the information. The final rule is unchanged. We note that the transfer of protected health information from a covered entity to a business associate is a disclosure for purposes of this regulation.

Health Care Operations

The preamble to the proposed rule explained that in order for treatment and payment to occur, protected health...
information must be used within entities and shared with business partners. In the proposed rule we provided a definition for “health care operations” to clarify the activities we considered to be “compatible with and directly related to” treatment and payment and for which protected health information could be used or disclosed without individual authorization. These activities included conducting quality assessment and improvement activities, reviewing the competence or qualifications and accrediting/licensing of health care professionals and plans, evaluating health care professional and health plan performance, training future health care professionals, insurance activities relating to the renewal of a contract for insurance, conducting or arranging for medical review and auditing services, and compiling and analyzing information in anticipation of or for use in a civil or criminal legal proceeding. Recognizing the dynamic nature of the health care industry, we acknowledged that the specified categories may need to be modified as the industry evolves.

The preamble discussion of the proposed general rules listed certain activities that would not be considered health care operations because they were sufficiently unrelated to treatment and payment to warrant requiring an individual to authorize such use or disclosure. Those activities included: marketing of health and non-health items and services; disclosure of protected health information for sale, rent or barter; protected health information by a non-health related division of an entity; disclosure of protected health information for eligibility, enrollment, underwriting, or risk rating determinations prior to an individuals’ enrollment in a health plan; disclosure to an employer for employment determinations; and fundraising.

In the final rule, we do not change the general approach of defining health care operations: health care operations are the listed activities undertaken by the covered entity that maintains the protected health information (i.e., one covered entity may not disclose protected health information for the operations of a second covered entity); a covered entity may use any protected health information it maintains for its operations (e.g., a plan may use protected health information about former enrollees as well as current enrollees); we expand the proposed list to reflect many changes requested by commenters.

We modify the proposal that health care operations represent activities “in support of” treatment and payment functions. Instead, in the final rule, health care operations are the enumerated activities to the extent that the activities are related to the covered entity’s functions as a health care provider, health plan or health care clearinghouse, i.e., the entity’s “covered functions.” We make this change to clarify that health care operations includes general administrative and business functions necessary for the covered entity to remain a viable business. While it is possible to draw a connection between all the enumerated activities and “treatment and payment,” for some general business activities (e.g., audits for financial disclosure statements) that connection may be tenuous. The proposed concept also did not include the operations of those health care clearinghouses that may be covered by this rule outside their status as business associate to a covered entity. We expand the definition to include disclosures for the enumerated activities of organized health care arrangements in which the covered entity participates. See also the definition of organized health care arrangements, below.

In addition, we make the following changes and additions to the enumerated subparagraphs:

(1) We add language to clarify that the primary purpose of the studies encompassed by “quality assessment and improvement activities” must not be to obtain generalizable knowledge. A study with such a purpose would meet the rule’s definition of research, and use or disclosure of protected health information would have to meet the requirements of §§ 164.508 or 164.512(i). Thus, studies may be conducted as a health care operation if development of generalizable knowledge is not the primary goal. However, if the study changes and the covered entity intends the results to be generalizable, the change should be documented by the covered entity as proof that, when initiated, the primary purpose was health care operations. We add population-based activities related to improving health or reducing health care costs, protocol development, case management and care coordination, contacting of health care providers and patients with information about treatment alternatives, and related functions that do not entail direct patient care. Many commenters recommended adding the term “disease management” to health care operations. We were unable, however, to find a generally accepted definition of the term. Rather than rely on this label, we include many of the functions often included in discussions of disease management in this definition or in the definition of treatment. This topic is discussed further in the comment responses below.

(2) We have deleted “undergraduate and graduate” as a qualifier for “students,” to make the term more general and inclusive. We add the term “practitioners.” We expand the purposes encompassed to include situations in which health care providers are working to improve their skills. The rule also adds the training of non-health care professionals.

(3) The rule expands the range of insurance related activities to include those related to the creation, renewal or replacement of a contract for health insurance or health benefits, as well as ceding, securing, or placing a contract for reinsurance of risk relating to claims for health care (including stop-loss and excess of loss insurance). For these activities, we also eliminate the proposed requirement that these uses and disclosures apply only to protected health information about individuals already enrolled in a health plan. Under this provision, a group health plan that wants to replace its insurance carrier may disclose certain protected health information to insurance issuers in order to obtain bids on new coverage, and an insurance carrier interested in bidding on new business may use protected health information obtained from the potential new client to develop the product and pricing it will offer. For circumstances in which no new contract is issued, we add a provision in § 164.514(g) restricting the recipient health plan from using or disclosing protected health information obtained for this purpose, other than as required by law. Uses and disclosures in these cases come within the definition of “health care operations,” provided that the requirements of § 164.514(g) are met, if applicable. See § 164.504(f) for requirements for such disclosures by group health plans, as well as specific restrictions on the information that may be disclosed to plan sponsors for such purposes. We note that a covered health care provider must obtain an authorization under § 164.508 in order to disclose protected health information about an individual for purposes of pre-enrollment underwriting; the underwriting is not an “operation” of the provider and that disclosure is not otherwise permitted by a provision of this rule.

(4) We delete reference to the “compiling and analyzing information in anticipation of or for use in a civil or criminal legal proceeding” and replace it with a broader reference to
conducting or arranging for “legal services.”

We add two new categories of activities:

(5) Business planning and development, such as conducting cost-management and planning-related analyses related to managing and operating the entity, including formulary development and administration, development or improvement of methods of payment or coverage policies.

(6) Business management activities and general administrative functions, such as management activities relating to implementation of and compliance with the requirements of this subchapter, fundraising for the benefit of the covered entity to the extent permitted without authorization under §164.514(f), and marketing of certain services to individuals served by the covered entity, to the extent permitted without authorization under §164.514(f) (see discussion in the preamble to that section, below). For example, under this category we permit uses or disclosures of protected health information to determine from whom an authorization should be obtained, for example, to generate a mailing list of individuals who would receive an authorization request.

We add to the definition of health care operations disclosure of protected health information for due diligence to a covered entity that is a potential successor in interest. This provision includes disclosures pursuant to the sale of a covered entity’s business as a going concern, mergers, acquisitions, consolidations, and other similar types of corporate restructuring between covered entities, including a division of a covered entity, and to an entity that is not a covered entity but will become a covered entity if the transfer or sale is completed. Other types of sales of assets, or disclosures to organizations that are not and would not become covered entities, are not included in the definition of health care operations and could only occur if the covered entity obtained valid authorization for such disclosure in accordance with §164.508, or if the disclosure is otherwise permitted under this rule.

We also add to health care operations disclosure of protected health information for resolution of internal grievances. These uses and disclosures include disclosure to an employee and/or employee representative, for example when the employee needs protected health information to demonstrate that the allegations of improper conduct are untrue. We note that such employees and employee representatives are not providing services to or for the covered entity, and, therefore, no business associate contract is required. Also included are resolution of disputes from patients or enrollees regarding the quality of care and similar matters.

We also add use for customer service, including the provision of data and statistical analyses for policyholders, plan sponsors, or other customers, as long as the protected health information is not disclosed to such persons. We recognize that part of the general management of a covered entity is customer service. We clarify that customer service may include the use of protected health information to provide data and statistical analyses. For example, a plan sponsor may want to understand why its costs are rising faster than average, or why utilization in one plant location is different than in another location. An association that sponsors an insurance plan for its members may want information on the relative costs of its plan in different areas. Some plan sponsors may want more detailed analyses that attempt to identify health problems in a work site. We note that when a plan sponsor has several different group health plans, or when such plans provide insurance or coverage through more than one health insurance issuer or HMO, the covered entities may jointly engage in this type of analysis as a health care operation of the organized health care arrangement.

This activity qualifies as a health care operation only if it does not result in the disclosure of protected health information to the customer. The results of the analyses must be presented in a way that does not disclose protected health information. A disclosure of protected health information to the customer as a health care operation under this provision violates this rule. This provision is not intended to permit covered entities to circumvent other provisions in this rule, including requirements relating to disclosures of protected health information to plan sponsors or other business associates of the covered entity. For example, a covered academic medical center may disclose certain protected health information to community health care providers who participate in one of its continuing medical education programs, whether or not such providers are covered health care providers under this rule. A provider attending a continuing education program is not thereby performing services for the covered entity sponsoring the program and, thus, is not a business associate for that purpose. Similarly, health plans may disclose for due diligence purposes to another entity that may or may not be a covered entity or a business associate.

### Health Oversight Agency

The proposed rule would have defined “health oversight agency” as “an agency, person, or entity, including the employees or agents thereof, (1) That is: (i) A public agency; or (ii) A person or entity acting under grant of authority from or contract with a public agency; and (2) Which performs or oversees the performance of any audit; investigation; inspection; licensure or discipline; civil, criminal, or administrative proceeding or action; or other activity necessary for appropriate oversight of the health care system, government benefit programs for which health information is relevant to beneficiary eligibility, or of government regulatory programs for which health information is necessary for determining compliance with program standards.” The proposed rule also described the functions of health oversight agencies in the proposed health oversight section (§164.510(c)) by repeating much of this definition.

In the final rule, we modify the definition of health oversight agency by eliminating from the definition the language in proposed §164.510(c) (now §164.512(d)). In addition, the final rule clarifies that a “health oversight agency” is an agency or authority of the United States,
a state, a territory, a political subdivision of a state or territory, or an Indian tribe, or a person or entity acting under a grant of authority from or contract with such public agency, including the employees or agents of such public agency or its contractors or grantees, that is authorized by law to oversee the health care system or government programs in which health information is necessary to determine eligibility or compliance, or to enforce civil rights laws for which health information is relevant.

The preamble to the proposed rule listed the following as examples of health oversight agencies that conduct oversight activities relating to the health care system: state insurance commissions, state health professional licensure agencies, Offices of Inspectors General of federal agencies, the Department of Justice, state Medicaid fraud control units, Defense Criminal Investigative Services, the Pension and Welfare Benefit Administration, the HHS Office for Civil Rights, and the FDA. The proposed rule listed the Social Security Administration and the Department of Education as examples of health oversight agencies that conduct oversight of government benefit programs for which health information is relevant to beneficiary eligibility. The proposed rule listed the Occupational Health and Safety Administration and the Environmental Protection Agency as examples of oversight agencies that conduct oversight of government regulatory programs for which health information is necessary for determining compliance with program standards.

In the final rule, we include the following as additional examples of health oversight activities: (1) The U.S. Department of Justice’s civil rights enforcement activities, and in particular, enforcement of the Civil Rights of Institutionalized Persons Act (42 U.S.C. 1997–1997j) and the Americans with Disabilities Act (42 U.S.C. 12101 et seq.), as well as the EEOC’s civil rights enforcement activities under titles I and V of the ADA; (2) the FDA’s oversight of food, drugs, biologics, devices, and other products pursuant to the Food, Drug, and Cosmetic Act (21 U.S.C. 301 et seq.) and the Public Health Service Act (42 U.S.C. 201 et seq.); and (3) data analysis—performed by a public agency or by a person or entity acting under grant of authority from or under contract with a public agency—to detect health care fraud.

“Overseeing the health care system,” which is included in the definition of health oversight, encompasses activities such as: oversight of health care plans; oversight of health benefit plans; oversight of health care providers; oversight of health care and health care delivery; oversight activities that involve resolution of consumer complaints; oversight of pharmaceuticals, medical products and devices, and dietary supplements; and a health oversight agency’s analysis of trends in health care costs, quality, health care delivery, access to care, and health insurance coverage for health oversight purposes.

We recognize that the health oversight agencies, such as the U.S. Department of Labor’s Pension and Welfare Benefits Administration, may perform more than one type of health oversight. For example, agencies may sometimes perform audits and investigations and at other times conduct general oversight of health benefit plans. Such entities are considered health oversight agencies under the rule for any and all of the health oversight functions that they perform.

The definition of health oversight agency does not include private organizations, such as private-sector accrediting groups. Accreditation organizations are performing health care operations functions on behalf of health plans and covered health care providers. Accordingly, in order to obtain protected health information without individuals’ authorizations, accrediting groups must enter into business associate agreements with health plans and covered health care providers for these purposes. Similarly, private entities, such as coding committees, that help government agencies that are health plans make coding and payment decisions are performing health care payment functions on behalf of the government agencies and, therefore, must enter into business associate agreements in order to receive protected health information from the covered entity (absent individuals’ authorization for such disclosure).

Indirect Treatment Relationship

This term was not included in the proposed rule. An “indirect treatment relationship” is a relationship between a health care provider and an individual in which the provider delivers health care to the individual based on the orders of another health care provider and the health care services, products, diagnoses, or results are typically furnished to the patient through another provider, rather than directly. For example, radiologists and pathologists generally have indirect treatment relationships with patients because they deliver diagnostic services based on the orders of other providers and the results of those services are furnished to the patient through the direct treating provider. This definition is necessary to clarify the relationships between providers and individuals in the regulation. For example, see the consent discussion at § 164.506.

Individual

We proposed to define “individual” to mean the person who is the subject of the protected health information. We proposed that the term include, with respect to the signing of authorizations and other rights (such as access, copying, and correction), the following types of legal representatives:

(1) With respect to adults and emancipated minors, legal representatives (such as court-appointed guardians or persons with a power of attorney), to the extent to which applicable law permits such legal representatives to exercise the person’s rights in such contexts.

(2) With respect to unemancipated minors, a parent, guardian, or person acting in loco parentis, provided that when a minor lawfully obtains a health care service without the consent of or notification to a parent, guardian, or other person acting in loco parentis, the minor shall have the exclusive right to exercise the rights of an individual with respect to the protected health information relating to such care.

(3) With respect to deceased persons, an executor, administrator, or other person authorized under applicable law to act on behalf of the decedent’s estate.

In addition, we proposed to exclude from the definition:

(1) Foreign military and diplomatic personnel and their dependents who receive health care provided by or paid for by the Department of Defense or other federal agency or by an entity acting on its behalf, pursuant to a country-to-country agreement or federal statute.

(2) Overseas foreign national beneficiaries of health care provided by the Department of Defense or other federal agency or by a non-governmental organization acting on its behalf.

In the final rule, we eliminate from the definition of “individual” the provisions designating a legal representative as the “individual” for purposes of exercising certain rights with regard to protected health information. Instead, we include in the final rule a separate standard for “personal representatives.” A covered entity must treat a personal representative of an individual as the individual except under specified circumstances. See discussion in
§ 164.502(g) regarding personal representatives.

In addition, we eliminate from the definition of “individual” the above exclusions for foreign military and diplomatic personnel and overseas foreign national beneficiaries. We address the special circumstances for use and disclosure of protected health information about individuals who are foreign military personnel in § 164.512(k). We address overseas foreign national beneficiaries in § 164.500, “Applicability.” The protected health information of individuals who are foreign diplomatic personnel and their dependents are not subject to special treatment under the final rule.

Individually identifiable health information about one individual may exist in the health records of another individual; health information about one individual may include health information about a second person. For example, a patient’s medical record may contain information about the medical conditions of the patient’s parents, children, and spouse, as well as their names and contact information. For the purpose of this rule, if information about a second person is included within the protected health information of an individual, the second person is not the person who is the subject of the protected health information. The second person is not the “individual” with regard to that protected health information, and under this rule thus does not have the individual’s rights (e.g., access and amendment) with regard to that information.

Individually Identifiable Health Information

We proposed to define “individually identifiable health information” to mean information that is a subset of health information, including demographic information collected from an individual, and that:

(1) Is created by or received from a health care provider, health plan, employer, or health care clearinghouse; and

(2) Relates to the past, present, or future physical or mental health or condition of an individual, the provision of health care to an individual, or the past, present, or future payment for the provision of health care to an individual, and

(i) Which identifies the individual, or

(ii) With respect to which there is a reasonable basis to believe that the information can be used to identify the individual.

In the final rule, we change “created by or received from a health care provider * * *” to “created or received by a health care provider * * * “in order to conform to the statute. We otherwise retain the definition of “individually identifiable health information” without change in the final rule.

Inmate

The proposed rule did not define the term inmate. In the final rule, it is defined as a person incarcerated in or otherwise confined to a correctional institution. The addition of this definition is necessary to explain the privacy rights and protections of inmates in this regulation.

Law Enforcement Official

The proposed rule would have defined a “law enforcement official” as “an official of an agency or authority of the United States, a state, a territory, a political subdivision of a state or territory, or an Indian tribe, who is empowered by law to conduct: (1) An investigation or official proceeding inquiring into a violation of, or failure to comply with, any law; or (2) a criminal, civil, or administrative proceeding arising from a violation of, or failure to comply with, any law.”

The final rule modifies this definition slightly. The definition in the final rule recognizes that law enforcement officials are empowered to prosecute cases as well as to conduct investigations and civil, criminal, or administrative proceedings. In addition, the definition in the final rule reflects the fact that when investigations begin, often it is not clear that law has been violated. Thus, the final rule describes law enforcement investigations and official proceedings as inquiring into a potential violation of law. In addition, it describes law enforcement-related civil, criminal, or administrative proceedings as arising from alleged violation of law.

Marketing

The proposed rule did not include a definition of “marketing.” The proposed rule generally required that a covered entity would need an authorization from an individual to use or disclose protected health information for marketing.

In the final rule we define marketing as a communication about a product or service a purpose of which is to encourage recipients of the communication to purchase or use the product or service. The definition does not limit the type or means of communication that are considered marketing.

The definition of marketing contains three exceptions. If a covered entity receives direct or indirect remuneration from a third party for making a written communication otherwise described in an exception, then the communication is not excluded from the definition of marketing. The activities we except from the definition of marketing are encompassed by the definitions of treatment, payment, and health care operations. Covered entities may therefore use and disclose protected health information for these excepted activities without authorization under § 164.508 and pursuant to any applicable consent obtained under § 164.506.

The first exception applies to communications made by a covered entity for the purpose of describing the entities participating in a provider network or health plan network. It also applies to communications made by a covered entity for the purpose of describing if and the extent to which a product or service, or payment for a product or service, is provided by the covered entity or included in a benefit plan. This exception permits covered entities to use or disclose protected health information when discussing topics such as the benefits and services available under a health plan, the payment that may be made for a product or service, and whether a provider is part of a network or whether (and what amount of) payment will be provided with respect to the services of particular providers. This exception expresses our intent not to interfere with communications made to individuals about their health benefits.

The second exception applies to communications tailored to the circumstances of a particular individual, made by a health care provider to an individual as part of the treatment of the individual, and for the purpose of furthering the treatment of that individual. This exception leaves health care providers free to use or disclose protected health information as part of a discussion of its products and services, or the products and services of others, and to prescribe, recommend, or sell such products or services, as part of the treatment of an individual. This exception includes activities such as referrals, prescriptions, recommendations, and other communications that address how a product or service may relate to the individual’s health. This exception expresses our intent not to interfere with communications made to individuals about their treatment.

The third exception applies to communications tailored to the...
circumstances of a particular individual and made by a health care provider or health plan to an individual in the course of managing the treatment of that individual or for the purpose of directing or recommending to that individual alternative treatments, therapies, providers, or settings of care. As with the previous exception, this exception permits covered entities to discuss freely their products and services and the products and services of third parties, in the course of managing an individual’s care or providing or discussing treatment alternatives with an individual, even when such activities involve the use or disclosure protected health information.

Section 164.514 contains provisions governing use or disclosure of protected health information in marketing communications, including a description of certain marketing communications that may use or include protected health information but that may be made by a covered entity without individual authorization. The definition of health care operations includes those marketing communications that may be made without an authorization pursuant to § 164.514. Covered entities may therefore use and disclose protected health information for these activities pursuant to any applicable consent obtained under § 164.506, or, if they are not required to obtain a consent under § 164.506, without one.

**Organized Health Care Arrangement**

This term was not used in the proposed rule. We define the term in order to describe certain arrangements in which participants need to share protected health information about their patients to manage and benefit the common enterprise. To allow uses and disclosures of protected health information for these arrangements, we also add language to the definition of “health care operations.” See discussion of that term above.

We include five arrangements within the definition of organized health care arrangement. The arrangements involve clinical or operational integration among legally separate covered entities in which it is often necessary to share protected health information for the joint management and operations of the arrangement. They may range in legal structure, but a key component of these arrangements is that individuals who obtain services from them have an expectation that these arrangements are integrated and that they jointly manage their operations. We include within the definition a clinically integrated care setting in which individuals typically receive health care from more than one health care provider. Perhaps the most common example of this type of organized health care arrangement is the hospital setting, where a hospital and a physician with staff privileges at the hospital together provide treatment to the individual. Participants in such clinically integrated settings need to be able to share health information freely not only for treatment purposes, but also to improve their joint operations. For example, any physician with staff privileges at a hospital must be able to participate in the hospital’s morbidity and mortality reviews, even when the particular physician’s patients are not being discussed. Nurses and other hospital personnel must also be able to participate. These activities benefit the common enterprise, even when the benefits to a particular participant are not evident. While protected health information may be freely shared among providers for treatment purposes under other provisions of this rule, some of these joint activities also support the health care operations of one or more participants in the joint arrangement. Thus, special rules are needed to ensure that this rule does not interfere with legitimate information sharing among the participants in these arrangements.

We also include within the definition an organized system of health care in which more than one covered entity participates, and in which the participating covered entities hold themselves out to the public as participating in a joint arrangement, and in which the joint activities of the participating covered entities include at least one of the following: utilization review, in which health care decisions by participating covered entities are reviewed by other participating covered entities or by a third party on their behalf; quality assessment and improvement activities, in which treatment provided by participating covered entities are reviewed by other participating covered entities or by a third party on their behalf; or payment activities, if the financial risk for delivering health care is shared in whole or in part by participating covered entities through the joint arrangement and if protected health information created or received by a covered entity is reviewed by other participating covered entities or by a third party on their behalf for the purpose of administering the sharing of financial risk. A common example of this type of organized health care arrangement is an independent practice association formed by a large number of physicians. They may advertise themselves as a common enterprise (e.g., Acme IPA), whether or not they are under common ownership or control, whether or not they practice together in an integrated clinical setting, and whether or not they share financial risk.

If such a group engages jointly in one or more of the listed activities, the participating covered entities will need to share protected health information to undertake such activities and to improve their joint operations. In this example, the physician participants in the IPA may share financial risk through common withhold pools with health plans or similar arrangements. The IPA participants who manage the financial arrangements need protected health information about all the participants’ patients in order to manage the arrangement. (The participants may also hire a third party to manage their financial arrangements.) If the participants in the IPA engage in joint quality assurance or utilization review activities, they will need to share protected health information about their patients much as participants in an integrated clinical setting would. Many joint activities that require the sharing of protected health information benefit the common enterprise, even when the benefits to a particular participant are not evident.

We include three relationships related to group health plans as organized health care arrangements. First, we include a group health plan and an issuer or HMO with respect to the group health plan within the definition, but only with respect to the protected health information of the issuer or HMO that relates to individuals who are or have been participants or beneficiaries in the group health plan. We recognize that many group health plans are funded partially or fully through insurance, and that in some cases the group health plan and issuer or HMO need to coordinate operations to properly serve the enrollees. Second, we include a group health plan and one or more other group health plans each of which are maintained by the same plan sponsor. We recognize that in some instances plan sponsors provide health benefits through a combination of group health plans, and that they may need to coordinate the operations of such plans to better serve the participants and beneficiaries of the plans. Third, we include a combination of group health plans maintained by the same plan sponsor and the health insurance issuers and HMOs with respect to such plans, but again only with respect to the protected health information of such issuers and HMOs that relates to
individuals who are or have been enrolled in such group health plans. We recognize that is some instances a plan sponsor may provide benefits through more than one group health plan, and that such plans may fund the benefits through one or more issuers or HMOs. Again, coordinating health care operations among these entities may be necessary to serve the participants and beneficiaries in the group health plans. We note that the necessary coordination may necessarily involve the business associates of the covered entities and may involve the participation of the plan sponsor to the extent that it is providing plan administration functions and subject to the limits in §164.504.

Payment

We proposed the term payment to mean:

(1) The activities undertaken by or on behalf of a covered entity that is:

(i) A health plan, or by a business partner on behalf of a health plan, to obtain premiums or to determine or fulfill its responsibility for coverage under the health plan and for provision of benefits under the health plan; or

(ii) A health care provider or health plan, or a business partner on behalf of such provider or plan, to obtain reimbursement for the provision of health care.

(2) Activities that constitute payment include:

(i) Determinations of coverage, adjudication or subrogation of health benefit claims;

(ii) Risk adjusting amounts due based on enrollee health status and demographic characteristics;

(iii) Billing, claims management, and medical data processing;

(iv) Review of health care services with respect to medical necessity, coverage under a health plan, appropriateness of care, or justification of charges; and

(v) Utilization review activities, including precertification and preauthorization of services.

In the final rule, we maintain the general approach of defining of payment: payment activities are described generally in the first clause of the definition, and specific examples are given in the second clause. Payment activities relate to the covered entity that maintains the protected health information (i.e., one covered entity may not disclose protected health information for the payment activities of a second covered entity). A covered entity may use or disclose only the protected health information about the individual to whom care was rendered, for its payment activities (e.g., a provider may disclose protected health information only about the patient to whom care was rendered in order to obtain payment for that care, or only the protected health information about persons enrolled in the particular health plan that seeks to audit the provider's records). We expand the proposed list to reflect many changes requested by commenters.

We add eligibility determinations as an activity included in the definition of payment. We expand coverage determinations to include the coordination of benefits and the determination of a specific individual’s cost-sharing amounts. The rule deletes activities related to the improvement of methods of paying or coverage policies from this definition and instead includes them in the definition of health care operations. We add to the definition “collection activities.” We replace “medical data processing” activities with health care data processing related to billing, claims management, and collection activities. We add activities for the purpose of obtaining payment under a contract for reinsurance (including stop-loss and excess of loss insurance). Utilization review activities now include concurrent and retrospective review of services.

In addition, we modify this definition to clarify that the activities described in section 1179 of the Act are included in the definition of “payment.” We add new subclause (vi) allowing covered entities to disclose to consumer reporting agencies any individual’s name, address, date of birth, social security number and payment history, account number, as well as the name and address of the individual’s health care provider and/or health plan, as appropriate. Covered entities may make disclosure of this protected health information to consumer reporting agencies for purposes related to collection of premiums or reimbursement. This allows reporting not just of missed payments and overdue debt but also of subsequent positive payment experience (e.g., to expunge the debt). We consider such positive payment experience to be “related to” collection of premiums or reimbursement.

The remaining activities described in section 1179 are included in other language in this definition. For example, “authorizing, processing, clearing, settling, billing, transferring, reconciling or collecting, a payment for, or related to, health plan premiums or health care” are covered by paragraph (2)(ii) of the definition, which allows use and disclosure of protected health information for “billing, claims management, collection activities and related health care data processing.” “Claims management” also includes auditing payments, investigating and resolving payment disputes and responding to customer inquiries regarding payments. Disclosure of protected health information for compliance with civil or criminal subpoenas, or with other applicable laws, are covered under §164.512 of this regulation. (See discussion above regarding the interaction between 1179 and this regulation.)

We modify the proposed regulation text to clarify that payment includes activities undertaken to reimburse health care providers for treatment provided to individuals.

Covered entities may disclose protected health information for payment purposes to any other entity, regardless of whether it is a covered entity. For example, a health care provider may disclose protected health information to a financial institution in order to cash a check or to a health care clearinghouse to initiate electronic transactions. However, if a covered entity engages another entity such as a billing service or a financial institution, to conduct payment activities on its behalf, the other entity may meet the definition of “business associate” under this rule. For example, an entity is acting as a business associate when it is operating the accounts receivable system on behalf of a health care provider.

Similarly, payment includes disclosure of protected health information by a health care provider to an insurer that is not a “health plan” as defined in this rule, to obtain payment. For example, protected health information may be disclosed to obtain reimbursement from a disability insurance carrier. We do not interpret the definition of “payment” to include activities that involve the disclosure of protected health information by a covered entity, including a covered health care provider, to a plan sponsor for the purpose of obtaining payment under a group health plan maintained by such plan sponsor, or for the purpose of obtaining payment from a health insurance issuer or HMO with respect to a group health plan maintained by such plan sponsor, unless the plan sponsor is performing plan administration pursuant to §164.504(f).

The Transactions Rule adopts standards for electronic health care transactions, including two for processing payment. We adopted the ASC X12N 835 transaction standard for “Health Care Payment and Remittance
Advice” transactions between health plans and health care providers, and the ASC X12N 820 standard for “Health Plan Premium Payments” transactions between entities that arrange for the provision of health care or provide health care coverage payments and health plans. Under these two transactions, information to effect funds transfer is transmitted in a part of the transaction separable from the part containing any individually identifiable health information.

We note that a covered entity may conduct the electronic funds transfer portion of the two payment standard transactions with a financial institution without restriction, because it contains no protected health information. The protected health information contained in the electronic remittance advice or the premium payment enrollee data portions of the transactions is not necessary either to conduct the funds transfer or to forward the transactions. Therefore, a covered entity may not disclose the protected health information to a financial institution for these purposes. A covered entity may transmit the portions of the transactions containing protected health information through a financial institution if the protected health information is encrypted so it can be read only by the intended recipient. In such cases no protected health information is disclosed and the financial institution is acting solely as a conduit for the individually identifiable data.

Plan Sponsor

In the final rule we add a definition of “plan sponsor.” We define plan sponsor by referencing the definition of the term provided in (3)(16)(B) of the Employee Retirement Income Security Act (ERISA). The plan sponsor is the employer or employee organization, or both, that establishes and maintains an employee benefit plan. In the case of a plan established by two or more employers, it is the association, committee, joint board of trustees, or other similar group or representative of the parties that establish and maintain the employee benefit plan. This term includes church health plans and government health plans. Group health plans may disclose protected health information to plan sponsors who conduct payment and health care operations activities on behalf of the group health plan if the requirements for group health plans in §164.504 are met.

The preamble to the Transactions Rule noted that plan sponsors of group health plans are not covered entities and, therefore, are not required to use the standards established in that regulation to perform electronic transactions, including enrollment and disenrollment transactions. We do not change that policy through this rule. Plan sponsors that perform enrollment functions are doing so on behalf of the participants and beneficiaries of the group health plan and not on behalf of the group health plan itself. For purposes of this rule, plan sponsors are not subject to the requirements of §164.504 regarding group health plans when conducting enrollment activities.

Protected Health Information

We proposed to define “protected health information” to mean individually identifiable health information that is or has been electronically maintained or electronically transmitted by a covered entity, as well as such information when it takes any other form. For purposes of this definition, we proposed to define “electronically transmitted” as including information exchanged with a computer using electronic media, such as the movement of information from one location to another by magnetic or optical media, transmissions over the Internet, Extranet, leased lines, dial-up lines, private networks, telephone voice response, and “faxback” systems. We proposed that this definition not include “paper-to-paper” faxes, or person-to-person telephone calls, video conferencing, or messages left on voice-mail.

Further, “electronically maintained” was proposed to mean information stored by a computer or on any other form or medium. We refer to electronic media, as defined in §162.103, which means the mode of electronic transmission. It includes the Internet (wide-open), Extranet (using Internet technology to link a business with information only accessible to collaborating parties), leased lines, dial-up lines, private networks, and those transmissions that are physically moved from one location to another using magnetic tape, disk, or compact disk media.

The definition of protected health information is set out in this form to emphasize the severability of this provision. As discussed below, we believe we have ample legal authority to cover all individually identifiable health information transmitted or maintained by covered entities. We have structured the definition this way so that, if a court were to disagree with our view of our authority in this area, the rule would still be operational, albeit with respect to a more limited universe of information.

Other provisions of the rules below may also be severable, depending on their scope and operation. For example, if the rule itself provides a fallback, as it does with respect to the various discretionary uses and disclosures permitted under §164.512, the provisions would be severable under case law.

The definition in the final rule retains the exception relating to individually identifiable health information in “education records” governed by FERPA. We also exclude the records described in 20 U.S.C. 1232g(a)(4)(B)(iv). These are records of students held by post-secondary educational institutions or of students 18 years of age or older, used exclusively for health care treatment and which have not been disclosed to anyone other than a health care provider at the student’s request. (See discussion of FERPA above.)

We have removed the exception for individually identifiable health information of inmates of correctional facilities and detainees in detention facilities. Individually identifiable health information about inmates is protected health information under the final rule, and special rules for use and disclosure of the protected health
information about inmates and their ability to exercise the rights granted in this rule are described below.

**Psychotherapy Notes**

Section 164.508(a)(3)(iv)(A) of the proposed rule defined psychotherapy notes as notes recorded (in any medium) by a health care provider who is a mental health professional documenting or analyzing the contents of conversation during a private counseling session or a group, joint, or family counseling session. The proposed definition excluded medication prescription and monitoring, counseling session start and stop times, the modalities and frequencies of treatment furnished, results of clinical tests, and any summary of the following items: Diagnosis, functional status, the treatment plan, symptoms, prognosis and progress. Furthermore, we stated in the preamble of the proposed rule that psychotherapy notes would have to be maintained separately from the medical record.

In this final rule, we retain the definition of psychotherapy notes that we had proposed, but add to the regulation text the requirement that, to meet the definition of psychotherapy notes, the information must be separated from the rest of the individual’s medical record.

**Public Health Authority**

The proposed rule would have defined “public health authority” as “an agency or authority of the United States, a state, a territory, or an Indian tribe that is responsible for public health matters as part of its official mandate.”

The final rule changes this definition slightly to clarify that a “public health authority” also includes a person or entity acting under a grant of authority from or contract with a public health agency. Therefore, the final rule defines this term as an agency or authority of the United States, a state, a territory, a political subdivision of a state or territory, or an Indian tribe, or a person or entity acting under a grant of authority from or contract with such public agency, including the employees or agents of such public agency or its contractors or persons or entities to whom it has granted authority, that is responsible for public health matters as part of its official mandate.

**Required By Law**

In the preamble to the NPRM, we did not include a definition of “required by law.” We discussed what it meant for an action to be considered to be “required” or “mandated” by law and included several examples of activities that would be considered as required by law for the purposes of the proposed rule, including a valid Inspector General subpoena, grand jury subpoena, civil investigative demand, or a statute or regulation requiring production of information justifying a claim would constitute a disclosure required by law.

In the final rule we include a new definition, move the preamble clarifications to the regulatory text and add several items to the illustrative list. For purposes of this regulation, “required by law” means a mandate contained in law that compels a covered entity to make a use or disclosure of protected health information and that is enforceable in a court of law. Among the examples listed in definition are Medicare conditions of participation with respect to health care providers participating in that program, court-ordered warrants, and subpoenas issued by a court. We note that disclosures “required by law” include disclosures of protected health information required by this regulation in §164.502(a)(1). It does not include contracts between private parties or similar voluntary arrangements. This list is illustrative only and is not intended in any way to limit the scope of this paragraph or other paragraphs in §164.512 that permit uses or disclosures to the extent required by other laws. We note that nothing in this rule compels a covered entity to make a use or disclosure required by the legal demands or prescriptions listed in this clarification only if, by any legal process, and a covered entity remains free to challenge the validity of such laws and processes.

**Research**

We proposed to define “research” as it is defined in the Federal Policy for the Protection of Human Subjects, at 45 CFR part 46, subpart A (referred to elsewhere in this rule as “Common Rule”), and in addition, elaborated on the meaning of the term “generalizable knowledge.” In §164.504 of the proposed rule we defined research as “* * * a systematic investigation, including research development, testing and evaluation, designed to develop or contribute to generalizable knowledge. ‘Generalizable knowledge’ is knowledge related to health that can be applied to populations outside of the population served by the covered entity.”

The final rule eliminates the further elaboration of “generalizable knowledge.” Therefore, the rule defines “research” as “the term is defined in the Common Rule: a systematic investigation, including research development, testing and evaluation, designed to develop or contribute to generalizable knowledge. Research Information Unrelated to Treatment

We delete this definition and the associated requirements from the final rule. Refer to §164.508(f) for new requirements regarding authorizations for research that includes treatment of the individual.

**Treatment**

The proposed rule defined “treatment” as the provision of health care by, or the coordination of health care (including health care management of the individual through risk assessment, case management, and disease management) among, health care providers; the referral of a patient from one provider to another; or the coordination of health care or other services among health care providers and third parties authorized by the health plan or the individual. The preamble noted that the definition was intended to relate only to services provided to an individual and not to an entire enrolled population.

In the final rule, we do not change the general approach to defining treatment: treatment means the listed activities undertaken on behalf of a single patient, not a population. Activities are considered treatment only if delivered
by a health care provider or a health care provider working with another party. Activities of health plans are not considered to be treatment. Many services, such as a refill reminder communication or nursing assistance provided through a telephone service, are considered treatment activities if performed by or on behalf of a health care provider, such as a pharmacist, but are regarded as health care operations if done on behalf of a different type of entity, such as a health plan.

We delete specific reference to risk assessment, case management, and disease management. Activities often referred to as risk assessment, disease and case management are treatment activities only to the extent that they are services provided to a particular patient by a health care provider; population based analyses or records review for the purposes of treatment protocol development or modification are health care operations, not treatment activities. If a covered entity is licensed as both a health plan and a health care provider, a single activity could be considered to be both treatment and health care operations; for compliance purposes we would consider the purpose of the activity. Given the integration of the health care system we believe that further classification of activities into either treatment or health care operations would not be helpful. See the definition of health care operations for additional discussion.

Use

We proposed to define “use” to mean the employment, application, utilization, examination, or analysis of information within an entity that holds the information. In the final rule, we clarify that use refers to the use of individually identifiable health information. We replace the term “holds” with the term “maintains.” These changes are for clarity only, and are not intended to effect any substantive change.

Section 164.502—General Rules for Uses and Disclosures of Protected Health Information

Section 164.502(a)—Use and Disclosure for Treatment, Payment and Health Care Operations

As a general rule, we proposed in the NPRM to prohibit covered entities from using or disclosing protected health information except as authorized by the individual who is the subject of such information or as explicitly permitted by the proposed rule explicitly would have permitted covered entities to use or disclose an individual’s protected health information without authorization for treatment, payment, and health care operations. The proposal would not have restricted to whom disclosures could be made for the purposes of treatment, payment, or operations. The proposal would have allowed disclosure of the protected health information of one individual for the treatment or payment of another, as appropriate. We also proposed to prohibit covered entities from seeking individual authorization for uses and disclosures for treatment, payment, and health care operations unless required by state or other applicable law.

We proposed two exceptions to this general rule which prohibited covered entities from using or disclosing research information unrelated to treatment or psychotherapy notes for treatment, payment, or health care operations purposes unless a specific authorization was obtained from the subject of the information. In addition, we proposed that a covered entity be prohibited from conditioning treatment, enrollment in a health plan or payment decisions on a requirement that the individual provide a specific authorization for the disclosure of these two types of information (see proposed §164.508(a)(3)(iii)).

We also proposed to permit covered entities to use or disclose an individual’s protected health information for specified public and public policy-related purposes, including public health, research, health oversight, law enforcement, and use by coroners. In addition, the proposal would have permitted covered entities to use and disclose protected health information when required to do so by other law or pursuant to an authorization from the individual allowing them to use or disclose the information for purposes other than treatment, payment or health care operations.

We proposed to require covered entities to disclose protected health information for only two purposes: to permit individuals to inspect and copy protected health information about themselves and for enforcement of the rule.

We proposed not to require covered entities to vary the level of protection accorded to protected health information based on the sensitivity of such information. In addition, we proposed to require that each affected entity assess its own needs and devise, implement, and maintain appropriate privacy policies, procedures, and documentation to address its business requirements.

In the final rule, the general standard remains that covered entities may use or disclose protected health information only as permitted or required by this rule. However, we make significant changes to the conditions under which uses and disclosures are permitted.

We revise the application of the general standard to require covered health care providers who have a direct treatment relationship with an individual to obtain a general “consent” from the individual in order to use or disclose protected health information about the individual for treatment, payment and health care operations (for details on who must obtain such consents and the requirements they must meet, see §164.506). These consents are intended to accommodate both the covered provider’s need to use or disclose protected health information for treatment, payment, and health care operations, and also the individual’s interest in understanding and acquiescing to such uses and disclosures. In general, other covered entities are permitted to use and disclose protected health information to carry out treatment, payment, or health care operations (as defined in this rule) without obtaining such consent, as in the proposed rule. Covered entities must, as under the proposed rule, obtain the individual’s “authorization” in order to use or disclose psychotherapy notes for most purposes: see §164.508(a)(2) for exceptions to this rule. We delete the proposed special treatment of “research information unrelated to treatment.”

We revise the application of the general standard to require all covered entities to obtain the individual’s verbal “agreement” before using or disclosing protected health information for facility directories, to persons assisting in the individual’s care, and for other purposes described in §164.510. Unlike “consent” and “authorization,” verbal agreement may be informal and implied from the circumstances (for details on who must obtain such agreements and the requirements they must meet, see §164.510). Verbal agreements are intended to accommodate situations where it is neither appropriate to remove from the individual the ability to control the protected health information nor appropriate to require formal, written permission to share such information. For the most part, these provisions reflect current practices.

As under the proposed rule, we permit covered entities to use or disclose protected health information without the individual’s consent, authorization or agreement for specified
public policy purposes, in compliance with the requirements in §164.512.

We permit covered entities to disclose protected health information to the individual who is the subject of that information without any condition. We note that this may include disclosures to "personal representatives" of individuals as provided by §164.502(g).

We permit a covered entity to use or disclose protected health information for other lawful purposes if the entity obtains a written "authorization" from the individual, consistent with the provisions of §164.508. Unlike "consents," these "authorizations" are specific and detailed. For details on who must obtain such authorizations and the requirements they must meet, see §164.508. They are intended to provide the individuals with concrete information about, and control over, the uses and disclosures of protected health information about themselves.

The final rule retains the provision that requires a covered entity to disclose protected health information only in two instances: When individuals request access to information about themselves, and when disclosures are compelled by the Secretary for compliance and enforcement purposes.

Finally, §164.502(a)(1) also requires covered entities to use or disclose protected health information in compliance with the other provisions of §164.502, for example, consistent with the minimum necessary standard, to create de-identified information, or to a personal representative of an individual. These provisions are described below.

We note that a covered entity may use or disclose protected health information as permitted by and in accordance with a provision of this rule, regardless of whether that use or disclosure fails to meet the requirements for use or disclosure under another provision of this rule.

Section 164.502(b)—Minimum Necessary Uses and Disclosures

The proposed rule required a covered entity to make all reasonable efforts not to use or disclose more than the minimum amount of protected health information necessary to accomplish the intended purpose of the use or disclosure (proposed §164.506(b)). This final rule significantly modifies the proposed requirements for implementing the minimum necessary standard. In the final rule, §164.502(b) contains the basic standard and §164.514 describes the requirements for implementing the standard. Therefore, we discuss all aspects of the minimum necessary standard and specific requirements below in the discussion of §164.514(d).

Section 164.502(c)—Uses and Disclosures Under a Restriction Agreement

The proposed rule would have required that covered health care providers permit individuals to request restrictions of uses and disclosures of protected health information and would have prohibited covered providers from using or disclosing protected health information in violation of any agreed-to restriction.

The final rule retains an individual’s right to request restrictions on uses or disclosures for treatment, payment or health care operations and prohibits a covered entity from using or disclosing protected health information in a way that is inconsistent with an agreed upon restriction between the covered entity and the individual, but makes some changes to this right. Most significantly, under the final rule individuals have the right to request restrictions of all covered entities. This standard is set forth in §164.522. Details about the changes to the standard are explained in the preamble discussion to §164.522.

Section 164.502(d)—Creation of De-identified Information

In proposed §164.506(d) of the NPRM, we proposed to permit use of protected health information for the purpose of creating de-identified information and we provided detailed mechanisms for doing so.

In §164.502(d) of the final rule, we permit a covered entity to use protected health information to create de-identified information, whether or not the de-identified information is to be used by the covered entity. We clarify that de-identified information created in accordance with our procedures (which have been moved to §164.514(a)) is not subject to the requirements of these privacy rules unless it is re-identified. Disclosure of a key or mechanism that could be used to re-identify such information is also defined to be disclosure of protected health information. See the preamble to §164.514(a) for further discussion.

Section 164.502(e)—Business Associates

In the proposed rule, other than for purposes of consultation or referral for treatment, we would have allowed a covered entity to disclose protected health information to a business partner only pursuant to a written contract that would, among other specified provisions, limit the business partner’s uses and disclosures of protected health information to those permitted by the contract, and would impose certain security, inspection and reporting requirements on the business partner. We proposed to define the term “business partner” to mean, with respect to a covered entity, a person to whom the covered entity discloses protected health information so that the person can carry out, assist with the performance of, or perform on behalf of, a function or activity for the covered entity.

In the final rule, we change the term “business partner” to “business associate” and in the definition clarify the full range of circumstances in which a person is acting as a business associate of a covered entity. (See definition of “business associate” in §160.103.) These changes mean that §164.502(e) requires a business associate contract (or other arrangement, as applicable) not only when the covered entity discloses protected health information to a business associate, but also when the business associate creates or receives protected health information on behalf of the covered entity.

In the final rule, we modify the proposed standard and implementation specifications for business associates in a number of significant ways. These modifications are explained in the preamble discussion of §164.504(e).

Section 164.502(f)—Deceased Individuals

We proposed to extend privacy protections to the protected health information of a deceased individual for two years following the date of death. During the two-year time frame, we proposed in the definition of “individual” that the right to control the deceased individual’s protected health information would be held by an executor or administrator, or other person (e.g., next of kin) authorized under applicable law to act on behalf of the decedent’s estate. The only proposed exception to this standard allowed for uses and disclosures of a decedent’s protected health information for research purposes without the authorization of a legal representative and without the Institutional Review Board (IRB) or privacy board approval required (in proposed §164.510(f)) for most other uses and disclosures for research.

In the final rule (§164.502(f)), we modify the standard to extend protection of protected health information about deceased individuals for as long as the covered entity maintains the information. We retain the exemption for uses and disclosures for research purposes, now part of §164.512(i), but also require that the
covered entity take certain verification measures prior to release of the decedent’s protected health information for such purposes (see §§164.514(h) and 164.512(j)(1)(iii)).

We remove from the definition of “individual” the provision related to deceased persons. Instead, we create a standard for “personal representatives” (§164.502(g), see discussion below) that requires a covered entity to treat a personal representative of an individual as the individual in certain circumstances, i.e., allows the representative to exercise the rights of the individual. With respect to deceased individuals, the final rule describes when a covered entity must allow a person who otherwise is permitted under applicable law to act with respect to the interest of the decedent or on behalf of the decedent’s estate, to make decisions regarding the decedent’s protected health information.

The final rule also adds a provision to §164.512(g), that permits covered entities to disclose protected health information to a funeral director, consistent with applicable law, as necessary to carry out their duties with respect to the decedent. Such disclosures are permitted both after death and in reasonable anticipation of death.

Section 164.502(g)—Personal Representatives

In the proposed rule we defined “individual” to include certain persons who were authorized to act on behalf of the person who is the subject of the protected health information. For adults and emancipated minors, the NPRM provided that “individual” includes a legal representative to the extent to which applicable law permits such legal representative to exercise the individual’s rights in such contexts.

With respect to unemancipated minors, we proposed that the definition of “individual” include a parent, guardian, or person acting in loco parentis, (hereinafter referred to as “parent”) except when an unemancipated minor obtained health care services without the consent of, or notification to, a parent. Under the proposed rule, if a minor obtained health care services under these conditions, the minor would have had the exclusive rights of an individual with respect to the protected health information related to such health care services.

In the final rule, the definition of “individual” is limited to the subject of the protected health information, which includes unemancipated minors and other individuals who may lack capacity to act on their own behalf. We remove from the definition of “individual” the provisions regarding legal representatives. The circumstances in which a representative must be treated as an individual for purposes of this rule are addressed in a separate standard titled “personal representatives.” (§164.502(g)). The standard regarding personal representatives incorporates some changes to the proposed provisions regarding legal representatives.

In general, under the final regulation, the “personal representatives” provisions are directed at the more formal representatives, while §164.510(b) addresses situations in which persons are informally acting on behalf of an individual.

With respect to adults or emancipated minors, we clarify that a covered entity must treat a person as a personal representative of an individual if such person is, under applicable law, authorized to act on behalf of the individual in making decisions related to health care. This includes a court-appointed guardian and a person with a power of attorney, as set forth in the NPRM, but may also include other persons. The authority of a personal representative under this rule is limited: the representative must be treated as the individual only to the extent that protected health information is relevant to the matters on which the personal representative is authorized to represent the individual. For example, if a person’s authority to make health care decisions for an individual is limited to decisions regarding treatment for cancer, such person is a personal representative and must be treated as the individual with respect to protected health information related to the cancer treatment of the individual. Such a person is not the personal representative of the individual with respect to all protected health information about the individual, and therefore, a covered entity may not disclose protected health information that is not relevant to the cancer treatment to the person, unless otherwise permitted under the rule. We intend this provision to apply to persons empowered under state or other law to make health related decisions for an individual, whether or not the instrument or law granting such authority specifically addresses health information.

In addition, we clarify that with respect to an unemancipated minor, if under applicable law a parent may act on behalf of an unemancipated minor in making decisions related to health care, a covered entity must treat such person as a personal representative under this rule with respect to protected health information relevant to such personal representation, with three exceptions. Under the general rule, in most circumstances the minor would not have the capacity to act as the individual, and the parent would be able to exercise rights and authorities on behalf of the minor. Under the exceptions to the rule on personal representatives of unemancipated minors, the minor, and not the parent, would be treated as the individual and able to exercise the rights and authorities of an individual under the rule. These exceptions occur if: (1) The minor consents to a health care service; no other consent to such health care service is required by law, regardless of whether the consent of another person has also been obtained; and the minor has not requested that such person be treated as the personal representative; (2) the minor may lawfully obtain such health care service without the consent of a parent, and the minor, a court, or another person authorized by law consents to such health care service; or (3) a parent assents to an agreement of confidentiality between a covered health care provider and the minor with respect to such health care service. We note that the definition of health care includes services, but we use “health care service” in this provision to clarify that the scope of the rights of minors under this rule is limited to the protected health information related to a particular service.

Under this provision, we do not provide a minor with the authority to act under the rule unless the state has given them the ability to obtain health care without consent of a parent, or the parent has assented. In addition, we defer to state law where the state authorizes or prohibits disclosure of protected health information to a parent. See part 160, subpart B, Preemption of State Law. This rule does not affect parental notification laws that permit or require disclosure of protected health information to a parent. However, the rights of a minor under this rule are not otherwise affected by such notification. In the final rule, the definition of “personal representatives of deceased individuals has been changed to clarify the provision. The policy has not changed substantively from the NPRM.

Finally, we added a provision in the final rule to permit covered entities to elect not to treat a person as a personal representative in abusive situations.

Under this provision, a covered entity need not treat a person as a personal representative of an individual if the covered entity, in the exercise of professional judgment, decides that it is
not in the best interest of the individual to treat the person as the individual’s personal representative and the covered entity has a reasonable belief that the individual has been or may be subjected to domestic violence, abuse, or neglect by such person, or that treating such person as the personal representative could endanger the individual.

Section 164.502(g) requires a covered entity to treat a person that meets the requirements of a personal representative as the individual (with the exceptions described above). We note that disclosure of protected health information to a personal representative is mandatory under this rule only if disclosure to the individual is mandatory. Disclosure to the individual is mandatory only under §§164.524 and 164.528. Further, as noted above, the personal representative’s rights are limited by the scope of its authority under other law. Thus, this provision does not constitute a general grant of authority to personal representatives.

We make disclosure to personal representatives mandatory to ensure that an individual’s rights under §§164.524 and 164.528 are preserved even when individuals are incapacitated or otherwise unable to act for themselves to the same degree as other individuals. If the covered entity were to have the discretion to recognize a personal representative as the individual, there could be situations in which no one could invoke an individual’s rights under these sections.

We continue to allow covered entities to use their discretion to disclose certain protected health information to family members, relatives, close friends, and other persons assisting in the care of an individual, in accordance with §164.510(b). We recognize that many health care decisions take place on an informal basis, and we permit disclosures in certain circumstances to permit this practice to continue. Health care providers may continue to use their discretion to address these informal situations.

Section 164.502(h)—Confidential Communications

In the NPRM, we did not directly address the issue of whether an individual could request that a covered entity restrict the manner in which it communicated with the individual. The NPRM did provide individuals with the right to request that health care providers restrict uses and disclosures of protected health information for treatment, payment, and health operations, but providers were not required to agree to such a restriction.

In the final rule, we require covered providers to accommodate reasonable requests by patients about how the covered provider communicates with the individual. For example, an individual who does not want his or her family members to know about a certain treatment may request that the provider communicate with the individual at his or her place of employment, or to send communications to a designated address. Covered providers must accommodate the request unless it is unreasonable. Similarly, the final rule permits individuals to request that health plans communicate with them by alternative means, and the health plan must accommodate such a request if it is reasonable and the individual states that disclosure of the information could endanger the individual. The specific provisions relating to confidential communications are in §164.522.

Section 164.502(i)—Uses and Disclosures Consistent with Notice

We proposed to prohibit covered entities from using or disclosing protected health information in a manner inconsistent with their notice of information practices. We retain this provision in the final rule. See §164.520 regarding notice content and distribution requirements.

Section 164.502(j)—Disclosures by Whistleblowers and Workforce Member Crime Victims

Disclosures by Whistleblowers

In §164.518(c)(4) of the NPRM we addressed the issue of whistleblowers by proposing that a covered entity not be held in violation of this rule because a member of its workforce or a person associated with a business associate of the covered entity used or disclosed protected health information that such person believed was evidence of a civil or criminal violation, and any disclosure was: (1) Made to relevant oversight agencies or law enforcement or (2) made to an attorney to allow the attorney to determine whether a violation of criminal or civil law had occurred or to assess the remedies or actions at law that may be available to the person disclosing the information.

We included an extensive discussion on how whistleblower actions can further the public interest, including reference to the need in some circumstances to utilize protected health information for this purpose as well as reference to the qui tam provisions of the Federal False Claims Act.

In the final rule we retitle the provision and include it in §164.502 to reflect the fact that these disclosures are not made by the covered entity and therefore this material does not belong in the section on safeguarding information against disclosure.

We retain the basic concept in the NPRM of providing protection to a covered entity for the good faith whistleblower action of a member of its workforce or a business associate. We clarify that a whistleblower disclosure by an employee, subcontractor, or other person associated with a business associate is considered a whistleblower disclosure of the business associate under this provision. However, in the final rule, we modify the scope of circumstances under which a covered entity is protected in whistleblower situations. A covered entity is not in violation of the requirements of this rule when a member of its workforce or a business associate of the covered entity discloses protected health information to: (i) A health oversight agency or public health authority authorized by law to investigate or otherwise oversee the relevant conduct or conditions of the covered entity; (ii) an appropriate health care accreditation organization; or (iii) an attorney, for the purpose of determining his or her legal options with respect to whistleblowing. We delete disclosures to a law enforcement official.

We expand the scope of this section to cover disclosures of protected health information to an oversight or accreditation organization for the purpose of reporting breaches of professional standards or problems with quality of care. The covered entity will not in violation of this rule, provided that the disclosing individual believes in good faith that the covered entity has engaged in conduct which is unlawful or otherwise violates professional or clinical standards, or that the care, services or conditions provided by the covered entity potentially endanger one or more patients, workers or the public. Since these provisions only relate to whistleblower actions in relation to the covered entity, disclosure of protected health information to expose malfeasant conduct by another person, such as knowledge gained during the course of treatment about an individual’s illicit drug use, would not be protected activity.

We clarify that this section only applies to protection of a covered entity, based on the whistleblower action of a member of its workforce or business associates. Since the HIPAA legislation only applies to covered entities, not their workforces, it is beyond the scope of this rule to directly regulate the
whistleblower actions of members of a covered entity’s workforce.

In the NPRM, we had proposed to require covered entities to apply sanctions to members of its workforce who improperly disclose protected health information. In this final rule, we retain this requirement in § 164.530(e)(1) but modify the proposed provision on sanctions to clarify that the sanctions required under this rule do not apply to workforce members of a covered entity for whistleblower disclosures.

**Disclosures by Workforce Members Who Are Crime Victims**

The proposed rule did not address disclosures by workforce members who are victims of a crime. In the final rule, we clarify that a covered entity is not in violation of the rule when a workforce member of a covered entity who is the victim of a crime discloses protected health information to law enforcement officials about the suspected perpetrator of the crime. We limit the amount of protected health information that may be disclosed to the limited information for identification and location described in § 164.512(f)(2).

We note that this provision is similar to the provision in § 164.512(f)(5), which permits a covered entity to disclose protected health information to law enforcement that the covered entity believes in good faith constitutes evidence of criminal conduct that occurred on the premises of the covered entity. This provision differs in that it permits the disclosure even if the crime occurred somewhere other than on the premises of the covered entity. For example, if a hospital employee is the victim of an attack outside of the hospital, but the perpetrator seeks medical care at the hospital, the workforce member who was attacked may notify law enforcement of the perpetrator’s location and other identifying information. We do not permit, however, the disclosure of protected health information other than that described in § 164.512(f)(2).

**Section 164.504—Uses and Disclosures—Organizational Requirements—Component Entities, Affiliated Entities, Business Associates and Group Health Plans**

**Section 164.504(a)–(c)—Health Care Component (Component Entities)**

In the preamble to the proposed rule we introduced the concept of a “component entity” to differentiate the health care unit of a larger organization from the larger organization. In the proposal we noted that some organizations that are primarily involved in non-health care activities do provide health care services or operate health plans or health care clearinghouses. Examples included a school with an on-site health clinic and an employer that self-administers a sponsored health plan. In such cases, the proposal said that the health care component of the entity would be considered the covered entity, and any release of information from that component to another office or person in the organization would be a regulated disclosure. We would have required such entities to create barriers to prevent protected health information from being used or disclosed for activities not authorized or permitted under the proposal.

We discuss group health plans and their relationships with plan sponsors below under “Requirements for Group Health Plans.”

In the final rule we address the issue of differentiating health plan, covered health care provider and health care clearinghouse activities from other functions carried out by a single legal entity in paragraphs (a)–(c) of § 164.504. We have created a new term, “hybrid entity”, to describe the situation where a health plan, health care provider, or health care clearinghouse is part of a larger legal entity; under the definition, a “hybrid entity” is “a single legal entity that is a covered entity and whose covered functions are not its primary functions.” The term “covered functions” is discussed above under § 164.501. By “single legal entity” we mean a legal entity, such as a corporation or partnership, that cannot be further differentiated into units with their own legal identities. For example, for purposes of this rule a multinational corporation composed of multiple subsidiary companies would not be a single legal entity, but a small manufacturing firm and its health clinic, if not separately incorporated, could be a single legal entity.

The health care component rules are designed for the situation in which the health care functions of the legal entity are not its dominant mission. Because some part of the legal entity meets the definition of a health plan or other covered entity, the legal entity as a whole could be required to comply with the rules below. However, in such a situation, it makes sense not to require the entire entity to comply with the requirements of the rules below, when most of its activities may have little or nothing to do with the provision of health care; rather, as a practical matter, it makes sense for such an entity to focus its compliance efforts on the component that is actually performing the health care functions. On the other hand, where most of what the covered entity does consist of covered functions, it makes sense to require the entity as a whole to comply with the rules. The provisions at §§ 164.504(a)–(c) provide that for a hybrid entity, the rules apply only to the part of the entity that is the health care component. At the same time, the lack of corporate boundaries increases the risk that protected health information will be used in a manner that would not otherwise be permitted by these rules. Thus, we require that the covered entity erect firewalls to protect against the improper use or disclosure within or by the organization. See § 164.504(c)(2).

The term “primary functions” in the definition of “hybrid entity” is not meant to operate with mathematical precision. Rather, we intend that a more common sense evaluation take place: Is most of what the covered entity does related to its health care functions? If so, then the whole entity should be considered the covered entity. Entities with different insurance lines, if not separately incorporated, present a particular issue with respect to this analysis. Because the definition of “health plan” excludes many types of insurance products (in the exclusion under paragraph (2)(i) of the definition), we would consider an entity that has one or more of these lines of insurance in addition to its health insurance lines to come within the definition of “hybrid entity,” because the other lines of business constitute substantial parts of the total business operation and are required to be separate from the health plan(s) part of the business.

An issue that arises in the hybrid entity situation is what records are covered in the case of an office of the hybrid entity that performs support functions for both the health care component of the entity and for the rest of the entity. For example, this situation could arise in the context of a company with an on-site clinic (which we will assume is a covered health care provider), where the company’s business office maintains both clinic records and the company’s personnel records. Under the definition of the term “health care component,” the business office is part of the health care component (in this hypothetical, the clinic) “to the extent that” it is performing covered functions on behalf of the clinic involving the use or disclosure of protected health information that it receives from, creates or maintains for the clinic. Part of the business office, therefore, is part of the
health care component, and part of the business office is outside the health care component. This means that the non-health care component part of the business office is not covered by the rules below. Under our hypothetical, then, the business office would not be required to handle its personnel records in accordance with the rules below. The hybrid entity would be required to establish firewalls with respect to these record systems, to ensure that the clinic records were handled in accordance with the rules.

With respect to excepted benefits, the rules below operate as follows.

(Excepted benefits include accident, disability income, liability, workers’ compensation and automobile medical payment insurance.) Excepted benefit programs are excluded from the health care component (or components) through the definition of “health plan.” If a particular organizational unit performs both excepted benefits functions and covered functions, the activities associated with the excepted benefits program may not be part of the health care component. For example, an accountant who works for a covered entity with both a health plan and a life insurer would have his or her accounting functions performed for the health care component, but not the life insurance accounting function. See § 164.504(c)(2)(iii). We require this segregation of excepted benefits because HIPAA does not cover such programs, policies and plans, and we do not permit any use or disclosure of protected health information for the purposes of operating or performing the functions of the excepted benefits without authorization from the individual, except as otherwise permitted in this rule.

In § 164.504(c)(2) we require covered entities with a health care component to establish safeguard policies and procedures to prevent any access to protected health information by its other organizational units that would not be otherwise permitted by this rule. We note that section 1173(d)(1)(B) of HIPAA requires policies and procedures to isolate the activities of a health care clearinghouse from a “larger organization” to prevent unauthorized access by the larger organization. This safeguard provision is consistent with the statutory requirement and extends to any covered entity that performs “non-covered entity functions” or operates or conducts functions of more than one type of covered entity.

Because, as noted, the covered entity in the hybrid entity situation is the legal entity itself, we state explicitly what is implicitly the case, that the covered entity (legal entity) remains responsible for compliance vis-a-vis subpart C of part 160. See § 164.504(c)(3)(i). We do this simply to make these responsibilities clear and to avoid confusion on this point. Also, in the hybrid entity situation the covered entity/legal entity has control over the entire workforce, not just the workforce of the health care component. Thus, the covered entity is in a position to implement policies and procedures to ensure that the part of its workforce that is doing mixed or non-covered functions does not impermissibly use or disclose protected health information. Its responsibility to do so is clarified in § 164.504(c)(3)(ii).

Section 164.504(d)—Affiliated Entities

Some legally distinct covered entities may share common administration of organizationally differentiated but similar activities (for example, a hospital chain). In § 164.504(d) we permit legally distinct covered entities that share common ownership or control to designate themselves, or their health care components, together to be a single covered entity. Common control exists if an entity has the power, directly or indirectly, significantly to influence or direct the actions or policies of another entity. Common ownership exists if an entity or entities possess an ownership or equity interest of 5 percent or more in another entity.

Such organizations may promulgate a single shared notice of information practices and a consent form. For example, a corporation with hospitals in twenty states may designate itself as a covered entity and, therefore, able to merge information for joint marketplace analyses. The requirements that apply to a covered entity also apply to an affiliated covered entity. For example, under the minimum necessary provisions, a hospital in one state could not share protected health information about a particular patient with another hospital if such a use is not necessary for treatment, payment or health care operations. The covered entities that together make the affiliated covered entity are separately subject to liability under this rule. The safeguarding requirements for affiliated covered entities track the requirements that apply to health care components.

Section 164.504(e)—Business Associates

In the NPRM, we proposed to require a contract between a covered entity and a business associate, except for disclosures of protected health information to a covered entity that is a health care provider to another health care provider for the purposes of consultation or referral. A covered entity would have been in violation of this rule if the covered entity knew or reasonably should have known of a material breach of the contract by a business associate and it failed to take reasonable steps to cure the breach or terminate the contract. We proposed in the preamble that when a covered entity acted as a business associate to another covered entity, the covered entity that was acting as business associate also would have been responsible for any violations of the regulation.

We also proposed that covered health care providers receiving protected health information for consultation or referral purposes would still have been subject to this rule, and could not have used or disclosed such protected health information for a purpose other than the purpose for which it was received (i.e., the consultation or referral). Further, we noted that providers making disclosures for consultations or referrals should be careful to inform the receiving provider of any special limitations or conditions to which the disclosing provider had agreed to impose (e.g., the disclosing provider had provided notice to its patients that it would not make disclosures for research).

We proposed that business associates would not have been permitted to use or disclose protected health information in ways that would not have been permitted of the covered entity itself under these rules, and covered entities would have been required to take reasonable steps to ensure that protected health information disclosed to a business associate remained protected.

In the NPRM (proposed § 164.506(e)(2)) we would have required that the contractual agreement between a covered entity and a business associate be in writing and contain provisions that would:

• Prohibit the business associate from further using or disclosing the protected health information in a manner that would violate the requirements of this proposed rule if it were done by the covered entity.

• Require the business associate to maintain safeguards as necessary to ensure that the protected health information is not used or disclosed except as provided by the contract.

• Require the business associate to report to the covered entity any use or disclosure of the protected health information of which the business
with each covered entity that supplied addition, the business associate would have had to have been authorized, in

the contract or arrangement with each covered entity that supplied

the protected health information to combine or aggregate the information. A

covered entity would not have been permitted to obtain protected health information through a business associate that it could not otherwise obtain itself.

In the final rule we retain the overall approach proposed: covered entities may disclose protected health information to persons that meet the rule’s definition of business associate, or hire such persons to obtain or create protected health information for them, only if covered entities obtain specified satisfactory assurances from the business associate that it will appropriately handle the information; the regulation specifies the elements of such satisfactory assurances; covered entities have responsibilities when such specified satisfactory assurances are violated by the business associate. We retain the requirement that specified satisfactory assurances must be obtained if a covered entity’s business associate is also a covered entity. We note that a master business associate contract or MOU that otherwise meets the requirements regarding specified satisfactory assurances meets the requirements with respect to all the signatories.

A covered entity may disclose protected health information to a business associate, consistent with the other requirements of the final rule, as necessary to permit the business associate to perform functions and activities for or on behalf of the covered entity, or to provide services specified in the business associate definition to or for the covered entity. As discussed below, a business associate may only use the protected health information it receives in its capacity as a business associate to a covered entity as permitted by its contract or agreement with the covered entity.

We do not attempt to directly regulate business associates, but pursuant to our authority to regulate covered entities we place restrictions on the flow of information from covered entities to non-covered entities. We add a provision to clarify that a violation of a business associate agreement by a covered entity that is a business associate of another covered entity constitutes a violation of this rule.

In the final rule, we make significant changes to the requirements regarding business associates. As explained below in more detail: we make significant changes to the content of the required contractual satisfactory assurances; we include exceptions for arrangements that would otherwise meet the
clears checks, initiates or processes electronic funds transfers, or conducts any other activity that directly facilitates or effects the transfer of funds for compensation for health care. A typical consumer-conducted payment transaction is when a consumer pays for health care or health insurance premiums using a check or credit card. In these cases, the identity of the consumer is always included and some health information (e.g., diagnosis or procedure) may be implied through the name of the health care provider or health plan being paid. Covered entities that initiate such payment activities must meet the minimum necessary disclosure requirements described in the preamble to §164.514.

In the final rule, we reduce the extent to which a covered entity must monitor the actions of its business associate and we make it easier for covered entities to identify the circumstances that will require them to take actions to correct a business associate’s material violation of the contract, in the following ways. We delete the proposed language requiring covered entities to “take reasonable steps to ensure” that each business associate complies with the rule’s requirements. Additionally, we now require covered entities to take reasonable steps to cure a breach or terminate the contract for business associate behaviors only if they know of a material violation by a business associate. In implementing this standard, we will view a covered entity that has substantial and credible evidence of a violation as knowing of such violation. While this standard relieves the covered entity of the need to actively monitor its business associates, a covered entity nonetheless is expected to investigate when they receive complaints or other information that contain substantial and credible evidence of violations by a business associate, and it must act upon any knowledge of such violation that it possesses. We note that a whistleblowing disclosure by a business associate of a covered entity that meets the requirements of §164.502(j)(1) does not put the covered entity in violation of this rule, and the covered entity has no duty to correct or cure, or to terminate the relationship.

We also qualify the requirement for terminating contracts with non-compliant business associates. The final rule still requires that the business associate contract authorize the covered entity to terminate the contract, if the covered entity determines that the business associate has violated a material term of the contract, and it requires the covered entity to terminate the contract if steps to cure such a material breach fail. The rule now stipulates, however, that if the covered entity is unable to cure a material breach of the business associate’s obligation under the contract, it is expected to terminate the contract, when feasible. This qualification has been added to accommodate circumstances where terminating the contract would be unreasonably burdensome on the covered entity, such as when there are no viable alternatives to continuing a contract with that particular business associate. It does not mean, for instance, that the covered entity can choose to continue the contract with a non-compliant business associate merely because it is more convenient or less costly than contracts with other potential business associates. We also require that if a covered entity determines that it is not feasible to terminate a non-compliant business associate, the covered entity must notify the Secretary.

We retain all of the requirements for a business associate contract that were listed in proposed §164.506(e)(2), with some modifications. See §164.504(e)(2).

We retain the requirement that the business associate contract must provide that the business associate will not use or further disclose the information other than as permitted or required by the contract or as required by law. We do not mean by this requirement that the business associate contract must specify each and every use and disclosure of protected health information to the business associate. Rather, the contract must state the purposes for which the business associate may use and disclose protected health information, and must indicate generally the reasons and types of persons to whom the business associate may make further disclosures. For example, attorneys often need to provide information to potential witnesses, opposing counsel, and others in the course of their representation of a client. The business associate contract pursuant to which protected health information is provided to its attorney may include a general statement permitting the attorney to disclose protected health information to these types of people, within the scope of its representation of the covered entity.

We retain the requirement that a business associate contract may not authorize a business associate to use or further disclose protected health information in a manner that would violate the requirements of this subpart if done by the covered entity in order to permit the combining or aggregation of protected health information received in its capacity as a business associate of another covered entity, to permit the creation of data for analyses that relate to the health care operations of the respective covered entities. We added this service to the business associate definition to clarify the ability of covered entities to contract with business associates to undertake quality assurance and comparative analyses that involve the protected health information of more than one contracting covered entity. We except data aggregation from the general requirement that a business associate contract may not authorize a business associate to use or further disclose protected health information in a manner that would violate the requirements of this subpart if done by the covered entity in order to permit the combining or aggregation of protected health information received in its capacity as a business associate of different covered entities when it is performing this service. In many cases, the combining of this information for the respective health care operations of the covered entities is not something that the covered entities could do—a covered entity cannot generally disclose protected health information to another covered entity for the disclosing covered entity’s health care operations. However, we permit covered entities that enter into business associate contracts with a business associate for data aggregation to permit the business associate to combine or aggregate the protected health information they
disclose to the business associate for their respective health care operations.

We note that there may be other instances in which a business associate may combine or aggregate protected health information received in its capacity as a business associate of different covered entities, such as when it is performing health care operations on behalf of covered entities that participate in an organized health care arrangement. A business associate that is performing payment functions on behalf of different covered entities also may combine protected health information when it is necessary, such as when the covered entities share financial risk or otherwise jointly bill for services.

In the final rule we clarify that the business associate contract must require the business associate to make available protected health information for amendment and to incorporate such amendments. The business associate contract must also require the business associate to retain the information required to provide an accounting of disclosures. We provide more flexibility to the requirement that all protected health information be returned by the business associate upon termination of the contract. The rule now stipulates that if feasible, the protected health information should be destroyed or returned at the end of a contract. Accordingly, a contract with a business associate must state that if there are reasons that the return or destruction of the information is not feasible, an alternative action must be retained for specific reasons and uses, such as for future audits, privacy protections must continue after the contract ends, for as long as the business associate retains the information. The contract also must state that the uses of information after termination of the contract must be limited to the specific set of uses or disclosures that make it necessary for the business associate to retain the information.

We also remove the requirement that business associate contracts contain a provision stating that individuals whose protected health information is disclosed under the contract are intended third-party beneficiaries of the contract. Third party beneficiary or similar responsibilities may arise under these business associate arrangements by operation of state law; we do not intend in this rule to affect the operation of such state laws.

We modify the requirement that a business associate contract require the business associate to ensure that agents abide by the provisions of the business associate contract. We clarify that agents includes subcontractors, and we note that a business associate contract must make the business associate responsible for ensuring that any person to whom it delegates a function, activity or service which is within its business associate contract with the covered entity agrees to abide by the restrictions and conditions that apply to the business associate under the contract. We note that a business associate will need to consider the purpose for which protected health information is being disclosed in determining whether the recipient must be bound to the restrictions and conditions of the business associate contract. When the disclosure is a delegation of a function, activity or service that the business associate has agreed to perform for a covered entity, the recipient who undertakes such a function steps into the shoes of the business associate and must be bound to the restrictions and conditions. When the disclosure is to a third party who is not performing business associate functions, activities or services for on behalf of the covered entity, but is the type of disclosure that the covered entity itself could make without giving rise to a business associate relationship, the business associate is not required to ensure that the restrictions or conditions of the business associate contract are maintained.

For example, if a business associate acts as the billing agent of a health care provider, and discloses protected health information on behalf of the hospital to health plans, the business associate has no responsibility with respect to further uses or disclosures by the health plan. In the example above, where a covered entity has a business associate contract with a lawyer, and the lawyer discloses protected health information to an expert witness in preparation for litigation, the lawyer again would have no responsibility under this subpart with respect to uses or disclosures by the expert witness, because such witness is not undertaking the functions, activities or services that the business associate has agreed to perform. However, if a covered entity contracts with a third party administrator to provide claims management, and the administrator delegates management of the pharmacy benefits to a third party, the business associate third party administrator must ensure that the pharmacy manager abides by the restrictions and conditions in the business associate contract between the covered entity and the third party administrator.

We provide in § 164.504(c)(3) several methods other than a business associate contract that will satisfy the requirement for satisfactory assurances under this section. First, when a government agency is a business associate of another government agency that is a covered entity, we permit memorandum of understanding between the agencies to constitute satisfactory assurance for the purposes of this rule, if the memorandum fulfills each of the objectives of the business associate contract. We recognize that the relationships of government agencies are often organized as a matter of law, and that it is not always feasible for one agency to contract with another for all of the purposes provided for in this section. We also recognize that it may be incorrect to view one government agency as “acting on behalf of” the other government agency; under law, each agency may be acting to fulfill a statutory mission. We note that in some instances, it may not be possible for the agencies to include the right to terminate the arrangement because the relationship may be established under law. In such instances, the covered entity government agency would need to fulfill the requirement to report known violations of the memorandum to the Secretary.

Where the covered entity is a government agency, we consider the satisfactory assurances requirement to be satisfied if other law contains requirements applicable to the business associate that accomplish each of the objectives of the business associate contract. We recognize that in some cases, covered entities that are government agencies may be able to impose the requirements of this section directly on the persons acting as their business associates. We also recognize that often one government agency is acting as a business associate of another government agency, and either party may have the legal authority to establish the requirements of this section by regulation. We believe that imposing these requirements directly on business associates provides greater protection than we can otherwise provide under this section, and so we recognize such other laws as sufficient to substitute for a business associate contract.

We also recognize that there may be some circumstances where the relationship between covered entities and business associates is otherwise mandated by law. In the final rule, we provide that where a business associate is required by law to act as a business associate to a covered entity, the covered entity may disclose protected health information to the business associate to the extent necessary to comply with the legal mandate without
meeting the requirement to have a business associate contract (or, in the case of government agencies, a memorandum of understanding or law pertaining to the business associate) if it makes a good faith attempt to obtain satisfactory assurances required by this section and, if unable to do so, documents the attempt and the reasons that such assurances cannot be obtained. This provision addresses situations where law requires one party to act as the business associate of another party. The fact that the parties have contractual obligations that may be enforceable is not sufficient to meet the required by law test in this provision.

This provision recognizes that in some instances the law requires that a government agency act as a business associate of a covered entity. For example, the United States Department of Justice is required by law to defend tort suits brought against certain covered entities; in such circumstances, however, the United States, and not the individual covered entity, is the client and is potentially liable. In such situations, covered entities must be able to disclose protected health information needed to carry out the representation, but the particular requirements that would otherwise apply to a business associate relationship may not be possible to obtain. Subsection (iii) makes clear that, where the relationship is required by law, the covered entity complies with the rule if it attempts, in good faith, to obtain satisfactory assurances as are required by this paragraph and, if such attempt fails, documents the attempts and the reasons that such assurances cannot be obtained.

The operation of the final rule maintains the construction discussed in the preamble to the NPRM that a business associate (including a business associate that is a covered entity) that has business associate contracts with more than one covered entity generally may not use or disclose the protected health information that it creates or receives in its capacity as a business associate of one covered entity for the purposes of carrying out its responsibilities as a business associate of another covered entity, unless doing so would be a lawful use or disclosure for each of the covered entities and the business associate’s contract with each of the covered entities permits the business associate to undertake the activity. For example, a business associate performing a function under health care operations on behalf of an organized health care arrangement would be permitted to combine or aggregate the protected health information obtained from covered entities participating in the arrangement to the extent necessary to carry out the authorized activity and in conformance with its business associate contracts. As described above, a business associate providing data aggregation services to different covered entities also could combine and use the protected health information of the covered entities to assist with their respective health care operations. A covered entity that is undertaking payment activities on behalf of different covered entities also may use or disclose protected health information obtained as a business associate of one covered entity when undertaking such activities as a business associate of another covered entity where the covered entities have authorized the activities and where they are necessary to secure payment for the entities. For example, when a group of providers share financial risk and contract with a business associate to conduct payment activities on their behalf, the business associate may use the protected health information received from the covered entities to assist them in managing their shared risk arrangement.

Finally, we note that the requirements imposed by this provision are intended to extend privacy protection to situations in which a covered entity discloses substantial amounts of protected health information to other persons so that those persons can perform functions or activities on its behalf or deliver specified services to it. A business associate contract basically requires the business associate to maintain the confidentiality of the protected health information that it receives and generally to use and disclose such information for the purposes for which it was provided. This requirement does not interfere with the relationship between a covered entity and business associate, or require the business associate to subordinate its professional judgment to that of a covered entity. Covered entities may rely on the professional judgment of their business associate to the type and amount of protected health information that is necessary to carry out a permitted activity. The requirements of this provision are aimed at securing the continued confidentiality of protected health information disclosed to third parties that are serving the covered entity’s interests.

Section 164.504(f)—Group Health Plans

Covered entities under HIPAA include health care clearinghouses, health care providers and health plans. Specifically included in the definition of “health plan” are group health plans (as defined in section 2791(a) of the Public Health Service Act) with 50 or more participants or those of any size that are administered by an entity other than the employer who established and maintains the plan. These group health plans may be fully insured or self-insured. Neither employers nor other group health plan sponsors are defined as covered entities. However, employers and other plan sponsors—particularly those sponsors with self-insured group health plans—may perform certain functions that are integrally related to or similar to the functions of group health plans and, in carrying out these functions, often require access to individual health information held by the group health plan.

Most group health plans are also regulated under the Employee Retirement Income Security Act of 1974 (ERISA). Under ERISA, a group health plan must be a separate legal entity from its plan sponsor. ERISA-covered group health plans usually do not maintain a corporate presence, in other words, they may not have their own employees and sometimes do not have their own assets (i.e., they may be fully insured or the benefits may be funded through the general assets of the plan sponsor, rather than through a trust). Often, the only tangible evidence of the existence of a group health plan is the contractual agreement that describes the rights and responsibilities of covered participants, including the benefits that are offered and the eligible recipients.

ERISA requires the group health plan to identify a “named fiduciary,” a person responsible for ensuring that the plan is operated and administered properly and with ultimate legal responsibility for the plan. If the plan documents under which the group health plan was established and is maintained permit, the named fiduciary may delegate certain responsibilities to trustees and may hire advisors to assist it in carrying out its functions. While generally the named fiduciary is an individual, it may be another entity. The plan sponsor or employees of the plan sponsor are often the named fiduciaries. These structural and operational relationships present a problem in our ability to protect health information from being used inappropriately in employment-related decisions. On the one hand, the group health plan, and any health insurance issuer or HMO providing health insurance or health coverage to the group health plan, are covered entities under the regulation and may only disclose protected health information as authorized under the
regulation or with individual consent. On the other hand, plan sponsors may need access to protected health information to carry out administration functions on behalf of the plan, but under circumstances in which securing individual consent is impractical. We note that we sometimes refer in the rule and preamble to health insurance issuers and HMOs that provide health insurance or health coverage to a group health plan as health insurance issuers or HMOs with respect to a group health plan.

The proposed rule used the health care component approach for employers and other plan sponsors. Under this approach, only the component of an employer or other plan sponsor would be treated as a covered entity. The component of the plan sponsor would have been able to use protected health information for treatment, payment, and health care operations, but not for other purposes, such as discipline, hiring and firing, placement and promotions. We have modified the final rule in a number of ways.

In the final rule, we recognize plan sponsors’ legitimate need for health information in certain situations while, at the same time, protecting health information from being used for employment-related functions or for other functions related to other employee benefit plans or other benefits provided by the plan sponsor. We do not attempt to directly regulate employers or other plan sponsors, but pursuant to our authority to regulate health plans, we place restrictions on the flow of information from covered entities to non-covered entities.

The final rule permits group health plans, and allows them to authorize health insurance issuers or HMOs with respect to the group health plan, to disclose protected health information to plan sponsors if the plan sponsors voluntarily agree to use and disclose the information only as permitted or required by the regulation. The information may be used only for plan administration functions performed on behalf of the group health plan which are specified in plan documents. The group health plan is not required to have a business associate contract with the plan sponsor to disclose the protected health information or allow the plan sponsor to create protected health information on its behalf, if the conditions of § 164.504(e) are met.

In order for the group health plan to disclose protected health information to a plan sponsor, the plan documents under which the plan was established and is maintained must be amended to: (1) Describe the permitted uses and disclosures of protected health information; (2) specify that disclosure is permitted only upon receipt of a certification from the plan sponsor that the plan documents have been amended and the plan sponsor has agreed to certain conditions regarding the use and disclosure of protected health information; and (3) provide adequate firewalls to: identify the employees or classes of employees who will have access to protected health information; restrict access solely to the employees identified and only for the functions performed on behalf of the group health plan; and provide a mechanism for resolving issues of noncompliance.

Any employee of the plan sponsor who receives protected health information for payment, health care operations or other matters related to the group health plan must be identified in the plan documents either by name or function. We assume that since individuals employed by the plan sponsor may change frequently, the group health plan would likely describe such individuals in a general manner. Any disclosure to employees or classes of employees not identified in the plan documents is not a permissible disclosure. To the extent a group health plan does have its own employees separate from the plan sponsor’s employees, as the workforce of a covered entity (i.e., the group health plan), they also are bound by the permitted uses and disclosures of this rule.

The certification that must be given to the group health plan must state that the plan sponsor agrees to: (1) Not use or further disclose protected health information other than as permitted or required by the plan documents or as required by law; (2) ensure that any subcontractors or agents to whom the plan sponsor provides protected health information agree to the same restrictions; (3) not use or disclose the protected health information for employment-related actions; (4) report to the group health plan any use or disclosure that is inconsistent with the plan documents or this regulation; (5) make the protected health information accessible to individuals; (6) allow individuals to amend their information; (7) provide an accounting of its disclosures; (8) make its practices available to the Secretary for determining compliance; (9) return and destroy all protected health information when no longer needed, if feasible; and (10) ensure that the firewalls have been established.

We have included this certification requirement in part, as a way to reduce the burden on health insurance issuers and HMOs. Without a certification, health insurance issuers and HMOs would need to review the plan documents in order to ensure that the amendments have been made before they could disclose protected health information to plan sponsors. The certification, however, is a simple statement that the amendments have been made and that the plan sponsor has agreed to certain restrictions on the use and disclosure of protected health information. The receipt of the certification therefore, is sufficient basis for the health insurance issuer or HMO to disclose protected health information to the plan sponsor.

Many activities included in the definitions of health care operations and payment are commonly referred to as plan administration functions in the ERISA group health plan context. For purposes of this rule, plan administration activities are limited to activities that would meet the definition of payment or health care operations, but do not include functions to modify, amend, or terminate the plan or solicit bids from prospective issuers. Plan administration functions include quality assurance, claims processing, auditing, monitoring, and management of carve-out plans—such as vision and dental. Under the final rule, “plan administration” does not include any employment-related functions or functions in connection with any other benefits or benefit plans, and group health plans may not disclose information for such purposes absent an authorization from the individual. For purposes of this rule, enrollment functions performed by the plan sponsor on behalf of its employees are not considered plan administration functions.

Plan sponsors have access to protected health information only to the extent group health plans have access to protected health information and plan sponsors are permitted to use or disclose protected health information only as would be permitted by group health plans. That is, a group health plan may permit a plan sponsor to have access to or to use protected health information only for purposes allowed by the regulation.

As explained above, where a group health plan purchases insurance or coverage from a health insurance issuer or HMO, the provision of insurance or coverage by the health insurance issuer or HMO to the group health plan does not make the health insurance issuer or HMO a business associate. In such case, the activities of the health insurance issuer or HMO are on their own behalf and not on the behalf of the group
health plan. We note that where a group health plan contracts with a health insurance issuer or HMO to perform functions or activities or to provide services that are in addition to or not directly related to the provision of insurance, the health insurance issuer or HMO may be a business associate with respect to those additional functions, activities, or services. In addition, group health plans that provide health benefits only through an insurance contract and do not create, maintain, or receive protected health information (except for summary information described below or information that merely states whether an individual is enrolled in or has been disenrolled from the plan) do not have to meet the notice requirements of § 164.520 or the administrative requirements of § 164.530, except for the documentation requirement in § 164.530(j), because these requirements are satisfied by the issuer or HMO that is providing benefits under the group health plan. A group health plan, however, may not permit a health insurance issuer or HMO to disclose protected health information to a plan sponsor unless the notice required in 164.520 indicate such disclosure may occur.

The final rule also permits a health plan that is providing insurance to a group health plan to provide summary information to the plan sponsor to permit the plan sponsor to solicit premium bids from other health plans or for the purpose of modifying, amending, or terminating the plan. The rule provides that summary information is information that summarizes claims history, claims expenses, or types of claims experienced by individuals for whom the plan sponsor has provided health benefits under a group health plan, provided that specified identifiers are not included. Summary information may be disclosed under this provision even if it does not meet the definition of de-identified information. As part of the notice requirements in § 164.520, health plans must inform individuals that they may disclose protected health information to plan sponsors. The provision to allow summaries of claims experience to be disclosed to plan sponsors that purchase insurance will allow them to shop for replacement coverage, and get meaningful bids from prospective issuers. It also permits a plan sponsor to get summary information as part of its consideration of whether or not to change the benefits that are offered or employees or whether or not to terminate a group health plan. We note that a plan sponsor may perform enrollment functions on behalf of its employees without meeting the conditions above and without using the standard transactions described in the Transactions Rule.

Section 164.504(g)—Multiple Covered Function Entities

Although not addressed in the proposed rule, this final rule also recognizes that a covered entity may as a single legal entity, affiliated entity, or other arrangement combine the functions or operations of health care providers, health plans and health care clearinghouses (for example, integrated health plans and health care delivery systems may function as both health plans and health care providers). The rule permits such covered entities to use or disclose the protected health information of its patients or members for all covered entity functions, consistent with the other requirements of this rule. The health care component must meet the requirements of this rule that apply to a particular type of covered entity when it is functioning as that entity: e.g., when a health care component is operating as a health care provider it must meet the requirements of this rule applicable to a health care provider. However, such covered entities may not use or disclose the protected health information of an individual who is not involved in a particular covered entity function for that function, and such information must be segregated from any joint information systems. For example, an HMO may integrate data about health plan members and clinic services to members, but a health care system may not share information about a patient in its hospital with its health plan if the patient is not a member of the health plan.

Section 164.506—Uses and Disclosures for Treatment, Payment, and Health Care Operations

Introduction: “Consent” versus “Authorization”

In the proposed rule, we used the term “authorization” to describe the individual’s written permission for a covered entity to use and disclose protected health information, regardless of the purpose of the use or disclosure. Authorization would have been required for all uses and disclosures that were not otherwise permitted or required under the NPM. We proposed to permit covered entities, subject to limited exceptions for psychotherapy notes and research information unrelated to treatment, to use and disclose protected health information to carry out treatment, payment, and health care operations without authorization. See proposed § 164.506(a)(1).

We also proposed to prohibit covered entities from requiring individuals to sign authorizations for uses and disclosures of protected health information for treatment, payment, and health care operations, unless required by other applicable law. See proposed § 164.508(a)(iv). We instead proposed requiring covered entities to produce a notice describing their information practices, including practices with respect to uses and disclosures to carry out treatment, payment, and health care operations.

In the final rule, we retain the requirement for covered entities to obtain the individual’s written permission (an “authorization”) for uses and disclosures of protected health information that are not otherwise permitted or required under the rule. However, under the final rule, we add a second type of written permission for use or disclosure of protected health information: a “consent” for uses and disclosures to carry out treatment, payment, and health care operations. In the final rule, we permit, and in some cases require, covered entities to obtain the individual’s written permission for the covered entity to use or disclose protected health information other than psychotherapy notes to carry out treatment, payment, and health care operations. We refer to this written permission as a “consent.”

The “consent” and the “authorization” do not overlap. The requirement to obtain a “consent” applies in different circumstances than the requirement to obtain an authorization. In content, a consent and an authorization differ substantially from one another.

As described in detail below, a “consent” allows use and disclosure of protected health information only for treatment, payment, and health care operations. It is written in general terms and refers the individual to the covered entity’s notice for further information about the covered entity’s privacy practices. It allows use and disclosure of protected health information by the covered entity seeking the consent, not by other persons. Most persons who obtain a consent will be health care providers; health plans and health care clearinghouses may also seek a consent. The consent requirements appear in § 164.506 and are described in this section of the preamble.

With a few exceptions, an “authorization” allows use and disclosure of protected health information for purposes other than treatment, payment, and health care operations.
operations. In order to make uses and disclosures that are not covered by the consent requirements and not otherwise permitted or required under the final rule, covered entities must obtain the individual’s “authorization.” An “authorization” must be written in specific terms. It may allow use and disclosure of protected health information by the covered entity seeking the authorization, or by a third party. In some instances, a covered entity may not refuse to treat or cover individuals based on the fact that they refuse to sign an authorization. See § 164.508 and the corresponding preamble discussion regarding authorization requirements.

Section 164.506(a)—Consent Requirements

We make significant changes in the final rule with respect to uses and disclosures of protected health information to carry out treatment, payment, and health care operations. We do not cover those situations where the covered entity is unable to obtain the individual’s consent, as described below.

Except as described below, we instead require covered health care providers to obtain the individual’s consent prior to using or disclosing protected health information to carry out treatment, payment, or health care operations. If the covered provider does not obtain the individual’s consent, the provider is prohibited from using or disclosing protected health information about the individual for purposes of treating the individual, obtaining payment for health care delivered to the individual, or for the provider’s health care operations. See § 164.506(a)(1).

We except two types of health care providers from this consent requirement. First, covered health care providers that have an indirect treatment relationship with an individual are not required to obtain the individual’s consent prior to using or disclosing protected health information about the individual to carry out treatment, payment, and health care operations. An “indirect treatment relationship” is defined in § 164.501 and described in the corresponding preamble. These providers may use and disclose protected health information as otherwise permitted under the rule and consistent with its notice of privacy practices (see § 164.520 regarding notice requirements and § 164.502(i) regarding requirements to adhere to the notice). For example, a covered provider that provides consultation services to another provider without seeing the patient would have an indirect treatment relationship with that patient and would not be required to obtain the patient’s consent to use protected health information about the patient for the consultation. These covered providers are, however, permitted to obtain consent, as described below.

Second, covered health care providers that create or receive protected health information in the course of providing health care to inmates of a correctional institution are not required to obtain the inmate’s consent prior to using or disclosing protected health information about the inmate to carry out treatment, payment, and health care operations. See § 164.501 and the corresponding preamble discussion regarding the definitions of “correctional institution” and “inmate.” These providers may use and disclose protected health information as otherwise permitted under the rule. These providers are permitted, however, to obtain consent, as described below.

In addition, we permit covered health care providers to use and disclose protected health information, without consent, to carry out treatment, payment, and health care operations, if the protected health information was created or received in certain treatment situations. In the treatment situations described in § 164.506(a)(3) and immediately below, the covered health care provider must attempt to obtain the individual’s consent. If the covered provider is unable to obtain consent, but documents the attempt and the reason consent was not obtained, the covered provider may, without consent, use and disclose the protected health information resulting from the treatment as otherwise permitted under the rule. All other protected health information about that individual that the covered health care provider creates or receives, however, is subject to the consent requirements.

This exception to the consent requirement applies to protected health information created or received in any of three treatment situations. First, the exception applies to protected health information created or received in emergency treatment situations. In these situations, covered providers must attempt to obtain the consent as soon as reasonably practicable after the delivery of the emergency treatment. Second, the exception applies to protected health information created or received in situations where the covered health care provider is required by law to treat the individual (that is, certain publicly funded providers) and the covered health care provider attempts to obtain such consent. Third, the exception applies to protected health information created or received in treatment situations where there are substantial barriers to communicating with the individual and, in the exercise of professional judgment, the covered provider clearly infers from the circumstances the individual’s consent to receive treatment. For example, there may be situations in which a mentally incapacitated individual seeks treatment from a health care provider but is unable to provide informed consent to undergo such treatment and does not have a personal representative available to provide such consent on the individual’s behalf. If the covered provider, in her professional judgment, believes she can legally provide treatment to that individual, we also permit the provider to use and disclose protected health information resulting from the treatment without the individual’s consent. We intend covered health care providers that legally provide treatment without the individual’s consent to that treatment to be able to use and disclose protected health information resulting from that treatment to carry out treatment, payment, or health care operations without obtaining the individual’s consent for such use or disclosure. We do not intend to impose unreasonable barriers to individuals’ ability to receive, and health care providers’ ability to provide, health care.

Under § 164.506(a)(4), covered health care providers that have an indirect treatment relationship with an individual, as well as health plans and health care clearinghouses, may elect to seek consent for their own uses and disclosures to carry out treatment, payment, and health care operations. If such a covered entity seeks consent for these purposes, the consent must meet the minimum requirements described below.

If a covered health care provider with an indirect treatment relationship, a health plan, or a health care clearinghouse does seek consent, the covered entity may use or disclose protected health information to carry out treatment, payment, or health care operations as otherwise permitted under the rule and consistent with its notice of privacy practices (see § 164.520 regarding notice requirements and § 164.502(i) regarding requirements to adhere to the notice).

If a covered health care provider with an indirect treatment relationship, a health plan, or a health care clearinghouse does not have an individual to sign a consent, and the individual does not do so, the covered entity is...
prohibited under § 164.502(a)(1) from using or disclosing protected health information for the purpose(s) included in the consent. A covered entity that seeks a consent must adhere to the individual’s decision. In § 164.506(a)(5), we specify that a consent obtained by one covered entity is not effective to permit another covered entity to use or disclose protected health information, unless the consent is a joint consent. See § 164.506(f) and the corresponding preamble discussion below regarding joint consents. A consent provides the individual’s permission only for the covered entity that obtains the consent to use or disclose protected health information for treatment, payment, and health care operations. A consent under this section does not operate to authorize another covered entity to use or disclose protected health information, except where the other covered entity is operating as a business associate. We note that, where a covered entity is acting as a business associate of another covered entity, the business associate covered entity is acting for or on behalf of the principal covered entity, and its actions for or on behalf of the principal covered entity are authorized by the consent obtained by the principal covered entity. Thus, under this section, a health plan can obtain a consent that permits the health plan and its business associates to use and disclose protected health information that the health plan and its business associates create or receive. That consent, however, permits another covered entity (that is not a business associate) to disclose protected health information to the health plan or to any other person.

If a covered entity wants to obtain the individual’s permission for another covered entity to disclose protected health information to it for treatment, payment, or health care operations purposes, it must seek an authorization in accordance with § 164.508(e). For example, when a covered provider asks the individual for written permission to obtain the individual’s medical record from another provider for treatment purposes, it must do so with an authorization, not a consent. Since the permission is for disclosure of protected health information by another person, a consent may not be used.

Section 164.506(b)—Consent General Requirements

In the final rule, we permit a covered health care provider to condition the provision of treatment on the receipt of the individual’s consent for the covered provider to use and disclose protected health information to carry out treatment, payment, and health care operations. Covered providers may refuse to treat individuals who do not consent to uses and disclosures for these purposes. See § 164.506(b)(1). We note that there are exceptions to the consent requirements for covered health care providers that are required by law to treat individuals. See § 164.506(a)(3), described above.

Similarly, in the final rule, we permit health plans to condition an individual’s enrollment in the health plan on the receipt of the individual’s consent for the health plan to use and disclose protected health information to carry out treatment, payment, and health care operations, if the consent is sought in conjunction with the enrollment process. If the health plan seeks the individual’s consent outside of the enrollment process, the health plan may not condition any services on obtaining such consent.

Under § 164.520, covered entities must produce notice of privacy practices. A consent may not be combined in a single document with the notice of privacy practices. See § 164.506(b)(3).

Under § 164.506(b)(4), consents for uses and disclosures of protected health information to carry out treatment, payment, and health care operations may be combined in a single document covering all three types of activities and may be combined with other types of legal permission from the individual. For example, a consent to use or disclose protected health information under this rule may be combined with an informed consent to receive treatment, a consent to assign payment of benefits to a provider, or narrowly tailored consents required under state law for the use or disclosure of specific types of protected health information (e.g., state laws requiring specific consent for any sharing of information related to HIV/AIDS).

Within a single consent document, the consent for use and disclosure of protected health information required or permitted under this rule must be visually and organizationally separate from the other consents or authorizations and must be separately signed by the individual and dated.

Where research includes treatment of the individual, a consent under this rule may be combined with the authorization for the use or disclosure of protected health information created for the research, in accordance with § 164.508(f). (This is the only case in which an authorization under § 164.508 of this rule may be combined with a consent under § 164.506 of this rule. See § 164.508(b)(3).) The covered entity that is creating protected health information for the research may elect to combine the consent required under this section with the research-related authorization required under § 164.508(f). For example, a covered health care provider that provides health care to an individual for research purposes and for non-research purposes must obtain a consent under this section for all of the protected health information it maintains. In addition, it must obtain an authorization in accordance with § 164.508(f) which describes how it will use and disclose the protected health information it creates for the research for purposes of treatment, payment, and health care operations. Section 164.506(b)(4) permits the covered entity to satisfy these two requirements with a single document. See § 164.508(f) and the corresponding preamble discussion for a more detailed description of research authorization requirements.

Under § 164.506(b)(5), individuals may revoke a consent in writing at any time, except to the extent that the covered entity has taken action in reliance on the consent. Upon receipt of the written revocation, the covered entity must stop processing the information for use or disclosure, except to the extent that it has taken action in reliance on the consent. A covered health care provider may refuse, under this rule, to continue to treat an individual that revokes his or her consent. A health plan may disenroll an individual that revokes a consent that was sought in conjunction with the individual’s enrollment in the health plan.

Covered entities must document and retain any signed consent as required by § 164.530(j).

Section 164.506(c)—Consent Content Requirements

Under § 164.506(c), the consent must be written in plain language. See the preamble discussion regarding notice of privacy practices for a description of plain language requirements. We do not provide a model consent in this rule. We will provide further guidance on drafting consent documents prior to the compliance date.

Under § 164.506(c)(1), the consent must inform the individual that protected health information may be used and disclosed by the covered entity to carry out treatment, payment, or health care operations. The covered entity must determine which of these elements (use and/or disclosure; treatment, payment, and/or health care operations) to include in the consent.
document, as appropriate for the covered entity’s practices. For covered health care providers that are required to obtain consent, the requirement applies only to the extent the covered provider uses or discloses protected health information. For example, if all of a covered provider’s health care operations are conducted by members of the covered provider’s own workforce, the covered provider may choose to obtain consent only for uses, not disclosures, of protected health information to carry out health care operations. If an individual pays out of pocket for all services received from the covered provider and the provider will not disclose any information about the patient to a third party payor, the provider may choose not to obtain the individual’s consent to disclose information for payment purposes.

In order for a covered provider to be able to use and disclose information for all three purposes, however, all three purposes must be included in the consent.

Under §§ 164.506(c)(2) and (3), the consent must refer the individual to the covered entity’s notice for additional information about the uses and disclosures of information described in the consent. The consent must also indicate that the individual has the right to review the notice prior to signing the consent. If the covered entity has reserved the right to change its privacy practices in accordance with § 164.520(b)(1)(v)(C), the consent must indicate that the terms of the notice may change, and must describe how the individual may obtain a revised notice. See § 164.520 and the corresponding preamble discussion regarding notice requirements.

Under § 164.506(c)(4), the consent must inform individuals that they have the right to request restrictions on uses and disclosures of protected health information for treatment, payment, and health care operations purposes. It must also state that the covered entity is not required to agree to an individual’s request, but that if the covered entity does agree to the request, the restriction is binding on the covered entity. See § 164.522(a) regarding the right to request restrictions.

Under § 164.506(c)(5), the consent must indicate that the individual has the right to revoke the consent in writing, except to the extent that the covered entity has taken action in reliance on the consent.

Under § 164.506(c)(6), the consent must include the individual’s signature and the purpose. Once we adopt the standards for electronic signature, another of the required administrative simplification standards we are required to adopt under HIPAA, an electronic signature that meets those standards will be sufficient under this rule. We do not require any verification of the individual’s identity or authentication of the individual’s signature.

We expect covered health care providers that are required to obtain consent to employ the same level of scrutiny to these signatures as they do to the signature obtained on a document regarding the individual’s consent to undergo treatment by the provider.

Section 164.506(d)—Defective Consents

Under § 164.506(d), there is no “consent” within the meaning of the rule if the completed document lacks a required element or if the individual has revoked the consent in accordance with § 164.506(b)(5).

Section 164.506(e)—Resolving Conflicting Consents and Authorizations

Situations may arise where a covered entity that has obtained the individual’s consent for the covered entity to use or disclose protected health information to carry out treatment, payment, or health care operations is asked to disclose protected health information pursuant to another written legal permission from the individual, such as an authorization, that was obtained by another person. Under § 164.506(e), when the terms of a covered entity’s consent conflict with the terms of another written legal permission from the individual to use or disclose protected health information (such as a consent obtained under state law by another covered entity or an authorization), the covered entity must adhere to the more restrictive document. By conflict, we mean that the consent and authorization contain inconsistencies. In implementing this section, we note that the consent under this section references the notice provided to the individual and the individual’s right to request restrictions. In determining whether the covered entity’s consent conflicts with another written legal permission provided by the individual, the covered entity must consider any limitations on its uses or disclosures resulting from the notice provided to the individual or from restrictions to which it has agreed. For example, a covered nursing home may elect to ask the patient to sign an authorization for the patient’s covered primary care physician to forward the patient’s medical records to the nursing home. The physician may have previously obtained the individual’s consent for disclosure for treatment purposes. If the authorization obtained by the nursing home grants permission for the physician to disclose particular types of information, such as genetic information, but the consent obtained by the physician excludes such information or the physician has agreed to a restriction on that type of information, the physician may not disclose that information. The physician must adhere to the more restrictive written legal permission from the individual.

When a conflict between a consent and another written legal permission from the individual exists, as described above, the covered entity may attempt to resolve the conflict with the individual by either obtaining a new consent from the individual or by having a discussion or otherwise communicating with the individual to determine the individual’s preference regarding the use or disclosure. If the individual’s preference is communicated orally, the covered entity must document the individual’s preference and act in accordance with that preference. In the example described above, the primary care physician could ask the patient to sign a new consent that would permit the disclosure of the genetic information. Alternatively, the physician could ask the patient whether the patient intended for the genetic information to be disclosed to the nursing home. If the patient confirms that he or she intended for the genetic information to be shared, the physician can document that fact (e.g., by making a notation in the medical record) and disclose the information to the nursing home.

We believe covered entities will rarely be faced with conflicts between consents and other written legal permission from the individual for uses and disclosures to carry out treatment, payment, and health care operations purposes. Under § 164.506(a)(5), we specify that a consent only permits the covered entity that obtains the consent to use or disclose protected health information. A consent obtained by one covered entity is not effective to permit another different covered entity to use or disclose protected health information. Conflicting consents obtained by covered entities, therefore, are not possible. We expect authorizations that permit another covered entity to use and disclose protected health information for treatment, payment, and health care operations purposes will rarely be necessary, because we expect covered entities that maintain protected health information to obtain consents that permit them to make anticipated uses and disclosures for these purposes. Nevertheless, covered entities are permitted under § 164.508(e) to obtain
authorization for another covered entity to use or disclose protected health information to carry out treatment, payment, and health care operations. We recognize these authorizations may be useful to demonstrate an individual’s intent and relationship to the intended recipient of the information. For example, these authorizations may be useful in situations where a health plan wants to obtain information from one provider in order to determine payment of a claim for services provided by a different provider (e.g., information from a primary care physician that is necessary to determine payment of services provided by a specialist) or where an individual’s new physician wants to obtain the individual’s medical records from prior physicians. Other persons not covered by this rule may also seek authorizations and state law may require written permission for specific types of information, such as information related to HIV/AIDS or to mental health. Because an individual may sign conflicting documents over time, we clarify that the covered entity maintaining the protected health information to be used or disclosed must adhere to the more restrictive permission the individual has granted, unless the covered entity resolves the conflict with the individual.

Section 164.506(f)—Joint Consents

Covered entities that participate in an organized health care arrangement and that develop a joint notice under § 164.520(d) may develop a joint consent in which the individual consents to the uses and disclosures of protected health information by each of the covered entities in the arrangement to carry out treatment, payment, and/or health care operations. The joint consent must identify with reasonable specificity the covered entities, to which the joint consent applies and must otherwise meet the consent requirements. If an individual revokes a joint consent, the covered entity that receives the revocation must inform the other entities covered by the joint consent of the revocation as soon as practicable.

If any one of the covered entities included in the joint consent obtains the individual’s consent, as required above, the consent requirement is met for all of the other covered entities to which the consent applies. For example, a covered hospital and the clinical laboratory and emergency departments with which it participates in an organized health care arrangement may produce a joint notice and obtain consent. If the covered hospital obtains the individual’s joint consent upon admission, and some time later the individual is readmitted through the associated emergency department, the emergency department’s consent requirement will already have been met. These joint consents are the only type of consent by which one covered entity can obtain the individual’s permission for another covered entity to use or disclose protected health information to carry out treatment, payment, or health care operations.

Effect of Consent

These consents, as well as the authorizations described in § 164.508, should not be construed to waive, directly or indirectly, any privilege granted under federal, state, or local law or procedure. Consents obtained under this regulation are not appropriate for the disposition of more technical and legal proceedings and may not comport with procedures and standards of federal, state, or local judicial practice. For example, state courts and other decision-making bodies may choose to examine more closely the circumstances and propriety of such consent and may adopt more protective standards for application in their proceedings. In the judicial setting, as in the legislative and executive settings, states may provide for greater protection of privacy. Additionally, both the Congress and the Secretary have established a general approach to protecting from explicit preemption state laws that are more protective of privacy than the protections set forth in this regulation.

Section 164.508—Uses and Disclosures for Which an Authorization Is Required

Section 164.508(a)—Standard

We proposed to require covered entities to obtain the individual’s authorization for all uses and disclosures of protected health information not otherwise permitted or required under the proposed rule. Uses and disclosures that would have been permitted without individual authorization included uses and disclosures for national priority purposes such as public health, law enforcement, and research (see proposed § 164.510) and uses and disclosures of protected health information, other than psychotherapy notes and research information unrelated to treatment, for purposes of treatment, payment, and health care operations (see proposed § 164.506). We also proposed to require covered entities to disclose protected health information to the individual for inspection and copying (see proposed § 164.514) and to the Secretary as required for enforcement of the rule (see proposed § 164.522). Individual authorization would not have been required for these uses and disclosures.

We proposed to require covered entities to obtain the individual’s authorization for all other uses and disclosures of protected health information. Under proposed § 164.508(a), uses and disclosures that would have required individual authorization included, but were not limited to, the following:

- Use for marketing of health and non-health items and services by the covered entity;
- Use by sale, rental, or barter;
- Use and disclosure to non-health related divisions of the covered entity, e.g., for use in marketing life or casualty insurance or banking services;
- Use, disclosure, prior to an individual’s enrollment in a health plan, to the health plan or health care provider for making eligibility or enrollment determinations relating to the individual or for underwriting or risk rating determinations;
- Disclosure to an employer for use in employment determinations; and
- Use or disclosure for fundraising.

In the preamble to the proposed rule, we stated that covered entities would be bound by the terms of authorizations. Uses or disclosures by the covered entity for purposes inconsistent with the statements made in the authorization would have constituted a violation of the rule.

In the final rule, under § 164.508(a), as in the proposed rule, covered entities must have authorization from individuals before using or disclosing protected health information for any purpose not otherwise permitted or required by this rule. Specifically, except for psychotherapy notes (see below), covered entities are not required to obtain the individual’s authorization to use or disclose protected health information to carry out treatment, payment, and health care operations. (Covered entities may, however, be required to obtain the individual’s consent for these uses and disclosures. See the preamble regarding § 164.506 for a discussion of “consent” versus “authorization.”) We also do not require covered entities to obtain the individual’s authorization for uses and disclosures of protected health information permitted under §§ 164.510 or 164.512, for disclosures to the individual, or for required disclosures to the Secretary under subpart C of part 160 of this subchapter for enforcement of this rule.

In the final rule, we clarify that covered entities are bound by the
statements provided on the authorization; use or disclosure by the covered entity for purposes inconsistent with the statements made in the authorization constitutes a violation of this rule.

Unlike the proposed rule, we do not include in the regulation examples of the types of uses and disclosures that require individual authorization. We eliminated two examples from the proposed list due to potential confusion as to our intent: disclosure by sale, rental, or barter and use and disclosure to non-health related divisions of the covered entity. We recognize that covered entities sometimes make these types of uses and disclosures for purposes that are permitted under the rule without authorization. For example, a covered health care provider may sell its accounts receivable to a collection agency for payment purposes and a health plan may disclose protected health information to its life insurance company for payment purposes. We do not intend to require authorization for uses and disclosures made by sale, rental, or barter or for disclosures made to non-health related divisions of the covered entity, if those uses or disclosures could otherwise be made without authorization under this rule. As with any other use or disclosure, however, uses and disclosures of protected health information for these purposes do require authorization if they are not otherwise permitted under the rule.

We also eliminated the remaining proposed examples from the final rule due to concern that these examples might be misinterpreted as an exhaustive list of all of the uses and disclosures that require individual authorization. We discuss the examples here, however, to clarify the interaction of the authorization requirements and the provisions of the rule that permit uses and disclosures without authorization and/or with consent. Uses and disclosures for which covered entities must have the individual’s authorization include, but are not limited to, the following activities.

**Marketing**

As in the proposed rule, covered entities must obtain the individual’s authorization before using or disclosing protected health information for marketing purposes. In the final rule, we add a new definition of marketing (see §164.501). For more detail on what activities constitute marketing, see §164.501, definition of “marketing,” and §164.514(e).

**Pre-Enrollment Underwriting**

As in the proposed rule, covered entities must obtain the individual’s authorization to use or disclose protected health information for the purpose of making eligibility or enrollment determinations relating to an individual or for underwriting or risk rating determinations, prior to the individual’s enrollment in a health plan (that is, for purposes of pre-enrollment underwriting). For example, if an individual applies for new coverage with a health plan in the non-group market and the health plan wants to review protected health information from the individual’s covered health care providers before extending an offer of coverage, the individual first must authorize the covered providers to share the information with the health plan. If the individual applies for renewal of existing coverage, however, the health plan would not need to obtain an authorization to review its existing claims records about that individual, because this activity would come within the definition of health care operations and be permissible. We also note that under §164.504(f), a group health plan and a health insurance issuer that provides benefits with respect to a group health plan are permitted in certain circumstances to disclose summary health information to the plan sponsor for the purpose of obtaining premium bids. Because these disclosures fall within the definition of health care operations, they do not require authorization.

**Employment Determinations**

As in the proposed rule, covered entities must obtain the individual’s authorization to use or disclose protected health information for employment determinations. For example, a covered health care provider must obtain the individual’s authorization to disclose the results of a pre-employment physical to the individual’s employer. The final rule provides that a covered entity may condition the provision of health care that is solely for the purpose of creating protected health information for disclosure to a third party on the provision of authorization for the disclosure of the information to the third party.

**Fundraising**

Under the proposed regulation, we would have required authorization before a covered entity could have used or disclosed protected health information for fundraising. In the final rule, we narrow the circumstances under which covered entities must obtain the individual’s authorization to use or disclose protected health information for fundraising purposes. As provided in §164.514(f) and described in detail in the corresponding preamble, authorization is not required when a covered entity uses or discloses demographic information and information about the dates of health care provided to an individual for the purpose of raising funds for its own benefit, nor when it discloses such information to an institutionally related foundation to raise funds for the covered entity.

Any use or disclosure for fundraising purposes that does not meet the requirements of §164.514(f) and does not fall within the definition of health care operations (see §164.501), requires authorization. Specifically, covered entities must obtain the individual’s authorization to use or disclose protected health information to raise funds for any entity other than the covered entity. For example, a covered entity must have the individual’s authorization to use protected health information about the individual to solicit funds for a non-profit organization that engages in research, education, and awareness efforts about a particular disease.

**Psychotherapy Notes**

In the NPRM, we proposed different rules with respect to psychotherapy notes than we proposed with respect to all other protected health information. The proposed rule would have required covered entities to obtain an authorization for any use or disclosure of psychotherapy notes to carry out treatment, payment, or health care operations, unless the use was by the person who created the psychotherapy notes. With respect to all other protected health information, we proposed to prohibit covered entities from requiring authorization for uses and disclosures for these purposes.

We significantly revise our approach to psychotherapy notes in the final rule. With a few exceptions, covered entities must obtain the individual’s authorization to use or disclose psychotherapy notes to carry out treatment, payment, or health care operations. A covered entity must obtain the individual’s consent, but not an authorization, for the person who created the psychotherapy notes to use the notes to carry out treatment and for the covered entity to use or disclose psychotherapy notes for conducting training programs in which students, trainees, or practitioners in mental health learn under supervision to
practice or improve their skills in group, joint, family, or individual counseling. A covered entity may also use psychotherapy notes to defend a legal action or other proceeding brought by the individual pursuant to a consent, without a specific authorization. We note that, while this provision allows disclosure of these records to the covered entity’s attorney to defend against the action or proceeding, disclosure to others in the course of a judicial or administrative proceeding is governed by §164.512(e). This special provision is necessary because disclosure of protected health information for purposes of legal representatives may be made under the general consent as part of “health care operations.” Because we require an authorization for disclosure of psychotherapy notes for “health care operations,” an exception is needed to allow covered entities to use protected health information about an individual to defend themselves against an action threatened or brought by that individual without asking that individual for authorization to do so. Otherwise, a consent under §164.506 is not sufficient for the use or disclosure of psychotherapy notes to carry out treatment, payment, or health care operations. Authorization is required.

We anticipate these authorizations will rarely be necessary, since psychotherapy notes do not include information that covered entities typically need for treatment, payment, or other types of health care operations.

In the NPRM, we proposed to permit covered entities to use and disclose psychotherapy notes for all other purposes permitted or required under the rule without authorization. In the final rule, we specify a more limited set of uses and disclosures of psychotherapy notes that covered entities are permitted to make without authorization. An authorization is not required for use or disclosure of psychotherapy notes when required for enforcement purposes, in accordance with subpart C of part 160 of this subchapter; when mandated by law, in accordance with §164.512(a); when needed for oversight of the health care provider who created the psychotherapy notes, in accordance with §164.512(d); when needed by a coroner or medical examiner, in accordance with §164.512(g)(1); or when needed to avert a serious and imminent threat to health or safety, in accordance with §164.512(j)(3). We also provide transition provisions in §164.532 regarding the effect of express legal permission obtained from an individual prior to the compliance date of this rule.

Section 164.508(b)—Implementation Specifications for Authorizations

Valid and Defective Authorizations

We proposed to require a minimum set of elements for authorizations requested by the individual and an additional set of elements for authorizations requested by a covered entity. We would have permitted covered entities to use and disclose protected health information pursuant to authorizations containing the applicable required elements. We would have prohibited covered entities from acting on an authorization if the submitted document had any of the following defects:

- The expiration date had passed;
- The form had not been filled out completely;
- The covered entity knew the authorization had been revoked;
- The completed form lacked a required element; or
- The covered entity knew the information on the form was false.

In §164.508(b)(1) of the final rule, we specify that an authorization containing the applicable required elements (as described below) is a valid authorization. We clarify that a valid authorization may contain additional, non-required elements, provided that these elements are not inconsistent with the required elements. Covered entities are not required to use or disclose protected health information pursuant to a valid authorization. Our intent is to clarify that a covered entity that uses or discloses protected health information pursuant to an authorization meeting the applicable requirements will be in compliance with this rule.

We retain the provision prohibiting covered entities from acting on an authorization if the submitted document had any of the listed defects, with a few changes. First, in §164.508(c)(1)(iv) we specify that an authorization may expire upon a certain event or on a specific date. For example, a valid authorization may state that it expires upon acceptance or rejection of an application for insurance or upon the termination of employment (for example, in an authorization for disclosure of protected health information for fitness-for-duty purposes) or similar event. The expiration event must, however, be related to the individual or the purpose of the use or disclosure. An authorization that purported to expire on the date when the stock market reached a specified level would not be valid. Under §164.508(b)(2)(i), if the expiration event is known by the covered entity to have occurred, the authorization is defective. Second, we clarify that certain compound authorizations, as described below, are defective. We also clarify that authorizations that are not completely filled out with respect to the required elements are defective. Finally, we clarify that an authorization with information that the covered entity knows to be false is defective only if the information is material.

As under the proposed regulation, an authorization that the covered entity knows has been revoked is not a valid authorization. We note that, although an authorization must be revoked in writing, the covered entity may not always “know” that an authorization has been revoked. The writing required for an individual to revoke an authorization may not always trigger the “knowledge” required for a covered entity to consider an authorization defective. Conversely, a copy of the written revocation is not required before a provider “knows” that an authorization has been revoked.

Many authorizations will be obtained by persons other than the covered entity. If the individual revokes an authorization by writing to that other person, and neither the individual nor the other person informs the covered entity of the revocation, the covered entity will not “know” that the authorization has been revoked. For example, a government agency may obtain an individual’s authorization for “all providers who have seen the individual in the past year” to disclose protected health information to the agency for purposes of determining eligibility for benefits. The individual may revoke the authorization by writing to the government agency requesting such revocation. We cannot require the agency to inform all covered entities to whom it has presented the authorization that the authorization has been revoked. If a covered entity does not know of the revocation, the covered entity will not violate this rule by acting pursuant to the authorization. At the same time, if the individual does inform the covered entity of the revocation, even orally, the covered entity “knows” that the authorization has been revoked and can no longer treat the authorization as valid under this rule. Thus, in this example, if the individual tells a covered entity that the individual has revoked the authorization, the covered entity “knows” of the revocation and must consider the authorization defective under §164.508(b)(2).
Compound Authorizations

Except for authorizations requested in connection with a clinical trial, we proposed to prohibit covered entities from combining an authorization for use or disclosure of protected health information for purposes other than treatment, payment, or health care operations with an authorization or consent for treatment (e.g., an informed consent to receive care) or payment (e.g., an assignment of benefits).

We clarify the prohibition on compound authorizations in the final rule. Other than as described below, § 164.508(b)(3) prohibits a covered entity from acting on an authorization required under this rule that is combined with any other document, including any other written legal permission from the individual. For example, an authorization under this rule may not be combined with a consent for use or disclosure of protected health information under § 164.506, with the notice of privacy practices under § 164.520, with any other form of written legal permission for the use or disclosure of protected health information, with an informed consent to participate in research, or with any other form of consent or authorization for treatment or payment.

There are three exceptions to this prohibition. First, under § 164.508(f) (described in more detail, below), an authorization for the use or disclosure of protected health information created for research that includes treatment of the individual may be combined with a consent for the use or disclosure of that protected health information to carry out treatment, payment, or health care operations under § 164.506 and with other documents as provided in § 164.508(f). Second, authorizations for the use or disclosure of psychotherapy notes for multiple purposes may be combined in a single document, but may not be combined with authorizations for the use or disclosure of other protected health information.

Third, authorizations for the use or disclosure of protected health information other than psychotherapy notes may be combined, provided that the covered entity has not conditioned the provision of treatment, payment, enrollment, or eligibility on obtaining the authorization. If a covered entity conditions any of these services on obtaining an authorization from the individual, as permitted in § 164.508(b)(4) and described below, the covered entity must not combine the authorization with any other document.

The following are examples of valid compound authorizations: an authorization for the disclosure of information created for clinical research combined with a consent for the use or disclosure of other protected health information to carry out treatment, payment, and health care operations, and the informed consent to participate in the clinical research; an authorization for disclosure of psychotherapy notes for both treatment and research purposes; and an authorization for the disclosure of the individual’s demographic information for both marketing and fundraising purposes.

Examples of invalid compound authorizations include: an authorization for the disclosure of protected health information for treatment, for research, and for determining payment of a claim for benefits, when the covered entity will refuse to pay the claim if the individual does not sign the authorization; or an authorization for the disclosure of psychotherapy notes combined with an authorization to disclose any other protected health information.

Prohibition on Conditioning Treatment, Payment, Eligibility, or Enrollment

We proposed to prohibit covered entities from conditioning treatment or payment on the provision by the individual of an authorization, except when the authorization was requested in connection with a clinical trial. In the case of authorization for use or disclosure of psychotherapy notes or research information unrelated to treatment, we proposed to prohibit covered entities from conditioning treatment, payment, or enrollment in a health plan on obtaining such an authorization.

We retain this basic approach but refine its application in the final rule. In addition to the general prohibition on conditioning treatment and payment, covered entities are also prohibited (with certain exceptions described below) from conditioning eligibility for benefits or enrollment in a health plan on obtaining an authorization. This prohibition extends to all authorizations, not just authorizations for use or disclosure of psychotherapy notes. This prohibition is intended to prevent covered entities from coercing individuals into signing an authorization for a use or disclosure that is not necessary to carry out the primary services that the covered entity provides to the individual. For example, a health care provider could not refuse to treat an individual because the individual refused to authorize a disclosure to a pharmaceutical manufacturer for the purpose of marketing a new product.

We clarify the proposed research exception to this prohibition. Covered entities seeking authorization in accordance with § 164.508(f) to use or disclose protected health information created for the purpose of research that includes treatment of the individual, including clinical trials, may condition the research-related treatment on the individual’s authorization. Permitted use of protected health information is part of the decision to receive care through a clinical trial, and health care providers conducting such trials should be able to condition research-related treatment on the individual’s willingness to authorize the use or disclosure of his or her protected health information for research associated with the trial.

In addition, we permit health plans to condition eligibility for benefits and enrollment in the health plan on the individual’s authorization for the use or disclosure of protected health information for purposes of eligibility or enrollment determinations relating to the individual or for its underwriting or risk-rating determinations. We also permit health plans to condition payment of a claim for specified benefits on the individual’s authorization for the disclosure of information maintained by another covered entity to the health plan, if the disclosure is necessary to determine payment of the claim. These exceptions do not apply, however, to authorization for the use or disclosure of psychotherapy notes. Health plans may not condition payment, eligibility, or enrollment on the receipt of an authorization for the use or disclosure of psychotherapy notes, even if the health plan intends to use the information for underwriting or payment purposes.

Finally, when a covered entity provides treatment for the sole purpose of providing information to a third party, the covered entity may condition the treatment on the receipt of an authorization to use or disclose protected health information related to that treatment. For example, a covered health care provider may have a contract with an employer to provide fitness-for-duty exams to the employer’s employees. The provider may refuse to conduct the exam if an individual refuses to authorize the provider to disclose the results of the exam to the employer. Similarly, a covered health care provider may have a contract with a life insurer to provide pre-enrollment physicals to applicants for life insurance coverage. The provider may refuse to conduct the physical if an individual refuses to authorize the provider to disclose the results of the physical to the life insurer.
Revocation of Authorizations

We proposed to allow individuals to revoke an authorization at any time, except to the extent that the covered entity had taken action in reliance on the authorization.

We retain this provision, but specify that the individual must revoke the authorization in writing. When an individual revokes an authorization, a covered entity that knows of such revocation must stop making uses and disclosures pursuant to the authorization to the greatest extent practical. A covered entity may continue to use and disclose protected health information in accordance with the authorization only to the extent the covered entity has taken action in reliance on the authorization. For example, a covered entity is not required to retrieve information that it has already disclosed in accordance with the authorization. (See above for discussion of how written revocation of an authorization and knowledge of that revocation may differ.)

We also include an additional exception. Under §164.508(b)(5), individuals do not have the right to revoke an authorization if the authorization was obtained as a condition of obtaining insurance coverage and other applicable law provides the insurer that obtained the authorization with the right to contest a claim under the policy. We intend this exception to permit insurers to obtain necessary protected health information during contestability periods under state law. For example, an individual may not revoke an authorization for the disclosure of protected health information to a life insurer for the purpose of investigating material misrepresentation if the individual’s policy is still subject to the contestability period.

Documentation

In the final rule, we clarify that a covered entity must document and retain any signed authorization as required by §164.530(j) (see below).

Section 164.508(c)—Core Elements and Requirements

We proposed to require authorizations requested by individuals to contain a minimum set of elements: a description of the information to be used or disclosed; the name of the covered entity, or class of entities or persons, authorized to make the use or disclosure; the name or types of recipients of the information; an expiration date; the individual’s signature and date of signature; if signed by a representative, a description of the representative’s authority or relationship to the individual; a statement regarding the individual’s right to revoke the authorization; and a statement that the information may no longer be protected by the federal privacy law. We proposed a model authorization form that entities could have used to satisfy the authorization requirements. If the model form was not used, we proposed to require covered entities to use authorization forms written in plain language.

We modify the proposed approach, by eliminating the distinction between authorizations requested by the individuals and authorizations requested by others. Instead, we prescribe a minimum set of elements for authorizations and certain additional elements when the authorization is requested by a covered entity for its own use or disclosure of protected health information it maintains or for receipt of protected health information from another covered entity to carry out treatment, payment, or health care operations.

The core elements are required for all authorizations, not just authorizations requested by individuals. Individuals seek disclosure of protected health information about them to others in many circumstances, such as when applying for life or disability insurance, when government agencies conduct suitability investigations, and in seeking certain job assignments when health status is relevant. Another common instance is when an individual’s attorney needs individually identifiable health information to evaluate an injury claim and asks the individual to authorize disclosure of records relating to the injury to the attorney. In each of these situations, the individual may go directly to the covered entity and ask it to send the relevant information to the intended recipient. Alternatively, the intended recipient may ask the individual to complete a form, which the recipient will submit to the covered entity on the individual’s behalf, that authorizes the covered entity to disclose the information. Whether the authorization is submitted to the covered entity by the individual or by another person on the individual’s behalf, the covered entity maintaining protected health information may not use or disclose it pursuant to an authorization unless the authorization meets the following requirements.

First, the authorization must include a description of the information to be used or disclosed, with sufficient specificity to allow the covered entity to know which information the authorization references. For example, the authorization may include a description of “laboratory results from July 1998” or “all laboratory results” or “results of MRI performed in July 1998.” The covered entity can then use or disclose that information and only that information. If the covered entity does not understand what information is covered by the authorization, the use or disclosure is not permitted unless the covered entity clarifies the request.

There are no limitations on the information that can be authorized for disclosure. If an individual wishes to authorize a covered entity to disclose his or her entire medical record, the authorization can so specify. In order for the covered entity to disclose the entire medical record, the authorization must be specific enough to ensure that the individual has a clear understanding that the entire record will be disclosed. For example, if the Social Security Administration seeks authorization for release of all health information to facilitate the processing of benefit applications, then the description on the authorization form must specify “all health information” or the equivalent.

In some instances, a covered entity may be reluctant to undertake the effort to review the record and select portions relevant to the request (or redact portions not relevant). In such circumstances, covered entities may provide the entire record to the individual, who may then redact and release the more limited information to the requestor. This rule does not require a covered entity to disclose information pursuant to an individual’s authorization.

Second, the authorization must include the name or other specific identification of the person(s) or class of persons that are authorized to use or disclose the protected health information. If an authorization permits a class of covered entities to disclose information to an authorized person, the class must be stated with sufficient specificity so that a covered entity presented with the authorization will know with reasonable certainty that the individual intended the covered entity to release protected health information. For example, a covered licensed nurse practitioner presented with an authorization for “all physicians” to disclose protected health information could not know with reasonable certainty that the individual intended for the practitioner to be included in the authorization.

Third, the authorization must include the name or other specific identification of the person(s) or class of persons to
whom the covered entity is authorized to make the use or disclosure. The authorization must identify these persons with sufficient specificity to reasonably permit a covered entity responding to the authorization to identify the authorized user or recipient of the protected health information.

Often, individuals provide authorizations to third parties, who present them to one or more covered entities. For example, an authorization could be completed by an individual and given to a government agency, authorizing the agency to receive medical information from any health care provider that has treated the individual within a defined period of time. Such an authorization is permissible (subject to the other requirements of this part) if it sufficiently identifies the government entity that is authorized to receive the disclosed protected health information.

Fourth, the authorization must state an expiration date or event. This expiration date or event must either be a specific date (e.g., January 1, 2001), a specific time period (e.g., one year from the date of signature), or an event directly relevant to the individual or the purpose of the use or disclosure (e.g., for the duration of the individual’s enrollment with the health plan that is authorized to make the use or disclosure). We note that the expiration date or event is subject to otherwise applicable and more stringent law. For example, the National Association of Insurance Commissioners’ Insurance Information and Privacy Protection Model Act, adopted in at least fifteen states, specifies that authorizations signed for the purpose of collecting information in connection with an application for a life, health, or disability insurance policy are permitted to remain valid for no longer than thirty months. In those states, the longest such an authorization may remain in effect is therefore thirty months, regardless of the expiration date or event indicated on the form.

Fifth, the authorization must state that the individual has the right to revoke an authorization in writing, except to the extent that action has been taken in reliance on the authorization or, if applicable, during a contestability period. The authorization must include instructions on how the individual may revoke the authorization. For example, the person obtaining the authorization from the individual can include an address where the individual can send a written request for revocation.

Sixth, the authorization must inform the individual that, when the information is used or disclosed pursuant to the authorization, it may be subject to re-disclosure by the recipient and may no longer be protected by this rule.

Seventh, the authorization must include the individual’s signature and the date of the signature. Once we adopt the standards for electronic signature, another of the required administrative simplification standards we are required to adopt under HIPAA, an electronic signature that meets those standards will be sufficient under this rule. We do not require verification of the individual’s identity or authentication of the individual’s signature.

Finally, if the authorization is signed by a personal representative of the individual, the representative must indicate his or her authority to act for the individual.

As in the proposed rule, the authorization must be written in plain language. See the preamble discussion regarding notice of privacy practices (§ 164.520) for a discussion of the plain language requirement. We do not provide a model authorization in this rule. We will provide further guidance on this issue prior to the compliance date.

Section 164.508(d) – Authorizations Requested by a Covered Entity for Its Own Uses and Disclosures

We proposed to require covered entities to include additional elements in authorizations initiated by the covered entity. Before a covered entity could use or disclose protected health information of an individual pursuant to a request the covered entity made, we proposed to require the entity to obtain an authorization containing the minimum elements described above and the following additional elements: except for authorizations requested for clinical trials, a statement that the entity will not condition treatment or payment on the individual’s authorization; a description of the purpose of the requested use or disclosure; a statement that the individual may inspect or copy the information to be used or disclosed and may refuse to sign the authorization; and, if the use or disclosure of the requested information will result in financial gain to the entity, a statement that such gain will result.

We additionally proposed to require covered entities, when requesting an individual’s authorization, to request only the minimum amount of information necessary to accomplish the purpose for which the request was made. We also proposed to require covered entities to provide the individual with a copy of the executed authorization.

We retain the proposed approach, but apply these additional requirements when the covered entity requests the individual’s authorization for the entity’s own use or disclosure of protected health information maintained by the covered entity itself. For example, a health plan may ask individuals to authorize the plan to disclose protected health information to a subsidiary to market life insurance to the individual. A pharmaceutical company may also ask a covered provider to recruit patients for drug research; if the covered provider asks patients to sign an authorization for the provider to disclose protected health information to the pharmaceutical company for this research, this is also an authorization requested by a covered entity for disclosure of protected health information maintained by the covered entity. When covered entities initiate the authorization by asking individuals to authorize the entity to use or disclose protected health information that the entity maintains, the authorization must include all of the elements required above as well as several additional elements.

Authorizations requested by covered entities for the covered entity’s own use or disclosure of protected health information must state, as applicable under § 164.508(b)(4), that the covered entity will not condition treatment, payment, enrollment, or eligibility on the individual’s authorization for the use or disclosure. For example, if a health plan asks an individual to sign an authorization for the health plan to disclose protected health information to a non-profit advocacy group for the advocacy group’s fundraising purposes, the authorization must contain a statement that the health plan will not condition treatment, payment, enrollment in the health plan, or eligibility for benefits on the individual providing the authorization.

Authorizations requested by covered entities for their own uses and disclosures of protected health information must also identify the purpose for which the information is to be used or disclosed. The required statement of purpose(s) must provide individuals with the facts they need to make an informed decision whether to allow release of the information. We prohibit the use of broad or blanket authorizations requesting the use or disclosure of protected health information for a wide range of unspecified purposes. Both the information that is to be used or disclosed and the specific purpose(s) for such uses or disclosures must be stated in the authorization.
Authorizations requested by covered entities for their own uses and disclosures must also advise individuals of certain rights available to them under this rule. The authorization must state that the individual may inspect or copy the information to be used or disclosed as provided in §164.524 regarding access for inspection and copying and that the individual may refuse to sign the authorization.

We alter the proposed requirements with respect to authorizations for which the covered entity will receive financial gain. When the covered entity initiates the authorization and the covered entity will receive direct or indirect remuneration from a third party (rather than financial gain, as proposed) in exchange for using or disclosing the protected health information, the authorization must include a statement that such remuneration will result. For example, a health plan may wish to sell or rent its enrollee mailing list or a pharmaceutical company may offer a covered provider a discount on its products if the provider obtains authorization to disclose the demographic information of patients with certain diagnoses so that the company can market new drugs to them directly. In each case, the covered entity must obtain the individual's authorization, and the authorization must include a statement that the covered entity will receive remuneration.

In §164.508(d)(2), we continue to require a covered entity that requests an authorization for its own use or disclosure of protected health information to provide the individual with a copy of the signed authorization. While we eliminate from this section the provision requiring covered entities to obtain authorization for use or disclosure of the minimum necessary protected health information, §164.514(d)(4) requires covered entities to request only the minimum necessary protected health information to accomplish the purpose for which the request is made. This requirement applies to these authorizations, as well as other requests.

Section 164.508(e)—Authorizations Requested by a Covered Entity for Disclosures by Others

In the proposed rule, we would have prohibited all covered entities from requiring the individual's written legal permission (as proposed, an "authorization") for the use or disclosure of protected health information to carry out treatment, payment, or health care operations. We generally eliminate this prohibition in the final rule, except to specify that a consent obtained by one covered entity is not effective to permit another covered entity to use or disclose protected health information. See §164.506(a)(5) and the corresponding preamble discussion.

In the final rule, if a covered entity seeks the individual's written legal permission to obtain protected health information about the individual from another covered entity for any purpose, it must obtain the individual's authorization for the covered entity that maintains the protected health information to make the disclosure. If the authorization is for the purpose of obtaining protected health information for purposes other than treatment, payment, or health care operations, the authorization need only contain the core elements required by §164.508(c) and described above.

If the authorization, however, is for the purpose of obtaining protected health information to carry out treatment, payment, or health care operations, the authorization must meet the requirements of §164.508(e). We expect such authorizations will rarely be necessary, because we expect covered entities that maintain protected health information to obtain consents that permit them to make anticipated uses and disclosures for these purposes. An authorization obtained by another covered entity that authorizes the covered entity maintaining the protected health information to make a disclosure for the same purpose, therefore, would be unnecessary.

We recognize, however, that these authorizations may be useful to demonstrate an individual’s intent and relationship to the intended recipient of the information when the intent or relationship is not already clear. For example, a long term care insurer may need information from an individual’s health care providers about the individual’s ability to perform activities of daily living in order to determine payment of a long term care claim. The providers that hold the information may not be providing the long term care and may not, therefore, be aware of the individual’s coverage under the policy or that the individual is receiving long term care services. An authorization obtained by the long term care insurer will help to demonstrate these facts to the providers holding the information, which will make them more confident that the individual intends for the information to be shared. Similarly, an insurer with subrogation obligations may need authorization from the enrollee’s providers to assess or prosecute the claim. A patient’s new physician may also need medical records from the patient’s prior providers in order to treat the patient. Without an authorization that demonstrates the patient’s intent for the information to be shared, the covered entity that maintains the protected health information may be reluctant to provide the information, even if that covered entity’s consent permits such disclosure to occur.

These authorizations may also be useful to accomplish clinical coordination and integration among covered entities that do not meet the definitions of affiliated covered entities or organized health care arrangements. For example, safety-net providers that participate in the Community Access Program (CAP) may not qualify as organized health care arrangements but may want to share protected health information with each other in order to develop and expand integrated systems of care for uninsured people. An authorization under this section would permit such providers to receive protected health information from other CAP participants to engage in such activities.

Because of such concerns, we permit a covered entity to request the individual’s authorization to obtain protected health information from another covered entity to carry out treatment, payment, and health care operations. In these situations, the authorization must contain the core elements described above and must also describe each purpose of the requested disclosure.

With one exception, the authorization must also indicate that the authorization is voluntary. It must state that the individual may refuse to sign the authorization and that the covered entity requesting the authorization will not condition the provision of treatment, payment, enrollment in the health plan, or eligibility for benefits on obtaining the individual’s authorization. If the authorization is for a disclosure of information that is necessary to determine payment of a claim for specified benefits, however, the health plan requesting the authorization may condition the payment of the claim on obtaining the authorization from the individual. See §164.508(b)(4)(iii). In this case, the authorization does not have to state that the health plan will not condition payment on obtaining the authorization.

The covered entity requesting the authorization must provide the individual with a copy of the signed authorization. We note that the covered entity requesting the authorization is also subject to the requirements in

---

Note: The text is a legal document, specifically a part of the Federal Register, which discusses the Health Insurance Portability and Accountability Act (HIPAA). The text pertains to the use and disclosure of protected health information, including the requirements for obtaining patient authorizations.
§ 164.514 to request only the minimum necessary information needed for the purpose of the authorization.

We additionally note that, when the covered entity that maintains the protected health information has already obtained a consent for disclosure of protected health information to carry out treatment, payment, and/or health care operations under § 164.506, and that consent conflicts with an authorization obtained by another covered entity under § 164.508(e), the covered entity maintaining the protected health information is bound by the more restrictive document. See § 164.506(e) and the corresponding preamble discussion for further explanation.

Section 164.508(f)—Authorizations for Uses and Disclosures of Protected Health Information Created for Research That Includes Treatment of Individuals

In the proposed rule, we would have required individual authorization for any use or disclosure of research information unrelated to treatment. In the final rule, we eliminate the special rules for this category of information and, instead, require covered entities to obtain an authorization for the use or disclosure of protected health information the covered entity creates for the purpose of research that includes treatment of individuals, except as otherwise permitted by § 164.512(i).

The intent of this provision is to permit covered entities that conduct research involving treatment to bind themselves to a more limited scope of uses and disclosures of research information than they would otherwise be permitted to make with non-research information. Rather than creating a single definition of “research information,” we allow covered entities the flexibility to define that subset of protected health information they create during clinical research that is not necessary for treatment, payment, or health care operations and that the covered entity will use or disclose under more limited circumstances than it uses or discloses other protected health information. In designing their authorizations, we expect covered entities to be mindful of the often highly sensitive nature of research information and the impact of individuals’ privacy concerns on their willingness to participate in research.

Covered entities seeking authorization to use or disclose protected health information they create for the purpose of research that includes treatment of individuals during clinical trials must include in the authorization (in addition to the applicable elements required above) a description of the extent to which some or all of the protected health information created for the research will also be used or disclosed for purposes of treatment, payment, and health care operations. For example, if the covered entity intends to seek reimbursement from the individual’s health plan for the routine costs of care associated with the research protocol, it must explain in the authorization the types of information that it will provide to the health plan for this purpose. This information, and the circumstances under which disclosures will be made for treatment, payment, and health care operations, may be more limited than the information and circumstances described in the covered entity’s general consent and notice of privacy practices. To the extent the covered entity limits itself to a subset of uses or disclosures that are otherwise permissible under the rule and the covered entity’s consent and notice, the covered entity is bound by the statements made in the research-related authorization. In these circumstances, the authorization must indicate that the authorization, not the general consent and notice, controls.

If the covered entity’s primary interaction with the individual is through the research, the covered entity may combine the general consent for treatment, payment, and health care operations required under § 164.506 with this research authorization and need not obtain an additional consent under § 164.506. If the entity has already obtained a consent to obtain, a separate consent as required under § 164.506, the research authorization must refer to that consent and state that the practices described in the research-related authorization are binding on the covered entity as to the information covered by the research-related authorization. The research-related authorization may also be combined in the same document as the informed consent for participation in the research. This is an exception to the general rule in § 164.508(b)(3) that an authorization under this section must be combined with any other document (see above).

The covered entity must also include in the authorization a description of the extent to which it will not use or disclose the protected health information it obtains in connection with the research protocol for purposes that are permitted without individual authorization under this rule (under §§ 164.510 and 164.512). To the extent that the entity limits itself to a subset of uses or disclosures that are otherwise permissible under the rule and the entity’s notice, the entity is bound by the statements made in the research-related authorization. In these circumstances, the authorization must indicate that the authorization, not the notice, controls. The covered entity may not, however, purport to preclude itself from making uses or disclosures that are required by law or that are necessary to avert a serious and imminent threat to health or safety.

In some instances, the covered entity may wish to make a use or disclosure of the research information that it did not include in its general consent or notice or for which authorization is required under this rule. To the extent the entity includes uses or disclosures in the research authorization that are otherwise not permissible under the rule and the entity’s consent and notice of information practices, the entity must include all of the elements required by §§ 164.508(c) and (d) in the research-related authorization. The covered entity is bound by these statements.

Research that involves the delivery of treatment to participants sometimes relies on existing health information, such as to determine eligibility for the trial. We note that under § 164.508(b)(3)(iii), the covered entity may combine the research-related authorization required under § 164.508(f) with any other authorization for the use or disclosure of protected health information (other than psychotherapy notes), provided that the covered entity does not condition the provision of treatment on the individual signing the authorization. For example, a covered health care provider that had a treatment relationship with an individual prior to the individual’s enrollment in a clinical trial, but that is now providing research-related treatment to the individual, may elect to request a compound authorization from the individual: an authorization under § 164.508(d) for the provider to use the protected health information it created prior to the initiation of the research that involves treatment, combined with an authorization under § 164.508(f) regarding use and disclosure of protected health information the covered provider will create for the purpose of the clinical trial. This compound authorization would be valid, provided the covered provider did not condition the research-related treatment on obtaining the authorization required under § 164.508(f), as permitted in § 164.508(b)(4)(i).

However, we anticipate that covered entities will almost always, if not always, condition the provision of research-related treatment on the individual signing the authorization under § 164.508(f) for the covered
entity’s use or disclosure of protected health information created for the research. Therefore, we expect that the vast majority of covered providers who wish to use or disclose protected health information about an individual that will be created for research that includes treatment and wish to use existing protected health information about that individual for the research that includes treatment, will be required to obtain two authorizations from the individual: (1) an authorization for the use and disclosure of protected health information to be created for the research that involves treatment of the individual (as required under § 164.508(f)), and (2) an authorization for the use of existing protected health information for the research that includes treatment of the individual (as required under § 164.508(d)).

Effect of Authorization
As noted in the discussion about consents in the preamble to § 164.506, authorizations under this rule should not be construed to waive, directly or indirectly, any privilege granted under federal, state, or local laws or procedures.

Section 164.510—Uses and Disclosures Requiring an Opportunity for the Individual To Agree or To Object

Introduction
Section 164.510 of the NPRM proposed the uses and disclosures of protected health information that covered entities could make for purposes other than treatment, payment, or health care operations and for which an individual authorization would not have been required. These allowable uses and disclosures were designed to permit and promote key national health care priorities, and to promote the smooth operation of the health care system. In each of these areas, the proposal permitted, but would not have required, covered entities to use or disclose protected health information.

We proposed to require covered entities to obtain the individual’s oral agreement before making a disclosure to a health care facility’s directory or to the individual’s next-of-kin or to another person involved in the individual’s health care. Because there is an expectation in these two areas that individuals will have some input into a covered entity’s decision to use or disclose protected health information, we decided to place disclosures to health facility directories and to persons involved in an individual’s care in a separate section. In the final rule, requirements regarding disclosure of protected health information for facility directories and to others involved in an individual’s care are included in § 164.510(a) and § 164.510(b), respectively. In the final rule, we include in § 164.510(b) provisions to address a type of disclosure not addressed in the NPRM: disclosures to entities providing relief and assistance in disasters such as floods, fires, and terrorist attacks. Requirements for most of the remaining categories of disclosures addressed in proposed § 164.510 of the NPRM are included in a new § 164.512 of the final rule, as discussed below.

Section 164.510 of the final rule addresses situations in which the interaction between the covered entity and the individual is relatively informal and agreements are made orally, without written authorizations for use or disclosure. In general, under the final rule, to disclose or use protected health information for these purposes, covered entities must inform individuals in advance and must provide a meaningful opportunity for the individual to prevent or restrict the disclosure. In exceptional circumstances, where even this informal discussion cannot practicably take place, covered entities are permitted to make decisions regarding disclosure or use based on the exercise of professional judgment of what is in the individual’s best interest.

Section 164.510(a)—Use and Disclosure for Facility Directories

The NPRM proposed to allow covered health care providers to disclose through an inpatient facility’s directory a patient’s name, location in the facility, and general health condition, provided that the individual had agreed to the disclosure. The NPRM would have allowed this agreement to be oral. Pursuant to the NPRM, when making decisions about incapacitated individuals, a covered health care provider could have disclosed such information at the entity’s discretion and consistent with good medical practice and any prior expressions of patient preference of which the covered entity was aware.

The preamble to the NPRM listed several factors that we encouraged covered entities to take into account when making decisions about whether to include an incapacitated patient’s information in the directory. These factors included: (1) Whether disclosing that an individual is in the facility could reasonably cause harm or danger to the individual (e.g., if it appeared that an unconscious patient had been abused and disclosing the information could give the attacker sufficient information to seek out the person and repeat the abuse); (2) whether disclosing a patient’s location within a facility implicitly would give information about the patient’s condition (e.g., whether a patient’s room number revealed that he or she was in a psychiatric ward); (3) whether it was necessary or appropriate to give information about patient status to family or friends (e.g., if giving information to a family member about an unconscious patient could help a physician administer appropriate medications); and (4) whether an individual had, prior to becoming incapacitated, expressed a preference not to be included in the directory. The preamble stated that if a covered entity learned of such a preference, it would be required to act in accordance with the preference.

The preamble to the NPRM said that when individuals entered a facility in an incapacitated state and subsequently gained the ability to make their own decisions, health facilities should ask them within a reasonable time period for permission to include their information in the facility’s directory. In the final rule, we change the NPRM’s opt-in authorization requirement to an opt-out approach for inclusion of patient information in a health care facility’s directory. The final rule allows covered health care providers—which in this case are health care facilities—to include patient information in their directory only if: (1) They inform incoming patients of their policies regarding the directory; (2) they give patients a meaningful opportunity to opt out of the directory listing or to restrict some or all of the uses and disclosures that can be included in the directory; and (3) the patient does not object to being included in the directory. A patient must be allowed, for example, to have his or her name and condition included in the directory while not having his or her religious affiliation included. The facility’s notice and the individual’s opt-out or restriction may be oral.

Under the final rule, subject to the individual’s right to object, or known prior expressed preferences, a covered health care provider may disclose the following information to persons who inquire about the individual by name: (1) The individual’s general condition in terms that do not communicate specific medical information about the individual (e.g., fair, critical, stable, etc.); and (2) location in the facility. This approach represents a slight change to the NPRM, which did not require members of the general public to ask for a patient by name in order to obtain directory information and which,
in fact, would have allowed covered entities to disclose the individual’s name as part of directory information. Under the final rule, we also establish provisions for disclosure of directory information to clergy that are slightly different from those which apply for disclosure to the general public. Subject to the individual’s right to object or restrict the disclosure, the final rule permits a covered entity to disclose to a member of the clergy: (1) The individual’s name; (2) the individual’s general condition in terms that do not communicate specific medical information about the individual; (3) the individual’s location in the facility; and (4) the individual’s religious affiliation. A disclosure of directory information may be made to members of the clergy even if they do not inquire about an individual by name. We note that the rule in no way requires a covered health care provider to inquire about the religious affiliation of an individual, nor must individuals supply that information to the facility. Individuals are free to determine whether they want their religious affiliation disclosed to clergy through facility directories.

We believe that allowing clergy to access patient information pursuant to this section does not violate the Establishment Clause of the First Amendment, which prohibits laws “respecting an establishment of religion.” Courts traditionally turn to the Lemon test when evaluating laws that might raise Establishment Clause concerns. A law does not violate the Clause if it has a secular purpose, is not primarily to advance religion, and does not cause excessive government entanglement with religion. The privacy regulation passes this test because its purpose is to protect the privacy of individuals—regardless of their religious affiliation—and it does not cause excessive government entanglement.

More specifically, although this section provides a special rule for members of the clergy, it does so as an accommodation to patients who seek to engage in religious conduct. For example, restricting the disclosure of an individual’s religious affiliation, room number, and health status to a priest could cause significant delay that would inhibit the ability of a Catholic patient to obtain sacraments provided during the last rites. We believe this accommodation does not violate the Establishment Clause, because it avoids a government-imposed restriction on the disclosure of information that could disapprove the practice of religion. In that way, it is no different from accommodations upheld by the U.S. Supreme Court, such as exceptions to laws banning the use of alcohol in religious ceremonies.

The final rule expands the circumstances under which health care facilities can disclose specified health information to the patient directory without the patient’s agreement. Besides allowing such disclosures when patients are incapacitated, as the NPRM would have allowed, the final rule allows such disclosures in emergency treatment circumstances. For example, when a patient is conscious and capable of making a decision, but is so seriously injured that asking permission to include his or her information in the directory would delay treatment such that the patient’s health would be jeopardized, health facilities can make decisions about including the patient’s information in the directory according to the same rules that apply when the patient is incapacitated. The final rule modifies the NPRM requirements for cases in which an incapacitated patient is admitted to a health care facility. Whereas the NPRM would have allowed health care providers to disclose an incapacitated patient’s information to the facility’s directory “at its discretion and consistent with good medical practice and any prior expressions of preference of which the covered entity [was] aware,” the final rule states that in these situations (and in other emergency treatment circumstances), covered health care providers must make the decision on whether to include the patient’s information in the facility’s directory in accordance with professional judgment as to the patient’s best interest. In addition, when making decisions involving incapacitated patients and patients in emergency situations, covered health care providers may decide to include some portions of the patient’s information (such as name) but not other information (such as location in the facility) in order to protect patient interests.

As in the preamble to the NPRM, we encourage covered health care providers to take into account the four factors listed above when making decisions about whether to include patient information in a health care facility’s directory when patients are incapacitated or are in an emergency treatment circumstance. In addition, we retain the requirement stated in the preamble of the NPRM that if a covered health care provider learns of an incapacitated patient’s prior expression of preference not to be included in a facility’s directory, the facility must not include the patient’s information in the directory. For cases involving patients admitted to a health care facility in an incapacitated or emergency treatment circumstance who during the course of their stay become capable of decisionmaking, the final rule takes an approach similar to that described in the NPRM. The final rule states that when an individual who was incapacitated or in an emergency treatment circumstance upon admission to an inpatient facility and whose condition stabilizes such that he or she is capable of decisionmaking, a covered health care provider must, when it becomes practicable, inform the individual about its policies regarding the facility’s directory and provide the opportunity to object to the use or disclosure of protected health information about themselves for the directory.

Section 164.510(b)—Uses and Disclosures for Involvement in the Individual’s Care and Notification Purposes

In cases involving an individual with the capacity to make health care decisions, the NPRM would have allowed covered entities to disclose protected health information about the individual to a next-of-kin, to other family members, or to close personal friends of the individual if the individual had agreed orally to such disclosure. If such agreement could not practicably or reasonably be obtained (e.g., when the individual was incapacitated), the NPRM would have allowed disclosure of protected health information that was directly relevant to the person’s involvement in the individual’s health care, consistent with good health professional practices and ethics. The NPRM defined next-of-kin as defined under state law.

Under the final rule, we specify that covered entities may disclose to a person involved in the current health care of the individual (such as a family member, other relative, close personal friend, or any other person identified by the individual) protected health information directly related to the person’s involvement in the current health care of an individual or payment related to the individual’s health care. Such persons involved in care and other contact persons might include, for example: blood relatives; spouses; roommates; boyfriends and girlfriends; domestic partners; neighbors; and colleagues. Inclusion of this list is intended to be illustrative only, and it is not intended to change current practices with respect to: (1) Involvement of other persons in individuals’ treatment decisions; (2) informational information among individuals involved in a person’s care; or (3) sharing of protected health
information to contact persons during a disaster. The final rule also includes new language stating that covered entities may use or disclose protected health information to notify or assist in notification of family members, personal representatives, or other persons responsible for an individual’s care with respect to an individual’s location, condition, or death. These provisions allow, for example, covered entities to notify a patient’s adult child that his father has suffered a stroke and to tell the person that the father is in the hospital’s intensive care unit.

The final rule includes separate provisions for situations in which the individual is present and for when the individual is not present at the time of disclosure. When the individual is present and has the capacity to make his or her own decisions, a covered entity may disclose protected health information only if the covered entity: (1) Obtains the individual’s agreement to disclose to the third parties involved in their care; (2) provides the individual with an opportunity to object to such disclosure and the individual does not express an objection; or (3) reasonably infers from the circumstances, based on the exercise of professional judgment, that the individual does not object to the disclosure. Situations in which covered providers may infer an individual’s agreement to disclose protected health information pursuant to option (3) include, for example, when a patient brings a spouse into the doctor’s office when treatment is being discussed, and when a colleague or friend has brought the individual to the emergency room for treatment.

We proposed that when a covered entity could not practically obtain oral agreement to disclose protected health information to next-of-kin, relatives, or those with a close personal relationship to the individual, the covered entity could make such disclosures consistent with good health professional practice and ethics. In such instances, we proposed that covered entities could disclose only the minimum information necessary for the friend or relative to provide the assistance he or she was providing. For example, health care providers could not disclose to a friend or relative simply driving a patient home from the hospital extensive information about the patient’s surgery or past medical history when the friend or relative had no need for this information.

The final rule takes a similar approach. Under the final rule, when an individual is not present (for example, when a friend of a patient seeks to pick up the patient’s prescription at a pharmacy) or when the opportunity to agree or object to the use or disclosure cannot practicably be provided due to the individual’s incapacity or an emergency circumstance, covered entities may, in the exercise of professional judgment, determine whether the disclosure is in the individual’s best interests and if so, disclose only the protected health information that is directly relevant to the person’s involvement with the individual’s health care. For example, this provision allows covered entities to inform relatives or others involved in a patient’s care, such as the person who accompanied the individual to the emergency room, that a patient has suffered a heart attack and to provide updates on the patient’s progress and prognosis when the patient is incapacitated and unable to make decisions about such disclosures. In addition, this section allows covered entities to disclose functional information to individuals assisting in a patient’s care; for example, it allows hospital staff to give information about a person’s mobility limitations to a friend driving the patient home from the hospital. It also allows covered entities to use professional judgment and experience with common practice to make reasonable inferences of the individual’s best interest in allowing a person to act on an individual’s behalf to pick up filled prescriptions, medical supplies, X-rays, or other similar forms of protected health information. Thus, under this provision, pharmacists may release a prescription to a patient’s friend who is picking up the prescription for him or her. Section 164.510(b) is not intended to disrupt most covered entities’ current practices or state law with respect to these types of disclosures.

This provision is intended to allow disclosures directly related to a patient’s current condition and should not be construed to allow, for example, disclosure of extensive information about the patient’s medical history that is not relevant to the patient’s current condition and that could prove embarrassing to the patient. In addition, if a covered entity suspects that an incapacitated patient is a victim of domestic violence and that a person seeking information about the patient may have abused the patient, covered entities should not disclose information to the suspected abuser if there is reason to believe that such a disclosure could cause the patient serious harm. In all of these situations regarding possible disclosures of protected health information about an patient who is not present or is unable to agree to such disclosures due to incapacity or other emergency circumstance, disclosures should be in accordance with the exercise of professional judgment as to the patient’s best interest.

This section is not intended to provide a loophole for avoiding the rule’s other requirements, and it is not intended to allow disclosures to a broad range of individuals, such as journalists who may be curious about a celebrity’s health status. Rather, it should be construed narrowly, to allow disclosures to those with the closest relationships with the patient, such as family members, in circumstances when a patient is unable to agree to disclosure of his or her protected health information. Furthermore, when a covered entity cannot practically obtain an individual’s agreement before disclosing protected health information to a relative or to a person involved in the individual’s care and is making decisions about such disclosures consistent with the exercise of professional judgment regarding the individual’s best interest, covered entities must take into account whether such a disclosure is likely to put the individual at risk of serious harm.

Like the NPRM, the final rule does not require covered entities to verify the identity of relatives or other individuals involved in the individual’s care. Rather, the individual’s act of involving the other persons in his or her care suffices as verification of their identity. For example, the fact that a person brings a family member into the doctor’s office when treatment information will be discussed constitutes verification of the involved person’s identity for purposes of this rule. Likewise, the fact that a friend arrives at a pharmacy and asks to pick up a specific prescription for an individual effectively verifies that the friend is involved in the individual’s care, and the rule allows the pharmacist to give the filled prescription to the friend.

We also clarify that the final rule does not allow covered entities to assume that an individual’s agreement at one point in time to disclose protected health information to a relative or to another person assisting in the individual’s care implies agreement to disclose protected health information indefinitely in the future. We encourage the exercise of professional judgment in determining the scope of the person’s involvement in the individual’s care and the time period for which the individual is agreeing to the other person’s involvement. For example, if a friend simply picks up a patient from the hospital but has played no other role...
in the individual’s care, hospital staff should not call the friend to disclose lab test results a month after the initial encounter with the friend. However, if a patient routinely brings a spouse into the doctor’s office when treatment is discussed, a physician can infer that the spouse is playing a long-term role in the patient’s care, and the rule allows disclosure of protected health information to the spouse consistent with his or her role in the patient’s care, for example, discussion of treatment options.

The NPRM did not specifically address situations in which disaster relief organizations may seek to obtain protected health information from covered entities to help coordinate the individual’s care, or to notify family or friends of an individual’s location or general condition in a disaster situation. In the final rule, we account for disaster situations in this paragraph. Specifically, we allow covered entities to use or disclose protected health information without individual agreement to federal, state, or local government agencies engaged in disaster relief activities, as well as to private disaster relief or disaster assistance organizations (such as the Red Cross) authorized by law or by their charters to assist in disaster relief efforts, to allow these organizations to carry out their responsibilities in a specific disaster situation. Covered entities may make these disclosures to disaster relief organizations, for example, so that these organizations can help family members, friends, or others involved in the individual’s care to locate individuals affected by a disaster and to inform them of the individual’s general health condition. This provision also allows disclosure of information to disaster relief or disaster assistance organizations so that these organizations can help individuals obtain needed medical care for injuries or other health conditions caused by a disaster.

We encourage disaster relief organizations to protect the privacy of individual health information to the extent practicable in a disaster situation. However, we recognize that the nature of disaster situations often makes it impossible or impracticable for disaster relief organizations and covered entities to seek individual agreement or authorization before disclosing protected health information necessary for providing disaster relief. Thus, we note that we do not intend to impede disaster relief organizations in their critical mission to save lives and reunite loved ones and friends in disaster situations.

Section 164.512—Uses and Disclosures for Which Consent, an Authorization, or Opportunity To Agree or Object Is Not Required

Introduction

The final rule’s requirements regarding disclosures for directory information and to family members or others involved in an individual’s care are in a section separate from that covering disclosures allowed for other national priority purposes. In the final rule, we place most of the other disclosures for national priority purposes in a new §164.512.

As in the NPRM, in §164.512 of the final rule, we allow covered entities to make these national priority uses and disclosures without individual authorization. As in the NPRM, these uses and disclosures are discretionary. Covered entities are free to decide whether or not to use or disclose protected health information for any or all of the permitted categories. However, as in the NPRM, nothing in the final rule provides authority for a covered entity to restrict or refuse to make a use or disclosure mandated by other law.

The new §164.512 includes paragraphs on: Uses and disclosures required by law; uses and disclosures for public health activities; disclosures about victims of abuse, neglect, or domestic violence; uses and disclosures for health oversight activities; disclosures for judicial and administrative proceedings; disclosures for law enforcement purposes; uses and disclosures about decedents; uses and disclosures for cadaveric donation of organs, eyes, or tissues; uses and disclosures for research purposes; uses and disclosures to avert a serious threat to health or safety; and uses and disclosures for national priority purposes.

While the right to request restrictions under §164.522 and the consents required under §164.506 do not apply to the use and disclosure of protected health information under §164.512, we do not intend to preempt any state or other restrictions, or any right to enforce such agreements or consents under other law.

We note that a covered entity may use or disclose protected health information as permitted by and in accordance with one of the paragraphs of §164.512, regardless of whether that use or disclosure fails to meet the requirements for use or disclosure under a different paragraph in §164.512 or elsewhere in the rule.

Verification for Disclosures Under §164.512

In §164.510(a) of the NPRM, we proposed that covered entities verify the identity and authority of persons to whom they made disclosure under the section. In the final rule, we generally have retained the proposed requirements. Verification requirements are discussed in §164.514 of the final rule.

Section 164.512(a)—Uses and Disclosures Required by Law

In the NPRM we would have allowed covered entities to use or disclose protected health information without individual authorization where such use...
as long as the use or disclosure met all relevant requirements of such law.

However, a legally mandated use or disclosure which fell into one or more of the national priority purposes expressly identified in proposed § 164.510 of the NPRM would have been subject to the terms and conditions specified by the applicable paragraph of proposed § 164.510. Thus, a disclosure required by law would have been allowed only to the extent it was not otherwise prohibited or restricted by another provision in proposed § 164.510. For example, mandatory reporting to law enforcement officials would not have been allowed unless such disclosures conformed to the requirements of proposed § 164.510(f) of the NPRM, on uses and disclosures for law enforcement purposes. As explained in the NPRM, this provision was not intended to obstruct access to information deemed important enough by federal, state or other government authorities to require it by law.

In § 164.512(a) of the final rule, we retain the proposed approach, and we permit covered entities to comply with laws requiring the use or disclosure of protected health information, provided the use or disclosure meets and is limited to the relevant requirements of such other laws. To more clearly address where the substantive and procedural requirements of other provisions in this section apply, we have deleted the general sentence from the NPRM which stated that the provision applies to uses or disclosures that are covered by paragraphs (b) through (m) of proposed § 164.510. Instead, in § 164.512(a)[2] we list the specific paragraphs that have additional requirements with which covered entities must comply. They are disclosures about victims of abuse, neglect or domestic violence (§ 164.512(c)), for judicial and administrative proceedings (§ 164.512(e)), and for law enforcement purposes (§ 164.512(f)). We include a new definition of “required by law.” See § 164.514. We clarify that the requirements provided for in § 164.514(h) relating to verification apply to disclosures under this paragraph. Those provisions require covered entities to verify the identity and authority of persons to whom they make disclosures. We note that the minimum necessary requirements of § 164.514(d) do not apply to disclosures made under this paragraph.

We note that this rule does not affect what is required by other law, nor does it compel a covered entity to make a use or disclosure of protected health information required by the legal demands or reporting requirements listed in the definition of “required by law.” Covered entities will not be sanctioned under this rule for responding in good faith to such legal process and reporting requirements.

However, nothing in this rule affects, either by expanding or contracting, a covered entity’s right to challenge such process or reporting requirements under other laws. The only disclosures of protected health information compelled by this rule are disclosures to an individual (or the personal representative of an individual) or to the Secretary for the purposes of enforcing this rule.

Uses and disclosures permitted under this paragraph must be limited to the protected health information necessary to meet the requirements of the law that compels the use or disclosure. For example, disclosures pursuant to an administrative subpoena are limited to the protected health information authorized to be disclosed on the face of the subpoena.

Section 164.512(b)—Uses and Disclosures for Public Health Activities

The NPRM would have allowed covered entities to disclose protected health information without individual authorization to: (1) A public health authority authorized by law to collect or receive such information for the purpose of preventing or controlling disease, injury, or disability, including, but not limited to, the reporting of disease, injury, vital events such as birth or death, and the conduct of public health surveillance, public health investigations, and public health interventions; (2) a public health authority or other appropriate authority authorized by law to receive reports of child abuse or neglect; (3) a person or entity other than a governmental authority that could demonstrate or demonstrated that it was acting to comply with requirements or direction of a public health authority; or (4) a person who may have been exposed to a communicable disease or may otherwise be at risk of contracting or spreading a disease or condition and was authorized by law to be notified as necessary in the conduct of a public health intervention or investigation.

In the final rule, we broaden the scope of permissible disclosures pursuant to item (1) listed above. We narrow the scope of disclosures permissible under item (3) of this list, and we add language to clarify the scope of permissible disclosures with respect to item (4) on the list. We broaden the scope of allowable disclosures regarding item (1) by allowing covered entities to disclose protected health information not only to U.S. public health authorities but also, at the direction of a public health authority, to an official of a foreign government agency that is acting in collaboration with a public health authority. For example, we allow covered entities to disclose protected health information to a foreign government agency that is collaborating with the Centers for Disease Control and Prevention to limit the spread of infectious disease.

We narrow the conditions under which covered entities may disclose protected health information to non-government entities. We allow covered entities to disclose protected health information to a person subject to the FDA’s jurisdiction, for the following activities: to report adverse events (or similar reports with respect to food or dietary supplements), product defects or problems, or biological product deviations. If the disclosure is made to the person required or directed to report such information to the FDA; to track products if the disclosure is made to a person required or directed by the FDA to track the product; to enable product recalls, repairs, or replacement, including locating and notifying individuals who have received products regarding product recalls, withdrawals, or other problems; or to conduct post-marketing surveillance to comply with requirements or at the direction of the FDA.

The terms included in § 164.512(b)(iii) are intended to have both their commonly understood meanings, as well as any specialized meanings, pursuant to the Food, Drug, and Cosmetic Act (21 U.S.C. 321 et seq.) or the Public Health Service Act (42 U.S.C. 201 et seq.). For example, “post-marketing surveillance” is intended to mean activities related to determining the safety or effectiveness of a product after it has been approved and is in commercial distribution, as well as certain Phase IV (post-approval) commitments by pharmaceutical companies. With respect to devices, “post-marketing surveillance” can be construed to refer to requirements of section 522 of the Food, Drug, and Cosmetic Act regarding certain implanted, life-sustaining, or life-supporting devices. The term “track” includes, for example, tracking devices under section 519(e) of the Food, Drug, and Cosmetic Act, units of blood or other blood products, as well as tracebacks of contaminated food.

In § 164.512(b)(ii), the term “required” refers to requirements in statute, regulation, order, or other...
legally binding authority exercised by the FDA. The term “directed,” as used in this section, includes other official agency communications such as guidance documents.

We note that under this provision, a covered entity may disclose protected health information to a non-governmental organization without individual authorization for inclusion in a private data base or registry only if the disclosure is otherwise for one of the purposes described in this provision (e.g., for tracking products pursuant to FDA direction or requirements, for post-marketing surveillance to comply with FDA requirements or direction.)

To make a disclosure that is not for one of these activities, covered entities must obtain individual authorization or must meet the requirements of another provision of this rule. For example, covered entities may disclose protected health information to employers for inclusion in a workplace surveillance database only with individual authorization. Disclosure is required by law; if the disclosure meets the requirements of § 164.512(b)(v); or if the disclosure meets the conditions of another provision of this regulation, such as § 154.512(i) relating to research. Similarly, if a pharmaceutical company seeks to create a registry containing protected health information about individuals who had taken a drug that the pharmaceutical company had developed, covered entities may disclose protected health information without authorization to the pharmaceutical company pursuant to FDA requirements or direction. If the pharmaceutical company’s registry is not for any of these purposes, covered entities may disclose protected health information to it only with patient authorization, if required by law, or if disclosure meets the conditions of another provision of this rule.

The final rule continues to permit covered entities to disclose protected health information without individual authorization directly to public health authorities, such as the Food and Drug Administration, the Occupational Safety and Health Administration, the Centers for Disease Control and Prevention, as well as state and local public health departments, for public health purposes as specified in the NPRM.

The final rule retains the NPRM provision allowing covered entities to disclose protected health information to public health authorities or other appropriate government authorities authorized by law to receive reports of childhood infections. In addition, we clarify the NPRM’s provision regarding disclosure of protected health information to persons who may have been exposed to a communicable disease or who may otherwise be at risk of contracting or spreading a disease or condition. Under the final rule, covered entities may disclose protected health information to such individuals when the covered entity or public health authority is authorized by law to notify these individuals as necessary in the conduct of a public health intervention or investigation.

In addition, as in the NPRM, under the final rule, a covered entity that is acting as a public health authority—for example, a public hospital conducting infectious disease surveillance in its role as an arm of the public health department—may use protected health information in all cases for which it is allowed to disclose such information for public health activities as described above.

The proposed rule did not contain a specific provision relating to disclosures by covered health care providers to employers concerning work-related injuries or illnesses or workplace medical surveillance. Under the proposed rule, a covered entity would have been permitted to disclose protected health information without individual authorization for public health purposes to private person if the person could demonstrate that it was acting to comply with requirements or at the direction of a public health authority.

As discussed above, in the final rule we narrow the scope of this paragraph as it applies to disclosures to persons other than public health authorities. To ensure that covered health care providers may make disclosures of protected health information without individual authorization to employers when appropriate under federal and state laws addressing work-related injuries and illnesses or workplace medical surveillance, we include a new provision in the final rule. The provision permits covered health care providers who have health care as a workforce member of or at the request of an employer to disclose to that employer protected health information concerning work-related injuries or illnesses or workplace medical surveillance in situations where the employer has a duty under OSHA and MSHA requirements, or under a similar state law, to keep records on or act on such information.

We require health care providers who make disclosures to employers under this provision to provide notice to individuals that it discloses protected health information to employers relating to the medical surveillance of the workplace and work-related illnesses and injuries. The notice required under this provision is separate from the notice required under § 164.520. The notice required under this provision may be met giving a copy of the notice to the individual at the time it provides the health care services, or, if the health care services are provided on the work site of the employer, by posting the notice in a prominent place at the location where the health care services are provided.

This provision applies only when a covered health care provider provides health care services as a workforce member of or at the request of an employer and for the purposes described above. This provision does not affect the application of this rule to other health care provided to
individuals or to their relationship with health care providers that they select. Section 164.512(c)—Disclosures About Victims of Abuse, Neglect or Domestic Violence

The NPRM included two provisions related to disclosures about persons who are victims of abuse. In the NPRM, we would have allowed covered entities to report child abuse to a public health authority or other appropriate authority authorized by law to receive reports of child abuse or neglect. In addition, under proposed § 164.510(f)(3) of the NPRM, we would have allowed covered entities to disclose protected health information about a victim of a crime, abuse or other harm to a law enforcement official under certain circumstances. The NPRM recognized that most, if not all, states had laws that mandated reporting of child abuse or neglect to the appropriate authorities. Moreover, HIPAA expressly carved out state laws on child abuse and neglect from preemption or any other interference. The NPRM further acknowledged that most, but not all, states had laws mandating the reporting of abuse, neglect or exploitation of the elderly or other vulnerable adults. We did not intend to impede reporting in compliance with these laws.

The final rule includes a new paragraph, § 164.512(c), which allows covered entities to report protected health information to specified authorities in abuse situations other than those involving child abuse and neglect. In the final rule, disclosures of protected health information related to child abuse continues to be addressed in the paragraph allowing disclosure for public health activities (§ 164.512(b)), as described above. Because HIPAA addresses child abuse specifically in connection with a state’s public health activities, we believe it would not be appropriate to include child abuse-related disclosures in this separate paragraph on abuse. State laws continue to apply with respect to child abuse, and the final rule does not in any way interfere with a covered entity’s ability to comply with these laws.

In the final rule, we address disclosures about other victims of abuse, neglect and domestic violence in § 164.512(c) rather than in the law enforcement paragraph. Section 164.512(c) establishes conditions for disclosure of protected health information in cases involving domestic violence other than child abuse (e.g., spousal abuse), as well as those involving neglect (e.g., abuse of nursing home residents or residents of facilities for the mentally retarded). This paragraph addresses reports to law enforcement as well as to other authorized public officials. The provisions of this paragraph supersede the provisions of § 164.512(a) and § 164.512(f)(1)(i) to the extent that those provisions address the subject matter of this paragraph.

Under the circumstances described below, the final rule allows covered entities to disclose protected health information about an individual whom the covered entity reasonably believes to be a victim of abuse, neglect, or domestic violence. In this paragraph, references to “individual” should be construed to mean the individual believed to be the victim. The rule allows such disclosure to any governmental authority authorized by law to receive reports of such abuse, neglect, or domestic violence. These entities may include, for example, adult protective or social services agencies, state survey and certification agencies, ombudsmen for the aging or those in long-term care facilities, and law enforcement or oversight.

The final rule specifies three circumstances in which disclosures of protected health information is allowed in order to report abuse, neglect or domestic violence. First, this paragraph allows disclosure of protected health information related to abuse if required by law and the disclosure complies with and is limited to the relevant requirements of such law. As discussed below, the final rule requires covered entities that make such disclosures pursuant to a state’s mandatory reporting law to inform the individual of the report.

Second, this paragraph allows covered entities to disclose protected health information related to abuse if the individual has agrees to such disclosure. When considering the possibility of disclosing protected health information in an abuse situation pursuant to this section, we encourage covered entities to seek the individual’s agreement whenever possible.

Third, this paragraph allows covered entities to disclose protected health information about an individual without the individual’s agreement if the disclosure is expressly authorized by statute or regulation and either: (1) The covered entity, in the exercise of its professional judgment, believes that the disclosure is necessary to prevent serious harm to the individual or to another potential victims; or (2) if the individual is unable to agree due to incapacity, a law enforcement or other public official authorized to receive the report represents that the protected health information for which disclosure is sought is not intended to be used against the individual, and that an immediate law enforcement activity that depends on the disclosure would be materially and adversely affected by waiting until the individual is able to agree to the disclosure.

We emphasize that disclosure under this third part of the paragraph also may be made only if it is expressly authorized by statute or regulation. We use this formulation, rather than the broader “required by law,” because of the heightened privacy and safety concerns in these situations. We believe it appropriate to defer to other public determinations regarding reporting of this information only where a legislative or executive body has determined the reporting to be of sufficient importance to warrant enactment of a law or promulgation of a regulation. Law and regulations reflect a clear decision to authorize the particular disclosure of protected health information, and reflect greater public accountability (e.g., through the required public comment process or by use enacted by elected representatives).

For example, a Wisconsin law (Wis. Stat § 46.904(1)) states that any person may report to a county agency or state official that he or she believes that abuse or neglect has occurred. Pursuant to § 164.512(c)(1)(ii), a covered entity may make a report only if the specific type or subject matter of the report (e.g., abuse or neglect of the elderly) is included in the law authorizing the report, and such a disclosure may only be made to a public authority specifically identified in the law authorizing the report. Furthermore, we note that disclosures under this part of the paragraph are further limited to two circumstances. In the first case, a covered entity, in the exercise of professional judgment, must believe that the disclosure is necessary to prevent serious harm to the individual or to other potential victims. The second case addresses situations in which an individual who is a victim of abuse, neglect or domestic violence is unable to agree due to incapacity and a law enforcement or other public official authorized to receive the report represents that the protected health information for which disclosure is sought is not intended to be used against the individual and that an immediate law enforcement activity that depends on the disclosure would be materially and adversely affected by waiting until the individual is able to agree to the disclosure. We note that, in this second case, a covered entity may exercise discretion, consistent with professional judgment as to the patient’s
best interest, in deciding whether to make the requested disclosure.

The rules governing disclosure in this third set of circumstances are different from those governing disclosures pursuant to § 164.512(f)(3) regarding disclosure to law enforcement about victims of crime and other harm. We believe that in abuse situations—to a greater extent than in situations involving crime victims in general—there is clear potential for abusers to cause further serious harm to the victim or to others, such as other family members in a household or other residents of a nursing home. The provisions allowing reporting of abuse when authorized by state law, as described above, are consistent with principles articulated by the AMA’s Council on Ethical and Judicial Affairs, which state that when reporting abuse is voluntary under state law, it is justified when necessary to prevent serious harm to a patient. Through the provisions of § 164.512(c), we recognize the unique circumstances surrounding abuse and domestic violence, and we seek to provide an appropriate balance between individual privacy interests and important societal interests such as preventing serious harm to other individuals. We note that here we are relying on covered entities, in the exercise of professional judgment, to determine what is in the best interests of the patient.

Finally, we require covered entities to inform the individual in all of the situations described above that the covered entity has disclosed protected health information to report abuse, neglect, or domestic violence. We allow covered entities to provide this information orally. We do not require written notification, nor do we encourage it, due to the sensitivity of abuse situations and the potential for the abuser to cause further harm to the individual if, for example, a covered entity sends written notification to the home of the individual and the abuser. Whenever possible, covered entities should inform the individual at the same time that they determine abuse has occurred and decide that the abuse should be reported. In cases involving patient incapacity, we encourage covered entities to inform the individual of such disclosures as soon as it is practicable to do so.

The rule provides two exceptions to the requirement to inform the victim about a report to a government authority, one based on concern for future harm and one based on past harm. First, the covered entity need not inform the victim if the covered entity, in the exercise of professional judgment, believes that informing the individual would place the individual at risk of serious harm. We believe that this exception is necessary to address the potential for future harm, either physical or emotional, that the individual may face from knowing that the report has been made. Second, a covered entity may choose not to meet the requirement for informing the victim, if the covered entity actually would be informing a personal representative (such as a parent of a minor) and the covered entity reasonably believes that such person is responsible for the abuse, neglect, or other injury that has already occurred and that informing that person would not be in the individual’s best interests.

Section 164.512(d)—Uses and Disclosures for Health Oversight Activities

Under § 164.510(c) of the NPRM, we proposed to permit covered entities to disclose protected health information to health oversight agencies for oversight activities authorized by law, including audit, investigation, inspection, civil, criminal, or administrative proceeding or action, or other activity necessary for appropriate oversight of: (i) the health care system; (ii) government benefit programs for which health information is relevant to beneficiary eligibility; or (iii) government regulatory programs for which health information is necessary for determining compliance with program standards.

In § 164.512(d) of the final rule, we modify the proposed language to include civil and criminal investigations. In describing “other activities necessary for oversight” of particular entities, we add the phrase “entities subject to civil rights laws for which health information is necessary for determining compliance.” In addition, in the final rule, we add “licensure or disciplinary actions” to the list of oversight activities authorized by law for which covered entities may disclose protected health information to health oversight agencies. The NPRM’s definition of “health oversight agency” (in proposed § 164.504) included this phrase, but it was inadvertently excluded from the regulation text at proposed § 164.510(c). We make this change in the regulation text of the final rule to conform to the NPRM’s definition of health oversight agency and to reflect the full range of activities for which we intend to allow covered entities to disclose protected health information to health oversight agencies.

The NPRM would have allowed, but would not have required, covered entities to disclose protected health information to public oversight agencies and to private entities acting under grant of authority from or under contract with oversight agencies for oversight purposes without individual authorization for health oversight activities authorized by law. When a covered entity was also an oversight agency, it also would have been permitted to use protected health information in all cases in which it would have been allowed to disclose such information for health oversight purposes. The final rule, which does not establish any new administrative or judicial process prior to disclosure for health oversight, nor would it have permitted disclosures forbidden by other law. The proposed rule also would not have created any new right of access to health records by oversight agencies, and it could not have been used as authority to obtain records not otherwise legally available to the oversight agency.

The final rule retains this approach to health oversight. As in the NPRM, the final rule provides that when a covered entity is also an oversight agency, it is allowed to use protected health information in all cases in which it is allowed to disclose such information for health oversight purposes. For example, if a state insurance department is acting as a health plan in operating the state’s Medicaid managed care program, the final rule allows the insurance department to use protected health information in all cases for which the plan can disclose the protected health information for health oversight purposes. For example, the state insurance department in its capacity as the state Medicaid managed care plan can use protected health information in the process of investigating and disciplining a state Medicaid provider for attempting to defraud the Medicaid system. As in the NPRM, the final rule does not establish any new administrative or judicial process prior to disclosure for health oversight, nor does it prohibit covered entities from making any disclosures for health oversight that are otherwise required by law. Like the NPRM, it does not create any new right of access to health records by oversight agencies and it cannot be used as authority to obtain records not otherwise legally available to the oversight agency.

Overlap Between Law Enforcement and Oversight

Under the NPRM, the proposed definitions of law enforcement and oversight, and the rules governing disclosures for these purposes
overlapped. Specifically, this overlap occurred because: (1) The NPRM preamble, but not the NPRM regulation text, indicated that agencies conducting both oversight and law enforcement activities would be subject to the oversight requirements when conducting oversight activities; and (2) the NPRM addressed some disclosures for investigations of health care fraud in the law enforcement paragraph (proposed § 164.510(f)(5)(ii)), while health care fraud investigations are central to the purpose of health care oversight agencies (covered under proposed § 164.510(c)). In the final rule, we make substantial changes to these provisions, in an attempt to prevent confusion.

In § 164.512(d)(2), we include explicit decision rules indicating when an investigation is considered law enforcement and when an investigation is considered oversight under this regulation. An investigation or activity is not considered health oversight for purposes of this rule if: (1) The individual is the subject of the investigation or activity; and (2) The investigation or activity does not arise out of and is not directly related to: (a) The receipt of health care; (b) a claim for public benefits related to health; or (c) qualification for, or receipt of public benefits or services where a patient’s health is integral to the claim for benefits or services. In such cases, where the individual is the subject of the investigation and the investigation does not relate to issues (a) through (c), the rule allows disclosure for law enforcement purposes (see § 164.512(f)) to apply. For the purposes of this rule, we intend for investigations regarding issues (a) through (c) above to mean investigations of health care fraud. Where the individual is not the subject of the activity or investigation, or where the investigation or activity relates to the subject matter in (a) through (c) of the preceding sentence, a covered entity may make a disclosure pursuant to § 164.512(d)(1). For example, when the U.S. Department of Labor’s Pension and Welfare Benefits Administration (PWBA) needs to analyze protected health information about health plan enrollees in order to conduct an audit or investigation of the health plan (i.e., the enrollees are not subjects of the investigation) to investigate potential fraud by the plan, the health plan may disclose protected health information to the PWBA under the health oversight rules. These rules and distinctions are discussed in greater detail in our responses to comments.

To clarify further that health oversight disclosure rules apply generally in health care fraud investigations (subject to the exception described above), in the final rule, we eliminate proposed § 164.510(f)(5)(ii), which would have established requirements for disclosure related to health care fraud for law enforcement purposes. All disclosures of protected health information that would have been permitted under proposed § 164.510(f)(5)(ii) are permitted under § 164.512(d).

In the final rule, we add new language (§ 164.512(d)(3)) to address situations in which health oversight activities are conducted in conjunction with an investigation regarding a claim for public benefits not related to health (e.g., claims for Food Stamps). In such situations, for example, when a state Medicaid agency is working with the Food Stamps program to investigate suspected fraud involving Medicaid and Food Stamps, covered entities may disclose protected health information to the entities conducting the joint investigation under the health oversight provisions of the rule.

In the proposed rule, the definitions of “law enforcement proceeding” and “oversight activity” both included the phrase “criminal, civil, or administrative proceeding.” For reasons explained below, the final rule retains this phrase in both definitions. The final rule does not attempt to distinguish between these activities based on the agency undertaking them or the applicable enforcement procedures. Rather, as described above, the final rule carves out certain activities which must always be considered law enforcement for purposes of disclosure of protected health information under this rule.

Additional Considerations

We note that covered entities are permitted to initiate disclosures that are permitted under this paragraph. For example, a covered entity could disclose protected health information in the course of reporting suspected health care fraud to a health oversight agency.

We delete language in the NPRM that would have allowed disclosure under this section only to law enforcement officials conducting or supervising an investigation, official inquiry, or a criminal, civil or administrative proceeding authorized by law. In some instances, a disclosure by a covered entity under this section will initiate such an investigation or proceeding, but it will not already be ongoing at the time the disclosure is made.

Section 164.512(e)—Disclosures and Uses for Judicial and Administrative Proceedings

Section 164.512(e) addresses when a covered entity is permitted to disclose protected health information in response to requests for protected health information that are made in the course of judicial and administrative proceedings—for example, when a non-party health care provider receives a subpoena (under Federal Rule of Civil Procedure Rule 45 or similar provision) for medical records from a party to a lawsuit. In the NPRM we would have allowed covered entities to disclose protected health information in the course of any judicial or administrative proceeding: (1) In response to an order of a court or administrative tribunal; or (2) where an individual was a party to the proceeding and his or her medical condition or history was at issue and the disclosure was pursuant to lawful process or otherwise authorized by law. Under the NPRM, if the request for disclosure of protected health information was accompanied by a court order, a covered entity could have disclosed protected health information which the court order authorized to be disclosed. If the request for disclosure of protected health information were not accompanied by a court order, covered entities could not have disclosed the information requested unless a request authorized by law had been made by the agency requesting the information or by legal counsel representing a party to litigation, with a written statement certifying that the protected health information requested concerned a litigant to the proceeding and that the health condition of the litigant was at issue at the proceeding.

In § 164.512(e) of the final rule, we permit covered entities to disclose protected health information in a disclosed that protected health information is made through or pursuant to an order from a court or administrative tribunal or in response to a subpoena or discovery request from, or other lawful process by a party to the proceeding. When a request is made pursuant to an order from a court or administrative tribunal, a covered entity may disclose the information requested without additional process. For example, a subpoena issued by a court constitutes a disclosure which is required by law as defined in this rule, and nothing in this rule is intended to interfere with the ability of the covered entity to comply with such subpoena.
However, absent an order of, or a subpoena issued by, a court or administrative tribunal, a covered entity may respond to a subpoena or discovery request from, or other lawful process by, a party to the proceeding only if the covered entity obtains either: (1) Satisfactory assurances that reasonable efforts have been made to give the individual whose information has been requested notice of the request; or (2) satisfactory assurances that the party seeking such information has made reasonable efforts to secure a protective order that will guard the confidentiality of the information. In meeting the first test, a covered entity is considered to have received satisfactory assurances from the party seeking the information if that party demonstrates that it has made a good faith effort (such as by sending a notice to the individual’s last known address) to provide written notice to the individual whose information is the subject of the request, that the written notice included sufficient information about the proceeding to permit the individual to raise an objection, and that the time for the individual to raise objections to the court or administrative tribunal has elapsed and no objections were filed or any objections filed by the individual have been resolved.

Unless required to do so by other law, the covered entity is not required to explain the procedures (if any) available for the individual to object to the disclosure. Under the rule, the individual exercises the right to object before the court or other body having jurisdiction over the proceeding, and not to the covered entity. The provisions in this paragraph are not intended to disrupt current practice whereby an individual who is a party to a proceeding and has put his or her medical condition at issue will not prevail without consenting to the production of his or her protected health information. In such cases, we presume that parties will have ample notice and an opportunity to object in the context of the proceeding in which the individual is a party.

As described above, in this paragraph we also permit a covered entity to disclose protected health information in response to a subpoena, discovery request, or other lawful process if the covered entity receives satisfactory assurances that the party seeking the information has made reasonable efforts to seek a qualified protective order that would protect the privacy of the information. A “qualified protective order” means an order of a court or of an administrative tribunal or a stipulation that: (1) Prohibits the parties from using or disclosing the protected health information for any purpose other than the litigation or proceeding for which the records are requested; and (2) requires the return to the covered entity of destruction of the protected health information (including all copies made) at the end of the litigation or proceeding. Satisfactory assurances of reasonable efforts to secure a qualified protective order are a statement and documentation that the parties to the dispute have agreed to a protective order and that it has been submitted to the court or administrative tribunal with jurisdiction, or that the party seeking the protected health information has requested a qualified protective order from such court or tribunal. We encourage the development of “model” protective orders that will facilitate adherence with this subpart.

In the final rule we also permit the covered entity itself to satisfy the requirement to make reasonable efforts to notify the individual whose information has been requested or to seek a qualified protective order. We intend this to be a permissible activity for covered entities: we do not require covered entities to undertake these efforts in response to a subpoena, discovery request, or similar process (other than an order from a court or administrative tribunal). If a covered entity receives such a request without receiving the satisfactory assurances described above from the party requesting the information, the covered entity is free to object to the disclosure and is not required to undertake the reasonable efforts itself.

We clarify that the provisions of this paragraph do not supersede or otherwise invalidate other provisions of this rule that permit uses and disclosures of protected health information. For example, the fact that protected health information is the subject of a matter before a court or tribunal does not prevent its disclosure under another provision of the rule, such as §§164.512(b), 164.512(d), or 164.512(f), even if a public agency’s method of requesting the information is pursuant to an administrative proceeding. For example, where a public agency commences a disciplinary action against a health professional, and requests protected health information as part of its investigation, the disclosure made be made to the agency under paragraph (d) of this section (relating to health oversight) even if the method of making the request is through the proceeding. As with any request for disclosure under this section, the covered entity will need to verify the authority under which the request is being made, and we expect that public agencies will identify their authority when making such requests. We note that covered entities may reasonably rely on assertions of authority made by government agencies.

Additional Considerations

Where a disclosure made pursuant to this paragraph is required by law, such as in the case of an order from a court or administrative tribunal, the minimum necessary requirements in §164.514(d) do not apply to disclosures made under this paragraph. A covered entity making a disclosure under this paragraph, however, may of course disclose only that protected health information that is within the scope of the permitted disclosure. For instance, in response to an order of a court or administrative tribunal, the covered entity may disclose only the protected health information that is expressly authorized by such an order. Where a disclosure is not considered under this rule to be required by law, the minimum necessary requirements apply, and the covered entity must make reasonable efforts to limit the information disclosed to that which is reasonably necessary to fulfill the request. A covered entity is not required to second guess the scope or purpose of the request, or take action to resist the request because they believe that it is over broad. In complying with the request, however, the covered entity must make reasonable efforts not to disclose more information than is requested. For example, a covered entity may not provide a party free access to its medical records under the theory that the party can identify the information necessary for the request. In some instances, it may be appropriate for a covered entity, presented with a relatively broad discovery request, to permit access to a relatively large amount of information in order for a party to identify the relevant information. This is permissible as long as the covered entity makes reasonable efforts to circumscribe the access as appropriate.

The NPRM indicated that when a covered entity was itself a government agency, the covered entity could use protected health information in all cases in which it would have been allowed to disclose such information in the course of any judicial or administrative proceeding. As explained above, the final rule does not include this provision.
Section 164.512(f)—Disclosure for Law Enforcement Purposes

Disclosures Pursuant to Process and as Otherwise Required by Law

In the NPRM we would have allowed covered entities to disclose protected health information without individual authorization as required by other law. However, as explained above, if a legally mandated use or disclosure fell into one or more of the national priority purposes expressly identified in other paragraphs of proposed § 164.510, the disclosure would have been subject to the terms and conditions specified by the applicable paragraph of proposed § 164.510. For example, mandatory reporting to law enforcement officials would not have been allowed unless such disclosures conformed to the requirements of proposed § 164.510(f) of the NPRM. Proposed § 164.510(f)(1) did not explicitly recognize disclosures required by other laws, and it would not have permitted covered entities to comply with some state and other mandatory reporting laws that require covered entities to disclose protected health information to law enforcement officials, such as the reporting of gun shot wounds, stab wounds, and/or burn injuries.

We did not intend to preempt generally state and other mandatory reporting laws, and in § 164.512(f)(1)(i) of the final rule, we explicitly permit covered entities to disclose protected health information for law enforcement purposes as required by other law. This provision permits covered entities to comply with these state and other laws. Under this provision, to the extent that a mandatory reporting law falls under the provisions of § 164.512(c)(1)(i) regarding reporting of abuse, neglect, or domestic violence, the requirements of those provisions supersede.

In the final rule, we specify that covered entities may disclose protected health information pursuant to this provision in compliance with and as limited by the relevant requirements of legal process or other law. In the NPRM, for the purposes of this portion of the law enforcement paragraph, we proposed to define “law enforcement inquiry or proceeding” as an investigation or official proceeding inquiring into a violation of or failure to comply with law; or a criminal, civil or administrative proceeding arising from a violation of or failure to comply with law. In the final rule, we do not include this definition in § 164.512(f), because it is redundant with the definition of “law enforcement official” in § 164.501.

Proposed § 164.510(f)(1) of the NPRM would have authorized disclosure of protected health information to a law enforcement official conducting or supervising a law enforcement inquiry or proceeding authorized by law pursuant to process, under three circumstances.

First, we proposed to permit such disclosures pursuant to a warrant, subpoena, or other order issued by a judicial officer that documented a finding by the officer. The NPRM did not specify requirements for the nature of the finding. In the final rule, we eliminate the requirement for a “finding,” and we make changes to the list of orders in response to which covered entities may disclose under this provision. Under the final rule, covered entities may disclose protected health information in compliance with and as limited by relevant requirements of: a court order or court-ordered warrant, or a subpoena or summons issued by a judicial officer. We made this change to the list to conform to the definition of “required by law” in § 164.501.

Second, we proposed to permit such disclosures pursuant to a state or federal grand jury subpoena. In the final rule, we leave this provision of the NPRM unchanged.

Third, we proposed to permit such disclosures pursuant to an administrative request, including an administrative subpoena or summons, a civil investigative demand, or similar process, under somewhat stricter standards than exist today for such disclosures. We proposed to permit a covered entity to disclose protected health information pursuant to an administrative request only if the request met three conditions, as follows: (i) The information sought was relevant and material to a legitimate law enforcement inquiry; (ii) the request was as specific and narrowly drawn as reasonably practicable; and (iii) de-identified information could not reasonably have been used to meet the purpose of the request.

The final rules generally adopts this provision of the NPRM. In the final rule, we modify the list of orders in response to which covered entities may disclose protected health information, to include administrative subpoenas or summons, civil or authorized investigative demands, or similar process authorized by law. We made this change to the list to conform with the definition of “required by law” in § 164.501. In addition, we slightly modify the second of the three conditions under which covered entities may respond to such requests, if the request is specific and is limited in scope to the extent reasonably practicable in light of the purpose for which the information is sought.

Limited Information for Identification and Location Purposes

The NPRM would have allowed covered entities to disclose “limited identifying information” for purposes of identifying a suspect, fugitive, material witness, or missing person, in response to a law enforcement request. We proposed to define “limited identifying information” as (i) name; (ii) address; (iii) Social Security number; (iv) date of birth; (v) place of birth; (vi) type of injury or other distinguishing characteristic; and (vii) date and time of treatment.

The final rules generally adopts this provision of the NPRM with a few modifications. In the final rule, we expand the circumstances under which limited information about suspects, fugitives, material witnesses, and missing persons may be disclosed, to include not only cases in which law enforcement officials are seeking to identify such individuals, but also cases in which law enforcement officials are seeking to locate such individuals. In addition, the final rule modifies the list of elements that may be disclosed under this provision, in several ways. We expand the list of elements that may be disclosed under these circumstances, to include ABO blood type and Rh factor, as well as date and time of death, if applicable. We remove “other distinguishing characteristic” from the list of items that may be disclosed for the location and identification purposes described in this paragraph, and instead allow covered entities to disclose only a description of distinguishing physical characteristics, such as scars and tattoos, height, weight, gender, race, hair and eye color, and the presence or absence of facial hair such as a beard or moustache. In addition, in the final rule, protected health information associated with the following cannot be disclosed pursuant to § 164.512(f)(2): DNA data and analyses; dental records; or typing, samples or analyses of tissues or bodily fluids other than blood (e.g., saliva). If a covered entity discloses additional information under this provision, the covered entity will be out of compliance and subject to sanction.

We clarify our intent not to allow covered entities to initiate disclosures of limited identifying information to law enforcement in the absence of a law enforcement request; a covered entity may disclose protected health information under this provision only in response to a request from law enforcement. We allow a “law enforcement official’s request” to be
made orally or in writing, and we intend for it to include requests by a person acting on behalf of law enforcement, for example, requests by a media organization making a television or radio announcement seeking the public’s assistance in identifying a suspect. Such a request also may include a “Wanted” poster and similar postings.

Disclosure About a Victim of Crime

The NPRM would have allowed covered entities to disclose protected health information about a victim of a crime, abuse or other harm to a law enforcement official, if the law enforcement official represented that: (i) The information was needed to determine whether a violation of law by a person other than the victim had occurred; and (ii) immediate law enforcement activity that depended on obtaining the information may have been necessary.

The final rule modifies the conditions under which covered entities can disclose protected health information about victims. In addition, as discussed above, the final rule includes a new § 164.512(c), which establishes conditions for disclosure of protected health information about victims of abuse, neglect or domestic violence. In addition, as discussed above, we have added § 164.512(f)(1)(i) to this paragraph to explicitly recognize that in some cases, covered entities’ disclosure of protected health information is mandated by state or other law. The rule’s requirements for disclosure in situations not covered under mandatory reporting laws are different from the rule’s provisions regarding disclosure pursuant to a mandatory reporting law.

The final rule requires covered entities to obtain individual agreement as a condition of disclosing the protected health information about victims to law enforcement, unless the disclosure is permitted under § 164.512(b) or (c) or § 164.512(f)(1) above. The required agreement may be obtained orally, and does not need to meet the requirements of § 164.508 of this rule (regarding authorizations). The rule waives the requirement for individual agreement if the victim is unable to agree due to incapacity or other emergency circumstance and: (1) The law enforcement official represents that the protected health information is needed to determine whether a violation of law by a person other than the victim has occurred and the information is not intended to be used against the victim; (2) the law enforcement official represents that immediate law enforcement activity that depends on such disclosure would be materially and adversely affected by waiting until the individual is able to agree to the disclosure; and (3) the covered entity, in the exercise of professional judgment, determines that the disclosure is in the individual’s best interests. We intend that assessing the individual’s best interests includes taking into account any further risk of harm to the individual. This provision does not allow covered entities to initiate disclosures of protected health information to law enforcement; the disclosure must be in response to a request from law enforcement.

We do not intend to create a new legal duty on the part of covered entities with respect to the safety of their patients. Rather, we intend to ensure that covered entities can continue to exercise their professional judgment in these circumstances, on a case-by-case basis, as they do today.

In some cases, a victim may also be a fugitive or suspect. For example, an individual may receive a gunshot wound during a robbery and seek treatment in a hospital emergency room. In such cases, when law enforcement officials are requesting protected health information because the individual is a suspect (and thus the information may be used against the individual), covered entities may disclose the protected health information pursuant to § 164.512(f)(2) regarding suspects and not pursuant to § 164.512(f)(3) regarding victims. Thus, in these situations, covered entities may disclose only the limited identifying information listed in § 164.512(f)(2)—not all of the protected health information that may be disclosed under § 164.512(f)(3).

The proposed rule did not address whether a covered entity could disclose protected health information to a law enforcement official to alert the official of the individual’s death.

Disclosures About Decedents

In the final rule, we add a new provision § 164.512(f)(4) in which we permit covered entities to disclose protected health information about an individual who has died to a law enforcement official for the purpose of alerting law enforcement of the death if the covered entity has a suspicion that such death may have resulted from criminal conduct. In such circumstances consent of the individual is not available and it may be difficult to determine the identity of a personal representative and gain consent for disclosure of protected health information. Such disclosures in this circumstance will permit law enforcement officials to begin their investigation into the death more rapidly, increasingly the likelihood of success.

Intelligence and National Security Activities

Section 164.510(f)(4) of the NPRM would have allowed covered entities to disclose protected health information to a law enforcement official without individual authorization for the conduct of lawful intelligence activities conducted pursuant to the National Security Act of 1947 (50 U.S.C. 401 et seq.) or in connection with providing protective services to the President or other individuals pursuant to section 3056 of title 18, United States Code. In the final rule, we move provisions regarding disclosures of protected health information for intelligence and protective services activities to § 164.512(k) regarding uses and disclosures for specialized government functions.

Criminal Conduct on the Premises of a Covered Entity

The NPRM would have allowed covered entities on their own initiative to disclose to law enforcement officials protected health information that the covered entity believed in good faith constituted evidence of criminal conduct that arose out of and was directly related to: (A) The receipt of health care or payment for health care, including a fraudulent claim for health care; (B) qualification for or receipt of benefits, payments, or services based on a fraudulent statement or material misrepresentation of the health of the individual; that occurred on the covered entity’s premises or was witnessed by a member of the covered entity’s workforce.

In the final rule, we modify this provision substantially, by eliminating language allowing disclosures already permitted in other sections of the regulation. The proposed provision overlapped with other sections of the NPRM, in particular proposed § 164.510(c) regarding disclosure for health oversight activities. In the final regulation, we clarify that this provision applies only to disclosures to law enforcement officials of protected health information that the covered entity believes in good faith constitutes evidence of a crime committed on the premises. We eliminate proposed § 164.510(f)(5)(i) regarding health care fraud from the law enforcement section, because all disclosures that would have been allowed under that provision are allowed under § 164.512(f) of the final rule (health oversight). Similarly, in the final rule, we eliminate proposed...
§ 164.510(f)(5)(iii) on disclosure of protected health information to law enforcement officials regarding criminal activity witnessed by a member of a health plan workforce. All disclosures that would have been permitted by that provision are included in § 164.512(f)(5), which allows disclosure of information to report a crime committed on the covered entity’s premises, and by § 164.502, which provides that a covered entity is not in violation of the rule when a member of its workforce or person working for a business associate uses or discloses protected health information while acting as a “whistle blower.” Thus, § 164.512(f)(5) allows covered entities to disclose health information only on the good faith belief that it constitutes evidence of a crime on their premises. The preamble to the NPRM said that if the covered entity disclosed protected health information in good faith but was wrong in its belief that the information was evidence of a violation of law, the covered entity would not be subject to sanction under this regulation. The final rule retains this approach.

Reporting Crime in Emergencies

The proposed rule did not address disclosures by emergency medical personnel to a law enforcement official intended to alert law enforcement about the commission of a crime. Because the provisions of proposed rule were limited to individually identifiable health information that was reduced to electronic form, many communications that occur between emergency medical personnel and law enforcement officials at the scene of a crime would not have been covered by the proposed provisions.

In the final rule we include a new provision § 164.512(f)(6) that addresses “911” calls for emergency medical technicians as well as other emergency health care in response to a medical emergency. The final rule permits a covered health care provider providing emergency health care in response to a medical emergency, other than such emergency on the premises of the covered health care provider, to disclose protected health information to a law enforcement official if such disclosure appears necessary to alert law enforcement to (1) the commission and nature of a crime, (2) the location of such crime or of the victim(s) of such crime, and (3) the identity, description, and location of the perpetrator of such crime. A disclosure is not permitted under this section if health care provider believes that the medical emergency is the result of abuse, neglect, or domestic violence of the individual in need of emergency health care. In such cases, disclosures to law enforcement would be governed by paragraph (c) of this section.

This added provision recognizes the special role of emergency medical technicians and other providers who respond to medical emergencies. In emergencies, emergency medical personnel often arrive on the scene before or at the same time as police officers, firefighters, and other emergency response personnel. In these cases, providers may be in the best position, and sometimes be the only ones in the position, to alert law enforcement about criminal activity. For instance, providers may be the first persons aware that an individual has been the victim of a battery or an attempted murder. They may also be in the position to report in real time, through use of radio or other mechanism, information that may immediately contribute to the apprehension of a perpetrator of a crime.

We note that disclosure under this provision is at the discretion of the health care provider. Disclosures in some instances may be governed more strictly, such as by applicable ethical standards and state and local laws.

Finally, the NPRM also included a proposed § 164.510(f)(5), which duplicated proposed § 164.510(f)(3). The final rule does not include this duplicate provision.

Additional Considerations

As stated in the NPRM, this paragraph is not intended to limit or preclude a covered entity from asserting any lawful defense or otherwise contesting the nature or scope of the process when the procedural rules governing the proceeding so allow. At the same time, it is not intended to create a basis for appealing to federal court concerning a request by state law enforcement officials. Each covered entity will continue to have available legal procedures applicable in the appropriate jurisdiction to contest such requests where warranted.

As was the case with the NPRM, this rule does not create any new affirmative requirement for disclosure of protected health information. Similarly, this section is not intended to limit a covered entity from disclosing protected health information to law enforcement officials where other sections of the rule permit such disclosure, e.g., as permitted by § 164.512(j) to avert an imminent threat to health or safety, for health oversight, to coroners or medical examiners, and in other circumstances permitted by the rule. For additional provisions permitting covered entities to disclose protected health information to law enforcement officials, see § 164.512(j)(1)(i) and (ii).

Under the NPRM and under the final rule, to obtain protected health information, law enforcement officials must comply with whatever other law is applicable. In certain circumstances, while this provision could authorize a covered entity to disclose protected health information to law enforcement officials, there could be additional applicable statutes or rules that further govern the specific disclosure. If the preemption provisions of this regulation do not apply, the covered entity must comply with the requirements or limitations established by such other law, regulation or judicial precedent. See §§ 160.201 through 160.205. For example, if state law permits disclosure only after compulsory process with court review, a provider or payor is not allowed to disclose information to state law enforcement officials unless the officials have complied with that requirement. Similarly, disclosure of substance abuse patient records subject to, 42 U.S.C. 290dd–2, and the implementing regulations, 42 CFR part 2, continue to be governed by those provisions.

In some instances, disclosure of protected health information to law enforcement officials will be compelled by other law, for example, by compulsory judicial process or compulsory reporting laws (such as laws requiring reporting of wounds from violent crimes, suspected child abuse, or suspected theft of controlled substances). As discussed above, disclosure of protected health information under such other mandatory law is permitted under § 164.512(a).

In the responses to comments we clarify that items such as cells and tissues are not protected health information, but that analyses of them is. The same treatment would be given other physical items, such as clothing, weapons, or a bloody knife. We note, however, that while these items are not protected health information and may be disclosed, some communications that could accompany the disclosure will be protected health information under the rule. For example, if a person provides cells to a researcher, and tells the researcher that these are an identified individual’s cancer cells, that accompanying statement is protected health information about that individual. Similarly, if a person provides a bullet to law enforcement, and tells law enforcement that the bullet was extracted from an identified
individual, the person has disclosed the fact that the individual was treated for a wound, and the additional statement is a disclosure of protected health information.

To be able to make the additional statement accompanying the provision of the bullet, a covered entity must look to the rule to find a provision under which a disclosure may be made to law enforcement. Section 164.512(f) of the rule addresses disclosures for law enforcement purposes. Under § 164.512(f)(1), the additional statement may be disclosed to a law enforcement official if required by law or with appropriate process. Under § 164.512(f)(2), we permit covered entities to disclose limited identifying information without legal process in response to a request from a law enforcement official for the purpose of identifying or locating a suspect, fugitive, material witness, or missing person. Thus, in the case of bullet described above, the covered entity may, in response to a law enforcement request, provide the extracted bullet and such additional limited identifying information as is permitted under § 164.512(f)(2).

Section 164.512(g)—Uses and Disclosures About Decedents

In the NPRM we proposed to allow covered entities to disclose protected health information without individual authorization to coroners and medical examiners, consistent with applicable law, for identification of a deceased person or to determine cause of death. In § 164.512(g) of the final rule, we permit covered entities to disclose protected health information to coroners, medical examiners, and funeral directors as part of a new paragraph on disclosures related to death. The final rule retains the NPRM approach regarding disclosure of protected health information to coroners and medical examiners, and it allows the information disclosed to coroners and medical examiners to include identifying information about other persons that may be included in the individual’s medical record. Redaction of such names is not required prior to disclosing the individual’s record to coroners or medical examiners. Since covered entities may also perform duties of a coroner or medical examiner, where a covered entity is itself a coroner or medical examiner, the final rule permits the covered entity to use protected health information in all cases in which it is proposed to disclose such information for its duties as a coroner or medical examiner.

Section 164.512(g) allows covered entities to disclose protected health information to funeral directors, consistent with applicable law, as necessary to carry out their duties with respect to a decedent. For example, the rule allows hospitals to disclose to funeral directors the fact that an individual has donated an organ or tissue, because this information has implications for funeral home staff duties associated with embalming. When necessary for funeral directors to carry out their duties, covered entities may disclose protected health information prior to and in reasonable anticipation of the individual’s death.

Whereas the NPRM did not address the issue of disclosure of psychotherapy notes without individual authorization to coroners and medical examiners, the final rule allows such disclosures. The NPRM did not include in proposed § 164.510(e) language stating that where a covered entity was itself a coroner or medical examiner, it could use protected health information for investigating purposes of engaging in a coroner’s or a medical examiner’s activities. The final rule includes such language to address situations such as where a public hospital performs medical examiner functions. In such cases, the hospital’s on-staff coroners can use protected health information while conducting post-mortem investigations, and other hospital staff can analyze any information associated with these investigations, for example, as part of the process of determining the cause of the individual’s death.

Section 164.512(h)—Uses and Disclosures for Cadaveric Donation of Organs, Eyes, or Tissues

In the NPRM we proposed to include the procurement or banking of blood, sperm, organs, or any other tissue for administration to patients in the definition of “health care” (described in proposed § 160.103). The NPRM’s proposed approach did not differentiate between situations in which the donor was competent to consent to the donation—for example, when an individual is donating blood, sperm, a kidney, or a liver or lung lobe—and situations in which the donor was deceased, for example, when cadaveric organs and tissues were being donated. We also proposed to allow use and disclosure of protected health information for treatment without consent.

In the final rule, we take a different approach. In § 164.512(b), we permit covered entities to disclose protected health information without individual authorization to organ procurement organizations or other entities engaged in the procurement, banking, or transplantation of cadaveric organs, eyes, or tissue for donation and transplantation. This provision is intended to address situations in which an individual has not previously indicated whether he or she seeks to donate organs, eyes, or tissues (and therefore authorized release of protected health information for this purpose). In such situations, this provision is intended to allow covered entities to initiate contact with organ and tissue donation and transplantation organizations to facilitate transplantation of cadaveric organs, eyes, and tissues.

Disclosures and Uses for Government Health Data Systems

In the NPRM we proposed to permit covered entities to disclose protected health information to a government agency, or to a private entity acting on behalf of a government agency, for inclusion in a government health data system collecting health data for analysis in support of policy, planning, regulatory, or management functions authorized by law. The NPRM stated that when a covered entity was itself a government agency collecting health data for these functions, it could use protected health information in all cases for which it was permitted to disclose such information to government health data systems.

In the final rule, we eliminate the provision that would have allowed covered entities to disclose protected health information to government health data systems without authorization. Thus, under the final rule, covered entities cannot disclose protected health information without authorization to government health data systems—or to private health data systems—unless the disclosure is permissible under another provision of the rule.

Disclosures for Payment Processes

In the NPRM we proposed to permit covered entities to disclose, in connection with routine banking activities or payment by debit, credit, or other payment card, or other payment means, the minimum amount of protected health information necessary to complete a banking or payment activity to financial institutions or to entities acting on behalf of financial institutions to authorize, process, clear, settle, bill, transfer, reconcile, or collect payments for financial institutions.

The preamble to the NPRM clarified the NPRM’s intent regarding disclosure of diagnostic and treatment information along with payment...
information to financial institutions. The preamble to the proposed rule said that diagnostic and treatment information never was necessary to process a payment transaction. The preamble said we believed that in most cases, the permitted disclosure would include only: (1) The name and address of the account holder; (2) the name and address of the payor or provider; (3) the amount of the charge for health services; (4) the date on which health services were rendered; (5) the expiration date for the payment mechanism, if applicable; and (6) the individual’s signature. The preamble noted that the proposed regulation text did not include an exclusion list of information that could lawfully be disclosed to process payments, and it solicited comments on whether more elements would be needed for banking and payment transactions and on whether including a specific list of protected health information that could be disclosed was an appropriate approach.

The preamble also noted that under section 1179 of HIPAA, certain activities of financial institutions were exempt from this rule, to the extent that these activities constituted authorizing, processing, clearing, settling, billing, transferring, reconciling, or collecting payments for health care or health plan premiums.

In the final rule, we eliminate the NPRM’s provision on “banking and payment processes.” All disclosures that would have been allowed pursuant to proposed § 164.510() are allowed under § 164.502(a) of the final rule, regarding disclosure for payment purposes.

Section 164.512(i)—Uses and Disclosures for Research Purposes

The NPRM would have permitted covered entities to use and disclose protected health information for research—regardless of funding source—without individual authorization, provided that the covered entity obtained documentation of the following:

1. A waiver, in whole or in part, of authorization for the use or disclosure of protected health information was approved by an Institutional Review Board (IRB) or a privacy board that was composed as stipulated in the proposed rule;

2. The date of approval of the waiver, in whole or in part, of authorization by an IRB or privacy board;

3. The IRB or privacy board had determined that the waiver, in whole or in part satisfied the following criteria:

(i) The use or disclosure of protected health information involves no more than minimal risk to the subjects;
(ii) The waiver will not adversely affect the rights and welfare of the subjects;
(iii) The research could not practicably be conducted without the waiver;
(iv) Whenever appropriate, the subjects will be provided with additional pertinent information after participation;
(v) The research could not practicably be conducted without access to and use of the protected health information;
(vi) The research is of sufficient importance so as to outweigh the intrusion of the privacy of the individual whose information is subject to the disclosure;
(vii) There is an adequate plan to protect the identifiers from improper use and disclosure; and
(viii) There is an adequate plan to destroy the identifiers at the earliest opportunity consistent with the conduct of the research, unless there is a health or research justification for retaining the identifiers; and

4. The written documentation was signed by the chair of, as applicable, the IRB or the privacy board.

The NPRM also proposed that IRBs and privacy boards be permitted to adopt procedures for “expedited review” similar to those provided in the Common Rule (Common Rule § .107), and the privacy board would need to indicate that the IRB had been constituted as required by the Common Rule (§ .107), and the privacy board had been composed as follows: “(A) Has members with varying backgrounds and appropriate professional competency as necessary to review the research protocol; (B) Includes at least one member who is not affiliated with the entity conducting the research, or related to a person who is affiliated with such entity; and (C) Does not have any member participating in a review of any project in which the member has a conflict of interest” (§ 164.510(j)(1)(ii)).

The final rule modifies the first of the requirements for the composition of a privacy board to focus on the effect of the research protocol on the individual’s privacy rights and related interests. Therefore, under the final rule, the required documentation must indicate that the privacy board has members with varying backgrounds and appropriate professional competency as necessary to review the effect of the research protocol on the individual’s privacy rights and related interests.

In addition, the final rule further restricts the NPRM’s proposed requirement that the privacy board include at least one member who was
not affiliated with the entity conducting the research, or related to a person who is affiliated with such entity. Under the final rule, the board must include at least one member who is not affiliated with the covered entity, not affiliated with any entity conducting or sponsoring the research, and not related to any person who is affiliated with such entities.

The other documentation requirements for the composition of an IRB and privacy board remain the same.

2. Waiver of authorization criteria.

The NPRM proposed to prohibit the use or disclosure of protected health information for research without individual authorization as stipulated in proposed §164.508 unless the covered entity had documentation indicating that an IRB or privacy board had determined that the following waiver criteria had been met:

(i) The use or disclosure of protected health information involves no more than minimal risk to the subjects;

(ii) The waiver will not adversely affect the rights and welfare of the subjects;

(iii) The research could not practicably be conducted without the waiver;

(iv) Whenever appropriate, the subjects will be provided with additional pertinent information after participation;

(v) The research could not be practicably be conducted without access to and use of the protected health information;

(vi) The research is of sufficient importance so as to outweigh the intrusion of the privacy of the individual whose information is subject to the disclosure;

(vii) There is an adequate plan to protect the identifiers from improper use and disclosure; and

(viii) There is an adequate plan to destroy the identifiers at the earliest opportunity consistent with the conduct of the research, unless there is a health or research justification for retaining the identifiers.

The final rule continues to permit the documentation of waiver of authorization to be signed by (1) the chair of, as applicable, the IRB or the privacy board, or (2) a member of the IRB or privacy board, or (3) a member of the research project itself.

In addition, the final rule (1) eliminates proposed waiver criterion iv, (2) modifies proposed waiver criteria ii, iii, vi, and viii, and (3) adds a waiver criterion.

Proposed waiver criterion ii (waiver criterion §164.512(i)(2)(ii)(B) in the final rule) is revised as follows to focus more narrowly on the privacy interests of individuals, and to clarify that it also pertains to alterations of individual authorization: “the alteration or waiver will not adversely affect the privacy rights and the welfare of the individuals.” Under criterion §164.512(i)(2)(ii)(B), the question is whether the alteration or waiver of individual authorization would adversely affect the privacy rights and the welfare of individuals, whether the research project itself would adversely affect the privacy rights or the welfare of individuals.

Proposed waiver criterion iii (waiver criterion §164.512(i)(2)(ii)(C) in the final rule) is revised as follows to clarify that it also pertains to alterations of individual authorization: “the research could not practicably be conducted without the alteration or waiver.”

Proposed waiver criterion vi (waiver criterion §164.512(i)(2)(ii)(E) in the final rule) is revised as follows to be more consistent with one of the Common Rule’s requirements for the approval of human subjects research (Common Rule, §111(a)(2)): “the privacy risks to individuals whose protected health information is to be used or disclosed are reasonable in relation to anticipated benefits if any to individuals, and the importance of the knowledge that may reasonably be expected to result from the research.” Under criterion §164.512(i)(2)(ii)(E), the question is whether the risks to an individual’s privacy from participating in the research are reasonable in relation to the anticipated benefits from the research. This criterion is unlike waiver criterion §164.512(i)(2)(ii)(B) in that it focuses on the privacy risks and benefits of the research project more broadly, not on the waiver of individual authorization.

Proposed waiver criterion viii (waiver criterion §164.512(i)(2)(ii)(G) in the final rule) is revised as follows: “there is an adequate plan to destroy the identifiers at the earliest opportunity consistent with the conduct of the research, unless there is a health or research justification for retaining the identifiers, or such retention is otherwise required by law.”

In addition, the final rule includes another criterion: waiver criterion §164.512(i)(2)(ii)(H). The NPRM proposed no restriction on a researcher’s further use or disclosure of protected health information that had been received under proposed §164.510(j). The final rule requires that the covered entity obtain written agreement from the person or entity receiving protected health information under §164.510 not to re-use or disclose protected health information to any other person or entity, except: (1) As required by law, (2) for authorized oversight of the research project, or (3) for other research for which the use or disclosure of protected health information would be permitted by this subpart. For instance, in assessing whether this criterion has been met, we encourage IRBs and privacy boards to obtain adequate assurances that the protected health information will not be disclosed to an individual’s employer for employment decisions without the individual’s authorization.

3. Required signature. The rule broadens the types of individuals who are permitted to sign the required documentation of IRB or privacy board approval. The final rule requires the documentation of the alteration or waiver of authorization to be signed by (1) the chair of, as applicable, the IRB or the privacy board, or (2) a member of the IRB or privacy board, as applicable, who is designated by the chair to sign the documentation.

Furthermore, the final rule makes the following three additions to the proposed documentation requirements for the alteration or waiver of authorization:

1. Identification of the IRB or privacy board. The NPRM did not propose that the documentation of waiver include a statement identifying the IRB or privacy board that approved the waiver of authorization. In the final rule we require that such a statement be included in the documentation of alteration or waiver of individual authorization. By this requirement we mean that the name of the IRB or privacy board must be included in such documentation, not the names of individual members of the board.

2. Description of protected health information approved for use or disclosure. The NPRM did not propose that the documentation of waiver include a description of the protected health information that the IRB or privacy board had approved for use or disclosure without individual authorization. In considering waiver of authorization criterion §164.512(i)(2)(ii)(D), we expect the IRB or privacy board to consider the amount of information that is minimally needed for the study. The final rule requires that the documentation of IRB or
privacy board approval of the alteration or waiver of authorization describe the protected health information for which use or access has been determined to be necessary for the research by the IRB or privacy board. For example, if the IRB or privacy board approves only the use or disclosure of certain information from patients’ medical records, and not patients’ entire medical record, this must be stated on the document certifying IRB or privacy board approval.

3. Review and approval procedures. The NPRM would not have required documentation of IRBs’ or privacy boards’ review and approval procedures. In the final rule, the documentation of the alteration or waiver of authorization must state that the alteration or waiver has been reviewed and approved by: (1) an IRB that has followed the voting requirements stipulated in the Common Rule (§ .108(b)), or the expedited review procedures as stipulated in § .110(b); or (2) a privacy board that has reviewed the proposed research at convened meetings at which a majority of the privacy board members are present, including at least one member who is not affiliated with the covered entity, not affiliated with any entity conducting or sponsoring the research, and not related to any person who is affiliated with any such entities, and the alteration or waiver of authorization is approved by the majority of privacy board members present at the meeting, unless an expedited review procedure is used.

For documentation of IRB approval that used an expedited review procedure, the covered entity must ensure that the documentation indicates that the IRB followed the expedited review requirements of the Common Rule (§ .110). For documentation of privacy board approval that used an expedited review procedure, the covered entity must ensure that the documentation indicates that the privacy board met the expedited review requirements of the privacy rule. In the final rule, a privacy board may use an expedited review procedure if the research involves no more than minimal risk to the privacy of the individuals who are the subject of the protected health information for which disclosure is being sought. If a privacy board elects to use an expedited review procedure, the review and approval of the alteration or waiver of authorization may be carried out by the chair of the privacy board, or by one or more members of the privacy board as designated by the chair. Use of the expedited review mechanism permits review by a single member of the IRB or privacy board, but continues to require that the covered entity obtain documentation that all of the specified waiver criteria have been met.

Reviews Preparatory to Research

Under the NPRM, if a covered entity used or disclosed protected health information for research, but the researcher did not record the protected health information in a manner that persons could be identified, such an activity would have constituted a research use or disclosure that would have been subject to either the individual authorization requirements of proposed § 164.508 or the documentation of the waiver of authorization requirements of proposed § 164.510(j).

The final rule permits the use and disclosure of protected health information for research without requiring authorization or documentation of the alteration or waiver of authorization, if the research is conducted in such a manner that only de-identified protected health information is recorded by the researchers and the protected health information is not removed from the premises of the covered entity. For such uses and disclosures of protected health information, the final rule requires that the covered entity obtain from the researcher representations that use or disclosure is sought solely to review protected health information as necessary to prepare a research protocol or for similar purposes preparatory to research, no protected health information is to be removed from the covered entity by the researcher in the course of the review, and the protected health information for which use or access is sought is necessary for the research purposes. The intent of this provision is to permit covered entities to use and disclose protected health information to assist in the development of a research hypothesis and aid in the recruitment of research participants. We understand that researchers sometimes require access to protected health information to develop a research protocol, and to determine whether a specific covered entity has protected health information of prospective research participants that would meet the eligibility criteria for enrollment into a research study. Therefore, this provision permits covered entities to use and disclose protected health information for these preliminary research activities without individual authorization and without documentation that an IRB or privacy board has altered or waived individual authorization.

Research on Protected Health Information of the Deceased

The NPRM would have permitted the use and disclosure of protected health information of deceased persons for research without the authorization of a legal representative, and without the requirement for written documentation of IRB or privacy board approval in proposed § 164.510(j). In the final rule, we retain the exception for uses and disclosures for research purposes but in addition require that the covered entity take certain protective measures prior to release of the decedent’s protected health information for such purposes. Specifically, the final rule requires that the covered entity obtain representation that the use or disclosure is sought solely for research on the protected health information of decedent, and representation that the protected health information for which use or disclosure is sought is necessary for the research purposes. In addition, the final rule allows covered entities to request from the researcher documentation of the death of the individuals about whom protected health information is being sought.

Good Faith Reliance

The final rule clarifies that covered entities are allowed to rely on the IRB’s or privacy board’s representation that the research proposal meets the documentation requirements of § 164.512(ii)(1)(i) and the minimum necessary requirements of § 164.514. In addition, when using or disclosing protected health information for reviews preparatory to research (§ 164.512(ii)(1)(ii)) or for research solely on the protected health information of decedents (§ 164.512(1)(iii)), the final rule clarifies that the covered entity may rely on the requesting researcher’s representation that the purpose of the request is for one of these two purpose, and that the request meets the minimum necessary requirements of § 164.514. Therefore, the covered entity has not violated the rule if the requesting researcher misrepresents his or her intended use of the protected health information to the covered entity.

Additional Research Provisions

Research Including Treatment

To the extent that a researcher provided treatment to persons as part of a research study, the NPRM would have covered such researchers as health care providers for purposes of that treatment, and required that the researcher comply with all of the provisions of the rule that
would be applicable to health care providers. The final rule retains this requirement.

**Individual Access to Research Information**

Under proposed § 164.514, the NPRM would have applied the proposed provision regarding individuals' access to records to research that includes the delivery of treatment. The NPRM proposed an exception to individuals' right to access protected health information for research that includes treatment of the individual in whole or in part, of the research would be reinstated once the research is in progress. Section 164.524 of the final rule retains this exception to access for research that includes treatment. In addition, the final rule requires that participants in such research be informed that their right of access to protected health information about them will be reinstated once the research is complete.

**Obtaining the Individual's Authorization for Research**

The NPRM would have required covered entities obtaining individuals' authorization for the use or disclosure of information for research to comply with the requirements applicable to individual authorization for the release of protected health information (proposed § 164.508(a)(2)). If an individual had initiated the use or disclosure of his/her protected health information for research, or any other purpose, the covered entity would have been required to obtain a completed authorization for the use or disclosure of protected health information as proposed in § 164.508(c).

The final rule retains these requirements for research conducted with authorization, as required by § 164.508. In addition, for the use and disclosure of protected health information created by a covered entity for the purpose, in whole or in part, of research that includes treatment of the individual, the covered entity must meet the requirements of § 164.508(f).

**Interaction with the Common Rule**

The NPRM stated that the proposed rule would not override the Common Rule. Where both the NPRM and the Common Rule would have applied to research conducted by the covered entity—either with or without individuals' authorization—both sets of regulations would have needed to be followed. This statement remains true in the final rule. In addition, we clarify that FDA's human subjects regulations must also be followed if applicable.

**Section 164.512(j)—Uses and Disclosures to Avert a Serious Threat to Health or Safety**

In the NPRM we proposed to allow covered entities to use or disclose protected health information without individual authorization—consistent with applicable law and ethics standards—based on a reasonable belief that use or disclosure of the protected health information was necessary to prevent or lessen a serious and imminent threat to health or safety of an individual or of the public. Pursuant to the NPRM, covered entities could have used or disclosed protected health information in these emergency circumstances to a person or persons reasonably able to prevent or lessen the threat, including the target of the threat. The NPRM stated that covered entities that made disclosures in these circumstances were presumed to have acted under a reasonable belief if the disclosure was made in good faith, based on credible representation by a person with apparent knowledge or authority. The NPRM did not include verification requirements specific to this paragraph.

In § 164.512(j) of the final rule, we retain the NPRM's approach to uses and disclosures made to prevent or lessen serious and imminent threats to health or safety, as well as its language regarding the presumption of good faith. We also clarify that: (1) Rules governing these situations, which the NPRM referred to as "emergency circumstances," are not intended to apply to emergency care treatment, such as health care delivery in a hospital emergency room; and (2) the "presumption of good faith belief" is intended to apply only to this provision and not to all disclosures permitted without individual authorization. The final rule allows covered entities to use or disclose protected health information without an authorization on their own initiative in these circumstances, when necessary to prevent or lessen a serious and imminent threat, consistent with other applicable ethical or legal standards.

The rule's approach is consistent with the "duty to warn" third persons at risk, which has been established through case law. In *Tarasoff v. Regents of the University of California* (17 Cal. 3d 425 (1977)), it was found that when a therapist's patient had made credible threats against the physical safety of a specific person, the therapist had an obligation to use reasonable care to protect the intended victim of his patient against danger, including warning the victim of the danger. Many states have adopted, through either statutory or case law, versions of the Tarasoff duty to warn. The rule is not intended to create a duty to warn or disclose. Rather, it permits disclosure to avert a serious and imminent threat to health or safety consistent with other applicable legal or ethical standards. If disclosure in these circumstances is prohibited by state law, this rule would not allow the disclosure.

As indicated above, in some situations (for example, when a person is both a fugitive and a victim and thus covered entities could disclose protected health information pursuant to § 164.512(f)(2) regarding fugitives or to § 164.512(f)(3) establishing conditions for disclosure about victims), more than one section of this rule potentially could apply with respect to a covered entity's potential disclosure of protected health information. Similarly, in situations involving a serious and imminent threat to public health or safety, law enforcement officials may be seeking protected health information from covered entities to locate a fugitive. In the final rule, we clarify that if a situation fits one section of the rule (for example, § 164.512(j) on serious and imminent threats to health or safety), covered entities may disclose protected health information.

The proposed rule did not address situations in which covered entities could make disclosures to law enforcement officials about oral statements admitting participation in violent conduct or about escapees. In the final rule we permit, but do not require, covered entities to use or disclose protected health information, consistent with applicable law and standards of ethical conduct, in specific situations in which the covered entity, in good faith, believes the use or disclosure is necessary to permit law enforcement authorities to identify or apprehend an individual. Under paragraph (j)(1)(ii)(A) of this section, a covered entity may take such action because of a statement by an individual admitting participation in a violent crime that the covered entity reasonably believes may have resulted in serious physical harm to the victim. The
protected health information that is disclosed in this case is limited to the statement and to the protected health information included under the limited identifying and location information in §164.512(f)(2), such as name, address, and type of injury. Under paragraph (jj)(1)(ii)(B) of this section, a covered entity may take such action where it appears from all the circumstances that the individual has escaped from a correctional institution or from lawful custody.

A disclosure may not be made under paragraph (jj)(1)(ii)(A) for a statement admitting participation in a violent crime if the covered entity learns the information in the course of counseling or therapy. Similarly, such a disclosure is not permitted if the covered entity learns the information in the course of treatment to affect the propensity to commit the violent crimes that are described in the individual’s statements. We do not intend to discourage individuals from speaking accurately in the course of counseling or therapy sessions, or to discourage other treatment that specifically seeks to reduce the likelihood that someone who has acted violently in the past will do so again in the future. This prohibition on disclosure is triggered once an individual has made a request to initiate or be referred to such treatment, therapy, or counseling.

The provision permitting use and disclosure has been added in light of the broadened definition in the final rule of protected health information. Under the NPRM, protected health information meant individually identifiable health information that is or has been electronically transmitted or electronically maintained by a covered entity. Under the final rule, protected health information includes information transmitted by electronic media as well as such information transmitted or maintained in any other form or medium. The new definition includes oral statements to covered entities as well as individually identifiable health information transmitted “in any other form.”

The definition of protected health information, for instance, would now apply to a statement by a patient that is overheard by a hospital security guard in a waiting room. Such a statement would have been outside the scope of the proposed rule (unless it was memorialized in an electronic record), but is within the scope of the final rule. For the example with the hospital guard, the new provision permitting disclosure of a statement by an individual admitting participation in a violent crime would have the same effect as the proposed rule—the statement could be disclosed to law enforcement, so long as the other aspects of the regulation are followed. Similarly, where it appears from all the circumstances that the individual has escaped from prison, the expanded definition of protected health information should not prevent the covered entity from deciding to report this information to law enforcement.

The disclosures that covered entities may elect to make under this paragraph are entirely at their discretion. These disclosures to law enforcement are in addition to other disclosure provisions in the rule. For example, under paragraph §164.512(f)(2) of this section, a covered entity may disclose limited categories of protected health information in response to a request from a law enforcement officer for the purpose of identifying or locating a suspect, fugitive, material witness, or missing person. Paragraph §164.512(f)(1) of this section permits a covered entity to make disclosures that are required by other laws, such as state mandatory reporting laws, or are required by legal process such as court orders or grand jury subpoena.

Section 164.512(k)—Uses and Disclosures for Specialized Government Functions

Application to Military Services

In the NPRM we would have permitted a covered entity providing health care to Armed Forces personnel to use and disclose protected health information for activities deemed necessary by appropriate military command authorities to assure the proper execution of the military mission, where the appropriate military authority had published by notice in the Federal Register (in the NPRM, we proposed that the Department of Defense would publish this Federal Register notice in the future.) The final rule takes a similar approach while making some modifications to the NPRM. One modification concerns the information that will be required in the Federal Register notice. The NPRM would have required a listing of (i) appropriate military command authorities; (ii) the circumstances for which use or disclosure without individual authorization would be required; and (iii) activities for which such use or disclosure would occur in order to assure proper execution of the military mission. In the final rule, we eliminate the third category and also slightly modify language in the second category to read: “the purposes for which the protected health information may be used or disclosed.”

An additional modification concerns the rule’s application to foreign military and diplomatic personnel. The NPRM would have excluded foreign diplomatic and military personnel, as well as their dependents, from the proposed definition of “individual,” thereby excluding any protected health information created about these personnel from the NPRM’s privacy protections. Foreign military and diplomatic personnel affected by this provision include, for example, allied military personnel who are in the United States for training. The final rule applies a more limited exemption to foreign military personnel only (Foreign diplomatic personnel will have the same protections granted to all other individuals under the rule). Under the final rule, foreign military personnel are not excluded from the definition of “individual.” Covered entities will be able to use and disclose protected health information of foreign military personnel to their appropriate foreign military authority for the same purposes for which uses and disclosures are permitted for U.S. Armed Forces personnel under the notice to be published in the Federal Register. Foreign military personnel do have the same rights of access, notice, right to request privacy protection, copying, amendment, and accounting as do other individuals pursuant to §§164.520–164.526 (sections on access, notice, right to request privacy protection for protected health information, amendment, inspection, copying) of the rule.

The NPRM likewise would have exempted overseas foreign national beneficiaries from the proposed rule’s requirements by excluding them from the definition of “individual.” Under the final rule, these beneficiaries no longer are exempt from the definition of “individual.” However, the rule’s provisions do not apply to the individually identifiable health information of overseas foreign nationals who receive care provided by the Department of Defense, other federal agencies, or by non-governmental organizations incident to U.S. sponsored missions or operations. The final rule includes a new provision to address separation or discharge from military service. The preamble to the NPRM noted that upon completion of individuals’ military service, DOD and the Department of Transportation routinely transfer entire military service records, including protected health information to the Department of Veterans Affairs so that
the file can be retrieved quickly if the individuals or their dependents apply for veterans benefits. The NPRM would have required consent for such transfers. The final rule no longer requires consent in such situations. Thus, under the final rule, a covered entity that is a component of DOD or the Department of Transportation may disclose to DVA the protected health information of an Armed Forces member upon separation or discharge from military service for the purpose of a determination by DVA of the individual’s eligibility for or entitlement to benefits under laws administered by the Secretary of Veterans Affairs.

**Department of Veterans Affairs**

Under the NPRM, a covered entity that is a component of the Department of Veterans Affairs could have used and disclosed protected health information to other components of the Department that determine eligibility for, or entitlement to, or that provide benefits under laws administered by the Secretary of Veterans Affairs. In the final rule, we retain this approach.

**Application to Intelligence Community**

The NPRM would have provided an exemption from its proposed requirements to the intelligence community. As defined in section 4 of the National Security Act, 50 U.S.C. 401a, the intelligence community includes: the Office of the Director of Central Intelligence Agency; the Office of the Deputy Director of Central Intelligence; the National Intelligence Council and other such offices as the Director may designate; the Central Intelligence Agency; the National Security Agency; the Defense Intelligence Agency; the National Imagery and Mapping Agency; the National Reconnaissance Office; other offices within the DOD for the collection of specialized national intelligence through reconnaissance programs; the intelligence elements of the Army, the Navy, the Air Force, the Marine Corps, the Federal Bureau of Investigation, the Department of the Treasury, and the Department of Energy; the Bureau of Intelligence and Research of the Department of State; and such other elements of any other department or agency as may be designated by the President, or designated jointly by the Director of Central Intelligence and the head of the department or agency concerned, as an element of the intelligence community. It would have allowed a covered entity to use without individual authorization protected health information of employees of the intelligence community, and of their dependents, if such dependents were being considered for posting abroad. The final rule does not include such an exemption. Rather, the final rule does not except intelligence community employees and their dependents from the general rule requiring an authorization in order for protected health information to be used and disclosed.

**National Security and Intelligence Activities**

The NPRM included a provision, in § 164.510(f)—Disclosure for Law Enforcement Purposes—that would allow covered entities to disclose protected health information without consent for the conduct of lawful intelligence activities under the National Security Act, and in connection with providing protective services to the President or to foreign heads of state pursuant to 18 U.S.C. 3056 and 22 U.S.C. 2709(a)(3) respectively. The final rule preserves these exemptions, with slight modifications, but moves them from proposed § 164.510(f) to § 164.512(k). It also divides this area into two paragraphs—one called “National Security and Intelligence Activities” and the second called “Protective services for the President and Others.”

The final rule, with modifications, allows a covered entity to disclose protected health information to an authorized federal official for the conduct of lawful intelligence, counter-intelligence, and other national security activities authorized by the National Security Act and implementing authority (e.g., Executive Order 12333). The references to “counter-intelligence and other national security activities” are now to the final rule. The reference to “implementing authority (e.g., Executive Order 12333)” is also new. The final rule also adds specificity to the provision on protective services. It states that a covered entity may disclose protected health information to authorized federal officials for the conduct of protective services if the President or designees authorized by 18 U.S.C. 3056, or to foreign heads of state or other persons as authorized by 22 U.S.C. 2709(a)(3), or for the conduct of investigations authorized by 18 U.S.C. 871 and 879.

**Application to the State Department**

The final rule creates a narrower exemption for Department of State for uses and disclosures of protected health information (1) for purposes of a required security clearance conducted pursuant to Executive Orders 10450 and 12698; (2) as necessary to meet the requirements of determining worldwide availability or availability for mandatory service abroad under Sections 101(a)(4) and 504 of the Foreign Service Act; and (3) for a family member to accompany a Foreign Service Officer abroad, consistent with Section 101(b)(5) and 904 of the Foreign Service Act.

Regarding security clearances, nothing prevents any employer from requiring that individuals provide authorization for the purpose of obtaining a security clearance. For the Department of State, however, the final rule provides a limited exemption that allows a component of the Department of State without an authorization to (1) use protected health information to make medical suitability determinations and (2) disclose whether or not the individual was determined to be medically suitable to authorized officials in the Department of State for the purpose of a security clearance investigation conducted pursuant to Executive Order 10450 and 12698.

Section 101(a)(4) and 504 of the Foreign Service Act require that Foreign Service members be available to serve in assignments throughout the world. The final rule permits disclosures to officials who need protected health information to determine availability for duty worldwide.

**Application to Correctional Facilities**

The NPRM would have excluded the individually identifiable health information of correctional facility inmates and detention facility detainees from the definition of protected health information. Thus, none of the NPRM’s...
The final rule takes a different approach. First, to clarify that we are referring to individuals who are incarcerated in correctional facilities that are part of the criminal justice system or in the lawful custody of a law enforcement official—and not to individuals who are “detained” for non-criminal reasons, for example, in psychiatric institutions—§ 164.512(k) covers disclosure of protected health information to correctional institutions or law enforcement officials having such lawful custody. In addition, where a covered health care provider is also a health care component of a correctional institution, the final rule permits the covered entity to use protected health information in all cases in which it is permitted to disclose such information.

We define correctional institution as defined pursuant to 28 U.S.C. 13725(b)(1), as a “prison, jail, reformatory, work farm, detention center, or halfway house, or any other similar institution designed for the confinement or rehabilitation of criminal offenders.” The rules regarding disclosure and use of protected health information specified in § 164.512(k) cover individuals who are in transitional homes, and other facilities in which they are required by law to remain for correctional reasons and from which they are not allowed to leave. This section also covers individuals who are confined to psychiatric institutions for correctional reasons and who are not allowed to leave; however, it does not apply to disclosure of information about individuals in psychiatric institutions for treatment purposes only, who are not there due to a crime or under a mandate from the criminal justice system. The disclosure rules described in this section do not cover release of protected health information about individuals in pretrial release, probation, or on parole, such persons are not considered to be incarcerated in a correctional facility.

As described in § 164.512(k), correctional facility inmates’ individually identifiable health information is not excluded from the definition of protected health information. When individuals are released from correctional facilities, they will have the same privacy rights that apply to all other individuals under this rule.

Section 164.512(k) of the final rule states that while individuals are in a correctional facility or in the lawful custody of a law enforcement official, covered entities (for example, the prison’s clinic) can use or disclose protected health information about these individuals without authorization to the correctional facility or the law enforcement official having custody as necessary for: (1) the provision of health care to such individuals; (2) the health and safety of such individual or other inmates; (3) the health and safety of the officers of employees of or others at the correctional institution; and (4) the health and safety of such individuals and officers or other persons responsible for the transporting of inmates or their transfer from one institution or facility to another; (5) law enforcement on the premises of the correctional institution; and (6) the administration and maintenance of the safety, security, and good order of the correctional institution. This section is intended to allow, for example, a prison’s doctor to disclose to a van driver transporting a criminal that the individual is a diabetic and frequently has seizures, as well as information about the appropriate action to take if the individual has a seizure while he or she is being transported.

We permit covered entities to disclose protected health information about these individuals if the correctional institution or law enforcement official represents that the protected health information is necessary for these purposes. Under 164.514(h), a covered entity may reasonably rely on the representation of such public officials.

Application to Public Benefits Programs Required to Share Eligibility Information

We create a new provision for covered entities that are a government program providing public benefits. This provision allows the following disclosures of protected health information.

First, where other law requires or expressly authorizes information relating to the eligibility for, or enrollment in more than one public program to be shared among such public programs and/or maintained in a single or combined data system, a public agency that is administering a health plan may maintain such a data base and may disclose information relating to such eligibility or enrollment in the health plan to the extent authorized by such other law.

Where another public entity has determined that the appropriate balance between the need for efficient administration of public programs and public funds and individuals’ privacy interests is to allow information sharing for these limited purposes, we do not upset that determination. For example, section 1137 of the Social Security Act requires a variety of public programs, including the Social Security program, state medical aid programs, the food stamp program, certain unemployment compensation programs, and others, to participate in a joint income and eligibility verification system. Similarly, section 222 of the Social Security Act requires the Social Security Administration to provide information to certain state vocational rehabilitation programs for eligibility purposes. In some instances, it is a covered entity that first collects or creates the information that is then disclosed for these systems. We do not prohibit those disclosures.

This does not authorize these entities to share information for claims determinations or ongoing administration of these public programs. This provision is limited to the agencies and activities described above.

Second, § 164.512(k)(6) permits a covered entity that is a government agency administering a government program providing public benefits to disclose protected health information relating to the program to another covered entity that is a government agency administering a government program providing public benefits if the programs serve the same or similar populations and the disclosure of protected health information is necessary to coordinate the covered functions of such programs.

The second provision permits covered entities that are government programs providing public benefits that serve the same or similar populations to share protected health information for the purposes of coordinating covered functions of the programs and for general management and administration relating to the covered functions of the programs. Often, similar government health programs are administered by different government agencies. For example, in some states, the Medicaid program and the State Children’s Health Insurance Program are administered by different agencies, although they serve similar populations. Many states coordinate eligibility for these two programs, and sometimes offer services through the same delivery systems and contracts. This provision would permit the covered entities administering these programs to share protected health information of program participants to coordinate enrollment and services and to generally improve health care operations of the programs. We note that this provision does not authorize the
agencies to use or disclose the protected health information that is shared for purposes other than as provided for in this paragraph.

**Section 164.512(l)—Disclosures For Workers’ Compensation**

The NPRM did not contain special provisions permitting covered entities to disclose protected health information for the purpose of complying with workers’ compensation and similar laws. Under HIPAA, workers’ compensation and certain other forms of insurance (such as automobile or disability insurance) are “excepted benefits.” Insurance carriers that provide this coverage are not covered entities even though they provide coverage for health care services. To carry out their insurance functions, these non-covered insurers typically seek individually identifiable health information from covered health care providers and group health plans. In drafting the proposed rule, the Secretary was faced with the challenge of trying to carry out the statutory mandate of safeguarding the privacy of individually identifiable health information by regulating the flow of such information from covered entities while at the same time respecting the Congressional intent to shield workers’ compensation carriers and other excepted benefit plans from regulation as covered entities.

In the proposed rule we allowed covered entities to disclose protected health information without individual consent for purposes of treatment, payment or health care operations—even when the disclosure was to a non-covered entity such as a workers’ compensation carrier. In addition, we allowed protected health information to be disclosed if required by state law for purposes of determining eligibility for coverage or fitness for duty. The proposed rule also required that whenever a covered entity disclosed protected health information to a non-covered entity, even though authorized under the rule, the individual who was the subject of the information must be informed that the protected health information was no longer subject to privacy protections.

Like other disclosures under the proposed rule, the information provided to workers’ compensation carriers for treatment, payment or health care operations was subject to the minimum necessary standard. However, to the extent that protected health information was disclosed to the carrier because it was required by law, it was not subject to the minimum necessary standard. In addition, individuals were entitled to an accounting when protected health information was disclosed for purposes other than treatment, payment or health care operations. In the final rule, we include a new provision in this section that clarifies the ability of covered entities to disclose protected health information without authorization to comply with workers’ compensation and similar programs established by law that provide benefits for work-related illnesses or injuries without regard to fault. Although most disclosures for workers’ compensation would be permissible under other provisions of this rule, particularly the provisions that permit disclosures for payment and as required by law, we are aware of the significant variability among workers’ compensation and similar laws, and include this provision to ensure that existing workers’ compensation systems are not disrupted by this rule. We note that the minimum necessary standard applies to disclosures under this paragraph.

Under this provision, a covered entity may disclose protected health information regarding an individual to a party responsible for payment of workers’ compensation benefits to the individual, and to an agency responsible for administering and/or adjudicating the individual’s claim for workers’ compensation benefits. For purposes of this paragraph, workers’ compensation benefits include benefits under programs such as the Black Lung Benefits Act, the federal Employees’ Compensation Act, the Longshore and Harbor Workers’ Compensation Act, and the Energy Employees’ Occupational Illness Compensation Program Act.

**Additional Considerations**

We have included a general authorization for disclosures under workers’ compensation systems to be consistent with the intent of Congress, which defined workers’ compensation carriers as excepted benefits under HIPAA. We recognize that there are significant privacy issues raised by how individually identifiable health information is used and disclosed in workers’ compensation systems, and believe that states or the federal government should enact standards that address those concerns.

**Section 164.514—Other Procedural Requirements Relating To Uses and Disclosures of Protected Health Information**

**Section 164.514(a)—De-identification**

In § 164.506(d) of the NPRM, we proposed that the privacy standards would apply to “individually identifiable health information,” and not to information that does not identify the subject individual. The statute defines individually identifiable health information as certain health information:

(i) Which identifies the individual, or
(ii) With respect to which there is a reasonable basis to believe that the information can be used to identify the individual.

As we pointed out in the NPRM, difficulties arise because, even after removing obvious identifiers (e.g., name, social security number, address), there is always some probability or risk that any information about an individual can be attributed to that individual.

The NPRM proposed two alternative methods for determining when sufficient identifying information has been removed from a record to render the information de-identified and thus not subject to the rule. First, the NPRM proposed the establishment of a “safe harbor”: if all of a list of 19 specified items of information had been removed, and the covered entity had no reason to believe that the remaining information could be used to identify the subject of the information (alone or in combination with other information), the covered entity would have been presumed to have created de-identified information. Second, the NPRM proposed an alternative method so that covered entities with sufficient statistical experience and expertise could remove or encrypt a combination of information different from the enumerated list, using commonly accepted scientific and statistical standards for disclosure avoidance. Such covered entities would have been able to include information from the enumerated list of 19 items if they (1) believed that the probability of re-identification was very low, and (2) removed additional information if they had a reasonable basis to believe that the resulting information could be used to re-identify someone.

We proposed that covered entities and their business partners be permitted to use protected health information to create de-identified health information using either of these two methods. Covered entities would have been permitted to further use and disclose such de-identified information in any way, provided that they did not disclose the key or other mechanism that would have enabled the information to be re-identified, and provided that they reasonably believed that such use or disclosure of de-identified information would not have resulted in the use or
Disclosure of protected health information.

A number of examples were provided of how valuable such de-identified information would be for various purposes. We expressed the hope that covered entities, their business partners, and others would make greater use of de-identified health information than they do today, when it is sufficient for the purpose, and that such practice would reduce the burden and the confidentiality concerns that result from the use of individually identifiable health information for some of these purposes.

In §§ 164.514(a)-(c) of this final rule, we make several modifications to the provisions for de-identification. First, we explicitly adopt the statutory standard as the basic regulatory standard for whether health information is individually identifiable health information under this rule. Information is not individually identifiable under this rule if it does not identify the individual, or if the covered entity has no reasonable basis to believe it can be used to identify the individual. Second, in the implementation specifications we reformulate the two ways in which a covered entity can demonstrate that it has met the standard.

One way a covered entity may demonstrate that it has met the standard is if a person with appropriate knowledge and experience applying generally accepted statistical and scientific principles and methods for rendering information not individually identifiable makes a determination that the risk is very small that the information could be used, either by itself or in combination with other available information, by anticipated recipients to identify a subject of the information. The covered entity must also document the analysis and results that justify the determination. We provide guidance regarding this standard in our responses to the comments we received on this provision.

We also include an alternate, safe harbor, method by which covered entities can demonstrate compliance with the standard. Under the safe harbor, a covered entity is considered to have met the standard if it has removed all of a list of enumerated identifiers, and if the covered entity has no actual knowledge that the information could be used alone or in combination to identify a subject of the information. We note that in the NPRM, we had proposed that to meet the safe harbor, a covered entity must have “no reason to believe” that the information remained identifiable after the enumerated identifiers were removed. In the final rule, we have changed the standard to one of actual knowledge in order to provide greater certainty to covered entities using the safe harbor approach.

In the safe harbor, we explicitly allow age and some geographic location information to be included in the de-identified information, but all dates directly related to the subject of the information must be removed or limited to the year, and zip codes must be removed or aggregated (in the form of most 3-digit zip codes) to include at least 20,000 people. Extreme ages of 90 and over must be aggregated to a category of 90+ to avoid identification of very old individuals. Other demographic information, such as gender, race, ethnicity, and marital status are not included in the list of identifiers that must be removed.

The intent of the safe harbor is to provide a means to produce some de-identified information that could be used for many purposes with a very small risk of privacy violation. The safe harbor is intended to involve a minimum of burden and convey a maximum of certainty that the rules have been met by interpreting the statutory “reasonable basis to believe that the information can be used to identify the individual” to produce an easily followed, cook book approach.

Covered entities may use codes and similar means of marking records so that they may be linked or later re-identified, if the code does not contain information about the subject of the information (for example, the code may not be a derivative of the individual’s social security number), and if the covered entity does not use or disclose the code for any other purpose. The covered entity is also prohibited from disclosing the mechanism for re-identification, such as tables, algorithms, or other tools that could be used to link the code with the subject of the information.

Language to clarify that covered entities may contract with business associates to perform the de-identification has been added to the section on business associates.

Section 164.514(d)—Minimum Necessary

The proposed rule required a covered entity to make all reasonable efforts not to use or disclose more than the minimum amount of protected health information necessary to accomplish the intended purpose of the use or disclosure (proposed § 164.506(b)).

The proposed minimum necessary standard did not apply to uses or disclosures that were made by covered entities at the request of the individual, either to allow the individual access to protected health information about him or her or pursuant to an authorization initiated by the individual. The requirement also did not apply to uses and disclosures made: pursuant to the compliance and enforcement provisions of the rule; as required by law and permitted by the regulation without individual authorization; by a covered health care provider to a health plan, when the information was requested for audit and related purposes. Finally, the standard did not apply to the HIPAA administrative simplification transactions.

The proposed implementation specifications would have required a covered entity to have procedures to: (i) Identify appropriate persons within the entity to determine what information should be used or disclosed consistent with the minimum necessary standard; (ii) ensure that those persons make the minimum necessary determinations, when required; and (iii) within the limits of the entity’s technological capabilities, provide for the making of such determinations individually. The proposal allowed a covered entity, when making disclosures to public officials that were permitted without individual authorization but not required by other law, to reasonably rely on the representations of such officials that the information requested was the minimum necessary for the stated purpose(s).

The preamble provided further guidance. The preamble explained that covered entities could not have general policies of approving all requests (or all requests of a particular type) without carefully considering certain criteria (see “Criteria,” below) as well as other information specific to the request. The minimum necessary determination would have needed to be consistent with and directly related to the purpose of the use or disclosure. Where there was ambiguity regarding the information to be used or disclosed, the preamble directed covered entities to interpret the “minimum necessary” standard to “require” the covered entity to make some effort to limit the amount of protected health information used/disclosed.

The proposal would have required the minimum necessary determination to take into consideration the ability of a covered entity to delimit the amount of information used or disclosed. The preamble noted that these determinations would have to be made under a reasonableness standard: covered entities would be required to make reasonable efforts and to incur reasonable expense to limit the use or
disclosure. The “reasonableness” of limiting particular uses or disclosures was to be determined based on the following factors (which were not included in the regulatory text):
a. The extent to which the use or disclosure would extend the number of persons with access to the protected health information.
b. The likelihood that further uses or disclosures of the protected health information could occur.
c. The amount of protected health information that would be used or disclosed.
d. The importance of the use or disclosure.
e. The potential to achieve substantially the same purpose with de-identified information. For disclosures, each covered entity would have been required to have policies for determining when protected health information must be stripped of identifiers.
f. The technology available to limit the amount of protected health information used/disclosed.
g. The cost of limiting the use/disclosure.
h. Any other factors that the covered entity believed were relevant to the determination.

The proposal shifted the “minimum necessary” burden off of covered providers when they were being audited by a health plan. The preamble explained that the duty would have been shifted to the payor to request the minimum necessary information for the audit purpose, although the regulatory text did not include such a requirement. Outside of the audit context, the preamble stated that a health plan would be required, when requesting a disclosure, to limit its requests to the information required to achieve the purpose of the request; the regulation text did not include this requirement.

The preamble stated that disclosure of an entire medical record, in response to a request for something other than the entire medical record, would presumptively violate the minimum necessary standard.

This final rule significantly modifies the proposed requirements for implementing the minimum necessary standard. For all uses and many disclosures and requests for disclosures from other covered entities, we require covered entities to implement policies and procedures for “minimum necessary” uses and disclosures.

Implementation of such policies and procedures is required in lieu of making the “minimum necessary” determination for each separate use or disclosure as discussed in the proposal.

Disclosures to or requests by a health care provider for treatment purposes are not subject to the standard (see § 164.502).

Specifically (and as further described below), the proposed requirement for individual review of all uses of protected health information is replaced with a requirement for covered entities to implement policies and procedures that restrict access and uses based on the specific roles of members of the covered entity’s workforce. Routine disclosures also are not subject to individual review; instead, covered entities must implement policies and procedures to limit the protected health information in routine disclosures to the minimum necessary to achieve the purpose of that type of disclosure. The proposed exclusion of disclosures to health plans for audit purposes is deleted and replaced with a general requirement that covered entities must limit requests to other covered entities for individually identifiable health information to what is reasonably necessary for the use or disclosure intended. The other exclusions from the standard are unchanged from the proposed rule (e.g., for individuals’ access to information about themselves, pursuant to an authorization initiated by the individual, for enforcement of this rule, as required by law).

The language of the basic “standard” itself is largely unchanged; covered entities must make reasonable efforts to use or disclose or to request from another covered entity, only the minimum amount of protected health information required to achieve the purpose of a particular use or disclosure. We delete the word “all” from the “reasonable efforts” that covered entities must take in making a “minimum necessary” determination. The implementation specifications are significantly modified, and differ based on whether the activity is a use or disclosure.

Similarly, a “minimum necessary” disclosure for oversight purposes in accordance with § 164.512(d) could include large numbers of records to allow oversight agencies to perform statistical analyses to identify deviations in payment or billing patterns, and other data analyses.

Uses of Protected Health Information
A covered entity must implement policies and procedures to identify the persons or classes of persons in the entity’s workforce who need access to protected health information to carry out their specific responsibilities. Covered entities also must implement policies and procedures to limit the protected health information to which such persons or classes need access, and the conditions, as appropriate, that would apply to such access. Covered entities must also implement policies and procedures to limit access to only the identified persons, and only to the identified protected health information. The policies and procedures must be based on reasonable determinations regarding the persons or classes of persons who require protected health information, and the nature of the health information they require, consistent with their job responsibilities.

For example, a hospital could implement a policy that permitted nurses access to all protected health information of patients in their ward while they are on duty. A health plan could permit its underwriting analysts unrestricted access to aggregate claims information for rate setting purposes, but require documented approval from its department manager to obtain specific identifiable claims records of a member for the purpose of determining the cause of unexpected claims that could influence renewal premium rate setting.

The “minimum necessary” standard is intended to reflect and be consistent with, not override, professional judgment and standards. For example, we expect that covered entities will implement policies that allow persons involved in treatment to have access to the entire record, as needed.

Disclosures of Protected Health Information
For any type of disclosure that is made on a routine, recurring basis, a covered entity must implement policies and procedures (which may be standard protocols) that permit only the disclosure of the minimum protected health information reasonably necessary to achieve the purpose of the disclosure. Individual review of each disclosure is not required. Instead, under § 164.514(d)(3), these policies and procedures must identify the types of protected health information to be disclosed, the types of persons who would receive the protected health information, and the conditions that would apply for such access. We recognize that specific disclosures within a type may vary, and require that the policies address what is the norm for the type of disclosure involved. For example, a covered entity may decide to participate in research studies and therefore establish a protocol to minimize the information released for such purposes, e.g., by requiring researchers requesting disclosure of data contained in paper-based records to review the paper records on-site and to
abstract only the information relevant to the research. Covered entities must develop policies and procedures (which may be standard protocols) to apply to disclosures to routinely hired types of business associates. For instance, a standard protocol could describe the subset of information that may be disclosed to medical transcription services.

For non-routine disclosures, a covered entity must develop reasonable criteria for determining, and limiting disclosure to, only the minimum amount of protected health information necessary to accomplish the purpose of the disclosure. They also must establish and implement procedures for reviewing such requests for disclosures on an individual basis in accordance with these criteria.

Disclosures to health care providers for treatment purposes are not subject to these requirements.

Covered entities’ policies and procedures must provide that disclosure of an entire medical record will not be made except pursuant to policies which specifically justify why the entire medical record is needed. For instance, a health plan’s request for all protected health information from an applicant for insurance would not necessarily violate the regulation, because the entire record may be the “minimum necessary” for its purpose. Covered entities may establish policies allowing for and justifying such a request. A request for the entire medical record absent such documented justification is a presumptive violation of this rule.

Reasonable Reliance

A covered entity may reasonably rely on the assertion of a requesting covered entity that it is requesting the minimum protected health information necessary for the stated purpose. A covered entity may also rely on the assertions of a professional (such as attorneys and accountants) who is a member of its workforce or its business associate regarding what protected health information he or she needs in order to provide professional services to the covered entity when such person represents that the information requested is the minimum necessary. As we proposed in the NPRM, covered entities making disclosures to public officials that are permitted under §164.512 may rely on the representation of a public official that the information requested is the minimum necessary.

Uses and Disclosures for Research

In making a minimum necessary determination regarding the use or disclosure of protected health information for research purposes, a covered entity may reasonably rely on documentation from an IRB or privacy board describing the protected health information needed for research and consistent with the requirements of §164.512(b). “Uses and Disclosures for Research Purposes.” A covered entity may also reasonably rely on a representation made by the requestor that the information is necessary to prepare a research protocol or for research on decedents. The covered entity must ensure that the representation or documentation of IRB or privacy board approval it obtains from a researcher describes with sufficient specificity the protected health information necessary for the research. Covered entities must use or disclose such protected health information in a manner that minimizes the scope of the use or disclosure.

Standards for Electronic Transactions

We clarify that under §164.502(b)(2)(v), covered entities are not required to apply the minimum necessary standard to the required or situational data elements specified in the implementation guides for HIPAA administrative simplification standard transactions in the Transactions Rule. The standard does apply for uses or disclosures in standard transactions that are made at the option of the covered entity.

Section 164.514(e)—Marketing

In the proposed rule, we would have required covered entities to obtain the individual’s authorization in order to use or disclose protected health information to market health and non-health items and services.

We have made a number of changes in the final rule that relate to marketing. In the final rule, we retain the general rule that covered entities must obtain the individual’s authorization before making uses or disclosures of protected health information for marketing. However, we add a new definition of “marketing” that clarifies that certain activities, such as communications made by a covered entity for the purpose of describing the products and services it provides, are not marketing. See §164.501 and the associated preamble regarding the definition of marketing. In the final rule we also permit covered entities to use and disclose protected health information for certain marketing activities without individual authorization, subject to conditions enumerated at §164.514(e).

First, §164.514(e) permits a covered entity to use or disclose protected health information without individual authorization to make a marketing communication if the communication occurs in a face-to-face encounter with the individual. This provision would permit a covered entity to discuss any services and products, including those of a third-party, without restriction during a face-to-face communication. A covered entity also could give the individual sample products or other information in this setting.

Second, we permit a covered entity to use or disclose protected health information without individual authorization to make marketing communications involving products or services of only nominal value. This provision ensures that covered entities do not violate the rule when they distribute calendars, pens and other merchandise that generally promotes the covered entity.

Third, we permit a covered entity to use or disclose protected health information without individual authorization to make marketing communications about the health-
related products or services of the covered entity or of a third party if the communication: (1) Identifies the covered entity as the party making the communication; (2) to the extent that the covered entity receives direct or indirect remuneration from a third-party for making the communication, prominently states that fact; (3) except in the case of a general communication (such as a newsletter), contains instructions describing how the individual may opt-out of receiving future communications about health-related products and services; and (4) where protected health information is used to target the communication about a product or service to individuals based on their health status or health condition, explains why the individual has been targeted and how the product or service relates to the health of the individual. The final rule also requires a covered entity to make a determination, prior to using or disclosing protected health information to target a communication to individuals based on their health status or condition, that the product or service may be beneficial to the health of the type or class of individual targeted to receive the communication.

This third provision accommodates the needs of health care entities to be able to discuss their own health-related products and services, or those of third parties, as part of their everyday business and as part of promoting the health of their patients and enrollees. The provision is restricted to uses by covered entities or disclosures to their business associates pursuant to a contract that requires confidentiality, ensuring that protected health information is not distributed to third parties. To provide individuals with a better understanding of how their protected health information is being used for marketing, the provision requires that the communication identify that the covered entity is the source of the communication; a covered entity may not send out information about the product of a third party without disclosing to the individual where the communication originated. We also require covered entities to disclose any direct or indirect remuneration from third parties. This requirement permits individuals to better understand why they are receiving a communication, and to weigh the extent to which their information is being used to promote their health or to enrich the covered entity. Covered entities also are required to include in their communication (unless it is a general newsletter or similar device) how the individual may prevent further communications about health-related products and services. This provision enhances individuals' control over how their information is being used. Finally, where a covered entity targets communications to individuals on the basis of their health status or condition, we require that the entity make a determination that the product or service being communicated may be beneficial to the health of the type of individuals targeted, and that the communication to the targeted individuals explain why they have been targeted and how the product or service relates to their health. This final provision balances the advantages that accrue from health care entities informing their patients and enrollees of new or valuable health products with individuals' expectations that their protected health information will be used to promote their health.

Section 164.514(f)—Fundraising

We proposed in the NPRM to require covered entities to obtain authorization from an individual in order to use the individual's protected health information for fundraising activities. As noted in §164.501, in the final rule we define fundraising on behalf of a covered entity to be a health care operation. In §164.514, we permit a covered entity to use protected health information without individual authorization for fundraising on behalf of itself, provided that it limits the information that it uses to demographic information about the individual and the dates that it has provided service to the individual (see the §164.501 discussion of “health care operations”). In addition, we require fundraising materials to explain how the individual may opt out of any further fundraising communications, and covered entities are required to honor such requests. We permit a covered entity to disclose the limited protected health information to a business associate for fundraising on its own behalf. We also permit a covered entity to disclose the information to an institutionally related foundation.

By “institutionally related foundation,” we mean a foundation that qualifies as a nonprofit charitable foundation under section 501(c)(3) of the Internal Revenue Code and that has in its charter statement of charitable purposes an explicit linkage to the covered entity. An institutionally related foundation may, as explicitly stated in its charter, support the covered entity as well as other covered entities or health care providers in its community. For example, a covered hospital may disclose for fundraising on its own behalf the specified protected health information to a nonprofit foundation established for the specific purpose of raising funds for the hospital or to a foundation that has as its mission the support of the members of a particular hospital chain that includes the covered hospital. The term does not include an organization with a general charitable purpose, such as to support research about or to provide treatment for certain diseases, that may give money to a covered entity, because its charitable purpose is not specific to the covered entity.

Section 164.514(g)—Underwriting

As described under the definition of “health care operations” (§164.501), protected health information may be used or disclosed for underwriting and other activities relating to the creation, renewal, or replacement of a contract of health insurance or health benefits. This final rule includes a requirement, not included in the NPRM, that health plans receiving such information for these purposes may not use or disclose it for any other purpose, except as may be required by law, if the insurance or benefits contract is not placed with the health plan.

Section 164.514(h)—Verification of Identity and Authority of Persons Requesting Protected Health Information

Disclosure of Protected Health Information

We reorganize the provision regarding verification of identity of individuals requesting protected health information to improve clarity, but we retain the substance of requirements proposed in the NPRM in §164.518(c), as follows.

The covered entity must establish and use written policies and procedures (which may be standard protocols) that are reasonably designed to verify the identity and authority of the requestor where the covered entity does not know the person requesting the protected health information. The knowledge of the person may take the form of a known place of business, address, phone or fax number, as well as a known human being. Where documentation, statements or representations, whether oral or written, from the person requesting the protected health information is a condition of disclosure under this rule or other law, this verification must involve obtaining such documentation statement, or representation. In such a case, additional verification is only required where this regulation (or other law)
requires additional proof of authority and identity.

The NPRM proposed that covered entities would be permitted to rely on the required documentation of IRB or privacy board approval to constitute sufficient verification that the person making the request was a researcher and that the research is authorized. The final rule retains this provision.

For most disclosures, verifying the authority for the request means taking reasonable steps to verify that the request is lawful under this regulation. Additional proof is required by other provisions of this regulation where the request is made pursuant to §164.512 for national priority purposes. Where the person requesting the protected health information is a public official, covered entities must verify the identity of the requester by examination of reasonable evidence, such as a written statement of identity on agency letterhead, an identification badge, or similar proof of official status. Similarly, covered entities are required to verify the legal authority supporting the request by examination of reasonable evidence, such as a written request provided on agency letterhead that describes the legal authority for requesting the release. Where §164.512 explicitly requires written evidence of legal process or other authority before a disclosure may be made, a public official’s proof of identity and the official’s oral statement that the request is authorized by law are not sufficient to constitute the required reasonable evidence of legal authority; under these provisions, only the required written evidence will suffice.

In some circumstances, a person or entity acting on behalf of a government agency may make a request for disclosure of protected health information under these subsections. For example, public health agencies may contract with a nonprofit agency to collect and analyze certain data. In such cases, the covered entity is required to verify the requestor’s identity and authority through examination of reasonable documentation that the requestor is acting on behalf of the government agency. Reasonable evidence includes a written request provided on agency letterhead that describes the legal authority for requesting the release and states that the person or entity is acting under the agency’s authority, or other documentation, including a contract, a memorandum of understanding, or purchased arrangements that confirm that the requestor is acting on behalf of the government agency.

In some circumstances, identity or authority will be verified as part of meeting the underlying requirements for disclosure. For example, a disclosure under §164.512(j)(1)(i) to avert an imminent threat to safety is lawful only if made in the good faith belief that the disclosure is necessary to prevent or lessen a serious and imminent threat to the health or safety of a person or the public, and to a person reasonably able to prevent or lessen the threat. If these conditions are met, no further verification is needed. In such emergencies, the covered entity is not required to demand written proof that the person requesting the protected health information is legally authorized. Reasonable reliance on verbal representations are appropriate in such situations.

Similarly, disclosures permitted under §164.510(a) for facility directories may be made to the general public; the covered entity’s policies and procedures do not need to address verifying the identity and authority for these disclosures. In §164.510(b) we do not require verification of identity for persons assisting in an individual’s care or for notification purposes. For disclosures when the individual is not present, such as when a friend is picking up a prescription, we allow the covered entity to use professional judgment and experience with common practice to make reasonable inferences.

Under §164.524, a covered entity is required to give individuals access to protected health information about them (under most circumstances). Under the general verification requirements of §164.514(h), the covered entity is required to take reasonable steps to verify the identity of the individual making the request. We do not mandate particular identification requirements (e.g., drivers license, photo ID), but rather leave this to the discretion of the covered entity. The covered entity must also establish and document procedures for verification of identity and authority of personal representatives, if not known to the entity. For example, a health care provider can require a copy of a power of attorney, or can ask questions to determine that an adult acting for a young child has the requisite relationship to the child.

In Subpart C of Part 160, we require disclosure to the Secretary for purposes of enforcing this regulation. When a covered entity is asked by the Secretary to disclose protected health information for compliance purposes, the covered entity must verify the same information that it is required to verify for any other law enforcement or oversight request for disclosure.

Use of Protected Health Information

The proposed rule’s verification requirements applied to any person requesting protected health information, whether for a use or a disclosure. In the final regulation, the verification provisions apply only to disclosures of protected health information. The requirements in §164.514(d), for implementation of policies and procedures for “minimum necessary” uses of protected health information, are sufficient to ensure that only appropriate persons within a covered entity will have access to protected health information.

Section 164.520—Notice of Privacy Practices for Protected Health Information

Section 164.520(a)—Right to Notice

We proposed to establish a right for individuals to receive adequate notice of how covered health care providers and health plans use and disclose protected health information, and of the individual’s rights with respect to that information.

In the final regulation, we retain the general right for individuals to receive and the requirement for covered entities to produce a notice of privacy practices, with significant modifications to the content and distribution requirements.

We also modify the requirements with respect to certain covered entities. First, in §164.500(b)(2), we clarify that a health care clearinghouse that creates or receives protected health information other than as a business associate of a covered entity must produce a notice. If a health care clearinghouse creates or receives protected health information only as a business associate of other covered entities, it is not required to produce a notice.

Second, in §164.520(a)(2), we clarify the notice requirements with respect to group health plans. Individuals who receive health benefits under a group health plan other than through insurance are entitled to a notice from the group health plan; self-insured group health plans must maintain a notice that meets the requirements of this section and must provide the notice in accordance with the requirements of §164.520(c). At a minimum, the self-insured group health plan’s notice must describe the group health plan’s privacy practices with respect to the protected health information it creates or receives through its self-insured arrangements. For example, if a group health plan maintains both fully-insured and self-insured arrangements, the group health plan must, at a minimum, maintain and provide a notice that describes its
privacy practices with respect to protected health information it creates or receives through the self-insured arrangements. This notice would be distributed to all participants in the self-insured arrangements (in accordance with §164.520(c)(1)) and would also be available on request to other persons, including participants in the fully-insured arrangements.

Individuals who receive health benefits under a group health plan through an insurance contract (i.e., a fully-insured group health plan) are entitled to a notice from the issuer or HMO through which they receive their health benefits. The health insurance issuer or HMO must maintain and provide the notice in accordance with §164.520(c)(1). In addition, some fully-insured group health plans are required to maintain and provide a notice of the group health plan’s privacy practices. If a group health plan provides health benefits solely through an insurance contract with a health insurance issuer or HMO, and the group health plan creates or receives protected health information in addition to summary information (as defined in §164.504(a)) and information about individuals’ enrollment in or disenrollment from a health insurance issuer or HMO offered by the group health plan, the group health plan must maintain a notice that meets the requirements of this section and must provide the notice upon request of any person. The group health plan is not required to meet the other distribution requirements of §164.520(c)(1). Individuals enrolled in such group health plans have the right to notice of the health insurance issuer or HMO’s privacy practices and, on request, to notice of the group health plan’s privacy practices. If the group health plan, however, provides health benefits solely through an insurance contract with a health insurance issuer or HMO, and the only protected health information the group health plan creates or receives is summary information (as defined in §164.504(a)) and information about individuals’ enrollment in or disenrollment from a health insurance issuer or HMO offered by the group health plan, the group health plan is not required to maintain or provide a notice under this section.

In this case, the individuals enrolled in the group health plan would receive notice of the health insurance issuer or HMO’s privacy practices, but would not be entitled to notice of the group health plan’s privacy practices.

Third, in §164.520(a)(3), we clarify that inmates do not have a right to notice under this section and a correctional institution that is a covered entity is not required to produce a notice. No person, including a current or former inmate, has the right to notice of such a covered entity’s privacy practices.

Section 164.520(b)—Content of Notice

We proposed to require the notice to be written in plain language and contain each of the following elements:

1. A description of the uses and disclosures expected to be made without individual authorization;
2. Statements that other uses and disclosures would be made only with the individual’s authorization and that the individual could revoke such authorization;
3. Descriptions of the rights to request restrictions, inspect and copy protected health information, amend or correct protected health information, and receive an accounting of disclosures of protected health information;
4. Statements about the entity’s legal requirements to protect privacy, provide notice, and adhere to the notice; a statement about how individuals would be informed about the entity’s policies and procedures; instructions on how to make complaints with the entity or Secretary; the name and telephone number of a contact person or office; and the date the notice was produced.

We provided a model notice of information policies and procedures for covered health care providers.

In §164.520(b), and immediately below in this preamble, we describe the notice content requirements for the final rule. As described in detail, below, we make substantial changes to the uses and disclosures of protected health information that must be described in the notice. Unlike the proposed rule, we do not include a model notice. We intend to develop further guidance on notice requirements prior to the compliance date of this rule. In this section of the final rule, we also refer to the covered entity’s privacy “practices,” rather than its “policies and procedures.” The purpose of this change in vocabulary is to clarify that a covered entity’s “policies and procedures” is a detailed documentation of all of the entity’s privacy practices as required under this rule, not just those described in the notice. For example, we require covered entities to have policies and procedures implementing the requirements for “minimum necessary” uses and disclosures of protected health information, but these policies and procedures need not be reflected in the entity’s notice. Similarly, we require covered entities to have policies and procedures for assuring individuals access to their information about them. While such policies and procedures will need to include documentation of the designated record sets subject to access, who is authorized to determine when information will be withheld from an individual, and similar details, the notice need only explain generally that individuals have the right to inspect and copy information about them, and tell individuals how to exercise that right.

A covered entity that adopts and follows the notice content and distribution requirements described below will have provided adequate notice. However, the requirements for the content of the notice are not intended to be exclusive. As with the rest of the rule, we specify minimum requirements, not best practices.

Covered entities may want to include more detail. We note that all federal agencies must still comply with the Privacy Act of 1974. This means that federal agencies that are covered entities or have covered health care components must comply with the notice requirements of the Privacy Act as well as those included in this rule.

In addition, covered entities may want or be required to produce more than one notice in order to satisfy the notice content requirements under this rule. For example, a covered entity that conducts business in multiple states with different laws regarding the uses and disclosures that the covered entity is permitted to make without authorization may be required to produce a different notice for each state. A covered entity that conducts business both as a part of an organized health care arrangement or affiliated covered entity and as an independent enterprise (e.g., a physician who sees patients through an on-call arrangement with a hospital and through an independent private practice) may want to adopt different privacy practices with respect to each line of business; such a covered entity would be required to produce a different notice describing the practices for each line of business. Covered entities must produce notices that accurately describe the privacy practices that are relevant to the individuals receiving the notice.

Required Elements

Plain Language

As in the proposed rule, we require the notice to be written in plain language. A covered entity can satisfy the plain language requirement if it makes a reasonable effort to: organize material to serve the needs of the reader; write short sentences in the active voice, using “you” and other pronouns; use common, everyday words in sentences; and divide material into short sections.

We do not require particular formatting specifications, such as easy-to-read design features (e.g., lists, tables, graphics, contrasting colors, and white space), type face, and font size. However, the purpose of the notice is to inform the recipients about their rights and how protected health information collected about them may be used or disclosed. Recipients who cannot understand the covered entity’s notice will miss important information about their rights under this rule and about how the covered entity is protecting health information about them. One of the goals of this rule is to create an environment of open communication and transparency with respect to the use and disclosure of protected health information. A lack of clarity in the notice could undermine this goal and create misunderstandings. Covered entities have an incentive to make their notice statements clear and concise. We believe that the more understandable the notice is, the more confidence the public will have in the covered entity’s commitment to protecting the privacy of health information.

It is important that the content of the notice be communicated to all recipients and therefore we encourage the covered entity to consider alternative means of communicating with certain populations. We note that any covered entity that is a recipient of federal financial assistance is generally obligated under Title VI of the Civil Rights Act of 1964 to provide material ordinarily distributed to the public in the primary languages of persons with limited English proficiency in the recipients’ service areas. Specifically, this Title VI obligation provides that, where a significant number or proportion of the population eligible to be served or likely to be directly affected by a federally assisted program needs service or information in a language other than English in order to effectively informed of or participate in the program, the recipient shall take reasonable steps, considering the scope of the program and the size and concentration of such population, to provide information in languages appropriate to such persons. For covered entities not subject to Title VI, the Title VI standards provide helpful guidance for effectively communicating the content of their notices to non-English speaking populations.

We also encourage covered entities to be attentive to the needs of individuals who cannot read. For example, an employee of the covered entity could read the notice to individuals upon request or the notice could be incorporated into a video presentation that is played in the waiting area.

Header

Unlike the proposed rule, covered entities must include prominent and specific language in the notice that indicates the importance of the notice. This is the only specific language we require covered entities to include in the notice. The header must read, “THIS NOTICE DESCRIBES HOW MEDICAL INFORMATION ABOUT YOU MAY BE USED AND DISCLOSED AND HOW YOU CAN GET ACCESS TO THIS INFORMATION. PLEASE REVIEW IT CAREFULLY.”

Uses and Disclosures

We proposed to require covered entities to describe in plain language the uses and disclosures of protected health information, and the covered entity’s policies and procedures with respect to such uses and disclosures, that the health plan or covered provider expected to make without individual authorization. The covered provider or health plan would have had to distinguish between those uses and disclosures required by law and those permitted but not required by law.

We also proposed to require covered health care providers and health plans to state in the notice that all other uses and disclosures would be made only with the individual’s authorization and that such authorization could be revoked. The notice would also have been required to state that the individual could request restrictions on certain uses and disclosures and that the covered entity would not be required to agree to such a request.

We significantly modify these requirements in the final rule. Covered entities must describe all uses and disclosures of protected health information that they are permitted or required to make under this rule without authorization, including those uses and disclosures subject to the consent requirements under §164.506. If other applicable law prohibits or materially limits the covered entity’s ability to make any uses or disclosures that would otherwise be permitted under the rule, the covered entity must describe only the uses and disclosures permitted under the more stringent law.

Covered entities must separately describe each purpose for which they are permitted to use or disclose protected health information under this rule without authorization, and must do so in sufficient detail to place the individual in a position to decide whether to agree to such a request. Covered entities must separately describe each purpose for which they are permitted to use or disclose protected health information under this rule without authorization, and must do so in sufficient detail to place the individual in a position to decide whether to agree to such a request.

In addition, a group health plan, or a health insurance issuer or HMO with respect to a group health plan, wants the option to disclose protected health information to a group health plan sponsor without authorization as permitted under §164.504(f), the group health plan, health insurance issuer or HMO must describe that practice in its notice.

As in the proposed rule, the notice must state that all other uses and disclosures will be made only with the individual’s authorization and that the individual has the right to revoke such authorization.

We anticipate this requirement will lead to significant standardization of the notice. This language could be the same for every covered entity of a particular type within a state, territory, or other locale. We encourage state professional associations, and other organizations to develop model language to assist covered entities in preparing their notices.

Individual Rights

As in the proposed rule, covered entities must describe individuals’ rights under the rule and how individuals may exercise those rights with respect to the covered entity. Covered entities must describe each of the following rights, as provided under the rule: the right to request restrictions...
on certain uses and disclosures, including a statement that the covered entity is not required to agree to a requested restriction (§ 164.522(a)); the right to receive confidential communications of protected health information (§ 164.522(b)); the right to inspect and copy protected health information (§ 164.524); the right to amend protected health information (§ 164.526); and the right to an accounting of disclosures of protected health information (§ 164.528). We additionally require the notice to describe the right of an individual, including an individual that has agreed to receive the notice electronically, to obtain a paper copy of the notice upon request.

Covered Entity’s Duties

As in the proposed rule, covered entities must state in the notice that they are required by law to maintain the privacy of protected health information, to provide a notice of their legal duties and privacy practices, and to abide by the terms of the notice currently in effect. In the final rule, we additionally require the covered entity, if it wishes to reserve the right to change its privacy practices and apply the revised practices to protected health information previously created or received, to make a statement to that effect and describe how it will provide individuals with a revised notice. (See below for a more detailed discussion of a covered entity’s responsibilities when it changes its privacy practices.)

Complaints

As in the proposed rule, a covered entity’s notice must inform individuals about how they can lodge complaints with the covered entity if they believe their privacy rights have been violated. See § 164.530(d) and the corresponding preamble discussion for the requirements on covered entities for receiving complaints. The notice must also state that individuals may file complaints with the Secretary. In the final rule, we additionally require the notice to include a statement that the individual will not suffer retaliation for filing a complaint.

Contact

As in the proposed rule, the notice must identify a point of contact where the individual can obtain additional information about any of the matters identified in the notice.

Effective Date

The notice must include the date the notice went into effect, rather than the proposed requirement to include the effective date the notice was produced. The effective date cannot be earlier than the date on which the notice was first printed or otherwise published. Covered entities may wish to highlight or otherwise emphasize any material modifications that it has made, in order to help the individual recognize such changes.

Optional Elements

As described above, we proposed to require covered entities to describe the uses and disclosures of protected health information that the covered entity in fact expected to make without the individual’s authorization. We did not specify any optional elements.

While the final rule requires covered entities to describe all of the types of uses and disclosures permitted or required by law (not just those that the covered entity intends to make), we also permit and encourage covered entities to include optional elements that describe the actual, more limited, uses and disclosures they intend to make without authorization. We anticipate that some covered entities will want to distinguish themselves on the basis of their more stringent privacy practices. For example, covered health care providers who routinely treat patients with particularly sensitive conditions may wish to assure their patients that, even though the law permits them to disclose information for a wide array of purposes, the covered health care provider will only disclose information in very specific circumstances, as required by law, and to avert a serious and imminent threat to health or safety. A covered entity may not include statements in the notice that purport to limit the entity’s ability to make uses or disclosures that are required by law or necessary to avert a serious and imminent threat to health or safety. As described above, if the covered entity wishes to reserve the right to change its privacy practices with respect to the more limited uses and disclosures and apply the revised practices to protected health information previously created or received, it must make a statement to that effect and describe how it will provide individuals with a revised notice. (See below for a more detailed discussion of a covered entity’s responsibilities when it changes its privacy practices.)

Revisions to the Notice

We proposed to require a covered entity to adhere to the terms of its notice, and would have permitted it to change its policies and procedures at any time. We would have required covered health care providers and health plans to update the notice to reflect material changes to the information policies and procedures described in the notice. Changes to the notice would have applied to all protected health information held by the covered entity, including information collected under prior notices. That is, we would not have required covered entities to segregate their records according to the notice in effect at the time the record was created. We proposed to prohibit covered entities from implementing a change to an information policy or procedure described in the notice until the notice was updated to reflect the change, unless a compelling reason existed to make a use or disclosure or take other action that the notice would not have permitted. In these situations, we proposed to require covered entities to document the compelling reason and, within 30 days of the use, disclosure, or other action, change its notice to permit the action.

As in the proposed rule, covered entities are required to adhere to the terms of the notice currently in effect. See § 164.502(i). When a covered entity materially changes any of the uses or disclosures, the individual’s rights, the covered entity’s legal duties, or other privacy practices described in its notice, it must promptly revise its notice accordingly. See § 164.520(b)(3). (Pursuant to § 164.530(i), it must also revise its policies and procedures.) Except when required by law, a material change to any term in the notice may not be implemented prior to the effective date of the notice in which such material change is reflected. In the final rule, however, we revise the circumstances under and extent to which the covered entity may revise the practices stated in the notice and apply the new practices to protected health information it created or received under prior notice.

Under § 164.530(i), a covered entity that wishes to change its practices over time without segregating its records according to the notice in effect at the time the records were created must reserve the right to do so in its notice. For example, a covered hospital that states in its notice that it will only make public health disclosures required by law, and that does not reserve the right to change this practice, is prohibited from making any discretionary public health disclosures of protected health information created or received during the effective period of that notice. If the covered hospital wishes at some point in the future to make discretionary disclosures for public health purposes, it must revise its notice to so state, and...
must segregate its records so that protected health information created or received under the prior notice is not disclosed for discretionary public health purposes. This hospital may then make discretionary public health disclosures of protected health information created or received after the effective date of the revised notice.

If a second covered hospital states in its notice that it will only make public health disclosures required by law, but does reserve the right to change its practices, it is prohibited from making any discretionary public health disclosures of protected health information created or received during the effective period of that notice. If this hospital wishes to provide public health information in the future, it may first obtain a copy of the notice of the other hospital as of the compliance date; after enrollment, health plan as of the compliance date; or by providing the relevant notice to the individual within 60 days of a material change to the notice. After this one year period, covered providers may satisfy the distribution requirement by providing the notice that is relevant to the particular individual or other person requesting the notice. For example, a health insurance issuer may have contracts with two different group health plans. One contract specifies that the issuer may use and disclose protected health information about the participants in the group health plan for research purposes without authorization (subject to the requirements of this rule) and one contract specifies that the issuer must always obtain authorizations for these uses and disclosures. The issuer accordingly develops two notices reflecting these different practices and satisfies its distribution requirement by making the relevant notice available to the participants.

We proposed to require covered health care providers with face-to-face contact with individuals to provide the notice to all such individuals at the first service delivery to the individual during the one year period after the compliance date. After this one year period, covered providers with face-to-face contact with individuals would have been required to distribute the notice to all new patients at the first service delivery. Covered providers without face-to-face contact with individuals would have been required to provide the notice in a reasonable period of time following first service delivery.

We proposed to require all covered providers to post the notice in a clear and prominent location where it would be accessible to individuals seeking services from the covered provider to be able to read the notice. We would have required revisions to be posted promptly.

In the final rule, we vary the distribution requirements according to whether the covered health care provider has a direct treatment relationship with an individual, rather than whether the covered health care provider has face-to-face contact with an individual. See §164.501 and the corresponding discussion in the preamble regarding the definition of direct treatment relationship. Covered health care providers that have direct treatment relationships with individuals must provide the notice to such individuals as of the first service delivery after the compliance date. This requirement applies whether the first service is delivered electronically or in person. Covered providers may satisfy this requirement by sending the notice to all of their patients at once, by giving the notice to each patient as he or she comes into the provider’s office or facility or contacts the provider electronically, or by some combination of these approaches. Covered providers that maintain a physical service delivery site must prominently post the notice where it is reasonable to expect individuals seeking service from the provider to be able to read the notice. The notice must also be available on site for individuals to take on request. In the event of a revision to the notice, the covered provider must promptly post the revision and make it available on site.

Covered health care providers that have indirect treatment relationships with individuals are only required to produce the notice upon request, as described above.

The proposed rule was silent regarding electronic distribution of the notice. Under the final rule, a covered entity that maintains a web site describing the services and benefits it offers must make its privacy notice prominently available through the site.

A covered entity may satisfy the applicable distribution requirements described above by providing the notice to the individual electronically, if the individual agrees to receiving materials from the covered entity electronically and the individual has not withdrawn his or her agreement. If the covered entity knows that the electronic transmission has failed, the covered entity must provide a paper copy of the notice to the individual.

If an individual’s first service delivery from a covered provider occurs electronically, the covered provider must provide electronic notice automatically and contemporaneously in response to the individual’s first request for service. For example, the first time an individual requests to fill a prescription through a covered internet pharmacy, the pharmacy must automatically and contemporaneously provide the individual with the
pharmacy’s notice of privacy practices. An individual that receives a covered entity’s notice electronically retains the right to request a paper copy of the notice as described above. This right must be described in the notice.

We note that the Electronic Signatures in Global and National Commerce Act (Pub. L. 106–229) may apply to documents required under this rule to be provided in writing. We do not intend to affect the application of that law to documents required under this rule.

Section 164.520(d)—Joint Notice by Separate Covered Entities

The proposed rule was silent regarding the ability of legally separate covered entities to produce a single notice.

In the final rule, we allow covered entities that participate in an organized health care arrangement to comply with this section by producing a single notice that describes their combined privacy practices. See § 164.501 and the corresponding preamble discussion regarding the definition of organized health care arrangement. (We note that, under § 164.504(d), covered entities that are under common ownership or control may designate themselves as a single affiliated covered entity. Joint notice requirements do not apply to such entities. Single affiliated covered entities must produce a single notice, consistent with the requirements described above for any other covered entity. Covered entities under common ownership or control that elect not to designate themselves as a single affiliated covered entity, however, may elect to produce a joint notice if they meet the definition of an organized health care arrangement.)

The joint notice must meet all of the requirements described above. The covered entities must agree to abide by the terms of the notice with respect to protected health information created or received by the covered entities as part of their participation in the organized health care arrangement. In addition, the joint notice must reasonably identify the covered entities, or class of covered entities, to which the joint notice applies and the service delivery sites, or classes of service delivery sites, to which the joint notice applies. If the covered entities participating in the organized health care arrangement will share protected health information with each other as necessary to carry out treatment, payment, or health care operations relating to the arrangement, that fact must be stated in the notice.

Typical examples where this policy may be useful are health care facilities where physicians and other providers who have offices elsewhere also provide services at the facility (e.g., hospital staff privileges, physicians visiting their patients at a residential facility). In these cases, a single notice may cover both the physician and the facility, if the above conditions are met. The physician is required to have a separate notice covering the privacy practices at the physician’s office if those practices are different than the practices described in the joint notice.

If any one of the covered entities included in the joint notice distributes the notice to an individual, as required above, the distribution requirement is met for all of the covered entities included in the joint notice.

Section 164.520(e)—Documentation

As in the proposed rule, we establish documentation requirements for covered entities subject to this provision. In the final rule, we specify that covered entities must retain copies of the notice(s) they issue in accordance with § 164.530(j). See § 164.530(j) and the corresponding preamble discussion for further description of the documentation requirements.

Section 164.522—Rights To Request Privacy Protection for Protected Health Information

Section 164.522(a)—Right of An Individual To Request Restriction of Uses and Disclosures

We proposed that individuals have the right to request that a covered health care provider restrict the use or disclosure of protected health information for treatment, payment, or health care operations. Providers would not have been required to agree to requested restrictions. However, a covered provider that agreed to a restriction could not use or disclose protected health information inconsistent with the restriction. The requirement would not have applied to permissible uses or disclosures under proposed § 164.510, including uses and disclosures in emergency circumstances under proposed § 164.510(k); when the health care services provided were emergency services; or to required disclosures to the Secretary under proposed § 164.522. We would have required covered providers to have procedures for individuals to request restrictions, for agreed-upon restrictions to be documented, for the provider to honor such restrictions, and for notification of the existence of a restriction to others to whom such protected health information is disclosed.

In the final rule, we retain the general right of an individual to request that uses and disclosures of protected health information be restricted and the requirement for covered entities to adhere to restrictions to which they have agreed. However, we include some significant changes and clarifications.

Under the final rule, we extend the right to request restrictions to health plans and to health care clearinghouses that create or receive protected health information other than as a business associate of another covered entity. All covered entities must permit individuals to request that uses and disclosures of protected health information to carry out treatment, payment, and health care operations be restricted and must adhere to restrictions to which they have agreed. A covered entity is not required to agree to a restriction. We note that restrictions between an individual and a covered entity for these or other purposes may be otherwise enforceable under other law.

Under § 164.522(a)(1)(i)(B), the right to request restrictions applies to disclosures to persons assisting in the individual’s care under § 164.510(b). An individual may request that a covered entity agree not to disclose protected health information to persons assisting with the individual’s care, even if such disclosure is permissible in accordance with § 164.510(b). For example, if an individual requests that a covered entity never disclose protected health information to a particular family member, and the covered entity agrees to that restriction, the covered entity is prohibited from disclosing protected health information to that family member, even if the disclosure would otherwise be permissible under § 164.510(b). We note that individuals additionally have the opportunity to agree or object to disclosures to persons assisting in the individual’s care under § 164.510(b)(2). The individual retains the right to agree or object to such disclosures under § 164.510(b)(2), in accordance with the restriction of that provision, regardless of whether the individual has requested a restriction under § 164.522(a). See § 164.510(b) and the corresponding preamble discussion regarding the individual’s right to agree or object to disclosures to persons assisting in the individual’s care.

In §§ 164.522(a)(1)(iii) and (iv) we clarify the requirements with respect to emergency treatment situations. In emergency treatment situations, a covered entity that has agreed to a restriction may use, or disclose to a health care provider, restricted protected health information that is
necessary to provide the emergency treatment. If the covered entity discloses restricted protected health information to a health care provider for emergency treatment purposes, it must request that the provider not further use or disclose the information. We expect covered entities to consider the need for access to protected health information for treatment purposes when considering a request for a restriction, to discuss this need with the individual making the request for restriction, and to agree to restrictions that will not foreseeably impede the individual’s treatment. Therefore, we expect covered entities will rarely need to use or disclose restricted protected health information in emergency treatment situations. We do not intend, however, to adversely impact the delivery of health care. We therefore provide a means for the use and disclosure of restricted protected health information in emergency treatment situations, where an unexpected need for the information could arise and there is insufficient time to secure the individual’s permission to use or disclose the restricted information.

In §164.522(a)(1)(v) we clarify that restrictions are not effective under this rule to prevent uses and disclosures required by §164.502(a)(2)(ii) or permitted under §164.510(a) (regarding facility directories) or §164.512 (regarding uses and disclosures for which consent, individual authorization, or opportunity to agree or object is not required). Covered entities are permitted to agree to such restrictions, but if they do so, the restrictions are not enforceable under this rule. For example, a provider who makes a disclosure under §164.512(j)(1)(ii) relating to serious and imminent threats will not be in violation of this rule even if the disclosure is contrary to a restriction agreed to under this paragraph.

In §164.522(a)(2) we clarify a covered entity’s ability to terminate a restriction to which it has agreed. A covered entity may terminate a restriction with the individual’s written or oral agreement. If the individual agrees to terminate the restriction, the covered entity may use and disclose protected health information as otherwise permitted under the rule. If the covered entity wants to terminate the restriction without the individual’s agreement, it may only terminate the restriction with respect to protected health information it creates or receives after it informs the individual of the termination. The restriction continues to apply to protected health information created or received prior to informing the individual of the termination. That is, any protected health information that had been collected before the termination may not be used or disclosed in a way that is inconsistent with the restriction, but any information that is collected after informing the individual of the termination of the restriction may be used or disclosed as otherwise permitted under the rule.

In §164.522(a)(3), we clarify that a covered entity must document a restriction to which it has agreed. We do not require a specific form of documentation; a note in the medical record or similar notation is sufficient. The documentation must be retained for six years from the date it was created or the date it was last in effect, whichever is later, in accordance with §164.530(j).

We eliminate the requirement from the NPRM for entities to inform persons to whom they disclose protected health information of the existence of any restriction on that information. A restriction is only binding on the covered entity that agreed to the restriction. We encourage covered entities to inform others of the existence of a restriction often amounts to a de facto disclosure of the restricted information itself. If a restriction does not permit a covered entity to disclose protected health information to a particular person, the covered entity must carefully consider whether disclosing the existence of the restriction to that person would also violate the restriction.

Section 164.522(b)—Confidential Communications Requirements

In the NPRM, we did not directly address the issue of whether an individual could request that a covered entity restrict the manner in which it communicated with the individual. As described above, the NPRM would have provided individuals with the right to request that health care providers restrict uses and disclosures of protected health information for treatment, payment and health care operations, but would not have required providers to agree to such a restriction.

In the final rule, we require covered entities to permit individuals to request that the covered entity provide communications from the covered entity to the individual, and also communications from the covered entity that would otherwise be sent to the named insured of an insurance policy that covers the individual as a dependent of the named insured. Individuals may request that the covered entity send such communications by alternative means or at alternative locations. For example, an individual who does not want his or her family members to know about a certain treatment may request that the provider communicate with the individual about that treatment at the individual’s place of employment, by mail to a designated address, or by phone to a designated phone number. Similarly, an individual may request that the provider send communications in a closed envelope rather than a post card, as an “alternative means.” Covered health care providers must accommodate all reasonable requests. Health plans must accommodate all reasonable requests, if the individual clearly states that the disclosure of all or part of the protected health information could endanger the individual. For example, if an individual requests that a health plan send explanations of benefits about particular services to the individual’s work rather than home address because the individual is concerned that a member of the individual’s household (e.g., the named insured) might read the explanation of benefits and become abusive towards the individual, the health plan must accommodate the request.

The reasonableness of a request made under this paragraph must be determined by a covered entity solely on the basis of the administrative difficulty of complying with the request and as otherwise provided in this section. A covered health care provider or health plan cannot refuse to accommodate a request based on its perception of the merits of the individual’s reason for making the request. A covered health care provider may not require the individual to provide a reason for a request as a condition of accommodating the request. As discussed above, a health plan is not required to accommodate a request unless the individual indicates that the disclosure could endanger the individual. If the individual indicates such endangerment, however, the covered entity cannot further consider the individual’s reason for making the request in determining whether it must accommodate the request.

A covered health care provider or health plan may refuse to accommodate a request, however, if the individual has
not provided information as to how payment, if applicable, will be handled, or if the individual has not specified an alternative address or method of contact.

Section 164.524—Access of Individuals to Protected Health Information

Section 164.524(a)—Right of Access

In the NPRM, we proposed to establish a right for individuals to access (i.e., inspect and obtain a copy of) protected health information about them maintained by a covered provider or health plan, or its business partners, in a designated record set. As in the proposed rule, in the final rule we provide that individuals have a right of access to protected health information that is maintained in a designated record set. This right applies to health plans, covered health care providers, and health care clearinghouses that create or receive protected health information other than as a business associate of another covered entity (see § 164.500(b)). In the final rule, however, we modify the definition of designated record set. For a discussion of the significant changes made to the definition of designated record set, see § 164.501 and the corresponding preamble.

Under the revised definition, individuals have a right of access to any protected health information that is used, in whole or in part, to make decisions about individuals. This information includes, for example, information used to make health care decisions or information used to determine whether an insurance claim will be paid. Covered entities often incorporate the same protected health information into a variety of different data systems, not all of which will be utilized to make decisions about individuals. For example, information systems that are used for quality control or peer review analyses may not be used to make decisions about individuals. In that case, the information systems would not fall within the definition of designated record set. We do not require entities to grant an individual access to protected health information maintained in these types of information systems.

Duration of the Right of Access

As in the proposed rule, covered entities must provide access to individuals for as long as the protected health information is maintained in a designated record set.

Exceptions to the Right of Access

In the NPRM, we proposed to establish a right for individuals to access any protected health information maintained in a designated record set. Though we proposed to permit covered entities to deny access in certain situations relating to the particular individual requesting access, we did not specifically exclude any protected health information from the right of access.

In the final rule, we specify three types of information to which individuals do not have a right of access, even if the information is maintained in a designated record set. They are psychotherapy notes, information compiled in reasonable anticipation of, or for use in, a civil, criminal, or administrative action or proceeding, and certain protected health information maintained by a covered entity that is subject to or exempted from the Clinical Laboratory Improvements Amendments of 1988 (CLIA). Covered entities may, but are not required to, provide access to this information.

First, unlike the proposed rule, we specify that individuals do not have a right of access to psychotherapy notes. Second, individuals do not have a right of access to information compiled in reasonable anticipation of, or for use in, a civil, criminal, or administrative action or proceeding. In the final rule, we clarify that a legal proceeding includes civil, criminal, and administrative actions and proceedings. In the final rule, we clarify that an individual does not have a right to this information by including it in the list of exceptions rather than stating that a covered entity may deny access to this information. Under this exception, the covered entity may deny access to any information that relates specifically to legal preparations but may not deny access to the individual’s underlying health information. We do not intend to require covered entities to provide access to documents protected by attorney work-product privilege nor do we intend to alter rules of discovery.

Third, unlike the proposed rule, individuals do not have a right of access to protected health information held by clinical laboratories if CLIA prohibits such access. CLIA states that clinical laboratories may provide clinical laboratory test records and reports only to “authorized persons,” as defined primarily by state law. The individual who is the subject of the information is not always included in this set of authorized persons. When an individual is not an authorized person, this restriction effectively prohibits the clinical laboratory from providing an individual access to this information. We do not intend to preempt CLIA and, therefore, do not require covered clinical laboratories to provide an individual access to this information if CLIA prohibits them from doing so. We note, however, that individuals have the right of access to this information if it is maintained by a covered health care provider, clearinghouse, or health plan that is not subject to CLIA.

Finally, unlike the proposed rule, individuals do not have access to protected health information held by certain research laboratories that are exempt from the CLIA regulations. The CLIA regulations specifically exempt the components or functions of “research laboratories that test human specimens but do not report patient specific results for the diagnosis, prevention or treatment of any disease or impairment of, or the assessment of the health of individual patients.” 42 CFR 493.3(a)(2). If subject to the access requirements, these laboratories, or the applicable components of them, would be forced to comply with the CLIA regulations once they provided an individual with the access under this privacy rule. Therefore, to alleviate this additional regulatory burden, we have exempted these laboratories, or the relevant components of them, from the access requirements of this regulation.

Grounds for Denial of Access

In the NPRM we proposed to permit covered health care providers and health plans to deny an individual access to inspect and copy protected health information about them for five reasons: (1) a licensed health care professional determined the inspection and copying was reasonably likely to endanger the life or physical safety of the individual or another person; (2) the information was about another person (other than a health care provider) and a licensed health care professional determined the inspection and copying was reasonably likely to cause substantial harm to that other person; (3) the information was obtained under a promise of confidentiality from someone other than a health care provider and the inspection and copying was likely to reveal the source of the information; (4) the information was obtained by a covered provider in the course of a clinical trial, the individual agreed to the denial of access in consenting to participate in the trial, and the trial was still in progress; and (5) the information was compiled in reasonable anticipation of, or for use in, a legal
proceeding. In the NPRM, covered entities would not have been permitted to use these grounds to deny individuals access to protected health information that was also subject to the Privacy Act.

In the final rule, we retain all of these grounds for denial, with some modifications. One of the proposed grounds for denial (regarding legal proceedings) is retained as an exception to the right of access. (See discussion above.) We also include additional grounds for denial and create a right for individuals to request review of certain denials.

There are five types of denials covered entities may make without providing the individual with a right to have the denial reviewed.

First, a covered entity may deny an individual access to any information that is excepted from the right of access under § 164.524(a)(1). (See discussion above.)

Second, we add a new provision that permits a covered entity that is a correctional institution or covered health care provider acting under the direction of a correctional institution to deny an inmate's request to obtain a copy of protected health information if obtaining a copy would jeopardize the health, safety, security, custody, or rehabilitation of the individual or other inmates or the safety of any officer, employee or other person at the correctional institution or responsible for the transporting of the inmate. This ground for denial is restricted to an inmate's request to obtain a copy of protected health information. If an inmate requests inspection of protected health information, the request must be granted unless one of the other grounds for denial applies. The purpose for this exception, and the reason that the exception is limited to denying an inmate a copy and not to denying a right to inspect, is to give correctional institutions the ability to maintain order in these facilities and among inmates without denying an inmate the right to review his or her protected health information.

Third, as in the proposed rule, a covered entity may deny an individual access to protected health information obtained by a covered provider in the course of research that includes treatment of the research participants, while such research is in progress. For this exception to apply, the individual must have agreed to the denial of access in conjunction with the individual's consent to participate in the research and the covered provider must have informed the individual that the right of access will be reinstated upon completion of the research. If either of these conditions is not met, the individual has the right to inspect and copy the information (subject to the other exceptions we provide here). In all cases, the individual has the right to inspect and copy the information after the research is complete.

As with all the grounds for denial, covered entities are not required to deny access under the research exception. We expect all researchers to maintain a high level of ethical consideration for the welfare of research participants and provide access in appropriate circumstances. For example, if a participant has a severe adverse reaction, disclosure of information during the course of the research may be necessary to give the participant adequate information for proper treatment decisions.

Fourth, we clarify the ability of a covered entity to deny individuals access to protected health information that is also subject to the Privacy Act. In the final rule, we specify that a covered entity may deny an individual access to protected health information that is contained in records that are subject to the Privacy Act if such denial is permitted under the Privacy Act. This ground for denial exists in addition to the other grounds for denial available under this rule. If an individual requests access to protected health information that is also subject to the Privacy Act, a covered entity may deny access to that information for any of the reasons permitted under the Privacy Act and for any of the reasons permitted under this rule.

Fifth, as in the proposed rule, a covered entity may deny an individual access to protected health information if the request is reasonably likely to endanger the life or physical safety of the individual or another person. The most commonly cited example is when an individual exhibits suicidal or homicidal tendencies. If a licensed health care professional determines that an individual exhibits such tendencies and that permitting inspection or copying of some of the individual's protected health information is reasonably likely to result in the individual committing suicide, murder, or other physical violence, then the health care professional may deny the individual access to that information. Under this reason for denial, covered entities may not deny access on the basis of the sensitivity of the health information or the potential for causing emotional or psychological harm.

Second, as in the proposed rule, covered entities may deny an individual access to protected health information if the information requested makes reference to someone other than the individual (and other than a health care provider) and a licensed health care professional has determined, in the exercise of professional judgment, that the access requested is reasonably likely to cause serious harm to that other person. On some occasions when health information about one person is relevant to the care of another, a physician may incorporate it into the latter's record, such as information from group therapy sessions and information about illnesses with a genetic component. This provision permits a covered entity to withhold information in such cases if harm the individual or others. In the final rule, we specify that a covered entity may only deny access for these reasons if the covered entity provides the individual with a right to have the denial reviewed. (See below for a discussion of the right to review.)

There are three types of denials for which covered entities must provide the individual with a right to review. A denial under these provisions requires a determination by a licensed health care professional (such as a physician, physician's assistant, or nurse) based on an assessment of the particular circumstances and current professional medical standards of harm. Therefore, when the request is made to a health plan or clearinghouse, the covered entity will need to consult with a licensed health care professional before denying access under this provision.

First, as in the proposed rule, covered entities may deny individuals access to protected health information about them if a licensed health care professional has determined, in the exercise of professional judgment, that the access requested is reasonably likely to endanger the life or physical safety of the individual or another person. The most commonly cited example is when an individual exhibits suicidal or homicidal tendencies. If a licensed health care professional determines that an individual exhibits such tendencies and that permitting inspection or copying of some of the individual's protected health information is reasonably likely to result in the individual committing suicide, murder, or other physical violence, then the health care professional may deny the individual access to that information. Under this reason for denial, covered entities may not deny access on the basis of the sensitivity of the health information or the potential for causing emotional or psychological harm.

Second, as in the proposed rule, covered entities may deny an individual access to protected health information if the information requested makes reference to someone other than the individual (and other than a health care provider) and a licensed health care professional has determined, in the exercise of professional judgment, that the access requested is reasonably likely to cause serious harm to that other person. On some occasions when health information about one person is relevant to the care of another, a physician may incorporate it into the latter's record, such as information from group therapy sessions and information about illnesses with a genetic component. This provision permits a covered entity to withhold information in such cases if
the release of such information is reasonably likely to cause substantial physical, emotional, or psychological harm.

Third, we add a new provision regarding denial of access requested by personal representatives. Under § 164.502(g), a person that is a personal representative of an individual may exercise the rights of the individual, including the right to inspect and copy protected health information about the individual that is relevant to such person’s representation. The provision permits covered entities to refuse to treat a personal representative as the individual, generally, if the covered entity has a reasonable belief that the individual has been or will be subjected to domestic violence, abuse or neglect by the personal representative, or that treating the personal representative as the individual may endanger the individual and, in its professional judgment, the covered entity decides that it is not in the best interest of the individual to treat such person as the personal representative.

In addition to that provision, we add a new provision at § 164.524(a)(3)(iii) to clarify that a covered entity may deny a request to inspect or copy protected health information if the information is requested by a personal representative of the individual and a licensed health care professional has determined that, in the exercise of professional judgment, such access is reasonably likely to cause substantial harm to the individual who is the subject of the information or to another person. The health care professional need not have a reasonable belief that the personal representative has abused or neglected the individuals and the harm that is likely to result need not be limited to the individual who is the subject of the requested protected health information. Therefore, a covered entity can recognize a person as a personal representative but deny such person access to protected health information as a personal representative.

We do not intend these provisions to create a legal duty for the covered entity to review all of the relevant protected health information before releasing it. Rather, we are preserving the flexibility and judgment of covered entities to deny access under appropriate circumstances. Denials are not mandatory; covered entities may always elect to provide requested health information to the individual. For each request by an individual, the covered entity may provide all of the information required or evaluate the circumstances surrounding the individual’s request, and make a determination as to whether that request should be granted or denied, in whole or in part, in accordance with the reasons for denial under this rule. We intend to create narrow exceptions to the right of access and we expect covered entities to employ these exceptions rarely, if at all. Covered entities may only deny access for the reasons specifically provided in the rule.

Review of a Denial of Access

In the NPRM, we proposed to require covered entities, when denying an individual’s request for access, to inform the individual of how to make a complaint to the covered entity and the Secretary. We retain in the final rule the proposed approach (see below). In addition, if the covered entity denies the request on the basis of one of the reviewable grounds for denial described above, the individual has the right to have the denial reviewed by a licensed health care professional who is designated by the covered entity to act as a reviewing official and who did not participate in the original decision to deny access. The covered entity must provide access in accordance with the reviewing official’s determination. (See below for further description of the covered entity’s requirements under § 164.524(d)(4) if the individual requests a review of denial of access.)

Section 164.524(c)—Provision of Access

In the NPRM, we proposed to require covered health care providers and health plans, upon accepting a request for access, to notify the individual of the decision and of any steps necessary to fulfill the request; to provide the information requested in the form or format requested, if readily producible in such form or format; and to facilitate the process of inspection and copying.

We generally retain the proposed approach in the final rule. If a covered entity accepts a request, in whole or in part, it must notify the individual of the decision and provide the access requested. Individuals have the right both to inspect and to copy protected health information in a designated record set. The individual may choose whether to inspect the information, to copy the information, or to do both.

In the final rule, we clarify that if the same protected health information is maintained in more than one designated record set or at more than one location, the covered entity is required to produce the information only once per request for access.

In the final rule, we clarify that if the same protected health information is maintained in more than one designated record set or at more than one location, the covered entity is required to produce the information only once per request for access. We intend this provision to reduce covered entities’ burden in complying with requests without reducing individuals’ access to protected health information. We note that summary information and reports...
are not the same as the underlying information on which the summary or report was based. Individuals have the right to obtain access both to summaries and to the underlying information. An individual retains the right of access to the underlying information even if the individual requests access to, or production of, a summary. (See below regarding requests for summaries.)

The covered entity must provide the information requested in the form or format requested if it is readily producible in such form or format. For example, if the covered entity maintains health information electronically and the individual requests an electronic copy, the covered entity must accommodate such request, if possible. Additionally, we specify that if the information is not available in the form or format requested, the covered entity must produce a readily readable hard copy of the information or another form or format to which the individual and covered entity can agree. If the individual agrees, including agreeing to any associated fees (see below), the covered entity may provide access to a summary of information rather than all protected health information in designated record sets. Similarly, a covered entity may provide an explanation in addition to the protected health information, if the individual agrees in advance to the explanation and any associated fees.

The covered entity must provide the access requested in a timely manner, as described above, and arrange for a mutually convenient time and place for the individual to inspect the protected health information or obtain a copy. If the individual requests that the covered entity mail a copy of the information, the covered entity must do so, and may charge certain fees for copying and mailing. For requests to inspect information that is maintained electronically, the covered entity may print a copy of the information and allow the individual to view the print-out on-site. Covered entities may discuss with the individual as necessary to facilitate the timely provision of access. For example, if the individual requested a copy of the information by mail, but the covered entity is able to provide the information faster by providing it electronically, the covered entity may discuss this option with the individual.

We proposed in the NPRM to permit the covered entity to charge a reasonable, cost-based fee for copying the information. We clarify this provision in the final rule. If the individual requests a copy of protected health information, a covered entity may charge a reasonable, cost-based fee for the copying, including the labor and supply costs of copying. If hard copies are made, this would include the cost of paper. If electronic copies are made to a computer disk, this would include the cost of the computer disk. Covered entities may not charge any fees for retrieving or handling the information or for processing the request. If the individual requests the information to be mailed, the fee may include the cost of postage. Fees for copying and postage provided under state law, but not for other costs excluded under this rule, are presumed reasonable. If such per page costs include the cost of retrieving or handling the information, such costs are not acceptable under this rule.

If the individual requests an explanation or summary of the information provided, and agrees in advance to any associated fees, the covered entity may charge for preparing the explanation or summary as well. The inclusion of a fee for copying is not intended to impede the ability of individuals to copy their records. Rather, it is intended to reduce the burden on covered entities. If the cost is excessively high, some individuals will not be able to obtain a copy. We encourage covered entities to limit the fee for copying so that it is within reach of all individuals.

We do not intend to affect the fees that covered entities charge for providing protected health information to anyone other than the individual. For example, we do not intend to affect current practices with respect to the fees one health care provider charges for forwarding records to another health care provider for treatment purposes.

Section 164.524(d)—Denial of Access

We proposed in the NPRM to require a covered health care provider or health plan that elects to deny a request for inspection or copying to make any other protected health information requested available to the individual to the extent possible, consistent with the denial.

In the final rule, we clarify the proposed approach. A covered entity that denies access, in whole or in part, must, to the extent possible, give the individual access to any other protected health information requested after excluding the protected health information to which the covered entity has a ground to deny access. We intend covered entities to redact or otherwise exclude only the information that falls within one or more of the denial criteria described above and to permit inspection and copying of all remaining information, to the extent it is possible to do so.

We also proposed to require covered providers and health plans, upon denying a request for access in whole or in part, to provide the individual with a written statement in plain language of the basis for the denial and how the individual could make a complaint to the covered entity or the Secretary.

We retain the proposed approach. A covered entity that denies access, in whole or in part, must provide the individual with a written denial in plain language that explains the basis for the denial. The written denial could include a direct reference to the section of the regulation relied upon for the denial, but the regulatory citation alone does not sufficiently explain the reason for the denial. The written denial must also describe how the individual can complain to the covered entity and the Secretary and must include the name or title and the telephone number of the covered entity’s contact person or office that is responsible for receiving complaints.

In the final rule, we impose two additional requirements when the covered entity denies access, in whole or in part. First, if a covered entity denies a request on the basis of one of the reviewable grounds for denial, the written denial must describe the individual’s right to a review of the denial and how the individual may exercise this right. Second, if the covered entity denies the request because it does not maintain the requested information, and the covered entity knows where the requested information is maintained, the covered entity must inform the individual where to direct the request for access.

Finally, we specify a covered entity’s responsibilities when an individual requests a review of a denial. If the individual requests a review of a denial made under §164.524(a)(3), the covered entity must designate a licensed health care professional to act as the reviewing official. This reviewing official must not have been involved in the original decision to deny access. The covered entity must promptly receive a request for review to the designated reviewing official. The reviewing official must determine, within a reasonable period of time, whether or not to deny the access requested based on the standards in §164.524(a)(3). The covered entity must promptly provide the individual with written notice of the reviewing official’s decision and otherwise carry out the decision in accordance with the requirements of this section.
Section 164.524(e)—Policies, Procedures, and Documentation

As in the proposed rule, we establish documentation requirements for covered entities that are subject to this provision. In accordance with §164.530(j), the covered entity must retain documentation of the designated record sets that are subject to access by individuals and the titles of the persons or offices responsible for receiving and processing requests for access by individuals.

Section 164.526—Amendment of Protected Health Information

Section 164.526(a)—Right to Amend

In proposed §164.516, we proposed to establish the individual’s right to request a covered health care provider or health plan to amend or correct protected health information about the individual for as long as the covered entity maintains the information. In §164.526 of the final rule, we retain the general proposed approach, but establish an individual’s right to have the covered entity amend, rather than amend or correct, protected health information. This right applies to protected health information and records in a designated record set for as long as the information is maintained in the designated record set. In the final rule, covered health care providers, health plans, and health care clearinghouses that create or receive protected health information other than as a business associate must comply with these requirements.

Denial of Amendment

We proposed to permit a covered health care provider or health plan to deny a request for amendment if it determined that the protected health information that was the subject of the request was not created by the covered provider or health plan, would not be available for inspection and copying under proposed §164.514, or was accurate and complete. A covered entity would have been permitted, but not required, to deny a request if any of these conditions were met.

As in the proposed rule, the final rule permits a covered entity to deny a request for amendment if the covered entity did not create the protected health information or record that is the subject of the request for amendment. We add one exception to this provision: if the individual provides a reasonable basis to believe that the originator of the protected health information is no longer available to act on the requested amendment, the covered entity must address the request for amendment as though the covered entity had created the information.

As in the proposed rule, a covered entity also may deny a request for amendment if the protected health information that is the subject of the request for amendment is not part of a designated record set or would not otherwise be available for inspection under §164.524. We eliminate the ability to deny a request for amendment if the information or record that is the subject of the request would not be available for copying under the rule. Under §164.524(a)(2)(ii), an inmate may be denied a copy of protected health information about the inmate. We intend to preserve an inmate’s ability to request amendments to information, even if a copy of the information would not be available to the inmate, subject to the other exceptions provided in this section.

Finally, as in the proposed rule, a covered entity may deny a request for amendment if the covered entity determines that the information in dispute is accurate and complete. We draw this concept from the Privacy Act of 1974, governing records held by federal agencies, which permits an individual to request correction or amendment of a record “which the individual believes is not accurate, relevant, timely, or complete.” (5 U.S.C. 552a(d)(2)). We adopt the standards of “accuracy” and “completeness” and draw on the clarification and analysis of these terms that have emerged in administrative and judicial interpretations of the Privacy Act during the last 25 years. We note that for federal agencies that are also covered entities, this rule does not diminish their present obligations under the Privacy Act of 1974.

This right is not intended to interfere with medical practice or to modify standard business record keeping practices. Perfect records are not required. Instead, a standard of reasonable accuracy and completeness should be used. In addition, this right is not intended to provide a procedure for substantive review of decisions such as coverage determinations by payors. It is intended only to affect the content of records, not the underlying truth or correctness of materials recounted therein. Attempts under the Privacy Act of 1974 to use this mechanism as a basis for collateral attack on agency determinations have generally been rejected by the courts. The same results are intended here.

Section 164.526(b)—Requests for Amendment and Timely Action

We proposed to require covered health care providers and health plans to provide a means for individuals to request amendment of protected health information about them. Under the NPRM, we would have required covered health care providers and health plans to take action on a request for amendment or correction within 60 days of the request.

As in the proposed rule, covered entities must permit individuals to request that the covered entity amend protected health information about them. We also permit certain specifications for the form and content of the request. If a covered entity informs individuals of such requirements in advance, a covered entity may require individuals to make requests for amendment in writing and to provide a reason to support a requested amendment. If the covered entity imposes such a requirement and informs individuals of the requirement in advance, the covered entity is not required to act on an individual’s request that does not meet the requirements.

We retain the requirement for covered entities to act on a request for amendment within 60 days of receipt of the request. In the final rule, we specify the nature of the action the covered entity must take within the time frame. The covered entity must inform the individual, as described below, that the request has been either accepted or denied, in whole or in part. It must also take certain actions pursuant to its decision to accept or deny the request, as described below. If the covered entity is unable to meet the deadline, the covered entity may extend the deadline by no more than 30 days. The covered entity must inform the individual in writing, within the initial 60-day period, of the reason for the delay and the date by which the covered entity will complete its action on the request. A covered entity may only extend the deadline one time per request for amendment.

Section 164.526(c)—Accepting the Amendment

If a covered health care provider or health plan accepted a request for amendment, in whole or in part, we proposed to require the covered entity to make the appropriate change. The covered entity would have had to identify the challenged entries as amended or corrected and indicate the location of the amended or corrected information.
We also proposed to require the covered provider or health plan to make reasonable efforts to notify certain entities of the amendment: 1) entities the individual identified as needing to be notified and 2) entities the covered provider or health plan knew had received the erroneous or incomplete information and who may have relied, or could foreseeably rely, on such information to the detriment of the individual.

The covered provider or health plan would also have been required to notify the individual of the decision to amend the information.

As in the proposed rule, if a covered entity accepts an individual’s request for amendment or correction, it must make the appropriate amendment. In the final rule, we clarify that, at a minimum, the covered entity must identify the records in the designated record set that are affected by the amendment and must append or otherwise provide a link to the location of the amendment. We do not require covered entities to expunge any protected health information. Covered entities may expunge information if doing so is consistent with other applicable law and the covered entity’s record keeping practices.

We alter some of the required procedures for informing the individual and others of the accepted amendment. As in the proposed rule, the covered entity must inform individuals about accepted amendments. In the final rule, the covered entity must obtain the individual’s agreement to have the amended information shared with certain persons. If the individual agrees, the covered entity must make reasonable efforts to provide a copy of the amendment within a reasonable time to: (1) Persons the individual identifies as having received protected health information about the individual and needing the amendment; and (2) persons, including business associates, that the covered entity knows have the unamended information and who may have relied, or could foreseeably rely, on the information to the detriment of the individual. For example, a covered entity must make reasonable efforts to inform a business associate that uses protected health information to make decisions about individuals about amendments to protected health information used for such decisions.

Section 164.526(d)—Denying the Amendment

If a covered health care provider or health plan denied a request for amendment, in whole or in part, we proposed to require the covered entity to provide the individual with a written statement in plain language of the basis for the denial, a description of how the individual could submit a written statement of disagreement with the denial, and a description of how the individual could make a complaint with the covered entity and the Secretary.

We proposed to require covered health care providers and health plans to have procedures to permit the individual to file a written statement of disagreement with the denial and to include the covered entity’s statement of denial and the individual’s statement of disagreement with any subsequent disclosure of the disputed information. Covered entities would have been permitted to establish a limit to the length of the individual’s statement of disagreement and to summarize the statement if necessary. We also proposed to permit covered entities to provide a rebuttal to the individual’s statement with future disclosures.

As in the proposed rule, if a covered entity accepts a request for amendment, it must provide the individual with a statement of denial written in plain language. The written denial must include the basis for the denial, how the individual may file a written statement disagreeing with the denial, and how the individual may make a complaint to the covered entity and the Secretary.

In the final rule, we additionally require the covered entity to inform individuals of their options with respect to future disclosures of the disputed information in order to ensure that an individual is aware of his or her rights. The written denial must state that if the individual chooses not to file a statement of disagreement, the individual may request that the covered entity include the individual’s request for amendment and the covered entity’s denial of the request with any future disclosures of the protected health information that is the subject of the requested amendment.

As in the proposed rule, the covered entity must permit the individual to submit a written statement disagreeing with the denial and the basis of such disagreement. The covered entity may reasonably limit the length of a statement of disagreement and may prepare a written rebuttal to the individual’s statement of disagreement. If the covered entity prepares a rebuttal, it must provide a copy to the individual.

The covered entity must identify the record or protected health information that is the subject of the disputed amendment and append or otherwise link the following to the designated record set: the individual’s request for amendment; the covered entity’s denial of the request, the individual’s statement of disagreement (if any), and the covered entity’s rebuttal (if any). If the individual submits a written statement of disagreement, all of the appended or linked information, or an accurate summary of it, must be included with any subsequent disclosure of the protected health information to which the disagreement relates. If the individual does not submit a written statement of disagreement, the covered entity must include the appended or linked information only if the individual requests that the covered entity do so.

In the final rule, we clarify that when a subsequent disclosure is a standard transaction adopted under the Transactions Rule that cannot accommodate the additional materials described above, the covered entity may separately disclose the additional material to the recipient of the transaction.

Section 164.526(e)—Actions on Notices of Amendment

We proposed to require any covered entity that received a notification of amendment to have procedures in place to make the amendment in any of its designated record sets and to notify its business associates, if appropriate, of amendments.

We retain the proposed approach in the final rule. If a covered entity receives a notification of amended protected health information from another covered entity as described above, the covered entity must make the necessary amendment to protected health information in designated record sets it maintains. In addition, covered entities must require their business associates who receive such notifications to incorporate any necessary amendments to designated record sets maintained on the covered entity’s behalf. (See § 164.504 regarding business associate requirements.)

Section 164.526(f)—Policies, Procedures, and Documentation

As in the proposed rule, we establish documentation requirements for covered entities subject to this provision. In accordance with § 164.530(j), the covered entity must document the titles of the persons or offices responsible for receiving and processing requests for amendment.

§ 164.528—Accounting of Disclosures of Protected Health Information

Right to an Accounting of Disclosures

We proposed in the NPRM to grant individuals a right to receive an
accounting of all disclosures of protected health information about them by a covered entity for purposes other than treatment, payment, and health care operations. We proposed this right to exist for as long as the covered entity maintained the protected health information.

We also proposed that individuals would not have a right to an accounting of disclosures to health oversight or law enforcement agencies if the agency provided a written request for exclusion for a specified time period and the request stated that access by the individual during that time period would be reasonably likely to impede the agency’s activities.

We generally retain the proposed approach in the final rule. As in the proposed rule, individuals have a right to receive an accounting of disclosures made by a covered entity, including disclosures by or to a business associate of the covered entity, for purposes other than treatment, payment, and health care operations, subject to certain exceptions as discussed below.

We revise the duration of this right under the final rule. Individuals have a right to an accounting of the applicable disclosures that have been made in the 6 year period prior to the date of a request for an accounting. We additionally clarify in §164.528(b)(1) that an individual may request, and a covered entity may then provide, an accounting of disclosures for a period of time less than 6 years from the date of the request. For example, an individual could request an accounting only of disclosures that occurred during the year prior to the request.

In the final rule, we exclude several additional types of disclosures from the accounting requirement. Covered entities are not required to include in the accounting disclosures to the individual as provided in §164.502; disclosures for facility directories; disclosures to persons involved in the individual’s care, or other disclosures for notification purposes as provided in §164.510; disclosures for national security or intelligence purposes as provided in §164.512(k)(2); disclosures to correctional institutions or law enforcement officials as provided in §164.512(k)(5); or any disclosures that were made by the covered entity prior to the compliance date of the rule for that covered entity.

We retain the time-limited exclusion for disclosures to health oversight and law enforcement agencies, but require rather than permit the exclusion for the specified time period. Covered entities must exclude disclosures to a health oversight agency or law enforcement official from the accounting for the time period specified by the applicable agency or official if the agency or official provides the covered entity with a statement that inclusion of the disclosure(s) in the accounting to the individual during that time period would be reasonably likely to impede the agency or official’s activities. The agency or official’s statement must specifically state how long the information must be excluded. At the expiration of that period, the covered entity is required to include the disclosure(s) in an accounting for the individual. If the agency or official’s statement is made orally, the covered entity must document the identity of the agency or official who made the statement and must exclude the disclosure(s) for no longer than 30 days from the date of the oral statement, unless a written statement is provided during that time. If the agency or official provides a written statement, the covered entity must exclude the disclosure(s) for the time period specified in the written statement.

Content of the Accounting

We proposed in the NPRM to require the accounting to include all disclosures as described above, including disclosures authorized by the individual. The accounting would have been required to contain the date of each disclosure; the name and address of the organization or person who received the protected health information; a brief description of the information disclosed; and copies of all requests for disclosures. For disclosures other than those made at the request of the individual, the accounting would have also included the purpose for which the information was disclosed.

We generally retain the proposed approach in the final rule, but do not require covered entities to make copies of authorizations or other requests for disclosures available with the accounting. Instead, we require the accounting to contain a brief statement of the purpose of the disclosure. The statement must reasonably inform the individual of the basis for the disclosure. In lieu of the statement of purpose, a covered entity may include a copy of the individual’s authorization under §164.508 or a copy of a written request for disclosure, if any, under §§164.502(a)(2)(ii) or 164.512. We also clarify that covered entities are only required to include the address of the recipient of the disclosed protected health information if the covered entity knows the address.

We add a provision allowing for a summary accounting of recurrent disclosures. For multiple disclosures to the same recipient pursuant to a single authorization under §164.508 or for a single purpose under §§164.502(a)(2)(ii) or 164.512, the covered entity may provide a summary accounting addressing the series of disclosures rather than a detailed accounting of each disclosure in the series. In this circumstance, a covered entity may limit the accounting of the series of disclosures to the following information: the information otherwise required above for the first disclosure in the series during the accounting period; the frequency, periodicity, or number of disclosures made during the accounting period; and the date of the most recent disclosure in the series. For example, if under §164.512(b), a covered entity discloses the same protected health information to a public health authority for the same purpose every month, it can account for those disclosures by including in the accounting the date of the first disclosure, the public health authority to whom the disclosures were made and the public health authority’s address, a brief description of the information disclosed, a brief description of the purpose of the disclosures, the fact that the disclosures were made every month during the accounting period, and the date of the most recent disclosure.

Provision of the Accounting

We proposed in the NPRM to require covered entities to provide individuals with an accounting of disclosures as soon as possible, but not later than 30 days following receipt of the request for the accounting. In the final rule, we eliminate the requirement for the covered entity to act as soon as possible. We recognize that circumstances may arise in which an individual will request an accounting on an expedited basis. We encourage covered entities to implement procedures for handling such requests. The time limitation is intended to be an outside deadline, rather than an expectation. We expect covered entities always to be attentive to the circumstances surrounding each request and to respond in an appropriate time frame.

In the final rule, covered entities must provide a requested accounting no later than 60 days after receipt of the request. If the covered entity is unable to meet the deadline, the covered entity may extend the deadline by no more than 30 days. The covered entity must inform the individual in writing, within the standard 60-day deadline of the reason for the delay and the date by which the covered entity will provide the request.
A covered entity may only extend the deadline one time per request for accounting.

The NPRM did not address whether a covered entity could charge a fee for the accounting of disclosures.

In the final rule, we provide that individuals have a right to receive one free accounting per 12 month period. For each additional request by an individual within the 12 month period, the covered entity may charge a reasonable, cost-based fee. If it imposes such a fee, the covered entity must inform the individual of the fee in advance and provide the individual with an opportunity to withdraw or modify the request in order to avoid or reduce the fee.

**Procedures and Documentation**

As in the proposed rule, we establish documentation requirements for covered entities subject to this provision. In accordance with § 164.530(j), for disclosures that are subject to the accounting requirement, the covered entity must retain documentation of the information required to be included in the accounting. The covered entity must also retain a copy of any accounting provided and must document the titles of the persons or offices responsible for receiving and processing requests for an accounting.

**Section 164.530—Administrative Requirements**

**Designation of a Privacy Official and Contact Person**

In § 164.518(a) of the NPRM, we proposed that covered entities be required to designate an individual as the covered entity’s privacy official, responsible for the implementation and development of the entity’s privacy policies and procedures. We also proposed that covered entities be required to designate a contact person to receive complaints about privacy and provide information about the matters covered by the entity’s notice. We indicated that the contact person could be, but was not required to be, the person designated as the privacy official. We proposed to leave implementation details to the discretion of the covered entity. We expected implementation to vary widely depending on the size and nature of the covered entity, with small offices assigning this as an additional duty to an existing staff person, and large organizations creating a full-time privacy official. In proposed § 164.512, we also proposed to require the covered plan or provider’s privacy notice to include the name of a contact person for privacy matters.

The final regulation retains the requirements for a privacy official and contact person as specified in the NPRM. These designations must be documented. The designation of privacy official and contact person positions within affiliated entities will depend on how the covered entity chooses to designate the covered entity(ies) under § 164.504(b). If a subsidiary is defined as a covered entity under this regulation, then a separate privacy official and contact person is required for that covered entity. If several subsidiaries are designated as a single covered entity, pursuant to § 164.504(b), then together they need have only a single privacy officer and contact person. If several covered entities share a notice for services provided on the same premises, pursuant to § 164.520(d), that notice need designate only one privacy official and contact person for the information collected under that notice. These requirements are consistent with the approach recommended by the Joint Commission on Accreditation of Healthcare Organizations, and the National Committee for Quality Assurance, in its paper “Protecting Personal Health Information: A framework for Meeting the Challenges in a Managed Care Environment.” This paper notes that “accountability is enhanced by having focal points who are responsible for assessing compliance with policies and procedures * * *” (p. 29).

**Training**

In § 164.518(b) of the NPRM we proposed to require that covered entities provide training on the entities’ policies and procedures to all members of the workforce likely to have access to protected health information. Each entity would be required to provide initial training by the date on which this rule became applicable. After that date, each covered entity would have to provide training to new members of the workforce within a reasonable time after joining the entity. In addition, we proposed that when a covered entity made material changes in its privacy policies or procedures, it would be required to retrain those members of the workforce whose duties were related to the change within a reasonable time of making the change.

The NPRM would have required that, upon completion of the training, the trainee would be required to sign a statement certifying that he or she received the information training and would honor all of the entity’s privacy policies and procedures. Entities would determine the most effective means of achieving this training requirement for their workforce. We also proposed that, at least every three years after the initial training, covered entities would be required to have each member of the workforce sign a new statement certifying that he or she would honor all of the entity’s privacy policies and procedures. The covered entity would have been required to document its policies and procedures for complying with the training requirements.

The final regulation requires covered entities to train all members of their workforce on the policies and procedures with respect to protected health information required by this rule, as necessary and appropriate for the members of the workforce to carry out their functions within the covered entity. We do not change the proposed time lines for training existing and new members of the workforce, or for training due to material changes in the covered entity’s policies and procedures. We eliminate both the requirement for employees to sign a certification following training and the triennial re-certification requirement.

Covered entities are responsible for implementing policies and procedures to meet these requirements and for documenting that training has been provided.

**Safeguards**

In § 164.518(c) of the NPRM, we proposed to require covered entities to put in place administrative, technical, and physical safeguards to protect the privacy of protected health information. We made reference in the preamble to similar requirements proposed for certain electronic information in the Notice of Proposed Rulemaking entitled the Security and Electronic Signature Standards (HCFA–0049–P). We stated that we were proposing parallel and consistent requirements for safeguarding the privacy of protected health information. In § 164.518(c)(3) of the NPRM, we required covered entities to have safeguards to ensure that information was not used in violation of the requirements of this subpart or by people who did not have proper authorization to access the information.

We do not change the basic proposed requirements that covered entities have administrative, technical and physical safeguards to protect the privacy of protected health information. We combine the proposed requirements into a single standard that requires covered entities to safeguard protected health information from access on intentional use or disclosure that is a violation of the requirements of this rule.
and to protect against the inadvertent disclosure of protected health information to persons other than the intended recipient. Limitations on access to protected health information by the covered entities workforce will also be covered by the policies and procedures for “minimum necessary” use of protected health information, pursuant to § 164.514(d). We expect these provisions to work in tandem.

We do not prescribe the particular measures that covered entities must take to meet this standard, because the nature of the required policies and procedures will vary with the size of the covered entity and the type of activities that the covered entity undertakes. (That is, as with other provisions of this rule, this requirement is “scalable.”)

Examples of appropriate safeguards include requiring that documents containing protected health information be shredded prior to disposal, and requiring that doors to medical records departments (or to file cabinets housing such records) remain locked and limited personnel are authorized to have the key or pass-code. We intend this to be a common sense, scalable, standard. We do not require covered entities to guarantee the safety of protected health information against all assaults. Theft of protected health information may or may not signal a violation of this rule, depending on the circumstances and whether the covered entity had reasonable policies to protect against theft. Organizations such as the Association for Testing and Materials (ASTM) and the American Health Information Management Association (AHIMA) have developed a body of recommended practices for handling of protected health information that covered entities may find useful.

We note that the proposed HIPAA Security Standards would require covered entities to safeguard the privacy and integrity of health information. For electronic information, compliance with both regulations will be required.

In § 164.518(c)(2) of the NPRM we proposed requirements for verification procedures to establish identity and authority for permitted disclosures of protected health information.

In the final rule, this material has been moved to § 164.514(h).

Use or Disclosure of Protected Health Information by Whistleblowers

In § 164.518(c)(4) of the NPRM, this provision was entitled “Implementation Specification: Disclosures by whistleblowers.” It is now retitled “Disclosures by whistleblowers,” with certain changes, and moved to § 164.502(j)(1).
either members of their workforce or by their business associates.

We eliminate the language regarding potential breaches of business associate contracts from this section. All other requirements with respect to business associates are stated in § 164.504.

Refusing from Intimidating or Retaliatory Acts

In § 164.522(d)(4) of the NPRM, in the Compliance and Enforcement section, we proposed that the responsibilities of a covered entity would be to refrain from intimidating or retaliatory acts. Specifically, the rule provided that “[a] covered entity may not intimidate, threaten, coerce, discriminate against, or take other retaliatory action against any individual for filing a complaint under this section, for testifying, assisting, participating in any manner in an investigation, compliance review, proceeding or hearing under this Act, or opposing any act or practice made unlawful by this subpart.”

In the final rule, we continue to require that entities refrain from intimidating or retaliatory acts; however, the provisions have been moved to the Administrative Requirements provisions in § 164.530. This change is not just clerical; in making this change, we apply this provision to the privacy rule alone rather than to all the HIPAA administrative simplification rules. (The compliance and enforcement provisions that were in § 164 are now in Part 160, Subpart C.)

We continue to prohibit retaliation against individuals for filing a complaint with the Secretary, but also prohibit retaliation against any other person who files such a complaint. This is the case because the term “individual” is generally limited to the person who is the subject of the information. The final rule prohibits retaliation against persons, not just individuals, for testifying, assisting, or participating in an investigation, compliance review, proceeding or hearing under Part C of Title XI. The proposed regulation referenced the “Act,” which is defined in Part 160 as the Social Security Act. Because we only intend to protect activities such as participation in investigations and hearings under the Administrative Simplification provisions of HIPAA, the final rule references Part C of Title XI of the Social Security Act.

The proposed rule would have prohibited retaliatory actions against individuals for exercising any act or practice made unlawful by this subpart. The final rule retains this provision, but applies it to any person, only if the person “has a good faith belief that the practice opposed is unlawful, the manner of the opposition is reasonable and does not involve a disclosure of protected health information in violation of this subpart.” The final rule provides additional protections, which had been included in the preamble to the proposed rule. Specifically, we prohibit retaliatory actions against individuals who exercise any right, or participate in any process established by the privacy rule (Part 164 Subpart E), and include as an example the filing of a complaint with the covered entity.

Waiver of Rights

In the final regulation, but not in the proposed regulation, we provide that a covered entity may not require individuals to waive their rights to file a complaint with the Secretary or their other rights under this rule as a condition of the provision of treatment, payment, enrollment in a health plan or eligibility for benefits. This provision ensures that covered entities do not take away the rights that individuals have been provided in Parts 160 and 164.

Requirements for Policies and Procedures, and Documentation Requirements

In § 164.520 of the NPRM, we proposed to require covered entities to develop and document their policies and procedures for implementing the requirements of the rule. In the final regulation we retain this approach, but specify which standards must be documented in each of the relevant sections. In this section, we state the general administrative requirements applicable to all policies and procedures required throughout the regulation. In § 164.530(i), (j), and (k) of the final rule, we amend the NPRM language in several respects. In § 164.530(i) we require that the policies and procedures be reasonably designed to comply with the standards, implementation specifications, and other requirements of the relevant part of the regulation, taking into account the size of the covered entity and the nature of the activities undertaken by the covered entity that relate to protected health information. However, we clarify that the requirements that policies and procedures be reasonably designed may not be interpreted to permit or excuse any action that violates the privacy regulation. Where the covered entity has stated in its notice that it reserves the right to change information practices, we allow the new practice to apply to information created or collected prior to the effective date of the new practice and establish requirements for making this change. We also establish the conditions for making changes if the covered entity has not reserved the right to change its practices.

We require covered entities to modify in a prompt manner their policies and procedures to comply with changes in relevant law and, where the change also affects the practices stated in the notice, to change the notice. We make clear that nothing in our requirements regarding changes to policies and procedures or changes to the notice may be used by a covered entity to excuse a failure to comply with applicable law.

In § 164.530(j), we require that the policies and procedures required throughout the regulation be maintained in writing, and that any other communication, action, activity, or designation that must be documented under this regulation be documented in writing. We note that “writing” includes electronic storage; paper records are not required. We also note that, if a covered entity is required to document the title of a person, we mean the job title or similar description of the relevant position or office.

We require covered entities to retain any documentation required under this rule for at least six years (the statute of limitations period for the civil penalties) from the date of the creation of the documentation, or the date when the document was last in effect, which ever is later. This generalizes the NPRM provision to cover all documentation required under the rule. The language on “last was in effect” was dropped from the NPRM which was worded “unless a longer period applies under this subpart.”

This approach is consistent with the approach recommended by the Joint Commission on Accreditation of Healthcare Organizations, and the National Committee for Quality Assurance, in its paper “Protecting Personal Health Information: A framework for Meeting the Challenges in a Managed Care Environment.” This paper notes that “MCOs [Managed Care Organizations] should have clear and well-defined policies and procedures for dealing with confidentiality issues.” (p. 29).

Standards for Certain Group Health Plans

We add a new provision (§ 164.530(k)) to clarify the administrative responsibilities of group health plans that offer benefits through issuers and HMOs. Specifically, a group health plan that provides benefits solely through an issuer or HMO, and that does not create, receive or maintain protected health
information other than summary health information or information regarding enrollment and disenrollment, is not subject to the requirements of this section regarding designation of a privacy official and contact person, workforce training, safeguards, complaints, mitigation, or policies and procedures. Such a group health plan is only subject to the requirements of this section regarding documentation with respect to its plan documents. Issuers and HMOs are covered entities under this rule, and thus have independent obligations to comply with this section with respect to the protected health information they maintain about the enrollees in such group health plans. The group health plans subject to this provision will have only limited protected health information. Therefore, imposing these requirements on the group health plan would impose burdens not outweighed by a corresponding enhancement in privacy protections.

Section 164.532—Transition Provisions

In the NPRM, we did not address the effect of the regulation on consents and authorizations covered entities obtained prior to the compliance date of the regulation. In the final rule, we clarify that, in certain circumstances, a covered entity may continue to rely upon consents, authorizations, or other express legal permissions obtained prior to the applicable requirements of §§ 164.506 or 164.508.

We realize that a covered entity may wish to rely upon a consent, authorization, or other express legal permission obtained from an individual before the applicable compliance date of this regulation so long as the use or disclosure is consistent with the requirements of this regulation. However, a covered entity will need to obtain a consent that meets the requirements of § 164.506 to use or disclose this previously obtained protected health information as long as the use or disclosure is consistent with the requirements of this section. Therefore, a covered entity will need to obtain a consent that meets the requirements of § 164.506 to the extent that it is required to obtain a consent under § 164.506 from an individual before it may use or disclose any protected health information it creates or receives after the date by which it must comply with this rule. Similarly, we recognize that a covered entity may wish to rely upon a consent, authorization, or other express legal permission obtained from an individual prior to the applicable compliance date of this regulation. In the final rule, we permit a covered entity to rely upon such a consent, authorization, or permission to use or disclose individually identifiable health information that it created or received before the applicable compliance date of the regulation for the specific activities described in the consent, authorization, or permission as long as the covered entity complies with two requirements. First, the covered entity may not make any use or disclosure that is expressly excluded from the consent, authorization, or permission. Second, the covered entity must comply with all limitations expressed in the consent, authorization, or permission. Thus, we do not require a covered entity to obtain an authorization that meets the requirements of § 164.506 to use or disclose this previously obtained protected health information so long as the use or disclosure is consistent with the requirements of this section. However, a covered entity will need to obtain an authorization that meets the requirements of § 164.508, to the extent that it is required to obtain an authorization under this rule, from an individual before it may use or disclose any protected health information it creates or receives after the date by which it must comply with this rule.

Additionally, the final rule acknowledges that covered entities may wish to rely upon consents, authorizations, or other express legal permission obtained from an individual prior to the applicable compliance date for a specific research project that includes the treatment of individuals, such as clinical trials. These consents, authorizations, or permissions may specifically permit a use or disclosure of individually identifiable health information for purposes of the project. Alternatively, they may be general consents to participate in the project. A covered entity may use or disclose protected health information it created or received before or after to the applicable compliance date of this rule for purposes of the project provided that the covered entity complies with all limitations expressed in the consent, authorization, or permission.

If, pursuant to this section, a covered entity relies upon a previously obtained consent, authorization, or other express legal permission and agrees to a restriction by an individual under § 164.522(a), any subsequent use or disclosure under that consent, authorization, or permission must comply with the agreed upon restriction as well.

We believe it is necessary to grandfather in previously obtained consents, authorizations, or other express legal permissions in these circumstances to ensure that important functions of the health care system are not impeded. We link the effectiveness of such consents, authorizations, or permissions in these circumstances to the applicable compliance date to give covered entities sufficient notice of the requirements set forth in §§ 164.506 and 164.508.

The rule does not change the past effectiveness of consents, authorizations, or other express legal permissions that do not come within this section. This means that uses or disclosures of individually identifiable health information made prior to the compliance date of this regulation are not subject to sanctions, even if they were made pursuant to documents or permissions that do not meet the requirements of this rule or were made without permission. This rule alters only the future effectiveness of the previously obtained consents, authorizations, or permissions. Covered entities are not required to rely upon these consents, authorizations, or permissions and may obtain new consents or authorizations that meet the applicable requirements of §§ 164.506 and 164.508.

When reaching this decision, we considered requiring all covered entities to obtain new consents or authorizations consistent with the requirements of §§ 164.506 and 164.508, but there may be cases where the covered entities would be able to use or disclose protected health information obtained...
of the preamble is organized to follow comments to that section. We present our responses to the provisions section-by-section. Following each response, we refer to the corresponding section of this preamble, while many people believe that they must be asked permission prior to any release of health information about them, current laws generally do not impose such a requirement. Similarly, as discussed in more detail later in this preamble, judicial review is required today only for a small proportion of releases of health information.

III. Section-by-Section Discussion of Comments

The following describes the provisions in the final regulation, and the changes we made to the proposed provisions section-by-section. Following each section are our responses to the comments to that section. This section of the preamble is organized to follow the corresponding section of the final rule, not the NPRM.

General Comments

We received many comments on the rule overall, not to a particular provision. We respond to those comments here. Similar comments, but directed to a specific provision in the proposed rule, are answered below in the corresponding section of this preamble.

Comments on the Need for Privacy Standards, and Effects of this Regulation on Current Protections

Comment: Many commenters expressed the opinion that federal legislation is necessary to protect the privacy of individuals’ health information. One comment advocated Congressional efforts to provide a comprehensive federal health privacy law that would integrate the substance abuse regulations with the privacy regulation.

Response: We agree that comprehensive privacy legislation is urgently needed. This administration has urged the Congress to pass such legislation. While this regulation will improve the privacy of individuals’ health information, only legislation can provide the full array of privacy protection that individuals need and deserve.

Comment: Many commenters noted that they do not go to a physician, or do not completely share health information with their physician, because they are concerned about who will have access to that information. Many physicians commented on their patients’ reluctance to share information because of fear that their information will later be used against them.

Response: We agree that strong federal privacy protections are necessary to enhance patients’ trust in the health care system.

Comment: Many commenters expressed concerns that this regulation will allow access to health information by those who today do not have such access, or would allow their physician to disclose information which may not lawfully be disclosed today. Many of these commenters stated that today, they consent to every disclosure of health information about them, and that absent their consent the privacy of their health information is “absolute.” Others stated that, today, health information is disclosed only pursuant to a judicial order. Several commenters were concerned that this regulation would override stronger state privacy protection.
