The project produces an average of approximately 4,653,000 kilowatt-hours of energy per year, primarily during the high runoff season each spring. Flows used to generate electricity either are diverted to the licensee's water distribution system for domestic and industrial consumption or are released into Hobbble Creek.

The project also includes the following two transmission facilities: (1) A 5.9-mile-long line, which includes one 1-mile-long, underground segment and a 4.9-mile-long overhead segment, from Upper Bartholomew powerhouse to Hobbble Creek powerhouse; and (2) a 6.9-mile-long, 12.47-kilovolt, underground cable from Lower Bartholomew powerhouse to Springville City's electric distribution system.

Although there are no developed recreational facilities within the boundaries of the subject project, Springville City owns and operates a 200-unit campground and an 18-hole golf course in the general vicinity of Hobbble Creek powerhouse. In addition, the Rotary Club operates a park on City-owned property. This facility includes a ball field and a picnic area with approximately 20 tables/grills. Further, the Forest Service operates two small

campgrounds along the right fork Hobbble Creek.
