1-18-01

Vol. 66 No. 12

Book 1 of 2 Books

Pages 4607-5000

Thursday

Jan. 18, 2001

The **FEDERAL REGISTER** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see <http://www.nara.gov/fedreg>.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge as one of the databases on GPO Access, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6 a.m. each day the **Federal Register** is published and it includes both text and graphics from Volume 59, Number 1 (January 2, 1994) forward.

GPO Access users can choose to retrieve online **Federal Register** documents as TEXT (ASCII text, graphics omitted), PDF (Adobe Portable Document Format, including full text and all graphics), or SUMMARY (abbreviated text) files. Users should carefully check retrieved material to ensure that documents were properly downloaded.

On the World Wide Web, connect to the **Federal Register** at <http://www.access.gpo.gov/nara>. Those without World Wide Web access can also connect with a local WAIS client, by Telnet to swais.access.gpo.gov, or by dialing (202) 512-1661 with a computer and modem. When using Telnet or modem, type swais, then log in as guest with no password.

For more information about GPO Access, contact the GPO Access User Support Team by E-mail at gpoaccess@gpo.gov; by fax at (202) 512-1262; or call (202) 512-1530 or 1-888-293-6498 (toll free) between 7 a.m. and 5 p.m. Eastern time, Monday–Friday, except Federal holidays.

The annual subscription price for the **Federal Register** paper edition is \$638, or \$697 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is \$253. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is \$9.00 for each issue, or \$9.00 for each group of pages as actually bound; or \$2.00 for each issue in microfiche form. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard or Discover. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 66 FR 12345.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

- FOR:** Any person who uses the Federal Register and Code of Federal Regulations.
- WHO:** Sponsored by the Office of the Federal Register.
- WHAT:** Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
 2. The relationship between the Federal Register and Code of Federal Regulations.
 3. The important elements of typical Federal Register documents.
 4. An introduction to the finding aids of the FR/CFR system.
- WHY:** To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WASHINGTON, DC

WHEN: February 20, 2001, from 9:00 a.m. to Noon (E.S.T.)

WHERE: Office of the Federal Register
Conference Room
800 North Capitol Street, NW.
Washington, DC
(3 blocks north of Union Station Metro)

RESERVATIONS: 202-523-4538

Printed on recycled paper.

Rules and Regulations

Federal Register

Vol. 66, No. 12

Thursday, January 18, 2001

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Commodity Credit Corporation

7 CFR Part 1436

RIN 0560-AG00

Farm Storage Facility Loan Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: This rule finalizes an interim rule implementing the Commodity Credit Corporation's (CCC) Farm Storage Facility Loan Program (FSFLP). The program provides financing for producers to build or upgrade farm storage and handling facilities. On the basis of the comments and suggestions received, CCC is making several changes to the program provisions in the interim rule and is adding other provisions.

DATES: This rule is effective January 18, 2001.

ADDRESSES: Copies of the regulation are available from Price Support Division, Farm Service Agency, 1400 Independence Avenue, SW., STOP 0512, Washington, DC 20250-0512.

FOR FURTHER INFORMATION CONTACT: Chris Kyer, (202) 720-7935 or e-mail chris_kyer@wdc.fsa.usda.gov.

SUPPLEMENTARY INFORMATION:

Executive Order 12866

This rule is issued in conformance with Executive Order 12866 and has been determined to be economically significant and has been reviewed by the Office of Management and Budget. The Cost/Benefit Assessment is summarized below.

Regulatory Flexibility Act

It has been determined that the Regulatory Flexibility Act is not applicable to this rule because the Farm Service Agency is not required by 5

U.S.C. 553 or any other provision of law to publish a notice of proposed rulemaking with respect to the subject matter of this rule.

Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA) (Chapter 8 of the Administrative Procedures Act)

The SBREFA generally requires that major rules be submitted to Congress for a 60-day review period before they may be made effective. This rule is considered major. However, section 808 of SBREFA (5 U.S.C. 808) provides that if good cause exists and public notice is impracticable, unnecessary, or contrary to the public purpose, a rule may be made effective immediately. CCC finds that because this rule affects the incomes of a large number of agricultural producers that it would be contrary to the public interest to delay this rule. Therefore, this rule is issued as final, effective immediately.

Environmental Evaluation

It has been determined by an environmental evaluation that this program, as a whole, will have no significant impact on the quality of the human environment. Therefore, neither an environmental assessment nor an environmental impact statement for the program is needed. However, because it is possible that individual projects may have limited impacts on the local environment, environmental evaluations for each project will be conducted to determine the need for environmental assessment and/or mitigation.

Executive Order 12988

This rule has been reviewed in accordance with Executive Order 12988. The provisions of this rule preempt State laws to the extent such laws are inconsistent with the provisions of this rule. Before any legal action may be brought regarding this rule, the administrative appeal provisions set forth at 7 CFR part 780 must be exhausted.

Executive Order 12372

This program is not subject to the provisions of Executive Order 12372, which require intergovernmental consultation with State and local officials. See the notice related to 7 CFR part 3014, subpart V, published at 48 FR 29115 (June 24, 1983).

The Unfunded Mandates Reform Act of 1995

This rule contains no Federal mandates under the regulatory provisions of Title II of the Unfunded Mandates Reform Act of 1995 (UMRA) for State, local, and tribal governments or the private sector. Thus, this rule is not subject to the requirements of sections 202 and 205 of the UMRA.

Paperwork Reduction Act of 1995

A notice with request for comments on the information collection was part of the interim rule. An emergency information collection package has been approved by OMB and assigned OMB control number 0560-204. No comments were received from the public during the 60-day comment period regarding the information collection. A regular information collection package will be submitted to OMB.

Executive Order 12612

It has been determined that this rule does not have sufficient Federalism implications to warrant the preparation of a Federalism Assessment. The provisions contained in this rule will not have a substantial direct effect on States or their political subdivisions, or on the distribution of power and responsibilities among the various levels of government.

Cost-Benefit Assessment Summary

U.S. grain storage capacity steadily declined from 1987 to 1997. Storage capacity has increased modestly since its low in 1997, but not sufficiently to keep pace with growing production. Despite persistent harvest-time storage capacity shortfalls and the advantages of on-farm storage for producers, low commodity prices and reduced farm income will limit the ability of producers to significantly expand their on-farm storage. The FSFLP will encourage the construction of grain storage capacity in deficit areas and help farmers adapt to identity-preserved storage and handling requirements for genetically enhanced production. The program will also assist dairy and livestock feeders who need new or additional silage or green-chop storage. For these producers, additional storage capacity increases their ability to manage feed inventories and control feed costs. One direct benefit to

producers from the program will be reduced financing costs on facility construction. Interest savings for a grain farmer on the construction of a 15,000-bushel grain bin could total as much as \$5,417 under the program when compared with financing through some commercial banks. Interest savings for a dairy or livestock feeder could be as much as \$6,139 on a 2,000-ton bunker-type silage storage facility. Grain producers would also benefit from the potential for higher market returns on their crops because on-farm storage capacity creates pricing and hedging opportunities that can significantly increase marketing returns. The program is expected to expand on-farm grain storage by 746 million bushels and on-farm silage storage by 4.75 million tons over the next 5 years.

Background

The interim rule published in the **Federal Register** on May 11, 2000 (65 FR 30345) set out regulations to allow for loans to be made to assist producers in providing storage for certain agricultural commodities. The background provisions of that rule described, in addition, the statutory underpinnings of the program, those being provisions of the Commodity Credit Corporation Charter Act. One of those provisions is 15 U.S.C. 714c(b) (section 5(b) of that Act), which authorizes CCC to use its general powers to make available material and facilities required in connection with the production and marketing of agricultural commodities. Another is 15 U.S.C. 714b(h) (section 4(h) of the Act), which was incorrectly identified as section "4(f)" in the interim rule. The latter provides that the Corporation may make loans to grain producers needing storage facilities.

Comments regarding the provisions of the program were accepted until June 12, 2000. Comments were received from 272 entities or persons: 40 agricultural associations, six banks, one Commissioner of Agriculture, 19 FSA county committee members, 109 private agricultural companies or corporations representing storage structure manufacturers, distributors and construction contractors, one United States Senator, five grain storage elevator companies or cooperatives, 57 farmers, and 34 FSA State committee members or representatives.

Most of the comments addressed particular provisions in the interim rule. These are discussed below on a section-by-section basis, along with the changes that have been made to the interim rule. Changes to each section based on the experience of operating the program

under the interim rule are also discussed on a section-by-section basis.

Background section of the interim rule

There were 63 comments regarding the background section of the interim rule. Within the background section of the interim rule it was stated that section 5(b) of the CCC Charter Act gives CCC broad authority to make available materials and facilities required in connection with the production and marketing of agricultural commodities. Thus, it was stated that CCC would explore making available facility loans for the storage of commodities harvested as other than grain such as silage, alternative types of storage arrangements such as "condominium storage", or storage facilities for other agricultural products.

There were 15 comments from elevators, agricultural associations, and cooperatives supporting a program to finance condominium-type storage arrangements. There were two respondents who did not favor such a program for on-farm type condominium storage because in their States, Ohio and Iowa, on-farm condominium storage would be subject to licensing requirements for public warehouses. Another respondent was against off-farm condominium storage because, in their opinion, on-farm storage works better for segregation of specialty crops.

Condominium-type grain storage is generally viewed as commercial off-farm storage offered by private companies or cooperatives where farmers can lease or purchase a set amount of shared storage space for a period of time. Farmers pay a set time purchase or lease fee for the storage and may subsequently pay an annual fee to cover the costs associated with the maintenance of the structure and grain maintenance and handling. In some cases, the condominium storage on a per-bushel basis may be less than the cost of constructing and owning on-farm grain storage structures. During years when the owner of the condominium storage may not use the entire quantity that is allocated to him, the storage owner may sublease or sell the space to another producer. This arrangement can result in giving condominium storage a value, which may be used by lenders as collateral to secure loans on condominium storage agreements. Condominium storage may allow the producer to market grain without further transportation or handling costs, and relief from the costs of owning and maintaining on-farm storage. Also a respondent pointed out that condominium storage loans if made to cooperatives could allow for a lessening of the administrative burden

of operating the program by allowing the storage needs of multiple producers to be dealt with in one large loan rather than in many small loans.

The primary disadvantage of condominium storage expressed by some farmers is the waiting time to deliver their grain to the elevator when they should be in the field harvesting grain because the condition of the crop and ideal harvesting conditions are always time sensitive. On-farm storage provides that flexibility. Also, farmers indicate that once grain is delivered to the elevator, they may lose marketing flexibility because to sell grain that is in elevator storage they may be required to pay additional handling fees. Despite the comments received supporting a loan program for condominium storage, the respondents provided little information as to how FSA should operate such a program. Inasmuch as the primary focus of the program was on-farm storage and helping producers cope with their restricted storage capacity, condominium storage might not mitigate the storage problem and might ultimately only benefit commercial facilities who already have alternate financing at their disposal. Because a program including condominium storage would differ considerably from the on-farm storage program, at issue are program provisions such as the term of the loan; loan security requirements; who should be the borrower, (the elevator or individual farmers); eligible types of storage structures and handling equipment; applicant eligibility requirements; the maximum loan amount; environmental law compliance for large commercial storage structures; and loan servicing provisions such as loan assumptions, foreclosure procedures, loan deferments and extensions. CCC has not prepared a cost benefit assessment regarding off-farm condominium storage and must do so to consider implementing such a program. Also, it should be pointed out that farmers wishing to receive loans for shared, on-farm storage may do so under the present program as long as they otherwise meet all of the eligibility and security requirements. Accordingly, for these reasons, CCC will not implement loans for condominium type storage at this time.

There were nine comments regarding the timeliness of the program announcement. Generally, the announcement of the program on May 11 was regarded as being too late to allow producers to apply, obtain approval, and to finish construction in time to store crops that will be harvested for the 2000 crop year. To

assist producers who took purchase actions based on the announcement of the program in the press on February 2, 2000, CCC provided that producers who made purchase decisions between February 2 and May 30, 2000, could apply and be approved for loans, if all other eligibility requirements were met. Furthermore, citing a critical need for storage in 19 States and recognizing the need to implement the program as soon as possible, CCC implemented the program under the interim rule effective on May 11, 2000. Additional relief in this regard would not be consistent with the nature of this program, which is designed to provide incentives rather than to make payments for past actions.

There were eight comments regarding the need for a program to finance the construction of storage for other agricultural products such as dry peas, lentils, peaches, cherries, pears, berries, vegetables, apples (including necessary cold storage equipment and cold storage supplies such as nitrogen), cotton seed, dry beans, straw, nuts, peanuts, rye, wood, wool, seed potatoes, grass seed, rice straw, livestock feed such as processed feed, cake, purchased feed, millet, and sugar. There were 16 comments supporting loans for structures to store dry hay. While CCC recognizes the support for such a program, CCC will not implement a program because of the lack of any USDA study indicating a critical need for a program to finance such storage for these commodities.

There were 130 comments regarding the provision to restrict the program to specified facility loan commodities harvested as whole grain as set out, and specified, in the interim rule. Under that rule, eligible facility loan commodities were limited to wheat, rice, soybeans, sunflower seed, canola, rapeseed, safflower, flaxseed, mustard seed, crambe, other oilseeds as determined and announced by CCC, corn, grain sorghum, oats, or barley harvested as whole grain. These commodities are the same commodities on which farmers can obtain CCC marketing assistance loans and loan deficiency payments. Generally, the respondents favored the financing of structures to store corn silage and other facility loan commodities that are commonly harvested as other than whole grain citing that dairy farmers are expanding their herds and need more upright silos for grains and forage to feed their animals, many farmers have been using temporary storage, and that it is more economical to store high moisture ground ear corn, high moisture shell corn, or corn silage to save on the cost of fuels for drying. Also, comments were

received concerning the provisions in the interim rule that limited financing to certain kinds of facilities—certain cribs or bins designed for whole grain storage, certain upright silo-type structures designed for whole grain storage and flat-type storage structures for which the primary use is to store whole grain commodities. Some respondents favored extending financing also to other structures such as upright silos and bunker-type storage structures that are horizontal and generally constructed of concrete. Bunker-type silos are generally easier and cheaper to construct than upright silos because they are usually constructed from precast reinforced concrete panels and may have more recovery value than poured cement structures.

The interim rule specifically sought comments on extending the program beyond whole grain storage. Given CCC's broad authority, under the CCC Charter Act, to make available materials and facilities in the production and marketing of "agricultural commodities" and the overwhelming sense of the comments received, it has been determined that CCC will extend the program beyond facilities designed only for whole grain storage. Accordingly, eligible "facility loan commodities" (that is, the kind of commodities for which the building of a storage facility can be allowed under the rule) will be extended to also include corn, grain sorghum, wheat, oats or barley that is harvested for non-whole-grain use. Accordingly, the rule will also be amended to specifically provide for financing structures that are designed for that purpose. Other commodities will not at this time be folded into the program definition of "facility loan commodities" so as to expand the program further. Such an expansion would at a minimum involve a large-scale increase in the complexity of the program given that many commodities can have special needs such as refrigeration. Thus, the administrative difficulties of the program would increase dramatically. Moreover, and more importantly, the storage crisis mentioned in the interim rule was a crisis in the storage of grain (and certain related) crops and an expansion of the program beyond those would disperse the effect of the program unless there was to be a much greater commitment of funds to the program. At this time, there does not appear to be a justification for that kind of additional expenditure. On the other hand, the limited expansion, for silage, will allow farmers who grow the covered crops to have the flexibility of addressing their

storage needs for all harvesting of their crop. This modest expansion should be workable, which, accordingly, closes the circle of storage needs for certain producers, does so without undue difficulty and should allow program expense to remain within reasonable bounds. Also, to the extent that silage facilities are available, such availability could remove the pressure that might otherwise exist in particular cases to make use of the storage available for whole grain harvesting of the same crop. In that sense, the expansion of eligibility will also tend to further the goals of the original interim rule. Further, this limitation of the program is also in accord with the special emphasis given in the Charter Act on grain crops as evidenced by Section 4(h) of that Act. Also for the sake of cohesiveness, the provisions in the rule dealing with eligible structures have also been amended to allow for bunker-silo type structures, in accord with the comments. Still further, certain clarifying changes have been made in the rules as regards pre-owned and manufactured structures.

There were six comments from banks regarding the need to implement a guaranteed farm storage facility loan program with an interest rate buy-down provision in addition to the direct loan program. Respondents cited the advantages of a guaranteed loan program such as easing the program administrative burden on already overburdened FSA employees, better use of taxpayer dollars, assisting more producers, and the level of good experience with banks that already participate in FSA's guaranteed loan program for FSA ownership and farm operating loans. While CCC recognizes the support for such a program, none of the respondents provided any information as to how CCC should operate such a program and an interest rate buy-down provision could prove to be very costly compared to the current program. Accordingly, CCC will not implement a guaranteed loan program at this time.

Section 1436.3 of the Interim Rule

There were no comments on this section, but the reference to a consent, disclaimer and subordination agreement was deleted and the definition of a severance agreement, and a subordination agreement were added to further clarify definitions. A definition of unsatisfactory credit history was added to provide guidance on eligibility determinations to approving county committees. The term "tribal venture" was added to the definition of a person to clarify that such ventures are eligible

for the program. Finally, a definition of the calculation for computing the storage need requirement was added to provide further clarification.

Section 1436.4 of the Interim Rule

In order to clarify what actions applicants may take before a loan can be approved, section 1436.4(b) was amended by identifying the actual actions producers may take. Furthermore, the provision allowing producers who took actions between February 2, 2000 and May 30, 2000 to be considered for loans was removed because those producers should have been accommodated during the time the program was operated under the interim rule. That provision is, thus, no longer needed but its removal will not affect prior loans.

Section 1436.5 of the Interim Rule

There were five comments regarding the provision in section 1436.5(a)(5) that requires an eligible borrower to provide proof of crop insurance. Generally, the respondents, three farmers, one FSA State Executive Director, and the American Farm Bureau Federation, questioned the value of crop insurance in furthering an applicant's repayment ability when crop losses occur, the additional cost an applicant may incur just to obtain a farm storage facility loan and the subsequent costs to maintain the insurance during the term of the loan. CCC will not change the requirement except that, based on the comments, we will not require insurance on crops that are determined to be economically insignificant by CCC. A definition for a crop of economic significance was added to the definitions section 1436.3 and the provision was clarified in 1436.5(a)(5).

There was one comment regarding the requirement for applicant compliance with the Debt Collection Improvement Act of 1996. Because this is a statutory requirement, CCC cannot change the requirement. Section 1436.5(a)(2) was amended, however, to further clarify the provision dealing with compliance with the Debt Collection Improvement Act.

There were several comments regarding section 1436.5(a)(4), which requires that in order for an applicant to be eligible for a loan, the applicant must demonstrate a need for an increase in storage capacity. This does not allow farmers with adequate existing capacity to be eligible for a loan to add or replace handling and drying equipment or to upgrade existing storage space. Based on this comment, and because CCC encourages the proper handling and maintenance of stored commodities, section 1436.5(a)(4) and section

1436.6(b)(1) have been amended to allow loans for handling and drying equipment, and for loans to upgrade existing storage capacity without increasing storage capacity. We also amended section 1436.5(a)(1) to make reference to the definition of satisfactory credit history and to make reference to a current financial statement. Finally, section 1436.5(a)(10) was added to require that borrowers may not have been convicted under Federal or State law of certain controlled substance violations in order to conform to the rule according to 7 CFR Part 718.

Section 1436.6 of the Interim Rule

A comment from the Pennsylvania FSA State committee questioned the definition of commercial purpose. Commercial purpose is defined as the storage and handling of grain, whether paid or unpaid, for persons other than the applicant. According to the respondent and other State offices, this definition hinders family operations where family members store their commodities together. Recognizing this problem, CCC amended the definition of a commercial operation in section 1436.3 to exempt immediate family members from this requirement.

Two respondents questioned the requirement that the program only allows loans to be made on new storage structures. One stated that pre-owned equipment should be considered to be eligible if CCC's interest is protected. Another suggested that 1436.6(a)(2) be changed to "new oxygen limiting or used oxygen limiting storage built to original manufacturer's design specifications using original manufacturer's rebuild kits, and other upright silo type structures, designed for whole grain storage and having a useful life of at least 10 years." Based on this comment, as indicated, CCC amended section 1436.6 to allow for loans on remanufactured structures, built to original manufacturer's design specifications using original manufacturer's rebuild kits. Section 1436.6(b)(2) was amended to clarify that CCC may require safety equipment meeting OSHA standards. Section 1436.6(e) was added to provide that new storage and handling components of purchased pre-owned structures may be eligible for loan.

Section 1436.7 of the Interim Rule

There were several comments regarding the term of the loan, which is 7 years. It was suggested that the term be flexible at 7, 10, or 15 years depending on repayment ability. CCC will not change the term of the loan because at 7 years the term is longer

than most commercial banks will offer and should be of sufficient length to allow the program goals to be met without jeopardizing repayment because of changed circumstances.

Section 1436.8 of the Interim Rule

There were 25 comments regarding this section, which provides for security for loans. Respondents generally cited a concern with the requirement in section 1436.8(b) that a lien on the real estate on which the farm storage facility is located will be required on all loans in the form of a real estate mortgage, deed of trust, or other security instrument approved by the CCC. Respondents were concerned that the requirement for what could be considered to be small loans was excessive and would create an unnecessary burden on loan applicants. CCC has responded to this concern by generally dropping the real estate lien requirement for loans with a principal amount less than \$50,000. It was also recommended that all facility loans be cross collateralized when the facility is constructed on real estate where there is a direct FSA farm loan program mortgage in existence. Accordingly, section 1436.8(b) was amended to provide that a real estate lien will not be required for loans of \$50,000 or less unless CCC determines through analysis of the applicant's financial condition that additional security in the form of a lien on real estate is necessary to protect CCC's interest in the collateral. Also, section 1436.8(b) has been clarified to provide that for loans exceeding \$50,000, a junior lien position on the entire real estate parcel underlying the storage facility may be acceptable as long as CCC's security interest is sufficiently protected. Also section 1436.8(b) was amended to define when a loan is considered to be adequately secured and to specify that a title opinion or title insurance is required for loans exceeding \$50,000. Section 1436.8(g) was amended to clarify fees that shall be paid by CCC or the applicant in connection with completing the loan transaction.

Section 1436.9 of the Interim Rule

There were 12 comments regarding this section, which explains how the amount of the loan is determined. Generally, the respondents cited a concern with the maximum amount of the loan, which is \$100,000 per loan and the maximum aggregate outstanding loan balance, which is \$100,000 per borrower. Respondents told FSA that \$100,000 is not enough in many cases to finance the storage structures and handling equipment needed by some farmers to adequately store facility loan

commodities. One respondent stated that, "Facilities and equipment can cost \$500,000 or greater." An example of farm operations that may be adversely affected by this requirement are large family-run operations that have formed family partnerships. The family conducts business as a general partnership; however, generally, FSA recognizes for commodity programs that each member of the partnership can be a separate "person" for program payment purposes so long as certain conditions are met. For the purposes of the farm storage facility loan program under the interim rule, however, CCC limited the loan at \$100,000 to the partnership since the loan limit was \$100,000 per loan in all cases. As this limit may adversely impact some farmers contrary to normal principles that guide farm programs, section 1436.9 has been amended to change the maximum loan to \$100,000 for each eligible borrower signing the loan note and security agreement and remove the limit of one loan per borrower per fiscal year. This will also allow more than one farmer to enter into a joint loan to share a storage structure with another and to receive a larger loan than one farmer acting alone. Section 1436.9 was also amended to remove the limit of one loan per borrower per fiscal year because the loan amount limit of \$100,000 accomplishes the same thing as a limit on the number of loans a borrower may obtain.

Section 1436.10 of the Interim Rule

There were 13 comments regarding section 1436.10, which set out the down payment requirements for the program. The down payment amount is 25 percent of the total cost of the items eligible for loan. Respondents think that 25 percent is too high and that the requirement places undue burden on loan applicants to provide cash at a time when grain prices are low and cash flow problems exist. CCC recognizes this burden and has changed the requirement to 15 percent of the cost of the items eligible for loan. Also, CCC will allow fees such as attorney fees and archaeological study fees to be considered as an eligible net cost item (items that may be figured into the calculation of the total amount for which the loan may be made) and amended section 1436.9(b) to reflect the change. Finally, section 1436.10(b) was amended to clarify that farmers may obtain a loan for the down payment amount from another lending source.

Section 1436.11 of the Interim Rule

This section provides generally that the loan will be disbursed when all

construction is complete, final cost data has been submitted, and the facility has been inspected and determined to be satisfactory by CCC. Four respondents addressed this portion of the rule and in one case the respondent suggested that the monies should be dispersed upon loan approval. Another suggested that the monies be dispersed upon delivery of the materials and a completion of the labor. Others suggested that the loan disbursements should always be jointly payable to both the borrower and the contractor or supplier, and that, in any event, CCC should always obtain a written release of liability from the contractor or supplier. The rule will continue allow the checks to be made payable to the borrower alone in certain cases as there does appear to be circumstance in which such payments could be made in that manner with sufficient security. However, the rule has been amended, in accord with the comments, to specify that in all cases a written release of liability from the contractors or suppliers involved will be required before loan funds are disbursed. These provisions should allow sufficient flexibility to handle all circumstances as might arise. Also, a provision was added to this section to specify that loan proceeds cannot be assigned. This will also reduce program complexity and allow for certainty in program administration.

Section 1436.12 of the Interim Rule

There were five comments regarding the interest rate for loans, which is the rate in effect on the date the loan is approved that is equivalent to Treasury securities of comparable maturity. Generally, respondents thought that the interest rate should be the lowest rate in effect at the time of application, approval, or disbursement. The rate allowed by the interim rule appears to be to a fair rate, which will allow the accomplishment of the program goals and the terms of the rule, as provided for in the interim rule, will allow for certainty in the administration of loans. In the event that an applicant is dissatisfied with the rate, the applicant can withdraw from the program.

Section 1436.13 of the Interim Rule

There were five comments regarding section 1436.13, which provides provisions regarding repayment of the loan. Four comments focused on the term of the loan while one comment suggested discontinuance of the requirement to offset commodity loan or LDP proceeds towards facility loan installments before the installment is due or the borrower is delinquent. CCC will discontinue that requirement and

amended section 1436.13(d) accordingly. Section 1436.13(c) was further amended to set out procedures that will be used in the event an installment is not paid.

Section 1436.15 of the Interim Rule

There was one comment regarding section 1436.15, which provides maintenance provisions for a program loan. The respondent suggested removing the requirement for an annual check by CCC of the loan collateral because FSA salary funds do not allow for "extreme" expenditures. CCC feels the requirement is reasonable and can be fulfilled with available resources.

Section 1436.16 of the Interim Rule

There were no comments regarding this section, but provisions have been added to this section for foreclosure, liquidation, and bankruptcy actions to help insure accomplishment of the goals of the program.

Section 1436.17 of the Interim Rule

There were two comments regarding the provision to require compliance with the National Environmental Policy Act. The provision requires that an environmental evaluation be conducted by CCC for each loan application. In most cases, this will require a farm visit to assess the impact of the proposed storage construction project on the environment and on historic and archaeological resources. Respondents generally indicated that the environmental assessment goes far beyond the intent and scope of a program designed to benefit farmers hard-pressed for storage capacity and in need of additional opportunities to enhance marketing returns. Respondents also pointed out that the requirement for compliance with local land use laws should be adequate for environmental compliance as well and that the interim rule states that the program as a whole will have no significant impact on the quality of the human environment. While CCC recognizes that the environmental review may delay loan approvals, this provision should help assure the maximum overall benefit from the expenditures to be made in this important program in conjunction with other programs, including conservation programs, operated by the participant.

Section 1436.18

Section 1436.18 was added to provide appeal provisions.

Additional editorial changes have also been made.

List of Subjects in 7 CFR Part 1436

Administrative practice and procedure, Loan programs—agriculture, Reporting and recordkeeping requirements.

Accordingly, for the reasons set forth in the preamble, 7 CFR part 1436 is revised to read as follows:

PART 1436—FARM STORAGE FACILITY LOAN PROGRAM REGULATIONS

Sec.

- 1436.1 Applicability
- 1436.2 Administration
- 1436.3 Definitions
- 1436.4 Availability of loans
- 1436.5 Eligible borrowers
- 1436.6 Eligible storage or handling equipment
- 1436.7 Term of loan
- 1436.8 Security for loan
- 1436.9 Loan amount and loan application approvals
- 1436.10 Down payment
- 1436.11 Disbursements and assignments
- 1436.12 Interest and fees
- 1436.13 Loan installments, delinquency, and acceleration of maturity date
- 1436.14 Taxes
- 1436.15 Maintenance, liability, insurance, and inspections
- 1436.16 Foreclosure, liquidation, assumptions, sale or conveyance, bankruptcy
- 1436.17 Environmental compliance
- 1436.18 Appeals

Authority: 15 U.S.C. 714 *et seq.*

PART 1436—FARM STORAGE FACILITY LOAN PROGRAM REGULATIONS**§ 1436.1 Applicability.**

The regulations of this part provide the terms and conditions under which CCC may provide low-cost financing for producers to build or upgrade on-farm storage and handling facilities. Because liens and security interests related to this activity may be governed by state law, CCC may adapt certain procedures relating to those issues that may vary between States.

§ 1436.2 Administration.

(a) The Farm Storage Facility Loan Program shall be administered under the general supervision of the Executive Vice President, CCC or designee and shall be carried out in the field by FSA State committees, FSA county committees and FSA employees.

(b) FSA State committees, FSA county committees and FSA employees, do not have the authority to modify or waive any of the provisions of the regulations of this part.

(c) The FSA State committee shall take any action required by these

regulations that has not been taken by the county committee. The FSA State committee shall also:

(1) Correct, or require the FSA county committee to correct, any action taken by such FSA county committee that is not in accordance with the regulations of this part; and

(2) Require the FSA county committee to withhold taking any action that is not in accordance with the regulations of this part.

(d) No provision or delegation herein to a State or FSA county committee shall preclude the Executive Vice President, CCC, or a designee, or the Administrator, FSA, or a designee, from determining any question arising under the program or from reversing or modifying any determination made by the State or FSA county committee.

(e) The Deputy Administrator, Farm Programs, FSA, may authorize State and FSA county committees to waive or modify deadlines and other program requirements in cases where lateness or failure to meet such other requirements does not adversely affect the operation of the Farm Storage Facility Loan Program.

(f) A representative of CCC may execute Farm Storage Facility Loan Program applications and related documents only under the terms and conditions determined and announced by CCC. Any such document that is not executed in accordance with such terms and conditions, including any purported execution prior to the date authorized by CCC, shall be void.

(g) The Deputy Administrator may suspend this program at any time when it appears that there is no shortage of storage that needs to be addressed or where some other reason shall arise for which it appears that the program goals can be achieved more efficiently in a manner different from that provided for in this rule.

§ 1436.3 Definitions.

The following definitions shall be applicable to the program authorized by this part and will be used in all aspects of administering this program:

Aggregate outstanding balance means the sum of the outstanding balances of all loans disbursed under this part to each borrower signing the note and security agreement.

Assumption means the act or agreement by which one borrower takes over or assumes the debt of another borrower.

Collateral means the storage structure, drying equipment or handling equipment securing the loan.

Crop of economic significance means any insurable facility loan commodity

that contributes 10 percent or more of the total expected value of all crops grown by the loan applicant except if the expected liability under the catastrophic level of crop insurance for a crop is equal to or less than the administrative fee for the crop, that crop shall not be economically significant.

Facility loan commodity means wheat, rice, soybeans, sunflower seed, canola, rapeseed, safflower, flaxseed, mustard seed, crambe, other oilseeds as determined and announced by CCC, corn, grain sorghum, oats, or barley harvested as whole grain except that corn, grain sorghum, oats, wheat, or barley shall be included whether harvested as whole grain or other than whole grain.

Financing statement means the appropriate document that gives legal notice of a security interest in personal property when properly filed or recorded.

Non-movable or non-salable collateral means either collateral the county committee determines cannot be sold and moved to a new location because of the type of construction involved or because the collateral has deteriorated to the point that it has no sale recovery value.

Person means any individual, group of individuals, partnership, corporation, estate, trust, association, cooperative, tribal venture, or other business enterprise, or other legal entity who is, or whose members are, a citizen or citizens of the United States, or a legal resident alien.

Satisfactory credit history means a history of repaying debts as they came due unless the failure to repay or tardiness in payment was due to circumstance beyond the applicant's control as determined by CCC upon proof submitted by the applicant.

Severance agreement means an agreement under which a party may consent to the security interest of another in property thereby allowing the severance of a fixture from the real estate.

Storage need requirement means the result of up to the average of the most recent 3 years available planted acreage from the applicant's share of the applicable farm operation for each facility loan commodity requiring storage at the proposed storage location multiplied by the applicable crop yield as determined reasonable by the county committee, multiplied by two, and less the available existing storage capacity. If there is no acreage data available, including prevented planted acres, or the data is not applicable relative to the storage need, a reasonable acreage projection may be made for newly

acquired farms, changes in cropping operations, or for facility loan commodity crops being grown for the first time.

Subordination agreement means any agreement under which a party may subordinate a security interest in property to the interest of another party.

Uniform Commercial Code means the laws generally known by that name covering commercial transactions such as sales, negotiable instruments, and secured transactions.

§ 1436.4 Availability of loans.

(a) An application for a loan shall be submitted to the administrative county office that maintains the records of the farm or farms to which the application applies. With State office approval, loans may be made or serviced by a county office other than the administrative county office. Upon request, the applicant shall furnish information and documents as the State or county committee deems reasonably necessary to support the application. This may include financial statements, receipted bills, invoices, purchase orders, specifications, drawings, plats, or written authorization of access.

(b) Producers who authorize delivery, site preparation, or construction actions without an approved loan, do so at their own risk and without creating any liability on behalf of CCC.

§ 1436.5 Eligible borrowers.

(a) The term "eligible borrower" means any person who, as landowner, landlord, operator, producer, tenant, leaseholder, or sharecropper:

(1) Has a satisfactory credit history according to the definition in § 1436.3 and as recommended to the approving committee by a FSA employee with FSA loan approval authority;

(2) Demonstrates an ability to repay the debt arising under this program using a financial statement acceptable to CCC prepared within 90 days of the date of application, as recommended to the approving committee by a FSA employee with FSA loan approval authority;

(3) Has no disqualifying delinquent Federal debt under the Debt Collection Improvement Act of 1996;

(4) Is a producer of a facility loan commodity by CCC;

(5) Demonstrates a need for increased storage capacity as determined by CCC if the applicant is applying for a loan for a storage structure;

(6) Provides proof of crop insurance offered under the Federal Crop Insurance Program for insurable crops of economic significance on all farms operated by the borrower in the county where the storage facility is located;

(6) Is in compliance with USDA provisions for highly erodible land and wetlands conservation provisions according to 7 CFR part 12;

(7) Demonstrates compliance with any applicable local zoning, land use, and building codes for the applicable farm storage facility structures;

(8) Annually provides proof of flood insurance if CCC determines such insurance is necessary to protect the interests of CCC, and annually provides proof that the structures for which the loan is made has all peril structural insurance;

(9) Demonstrates compliance with the National Environmental Policy Act regulations at 40 CFR parts 1500–1508; and

(10) Has not been convicted under Federal or State law of a disqualifying controlled substance violation under 7 CFR part 718.

§ 1436.6 Eligible storage or handling equipment.

(a) Loans may be made only for the purchase and installation of eligible storage facilities and permanently affixed drying and handling equipment, for the remodeling of existing storage facilities, or for permanently affixed drying and handling equipment as provided in this section. Eligible storage and handling facilities shall include the following:

(1) New conventional-type cribs or bins designed and engineered for whole grain storage and having a useful life of at least 10 years;

(2) New oxygen-limiting storage structures or remanufactured oxygen-limiting storage structures built to the original manufacturer's design specifications using original manufacturer's rebuild kits, and other upright silo-type structures designed for whole grain storage or other than whole grain storage and having a useful life of at least 10 years; and

(3) New flat-type storage structures including a permanent concrete floor, designed for and primarily used to store facility loan commodities for the term of the loan and having a useful life of at least 10 years; and

(4) New structures that are bunker-type, horizontal, or open silo structures designed for whole grain storage or other than whole grain storage and having a useful life of at least 10 years.

(b) The calculation of the loan amount may include costs associated with building, improving, or renovating an eligible storage or handling facility, including:

(1) Permanently affixed grain handling equipment and grain drying equipment, including perforated floors

determined by the approving committee to be needed and essential to the proper functioning of the grain storage system;

(2) Safety equipment as required by CCC and meeting OSHA requirements such as lighting, and inside and outside ladders;

(3) Equipment to improve, maintain, or monitor the quality of stored grain, such as cleaners, moisture testers, and heat detectors;

(4) Electrical equipment, including labor and materials for installation, such as lighting, motors, and wiring integral to the proper operation of the grain storage and handling equipment; and

(5) Concrete foundations, aprons, pits, and pads (including site preparation, labor and materials) essential to the proper operation of the grain storage and handling equipment.

(c) Storage and handling equipment with respect to which no loans for installation or related costs shall be disbursed under this part include:

(1) Portable grain drying equipment, portable handling equipment and portable augers;

(2) Structures of a temporary nature that require the weight or bulk of the stored commodity to maintain its shape (such as fences or bags);

(3) Used structures or handling equipment;

(4) Structures that are not suitable for storing the facility loan commodities for which a need is determined;

(5) Storage structures to be used for commercial purposes. Commercial purpose is defined as the storage and handling of grain, whether paid or unpaid, for persons other than the loan applicant, except for family members as defined in 7 CFR Part 718, and tenants or landlords sharing in the crop requiring storage. Any facility that is in working proximity to any commercial storage operation shall be considered to be part of a commercial storage operation; and

(6) Portable or permanent weigh scales.

(d) Loans may be approved for financing additions to or modifications of an existing storage facility with an expected useful life of at least 10 years if the county committee determines there is a need for the capacity of the structure, but not for the sole replacement of worn out items such as motors, fans, or wiring.

(e) Loans may be approved for new storage and handling components of a pre-owned structure provided the completed facility has a useful life of at least 10 years. The pre-owned structure must be purchased and moved to a new storage location. Eligible items for such a loan include costs such as new bin

rings or roof panels needed to make a purchased pre-owned structure useable, new aeration systems, site preparation, construction off-farm paid labor cost, foundation material and off-farm paid labor. Ineligible items for such a loan include the cost of purchasing and moving the used structure.

§ 1436.7 Term of loan.

The maximum term of the loan shall be 7 years from the date of execution of a promissory note and security agreement. No extensions of the loan term will be granted. The loan balance and all attendant costs are due 7 years from the date of the execution of the promissory note and security agreement.

§ 1436.8 Security for loan.

(a) Except as agreed to by CCC, all loans shall be secured by a promissory note and security agreement covering the farm storage facility. The promissory note and security agreement shall grant CCC a security interest in the collateral and shall be perfected in the manner specified in the laws of the state where the collateral is located. CCC's security interest in the collateral shall constitute the sole security interest in such collateral except for prior liens on the underlying realty that by operation of law attach to the collateral if it is or will become a fixture. If any such prior lien on the realty will attach to the collateral, a severance agreement must be obtained in writing from each holder of such a lien, including all government or USDA agencies. No additional liens or encumbrances may be placed on the storage facility after the loan is approved unless CCC approves otherwise in writing.

(b) For loan amounts exceeding \$50,000, or where the aggregate outstanding loan balance will exceed \$50,000 or for loans where the approving committee determines as a result of financial analysis that additional security is required, a lien on the real estate parcel on which the farm storage facility is located will be required in the form of a real estate mortgage, deed of trust, or other security instrument approved by the United States Department of Agriculture's Office of General Counsel. CCC's interest in the real estate shall be superior to all other liens and is the first lien that secures the amount of the loan. A loan will be considered to be adequately secured when the real estate security for the loan is at least equal to the loan amount. If the real estate is covered by a prior lien, a lien waiver may be obtained by means of a subordination agreement approved for use in the State by USDA's Office of

General Counsel. CCC will not require such an agreement from any agency of the Department of Agriculture. Loans may be secured by a junior lien on real estate when the loan is adequately secured and a severance agreement is obtained from prior lien holders.

(c) Title insurance or a title opinion is required for loans secured by real estate.

(d) Real estate liens may cover land separate from the collateral if a lien on the underlying real estate is not feasible and if:

(1) The borrower owns the separate acreage; and

(2) the acreage has sufficient value based on the fair market value of the acreage at the time of the application as determined by the county committee, to insure repayment of the loan.

(e) Notwithstanding the preceding subsections of this section, a borrower, in lieu of such liens as are otherwise required by those subsections, may provide a letter of credit, bond, or other form of security, as approved by CCC.

(f) If an existing structure is remodeled and an addition becomes an attached, integral part of the existing storage structure, CCC's security interest shall include the existing storage structure.

(g) The cost of loan closings by attorneys, title opinions, title insurance, title searches, filing and recording all real estate liens, fixture filings and later subordinations will be paid by the borrower. CCC shall pay such costs relating to credit reports, collateral lien searches, and filing and recording financing statements for the collateral.

§ 1436.9 Loan amount and loan application approvals.

(a) The cost on which the loan shall be based is the net cost of the eligible facility, accessories, and services to the applicant after discounts and rebates, not to exceed a maximum per-bushel cost established by the FSA State committee.

(b) The net cost for storage facilities and handling equipment may include the following: all real estate lien related fees paid by the borrower, including attorney fees, except for filing fees, environmental and historic review fees including archaeological study fees, the facility purchase price, sales tax, shipping, delivery charges, site preparation costs, installation cost, material and labor for concrete pads and foundations, material and labor for electrical wiring, electrical motors, off-farm paid labor, on farm site preparation and construction equipment costs not to exceed commercial rates approved by the county committee, and new on-farm

material approved by the county committee. The net cost shall not include secondhand material or any other item that is determined by the approving authority to be ineligible for loan.

(c) The maximum principal amount of any farm storage facility loan shall be 85 percent of the net cost of the applicant's needed storage or handling equipment not to exceed \$100,000 for each borrower signing the note and security agreement. Unless otherwise approved by CCC, borrowers shall be considered to be separate persons or borrowers for purposes of applying the preceding sentence only to the extent that they would normally be considered a separate person under the rules set out in 7 CFR part 1400.

(d) The aggregate outstanding balance of all facility loans for any one borrower signing the note and security agreement may not exceed \$100,000.

(e) When a storage structure has a larger capacity than the applicant's needed capacity, as determined by CCC, the net cost eligible for a loan shall be prorated. Only costs associated with the applicant's needed storage capacity will be considered eligible for loan under this part.

(f) When a flat storage structure has space that is not used primarily for facility loan commodity storage, such as office space, the loan amount shall be adjusted for the ineligible space as determined by CCC.

(g) The FSA county committee may approve applications, if loan funds are available, up to the maximum approval amount unless the FSA State committee establishes a lower limit for county committee approval authority.

(h) Loan approvals will expire 4 months after the date of approval unless extended in writing for an additional 4 months by the FSA State Committee.

(i) CCC may at any time refuse to make new loans.

§ 1436.10 Down payment.

(a) A minimum down payment representing the difference between the net cost of the storage facility and the amount of the loan determined in accordance with § 1436.9 shall be made by the loan applicant to the supplier or contractor before the loan is disbursed.

(b) The down payment shall be in cash unless some other form of payment is approved by CCC. The down payment may be obtained by the borrower from another lending source.

(c) The down payment may not include any trade-in, discount, rebate, credit, deferred payment, post-dated check, or promissory note to the supplier or contractor.

§ 1436.11 Disbursement and assignments.

(a) Disbursement of the loan by CCC will be made after the farm storage facility has been delivered, erected, constructed, assembled, or installed and a CCC representative has inspected and approved such facility.

(b) Disbursement will be made only if the borrower furnishes satisfactory evidence of the total cost of the facility and payment of all debts on the facility in excess of the amount of the loan.

(c) Disbursement may be made jointly to the borrower and the contractor or supplier, except disbursement may be made to the borrower only if CCC determines the borrower has paid the contractor or supplier all amounts that are due and owing with respect to the facility and that all applicable liens, security interests, or other encumbrances have been released.

(d) A release of liability will be required from contractors and suppliers providing goods and services to the loan applicant.

(e) Loan proceeds cannot be assigned.

§ 1436.12 Interest and fees.

(a) Loans shall bear interest at the rate equivalent, as determined by CCC, to the rate of interest charged on Treasury securities of comparable maturity on the date the loan is approved.

(b) The interest rate for each loan will remain in effect for the term of the loan.

(c) The loan applicant shall pay a non-refundable application fee in such amount determined appropriate by CCC, which fee may not in any case be less than \$45.

§ 1436.13 Loan installments, delinquency, and acceleration of maturity date.

(a) Equal installments of principal plus interest will be amortized over the loan term for purposes of setting a payment schedule. Installments are due and payable not later than the last day of each 12-month period of the loan, until the principal plus interest has been paid in full.

(b) Each installment may be paid in cash, money order, wire transfer, or by personal, certified, or cashier's check. Repayment shall be applied first to accrued interest and then to principal.

(c) The following actions will be taken when installments are not paid on the due date: A demand for payment shall be mailed to the debtor after the due date has passed. If the installment is not paid within 30 days of the due date or if a new due date acceptable to CCC has not been established based on a financial plan submitted by the debtor, the initial demand may be followed by two subsequent written demands at approximately 30-day intervals unless

other action is needed to protect the interests of CCC. If the debtor files an appeal according to § 1436.18 of this part, collection action shall cease until the appeal process is complete, however, any payments due the debtor may be withheld and, depending on the outcome of the appeal, may later be offset and applied to reduce the indebtedness. In lieu of a foreclosure on the collateral in the case of a delinquency, CCC may permit a rescheduling of the debt or other measures consistent with the collection of other debts under the provisions of Part 1403. Alternately, CCC may implement such other collection procedures as it deems appropriate.

(d) A claim shall be established against a borrower for any amounts remaining due after liquidation of the loan.

(e) CCC may declare the entire indebtedness immediately due and payable if the borrower violates any of the terms and conditions of this part, fails to pay any installment on time, or breaches any of the terms and conditions of any of the instruments executed in connection with the loan, or if, during the life of the loan, the collateral is used in connection with or by any unauthorized commercial operation including, but not limited to, elevators, warehouses, dryers or processing plants.

(f) Any action authorized by the provisions of this section may be taken:

(1) Against a debtor's pro rata share of payments due any entity that the borrower participates in, either directly or indirectly, as determined by CCC.

(2) Against related persons or entities, irrespective of the debtors share, when CCC determines that the debtor has established an entity, or reorganized, transferred ownership of, or changed in some other manner, their operation, for the purpose of avoiding the payment of the debt.

(g) The loan may be paid in full or in part without penalty at any time before maturity.

(h) Upon payment of a loan, CCC shall release CCC's security interest in the collateral.

§ 1436.14 Taxes.

The borrower must pay, when due, all real and personal property taxes that may affect CCC's security interest in all collateral securing the note evidencing the loan. To protect its interests, CCC may pay any unpaid taxes with respect to the collateral securing a loan made in accordance with this part, and if CCC does so, the borrower shall reimburse CCC for such payment, and if unpaid by

the borrower, such debt shall become due immediately.

§ 1436.15 Maintenance, liability, insurance, and inspections.

(a) The borrower must maintain the loan collateral in a condition suitable for the storage of one or more of the facility loan commodities. For purpose of this section the term "loan collateral" shall mean any property of any kind that was built or improved, or acquired using a loan made under this part.

(b) Until the loan has been repaid, the borrower shall be liable for all damages to or destruction of the loan collateral. CCC shall not assume any loss of the loan collateral.

(c) CCC may conduct annual collateral inspections to insure compliance with this part. The borrower must consent to such inspection as a term of the loan and failure to supply such access shall put the borrower into default.

(d) Structures must be insured against all perils in all cases and must also be insured against flooding if the structure is located in a flood plain, as determined by CCC. Proof of flood insurance, if required, and proof of all peril structural insurance, must be provided to CCC annually. CCC must be listed as a loss payee on all peril and flood insurance policies.

(e) CCC shall have rights of ingress and egress where the facility is located. Failure of the borrower to secure such access will render a borrower ineligible for the loan and, if a loan has already been made shall constitute a loan default for which the remaining balance of the loan shall become immediately due and payable.

§ 1436.16 Foreclosure, liquidation, assumptions, sale or conveyance, bankruptcy.

(a) The collateral or land securing a loan may be sold by CCC whenever CCC has declared the entire indebtedness immediately due and payable under this part as follows:

(1) If a demand for payment is not received by the due date acceptable to CCC, CCC may call the loan and initiate foreclosure proceedings by issuing a liquidation letter to the borrower.

(2) The debtor may voluntarily agree to allow removal of the collateral to facilitate sale by signing an agreement for sale. If the debtor objects to removal of collateral, the law of the state where the collateral exists will be used to foreclose on the property.

(3) For loans with movable collateral and no real estate lien, CCC may sell the collateral for the best price obtainable. Sales proceeds shall be distributed in the following order:

(i) To CCC to satisfy the debtor's indebtedness including all costs associated with selling the collateral.

(ii) Payment to junior lien holders if approved by USDA's Office of the General Counsel and then to the borrower or other persons as determined appropriate by that office.

(4) For loans with nonmovable collateral, as determined by CCC, and no real estate lien, CCC may establish a claim according to 7 CFR part 1403.

(5) For loans secured with a real estate lien, CCC may obtain an appraisal of the property. Sales proceeds shall be distributed in the following order:

(i) To CCC to satisfy the debtor's indebtedness including all costs associated with selling the collateral and the appraisal.

(ii) To junior lien holders if approved by USDA's Office of the General Counsel; or

(iii) To the borrower or other persons as determined appropriate by that office.

(b) Assumption by another borrower of a farm storage facility loan is permitted subject to county committee approval and the subsequent borrower's ability to show a satisfactory credit history. An assumption of the loan may be approved when the collateral is sold by CCC to an otherwise eligible borrower, the current borrower will convey the collateral or property securing the loan to another eligible borrower, or the borrower is dead, incompetent, or missing and an eligible borrower wants to assume the loan.

(1) Requests for approval of assumptions shall be made to the county committee by the borrower, the borrower's successors, or representatives of the borrower. If approval is granted, the borrower's successors or representatives shall execute a new farm storage facility note and security agreement for the balance of the term of the loan.

(2) The principal amount of the loan shall include the unpaid amount of the loan, interest computed to the date of assumption, all past due installments, and any other charges that may be required.

(c) The borrower may voluntarily convey the collateral to CCC before repaying the loan. Before a borrower sells or conveys the facilities or other property securing a loan without repaying the loan in full, the borrower shall obtain approval for the sale or conveyance from the FSA county committee with the understanding that sale proceeds shall be paid to satisfy the borrowers indebtedness to CCC.

(d) Remedies provided for in this section shall, unless CCC determines otherwise, be subject to the

administrative appeals provided for elsewhere in this part, including those that are found at § 1436.13.

§ 1436.17 Environmental compliance.

(a) Except as otherwise specified in this section, prior to approval of any farm storage facility loan, an environmental evaluation will be completed to determine if the proposed action will have any adverse impacts on the environment and cultural resources.

(b) If it is determined that a proposed action or group of proposed actions will not result in any adverse impact, the action will be considered as being categorically excluded for the purpose of compliance with the National Environmental Policy Act (NEPA), 40 CFR parts 1500–1508.

(c)(1) If adverse environmental impacts (either direct or indirect) are identified, an environmental assessment will be completed in accordance with the Council on Environmental Quality's Regulations for Implementing the Procedural Provisions of NEPA.

(2) The environmental assessment will be used to develop an action that results in no significant environmental impact on the human environment or cultural resources.

(3) No action will be approved that has been determined to have significant impacts on the human environment or cultural resources.

(d)(1) In order to minimize the exposure to environmental liabilities from the presence of contamination on real estate collateral, an evaluation will be made of the economic and environmental risks to the real estate collateral posed by the presence of hazardous substances and petroleum products.

(2) If the evaluation made under paragraph (d)(1) of this section reveals that the collateral is or may be contaminated, then the applicant will be notified and given an option of offering as collateral other real estate that is free from contamination or remediating the contamination on the original site offered as collateral.

§ 1436.18 Appeals.

The appeal, reconsideration, or review of all determinations made under this part, except for provisions for which there are no appeal rights because they are determined rules of general applicability, must be in accordance with parts 11 and 780 of this title.

Signed at Washington, DC, on January 10, 2001.

George Arredondo,

Acting Executive Vice President, Commodity Credit Corporation.

BILLING CODE 3410–05–P

DEPARTMENT OF ENERGY

10 CFR Part 719

48 CFR Parts 931 and 970

RIN 1990–AA27

Contractor Legal Management Requirements; Department of Energy Acquisition Regulation

AGENCY: Department of Energy.

ACTION: Notice of final rulemaking.

SUMMARY: The Department of Energy (Department) is establishing new regulations covering contractor legal management requirements. Conforming amendments are also made to the Department of Energy Acquisition Regulation (DEAR). The new regulation covers legal costs to be reimbursed by the Department to its contractors at government owned or leased facilities with contracts exceeding \$100,000,000. An Appendix to the regulation provides additional guidance to contractors.

EFFECTIVE DATE: This final rule is effective February 20, 2001.

SUPPLEMENTARY INFORMATION:

I. Background.

II. Disposition of Comments.

III. Procedural Requirements.

A. Review Under Executive Order 12866.

B. Review Under Executive Order 12988.

C. Review Under the Regulatory Flexibility Act.

D. Review Under the Paperwork Reduction Act.

E. Review Under the National Environmental Policy Act.

F. Review Under Executive Order 13132.

G. Review Under the Unfunded Mandates Reform Act of 1995.

H. Review Under the Treasury and General Government Appropriations Act of 1999.

I. Congressional Notification.

I. Background

This final rulemaking creates a new part 719, in Chapter 10 of the Code of Federal Regulations, establishing regulations to monitor and control legal costs and to provide guidance to aid contractors and Department personnel in making determinations regarding the

reasonableness of all outside legal costs, including the costs of litigation. This action finalizes the Notice of Proposed Rulemaking (NPR) published October 25, 2000 (65 FR 63809). Today's rules cover all outside legal costs incurred by contractors with contracts exceeding \$100,000,000 at facilities owned or leased by the Department. The policies also apply to legal counsel retained by the Department itself for litigation or other legal services where the legal costs over the life of the matter for which counsel has been retained are expected to exceed \$100,000.

The regulation requires submission of a legal management plan by contractors where costs for legal services are to be reimbursed by the Department. Once approved by the Department, the legal management plan, as well as applicable regulations and contract provisions, forms the basis for approvals by the Department to reimburse litigation and other legal expenses. The cost principles and contract clauses in the Department's contracts generally make legal costs, including the cost of litigation, allowable if reasonable and incurred in accordance with the applicable cost principles and contract clauses.

The Department received some comments expressing concern about the potential waiver of attorney-client confidentiality privileges if contractors provide the type of information required under this rulemaking. The Department needs to receive information regarding contractor litigation in order to participate in strategy and to justify the reimbursement of the costs of litigation. Although it is true that attorney-client privilege can be waived by a disclosure of an otherwise confidential disclosure to a third party, there is an exception to this principle. The privilege is not waived when the nominal "third party" has a common interest with the client as to the subject matter of the communication. In the cases involving our contractors, the Department is contractually obligated, with few exceptions, to pay the contractors' litigation costs, as well as any judgment or settlements. In order to determine whether the costs are allowable and reasonable the Department needs to review the invoices, as well as budgets and staffing and resource plans. In addition, the Insurance—Litigation and claims clause provides that the Department can direct the defense of such litigation and provides for the collaboration between Department representatives and in-house or Department approved outside counsel. In order to provide guidance, the Department needs to be provided

pleadings and other documents that deal with the strategy of the case.

In July 2000, the common interest privilege was upheld by the Supreme Court of Washington¹ in a case involving information provided to the Department by one of its contractors. The privilege was also recognized in a decision by the U.S. District Court for the District of New Mexico² which determined that a Litigation Plan is a privileged document and not subject to production.

An Appendix to the regulation provides additional "safe harbor" guidance for legal management practices. The guidance provided in the Appendix may be updated from time to time by the Department and those updates distributed to contractors, contracting officers and Department counsel.

Conforming technical amendments to the Department of Energy's Acquisition Regulation (DEAR), at 48 CFR Chapter 9, appear at the end of this notice of final rulemaking. Some changes have been made in the approach for these amendments.³

The proposal to add a clause to DEAR Part 952 and prescriptive language in Part 928 has been eliminated. Instead, prescriptive language has been added as Department coverage for the cost principle at 48 CFR 931.205–19, requiring the use of Insurance—Litigation and claims, 970.5228–1 (new citation) [970.5204–31 old citation], for contracts exceeding an amount of \$100,000,000 involving work performed at a Department owned or leased site. Additionally, the language in the 48 CFR Part 970 clause, Insurance—Litigation and claims, 970.5228–1 (new citation) [970.5204–31 old citation], has been modified to permit use of that clause in non-M&O contracts now covered by 48 CFR 931.205–19. These changes involve only the elimination of references to DEAR Part 970 specific clauses and a substitution of generalized clause titles instead.

Department coverage for the Federal Acquisition Regulation (FAR) cost principle at FAR 31.205–33,

¹ *Brundridge, et al. v. Fluor Daniel, Inc., Fluor Daniel Hanford, Inc., Daniel Northwest, Inc.*, No. 69732–9, Ruling Denying Review, (Sup. Ct. Wash., 7/27/00).

² *Morrison Knudsen Corp. v. Ground Improvement Techniques, Inc., and Fireman's Fund Insurance Co.*, Order Denying Motion to Compel Discovery From the Department of Energy, Misc. No. 96–37 MV/LFG (D.N.M., 10/8/96).

³ **Note:** The Department republished 48 CFR (DEAR) subpart 970 in a final rulemaking in the **Federal Register** on December 22, 2000 (65 FR 80994). This rulemaking action streamlined and reorganized DEAR subpart 970 and both the new and old citations for DEAR subpart 970 are provided for the convenience of the reader.

Professional and consultant service costs, is added at DEAR 931.205–33(g) and DEAR 970.3102–05–33(g), to describe the applicability of 10 CFR Part 719 to M&O contracts, and to non-M&O contracts for an amount exceeding \$100,000,000 involving work performed at facilities owned or leased by the Department, and for legal counsel retained directly by the Department for litigation or other legal matters.

Additionally, the language originally proposed to be inserted at subpart 970.71 has been revised and added to the contractor purchasing guidance contained at 970.5244–1 (new citation) [970.5204–22 old citation].

Contracting officers must apply these DEAR changes to solicitations issued on or after the effective date of this rule. Contracting officers may, at their discretion, include these DEAR changes in solicitations issued before the effective date of this rule, provided award of the resulting contract(s) occurs on or after the effective date.

Contracting officers must apply these DEAR changes: to contracts extended in accordance with the Department's extend/compete policies and procedures (48 CFR 917.6, 48 CFR 970.1702–1(a), and internal guidance); and to options exercised under competitively awarded management and operating contracts (48 CFR 970.1702–1(b)).

For management and operating contracts or other contracts already containing subparagraph (d)(4) of the Allowable costs clause, 970.5204–13, or 970.5204–14, or other reference to the Department's litigation management procedures and cost guidelines, these changes and the new 10 CFR part 719 are automatically applicable. These provisions address the allowability of reasonable legal costs incurred by contractors and include references to the Department's "approval of the contractors litigation management procedures (including cost guidelines)" and also include the caveat that "such procedures may be revised from time to time."

II. Disposition of Comments

General Comments

Comment: One commenter stated that the proposed rule duplicates existing litigation management and legal cost reporting requirements established by the Final Policy Statement, which addressed contractor litigation cost policies, terms of law firm engagement, and allowability of costs ("Policy Statement"), 65 FR 14763, (April 3, 1996) and therefore is unnecessary.

Response: One of the purposes of this rulemaking is to codify the legal

management and cost policies described in the Policy Statement and related requirements from diverse sources and locations and to standardize those requirements. This regulation consolidates requirements from earlier contract reform initiatives and the Policy Statement and replaces those requirements. The commenter argues that the information collection in the proposed rule corresponds to the information collections in the Policy Statement and the Department agrees.

Comment: One commenter took issue with the Notice of Proposed Rulemaking's estimate of 15–30 hours to prepare a litigation management plan and stated that it expended estimated 150 hours reviewing, revising, and altering a litigation management plan and its office practices.

Response: The commenter did not explain how many of the 150 hours were used in the preparation of the legal management plan and how many were used reviewing its office practices. Also, the commenter did not state whether this time was expended for an initial legal management plan or for a plan and a series of revisions over a period of time. The NOPR's estimate of 15–30 hours for the initial preparation of a legal management plan was based on information provided by a contractor who had a litigation management plan in place. The Department expects that the time necessary to prepare and implement a legal management plan will vary from contractor to contractor, but does not expect that 150 hours for preparation of an initial plan will be the norm. Nevertheless, the Department notes that the time spent preparing the legal management plan is ordinarily an allowable cost that is paid for by the government.

Comment: The commenter noted that under its current practices with the Department that the retention agreement for, and then the billings and invoices for, any litigation must be submitted to the Department for prior approval. The commenter asked whether the \$25,000 threshold pertaining to engagement letters would now replace their current practice.

Response: When the requirements contained in this regulation are incorporated into a contract, already existing guidance and requirements is canceled for that individual contract, unless specifically retained and made a part of the revised plan.

Comment: Two commenters stated that the goal of controlling legal costs should be addressed by agency guidance documents rather than in a mandatory regulation. The commenters argue that codifying the requirements in a

regulation reduces the flexibility necessary for effective legal representation.

Response: The Department recognizes the concerns behind this view and has revised the regulation to provide more flexibility in the final rulemaking than provided in the NOPR. For example, in instances where the contractor does not know enough about the case at the time of filing an answer, the filing deadline for the staffing and resource plan is extended to 30 days after a determination that the costs of the matter are expected to exceed \$100,000. Also, since there was concern that a contractor might be penalized for failing to determine whether a matter was significant for purposes of the staffing and resource plan, language has been added requiring the contractor to consult with Department counsel and an explanation that the primary purpose of the plan is informational. Finally, the requirement for advance approval of certain costs, in § 719.35, has been changed to permit submission of a justification after the incurrence of the cost.

Comment: Two commenters requested further explanation of the Department's reasons for including non-litigation matters in the rulemaking.

Response: It came to the Department's attention that there were instances where contractors incurred significant legal fees for matters not involving litigation. Given the Department's interest in assuring that appropriate cost controls are in place for all major legal representation and the interest Congress has in the expenditure of appropriated funds for legal fees, we decided it was prudent to include legal services for all matters expected to exceed \$100,000.

Section 719.2 Definitions

Comment: One commenter suggested that the phrase “administrative expenses associated with the provision of legal services by retained counsel” could be ambiguous and proposed a revised definition for the term “legal costs” that excludes that phrase.

Response: The definition of “costs” contained at 48 CFR (FAR) 31.205–47, Costs related to legal and other proceedings, includes “administrative and clerical expenses” and the Department sees no reason to deviate from the FAR standard.

Section 719.3 What Contracts Are Covered by This Part?

Comment: One commenter observed that the Final Policy Statement applied to only management and operating contracts and requested an explanation for the Department's extension of the

application of the regulation beyond the scope of the existing Policy Statement.

Response: The Final Policy Statement applied only to legal costs incurred by management and operating (M&O) contractors. Today's rule applies to all cost-reimbursement contracts in excess of \$100,000,000 involving work performed at DOE facilities, including contracts that are not M&O contracts. The Department has experienced resistance against application of the Policy Statement in a number of non-M&O contracts that involve facility and site management responsibilities where the litigation management and cost policies need to be applied. The legal management plan has been expanded beyond DEAR part 970, which contains the M&O contract provisions, to make it clear that this requirement applies to some non-M&O type contracts.

Section 719.6(a) Are There Any Types of Legal Matters Not Included in the Coverage of This Part?

Comment: Seven commenters recommended against extending the coverage of the legal management requirements to matters handled by insurance carriers providing third party administrator (TPA) services or retrospective policies, as provided in § 719.6(a) of the NOPR. Some of the commenters noted that the purpose of using TPA services is to purchase the expertise and administrative capabilities of insurance companies and that part of the expertise package provided by the insurance carrier is the retention, oversight and direction of an outside law firm with specialized experience and contacts. They also noted that one of the benefits is reduced legal fees because of business volume and the ongoing relationship between the insurance carrier and law firm.

Response: The comments provided insight and experience and are persuasive. Proposed § 719.6 has been revised by deleting the references to matters handled by insurance carriers providing third party administrator and retrospective policy services and by inserting a new subparagraph (c) that excludes routine workers compensation matters.

Section 719.10 What Information Must Be Included in the Legal Management Plan?

Comment: One commenter stated an opinion that the information requirements in this section are too intrusive in the contractor's counsel selection process by dictating that the contractors abide by these criteria as a prerequisite for allowability of its legal counsel costs.

Response: The provisions of this section do not make any costs unallowable. The purpose of this section is to require the contractor to submit a legal management plan with its own individualized list of criteria. The regulation provides a list of criteria or factors that the contractor must consider prior to making its selection of retained legal counsel and that the Department must consider in determining if the costs are reasonable and allowable. No costs are made unallowable merely for failure to address all of the recommended criteria.

Section 719.14 Will the Department Notify the Contractor Concerning the Adequacy or Inadequacy of the Submitted Plan?

Comment: One commenter stated that it was unclear whether the term “deficiencies” as used in § 719.14(a) referred to failure to comply with a requirement in § 719.10 or an objection from the Department concerning the substance of the plan. The commenter noted also that the proposed regulation fails to specify a route for appeal or a remedy for a dispute concerning a deficiency.

Response: The term “deficiencies” in this section refers to the failure of the legal management plan to meet the mandatory requirements of § 719.10 and this clarification has been added to § 719.14(a). Section 719.14(b) has been revised to provide for a letter of appeal to the General Counsel disputing a deficiency determination.

Section 719.17 Are There Any Budgetary Requirements?

Comment: Four commenters expressed concern that prospective budgets would be entirely speculative and that requiring contractors to speculate on budget needs would set them up for criticism in the event the budgeted amount is exceeded. One of these commenters recommended clarifying that only “known or existing matters” are intended to be included in the prospective budget.

Response: The prospective budget requirement is intended to serve only as an information device for the Department and the contractor, so that both have a better understanding of the contractor’s awareness of its legal staffing needs and the contractor’s ability to estimate based on its experience. Clarifying language has been added in paragraph § 719.17(a) that the annual budget requirement covers only pending matters, and in § 719.17(c) to state that the purpose of the budget requirement is primarily informational and that the Department recognizes that

there will be departures from the budget beyond the control of the contractor.

Comment: One commenter stated that the budget requirements of § 719.17(b) duplicate the staffing and resource plan requirements of § 719.16.

Response: No budgetary information is required in § 719.16. As defined in § 719.2, staffing and resource plan means a statement prepared by retained legal counsel describing plans for managing a significant matter. The budget described in § 719.17 is prepared by the contractor.

Section 719.20 When Must an Engagement Letter Be Used?

Comment: One commenter sought clarification whether the term “matters” meant particular, individual matters or all matters handled by an individual law firm.

Response: Section 719.20 has been modified by adding the phrase “for a particular matter” to make clear that as used in this section, the term “matter” refers to particular, individual matters handled by a law firm and not to a cumulative amount of matters handled by a particular firm.

Section 719.21 What Are the Required Elements of an Engagement Letter?

Comment: One commenter recommended a modification to allow both retained legal counsel and contractor counsel the flexibility to communicate material concerning the case in a manner that serves the Department’s needs without creating risk of waiving any attorney-client confidentiality privilege.

Response: Section 719.21(b)(2) has been modified by adding language that an exemption for specific records may be obtained where contractors can demonstrate that a particular situation may provide grounds for a waiver. This change is intended to make clear that in instances when the contractor has demonstrated that production of specific documents may provide grounds for waiver of the attorney-client privilege, that material may be withheld.

Section 719.31 How Does the Department Determine Whether Fees Are Reasonable?

Comment: One commenter inquired whether the phrase “lowest reasonably achievable fees or rates” as used in 719.31(a) is intended to include consideration of the terms of engagement, § 719.21, and reimbursement guidance, subpart D, in the proposed rule.

Response: The phrase “lowest reasonably achievable fees or rates” is to

be applied with due consideration for the individual circumstances of each situation, including the overall terms of engagement between the contractor and retained legal counsel, and the guidance found throughout part 719.

Comment: Another commenter asked how the Department will treat legal services obtained by a contractor which do not meet all the criteria in § 719.31 and whether the Department will pay at the rate it deems reasonable and allow the contractor to pay the difference if the contractor elects to use an attorney whose rates are determined to not be the lowest price available.

Response: The Department anticipates that there will be circumstances which do not meet all the criteria in this section. The Department will reimburse the amount that it determines to be allowable and reasonable. It is not the intent of this regulation to select legal representation for contractors, to limit the choice of legal representation available to the contractor, or prevent the contractor from engaging any particular attorney or firm. The purpose of this regulation is to outline the Department’s approach to evaluating the reasonableness of costs associated with legal representation for purposes of determining legal cost reimbursement. Contractors may elect to deviate from the regulation but they run the substantial risk that the Department will determine costs that do not conform to the regulation to be unreasonable. Contractors are responsible alone for costs that are deemed unreasonable under part 719. This approach allows the contractor, for example, to pay the difference if the contractor wishes to retain the services of an attorney whose fees are higher than that deemed reasonable under part 719.

Section 719.35 What Categories of Costs Require Advance Approval?

Comment: Five commenters objected to requiring advance approval from Department counsel for attendance by more than one person at a deposition, court hearing, interview or meeting. One of these commenters also enquired whether this requirement is meant to include impromptu meetings or routine meetings between partners and associates. Two of these commenters also noted that quick turn around times often occur with litigation and recommended more flexibility in the system, such as a presumption of approval after a certain waiting time, exception process or pre-approval mechanism.

Response: These concerns have been addressed by adding language to § 719.35 to permit the contractor to

submit a justification following the incurrence of the cost. The Department has not changed the language in § 719.35(d) covering attendance by more than one person at a deposition, court hearing, interview or meeting. If the contractor decides to have more than one person attend a meeting, justification for attendance of more than one person may be provided following the incurrence of that cost. This is the procedure the contractor should follow for impromptu and routine meetings.

Comment: Two commenters stated that the proposed requirement for advance approval for costs for items listed in this section creates cost allowability rules which are not consistent with current FAR cost allowability rules since the Federal Acquisition Regulation (FAR) does not contain specific advance approval requirements.

Response: This section of the final rule effectively puts contractors on advance notice that the contractors must demonstrate the reasonableness of certain listed costs. Contracting officers can require the contractor to demonstrate the reasonableness of a cost by questioning the cost. The Federal Acquisition Regulation already states, at 48 CFR (FAR) 31.201–3, that no presumption of reasonableness is attached to the incurrence of costs by a contractor. In accordance with 48 CFR (FAR) 31.201–3, the contracting officer shifts the burden of proof to the contractor when the reasonableness of the cost is questioned. Section 719.35 automatically invokes this process for the listed costs.

Section 719.37 Are There Any Special Procedures or Requirements Regarding Subcontractor Legal Costs?

Comment: One commenter viewed § 719.37(b) as subjecting subcontractors to the same set of requirements imposed on prime contractors while two commenters stated that this proposal is unworkable and unmanageable.

Response: The Department agrees that, as proposed, this section could be read in a manner that would make it somewhat unworkable and this section has been revised to require the contractor submit to Department counsel information copies of subcontractor invoices for legal services.

Section 719.39 What Happens When More Than One Contractor Is a Party to a Matter?

Comment: Two commenters stated that it is unreasonable to expect contractors and their retained legal counsel to waive ethical conflict issues

which are created by the lead lawyer requirement.

Response: The Department has already provided for exceptions for situations where an ethical conflict arises, including an exception for situations where there are conflicts with the standards of professional conduct (§ 719.39(a)), and an opportunity for the contractor to demonstrate the reasonableness of its decision (§ 719.39(b)).

Comment: Another commenter recommended the section be modified to give Department counsel the authority to approve joint or lead counsel recommended by the parties and to designate directly only in those situations where recommended counsel is unacceptable or the contractors cannot agree on a choice.

Response: It is not the intent of the regulation to circumscribe the contractors' choice of counsel but to eliminate duplicative billings for identical legal services, particularly where the issues involved are similar for the contractors involved. The language in this section has been modified to permit contractors to propose their preference for the attorney or law firm to serve as lead counsel.

Comment: Two of the commenters interpreted this provision as making expressly unallowable legal costs incurred by a contractor who hires different counsel than the designated lead counsel.

Response: As stated earlier in this rulemaking, every situation will be reviewed on an individual basis. Reasonable costs will be reimbursed where the contractor can demonstrate the reasonableness of its decision to engage additional counsel based on contractor interests that diverge from those represented by lead counsel.

III. Procedural Requirements

A. Review Under Executive Order 12866

Today's regulatory action has been determined not to be a "significant regulatory action" under Executive Order 12866, "Regulatory Planning and Review," (58 FR 51735, October 4, 1993). Accordingly, this final rule was not subject to review under that Executive Order by the Office of Information and Regulatory Affairs of the Office of Management and Budget (OMB).

B. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, "Civil Justice Reform," 61 FR 4729 (February 7, 1996),

imposes on Executive agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; (3) provide a clear legal standard for affected conduct rather than a general standard; and (4) promote simplification and burden reduction. With regard to the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. The Department has completed the required review and determined that, to the extent permitted by law, the regulations meet the relevant standards of Executive Order 12988.

C. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*, requires that a federal agency prepare a regulatory flexibility analysis for any rule for which the agency is required to publish a general notice of proposed rulemaking. Such an analysis is not required, however, if the agency certifies that the rule would not, if promulgated, have a significant economic impact on a substantial number of small entities (5 U.S.C. 605(b)).

The Department certifies that today's final rule creating a new part 10 CFR part 719 does not have a significant economic impact on a substantial number of small entities. This rule only restates and clarifies the Department's restrictions on the reimbursement of contractor legal costs. The rule affects only potential claims for reimbursement of costs. The rule does not directly regulate small entities.

D. Review Under the Paperwork Reduction Act

The final rule requires each covered contractor to submit a legal management

plan that describes the contractor's practices for managing legal costs and matters for which it procures the services of retained legal counsel. This collection of information is required for the Department to determine whether to approve reimbursement of contractors' litigation and other legal expenses.

The Department submitted to the Office of Management and Budget (OMB) this collection of information for review and approval under the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.* The Office of Management and Budget has not yet approved the collection of information in this rule. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection has been reviewed and assigned a control number by OMB.

E. Review Under the National Environmental Policy Act

The Department has concluded that promulgation of this final rule falls into a class of actions which would not individually or cumulatively have significant impact on the human environment, as determined by Department of Energy regulations (10 CFR part 1021, subpart D) implementing the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*). Specifically, this final rule is categorically excluded from NEPA review because the amendments to the DEAR would be strictly procedural (categorical exclusion A6). Therefore, this final rule does not require an environmental impact statement or environmental assessment pursuant to NEPA.

F. Review Under Executive Order 13132

Executive Order 13132 (64 FR 43255, August 10, 1999) requires agencies to develop an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have "federalism implications." As defined in the Executive Order, policies that have federalism implications include regulations that have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. The Department has examined this final rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various

levels of government. No further action is required by Executive Order 13132.

G. Review Under the Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4) generally requires a Federal agency to perform a detailed assessment of costs and benefits of any rule imposing a Federal Mandate with costs to State, local or tribal governments, or to the private sector, of \$100 million or more. This rulemaking affects private sector entities, and the impact is less than \$100 million.

H. Review Under the Treasury and General Government Appropriations Act, 1999

Section 654 of the Treasury and General Government Appropriations Act, 1999 (Pub. L. 105-277) requires federal agencies to issue a Family Policymaking Assessment for any proposed rule or policy that may affect family well-being. Today's rule does not impact on the autonomy or integrity of the family institution. Accordingly, the Department has concluded that it is not necessary to prepare a Family Policymaking Statement.

I. Congressional Notification

As required by 5 U.S.C. 801, the Department will report to Congress promulgation of this final rule prior to its effective date. The report will state that it has been determined that the rule is not a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects

10 CFR Part 719

Government contracts, Legal services, Reporting and recordkeeping requirements.

48 CFR Parts 931 and 970

Government procurement.

Issued in Washington, DC on January 3, 2001.

T.J. Glauthier,

Deputy Secretary, Department of Energy.

For the reasons set out in the preamble, Chapter III of title 10 and Chapter 9 of title 48 of the Code of Federal Regulations is amended as set forth below:

1. 10 CFR Part 719 is added to read as follows:

PART 719—CONTRACTOR LEGAL MANAGEMENT REQUIREMENTS

Subpart A—General Provisions

719.1 What is the purpose of this part?

719.2 What are the definitions of terms used in this part?

719.3 What contracts are covered by this part?

719.4 Are law firms that are retained by the Department covered by this part?

719.5 What contracts are not covered by this part?

719.6 Are there any types of legal matters not included in the coverage of this part?

719.7 Is there a procedure for exceptions or deviations from this part?

Subpart B—Legal Management Plan

719.10 What information must be included in the legal management plan?

719.11 Who must submit a legal management plan?

719.12 When must the plan be submitted?

719.13 Who at the Department must receive and review the plan?

719.14 Will the Department notify the contractor concerning the adequacy or inadequacy of the submitted plan?

719.15 What are the requirements for a staffing and resource plan?

719.16 When must the staffing and resource plan be submitted?

719.17 Are there any budgetary requirements?

Subpart C—Engagement Letter

719.20 When must an engagement letter be used?

719.21 What are the required elements of an engagement letter?

Subpart D—Reimbursement of Costs Subject to This Part

719.30 Is there a standard for determining cost reasonableness?

719.31 How does the Department determine whether fees are reasonable?

719.32 For what costs is the contractor, or Department retained counsel, limited to reimbursement of actual costs only?

719.33 What categories of costs are unallowable?

719.34 What is the treatment for travel costs?

719.35 What categories of costs require advance approval?

719.36 Who at the Department must give advance approval?

719.37 Are there any special procedures or requirements regarding subcontractor legal costs?

719.38 Are costs covered by this part subject to audit?

719.39 What happens when more than one contractor is a party to the matter?

Subpart E—Department Counsel Requirements

719.40 What is the role of Department counsel as a contracting officer's representative?

719.41 What information must be forwarded to the General Counsel's Office concerning contractor submissions to Department counsel under this part?

719.42 What types of field actions must be coordinated with Headquarters?

Appendix to Part 719—Guidance for Legal Resource Management

Authority: 42 U.S.C. 2201, 5814, 5815 and 7101, *et seq.*; 50 U.S.C. 2401, *et seq.*

Subpart A—General Provisions

§ 719.1 What is the purpose of this part?

This part is intended to facilitate control of Department and contractor legal costs, including litigation costs. The contractor is required to develop a procedure for retaining legal counsel, and to document the analysis used to decide when, where and who will be engaged as outside counsel and the terms of the engagement. Payment of law firm invoices and reimbursement of contractor legal costs under covered contracts is subject to compliance with this part.

§ 719.2 What are the definitions of terms used in this part?

For purposes of this part:

Alternative dispute resolution includes processes such as mediation, neutral evaluation, mini-trials and arbitration.

Contractor means any person or entity with whom the Department contracts for the acquisition of goods or services.

Covered contracts means those contracts described in § 719.3.

Department means the Department of Energy, including the National Nuclear Security Administration.

Department counsel means the individual in the field office, or Headquarter's office, designated as the contracting officer's representative and point of contact for a contractor or Department retained legal counsel, for purposes of this part only, for submission and approval of the legal management plan, advance approval of certain costs, and submission of a staffing and resource plan, as addressed in this part.

Legal costs include, but are not limited to, administrative expenses associated with the provision of legal services by retained legal counsel; the costs of legal services provided by retained legal counsel; the costs of the services of accountants, consultants, or others retained by the contractor or by retained legal counsel to assist retained legal counsel; and any similar costs incurred by or in connection with the services of retained legal counsel.

Legal management plan means a statement describing the contractor's practices for managing legal costs and matters for which it procures the services of retained legal counsel.

Retained legal counsel means members of the bar working in the private sector, either individually or in law firms, who are retained by a contractor or the Department to provide legal services.

Significant matters means legal matters, including litigation, involving

significant issues as determined by Department counsel, and any legal matter where the amount of any legal costs, over the life of the matter, is expected to exceed \$100,000.

Staffing and resource plan means a statement prepared by retained legal counsel describing plans for managing a significant matter.

§ 719.3 What contracts are covered by this part?

(a) This part covers cost reimbursement contracts:

(1) For an amount exceeding \$100,000,000, and

(2) Involving work performed at the facilities owned or leased by the Department.

(b) This part covers contracts otherwise not covered by paragraph 3(a) of this section containing a specialized clause requiring compliance with this part.

(c) This part also covers Department contracts with retained legal counsel where the legal costs are expected to exceed \$100,000.

§ 719.4 Are law firms that are retained by the Department covered by this part?

Retained legal counsel under fixed rate or other type of contract with the Department itself to provide legal services must comply with the following where the legal costs over the life of the matter for which counsel has been retained are expected to exceed \$100,000:

(a) Requirements related to staffing and resource plans in subpart B of this part.

(b) Engagement letter requirements if legal work is contracted out, and

(c) Cost guidelines in subpart D of this part.

§ 719.5 What contracts are not covered by this part?

This part does not cover:

(a) Fixed price contracts;

(b) Cost reimbursement contracts for an amount less than \$100,000,000; or

(c) Contracts for an amount exceeding \$100,000,000 involving work not performed at a government owned or leased site.

§ 719.6 Are there any types of legal matters not included in the coverage of this part?

Matters not covered by this part include:

(a) Matters handled by counsel retained by an insurance carrier;

(b) Routine intellectual property law support services;

(c) Routine workers and unemployment compensation matters and labor arbitrations; and

(d) Routine matters handled by counsel retained through a GSA supply schedule.

§ 719.7 Is there a procedure for exceptions or deviations from this part?

(a) Requests for exceptions or deviations from this part by contractors must be made in writing to Department counsel and approved by the General Counsel. If an alternate procedure is proposed for compliance with an individual requirement in this part, that procedure must be included in the written request by the contractor.

(b) The General Counsel may authorize exceptions based on a recommendation of Department counsel. The General Counsel may also establish exceptions to this part based on current field office and contractor practices which satisfy the purpose of these requirements.

(c) Exceptions to this part which are also a deviation from the cost principles (see subpart D of this part) must be approved by the Procurement Executive. See 48 CFR (FAR) 31.101. Written requests from contractors for a deviation to a cost principle must be submitted to the contracting officer, with a copy provided to Department counsel.

Subpart B—Legal Management Plan

§ 719.10 What information must be included in the legal management plan?

The legal management plan must include the following items:

(a) A description of the legal matters that may necessitate handling by retained legal counsel.

(b) A discussion of the factors the contractor must consider in determining whether to handle a particular matter utilizing retained legal counsel.

(c) An outline of the factors the contractor must consider in selecting retained legal counsel, including:

(1) Competition;

(2) Past performance and proficiency shown by previously retained counsel;

(3) Particular expertise in a specific area of the law;

(4) Familiarity with the Department's activity at the particular site and the prevalent issues associated with facility history and current operations;

(5) Location of retained legal counsel relative to:

(i) The site involved in the matter,

(ii) Any forum in which the matter will be processed, and

(iii) Where a significant portion of the work will be performed;

(6) Experience as an advocate in alternative dispute resolution procedures such as mediation;

(7) Actual or potential conflicts of interest; and

(8) The means and rate of compensation (e.g., hourly billing, fixed fee, blended fees, etc.).

(d) A description of:

(1) The system that the contractor will use to review each case to determine whether and when alternative dispute resolution is appropriate;

(2) The role of in house counsel in cost management;

(3) The contractor's process for review and approval of invoices from outside law firms or consultants;

(4) The contractor's strategy for interaction with, and supervision of, retained legal counsel;

(5) How appropriate interaction with the contracting officer and Department counsel will be ensured; and,

(6) The contractor's corporate approach to legal decision making.

§ 719.11 Who must submit a legal management plan?

Contractors identified under paragraphs (a) and (b) in § 719.3 must submit a legal management plan.

§ 719.12 When must the plan be submitted?

Contractors identified under paragraphs (a) and (b) in § 719.3 must submit a legal management plan within 60 days following the execution of a contract with the Department.

§ 719.13 Who at the Department must receive and review the plan?

The contractors identified under paragraphs (a) and (b) in § 719.3 must file a legal management plan with Department counsel.

§ 719.14 Will the Department notify the contractor concerning the adequacy or inadequacy of the submitted plan?

(a) The Department will notify the contractor within 30 days of the contractor's submission of the plan of any deficiencies relating to requirements in § 719.10.

(b) The contractor must either correct identified deficiencies within 30 days of notice of the deficiency or file a letter with the General Counsel disputing the determination of a deficiency.

§ 719.15 What are the requirements for a staffing and resource plan?

(a) For significant matters, the contractor must require retained legal counsel providing legal services to prepare a staffing and resource plan as provided in this section. The contractor must then forward the staffing and resource plan to Department counsel. Department retained counsel subject to this part must prepare a staffing and resource plan and forward it to Department counsel.

(b) A staffing and resource plan is a plan describing:

(1) Major phases likely to be involved in the handling of the matter;

(2) Timing and sequence of such phases;

(3) Projected cost for each phase of the representation; and

(4) Numbers and mix of resources, when applicable, that the retained legal counsel intends to devote to the representation.

(c) For significant matters in litigation, in addition to the generalized annual budget required by § 719.17 a staffing and resource plan must include a budget, broken down by phases, including at a minimum:

(1) Matter assessment, development and administration;

(2) Pretrial pleadings and motions;

(3) Discovery;

(4) Trial preparation and trial; and

(5) Appeal.

§ 719.16 When must the staffing and resource plan be submitted?

(a) For significant matters in litigation, the contractor or Department retained counsel must submit the staffing and resource within 30 days after the filing of an answer or a dispositive motion in lieu of an answer, or 30 days after a determination that the cost is expected to exceed \$100,000.

(b) For significant legal services matters, the contractor or Department retained counsel must submit the staffing and resource plan within 30 days following execution of an engagement letter.

(c) Contractors and Department retained counsel must submit updates to staffing and resource plans annually or sooner if significant changes occur in the matter.

(d) When it is unclear whether a matter is significant, the contractor must consult with Department counsel on the question.

(e) The purpose of the staffing and resource plan is primarily informational, but Department counsel may state objections within 30 days of the submission of a staffing and resource plan. When an objection is stated, the contractor has 30 days to satisfy the objection or dispute the objection in a letter to the General Counsel.

§ 719.17 Are there any budgetary requirements?

(a) Contractors required to submit a legal management plan must also submit an annual legal budget covering then pending matters to Department counsel.

(b) The annual legal budget must include cost projections for known or

existing matters for which reimbursable legal costs are expected to exceed \$100,000, at a level of detail reflective of the types of billable activities and the stage of each such matter.

(c) For informational purposes for both the contractor and Department counsel, the contractor must report on its success on staying within budget at the conclusion of the period covered by each annual legal budget. The Department recognizes, however, that there will be departures from the annual budget beyond the control of the contractor.

Subpart C—Engagement Letters

§ 719.20 When must an engagement letter be used?

Contractors must submit an engagement letter to retained legal counsel expected to provide \$25,000 or more in legal services for a particular matter and submit a copy of correspondence relating to § 719.21, including correspondence from retained legal counsel addressing any of the issues under § 719.21, to Department counsel.

§ 719.21 What are the required elements of an engagement letter?

(a) The engagement letter must require retained legal counsel to assist the contractor in complying with this part and any supplemental guidance distributed under this part.

(b) At a minimum, the engagement letter must include the following:

(1) A process for review and documented approval of all billing by a contractor representative, including the timing and scope of billing reviews.

(2) A statement that provision of records to the Government is not intended to constitute a waiver of any applicable legal privilege, protection, or immunity with respect to disclosure of these records to third parties. (An exemption for specific records may be obtained where contractors can demonstrate that a particular situation may provide grounds for a waiver.)

(3) A requirement that the contractor, the Department, and the General Accounting Office, have the right upon request, at reasonable times and locations, to inspect, copy, and audit all records documenting billable fees and costs.

(4) A statement that all records must be retained for a period of three (3) years after the final payment.

(c) The contractor must obtain the following information from retained counsel:

(1) Identification of all attorneys and staff who are assigned to the matter and

the rate and basis of their compensation (i.e., hourly rates, fixed fees, contingency arrangement) and a process for obtaining approval of temporary adjustments in staffing levels or identified attorneys.

(2) An initial assessment of the matter, along with a commitment to provide updates as necessary.

(3) A description of billing procedures, including frequency of billing and billing statement format.

(d) The contractor must obtain retained counsel's agreement to the following:

(1) That in significant matters a staffing and resource plan for the conduct of the matter must be submitted by the retained legal counsel to the contractor in accordance with the requirements of §§ 719.15 and 719.16.

(2) That alternative dispute resolution must be considered at as early a stage as possible where litigation is involved.

(3) That retained counsel must comply with the cost guidelines in subpart D of this part.

(4) That retained counsel must provide a certification concerning the costs submitted for reimbursement that is consistent with the certification in the Attachment to Appendix A to this part.

(5) That professional conflicts of interest issues must be identified and addressed promptly.

(e) Additional requirements may be included in an engagement letter based on the needs of the contractor or the office requiring the Department retained counsel.

Subpart D—Reimbursement of Costs Subject to This Part

§ 719.30 Is there a standard for determining cost reasonableness?

The standard for cost reasonableness determinations, one of the criteria for an allowability determination, is contained in the Federal Acquisition Regulation (FAR), at 48 CFR 31.201–3.

§ 719.31 How does the Department determine whether fees are reasonable?

In determining whether fees or rates charged by retained legal counsel are reasonable, the Department may consider:

(a) Whether the lowest reasonably achievable fees or rates (including any currently available or negotiable discounts) were obtained from retained legal counsel;

(b) Whether lower rates from other firms providing comparable services were available;

(c) Whether alternative rate structures such as flat, contingent, and other innovative proposals, were considered;

(d) The complexity of the legal matter and the expertise of the law firm in this area; and

(e) The factors listed in § 719.10(c).

§ 719.32 For what costs is the contractor, or Department retained counsel, limited to reimbursement of actual costs only?

All costs determined to be allowable are reimbursable for actual costs only, with no overhead or surcharge adjustments.

§ 719.33 What categories of costs are unallowable?

(a) Specific categories of unallowable costs are contained in the cost principles at 48 CFR (FAR) part 31 and 48 CFR (DEAR) part 931 and 970.31. See also 41 U.S.C. 256(e).

(b) The Department does not consider for reimbursement any costs incurred for entertainment or alcoholic beverages. See 48 CFR (FAR) 31.205–14 and 31.205–51 and 41 U.S.C. 256(e).

(c) Costs that are customarily or already included in billed hourly rates are not separately reimbursable.

(d) Interest charges that a contractor incurs on any outstanding (unpaid) bills from retained legal counsel are not reimbursable.

§ 719.34 What is the treatment for travel costs?

Travel and related expenses must at a minimum comply with the restrictions set forth in 48 CFR (FAR) 31.205–46, or 48 CFR (DEAR) 970.3102–05–46, as appropriate, to be reimbursable.

§ 719.35 What categories of costs require advance approval?

Costs for the following require specific justification or advance written approval from Department counsel to be considered for reimbursement:

(a) Computers or general application software, or non-routine computerized databases specifically created for a particular matter;

(b) Charges for materials or non-attorney services exceeding \$5,000;

(c) Secretarial and support services, word processing, or temporary support personnel;

(d) Attendance by more than one person at a deposition, court hearing, interview or meeting;

(e) Expert witnesses and consultants;

(f) Trade publications, books, treatises, background materials, and other similar documents;

(g) Professional or educational seminars and conferences;

(h) Preparation of bills or time spent responding to questions about bills from either the Department or the contractor;

(i) Food and beverages when the attorney or consultant is not on travel

status and away from the home office; and

(j) Pro hac vice admissions.

§ 719.36 Who at the Department must give advance approval?

If advance approval is required under this part, the advance approval must be obtained from the Department counsel unless the Department counsel indicates that approval of a request may only be given by the contracting officer.

§ 719.37 Are there any special procedures or requirements regarding subcontractor legal costs?

(a) The contractor must have a monitoring system for subcontractor legal matters likely to reach \$100,000 over the life of the matter. The purpose of this system is to enable the contractor to perform the same type of analysis and review of subcontractor legal management practices that the Department can perform of the contractor's legal management practices. The monitoring is intended to enable the contractor to keep the Department informed about significant subcontractor legal matters, including significant matters in litigation. The burden is on the prime contractor to be responsive to questions raised by the Department concerning significant subcontractor legal matters.

(b) Contractors must submit information copies of subcontractor invoices for legal services to Department counsel.

§ 719.38 Are costs covered by this part subject to audit?

All costs covered by this part are subject to audit by the Department, its designated representative or the General Accounting Office. See § 719.21.

§ 719.39 What happens when more than one contractor is a party to a matter?

(a) If more than one contractor is a party in a particular matter and the issues involved are similar for all the contractors, a single legal counsel designated by the General Counsel must either represent all of the contractors or serve as lead counsel, when the rights of the contractors and the government can be effectively represented by a single legal counsel, consistent with the standards for professional conduct applicable in the particular matter. Contractors may propose to the General Counsel their preference for the individual or law firm to perform as the lead counsel for a particular matter.

(b) If a contractor, having been afforded an opportunity to present its views concerning joint or lead representation, does not acquiesce in the designation of one retained legal

counsel to represent a number of contractors, or serve as lead counsel, then the legal costs of such contractor are not reimbursable by the Department, unless the contractor persuasively shows that it was reasonable for the contractor to incur such expenses.

Subpart E—Department Counsel Requirements

§ 719.40 What is the role of Department counsel as a contracting officer's representative?

(a) The individual selected as Department counsel for a contract subject to the requirements of this part must be approved by the contracting officer and the appropriate Chief Counsel, or General Counsel if at Headquarters. The Department counsel must receive written delegated authority from the contracting officer to serve as the contracting officer's representative for legal matters. The contractor must receive a copy of this delegation of authority.

(b) Actions by Department counsel may not exceed the responsibilities and limitations as delegated by the contracting officer. Delegated contracting officer representative authority may not be construed to include the authority to execute or to agree to any modification of the contract nor to attempt to resolve any contract dispute concerning a question of fact arising under the contract.

§ 719.41 What information must be forwarded to the General Counsel's Office concerning contractor submissions to Department counsel under this part?

Department counsel must submit through the General Counsel reporting system, the approved costs and status updates for all matters involving retained counsel, including but not limited to contractor litigation. The reports are to be received by the 15th day of the month following the end of each quarter of the fiscal year.

§ 719.42 What types of field actions must be coordinated with Headquarters?

(a) Requests from contractors for exception from this entire part must be coordinated with Headquarters.

(b) Requests from contractors for approval to initiate or defend litigation, or to appeal from adverse decisions, where legal issues of first impression, sensitive issues, issues of significance to the Department nationwide or issues of broad applicability to the Government that might adversely impact its operations are involved must be coordinated by Department counsel with the Deputy General Counsel for Litigation or his/her designee.

(c) Department field counsel must inform the General Counsel of any significant matter, as defined in this part, and must coordinate any action involving a significant matter with the General Counsel, or his/her designee, as directed by the General Counsel or his/her designee.

Appendix to Part 719—Guidance for Legal Resource Management

Management and Administration of Outside Legal Services

- 1.0 Initiation of Litigation
- 2.0 Defense of Litigation
- 2.1 Disapproval of Defensive Litigation
- 3.0 Notice to the Department of Significant Matters and Litigation
- 4.0 Alternative Dispute Resolution
- 5.0 Cost Allowability Issues
- 5.1 Underlying Cause for Incurrence of Costs
- 5.2 Fees and Other Charges
- 6.0 Role of Department Counsel as the Contracting Officer's Representative
- 7.0 Future Amendments to Guidance Attachment—Contractor Litigation and Legal Costs, Model Bill Certification and Format

Management and Administration of Outside Legal Services

This guidance is intended to assist contractors and the Department's contracting officers and counsel in managing the costs of outside legal services. This guidance is also intended to assist retained legal counsel who provide services to the Department or to the Department's contractors.

1.0 Initiation of Litigation

(A) The Insurance—Litigation and Claims clause (48 CFR (DEAR) 970.5228–1) in the Department's facility management contracts provides that the contractor may not initiate litigation, including appeals from adverse decisions, without the prior authorization or approval of Department counsel acting in his/her capacity as the Department's contracting officer representative. The following are the minimum informational requirements for requests for authorization or approval under that clause:

- (1) Identification of the proposed parties;
- (2) The nature of the proposed action;
- (3) Relief sought;
- (4) Venue;
- (5) Proposed representation and reason for selection;
- (6) An analysis of the issues and the likelihood of success, and any time limitation associated with the requested approval;
- (7) The estimated costs associated with the proposed action, including whether outside counsel has agreed to a contingent fee arrangement;
- (8) Whether, for any reason, the contractor will assume any part of the costs of the action;
- (9) A description of any attempts to resolve the issues that would be the subject of the litigation, such as through mediation or other means of alternative dispute resolution; and
- (10) A discussion of why initiating litigation would prove beneficial to the contractor and to the Government.

(B) Department counsel should advise the contracting officer concerning each request and must provide assistance to the contracting officer in communicating the Department's decision to the contractor.

2.0 Defense of Litigation

(A) In accordance with the Insurance-Litigation and Claims clause, the contractor must immediately notify Department counsel, acting in his/her capacity as contracting officer representative, of the initiation of litigation against the contractor. Department counsel will advise the contractor as to:

- (1) Whether the defense of the litigation will be either approved or disapproved or approval deferred and any conditions to which approval is subject;
 - (2) Whether the contractor must authorize the Government to defend the action;
 - (3) Whether the Government will take charge of the action; or
 - (4) Whether the Government must receive an assignment of the contractor's rights.
- (B) When defensive litigation is approved at a later stage or at the conclusion of the matter, reimbursement can be made for only those expenses which would have been reimbursable as allowable costs if the Department had originally approved the defense of the litigation.

2.1 Disapproval of Defensive Litigation

If the Department disapproves in advance the costs of defense of the litigation, the contractor will be notified of the disapproval and that contract funds may not be used to fund the defense of the litigation. The contractor will also be informed if the Department changes its position. Contractor compliance with these policies and procedures does not itself obligate the Department to reimburse litigation costs or judgment costs when Departmental approval of the litigation cost has been denied or deferred.

3.0 Notice to the Department of Significant Matters and Litigation

The contractor's procedures under its Legal Management Plan should include provisions for earliest possible notification to the Department of the likely initiation of any "significant matters" involving class actions, radiation or toxic substance exposure, problems concerning the safeguarding of classified information, and any other matters involving issues which the contractor has reason to believe are of general importance to the Department or the government as a whole.

4.0 Alternative Dispute Resolution

Contractors are expected to evaluate all matters for appropriate alternative dispute resolution (ADR) at various stages of an issue in dispute, e.g., before a case is filed, pre-discovery, after initial discovery and pre-trial. This evaluation should be done in coordination with the Department's ADR liaison if one has been established or appointed or the Department counsel if an ADR liaison has not been appointed. Contractors, contractor counsel, and Department counsel are also encouraged to consult with the Department's Director of the

Office of Dispute Resolution. The Department anticipates that mediation will be the principal and most common method of alternative dispute resolution. In exceptional circumstances, arbitration may be appropriate. However, agreement to arbitrate should generally be consistent with the Administrative Dispute Resolution Act (incorporated in part at 5 U.S.C. 571, *et seq.*) and Department guidance issued under that Act. When a decision to arbitrate is made, a statement fixing the maximum award amount should be agreed to in advance by the participants.

5.0 Cost Allowability Issues

A determination of cost reasonableness may depend on a variety of considerations and circumstances. In accordance with 48 CFR (FAR) 31.201–3, no presumption of reasonableness is attached to the incurrence of costs by a contractor. 10 CFR part 719 and this Appendix provide contractors guidelines for incurring legal costs to which adherence should result in a determination of allowability if the cost is otherwise allowable under the contract.

5.1 Underlying Cause for Incurrence of Costs

(A) While 10 CFR part 719 provides procedures for incurring legal costs, the determination of the reason for the incurrence of the legal costs, *e.g.*, liability, fault or avoidability, is a separate determination. This latter determination may involve, for example, a possible finding of willful misconduct or lack of good faith by contractor management in the case of third party liability, or a finding of violation of a statute or regulation by the contractor in a governmental proceeding. The reason for the contractor incurring costs may be determinative of the allowability of the contractor's legal costs. For example, legal costs incurred by a contractor in defending actions brought by governmental agency may be covered by the Major Fraud Act, 41 U.S.C. 256(k), implemented as a cost principle at 48 CFR (FAR) 31.205–47. In such cases, the statute may restrict the Department's authority to reimburse legal costs incurred by the contractor regardless of the outcome of the action.

(B) In some cases, the final determination of allowability of legal costs cannot be made until a matter is fully resolved. This is particularly true in the case of legal defense costs covered by the restrictions in the Major Fraud Act and is also a common problem in cases covered by various whistleblower

statutes and regulations. In certain circumstances, contract and cost principle language may permit conditional reimbursement of costs pending the outcome of the legal matter. Whether the Department makes conditional reimbursements or withholds any payment pending the outcome, legal costs ultimately reimbursed by the Department must satisfy the standards of cost reasonableness.

5.2 Fees and Other Charges

(A) Requests by retained legal counsel that are not in a direct contract with the Department for fee increases should be sent in writing to the contractor, who should review the request for reasonableness. If the contractor determines the request is reasonable, the contractor should seek approval for the request from Department counsel and the contracting officer before it authorizes any increase. Contractors should attempt to lock in rates for partners, associates and paralegals for at least a two-year period.

(B) Costs listed in 10 CFR 719.33(c) are usually incorporated into the rate or fee structure. Consultants or experts hired by retained legal counsel who do not include any overhead or similar charges, such as computer time, in their base rate, must have those charges approved in advance by Department counsel and the contracting officer. Time charged by law students should be scrutinized for its efficiency and have prior authorization.

(C) Travel time may be reimbursed at a full rate for the portion of time during which retained legal counsel actually performs work for which it was retained; any remaining travel time during normal working hours shall be reimbursed at 50 percent, except that in no event is travel time for time during which work was performed for other clients reimbursable. Also, for long distance travel that could be completed by various methods of transportation, *i.e.*, car, train, or plane, only the charge for the overall fastest travel time will be considered reasonable.

(D) For costs associated with the creation and use of computerized databases, contractors and retained legal counsel must ensure that the creation and use of computerized databases is necessary and cost-effective. Potential use of databases originally created by the Department or its contractors for other purposes, but that can be used to assist a contractor or retained legal counsel in connection with a particular matter, should be considered and be coordinated with Department counsel.

6.0 Role of Department Counsel as the Contracting Officer's Representative

(A) An attorney from the field office or from Headquarters will be appointed a contracting officer's representative by the cognizant contracting officer. A contracting officer may designate other Government personnel to act as authorized representatives for functions not involving a change in the scope, price, terms or conditions of the contract. This designation is made in writing and contains specific instructions regarding the extent to which the representatives may take action for the contracting officer, and prohibits the representative from signing contractual documents. The contracting officer is the only person authorized to approve changes in any of the requirements under the contract.

(B) Additional discussion of the authority and limitation of contracting officers can be found at 48 CFR (FAR) 1.602–1, and for contracting officer's representatives at 48 CFR (DEAR) 942.270–1. The clause, Technical Direction, 48 CFR (DEAR) 952.242–70, also discusses the responsibilities and limitations of a contracting officer's representative.

7.0 Future Amendments to Guidance

The Office of the General Counsel may by memorandum provide additional guidance to contractors. These memoranda will serve as guidance for "safe harbor" practices for contractors procuring outside legal services.

Attachment—Contractor Litigation and Legal Costs, Model Bill Certification and Format

1. Certification

Bills or invoices should contain a certification signed by a representative of the retained legal counsel to the effect that:

"Under penalty of law, [the representative] acknowledges the expectation that the bill will be paid by the contractor and that the contractor will be reimbursed by the Federal Government through the U.S. Department of Energy, and, based on personal knowledge and a good faith belief, certifies that the bill is truthful and accurate, and that the services and charges set forth herein comply with the terms of engagement and the policies set forth in the Department of Energy's regulation and guidance on contractor legal management requirements, and that the costs and charges set forth herein are necessary."

2. Model Bill Format

I.—FOR FEES

Date of service	Description of service	Name or initials of attorney	Approved rate	Time charged	Amount (rate × time)

(See Note 1 to this table).

II.—FOR DISBURSEMENTS

Date	Description of disbursement	Amount

(See Note 2 to this table).

Note 1—Description of Service: All fees must be itemized and described in sufficient detail and specificity to reflect the purpose and nature of the work performed (e.g., subject matter researched or discussed; names of participants of calls/meetings; type of documents reviewed).

Note 2—Description of Disbursement: Description should be in sufficient detail to determine that the disbursement expense was in accordance with all applicable Department policies on reimbursement of contractor legal costs and the terms of engagement between the contractor and the retained legal counsel. The date the expense was incurred or disbursed should be listed rather than the date the expense was processed. The following should be itemized: copy charge (i.e., number of pages times a maximum of 10 cents per page); fax charges (date, phone number and actual amount); overnight delivery (date and amount); electronic research (date and amount); extraordinary postage (i.e., bulk or certified mail); court reporters; expert witness fees; filing fees; outside copying or binding charges; temporary help (assuming prior approval).

Note 3—Receipts: Receipts for all expenses equal to or above \$75 must be attached.

2. The authority citation for Part 931 continues to read as follows:

Authority: 42 U.S.C. 7101, *et seq.*; 40 U.S.C. 486(c); 50 U.S.C. 2401, *et seq.*; 42 U.S.C. 2201.

PART 931—COST PRINCIPLES

3. Section 931.205–19 is added to read as follows:

931.205–19 Insurance and Indemnification. (Department coverage-paragraph (h)).

(h) Cost reimbursement contracts involving work performed at facilities owned or leased by the Department for an amount exceeding \$100,000,000 must insert the clause at 48 CFR 970.5228–1, Insurance-Litigation and claims.

4. Section 931.205–33 is added to read as follows:

931.205–33 Professional and consultant service costs. (Department coverage-paragraph (g)).

(g)(1) Reasonable litigation and other legal expenses are allowable when incurred in accordance with 10 CFR part 719, Contractor Legal Management Requirements, if not otherwise made unallowable by law or provisions of the contract.

(2)(A) Cost reimbursement contracts involving work performed at facilities owned or leased by the Department for an amount exceeding \$100,000,000 are covered by this cost principle and 10 CFR part 719.

(B) This cost principle and 10 CFR part 719 are applicable to legal counsel retained by the Department itself for

litigation and other legal services where the legal costs over the life of the matter for which counsel has been retained are expected to exceed \$100,000.

(3) Contractors described in paragraph (g)(2)(A) of this section are required to submit a Legal Management Plan within 60 days of execution of a contract.

PART 970—DOE MANAGEMENT AND OPERATING CONTRACTS

5. The authority citation for Part 970 continues to read as follows:

Authority: Atomic Energy Act of 1954 (42 U.S.C. 2201); Department of Energy Organization Act (42 U.S.C. 7101, *et seq.*); and National Nuclear Security Administration Act (50 U.S.C. 2401, *et seq.*)

6. Section 970.3102–05–33 is added to read as follows:

970.3102–05–33 Professional and consultant service costs. (Department coverage-paragraph (g)).

(g) Section 931.205–33 is applicable to management and operating contracts under this part.

7. Section 970.5228–1 is amended by:
a. revising clause paragraph (e)(2),
b. revising the introductory text of clause paragraph (h),
c. revising clause paragraph (j)(4), and
d. removing clause paragraph (m).
The revisions read as follows:

970.5228–1 Insurance—litigation and claims.

* * * * *

(e) * * *

(2) For liabilities (and reasonable expenses incidental to such liabilities, including litigation costs) to third persons not compensated by insurance or otherwise without regard to and as an exception to the limitation of cost or limitation of funds clause of this contract.

* * * * *

(h) In addition to the cost reimbursement limitations contained in the cost principles at FAR part 31, as supplemented in the DEAR, and notwithstanding any other provision of this contract, the contractor's liabilities to third persons, including employees but excluding costs incidental to workers' compensation actions (and any expenses incidental to such liabilities, including litigation costs, counsel fees, judgments and settlements), shall not be reimbursed if such liabilities were caused by contractor managerial personnel's * * *.

* * * * *

(j) * * *

(4) The term "contractor's managerial personnel" is defined in the Property clause in this contract.

* * * * *

8. Section 970.5244–1 is amended by revising the reference to "paragraphs (b) through (x)" in the last sentence of clause paragraph (a) to read "paragraphs (b) through (y)" and by adding clause paragraph (y) to read as follows:

970.5244–1 Contractor purchasing system.

* * * * *

(y) Legal Services. Contractor purchases of litigation and other legal services are subject to the requirements in 10 CFR part 719 and the requirements of this clause.

[FR Doc. 01–584 Filed 1–17–01; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

10 CFR Parts 1040 and 1042

RIN: 1901–AA87

Nondiscrimination on the Basis of Sex in Education Programs or Activities Receiving Federal Financial Assistance

AGENCY: Department of Energy.

ACTION: Final rule.

SUMMARY: This final rule adds a new part to the Code of Federal Regulations to replace existing Department of Energy (DOE) regulations for the enforcement of Title IX of the Education Amendments of 1972, as amended ("Title IX"). Title IX prohibits recipients of Federal financial assistance from discriminating on the basis of sex in education programs or activities. The provisions of this final rule are the same as a common rule published by the Department of Justice on August 30, 2000, for Federal agencies that did not already have Title IX implementing regulations. DOE adopts the provisions of the common rule in order to promote consistent and adequate enforcement of Title IX.

EFFECTIVE DATE: February 20, 2001.

FOR FURTHER INFORMATION CONTACT: Sharon Wyatt, Paralegal Specialist, Office of Civil Rights and Diversity, Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20285. Telephone: (202) 586–2256.

SUPPLEMENTARY INFORMATION:

I. Background

On June 13, 1980, DOE published a final rule (10 CFR part 1040) to implement various nondiscrimination statutes, including Title IX of the Education Amendments of 1972. 45 FR 40514. DOE's Title IX regulations, which prohibit discrimination on the basis of sex in educational programs or activities operated by recipients of

Federal financial assistance, are found principally in subpart C of 10 CFR part 1040.

On August 30, 2000, 20 Federal departments and agencies published a final common rule to provide for the enforcement of Title IX by participating Federal agencies that had not previously promulgated Title IX implementing regulations ("Title IX common rule"). 65 FR 52858. The Department of Justice coordinated development of the Title IX common rule, consistent with its responsibility under Executive Order 12250 to ensure the consistent and effective implementation of Title IX and other civil rights laws. DOE, as one of four Federal agencies that had already promulgated Title IX regulations, did not join in the common rulemaking.

Upon further consideration, and on the basis of the common notice of final rulemaking, DOE has decided to replace its existing regulations with the provisions of the common rule. DOE's current regulations have not been amended since 1980 and do not reflect intervening developments, including certain Supreme Court decisions, the Civil Rights Restoration Act of 1987 (Public Law 100-259), and various Executive orders. By adopting the common rule, DOE brings its regulations up-to-date and, by adopting the language and form of the Title IX common rule, should make it easier for recipients of DOE financial assistance to comply with Title IX requirements.

II. Overview of the Rule

Subpart A of this final rule sets forth definitions as well as provisions concerning remedial action and affirmative action, required assurances, adoption of grievance procedures, and notification of nondiscrimination policies. The effect of state and other laws and other requirements is also explained. Subpart B addresses the scope or coverage of Title IX, and Subpart C addresses nondiscrimination on the basis of sex in admission and recruitment practices with respect to students.

Subpart D addresses nondiscrimination on the basis of sex in education programs or activities. Specific areas covered in this subpart are housing, access to course offerings, access to schools operated by local education agencies, counseling, financial assistance, employment assistance to students, health and insurance benefits and services, consideration of marital and parental status, and athletics.

Subpart E covers the prohibitions of discrimination on the basis of sex in employment in educational programs or

activities. Specific aspects of employment that are addressed include hiring and employment criteria, recruitment, compensation, job classification and structure, promotion and termination, fringe benefits, consideration of marital or parental status, leave practices, advertising, and preemployment inquiries as to parental and marital status. This subpart also includes a provision to exempt from Title IX coverage employment actions where sex is a bona fide occupational qualification.

Finally, Subpart F contains provisions that reference DOE's list of covered programs and incorporate DOE's procedures for implementation and enforcement of Title IX.

By adopting the provisions of the Title IX common rule in this rule, DOE is not imposing any new substantive requirements, beyond the requirements of Title IX, on recipients of DOE funding.

As shown in the following "cross-walk" table, some of the provisions of new part 1042 (numbered to correspond to the common rule) appear in different order than in the existing regulations in part 1042:

Part 1042	Part 1040 (current regulations)
Subpart A	
1042.100	1040.21
1042.105	1040.23
1042.110	1040.7
1042.115	1040.4
1042.120	1040.4(b)(1)
1042.125	1040.24
1042.130	1040.8
1042.135	1040.5
1042.140	1040.6
Subpart B	
1042.200	1040.22
1042.205	1040.25

1042.550	1040.57
Subpart F	
1042.600	Appendix A
1042.605	1040.46

The only deviation in numbering between part 1042 and the Title IX common rule is in subpart F. Subpart F of the Title IX common rule is titled "Procedures" and contains § _____.600, "Notice of covered programs," that requires each participating agency to publish, within 60 days of the common rule's effective date, a notice of the programs covered by its Title IX regulations, and to periodically republish the notice listing the programs. In addition, most participating agencies have included in subpart F a § _____.605 that incorporates by reference the agencies' procedures for enforcing Title VI of the Civil Rights Act of 1964, as amended (42 U.S.C. 2000d, *et seq.*). DOE already has published a list of covered programs as appendix A to 10 CFR part 1040. Therefore, DOE includes in subpart F, titled "Other Provisions," a § 1042.600, "Covered programs," which simply references the list of covered programs in appendix A to part 1040. DOE has followed other agencies in including in subpart F a § 1042.605, "Enforcement procedures," that incorporates the procedures for enforcing Title VI in subparts G and H of part 1040.

This final rule includes various compliance deadlines included in the Title IX common rule, including deadlines for self-evaluation (§ 1042.110(c)) and initial notification of the recipient's nondiscrimination policy (§ 1042.140(a)(2)). Most DOE recipients already comply with these requirements, and DOE does not intend this rule to require any additional actions by them. DOE notes that the preamble to the final Title IX common rule explains that recipient educational institutions that have conducted a self-evaluation under Title IX need not, as a result of the Title IX common rule, conduct a new self-evaluation. 65 FR 52863.

III. Public Comment

This rule imposes no new substantive requirements on recipients of DOE financial assistance. These revisions to DOE's Title IX regulations only conform DOE's regulations to the Title IX common rule adopted by other Federal agencies and amend the text to reflect changes in the law that have occurred since DOE published its Title IX regulations in 1980. Thus, this final rule is not a significant rule involving equal employment opportunity that must be proposed for public comment under Executive Order 12067, section 1-305. Nor is an opportunity for public comment required by the rulemaking provisions of the Administrative Procedure Act, 5 U.S.C. 553.

Furthermore, the provisions of this final rule were proposed by the Department of Justice and public comment invited for a period of 60 days. See 64 FR 58567 (Oct. 29, 1999). DOJ received a total of 22 comments, five of which were submitted by other Federal agencies. The preamble to the final Title IX common rule contains a summary of the public comments and the participating agencies' responses to those comments. See 65 FR 52860-52864.

In light of the opportunity for public comment provided by the Department of Justice, and DOE's obligation under Executive Order 12250, section 1-402, to promulgate regulations "consistent with the requirements prescribed by the Attorney General," to the extent permitted by law, no purpose would be served by inviting public comment on these regulations.

IV. Procedural Requirements

A. Review Under Executive Order 12866

This final rule has been determined not to be a "significant regulatory action" under Executive Order 12866, "Regulatory Planning and Review," (58 FR 51735, October 4, 1993). Accordingly, this action was not subject to review under that Executive Order by the Office of Information and Regulatory Affairs of the Office of Management and Budget.

B. Review Under Executive Order 12250

This final rule has been reviewed by the Attorney General in accordance with the provisions of Executive Order 12250, "Leadership and Coordination of Nondiscrimination Laws," (3 CFR, 1980 Comp., p. 298).

C. Review Under Executive Order 12067

These regulations were submitted for review by the Equal Employment Opportunity Commission pursuant to

Executive Order 12067, "Providing for Coordination of Federal Equal Employment Opportunity Programs," (3 CFR, 1978 Comp., p. 206).

D. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (Public Law 104-4) generally requires a Federal agency to perform a detailed assessment of costs and benefits of any rule imposing a Federal mandate with costs to State, local, or tribal governments, or to the private sector, of \$100 million or more. These Title IX regulations, which enforce a statutory prohibition on discrimination on the basis of sex, will not result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100 million or more in any one year, nor will they significantly or uniquely affect small governments. No further action is required by the Unfunded Mandates Reform Act of 1995.

E. The Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis for any rule that by law must be proposed for public comment unless the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. DOE is not required by law to propose this financial assistance regulation for public comment. Accordingly, the Regulatory Flexibility Act requirements do not apply to this rulemaking, and no regulatory flexibility analysis has been prepared.

F. Paperwork Reduction Act of 1995

No new information or record keeping requirements are imposed by this rulemaking. Accordingly, no clearance by the Office of Management and Budget is required under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). The information collections in this rule are covered by OMB Control No. 1910-0400.

G. Review Under the National Environmental Policy Act

DOE has concluded that promulgation of this final rule falls into a class of actions that would not individually or cumulatively have a significant impact on the human environment, as determined by DOE's regulations implementing the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*) Specifically, this rule is covered under the Categorical Exclusion in paragraph A5 to subpart D, 10 CFR part 1021, which covers

rulemakings that interpret or amend an existing regulation without changing the environmental effect of the regulation. Accordingly, neither an environmental assessment nor an environmental impact statement is required.

H. Executive Order 13132

These Title IX regulations will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. These Title IX regulations do not subject recipients of Federal funding to any new substantive obligations because all recipients of Federal funding that operate education programs or activities have been bound by Title IX's anti-discrimination provision since 1972. Therefore, in accordance with section 6 of Executive Order 13132, DOE has determined that this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement. No further action is required.

I. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3 of Executive Order 12988, "Civil Justice Reform," 61 FR 4729 (February 7, 1996), imposes on Executive agencies the general duty to eliminate drafting errors and ambiguity; write regulations to minimize litigation; provide a clear legal standard for affected conduct rather than a general standard; and promote simplification and burden reduction. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met. DOE has completed the required review and determined that, to the extent permitted by law, this final rule meets the relevant standards of Executive Order 12988.

J. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress promulgation of this final rule prior to its effective date. The report will state that it has been determined that the rule is not a "major rule" as defined by 5 U.S.C. 804(2).

List of Subjects in 10 CFR Parts 1040 and 1042

Administrative practice and procedure, Civil rights, Colleges and universities, Education, Educational facilities, Educational research, Educational study programs, Equal educational opportunity, Equal

employment opportunity, Grant programs-education, Investigations, Marital status discrimination, Reporting and recordkeeping requirements, Schools, Sex discrimination, Student aid, Women.

Issued in Washington, D.C. on January 2, 2001.

T.J. Glauthier,

Deputy Secretary.

For the reasons stated in the preamble, DOE hereby amends chapter X of Title 10 of the Code of Federal Regulations as set forth below:

PART 1040—NONDISCRIMINATION IN FEDERALLY ASSISTED PROGRAMS

1. The authority citation is revised to read as follows:

Authority: 20 U.S.C. 1681–1686; 29 U.S.C. 794; 42 U.S.C. 2000d to 2000d–4a, 3601–3631, 5891, 6101–6107, 6870, 7101 *et seq.*; and 50 U.S.C. 2401 *et seq.*

2. Section 1040.1 is amended by designating the current text as paragraph (a) and adding paragraphs (b) and (c) to read as follows:

§ 1040.1 Purpose.

* * * * *

(b) DOE regulations on enforcement of nondiscrimination on the basis of handicap in programs or activities conducted by DOE are in part 1041 of this chapter.

(c) DOE regulations on enforcement of nondiscrimination on the basis of sex, under Title IX of the Education Act Amendments of 1972, as amended, are in part 1042 of this chapter.

Subpart C—[Removed and Reserved]

3. Subpart C of 10 CFR part 1040 is removed and reserved.

4. Part 1042, is added to chapter X to read as follows:

PART 1042—NONDISCRIMINATION ON THE BASIS OF SEX IN EDUCATION PROGRAMS OR ACTIVITIES RECEIVING FEDERAL FINANCIAL ASSISTANCE

Subpart A—Introduction

Sec.

- 1042.100 Purpose and effective date.
- 1042.105 Definitions.
- 1042.110 Remedial and affirmative action and self-evaluation.
- 1042.115 Assurance required.
- 1042.120 Transfers of property.
- 1042.125 Effect of other requirements.
- 1042.130 Effect of employment opportunities.
- 1042.135 Designation of responsible employee and adoption of grievance procedures.
- 1042.140 Dissemination of policy.

Subpart B—Coverage

- 1042.200 Application.
- 1042.205 Educational institutions and other entities controlled by religious organizations.
- 1042.210 Military and merchant marine educational institutions.
- 1042.215 Membership practices of certain organizations.
- 1042.220 Admissions.
- 1042.225 Educational institutions eligible to submit transition plans.
- 1042.230 Transition plans.
- 1042.235 Statutory amendments.

Subpart C—Discrimination on the Basis of Sex in Admission and Recruitment Prohibited

- 1042.300 Admission.
- 1042.305 Preference in admission.
- 1042.310 Recruitment.

Subpart D—Discrimination on the Basis of Sex in Education Programs or Activities Prohibited

- 1042.400 Education programs or activities.
- 1042.405 Housing.
- 1042.410 Comparable facilities.
- 1042.415 Access to course offerings.
- 1042.420 Access to schools operated by LEAs.
- 1042.425 Counseling and use of appraisal and counseling materials.
- 1042.430 Financial assistance.
- 1042.435 Employment assistance to students.
- 1042.440 Health and insurance benefits and services.
- 1042.445 Marital or parental status.
- 1042.450 Athletics.
- 1042.455 Textbooks and curricular material.

Subpart E—Discrimination on the Basis of Sex in Employment in Education Programs or Activities Prohibited

- 1042.500 Employment.
- 1042.505 Employment criteria.
- 1042.510 Recruitment.
- 1042.515 Compensation.
- 1042.520 Job classification and structure.
- 1042.525 Fringe benefits.
- 1042.530 Marital or parental status.
- 1042.535 Effect of state or local law or other requirements.
- 1042.540 Advertising.
- 1042.545 Pre-employment inquiries.
- 1042.550 Sex as a bona fide occupational qualification.

Subpart F—Other Provisions

- 1042.600 Covered programs.
- 1042.605 Enforcement procedures.

Authority: 20 U.S.C. 1681, 1682, 1683, 1685, 1686, 1687, 1688; 42 U.S.C. 7101 *et seq.*; and 50 U.S.C. 2401 *et seq.*

Subpart A—Introduction

§ 1042.100 Purpose and effective date.

The purpose of these Title IX regulations is to effectuate Title IX of the Education Amendments of 1972, as amended (except sections 904 and 906 of those Amendments) (20 U.S.C. 1681,

1682, 1683, 1685, 1686, 1687, 1688), which is designed to eliminate (with certain exceptions) discrimination on the basis of sex in any education program or activity receiving Federal financial assistance, whether or not such program or activity is offered or sponsored by an educational institution as defined in these Title IX regulations. The effective date of these Title IX regulations is February 20, 2001.

§ 1042.105 Definitions.

As used in these Title IX regulations, the term:

Administratively separate unit means a school, department, or college of an educational institution (other than a local educational agency) admission to which is independent of admission to any other component of such institution.

Admission means selection for part-time, full-time, special, associate, transfer, exchange, or any other enrollment, membership, or matriculation in or at an education program or activity operated by a recipient.

Applicant means one who submits an application, request, or plan required to be approved by an official of the Department of Energy, or by a recipient, as a condition to becoming a recipient of Federal financial assistance.

Designated agency official means the Director, Office of Civil Rights and Diversity or any official to whom the Director's functions under this part are relegated.

Educational institution means a local educational agency (LEA) as defined by 20 U.S.C. 8801(18), a preschool, a private elementary or secondary school, or an applicant or recipient that is an institution of graduate higher education, an institution of undergraduate higher education, an institution of professional education, or an institution of vocational education, as defined in this section.

Federal financial assistance means any of the following, when authorized or extended under a law administered by the Federal agency that awards such assistance:

(1) A grant or loan of Federal financial assistance, including funds made available for:

(i) The acquisition, construction, renovation, restoration, or repair of a building or facility or any portion thereof; and

(ii) Scholarships, loans, grants, wages, or other funds extended to any entity for payment to or on behalf of students admitted to that entity, or extended directly to such students for payment to that entity.

(2) A grant of Federal real or personal property or any interest therein, including surplus property, and the proceeds of the sale or transfer of such property, if the Federal share of the fair market value of the property is not, upon such sale or transfer, properly accounted for to the Federal Government.

(3) Provision of the services of Federal personnel.

(4) Sale or lease of Federal property or any interest therein at nominal consideration, or at consideration reduced for the purpose of assisting the recipient or in recognition of public interest to be served thereby, or permission to use Federal property or any interest therein without consideration.

(5) Any other contract, agreement, or arrangement that has as one of its purposes the provision of assistance to any education program or activity, except a contract of insurance or guaranty.

Institution of graduate higher education means an institution that:

(1) Offers academic study beyond the bachelor of arts or bachelor of science degree, whether or not leading to a certificate of any higher degree in the liberal arts and sciences;

(2) Awards any degree in a professional field beyond the first professional degree (regardless of whether the first professional degree in such field is awarded by an institution of undergraduate higher education or professional education); or

(3) Awards no degree and offers no further academic study, but operates ordinarily for the purpose of facilitating research by persons who have received the highest graduate degree in any field of study.

Institution of professional education means an institution (except any institution of undergraduate higher education) that offers a program of academic study that leads to a first professional degree in a field for which there is a national specialized accrediting agency recognized by the Secretary of Education.

Institution of undergraduate higher education means:

(1) An institution offering at least two but less than four years of college-level study beyond the high school level, leading to a diploma or an associate degree, or wholly or principally creditable toward a baccalaureate degree; or

(2) An institution offering academic study leading to a baccalaureate degree; or

(3) An agency or body that certifies credentials or offers degrees, but that may or may not offer academic study.

Institution of vocational education means a school or institution (except an institution of professional or graduate or undergraduate higher education) that has as its primary purpose preparation of students to pursue a technical, skilled, or semiskilled occupation or trade, or to pursue study in a technical field, whether or not the school or institution offers certificates, diplomas, or degrees and whether or not it offers full-time study.

Recipient means any State or political subdivision thereof, or any instrumentality of a State or political subdivision thereof, any public or private agency, institution, or organization, or other entity, or any person, to whom Federal financial assistance is extended directly or through another recipient and that operates an education program or activity that receives such assistance, including any subunit, successor, assignee, or transferee thereof.

Student means a person who has gained admission.

Title IX means Title IX of the Education Amendments of 1972, Public Law 92-318, 86 Stat. 235, 373 (codified as amended at 20 U.S.C. 1681-1688) (except sections 904 and 906 thereof), as amended by section 3 of Public Law 93-568, 88 Stat. 1855, by section 412 of the Education Amendments of 1976, Public Law 94-482, 90 Stat. 2234, and by Section 3 of Public Law 100-259, 102 Stat. 28, 28-29 (20 U.S.C. 1681, 1682, 1683, 1685, 1686, 1687, 1688).

Title IX regulations means the provisions set forth in this 10 CFR Part 1042.

Transition plan means a plan subject to the approval of the Secretary of Education pursuant to section 901(a)(2) of the Education Amendments of 1972, 20 U.S.C. 1681(a)(2), under which an educational institution operates in making the transition from being an educational institution that admits only students of one sex to being one that admits students of both sexes without discrimination.

§ 1042.110 Remedial and affirmative action and self-evaluation.

(a) *Remedial action.* If the designated agency official finds that a recipient has discriminated against persons on the basis of sex in an education program or activity, such recipient shall take such remedial action as the designated agency official deems necessary to overcome the effects of such discrimination.

(b) *Affirmative action.* In the absence of a finding of discrimination on the basis of sex in an education program or activity, a recipient may take affirmative action consistent with law to overcome the effects of conditions that resulted in limited participation therein by persons of a particular sex. Nothing in these Title IX regulations shall be interpreted to alter any affirmative action obligations that a recipient may have under Executive Order 11246, 3 CFR, 1964-1965 Comp., p. 339; as amended by Executive Order 11375, 3 CFR, 1966-1970 Comp., p. 684; as amended by Executive Order 11478, 3 CFR, 1966-1970 Comp., p. 803; as amended by Executive Order 12086, 3 CFR, 1978 Comp., p. 230; as amended by Executive Order 12107, 3 CFR, 1978 Comp., p. 264.

(c) *Self-evaluation.* Each recipient education institution shall, within one year of February 20, 2001:

(1) Evaluate, in terms of the requirements of these Title IX regulations, its current policies and practices and the effects thereof concerning admission of students, treatment of students, and employment of both academic and non-academic personnel working in connection with the recipient's education program or activity;

(2) Modify any of these policies and practices that do not or may not meet the requirements of these Title IX regulations; and

(3) Take appropriate remedial steps to eliminate the effects of any discrimination that resulted or may have resulted from adherence to these policies and practices.

(d) *Availability of self-evaluation and related materials.* Recipients shall maintain on file for at least three years following completion of the evaluation required under paragraph (c) of this section, and shall provide to the designated agency official upon request, a description of any modifications made pursuant to paragraph (c)(2) of this section and of any remedial steps taken pursuant to paragraph (c)(3) of this section.

§ 1042.115 Assurance required.

(a) *General.* Either at the application stage or the award stage, the Department of Energy must ensure that applications for Federal financial assistance or awards of Federal financial assistance contain, be accompanied by, or be covered by a specifically identified assurance from the applicant or recipient, satisfactory to the designated agency official, that each education program or activity operated by the applicant or recipient and to which

these Title IX regulations apply will be operated in compliance with these Title IX regulations. An assurance of compliance with these Title IX regulations shall not be satisfactory to the designated agency official if the applicant or recipient to whom such assurance applies fails to commit itself to take whatever remedial action is necessary in accordance with § 1042.110(a) to eliminate existing discrimination on the basis of sex or to eliminate the effects of past discrimination whether occurring prior to or subsequent to the submission to the designated agency official of such assurance.

(b) *Duration of obligation.* (1) In the case of Federal financial assistance extended to provide real property or structures thereon, such assurance shall obligate the recipient or, in the case of a subsequent transfer, the transferee, for the period during which the real property or structures are used to provide an education program or activity.

(2) In the case of Federal financial assistance extended to provide personal property, such assurance shall obligate the recipient for the period during which it retains ownership or possession of the property.

(3) In all other cases such assurance shall obligate the recipient for the period during which Federal financial assistance is extended.

(c) *Form.* (1) The assurances required by paragraph (a) of this section, which may be included as part of a document that addresses other assurances or obligations, shall include that the applicant or recipient will comply with all applicable Federal statutes relating to nondiscrimination. These include but are not limited to: Title IX of the Education Amendments of 1972, as amended (20 U.S.C. 1681–1683, 1685–1688).

(2) The designated agency official will specify the extent to which such assurances will be required of the applicant's or recipient's subgrantees, contractors, subcontractors, transferees, or successors in interest.

§ 1042.120 Transfers of property.

If a recipient sells or otherwise transfers property financed in whole or in part with Federal financial assistance to a transferee that operates any education program or activity, and the Federal share of the fair market value of the property is not upon such sale or transfer properly accounted for to the Federal Government, both the transferor and the transferee shall be deemed to be recipients, subject to the provisions of §§ 1042.205 through 1042.235(a).

§ 1042.125 Effect of other requirements.

(a) *Effect of other Federal provisions.* The obligations imposed by these Title IX regulations are independent of, and do not alter, obligations not to discriminate on the basis of sex imposed by Executive Order 11246, 3 CFR, 1964–1965 Comp., p. 339; as amended by Executive Order 11375, 3 CFR, 1966–1970 Comp., p. 684; as amended by Executive Order 11478, 3 CFR, 1966–1970 Comp., p. 803; as amended by Executive Order 12087, 3 CFR, 1978 Comp., p. 230; as amended by Executive Order 12107, 3 CFR, 1978 Comp., p. 264; sections 704 and 855 of the Public Health Service Act (42 U.S.C. 295m, 298b–2); Title VII of the Civil Rights Act of 1964 (42 U.S.C. 2000e *et seq.*); the Equal Pay Act of 1963 (29 U.S.C. 206); and any other Act of Congress or Federal regulation.

(b) *Effect of State or local law or other requirements.* The obligation to comply with these Title IX regulations is not obviated or alleviated by any State or local law or other requirement that would render any applicant or student ineligible, or limit the eligibility of any applicant or student, on the basis of sex, to practice any occupation or profession.

(c) *Effect of rules or regulations of private organizations.* The obligation to comply with these Title IX regulations is not obviated or alleviated by any rule or regulation of any organization, club, athletic or other league, or association that would render any applicant or student ineligible to participate or limit the eligibility or participation of any applicant or student, on the basis of sex, in any education program or activity operated by a recipient and that receives Federal financial assistance.

§ 1042.130 Effect of employment opportunities.

The obligation to comply with these Title IX regulations is not obviated or alleviated because employment opportunities in any occupation or profession are or may be more limited for members of one sex than for members of the other sex.

§ 1042.135 Designation of responsible employee and adoption of grievance procedures.

(a) *Designation of responsible employee.* Each recipient shall designate at least one employee to coordinate its efforts to comply with and carry out its responsibilities under these Title IX regulations, including any investigation of any complaint communicated to such recipient alleging its noncompliance with these Title IX regulations or alleging any actions that would be

prohibited by these Title IX regulations. The recipient shall notify all its students and employees of the name, office address, and telephone number of the employee or employees appointed pursuant to this paragraph.

(b) *Complaint procedure of recipient.* A recipient shall adopt and publish grievance procedures providing for prompt and equitable resolution of student and employee complaints alleging any action that would be prohibited by these Title IX regulations.

§ 1042.140 Dissemination of policy.

(a) *Notification of policy.* (1) Each recipient shall implement specific and continuing steps to notify applicants for admission and employment, students and parents of elementary and secondary school students, employees, sources of referral of applicants for admission and employment, and all unions or professional organizations holding collective bargaining or professional agreements with the recipient, that it does not discriminate on the basis of sex in the educational programs or activities that it operates, and that it is required by Title IX and these Title IX regulations not to discriminate in such a manner. Such notification shall contain such information, and be made in such manner, as the designated agency official finds necessary to apprise such persons of the protections against discrimination assured them by Title IX and these Title IX regulations, but shall state at least that the requirement not to discriminate in education programs or activities extends to employment therein, and to admission thereto unless §§ 1042.300 through 1042.310 do not apply to the recipient, and that inquiries concerning the application of Title IX and these Title IX regulations to such recipient may be referred to the employee designated pursuant to § 1042.135, or to the designated agency official.

(2) Each recipient shall make the initial notification required by paragraph (a)(1) of this section within 90 days of February 20, 2001 or of the date these Title IX regulations first apply to such recipient, whichever comes later, which notification shall include publication in:

(i) Newspapers and magazines operated by such recipient or by student, alumnae, or alumni groups for or in connection with such recipient; and

(ii) Memoranda or other written communications distributed to every student and employee of such recipient.

(b) *Publications.* (1) Each recipient shall prominently include a statement of

the policy described in paragraph (a) of this section in each announcement, bulletin, catalog, or application form that it makes available to any person of a type, described in paragraph (a) of this section, or which is otherwise used in connection with the recruitment of students or employees.

(2) A recipient shall not use or distribute a publication of the type described in paragraph (b)(1) of this section that suggests, by text or illustration, that such recipient treats applicants, students, or employees differently on the basis of sex except as such treatment is permitted by these Title IX regulations.

(c) *Distribution.* Each recipient shall distribute without discrimination on the basis of sex each publication described in paragraph (b)(1) of this section, and shall apprise each of its admission and employment recruitment representatives of the policy of nondiscrimination described in paragraph (a) of this section, and shall require such representatives to adhere to such policy.

Subpart B—Coverage

§ 1042.200 Application.

Except as provided in §§ 1042.205 through 1042.235(a), these Title IX regulations apply to every recipient and to each education program or activity operated by such recipient that receives Federal financial assistance.

§ 1042.205 Educational institutions and other entities controlled by religious organizations.

(a) *Exemption.* These Title IX regulations do not apply to any operation of an educational institution or other entity that is controlled by a religious organization to the extent that application of these Title IX regulations would not be consistent with the religious tenets of such organization.

(b) *Exemption claims.* An educational institution or other entity that wishes to claim the exemption set forth in paragraph (a) of this section shall do so by submitting in writing to the designated agency official a statement by the highest-ranking official of the institution, identifying the provisions of these Title IX regulations that conflict with a specific tenet of the religious organization.

§ 1042.210 Military and merchant marine educational institutions.

These Title IX regulations do not apply to an educational institution whose primary purpose is the training of individuals for a military service of the United States or for the merchant marine.

§ 1042.215 Membership practices of certain organizations.

(a) *Social fraternities and sororities.* These Title IX regulations do not apply to the membership practices of social fraternities and sororities that are exempt from taxation under section 501(a) of the Internal Revenue Code of 1954, 26 U.S.C. 501(a), the active membership of which consists primarily of students in attendance at institutions of higher education.

(b) *YMCA, YWCA, Girl Scouts, Boy Scouts, and Camp Fire Girls.* These Title IX regulations do not apply to the membership practices of the Young Men's Christian Association (YMCA), the Young Women's Christian Association (YWCA), the Girl Scouts, the Boy Scouts, and Camp Fire Girls.

(c) *Voluntary youth service organizations.* These Title IX regulations do not apply to the membership practices of a voluntary youth service organization that is exempt from taxation under section 501(a) of the Internal Revenue Code of 1954, 26 U.S.C. 501(a), and the membership of which has been traditionally limited to members of one sex and principally to persons of less than nineteen years of age.

§ 1042.220 Admissions.

(a) Admissions to educational institutions prior to June 24, 1973, are not covered by these Title IX regulations.

(b) *Administratively separate units.* For the purposes only of this section, §§ 1042.225 and 1042.230, and §§ 1042.300 through 1042.310, each administratively separate unit shall be deemed to be an educational institution.

(c) *Application of §§ 1042.300 through 1042.310.* Except as provided in paragraphs (d) and (e) of this section, §§ 1042.300 through 1042.310 apply to each recipient. A recipient to which §§ 1042.300 through 1042.310 apply shall not discriminate on the basis of sex in admission or recruitment in violation of §§ 1042.300 through 1042.310.

(d) *Educational institutions.* Except as provided in paragraph (e) of this section as to recipients that are educational institutions, §§ 1042.300 through 1042.310 apply only to institutions of vocational education, professional education, graduate higher education, and public institutions of undergraduate higher education.

(e) *Public institutions of undergraduate higher education.* §§ 1042.300 through 1042.310 do not apply to any public institution of undergraduate higher education that traditionally and continually from its

establishment has had a policy of admitting students of only one sex.

§ 1042.225 Educational institutions eligible to submit transition plans.

(a) *Application.* This section applies to each educational institution to which §§ 1042.300 through 1042.310 apply that:

(1) Admitted students of only one sex as regular students as of June 23, 1972; or

(2) Admitted students of only one sex as regular students as of June 23, 1965, but thereafter admitted, as regular students, students of the sex not admitted prior to June 23, 1965.

(b) *Provision for transition plans.* An educational institution to which this section applies shall not discriminate on the basis of sex in admission or recruitment in violation of §§ 1042.300 through 1042.310.

§ 1042.230 Transition plans.

(a) *Submission of plans.* An institution to which § 1042.225 applies and that is composed of more than one administratively separate unit may submit either a single transition plan applicable to all such units, or a separate transition plan applicable to each such unit.

(b) *Content of plans.* In order to be approved by the Secretary of Education, a transition plan shall:

(1) State the name, address, and Federal Interagency Committee on Education Code of the educational institution submitting such plan, the administratively separate units to which the plan is applicable, and the name, address, and telephone number of the person to whom questions concerning the plan may be addressed. The person who submits the plan shall be the chief administrator or president of the institution, or another individual legally authorized to bind the institution to all actions set forth in the plan.

(2) State whether the educational institution or administratively separate unit admits students of both sexes as regular students and, if so, when it began to do so.

(3) Identify and describe with respect to the educational institution or administratively separate unit any obstacles to admitting students without discrimination on the basis of sex.

(4) Describe in detail the steps necessary to eliminate as soon as practicable each obstacle so identified and indicate the schedule for taking these steps and the individual directly responsible for their implementation.

(5) Include estimates of the number of students, by sex, expected to apply for, be admitted to, and enter each class during the period covered by the plan.

(c) *Nondiscrimination.* No policy or practice of a recipient to which § 1042.225 applies shall result in treatment of applicants to or students of such recipient in violation of §§ 1042.300 through 1042.310 unless such treatment is necessitated by an obstacle identified in paragraph (b)(3) of this section and a schedule for eliminating that obstacle has been provided as required by paragraph (b)(4) of this section.

(d) *Effects of past exclusion.* To overcome the effects of past exclusion of students on the basis of sex, each educational institution to which § 1042.225 applies shall include in its transition plan, and shall implement, specific steps designed to encourage individuals of the previously excluded sex to apply for admission to such institution. Such steps shall include instituting recruitment programs that emphasize the institution's commitment to enrolling students of the sex previously excluded.

§ 1042.235 Statutory amendments.

(a) This section, which applies to all provisions of these Title IX regulations, addresses statutory amendments to Title IX.

(b) These Title IX regulations shall not apply to or preclude:

(1) Any program or activity of the American Legion undertaken in connection with the organization or operation of any Boys State conference, Boys Nation conference, Girls State conference, or Girls Nation conference;

(2) Any program or activity of a secondary school or educational institution specifically for:

(i) The promotion of any Boys State conference, Boys Nation conference, Girls State conference, or Girls Nation conference; or

(ii) The selection of students to attend any such conference;

(3) Father-son or mother-daughter activities at an educational institution or in an education program or activity, but if such activities are provided for students of one sex, opportunities for reasonably comparable activities shall be provided to students of the other sex;

(4) Any scholarship or other financial assistance awarded by an institution of higher education to an individual because such individual has received such award in a single-sex pageant based upon a combination of factors related to the individual's personal appearance, poise, and talent. The pageant, however, must comply with other nondiscrimination provisions of Federal law.

(c) *Program or activity or program means:*

(1) All of the operations of any entity described in paragraphs (c)(1)(i) through (iv) of this section, any part of which is extended Federal financial assistance:

(i)(A) A department, agency, special purpose district, or other instrumentality of a State or of a local government; or

(B) The entity of such State or local government that distributes such assistance and each such department or agency (and each other State or local government entity) to which the assistance is extended, in the case of assistance to a State or local government;

(ii)(A) A college, university, or other post-secondary institution, or a public system of higher education; or

(B) A local educational agency (as defined in section 8801 of title 20), system of vocational education, or other school system;

(iii)(A) An entire corporation, partnership, or other private organization, or an entire sole proprietorship—

(1) If assistance is extended to such corporation, partnership, private organization, or sole proprietorship as a whole; or

(2) Which is principally engaged in the business of providing education, health care, housing, social services, or parks and recreation; or

(B) The entire plant or other comparable, geographically separate facility to which Federal financial assistance is extended, in the case of any other corporation, partnership, private organization, or sole proprietorship; or

(iv) Any other entity that is established by two or more of the entities described in paragraphs (c)(1)(i), (ii), or (iii) of this section.

(2)(i) *Program or activity* does not include any operation of an entity that is controlled by a religious organization if the application of 20 U.S.C. 1681 to such operation would not be consistent with the religious tenets of such organization.

(ii) For example, all of the operations of a college, university, or other post-secondary institution, including but not limited to traditional educational operations, faculty and student housing, campus shuttle bus service, campus restaurants, the bookstore, and other commercial activities are part of a "program or activity" subject to these Title IX regulations if the college, university, or other institution receives Federal financial assistance.

(d)(1) Nothing in these Title IX regulations shall be construed to require or prohibit any person, or public or private entity, to provide or pay for any

benefit or service, including the use of facilities, related to an abortion. Medical procedures, benefits, services, and the use of facilities, necessary to save the life of a pregnant woman or to address complications related to an abortion are not subject to this section.

(2) Nothing in this section shall be construed to permit a penalty to be imposed on any person or individual because such person or individual is seeking or has received any benefit or service related to a legal abortion. Accordingly, subject to paragraph (d)(1) of this section, no person shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any academic, extracurricular, research, occupational training, employment, or other educational program or activity operated by a recipient that receives Federal financial assistance because such individual has sought or received, or is seeking, a legal abortion, or any benefit or service related to a legal abortion.

Subpart C—Discrimination on the Basis of Sex in Admission and Recruitment Prohibited

§ 1042.300 Admission.

(a) *General.* No person shall, on the basis of sex, be denied admission, or be subjected to discrimination in admission, by any recipient to which §§ 1042.300 through 1042.310 apply, except as provided in §§ 1042.225 and 1042.230.

(b) *Specific prohibitions.* (1) In determining whether a person satisfies any policy or criterion for admission, or in making any offer of admission, a recipient to which §§ 1042.300 through 1042.310 apply shall not:

(i) Give preference to one person over another on the basis of sex, by ranking applicants separately on such basis, or otherwise;

(ii) Apply numerical limitations upon the number or proportion of persons of either sex who may be admitted; or

(iii) Otherwise treat one individual differently from another on the basis of sex.

(2) A recipient shall not administer or operate any test or other criterion for admission that has a disproportionately adverse effect on persons on the basis of sex unless the use of such test or criterion is shown to predict validly success in the education program or activity in question and alternative tests or criteria that do not have such a disproportionately adverse effect are shown to be unavailable.

(c) *Prohibitions relating to marital or parental status.* In determining whether

a person satisfies any policy or criterion for admission, or in making any offer of admission, a recipient to which §§ 1042.300 through 1042.310 apply:

(1) Shall not apply any rule concerning the actual or potential parental, family, or marital status of a student or applicant that treats persons differently on the basis of sex;

(2) Shall not discriminate against or exclude any person on the basis of pregnancy, childbirth, termination of pregnancy, or recovery therefrom, or establish or follow any rule or practice that so discriminates or excludes;

(3) Subject to § 1042.235(d), shall treat disabilities related to pregnancy, childbirth, termination of pregnancy, or recovery therefrom in the same manner and under the same policies as any other temporary disability or physical condition; and

(4) Shall not make pre-admission inquiry as to the marital status of an applicant for admission, including whether such applicant is "Miss" or "Mrs." A recipient may make pre-admission inquiry as to the sex of an applicant for admission, but only if such inquiry is made equally of such applicants of both sexes and if the results of such inquiry are not used in connection with discrimination prohibited by these Title IX regulations.

§ 1042.305 Preference in admission.

A recipient to which §§ 1042.300 through 1042.310 apply shall not give preference to applicants for admission, on the basis of attendance at any educational institution or other school or entity that admits as students only or predominantly members of one sex, if the giving of such preference has the effect of discriminating on the basis of sex in violation of §§ 1042.300 through 1042.310.

§ 1042.310 Recruitment.

(a) *Nondiscriminatory recruitment.* A recipient to which §§ 1042.300 through 1042.310 apply shall not discriminate on the basis of sex in the recruitment and admission of students. A recipient may be required to undertake additional recruitment efforts for one sex as remedial action pursuant to § 1042.110(a), and may choose to undertake such efforts as affirmative action pursuant to § 1042.110(b).

(b) *Recruitment at certain institutions.* A recipient to which §§ 1042.300 through 1042.310 apply shall not recruit primarily or exclusively at educational institutions, schools, or entities that admit as students only or predominantly members of one sex, if such actions have the effect of discriminating on the basis of sex in

violation of §§ 1042.300 through 1042.310.

Subpart D—Discrimination on the Basis of Sex in Education Programs or Activities Prohibited

§ 1042.400 Education programs or activities.

(a) *General.* Except as provided elsewhere in these Title IX regulations, no person shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any academic, extracurricular, research, occupational training, or other education program or activity operated by a recipient that receives Federal financial assistance. Sections 1042.400 through 1042.455 do not apply to actions of a recipient in connection with admission of its students to an education program or activity of a recipient to which §§ 1042.300 through 1042.310 do not apply, or an entity, not a recipient, to which §§ 1042.300 through 1042.310 would not apply if the entity were a recipient.

(b) *Specific prohibitions.* Except as provided in §§ 1042.400 through 1042.455, in providing any aid, benefit, or service to a student, a recipient shall not, on the basis of sex:

(1) Treat one person differently from another in determining whether such person satisfies any requirement or condition for the provision of such aid, benefit, or service;

(2) Provide different aid, benefits, or services or provide aid, benefits, or services in a different manner;

(3) Deny any person any such aid, benefit, or service;

(4) Subject any person to separate or different rules of behavior, sanctions, or other treatment;

(5) Apply any rule concerning the domicile or residence of a student or applicant, including eligibility for in-state fees and tuition;

(6) Aid or perpetuate discrimination against any person by providing significant assistance to any agency, organization, or person that discriminates on the basis of sex in providing any aid, benefit, or service to students or employees;

(7) Otherwise limit any person in the enjoyment of any right, privilege, advantage, or opportunity.

(c) *Assistance administered by a recipient educational institution to study at a foreign institution.* A recipient educational institution may administer or assist in the administration of scholarships, fellowships, or other awards established by foreign or domestic wills, trusts, or

similar legal instruments, or by acts of foreign governments and restricted to members of one sex, that are designed to provide opportunities to study abroad, and that are awarded to students who are already matriculating at or who are graduates of the recipient institution; *Provided*, that a recipient educational institution that administers or assists in the administration of such scholarships, fellowships, or other awards that are restricted to members of one sex provides, or otherwise makes available, reasonable opportunities for similar studies for members of the other sex. Such opportunities may be derived from either domestic or foreign sources.

(d) *Aids, benefits or services not provided by recipient.* (1) This paragraph (d) applies to any recipient that requires participation by any applicant, student, or employee in any education program or activity not operated wholly by such recipient, or that facilitates, permits, or considers such participation as part of or equivalent to an education program or activity operated by such recipient, including participation in educational consortia and cooperative employment and student-teaching assignments.

(2) Such recipient:

(i) Shall develop and implement a procedure designed to assure itself that the operator or sponsor of such other education program or activity takes no action affecting any applicant, student, or employee of such recipient that these Title IX regulations would prohibit such recipient from taking; and

(ii) Shall not facilitate, require, permit, or consider such participation if such action occurs.

§ 1042.405 Housing.

(a) *Generally.* A recipient shall not, on the basis of sex, apply different rules or regulations, impose different fees or requirements, or offer different services or benefits related to housing, except as provided in this section (including housing provided only to married students).

(b) *Housing provided by recipient.* (1) A recipient may provide separate housing on the basis of sex.

(2) Housing provided by a recipient to students of one sex, when compared to that provided to students of the other sex, shall be as a whole:

(i) Proportionate in quantity to the number of students of that sex applying for such housing; and

(ii) Comparable in quality and cost to the student.

(c) *Other housing.* (1) A recipient shall not, on the basis of sex, administer different policies or practices concerning occupancy by its students of

housing other than that provided by such recipient.

(2)(i) A recipient which, through solicitation, listing, approval of housing, or otherwise, assists any agency, organization, or person in making housing available to any of its students, shall take such reasonable action as may be necessary to assure itself that such housing as is provided to students of one sex, when compared to that provided to students of the other sex, is as a whole:

(A) Proportionate in quantity; and
(B) Comparable in quality and cost to the student.

(ii) A recipient may render such assistance to any agency, organization, or person that provides all or part of such housing to students of only one sex.

§ 1042.410 Comparable facilities.

A recipient may provide separate toilet, locker room, and shower facilities on the basis of sex, but such facilities provided for students of one sex shall be comparable to such facilities provided for students of the other sex.

§ 1042.415 Access to course offerings.

(a) A recipient shall not provide any course or otherwise carry out any of its education program or activity separately on the basis of sex, or require or refuse participation therein by any of its students on such basis, including health, physical education, industrial, business, vocational, technical, home economics, music, and adult education courses.

(b)(1) With respect to classes and activities in physical education at the elementary school level, the recipient shall comply fully with this section as expeditiously as possible but in no event later than one year from February 20, 2001. With respect to physical education classes and activities at the secondary and post-secondary levels, the recipient shall comply fully with this section as expeditiously as possible but in no event later than three years from February 20, 2001.

(2) This section does not prohibit grouping of students in physical education classes and activities by ability as assessed by objective standards of individual performance developed and applied without regard to sex.

(3) This section does not prohibit separation of students by sex within physical education classes or activities during participation in wrestling, boxing, rugby, ice hockey, football, basketball, and other sports the purpose or major activity of which involves bodily contact.

(4) Where use of a single standard of measuring skill or progress in a physical education class has an adverse effect on members of one sex, the recipient shall use appropriate standards that do not have such effect.

(5) Portions of classes in elementary and secondary schools, or portions of education programs or activities, that deal exclusively with human sexuality may be conducted in separate sessions for boys and girls.

(6) Recipients may make requirements based on vocal range or quality that may result in a chorus or choruses of one or predominantly one sex.

§ 1042.420 Access to schools operated by LEAs.

A recipient that is a local educational agency shall not, on the basis of sex, exclude any person from admission to:

(a) Any institution of vocational education operated by such recipient; or

(b) Any other school or educational unit operated by such recipient, unless such recipient otherwise makes available to such person, pursuant to the same policies and criteria of admission, courses, services, and facilities comparable to each course, service, and facility offered in or through such schools.

§ 1042.425 Counseling and use of appraisal and counseling materials.

(a) *Counseling.* A recipient shall not discriminate against any person on the basis of sex in the counseling or guidance of students or applicants for admission.

(b) *Use of appraisal and counseling materials.* A recipient that uses testing or other materials for appraising or counseling students shall not use different materials for students on the basis of their sex or use materials that permit or require different treatment of students on such basis unless such different materials cover the same occupations and interest areas and the use of such different materials is shown to be essential to eliminate sex bias. Recipients shall develop and use internal procedures for ensuring that such materials do not discriminate on the basis of sex. Where the use of a counseling test or other instrument results in a substantially disproportionate number of members of one sex in any particular course of study or classification, the recipient shall take such action as is necessary to assure itself that such disproportion is not the result of discrimination in the instrument or its application.

(c) *Disproportion in classes.* Where a recipient finds that a particular class contains a substantially

disproportionate number of individuals of one sex, the recipient shall take such action as is necessary to assure itself that such disproportion is not the result of discrimination on the basis of sex in counseling or appraisal materials or by counselors.

§ 1042.430 Financial assistance.

(a) *General.* Except as provided in paragraphs (b) and (c) of this section, in providing financial assistance to any of its students, a recipient shall not:

(1) On the basis of sex, provide different amounts or types of such assistance, limit eligibility for such assistance that is of any particular type or source, apply different criteria, or otherwise discriminate;

(2) Through solicitation, listing, approval, provision of facilities, or other services, assist any foundation, trust, agency, organization, or person that provides assistance to any of such recipient's students in a manner that discriminates on the basis of sex; or

(3) Apply any rule or assist in application of any rule concerning eligibility for such assistance that treats persons of one sex differently from persons of the other sex with regard to marital or parental status.

(b) *Financial aid established by certain legal instruments.* (1) A recipient may administer or assist in the administration of scholarships, fellowships, or other forms of financial assistance established pursuant to domestic or foreign wills, trusts, bequests, or similar legal instruments or by acts of a foreign government that require that awards be made to members of a particular sex specified therein; *Provided*, that the overall effect of the award of such sex-restricted scholarships, fellowships, and other forms of financial assistance does not discriminate on the basis of sex.

(2) To ensure nondiscriminatory awards of assistance as required in paragraph (b)(1) of this section, recipients shall develop and use procedures under which:

(i) Students are selected for award of financial assistance on the basis of nondiscriminatory criteria and not on the basis of availability of funds restricted to members of a particular sex;

(ii) An appropriate sex-restricted scholarship, fellowship, or other form of financial assistance is allocated to each student selected under paragraph (b)(2)(i) of this section; and

(iii) No student is denied the award for which he or she was selected under paragraph (b)(2)(i) of this section because of the absence of a scholarship, fellowship, or other form of financial

assistance designated for a member of that student's sex.

(c) *Athletic scholarships.* (1) To the extent that a recipient awards athletic scholarships or grants-in-aid, it must provide reasonable opportunities for such awards for members of each sex in proportion to the number of students of each sex participating in interscholastic or intercollegiate athletics.

(2) A recipient may provide separate athletic scholarships or grants-in-aid for members of each sex as part of separate athletic teams for members of each sex to the extent consistent with this paragraph (c) and § 1042.450.

§ 1042.435 Employment assistance to students.

(a) *Assistance by recipient in making available outside employment.* A recipient that assists any agency, organization, or person in making employment available to any of its students:

(1) Shall assure itself that such employment is made available without discrimination on the basis of sex; and

(2) Shall not render such services to any agency, organization, or person that discriminates on the basis of sex in its employment practices.

(b) *Employment of students by recipients.* A recipient that employs any of its students shall not do so in a manner that violates §§ 1042.500 through 1042.550.

§ 1042.440 Health and insurance benefits and services.

Subject to § 1042.235(d), in providing a medical, hospital, accident, or life insurance benefit, service, policy, or plan to any of its students, a recipient shall not discriminate on the basis of sex, or provide such benefit, service, policy, or plan in a manner that would violate §§ 1042.500 through 1042.550 if it were provided to employees of the recipient. This section shall not prohibit a recipient from providing any benefit or service that may be used by a different proportion of students of one sex than of the other, including family planning services. However, any recipient that provides full coverage health service shall provide gynecological care.

§ 1042.445 Marital or parental status.

(a) *Status generally.* A recipient shall not apply any rule concerning a student's actual or potential parental, family, or marital status that treats students differently on the basis of sex.

(b) *Pregnancy and related conditions.* (1) A recipient shall not discriminate against any student, or exclude any student from its education program or

activity, including any class or extracurricular activity, on the basis of such student's pregnancy, childbirth, false pregnancy, termination of pregnancy, or recovery therefrom, unless the student requests voluntarily to participate in a separate portion of the program or activity of the recipient.

(2) A recipient may require such a student to obtain the certification of a physician that the student is physically and emotionally able to continue participation as long as such a certification is required of all students for other physical or emotional conditions requiring the attention of a physician.

(3) A recipient that operates a portion of its education program or activity separately for pregnant students, admittance to which is completely voluntary on the part of the student as provided in paragraph (b)(1) of this section, shall ensure that the separate portion is comparable to that offered to non-pregnant students.

(4) Subject to § 1042.235(d), a recipient shall treat pregnancy, childbirth, false pregnancy, termination of pregnancy and recovery therefrom in the same manner and under the same policies as any other temporary disability with respect to any medical or hospital benefit, service, plan, or policy that such recipient administers, operates, offers, or participates in with respect to students admitted to the recipient's educational program or activity.

(5) In the case of a recipient that does not maintain a leave policy for its students, or in the case of a student who does not otherwise qualify for leave under such a policy, a recipient shall treat pregnancy, childbirth, false pregnancy, termination of pregnancy, and recovery therefrom as a justification for a leave of absence for as long a period of time as is deemed medically necessary by the student's physician, at the conclusion of which the student shall be reinstated to the status that she held when the leave began.

§ 1042.450 Athletics.

(a) *General.* No person shall, on the basis of sex, be excluded from participation in, be denied the benefits of, be treated differently from another person, or otherwise be discriminated against in any interscholastic, intercollegiate, club, or intramural athletics offered by a recipient, and no recipient shall provide any such athletics separately on such basis.

(b) *Separate teams.* Notwithstanding the requirements of paragraph (a) of this section, a recipient may operate or sponsor separate teams for members of

each sex where selection for such teams is based upon competitive skill or the activity involved is a contact sport.

However, where a recipient operates or sponsors a team in a particular sport for members of one sex but operates or sponsors no such team for members of the other sex, and athletic opportunities for members of that sex have previously been limited, members of the excluded sex must be allowed to try out for the team offered unless the sport involved is a contact sport. For the purposes of these Title IX regulations, contact sports include boxing, wrestling, rugby, ice hockey, football, basketball, and other sports the purpose or major activity of which involves bodily contact.

(c) *Equal opportunity.* (1) A recipient that operates or sponsors interscholastic, intercollegiate, club, or intramural athletics shall provide equal athletic opportunity for members of both sexes. In determining whether equal opportunities are available, the designated agency official will consider, among other factors:

(i) Whether the selection of sports and levels of competition effectively accommodate the interests and abilities of members of both sexes;

(ii) The provision of equipment and supplies;

(iii) Scheduling of games and practice time;

(iv) Travel and per diem allowance;

(v) Opportunity to receive coaching and academic tutoring;

(vi) Assignment and compensation of coaches and tutors;

(vii) Provision of locker rooms, practice, and competitive facilities;

(viii) Provision of medical and training facilities and services;

(ix) Provision of housing and dining facilities and services;

(x) Publicity.

(2) For purposes of paragraph (c)(1) of this section, unequal aggregate expenditures for members of each sex or unequal expenditures for male and female teams if a recipient operates or sponsors separate teams will not constitute noncompliance with this section, but the designated agency official may consider the failure to provide necessary funds for teams for one sex in assessing equality of opportunity for members of each sex.

(d) *Adjustment period.* A recipient that operates or sponsors interscholastic, intercollegiate, club, or intramural athletics at the elementary school level shall comply fully with this section as expeditiously as possible but in no event later than one year from February 20, 2001. A recipient that operates or sponsors interscholastic, intercollegiate, club, or intramural

athletics at the secondary or post-secondary school level shall comply fully with this section as expeditiously as possible but in no event later than three years from February 20, 2001.

§ 1042.455 Textbooks and curricular material.

Nothing in these Title IX regulations shall be interpreted as requiring or prohibiting or abridging in any way the use of particular textbooks or curricular materials.

Subpart E—Discrimination on the Basis of Sex in Employment in Education Programs or Activities Prohibited

§ 1042.500 Employment.

(a) *General.* (1) No person shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination in employment, or recruitment, consideration, or selection therefor, whether full-time or part-time, under any education program or activity operated by a recipient that receives Federal financial assistance.

(2) A recipient shall make all employment decisions in any education program or activity operated by such recipient in a nondiscriminatory manner and shall not limit, segregate, or classify applicants or employees in any way that could adversely affect any applicant's or employee's employment opportunities or status because of sex.

(3) A recipient shall not enter into any contractual or other relationship which directly or indirectly has the effect of subjecting employees or students to discrimination prohibited by §§ 1042.500 through 1042.550, including relationships with employment and referral agencies, with labor unions, and with organizations providing or administering fringe benefits to employees of the recipient.

(4) A recipient shall not grant preferences to applicants for employment on the basis of attendance at any educational institution or entity that admits as students only or predominantly members of one sex, if the giving of such preferences has the effect of discriminating on the basis of sex in violation of these Title IX regulations.

(b) *Application.* The provisions of §§ 1042.500 through 1042.550 apply to:

(1) Recruitment, advertising, and the process of application for employment;

(2) Hiring, upgrading, promotion, consideration for and award of tenure, demotion, transfer, layoff, termination, application of nepotism policies, right of return from layoff, and rehiring;

(3) Rates of pay or any other form of compensation, and changes in compensation;

(4) Job assignments, classifications, and structure, including position descriptions, lines of progression, and seniority lists;

(5) The terms of any collective bargaining agreement;

(6) Granting and return from leaves of absence, leave for pregnancy, childbirth, false pregnancy, termination of pregnancy, leave for persons of either sex to care for children or dependents, or any other leave;

(7) Fringe benefits available by virtue of employment, whether or not administered by the recipient;

(8) Selection and financial support for training, including apprenticeship, professional meetings, conferences, and other related activities, selection for tuition assistance, selection for sabbaticals and leaves of absence to pursue training;

(9) Employer-sponsored activities, including social or recreational programs; and

(10) Any other term, condition, or privilege of employment.

§ 1042.505 Employment criteria.

A recipient shall not administer or operate any test or other criterion for any employment opportunity that has a disproportionately adverse effect on persons on the basis of sex unless:

(a) Use of such test or other criterion is shown to predict validly successful performance in the position in question; and

(b) Alternative tests or criteria for such purpose, which do not have such disproportionately adverse effect, are shown to be unavailable.

§ 1042.510 Recruitment.

(a) *Nondiscriminatory recruitment and hiring.* A recipient shall not discriminate on the basis of sex in the recruitment and hiring of employees. Where a recipient has been found to be presently discriminating on the basis of sex in the recruitment or hiring of employees, or has been found to have so discriminated in the past, the recipient shall recruit members of the sex so discriminated against so as to overcome the effects of such past or present discrimination.

(b) *Recruitment patterns.* A recipient shall not recruit primarily or exclusively at entities that furnish as applicants only or predominantly members of one sex if such actions have the effect of discriminating on the basis of sex in violation of §§ 1042.500 through 1042.550.

§ 1042.515 Compensation.

A recipient shall not make or enforce any policy or practice that, on the basis of sex:

(a) Makes distinctions in rates of pay or other compensation;

(b) Results in the payment of wages to employees of one sex at a rate less than that paid to employees of the opposite sex for equal work on jobs the performance of which requires equal skill, effort, and responsibility, and that are performed under similar working conditions.

§ 1042.520 Job classification and structure.

A recipient shall not:

(a) Classify a job as being for males or for females;

(b) Maintain or establish separate lines of progression, seniority lists, career ladders, or tenure systems based on sex; or

(c) Maintain or establish separate lines of progression, seniority systems, career ladders, or tenure systems for similar jobs, position descriptions, or job requirements that classify persons on the basis of sex, unless sex is a bona fide occupational qualification for the positions in question as set forth in § 1042.550.

§ 1042.525 Fringe benefits.

(a) *"Fringe benefits" defined.* For purposes of these Title IX regulations, *fringe benefits* means: Any medical, hospital, accident, life insurance, or retirement benefit, service, policy or plan, any profit-sharing or bonus plan, leave, and any other benefit or service of employment not subject to the provision of § 1042.515.

(b) *Prohibitions.* A recipient shall not:

(1) Discriminate on the basis of sex with regard to making fringe benefits available to employees or make fringe benefits available to spouses, families, or dependents of employees differently upon the basis of the employee's sex;

(2) Administer, operate, offer, or participate in a fringe benefit plan that does not provide for equal periodic benefits for members of each sex and for equal contributions to the plan by such recipient for members of each sex; or

(3) Administer, operate, offer, or participate in a pension or retirement plan that establishes different optional or compulsory retirement ages based on sex or that otherwise discriminates in benefits on the basis of sex.

§ 1042.530 Marital or parental status.

(a) *General.* A recipient shall not apply any policy or take any employment action:

(1) Concerning the potential marital, parental, or family status of an

employee or applicant for employment that treats persons differently on the basis of sex; or

(2) Which is based upon whether an employee or applicant for employment is the head of household or principal wage earner in such employee's or applicant's family unit.

(b) *Pregnancy*. A recipient shall not discriminate against or exclude from employment any employee or applicant for employment on the basis of pregnancy, childbirth, false pregnancy, termination of pregnancy, or recovery therefrom.

(c) *Pregnancy as a temporary disability*. Subject to § 1042.235(d), a recipient shall treat pregnancy, childbirth, false pregnancy, termination of pregnancy, recovery therefrom, and any temporary disability resulting therefrom as any other temporary disability for all job-related purposes, including commencement, duration, and extensions of leave, payment of disability income, accrual of seniority and any other benefit or service, and reinstatement, and under any fringe benefit offered to employees by virtue of employment.

(d) *Pregnancy leave*. In the case of a recipient that does not maintain a leave policy for its employees, or in the case of an employee with insufficient leave or accrued employment time to qualify for leave under such a policy, a recipient shall treat pregnancy, childbirth, false pregnancy, termination of pregnancy, and recovery therefrom as a justification for a leave of absence without pay for a reasonable period of time, at the conclusion of which the employee shall be reinstated to the status that she held when the leave began or to a comparable position, without decrease in rate of compensation or loss of promotional opportunities, or any other right or privilege of employment.

§ 1042.535 Effect of state or local law or other requirements.

(a) *Prohibitory requirements*. The obligation to comply with §§ 1042.500 through 1042.550 is not obviated or alleviated by the existence of any State or local law or other requirement that imposes prohibitions or limits upon employment of members of one sex that are not imposed upon members of the other sex.

(b) *Benefits*. A recipient that provides any compensation, service, or benefit to members of one sex pursuant to a State or local law or other requirement shall provide the same compensation, service, or benefit to members of the other sex.

§ 1042.540 Advertising.

A recipient shall not in any advertising related to employment indicate preference, limitation, specification, or discrimination based on sex unless sex is a bona fide occupational qualification for the particular job in question.

§ 1042.545 Pre-employment inquiries.

(a) *Marital status*. A recipient shall not make pre-employment inquiry as to the marital status of an applicant for employment, including whether such applicant is "Miss" or "Mrs."

(b) *Sex*. A recipient may make pre-employment inquiry as to the sex of an applicant for employment, but only if such inquiry is made equally of such applicants of both sexes and if the results of such inquiry are not used in connection with discrimination prohibited by these Title IX regulations.

§ 1042.550 Sex as a bona fide occupational qualification.

A recipient may take action otherwise prohibited by §§ 1042.500 through 1042.550 provided it is shown that sex is a bona fide occupational qualification for that action, such that consideration of sex with regard to such action is essential to successful operation of the employment function concerned. A recipient shall not take action pursuant to this section that is based upon alleged comparative employment characteristics or stereotyped characterizations of one or the other sex, or upon preference based on sex of the recipient, employees, students, or other persons, but nothing contained in this section shall prevent a recipient from considering an employee's sex in relation to employment in a locker room or toilet facility used only by members of one sex.

Subpart F—Other Provisions

§ 1042.600 Covered programs.

The financial assistance programs to which this part applies are listed in Appendix A to 10 CFR part 1040.

§ 1042.605 Enforcement procedures.

The investigative, compliance, and enforcement procedural provisions of Title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d) are hereby adopted and applied to these Title IX regulations. These procedures may be found at 10 CFR part 1040, subparts G and H.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

10 CFR Part 1044

[Docket No. SO-RM-00-3164]

RIN 1992-AA26

Office of Security and Emergency Operations; Security Requirements for Protected Disclosures Under Section 3164 of the National Defense Authorization Act for Fiscal Year 2000

AGENCY: Department of Energy.

ACTION: Interim final rule and opportunity for public comment.

SUMMARY: The Department of Energy (DOE) is publishing an interim final rule to prescribe the security procedures that a DOE employee or DOE contractor employee, including an employee or contractor employee of the National Nuclear Security Administration, who is engaged in defense activities must follow to make a protected disclosure of classified or other controlled information under the whistleblower protection provisions in section 3164 of the National Defense Authorization Act for Fiscal Year 2000. Anyone who follows these procedures when making a disclosure of classified or other controlled information may not be discharged, demoted, or otherwise discriminated against as a reprisal for making the disclosure.

EFFECTIVE DATE: The interim final rule is effective February 20, 2001. Interested persons may submit written comments on this interim rule by February 20, 2001. Comments received after this date will be considered to the extent practicable.

ADDRESSES: Written comments (3 copies) should be addressed to: U.S. Department of Energy, Docket No. SO-RM-00-3164, Attn: Richard Farman, Office of General Counsel, GC-74, 1000 Independence Ave., SW., Washington, DC 20585.

All comments received will be available for public inspection as part of the administrative record on file for this rulemaking in the Department of Energy Freedom of Information Office Reading Room, Room 1E-090, Forrestal Building, 1000 Independence Avenue, S.W., Washington, DC 10585, (202) 586-6020, between 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays. The docket material for this rulemaking will be filed under Docket No. SO-RM-00-3164.

FOR FURTHER INFORMATION CONTACT: Cathy Tullis, Office of Security and Emergency Operations (SO-211), U.S. Department of Energy, 19901

Germantown Road, Germantown, MD 20874-1290, (301) 903-4805.

SUPPLEMENTARY INFORMATION:

I. Introduction

Today's notice adds a new Part 1044 to Title 10 of the Code of Federal Regulations to establish security requirements for the disclosure of classified and other controlled information under section 3164 of the National Defense Authorization Act for Fiscal Year 2000 (NDAA for FY 2000) (42 U.S.C. 7239). Section 3164 directs the Secretary of Energy to establish a program to ensure that DOE employees or DOE contractor employees engaged in defense activities may not be discharged, demoted, or otherwise discriminated against as a reprisal for making protected disclosures. The Secretary is required by section 3164(g) to prescribe regulations to ensure the security of any information disclosed under the program (42 U.S.C. 7239(g)). To qualify as a "protected disclosure" of classified or other controlled information, a covered employee must take appropriate steps to protect the security of the information in accordance with guidance provided by the DOE Inspector General, and reveal the information only to a person or entity specified in the statute (42 U.S.C. 7239(c)).

Section 3164(j) of the NDAA for FY 2000 provides that complaints of discriminatory acts taken in reprisal for making a protected disclosure may be submitted to the DOE Office of Hearings and Appeals for investigation (42 U.S.C. 7239(j)). Section 3164(k) directs the Secretary of Energy to take appropriate actions to abate acts of reprisal (42 U.S.C. 7239(k)).

II. Discussion of Rule Provisions

Part 1044 informs DOE and DOE contractor employees engaged in defense activities how to make a protected disclosure of classified and other controlled information. The definitions in section 1044.03 of "classified information" and "contractor" are drawn from 10 CFR Part 1045, "Nuclear Classification and Declassification." The same definitions apply to this rule because of the similar subject matter. DOE defines "defense activities" to cover the range of its defense activities carried out under the Atomic Energy Act of 1954 (42 U.S.C. 2011 *et seq.*). The definition of "defense activities" in section 1044.03 is consistent with the definition of "Atomic Energy Defense Programs" in DOE's regulations concerning protection of unclassified controlled nuclear information (see 10 CFR 1017.3). All

Departmental-related activities involving classified information and Unclassified Controlled Nuclear Information are considered to be "defense activities" covered by this rule.

The term "unclassified controlled nuclear information" is defined in section 1044.03, and used in conjunction with "classified information" throughout the rule to identify the types of information that are covered by the protected disclosure provisions of section 3164 of the NDAA for FY2000. For reasons that follow, DOE has concluded that unclassified controlled nuclear information under section 148 of the Atomic Energy Act (42 U.S.C. 2168) is the only type of information that falls within the meaning of "other information" in the phrase "classified or other information" used in section 3164(c)(3) to define "protected disclosures."

DOE's interpretation of "other information" in section 3164 is consistent with the apparent intent of Congress to cover the disclosure of controlled information. Under section 3164(g), DOE is required to prescribe regulations to ensure the security of any information disclosed under the statute. Other provisions impose an obligation on a whistleblower to take appropriate steps to protect the security of the information to be disclosed (section 3164(c)(1)), and restrict who may receive a disclosure of classified or other information (section 3164(d)). These provisions would not make sense if "other information" encompassed uncontrolled information. The legislative history also shows that Congress intended to address in section 3164 the disclosure of national security sensitive information. See Conference Report on the National Defense Authorization Act for Fiscal Year 2000, H.R. Conf. Rep. No. 106-301, at p. 920.

Section 1044.06 lists the persons and entities that may receive a protected disclosure (42 U.S.C. 7239(d)). Section 1044.07 provides that the Inspector General will assist the whistleblower by obtaining from the Office of Safeguards and Security a determination whether a particular person has the appropriate security access authorization to receive the classified or other controlled information.

Sections 1044.08 and 1044.09 provide that a person who wishes to make a protected disclosure must submit the information to the Inspector General, who in turn will obtain a determination from the Office of Nuclear and National Security Information on the security classification, if any, of the information. If the information is classified or

controlled, section 1044.11 provides that the whistleblower must follow applicable security requirements concerning how to generate, mark, reproduce, store, destroy, and transmit classified and other controlled information. These security requirements derive from Executive Orders, DOE regulations, and current security directives issued by the Office of Safeguards and Security. The Inspector General will provide the whistleblower with guidance on how to comply with these requirements. The individual has a responsibility to obtain assistance and guidance before seeking to make a protected disclosure.

As required by the NDAA for FY 2000, DOE provides in section 1044.09 that the identity of a whistleblower under this program will be protected (42 U.S.C. 7239(f)(3)). Section 1044.12 describes the procedures provided in the statute (42 U.S.C. 7239(i)-(k)) for acting on complaints of alleged discrimination against employees as reprisal for making protected disclosures.

III. Public Comment

The interim final rule published today prescribes security procedures that DOE and DOE contractor employees must follow to make a protected disclosure of classified or other controlled information under section 3164(g) of the NDAA for FY 2000. As a rule of agency procedure, this rulemaking is exempt from the notice and comment requirements in the Administrative Procedure Act, 5 U.S.C. 553. DOE, nevertheless, is providing an opportunity for interested persons to submit written data and views on the interim rule. Interested persons should submit their comments to the address indicated in the **ADDRESSES** section of this notice. The outside of the envelope and the comments should be labeled as follows: "Protected Disclosure Rulemaking, Docket No. SO-RM-00-3164." If you believe that any information or data you submit may be exempt from public disclosure by law, you should submit one complete copy as well as one copy from which you have deleted the information you believe to be exempt from disclosure. The Department will determine if the information or data is exempt from disclosure.

All comments received will be available for public inspection as part of the administrative record on file for this rulemaking in the Department of Energy Freedom of Information Office Reading Room, Room 1E-090, Forrestal Building, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 586-

6020, between 9 a.m. and 4 p.m., Monday through Friday, except Federal holidays.

IV. Procedural Requirements

A. Review Under Executive Order 12866

Today's regulatory action has been determined not to be "a significant regulatory action" under Executive Order 12866, "Regulatory Planning and Review," (58 FR 51735, October 4, 1993). Accordingly, this action was not subject to review under that Executive Order by the Office of Information and Regulatory Affairs of the Office of Management and Budget (OMB).

B. Review Under the Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) requires preparation of an initial regulatory flexibility analysis for any rule that by law must be proposed for public comment, unless the agency certifies that the rule will not have a "significant economic impact on a substantial number of small entities." Today's interim final rule prescribes the security procedures that a DOE or DOE contractor employee engaged in defense activities must follow when making a protected disclosure of classified or other controlled information under section 3164 of the NDAA for FY 2000. DOE is not required by the Administrative Procedure Act (5 U.S.C. 553) or any other law to propose this rule for public comment. Accordingly, the Regulatory Flexibility Act requirements do not apply to this rulemaking, and no regulatory flexibility analysis has been prepared.

C. Review Under the Paperwork Reduction Act

No additional information or record keeping requirements are imposed by this rulemaking. Accordingly, no OMB clearance is required under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*).

D. Review Under the National Environmental Policy Act

Today's rule describes the security requirements a DOE or DOE contractor employee engaged in defense activities must follow when making a protected disclosure of classified or other controlled information under section 3164 of the NDAA for FY 2000. Implementation of this rule will not affect whether such information might cause or otherwise be associated with an environmental impact. The Department has, therefore, determined that this rule is covered under the Categorical Exclusion found at paragraph A.6. of

Appendix A to Subpart D, 10 CFR Part 1021, which applies to rulemakings that are strictly procedural. Accordingly, neither an environmental assessment nor an environmental impact statement is required.

E. Review Under Executive Order 12988

With respect to the review of existing regulations and the promulgation of new regulations, section 3(a) of Executive Order 12988, "Civil Justice Reform," (61 FR 4729, February 7, 1996), imposes on Federal agencies the general duty to adhere to the following requirements: (1) Eliminate drafting errors and ambiguity; (2) write regulations to minimize litigation; and (3) provide a clear legal standard for affected conduct rather than a general standard and promote simplification and burden reduction. With regard to the review required by section 3(a), section 3(b) of Executive Order 12988 specifically requires that Executive agencies make every reasonable effort to ensure that the regulation: (1) Clearly specifies the preemptive effect, if any; (2) clearly specifies any effect on existing Federal law or regulation; (3) provides a clear legal standard for affected conduct while promoting simplification and burden reduction; (4) specifies the retroactive effect, if any; (5) adequately defines key terms; and (6) addresses other important issues affecting clarity and general draftsmanship under any guidelines issued by the Attorney General. Section 3(c) of Executive Order 12988 requires Executive agencies to review regulations in light of applicable standards in section 3(a) and section 3(b) to determine whether they are met or it is unreasonable to meet one or more of them. DOE has completed the required review and determined that, to the extent permitted by law, this interim final rule meets the relevant standards of Executive Order 12988.

F. Review Under Executive Order 13132

Executive Order 13132 (64 FR 43255, August 10, 1999) requires agencies to develop an accountable process to ensure meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications. DOE published its intergovernmental consultation policy and procedures on March 14, 2000 (65 FR 13735). "Policies that have federalism implications" is defined in the Executive Order to include regulations that have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and

responsibilities among the various levels of government. DOE has examined this interim final rule and has determined that it would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. No further action is required by Executive Order 13132.

G. Review Under the Unfunded Mandates Reform Act of 1995

Title II of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4) requires each federal agency to prepare a written assessment of the effects of any federal mandate in a proposed or final agency rule that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100 million in any one year. The Act also requires a federal agency to develop an effective process to permit timely input by elected officers of State, local, and tribal governments on a proposed "significant intergovernmental mandate," and requires an agency plan for giving notice and opportunity to timely input to potentially affected small governments before establishing any requirements that might significantly or uniquely affect small governments. DOE's intergovernmental consultation process under the Unfunded Mandates Reform Act of 1995 is described in a statement of policy published by DOE on March 18, 1997 (62 FR 12820). The interim final rule published today does not contain any federal mandate, so these requirements do not apply.

H. Review Under Plain Language Initiative

Executive Order 12866 and the President's memorandum of June 1, 1998, require each agency to write all rules in plain language. We invite your comments on how to make this rule easier to understand. For example:

- Have we organized the material to suit your needs?
- Are the requirements in the rule clearly stated?
- Does the rule contain technical language or jargon that isn't clear?
- Would a different format make the rule easier to understand?
- What else could we do to make the rule easier to understand?

I. Congressional Notification

As required by 5 U.S.C. 801, DOE will report to Congress promulgation of the interim final rule prior to its effective date. The report will state that it has been determined that the rule is not a

“major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 10 CFR Part 1044

Administrative practice and procedure, Classified information, Energy, Government contracts, National security information, Security information, Whistleblowing

Issued in Washington, DC, on November 30, 2000.

T.J. Glauthier,

Deputy Secretary.

For the reasons set forth in the preamble, DOE hereby amends Chapter X of title 10 of the Code of Federal Regulations as set forth below:

1. New Part 1044 is added to read as follows:

PART 1044—SECURITY REQUIREMENTS FOR PROTECTED DISCLOSURES UNDER SECTION 3164 OF THE NATIONAL DEFENSE AUTHORIZATION ACT FOR FISCAL YEAR 2000

Sec.

- 1044.01 What is the purpose of this part?
- 1044.02 Who must follow the requirements contained in this part?
- 1044.03 What definitions apply to this part?
- 1044.04 What is a protected disclosure?
- 1044.05 What is the effect of a disclosure qualifying as a “protected disclosure”?
- 1044.06 Who may receive a protected disclosure?
- 1044.07 How can you find out if a particular person is authorized to receive a protected disclosure?
- 1044.08 Do you have to submit the documents for classification review before you give them to someone?
- 1044.09 What do you do if you plan to disclose classified or unclassified controlled nuclear information orally rather than by providing copies of documents?
- 1044.10 Will your identity be protected?
- 1044.11 How do you protect the documents and information that you want to disclose?
- 1044.12 What procedures can you invoke if you believe you have been discharged, demoted, or otherwise discriminated against as a reprisal for making a protected disclosure?

Authority: 42 U.S.C. 7101 et seq., 7239, and 50 U.S.C. 2401 et seq.

§ 1044.01 What is the purpose of this part?

This part prescribes the security requirements for making protected disclosures of classified or unclassified controlled nuclear information under the whistleblower protection provisions of section 3164 of the National Defense Authorization Act for Fiscal Year 2000.

§ 1044.02 Who must follow the requirements contained in this part?

The requirements apply to you if you are:

- (a) An employee of DOE, including the National Nuclear Security Administration, or one of its contractors;
- (b) Engaged in DOE defense activities; and
- (c) Wish to make a protected disclosure as described in § 1044.04 of this part.

§ 1044.03 What definitions apply to this part?

The following definitions apply to this subpart:

Atomic Energy Act means the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011 et seq.).

Classified information means:

- (1) Information classified as Restricted Data or Formerly Restricted Data under the Atomic Energy Act; or
- (2) Information that has been determined pursuant to Executive Order 12958 or prior Executive Orders to require protection against unauthorized disclosure and is marked to indicate its classification status when in document form (also referred to as “National Security Information” in 10 CFR Part 1045 or “defense information” in the Atomic Energy Act).

Contractor means any industrial, educational, commercial or other entity, grantee or licensee at any tier, including an individual, that has executed an agreement with the Federal Government for the purpose of performing under a contract, license or other agreement.

Defense activities means activities of DOE engaged in support of:

- (1) The production, testing, sampling, maintenance, repair, modification, assembly, disassembly, utilization, transportation, or retirement of nuclear weapons or components of nuclear weapons;
- (2) The production, utilization, or transportation of nuclear material for military applications; or
- (3) The safeguarding of activities, equipment, or facilities which support the production of nuclear weapons or nuclear material for nuclear weapons.

DOE means the Department of Energy, including the National Nuclear Security Administration.

Unclassified controlled nuclear information means unclassified government information prohibited from unauthorized dissemination under section 148 of the Atomic Energy Act and DOE implementing regulations in 10 CFR part 1017.

§ 1044.04 What is a protected disclosure?

A protected disclosure is:

(a) A disclosure of classified or unclassified controlled nuclear information that you reasonably believe provides direct and specific evidence of—

- (1) A violation of law or Federal regulation;
- (2) Gross mismanagement, a gross waste of funds, or an abuse of authority; or
- (3) A false statement to Congress on pursuant to an issue of material fact; and

(b) Protected pursuant to the procedures in this part, including the security procedures referenced in § 1044.11; and

(c) Revealed only to a person or organization described in § 1044.06.

§ 1044.05 What is the effect of a disclosure qualifying as a “protected disclosure”?

If a DOE or DOE contractor employee follows the procedures of this part when making a disclosure of classified or unclassified controlled nuclear information, then the employer (DOE or DOE contractor as applicable) may not discharge, demote, or otherwise discriminate against the employee as a reprisal for making the disclosure.

§ 1044.06 Who may receive a protected disclosure?

The following persons or organizations may receive a protected disclosure:

(a) A member of a committee of Congress having primary responsibility for oversight of the department, agency, or element of the Government to which the disclosed information relates;

(b) An employee of Congress who is a staff member of such a committee and has an appropriate security access authorization for the information being disclosed;

(c) The Inspector General of the Department of Energy;

(d) The Federal Bureau of Investigation; or

(e) Any other element of the Government designated by the Secretary of Energy as authorized to receive the information being disclosed.

§ 1044.07 How can you find out if a particular person is authorized to receive a protected disclosure?

You must contact the Department of Energy Inspector General for help in determining whether a particular person is authorized to receive the classified or unclassified controlled nuclear information you wish to disclose. The Inspector General will contact the Office of Safeguards and Security as necessary to determine the security access authorization of the person to receive the protected disclosure.

§ 1044.08 Do you have to submit the documents for classification review before you give them to someone?

Yes, you must submit each document with a classification or control marking and any unmarked document generated in a classified or controlled subject area to the Inspector General. The Inspector General forwards each document to the Office of Nuclear and National Security Information for a determination as to whether the information in the document is properly classified, controlled, or may be released to the public.

§ 1044.09 What do you do if you plan to disclose classified or unclassified controlled nuclear information orally rather than by providing copies of documents?

You must describe in detail to the Inspector General what information you wish to disclose. The Inspector General may require that the information to be disclosed be put in writing in order to ensure the Inspector General obtains and provides accurate advice. The Inspector General will consult with the Office of Nuclear and National Security Information who will provide you with advice, through the Inspector General, as to whether the information is classified or controlled and any steps needed to protect the information.

§ 1044.10 Will your identity be protected?

Yes, both the Inspector General and the Office of Nuclear and National Security Information must protect, consistent with legal requirements, your identity and any information about your disclosure.

§ 1044.11 How do you protect the information that you want to disclose?

To protect classified information and unclassified controlled nuclear information you plan to disclose, you must:

(a) Only disclose the information to personnel who possess the appropriate clearance and need-to-know for the information disclosed as required in 10 CFR part 710, after verifying any special authorizations or accesses, such as Sensitive Compartmented Information, Special Access Program, and Weapon Data information;

(b) Use only equipment (such as computers or typewriters) that is approved for classified processing for the generation of classified documents;

(c) Mark documents as required by 10 CFR part 1045 (classified information), 10 CFR Part 1017 (unclassified controlled nuclear information), or as required by the Office of Nuclear and National Security Information.

(d) Use only approved copiers to reproduce documents;

(e) Store classified documents in facilities approved by the U.S. Government for the storage of classified material;

(f) Use only approved destruction devices to destroy classified documents;

(g) Use only appropriate secure means, such as secure facsimile or secure telephone, to provide classified information orally or electronically when transmitting or communicating that information (e.g. the applicable classified mailing address); and

(h) Follow any additional specific instructions from the Office of Safeguards and Security on how to protect the information.

§ 1044.12 What procedures can you invoke if you believe you have been discharged, demoted, or otherwise discriminated against as a reprisal for making a protected disclosure?

If you believe you have been discriminated against as a reprisal for making a protected disclosure, you may submit a complaint to the Director of the Office of Hearings and Appeals, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585-0107, or you may send your complaint to the Director, Office of Hearings and Appeals, by facsimile to FAX number (202) 426-1415. In your complaint, you should give your reasons for believing that you have been discriminated against as a reprisal for making a protected disclosure, and include any information you think is relevant to your complaint. The Office of Hearings and Appeals will conduct an investigation of your complaint unless the Director determines your complaint is frivolous. The Director will notify you in writing if your complaint is found to be frivolous. If an investigation is conducted, the Director will submit a report of the investigation to you, to the employer named in your complaint, and to the Secretary of Energy, or the Secretary's designee. The Secretary, or the Secretary's designee, will take appropriate action, pursuant to 42 U.S.C. 7239(k), to abate any discriminatory actions taken as reprisal for making a protected disclosure.

BILLING CODE 6450-01-P

SMALL BUSINESS ADMINISTRATION

13 CFR Part 126

HUBZone Program

AGENCY: Small Business Administration.

ACTION: Final rule.

SUMMARY: This final rule amends the regulations governing the HUBZone Empowerment Contracting Program (HUBZone program). In particular, this rule clarifies the application of the HUBZone program to state and local governments, revises the definition of the term "principal office," eliminates the program eligibility restrictions on allowable affiliations of HUBZone small business concerns, and eases the program eligibility requirements and procurement restrictions concerning qualified HUBZone small business concerns that operate as non-manufacturers.

DATES: This rule is effective on February 20, 2001.

FOR FURTHER INFORMATION CONTACT:

Michael McHale, Associate Administrator for the HUBZone Program, (202) 205-6731 or hubzone@sba.gov.

SUPPLEMENTARY INFORMATION: On October 3, 2000, the Small Business Administration (SBA) published in the **Federal Register**, 65 FR 58963, a proposed rule to amend its regulations governing the HUBZone program. The rule proposed to update the list of Federal agencies covered by the HUBZone program and clarify that the program does not apply to contracts awarded by state and local governments. In addition, the rule proposed to amend the definition of the term principal office to accommodate service and construction concerns, and to eliminate the program eligibility restrictions on allowable affiliations of HUBZone small business concerns (SBCs). Finally, the rule proposed to ease the program eligibility requirements and procurement restrictions concerning qualified HUBZone small business concerns that operate as non-manufacturers. The proposed regulatory amendments were intended to improve the efficiency and effectiveness of the program in light of SBA's experience since the effective date of the final regulations implementing the HUBZone Act of 1997, Title VI of the Small Business Reauthorization Act of 1997, Public Law 105-135.

Discussion of Comments on the Proposed Rule

SBA received 22 timely comments concerning the proposed amendments. The vast majority of the comments supported the proposed regulatory amendments and applauded SBA's efforts to improve and clarify the HUBZone regulations. In addition to expressing support for the amendments, a few commenters also recommended some modifications to two of the

proposed amendments. As discussed below, SBA carefully considered the comments and recommendations in developing this final rule. SBA received a few comments addressing other sections of the HUBZone regulations. Because this final rule does not involve any of those sections, SBA does not discuss those comments here but will consider them for future amendments to the HUBZone regulations.

Four comments addressed SBA's proposal to revise § 126.101, to add three additional Federal agencies to the list of agencies covered by the HUBZone Act and to clarify that the program does not apply to state and local governments. Three of those comments supported those amendments. One of the four commenters, however, pointed out that Section 212 of Public Law 106-113, which extended the HUBZone program to the three Federal agencies that SBA proposed to add to the list, was effective for the fiscal year ending September 30, 2000. That commenter also noted that although the current § 126.101(b) makes clear that after September 30, 2000, the HUBZone program applies to all federal agencies that hire one or more contracting officers, it may be useful to retain the current list of covered agencies under § 126.101(a) because it spells out the program's applicability to HUBZone contracts awarded prior to September 30, 2000. SBA concurs with that recommendation and therefore has retained the original § 126.101(a) without change and has adopted in full a new paragraph (c) to § 126.101, as proposed on October 3, 2000.

The comments concerning the definition of "principal office," were all supportive of the proposed amendment of that definition in § 126.103. Under the proposed definition, "principal office" would continue to be defined as the location where the greatest number of the concern's employees perform their work, except that for concerns whose primary industry is service or construction, the determination of "principal office" would exclude the concern's employees who perform their work at separate job-site locations to fulfill specific contract obligations.

In the preamble to the proposed rule, SBA specifically requested public comments on the proposed employee exclusion provision for the construction and service industries. Responding commenters strongly supported that exclusion for firms engaged in the construction and service industries. They agreed that the current definition of "principal office" is appropriate for manufacturing concerns, because such firms tend to operate with fixed plant,

equipment and personnel tied to one location, but that it did not make sense for service or construction industries. Accordingly, this final rule adopts the definition of "principal office" as proposed.

With one notable exception, commenters likewise endorsed the proposed amendment of § 126.204, to eliminate the current restriction on allowable affiliations of HUBZone SBCs to other qualified HUBZone SBCs, 8(a) Business Development program participants and women-owned small businesses. The one objecting commenter expressed concern that the proposed change would make it easier for large businesses to set up "store-front" affiliates to abuse the program. SBA disagrees. The proposed amendment to § 126.204 makes clear that the size of the HUBZone SBCs when combined with the size of all its affiliates must qualify as small under part 121 of title 13 of the Code of Federal Regulations. That requirement safeguards against possible abuse by large businesses in that regard.

Although supporting the proposed elimination of the existing restrictions on allowable affiliations, another commenter recommended that SBA relax the requirements of § 126.204 further by revising the directive for aggregating the size of the HUBZone SBC and its affiliates. That commenter suggested that SBA should only aggregate the "business activity resulting from" the affiliation. SBA declines to accept that recommendation. Given the broad definition of affiliation under § 121.103 of title 13 of the Code of Federal Regulations, it is not feasible to aggregate only the "business activity resulting from" the affiliation. Further, combining the size of a HUBZone concern with all its affiliates is consistent with governing size regulations under part 121, and does not impose undue burden on otherwise qualified HUBZone SBCs. SBA believes that a finding of affiliation should have the same consequences in each of SBA's programs. In other words, a finding of affiliation causes SBA to aggregate all of the receipts or employees of each of the affiliates. SBA does not look only at certain types of receipts of a firm's affiliates, but rather, combines all receipts of an affiliate from whatever source. SBA believes that that general rule is equally applicable to the HUBZone program. Consequently, the requirement for aggregating the size of a HUBZone SBC and all its affiliates is retained in this final rule.

Finally, SBA received several comments which were supportive of the proposed amendment to § 126.206 to

eliminate the eligibility requirement that a non-manufacturer demonstrate that it can provide products manufactured by a qualified HUBZone SBC, and the proposed amendment to § 126.601(d) to allow qualified HUBZone SBCs that are non-manufacturers to supply the product of any business for HUBZone contracts at or below \$25,000 in total value. Three of those commenters, however, requested that SBA adopt a higher maximum threshold of as high as \$100,000 and \$250,000. SBA does not believe that an increase in the proposed \$25,000 threshold is justified at this time, since it would unfairly impact qualified HUBZone SBCs that are manufacturers. The \$25,000 threshold also parallels the regulatory scheme of the Federal Acquisition Regulation, 48 CFR 19.502-2(c), which permits small businesses in small business set-asides where the anticipated cost of the procurement will not exceed \$25,000, to provide the product or products of any domestic firm.

As suggested by one commenter, the final rule makes one clarification to the provisions regarding HUBZone non-manufacturers. In both § 126.206 and § 126.601(d), the final rule specifically references 13 CFR 121.406(b)(1)(i) and (ii), as the applicable definition of non-manufacturer. Other than that clarification, this final rule adopts without change the proposed amendments pertaining to HUBZone non-manufacturers.

Application of the Final Rule

As indicated above, this rule is effective thirty days from the date of publication. To ensure that applicants to and participants in the HUBZone program are subject to the same regulatory requirements, this final rule applies to all HUBZone applications submitted on or after the effective date of this rule, to all pending HUBZone applications, and to all currently certified HUBZone SBCs.

Compliance With Executive Orders 12866, 12988, and 13132, the Paperwork Reduction Act (44 U.S.C. Ch. 35), and the Regulatory Flexibility Act (5 U.S.C. 601-602)

The Office of Management and Budget (OMB) reviewed this final rule as a "significant" regulatory action under Executive Order 12866.

For purposes of Executive Order 12988, SBA has drafted this rule, to the extent practicable, in accordance with the standards set forth in section 3 of that Order.

For purposes of Executive Order 13132, SBA has determined that this

final rule has no federalism implications warranting the preparation of a Federalism Assessment.

For purposes of the Paperwork Reduction Act, 44 U.S.C. Ch. 35, SBA has determined that this rule does not impose new reporting or recordkeeping requirements.

SBA has determined that this final rule may have a significant beneficial economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act (RFA), 5 U.S.C. § 601, *et seq.* This rule involves revising the definition of "principal office" and eliminating certain requirements governing the allowable affiliations of qualified HUBZone SBCs and SBCs that operate as non-manufacturers. The rule will affect a large percentage of the over 30,000 SBCs that SBA believes are now eligible or will become eligible for certification as qualified HUBZone SBCs over the life of the program.

Pursuant to the requirements of the RFA, SBA prepared an Initial Regulatory Flexibility Analysis (IRFA), fully discussing the economic impact of the amendments on small entities. SBA submitted a copy of the IRFA to the Chief Counsel for Advocacy of the Small Business Administration. No comments were submitted in response to the IRFA. Since this final rule implements the amendments without significant substantive change, this final rule does not change the nature of the economic impact of the amendments on small entities, nor alter the basis of SBA's IRFA. Accordingly, this Final Regulatory Flexibility Analysis incorporates by reference the entire IRFA. A copy of the Final Regulatory Flexibility Analysis and IRFA may be obtained by contacting the Chief Counsel for Advocacy of the Small Business Administration, (202) 205-6533.

The amendments that are the subject of this rule will affect primarily those SBCs that participate in Federal procurements, that have affiliates, or that are non-manufacturers. The amendments will make it easier for qualified SBCs to participate in the program because it provides a definition of "principal office" that accommodates the fluid nature of the construction and service industries and it allows qualified HUBZone SBCs to have any affiliates provided that they, together with their affiliates, do not exceed their applicable size standard under part 121 of title 13 of the Code of Federal Regulations. This final rule also will facilitate the certification of qualified HUBZone SBCs and open the door to more HUBZone contracts by eliminating

the eligibility requirement that non-manufacturers must demonstrate that they can supply the goods of a qualified SBC as a prerequisite for program certification, and by exempting non-manufacturers from making that showing when submitting offers to supply goods for HUBZone contracts with a total value of \$25,000 or less.

In addition, this final rule does not duplicate, overlap or conflict with relevant Federal regulations. SBA reviewed several alternatives to the amendments implemented by this rule and believes that the amendments are in the best interest of SBCs and the HUBZone Program.

(Catalog of Federal Domestic Assistance Programs, No. 59.009)

List of Subjects in 13 CFR Part 126

Administrative practice and procedure, Government procurement, Reporting and recordkeeping requirements, Small businesses.

Accordingly, for the reasons set forth above, SBA amends 13 CFR part 126, as follows:

PART 126—HUBZONE PROGRAM [AMENDED]

1. Revise the authority citation for 13 CFR part 126 to read as follows:

Authority: 15 U.S.C. 632(a); Pub. L. 105-135 sec. 601 *et seq.*, 111 Stat. 2592.

2. Amend § 126.101 by adding a new paragraph (c) to read as follows:

§ 126.101 Which government departments or agencies are affected directly by the HUBZone program?

* * * * *

(c) The HUBZone program does not apply to contracts awarded by state and local governments. However, state and local governments may use the List of qualified HUBZone SBCs to identify qualified HUBZone SBCs for similar programs authorized under state or local law.

3. Amend § 126.103 to revise the definition of "principal office" to read as follows:

§ 126.103 What definitions are important in the HUBZone program?

* * * * *

Principal office means the location where the greatest number of the concern's employees at any one location perform their work. However, for those concerns whose "primary industry" (see 13 CFR 121.107) is service or construction (see 13 CFR 121.201), the determination of principal office excludes the concern's employees who perform the majority of their work at

job-site locations to fulfill specific contract obligations.

* * * * *

4. Revise § 126.204 to read as follows:

§ 126.204 May a qualified HUBZone SBC have affiliates?

A concern may have affiliates provided that the aggregate size of the concern and all its affiliates is small as defined in part 121 of this title.

5. Revise § 126.206 to read as follows:

§ 126.206 May non-manufacturers be certified as qualified HUBZone SBCs?

Non-manufacturers (referred to in the HUBZone Act of 1997 as "regular dealers") may be certified as qualified HUBZone SBCs if they meet all of the requirements set forth in § 126.200. For purposes of this part, a "non-manufacturer" is defined in § 121.406(b)(1)(i) and (ii) of this title.

6. Amend § 126.601 by revising paragraph (d) to read as follows:

§ 126.601 What additional requirements must a qualified HUBZone SBC meet to bid on a contract?

* * * * *

(d) A qualified HUBZone SBC which is a non-manufacturer may submit an offer on a HUBZone contract for supplies if it meets the requirements of the non-manufacturer rule set forth at § 121.406(b)(1)(i) and (ii) of this title, and if the small manufacturer providing the end item for the contract is also a qualified HUBZone SBC. However, for HUBZone contracts at or below \$25,000 in total value, a qualified HUBZone SBC may supply the end item of any manufacturer, including a large business.

Dated: January 10, 2001.

Aida Alvarez,
Administrator.

BILLING CODE 8025-01-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 2000-CE-57-AD; Amendment 39-12073; AD 2001-01-03]

RIN 2120-AA64

Airworthiness Directives; British Aerospace HP137 Mk1, Jetstream Series 200, and Jetstream Models 3101 and 3201 Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) that applies to all British Aerospace HP137 Mk1, Jetstream series 200, and Jetstream Models 3101 and 3201 airplanes. This AD requires you to remove the nose landing gear steering actuator and install one that incorporates a modified piston rod. This AD is the result of mandatory continuing airworthiness information (MCAI) issued by the airworthiness authority for the United Kingdom. The actions specified by this AD are intended to prevent failure of the nose landing gear steering actuator because of problems with the current design piston rod. Continued operation with the current design piston rod could result in loss of nose wheel steering and possible loss of control of the airplane during takeoff, landing, and taxi operations.

DATES: This AD becomes effective on February 24, 2001.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in the regulations as of February 24, 2001.

ADDRESSES: You may get the service information referenced in this AD from British Aerospace Regional Aircraft, Prestwick International Airport, Ayrshire, KA9 2RW, Scotland; telephone: (01292) 479888; facsimile: (01292) 479703. You may examine this information at the Federal Aviation Administration (FAA), Central Region, Office of the Regional Counsel, Attention: Rules Docket No. 2000-CE-57-AD, 901 Locust, Room 506, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Doug Rudolph, Aerospace Engineer, FAA, Small Airplane Directorate, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329-4059; facsimile: (816) 329-4090.

SUPPLEMENTARY INFORMATION:

Discussion

What events have caused this AD? The Civil Aviation Authority (CAA), which is the airworthiness authority for the United Kingdom, recently notified FAA that an unsafe condition may exist on all British Aerospace HP137 Mk1, Jetstream series 200, and Jetstream Models 3101 and 3201 airplanes. The CAA reports three occurrences of nose landing gear failure in the area of the undercut on the base of the eye and thread on the steering actuator. The CAA reports cracks in this area on 10 additional nose landing gear units.

Investigation of these occurrences reveals incorrect installation or insufficient lubrication at the steering actuator trunnions. This then causes bending loads in the steering actuator piston rod during operation.

What are the consequences if the condition is not corrected? Cracks in or failure of the steering actuator piston rod could result in loss of nose wheel steering and possible loss of control of the airplane during takeoff, landing, and taxi operations.

Has FAA taken any action to this point? We issued a proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an AD that would apply to all British Aerospace HP137 Mk1, Jetstream series 200, and Jetstream Models 3101 and 3201 airplanes. This proposal was published in the **Federal Register** as a notice of proposed rulemaking (NPRM) on October 24, 2000 (65 FR 63551). The NPRM proposed to require you to remove the nose landing gear steering actuator and install one that incorporates a modified piston rod.

Was the public invited to comment? Interested persons were afforded an opportunity to participate in the making of this amendment. We have given due consideration to the comments received.

Comment Disposition

What is the Commenters' Concern? Several commenters express concern over the compliance time that FAA

established. In particular, the comments are:

- 200 hours time-in-service (TIS) is unrealistic for the installation because parts would not be available and many of the affected aircraft would be unjustly grounded; and
- since CAA and British Aerospace recommend 3,000 landings since May 5, 2000, FAA should adopt a similar compliance time.

What is FAA's Response to the Concern? After consulting with British Aerospace and CAA, we concur that 200 hours TIS would unjustly ground many of the affected aircraft. We are changing the compliance time of the installation in this final rule as follows:

“Within the next 3,000 landings after May 5, 2000 (the issue date of the applicable service information) or within the next 90 days after the effective date of this AD, whichever occurs later.”

The FAA's Determination

What is FAA's Final Determination on this Issue? After careful review of all available information related to the subject presented above, we have determined that air safety and the public interest require the adoption of the rule as proposed except for the compliance time change and minor editorial corrections. We determined that this compliance time change and the minor corrections:

- Will not change the meaning of the AD; and
- Will not add any additional burden upon the public than was already proposed.

Cost Impact

How many airplanes does this AD impact? We estimate that this AD affects 264 airplanes in the U.S. registry.

What is the cost impact of this AD on owners/operators of the affected airplanes? We estimate the following costs to accomplish the modification:

Labor cost	Parts cost	Total cost per airplane	Total cost on U.S. airplane operators
2 workhours × \$60 per hour=\$120	\$1,520 per airplane	\$1,640 per airplane	\$432,960

Regulatory Impact

Does this AD impact various entities? The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and

responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

Does this AD involve a significant rule or regulatory action? For the reasons discussed above, I certify that this

action (1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities

under the criteria of the Regulatory Flexibility Act. A copy of the final evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by Reference, Safety.

Adoption of the Amendment

Accordingly, under the authority delegated to me by the Administrator, the Federal Aviation Administration

amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. FAA amends § 39.13 by adding a new AD to read as follows:

2001-01-03 British Aerospace:

Amendment 39-12073; Docket No. 2000-CE-57-AD.

(a) *What airplanes are affected by this AD?* This AD affects Models HP137 Mk1,

Jetstream Series 200, and Jetstream Models 3101 and 3201 airplanes, all serial numbers, certificated in any category.

(b) *Who must comply with this AD?*

Anyone who wishes to operate any of the above airplanes must comply with this AD.

(c) *What problem does this AD address?*

The actions specified by this AD are intended to prevent failure of the nose landing gear steering actuator because of problems with the current design piston rod. Continued operation with the current design piston rod could result in loss of nose wheel steering and possible loss of control of the airplane during takeoff, landing, and taxi operations.

(d) *What actions must I accomplish to address this problem?* To address this problem, you must accomplish the following:

Action	Compliance time	Procedures
(1) Remove the nose landing gear steering actuator and install one that incorporates a modified piston rod.	Within the next 3,000 landings after May 5, 2000 (the issue date of the applicable service bulletin) or within the next 90 days after February 17, 2001 (the effective date of this AD), whichever occurs later, unless already accomplished. If the number of landings is unknown, you may use hours time-in-service (TIS) by multiplying the number of hours TIS by 0.75. In this case, 3,000 landings would be equal to 4,000 hours TIS (4,000 hours TIS $\times$ 0.75 = 3,000 landings).	In accordance with the procedures in APPH Ltd. Service Bulletin 32-73, dated April 2000, as referenced in British Aerospace Jetstream Mandatory Service Bulletin 32-JA000342, Issued: May 5, 2000.
(2) You may not install, on any affected airplane, a nose landing gear unit that does not incorporate a modified steering actuator piston rod, as required by paragraph (d)(1) of this AD.	As of February 17, 2001 (the effective date of this AD).	Not Applicable.

(e) *Can I comply with this AD in any other way?* You may use an alternative method of compliance or adjust the compliance time if:

- (1) Your alternative method of compliance provides an equivalent level of safety; and
- (2) The Manager, Small Airplane Directorate, approves your alternative. Submit your request through an FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, Small Airplane Directorate.

Note 1: This AD applies to each airplane identified in paragraph (a) of this AD, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if you have not eliminated the unsafe condition, specific actions you propose to address it.

(f) *Where can I get information about any already-approved alternative methods of compliance?* Contact Mr. Doug Rudolph, Aerospace Engineer, FAA, Small Airplane Directorate, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329-4059; facsimile: (816) 329-4090.

(g) *What if I need to fly the airplane to another location to comply with this AD?* The FAA can issue a special flight permit under sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate your airplane to a location where you can accomplish the requirements of this AD.

(h) *Are any service bulletins incorporated into this AD by reference?* Actions required by this AD must be done in accordance with APPH Ltd. Service Bulletin 32-73, dated April 2000, as referenced in British Aerospace Jetstream Mandatory Service Bulletin 32-JA000342, Issued: May 5, 2000. The Director of the Federal Register approved this incorporation by reference under 5 U.S.C. 552(a) and 1 CFR part 51. You can get copies from British Aerospace Regional Aircraft, Prestwick International Airport, Ayrshire, KA9 2RW, Scotland. You can look at copies at FAA, Central Region, Office of the Regional Counsel, 901 Locust, Room 506, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street, NW, suite 700, Washington, DC.

(i) *When does this amendment become effective?* This amendment becomes effective on February 24, 2001.

Note 2: The subject of this AD is addressed in British AD 004-05-2000.

Issued in Kansas City, Missouri, on January 4, 2001.

Michael Gallagher,
Manager, Small Airplane Directorate, Aircraft Certification Service.

RIN 2120-AA64

Airworthiness Directives; BAE Systems (Operations) Limited (Jetstream) Model 4101 Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to all BAE Systems (Operations) Limited (Jetstream) Model 4101 airplanes, that requires inspection

for cracking of the mounting brackets of the hydraulic hand pump at the frame attachment flanges, replacement of any cracked bracket with a new bracket, replacement of all bolts and nuts with new bolts and nuts, and installation of a particular "D" packer. The actions specified by this AD are intended to prevent failure of these brackets, which could result in inability to extend the landing gear in an emergency situation where the main hydraulic system is lost. This action is intended to address the identified unsafe condition.

DATES: Effective February 22, 2001.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of February 22, 2001.

ADDRESSES: The service information referenced in this AD may be obtained from British Aerospace Regional Aircraft American Support, 13850 Mclearen Road, Herndon, Virginia 20171. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM-116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington 98055-4056; telephone (425) 227-2110; fax (425) 227-1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to all British Aerospace (Jetstream) Model 4101 airplanes was published in the **Federal Register** on October 30, 2000 (65 FR 64629). That action proposed to require inspection for cracking of the mounting brackets of the hydraulic hand pump at the frame attachment flanges, replacement of any cracked bracket with a new bracket, replacement of all bolts and nuts with new bolts and nuts, and installation of a particular "D" packer.

Manufacturer Name Change

The manufacturer name in the final rule has been changed from British Aerospace to BAE Systems (Operations) Limited to reflect the recent company name change.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. No

comments were submitted in response to the proposal or the FAA's determination of the cost to the public.

Conclusion

After careful review of the available data, the FAA has determined that air safety and the public interest require the adoption of the rule with the change described previously. The FAA has determined that this change will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

The FAA estimates that 59 airplanes of U.S. registry will be affected by this AD, that it will take approximately 4 work hours per airplane to accomplish the required actions, and that the average labor rate is \$60 per work hour. Based on these figures, the cost impact of the AD on U.S. operators is estimated to be \$14,160, or \$240 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules

Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2001-01-08 BAE Systems (Operations) Limited [Formerly British Aerospace Regional Aircraft]: Amendment 39-12078. Docket 2000-NM-141-AD.

Applicability: All Model Jetstream 4101 airplanes, certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (b) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent failure of the mounting brackets of the hydraulic hand pump at the frame attachment flanges, which could result in inability to extend the landing gear in an emergency situation where the main hydraulic system is lost, accomplish the following:

Inspection and Installation

(a) Within 6 months after the effective date of this AD, perform a one-time dye penetrant inspection to detect cracking of the mounting brackets of the hydraulic hand pump at the frame attachment flanges, install "D" packers to the mounting brackets, and replace all bolts and nuts with new bolts and nuts, in accordance with the Accomplishment Instructions of Jetstream Service Bulletin J41-53-046, dated March 15, 2000. If any cracked bracket is found during the

inspection, prior to further flight, replace it with a new bracket.

Alternative Methods of Compliance

(b) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM-116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM-116.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM-116.

Special Flight Permits

(c) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(d) The actions shall be done in accordance with Jetstream Service Bulletin J41-53-046, dated March 15, 2000. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from British Aerospace Regional Aircraft American Support, 13850 Mclearen Road, Herndon, Virginia 20171. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 3: The subject of this AD is addressed in British airworthiness directive 003-03-2000.

Effective Date

(e) This amendment becomes effective on February 22, 2001.

Issued in Renton, Washington, on January 8, 2001.

Donald L. Riggins,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 99-NM-202-AD; Amendment 39-12076; AD 2001-01-06]

RIN 2120-AA64

Airworthiness Directives; Airbus Model A300 B2 and A300 B4 (A300); Model A300 B4-600, A300 B4-600R, and A300 F4-600R (A300-600); and Model A310 Series Airplanes; Equipped With Dowty Ram Air Turbines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes an existing airworthiness directive (AD), applicable to certain Airbus Industrie Model A300, A300-600, and A310 series airplanes; equipped with Dowty ram air turbines (RAT). That AD currently requires repetitive deployment tests of the RAT and checks of the adjustment of the locking rod. This amendment also requires modification of the RAT, which terminates the repetitive tests and checks. This amendment is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by this AD are intended to ensure the availability of the RAT in case of need.

DATES: Effective February 22, 2001.

The incorporation by reference of certain publications, as listed in the regulations, is approved by the Director of the Federal Register as of February 22, 2001.

The incorporation by reference of Airbus All Operator Telex 29-09, dated November 16, 1993, as listed in the regulations, was approved previously by the Director of the Federal Register as of March 2, 1994 (59 FR 7208, February 15, 1994).

ADDRESSES: The service information referenced in this AD may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM-116, FAA, Transport Airplane Directorate, 1601

Lind Avenue, SW., Renton, Washington 98055-4056; telephone (425) 227-2110; fax (425) 227-1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) by superseding AD 94-04-05, amendment 39-8823 (59 FR 7208, February 15, 1994), which is applicable to certain Airbus Industrie Model A300, A300-600, and A310 series airplanes, was published as a supplemental notice of proposed rulemaking (NPRM) in the **Federal Register** on August 23, 2000 (65 FR 51254). The action proposed to continue to require repetitive deployment tests of the ram air turbine (RAT) and checks of the adjustment of the locking rod. The action also proposed to require modification of the RAT, which would terminate the repetitive tests and checks, and to expand the applicability of the existing AD.

Airplane Model Designation Change

Since the issuance of the supplemental NPRM, the FAA has determined that it is necessary to revise the manner in which it specifies the model designation for Airbus Model A300 and A300-600 series airplanes to reflect the designations that appear on the type certificate data sheet (TCDS). This final rule has been revised accordingly.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were submitted in response to the supplemental NPRM or the FAA's determination of the cost to the public.

Conclusion

After careful review of the available data, the FAA has determined that air safety and the public interest require the adoption of the rule with the change previously described. The FAA has determined that this change will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

There are approximately 126 airplanes of U.S. registry that will be affected by this AD.

The repetitive tests and checks that are required by AD 94-04-05, and retained in this AD, take approximately 2 work hours per airplane to accomplish, at an average labor rate of \$60 per work hour. Based on these figures, the cost impact of this requirement on U.S. operators is

estimated to be \$15,120, or \$120 per airplane, per test/check cycle.

The new modification that is required by this AD action will take approximately 6 work hours per airplane to accomplish, at an average labor rate of \$60 per work hour. Required parts will cost approximately \$3,995 per airplane. Based on these figures, the cost impact of the new requirements of this AD on U.S. operators is estimated to be \$548,730, or \$4,355 per airplane.

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the

Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing amendment 39-8823 (59 FR 7208, February 15, 1994), and by adding a new airworthiness directive (AD), amendment 39-12076, to read as follows:

2001-01-06 Airbus Industrie: Amendment 39-12076. Docket 99-NM-202-AD. Supersedes AD 94-04-05, Amendment 39-8823.

Applicability: Model A300 B2 and A300 B4 (A300); Model A300 B4-600, A300 B4-600R, and A300 F4-600R (A300-600); and Model A310 series airplanes; certificated in any category; equipped with Dowty ram air turbines (RAT) having the following part numbers:

RAT 16C 100 VG
RAT 16C 101 VG
RAT 16C 102 VG
RAT 16C 103 VG
RAT 16C 105 VG
RAT 16C 109 VG
RAT 16C 110 VG
768336
768338

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e)(1) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To ensure the availability of the RAT in case of need, accomplish the following:

Restatement of Requirements of AD 94-04-05:

Repetitive Tests and Checks

(a) Within 60 days after March 2, 1994 (the effective date of AD 94-04-05, amendment 39-8823), or 500 hours time-in-service after March 2, 1994, whichever occurs first, perform a deployment test of the RAT and check the adjustment of the locking rod, in accordance with Airbus All Operator Telex (AOT) 29-09, dated November 16, 1993. Repeat the deployment test and adjustment check thereafter at intervals not to exceed 10 months.

(1) If no discrepancy is found, prior to further flight, apply grease to the RAT leg at the entry and exit positions of the locking rod spring housing, in accordance with the AOT.

(2) If any discrepancy is found, prior to further flight, correct it and apply grease to the RAT leg at the entry and exit positions of the locking rod spring housing, in accordance with the AOT.

New Requirements of This AD:

New Service Bulletin Revisions

(b) As of the effective date of this new AD, Airbus Service Bulletin A300-29-0101 (for Model A300 series airplanes), A310-29-2039 (for Model A310 series airplanes), or A300-29-6030 (for Model A300-600 series airplanes); all Revision 02, all dated June 28, 2000; as applicable; must be used for accomplishment of the actions required by paragraph (a) of this AD.

Modification

(c) Within 24 months after the effective date of this AD, modify the RAT by installing a grease nipple and a scraper seal assembly, replacing the locking rod spring with a stronger spring, and re-identifying the RAT with a new part number; in accordance with Airbus Service Bulletin A300-29-0106 (for Model A300 series airplanes), A310-29-2078 (for Model A310 series airplanes), or A300-29-6039 (for Model A300-600 series airplanes); all Revision 03, all dated June 28, 2000; as applicable. Accomplishment of the modification constitutes terminating action for the repetitive tests and checks required by paragraph (a) of this AD.

Note 2: The service bulletins refer to Sundstrand Service Bulletin ERPS26T-29-1 for modification instructions and new part numbers.

Note 3: Accomplishment of the actions specified in Airbus Service Bulletin A300-29-0106, A310-29-2078, or A300-29-6039; Revision 01; all dated September 8, 1997; or Revision 02, all dated January 26, 1999; as applicable; prior to the effective date of this AD, is acceptable for compliance with paragraph (c) of this AD.

Spares

(d) As of the effective date of this AD, no person shall install a RAT having the following part numbers on any airplane:

RAT 16C 100 VG
RAT 16C 101 VG
RAT 16C 102 VG
RAT 16C 103 VG
RAT 16C 105 VG
RAT 16C 109 VG
RAT 16C 110 VG
768336
768338

Alternative Methods of Compliance

(e)(1) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM-116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then

send it to the Manager, International Branch, ANM-116.

(2) Alternative methods of compliance, approved previously in accordance with AD 94-04-05, amendment 39-8823, are approved as alternative methods of compliance with paragraph (a) of this AD.

Note 4: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM-116.

(f) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(g) The actions shall be done in accordance with Airbus All Operator Telex 29-09, dated November 16, 1993; Airbus Service Bulletin A300-29-0101, Revision 02, dated June 28, 2000; Airbus Service Bulletin A310-29-2039, Revision 02, dated June 28, 2000; Airbus Service Bulletin A300-29-6030, Revision 02, dated June 28, 2000; Airbus Service Bulletin A300-29-0106, Revision 03, dated June 28, 2000; Airbus Service Bulletin A310-29-2078, Revision 03, dated June 28, 2000; and Airbus Service Bulletin A300-29-6039, Revision 03, dated June 28, 2000; as applicable.

(1) The incorporation by reference of Airbus Service Bulletin A300-29-0101, Revision 02, dated June 28, 2000; Airbus Service Bulletin A310-29-2039, Revision 02, dated June 28, 2000; Airbus Service Bulletin A300-29-6030, Revision 02, dated June 28, 2000; Airbus Service Bulletin A300-29-0106, Revision 03, dated June 28, 2000; Airbus Service Bulletin A310-29-2078, Revision 03, dated June 28, 2000; and Airbus Service Bulletin A300-29-6039, Revision 03, dated June 28, 2000; is approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51.

(2) The incorporation by reference of Airbus All Operator Telex 29-09, dated November 16, 1993, was approved previously by the Director of the Federal Register as of March 2, 1994 (59 FR 7208, February 15, 1994).

(3) Copies may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 5: The subject of this AD is addressed in French airworthiness directive 2000-259-315(B), dated June 28, 2000.

Effective Date

(h) This amendment becomes effective on February 22, 2001.

Issued in Renton, Washington, on January 8, 2001.

Donald L. Riggins,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-U

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 98-NM-325-AD; Amendment 39-12075; AD 2001-01-05]

RIN 2120-AA64

Airworthiness Directives; Dassault Model Falcon 10 and Model Mystere-Falcon 50 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Dassault Model Falcon 10 and Model Mystere-Falcon 50 series airplanes. For certain airplanes, this amendment requires modification of the aircraft wiring to illuminate the "T/O CONFIG" red warning light on the cockpit warning panel. For certain other airplanes, this amendment requires installation of a "NO TAKEOFF" red light on each pilot's instrument panel; modification of the associated aircraft wiring to activate the lights whenever the aircraft is not in the proper configuration for takeoff; and a revision to the Airplane Flight Manual to check that the "NO TAKEOFF" lights are out prior to takeoff. This amendment is prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The actions specified by this AD are intended to prevent takeoff with the parking brake engaged, which could result in an extended takeoff roll or a rejected takeoff, and consequent runway overrun.

DATES: Effective February 22, 2001.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of February 22, 2001.

ADDRESSES: The service information referenced in this AD may be obtained from Dassault Falcon Jet, P.O. Box 2000, South Hackensack, New Jersey 07606. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM-116, FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington

98055-4056; telephone (425) 227-2110; fax (425) 227-1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Dassault Model Falcon 10 and Model Mystere-Falcon 50 series airplanes was published in the **Federal Register** on July 22, 1999 (64 FR 39448). For certain airplanes, that action proposed to require modification of the aircraft wiring to illuminate the "T/O CONFIG" red warning light on the cockpit warning panel. For certain other airplanes, that action proposed to require installation of a "NO TAKEOFF" red light on each pilot's instrument panel; modification of the associated aircraft wiring to activate the lights whenever the aircraft is not in the proper configuration for takeoff; and a revision to the Airplane Flight Manual (AFM) to check that the "NO TAKEOFF" lights are out prior to takeoff.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. Due consideration has been given to the comments received.

Request for Credit for Previously Accomplished Work

One commenter, the manufacturer, requests that a statement be added to the proposed AD that would credit operators for the prior accomplishment of the original versions of the service bulletins. (The proposed AD specified that the modification be accomplished in accordance with Revision 1 of the corresponding service bulletins.)

The FAA concurs. Notes 2 and 4 have been added to the final rule to credit operators for the prior accomplishment of the modification in accordance with the original versions of the applicable service bulletins.

Request to Revise Cost Estimate

One commenter, the manufacturer, requests that the cost impact section of the proposed AD be revised to reflect certain information in its records: There are 144 U.S.-registered Model Falcon 10 series airplanes, of which 110 have already been modified; and 159 U.S.-registered Model Mystere-Falcon 50 series airplanes, of which 90 have already been modified. In addition, the commenter reports that the parts cost for Model Mystere-Falcon 50 series airplanes is \$226.

The FAA acknowledges the revised information, and has revised the cost

impact section of the final rule accordingly.

Request to Revise Applicability: AD Unnecessary for Falcon 50

One commenter, a pilot of Model Falcon 50 series airplanes, considers this AD to be unreasonable for those airplanes. The commenter cites a lack of incidents or accidents involving Model Falcon 50 series airplanes resulting from the parking brake being applied during takeoff. The commenter further suggests that the likelihood of such an event to occur is remote, based on the following considerations:

- The parking brake handle on the Model Falcon 50 series airplane is in the normal line of sight for the pilot.
- There are other cockpit indications available to advise the pilot if the parking brake is applied during takeoff.
- Except for one abnormal procedure, the available operational procedures (provided by the AFM, operating manual, and formal instruction) direct the use of the parking brake only full forward or full aft (full on) when the engine is operating.

The FAA infers that the commenter requests that Model Falcon 50 series airplanes be removed from the applicability of the proposed AD.

The FAA does not concur. The FAA disagrees with the commenter's claim that no incidents have occurred as a result of the identified unsafe condition. In fact, several incidents have been reported, despite the considerations identified by the commenter. In 1997 in Bursa, Turkey, the flightcrew of a Model Mystere-Falcon 50 series airplane rejected a takeoff, resulting in damage to the aircraft. The reported aircraft behavior was analyzed in a flight simulator, which indicated that the takeoff was attempted with the parking brake engaged at the first detent. In addition, the FAA has received reports of three similar occurrences on Model Falcon 10 series airplanes, resulting in four casualties and two injuries. In all three incidents, the crew attempted takeoff with the parking brake engaged at the first detent. Therefore, because of these incidents related to the unsafe condition, the FAA finds it necessary to require the actions for the identified airplanes as proposed. No change to the final rule is warranted in this regard.

Request to Revise Applicability: Potential To Cause Unsafe Operation

This same commenter suggests that the incorporation of Dassault Service Bulletin F50-240, as proposed by the notice of proposed rulemaking (NPRM), could cause unsafe operation of Model Mystere-Falcon 50 series airplanes. The commenter states:

If the anti-skid system of the #1 brake system is malfunctioning or inoperative, then the use of the #2 brakes according to the MMEL [Master Minimum Equipment List] and Annex 4 of the AFM [Airplane Flight Manual] is permitted. Inadvertent minor touching of the brakes during take-off under such conditions with Service Bulletin F50-240 applied would cause the illumination of the 'T/O CONFIG' red warning light; if this were to occur near or above V1, it would cause an aborted takeoff. This is because all other meanings to the crew of the 'T/O CONFIG' red warning light are dangerous to flight.

The FAA infers that the commenter is again requesting that Model Mystere-Falcon 50 series airplanes be removed from the applicability of the proposed AD.

The FAA does not concur. Data from the manufacturer indicate the reliability of the anti-skid system to be very high. Thus, the risk of concurrent failure of the anti-skid system and operation of the #2 brakes, in accordance with Annex 4 of the AFM, is remote. In light of the incidents previously described, the FAA considers the required change to the airplane design a necessary improvement in airplane safety and not a design change that would result in unsafe operations. No change to the final rule is necessary in this regard.

Request for Alternative Solutions

This same commenter suggests that the FAA consider alternative solutions to indicate that the parking brake is applied to the intermediate position during takeoff. The commenter states that the proposed actions would conflict with procedures in Annex 4 (if permitted) of the AFM. The commenter suggests incorporating either a switch on the parking brake handle or a pressure switch in the parking brake system before it joins the #2 brake system. The commenter alternatively suggests prohibiting use of Annex 4.

The FAA acknowledges the commenter's suggestions but has

determined that the actions as proposed will adequately address the unsafe condition. No change to the final rule is necessary.

Request To Revise MMEL

The manufacturer suggests incorporating the following sentence into the Maintenance and Operating procedures for the MMEL: "When dispatching with anti-skid failed, braking will illuminate the 'T/O config' Warning light when the aircraft is in take-off configuration." The commenter requests the change to alert the pilot of the potential unsafe condition identified by the proposed AD.

The FAA does not concur. While there may be merit to the commenter's suggestions, this AD is not the appropriate context in which to evaluate those suggestions. Since the suggested changes would alter the actions currently required by this AD, additional rulemaking would be required. The FAA finds that to delay this action would be inappropriate in light of the identified unsafe condition. No change to the final rule is necessary in this regard.

Additional Change to Final Rule

The proposed AD inadvertently referred to Dassault Service Bulletin F10-280 as the appropriate source of service information for accomplishment of both the installation action of paragraph (b)(1) and the AFM revision of paragraph (b)(2). The service bulletin provides accomplishment instructions only for the installation required by paragraph (b)(1). The final rule has been revised accordingly.

Conclusion

After careful review of the available data, including the comments noted above, the FAA has determined that air safety and the public interest require the adoption of the rule with the changes described previously. The FAA has determined that these changes will neither increase the economic burden on any operator nor increase the scope of the AD.

Cost Impact

The following table lists the estimated costs to operators to accomplish the requirements of this AD.

Model	Number of affected airplanes	Action	Work hours	Average labor rate (hour)	Parts cost	Per-airplane cost	Fleet cost
Falcon 10	34	Install light	50	\$60	\$2,280	\$5,280	\$179,520
		Revise AFM	1	60		60	2,040
Falcon 50	69	Modify wiring	8	60	226	706	48,714

The cost impact figures discussed above are based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption ADDRESSES.

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2001-01-05 Dassault Aviation:

Amendment 39-12075. Docket 98-NM-325-AD.

Applicability: Model Falcon 10 series airplanes, serial numbers 1 through 152 inclusive, on which Dassault Modification M801 (reference Dassault Service Bulletin F10-280, Revision 1, dated February 10, 1999) has not been accomplished; and Model Mystere-Falcon 50 series airplanes, serial numbers 2 through 250 inclusive and 252, on which Dassault Modification M1850 (reference Dassault Service Bulletin F50-240, Revision 1, dated October 7, 1998) has not been accomplished; certificated in any category.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent takeoff with the parking brake engaged, which could result in an extended takeoff roll or a rejected takeoff, and consequent runway overrun, accomplish the following:

Model Mystere-Falcon 50 Series Airplanes: Modification

(a) For Model Mystere-Falcon 50 series airplanes, within 9 months after the effective date of this AD, modify the aircraft wiring to add the "park brake handle not pushed forward" condition in the illumination conditions of the "T/O CONFIG" red warning light on the cockpit warning panel in accordance with Dassault Service Bulletin F50-240, Revision 1, dated October 7, 1998.

Note 2: Modification in accordance with Dassault Service Bulletin F50-240, dated April 5, 1995, is acceptable for compliance with the requirements of paragraph (a) of this AD.

Model Falcon 10 Series Airplanes: Modification and Airplane Flight Manual (AFM) Revision

(b) For Dassault Falcon 10 series airplanes, within 9 months after the effective date of this AD, accomplish the requirements of paragraphs (b)(1) and (b)(2) of this AD.

(1) Install a "NO TAKEOFF" red light on each pilot's instrument panel and modify the associated aircraft wiring to activate the lights whenever the aircraft is not in the proper configuration for takeoff, in

accordance with Dassault Service Bulletin F10-280, Revision 1, dated February 10, 1999.

(2) Revise the Normal Procedures Section of the FAA-approved AFM to include the information specified in Falcon 10 AFM DTM722 Temporary Change No. 17, dated March 31, 1995, which introduces procedures for checking that the "NO TAKEOFF" lights are out prior to takeoff; and operate the airplane in accordance with those limitations and procedures.

Note 3: This may be accomplished by inserting a copy of Falcon 10 AFM DTM722 Temporary Change No. 17 in the AFM. When these temporary revisions have been incorporated into general revisions of the AFM, the general revisions may be inserted in the AFM, provided the information contained in the general revision is identical to that specified in Temporary Change No. 17.

Note 4: Modification in accordance with Dassault Service Bulletin F10-280, dated September 6, 1995, is acceptable for compliance with the requirements of paragraph (b)(1) of this AD.

Alternative Methods of Compliance

(c) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM-116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM-116.

Note 5: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM-116.

Special Flight Permits

(d) Special flight permits may be issued in accordance with 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(e) Except as provided by paragraph (b)(2) of this AD: The actions shall be done in accordance with Dassault Service Bulletin F50-240, Revision 1, dated October 7, 1998; and Dassault Service Bulletin F10-280, Revision 1, dated February 10, 1999. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Dassault Falcon Jet, P.O. Box 2000, South Hackensack, New Jersey 07606. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 6: The subject of this AD is addressed in French airworthiness directives 98-300-022(B), dated July 29, 1998, and 98-547-022(B), dated December 30, 1998.

Effective Date

(f) This amendment becomes effective on February 22, 2001.

Issued in Renton, Washington, on January 8, 2001.

Dorenda D. Baker,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-U

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 39**

[Docket No. 2000-SW-52-AD; Amendment 39-12074; AD 2001-01-04]

RIN 2120-AA64

Airworthiness Directives; Sikorsky Aircraft Corporation Model S-76A, S-76B, and S-76C Helicopters

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule; request for comments.

SUMMARY: This amendment adopts a new airworthiness directive (AD) for Sikorsky Aircraft Corporation (Sikorsky) Model S-76A, S-76B, and S-76C helicopters. This AD requires initial and repetitive inspections of the main landing gear positioning rod assembly (rod assembly) and the side brace rod end (rod end) for corrosion. If any corrosion is found, this AD requires replacing any part that is corroded with an airworthy part before further flight. This amendment is prompted by a landing gear collapse caused by corrosion due to dissimilar metals in the landing gear rod end. The actions specified in this AD are intended to detect corrosion of the threaded joint in the rod assembly to prevent a collapse of the landing gear, and subsequent loss of control of the helicopter during landing.

DATES: Effective February 2, 2001.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of February 2, 2001.

Comments for inclusion in the Rules Docket must be received on or before March 19, 2001.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Office of the Regional Counsel, Southwest Region, Attention: Rules Docket No. 2000-SW-52-AD, 2601 Meacham Blvd., Room 663, Fort Worth, Texas 76137. You may

also send comments electronically to the Rules Docket at the following address: 9-asw-adcomments@faa.gov.

The service information referenced in this AD may be obtained from BF Goodrich Landing Gear Division, Attn.: Kenneth R. Madej, 8000 Marble Ave., Cleveland, OH 44105, telephone (216) 429-4461, fax (216) 429-4357. This information may be examined at the FAA, Office of the Regional Counsel, Southwest Region, 2601 Meacham Blvd., Room 663, Fort Worth, Texas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT:

Jeffrey Lee, Aviation Safety Engineer, Boston Aircraft Certification Office, 12 New England Executive Park, Burlington, MA 01803, telephone (781) 238-7161, fax (781) 238-7199.

SUPPLEMENTARY INFORMATION: This amendment adopts a new AD for Sikorsky Model S-76A, S-76B, and S-76C helicopters. This AD requires, within 14 days, inspecting the rod assembly, part number (P/N) 1945E-31A or 2071-31, and rod end, P/N 1945E235 or 2071-235, for corrosion. If the rod assembly and rod end were inspected and reassembled in accordance with BF Goodrich Component Maintenance Manual with Illustrated Parts List, 1945/2071 Series Main Landing Gear, No. 32-10-01, (formerly titled Cleveland Pneumatic Maintenance Manual 32-10-01), Revision 4, dated December 15, 1994, within the past 24 months, this AD requires an inspection within 90 days. If any corrosion is found, this AD requires replacing the unairworthy part with an airworthy part before further flight. This AD also requires, at intervals not to exceed 90 days, a repetitive inspection for corrosion on certain rod ends. For other rod ends, this AD requires a repetitive inspection for corrosion at intervals not to exceed 12 months or 1,500 hours time-in-service, whichever occurs first. This AD is prompted by a landing gear collapse on a helicopter that was in a hangar. Analysis showed that corrosion due to dissimilar metals in the rod end caused the rod end to fail with subsequent collapse of the landing gear. The actions specified in this AD are intended to detect corrosion of the threaded joint in the rod assembly and prevent a collapse of the landing gear and subsequent loss of control of the helicopter during landing.

The FAA has reviewed BF Goodrich Landing Gear Service Bulletin No. 76A-32-03, Revision 1, dated September 15, 2000, which describes procedures for

inspecting and repairing or replacing the rod end and rod assembly.

Since an unsafe condition has been identified that is likely to exist or develop on other Sikorsky Model S-76A, S-76B, and S-76C helicopters of the same type design, this AD is being issued to detect corrosion of the threaded joint in the rod assembly and prevent a collapse of the landing gear. This AD requires inspecting the rod assembly and rod end for corrosion at specified intervals and replacing, before further flight, any component that has corrosion. The actions must be accomplished in accordance with the service bulletin described previously. The short compliance time involved is required because the previously described critical unsafe condition can adversely affect the structural integrity of the helicopter. Therefore, the actions previously mentioned are required within 14 days, and this AD must be issued immediately.

Since a situation exists that requires the immediate adoption of this regulation, it is found that notice and opportunity for prior public comment hereon are impracticable, and that good cause exists for making this amendment effective in less than 30 days.

The FAA estimates that 180 helicopters will be affected by this AD and that it will take approximately 4.5 work hours per helicopter to inspect the rod assembly and rod end and 1.5 work hours to remove and replace the rod assembly and rod end, if necessary. Required parts will cost approximately \$14,600 per helicopter. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be \$2,692,800 (\$14,960 per helicopter, assuming inspecting, removing, and replacing the rod assembly and rod end once).

Comments Invited

Although this action is in the form of a final rule that involves requirements affecting flight safety and, thus, was not preceded by notice and an opportunity for public comment, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications should identify the Rules Docket number and be submitted in triplicate to the address specified under the caption **ADDRESSES**. All communications received on or before the closing date for comments will be considered, and this rule may be amended in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in

evaluating the effectiveness of the AD action and determining whether additional rulemaking action would be needed.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this AD will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their mailed comments submitted in response to this rule must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 2000-SW-52-AD." The postcard will be date stamped and returned to the commenter.

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

The FAA has determined that this regulation is an emergency regulation that must be issued immediately to correct an unsafe condition in aircraft, and that it is not a "significant regulatory action" under Executive Order 12866. It has been determined further that this action involves an emergency regulation under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). If it is determined that this emergency regulation otherwise would be significant under DOT Regulatory Policies and Procedures, a final regulatory evaluation will be prepared and placed in the Rules Docket. A copy of it, if filed, may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding a new airworthiness directive to read as follows:

2001-01-04 Sikorsky Aircraft Corporation: Amendment 39-12074. Docket No. 2000-SW-52-AD.

Applicability: Model S-76A, S-76B, and S-76C helicopters up to and including serial number 760513 with positioning rod assembly (rod assembly), part number (P/N) 1945E-31A or 2071-31, or side brace rod end (rod end), P/N 1945E-235 or 2071-235, installed, certificated in any category.

Note 1: This AD applies to each helicopter identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For helicopters that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (e) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To detect corrosion of the threaded joint in the rod assembly and prevent a collapse of the landing gear and subsequent loss of control of the helicopter during landing, accomplish the following:

(a) Within 14 days, inspect the rod assembly and rod end for corrosion in accordance with Section 2., Accomplishment Instructions, in BF Goodrich Service Bulletin No. 76A-32-03, Revision 1, dated September 15, 2000 (SB), except that scrapping of corroded parts is not required. Replace any part that is corroded with an airworthy part before further flight.

(b) Within 90 days, if the rod assembly and rod end were inspected and reassembled in accordance with BF Goodrich Component Maintenance Manual with Illustrated Parts List, 1945/2071 Series Main Landing Gear, No. 32-10-01, (formerly titled Cleveland Pneumatic Maintenance Manual 32-10-01), Revision 4, dated December 15, 1994, within the past 24 months, inspect the rod assembly and rod end in accordance with Section 2. of the SB. Scrapping of corroded parts is not required. Replace any part that is corroded with an airworthy part before further flight.

(c) At intervals not to exceed 90 days, for rod ends that are not reassembled with Mastinox sealant or reassembled with Mastinox sealant but without cadmium plate restoration, inspect the rod assembly and rod end for corrosion in accordance with the Section 2. of the SB, except that scrapping of

corroded parts is not required. Replace any part that is corroded with an airworthy part before further flight.

(d) At intervals not to exceed 12 months or 1,500 hours time-in-service, whichever occurs first, for rod ends assembled with Mastinox sealant and cadmium plate restoration or for rod ends reassembled with Mastinox but that did not previously require rework due to corrosion, inspect the rod assembly and rod end for corrosion in accordance with the Section 2. of the SB, except that scrapping of corroded parts is not required. Replace any part that is corroded with an airworthy part before further flight.

(e) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, Boston Aircraft Certification Office (ACO), FAA. Operators shall submit their requests through an FAA Principal Maintenance Inspector, who may concur or comment and then send it to the Manager, Boston ACO.

Note 2: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the Boston ACO.

(f) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the helicopter to a location where the requirements of this AD can be accomplished.

(g) The inspections shall be done in accordance with Section 2., Accomplishment Instructions, in BF Goodrich Service Bulletin No. 76A-32-03, Revision 1, dated September 15, 2000. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from BF Goodrich Landing Gear Division, Attn.: Kenneth R. Madej, 8000 Marble Ave., Cleveland, OH 44105, telephone (216) 429-4461, fax (216) 429-4357. Copies may be inspected at the FAA, Office of the Regional Counsel, Southwest Region, 2601 Meacham Blvd., Room 663, Fort Worth, Texas; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

(h) This amendment becomes effective on February 2, 2001.

Issued in Fort Worth, Texas, on January 5, 2001.

Henry A. Armstrong,

Manager, Rotorcraft Directorate, Aircraft Certification Service.

[FR Doc. 01-1121 Filed 1-17-01; 8:45 am]

BILLING CODE 4910-13-U

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 39**

[Docket No. 2000-NM-292-AD; Amendment 39-12079; AD 2001-01-09]

RIN 2120-AA64

Airworthiness Directives; Airbus Model A330-301, -321, and -322 Series Airplanes; and Model A340-211, -212, -213, -311, -312, and -313 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule; request for comments.

SUMMARY: This amendment supersedes an existing airworthiness directive (AD), applicable to all Airbus Model A330-301, -321, and -322 series airplanes; and Model A340-211, -212, -213, -311, -312, and -313 series airplanes. The existing AD requires repetitive replacements of the yaw damper actuator installed on active position with a new or overhauled actuator. This action adds a requirement, for certain airplanes, to install upgraded flight control primary computers, which terminates the requirement for the repetitive actuator replacements for those airplanes. This action is necessary to prevent hydraulic leakage from the yaw damper actuator installed on active position, due to premature wear of the dynamic seals between the actuator piston and the piston bearing. Hydraulic leakage could lead to the complete loss of the green hydraulic circuit, which could result in reduced controllability of the airplane. This action is intended to address the identified unsafe condition.

DATES: Effective February 2, 2001.

The incorporation by reference of certain publications, as listed in the regulations, is approved by the Director of the Federal Register as of February 2, 2001.

The incorporation by reference of certain other publications, as listed in the regulations, was approved previously by the Director of the Federal Register as of January 24, 2000 (64 FR 71004, December 20, 1999).

Comments for inclusion in the Rules Docket must be received on or before February 20, 2001.

ADDRESSES: Submit comments in triplicate to the Federal Aviation Administration (FAA), Transport Airplane Directorate, ANM-114, Attention: Rules Docket No. 2000-NM-292-AD, 1601 Lind Avenue, SW.,

Renton, Washington 98055-4056. Comments may be inspected at this location between 9:00 a.m. and 3:00 p.m., Monday through Friday, except Federal holidays. Comments may be submitted via fax to (425) 227-1232. Comments may also be sent via the Internet using the following address: *9-anm-iarcomment@faa.gov*. Comments sent via fax or the Internet must contain "Docket No. 2000-NM-292-AD" in the subject line and need not be submitted in triplicate. Comments sent via the Internet as attached electronic files must be formatted in Microsoft Word 97 for Windows or ASCII text.

The service information referenced in this AD may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington; or at the Office of the **Federal Register**, 800 North Capitol Street NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Dan Rodina, Aerospace Engineer, International Branch, ANM-116, FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, Washington 98055-4056; telephone (425) 227-2125; fax (425) 227-1149.

SUPPLEMENTARY INFORMATION: On December 10, 1999, the FAA issued AD 99-26-12, amendment 39-11471 (64 FR 71004, December 20, 1999). That AD is applicable to all Airbus Model A330-301, -321, and -322 series airplanes; and Model A340-211, -212, -213, -311, -312, and -313 series airplanes. That AD requires repetitive replacements of the yaw damper actuator installed on active position with a new or overhauled actuator. That AD was prompted by issuance of mandatory continuing airworthiness information by a foreign civil airworthiness authority. The requirements of that AD are intended to prevent hydraulic leakage from the yaw damper actuator installed on active position due to premature wear of the dynamic seals between the actuator piston and the piston bearing. Hydraulic leakage could lead to complete loss of the green hydraulic circuit, which could result in reduced controllability of the airplane.

Actions Since Issuance of Previous Rule

As described in the proposed NPRM to AD 99-26-12, hydraulic fluid leakage from the yaw damper actuator has been attributed to premature wear of certain dynamic seals. Investigation revealed a link between the leakage and small inputs sent by the flight control primary computers (FCPC).

In the preamble to AD 99-26-12, the FAA specified that the actions required by that AD were considered "interim action" and that the manufacturer was developing a modification to positively address the unsafe condition. The FAA indicated that it may consider further rulemaking action once the modification was developed, approved, and available. The manufacturer now has developed such a modification for Model A330 series airplanes, and the FAA has determined that further rulemaking action is indeed necessary; this proposed AD follows from that determination.

A similar modification has been developed for Model A340 series airplanes. There currently are no such airplanes on the U.S. Register. The A340 modification will be included in the FAA Required Modification List for these airplanes. Actions identified on this list must be accomplished before the airplane may be imported into the United States.

Explanation of Relevant Service Information

Airbus has issued the following service bulletins for Model A330 series airplanes:

Service bulletin	Revision level	Date
A330-27-3068	Original ..	July 29, 1999.
A330-27-3071	Original ..	November 19, 1999.
A330-27-3055	02	March 24, 2000.

Service Bulletins A330-27-3068 and A330-27-3071 describe procedures for obtaining new software standards for the FCPCs by replacing or reprogramming the on-board replaceable modules, or by replacing the FCPCs with new, improved FCPCs. The actions specified by these service bulletins are intended to prevent premature wear and subsequent leakage of the active and damping yaw actuators.

Revision 02 of Service Bulletin A330-27-3055 was issued to, among other things, add a detailed visual inspection of the FCPC part numbers and revise certain repair procedures for replacing the yaw damper actuator. The actions otherwise are the same as those described in Revision 01 of the service bulletin, which was referred to in AD 99-26-12 as the appropriate source of service information for replacing the yaw damper actuator.

The DGAC classified the service bulletins as mandatory and issued French airworthiness directive 2000-076-115(B) R1, dated March 22, 2000, to ensure the continued airworthiness of

affected Model A330 series airplanes in France.

FAA's Conclusions

These airplane models are manufactured in France and are type certificated for operation in the United States under the provisions of § 21.29 of the Federal Aviation Regulations (14 CFR 21.19) and the applicable bilateral airworthiness agreement. Pursuant to this bilateral airworthiness agreement, the DGAC has kept the FAA informed of the situation described above. The FAA has examined the findings of the DGAC, reviewed all available information, and determined that AD action is necessary for products of this type design that are certificated for operation in the United States.

Explanation of Requirements of the Rule

Since an unsafe condition has been identified that is likely to exist or develop on other airplanes of the same type design registered in the United States, this AD is being issued to prevent hydraulic leakage from the yaw damper actuator installed on active position, which could lead to complete loss of the green hydraulic circuit and consequent reduced controllability of the airplane. This AD supersedes AD 99-26-12 to continue to require repetitive replacements of the yaw damper actuator installed on active position with a new or overhauled yaw damper actuator. This AD adds a requirement, for affected Model A330 series airplanes, to install upgraded FCPCs, which terminates the requirement for repetitive actuator replacements for those airplanes. The actions are required to be accomplished in accordance with the service bulletins described previously.

Cost Impact

None of the airplanes affected by this action are on the U.S. Register. All airplanes included in the applicability of this rule currently are operated by non-U.S. operators under foreign registry; therefore, they are not directly affected by this AD action. However, the FAA considers that this rule is necessary to ensure that the unsafe condition is addressed in the event that any of these subject airplanes are imported and placed on the U.S. Register in the future.

Should an affected airplane be imported and placed on the U.S. Register in the future, it would require approximately 2 work hours to accomplish the required actions, at an average labor rate of \$60 per work hour. Required parts would cost

approximately \$390 per airplane. Based on these figures, the cost impact of this AD is estimated to be \$510 per airplane.

Determination of Rule's Effective Date

Since this AD action does not affect any airplane that is currently on the U.S. register, it has no adverse economic impact and imposes no additional burden on any person. Therefore, prior notice and public procedures hereon are unnecessary and the amendment may be made effective in less than 30 days after publication in the **Federal Register**.

Comments Invited

Although this action is in the form of a final rule and was not preceded by notice and opportunity for public comment, comments are invited on this rule. Interested persons are invited to comment on this rule by submitting such written data, views, or arguments as they may desire. Communications shall identify the Rules Docket number and be submitted in triplicate to the address specified under the caption **ADDRESSES**. All communications received on or before the closing date for comments will be considered, and this rule may be amended in light of the comments received. Factual information that supports the commenter's ideas and suggestions is extremely helpful in evaluating the effectiveness of the AD action and determining whether additional rulemaking action would be needed.

Submit comments using the following format:

- Organize comments issue-by-issue. For example, discuss a request to change the compliance time and a request to change the service bulletin reference as two separate issues.
- For each issue, state what specific change to the AD is being requested.
- Include justification (*e.g.*, reasons or data) for each request.

Comments are specifically invited on the overall regulatory, economic, environmental, and energy aspects of the rule that might suggest a need to modify the rule. All comments submitted will be available, both before and after the closing date for comments, in the Rules Docket for examination by interested persons. A report that summarizes each FAA-public contact concerned with the substance of this AD will be filed in the Rules Docket.

Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this rule must submit a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. 2000-NM-292-AD." The

postcard will be date stamped and returned to the commenter.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing amendment 39-11471 (64 FR 71004, December 20, 1999), and by adding a new airworthiness directive (AD), amendment 39-12079, to read as follows:

2001-01-09 Airbus Industrie: Amendment 39-12079. Docket 2000-NM-292-AD. Supersedes AD 99-26-12, Amendment 39-11471.

Applicability: The following airplanes, certificated in any category: Model A330-301, -321, and -322 series airplanes; excluding those on which Airbus Modification 46964 or 47221 has been installed; and Model A340-211, -212, -213, -311, -312, and -313 series airplanes.

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (d) of this AD. The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.
To prevent hydraulic leakage from the yaw damper actuator, which could lead to complete loss of the green hydraulic circuit and consequent reduced controllability of the airplane, accomplish the following:

Restatement of Requirements of AD 99-26-12

Repetitive Replacement

(a) Prior to the accumulation of 6,500 total flight hours, or within 500 flight hours after January 24, 2000 (the effective date of AD 99-26-12, amendment 39-11471), whichever occurs later, replace the yaw damper actuator installed on active position with a new or overhauled yaw damper actuator in accordance with Airbus Service Bulletin

A330-27-3055, Revision 01, dated July 1, 1998, or Revision 02, dated March 24, 2000 (for Model A330 series airplanes); or A340-27-4063, Revision 01, dated July 1, 1998 (for Model A340 series airplanes); as applicable. Thereafter, repeat the replacement at intervals not to exceed 6,500 flight hours. For Model A330 series airplanes, after the effective date of this AD, only Revision 02 of Service Bulletin A330-27-3055 may be used.

Note 2: Replacement of yaw dampers accomplished prior to January 24, 2000, in accordance with Airbus Service Bulletin A330-27-3055, dated August 26, 1997 (for Model A330 series airplanes), or Airbus Service Bulletin A340-27-4063, dated August 26, 1997 (for Model A340 series airplanes); as applicable; is an acceptable method of compliance for the initial replacement required by paragraph (a) of this AD.

New Requirements of This AD

Terminating Action

(b) For Model A330 series airplanes: Within 18 months after the effective date of this AD, install 3 upgraded flight control primary computers (FCPC), in accordance with Airbus Service Bulletin A330-27-3071, dated November 19, 1999, or A330-27-3068, dated July 29, 1999; as applicable. Accomplishment of the installation terminates the requirements of this AD for Model A330 series airplanes.

Spares
(c) As of the effective date of this AD, no person may install an FCPC, part number LA2K01500A40000 or LA2K1A100D20000, on any Model A330 series airplane.

Alternative Methods of Compliance

(d) An alternative method of compliance or adjustment of the compliance time that provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM-116, FAA, Transport Airplane Directorate. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM-116.

Note 3: Information concerning the existence of any approved alternative methods of compliance with this AD may be obtained from the International Branch, ANM-116.

Special Flight Permits

(e) Special flight permits may be issued in accordance with §§ sections 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(f) The actions shall be done in accordance with the following Airbus service bulletins, as applicable:

Service bulletin number	Revision level	Date
A330-27-3055	Revision 01	July 1, 1998
A330-27-3055	Revision 02	March 24, 2000
A340-27-4063	Revision 01	July 1, 1998
A330-27-3071	Original	November 19, 1999
A330-27-3068	Original	July 29, 1999

(1) The incorporation by reference of Airbus Service Bulletin A330-27-3055, Revision 02, dated March 24, 2000; Airbus Service Bulletin A330-27-3071, dated November 19, 1999; and Airbus Service Bulletin A330-27-3068, dated July 29, 1999; is approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51.
(2) The incorporation by reference of Airbus Service Bulletin A330-27-3055, Revision 01, dated July 1, 1998; and Airbus Service Bulletin A340-27-4063, Revision 01, dated July 1, 1998; was approved previously by the Director of the Federal Register as of January 24, 2000 (64 FR 71004, December 20, 1999).
(3) Copies of any of these service bulletins may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.
Note 4: The subject of this AD is addressed in French airworthiness directives 1998-100-067(B) R2, dated May 19, 1999; 98-104-

083(B), dated February 25, 1998; and 2000-076-115(B) R1, dated March 22, 2000.
Effective Date
(g) This amendment becomes effective on February 2, 2001.
Issued in Renton, Washington, on January 9, 2001.
Donald L. Riggins,
Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-U

DEPARTMENT OF TRANSPORTATION
Federal Aviation Administration
14 CFR Part 39
[Docket No. 2000-NM-72-AD; Amendment 39-12077; AD 2001-01-07]
RIN 2120-AA64
Airworthiness Directives; Airbus Model A300 B2, A300 B4, A300 B4-600, A300 B4-600R, A300 F4-600R, and A310 Series Airplanes
AGENCY: Federal Aviation Administration, DOT.
ACTION: Final rule.
SUMMARY: This amendment adopts a new airworthiness directive (AD), applicable to certain Airbus Model A300 B2, A300 B4, A300 B4-600, A300 B4-600R, A300 F4-600R, and A310 series airplanes, that requires modification of the escape slides. The actions specified by this AD are

intended to prevent deflation of the escape slide after deployment, which could result in a delay during an emergency evacuation. This action is intended to address the identified unsafe condition.

DATES: Effective February 22, 2001.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of February 22, 2001.

ADDRESSES: The service information referenced in this AD may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. This information may be examined at the Federal Aviation Administration (FAA), Transport Airplane Directorate, Rules Docket, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the Federal Register, 800 North Capitol Street, NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Norman B. Martenson, Manager, International Branch, ANM-116, FAA, 1601 Lind Avenue, SW., Renton, Washington 98055-4056; telephone (425) 227-2110; fax (425) 227-1149.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations (14 CFR part 39) to include an airworthiness directive (AD) that is applicable to certain Airbus Model A300 B2 and A300 B4 (A300); Model A300 B4-600, A300 B4-600R, and A300 F4-600R (A300-600); and Model A310 series airplanes was published in the **Federal Register** on October 31, 2000 (65 FR 64901). That action proposed to require modification of the escape slides.

Comments

Interested persons have been afforded an opportunity to participate in the making of this amendment. No comments were submitted in response

to the proposal or the FAA's determination of the cost to the public.

Conclusion

The FAA has determined that air safety and the public interest require the adoption of the rule as proposed.

Cost Impact

The FAA estimates that 126 airplanes of U.S. registry will be affected by this AD, that it will take approximately 1 work hour per slide to accomplish the required actions, and that the average labor rate is \$60 per work hour. Required parts will cost approximately \$124 to \$185 per slide. Each Model A300 and A300-600 series airplane has 6 escape doors, and each Model A310 series airplane has 4 escape doors. Based on these figures, the cost impact of the proposed AD on U.S. operators is estimated to be between \$736 and \$1,470 per airplane.

The cost impact figure discussed above is based on assumptions that no operator has yet accomplished any of the requirements of this AD action, and that no operator would accomplish those actions in the future if this AD were not adopted. The cost impact figures discussed in AD rulemaking actions represent only the time necessary to perform the specific actions actually required by the AD. These figures typically do not include incidental costs, such as the time required to gain access and close up, planning time, or time necessitated by other administrative actions.

Regulatory Impact

The regulations adopted herein will not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, it is determined that this final rule does not

have federalism implications under Executive Order 13132.

For the reasons discussed above, I certify that this action (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A final evaluation has been prepared for this action and it is contained in the Rules Docket. A copy of it may be obtained from the Rules Docket at the location provided under the caption **ADDRESSES**.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends part 39 of the Federal Aviation Regulations (14 CFR part 39) as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. Section 39.13 is amended by adding the following new airworthiness directive:

2001-01-07 Airbus Industrie: Amendment 39-12077. Docket 2000-NM-72-AD.

Applicability: The following airplanes, certificated in any category:

Model	Equipped with any BFGoodrich slide having part number	Excluding airplanes modified in accordance with
A300 B2 series	7A1296-001	Airbus Service Bulletin A300-25-0466, Revision 01, dated December 1, 1999; or BFGoodrich Service Bulletin 7A1296/7A1298-25-298, dated January 15, 1999.
A300 B4 series	7A1296-002	
	7A1296-003	
	7A1296-004	
	7A1298-001	
	7A1298-002	
	7A1298-003	
	7A1298-004	

Model	Equipped with any BFGoodrich slide having part number	Excluding airplanes modified in accordance with
A300 B4-600 series	7A1296-001.	Airbus Service Bulletin A300-25-6146, Revision 01, dated December 1, 1999; or BFGoodrich Service Bulletin 7A1296/7A1298-25-298, dated January 15, 1999.
A300 B4-600R series	7A1296-002.	
A300 F4-600R series	7A1296-003	
	7A1296-004	
	7A1298-001	
	7A1298-002	
	7A1298-003	Airbus Service Bulletin A310-25-2133, dated June 21, 1999; or BFGoodrich Service Bulletin 7A1296/7A1298-25-298, dated January 15, 1999.
	7A1298-004	
A310 series	7A1298-001	
	7A1298-002	
	7A1298-003	
	7A1298-004	

Note 1: This AD applies to each airplane identified in the preceding applicability provision, regardless of whether it has been otherwise modified, altered, or repaired in the area subject to the requirements of this AD. For airplanes that have been modified, altered, or repaired so that the performance of the requirements of this AD is affected, the owner/operator must request approval for an alternative method of compliance in accordance with paragraph (c) of this AD.

The request should include an assessment of the effect of the modification, alteration, or repair on the unsafe condition addressed by this AD; and, if the unsafe condition has not been eliminated, the request should include specific proposed actions to address it.

Compliance: Required as indicated, unless accomplished previously.

To prevent deflation of the escape slide after deployment, which could result in a

delay during an emergency evacuation, accomplish the following:

Modification

(a) Within 34 months after the effective date of this AD, modify the escape slides in accordance with the applicable Airbus service bulletin listed in Table 1 of this AD, as follows:

TABLE 1.—SERVICE BULLETINS

Model	Service bulletin	Revision level	Date
A300	A300-25-0466	01	December 1, 1999.
A300-600	A300-25-6146	01	December 1, 1999.
A310	A310-25-2133	Original	June 21, 1999.

Note 2: The Airbus service bulletins refer to BFGoodrich Service Bulletin 7A1296/7A1298-25-298, dated January 15, 1999, as an additional source of service information for modifying the escape slides.

(b) As of the effective date of this AD, no person shall install, on any airplane, a BFGoodrich escape slide having a part number listed in Table 2 of this AD, unless that slide has been modified in accordance with this AD:

TABLE 2.—SLIDE PART NUMBERS

7A1296-001
7A1296-002
7A1296-003
7A1296-004
7A1298-001
7A1298-002
7A12 98-003
7A1298-004

Alternative Methods of Compliance

(c) An alternative method of compliance or adjustment of the compliance time that

provides an acceptable level of safety may be used if approved by the Manager, International Branch, ANM-116, Transport Airplane Directorate, FAA. Operators shall submit their requests through an appropriate FAA Principal Maintenance Inspector, who may add comments and then send it to the Manager, International Branch, ANM-116.

Note 3: Information concerning the existence of approved alternative methods of compliance with this AD, if any, may be obtained from the International Branch, ANM-116.

Special Flight Permits

(d) Special flight permits may be issued in accordance with §§ 21.197 and 21.199 of the Federal Aviation Regulations (14 CFR 21.197 and 21.199) to operate the airplane to a location where the requirements of this AD can be accomplished.

Incorporation by Reference

(e) The modification shall be done in accordance with Airbus Service Bulletin A300-25-0466, Revision 01, dated December 1, 1999; Airbus Service Bulletin A300-25-6146, Revision 01, dated December 1, 1999; or Airbus Service Bulletin A310-25-2133,

dated June 21, 1999; as applicable. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Airbus Industrie, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France. Copies may be inspected at the FAA, Transport Airplane Directorate, 1601 Lind Avenue, SW., Renton, Washington; or at the Office of the **Federal Register**, 800 North Capitol Street, NW., suite 700, Washington, DC.

Note 4: The subject of this AD is addressed in French airworthiness directive 2000-059-302(B), dated February 9, 2000.

Effective Date

(f) This amendment becomes effective on February 22, 2001.

Issued in Renton, Washington, on January 9, 2001.

Donald L. Riggins,

Acting Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF THE TREASURY**Internal Revenue Service****26 CFR part 1**

[TD 8941]

RIN 1545-AX87

Obligations of States and Political Subdivisions

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final and temporary regulations.

SUMMARY: This document contains temporary regulations that provide guidance to issuers of tax-exempt bonds for output facilities. This document also contains final regulations that provide guidance to certain nongovernmental persons that are engaged in the local furnishing of electric energy or gas using facilities financed with state or local government bonds. These regulations will affect issuers of tax-exempt bonds and nongovernmental persons engaged in the local furnishing of electric energy or gas after the effective date.

The text of the temporary regulations also serves as the text of the proposed regulations set forth in the notice of proposed rulemaking on this subject in the Proposed Rules section of this issue of the **Federal Register**.

DATES: *Effective Date:* These regulations are effective January 19, 2001.

Applicability Date: For dates of applicability, see §§ 1.141-15T, 1.142(f)(4)-1(g), and 1.150-5(b).

FOR FURTHER INFORMATION CONTACT: Rose M. Weber (202) 622-3980 (not a toll-free number).

SUPPLEMENTARY INFORMATION:**Paperwork Reduction Act**

The collection of information in this rule has been reviewed and, pending receipt and evaluation of public comments, approved by the Office of Management and Budget (OMB) under 44 U.S.C. 3507 and assigned control number 1545- .

The collection of information in this regulation is in § 1.142(f)(4)-1. This information is required to enable the IRS to identify persons engaged in the local furnishing of electric energy or gas that use facilities financed with exempt facility bonds under section 142(a)(8) and that expand their service area in a manner inconsistent with the requirements of sections 142(a)(8) and (f) who have made an election to ensure that those bonds will continue to be treated as exempt facility bonds. The data collected will be used by the IRS

as the mechanism for identifying bonds that will remain tax-exempt notwithstanding a service area expansion that is inconsistent with the requirements of sections 142(a)(8) and (f). The collection of information is mandatory. The likely respondents are business institutions.

Comments on the collection of information should be sent to the Office of Management and Budget, Attn: Desk Officer for the Department of the Treasury, Office of Information and Regulatory Affairs, Washington, DC 20503, with copies to the Internal Revenue Service, Attn: IRS Reports Clearance Officer, W:CAR:MP:FP:S:O Washington, DC 20224. Comments on the collection of information should be received by March 19, 2001. Comments are specifically requested concerning:

Whether the collection of information is necessary for the proper performance of the functions of the Internal Revenue Service, including whether the information will have practical utility;

The accuracy of the estimated burden associated with the collection of information (see below);

How the quality, utility, and clarity of the information to be collected may be enhanced;

How the burden of complying with the collection of information may be minimized, including through the application of automated collection techniques or other forms of information technology; and

Estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Estimated total annual reporting burden is 15 hours.

Estimated average annual burden hours per respondent is 1 hour.

Estimated number of respondents is 15.

Estimated annual frequency of responses is on occasion.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by the Office of Management and Budget.

Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Background

This document amends the Income Tax Regulations (26 CFR part 1) under section 141 by providing special rules

for tax-exempt bonds issued for output facilities. This document also amends the Income Tax Regulations under section 142(f)(4) by providing rules to make the election provided in that section for nongovernmental persons engaged in local furnishing of electric energy or gas using facilities financed with tax-exempt bonds.

On January 22, 1998, temporary regulations (TD 8757) (the 1998 temporary regulations) were published in the **Federal Register** (63 FR 3256) to provide guidance under the Internal Revenue Code of 1986 regarding the application of the private activity bond tests under section 141(b)(1) and (2) to output contracts for output facilities; the application of the \$15 million limit under section 141(b)(4) to output facility financings; the election provided in section 142(f)(4) for nongovernmental persons engaged in local furnishing of electric energy or gas using facilities financed with tax-exempt bonds; and the filing location for certain notices and elections. A notice of proposed rulemaking (REG-110965-97) cross-referencing the temporary regulations was published in the **Federal Register** on the same day (63 FR 3296). On April 28, 1998, the IRS held a public hearing on the proposed regulations. Written comments responding to the notice of proposed rulemaking were also received. After consideration of all the comments, the 1998 temporary regulations are revised by this Treasury decision. The new temporary regulations are referred to below as the "revised regulations." The revisions are discussed below.

Explanation of Provisions*A. Section 1.141-7T Special Rules for Output Facilities***1. Benefits and Burdens Test—Transmission Contracts**

Under the 1998 temporary regulations, an agreement to provide firm or priority transmission services is generally treated as a take or take or pay contract. Commentators suggested that firm or priority transmission contracts should not automatically be treated as take or take or pay contracts. They recommended that the same standards that apply to determine whether generation contracts result in private business use, including the requirements contract provisions, should also apply to transmission contracts. The revised regulations adopt this recommendation by deleting the provision that generally treats all contracts for firm or priority transmission service as take or take or pay contracts.

2. Retail Requirements Contracts

The 1998 temporary regulations provide that a retail requirements contract generally meets the benefits and burdens test to the extent it obligates the purchaser to make payments that are not contingent on the purchaser's output requirements. Commentators requested clarification regarding the application of this rule to reasonable contract damages and termination provisions. The revised regulations clarify that a retail requirements contract does not meet the benefits and burdens test by reason of (1) a provision that requires the purchaser to pay reasonable and customary damages (including liquidated damages) in the event of a default, or (2) a provision that permits the purchaser to pay a specified amount to terminate the contract while the purchaser has requirements, in each case if the amount of the payment is reasonably related to the purchaser's obligation to buy requirements that is discharged by the payment.

3. Output Contract Properly Characterized as a Lease

Under the 1998 temporary regulations, output contracts that provide the purchaser with specific rights to control the output of a facility or with other specific performance rights to the use of output of the facility are generally taken into account under the private business tests, even if the benefits and burdens test is not met. Commentators requested clarification of the scope of this rule.

The revised regulations amend the rule and clarify its application by specifying that an output contract that is properly characterized as a lease for federal income tax purposes is tested under §§ 1.141-3 and 1.141-4 to determine whether it is taken into account under the private business tests.

4. Special Rule for Facilities With Significant Unutilized Capacity

The 1998 temporary regulations provide that, if an issuer reasonably expects on the issue date that persons that are treated as private business users will purchase more than 30 percent of the actual output of the facility, the Commissioner may determine the number of units produced or to be produced by the facility in one year on a reasonable basis other than by reference to nameplate capacity, such as the average expected annual output of the facility. The revised regulations change the 30 percent threshold to 20 percent.

5. Special Rule for Facilities With a Limited Source of Supply

Under the 1998 temporary regulations, the available output of a facility that is constrained by a limited source of supply must be determined by reasonably taking those constraints into account. Commentators requested clarification of the meaning of limited source of supply. For example, they asked whether the term includes not only physical but also economic limitations.

The revised regulations clarify that a limited source of supply includes a physical limitation, such as the flow of water, but not an economic limitation, such as the cost of coal or gas.

6. Measurement of Private Business Use

The 1998 temporary regulations provide that, if an output contract results in private business use, the amount of such use generally is the capacity that must be reserved for the nongovernmental person under prudent reliability standards. Commentators stated that this provision is difficult to apply and may overstate the amount of private business use. They suggested that the amount of private business use should be the amount of output actually purchased under the contract.

The revised regulations provide that, if an output contract results in private business use, the amount of private business use generally is the amount of output purchased under the contract.

7. Exception for Small Purchases of Output

The 1998 temporary regulations provide that output contracts are not taken into account under the private business tests if the purchaser is not required to make a substantially certain payment in any year that is greater than 0.5 percent of the average annual debt service on an issue that finances the facility. Some commentators suggested that this provision should be amended to take into account average annual payments under a contract, rather than payments in any one year, and that the provision should apply based on all the outstanding bonds for the facility. Other commentators stated that the exception should be eliminated as inconsistent with a competitive electric industry.

The revised regulations provide that output contracts are not taken into account under the private business tests if the average annual payments under the contract that are substantially certain to be made do not exceed 0.5 percent of the average annual debt service on all outstanding tax-exempt bonds issued to finance the facility.

8. Exception for Short-Term Sales of Output

The 1998 temporary regulations provide that the exceptions for short-term use that apply to other types of arrangements under the general private activity bond rules in § 1.141-3 also apply to output contracts. Many commentators suggested that these exceptions may have limited practical application in the output context and recommended that they be expanded to permit contracts of a longer duration. These commentators stated that longer-term contracts are required in order to transfer substantial benefits of ownership and substantial burdens of debt service with respect to an output facility. Other commentators suggested that any sale of output by a municipal utility outside of its traditional service territory should result in private business use.

The revised regulations provide an exception under which an output contract with a nongovernmental person will not be taken into account under the private business tests if: (1) the term of the contract, including all renewal options, does not exceed one year; (2) the compensation under the contract is based on generally applicable and uniformly applied rates or represents a negotiated, fair market price; and (3) the facility is not financed for a principal purpose of serving that nongovernmental person.

9. Special Exception for Sales of Output Attributable to Excess Generating Capacity Resulting From Open Access

The 1998 temporary regulations contain an exception to private business use for certain output contracts if: (1) The contract term does not exceed three years; (2) the issuer does not utilize tax-exempt financing to increase the generating capacity of its system during the contract term; (3) the governmental owner offers non-discriminatory, open access transmission tariffs under certain rules of the Federal Energy Regulatory Commission (FERC) (or comparable provisions of state law pursuant to a plan approved by the FERC); (4) all of the output sold is attributable to excess capacity resulting from the offer of the open access tariffs; (5) the contract mitigates stranded costs attributable to the open access tariffs; and (6) any stranded costs recovered by the governmental owner are applied as promptly as is reasonably practical to redeem tax-exempt bonds in a manner consistent with § 1.141-12.

Comments were received regarding many of the above requirements. In particular, many commentators

suggested that the maximum contract term should be extended beyond three years. Some commentators recommended eliminating the prohibition on tax-exempt financing to increase capacity during the contract term. Others suggested that de minimis capacity increases should be permitted. Some commentators suggested that the requirement that a contract mitigate stranded costs should be eliminated because the purpose of that provision is accomplished by the requirement that all of the output sold be attributable to excess capacity from open access tariffs. Some commentators recommended deleting the reference to FERC approval of state open access plans because the FERC may not approve all such plans. Other commentators requested clarification regarding the amounts that an issuer must use to redeem bonds. Finally, some commentators recommended deleting the exception entirely.

The revised regulations retain the exception, with certain modifications. First, the revised exception permits tax-exempt financing during the contract term for property that does not increase the generating capacity of the issuer's system by more than three percent. Second, the amended exception deletes the reference to FERC approval of state open access plans. Third, the revised regulations remove the reference to stranded costs. Finally, the revised exception clarifies that the amounts that an issuer must use to redeem bonds consist of all payments that it receives under the contract, other than the portion of such payments that is properly allocable to the payment of ordinary and necessary expenses directly attributable to the operation and maintenance of the facility (as described in § 1.141-4(c)(2)(C)).

10. Special Exceptions for Transmission Facilities

The 1998 temporary regulations do not treat all use of transmission facilities pursuant to standard tariffs as general public use, but contain certain special exceptions to private business use of transmission facilities. Some commentators suggested that use of transmission facilities under standard tariffs should be treated as general public use, and therefore should never result in private business use. The revised regulations do not treat all use of transmission facilities pursuant to standard tariffs as general public use, but retain and modify the special exceptions, as discussed below.

The 1998 temporary regulations contain two special exceptions under which certain actions with respect to

transmission facilities financed by an issue are not treated as deliberate actions under § 1.141-2(d). The first exception provides that the execution of a contract for the use of transmission facilities is not treated as a deliberate action if the contract is entered into in response to or in anticipation of a specific order by the FERC to wheel power under sections 211 and 212 of the Federal Power Act (16 U.S.C. 824j and 824k) (or a state regulatory authority under comparable provisions of state law pursuant to a plan approved by the FERC); the terms of the contract are bona fide and arm's-length; and the consideration paid is consistent with section 212(a) of the Federal Power Act.

Commentators suggested eliminating the requirement that orders of state regulatory authorities be undertaken pursuant to a FERC-approved state open access plan because FERC approval may not be required for all such plans. The revised regulations adopt this suggested change.

The second exception in the 1998 temporary regulations provides that an action is not treated as a deliberate action if it is taken to implement the offering of non-discriminatory, open access tariffs for the use of financed transmission facilities in a manner consistent with FERC rules, including the reciprocity conditions of FERC Order No. 888 (61 FR 21540, May 10, 1996). The exception also applies to orders and rules of state regulatory authorities pursuant to a plan approved by the FERC that are comparable to certain FERC orders and rules. The exception does not apply, however, to the sale, exchange, or other disposition of bond-financed transmission facilities to a nongovernmental person.

Commentators recommended that the exception be expanded to apply to open access tariffs that are offered under state law provisions that are comparable to FERC rules, regardless of whether those provisions are promulgated by a state regulatory authority or approved by the FERC. The revised regulations adopt this suggested change.

Commentators also requested clarification regarding the circumstances in which an independent system operator (ISO) may be treated as a private business user of transmission facilities. Some commentators suggested that the operation of transmission facilities by an ISO is a quasi-governmental function and thus should never constitute private business use. Some commentators requested clarification of whether the existing rules for management contracts under section 141 may be applied to

arrangements for the operation of transmission facilities by an ISO.

The revised regulations do not provide that the operation of bond-financed transmission facilities by an ISO or other regional transmission organization (RTO) is disregarded under section 141. However, the existing rules for management contracts under section 141, including Revenue Procedure 97-13 (1997-1 C.B. 632), are applicable in determining whether an arrangement for the operation of transmission facilities by an ISO or other RTO results in private business use, including a determination of whether the arrangement is properly characterized as a lease for federal income tax purposes. Comments are requested on whether additional guidance is needed concerning the treatment under section 141 of arrangements for the operation of bond-financed transmission facilities by an ISO or other RTO.

The 1998 temporary regulations provide a special transition rule for bonds (other than advance refunding bonds) that refund bonds issued prior to July 9, 1996 (the effective date of FERC Order No. 888). Under this rule, an action taken or to be taken with respect to transmission facilities is not taken into account under the reasonable expectations test of § 1.141-2(d) if the action is described in one of the two special exceptions discussed above and the weighted average maturity of the refunding bonds does not exceed the remaining weighted average maturity of the prior bonds.

Commentators recommended that the July 9, 1996 date be changed to a date on or after February 23, 1998 (the effective date of the 1998 temporary regulations). The revised regulations change the cut-off date to February 23, 1998.

Under the 1998 temporary regulations, issuers may apply the special exceptions for transmission facilities to any bonds issued before the effective date of those regulations. However, issuers may not apply the exceptions to refunding bonds issued on or after the effective date, unless the refunding bonds are subject to the 1998 temporary regulations in their entirety. Commentators suggested that, in order to encourage open access, issuers should be permitted to apply the exceptions to refunding bonds that are not otherwise subject to the regulations. The revised regulations adopt this change.

11. Definition of Transmission Facilities

The 1998 temporary regulations define transmission facilities to include facilities that are necessary to provide

ancillary services required to be offered as part of open access transmission tariffs under FERC rules. Commentators stated that the inclusion of ancillary services within the general definition of transmission facilities creates unwarranted complexity. They recommended that facilities used for ancillary services be treated as transmission facilities only for purposes of the special exceptions for transmission facilities in the regulations. The revised regulations adopt this approach.

B. Section 1.141-8T \$15 Million Limitation for Output Facilities

Under the 1998 temporary regulations, property that replaces existing property is treated as part of the same project as the replaced property unless, among other things, the bonds that finance the replaced property have a weighted average maturity that is not greater than 120 percent of the reasonably expected economic life of the replaced property.

One commentator noted that it is not common to allocate bonds that finance output facilities to the specific assets that comprise those facilities, and thus it may be difficult to determine whether this 120 percent requirement is met. The revised regulations amend this rule so that it applies to the entire output facility of which the replaced property is a part, rather than the specific asset being replaced.

C. Need for Temporary Regulations and Request for Public Comments

Congress passed the Energy Policy Act of 1992 to encourage restructuring of the electric power industry. Since that time, the FERC and many states have adopted policies to open up access to transmission facilities. Treasury and the IRS are aware that these initiatives are causing rapid changes in the electric power industry.

The 1998 temporary regulations were published in order to provide immediate guidance under section 141 regarding the effect on the tax-exempt status of bonds of certain restructuring transactions necessary for utilities to participate in a restructured electric utility industry. Treasury and the IRS are aware, however, that restructuring efforts are evolving and uncertain, and that new types of arrangements may be developed to implement restructuring.

Accordingly, the revised regulations are published in both temporary and proposed form in order to continue to provide guidance on which issuers can rely in evaluating their participation in open access regimes, while providing the opportunity for public comment with respect to developments in the

electric power industry that have occurred since the publication of the 1998 temporary regulations. The revised regulations are published in temporary form with the expectation that the Treasury and the IRS will reexamine them in light of new developments within the next three years.

Comments are invited on whether further guidance is needed to address the new types of contractual arrangements that are arising in the electric power industry. In particular, comments are invited on whether additional guidance is needed to address the proper treatment under section 141 of output contracts for the use of transmission and distribution facilities under open access, and output contracts for ancillary services that are necessary to maintain the reliability of a transmission grid. Comments are also requested on the impact of FERC Order No. 2000 (65 FR 810, January 6, 2000) on tax-exempt bonds issued by public power systems, including whether additional guidance is needed regarding the proper treatment under section 141 of arrangements for the operation of bond-financed transmission facilities by an ISO or other RTO that satisfies the requirements of Order 2000.

Effective Dates

Sections 1.141-7T and 1.141-8T are applicable to bonds sold on or after January 19, 2001. Section 1.142(f)(4)-1 applies to elections made on or after January 19, 2001. Section 1.150-5 applies to notices and elections filed on or after January 19, 2001.

Special Analyses

It has been determined that this Treasury decision is not a significant regulatory action as defined in Executive Order 12866. Therefore, a regulatory assessment is not required. It has also been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) does not apply to these regulations.

It is hereby certified that the collection of information in these regulations will not have a significant impact on a substantial number of small entities. This certification is based upon the fact that in the years 1987 through 1997 a total of only 80 different state or local government issuers of exempt facility bonds issued under section 142(f) for facilities for the local furnishing of electric energy or gas filed information returns with the IRS under section 149(e). Further, an election under section 142(f)(4) is in no event required to be filed with the Internal Revenue Service more than once. Therefore, a Regulatory Flexibility Analysis under the Regulatory

Flexibility Act (5 U.S.C. chapter 6) is not required. Pursuant to section 7805(f) of the Internal Revenue Code, these temporary regulations will be submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Drafting Information

The principal authors of these regulations are Bruce M. Serchuk, and Rose M. Weber, Office of Chief Counsel (Tax-exempt and Government Entities), Internal Revenue Service, and Stephen J. Watson, Office of Tax Legislative Counsel, Department of the Treasury. However, other personnel from the IRS and Treasury Department participated in their development.

List of Subjects

26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

26 CFR Part 602

Reporting and recordkeeping requirements.

Adoption of Amendments to the Regulations

Accordingly, 26 CFR part 1 is amended as follows:

PART 1—INCOME TAXES

Paragraph 1. The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

Par. 2. Section 1.141-0 is amended by revising the entire entries for §§ 1.141-7T, 1.141-8T and 1.141-15T to read as follows:

§ 1.141-0 Table of contents.

* * * * *

§ 1.141-7T Special Rules for Output Facilities (Temporary).

- (a) Overview.
- (b) Definitions.
- (1) Available output.
- (2) Measurement period.
- (3) Sale at wholesale.
- (4) Take contract and take or pay contract.
- (5) Transmission facilities.
- (6) Nonqualified amount.
- (c) Output contracts.
- (1) General rule.
- (2) Benefits and burdens test.
- (3) Take contract or take or pay contract.
- (4) Requirements contracts.
- (5) Output contract properly characterized as a lease.
- (d) Measurement of private business use.
- (e) Measurement of private security or payment.

- (f) Exceptions for certain contracts.
- (1) Small purchases of output.
- (2) Swapping and pooling arrangements.
- (3) Short-term output contracts.
- (4) Special 3-year exception for sales of output attributable to excess generating capacity resulting from participation in open access.
- (5) Special exceptions for transmission facilities.
- (6) Certain conduit parties disregarded.
- (g) Allocations of output facilities and systems.
- (1) Facts and circumstances analysis.
- (2) Illustrations.
- (3) Transmission contracts.
- (4) Allocation of payments.
- (h) Examples.

§ 1.141–8T \$15 Million Limitation for Output Facilities (Temporary).

- (a) In general.
- (1) General rule.
- (2) Reduction in \$15 million output limitation for outstanding issues.
- (3) Benefits and burdens test applicable.
- (b) Definition of project.
- (1) General rule.
- (2) Separate ownership.
- (3) Generating property.
- (4) Transmission.
- (5) Subsequent improvements.
- (6) Replacement property.
- (c) Examples.

§ 1.141–15T Effective Dates (Temporary).

- (a) through (e) [Reserved].
- (f) Effective dates for certain regulations relating to output facilities.
- (1) General rule.
- (2) Transition rule for requirement contracts.
- (3) Elective application of 1998 temporary regulations.
- (g) Refunding bonds.
- (h) Permissive retroactive application.
- (i) Permissive retroactive application of certain regulations pertaining to output contracts.

* * * * *

Par. 3. Section 1.141–7T is revised to read as follows:

§ 1.141–7T Special Rules for Output Facilities (Temporary).

(a) *Overview.* This section provides special rules to determine whether arrangements for the purchase of output from an output facility cause an issue of bonds to meet the private business tests. For this purpose, unless otherwise stated, water facilities are treated as output facilities. Sections 1.141–3 and 1.141–4 generally apply to determine whether other types of arrangements for use of an output facility cause an issue to meet the private business tests.

(b) *Definitions.* For purposes of this section and § 1.141–8T, the following definitions and rules apply:

(1) *Available output.* The available output of a facility financed by an issue is determined by multiplying the number of units produced or to be produced by the facility in one year by

the number of years in the measurement period of that facility for that issue.

(i) *Generating facilities.* The number of units produced or to be produced by a generating facility in one year is determined by reference to its nameplate capacity or the equivalent (or where there is no nameplate capacity or the equivalent, its maximum capacity), which is not reduced for reserves, maintenance or other unutilized capacity.

(ii) *Transmission and other output facilities—(A) In general.* For transmission, cogeneration, and other output facilities, available output must be measured in a reasonable manner to reflect capacity.

(B) *Electric transmission facilities.* Measurement of the available output of all or a portion of electric transmission facilities may be determined in a manner consistent with the reporting rules and requirements for transmission networks promulgated by the Federal Energy Regulatory Commission (FERC). For example, for a transmission network, the use of aggregate load and load share ratios in a manner consistent with the requirements of the FERC may be reasonable. In addition, depending on the facts and circumstances, measurement of the available output of transmission facilities using thermal capacity or transfer capacity may be reasonable.

(iii) *Special rule for facilities with significant unutilized capacity.* If an issuer reasonably expects on the issue date that persons that are treated as private business users will purchase more than 20 percent of the actual output of the facility financed with the issue, the Commissioner may determine the number of units produced or to be produced by the facility in one year on a reasonable basis other than by reference to nameplate capacity, such as the average expected annual output of the facility. For example, the Commissioner may determine the available output of a financed peaking electric generating unit by reference to the reasonably expected annual output of that unit if the issuer reasonably expects, on the issue date of bonds that finance the unit, that an investor-owned utility will purchase more than 20 percent of the actual output of the facility during the measurement period under a take or pay contract, even if the amount of output purchased is less than 10 percent of the available output determined by reference to nameplate capacity. The reasonably expected annual output of the generating facility must be consistent with the capacity reported for prudent reliability purposes.

(iv) *Special rule for facilities with a limited source of supply.* If a limited source of supply constrains the output of an output facility, the number of units produced or to be produced by the facility must be determined by reasonably taking into account those constraints. For this purpose, a limited source of supply shall include a physical limitation (for example, flow of water), but not an economic limitation (for example, cost of coal or gas). For example, the available output of a hydroelectric unit must be determined by reference to the reasonably expected annual flow of water through the unit.

(2) *Measurement period.* The measurement period of an output facility financed by an issue is determined under § 1.141–3(g).

(3) *Sale at wholesale.* For purposes of this section, a sale at wholesale means a sale of output to any person for resale.

(4) *Take contract and take or pay contract.* A *take contract* is an output contract under which a purchaser agrees to pay for the output under the contract if the output facility is capable of providing the output. A *take or pay contract* is an output contract under which a purchaser agrees to pay for the output under the contract, whether or not the output facility is capable of providing the output.

(5) *Transmission facilities—(i) In general.* Transmission facilities are facilities for the transmission or distribution of output.

(ii) *Special rule for ancillary services.* For purposes of paragraph (f)(5), transmission facilities include facilities necessary to provide ancillary services required to be offered as part of open access transmission tariffs under rules promulgated by the FERC under sections 205 and 206 of the Federal Power Act (16 U.S.C. 824d and 824e). Thus, if a facility also serves another function (for example, a facility that provides for operating reserves for transmission and also provides generation) an allocable portion of the facility is treated as a transmission facility for purposes of paragraph (f)(5) of this section.

(6) *Nonqualified amount.* The nonqualified amount with respect to an issue is determined under section 141(b)(8).

(c) *Output contracts—(1) General rule.* The purchase by a nongovernmental person of available output of an output facility (output contract) financed with the proceeds of an issue is taken into account under the private business tests if the purchase has the effect of transferring substantial benefits of owning the facility and substantial burdens of paying the debt service on

bonds used (directly or indirectly) to finance the facility (the benefits and burdens test). See paragraph (c)(5) of this section for the treatment of an output contract that is properly characterized as a lease for Federal income tax purposes. See paragraphs (d) and (e) of this section for rules regarding measuring the use of, and payments of debt service for, an output facility for determining whether the private business tests are met. See also § 1.141-8T for rules for when an issue that finances an output facility (other than a water facility) meets the private business tests because the nonqualified amount of the issue exceeds \$15 million.

(2) *Benefits and burdens test*—(i) *Benefits of ownership.* An output contract transfers substantial benefits of owning a facility if the contract gives the purchaser (directly or indirectly) rights to capacity of the facility on a basis that is preferential to the rights of the general public.

(ii) *Burdens of paying debt service.* An output contract transfers substantial burdens of paying debt service on an issue to the extent that the issuer reasonably expects that it is substantially certain that payments will be made under the terms of the contract (disregarding default, insolvency, or other similar circumstances). For example, an output contract is treated as transferring burdens of paying debt service on an issue if payments must be made upon contract termination.

(iii) *Payments pursuant to pledged contract.* Payments made or to be made under the terms of an output contract that is pledged as security for an issue are taken into account under the private business tests even if the issuer reasonably expects that it is not substantially certain that payments will be made under the contract (disregarding default, insolvency, or other similar circumstances). For this purpose, an output contract is pledged as security only if the bond documents provide that the pledged contract cannot be substantially amended without the consent of bondholders or a trustee for the bondholders. This paragraph (c)(2)(iii) applies to pledges made on or after February 23, 1998, with respect to bonds that are subject to this section.

(3) *Take contract or take or pay contract.* The benefits and burdens test is met if a nongovernmental person agrees pursuant to a take contract or a take or pay contract to purchase available output of a facility.

(4) *Requirements contracts*—(i) *In general.* A requirements contract under which a nongovernmental person agrees to purchase all or part of its output

requirements is taken into account under the private business tests only to the extent that, based on all the facts and circumstances, the contract meets the benefits and burdens test. See § 1.141-15T(f)(2) for special effective dates for the application of this paragraph (c)(4) to issues financing facilities subject to requirements contracts.

(ii) *Significant factors.* Significant factors that tend to establish that the benefits and burdens test is met under the rule set forth in paragraph (c)(4)(i) of this section include, but are not limited to—

(A) The purchaser's customer base has significant indicators of stability, such as large size, diverse composition, and a substantial residential component;

(B) The contract covers historical requirements of the purchaser, rather than only projected requirements that are in addition to historical requirements; and

(C) The purchaser agrees not to construct or acquire other power resources to meet the requirements covered by the contract.

(iii) *Special rule for retail requirements contracts.* In general, a requirements contract that is not a sale at wholesale (a *retail requirements contract*) does not meet the benefits and burdens test because the obligation to make payments on the contract is contingent on the output requirements of a single user. Such a requirements contract in general meets the benefits and burdens test, however, to the extent that it contains contractual terms that obligate the purchaser to make payments that are not contingent on the output requirements of the purchaser or that obligate the purchaser to have output requirements. For example, a requirements contract with an industrial purchaser meets the benefits and burdens test if the purchaser enters into additional contractual obligations with the issuer or another governmental unit not to cease operations. A retail requirements contract does not meet the benefits and burdens test by reason of a provision that requires the purchaser to pay reasonable and customary damages (including liquidated damages) in the event of a default, or a provision that permits the purchaser to pay a specified amount to terminate the contract while the purchaser has requirements, in each case if the amount of the payment is reasonably related to the purchaser's obligation to buy requirements that is discharged by the payment.

(5) *Output contract properly characterized as a lease.* Notwithstanding any other provision of this section, an output contract that is

properly characterized as a lease for Federal income tax purposes shall be tested under the rules contained in §§ 1.141-3 and 1.141-4 to determine whether it is taken into account under the private business tests.

(d) *Measurement of private business use.* If an output contract results in private business use under this section, the amount of private business use generally is the amount of output purchased under the contract.

(e) *Measurement of private security or payment.* The measurement of payments made or to be made by nongovernmental persons under output contracts as a percent of the debt service of an issue is determined under the rules provided in § 1.141-4.

(f) *Exceptions for certain contracts*—

(1) *Small purchases of output.* An output contract is not taken into account under the private business tests if the average annual payments under the contract that are substantially certain to be made under paragraph (c)(2)(ii) of this section do not exceed 0.5 percent of the average annual debt service on all outstanding tax-exempt bonds issued to finance the facility, determined as of the effective date of the contract.

(2) *Swapping and pooling arrangements.* An agreement that provides for swapping or pooling of output by one or more governmental persons and one or more nongovernmental persons does not result in private business use of the output facility owned by the governmental person to the extent that—

(i) The swapped output is reasonably expected to be approximately equal in value (determined over periods of one year or less); and

(ii) The purpose of the agreement is to enable each of the parties to satisfy different peak load demands, to accommodate temporary outages, to diversify supply, or to enhance reliability in accordance with prudent reliability standards.

(3) *Short-term output contracts.* An output contract with a nongovernmental person is not taken into account under the private business tests if—

(i) The term of the contract, including all renewal options, is not longer than 1 year;

(ii) The contract either is a negotiated, arm's-length arrangement that provides for compensation at fair market value, or is based on generally applicable and uniformly applied rates; and

(iii) The output facility is not financed for a principal purpose of providing that facility for use by that nongovernmental person.

(4) *Special 3-year exception for sales of output attributable to excess generating capacity resulting from participation in open access.* The purchase of output of an electric generating facility by a nongovernmental person is not treated as private business use if all of the following requirements are met:

(i) The term of the contract is not longer than 3 years, including all renewal options.

(ii) The issuer does not make expenditures to increase the generating capacity of its system during the term of the contract that are, or will be, financed with proceeds of tax-exempt bonds (other than expenditures for property that does not increase the generating capacity of the system by more than 3 percent).

(iii) The governmental owner offers non-discriminatory, open access transmission tariffs for use of its transmission system pursuant to rules promulgated by the FERC under sections 205 and 206 of the Federal Power Act (16 U.S.C. 824d and 824e) (or comparable provisions of state law).

(iv) All of the output sold under the contract is attributable to excess capacity resulting from the offer of the non-discriminatory, open access transmission tariffs referred to in paragraph (f)(5)(iii) of this section.

(v) All payments received by the governmental owner under the contract (other than the portion of such payments described in § 1.141-4(c)(2)(C)) are applied as promptly as is reasonably practical to redeem tax-exempt bonds that financed the output facility in a manner consistent with § 1.141-12.

(5) *Special exceptions for transmission facilities*—(i) *Mandated wheeling.* Entering into a contract for the use of transmission facilities financed by an issue is not treated as a deliberate action under § 1.141-2(d) if—

(A) The contract is entered into in response to (or in anticipation of) an order by the United States under sections 211 and 212 of the Federal Power Act (16 U.S.C. 824j and 824k) (or a state regulatory authority under comparable provisions of state law); and

(B) The terms of the contract are bona fide and arm's length, and the consideration paid is consistent with the provisions of section 212(a) of the Federal Power Act.

(ii) *Actions taken to implement non-discriminatory, open access.* An action is not treated as a deliberate action under § 1.141-2(d) if it is taken to implement the offering of non-discriminatory, open access tariffs for the use of transmission facilities

financed by an issue in a manner consistent with rules promulgated by the FERC under sections 205 and 206 of the Federal Power Act (16 U.S.C. 824d and 824e) (or comparable provisions of state law). This paragraph (f)(5)(ii) does not apply, however, to the sale, exchange, or other disposition of transmission facilities to a nongovernmental person.

(iii) *Application of reasonable expectations test to certain current refunding bonds.* An action taken or to be taken with respect to transmission facilities refinanced by an issue is not taken into account under the reasonable expectations test of § 1.141-2(d) if—

(A) The action is described in paragraph (f)(5)(i) or (ii) of this section;

(B) The bonds of the issue are current refunding bonds that, directly or indirectly, refund bonds originally issued before February 23, 1998; and

(C) The weighted average maturity of the refunding bonds is not greater than the remaining weighted average maturity of those prior bonds.

(6) *Certain conduit parties disregarded.* A nongovernmental person acting solely as a conduit for the exchange of output among governmentally owned and operated utilities is disregarded in determining whether the private business tests are met with respect to financed facilities owned by a governmental person. Use of property by a power marketer in the trade or business of purchasing and reselling power, however, is taken into account under the private business tests.

(g) *Allocations of output facilities and systems*—(1) *Facts and circumstances analysis.* Whether output sold under an output contract is allocated to a particular facility (for example, a generating unit), to the entire system of the seller of that output (net of any uses of that system output allocated to a particular facility), or to a portion of a facility is based on all the facts and circumstances. Significant factors to be considered in determining the allocation of an output contract to financed property are the following:

(i) The extent to which it is physically possible to deliver output to or from a particular facility or system.

(ii) The terms of a contract relating to the delivery of output (such as delivery limitations and options or obligations to deliver power from additional sources).

(iii) Whether a contract is entered into as part of a common plan of financing for a facility.

(iv) The method of pricing output under the contract, such as the use of market rates rather than rates designed to pay debt service of tax-exempt bonds used to finance a particular facility.

(2) *Illustrations.* The following illustrate the factors set forth in paragraph (g)(1) of this section:

(i) *Physical possibility.* Output from a generating unit that is fed directly into a low voltage distribution system of the owner of that unit and that cannot physically leave that distribution system generally must be allocated to those receiving electricity through that distribution system. Output may be allocated without regard to physical limitations, however, if exchange or similar agreements provide output to a purchaser where, but for the exchange agreements, it would not be possible for the seller to provide output to that purchaser.

(ii) *Contract terms relating to performance.* A contract to provide a specified amount of electricity from a system, but only when at least that amount of electricity is being generated by a particular unit, is allocated to that unit. For example, a contract to buy 20 MW of system power with a right to take up to 40 percent of the actual output of a specific 50 MW facility whenever total system output is insufficient to meet all of the seller's obligations generally is allocated to the specific facility rather than to the system.

(iii) *Common plan of financing.* A contract entered into as part of a common plan of financing for a facility generally is allocated to the facility if debt service for the issue of bonds is reasonably expected to be paid, directly or indirectly, from payments substantially certain to be made under the contract (disregarding default, insolvency, or other similar circumstances).

(iv) *Pricing method.* Pricing based on the capital and generating costs of a particular turbine tends to indicate that output under the contract is properly allocated to that turbine.

(3) *Transmission contracts.* Whether use under an output contract for transmission is allocated to a particular facility or to a transmission network is based on all the facts and circumstances, in a manner similar to paragraphs (g)(1) and (2) of this section. In general, the method used to determine payments under a contract is a more significant contract term for this purpose than nominal contract path. In general, if reasonable and consistently applied, the determination of use of transmission facilities under an output contract may be based on a method used by third parties, such as reliability councils.

(4) *Allocation of payments.* Payments for output provided by an output facility financed with two or more sources of

funding are generally allocated under the rules in § 1.141-4(c).

(h) *Examples.* The following examples illustrate the application of this section:

Example 1. Joint ownership. Z, an investor-owned electric utility, and City H agree to construct an electric generating facility of a size sufficient to take advantage of the economies of scale. H will issue \$50 million of its 24-year bonds, and Z will use \$100 million of its funds for construction of a facility they will jointly own as tenants in common. Each of the participants will share in the ownership, output, and operating expenses of the facility in proportion to its contribution to the cost of the facility, that is, one-third by H and two-thirds by Z. H's bonds will be secured by H's ownership interest in the facility and by revenues to be derived from its share of the annual output of the facility. H will need only 50 percent of its share of the annual output of the facility during the first 20 years of operations. It agrees to sell 10 percent of its share of the annual output to Z for a period of 20 years pursuant to a contract under which Z agrees to take that power if available. The facility will begin operation, and Z will begin to receive power, 4 years after the H bonds are issued. The measurement period for the property financed by the issue is 20 years. H also will sell the remaining 40 percent of its share of the annual output to numerous other private utilities under contracts of one year or less that satisfy the exception under paragraph (f)(3) of this section. No other contracts will be executed obligating any person to purchase any specified amount of the power for any specified period of time. No person (other than Z) will make payments substantially certain to be made (disregarding default, insolvency, or other similar circumstances) under paragraph (c)(2) of this section that will result in a transfer of substantial burdens of paying debt service on bonds used directly or indirectly to provide H's share of the facilities. The bonds are not private activity bonds, because H's one-third interest in the facility is not treated as used by the other owners of the facility. Although 10 percent of H's share of the annual output of the facility will be used in the trade or business of Z, a nongovernmental person, under this section, that portion constitutes not more than 10 percent of the available output of H's ownership interest in the facility.

Example 2. Requirements contract treated as take contract. (i) City J issues 20-year bonds to acquire an electric generating facility having a reasonably expected economic life substantially greater than 20 years and a nameplate capacity of 100 MW. The available output of the facility under paragraph (b)(1) of this section is approximately 17,520,000 MWh (100 MW × 24 hours × 365 days × 20 years). On the issue date, J enters into a contract with T, an investor-owned utility, to provide T with all of its power requirements for a period of 10 years, commencing on the issue date. J reasonably expects that T will actually purchase an average of 30 MW over the 10-year period. Based on all of the facts and circumstances, including the size, diversity,

and composition of T's customer base, J reasonably expects that it is substantially certain (disregarding default, insolvency, or other similar circumstances) that T will actually purchase only an average of 26 MW over the 10-year period. The contract is a requirements contract that must be taken into account under the private business tests pursuant to paragraph (c)(4) of this section because it provides T with substantial benefits of ownership (rights to capacity) and obligates T with substantial burdens of making payments that the issuer reasonably expects are substantially certain.

(ii) Under paragraph (d) of this section, the amount of reasonably expected private business use under this contract is approximately 15 percent (30 MW × 24 hours × 365 days × 10 years, or 2,628,000 MWh) of the available output. Accordingly, the issue meets the private business use test. J reasonably expects that the amount to be paid for an average of 26 MW of power (less the operation and maintenance costs directly attributable to generating that 26 MW of power), will be more than 10 percent of debt service on the issue on a present-value basis. The payment for 26 MW of power is an amount that J reasonably expects is substantially certain to be made under paragraph (c)(2) of this section. Accordingly, the issue meets the private security or payment test because J reasonably expects that it is substantially certain that payment of more than 10 percent of the debt service will be indirectly derived from payments by T. The bonds are private activity bonds under paragraph (c) of this section. Further, if 15 percent of the sale proceeds of the issue is greater than \$15 million and the issue meets the private security or payment test with respect to the \$15 million output limitation, the bonds are also private activity bonds under section 141(b)(4). See § 1.141-8T.

Example 3. Allocation of existing contracts to new facilities. Power Authority K, a political subdivision created by the legislature in State X to own and operate certain power generating facilities, sells all of the power from its existing facilities to four private utility systems under contracts executed in 1999, under which the four systems are required to take or pay for specified portions of the total power output until the year 2029. Existing facilities supply all of the present needs of the four utility systems, but their future power requirements are expected to increase substantially beyond the capacity of K's current generating system. K issues 20-year bonds in 2004 to construct a large generating facility. As part of the financing plan for the bonds, a fifth private utility system contracts with K to take or pay for 15 percent of the available output of the new facility. The balance of the output of the new facility will be available for sale as required, but initially it is not anticipated that there will be any need for that power. The revenues from the contract with the fifth private utility system will be sufficient to pay less than 10 percent of the debt service on the bonds (determined on a present value basis). The balance, which will exceed 10 percent of the debt service on the bonds, will be paid from revenues derived from the contracts with the four systems initially from

sale of power produced by the old facilities. The output contracts with all the private utilities are allocated to K's entire generating system. See paragraphs (g)(1) and (2) of this section. Thus, the bonds meet the private business use test because more than 10 percent of the proceeds will be used in the trade or business of a nongovernmental person. In addition, the bonds meet the private security or payment test because payment of more than 10 percent of the debt service, pursuant to underlying arrangements, will be derived from payments in respect of property used for a private business use.

Example 4. Allocation to displaced resource. Municipal utility MU, a political subdivision, purchases all of the electricity required to meet the needs of its customers (1,000 MW) from B, an investor-owned utility that operates its own electric generating facilities, under a 50-year take or pay contract. MU does not anticipate that it will require additional electric resources, and any new resources would produce electricity at a higher cost to MU than its cost under its contract with B. Nevertheless, B encourages MU to construct a new generating plant sufficient to meet MU's requirements. MU issues obligations to construct facilities that will produce 1,000 MW of electricity. MU, B, and I, another investor-owned utility, enter into an agreement under which MU assigns to I its rights under MU's take or pay contract with B. Under this arrangement, I will pay MU, and MU will continue to pay B, for the 1,000 MW. I's payments to MU will at least equal the amounts required to pay debt service on MU's bonds. In addition, under paragraph (g)(1)(iii) of this section, the contract among MU, B, and I is entered into as part of a common plan of financing of the MU facilities. Under all the facts and circumstances, MU's assignment to I of its rights under the original take or pay contract is allocable to MU's new facilities under paragraph (g) of this section. Because I is a nongovernmental person, MU's bonds are private activity bonds.

Example 5. Transmission facilities transferred to regional transmission organization. (i) In 2001, the public utilities commission of State C adopts a plan for restructuring its electric power industry. The plan fosters competition by providing both wholesale and retail customers with non-discriminatory access to transmission facilities within the State. The plan provides that investor-owned utilities will transfer operating control over all of their transmission assets to a regional transmission organization (RTO), which is a nongovernmental person that will operate those combined assets as a single, state-wide system. Municipally-owned utilities are eligible for, but are not required to participate in, the open access system implemented by the RTO. The functions of the RTO include control of transmission access and pricing, scheduling transmission, control area operations, and settlements and billing. The RTO's compensation under its operating agreement with transmission owners is based on a share of net profits from operating the facilities. The restructuring plan is approved by the FERC pursuant to sections 205 and 206 of the Federal Power Act.

(ii) In 1994, City D had issued bonds to finance improvements to its transmission system. In 2001, D transfers operating control of its transmission system to the RTO pursuant to the restructuring plan. At the same time, D chooses to apply the private activity bond regulations of §§ 1.141–1 through 1.141–15 to the 1994 bonds. The operation of the financed facilities by the RTO results in private business use under § 1.141–3. Under the special exception in paragraph (f)(5) of this section, however, the transfer of control is not treated as a deliberate action. Accordingly, the transfer of control does not cause the 1994 bonds to meet the private activity bond tests.

Example 6. Current refunding. The facts are the same as in Example 5 of this paragraph (h), and in addition D issues bonds in 2003 to currently refund the 1994 bonds. The weighted average maturity of the 2003 bonds is not greater than the remaining weighted average maturity of the 1994 bonds. D chooses to apply the private activity bond regulations of §§ 1.141–1 through 1.141–15 to the refunding bonds. In general, reasonable expectations must be separately tested on the date that refunding bonds are issued under § 1.141–2(d). Under the special exception in paragraph (f)(5) of this section, however, the transfer of the financed facilities to the RTO need not be taken into account in applying the reasonable expectations test to the refunding bonds.

Par. 4. Section 1.141–8T is revised to read as follows:

§ 1.141–8T \$15 million limitation for output facilities (temporary).

(a) *In general*—(1) *General rule.* Section 141(b)(4) provides a special private activity bond limitation (the \$15 million output limitation) for issues 5 percent or more of the proceeds of which are to be used to finance output facilities (other than a facility for the furnishing of water). Under this rule, an issue consists of private activity bonds under the private business tests of section 141(b)(1) and (2) if the nonqualified amount with respect to output facilities financed by the proceeds of the issue exceeds \$15 million. The \$15 million output limitation applies in addition to the private business tests of section 141(b)(1) and (2). Under section 141(b)(4) and paragraph (a)(2) of this section, the \$15 million output limitation is reduced in certain cases. Specifically, an issue meets the test in section 141(b)(4) if both of the following tests are met:

(i) More than \$15 million of the proceeds of the issue to be used with respect to an output facility are to be used for a private business use. Investment proceeds are disregarded for this purpose if they are not allocated disproportionately to the private business use portion of the issue.

(ii) The payment of the principal of, or the interest on, more than \$15 million

of the sales proceeds of the portion of the issue used with respect to an output facility is (under the terms of the issue or any underlying arrangement) directly or indirectly—

(A) Secured by any interest in an output facility used or to be used for a private business use (or payments in respect of such an output facility); or

(B) To be derived from payments (whether or not to the issuer) in respect of an output facility used or to be used for a private business use.

(2) *Reduction in \$15 million output limitation for outstanding issues*—(i) *General rule.* In determining whether an issue 5 percent or more of the proceeds of which are to be used with respect to an output facility consists of private activity bonds under the \$15 million output limitation, the \$15 million limitation on private business use and private security or payments is applied by taking into account the aggregate nonqualified amounts of any outstanding bonds of other issues 5 percent or more of the proceeds of which are or will be used with respect to that output facility or any other output facility that is part of the same project.

(ii) *Bonds taken into account.* For purposes of this paragraph (a)(2), in applying the \$15 million output limitation to an issue (the later issue), a tax-exempt bond of another issue (the earlier issue) is taken into account if—

(A) That bond is outstanding on the issue date of the later issue;

(B) That bond will not be redeemed within 90 days of the issue date of the later issue in connection with the refunding of that bond by the later issue; and

(C) 5 percent or more of the sale proceeds of the earlier issue financed an output facility that is part of the same project as the output facility that is financed by 5 percent or more of the sale proceeds of the later issue.

(3) *Benefits and burdens test applicable*—(i) *In general.* In applying the \$15 million output limitation, the benefits and burdens test of § 1.141–7T applies, except that “\$15 million” is substituted for “10 percent”, or “5 percent” as appropriate.

(ii) *Earlier issues for the project.* If bonds of an earlier issue are outstanding and must be taken into account under paragraph (a)(2) of this section, the nonqualified amount for that earlier issue is multiplied by a fraction, the numerator of which is the adjusted issue price of the earlier issue as of the issue date of the later issue, and the denominator of which is the issue price of the earlier issue. Pre-issuance accrued

interest as defined in § 1.148–1(b) is disregarded for this purpose.

(b) *Definition of project*—(1) *General rule.* For purposes of paragraph (a)(2) of this section, *project* has the meaning provided in this paragraph. Facilities that are functionally related and subordinate to a project are treated as part of that same project. Facilities having different purposes or serving different customer bases are not ordinarily part of the same project. For example, the following are generally not part of the same project—

(i) Generation and transmission facilities;

(ii) Separate facilities designed to serve wholesale customers and retail customers; and

(iii) A peaking unit and a baseload unit.

(2) *Separate ownership.* Except as otherwise provided in this paragraph (b)(2), facilities that are not owned by the same person are not part of the same project. If different governmental persons act in concert to finance a project, however (for example as participants in a joint powers authority), their interests are aggregated with respect to that project to determine whether the \$15 million output limitation is met. In the case of undivided ownership interests in a single output facility, property that is not owned by different persons is treated as separate projects only if the separate interests are financed—

(i) With bonds of different issuers; and

(ii) Without a principal purpose of avoiding the limitation in this section.

(3) *Generating property*—(i) *Property on same site.* In the case of generation and related facilities, *project* means property located at the same site.

(ii) *Special rule for generating units.* Separate generating units are not part of the same project if one unit is reasonably expected, on the issue date of each issue that finances the units, to be placed in service more than 3 years before the other. Common facilities or property that will be functionally related to more than one generating unit must be allocated on a reasonable basis. If a generating unit already is constructed or is under construction (the first unit) and bonds are to be issued to finance an additional generating unit (the second unit), all costs for any common facilities paid or incurred before the earlier of the issue date of bonds to finance the second unit or the commencement of construction of the second unit are allocated to the first unit. At the time that bonds are issued to finance the second unit (or, if earlier, upon commencement of construction of

that unit), any remaining costs of the common facilities may be allocated between the first and second units so that in the aggregate the allocation is reasonable.

(4) *Transmission*. In the case of transmission facilities, *project* means functionally related or contiguous property. Separate transmission facilities are not part of the same project if one facility is reasonably expected, on the issue date of each issue that finances the facilities, to be placed in service more than 2 years before the other.

(5) *Subsequent improvements*—(i) *In general*. An improvement to generating or transmission facilities that is not part of the original design of those facilities (the original project) is not part of the same project as the original project if the construction, reconstruction, or acquisition of that improvement commences more than 3 years after the original project was placed in service and the bonds issued to finance that improvement are issued more than 3 years after the original project was placed in service.

(ii) *Special rule for transmission facilities*. An improvement to transmission facilities that is not part of the original design of that property is not part of the same project as the original project if the issuer did not reasonably expect the need to make that improvement when it commenced construction of the original project and the construction, reconstruction, or acquisition of that improvement is mandated by the federal government or a state regulatory authority to accommodate requests for wheeling.

(6) *Replacement property*. For purposes of this section, property that replaces existing property of an output facility is treated as part of the same project as the replaced property unless—

(i) The need to replace the property was not reasonably expected on the issue date or the need to replace the property occurred more than 3 years before the issuer reasonably expected (determined on the issue date of the bonds financing the property) that it would need to replace the property; and

(ii) The bonds that finance (and refinance) the output facility have a weighted average maturity that is not greater than 120 percent of the reasonably expected economic life of the facility.

(c) *Example*. The application of the provisions of this section is illustrated by the following example:

Example. (i) Power Authority K, a political subdivision, intends to issue a single issue of tax-exempt bonds at par with a stated principal amount and sale proceeds of \$500

million to finance the acquisition of an electric generating facility. No portion of the facility will be used for a private business use, except that L, an investor-owned utility, will purchase 10 percent of the output of the facility under a take contract and will pay 10 percent of the debt service on the bonds. The nonqualified amount with respect to the bonds is \$50 million.

(ii) The maximum amount of tax-exempt bonds that may be issued for the acquisition of an interest in the facility in paragraph (i) of this *Example* is \$465 million (that is, \$450 million for the 90 percent of the facility that is governmentally owned and used plus a nonqualified amount of \$15 million).

Par. 5. Section 1.141–15 is amended by revising paragraphs (c), (d) and (e) to read as follows:

§ 1.141–15 Effective dates.

* * * * *

(c) *Refunding bonds*. Sections 1.141–1 through 1.141–6(a), 1.141–9 through 1.141–14, 1.145–1 through 1.145–2, 1.150–1(a)(3) and the definition of bond documents contained in § 1.150–1(b) do not apply to any bonds issued on or after May 16, 1997, to refund a bond to which those sections do not apply unless—

(1) The refunding bonds are subject to section 1301 of the Tax Reform Act of 1986 (100 Stat. 2602); and

(2)(i) The weighted average maturity of the refunding bonds is longer than—

(A) The weighted average maturity of the refunded bonds; or

(B) In the case of a short-term obligation that the issuer reasonably expects to refund with a long-term financing (such as a bond anticipation note), 120 percent of the weighted average reasonably expected economic life of the facilities financed; or

(ii) A principal purpose for the issuance of the refunding bonds is to make one or more new conduit loans.

(d) *Permissive application of regulations*. Except as provided in paragraph (e) of this section, §§ 1.141–1 through 1.141–6(a), 1.141–9 through 1.141–14, 1.145–1 through 1.145–2, 1.150–1(a)(3) and the definition of bond documents contained in § 1.150–1(b) may be applied in whole, but not in part, to actions taken before February 23, 1998, with respect to—

(1) Bonds that are outstanding on May 16, 1997, and subject to section 141; or

(2) Refunding bonds issued on or after May 16, 1997 that are subject to section 141.

(e) *Permissive application of certain sections*. The following sections may each be applied to any bonds—

(1) Section 1.141–3(b)(4);

(2) Section 1.141–3(b)(6); and

(3) Section 1.141–12.

Par. 6. Section 1.141–15T is revised to read as follows:

§ 1.141–15T Effective dates (temporary).

(a) through (e) [Reserved]. For further guidance see § 1.141–15.

(f) *Effective dates for certain regulations relating to output facilities*—

(1) *General rule*. Except as otherwise provided in this section, §§ 1.141–7T and 1.141–8T apply to bonds sold on or after January 19, 2001, that are subject to section 1301 of the Tax Reform Act of 1986 (100 Stat. 2602).

(2) *Transition rule for requirements contracts*. For bonds otherwise subject to §§ 1.141–7T and 1.141–8T, § 1.141–7T(c)(4) applies to output contracts entered into on or after February 23, 1998. An output contract is treated as entered into on or after that date if its term is extended, the parties to the contract change, or other material terms are amended on or after that date. For purposes of this paragraph (f)(2)—

(i) The extension of the term of a contract causes the contract to be treated as entered into on the first day of the additional term;

(ii) The exercise by a party of a legally enforceable right that was provided under a contract before February 23, 1998, on terms that were fixed and determinable before such date, is not treated as an amendment of the contract. For example, the exercise by a purchaser after February 23, 1998 of a renewal option that was provided under a contract before that date, on terms identical to the original contract, is not treated as an amendment of the contract; and

(iii) An amendment that reduces the term of a contract, or the amount of requirements covered by a contract, is not, in and of itself, material.

(3) *Elective application of 1998 temporary regulations*. For an issue sold on or after January 19, 2001, and before February 15, 2001, an issuer may apply the provisions of §§ 1.141–7T and 1.141–8T in effect prior to January 19, 2001 (26 CFR part 1, revised April 1, 2000) in whole, but not in part, in lieu of applying §§ 1.141–7T and 1.141–8T.

(g) *Refunding bonds in general*. Except as otherwise provided in paragraph (h) or (i) of this section, §§ 1.141–7T and 1.141–8T do not apply to any bonds sold on or after January 19, 2001, to refund a bond to which §§ 1.141–7T and 1.141–8T do not apply unless—

(1) The refunding bonds are subject to section 1301 of the Tax Reform Act of 1986 (100 Stat. 2602); and

(2)(i) The weighted average maturity of the refunding bonds is longer than—

(A) The weighted average maturity of the refunded bonds; or

(B) In the case of a short-term obligation that the issuer reasonably

expects to refund with a long-term financing (such as a bond anticipation note), 120 percent of the weighted average reasonably expected economic life of the facilities financed; or

(ii) A principal purpose for the issuance of the refunding bonds is to make one or more new conduit loans.

(h) *Permissive retroactive application.* Except as provided in § 1.141–15(d) or (e) or paragraph (i) of this section, §§ 1.141–1 through 1.141–6, 1.141–7T through 1.141–8T, 1.141–9 through 1.141–14, 1.145–1 through 1.145–2, 1.150–1(a)(3) and the definition of bond documents contained in § 1.150–1(b) may be applied in whole, but not in part to—

(1) Outstanding bonds that are sold before January 19, 2001, and subject to section 141; or

(2) Refunding bonds sold on or after January 19, 2001, that are subject to section 141.

(i) *Permissive application of certain regulations pertaining to output contracts.* Section 1.141–7T(f)(4) and (5) may be applied to any bonds.

Par. 7. Section 1.142(f)(4)–1 is added to read as follows:

§ 1.142(f)(4)–1 Manner of making election to terminate tax-exempt bond financing.

(a) *Overview.* Section 142(f)(4) permits a person engaged in the local furnishing of electric energy or gas (a local furnisher) that uses facilities financed with exempt facility bonds under section 142(a)(8) and that expands its service area in a manner inconsistent with the requirements of sections 142(a)(8) and (f) to make an election to ensure that those bonds will continue to be treated as exempt facility bonds. The election must meet the requirements of paragraphs (b) and (c) of this section.

(b) *Time for making election—(1) In general.* An election under section 142(f)(4)(B) must be filed with the Internal Revenue Service on or before 90 days after the date of the service area expansion that causes bonds to cease to meet the requirements of sections 142(a)(8) and (f).

(2) *Date of service area expansion.* For the purposes of this section, the date of the service area expansion is the first date on which the local furnisher is authorized to collect revenue for the provision of service in the expanded area.

(c) *Manner of making election.* An election under section 142(f)(4)(B) must be captioned “ELECTION TO TERMINATE TAX-EXEMPT BOND FINANCING”, must be signed under penalties of perjury by a person who has authority to sign on behalf of the local

furnisher, and must contain the following information—

(1) The name of the local furnisher;

(2) The tax identification number of the local furnisher;

(3) The complete address of the local furnisher;

(4) The date of the service area expansion;

(5) Identification of each bond issue subject to the election, including the complete name of each issue, the tax identification number of each issuer, the report number of the information return filed under section 149(e) for each issue, the issue date of each issue, the CUSIP number (if any) of the bond with the latest maturity of each issue, the issue price of each issue, the adjusted issue price of each issue as of the date of the election, the earliest date on which the bonds of each issue may be redeemed, and the principal amount of bonds of each issue to be redeemed on the earliest redemption date;

(6) A statement that the local furnisher making the election agrees to the conditions stated in section 142(f)(4)(B); and

(7) A statement that each issuer of the bonds subject to the election has received written notice of the election.

(d) *Effect on section 150(b).* Except as provided in paragraph (e) of this section, if a local furnisher files an election within the period specified in paragraph (b) of this section, section 150(b) does not apply to bonds identified in the election during and after that period.

(e) *Effect of failure to meet agreements.* If a local furnisher fails to meet any of the conditions stated in an election pursuant to paragraph (c)(6) of this section, the election is invalid.

(f) *Corresponding provisions of the Internal Revenue Code of 1954.* Section 103(b)(4)(E) of the Internal Revenue Code of 1954 set forth corresponding requirements for the exclusion from gross income of the interest on bonds issued for facilities for the local furnishing of electric energy or gas. For the purposes of this section any reference to sections 142(a)(8) and (f) of the Internal Revenue Code of 1986 includes a reference to the corresponding portion of section 103(b)(4)(E) of the Internal Revenue Code of 1954.

(g) *Effective dates.* This section applies to elections made on or after January 19, 2001.

§ 1.142(f)(4)–1T [Removed]

Par. 8. Section 1.142(f)(4)–1T is removed.

Par. 9. Section 1.150–5 is added to read as follows:

§ 1.150–5 Filing notices and elections.

(a) *In general.* Notices and elections under the following sections must be filed with the Internal Revenue Service, 1111 Constitution Avenue, NW, Attention: T:GE:TEB:O, Washington, DC 20224 or such other place designated by publication of a notice in the Internal Revenue Bulletin—

(1) Section 1.141–12(d)(3);

(2) Section 1.142(f)(4)–1; and

(3) Section 1.142–2(c)(2).

(b) *Effective dates.* This section applies to notices and elections filed on or after January 19, 2001.

§ 1.150–5T [Removed]

Par. 10. Section 1.150–5T is removed.

PART 602—OMB CONTROL NUMBERS UNDER THE PAPERWORK REDUCTION ACT

Par. 11. The authority for part 602 continues to read as follows:

Authority: 26 U.S.C. 7805.

Par. 12 . In § 602.101, paragraph (b) is amended by adding an entry in numerical order to the table to read as follows:

§ 602.101 OMB control numbers.

* * * * *

(b) * * *

CFR part or section where identified and described	Current OMB control No.
* * * * *	* * * * *
1.142(f)(4)–1	1545–1730
* * * * *	* * * * *

Robert E. Wenzel,

Deputy Commissioner of Internal Revenue.

Approved: January 10, 2001.

Jonathan Talisman,

Assistant Secretary of the Treasury.

BILLING CODE 4830–01–P

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 931

[NM–041–FOR]

New Mexico Regulatory Program

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Final rule, approval of amendment.

SUMMARY: The Office of Surface Mining Reclamation and Enforcement (OSM) is

approving a proposed amendment to the New Mexico regulatory program (hereinafter, the "New Mexico program") under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). New Mexico proposed to recodify the New Mexico Surface Coal Mining Regulations. The amendment revised the State program to improve operational efficiency and ensure that the New Mexico Surface Coal Mining Regulations were codified according to the New Mexico administrative rules.

EFFECTIVE DATE: January 18, 2001.

FOR FURTHER INFORMATION CONTACT:

Willis L. Gainer, Telephone: (505) 248-5096, Internet address: WGAINER@SMRE.GOV.

SUPPLEMENTARY INFORMATION:

I. Background on the New Mexico Program

On December 31, 1980, the Secretary of the Interior conditionally approved the New Mexico program. General background information on the New Mexico program, including the Secretary's findings, the disposition of comments, and the conditions of approval of the New Mexico program can be found in the December 31, 1980, **Federal Register** (45 FR 86459). Subsequent actions concerning New Mexico's program and program amendments can be found at 30 CFR 931.11, 931.15, 931.16, and 931.30.

II. Proposed Amendment

By letter dated September 22, 2000, New Mexico submitted a proposed amendment to its program (administrative record No. NM-840) pursuant to SMCRA (30 U.S.C. 1201 *et seq.*). New Mexico submitted the proposed amendment at its own initiative. New Mexico proposed to recodify the New Mexico Surface Coal Mining Regulations.

OSM announced receipt of the proposed amendment in the October 23, 2000, **Federal Register** (65 FR 63223), provided an opportunity for a public hearing or meeting on its substantive adequacy, and invited public comment on its adequacy (administrative record No. NM-842). Because no one requested a public hearing or meeting, none was held. The public comment period ended on November 22, 2000.

III. Director's Findings

As discussed below, the Director, in accordance with SMCRA and 30 CFR 732.15 and 732.17, finds that the proposed program amendment, submitted by New Mexico on September 22, 2000, is no less effective than the corresponding Federal regulations and

no less stringent than SMCRA. Accordingly, the Director approves the proposed amendment.

Minor Revisions to New Mexico's Rules

New Mexico proposed recodification of previously-approved New Mexico Surface Coal Mining Regulations including revisions that are minor in nature, consisting of minor wording, editorial and punctuation changes. Specifically, New Mexico proposed to recodify its regulations from Title 19 (Natural Resources and Wildlife), Chapter 8, (Coal Mining), Part 2 (Coal Surface Mining) of the New Mexico Administrative Code (19 NMAC 8.2), Subparts 1 through 34 to Title 19 (Natural Resources and Wildlife), Chapter 8, (Coal Mining) of the New Mexico Administrative Code (19.8 NMAC), Parts 1 through 34. In addition to the renumbering and reformatting, New Mexico proposed to revise the history references after each section and added to the rule history at the end of each part. No substantive changes to the text of the regulations were proposed.

Because the proposed revisions to these previously-approved rules are minor in nature, the Director finds that these proposed New Mexico rules are no less effective than the Federal regulations at Title 30 (Mineral Resources), Chapter VII (Office of Surface Mining Reclamation and Enforcement, Department of the Interior), Parts 700 through 887. The Director approves the proposed recodification of New Mexico's rules.

IV. Summary and Disposition of Comments

Following are summaries of all substantive written comments on the proposed amendment that were received by OSM, and OSM's responses to them.

1. Public Comments

OSM invited public comments on the proposed amendment (administrative record Nos. NM-841 and NM-842), but none were received.

2. Federal Agency Comments

Pursuant to 30 CFR 732.17(h)(11)(i), OSM solicited comments on the proposed amendment from various Federal agencies with an actual or potential interest in the New Mexico program (administrative record No. NM-841). None were received.

3. Environmental Protection Agency (EPA) Concurrence and Comments

Pursuant to 30 CFR 732.17(h)(11)(ii), OSM is required to solicit the written concurrence of EPA with respect to

those provisions of the proposed amendment that relate to air or water quality standards promulgated under the authority of the Clean Water Act (33 U.S.C. 1251 *et seq.*) or the Clean Air Act (42 U.S.C. 7401 *et seq.*).

None of the revisions that New Mexico proposed to make in its amendment pertain to air or water quality standards. Pursuant to 30 CFR 732.17(h)(11)(i), OSM solicited comments on the proposed amendment from EPA (administrative record No. NM-841). It did not respond to OSM's request.

4. State Historic Preservation Officer (SHPO) and the Advisory Council on Historic Preservation (ACHP)

Pursuant to 30 CFR 732.17(h)(4); OSM solicited comments on the proposed amendment from the SHPO and ACHP (administrative record No. NM-841). Neither SHPO nor ACHP responded to OSM's request.

V. Director's Decision

Based on the above finding, the Director approves New Mexico's proposed amendment as submitted on September 22, 2000.

The Federal regulations at 30 CFR part 931, codifying decisions concerning the New Mexico program, are being amended to implement this decision. This final rule is being made effective immediately to expedite the State program amendment process and to encourage States to bring their programs into conformity with the Federal standards without undue delay. Consistency of State and Federal standards is required by SMCRA.

VI. Procedural Determination

Executive Order 12866—Regulatory Planning and Review

This rule is exempted from review by the Office of Management and Budget (OMB) under Executive Order 12866 (Regulatory Planning and Review).

Executive Order 12630—Takings

This rule does not have takings implications. This determination is based on the analysis performed for the counterpart federal regulation.

Executive Order 13132—Federalism

This rule does not have federalism implications. SMCRA delineates the rules of the federal and state governments with regard to the regulation of surface coal mining and reclamation operations. One of the purposes of SMCRA is to "establish a nationwide program to protect society and the environment from the adverse effects of surface coal mining

operations.” Section 503(a)(1) of SMCRA requires that state laws regulating surface coal mining and reclamation operations be “in accordance with” the requirements of SMCRA, and section 503(a)(7) requires that state programs contain rules and regulations “consistent with” regulations issued by the Secretary pursuant to SMCRA.

Executive Order 12988—Civil Justice Reform

The Department of the Interior has conducted the reviews required by section 3 of Executive Order 12988 (Civil Justice Reform) and has determined that this rule meets the applicable standards of subsections (a) and (b) of that section. However, these standards are not applicable to the actual language of State regulatory programs and program amendments since each such program is drafted and promulgated by a specific State, not by OSM. Under sections 503 and 505 of SMCRA (30 U.S.C. 1253 and 1255) and the Federal regulations at 30 CFR 730.11, 732.15, and 732.17(h)(10), decisions on proposed State regulatory programs and program amendments submitted by the States must be based solely on a determination of whether the submittal is consistent with SMCRA and its implementing Federal regulations and whether the other requirements of 30 CFR Parts 730, 731, and 732 have been met.

National Environmental Policy Act

This rule does not require an environmental impact statement because section 702(d) of SMCRA (30 U.S.C. 1292(d)) provides that agency decisions on proposed State regulatory program provisions do not constitute major Federal actions within the meaning of section 102(2)(C) of the

National Environmental Policy Act (42 U.S.C. 4332(2)(C)).

Paperwork Reduction Act

This rule does not contain information collection requirements that require approval by OMB under the Paperwork Reduction Act (44 U.S.C. 3507 *et seq.*).

Regulatory Flexibility Act

The Department of the Interior has determined that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). The State submittal that is the subject of this rule is based upon counterpart Federal regulations for which an economic analysis was prepared and certification made that such regulations would not have a significant economic effect upon a substantial number of small entities. Accordingly, this rule will ensure that existing requirements previously promulgated by OSM will be implemented by the State. In making the determination as to whether this rule would have a significant economic impact, the Department relied upon the data and assumptions for the counterpart Federal regulations.

Small Business Regulatory Enforcement Fairness Act

This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule: a. does not have an annual effect on the economy of \$100 million; b. will not cause a major increase in costs or prices for consumers, individual industries, federal, state, or local government agencies, or geographic regions; and c. does not have significant adverse effects on competition, employment, investment,

productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises.

This determination is based upon the fact that the state submittal which is the subject of this rule is based upon counterpart Federal regulations for which an analysis was prepared and a determination made that the Federal regulation was not considered a major rule.

Unfunded Mandates.

OSM has determined and certifies under the Unfunded Mandates Reform Act (2 U.S.C. 1502 *et seq.*) that this rule will not impose a cost of \$100 million or more in any given year on any local, State, or tribal governments or private entities.

List of Subjects in 30 CFR Part 931

Intergovernmental relations, Surface mining, Underground Mining.

Dated: January 3, 2001.

Brent T. Wahlquist,

Regional Director, Western Regional Coordinating Center.

For the reasons set out in the preamble, Title 30, Chapter VII, Subchapter T of the Code of Federal Regulations is amended as set forth below:

PART 931—NEW MEXICO

1. The authority citation for part 931 continues to read as follows:

Authority: 30 U.S.C. 1201 *et seq.*

2. Section 931.15 is amended in the table by adding a new entry in chronological order by “Date of Final Publication” to read as follows:

§ 931.15 Approval of New Mexico regulatory program amendments.

* * * * *

Original amendment submission date	Date of final publication	Citation/description
* * *	* * *	* * *
September 22, 2000	January 18, 2001	19.8 NMAC Parts 1 through 34 (recodification)

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Care Financing Administration

42 CFR Parts 416, 482, and 485

[HCFA-3049-F]

RIN 0938-AK08

Medicare and Medicaid Programs; Hospital Conditions of Participation: Anesthesia Services.

AGENCY: Health Care Financing Administration (HCFA), HHS.

ACTION: Final rule.

SUMMARY: This final rule amends the Anesthesia Services Condition of Participation (CoP) for hospitals, the Surgical Services Condition of Participation for Critical Access Hospitals (CAH), and the Ambulatory Surgical Center (ASC) Conditions of Coverage Surgical Services. This final rule changes the physician supervision requirement for certified registered nurse anesthetists furnishing anesthesia services in hospitals, CAHs, and ASCs. Under this final rule, State laws will determine which professionals are permitted to administer anesthetics and the level of supervision required, recognizing a State's traditional domain in establishing professional licensure and scope-of-practice laws. States and hospitals are free to establish additional standards for professional practice and oversight as they deem necessary.

The hospital anesthesia services CoP, CAH surgical services CoP, and the conforming change to the anesthesia Conditions of Coverage apply to all Medicare and Medicaid participating hospitals, CAHs, and ASCs.

EFFECTIVE DATE: These regulations are effective on March 19, 2001.

Copies

To order copies of the **Federal Register** containing this document, send your request to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954. Specify the date of the issue requested and enclose a check or money order payable to the Superintendent of Documents, or enclose your Visa or Master Card number and expiration date. Credit card orders can also be placed by calling the order desk at (202) 512-1800 or by faxing to (202) 512-

2250. The cost for each copy is \$8. As an alternative, you can view and photocopy the **Federal Register** document at most libraries designated as Federal Depository Libraries and at many other public and academic libraries throughout the country that receive the **Federal Register**.

This **Federal Register** document is also available from the **Federal Register** online database through GPO access, a service of the U.S. Government Printing Office. The Website address is <http://www.access.gpo.gov/nara/index.html>.

I. Background

A. Legislation

Sections 1861(e)(1) through (e)(8) of the Social Security Act (the Act) provide that a hospital participating in the Medicare program must meet certain specified requirements. Section 1861(e)(9) of the Act specifies that a hospital also must meet such other requirements as the Secretary finds necessary in the interest of the health and safety of the hospital's patients. Section 1820 of the Act contains criteria for application for States establishing a Critical Access Hospital. Sections 1832(a)(2)(F)(i) and 1833(i) provide coverage requirements for ASCs. Section 1861(bb) of the Act, provides definitions for certified registered nurse anesthetists (CRNAs) and their services.

B. General

On December 19, 1997, we published the proposed rule, "Hospital Conditions of Participation, Provider Agreements and Supplier Approval," (62 FR 66726) in the **Federal Register**. This proposed rule generated over 60,000 public comments and approximately one-third of these comments addressed the proposed condition eliminating the Federal requirement for physician supervision of a licensed independent practitioner permitted by the State to administer anesthetics.

In 1997, when we proposed our changes to the current hospital conditions of participation (CoPs), we stated our desire to move toward standards that are patient-centered, evidence-based, and outcome oriented. We also stated that a fundamental principle was to facilitate flexibility in how a hospital meets our performance expectations, and eliminate structure and process requirements unless there is evidence that they are predictive of desired outcomes for patients. Where there is agreement on a structure or process requirement predictive of desired patient outcomes, we included that in our proposed rule. In fact, comments on the standard for physician

supervision of CRNAs reflect a split between those who support flexibility in allowing States and hospitals to make decisions about anesthesia services and those who oppose the provision, supporting, instead, the structural requirement for physician supervision. We have already finalized the Organ Donation and Transplantation and Patients' Rights conditions, which were contained in the December 19, 1997 proposed hospital rule. We are now finalizing part of the anesthesia services standard describing anesthesia administration. We continue to work to finalize the other issues in the December 19, 1997 hospital conditions of participation proposed rule.

C. Need for Amended Anesthesia Services CoP

The existing hospital CoPs require hospitals, CAHs, and ASCs to provide quality care by adhering to our organizational and staffing requirements. The current hospital CoPs are not written in a way that promote or encourage a hospital, CAH, or ASC to assess the quality of care and improve patient outcomes. One of the clear messages we received from industry groups and professionals as we pursued this change in regulatory approach is that the old way of focusing on structure and process no longer represented current practice or the best available method to foster delivery of quality health care services.

Since publication of the December 19, 1997 proposed rule, we have continued to receive input from representatives of individual industry groups and have analyzed thousands of public comments from individual providers, beneficiaries, hospitals, and professional and provider organizations. We have given careful consideration to the scientific literature cited by commenters. We have found no compelling scientific evidence that an across-the-board Federal physician supervision requirement for CRNAs leads to better outcomes, or that there will be adverse outcomes by relying on State licensure laws instead.

We are also responding to considerable Congressional activity that has occurred since the 1997 publication of the proposed rule. Interest by Congress on both sides of the issue of physician supervision resulted in Appropriations Conference committee language in the Conference Report to the Balanced Budget Refinement Act (BBRA) of 1999 (H. Conf. Rep. No. 106-

479, at 873 (November 18, 1999)) urging the Secretary to determine whether there was sufficient information to move forward with a final rule. The literature we reviewed (see appendix) indicated that the anesthesia-related death rate is extremely low, and that the administration of anesthesia in the United States is safe relative to surgical risk.

There have been no studies published within the last 10 years demonstrating any need for Federal intervention in State professional practice laws governing CRNA practice. Currently, there is no reason to require a Federal rule in these conditions of participation mandating that physicians supervise the practice of another State-licensed health professional where there is a statutory provision authorizing direct Medicare payment for the services of that health professional. We believe there is no reason to change our proposed approach, which gives States and hospitals the flexibility to determine necessary oversight. We believe the change, based on the available information, appropriately reflects the important value of regulatory flexibility.

D. Recognizing State Laws and Professional Scope of Practice

Congress has specified which non-physician health professionals may receive separate payment for their professional services (such as CRNAs and nurse practitioners). In addition, Congress left the function of licensing these health professionals to the States. Medicare recognizes the scope of practice established by the States for these health professionals. Prior to this final rule, Medicare's hospital CoPs did not have Federal requirements for physicians to supervise the practice of another State-licensed health professional where there is a statutory provision authorizing direct Medicare payment for the services of that health professional, with the sole exception of the Federal requirement for physician supervision of CRNAs. We do not believe that there is evidence to support maintaining a special Federal requirement for physician supervision of CRNAs.

Eliminating the Federal requirement for physician supervision of CRNAs is not a judgment on our part that one health professional is better than another or that one type of care is superior. The change in regulatory approach reflected in this final rule was discussed in the preamble of the hospital CoPs proposed rule (62 FR 66740). This rule establishes a shared commitment to quality care among us, the States, and Medicare providers.

Medicare providers are in the best position to assess the evidence and consider data relevant to their own situations (for example, physician access, hospital and patient characteristics and needs of rural areas) about the best way to deliver anesthesia care. Hospitals can always exercise stricter standards than required by State law. We will monitor the effects on the quality of anesthesia care furnished to Medicare beneficiaries resulting from the greater flexibility provided to States and hospitals under this rule.

II. Analysis of and Responses to Public Comments

We received approximately 20,000 comments on the issue of physician supervision of CRNA administration of anesthesia. Comments were largely split among CRNAs, representatives of rural areas, and supporters of State oversight who favor the proposal; and physicians who, in general, opposed the proposal and argued that anesthesia administration is the practice of medicine, requiring advanced medical education. A summary of the major issues and our responses follow:

State Law and Professional Scopes of Practice

Comment: The majority of comments focused on whether States' scope-of-practice laws are the proper level of regulatory oversight. Most physicians maintained that anesthesia is the practice of medicine which should only be practiced by a licensed physician, and opposed the provision permitting State licensed independent practitioners to administer anesthetics without physician supervision. These commenters argued that, because of disparities among the various States, laws are inconsistent and result in inequality of care across the country. As a result, they stated that Medicare beneficiaries would lose an important Federal guarantee for minimum standards of anesthesia care, and instead would be subjected to a variety of State laws. Conversely, other commenters argued that the Federal rule preempts State law, creating barriers to practice and limiting opportunity for nurse anesthetists licensed as independent practitioners. A physician supervision requirement, they asserted, diminishes the role of local jurisdictions and authorities that regulate and/or license other health professions and aspects of health service delivery. Commenters also stated that the current Federal requirement for physician supervision has been a disincentive for employers to hire CRNAs, decreasing flexibility and efficiency in anesthesia

services, and limiting access in certain areas. One commenter wrote that it is the State that best understands its individual geographical, population, and financial needs and resources and how these resources can best be utilized to deliver safe, quality anesthesia services.

Response: We respect the authority of States to meet regional/local needs. Setting forth a final rule that allows States the ultimate determination regarding which licensed independent practitioners may administer anesthesia does not prohibit any State or hospital from requiring physician supervision. It will effectively provide greater discretion to State authorities that are experienced at regulating the licensing, education, training, and skills of the professionals practicing under their purview, without the burden associated with duplicative regulatory oversight. There is no evidence that States are less concerned with ensuring safety and quality than the Federal government, especially where the health of their citizens is at stake. We disagree that States are less capable or less committed to protecting patients and ensuring quality anesthesia services than the Federal government. The final rule removes the "across the board" Federal requirement for physician supervision in every case of anesthesia administration. At the same time, it broadens overall flexibility by permitting individuals and authorities closer to patient care delivery to make decisions about the best way to deliver health care services.

Comment: Some commenters were concerned that this change in regulatory approach would grant the right to practice medicine to individuals who were not properly prepared to do so. One commenter pointed out that we were giving unsupervised privileges to prescribe narcotics, paralytic agents, and cardiac drugs to people who have neither a medical license nor the training and credentialing that is associated with a medical license.

Response: States regulate professionals who may prescribe medicines as well as which medical procedures may be performed under a professional license through their professional practice laws. Our regulations do not determine prescribing authority or grant medical licenses, and this final rule does not change the traditional purview under which these professional scope-of-practice issues have occurred in the past. The final rule does not prohibit physicians from practicing medicine, nor does it allow nurse anesthetists to practice beyond the scope of their

practice or authority granted them by States.

Comment: We received several comments from both physicians and nurse anesthetists in support of allowing physicians, hospitals, and surgical centers more responsibility for the care they furnished. Some commenters noted that the medical staffs within institutions should determine guidelines for supervision of all health care personnel contributing to the medical care of patients. Several commenters recognized the value of allowing hospital boards and medical staffs to set the standards of care. These commenters thought that relying on greater accountability from doctors and hospitals instead of Federal regulation would lead to better care for patients. Commenters noted that this rule would allow hospitals to set standards different from us, based on review and input from physicians and other health professionals. The American Hospital Association (AHA) also supported this rule change, stating "This new policy ensures that only personnel trained in administering anesthesia are allowed to do so. This requirement balances accountability with flexibility."

Response: We agree that providers have a shared responsibility, with us and the States, to assure quality standards of practice. We are pleased that the hospital industry recognizes the values of accountability and flexibility in Federal regulation. Allowing States to make determinations about health care professional standards of practice, and hospitals to make decisions regarding the delivery of care, assures that those closest to, and who know the most about, the health care delivery system are accountable for the outcomes of that care.

Comment: Several commenters stated that the administration of anesthesia has never been exclusively the practice of medicine. These commenters noted that anesthesia administration is within the scope of practice of nurses, physicians, dentists, podiatrists, and other professionals who have been properly educated and credentialed in the field of anesthesia. Since more surgical procedures are moving out of the hospital into clinic and office settings, an institution needs the flexibility to utilize the anesthesia professional of its choice which best matches the needs of the patient.

Response: Although this final rule governs anesthesia administration in hospital, CAH, and ASC settings only, we agree with the need for flexibility in other settings, especially as surgical techniques, methods for administering

anesthesia and the availability of drugs is improved.

We believe that the range of patient types, surgical procedures, new technologies, and provider settings (for example, hospital outpatient departments, intensive care units, and teaching hospitals) makes an across-the-board Federal requirement overly burdensome. Differences between a healthy young patient undergoing minor surgery in a hospital outpatient department and a medically compromised, elderly patient undergoing major surgery in a large teaching facility are so great that a single Federal requirement is not applicable in every situation.

Comment: Several commenters objected to our arguments that eliminating CRNA supervision would, "allow greater flexibility to hospitals and practitioners" and would "give deference to State scope-of-practice laws". These commenters believe that our reasoning is weak, especially in the absence of documentation that either of these issues is a problem.

Response: We disagree with these commenters. As previously noted, we respect State control and oversight of health care professionals by deference to State licensing laws which regulate professional practice. There is no reason to consider physician supervision of CRNAs a special case requiring a national standard. Advances in anesthesia and surgical techniques, the availability and discovery of new drugs, and the varying medical presentations of patients make it less prudent to rely on a single national standard requiring physician supervision of CRNAs to be applied in every situation. Doing so risks losing the accountability of practitioners, both to make clinical decisions based on the needs of patients, and to utilize resources effectively. We believe States need flexibility from Federal oversight of those processes, such as professional licensing, for which they are ultimately accountable. In fact, it is at the State level where much direct input by health professionals into scope-of-practice and licensing laws takes place.

Comment: One commenter asked what rule would be operative in the absence of any State law.

Response: The final rule allows only a licensed practitioner permitted by the State to administer anesthetics to do so. Therefore, State health professional practice laws, such as those covering nurse and physician practice, as well as hospital licensing requirements, would be the basis for determining which health care professionals can administer anesthesia in any given State.

Safety and Quality of Care

Comment: Many of the commenters who wrote expressing concern over quality of anesthesia services referred to published research to support their point of view. For example, many commenters who support the proposed rule stated that evidence shows anesthesia administered by CRNAs to be as safe as that administered by anesthesiologists. In contrast, we also received comments from anesthesiologists who noted positive patient outcomes from anesthesia administration to be related to the presence of the anesthesiologist. The articles most frequently cited by commenters were three by Jeffrey Silber, M.D. and colleagues (1992, 1995, 1997), and another by J.P. Abenstein and M.A. Warner (1996). Many commenters claimed these studies concluded either an anesthesiologist alone, or a CRNA in "collaboration" with an anesthesiologist, had better patient outcomes than a CRNA alone. Many commenters contend, erroneously, the recommendations from the Abenstein & Warner article were adopted by the Minnesota legislature (although it is not clear to what recommendations the commenters were referring). Many other commenters urged us not to consider the change made by this rule until there is solid, scientifically defensible outcome data to establish that independent nurse anesthesia care is just as safe as anesthesiologist care.

Response: The conclusions of the commenters were not supported by findings from the studies they cited, nor do the studies conclude that States provide inadequate oversight and that a Federal standard is therefore necessary. We reviewed available literature and found the following major conclusions (see appendix).

- All literature surveyed agreed that the anesthesia-related death rate is extremely low, and the administration of anesthesia in the United States is safe relative to surgical risk. In fact, according to the 1999 Institute of Medicine Report *To Err Is Human*, "anesthesia mortality rates are about one death per 200,000–300,000 anesthetics administered, compared with two deaths per 10,000 anesthetics administered in the early 1980s," a 40- to 60-fold improvement.

- There are no studies published within the last 10 years that are specific to the issue of the final rule, namely provision of anesthesia care by CRNAs practicing without physician supervision. All of the studies we reviewed had significant limitations. Conclusions are limited by these

studies' failure to control adequately for possible correlations among variables such as higher risk patients and hospital characteristics (for example, size and sophistication of medical technology) as they would affect deaths attributable to anesthesia.

- There is no evidence that there would be adverse outcomes by relying on States and hospitals to regulate the appropriate supervision and scope of practice of health professionals administering anesthesia. Nor has there been any evidence that States do a poor job in regulating and overseeing health care professional practice or that States are not capable of making decisions regarding requirements for supervision of one State-licensed independent practitioner by another.

In the Silber studies, the authors did not conclude that CRNAs may be providing poor care that might more likely lead to negative outcomes. The 1992 study did not address whether there is an association between patient outcomes and the type of professional who furnished anesthesia. The anesthesia variable used in the study was not specific to the patient, rather it was a variable at the hospital level (for example, percent of anesthesiologists who are board-certified). The anesthesia variable might be a proxy indicator of quality of the hospital: Thus, there would be lower mortality in the higher quality hospitals and if a complication occurred the patient would more likely be rescued.

Silber urges "that the limitations of the project be recognized." The limitations include: There were relatively few deaths, adverse outcomes and failures, and relatively few patients per hospital so the rates could only be compared for groups of hospitals, not specific facilities.

In a subsequent article to the one summarized above, Silber and colleagues (1995) found that "most of the predictable variation in outcome rates among hospitals appears to be predicted by differing patient characteristics rather than by differing hospital characteristics, that is, by who is treated rather than by the resources available for treatment." The authors found higher proportions of board-certified anesthesiologists to be associated with lower death and failure rates, but also with higher adverse occurrence rates. The study did not address the relationship between the patient outcomes and the type of professional who furnished the anesthesia care. The study did not address the issue of provision of anesthesia care by CRNAs supervised and not supervised by physicians. The

article presents no information that States are not capable of making decisions regarding requirements for supervision of one State-licensed independent practitioner by another. Silber and his colleagues (1997) have also conducted methodological studies that compare the usefulness of three outcome measures, mortality, complication and failure-to-rescue rates. They concluded that for the general surgical procedures studied, the complication rate is poorly correlated with the death and failure rate. The authors suggest that great caution be taken when using complication rates and that they should not be used in isolation when assessing hospital quality of care. The study did not address the relationship between the patient outcomes and the type of professional who furnished the anesthesia care. Nor did the study address the issue of provision of anesthesia care by CRNAs supervised and not supervised by physicians, the issue in the rule. The article presents no information that States are not capable of making decisions regarding requirements for supervision of one State-licensed independent practitioner by another.

We have also reviewed a more recently published article by Dr. Silber (July 2000) and colleagues from the University of Pennsylvania. This article also is not relevant to the policy determination at hand because it did not study CRNA practice with and without physician supervision, again the issue of this rule. Moreover, it does not present evidence of any inadequacy of State oversight of health professional practice laws, and does not provide sound and compelling evidence to maintain the current Federal preemption of State law.

Even on its own terms, the study has the following methodological shortcomings:

- The study used a non-experimental research design and only examined claims data, instead of reviewing medical records or observing actual care. Even though the researchers statistically controlled for 106 proxy indicators of care, without a stronger research design, they can only make a weak conclusion about an "association" between a variable and an outcome.

- The study did not control for the cause of death. Cases where a patient died from an anesthesia related cause, the surgery itself, an unrelated medical error, or an unknown medical condition are all considered, regardless of the cause of death. Not having data on deaths actually attributed to anesthesia is problematic since the mortality data used covers any death occurring within

30 days of a hospital admission. Events occurring 30 days from admission cannot be attributed to the anesthesia care alone. While the researchers argue that "delayed" death (that is, within 30 days of admission) is the appropriate measure of mortality for anesthesia care, the study does not produce causal evidence for such a theory. At a minimum, the researchers could have presented results for mortality measured for shorter periods of time such as within 72 hours of admission which may or may not have shown different outcomes for short-term and delayed deaths.

- Both the study and comparison groups included cases where physicians supervised CRNAs and personally furnished anesthesia. (The study group also included cases where anesthesiologists medically directed residents). The purpose of the study was to examine differences when an anesthesiologist versus a non-anesthesiologist physician is involved in the case. One cannot use this analysis to make conclusions about CRNA performance with or without physician supervision.

- The study used data where anesthesia was furnished by unknown suppliers (incorrectly referred to in the article as "unknown providers") either personally providing care or supervising CRNAs. Because a supplier is not a physician there are likely to be data coding errors which could contaminate and bias the results.

Even if the methodological shortcomings were fixed, because the study did not address the issue in the final rule, it is inappropriate to impute results from this study to the issue in this final rule, the provision of care by CRNAs supervised and not supervised by physicians.

Even if the recent Silber study did not have methodological problems, we disagree with its apparent policy conclusion that an anesthesiologist should be involved in every case, either personally performing anesthesia or providing medical direction of CRNAs. Such a policy is much more restrictive than current Medicare policy because it would prohibit non-anesthesiologist physicians to supervise CRNAs. This would make it difficult to perform surgeries in many small and rural hospitals because anesthesiologists generally do not practice in these hospitals.

Finally, even if we were to consider that the Silber article should guide our policy, we note, that due to the difference between relative risk and absolute risk, the reported size-effect is too small to cause us to change our

decision. The Silber article reported an odds ratio for death of 1.08 corresponding to 2.5 excess deaths per 1000 cases (relative risk). However, due to the lack of medical record review in this study these excess deaths cannot be solely attributed to anesthesia care and thus is not the absolute risk. For example, if we accept the IOM review of the literature of 33.3–50 anesthesia related deaths per 10 million (*i.e.*, one per 200,000–300,000) then the absolute risk of excess deaths would be in the range of 2.7–4.0 per 10 million (.08 times range of 33.3–50). This size of absolute risk must be balanced against the risk of death due to lack of timely access to anesthesia services because of a federal imposition of a supervision requirement. At a minimum States are certainly capable of balancing the risks of lack of supervision versus the shortage of anesthesiologists given the supply of anesthesiologists in each of their respective States.

The Abenstein & Warner (1996) paper describes a number of aspects of anesthesia care and reviews studies in several areas. The paper notes that there has been a dramatic improvement in anesthetic deaths in the last 15 years: "Since 1979, five studies have documented a remarkably abrupt decrease in anesthetic-related death rates, morbidity, and risk of perioperative deaths." The paper concludes that: "For many patients, it is now as safe to be anesthetized as to be a passenger in an automobile."

The paper notes that "identifying the cause for the improvement in anesthetic outcome is as problematic as determining the cause of perioperative death." The paper indicates that "huge numbers of surgical patients (that is, >1,000,000) must be enrolled in studies to provide the statistical power needed to determine whether there are associations between perioperative disability or death and various anesthetic techniques, technologies, and practice models." The paper notes that studies of this size are expensive. None of the studies reviewed meet this standard.

The paper reviewed two studies that compared mortality for anesthesia care furnished by anesthesiologists, and anesthesia care team and nurse anesthetist supervised by a physician. Neither meets the criteria for an adequate study identified in the paper. As the authors note, the first study did not provide statistical analysis of the data. The second study used data now 25 years old and found no statistically significant difference between the groups. Neither study examined the provision of anesthesia furnished

independently by CRNAs, the issue of this rule.

The paper suggested a number of reasons for improved anesthesia care including "new and improved patient monitoring techniques." The paper also notes that the "decline in adverse outcomes occurred at the same time that the number of American trained physicians entering and graduating from anesthesiology residency programs more than doubled (1975–1985)." The paper suggests that "the increase in the number of physicians engaged in the practice of anesthesiology is primarily responsible for the dramatic improvement in perioperative outcomes." However, the paper also notes that during roughly the same period of time, 1970–1985, the number of active nurse anesthetists doubled.

On the basis of studies which are flawed methodologically, which do not prove causality, and which do not meet the authors' own criteria for rigorous study, the authors nevertheless conclude that "the presence of board-certified anesthesiologists has been associated with the decline in death and disability commonly attributed to adverse perioperative events." The authors' conclusion is not substantiated by their own review and analysis of the literature. Finally, the paper presents no information regarding the issue in the rule or that States are not capable of making decisions regarding requirements for supervision of one State-licensed independent practitioner by another.

As part of the decision to finalize the rule, we considered the feasibility of conducting a study comparing the mortality and adverse outcomes of Medicare patients for anesthesia care furnished by CRNAs with and without physician supervision. However, we concluded that it was not feasible to conduct such a retrospective study. Not only would the low overall anesthesia mortality make it difficult to develop a sufficient sample, but because of the current Medicare rule, there are no cases where CRNAs practice without supervision and thus there would be no data for the key comparison. We also considered the feasibility of conducting a study using data from non-Medicare patients. However, because Medicare's current hospital conditions of participation apply to all patients, here too there would be no data for the key comparison. Finally, we do not believe that it would be wise to conduct a prospective demonstration which would waive State law and prospectively randomly assign patients to study and control groups because it would remove

patient choice of anesthesia professional.

Comment: Several commenters felt strongly that anesthesia should be considered a high-risk procedure where mistakes are measured in terms of death and injury. These commenters believe that millions of patients will be at a higher risk for injury without the supervision of board certified anesthesiologists. One commenter noted that without the requirement, no trained physician would be available to respond to any emergency during a case where a CRNA was practicing independently.

Response: If we were to require board certification for anesthesiologists as a hospital CoP it would be a stricter requirement than currently exists for the practice of any other medical specialty subject to our CoPs. Hospitals have been providing anesthesia care without a Federal requirement for board certified anesthesiologists since the inception of the Medicare program. This rule does not change the requirement that hospitals must have physicians available at all times and that all Medicare patients are under the care of a physician as defined in section 1861(r) of the Act. Therefore, the patient's medical and/or surgical care continues to be the responsibility of his or her assigned physician.

Comment: Several commenters wanted to know what had changed since a 1992 HCFA comment that, "In view of the lack of definitive clinical studies on this issue, and in consideration of the risks associated with anesthesia procedures, we believe it would not be appropriate to allow anesthesia administration by a nonphysician anesthetist unless under supervision by either an anesthesiologist or the operating practitioner."

Response: As discussed above, there are no definitive studies one way or the other which address this question. The studies we discussed in our 1992 final rule on fee schedules for CRNAs (57 FR 33878, July 31, 1992) have limitations, as does the literature since 1992. Moreover, there is no evidence that an across-the-board physician supervision requirement for CRNAs leads to better outcomes or that there will be adverse outcomes by relying on State licensure laws instead. What has changed since 1992 is our view that it is unnecessary to continue a special Federal preemption of State licensing laws regulating professional practice for CRNAs.

The 1999 IOM Report cites a drop in anesthesia mortality rates from two deaths per 10,000 anesthetics administered in the early 1980's to

about one death per 200,000 to 300,000 anesthetics administered today. Chassin (1998) identifies several studies which note this improvement is a result of "a variety of mechanisms, including improved monitoring techniques, the development and widespread adoption of practice guidelines and other systematic approaches to reducing error." This is an impressive improvement and confirms the soundness of the approach taken in this final hospital CoP, which broadens the flexibility for States and providers, who are much closer to the realities of patient care, to make decisions about the best way to improve standards and implement best practices.

Comment: Several commenters stated that quality of care should be an important consideration in determining the need for physician supervision. Some commenters noted an association between improved anesthesia outcomes and increased numbers of anesthesiologists practicing. Many commenters noted that some CRNAs could function independently, but that others lack the judgement and knowledge to safely provide anesthesia without supervision. Further, commenters point out that CRNAs are more than capable of administering anesthesia on a healthy adult; however, when a patient's health is poor, an anesthesiologist should be involved in the care. Some nurse anesthetists report concern with their ability to deal with anesthetic complications without the availability of an anesthesiologist.

Response: Our decision to change the Federal requirement for supervision of CRNAs applicable in all situations is because, as stated in the preamble of the proposed rule, we are committed to changing current regulations that focus largely on procedural requirements, such as the Federal regulation mandating physician supervision of CRNAs. These comments make clear there are a range of factors to be considered (for example, patient types, surgical procedures, technology, and provider settings). Differences between a healthy young patient undergoing minor surgery in a hospital outpatient department and a medically compromised, elderly patient undergoing major surgery in a large teaching facility are so great that a single Federal requirement applicable in every situation is not sensible.

Comment: One commenter noted that the practice of anesthesiology extends beyond the operating room to the Intensive Care Unit (ICU), pain management, and other medical consultation. The commenter believes that the removal of the medical

supervision requirement risks removing the anesthesiologist from the practice of anesthesia.

Response: The change in the physician supervision requirement for CRNAs does not affect the anesthesiologist's ability to provide services outside the operating room.

Comment: A few commenters told us they believed it was the Federal government's responsibility to set safety standards for the nation and this rule evades that responsibility. One commenter agreed that CRNAs have a good safety record, but emphasized that they have been under the direct supervision of the anesthesiologist. He believed that eliminating the supervision requirement would cause these positive patient outcomes to occur less frequently. Other commenters agreed that physicians absolutely need to be involved for the practice of medicine to be safe, and this regulation change is in direct violation of this principle. Some commenters noted that the practice of safe anesthesia administration is largely due to better monitoring techniques, technology, improved drugs, and not to greater supervision by a physician. One commenter stated that in combination with improved drugs and techniques, CRNAs will bring greater access to anesthesia services in situations and areas where they are currently limited in their practice because of the physician supervision requirement, thus allowing such delivery of medical services that improve patient health and safety, and provide services to a greater number of people.

Response: We are acutely aware that ensuring patient safety and high quality patient outcomes are the principal considerations in regulating providers. There is no indication that physician supervision of a CRNA affects such outcomes. It is for this reason that we are moving away from a focus on physician supervision, where there is no evidence or data linking this structural requirement to patient outcomes. As previously noted, changing the supervision requirement does not obviate the requirement that every Medicare patient admitted to the hospital be under the care of a physician or doctor of osteopathy. This requirement remains an important component in the hospital CoPs. Even under the current regulation CRNAs are not required to be under the supervision of an anesthesiologist; the operating physician can meet the rule's supervision requirement. This rule does not prohibit anesthesiologist supervision or administration; it simply

leaves the decision up to State law or hospital policy.

This rule recognizes the significant improvement in the safety of anesthesia administration made by improved technology and implementation of practice guidelines. As in other areas of health care, new drugs and pharmaceuticals have contributed to improved patient outcomes as well. This underscores the findings in our review of the literature that multiple variables, some interacting in combination with each other, contribute to anesthesia-related patient outcomes.

Comment: We received several comments from beneficiaries who had received anesthesia care from a CRNA and felt comfortable with the service that was provided. They describe their anesthesia experiences as compassionate and thorough, including quality service and attention from these professionals. Many felt their care was excellent. Another commenter noted nurse anesthetists take time to be compassionate and attentive to fears, approaching anesthesia care holistically.

We also received comments from beneficiaries who felt that their care was being compromised for economic reasons by not requiring a doctor to be in charge of their anesthesia. Many reported increased fears during a time when they are most vulnerable, without the guarantee that a doctor will be in charge of their anesthesia care. Many reported that, as senior citizens, they faced more complicated medical and surgical procedures than younger patients and therefore that hospitals should be required to have a doctor in charge of administering their anesthesia.

Response: Patient experiences can be influenced not only by the anesthetist, but the surgeon, the type of procedure, the emergency nature of the procedure, and other factors. We also believe that many Medicare beneficiaries have been receiving anesthesia from CRNAs without being specifically aware of the credentials of the administering professional. We agree that a patient's perception of the safety and concern demonstrated by medical personnel is important but there is no evidence linking safety or better patient outcomes to the Federal requirement for physician supervision.

The change made by this rule is not specific to the patient's status as a Medicare beneficiary but to the participation of the provider in the Medicare program. The increased flexibility gained by this rule will allow hospitals and doctors to make decisions, pursuant to State law, about what is best for patients, reinforcing the primacy of the doctor-patient relationship.

Professional Education and Training

Comment: Several commenters noted the differences in training and education between a CRNA and an anesthesiologist. These differences were considered significant by anesthesiologists, who believe that anesthesia administration is the practice of medicine and should only be performed by physicians. Physician commenters pointed out that anesthesiologists receive in-depth training in physiology, pharmacology, diagnosis, treatment and independent management of patient care. In addition, because they are physicians and have received medical training, anesthesiologists assess a patient's medical condition, as well as plan and administer the anesthetic. One physician stated "nurse anesthetists are trained to assist anesthesiologists; they are not physicians and are not trained in medical diagnosis and therapy. The lack of medical background prevents the CRNA from being able to diagnose and treat the unexpected, and often serious, reactions that can accompany anesthesia in even the simplest of cases. CRNAs should be considered valued extenders of care but not as substitutes for the expertise of an anesthesiologist." Other commenters stated that nurses are trained to follow orders and medical protocols, and are not trained to diagnose and treat. Several anesthesiologists, who had been nurse anesthetists, wrote describing that not until they had medical school training did they understand the full impact of the differences between the education preparing them as nurse anesthetists versus their preparation to practice as anesthesiologists. One commenter stated he believed the regulation should be based on demonstrated formal education. Another physician commenter stated he believed CRNAs were well educated and trained and had good records of performance, but that this was due to their collaboration with doctors, and not their independent management of medical situations.

Some commenters stated, inaccurately, that the postgraduate training of nurse anesthetists is unique in that, after a minimum of a bachelors degree in nursing, the nurse anesthetist student is required to have at least two years of practical experience in a critical care setting before advanced formal education in anesthetic administration. They stated that this advanced training prepares the nurse anesthetist to provide the full range of anesthesia services, independently. Several commenters noted that nurse anesthetists must be board certified by

successfully completing the National Certification Examination. Other commenters felt that the knowledge and expertise in nurse anesthesia care is equivalent to the preparation provided physicians. Some commenters reminded us that the Federal supervision requirement has been the only obstacle to independent practice, and that otherwise nurse anesthetists are licensed and trained to practice independently. One CRNA stated he did not agree with the contention that educational differences between CRNAs and anesthesiologists are sufficient reasons to place practice restrictions on CRNAs.

Response: Education and training requirements for CRNAs vary among the States. Decisions about appropriate and necessary education and training for health professionals are made by States and educational institutions in compliance with education accreditation standards. Professional schools, both medical and nursing, are accredited by educational organizations with specific standards for curriculum content. Evidence of graduation from an accredited school is part of a State's licensing and certification requirements, independent of Federal regulation. Anesthesia administration by nurse anesthetists has a long history in this country, including a level of independent practice in Department of Defense hospitals. We cannot agree that anesthesia administration is the practice of medicine and therefore can only be done after medical school training. Moreover, the rule does not allow any provider to practice outside the parameters of his or her professional license.

We also believe that this rule is consistent with both sides of this argument as reflected in the comments. The added flexibility and shared responsibility allows each health professional to practice within his/her licensed scope of practice without an across-the-board Federal requirement limiting any collaborative, team or independent practice.

Comment: Additional commenters claimed significant variation among program requirements in nurse anesthetist training. Some of these commenters cited an article from the June 1996 Journal of the American Association of Nurse Anesthetists, identifying that more than one-third (37 percent) of nurse anesthetists do not have bachelor's degrees, less than a quarter (22 percent) have a master's degree, and less than 1 percent have a Ph.D. In comparison, the writers note, all anesthesiologists have an undergraduate degree, 4 years of

medical school and specialty training in anesthesiology.

Response: We recognize that education and training requirements vary among the States. As previously noted, States are well skilled at deciding requirements related to health care professional licensing. Our change in the hospital rule deferring to State oversight is not an endorsement of one health professional over another. It is not a rule that defines medical or nursing standards of practice or educational preparation. The rule merely allows the authority (that is, States) whose traditional role it is to make such determinations (for example, which health care professional is trained to provide which health care services) to do so in the case of anesthesia administration.

Comment: There was some concern expressed that eliminating the Federal requirement for supervision would result in decreased physician involvement in the training of CRNAs. One commenter speculated that this provision would reduce the incentive for a physician to specialize in anesthesiology and physician-administered anesthesia would soon vanish.

Response: We disagree that eliminating the Federal supervision requirement will necessarily lead to physicians making decisions about practice specialties, other than anesthesiology. This rule change is not a judgment about the value or contribution of one health professional or another. We believe that with greater staffing flexibility, opportunities for collaboration between physicians and nurse anesthetists will increase based on individual patient needs, hospital characteristics, and an increasing ability to implement best practice protocols.

Comment: A few commenters thought that eliminating supervision by the anesthesiologist will limit the choice of anesthesia modalities and deprive patients of an appropriate anesthesia plan. These commenters stated that CRNAs are not trained in various types of nerve blocks and/or the use of certain devices. These additional skills are necessary to care for critically ill patients.

Response: This change in regulatory approach does not permit any licensed independent health care provider to practice beyond his or her licensed scope of practice. While we acknowledge there will continue to be medical interventions or treatments that fall under the practice authority of a medical licensee, these determinations are not, and never have been, made by Federal regulation, but by States, with

input from, and consultation with, licensed health professionals. Typically these decisions on practice issues fall to provider credentialing, licensing or certification authorities. All areas of health care are constantly faced with implementing new technologies, procedures, drugs, biologicals, or devices. As these new techniques become available we believe it is the responsibility of States, hospitals, and professional organizations to implement standards for training and assuring practice competency. In addition, we have no evidence to indicate that eliminating the Federal supervision requirement for CRNAs will limit the choice of anesthetic modalities or deprive patients of appropriate anesthesia plans.

Comment: There were a few comments stating that the evolution of non-physician practitioners is expanding through the use of well-trained and very capable professionals. Advanced practice nurses represent part of the movement to broaden access, increase efficiency and maintain health care quality. One commenter applauded our efforts to eliminate restrictions preventing full utilization of these highly trained and qualified health professionals.

Others wrote in with concerns that this rule was opening the door to allowing other independent health professionals to engage in unsupervised practice in hospitals and through other providers regulated by us. Some of these commenters pointed to increasing activity at the State level to expand scope-of-practice laws for nonphysicians. Examples, such as psychologists seeking prescribing authority and complementary and alternative medicine practitioners lobbying to expand their professional practice rights, have been used to argue that lesser-trained professionals are attempting to practice medicine without the appropriate training or supervision. They point out that these are more examples of loosening regulatory safeguards over the practice of medicine and patient care.

Response: States have an excellent track record of protecting patient health through their own regulations. We respect State control and oversight of health professionals by deferring to State licensing laws to regulate professional practice. We have determined that there is no need for continuing Federal preemption of State laws by maintaining a requirement for physician supervision of CRNAs as a special case. There is no evidence that States are any less concerned with ensuring safety and quality than the

Federal government, especially when it comes to the health and safety of their citizens. In fact, our evidence-based, outcome-oriented standards establish a shared commitment between us, the States, and Medicare providers to ensure safe, quality anesthesia administration. States have a good track record in determining best practices. In fact, it is at the State level where most direct input by health professionals into scope-of-practice licensing laws takes place.

Additionally, we believe that independently licensed health professionals have served a valuable role in expanding access to, and maintaining quality in, many health services. The change in the Federal requirement for physician supervision is not an endorsement of any health profession, model of care delivery, or promotion of a specific standard of care. It is a change in approach to regulatory oversight that recognizes the worth of State control in meeting regional/local needs.

Operating Surgeon Providing Physician Oversight

Previous regulation required physician supervision by either an anesthesiologist or the operating surgeon. We received many comments from surgeons asking about the surgeon's liability as well as questions about who would be considered in charge of the patient's care.

Comment: One surgeon noted that he is dependent on the anesthesiologist as a consultant to provide care and recommendations concerning his patient. Other surgeons did not want responsibility for the anesthesia care of their patients when they were not trained in anesthesia. One commenter stated "surgical residency programs have intensified training in surgical technical skills, and decreased emphasis on anesthesiology training, leaving such matters to the consultant in Anesthesiology. As a result, [the surgeon's] ability to supervise the CRNA has declined." This commenter asserted this should encourage us to require CRNA supervision by an anesthesiologist only. One anesthesiologist asked whether he would be responsible for anesthesia management done prior to his consultation.

Response: This final rule does not require supervision, direction, or oversight of any independently licensed practitioner administering anesthesia by the operating surgeon. The surgeon would still be able to involve an anesthesiologist as a consultant or in any other capacity. This rule does

nothing to restrict that relationship. CRNAs, as well as anesthesiologists, are accountable for their own practices, the care they deliver, patient outcomes, as well as insurance liability coverage.

Comment: A few commenters stated there will be increasing pressure on surgeons, from hospitals, CAHs, and ASCs, to eliminate the anesthesiologist. Another commenter wrote that he believes if we allowed this change, it would not be long before private insurers would refuse to pay physicians no matter how sick the patient or complex the procedure.

Response: This rule governs participation requirements for hospitals, CAH, and ASCs participating in the Medicare program. It does not eliminate, restrict, or in any way limit the practice of any practitioner. In addition, an insurance company cannot establish health professional practice rules that are in conflict with State licensing laws.

Comment: We received several comments asserting the physician supervision requirement was responsible for surgeons choosing not to practice in some settings because they do not want the liability associated with the supervision responsibility. One commenter noted that one possible result of lifting the Federal supervision requirement is that more surgeons may be willing to practice in geographical areas they previously would have avoided partially because they did not want to be responsible for supervising the CRNA. Some believed the rule change will alleviate fears of surgeons who were concerned about taking on increased legal liability. Others noted that removing the supervision requirement afforded greater flexibility for surgeons and hospitals to choose their anesthesia providers without fear of increased liability.

Response: The rule makes no legal change in the scope of malpractice liability, traditionally a State issue. Our rule, permitting any State licensed health professional permitted by the State to administer anesthesia would not definitively affect any provider or professional the same way in all States. Because both scope-of-practice and malpractice liability differs from state to state, as a general matter, any professional who has contact with the patient could conceivably be held liable for personal injury, depending on the facts and circumstances of the case and on the State's laws. This issue is not the subject of this rulemaking.

Rural Issues

Comment: We had many comments on this provision relative to the practice of nurse anesthetists in rural areas. Even

many physicians supported the changed supervision requirement in rural areas where access to anesthesiologists is limited. Some comments from surgeons practicing in small communities noted they have worked solely with CRNAs for all procedures, and they never felt they had a need for any additional supervision, regardless of the medical situation. They further point out that without nurse anesthetists willing to practice in medically underserved areas, no one would be available to administer anesthesia.

However, other physician commenters noted that under current regulation, even without a supervising anesthesiologist, the operating surgeon provides supervision to the nurse anesthetist. One commenter noted, "the administration of anesthetics by nurse anesthetists in rural communities of this country is a condition of necessity, not design, since these areas are generally underserved by physicians." The commenter disagrees with proposing a national standard based on these criteria.

Response: The intent of this rule is not to limit or prohibit any anesthesia care model. We are changing a thirty year old policy to more accurately reflect demands of current practice, variations in hospital, CAH or ASC, patient characteristics, resource management, technology, and ever-increasing medical knowledge. We concur with the experience of the commenters who state that nurse anesthetists have increased access to anesthesia care, and thereby, access to medical and surgical procedures that would likely be unavailable if not for a practitioner qualified to administer anesthesia. We disagree, however, that the new rule, by itself, will guarantee an adequate supply of CRNAs in rural settings. A patient population's medical or surgical needs; hospital, CAH, or ASC characteristics; State practice laws, etc. are all factors contributing to decisions of CRNAs about where to practice. These variables exist in rural as well as other geographic areas.

Comment: A few commenters believed we were erroneous in our assumption that allowing independent practice of CRNAs would increase access to needed medical procedures in rural areas. One commenter asserted we were wrong in our assumption that there is a problem of access to care in rural areas. CRNA commenters noted that CRNAs administer anesthesia unsupervised by an anesthesiologist in approximately 70 percent of rural hospitals within the United States, providing a full range of anesthetic

services (for example, surgical, obstetrical, and trauma stabilization).

Response: Without CRNA availability in certain areas there would be limits on the types of surgical interventions or procedures that could be performed in those areas, because no anesthesia professionals other than CRNAs would be available.

Comment: Several people asked that we create a rural carve-out for CRNA independent practice. Some of these commenters agreed with keeping the requirement for operating physician supervision, while others supported full independent practice. Still others, even though in agreement with a rural carve-out, wanted us to create a requirement for supervision by an anesthesiologist wherever there were no shortages of this physician specialty. Additionally, these commenters wanted assurance that patient care outcomes would continue to be monitored so that all patients would be receiving the care they deserve.

Response: The purpose of the change in the requirement is not simply to respond to the needs of physician shortage areas. We gave full consideration to this option but decided that the importance of increased flexibility, decreased burden, and broadened implementation of best practice protocols were important for hospitals in all geographic settings. We believe there is no reason for an across-the-board Federal requirement that could potentially limit development of new practice models of anesthesia delivery, or interfere with progress in promoting practices that improve patient outcomes.

There are additional mechanisms in place to support monitoring of patient outcomes. There are other hospital standards and oversight activities that address how care is delivered and identify mechanisms hospitals must have in place to assure patients receive safe, quality care.

Comment: One commenter stated that by expanding CRNA independent practice outside of rural areas, increased competition would occur with anesthesiologists for jobs in better served areas and would result in CRNAs choosing not to locate in less desirable and under-served areas. This commenter supported a rural carve-out for fear that without such a carve-out, these underserved areas would again experience access problems. Another commenter mistakenly believed that requiring physician supervision would result in CRNAs working without payment, leading small community operating rooms to close.

Response: CRNAs are paid under the CRNA fee schedule. The CRNA may furnish the service under the "medical direction" of a physician, usually the anesthesiologist, or the CRNA may furnish the entire anesthesia service without medical direction, while still under the supervision of the operating surgeon. Payment rules for CRNAs, as well as for physician anesthesiologists, do not change as a result of this rule.

This issue of health professional shortage has always been present but there is no way to predict that this will be a definite outcome of the rule change. The Congress, the Department of Health and Human Services, and the States continue to address the issue of health professional shortages through a variety of mechanisms, including increasing educational grants and loans for those who choose to practice in designated critical shortage areas.

Pre- and Post-Anesthesia Evaluations

Comment: Several writers cited the importance of the pre-anesthesia evaluation as critical to prevention of complication during and after a procedure. Many of these commenters felt that only a physician with detailed knowledge of medicine has the ability to make a reasoned, informed judgment about the medical state of a patient. Other commenters noted that in addition to the pre-anesthetic evaluation, all peri-operative assessment and care requires physician oversight. One commenter pointed out that anesthesia complications might be a result of several factors, including inadequate pre-anesthetic preparation, severity of concurrent disease, inappropriate monitoring and lack of post-anesthetic follow-up care. Another commenter stated this process is more accurately described as "pre-procedure assessment", indicating the importance of thorough consideration of the patient's medical needs.

Response: We agree with commenters that a variety of factors and contributing variables influence surgical and anesthesia outcomes. Our literature review and analyses of comments confirms our conclusion that interactions among and between these variables are difficult to isolate in terms of their individual effects on outcomes. Education and training programs for CRNAs include pre- and post-anesthesia care. Pre- and post-anesthesia assessment and monitoring are scope-of-practice issues determined by each State as it considers education and training requirements for professional licensing.

We are sensitive to the debate between physician anesthesiologists and nurse anesthetists regarding what

constitutes the practice of medicine with regard to anesthesia administration. States have handled these issues through laws and health professional practice acts. Questions of who is properly trained to do a pre-anesthesia evaluation, care for a patient in recovery, order pain medication, or perform a procedure that results in conscious sedation of a patient, have all faced States when they adopted professional licensing laws. This rule change does not prohibit collaboration between medical professionals including surgeons, nurse anesthetists, and/or anesthesiologists in the total care and treatment of any patient in the hospital. As expanded scope-of-practice issues are debated at the State level, we expect continued involvement by medical and health professionals to ensure best practices and protocols are incorporated in final decisions about which professionals meet the required training and education to perform any particular service.

Collaboration and Anesthesia Team Approach

Comment: Several commenters explained that this rule would not significantly change the manner in which CRNAs currently work. One commenter noted that "anesthesia always has been and always will be given only as an adjunct to a surgical or diagnostic procedure. Collaboration must occur with the primary physician no matter if the anesthesia is provided by a physician anesthesiologist or a nurse anesthetist." Other commenters reaffirmed this by pointing out that collaboration is intrinsic to the practice of anesthesia administration, and therefore an explicit requirement of supervision is at best unnecessary. Others brought to our attention that State laws that require supervision vary in their definitions and in many cases define supervision as collaboration rather than direction.

Several anesthesiologists commented in support of the collaborative, team approach to anesthesia delivery. Commenters stressed the valuable and knowledgeable assets CRNAs are to the anesthesia team. These commenters expressed some concern that the rule will destroy the longstanding concept of the anesthesia care team, making it less likely hospitals will take advantage of the skills of the nurse anesthetist and the medical training of the anesthesiologist.

Response: As we have said, this rule makes no judgment in support of one model of care over another. In addition, the rule does not prohibit collaboration or teamwork during anesthesia

administration. We believe the rule will promote best practices and encourage professional collaboration, in an effort to improve anesthesia care delivery and patient outcomes. We are pleased with the comments in recognition of the valuable contribution made by both professionals to the care of patients during anesthesia administration.

Comment: One commenter wrote that in most settings patient care is a team effort, and the current supervision requirement encourages polarization rather than collaboration. This commenter noted that when CRNAs have problems or questions about patient care they seek consultation with colleagues. Other commenters stated that the removal of the requirement provides surgeons, medical physicians, and others who perform diagnostic or surgical procedures freedom to collaborate or choose the anesthesia provider best suited to the procedure and the patient's needs. Additionally, many who supported the change in the rule believe that only a few CRNAs in certain circumstances would want to practice without supervision. They felt that both nurses and anesthesiologists preferred a team model of practice.

Two commenters stated that dentists, some physicians, and podiatrists work in settings where collaboration with an independent nurse anesthetist better suits the needs of the patient. They particularly noted the practice by nurse anesthetists of staying with patients for the entire duration of the procedure and through discharge from surgery as being helpful.

Similarly, we had several physicians state that the average healthy person can be safely managed by a CRNA. However, they contend a person with multiple medical problems or those undergoing complex or high-risk surgery should have a physician evaluation and medical direction during his or her care. The commenters believed that with this type of distinction in care, both parties would work together to deliver high quality anesthesia.

Response: One of the limits to requiring an overarching, across the board Federal requirement for supervision is the problem it creates for providers to tailor care to the needs of patients. These comments reaffirm what we have previously noted about the wide variability in patient presentations (for example, medical factors, type and nature of procedure, age, health, etc.) and how these variables influence clinical decisions about anesthesia administration. This rule change removes these unnecessary restrictions.

Cost to the Medicare Program

Comment: We received many comments on the financial motivations of various types of professionals for taking a position on one side of this issue or another. Many of the 20,000 comments accused one professional group or another of lacking concern for safety or adding additional burden to the health care delivery system for the sole purpose of financial gain or practice monopoly. We also received comments asserting that our motivation was to save money payable through the Medicare and Medicaid programs at the cost of quality anesthesia services. Those who support the change note that it removes a financial disincentive to use nurse anesthetists by no longer requiring payment to two professionals. They feel nurse anesthetist will be more efficient and expand a hospital's ability to provide services to more patients.

Many nurse anesthetists report having full responsibility for administering an anesthetic and caring for a patient while the anesthesiologist is somewhere else in the surgical area having no interaction with the patient. They note CRNAs are able to provide the same quality service at a lower cost, without the additional fee to an anesthesiologist for providing supervision. One commenter expressed support for the change as one that will greatly facilitate the use of cost-effective, outcome-based providers, noting "Unnecessarily mandated layers of supervision ultimately add cost to care, and yet have never documented any benefits." Many commenters wrote us with specific examples of how Medicare charges and costs would decrease as a result of the rule.

There was a common misunderstanding among many commenters that this change meant that Medicare patients would be forced to receive a lesser level of care because the rule changed the reimbursement for Medicare patients. One commenter asked, "Why would HCFA institute payment procedures that decrease the level of care provided to Medicare and Medicaid patients in the name of flexibility?" Another stated this rule proposes a double standard in that Medicare and Medicaid patients would not have the benefit of a physician's expertise to ensure their safety during critical peri-operative time.

Response: This rule does not change the payment policies for anesthesia services. Medicare payment rules remain the same. CFR section 415.110(a) requires that the anesthesiologist perform specific activities for each patient in order to be paid for providing

“medical direction.” It must be emphasized that the “medical direction” rules are rules for payment of the physician’s service under the physician fee schedule. The physician fee schedule payment per service is related to the amount of physician work associated with the service. Thus, the medical direction requirement must establish some level of physician work that is reasonable in relation to the allowance recognized for the service. The “supervision” of the CRNA by a physician, usually the operating surgeon, is not a separately payable service for the surgeon. The payment for this service is considered a part of the global surgical fee paid to the surgeon.

Because this rule does not affect payment, the determination about supervision is not specific to a Medicare beneficiary. These rules apply to all patients receiving anesthesia services in Medicare participating hospitals, CAHs, and ASCs, thus Medicare patients would not receive a different level of care from non-Medicare patients and therefore, does not mean different care for Medicare or Medicaid patients. The rule is specific to the provision of anesthesia services in a Medicare participating hospital, CAH, or ASC, and applies to all patients.

Comment: Several commenters who opposed this provision warned that costs to the Medicare program will increase as a result of this rule. Many believed that, although there will be no immediate effect since payment remains the same, costs would increase in the long term because of resulting anesthetic complications and malpractice. Others told us they believe anesthesiologist consultations will increase because some of these services are included in the anesthesia administration fee but as consultants, anesthesiologists would have to charge separately for these services.

Response: Neither costs to the Medicare program nor payment to different professionals was part of the decision to change the hospital CoP for anesthesia services. The fears of long term negative outcomes, increasing medical complications and higher malpractice insurance premiums, related to professional type, are unwarranted, based on our review of the literature. This rule will not prohibit consultation, physician supervision, or anesthesiologist administration of anesthesia where State and/or hospital by-laws require it. Whether payment can be made for consultations will be determined by the usual physician coverage and payment rules.

General

Comment: We received many anecdotal comments from beneficiaries, describing both positive and negative experiences during anesthesia, such as, the importance of a caring, well-trained professional who gives the needed patient attention, and answers the patient’s questions. Rarely did the comments identify the professional by credentials.

Response: These reports are important in that they confirm our commitment to patient-centered, outcome-oriented approaches to regulating Medicare participating providers.

Comment: Several certified anesthesiology assistants (AAs) expressed concerns about how the rule might affect their practice. Since the rule allows anesthesia to be administered only by a person licensed by the State to do so, they question whether this requirement would prohibit their practice. Some of the AAs recommended that we omit the term licensed and allow States to determine whether licensure is required at all to practice anesthesia.

Response: We do not agree with the comments that no State licensure should be required for anesthesia health professional practice. As noted, this rule defers to State scope-of-practice laws which identify health professionals that are allowed to administer anesthesia. Under this rule, AAs would be allowed to practice within their scope-of-practice specified by State law.

Comment: One commenter recommended that we require a CRNA to disclose that a nurse, not a doctor, would be providing anesthesia care and that if the patient desired to choose another provider his or her request would be honored. Other commenters stated that this rule is being promulgated without adequate input from patient advocate groups and without regard to how it might affect patient care. They believe that this rule serves special interests and that patient interests have not been adequately considered.

Response: The request for an anesthesia provider is usually made by the surgeon or physician in charge of the patient’s care. We believe the flexibility allowed through this rule change will enable physicians to make the best and most suitable choice for their patient’s characteristics, medical and anesthesia needs. Patients are always free to ask about the qualifications of any practitioner providing care, including doctors, nurses, therapists, surgeons, or anesthesiologists.

We received comments regarding this proposal from patient advocates and individual Medicare and Medicaid beneficiaries as well as providers on both sides of the issue. We agree that safety and quality patient outcomes should be the principal consideration in regulating providers. It is exactly this focus which has led to the regulatory change in supervision of CRNAs.

Comment: Several commenters pointed to other ways in which the Federal government supported nurse anesthetists, citing, as examples, Federal funds under Title VIII of the Public Health Service Act and Medicare Education Funds. One commenter wrote that nurse anesthetists received approximately \$2.7 million dollars per year for student trainees, faculty fellowships, and new program startup money.

Response: As previously noted, this rule is not intended to endorse one health care professional over another. It is intended to recognize the value in flexibility for providers when making decisions about how to best manage resources to ensure access to quality health services.

Comment: We received a few comments from nurse anesthetists who believed that implementation of this rule would be easy in those parts of the country where CRNAs have practiced and are treated with respect. Some of these commenters identified difficulty in achieving professional courtesy and referrals from doctors who did not recognize their skills and abilities.

Response: To the extent that this rule provides opportunity for greater flexibility for providers and increased access to quality health care for patients, we hope that this will occur. It is not our goal in this rule to prescribe, or to limit, which health care professionals may collaborate, supervise or work independently. We do, however, hope to decrease barriers to access, increase efficiency, and encourage improved models of safe anesthesia delivery. We believe that is best accomplished by sharing the responsibility with States and providers.

III. Provisions of the Final Regulations

We are amending § 482.52(a)(4) of the current hospital CoPs and § 485.639(c)(1)(v) of the current critical access hospitals CoPs, to codify requirements for who may administer anesthesia under Subpart D—Standard: Anesthesia Services. This change is also reflected in a conforming amendment to the ASC Conditions of coverage at § 416.42(b)(2). This final regulation eliminates a Federal requirement for physician supervision and defers to

States the determination of which licensed practitioners are allowed to administer anesthesia.

IV. Collection of Information Requirements

This document does not impose information collection and record keeping requirements. Consequently, it need not be reviewed by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995.

V. Regulatory Impact Statement

A. Overall Impact

We have examined the impacts of this rule as required by Executive Order 12866 and the Regulatory Flexibility Act (RFA) (Public Law 96-354). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100 million or more annually). This rule is not considered to have a significant economic impact on hospitals and, therefore, is not considered a major rule. There are no requirements for hospitals to initiate new processes of care, reporting, or to increase the amount of time spent on providing or documenting patient care services. This final rule will provide hospitals with more flexibility in how they provide quality anesthesia services, and encourage implementation of the best practice protocols.

The RFA requires agencies to analyze options for regulatory relief of small businesses. For purposes of the RFA, small entities include small businesses, nonprofit organizations and government agencies. Most hospitals and most other providers and suppliers are small entities, either by nonprofit status or by having revenues of \$5 million or less annually. For purposes of the RFA, all non-profit hospitals, and other hospitals with revenues of \$5 million or less annually are considered to be small entities. Some critical access hospitals and some ASCs with revenues of \$5 million or less annually are also considered to be small entities. Individuals and States are not included in the definition of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of

a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area and has fewer than 50 beds.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule that may result in an expenditure in any one year by State, local, or tribal governments, in the aggregate, or by the private sector, of \$100 million. This rule places no additional cost requirements for implementation on the governments mentioned. It will allow CRNAs to practice without physician supervision where State law permits or to be supervised by a physician where such oversight is required by State law. This change is consistent with our policy of respecting State control and oversight of health care professions by deferring to State licensing laws to regulate professional practice. Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct compliance costs on State and local governments, preempts State law, or otherwise has Federalism implications. This final rule imposes no direct compliance costs on State or local governments.

B. Anticipated Effects

1. Medicare and Medicaid participating hospitals, CAHs, and Ambulatory Surgical Centers will defer to State licensing laws in determining which health professionals are permitted to administer anesthesia. In addition, these facilities are free to exercise stricter standards than required by State law.

2. First, it must be noted that this final rule does not change the Medicare payment policies for anesthesia services. There is an important payment distinction between the medical "direction" requirements and the physician "supervision" requirement. Payment made by Medicare on a fee schedule basis is not payment for "supervision" but rather payment for "direction" and the payment per service is related to the amount of physician work associated with the service.

Second, economic effects on individual health professionals as a result of this rule change will be influenced by other factors. Because the final rule defers to State licensing laws, the impact on either physician or CRNA income from billed services will be

determined by each States' laws. State laws vary widely in both the definition and degree of physician supervision and oversight required of CRNAs. In addition, some State laws leave the determination up to individual hospital, CAH, or ASC medical staff by-laws, resulting in a financial impact that is different depending on where the physician or CRNA provides the services. In any of these situations the potential impact might include an increase or decrease in billed services by CRNAs practicing alone, in billed services by physicians practicing alone, in billed services by physicians providing medical direction in collaboration with CRNAs, as well as the possibility of no change in billed services by either provider. In some of these cases, where there is decreased physician billing, there may be increased savings to third party payers.

Finally, the flexibility resulting from the rule change could provide increased access to services in some areas, and broaden opportunity for providers to implement professional standards of practice that improve quality and promote more efficacious models of care delivery.

3. This rule increases flexibility in the provision of anesthesia services for Medicare and Medicaid hospitals, CAHs, and ASCs. It removes the burden of implementing a Federal requirement for physician supervision of CRNAs in all cases. The rule change will allow hospitals, CAHs, and ASCs the flexibility, within the authority of State licensing laws, to implement best-practice protocols in providing anesthesia services most associated with positive patient outcomes. Moreover, hospitals are free to exercise stricter practice standards. As discussed in the preamble of the December 19, 1997 proposed rule, this provision does not lend itself to a quantitative impact estimate, and we do not anticipate a substantial economic impact either in costs or savings.

C. Conclusion

We are changing the current across-the-board Federal requirement for physician supervision of CRNAs to allow State control and oversight through professional licensing laws. This change applies to all Medicare and Medicaid participating hospitals, CAHs, and ASCs. Our decision to change the Federal requirement for supervision of CRNAs applicable in all situations is, in part, the result of our review of the scientific literature which shows no overarching need for a Federal regulation mandating any model of anesthesia practice, or limiting the

practice of any licensed professional. The clinical evidence indicates anesthesia outcomes have improved substantially in recent years such that anesthesia is a relatively safe procedure. Both our literature review and comment analysis made clear that there is such a range of variables and influences to be considered (for example, patient types, surgical procedure, and/or availability of technology) that a single Federal requirement applicable in all situations is unnecessary and may actually interfere with factors that promote quality patient outcomes.

For these reasons, we are not preparing analyses for either the RFA or section 1102(b) of the Act because we have determined, and we certify, that this rule will not have a significant economic impact on a substantial number of small entities or a significant impact on the operations of a substantial number of small rural hospitals.

In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

VI. Federalism

We have reviewed this final rule under the threshold criteria of Executive Order 13132, Federalism. We have determined that it does significantly affect the rights, roles, and responsibilities of States. This final rule removes the Federal guideline that requires CRNAs to be supervised by a

physician and allows the laws of the States to determine which practitioners are permitted to administer anesthetics and the level of supervision required.

List of Subjects

42 CFR Part 416

Health facilities, Kidney diseases, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 482

Grant programs-health, Hospitals, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 485

Grant programs-health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, 42 CFR Chapter IV is amended as set forth below:

PART 416—AMBULATORY SURGICAL SERVICES

1. The authority citation for Part 416 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

Subpart C—Specific Conditions for Coverage

2. Section 416.42 is amended by revising paragraph (b) to read as follows:

§ 416.42 Condition for coverage—surgical services.

* * * * *

(b) *Standard: Administration of anesthesia.* Anesthesia must be administered by a licensed practitioner permitted by the State to administer anesthetics.

* * * * *

PART 482—CONDITIONS OF PARTICIPATION FOR HOSPITALS

3. The authority citation for part 482 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh), unless otherwise noted.

Subpart D—Optional Hospital Services

4. Section 482.52 is amended by revising paragraph (a) to read as follows:

§ 482.52 Condition of participation: anesthesia services.

* * * * *

(a) *Standard: Staffing.* The organization of anesthesia services must be appropriate to the scope of the services offered. Anesthesia must be administered by only a licensed practitioner permitted by the State to administer anesthetics.

* * * * *

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

5. The authority citation for Part 485 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395 (hh)).

Subpart F—Critical Access Hospitals (CAHs)

6. Section 485.639 is amended by revising paragraph (c) to read as follows:

§ 485.639 Condition of participation—surgical services.

* * * * *

(c) *Administration of anesthesia.* The CAH designates the person who is allowed to administer anesthesia to CAH patients in accordance with its approved policies and procedures and with State scope of practice laws. Anesthesia is administered only by a licensed practitioner permitted by the State to administer anesthetics.

* * * * *

Vol. 66, No. 12

Thursday, January 18, 2001

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 20, 312, and 601

[Docket No. 00N-0989]

Availability for Public Disclosure and Submission to FDA for Public Disclosure of Certain Data and Information Related to Human Gene Therapy or Xenotransplantation

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is proposing to amend the biologics licensing regulations regarding confidentiality of information. The amendments would add provisions that would make available for public disclosure, and require submission for public disclosure of, certain data and information related to human gene therapy or xenotransplantation. The proposed regulation would apply specifically to the areas of human gene therapy and xenotransplantation because these areas of clinical research have the potential for unique public health risks and modification of the human genome. The proposed rule would provide for public disclosure of certain data and information related to an investigational new drug application (IND), to provide an opportunity for public education on, and discussion and consideration of, public health and safety issues. In addition, the proposed rule would require sponsors of clinical trials on human gene therapy or xenotransplantation to submit to FDA for public disclosure certain data and information that has been redacted to remove or obscure all information defined as confidential commercial or trade secret, or names and other personal identifiers of patients and certain other third parties.

DATES: Submit written comments on this proposed rule on or before April 18, 2001. Submit written comments on the information collection provisions by February 20, 2001.

ADDRESSES: Submit written comments on this proposed rule to the Dockets Management Branch (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Submit written comments on the information collection requirements to Wendy Taylor, FDA Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, 725 17th St. NW., Washington, DC 20503, Attn: Desk Officer for FDA.

FOR FURTHER INFORMATION CONTACT: Steven F. Falter, Center for Biologics Evaluation and Research (HFM-17), Food and Drug Administration, 1401 Rockville Pike, suite 200N, Rockville, MD 20852-1448, 301-827-6210.

SUPPLEMENTARY INFORMATION:

I. Background Information

A. Current FDA Policies Regarding Disclosure of Information

FDA regulations in part 312 (21 CFR part 312) provide procedures that govern the use of investigational new drugs, including new biological drugs, in humans. Under part 312, the sponsor of a clinical study in humans must submit to FDA an IND which provides specific information regarding the investigational new drug and the clinical study. The IND must be authorized by FDA and approved by the local institutional review board (IRB) before the clinical study may begin. The provisions of this rulemaking do not alter the procedures specified in part 312 for submission of an IND. A manufacturer requesting approval to market a biological product in interstate commerce must submit a biologics license application (BLA) to FDA before the product may be introduced into interstate commerce (42 U.S.C. 262). Among other things, the BLA contains information and data resulting from the clinical studies performed under an IND (§ 601.2 (21 CFR 601.2(a))). All information and data concerning the product, including those submitted in applicable IND's and in the BLA, are held by FDA in a biological product file (see definition of "biological product

file" in § 601.51(a) (21 CFR 601.51(a)) throughout the lifetime of the product.

The general requirements related to disclosure of information for all types of commodities regulated by FDA and for all types of documents are provided in part 20 (21 CFR part 20). Under these regulations, certain categories of information are exempt from mandatory disclosure. The categories of information relevant to human gene therapy and xenotransplantation clinical trials that have historically been exempt from public disclosure include trade secrets and commercial or financial information which is privileged or confidential (§ 20.61); personnel, medical, and similar files, the disclosure of which constitutes a clearly unwarranted invasion of personal privacy (§ 20.63); and at the discretion of FDA, interagency or intra-agency memoranda or letters, except for factual information which is reasonably segregable (§ 20.62).

Specific requirements for the availability for public disclosure of data and information in an IND, including those IND's relating to biological drug products, are included in § 312.130. FDA's policy for the confidentiality of data and information contained in an IND for a biological product and in a biological product file is provided in §§ 601.50 and 601.51 (21 CFR 601.50 and 601.51). Under §§ 601.50 and 601.51, and consistent with the other referenced disclosure regulations, FDA has not routinely publicly disclosed any data or information contained in an IND or a pending biological product file. FDA has not even acknowledged the existence of the IND or a pending biologics license application, unless its existence has previously been publicly acknowledged. Because the agency has no mechanism for reliably tracking what information concerning an unapproved, investigational product has been publicly acknowledged, the agency generally provides no information to the public concerning an investigational product, including information concerning any IND or pending BLA submissions, and refers the public to the sponsor of the IND or the pending biological license for further information. In some cases, FDA may publicly disclose selected portions of safety and effectiveness data, such as summary information for consideration at an open session of a Federal advisory

committee meeting, or other public workshops or meetings (§ 601.51(d)(1)). Once a biological license has been approved, certain information, as specified in § 601.51(e), concerning the approved product and the clinical investigation of the product may be publicly disclosed.

B. Issues Related to Human Gene Therapy and Xenotransplantation

As a result of rapid advances in molecular biology, genomics, immunology, and transplant biology, new classes of biological therapeutics are being developed with the goal of providing future treatment options for genetic disease, cancer, and organ failure. Novel therapeutic approaches currently under consideration include the areas of human gene therapy and xenotransplantation. Human gene therapy and xenotransplantation are being proposed to treat genetic diseases such as cystic fibrosis, cardiovascular insufficiency, metabolic diseases such as diabetes, neurologic diseases such as Parkinson's and Huntington's disease, cancer, acquired immune deficiency syndrome (AIDS), and organ failure.

1. Definitions

Human gene therapy is defined as the administration of genetic material to modify or manipulate the expression of a gene product or to alter the biological properties of living cells for therapeutic use. Cells may be modified *ex vivo* for subsequent administration to the subject or altered *in vivo* by gene therapy products given directly to the subject. Human gene therapy includes, but is not limited to, autologous or allogeneic bone marrow stem cells modified with a viral vector, intramuscular or intravascular injection of a therapeutic plasmid deoxyribonucleic acid (DNA) or a therapeutic viral vector, ribozyme technology, and use of sequence specific oligonucleotides to correct a genetic mutation. For the purposes of this regulation, gene therapy is not intended to include the administration of viral or cellular products (e.g., blood or unmodified bone marrow), or their derivatives, that do not contain genetic material that has been specifically engineered into the product for therapeutic purposes. While prophylactic vaccines, including plasmid DNA vaccines and genetically modified viral vector vaccines, and some replication competent viruses are excluded under this regulation from the gene therapy definition, they are similar in nature to gene therapy products. Issues relevant to gene therapy products, such as vector integration and biodistribution, also apply to

prophylactic vaccines. Therefore, the agency requests comment on whether such products should be included under this rulemaking to allow information related to these products to be available for public disclosure.

The use of antisense oligonucleotides to block gene transcription is not intended to be included under gene therapy; however, as noted above, the use of sequence specific oligonucleotides to correct a genetic mutation would be included. The proposed mechanism of action of sequence specific oligonucleotides is to irreversibly change, insert, or delete a single base in the genome of a cell. This raises questions of whether base changes may result in mutations that may cause cancer, or express an immunogenic protein or have other adverse health affects. In addition, their use *in vivo* raises issues of activity in tissues other than the target and the risk of gonadal biodistribution leading to germ line changes.

Xenotransplantation refers to any procedure that involves the transplantation, implantation, or infusion into a human recipient of either: (1) Live cells, tissues, or organs from a nonhuman animal source; or (2) human body fluids, cells, tissues, or organs that have had *ex vivo* contact with live nonhuman animal cells, tissues, or organs. The live cells, tissues, or organs used in xenotransplantation are referred to as xenotransplantation products. Xenotransplantation products include those from transgenic or nontransgenic animals, as well as combination products that contain xenotransplantation products in combination with drugs or devices. These include, but are not limited to, porcine fetal neuronal cells, encapsulated porcine islet cells, encapsulated bovine adrenal chromaffin cells, baboon bone marrow, and external liver assist devices employing porcine liver, or porcine hepatocytes. Nonliving biological products or materials from animals, such as porcine heart valves and porcine insulin, are not classified as xenotransplantation products for the purposes of this rulemaking.

2. Public Health Issues

While human gene therapy offers great promise for improving the lives of patients with serious, life-threatening diseases and disorders, there are several risks inherent in its use as a medical intervention. These risks include the inadvertent infection of patients, and potentially their contacts, with replication competent virus present in gene therapy vector preparations. For example, infection with type C murine

retroviruses, which could contaminate retroviral vector preparations, is known to cause a range of diseases in animals including spongiform encephalopathy, anemia, and neoplastic disease. In addition, these risks include the risk of infection with novel infectious agents generated by recombination *in vivo*, the consequences of which are unknown; the risk of insertional mutagenesis through disruption of the normal genetic sequence, resulting in altered gene expression; and the risk of inadvertent modification of the patient's germline and its effect on future offspring.

Although xenotransplantation provides a potential approach to address the shortage of human organs and for treatment of disease, the use of xenotransplantation products raises concerns about possible infection of the recipient and, subsequently, the public at large with both known and as-yet-unrecognized infectious agents. Experience with human allograft transplantation has demonstrated the potential for transmissibility of infections from donor to recipient through transplants (Refs. 1 to 3). The direct contact resulting from implantation of a xenotransplantation product into a recipient, with the associated disruption of anatomical barriers and the immunosuppression of the recipient, may facilitate interspecies transmission of xenogeneic infectious agents. The potential for subsequent transmission of a xenogeneic infectious agent from the recipient to the recipient's close contacts, and propagation through the general human population, is an additional risk and a recognized public health concern.

Insertional mutagenesis is a risk potentially associated with the infection of xenotransplant recipients and their close contacts and the general population with xenogeneic retroviruses. In addition to potential horizontal transmission of infectious agents from the recipient of a xenotransplantation product to the recipient's contacts, there is concern regarding vertical transmission of infectious agents from the recipient to progeny during gestation (e.g., transmission from mother to fetus or infectious agents across the placenta or during parturition). Vertical transmission of xenogeneic infectious agents could result in the development of infectious disease in progeny. In addition, vertical transmission of xenogeneic viruses can result in insertional mutagenesis with disruption of normal human development or integration into the germline resulting in transmission to future generations.

Thus, human gene therapy and xenotransplantation investigative approaches individually pose: (1) Risks that extend beyond the individual (e.g., public health risks, including the potential for the transmission of infectious agents from the recipient to the public at large); and (2) risks of inadvertent modification of the germline (alterations of the genetic material of the progeny). Moreover, these approaches may also be used in combination (e.g., xenotransplantation products genetically modified before implantation), resulting in complex questions and issues for consideration and discussion prior to and during human clinical trials.

3. Public Education and Informed Consent Issues

Human gene therapy and xenotransplantation investigations call for additional mechanisms to provide the public access to clinical trial information relevant to the assessment of risks and benefits, and to informed consent. Special care is needed to ensure that individual subjects understand the experimental nature of the procedures and their known and unknown risks and burdens. Human gene therapy and xenotransplantation require the evaluation of risks to third parties such as health care workers, close contacts of the recipient, and the community. The informed consent process should address the need for long-term surveillance and post-mortem analysis and potential infectious disease risks to recipients and their contacts.

These investigative approaches raise new challenges for the local review bodies responsible for ensuring the safe and ethical conduct of this research. Local IRB's are responsible for reviewing biomedical and behavioral research involving human subjects, to protect the rights of human subjects (45 CFR part 46, Protection of Human Subjects, and 21 CFR part 56, Institutional Review Boards). Institutional Biosafety Committees (IBC's) are responsible for reviewing and overseeing basic and clinical research conducted at their institutions. The IBC assesses the safety of the research and identifies any potential risk to public health or the environment (section IV-B-2 National Institutes of Health (NIH) Guideline for Research Involving Recombinant DNA Molecules). This proposed rule would provide a mechanism for public access to human gene therapy and xenotransplantation clinical trial information and for public education, informed discussion and participation that can form a foundation

for safe and ethical research in these innovative areas.

The proposed rule would enhance the development of related Federal initiatives that provide for public access to clinical trial information through national data bases: There are also a number of Internet sites sponsored by associations, clinical centers or academic institutions, and nonprofit organizations that provide public access to similar types of clinical trial information. Examples include: Center Watch Clinical Trials Listing Service at <http://www.centerwatch.com>, a resource both for patients interested in participating in clinical trials and for research professionals; <http://www.HealthAtoZ.com>, a search engine for health and medical Internet resources; the Musella Foundation for brain tumor research and information, at <http://www.virtualtrials.com>; the National Alliance of Breast Cancer Organizations, at <http://www.nabco.org>, which, in an effort to increase awareness of clinical trials, lists brief descriptive summaries of clinical trials in the National Cancer Institute Physician Data Query (NCI PDQ) data base; the University of Michigan, at <http://www.cancer.med.umich.edu>, which lists clinical trials at the University of Michigan Cancer Center (UMCC) and supplies links to external clinical trials and resources; the former Surgeon General C. Everett Koop's Internet site, at <http://www.drkoop.com>, which allows the public to browse through a listing of therapeutic areas where volunteers are being sought for clinical trials; Biotechnology Industry Organization, a trade association, at <http://www.bio.org>, which lists press releases and industry news, and provides links to patient groups and professional medical societies; and <http://www.investor.biospace.com>, which has not only a biotechnology search engine that links to hundreds of companies, but also extensive information on the latest technologies and clinical trials, as a basis for investment. The proposed rule should facilitate the development of similar data bases, either publicly or privately sponsored, with information concerning the study of gene therapy and xenotransplantation. As provided under section 113 of the Food and Drug Modernization Act of 1997 (Public Law 105-115), NIH, through its National Library of Medicine, has created a national clinical trials data base at <http://clinicaltrials.gov> to provide patients, family members, and other members of the public with current information about clinical research studies.

4. Basis for Disclosure

Historically, public disclosure of information with regard to human gene therapy and xenotransplantation has assisted FDA in performing its duties and has benefitted the public. The categories of information that may be made publicly available by FDA as a result of this disclosure rule include information currently made public by other Federal agencies in connection with advisory committee meetings or other public workshops or meetings, and through general commercial disclosure.

The NIH Office of Biotechnology Activities (OBA; formerly the Office of Recombinant DNA Activities) administers the Recombinant DNA Advisory Committee (RAC). This committee was established in October 1975, in response to concerns about the potential public health risks and environmental hazards posed by recombinant DNA research, as well as the significant ethical, legal, and societal issues associated with this emerging technology. The RAC has met quarterly in open public session to discuss these issues and, since the first human gene transfer clinical trial was proposed in 1988, the committee has publicly reviewed selected human gene transfer clinical trial protocols. The minutes of RAC discussions of human gene transfer clinical trials and related issues are accessible to the public via the OBA website (<http://www.nih.gov/od/oba/index.htm>). RAC review and public discussions provide an important mechanism for receiving public input into Federal policy development and for making the public aware of potential toxicities and adverse events associated with gene transfer products. As one example, when a participant in a cystic fibrosis gene transfer clinical trial required intensive care treatment for an acute adverse event suffered shortly after administration of an adenoviral gene transfer product, the investigator was invited to discuss the occurrence with other experts in the field at the next public RAC meeting. This public discussion and analysis facilitated both dissemination of important information about this toxicity and enhanced understanding of its pathogenesis, thereby contributing to the safety of patients in other gene therapy trials.

NIH also collects information on gene transfer studies and makes it available to the public. Appendix M of the "NIH Guidelines for Research Involving Recombinant DNA Molecules" (Ref. 4) requires that investigators provide specific information for the purposes of protocol registration, RAC review, and

potential public discussion, and that this information should not contain confidential commercial information or trade secrets, enabling all aspects of RAC review to be open to the public. The required information includes scientific and nontechnical abstracts, the informed consent document, statements on privacy and confidentiality, reports of serious adverse events, protocol amendments, and annual followup reports. Public disclosure of this information has facilitated progress and has contributed to improved patient safety in the field of human gene transfer by providing public access to clinical trial information, rapid dissemination of adverse event information, and summary information regarding outcomes of gene therapy clinical trials and adverse events.

All investigators receiving any NIH funds for basic and/or clinical research involving recombinant DNA molecules, and all investigators affiliated with institutions receiving any NIH funds for basic and/or clinical research involving recombinant DNA molecules, must comply with the NIH Guidelines. The NIH Guidelines also apply to collaborations between NIH-funded or affiliated researchers and privately funded investigators. In addition, commercial sponsors not affiliated with a NIH-funded institution have voluntarily submitted materials to OBA for RAC review. Therefore, the general practice in the field of human gene transfer has been to submit to NIH, OBA the information required under NIH Guidelines with the understanding that the information will be available for RAC review and potentially public discussion. This suggests that the information specified in Appendix M is not generally considered to be proprietary and that its disclosure does not impede commercial development.

The categories of information that would be disclosed as a result of this rulemaking include information that generally has been made public for xenotransplantation protocols. Sponsors of xenotransplantation IND's have publicly disclosed information regarding the scope of xenotransplantation clinical trials and the development of public health safeguards through: (1) Open public sessions of the Xenotransplantation Subcommittee of the Biologics Response Modifiers Advisory Committee (BRMAC) for the Center for Biologics Evaluation and Research (CBER), FDA (December 17, 1997, June 3 and 4, 1999, and January 13, 2000), and (2) Public Health Service (PHS) sponsored public workshops, including the workshop

entitled "Developing U.S. Public Health Policy in Xenotransplantation," January 21 and 22, 1998, at which xenotransplantation clinical trials under FDA IND's were summarized by the sponsor or by a sponsor's designee. Transcripts of these meetings can be found on the CBER Internet site at <http://www.fda.gov/cber>. At these public meetings, FDA scientists and others presented data demonstrating that porcine endogenous retroviruses could be activated and could infect human cells in vitro, and the implications of these data for porcine xenotransplantation product development and regulation were discussed. Based on these discussions, the BRMAC concurred with FDA's decision to place all porcine xenotransplantation clinical trials on clinical hold. During these meetings, FDA publicly discussed testing requirements and results needed by manufacturers in order to address and remove the clinical hold, and allowed sponsors of porcine xenotransplantation IND's the opportunity to present testing strategies, assuring the industry of consistency in regulation. The public as well was assured that Federal oversight was being conducted in a responsible manner.

Information related to the categories of information FDA proposes to disclose is available through publicly accessible filings to the Securities and Exchange Commission (SEC). The Securities Act of 1933 requires that investors receive financial and other significant information concerning securities being offered for public sale. In an annual filing, a company must provide a comprehensive overview of its business. This includes a description of ongoing research programs including discussion of clinical study safety and efficacy results, disclosure of investigational sites and the investigators involved, plans for product development and commercialization, and financial information. This information may be found on the SEC Internet site at <http://www.sec.gov/edgarhp.htm>.

In addition, voluntary disclosure of information regarding clinical trials of unapproved products and therapies by individual sponsors over the Internet has become widespread. Company Internet sites often provide this information in the form of descriptive summaries of clinical trials, press releases, recruitment opportunities for patients, investment opportunities, and general awareness material.

Thus, information of the kind FDA proposes to disclose concerning clinical trials on human gene therapy and xenotransplantation is already widely

disclosed. This disclosure has not impeded commercial development of these products. In addition, the agency considers public disclosure of data and for information from human gene therapy or xenotransplantation clinical trials essential for public education, and for informed discussion and consideration of the public health and safety risks associated with the use of these investigational therapies.

II. Overview of Proposed Rule

A. Scope

The scope of this proposed rule is limited to disclosure of information related to human gene therapy and xenotransplantation. Confidential commercial information, such as information regarding commercial licensing agreements or the identification of suppliers, trade secret manufacturing information, names and other personal identifiers of patients and, except as specifically provided in the regulations, names and personal identifiers of third parties, such as physicians, hospitals, etc., and, at FDA's discretion, interagency or intra-agency memoranda and letters would not be disclosed. FDA is proposing only to disclose certain information necessary to ensure a continued mechanism for public education and input, which FDA believes is essential to the evaluation of the public health impact of these new technologies. FDA believes that these categories of information have not been considered to be proprietary, since they have been made publicly available through various mechanisms and their disclosure has not impeded commercial development. The public expects the current level of information disclosure and public review to continue in the areas of human gene therapy and xenotransplantation where there is potential risk to the public health.

The categories of information related to an IND that would be disclosed under this regulation include: (1) Product and patient safety data and related information, including results from preclinical and clinical studies and tests that demonstrate the safety and/or feasibility of the proposed procedures; (2) the name and address of the sponsor; (3) the clinical indications to be studied; (4) the protocol for each planned study, to include a scientific abstract and a nontechnical abstract, a statement of the objectives, purpose, and rationale of the study, the name and address of each investigator, the name and address of the official contacts of each local review body as appropriate (IRB, IBC) and dated copies of approval by each group, the criteria for patient selection and

exclusion, an estimate of the number of patients to be studied, a description of the treatment that will be administered to patients, and the clinical procedures, laboratory tests, or other measures to be taken to monitor the safety and effects of the drug in human subjects and to minimize risk; (5) written informed consent forms; (6) identification of the biological product(s) and a general description of the method of production, including a description of product features that may affect patient safety; (7) IND safety reports; (8) information submitted to FDA in the annual report; (9) the regulatory status of the investigation, the date of such action, and the reason for such action; and (10) other relevant data and information that the Director, CBER, determines are necessary for the appropriate consideration of the public health and scientific issues, including relevant ethical issues, raised by human gene therapy or xenotransplantation.

To facilitate public disclosure of this information, FDA proposes to require sponsors of human gene therapy and xenotransplantation clinical trials to submit to FDA the information defined above upon submission of: (1) The initial IND, (2) any amendment documenting changes or additions to the IND, at the time the amendment goes into effect, (3) IND safety reports, and (4) annual reports. FDA is not proposing to require the submission of any new information not previously submitted as part of the IND process. For example, FDA is not proposing that all variations and updates of informed consent forms be submitted to FDA for public disclosure; however, under the proposed rule, FDA would disclose any sample informed consent forms generally submitted with an initial IND submission.

The agency requests comment on whether this rulemaking should apply to information as defined above that is submitted in a BLA. Public disclosure of information in a BLA would provide a continuation of the availability of information for public disclosure up until the time of license approval. A disadvantage would be the amount of documentation that would be required to be submitted in order to support this initiative.

The proposed provisions of this rulemaking do not alter the procedures specified in part 312 for submission of an IND. However, with regard to clinical holds of an IND (§ 312.42), FDA would be able to place a human gene therapy or xenotransplantation investigation on clinical hold if the sponsor does not submit to the agency the redacted version of data and information for

public disclosure, or if the redacted version submitted is incomplete or not properly redacted.

B. Legal Authority

The proposed regulation would make available for public disclosure specified safety and effectiveness information submitted in support of an IND¹ involving either a human gene therapy or xenotransplantation protocol. This information, discussed thoroughly in section II.C of this preamble, includes protocols, criteria for patient selection and exclusion, summary results of preclinical and clinical studies of the investigational article, a summary of the treatment that will be administered and the measures that will be taken to minimize risk to human subjects, safety reports, informed consent documentation, and information concerning the regulatory status of the product, such as whether it is on clinical hold and the reason for the hold. While such information relating to human gene therapy protocols has routinely been made available to the public through the NIH RAC process for the last 20 years, FDA regulations have consistently provided that similar information submitted to FDA as part of an IND is not publicly available. (See §§ 601.50 and 601.51.) This proposed rule is an attempt to harmonize these approaches for public review of important, new, but potentially hazardous and controversial, therapies. In this way, FDA will be able to more fully participate in existing and future venues for obtaining educated public input and discussion that could inform the agency's deliberations. The agency believes that there is great benefit in having human gene therapy and xenotransplantation products scrutinized, as they are being developed, by individuals with a wide variety of perspectives, including scientists from different disciplines, biomedical ethicists, patient advocacy organizations, and the general public, because of the unique blend of proposed benefit as well as potential risk to society that these products possess. Investigations of these types of products raise serious ethical and scientific issues, and, therefore, the decisionmaking process should be as

¹While human gene therapy and xenotransplantation protocols are generally regulated by CBER as biological products, it is possible that some of these products may be combination products consisting of biological components, drug components, and device components. The same rules of disclosure will apply to the drug or device components of combination products under the same theories discussed later in this section.

transparent and fully informed as possible.

The proposed rule would formalize the existing practice of making certain specified types of safety and effectiveness information in IND's for human gene therapy and xenotransplantation publicly available. Such disclosure is necessary in order to protect the public health by informing the research community and the public of the nature and the hazards of the proposed research and by permitting comment on the merits of the proposed research.

The Freedom of Information Act (FOIA), 5 U.S.C. 552, generally provides that Federal agencies must disclose information in their files to the public on request. FOIA is designed to make federal agency records or information available to the public. The Supreme Court has stated that, "The basic purpose of [the] FOIA is to ensure an informed citizenry, vital to the functioning of a democratic society, needed to check against corruption and to hold the governors accountable to the governed." (See *NLRB v. Robbins Tire & Rubber Co.*, 437 U.S. 214, 242 (1978).)

The statute provides nine exemptions and three law enforcement exclusions that agencies may use to protect specific categories of information from disclosure (5 U.S.C. 552(b)). These exemptions are the only basis for withholding information requested by the public under the FOIA² and are discretionary, not mandatory. (See *Chrysler Corp. v. Brown*, 441 U.S. 281 (1979).) One of these exemptions is particularly relevant to this proposed rule and the disclosure of information in applications to investigate and market human gene therapy and xenotransplantation products.

Exemption 4 of the FOIA protects trade secrets and confidential commercial information from public disclosure. (See 5 U.S.C. 552(b)(4).) While trade secret information, narrowly defined as secret, commercially valuable information related to manufacturing methods or processes, is present in all IND's and biological product files, including those subject to this proposed rule, this

²It should be noted here that section 301(j) of the act prohibits the public disclosure of information, obtained under certain sections of the act, "concerning any method or process which as a trade secret is entitled to protection." (See 21 U.S.C. 331(j).) In addition, the so-called Federal Trade Secrets Act also contains certain restrictions on the public disclosure of trade secret and confidential commercial information. The Trade Secrets Act does provide for the disclosure of confidential commercial information where such disclosure is "authorized by law." (See 18 U.S.C. 1905.)

proposal will not affect the confidentiality of such information, and therefore it will not be discussed. Confidential commercial information is defined under exemption 4 as "commercial or financial information obtained from a person and privileged or confidential." Each element of the definition must be satisfied for information to be confidential commercial information entitled to protection under exemption 4.

Historically, much of the data and information submitted in IND's and unapproved biological product files has been considered confidential commercial information. (See *Public Citizen Health Research Group v. FDA*, 704 F.2d 1280 (D.C. Cir. 1983); *R & D Laboratories, Inc. v. FDA* No. 00-CV-0165 (D.D.C. Sept. 7, 2000).) FDA's general information disclosure regulations define confidential commercial information, and provide that information submitted to FDA that falls within this definition is not disclosable. (See 21 CFR 20.61.) Further, the regulations that apply to the submission of IND's and biological product files define the contents of these applications as confidential commercial information generally exempt from disclosure and, indeed, even prohibit the agency from acknowledging the existence of an application (prior to approval) if it has not already been publicly disclosed. (See 21 CFR 312.130, 601.50, and 601.51.) The regulations provide different rules for disclosure after an approval letter has been sent, and when the application has been terminated, abandoned, or otherwise no longer has commercial value.

The agency is exercising its legal authority to promulgate new regulations that will make explicit and will formalize the circumstances and means by which certain safety and effectiveness information in these special types of applications will be made available for public disclosure. Such a change is especially warranted when, as here, the change is being made in large part to reflect the actual environment in which human gene therapy and xenotransplantation applications exist.

As has been discussed elsewhere in this preamble (in section I.B, Issues Related to Human Gene Therapy and Xenotransplantation), sponsors of IND's pertaining to human gene therapy have publicly disclosed the types of information covered by this proposed rule for many years as part of the process overseen by the RAC. Likewise, there has been widespread practice in the field of xenotransplantation to make

publicly available a great deal of information concerning details of trials of xenotransplantation products during public advisory committee meetings and workshops sponsored by FDA and by the U.S. PHS. Information that is publicly disclosed by its owner cannot be confidential within the meaning of the FOIA and, as a result, can be made available for public disclosure by FDA. (See *CNA Fin. v. Donovan*, 830 F.2d 1132, 1154 (D.C. Cir. 1987).) The fact that these types of information cannot be considered confidential is the principal basis for issuing this proposed rule.

This proposed rule contains the public disclosure procedures the agency will apply to the safety and effectiveness information in human gene therapy and xenotransplantation applications that has historically been treated as confidential commercial information by the agency. These procedures will follow the consistent practice in the fields of human gene therapy and xenotransplantation of making such information available to the public. It is important to note that while certain safety and effectiveness data and information will be publicly available under this proposed rule, FDA does not intend to disclose the full reports of safety and effectiveness on the basis of which the product may be approved. FDA believes that, prior to approval of a biological product file, the full reports constitute confidential commercial information, as they traditionally have under the agency's regulations, and should not be released. (See 21 CFR 601.51(d).) However, under § 601.51(e), all safety and effectiveness data and information do become publicly available after a license is issued, and this practice will not be changed by this proposal.

In addition to the full reports, the agency also wishes to make clear that it will continue its current policy of not releasing confidential commercial information that is contained in a human gene therapy or xenotransplantation IND or unapproved biological product file. Examples of confidential commercial information that may exist in these applications would include information concerning licensing agreements and information identifying suppliers. This information ordinarily will remain confidential under exemption 4 unless it has already been publicly disclosed by the sponsor. Such business-related information is also not the type of information that FDA believes should be disclosed to further the public discussion and evaluation of human gene therapy and xenotransplantation trials. In addition,

this proposed rule will not affect the rules governing the disclosure of personal medical and other similar information, the disclosure of which would cause an unwarranted invasion of personal privacy. (See 21 CFR 20.63.)

Based on the authorities discussed, the agency proposes to require sponsors of IND's related to human gene therapy and xenotransplantation to disclose certain specified safety and effectiveness data and information. This proposal will formalize and codify the existing practice in these fields under which these data and information have been publicly disclosed by their sponsors. Disclosure is especially necessary regarding these new, important, and also controversial technologies so that the research community and the public can be assured of the safety of conducting clinical trials of these products.

This proposal would require the sponsors of human gene therapy or xenotransplantation IND's to submit to FDA publicly available versions of information FDA requires in such IND's. The purpose of this requirement is to facilitate FDA's efforts to make important information concerning human gene therapy and xenotransplantation IND's available to the public in a timely and efficient manner. Sponsors would have to redact the information from IND submissions specified in proposed § 601.53. Sponsors would redact trade secrets, confidential commercial information, such as licensing agreements and suppliers, and names and other personal identifiers of patients and, except as specifically provided in the regulations, names and personal identifiers of third parties, such as physicians, hospitals, etc. (See §§ 20.61 and 20.63.) It would not be necessary for sponsors to redact the vast majority of the information in human gene therapy and xenotransplantation IND's since, as described in this proposal, such information would be publicly disclosable.

The proposed rule would also specify that FDA may place a human gene therapy or xenotransplantation investigation on clinical hold if the sponsor has not submitted to the agency a redacted and thus disclosable version of the required IND information that complies with the requirements of proposed § 601.53. A sponsor must properly purge its redacted version of trade secrets, confidential commercial information, and names and other personal identifiers and, except as specifically provided in the regulations, names and personal identifiers of third parties, such as physicians, hospitals,

etc. Section 505(i)(3) of the act authorizes FDA to prohibit a sponsor of an investigation from conducting that investigation if FDA determines that the drug involved represents an unreasonable risk to the safety of persons who are the subjects of the clinical investigation, or if there are other reasons that FDA has established by regulation for which the agency may issue a clinical hold. FDA recognizes that errors in redacting may occur and will provide sponsors with an opportunity to correct such errors. However, FDA will have the enforcement authority to place a human gene therapy and xenotransplantation investigation on clinical hold if resolution is not reached on any discrepancies found by FDA in the redacted versions, or if a redacted version is not submitted at all by the sponsor. As described in this proposal, it is important for proposed and ongoing human gene therapy and xenotransplantation investigations to be the subject of public education, discussion, and consideration in order for all relevant issues, including safety, to be explored.

As stated above, FDA has tentatively concluded that the information that would be disclosed as a result of this rulemaking is, in fact, already being made public through a variety of mechanisms, and therefore cannot be considered confidential. As such, it does not constitute confidential commercial (or trade secret) information within the meaning of FOIA Exemption 4.

However, FDA's issuance of this proposed rule is authorized even if the information to be disclosed could be considered confidential commercial information covered by Exemption 4 and within the scope of protection of the Trade Secrets Act (18 U.S.C. 1905). That statute prohibits the disclosure of confidential commercial or trade secret information, except as "authorized by law." Because agency regulations that specifically provide for the disclosure of such information can supply the requisite legal authorization for release of the information for purposes of the Trade Secrets Act, that statute would not present a bar to any of the disclosures contemplated by this proposed rule. (See, e.g., *CNA Financial Corp.*, 830 F.2d 1132, 1138–1139 (D.C. Cir. 1987)).

The broad rulemaking authority conferred on FDA by Congress under the act (21 U.S.C. 201 *et seq.*) permits the agency to amend its regulations as contemplated by this proposed rule.

Section 505(i) of the act (21 U.S.C. 355(i)) gives FDA the authority to issue

regulations imposing conditions on the investigation of new drugs. In addition to prescribing certain mandatory conditions, that section further provides that the agency may impose "other conditions" as necessary "relating to the protection of the public health." (21 U.S.C. 355(i)). This language was added to the act as part of the Drug Amendments of 1962 (Public Law 87–781) to make it "clear that the conditions prescribed in the [bill] are not the sole conditions that may be imposed for the protection of public health." H.R. Conf Rep. No. 2526, at 20 (1962), reprinted in 1962 U.S.C.C.A.N. 2927, 2929. Legislative history relating to these amendments also indicates that one purpose of the bill was to make "information on drugs * * * more readily available to physicians and the general public." (S. Rep. No. 1744, at 1 (1962), 1962 U.S.C.C.A.N. 2884). FDA's broad discretion in adopting regulations under this language has been upheld by the courts. (*United States v. Garfinkel*, 29 F.3d 451 (8th Cir. 1994)).

The proposed amendments to FDA's regulations are within FDA's statutory discretion in imposing conditions on products under development to promote the public health. The public health often is served not only by collection of research data and information, but also by disclosure of such information. (See e.g., *Dole v. United Steelworkers of America*, 494 U.S. 26, 28 (1990)).

The proposed rule would serve several significant public health goals. It would enhance the ability of patients with serious and life-threatening diseases and others seeking information about emerging therapies to obtain critically important information from FDA about the existence of clinical trials in which they might participate, about possible safety problems associated with the products they are taking, and about the regulatory status of applications pending before the agency.

As an aftermath of recent problems in clinical trials involving gene therapy products, FDA and NIH have launched two new initiatives to further strengthen the safeguards for individuals enrolled in clinical studies for gene therapy. One initiative, the Gene Therapy Clinical Trial Plan, would ensure: That sponsors meet their obligation to adequately monitor the clinical trials for which they are responsible; that there is appropriately independent oversight of such clinical trials; and that there is an increased level of government oversight, through increased inspection frequency and review of sponsors' monitoring plans and other clinical trial practices. Under the other initiative, FDA and NIH

will, several times per year, convene Gene Transfer Safety Symposia to provide a critical forum with experts in gene transfer for the sharing and analysis of medical and scientific data from gene transfer research. FDA and NIH support will also be provided for professional organizations and academic centers to hold safety conferences focused on gene therapy. These safety symposia and educational outreach efforts are intended to guide the conduct of current clinical trials and enhance the design of future gene transfer trials to maximize public safety.

The ready availability of information concerning clinical trials involving gene therapy is essential to the success of these efforts. For example, such information would be discussed at the government's safety symposia, may be made available for other scientific discussions and to the general public, and would be used in evaluating current gene therapy practices, including sponsor monitoring and informed consent standards. Likewise, FDA intends to continue to sponsor and support government, professional, and academic conferences related to xenotransplantation. Thus, FDA believes that the disclosure of information contained in INDs related to gene therapy and xenotransplantation trials is essential to patient safety and appropriate informed consent.

In addition to section 505(i), section 701(a) of the act (21 U.S.C. 371(a)) gives FDA general rulemaking authority to issue regulations for the efficient enforcement of the act. A regulation issued under section 701 of the act will be sustained as long as it is reasonably related to the purposes of the act. (*United States v. Nova Scotia Food Prod. Corp.*, 568 F.2d 240, 246 (2d Cir. 1977)). Section 903(b) of the act (21 U.S.C. 393(b)) explicitly states that the mission of FDA includes the promotion and protection of the public health. It has long been recognized by the courts, including the Supreme Court, that the primary purpose of the act is the protection of public health (*United States v. An Article of Drug, Bacto-Unidisk*, 394 U.S. 784, 798 (1969)). As a result, FDA's rulemaking authority under section 701(a) of the act has been broadly construed to uphold a wide variety of the agency's rulemaking activities intended to protect the public health. (See e.g., *National Ass'n of Pharmaceutical Mfrs. v. FDA*, 637 F.2d 877 (2d Cir. 1981)) (current good manufacturing practice regulations); *Pharmaceutical Mfrs. Ass'n v. FDA*, 484 F. Supp. 1179 (D. Del. 1980) (rule requiring disclosure of drug side effects to patients); *American Frozen Food Inst.*

v. *Mathews*, 413 F. Supp. 548 (D.D.C. 1976) (rule establishing common and usual names for certain nonstandard foods to provide consumers with relevant buying information), *aff'd*, 555 F.2d 1059 (D.C. Cir. 1977); *National Nutritional Foods Ass'n v. Weinberger*, 376 F. Supp. 142 (S.D.N.Y.) (rule requiring that certain vitamin preparations be restricted to prescription sale and be labeled accordingly), *aff'd*, 512 F.2d 688 (2d Cir. 1975)), *cert. denied*, 423 U.S. 827 (1975). FDA believes that its rulemaking authority under section 701(a) of the act supports the amendments proposed here because they advance public health goals concerning gene therapy and xenotransplantation studies.

FDA is also proposing to issue this new regulation under the authority of section 361 of the Public Health Service Act (PHS Act) (42 U.S.C. 264). Under section 361 of the PHS Act, FDA may make and enforce regulations necessary to prevent the introduction, transmission, or spread of communicable diseases between the States or from foreign countries into the States. (See sec. 1, Reorg. Plan No. 3 of 1966 at 42 U.S.C. 202 for delegation of section 361 of the PHS Act authority from the Surgeon General to the Secretary, Health and Human Services; see 21 CFR 5.10(a)(4) for delegation from the Secretary to FDA.) Intrastate transactions may also be regulated under section 361 of the PHS Act.

This proposed regulation is part of a regulatory program that will further the goal of preventing the introduction, transmission, or spread of communicable disease. For this regulatory system to be effective in preventing the spread of disease, FDA must be able to regularly make publicly available information regarding these experimental procedures. By providing sponsors, clinical investigators, patients and their families, and the general public with access to the types of information proposed in this rule, FDA will be able to more rapidly identify and react appropriately to newly discovered or understood risks in order to prevent the spread of communicable disease.

Studies in the areas of gene therapy and xenotransplantation are conducted to explore the potential for considerable benefits. However, use of these procedures, particularly in the case of xenotransplantation, poses potential risks for the transmission of infectious disease. Infectious disease public health concerns focus not only on the transmission of known zoonoses, but also on the transmission of infectious agents as yet unrecognized. The disruption of natural anatomical barriers

and immunosuppression of the recipient increase the likelihood of interspecies transmission of xenogeneic infectious agents. An infectious agent may pose risks if it can infect, cause disease in, and transmit among humans, or if its ability to infect, cause disease in, or transmit among humans remains inadequately defined. The public availability of information this proposed rule envisions will permit public attention to any emerging risks associated with these experimental techniques, early detection and definition of which will permit the agency and sponsors to take steps to prevent or minimize the introduction of communicable disease.

An additional concern is that these infectious agents could subsequently be transmitted from the patient to family members and other close contacts of the patients, to health care personnel, and to other members of the public. Because the potential risk of transmission of infectious disease extends beyond the patient receiving the treatment, it is vital that the public, as well as the patient, be informed and educated about potential infectious disease risks and methods for reducing those risks. Close contacts should understand the uncertainty regarding the risks of xenogeneic infections, behaviors known to transmit infectious agents from human to human (e.g., unprotected sex, breast feeding, intravenous drug use with shared needles, and other activities that involve potential exchange of blood or other body fluids) and methods to minimize the risk of transmission. Close contacts of recipients also need to know about the importance of reporting any significant unexplained illness through their health care provider to the research coordinator at the institutions where the xenotransplantation was performed. This broader concern for the spread of communicable disease is reflected in the proposed requirements providing for public disclosure. While informed consent procedures may try to address these educational needs, the public release and discussion of information that this proposed rule calls for is also necessary to ensure that all those potentially at risk have the information to manage these risks and so avoid or minimize the spread of communicable disease.

For all the above reasons, to promote and protect the public health, FDA is proposing to issue this proposed rule providing for public disclosure of certain information relating to gene therapy and xenotransplantation.

C. Discussion of the Proposed Rule

The proposed rule would create a new § 601.52 entitled "Availability for public disclosure of certain data and information related to human gene therapy or xenotransplantation" and § 601.53 entitled "Submission to FDA of certain data and information related to human gene therapy or xenotransplantation for public disclosure." In addition, conforming amendments are proposed to §§ 20.100, 312.42, 312.130, 601.50, and 601.51. The provisions of this rulemaking do not alter the procedures specified in part 312 for submission of an IND. The proposed regulations are discussed below.

1. Sections 601.50 and 601.51

Part 601 (21 CFR part 601) sets forth provisions that govern the licensing of biologic products by the FDA. Existing procedures and requirements regarding confidentiality of data and information contained in IND's for biological products or biologics license applications are described in §§ 601.50 and 601.51. The proposed rule would amend §§ 601.50 and 601.51 to include language that would reference the exceptions proposed in § 601.52 regarding the availability for public disclosure of certain data and information related to human gene therapy or xenotransplantation. Specifically, §§ 601.50(a) and 601.51(a) would be amended to add the words, "Except as provided in § 601.52."

In addition, FDA is proposing to amend the § 601.50 section heading and § 601.50(a) to replace the word "notice" with "application" to be consistent with other current regulations regarding investigational new drugs, i.e., part 312.

2. Proposed § 601.52

Proposed § 601.52 would set forth the requirements regarding the availability for public disclosure of certain data and information related to human gene therapy or xenotransplantation. These provisions would define the therapies and scope of the proposed regulation, and describe the types of data and information related to human gene therapy and xenotransplantation that may be disclosed by FDA.

a. *Definitions.* Proposed § 601.52(a) would include definitions of human gene therapy and xenotransplantation that are consistent with existing agency policy and guidance regarding these therapies. Proposed § 601.52(a)(1) would define "human gene therapy" to mean the administration of genetic material in order to modify or manipulate the expression of a gene

product or to alter the biological properties of living cells for therapeutic use. FDA interprets this definition to include both the *ex vivo* and *in vivo* modification of cells. Proposed § 601.52(a)(2) would define “xenotransplantation” to mean any procedure that involves the transplantation, implantation, or infusion into a human recipient of either: (a) Live cells, tissues, or organs from a nonhuman animal source, or (b) human body fluids, cells, tissues, or organs that have had *ex vivo* contact with live nonhuman animal cells, tissues, or organs. This definition of xenotransplantation does not include the use of products that are nonliving, acellular products such as porcine heart valves, porcine insulin, or bovine serum albumin. The definition also does not include non-animal cells and tissues, such as bacteria and plant cells.

Because the terms “human gene therapy” and “xenotransplantation” are not currently used elsewhere in the regulations, FDA is proposing that, for the convenience of the user, the definitions be included in proposed § 601.52. If, in the future, additional regulations are issued using these terms, FDA intends to move these definitions to the section of the regulations which currently includes definitions of other terms applicable to biological products (21 CFR 600.3).

b. *Scope.* Proposed § 601.52(b) would describe the scope of the proposed regulation. Consistent with the use of the terms “human gene therapy” and “xenotransplantation,” FDA intends that the proposed rule apply to the procedures, not specific products used in the therapies, although data and information regarding a product may be disclosed as proposed in § 601.52(c). FDA intends with this broadly-defined scope that the proposed regulation apply to any experimental use of human gene therapy and xenotransplantation, although the immediate impact of the proposed regulation would be on investigational products. For example, the proposed regulations would apply to any use of gene therapy or xenotransplantation in clinical studies in humans, including use of a licensed gene therapy or xenotransplantation product with an experimental drug or device being clinically studied for use in a gene therapy or xenotransplantation procedure.

FDA believes it is not necessary to disclose for purposes of public education and discussion all the information which may be included in an IND. Except as specifically provided in the proposed rule, FDA intends that information regarding human gene

therapy or xenotransplantation investigations will continue to be held confidential, consistent with existing regulations in §§ 20.61, 20.62, 20.63, 20.100, 312.130, 601.50, and 601.51. Accordingly, proposed § 601.52(b) would specify that, except as specifically provided in proposed § 601.52, the availability for public disclosure of data and information related to human gene therapy or xenotransplantation shall remain in accordance with § 601.50 for IND’s for a biological product.

c. *Information for public disclosure.* Proposed § 601.52(c) would specify the types of data and information related to human gene therapy or xenotransplantation that the FDA may make available for public disclosure. The types of information listed in proposed § 601.52(c) are already required for submission under existing regulations (parts 312 and 601) as part of an IND or BLA or as a supplement to a BLA.

Under proposed § 601.52(c)(1), FDA would make product and patient safety data and related information related to human gene therapy and xenotransplantation available for public disclosure. This proposed provision is similar to existing requirements in § 601.51(e)(1), which require that all safety and effectiveness data and information contained in a biological product file be made available for public disclosure immediately after a license has been issued. The proposed provisions in § 601.52, however, would extend this throughout the entire product development process for a product related to human gene therapy or xenotransplantation. The proposed rule further specifies in § 601.52(c)(1) that for the purposes of this proposed regulation, product and patient safety data and related information include results of preclinical and clinical studies and tests that demonstrate the safety and/or feasibility of the proposed procedures. In addition, FDA proposes in § 601.52(c)(1) to identify some of the types of product and patient safety data and related information that would be disclosed to the public that are particularly relevant or specific to human gene therapy and xenotransplantation. These types of product and patient safety data and related information are: (1) Analysis in animals, humans, or *in vitro* systems of gene transfer, expression, and persistence; (2) vector biodistribution; (3) evidence for immune response/ anergy; (4) biological activity; (5) results of product safety testing including test results for known xenogeneic and human infectious agents and replication

competent virus; (6) qualification of source herd, individual source animal, and source organ/tissue/cells for xenotransplantation in humans; and (7) information on monitoring or prevention of potential health risks to the recipient, close contacts, and health care workers. FDA does not intend this to be an exclusive list. In all cases, names and other personal identifiers of patients and, except as specifically provided in the regulations, names and other personal identifiers of third parties, such as physicians or hospitals, would be removed. Furthermore, FDA does not intend product and patient safety data and related information under proposed § 601.52(c)(1) to include IND safety reports and annual reports, as provided for in §§ 312.32 and 312.33. Rather, specific requirements for the public disclosure of these types of reports are proposed below in § 601.52(c)(7) and (c)(8), respectively.

Under proposed § 601.52(c)(2) and (c)(3), FDA would make the name and address of the sponsor and the clinical indications to be studied available for public disclosure. The sponsor name and address and the indications to be studied are types of information that are consistent with information already required for submission to FDA in an IND under § 312.23(a)(1)(i) and (a)(3)(iv)(b), respectively.

Under proposed § 601.52(c)(4), FDA would make the protocol for each planned study available for public disclosure. A study protocol is required for submission in an IND under § 312.23(a)(6); proposed § 601.52(c)(4) would specify that certain elements of the protocol be available for public disclosure. Proposed § 601.52(c)(4)(i) through (c)(4)(vi) would describe the following specific elements of the protocol to be available for public disclosure: (1) A scientific abstract and a non-technical abstract; (2) a statement of the objectives, purpose, and rationale of the study (submitted in an IND under § 312.23(a)(6)(iii)(a)); (3) the name and address of each investigator (submitted in an IND under § 312.23(a)(6)(iii)(b)); (4) the name and address of the official contacts of each local review body as appropriate (IRB (submitted in an IND under § 312.23(a)(6)(iii)(b)), and IBC (NIH *Guidelines for Research Involving Recombinant DNA Molecules*, revised April 1998)) and dated copies of each committee’s approval of the study; (5) the criteria for patient selection and exclusion and an estimate of the number of patients to be studied (submitted in an IND under § 312.23(a)(6)(iii)(c)); and (6) a description of the treatment that will be administered to patients and the clinical procedures, laboratory tests, or

other measures to be taken to monitor the safety and effects of the drug in human subjects and to minimize risk (similar to that submitted in an IND under § 312.23(a)(6)(iii)(g)). FDA intends that the term “investigator” in proposed § 601.52(c)(4)(iii) include “sponsor-investigators” (individuals who have the responsibility for both the development and clinical investigation of the product) as well as “investigators,” both of which are defined in existing § 312.3(b). In proposed § 601.52(c)(4)(iv), FDA intends to make available for public disclosure the dated copies of the IRB’s and IRC’s approval of the proposed clinical study to identify when the IRB or IBC assumed responsibility for the continued review and approval of the IND.

Under proposed § 601.52(c)(5), FDA would make sample informed consent forms available for public disclosure. FDA proposes to provide public access to human gene therapy and xenotransplantation clinical trial information relevant to informed consent to promote public education, discussion, and consideration of the unique challenges that these novel therapies present to assuring adequate informed consent, as discussed previously in this proposed rule.

Under proposed § 601.52(c)(6), FDA would make the identification of the biological product(s) and a general description of the method of production, including a description of product features that may affect patient safety, available for public disclosure. This proposed provision contains types of information that are required for submission to FDA in an IND under § 312.23. FDA has modified the language taken from § 312.23 to reflect information needs related to human gene therapy and xenotransplantation and specifies that only a “general” description of the production method would be made available, excluding trade secret information. FDA does, however, propose to further specify in § 601.52(c)(6) that the identification and description would include the following types of information, as applicable: (1) The vector name and type; (2) gene insert; (3) regulatory elements and their source; (4) intended target cells; (5) source of cells, tissues, or organ(s); (6) method used to prepare the vector containing cells; (7) method used to procure and prepare cells, tissues, or organ(s) for xenotransplantation; (8) purity of cells; (9) adventitious agent testing; (10) description of the delivery system; (11) ancillary products used during production; (12) herd colony and individual source animal health

maintenance and surveillance records; and (13) biological specimens to be archived from source animals. These types of information are consistent with information that is already submitted to and publicly disclosed by OBA for human gene therapy.

Under proposed § 601.52(c)(7), FDA would make IND safety reports, as provided in § 312.32, and other similar data and information available for public disclosure. Under § 312.32, sponsors of investigational drugs, including biological drugs, are required to submit to FDA certain adverse reaction reports concerning their product. Under § 601.51(e)(3), information concerning these adverse experience reports, excluding names and other identifiers of patients, health care facilities, and physicians, may be publicly disclosed after the licensure of the product. Under proposed § 601.52(c)(7), such adverse experience reports and other safety reports related to an investigational product could be publicly disclosed at any time throughout the lifetime of the product. The same limitations for disclosure included in § 601.51(e)(3) are included in proposed § 601.52(c) to protect the privacy of patients and health care workers.

Under § 601.52(c)(8), FDA would make information submitted in the annual report available for public disclosure. Sponsors must submit to FDA annual reports of the progress of the investigations as required under § 312.33. FDA proposes that the following types of information relevant to human gene therapy and xenotransplantation be included, as applicable, in the annual report submitted by the sponsor to FDA for public disclosure: (1) Evidence of gene transfer, gene expression in target cells, and biological activity; (2) assessment of immune response; (3) analysis of biodistribution; (4) significant preclinical and clinical toxicities; (5) evidence of infection by agents associated with the products; (6) adverse experiences; (7) number of subjects who died during participation in the investigation, with the cause of death for each subject and the status of autopsy requests; and (8) any available post mortem evidence of gene transfer, biodistribution, specifically including gonadal distribution. In all cases, names and other personal identifiers of patients and, except as specifically provided in the regulations, names and other personal identifiers of third parties, such as physicians or hospitals, would be removed.

Under proposed § 601.52(c)(9), FDA would make the regulatory status of the

investigation, the date of a regulatory action, and the reason for an action available for public disclosure in order to identify to the public the current regulatory status of a clinical investigation. For example, FDA would disclose that an investigation is on clinical hold, or that an IND is inactive, withdrawn, or terminated. Additional information regarding the procedures and criteria for placing an investigation on clinical hold, withdrawal of an IND, inactive status for an IND, and IND termination may be found in §§ 312.42, 312.38, 312.45, and 312.44, respectively.

Under § 601.52(c)(10), FDA would make available for public disclosure other relevant data and information that the Director, CBER, determines are necessary for the appropriate consideration of the public health and scientific issues, including relevant ethical issues raised by human gene therapy or xenotransplantation. This proposed provision is included because the investigational nature of these therapies and the continuing evolution of the science surrounding these therapies renders FDA unable to anticipate all of the types of information related to human gene therapy and xenotransplantation that may warrant public education, discussion, and consideration. Examples of other relevant data that FDA may disclose could, under certain circumstances, include the details of a test used to determine eligibility for trial entry or autopsy or biopsy information. However, in general, FDA intends to release only the information specifically identified in this proposed rule, except in unique conditions or circumstances. Proposed § 601.52(c)(10) would provide that other relevant data and information may be approved for disclosure only by the Director of CBER.

3. Proposed § 601.53

Proposed § 601.53 would require sponsors of human gene therapy and xenotransplantation clinical trials to submit to FDA for public disclosure a redacted version of certain data and information. These provisions would specify when and what types of submissions to make to FDA in a redacted version for public disclosure, and the requirements for identifying and certifying these submissions.

Furthermore, proposed § 312.42(b)(6) provides that a sponsor’s failure to submit to FDA the data and information specified in §§ 601.52 and 601.53 that has been properly redacted under § 601.53(a) is a basis for FDA placing the investigation on clinical hold. FDA recognizes that errors in redacting may occur and will provide sponsors with an

opportunity to correct such errors. However, FDA will have the enforcement authority to place a human gene therapy and xenotransplantation investigation on clinical hold if resolution is not reached on any discrepancies found by FDA in the redacted versions, or if a redacted version is not submitted at all by the sponsor. It is important that FDA has the specific authority to place a human gene therapy or xenotransplantation investigation on clinical hold if the sponsor has not submitted required data and information to FDA in a form that FDA can make publicly available in a timely and efficient manner. As previously described in this proposal, due to the unique nature of human gene therapy and xenotransplantation, public participation in the consideration of proposed and ongoing clinical studies of such therapies is crucial. In order for such public education, discussion, and consideration to take place and be meaningful, FDA must be able to make all relevant and publicly disclosable data and information available to the public as soon as practicable. The agency has determined that having sponsors submit redacted versions that comply with proposed §§ 601.52 and 601.53 is the most efficient means to accomplish this.

Under proposed § 601.53(a), FDA would require the sponsor of an IND to submit to FDA for public disclosure a redacted version of the types of submissions identified in § 601.53(b)(1) through (b)(5). The sponsor would be required to include all applicable information identified as disclosable in § 601.52 and redact all information considered confidential as trade secret, names and other personal identifiers of patients and, except as specifically provided in the regulations, names and personal identifiers of third parties, such as physicians, hospitals, etc., and certain confidential commercial information, such as information regarding commercial licensing agreements or the identification of suppliers. Sponsors would be permitted to redact either by removing or obscuring the information exempt from disclosure.

Proposed § 601.53(b)(1) through (b)(5) would list the types of submissions that the sponsor would be required to submit to FDA in duplicate and as a redacted version for public disclosure. FDA believes this information should be available for public disclosure as soon as possible and therefore, would require under this paragraph that the redacted version be submitted to FDA concurrently with the original

unabridged submission or at the specific time points noted.

Proposed § 601.53(b)(1) would require submission for public disclosure a redacted version of the information defined under § 601.52 to accompany the original unabridged IND submission.

Proposed § 601.53(b)(2) would require submission for public disclosure a redacted version of any amendment documenting changes or additions to the information defined under § 601.52 that occur either during the IND review process or after the IND goes into effect. FDA recognizes that some amendments may require negotiation with FDA and subsequent revision by the sponsor. As such, FDA would require that the redacted version of any amendment be submitted at the time the amendment goes into effect.

Proposed § 601.53(b)(3) would require submission for public disclosure of a redacted version of any IND safety report at the time of submission of the original report to FDA. Sponsors are required under § 312.32 to notify FDA in a written IND safety report of any serious and unexpected adverse experiences associated with the use of their drug no later than 15 days after the sponsor's initial receipt of the information. FDA believes that the timely availability of adverse experience information is essential for public education and informed discussion and consideration of the health and safety issues presented by the experiences.

Proposed § 601.53(b)(4) would require submission for public disclosure of a redacted version of the annual report, in accordance with § 312.33. Consistent with § 312.33, sponsors would be required to submit, within 60 days of the anniversary date that the IND went into effect, a redacted version of the annual report.

Under proposed § 601.53(b)(5), a sponsor would be required to submit for public disclosure a redacted version of other information upon specific request of the Director, CBER. For example, FDA may request that the sponsor submit information regarding a test used to determine eligibility for trial entry. This proposed provision is included because due to the investigational nature of these therapies and the continuing evolution of the science surrounding these therapies, FDA is not able to anticipate all of the types of information related to human gene therapy and xenotransplantation that may warrant public education, discussion, and consideration. However, in general, FDA does not intend to request information not identified in this proposed rule, except for unique conditions or circumstances.

Proposed § 601.53(c) would require that the sponsor submit the information identified in § 601.53(b) in duplicate, in a form readily separable from the nonredacted or original unabridged version or submission and clearly marked as suitable for public disclosure on each page of the submission. This proposed provision would enable FDA to identify and provide this information more rapidly to the public and would help assure that only appropriate information is disclosed to the public.

Proposed § 601.53(d) would require that any copyrighted material be included in a single appendix to the submission and listed in a bibliography in the redacted version. The proposal would specify that any copyrighted material whose copyright is not owned by the applicant shall not be included in any other section of the redacted version. FDA is including this provision to facilitate timely release of the redacted version on the Internet. In response to an FOIA request, copyrighted materials can be included in the response. However, with regard to posting on the Internet, copyrighted material must be redacted prior to electronic disclosure as this is not considered a "fair use" of copyrighted material. Therefore, FDA would not release the appendix containing copyrighted materials as part of the redacted version on the Internet, but may release the bibliography of materials included in the appendix.

Proposed § 601.53(e) would require that redacted versions be accompanied by the statement specified to ensure that the sponsor has redacted only the information identified in § 601.53(a) as exempt from disclosure (confidential commercial, trade secret, or personal information). In addition, under proposed § 601.53, the sponsor must include a declaration that the statement is true and correct, under penalty of perjury.

4. Conforming Amendments

The proposed rule would make conforming amendments to parts 20 and 312. Part 20 describes the procedures and policy regarding the availability and disclosure of information to the public. Section 20.100 lists the cross-references to other sections of title 21 CFR that contain requirements on the availability of specific categories of FDA records and how these records are handled upon a request for public disclosure. The proposed rule would amend § 20.100(c) by adding a paragraph (43) that would contain a cross-reference to the proposed § 601.52 regarding the availability for public disclosure of certain data and information submitted

to FDA related to human gene therapy or xenotransplantation.

Part 312 describes the procedures and requirements that govern the use of investigational new drugs, including provisions for submission to and review by FDA of IND's. The provisions of this rulemaking do not alter the procedures specified in part 312 for submission of an IND. Section 312.42, among other things, lists the grounds for which FDA may impose a clinical hold of an investigation. Proposed § 312.42(b)(7) would amend § 312.42 by adding an additional basis for clinical hold for human gene therapy and xenotransplantation investigations. Under this proposal, FDA could place a human gene therapy or xenotransplantation investigation on clinical hold if the sponsor has not submitted to the agency a redacted version for public disclosure that complies with the requirements of § 601.53.

Section § 312.130 contains requirements regarding the availability for public disclosure of data and information in an IND. The proposed rule would amend § 312.130 by revising paragraph (b) to include a reference to proposed § 601.52, in addition to the existing references to §§ 601.50 and 601.51, when listing the provisions of this chapter that govern the availability for public disclosure of all data and information in an IND.

III. Implementation

Under the proposed rule, FDA would require that sponsors of human gene therapy and xenotransplantation clinical trials submit for public disclosure a redacted version of the information defined under § 601.52 as contained in the initial IND submission, amendments documenting changes or additions to the information defined under § 601.52 at the time the amendments go into effect, IND safety reports, and annual reports. The redacted version of these documents should be submitted to FDA in a form immediately releasable to the public, and clearly marked accordingly on each page of the submission as suitable for public disclosure. Acceptable approaches range from submitting a "marked up" version of the original that obscures the information which is not to be disclosed, to developing a separate document that abstracts the needed information for public disclosure from the original unabridged version submitted to FDA.

Specifically, FDA is proposing that the redacted version of the information specified in the proposed rule be submitted to FDA concurrently with the

original unabridged IND submission or at the specific time points noted in the provisions. Sponsors of human gene therapy and xenotransplantation clinical trials would send an original and two copies of the original unabridged version of the IND submission (as required under existing § 312.23(d)) as well as one copy of the redacted version for public disclosure to FDA's CBER, where they would be received by the Document Control Center (DCC) to be logged, filed, and routed for appropriate documentation, review, and approval. DCC would route the submittals to the appropriate FDA reviewer, where, upon receipt, the redacted version for public disclosure would be reviewed for administrative completeness as well as to ensure that the submitting sponsor has appropriately redacted personal information regarding patients and third parties prior to release to the public. Once this review is complete, the redacted version for public disclosure would be sent to the Dockets Management Branch for public display where a docket number would be assigned. Each redacted version for public disclosure submitted to FDA would be tagged with the same docket number for that IND for reference. FDA is also proposing to make the redacted versions for public disclosure available to the public electronically on the Internet site according to the docket number.

In addition, to facilitate timely release by FDA of the redacted version, FDA is proposing to require that all copyrighted materials submitted in accordance with § 601.53 be placed in a single appendix and listed in a bibliography in the redacted version. Should an FOIA request be received for the data and information specified in § 601.52, FDA would be able to include a copy of any copyrighted materials in its response. However, FDA would not be able to publicly release any copyrighted material on the Internet as electronic posting of such information is not a "fair use" of that copyrighted material and must be redacted prior to electronic release. In this case, FDA instead would disclose the bibliography of copyrighted materials contained in the appendix.

FDA encourages, but would not require at this time, sponsors to submit the redacted version for public disclosure in electronic format. Pilot programs are currently underway regarding submission of electronic IND's and BLA's. (See 63 FR 29740 and 29741.) As such, FDA may, in the near future, implement electronic submission and disclosure of this information.

Sponsors of human gene therapy or xenotransplantation clinical trials who submit an initial IND or an amendment to an existing IND on or after the effective date of the final rule resulting from this rulemaking would be required to submit a redacted version for public disclosure in conformance with the rule.

Sponsors of xenotransplantation clinical trials who have submitted an IND to FDA prior to the effective date of the final rule resulting from this rulemaking would be required to submit for public disclosure a redacted version of the information defined under § 601.52, reflecting all amendments to date, by a date specified in the final rule.

Sponsors of human gene therapy clinical trials who have submitted IND's or amendments prior to the effective date of the final rule, need not submit redacted versions. For these IND's or amendments, FDA will rely on the existing OBA database as a source of the information that FDA will disclose.

For additional information regarding the proposed effective dates for the final rule see the end of this preamble.

IV. Environmental Impact

The agency has determined under 21 CFR 25.30(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

V. Analysis of Impacts and Initial Regulatory Flexibility Analysis

FDA has examined the impacts of the proposed rule under Executive Order 12866, under the Regulatory Flexibility Act (5 U.S.C. 601–612) (as amended by subtitle D of the Small Business Regulatory Fairness Act of 1996 (Public Law 104–121)), and under the Unfunded Mandates Reform Act (UMRA) (Public Law 104–4). Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The Regulatory Flexibility Act requires agencies to analyze whether a rule may have a significant impact on a substantial number of small entities and, if it does, to analyze regulatory options that would minimize the impact. The UMRA requires that agencies prepare a written statement under section 202(a) of UMRA of

anticipated costs and benefits before proposing any rule that may result in an expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100 million (adjusted annually for inflation) in any one year.

The agency believes that this final rule is consistent with the principles identified in Executive Order 12866. OMB has determined that the final rule is a significant regulatory action as defined by the Executive Order and so is subject to review. Because the rule does not impose mandates on State, local, or tribal governments, or the private sector, that will result in an expenditure in any one year of \$100 million or more, FDA is not required to perform a cost-benefit analysis according to the Unfunded Mandates Reform Act. Aggregate impacts of the rule, and aggregate expenditures caused by the rule, will not approach \$100 million for either the public or the private sector. As discussed below, because of the limited information that can be used to characterize the entities that may qualify as small businesses, the impact on small business establishments is uncertain. FDA has therefore prepared an Initial Regulatory Flexibility Analysis.

A. Background

In the discussion that follows, FDA will describe the purpose and requirements of the proposed rule, the estimated number of entities that will be affected, the estimated cost of compliance with the rule per IND, and a summary of estimated annual costs to industry.

The purpose of the proposed rule is to make available for public disclosure and to require submission in redacted version for public disclosure, certain data and information related to human gene therapy and xenotransplantation investigations. These areas of clinical investigation have the potential for unique public health risks and modification of the human genome. The public health and safety risks require that FDA be able to make timely disclosures of adverse outcomes, such as the development of novel infectious agents, unanticipated alterations of a recipient's germline, and severe toxicity resulting from the therapy, in order to prevent or contain further adverse occurrences.

These therapeutic research areas will effectively transform participating recipients into life-long research subjects. The length of commitment, coupled with the magnitude of potential risks to the recipients, their families and community, will present new challenges for risk assessment and the adequacy of

informed consent. As noted earlier, these investigative approaches raise new challenges for Institutional Review Boards. The novelty and extent of the risk issues will call for expanded public access to clinical trial information relevant to assessment of risks and benefits, and public education and informed consent. These public information needs can only be addressed through disclosure of relevant information about the proposed and ongoing investigations.

The information to come under this disclosure regulation includes: (1) Product and patient safety data and related information including results of preclinical and clinical studies and tests that demonstrate the safety and/or feasibility of the proposed procedures; (2) the name and address of the sponsor; (3) the clinical indications to be studied; (4) the protocol for each planned study to include a scientific abstract and a nontechnical abstract, a statement of the objectives, purpose, and rationale of the study, the name and address of each investigator and subinvestigator, the name and address of the official contacts of each local review body as appropriate (IRB, IBC) and the dated copies of approval by each group, the criteria for patient selection and exclusion, an estimate of the number of patients to be studied, and a description of the treatment that will be administered to patients, and the clinical procedures, laboratory tests, or other measures to be taken to monitor the safety and effects of the drug in human subjects and to minimize risk; (5) the informed consent documentation; (6) the identification of the biological product(s) and a general description of the method of production, including a description of product features that may affect patient safety; (7) the IND safety reports; (8) the information submitted to FDA in the annual report; (9) the regulatory status of the investigation, the date of an action, and the reason for an action; (10) and other relevant data and information that the Director, CBER, determines are necessary for the appropriate consideration of the public health and scientific issues, including relevant ethical issues, raised by human gene therapy or xenotransplantation. After a license has been issued, all safety and effectiveness data and information in the biological product file are immediately available for public disclosure unless extraordinary circumstances are shown (§ 601.51(e)(1)).

The sponsor of an IND involving human gene therapy or xenotransplantation will be required to

submit this information in redacted version for public disclosure, removing all information that would be defined as trade secret, or personal information. The redacted submissions would be as follows:

1. Redacted version of information as defined under § 601.52 at the time of the initial IND submission.

2. Redacted version of any amendment documenting changes or additions to the information defined under § 601.52, at the time the amendment goes into effect.

3. Redacted version of IND safety reports at the time of submission of the initial report.

4. Redacted version of the annual progress report within 60 days of the anniversary date that the IND went into effect.

The redacted version would be submitted in a form that is readily identifiable and separable from the original unabridged submission to FDA.

The proposed rule will affect sponsors of human gene therapy or xenotransplantation clinical trials. The agency estimates that, at any one time, a total of 147 sponsors will be affected by the proposed rule. This includes 134 sponsors that have submitted IND's in the area of human gene therapy, and an additional 13 sponsors that have submitted IND's for clinical trials involving xenotransplantation. The number of new IND's per year in these two research areas has remained relatively constant at the level of approximately 45 IND submissions per year, for the past several years.

B. Cost Impact

Certain types of information have a substantial commercial value. This value may be particularly high for data pertaining to specific business plans, strategies, or lines of scientific research. The required disclosure of such information, however, imposes no economic impact where the relevant data are already available to competitors. As discussed earlier in this preamble, information that would be disclosed under this proposed rule is routinely examined and discussed by the RAC, in the case of gene therapy, and discussed at other public meetings addressing xenotransplantation issues, or through public filings with the SEC. Because the information proposed for disclosure has not been treated as confidential by industry, FDA finds that there is minimal incremental commercial value associated with the information that may be disclosed. The agency has, therefore, not attributed regulatory costs to its disclosure. The

agency requests public comment on the validity of this view.

The proposed rule will require additional paperwork activities for affected firms. The primary impact on clinical trial sponsors will be the requirement for additional staff time to redact IND-related submissions, throughout the period in which the IND is active. Table 1 of this document provides a summary of the types of submissions that will be required for public disclosure and the estimated number of such submissions that FDA expects to receive each year across all active IND's in the areas of human gene

therapy and xenotransplantation. The estimated time required per redacted submission is also shown in table 1. The numbers of submissions and redaction times are estimated by FDA staff involved in application review, based on their experience in recent years, and their familiarity with the content of the IND packages. The redaction is assumed to be performed by a relatively senior member of the scientific research staff at a sponsoring organization. The cost per hour of staff time is estimated to be approximately \$38, based on the Bureau of Labor Statistics estimate of total

hourly compensation for professional white-collar workers in the private goods-producing and service producing industries.³ The redacted documents listed in table 1 reflect a series of submissions that would typically occur over several years. Based on FDA's estimate of the total volume of submissions of each type per year, the agency estimates that the total cost to the industry will be approximately \$123,880 [\$41,040+\$5,130+\$1,170+\$76,000]. This yields an average annual cost of \$843 per sponsor [\$123,880/147].

TABLE 1.—ESTIMATES OF COST PER YEAR FOR INDUSTRY-WIDE REDACTION EFFORTS

Type of Redacted Submission	Total Industry Submissions per Year	Average Redaction Time/Submission	Estimated Industry Cost per Year
New IND ¹ —initial and authorized version	45	24 hours	\$41,040 [45 x 24 x \$38]
IND amendments	270	0.5 hour	\$5,130 [270 x 0.5 x \$38]
IND safety reports	90	0.5 hour	\$1,170 [90 x 0.5 x \$38]
Annual reports	100	20 hours	\$76,000 [100 x 20 x \$38]
Total Annual Cost to Industry			\$123,880
Average Annual Cost Per Sponsor (147 sponsors)			\$843

¹ Investigational new drug application.

C. Benefits

Although human gene therapy offers the promise of more effective treatment, for diseases ranging from cystic fibrosis to human immunodeficiency virus (HIV), rapid progress and patient safety in research requires timely communication of new findings about the success or risks of candidate strategies. The key to success for any human gene therapy strategy is attaining a vector that can serve as a safe and efficient gene delivery vehicle (Ref. 5). In general, human gene therapy researchers work to maximize efficacy through the regulation of gene expression over long periods (Ref. 6). Simultaneous with this goal, researchers attempt to develop vectors and treatment strategies that will both minimize the patient's immune response (which counters the therapy) (Ref. 7) and minimize the toxicity of the gene therapy (Refs. 8 and 9). As different vectors are considered, it is critical that newly discovered risks be reported to alert other researchers considering similar vectors or developing therapies to treat similar conditions.

As described earlier, the importance of timely communication of risks is clearly demonstrated by the cystic fibrosis patient who developed an acute adverse event requiring intensive care after receiving an adenoviral vector. In this case, public discussion of the adverse event at the RAC meeting facilitated rapid dissemination of important information about this toxicity, thereby contributing to the safety of patients in other gene therapy trials.

For xenotransplantation, the disclosure of information is necessary for public education and more efficient product and recipient tracking. Communication of risks offers other benefits for recipients of xenotransplantation products, their families, and their communities. According to a recent World Health Organization report on xenotransplantation, "The practice of xenotransplantation carries with it an unquantifiable risk of xenozoonotic infection and disease. Measures are required to minimize risk and maximize safety in the potential use of this technology" (Ref. 10). The level of risk is particularly difficult to quantify since

potential viruses may be unknown and "silent" in the donor species; that is, they may not be identified through the currently available battery of screening tests for known pathogens. In addition, the risk of infection in the recipient of a xenotransplantation product may be substantially increased as a result of the immunosuppressive drug therapy administered to prevent rejection of the transplanted xenotransplantation product.

New evidence supporting the possibility of this risk is reported in a recent study (Ref. 11) showing that pig pancreatic islets transplanted into severely immunodeficient mice produce porcine endogenous retroviruses (PERV) that can infect human cells that had been transplanted into the same mice receiving the porcine pancreatic cells. Although pigs are considered a promising alternative source of organs for xenotransplantation, this study found that the PERV were transcriptionally active and infectious cross-species *in vivo* after xenotransplantation of the pig tissues. These findings bolster earlier concerns about PERV infection from pig islet

³ U.S. Dept of Labor, Bureau of Labor Statistics, Employer Costs for Employee Compensation, March 1997.

xenotransplantation in immunosuppressed human patients.

Recent experience with zoonotic viruses has demonstrated the potential lethality of these viruses. An example is the 1998 to 1999 outbreak of a hendra-like virus in Malaysia and Singapore (Ref. 12). Documented cases occurred primarily among adults who had come in close contact with swine, which also showed signs of the illness. In some instances, illness in the pigs had occurred 1 to 2 weeks before illness in the humans. Illness in humans was characterized by 3 to 14 days of fever and headache followed by drowsiness and disorientation that often progressed to coma within 24 to 48 hours. During the period September 1998 to April 1999, 229 human cases were reported, 111 of which (48 percent) resulted in death. Although the first cases of human illness were reported in September 1998, the type and source of infection was initially unknown, so human exposures continued to occur, with the peak number of new cases occurring 6 months later, in March 1999. Once the type of virus was identified, through laboratory testing, and the source of infection (i.e., exposure to pigs) was serologically confirmed, public health measures were taken to prevent further outbreaks.

Ebola hemorrhagic fever is another disease that is transferable from animals to humans (Ref. 13) and consequently illustrates the importance of timely tracking of and public communication about zoonotic viruses. In the period from January to July 1995, a total of 316 persons became ill with hemorrhagic fever in Kikwit, Democratic Republic of the Congo (DRC) (Ref. 14). During the epidemic, a mortality rate of 60 to 80 percent was reported among hospital cases. After an incubation period of approximately 7 days, the early clinical features of the disease included fever, headache, sore throat, diarrhea and myalgias, followed by vomiting, worsening diarrhea, oliguria, shock and death after 7 to 14 days. In May of 1995, the month of peak onset of new cases, the DRC requested international assistance in investigating the cause of the outbreak. Laboratory testing by the Centers for Disease Control and Prevention (CDC) confirmed the presence of the Zaire subtype of Ebola hemorrhagic fever. Continued investigation and testing enabled the international team to identify modes of transmission and to specify the precautions necessary to prevent further spread of the virus. According to the CDC, prompt laboratory diagnosis is an essential component of the surveillance needed to maximize Ebola prevention

and control measures (Ref. 15). In this instance, the lack of early detection and proper management of Ebola hemorrhagic fever patients resulted in numerous deaths among both health care personnel and patients (Rollin and Ksiazek, 1998). By hastening the disclosure of important risk information, the proposed rule would assist public health agencies and health care providers in more rapidly identifying and controlling any zoonotic viruses that might emerge following xenotransplantation.

As of April 1999, the United Network for Organ Sharing (UNOS) reported a total of 62,443 patients on the waiting list for an organ transplant. This number far exceeds the total of approximately 20,000 transplants performed each year (Ref. 16). In addition to bolstering the supply of viable organ transplants, patients may also benefit from cellular and tissue therapies involving a xenotransplantation product. Although the potential to fill unmet needs is great, the number of prospective xenotransplant recipients represents a sizeable population at potential risk of zoonotic infection. The proposed data disclosures would help to provide the information needed by the public to understand, manage, and minimize the risks associated with these advancing medical technologies.

D. Impact on Small Entities

The agency has only limited information to estimate the number of small entities conducting clinical investigations of human gene therapy or xenotransplantation. As indicated in the cost analysis, the overall number of business entities sponsoring clinical trials is estimated to be 147. Although a few companies are a part of larger firms, many others may have annual revenues of less than \$5 million, which is the revenue level that identifies a small business, according to the Small Business Administration. The estimated cost impact of \$843 per sponsor per year reflects the staff time that would need to be allocated to produce redacted versions of the specified documents for the purpose of public disclosure.

The proposed rule offers sponsors considerable flexibility in implementation by allowing for a range of approaches for preparing a redacted version. Under the proposed rule, acceptable approaches range from submitting a "marked up" version of the original that simply obscures the information not to be disclosed, to development of a separate document that abstracts the needed information for the public from the original unabridged version submitted to FDA. This

flexibility will help to minimize the cost impact.

The agency does not anticipate that the estimated cost will significantly burden any of the sponsors. However, because of the limited information available for establishments sponsoring clinical trials in human gene therapy and xenotransplantation, and its importance in developing estimates of the small entity impact, the agency requests detailed comment on the number and type of businesses sponsoring clinical trials in human gene therapy or xenotransplantation, and the expected impact of the proposed requirements on these entities.

In developing the proposed rule, the agency considered but rejected two alternatives that might impose less burden on small businesses. The agency found, however, that these alternatives would be less effective in supporting the advancement of this research, because of unanswered concerns regarding patient safety and public health. One of the alternatives considered involved voluntary disclosure by clinical trial sponsors without a regulatory requirement. This alternative would reduce costs to industry only if establishments failed to voluntarily provide the needed information for disclosure. Moreover, while voluntary provision of this information would be no less burdensome for industry, it could prove inadequate in protecting public health, because the agency would have no means of assuring the quality and consistency of the content of the voluntarily disclosed information, or the timeliness of its reporting. The disclosure of timely, accurate, and complete information is critical to an appropriate agency response to adverse outcomes, including the emergence of novel and potentially life-threatening infectious agents, or the alteration of the germline in patients participating in the clinical study. Also, voluntary disclosure provides no means for the agency to ensure a balanced dissemination of information on identified risks and benefits. Such balance is central to an adequate public understanding of the technologies, and to an informed public discussion of the overall risk versus benefit to patients and communities.

A second alternative to the proposed rule would require disclosure, but would have FDA assume the sole responsibility for redaction of documents submitted by the sponsor. Although this alternative would reduce the direct cost impact for sponsors, the limited number of agency staff available to perform this task would introduce the risk of delay in producing the redacted

version for public disclosure. This outcome could potentially result in delaying the research, or delaying the timely public availability of critical information.

VII. The Paperwork Reduction Act of 1995

This proposed rule contains information collection provisions that are subject to review by OMB under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520). The title, description, and respondent description of the information collection provisions are shown below with an estimate of the annual reporting burden. Included in the estimate is the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing each collection of information.

FDA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have a practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Title: Submission to FDA for Public Disclosure of Certain Data and Information Related to Human Gene Therapy or Xenotransplantation.

Description: FDA is proposing new regulations to require that sponsors of IND's involving human gene therapy or xenotransplantation submit information related to the IND in redacted version

for public disclosure, removing all information that would be defined as trade secret or personal information whose disclosure would constitute a clearly unwarranted invasion of privacy, and certain confidential commercial information. Each submission for public disclosure would be accompanied by a statement, signed by a responsible person, that the information has been suitably redacted. FDA would then publicly disclose the redacted version to provide an opportunity for public education, discussion, and consideration of public health and safety issues, as well as consideration of societal and ethical issues.

FDA is also proposing to require that the sponsor submit any copyrighted material in a single appendix to each redacted version and any copyrighted material whose copyright is not owned by the sponsor not be included in any other section of the redacted version. The proposal would further require that the redacted version include a bibliography of the copyrighted material contained in the appendix. This provision would facilitate the timely public disclosure of the redacted version on the Internet, with the copyrighted information excluded. Making available copyrighted material on the Internet is not considered "fair use" of copyrighted material.

Description of Respondents: Sponsors of clinical investigations involving human gene therapy or xenotransplantation.

FDA has estimated the burden for each provision that describes a collection of information. The estimates are based on FDA's experience in reviewing IND submissions and in redacting documents related to an IND.

Under proposed § 601.53(b), approximately 147 sponsors of clinical investigations involving human gene therapy (134 sponsors) and xenotransplantation (13 sponsors) would be required to submit a redacted version of certain documents under the IND. For all 147 sponsors, these documents include the original IND (45 submissions/year), amendments to an IND (270 submissions/year), IND safety reports (90 submissions/year), and annual reports (100 submissions/year) for an estimated total of 505 submissions/year (45 + 270 + 90 + 100). FDA has estimated the time necessary to copy and redact each of the above types of submissions; i.e., IND submission, 24 hours/submission; amendments, .5 hour/per submission; IND safety reports, .5 hour/submission; and annual reports, 20 hours/submission. The total burden equals the sum of the burdens estimated for each type of submission (45x24 +

270x.5 + 90x.5 + 100x20 equals 3,260 hours).

Under § 601.53(c) all submissions under § 601.53(b) must be readily separable from the original submission and clearly marked on each page as suitable for disclosure. Under § 601.53(d) of the proposed rule, sponsors of human gene therapy and

xenotransplantation clinical studies would be required to submit copyrighted material in a single appendix to each redacted submission and include in the redacted version a bibliography of these materials. The hours per response, therefore, are an average estimate of the total time for redaction of the document, separation of

copyrighted material and preparation of a bibliography, marking of each page as suitable for public disclosure, and submission to FDA, as provided in § 601.53(b), (c), and (d). The information collection burdens associated with the submission of an IND as provided in part 312 are approved by OMB under OMB control number 0910-0014.

TABLE 2.—ESTIMATED ANNUAL REPORTING BURDEN¹

21 CFR Section	No. of Respondents	Annual Frequency per Response	Total Annual Responses	Hours per Response	Total Hours
601.53(b), (c), and (d)	147	3.4	505	6.5	3,282

¹ There are no capital costs and maintenance costs associated with this collection of information.

In compliance with section 3507(d) of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)), FDA has submitted the information collection provisions of this proposed rule to OMB for review. Interested persons may submit comments on the information collection requirements of this proposal by February 20, 2001, to the Office of Information and Regulatory Affairs, OMB, New Executive Office Bldg., 725 17th St. NW., Washington, DC 20503, Attn: Desk Officer for FDA.

VIII. Proposed Effective Dates

FDA proposes that any final rule that may issue based on this proposal become effective 90 days after the date of its publication in the **Federal Register**. On or after that date, sponsors of human gene therapy or xenotransplantation clinical trials would be required to submit a redacted version of the data and information specified in the final rule as part of a submission into an IND. Sponsors may voluntarily submit a redacted version immediately upon the date of issuance of the final rule. FDA is proposing, for sponsors of xenotransplantation clinical trials who have submitted an IND prior to the effective date of the final rule, that the sponsor submit for public disclosure a redacted version of the information held under the IND, to contain the information specified in proposed § 601.52. FDA invites comment on the length of time after issuance of the final rule that these sponsors should be provided to submit the redacted information.

IX. Request for Comments

Interested persons may submit to the Dockets Management Branch (address above) written comments regarding this proposal by April 18, 2001. Two copies of any comments are to be submitted, except that individuals may submit one

copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Submit written comments on the information collection provisions by February 20, 2001. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 20

Confidential business information, Courts, Freedom of information, Government employees.

21 CFR Part 312

Drugs, Exports, Imports, Investigations, Labeling, Medical research, Reporting and recordkeeping requirements, Safety.

21 CFR Part 601

Administrative practice and procedure, Biologics, Confidential business information.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, it is proposed that 21 CFR parts 20, 312, and 601 be amended as follows:

PART 20—PUBLIC INFORMATION

1. The authority citation for part 20 continues to read as follows:

Authority: 5 U.S.C. 552; 18 U.S.C. 1905; 19 U.S.C. 2531–2582; 21 U.S.C. 321–393, 1401–1403; 42 U.S.C. 241, 242, 242a, 242l, 242n, 243, 262, 263, 263b–263n, 264, 265, 300u–300u–5, 300aa–1.

2. Section 20.100 is amended by adding paragraph (c)(43) to read as follows:

§ 20.100 Applicability; cross-reference to other regulations.

* * * * *

(c) * * *

(43) Data and information submitted related to human gene therapy or xenotransplantation, in § 601.52 of this chapter.

PART 312—INVESTIGATIONAL NEW DRUG APPLICATION

3. The authority citation for part 312 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 371; 42 U.S.C. 262.

4. Section 312.42 is amended by adding paragraph (b)(7) to read as follows:

§ 312.42 Clinical holds and requests for modification.

* * * * *

(b) * * *

(7) *Clinical hold of any investigation, as defined in § 601.52 of this chapter, involving human gene therapy or xenotransplantation.* FDA may place a proposed or ongoing investigation, as defined in § 601.52 of this chapter, involving human gene therapy or xenotransplantation on clinical hold if it is determined that:

(i) Any of the conditions in paragraph (b)(1) or (b)(2) of this section apply; or
(ii) The sponsor has not submitted a redacted version of the data and information, as specified in § 601.52 of this chapter, for public disclosure that complies with the requirements of § 601.53 of this chapter.

* * * * *

5. Section 312.130 is amended by revising paragraph (b) to read as follows:

§ 312.130 Availability for public disclosure of data and information in an IND.

* * * * *

(b) The availability for public disclosure of all data and information in an investigational new drug application for a new drug or antibiotic drug will be handled in accordance with the provisions established in § 314.430 of

this chapter for the confidentiality of data and information in applications submitted in part 314 of this chapter. The availability for public disclosure of all data and information in an investigational new drug application for a biological product will be governed by the provisions of §§ 601.50, 601.51, and 601.52 of this chapter.

* * * * *

PART 601—LICENSING

6. The authority citation for part 601 continues to read as follows:

Authority: 15 U.S.C. 1451–1561; 21 U.S.C. 321, 351, 352, 353, 355, 360, 360c–360f, 360h–360j, 371, 374, 379e, 381; 42 U.S.C. 216, 241, 262, 263; sec. 122, Pub. L. 105–115, 111 Stat. 2322 (21 U.S.C. 355 note).

7. Section 601.50 is amended by revising the section heading and paragraph (a) to read as follows:

§ 601.50 Confidentiality of data and information in an investigational new drug application for a biological product.

(a) Except as provided in § 601.52, the existence of an IND application for a biological product will not be disclosed by the Food and Drug Administration unless it has previously been publicly disclosed or acknowledged.

* * * * *

8. Section 601.51 is amended by revising the section heading and paragraph (a) to read as follows:

§ 601.51 Confidentiality of data and information in a biologics license application.

(a) For purposes of this section the *biological product file* includes all data and information submitted with or incorporated by reference in any biologics license application, IND's incorporated in any such application, master files, and other related submissions. Except as provided in § 601.52, the availability for public disclosure of any record in the biological product file shall be handled in accordance with the provisions of this section.

* * * * *

9. Section 601.52 is added to subpart F to read as follows:

§ 601.52 Availability for public disclosure of certain data and information related to an IND concerning human gene therapy or xenotransplantation.

(a) *Definitions.* The following definitions of terms apply to this section:

(1) *Human gene therapy* means the administration of genetic material in order to modify or manipulate the expression of a gene product or to alter the biological properties of living cells

for therapeutic use. Cells may be modified *ex vivo* for subsequent administration or altered *in vivo* by gene therapy products given directly to the subject.

(2) *Xenotransplantation* means any procedure that involves the transplantation, implantation, or infusion into a human recipient of either: Live cells, tissues, or organs from a nonhuman animal source; or human body fluids, cells, tissues, or organs that have had *ex vivo* contact with live nonhuman animal cells, tissues, or organs.

(b) *Scope.* Except as otherwise provided in this section, the availability for public disclosure of data and information related to human gene therapy or xenotransplantation shall be in accordance with §§ 601.50 and 601.51.

(c) *Information for public disclosure.* FDA will make available for public disclosure the following types of data and information related to an IND concerning human gene therapy or xenotransplantation. Names and other personal identifiers of patients and, except as specifically provided in this section, names and personal identifiers of and third party, such as physicians or hospitals, will not be made available for public disclosure.

(1) Product and patient safety data and related information. For purposes of this section product and patient safety data and related information include results of preclinical and clinical studies and tests that demonstrate the safety and/or feasibility of the proposed procedures. This may include, but is not necessarily limited to, analysis in animals, humans, or *in vitro* systems of gene transfer, expression, and persistence; vector biodistribution; evidence for immune response/anergy; biological activity; and results of product safety testing including testing for known xenogeneic and human infectious agents and replication competent virus; and qualification of source herd, individual source animal, and source organ/tissue/cells for xenotransplantation in humans. Also included is information on monitoring or prevention of potential health risks to the recipient, close contacts, and health care workers, such as patient monitoring for replication competent retrovirus and viral shedding and measures taken to prevent transmission of infectious disease. The availability for public disclosure of data and information in an IND safety report or annual report, as provided under §§ 312.32 and 312.33 of this chapter, will be governed by the provisions of paragraphs (c)(7) and (c)(8) of this section.

(2) The name and address of the sponsor.

(3) The clinical indications to be studied.

(4) A protocol for each planned study, to include:

(i) A scientific abstract and a nontechnical abstract.

(ii) A statement of the objectives, purpose, and rationale of the study.

(iii) The name and address of each investigator.

(iv) The name and address of the official contacts of each local review body as appropriate (Institutional Review Board, Institutional Biosafety Committee) and the dated copies of each committee's approval of the study.

(v) The criteria for patient selection and exclusion and an estimate of the number of patients to be studied.

(vi) A description of the treatment that will be administered to patients and the clinical procedures, laboratory tests, or other measures to be taken to monitor the safety and effects of the drug in human subjects and to minimize risk.

(5) Written informed consent form(s) as provided in § 50.27 of this chapter.

(6) Identification of the biological product(s) and a general description of the method of production, including a description of product features that may affect patient safety. The information shall include, as applicable, the vector name and type; gene insert; regulatory elements and their source; intended target cells; source of cells, tissues, or organ(s); method used to prepare the vector containing cells; method used to procure and prepare cells, tissues, or organs for xenotransplantation; purity of cells; adventitious agent testing; description of the delivery system; ancillary products used during production; herd colony and individual source animal health maintenance and surveillance records; and biological specimens to be archived from source animals.

(7) IND safety reports, as provided in § 312.32 of this chapter, and other similar data and information.

(8) Information submitted in the annual report to include, as applicable, assessment of evidence of gene transfer, gene expression in target cells, biological activity, immune response, status of autopsy request and evidence of gene transfer and gonadal distribution upon autopsy, results from assessment for evidence of infection by agents associated with the product, adverse experiences, and a list of subjects who died during participation in the investigation, with the cause of death for each subject.

(9) The regulatory status of the IND, such as on hold, in effect, inactive, or

withdrawn, the dates of these actions, and the reasons for these actions.

(10) Other relevant data and information that the Director, CBER, determines are necessary for the appropriate consideration of the public health and scientific issues, including relevant ethical issues, raised by human gene therapy or xenotransplantation.

10. Section 601.53 is added to subpart F to read as follows:

§ 601.53 Submission of certain data and information related to human gene therapy or xenotransplantation for public disclosure.

(a) A sponsor of an IND shall submit to FDA for public disclosure in a redacted version the submissions identified in paragraphs (b)(1) through (b)(5) of this section. Each submission shall include all applicable information identified as disclosable in § 601.52, but shall be redacted to remove or obscure all information considered confidential as a trade secret, certain confidential commercial information, such as information regarding commercial licensing agreements or the identification of suppliers, and names and other personal identifiers of patients and, except as specifically provided in this section, names and personal identifiers of any third party, such as physicians or hospitals, must be redacted.

(b) The following shall be submitted in a suitably redacted version and in duplicate at the time points noted:

(1) Information as defined under § 601.52 at the time of initial IND submission.

(2) Any amendment documenting changes or additions to the information as defined under § 601.52 at the time the amendment goes into effect.

(3) IND safety reports at the time of submission of the initial report to FDA.

(4) The annual report, within 60 days of the anniversary date that the IND went into effect, in accordance with § 312.33 of this chapter.

(5) Other information upon the specific request of the Director, CBER.

(c) The submissions identified in paragraph (b) of this section shall be submitted in a form readily separable from the original unabridged submission to FDA and clearly marked on each page of the redacted version as suitable for public disclosure.

(d) Any copies of copyrighted material shall be submitted in a single appendix to each redacted version. Copyrighted materials whose copyright is not owned by the applicant shall not be included in any other section of the redacted versions. A bibliography of copyrighted materials contained in the

appendix shall be included as part of each redacted version.

(e) Any data or information submitted to FDA as a redacted version for public disclosure in accordance with paragraph (a) of this section shall be accompanied by the following statement signed by a responsible individual:

The information contained herein has been redacted for public disclosure. The only material removed from these records is: Confidential commercial or trade secret information exempt from disclosure under the Freedom of Information Act (5 U.S.C. 552 (b)(4)) and the Food and Drug Administration's implementing regulations (21 CFR 20.61); names and other personal identifiers of patients and, except as specifically provided in the regulations, names and other personal identifiers of any third party.

I declare, under the penalty of perjury, that the foregoing is true and correct.

Dated: December 20, 2000.

Jane E. Henney,

Commissioner of Food and Drugs.

Donna E. Shalala,

Secretary of Health and Human Services.

BILLING CODE 4160-01-F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 192 and 592

[Docket No. 00N-1396]

RIN 0910-AC15

Premarket Notice Concerning Bioengineered Foods

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is proposing to require the submission to the agency of data and information regarding plant-derived bioengineered foods that would be consumed by humans or animals. FDA is proposing that this submission be made at least 120 days prior to the commercial distribution of such foods. FDA is taking this action to ensure that it has the appropriate amount of information about bioengineered foods to help to ensure that all market entry decisions by the industry are made consistently and in full compliance with the law. The proposed action will permit the agency to assess on an ongoing basis whether plant-derived bioengineered foods comply with the

standards of the Federal Food, Drug, and Cosmetic Act (the act).

DATES: Submit written comments on the proposed rule by April 3, 2001. Submit written comments on the information collection provisions by February 20, 2001.

See section XIV of this document for the proposed effective date of a final rule based on this document.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Submit written comments on the information collection provisions to the Office of Information and Regulatory Affairs, OMB, New Executive Office Bldg., 725 17th St. NW., rm. 10235, Washington, DC 20503, Attn: Desk Officer for FDA.

FOR FURTHER INFORMATION CONTACT:

Regarding human food issues: Linda S. Kahl, Center for Food Safety and Applied Nutrition (HFS-206), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202-418-3101.

Regarding animal feed issues: William D. Price, Center for Veterinary Medicine (CVM) (HFV-200), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301-827-6652.

I. Background

A. The 1992 Policy

In the **Federal Register** of May 29, 1992 (57 FR 22984), FDA published its "Statement of Policy: Foods Derived From New Plant Varieties" (the 1992 policy). The 1992 policy clarified the agency's interpretation of the application of the act with respect to human foods and animal feeds derived from new plant varieties, including varieties that are developed using recombinant deoxyribonucleic acid (rDNA) technology. This proposal refers to foods derived from plant varieties that are developed using in vitro manipulations of DNA (generally referred to as rDNA technology) as "bioengineered foods."

The 1992 policy provided guidance to industry on scientific and regulatory issues related to plant-derived foods, including bioengineered foods. In developing the 1992 policy as it relates to bioengineered foods, FDA focused on modifications to foods that were likely to result in commercial products and did not attempt to predict future changes in foods that could result from technological advances. Instead, FDA intended to modify its policy as circumstances warranted (57 FR 22984 at 22985).

In announcing the 1992 policy, FDA invited interested persons to submit written comments. Comments received from the scientific community generally have supported the scientific guidance articulated in the 1992 policy, including the scientific guidance as it relates to bioengineered foods. In addition, the views expressed by the members of FDA's Food Advisory Committee (Ref. 1) and the joint meeting of FDA's Food Advisory Committee and Veterinary Medicine Advisory Committee (Ref. 2), generally supported the scientific guidance in the 1992 policy.

However, many consumers, a number of public interest groups, and some State officials have expressed concern about or opposed the regulatory guidance articulated in the 1992 policy, particularly regarding the ability of the regulated industry to make market entry decisions. Frequently, those comments suggested, as an important adjunct to the 1992 policy, that FDA require an administrative process, such as premarket notification, to ensure that the agency remains aware of new

bioengineered foods entering commercial distribution.¹

FDA is confident that the guidance articulated in the 1992 policy adequately addressed both the scientific and regulatory issues raised by the products that were approaching commercialization in 1992. FDA is aware, however, that rDNA technology continues to evolve and that it is not possible for the agency to anticipate all of the novel scientific and regulatory issues that may arise as the number and types of foods developed using this technology expands. As discussed more fully below, this proposed rule would modify the regulatory guidance laid out in the 1992 policy by requiring the submission to the agency of data and information regarding plant-derived bioengineered foods at least 120 days prior to the commercial distribution of such foods.

B. Consultations Under the 1992 Policy and the 1996 Procedures

In the 1992 policy, FDA explained that, under the act, developers of new foods have a responsibility to ensure that the foods they offer to consumers are safe and in compliance with all requirements of the act (57 FR 22984 at 22985). In light of this responsibility, FDA has long regarded it to be a prudent practice for producers who use new technologies in the manufacture or development of foods and food ingredients to work cooperatively with FDA to ensure that the products of these new technologies are safe and comply with all applicable legal requirements (57 FR 22984 at 22991). Historically, the food industry generally has initiated consultation with FDA during the pioneer stages of a new technology, even if there is no legal obligation to do so. These consultations have served to make FDA aware of foods and food ingredients before these products are distributed commercially, and have provided FDA with the information necessary to address any questions regarding the safety, labeling, or regulatory status of the food or food ingredient. As such, these consultations have provided assistance to both industry and the agency in exercising their mutual responsibilities under the act.

In the 1992 policy, FDA noted that the agency expected this practice of consultation to continue with respect to bioengineered foods (57 FR 22984 at 22991). One early example of such a

¹ This document defines "commercial distribution" as the introduction, or delivery for introduction, into interstate commerce for sale or exchange for consumption in any form by humans or other animals.

consultation involved FLAVR SAVR™ tomatoes.² In developing FLAVR SAVR™ tomatoes, Calgene used rDNA technology to introduce an antisense polygalacturonase gene, which was derived from tomatoes, and the kanamycin resistance gene (the *kan^r* gene), which encodes the enzyme aminoglycoside-3'-phosphotransferase II (APH(3')II). The enzyme APH(3')II confers resistance to the clinically used antibiotics kanamycin and neomycin in the selection of new plant varieties developed using rDNA technology. The use of APH(3')II raised several issues that had not previously been evaluated by the agency in the context of food safety. The initial consultation between the agency and Calgene about the intended use of APH(3')II, which in this instance resulted in the filing and approval of a food additive petition (59 FR 26700, May 23, 1994), was an effective mechanism to fully explore and resolve these issues.

The resolution of these and other scientific issues entailed the use of nontraditional approaches to the evaluation of food safety. For example, traditional evaluation of the safety of a food additive frequently includes toxicological tests conducted in accordance with the principles outlined in the agency's "Toxicological Principles for the Safety Assessment of Direct Food Additives and Color Additives Used in Food" (Redbook (Ref. 3)).³ In addition to guidance on when certain tests may be appropriate, the Redbook includes specific recommendations on the protocols for conducting such tests.

In contrast, issues raised during the consultations on APH(3')II and the FLAVR SAVR™ tomato required evaluation of data generated using procedures that had only rarely been used in the evaluation of food safety. For example, Calgene used "Southern blots" to determine which DNA sequences had been transferred to FLAVR SAVR™ tomatoes, "Northern blots" to demonstrate the intended technical effect in FLAVR SAVR™ tomatoes, and "Western blots" to determine the amount of APH(3')II present in FLAVR SAVR™ tomatoes. The use of nontraditional strategies in the evaluation of food safety likely will become the norm as the use of rDNA technology expands, and further

consultations between industry and the agency would foster the identification and design of reasonable test procedures to evaluate the composition and safety of whole foods.

Consultations are an appropriate forum for industry and the agency to address proactively issues that are relevant to bioengineered foods, and developers have actively consulted with FDA about their products since the issuance of the 1992 policy. In June 1996, FDA provided guidance to industry on procedures for these consultations (the 1996 procedures (Ref. 5)).⁴ Under that process, a developer who intends to commercialize a bioengineered food meets with the agency to identify and discuss relevant safety, nutritional, or other regulatory issues regarding the bioengineered food prior to marketing it. Depending on the experience the agency and the developer have with the kind of modification being considered, a developer may initiate such a consultation early or late in the development of the food. When the developer believes that it has accumulated adequate data or information to address any issues raised during the consultation, the developer begins the "final consultation" by submitting to FDA a summary of its scientific and regulatory assessment of the food. To date, the agency has completed its evaluation of data or other information from more than 45 such consultations (Ref. 6). FDA believes that, to date, all developers of bioengineered foods commercially marketed in the United States have consulted with the agency prior to marketing the food.

FDA continues to believe that the consultation process is appropriate for bioengineered foods. Accordingly, this proposed rulemaking includes FDA's recommendation that developers consult with the agency to identify and discuss relevant safety, nutritional, or other regulatory issues regarding a bioengineered food (see proposed § 192.10 and section VI of this document).

C. Public Meetings

In 1999, FDA announced that the agency would hold three public meetings, each in a different region of the United States (64 FR 57470, October

25, 1999). The purpose of those meetings was for the agency to share its current approach and experience over the past 5 years regarding bioengineered foods, to solicit views on whether FDA's policies or procedures should be modified, and to gather information to be used to assess the most appropriate means of providing information to the public about bioengineered products in the food supply. In the notice announcing the public meetings (64 FR 57470), FDA requested comments on specific questions regarding bioengineered foods. As a result of those meetings and the request for comments, the agency subsequently received more than 35,000 written comments about its policy regarding bioengineered foods.

At those meetings, and in the comments, FDA heard three messages very clearly. First, there does not appear to be any new scientific information that raises questions about the safety of bioengineered foods currently being marketed. Second, some of the public is concerned about FDA's existing guidance and regulatory approach to overseeing the safety of these products. These concerns include whether FDA's guidance and regulatory approach will be adequate for future developments and whether firms will continue to inform FDA about new bioengineered foods under the present program. In addition, there was a concern that the current regulatory process lacks transparency (e.g., because FDA discloses each consultation about a bioengineered food only at the end of the process). Third, there are very strongly held but divergent views as to whether bioengineered foods should bear special labeling. However, there was general agreement that providing more information to consumers about bioengineered foods would be useful⁵ (Ref. 8).

II. Legal Authority

FDA is responsible for ensuring that all foods⁶ in the American food supply conform to the applicable provisions of the law. The act provides FDA with broad authority to regulate the safety and wholesomeness of food. In particular, the act prohibits the adulteration of food under section 402 of the act (21 U.S.C. 342) and the misbranding of food under section 403

² This consultation was concluded in May 1994 (59 FR 26647 at 26700, May 23, 1994).

³ In 1993, the Center for Food Safety and Applied Nutrition (CFSAN) released a revised Redbook for public comment (58 FR 16536, March 29, 1993). Following its evaluation of comments on each draft chapter of the Redbook, CFSAN is making revised chapters available on its Internet site (Ref. 4).

⁴ In October 1997, FDA made administrative revisions to these procedures to reflect reorganizations within the Office of Premarket Approval, CFSAN, and the Center for Veterinary Medicine (CVM). In this document, FDA refers to these procedures as "the 1996 procedures" to reflect the year that the agency made them available.

⁵ In May 2000, FDA announced that it intended to issue for public comment draft labeling guidance to aid manufacturers who wish to voluntarily label their products as made with or without the use of bioengineering or bioengineered ingredients (Ref. 7). The development of that draft guidance is outside the scope of this document.

⁶ There are certain exceptions to this jurisdiction pertaining to meat, poultry, and egg products that are not relevant to this rulemaking.

of the act (21 U.S.C. 343). The act also requires that all food additives (as defined by section 201(s) of the act (21 U.S.C. 321(s))) be approved by FDA before they are marketed (sections 409 and 402 of the act (21 U.S.C. 348(a) and 342(a)(2)(C))). FDA is authorized to seek sanctions against foods that do not adhere to the act's standards, through seizure of foods that violate the act under section 304 of the act (21 U.S.C. 334); the agency is also authorized to seek an injunction against, or criminal prosecution of, those responsible for introducing such foods into commerce under sections 302 and 303 of the act (21 U.S.C. 332 and 333).

All plant breeding techniques have the potential to alter food source crops in ways relevant to the legal status of food derived from such crops. However, rDNA technology greatly facilitates, relative to traditional breeding techniques, both the introduction of specific new substances into foods and the directed modification of the composition of foods. This is in part because the technology expands the range of sources of new substances that can be introduced into plants, relative to those that can be introduced with traditional techniques, due principally to rDNA technology's ability to permit the transfer to a food crop of genetic material from virtually any organism. Similarly, at the present time, information related to the genomes of many organisms is rapidly expanding, with the result that newly identified genes are now available to breeders. In addition, rDNA technology increases the speed by which traits can be introduced into food crops, by allowing the introduction of specific, well-characterized genetic material and by reducing the need for backcrossing to remove undesirable traits. Given the efficiencies of rDNA techniques, the advances in these techniques, and the rapidly expanding information related to genomes, FDA expects that these techniques are likely to be utilized to an increasingly greater extent by plant breeders and that the products of this technology are likely in some cases to present more complex safety and regulatory issues than seen to date.

Alterations in food source plants accomplished using rDNA technology, with resulting changes in the foods derived from such plants, can present a range of regulatory issues (57 FR 22984 to 23005). For example, such alterations may present questions as to the food additive status of the substances introduced into the food as a result of the genetic transformation. As noted, bioengineering permits the introduction into food of substances from any source,

and the number and types of genes available for use in rDNA technology are rapidly increasing. Thus, increasingly, substances may be introduced into food using rDNA techniques that cannot be introduced by traditional breeding. FDA noted in the 1992 policy that a nonpesticidal substance introduced into food by way of breeding is a food additive if the substance is not generally recognized as safe (GRAS) within the meaning of 21 U.S.C. 321(s). Because of the greater range of sources of substances that can be introduced into plants via rDNA technology, there is a greater likelihood that some of the new substances will be significantly different from substances that have a history of safe use in food or may otherwise not satisfy the GRAS standard in section 201(s) of the act(s). Thus, there is a greater potential for foods developed using rDNA technology to contain substances that are food additives.

The agency reiterates its view, as stated in the 1992 policy (57 FR 22990), that transferred genetic material can be presumed to be GRAS. Likewise, FDA is not altering its view, as set forth in the 1992 policy, that there is unlikely to be a safety question sufficient to question the presumed GRAS status of the proteins (typically enzymes) produced from the transferred genetic material, or of substances produced by the action of the introduced enzymes (such as carbohydrates, fats, and oils), when these proteins or other substances do not differ significantly from other substances commonly found in food and are already present at generally comparable or greater levels in currently consumed foods. However, FDA recognizes that because breeders utilizing rDNA technology can introduce genetic material from a much wider range of sources than previously possible, there is a greater likelihood that the modified food will contain substances that are significantly different from, or are present in food at a significantly higher level than, counterpart substances historically consumed in food. In such circumstances, the new substances may not be GRAS and may require regulation as food additives (57 FR 22990).

To date, FDA has not seen multiple examples of food additive substances introduced into food using rDNA technology. However, the agency recognizes that the potential for introducing such substances is real. There are, for example, certain plant-derived proteins that have a sweetening effect but whose biochemical function is

not known.⁷ In addition, they are found in plants that have not been used for food. Thus, in contrast to other proteins introduced into foods by genetic engineering, which have been presumed GRAS, there is little or no apparent basis for a GRAS presumption for such substances. Genes encoding the protein sweetener could be introduced into a fruit to enhance sweetness. In such circumstances, FDA should be made aware of the intended marketing of the modified food and have access to relevant information to evaluate whether the protein sweetener is a food additive within the act's definition under section 201(s) of the act. If the protein sweetener is a food additive, premarket approval of the substance would be required under section 409 of the act before the altered food could be lawfully marketed.

Another potential consequence of transferring genetic material from one source into another is the possibility of introducing a food allergen that would not be expected to be in a particular food, a change that would be relevant to the legal status of such food. This is because genes code for proteins, and virtually all allergens are proteins (although only a small subset of proteins are allergens). Thus, by increasing the range of potential proteins that can be introduced into food over that possible by traditional breeding, there is an increased potential for introducing an allergen into a food developed using rDNA technology. Also, rDNA technology can be used to express proteins at higher concentrations than they would otherwise be expressed; these higher concentrations may increase the potential for such proteins to be allergenic.

One implication of being able to transfer genes between unrelated plants using rDNA techniques is that it is possible to transfer genes from one food plant to another quite unrelated food plant, thereby allowing the potential transfer of an allergen from the first plant to the second. In such a case, food from the bioengineered plant could have an allergenic characteristic completely different from that of its conventional counterpart. Such a change would not be evident to the consumer. For example, a gene from a Brazil nut plant was introduced into a soy plant to improve the protein content of soy beans for use in animal feed. The seed was never commercialized, however, because when the company tested the

⁷ The proteins apparently do not make the plants more attractive to insects or animals, and thus would not likely function as natural sweeteners in plants in the wild.

soy beans for allergenicity, they found that people allergic to Brazil nuts were also allergic to the bioengineered soy (Refs. 9 and 10). Given the potential consequences to sensitive consumers of eating soy products containing a Brazil nut allergen, such a food would likely be considered misbranded within the meaning of sections 201(n) and 403(a)(1) of the act, unless the presence of the new allergen were disclosed to consumers.

Further, in certain circumstances, labeling may not be adequate or practical to ensure that consumers are aware of the presence of unexpected allergens. FDA would likely consider such food containing an unexpected allergen to be adulterated within the meaning of section 402(a)(1) of the act because the unexpected allergen rendered the food possibly injurious to health. With alterations of this type, FDA should be made aware of the modification and have an opportunity to assess whether and how the food could legally be marketed. Specifically, FDA should have the opportunity to consider whether any labeling proposed by the developer would ensure that the engineered food is not misbranded within the meaning of sections 201(n) and 403(a)(1) of the act, and whether, even with labeling, the food would be adulterated because it may be injurious to health within the meaning of section 402(a)(1) of the act.

Compositional changes in foods created through breeding may also present regulatory status issues. Although traditional breeding techniques can be used to alter significantly the compositional characteristics of food, rDNA technology enhances that ability because rDNA technology enables breeders to make targeted changes in plant components such as proteins and other constituents. For example, rDNA techniques would facilitate a breeder's ability to modify a soy plant so that the composition of oil derived from the plant would more closely resemble that of a tropical oil than that of conventional soy oil. In these circumstances, the name "soy oil" would likely not be suitable for the oil derived from the altered soy plant because the composition of the new oil is significantly different from what is customarily understood to be "soy oil". Thus, a new common or usual name would likely be required for this new oil to ensure that the oil is not misbranded under section 403(i)(1) of the act. FDA should be made aware of compositional changes of this type so that the agency may consider whether a new common or usual name is required and, if so, what that new name should be.

Additionally, rDNA technology has recently begun to be used to introduce multiple genes to generate new metabolic pathways (Ref. 11). New metabolic pathways are intended to result in the synthesis of substances not normally present in the host plant. Such modifications may alter the composition of the food in a significant manner that may raise nutritional or safety issues or that would require use of a new common or usual name.

In addition to enabling breeders to introduce desired new characteristics into foods, all breeding methods used to develop new plant varieties have a potential for unintentionally introducing undesired new characteristics into foods (57 FR 22986). Broadly speaking, a breeding method's potential for introducing unintended changes to the characteristics of a food results either from bringing into a food plant extraneous genetic material encoding trait(s) additional to the desired trait(s), or from introducing mutations (such as deletions, amplifications, insertions, rearrangements, or DNA base-pair changes) into the plant's native genetic material that alter some characteristic(s) of the food.

The most commonly used breeding method is a "narrow cross," which is hybridization between varieties of the same species. Hybridization between related species or genera that cannot be cross-fertilized is a "wide cross." Wide crosses are useful for expanding the range of genetic source material that can be introduced into food crops, but are performed relatively infrequently because of technical and logistical difficulties. Both wide and narrow crosses will introduce into plants extraneous genetic material along with the genetic material encoding the desired traits. Breeders then attempt to remove any undesired traits through extensive backcrossing.

Plant breeders also use mutagenic techniques to modify plants. These techniques include random mutagenesis using a mutagenic agent and somaclonal variation. (Somaclonal variation refers to the process of growing a plant up from tissue culture and observing for phenotypic changes, which are often due to chromosomal rearrangements or other mutations.) Both techniques can introduce undesirable mutations along with possible desirable mutations. As with hybridization, breeders perform backcrosses to eliminate any undesirable traits. Cell fusion poses similar issues to those posed by wide crosses (because it generally is performed between cells of different species of plants) and posed by

somaclonal variation (because it involves growing a plant up from tissue culture).

Recombinant DNA technology greatly reduces the likelihood of introducing extraneous genetic material, as compared with hybridization, because it enables breeders to introduce only the gene or genes of interest, with little or no extraneous deoxyribonucleic acid (DNA). However, it shares with mutagenesis techniques a potential for introducing unintended effects through mutations. In part, this is because rDNA technology involves growing plants from tissue culture, which can exhibit somaclonal variation, and, more significantly, because breeders using this technology generally cannot control the location in the plant genome at which genetic material will insert when introduced into a plant. Thus, with rDNA technology, the introduced genetic segment may insert into a genetically active chromosomal location. Such insertion may disrupt or inactivate an important gene or a regulatory sequence that affects the expression of one or several genes, thereby potentially affecting adversely the safety of the food or raising other regulatory issues. Such an occurrence is referred to as an insertional mutation.

FDA believes that in the future, plant breeders will increasingly use rDNA techniques to achieve more complicated compositional changes to food, sometimes introducing multiple genes residing on multiple vectors to generate new metabolic pathways. FDA expects that with the increased introduction of multiple genes, unintended effects may become more common. For example, rice modified to express pro-vitamin A was shown to exhibit increased concentrations of xanthophylls (Ref. 11), and rice modified to reduce the concentration of a specific protein was found to exhibit an increased concentration of prolamine (Ref. 12).

FDA believes that the use of rDNA techniques in plant breeding may lead to unintended changes in foods that raise adulteration or misbranding questions. These unintended changes may cause a food to be adulterated because the food may be rendered injurious to health within the meaning of section 402(a)(1) of the act, or, in the absence of a new common or usual name, cause the food to be misbranded under section 403(i)(1) of the act. Because of its role in ensuring the safety of the U.S. food supply, FDA needs to be aware of the modifications to food source plants from the application of rDNA technology and any unintended effects in food that result so that the agency can evaluate whether the foods

from such plants are adulterated or misbranded.

Because some rDNA-induced unintended changes are specific to a transformational event (e.g., those resulting from insertional mutagenesis), FDA believes that it needs to be provided with information about foods from all separate transformational events, even when the agency has been provided with information about foods from rDNA-modified plants with the same intended new trait and has had no questions about such foods. Similarly, the agency believes that it needs to be provided with information about foods from rDNA-modified plants whose intended change is the introduction of a pesticidal protein subject to oversight by the Environmental Protection Agency (EPA) rather than by FDA, because the transformational event that is used to introduce the pesticidal trait may also cause unintended changes to the food that would raise adulteration or misbranding questions subject to FDA jurisdiction.

In contrast, the agency does not believe that it needs to receive information about foods from plants derived through narrow crosses (including narrow crosses between different rDNA-modified lines). Narrow crosses, because they generally are performed between varieties that are themselves used in food or are very closely related to varieties used in food, are unlikely to introduce extraneous DNA that encodes traits that have not been in food before. In addition, plant lines used for narrow crosses generally have been subject to extensive backcrossing and field testing to ensure genetic stability (including lack of any active transposons that could cause insertional mutagenesis). Finally, because the plant lines are closely related to each other, crosses between them will involve homologous recombination and thus are unlikely to be subject to insertional mutagenesis. Therefore, narrow crosses are unlikely to result in unintended changes to foods that raise safety or other regulatory questions.

The agency recognizes that unintended changes associated with other non-rDNA breeding methods may pose regulatory questions similar to those posed by rDNA methods. For example, wide crosses, especially between a food plant variety and an undomesticated nonfood plant variety, have much greater potential than do narrow crosses for introducing unintended traits that may alter the safety of the food; undomesticated plants frequently produce toxins at levels unsafe for human consumption,

and may also produce substances not found in food. The agency has not found it necessary to assess routinely the safety of foods derived from such breeding methods, because over the last 50 to 60 years that some of these techniques have been used in plant breeding, breeders have used well-established practices successfully to identify and eliminate, prior to commercial use, plants that exhibit unexpected adverse traits. The agency is not aware of a basis for additional FDA oversight of foods derived from plants modified by such techniques, given that there has not been such a need in the past and that there do not appear to be any significant changes in breeders' use of such techniques that would warrant new FDA oversight. Rather, because of the technical advantages of rDNA methods over these other techniques, FDA anticipates that, in the future, breeders will likely use non-rDNA methods less frequently to introduce new characteristics into food plants as they increasingly utilize rDNA techniques. Likewise, despite the similar potential for unintended effects, FDA believes that declining to propose a requirement that the agency be notified about the commercialization of food source plants transformed using techniques other than rDNA is consistent with its current conclusion that, unexpected effects aside, rDNA techniques have a greater potential, relative to conventional methods of breeding, to result in the development of foods that present legal status questions. The agency therefore is not proposing to include foods from crops modified by methods other than rDNA techniques within the scope of this proposed notification rule. The agency requests comment as to whether it should include foods from crops developed by wide crosses or other breeding methods in the scope of any final rule based upon this proposal.

FDA recognizes that whether there is a change in the legal status of a food resulting from a particular rDNA modification depends almost entirely on the nature of the modification, and that not every modification accomplished with rDNA techniques will alter the legal status of the food. In other words, many modifications will result in a food that does not contain an unapproved food additive, does not contain an unexpected allergen, and does not differ significantly in its composition compared with its traditional counterpart or otherwise require special labeling. For this reason, FDA is neither proposing to require premarket approval for all foods developed using rDNA

technology nor is the agency proposing an across-the-board requirement that all such foods bear special labeling.

There is substantial basis to conclude, however, that there is greater potential for breeders, using rDNA technology, to develop and commercialize foods that are more likely to present legal status issues and thus require greater FDA scrutiny than those developed using traditional or other breeding techniques. It was in part for this reason that, in 1994, the agency initiated a consultation process. Since that time, developers have actively consulted with FDA regarding their new plant varieties; under this process, the agency has completed its evaluation of data and other information from some 45 consultations.

As noted, FDA believes that, to date, the developer of each rDNA variety commercially marketed in the United States has consulted with the agency prior to marketing food from the new variety. But these products represent only a small fraction of the potential products of rDNA technology.⁸ Additionally, in general, the introduced traits have been agronomic in nature (i.e., directed at the characteristics of the plant and not at the characteristics of the food produced by the plant). However, this picture is rapidly changing. The current list, which is provided by the Animal and Plant Health Inspection Service (APHIS) in the U. S. Department of Agriculture (USDA), of field tests of plants being developed using rDNA technology shows that the plants under development have a broader variety of introduced traits (Ref. 13). Additionally, that list shows that many such traits are not simply agronomic, but are intended to modify the food itself, and thus would be more likely than in the past to raise regulatory issues falling under FDA's purview.⁹ Finally, as noted previously, FDA believes that, given the efficiencies of rDNA techniques, the advances in these techniques, and the rapidly expanding information related to genomes, these techniques are likely

⁸ For example, in the 45 consultations completed under the 1992 policy, only 11 different commodities are represented, including 12 consultations on corn, 7 on canola, 6 on tomatoes, 5 on cotton, and 4 on potatoes. Moreover, the 45 consultations do not represent 45 separate types of modifications; rather, these 45 consultations represent only 9 general types of modifications. These modifications were herbicide resistance, insect and virus resistance, delayed ripening or softening, male sterility or fertility restorer, high phosphorus availability, and modified oil.

⁹ These include modifications for altered protein quality, increased carotenoid content, increased fruit solids, altered fiber quality, and increased fruit sweetness, among others.

to be utilized by plant breeders to an increasingly greater extent.

The confluence of the increasingly broader use of rDNA techniques to develop foods for human and animal use and the globalization of the world's food supply also suggest that FDA needs to be aware of the various foods developed using rDNA technology. Currently, approximately 45 percent of the United States' plant-derived food is imported, and that percentage continues to increase. The agency expects that rDNA techniques may, over time, be used increasingly by plant breeders and developers in countries that export foods to this country. In such circumstances, the accuracy of FDA's knowledge about the presence in the U.S. food supply of foods developed using rDNA techniques is likely to decrease. In addition, the awareness of particular food allergies is not uniform throughout the world because the diets of some populations do not contain sufficiently large amounts of a food such that the allergic potential has been demonstrated; in these circumstances, it is particularly important that FDA be aware of imported foods modified using rDNA techniques that may unexpectedly contain a substance that is an allergen.

For all these reasons, FDA believes that the food products of rDNA technology are appropriately made subject to greater regulatory scrutiny by FDA in the form of enhanced agency awareness of all such foods intended for commercial distribution. This increased agency awareness will ensure that at this stage of this continuously evolving technology, all market entry decisions about new bioengineered foods, including those intended for import into the United States, are made consistently and in full compliance with the law. Similarly, in order for the agency to evaluate fully and consistently the possible regulatory consequences of the alterations made possible using rDNA technology, FDA must be made aware of the bioengineered foods entering commercial distribution.

Section 701(a) of the act (21 U.S.C. 371(a)) authorizes the Secretary of the Department of Health and Human Services (the Secretary) to issue regulations for the efficient enforcement of the act; under section 903(d)(2) of the act (21 U.S.C. 393(d)(2)), the Secretary is responsible for executing the act, including section 701(a), through the Commissioner of Food and Drugs. The authority under section 701(a) of the act to issue regulations under the act extends to both regulations that supplement a specific statutory mandate as well as regulations that are justified

by the statutory scheme as a whole. (See *National Confectioner's Association v. Califano*, 569 F.2d 690, 693 (D.C. Cir. 1978), citing *Toilet Goods Association v. Gardner*, 387 U.S. 158, 163 (1967).) In assessing a regulation issued under section 701(a), it is important to consider both the statutory purpose as well as the practical aspects of the situation, including the possible enforcement problems that may be encountered by FDA. (See *National Confectioner's Association v. Califano*, 569 F.2d 690, 693 (D.C. Cir. 1978), citing *Toilet Goods Association v. Gardner*, 387 U.S. 158, 163 (1967).)

To ensure that FDA has the maximum amount of information about foods from bioengineered plants, the agency has tentatively concluded that, prior to initiation of commercial distribution in the United States of a bioengineered food, FDA must be notified of the intent to market such food, including foods intended for import into the United States. Notification will ensure that the agency is aware of all bioengineered foods entering commercial distribution that are subject to FDA's jurisdiction and will help to ensure that all market entry decisions by the industry are made consistently and in full compliance with the law. This will permit the agency to assess on an ongoing basis whether foods developed using rDNA technology comply with the standards of the act. FDA believes that it is essential that all those developing and marketing bioengineered foods participate fully and completely in the proposed notification program. Therefore, the agency is proposing that the notification program that is described in this document be mandatory.

Accordingly, for the reasons set forth above concerning the special circumstances of bioengineered foods, to enforce the act efficiently, and in particular, to administer efficiently the act's various provisions that relate to food as such provisions apply to bioengineered food, including section 301 of the act (21 U.S.C. 331) and sections 402, 403, and 409 of the act, FDA is proposing regulations to require that the agency be notified at least 120 days prior to the initiation of commercial distribution in the United States of a bioengineered food. The elements of FDA's proposed program are discussed in detail below.

III. Scope

FDA is proposing to require the submission to the agency of data and information regarding plant-derived bioengineered foods that would be consumed by humans or animals. FDA's

proposal also includes a recommendation that prospective notifiers participate in a presubmission consultation program. The regulations regarding bioengineered foods that would be consumed by humans would be codified in new part 192. The regulations regarding bioengineered foods that would be consumed by animals would be codified in new part 592. The proposed regulations regarding bioengineered foods that would be consumed by animals parallel the proposed regulations regarding bioengineered foods that would be consumed by humans. For ease of discussion, in this proposed rule, FDA describes each of the regulations that would be codified in part 192, without describing the parallel regulations in part 592. Following this discussion, FDA describes areas of importance in the proposed animal feed regulations (section XI of this document).

IV. Definitions

FDA is proposing to codify five definitions that are associated with the proposed notification program (proposed § 192.1). These terms are bioengineered food, commercial distribution, notifier, premarket biotechnology notice (PBN or notice), and transformation event. FDA invites comments on these proposed definitions. FDA is particularly interested in comments on the proposed definitions of bioengineered food and transformation event. Specifically, FDA is requesting comment on whether these proposed definitions are consistent with the agency's intent (described in section V of this document) that the proposed notification program apply to a particular subset of plant-derived foods. Such comments may result in a modification to the proposed definitions.

Under the proposed definitions, a required PBN may be submitted by any person who is responsible for the development, distribution, importation, or sale of a bioengineered food. Based on the agency's experience, FDA expects that it ordinarily will be the seed developers and purveyors who notify the agency about a bioengineered food.

V. Requirement for Premarket Biotechnology Notice

FDA is proposing to require a submission to the agency of data and information regarding a plant-derived bioengineered food at least 120 days prior to the commercial distribution of the food (proposed § 192.5). The proposed regulation would include a bioengineered food derived from a new

plant variety modified to contain a pesticidal substance, and would exclude a bioengineered food that meets three specified criteria. The rationale for this proposed notification requirement is discussed in section II of this document. FDA specifically requests comment on the scope of the proposed notification requirement and on the proposed conditions for exclusion from the notification requirement. Such comments may result in a modification to the proposed regulation.

A. Foods That Are Subject to the Requirement

FDA is proposing that the notification requirement apply to a bioengineered food derived from a new plant variety modified to contain a pesticidal substance (proposed § 192.2(a)). Under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136 *et seq.*), EPA has authority to regulate all pesticides, regardless of how they are made or their mode of action. Under the act, EPA has authority to regulate pesticide residues in foods and FDA has authority to regulate a nonpesticidal substance that may be introduced into a new variety and that is expected to become a component of food. Given this statutory framework, both FDA and EPA agree that any food safety questions beyond those associated with the pesticide, such as those raised by unexpected or unintended compositional changes, are under FDA's jurisdiction (57 FR 22984 at 23005). FDA's proposal to include in its notification program new plant varieties that contain a pesticidal substance will facilitate consultation between EPA and FDA on the scientific and regulatory issues that are not within the scope of EPA's authority under FIFRA and the act.

FDA is proposing to exclude from the notification requirement a bioengineered food that satisfies three conditions. The first condition is that the food derives from a plant line that represents a transformation event that has been addressed in a notice previously submitted to FDA (proposed § 192.5(a)(1)). Under § 192.5(a)(1), a separate notice would be required for distinct plant lines that are derived from separate transformed cells, even when those cells were transformed during a single transformation procedure. The second condition is that the use or application of the bioengineered food has been addressed in a notice previously submitted to FDA (proposed § 192.5(a)(2)). Under § 192.5(a)(2), a separate notice would be required, for example, if herbicide tolerance introduced into a variety of sweet corn

that is used solely for human food is subsequently transferred, using traditional plant-breeding techniques, to a variety of field corn that would also be used in food intended for consumption by animals. The third condition is that a letter from FDA demonstrates that FDA has evaluated the use or application of the bioengineered food and has no questions about it (proposed § 192.5(a)(3)). Under § 192.5(a)(3), a notice would be required if, for example, a prior notice about another use of a bioengineered food is still pending or if the agency's response to a prior notice demonstrates that FDA did not consider the prior notice as providing a basis to conclude that the bioengineered food was in compliance with all applicable requirements of the act.

As mentioned, FDA believes that all developers of bioengineered foods that already are commercially marketed in the United States have consulted with the agency prior to marketing the food. FDA believes that any legal status questions that pertain to the applicable bioengineered foods have been identified and resolved through that consultation process. Therefore, the notification requirement would not extend to bioengineered food obtained from a plant line (or series of plant lines) that derives from a particular transformation event, as long as both the applicable transformation and the use or application of the bioengineered food has been addressed satisfactorily in a completed consultation under the voluntary program.

It is likely that some final consultations received under the 1996 procedures would still be pending on the date of a final rule based on this proposal. The proposed regulations include no specific provisions regarding a bioengineered food that is the subject of a pending final consultation under the 1996 procedures. FDA specifically requests comment on how FDA should administer such submissions. FDA also specifically requests comment on whether the process for administering a final consultation that is pending on the date of a final rule based on this proposal should be included in these regulations. Such comments may result in a modification to the proposed regulation.

FDA specifically requests comment on the scope of proposed notification requirement and on the proposed conditions for exclusion from the notification requirement. Such comments may result in a modification to the proposed regulation.

B. Origin of Data and Information

FDA is proposing that the data or information that a notifier submits to FDA regarding a bioengineered food must be generated from a plant line whose derivation can be traced to the transformation event that is the subject of the notice and that contains the genetic material introduced via the transformation event (proposed § 192.5(b)). As a practical matter, the proposed regulation will give flexibility to producers while providing the agency with relevant information concerning the nature of the bioengineered foods. FDA specifically requests comment on this proposed provision. Such comments may result in a modification to the proposed regulation.

C. Timing

FDA is proposing to require that a notifier submit a PBN at least 120 days before the bioengineered food is marketed (proposed § 192.5(c)). The proposed timeframe is consistent with contemporary expectations of the Congress for another notification program, the notification program for food contact substances (section 409(h) of the act).

FDA believes that it can, in most circumstances, complete its evaluation of a PBN within 120 days because, as discussed more fully below, FDA is recommending that prospective notifiers participate in a presubmission consultation program. The purpose of the presubmission consultation program is to enable a prospective notifier to identify and address relevant safety, nutritional, or other regulatory issues regarding the bioengineered food before submitting a PBN. Given this presubmission consultation program, FDA expects that a notifier will have sufficient information to prepare a notice that adequately addresses all issues and that scientific experts at the agency will be familiar with the issues raised by a particular bioengineered food when the agency receives the applicable PBN.¹⁰

VI. Recommendation for Presubmission Consultation

FDA is proposing to include in the regulation a recommendation that a prospective notifier consult with the agency, before submitting a PBN, to identify and discuss relevant safety, nutritional, or other regulatory issues regarding the bioengineered food

¹⁰ The consultation procedures do not identify a timeframe for FDA to complete its evaluation of a final consultation. As of April 2000, under that program the median time for FDA's response to a final consultation was approximately 155 days and the average time was approximately 175 days.

(proposed § 192.10). The proposed recommendation describes procedures for requesting consultation and the public disclosure provisions that likely would apply to records that FDA maintains about the consultation. Under § 192.10(f), a notifier must state his view as to whether the fact that he is consulting with FDA, or any or all of the data or information that he submits to FDA, is exempt from disclosure under the Freedom of Information Act (FOIA) and must explain the basis for any such exemption claim. The recommendation to consult with FDA derives from the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures. FDA discusses the details of this proposed recommendation immediately below.

Using rDNA technology, bioengineered plants such as corn are now being developed for non-food uses. Examples of such applications include the transfer of genes that encode pharmaceutical proteins, oral vaccines, and enzymes that would be used for non-food industrial applications. In some cases, such as most of the pharmaceutical proteins, the final product would be a highly purified component of the plant commodity. In other cases, such as some oral vaccines, the final product would be a minimally processed plant commodity. In some cases, there may be a potential for a bioengineered plant commodity that is not intended for use in food to enter the food supply inadvertently. FDA encourages developers of bioengineered plants that are not intended for use in food or feed, but that theoretically could enter the food or feed supply, to participate in the consultation program described in this proposed rule. This participation would ensure that developers have given careful consideration to the procedures needed to ensure that their products do not inappropriately get into the food supply, and are aware of the legal implications if their products do.

A. Presubmission Consultation Program

FDA is proposing to recommend that a prospective notifier participate in a presubmission consultation program (proposed § 192.10(a)). Under the program (proposed § 192.10(b)), a prospective notifier would write to FDA and ask to consult about a bioengineered food. FDA would establish an administrative file for each consultation and would meet with a prospective notifier upon request. Although FDA may provide written feedback during the consultation, that feedback would not release the prospective notifier from the proposed

requirement to notify FDA about the bioengineered food at least 120 days before commercialization of the food. The proposed presubmission consultation program derives from the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures.

B. Public Disclosure

FDA is proposing to provide information about the availability for public disclosure of: (1) The fact that a developer is consulting with FDA (proposed § 192.10(c)) and (2) the data or information in the file that FDA would establish for a presubmission consultation (proposed § 192.10(d)). The regulations would inform all parties of the fact that FDA must act in response to a request under FOIA for information on presubmission consultations, and must disclose, or protect from disclosure, the applicable record(s) in accordance with § 20.61 (21 CFR 20.61) (proposed § 192.10(c)(2) and (d)(1)).

In light of the significant public interest in bioengineered foods and in FDA's oversight of these foods, FDA believes that it is important for developers to be informed that FOIA may entitle the public to know that the developer has provided data or information to FDA about a bioengineered food and to receive a copy of those data or information. Likewise, FDA believes that it is equally important for the public to know that the fact that a developer is consulting with FDA may be exempt from disclosure under FOIA and that some or all of the data or information that are submitted to FDA during a presubmission consultation could be exempt from public disclosure.

Under FOIA, data or information that are submitted to the Federal Government are available for public disclosure unless those data or information fall within an established exemption of FOIA. The exemption that is most relevant to data or information provided to FDA during a presubmission consultation is "exemption 4," which applies to "trade secrets and commercial or financial information obtained from a person and privileged or confidential." (5 U.S.C. 552(b)(4)). FDA has issued regulations implementing exemption 4 of FOIA in § 20.61.

FDA believes that, in most cases, the fact that a developer is consulting with FDA would not constitute confidential commercial information. For example, most plants developed using rDNA technology are considered "regulated articles" under regulations of USDA's APHIS (7 CFR part 340), which

regulates the introduction of certain "genetically engineered" plants. At some stage of research and development of a regulated article, a developer requests from APHIS a determination of the article's regulatory status, and, consistent with FOIA requirements, APHIS discloses that request. Thus, by virtue of the APHIS process, the fact that the developer is developing the plant and its food product would usually already be disclosed.

FDA also believes that, in most cases, most of the data or information provided to FDA during a presubmission consultation would not constitute a trade secret or confidential commercial information. For example, only a handful of the submissions that FDA has received under its current consultation program identified specific data or information that the developer claimed to be exempt under § 20.61. Nevertheless, there could be circumstances where a developer initiates a presubmission consultation about a product that has not previously been disclosed to the public and has grounds to claim that the fact of the consultation should not be available for public disclosure. In such circumstances, disclosing any data or information in the applicable submission would reveal the existence of the submission. Thus, as long as the existence of the consultation is exempt from disclosure, all data or information in the submission would necessarily be exempt from disclosure.

C. Standard Procedures

FDA is proposing that a prospective notifier ask FDA in writing for an opportunity to consult about a bioengineered food (proposed § 192.10(e)). A written request would provide clarity about the subject of the consultation.

FDA is proposing to require that a prospective notifier who initiates a consultation inform FDA whether, in his view, the fact of the consultation with FDA is confidential, and whether, in his view, any or all of the provided data or information is confidential (proposed § 192.10(f)(1)). FDA also is proposing to require that a prospective notifier who claims confidentiality for the existence or content of a presubmission consultation explain the basis for that claim (proposed § 192.10(f)(2)). FDA is proposing these requirements because of the significant public interest in bioengineered foods. These requirements would ensure that FDA is aware of the prospective notifier's position regarding the availability for public disclosure of the existence and content of the

consultation. In addition, FDA believes that these requirements would alert a prospective notifier to the fact that the data or information contained in a submission to FDA are available for disclosure unless the applicable criteria for exemption are satisfied.

FDA is proposing to recommend that a prospective notifier send FDA a synopsis about the requested consultation (proposed § 192.10(f)(3)). The recommended synopsis would include the prospective notifier's name and address, the name of the bioengineered food and the plant species from which it is derived, a distinctive designation(s) that the notifier uses to identify the applicable transformation events, a list of the identity(ies) and source(s) of introduced genetic material, a description of the purpose or intended technical effect of the transformation event (including expected significant changes in the composition or characteristic properties of food derived from the plant as a result of the transformation event, regardless of whether these changes result from the insertion of new genes or from a modification in the expression of endogenous genes), a description of the applications or uses of the bioengineered food, and a description of any applications or uses of the bioengineered food that are not suitable for the bioengineered food. FDA is proposing to recommend this synopsis because the agency believes that the information in the synopsis is both necessary and sufficient to characterize the bioengineered food in a manner that will enable the agency to engage in a meaningful dialogue with the prospective notifier. For example, information about the identity and intended technical effect of the transformation event would enable the agency to address the potential issue that the food would contain an unapproved food additive. A distinctive designation that the notifier uses to identify the applicable transformation event would enable the agency to efficiently locate other agency records regarding that transformation event. It would also facilitate discussions with APHIS and EPA, if sponsors use those same designations in information supplied to the other agencies. Information about the sources of the genetic material would enable the agency to identify issues associated with a known allergenic source. Information about expected significant changes in the composition of the food would enable the agency to discuss suggestions for an appropriate common or usual name for the bioengineered food.

Information about the applications or uses of the food would enable the agency to identify applicable regulatory situations (e.g., whether the bioengineered food would likely be used in human food, animal feed, or both). Information about any applications or uses that the notifier believes would not be suitable for the bioengineered food would enable the agency to identify potential safety questions, if any, about such use of the bioengineered food.

FDA is proposing that a prospective notifier send a request for consultation regarding a bioengineered food to CFSAN (proposed § 192.10(g)). As necessary and appropriate, CFSAN would coordinate the consultation process with CVM. The proposed regulation is consistent with the approach in the 1996 procedures, which has worked well.

FDA is proposing that a prospective notifier should send an original and two paper copies of a written request for consultation and of any additional materials that are sent to FDA during the consultation process (proposed § 192.10(h)(1) and (h)(2)). FDA is proposing an original and two copies of these submissions for efficiency in providing information about the presubmission consultation to the agency's scientific reviewers.

Because it is likely the data or information in a presubmission consultation would be requested under FOIA by an outside party, FDA is proposing that a prospective notifier who claims that certain data or information provided to FDA during the presubmission consultation are exempt from disclosure should clearly identify, in each submission, the data or information at issue (proposed § 192.10(h)(3)(i)). When this is the case, FDA also is proposing that the prospective notifier should provide an additional paper copy of the submission that does not contain such data or information (i.e., a redacted paper copy under proposed § 192.10(h)(3)(ii)). Providing a redacted copy would communicate very clearly which data or information the prospective notifier considers to be exempt. These recommendations are consistent with a practice that is commonly used by firms who send FDA a food additive petition that contains information that the petitioner claims to be confidential, a practice that has worked well. In addition, the practice of providing a redacted copy also has been used in a few cases under the 1996 procedures.

FDA is proposing that the redacted paper copy be prepared in a manner that clearly identifies the location and

relative size of deleted information. This proposed regulation is consistent with FDA's proposed regulations (64 FR 60143, November 4, 1999) regarding implementation of the Electronic Freedom of Information Act Amendments of 1996 (EFOIA (Public Law 104-231)). EFOIA includes, among other things, provisions requiring agencies to inform requesters about the amount of information not being released to them.

FDA is proposing to specify the materials that the agency would place in an administrative file that it establishes for a presubmission consultation (proposed § 192.10(i)(1)). These materials include any correspondence between the prospective notifier and FDA, any written materials that the prospective notifier provides during the consultation process, and a memorandum of each meeting or significant phone call between FDA and the prospective notifier during the consultation. This part of the regulation would inform both prospective notifiers and outside parties of the materials that ordinarily would be in the administrative file of the consultation and thus potentially be subject to disclosure under FOIA.

FDA's proposal includes its commitment to discuss issues associated with a bioengineered food with any prospective notifier who asks to do so (proposed § 192.10(i)(2)). FDA is proposing to include this commitment to both remind and encourage prospective notifiers that the purpose of the recommended program is for a prospective notifier to engage FDA in a discussion about the bioengineered food at an early stage of the food's development. However, the agency realizes that there may be circumstances where such a discussion would not be an efficient use of resources for either the prospective notifier or for FDA. For example, a prospective notifier may intend to notify FDA about bioengineered foods that derive from a series of plant lines that are the result of independent transformation events with the same genetic construct. After FDA has completed its evaluation of one of these bioengineered foods, the notifier likely would be aware of most or all of the applicable safety, nutritional, or other regulatory issues that could be associated with the food. Nevertheless, FDA would welcome the opportunity to be informed about the notifier's plans to submit additional notices because this information could help the agency to plan its workload.

The proposed regulation describes a flexible process for any discussion (e.g., by mentioning that the discussion could

take place through a meeting or through a telephone conference). FDA is highlighting the opportunity to discuss the bioengineered food by a mechanism other than a face-to-face meeting to minimize the potential that a small business or academic research group would elect not to participate in the program due to the cost of travel. Given the agency's experience under the current consultation process, FDA is confident that a meaningful dialogue can often be accomplished without a face-to-face meeting.

VII. Premarket Biotechnology Notice: Administrative Information

FDA is proposing to codify certain administrative information that would apply to a PBN (proposed § 192.20). The proposed administrative information includes information about where to send a PBN, the number of copies to send, how to include information in a foreign language, how to refer to data or information that are already in FDA's files, how to obtain guidance on scientific issues, and the prerogative of a notifier to withdraw a PBN from FDA's consideration. Many of these administrative aspects of the proposed notification program are consistent with procedures already in place for the food additive petition program (§ 171.1 (21 CFR 171.1)). FDA discusses the details of these administrative aspects of the proposed notification program immediately below.

A. Submissions to CFSAN for Use in Human Food, Animal Feed, or Both

FDA is proposing that a notifier send a PBN regarding a bioengineered food to CFSAN (proposed § 192.20(a)). As necessary and appropriate, CFSAN would coordinate FDA's evaluation of the PBN with CVM. The proposed regulation is consistent with the approach that FDA recommended in the 1996 procedures, an approach that has worked well.

B. Paper Copies

FDA is proposing that a prospective notifier send to the agency an original paper version and one paper copy of a PBN (including any amendments) (proposed § 192.20(b)(1)). A notifier would have an option to submit one additional paper copy or, under proposed 192.20(c)(1), to submit an electronic copy that is formatted in a manner that makes it suitable for FDA to use while evaluating the PBN. The number of paper copies required by the regulation is consistent with the number of paper copies that FDA currently requires for other premarket submissions, such as a food additive

petition. A requirement for multiple paper copies generally serves the purpose of providing a copy of the submission to multiple scientific reviewers. However, as discussed below, FDA also is recommending that a notifier submit an electronic copy of a PBN that is formatted in a manner that makes it suitable for FDA to use in evaluating a PBN. Because scientific reviewers could accomplish their review by accessing the electronic copy, under the proposed rule, a notifier who submits an electronic evaluation copy would submit one less paper copy. FDA would retain the original paper version at CFSAN, while the paper copy would be retained at CVM. Comments may result in a modification to the proposed requirement to submit a single paper copy.

Under the regulation, the paper copy would be the official version at FDA. This provision would clarify the status of an electronic copy that FDA also is proposing to require ¹¹ (see proposed § 192.20(c)(1) and section VII.C of this document).

FDA is proposing that a notifier who claims that specific data or information in the PBN are confidential must prepare and submit one paper copy of the PBN that does not contain any of those data or information (proposed § 192.20(b)(2)). Consistent with the EFOIA proposed rule, the notifier would prepare this redacted paper copy in a manner that clearly identifies the location and relative size of deleted information. As discussed previously regarding a presubmission consultation (see section VI.C of this document), the redacted copy would be very useful as it would communicate very clearly which data or information the notifier considers to be exempt from disclosure.

C. Electronic Copies

FDA is proposing to include in the regulation a recommendation that a notifier submit an electronic copy (the evaluation copy) that is formatted in a manner that makes it suitable for FDA to use while evaluating the PBN (proposed § 192.20(c)(1)). Because technology is advancing at a rapid pace, the regulation would inform notifiers how to obtain information about the appropriate format of the electronic copy rather than specify that format. Under the regulation, a notifier would

provide such an electronic copy of both the original PBN and of any amendments to the PBN. FDA is recommending the submission of an electronic evaluation copy to take advantage of the fact that contemporary technology makes it possible for notifiers to send, and FDA to evaluate, submissions of data or information in electronic form, and the availability of an electronic evaluation copy has the potential to improve the efficiency of FDA's review. To encourage manufacturers to submit an electronic evaluation copy, a notifier who submits such a copy would submit a total of two, rather than three, paper copies.

FDA also is proposing to require that a notifier submit an electronic copy (the disclosure copy) that is formatted in a manner that makes it suitable for FDA to use to make a PBN available to the public in an electronic reading room (proposed § 192.20(c)(2)). As would be the case with the electronic evaluation copy, the regulation would inform notifiers how to obtain information about the appropriate format of the electronic copy and a notifier would be required to provide such an electronic copy of both the original PBN and of any amendments to the PBN. Consistent with the EFOIA proposed rule, a notifier would delete data or other information claimed to be confidential from the electronic copy in a manner that clearly identifies the location and relative size of deleted information. FDA is proposing to require an electronic disclosure copy to facilitate the agency's compliance with EFOIA, which includes provisions regarding the availability of records in electronic form and the establishment of "electronic reading rooms." As discussed in the EFOIA proposed rule, section 4 of EFOIA (5 U.S.C. 552(a)(2)(D)) adds a new category of records that agencies must make available in their public reading rooms. This new category consists of copies of records that have been released to any person under FOIA and that, because of their subject matter, the agency determines have become or are likely to become the subject of subsequent requests for substantially the same records. In light of the significant public interest in bioengineered foods and in FDA's oversight of these foods, FDA has tentatively concluded that it is likely that each submitted PBN would be requested under FOIA multiple times.

The preparation of an electronic copy formatted in a manner that makes it suitable for FDA to use to make a PBN available to the public in an electronic reading room will require use of computer technology. Although the use

¹¹ Under 21 CFR 11.1(c), an electronic record that meets the requirements of 21 CFR part 11 may be used in lieu of a paper record, unless paper records are specifically required. However, CFSAN is not prepared, at this time, to accept an electronic record as the official record because CFSAN does not yet have specific guidance for the submission of records only in electronic form.

of this technology is widespread, it is possible that a firm that develops a bioengineered food would not have access to the particular technology that will be needed. For this reason, under the proposed regulation a notifier may request a waiver from the requirement to submit an electronic disclosure copy. FDA would grant or deny the notifier's request on its merits.

FDA requests comments on its proposal to require an electronic disclosure copy of a PBN and to provide a notifier with an opportunity to request a waiver from this requirement. Such comments may result in a modification to the proposed requirement to submit such a copy.

D. English Language Translations, Incorporation by Reference, and Available Guidance Documents

FDA is proposing that a notifier who submits any material in a foreign language provide an English translation that is verified to be complete and accurate (proposed § 192.20(d)). This proposed regulation is necessary for the agency's efficient evaluation of a PBN and is consistent with other agency regulations regarding the submission of information in a foreign language (see e.g., § 171.1(a) and the agency's recent proposal for a premarket notification program for food contact substances (65 FR 43269, July 3, 2000)).

FDA is proposing that a notifier may incorporate by reference data or information that are already retained in FDA's files (proposed § 192.20(e)). The proposed regulation specifies that a notifier may simply incorporate by reference a file that the notifier previously submitted. If the notifier wishes to incorporate by reference a file that someone else previously submitted to FDA, the procedure to incorporate that file into the PBN depends on whether the file is publicly available (e.g., the file is in an electronic reading room or is otherwise available under FOIA). If the file is publicly available, a notifier may incorporate that file by referring FDA to it. If the file is not publicly available, a notifier may incorporate that file by referring FDA to it if the person who submitted the file authorizes the notifier to do so in a signed statement and the notifier includes that signed statement in the PBN. This proposed provision is similar to that described for incorporating previously submitted information into a food additive petition (§ 171.1(b)) and to that described in the agency's recent proposal for a premarket notification program for food-contact substances (65 FR 43269, July 13, 2000).

FDA is proposing to inform notifiers that they can obtain current guidance regarding specific technical issues by writing to FDA or by looking on FDA's site on the Internet (proposed § 192.20(f)). FDA is adding this provision to assist notifiers in addressing common technical issues, such as the estimation of dietary exposure to substances that are present in food. FDA expects that this provision will minimize the time spent, by the agency and the notifier, on routine technical issues.

E. Opportunity to Withdraw

FDA is proposing to codify a provision that a notifier may request, at any time during FDA's evaluation of a PBN, that FDA cease to evaluate that PBN (proposed § 192.30(g)). Under the regulation, the notifier could submit a future PBN about the same bioengineered food. FDA would retain the PBN in its files and would classify it as "withdrawn." A notifier could choose to withdraw a notice for several reasons. For example, it is possible that discussions between the notifier and FDA would result in a decision by the notifier to substantially revise the notice to provide data or information that address the applicable legal status questions in a more thorough manner than the submitted PBN.

The proposed regulation is consistent with the provisions of the food additive premarket review program (§ 171.7). Although a notifier does not need explicit authorization to withdraw a notice, a notifier may not be aware of this fact. Likewise, a notifier may not be aware that a notice that is "withdrawn" remains an agency record that could be requested under FOIA. Thus, the regulation would both clarify a prerogative accorded to a notifier and inform the notifier of consequences associated with that prerogative.

VIII. Premarket Biotechnology Notice: Required Parts

FDA is proposing that a PBN be separated into seven parts (proposed § 192.25). These would include a letter (proposed § 192.25(a)); a synopsis (proposed § 192.25(b)); administrative statements about the status of review of the bioengineered food by other Federal agencies or by foreign governments (proposed § 192.25(c)); data or information about the method of development (proposed § 192.25(d)); a discussion of any newly inserted genes that encode resistance to an antibiotic (proposed § 192.25(e)); data or information about substances introduced into, or modified in, the food (proposed § 192.25(f)); and data or

information about the food (proposed § 192.25(g)). The proposed regulation fosters a case-by-case approach to addressing relevant scientific and regulatory issues rather than a single set of tests that likely would not be applicable in all circumstances. In general, the proposed requirements derive from the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures. In proposing these requirements, FDA also has drawn on its experience in administering a proposed notification program for GRAS substances (62 FR 18938, April 17, 1997).¹²

The proposed regulation reflects FDA's current judgment based on contemporary scientific methods for development of bioengineered foods and the types of bioengineered foods that are now under development. Accordingly, the proposed regulation focuses on modifications to foods that are likely to result in commercial products and does not attempt to predict future changes in foods that may result from technological advances. In this field of rapid scientific development, if circumstances warrant, FDA would propose to revise any regulation that results from this proposal. FDA requests comment on technological advances in rDNA technology that are likely to result in commercial products and that would not be addressed by the proposed submission requirements. Such comments may result in a modification to the proposed submission requirements.

A. Part I: Letter

FDA is proposing to require that a responsible official of the notifier's organization, or the notifier's attorney or agent, date and sign a letter that informs FDA that the notifier is submitting a PBN under proposed § 192.25. In the letter, this official, attorney, or agent would state his position or title and attest to five statements.

1. Statements Regarding the Notifier's Responsibility and the Balanced Nature of the Notice

FDA is proposing to require that a notifier inform FDA that it is the

¹² FDA has not yet issued a final rule based on the GRAS proposal. However, in the GRAS proposal, FDA invited interested persons who determine that a use of a substance is GRAS to notify FDA of such GRAS determinations during the interim between the proposed and final rules (the interim period). During this interim period, FDA has received several dozen GRAS notices, which provided practical experience both with theoretical issues raised by that rulemaking and with practical issues associated with establishing an efficient program.

notifier's view that the bioengineered food is as safe as comparable food and that the intended use of the bioengineered food is in compliance with all applicable requirements of the act (proposed § 192.25(a)(1)). Applicable requirements of the act would include, for example, the requirement under section 409(a) and 402(a)(2)(C) of the act for FDA review and approval of a food additive and the requirement under section 201(n) and 403 of the act that labeling for the food be appropriate. FDA also is proposing that a notifier state that to the best of the notifier's knowledge, the PBN is a representative and balanced submission that includes information, unfavorable as well as favorable, pertinent to the evaluation of the safety, nutritional, or other regulatory issues that may be associated with the bioengineered food (proposed § 192.25(a)(2)). FDA is proposing that the notifier attest to these statements because, under the act, developers of new foods have a responsibility to ensure that the foods they offer to consumers are safe and in compliance with all requirements of the act (57 FR 22984 at 22985).

FDA is proposing the standard "as safe as" because this is the standard that the agency currently uses to evaluate a notice that is submitted under the 1996 procedures. Because the proposed standard is a comparative standard ("as safe as"), it takes into account circumstances such as the existence of naturally occurring toxicants in many plants (e.g., solanine that occurs naturally in potatoes). As discussed below (see section VIII.G.1 and proposed § 192.25(g)(1)), FDA also is proposing that the notifier provide a justification for selecting a particular food or foods as the "comparable food" to which the notifier will compare the bioengineered food.

2. Statements Regarding the Availability of Data and Information for FDA's Review

FDA is proposing to require that a notifier agree to make relevant data or information that are not included in the PBN available to FDA upon request while FDA is evaluating the PBN or for cause (proposed § 192.25(a)(3)). FDA is proposing this requirement to ensure that the agency will have access to relevant data or other information if safety questions arise after the bioengineered food enters commercial distribution. This proposed requirement will also continue a practice that began under the 1996 procedures.

FDA also is proposing that a notifier agree to two procedures for making such data or information available to FDA

(proposed § 192.25(a)(4)). The first procedure is to allow FDA to review and copy these data or information at a specified address during customary business hours. The second procedure is to send these data or information to FDA. FDA is proposing that a notifier agree to both of these two procedures to provide flexibility and efficiency to both the notifier and the agency.

3. Statement Regarding Public Disclosure

FDA is proposing that a notifier inform FDA as to whether the notifier claims that the existence of a PBN, or any or all of the data or information in the PBN, is exempt from disclosure under the FOIA and explain the basis for that claim (proposed § 192.25(a)(5)). FDA is proposing these requirements in light of the significant public interest in bioengineered foods. These requirements would ensure that FDA is aware of the notifier's position regarding the availability for public disclosure of the existence and content of a PBN. In addition, FDA believes that these requirements would alert a notifier that the data or information contained in a PBN are available for disclosure unless the applicable criteria for exemption are satisfied.

As discussed more fully below, this proposed rule assumes that the existence and content of a PBN is available for public disclosure unless the notifier establishes that the existence of the notice constitutes confidential commercial information or that specific data or information in the PBN constitute a trade secret or confidential commercial information. Thus, the proposed rule acknowledges that there could be circumstances in which the existence or content (or a portion of the content) of a PBN would be eligible for an exemption from public disclosure.

B. Part II: Synopsis

FDA is proposing that the first section of a PBN be a synopsis (proposed § 192.25(b)) that includes the same information that FDA is recommending for inclusion in a presubmission consultation (see proposed § 192.10(f)(3) and section VI.C of this document). The synopsis would be a concise document that describes the bioengineered food in a manner that is suitable for preparing a publicly accessible list of PBN's (see proposed § 192.40(c)(1)(i) and section X.A of this document).

C. Part III: Status at Other Federal Agencies and Foreign Governments

FDA is proposing that a notifier inform FDA of the status of any prior or

ongoing evaluation of the bioengineered plant, or food derived from such a plant, by USDA/APHIS and EPA (proposed § 192.25(c)(1) and (c)(2)). The proposed regulation is consistent with the recommendations in a report issued in April 2000 by the National Research Council (the 2000 NRC Report) (Ref. 14). That report recommended, among other things, that FDA, EPA, and USDA/APHIS establish a process to ensure appropriate and timely exchange of information between agencies about bioengineered pest-protected plants. Under the regulation, FDA would be aware of any issues still pending at those agencies, that are relevant to FDA's evaluation of the bioengineered food in question. When necessary and appropriate, FDA would contact APHIS, EPA, or both agencies about their evaluation of the bioengineered plant.

In addition, as discussed previously in this notice, the purpose of this notification program is to provide FDA with the information necessary to determine whether there are legal status questions concerning a bioengineered food so as to permit FDA to carry out its enforcement responsibilities. This would include its responsibilities to enforce section 402(a)(2)(B) of the act, which addresses foods containing illegal pesticide residues.¹³ If the EPA regulatory process regarding the bioengineered food is not yet complete and a tolerance or exemption from tolerance has not been established, the food would not be in full compliance with the law. Accordingly, in these circumstances, FDA would inform a notifier that the agency does not consider the notifier's PBN to satisfy the requirement for premarket notice (see proposed § 192.30(e) and section IX.C.5 of this document).

FDA also is proposing that a notifier inform FDA as to whether the bioengineered food is or has been the subject of review by any foreign government and, if so, describe the status of that review (proposed § 192.25(c)(3)). Foreign countries have instituted various regulatory requirements for bioengineered foods. Information about the status of a notifier's submission(s) to foreign

¹³ Under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), EPA registers pesticides, including those introduced into food via bioengineering; under section 408 of the act (21 U.S.C. 346a), EPA sets a tolerance or grants an exemption from a tolerance for pesticide residues in food. FDA has the statutory responsibility to enforce these tolerances or exemptions; under section 402(a)(2)(B), a food is adulterated if it contains a pesticide residue that exceeds an established tolerance or for which there is no tolerance or exemption from the requirement for a tolerance.

countries could be pertinent to FDA's review. For example, some issues raised by a foreign country could be relevant to the legal status of the bioengineered food under the act.

D. Part IV: Method of Development

FDA is proposing that a PBN include data or information about the method of development (proposed § 192.25(d)). Specifically, FDA is proposing that the data or information that a notifier provides regarding the method of development include: (1) Characterization of the parent plant including scientific name, taxonomic classification, mode of reproduction, and pertinent history of development (proposed § 192.25(d)(1)); (2) construction of the vector used in the transformation of the parent plant, with a thorough characterization of the genetic material intended for introduction into the parent plant and a discussion of the transformation method, open reading frames, and regulatory sequences (proposed § 192.25(d)(2)); (3) characterization of the introduced genetic material, including the number of insertion sites, the number of gene copies inserted at each site, and information on DNA organization within the inserts; and information on potential reading frames that could express unintended proteins in the transformed plant (proposed § 192.25(d)(3)); and (4) data or information related to the inheritance and genetic stability of the introduced genetic material (proposed § 192.25(d)(4)). The proposed requirement derives from the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures. FDA requests comment on technological advances in rDNA technology that are likely to result in commercial products and that would not be addressed by the proposed submission requirements. Such comments may result in a modification to the proposed submission requirements.

FDA also is proposing to require that a notifier include a discussion, as necessary, of other relevant data or information about the method of development (proposed § 192.25(d)(5)). This requirement would cover any issues about the method of development that are not explicitly addressed in proposed § 192.25(d)(1), (d)(2), (d)(3), and (d)(4). FDA expects that such issues would be identified during presubmission consultations on specific products.

E. Part V: Antibiotic Resistance

In September 1998, FDA issued for public comment a draft guidance

document regarding the use of antibiotic resistance markers in bioengineered plants (the 1998 draft antibiotic resistance guidance (Ref. 15)).¹⁴ Consistent with the thinking presented in that document, FDA is proposing to require that a PBN include a discussion about any newly inserted genes that encode resistance to an antibiotic (proposed § 192.25(e)). Because scientific methods to assess this issue are evolving, in the proposed regulation FDA is recommending that a notifier contact FDA about the agency's current thinking on this topic.

F. Part VI: Substances in the Food

FDA is proposing that a PBN include data or information about substances introduced into, or modified in, the food (proposed § 192.25(f)). These data or information would include data or information about the identity and function of these substances (proposed § 192.25(f)(1)), the level of these substances in the bioengineered food (proposed § 192.25(f)(2)), dietary exposure to these substances (proposed § 192.25(f)(3)), the potential that a protein introduced into the food will be an allergen (proposed § 192.25(f)(4)), and a discussion of other safety issues that may be associated with these substances (proposed § 192.25(f)(5)). In general, the proposed requirements derive from the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures. FDA requests comment on these proposed submission requirements. Such comments may result in a modification to the proposed submission requirements.

1. Covered Substances

FDA is proposing that a notifier provide data or information about substances introduced into, or modified in, the food (proposed § 192.25(f)). Under the regulation, a "modified substance" would include a substance

that is present in the bioengineered food at an increased level relative to comparable food. Because pesticidal substances are regulated by EPA, the proposed regulation regarding data and information about substances introduced into the plant excludes data and information about pesticidal substances.

As discussed previously (section II of this document), a nonpesticidal substance introduced into food by way of breeding is a food additive if the substance is not GRAS within the meaning of 21 U.S.C. 321(s). Thus, the legal status issues raised by bioengineered foods include the potential that the food would contain an unapproved food additive. In the 1992 policy, FDA expressed its view that there is unlikely to be a safety question sufficient to question the presumed GRAS status of the expression products of the transferred genetic material when the expression products do not differ significantly from other substances commonly found in food and are already present at generally comparable or greater levels in currently consumed foods (57 FR 22984 at 22990). In the 1992 policy, FDA identified proteins, carbohydrates, and fats and oils as substances commonly found in food because those were the substances that were being considered in products under development in 1992.¹⁶ As discussed, rDNA technology has recently begun to be used to introduce multiple genes to generate new metabolic pathways (Ref. 11). As with proteins, carbohydrates, and fats and oils, it is FDA's view that the substances produced by the new pathways would be presumed to be GRAS if they do not differ significantly from other substances that are currently present at generally comparable or greater levels in food and, as such, are safely consumed.

2. Identity, Function, Level, and Dietary Exposure

FDA is proposing that a PBN include data or information about the identity and function of substances introduced into, or modified in, the food (proposed § 192.25(f)(1)) and the level in the bioengineered food of these substances (proposed § 192.25(f)(2)). The proposed regulation derives from the fact that the quantity and quality of scientific evidence required to establish that the use of a substance is safe vary

¹⁴ In the 1992 policy, FDA discussed the role of genes that encode resistance to an antibiotic as part of the development of some bioengineered foods (57 FR 22984 at 22987). In the APH(3)II final rule, FDA approved the use of the enzyme expressed by one such gene, the *kan^r* gene encoding resistance to kanamycin, in the development of new varieties of cotton, oilseed rape, and tomatoes. Between November 1996, and February 1997, FDA had several discussions with outside experts to determine whether circumstances exist under which FDA should recommend that a given antibiotic resistance gene not be used in crops intended for food use, and if so, to delineate the nature of those circumstances. Based on these discussions, FDA issued for public comment the 1998 draft antibiotic resistance guidance. FDA intends to issue final guidance in the near future.

¹⁵ A report that describes the consultations that FDA relied on in developing this draft guidance is available (Ref. 16).

¹⁶ As discussed in the 1992 policy, FDA has presumed that transferred nucleic acids would be GRAS (57 FR 22990). Under the proposed regulation, a notifier provides data or other information about transferred nucleic acids in Parts IV (method of development) and V (genes that encode resistance to an antibiotic).

considerably depending upon the chemical, physical, and physiological properties of the substance and its estimated dietary exposure.

FDA is proposing that a notifier include either: (1) An estimate of dietary exposure to substances introduced into, or modified in, the food (proposed § 192.25(f)(3)(i)); or (2) a statement that explains the basis for the notifier's conclusion that an estimate of dietary exposure to these substances is not needed to support safety (proposed § 192.25(f)(3)(ii)). As discussed in the 1992 policy (57 FR 22984 at 22998), many substances that would be introduced into, or modified in, a bioengineered food would be present in the bioengineered food at a relatively low level. For example, since 1994, developers have completed more than 45 consultations about bioengineered foods, most of which contain newly introduced or modified enzymes (Ref. 6). In most cases, an estimate of dietary exposure to these enzymes was not critical to the safety assessment. However, this is not always the case, even for enzymes that would be present in food at a low level. For example, in the case of the enzyme APH(3')II, FDA relied, in part, on the estimated dietary exposure to APH(3')II in concluding that active APH(3')II in food would not interfere with the clinical efficacy of the orally administered antibiotic, kanamycin (59 FR 26700 at 26703). Thus, the particular circumstances will determine whether an actual estimate of dietary exposure to a substance that is introduced into a food plant is needed to support the notifier's view that the bioengineered food is as safe as comparable food.

3. Allergenicity

FDA is proposing that a notifier include a discussion of the available data or information that address the potential that a protein introduced into the food will be an allergen (proposed § 192.25(f)(4)). The proposed regulation is consistent with the 1996 procedures, which recommend that a notifier provide FDA with information regarding any known or suspected allergenicity and a discussion of the available information about the potential for the bioengineered food to induce an allergic response. Because scientific methods to assess this issue are evolving, in the proposed regulation FDA is recommending that a notifier contact FDA about the agency's current thinking on this topic.

FDA is developing guidance for evaluating the potential allergenicity of proteins introduced into bioengineered foods and intends to make that draft

guidance available for public comment in the near future. The draft guidance will be based in part on recommendations made by scientific experts who attended a public scientific conference on food allergy and bioengineered foods that FDA, EPA, and USDA jointly hosted on April 18 and 19, 1994 (the 1994 allergenicity conference (Ref. 17)).¹⁷

4. Other Safety Issues

It is impracticable for FDA to either anticipate all classes of substances that could be introduced into food or provide specific guidance about each of those classes of substances. Therefore, FDA is proposing that a notifier provide a discussion of data or information relevant to other safety issues that may be associated with the substances introduced into, or modified in, the food (proposed § 192.25(f)(5)). This requirement would cover any issues that are not explicitly addressed in proposed § 192.25(f)(1), (f)(2), (f)(3), and (f)(4) regarding substances introduced into, or modified in, the food. Such issues could include, for example, the digestibility or toxicity of an introduced protein. FDA expects that such issues would be identified during presubmission consultations on specific foods.

G. Part VII: Data and Information About the Food

FDA is proposing that a notifier provide data or information about the bioengineered food (proposed § 192.25(g)). These data or information would include a justification for selecting a particular food(s) as "comparable food" (proposed § 192.25(g)(1)); a discussion of historic uses of the comparable food(s) (proposed § 192.25(g)(2)); data or information comparing the composition and characteristics of the bioengineered

¹⁷ The goal of the 1994 allergenicity conference was to foster a scientific dialogue to assess information that was available at that time regarding the characteristic properties of food allergens and the methods that are available to assess allergenicity. The scientists who participated in this conference noted that serum from an individual who is sensitive to a known allergenic source can be used to assess the allergenic potential of proteins derived from that source. These scientists acknowledged that there are no direct methods to assess allergenicity of proteins from sources that are not known to produce food allergy. However, they suggested that the possibility that a new protein will cause an allergic reaction can, to some degree, be evaluated by comparing its similarity to characteristics of known food allergens. If a protein does not have characteristics of known food allergens, the potential that the protein would cause an allergic reaction is minimized. Because exceptions have been reported for the observed characteristics of allergens, and no one factor is fully predictive, the scientists recommended that an assessment of allergenicity be based on all available information.

food to those of comparable food(s), with emphasis on significant nutrients, naturally occurring toxicants and antinutrients, and any intended changes to the composition of the food (proposed § 192.25(g)(3)); any other information relevant to the safety, nutritional, or other regulatory assessment of the bioengineered food (proposed § 192.25(g)(4)); and a narrative that explains the basis for the notifier's view that the bioengineered food is as safe as comparable food(s) and that the bioengineered food is otherwise in compliance with all applicable requirements of the act (proposed § 192.25(g)(5)). In general, the proposed requirements derive from the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures. FDA discusses the details of this proposed regulation immediately below. FDA requests comment on the proposed submission requirements regarding the food. Such comments may result in a modification to the proposed submission requirements.

1. Comparable Food

FDA is proposing that the notifier provide a justification for selecting a particular food or foods as the "comparable food" to which the notifier will compare the bioengineered food (proposed § 192.25(g)(1)). The proposed requirement is based on the 1992 policy and FDA's experience under the 1996 procedures.

Ordinarily, the comparable food would be the parental variety or commonly consumed varieties of the parent plant (57 FR 22984 at 22996 and Ref. 5)). However, when the intended effect of the transformation is to change the composition of the food, it may be appropriate to also compare the composition and characteristics of the bioengineered food to that of another commonly consumed food. For example, if an oilseed crop is modified to produce an oil that has a higher content of a particular fatty acid than commonly consumed varieties, it may be appropriate to also compare the composition and characteristics of the bioengineered food to that of a food that contains that fatty acid. FDA expects that any issues associated with the appropriate selection of comparable food(s) would be identified during presubmission consultations on specific products.

2. Historic Uses of the Comparable Food

FDA is proposing that the notifier provide a discussion of historic uses of the comparable food(s) to which the notifier will compare the bioengineered food (proposed § 192.25(g)(2)). Several

notifiers who have consulted with FDA under the 1996 procedures have included such a discussion (e.g., as part of their description of the applications or uses of the bioengineered food). FDA has found that such a discussion is particularly helpful in identifying the potential uses of the bioengineered food, regardless of whether those uses are specifically targeted by the notifier.

3. Comparing the Composition and Characteristics of the Bioengineered Food to That of Comparable Food

Consistent with the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures, FDA is proposing that a notifier provide data or information comparing the composition and characteristics of the bioengineered food to those of comparable food(s), with emphasis on changes in the levels of significant nutrients and naturally occurring toxicants and antinutrients (proposed § 192.25(g)(3)(i) and (g)(3)(ii)). Such changes could raise legal status questions such as whether the name of the food adequately describes the food or whether the food is adulterated within the meaning of section 402(a)(1) of the act.

Consistent with the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures, FDA is proposing that a notifier provide data or information about any intended changes to the composition or characteristics of the food (proposed § 192.25(g)(3)). Such changes could raise legal status questions such as the appropriate common or usual name for the food. For example, FDA has been notified about a modification to a canola variety of rapeseed to produce an oil with a modified fatty acid composition. Because the name that is most often used to describe oil derived from the parent plant (i.e., canola oil) did not accurately reflect the characteristic properties of the bioengineered oil, the notifier suggested a new name for the oil.

Intended changes to the composition or characteristics of the food also could raise safety questions about the food. For example, it is possible that a developer could modify corn so that the corn becomes a significant dietary source of the nutrient folic acid. Folic acid is used to fortify many foods, including breakfast cereals, because of the relationship between consumption of folic acid and a reduced risk of neural tube defects (21 CFR 101.79). However, excess folic acid in the diet can mask the signs of vitamin B₁₂ deficiency. Thus, an increased level of folic acid in a food such as corn, which is commonly

used in breakfast cereals, could raise safety or other regulatory issues.

Under proposed § 192.25(g)(3), intended changes to the composition of food include modifications that are intended to reduce the level of a substance in food. For example, it is possible that a modification would be intended to decrease the level of a substance that is considered undesirable, such as the phytate that naturally occurs in soybeans. It also is possible that a modification would be intended to reduce the fat content of a food. As with intended increases in the level of substances already in food, changes that decrease the level of substances already in food could raise legal status questions such as the appropriate common or usual name for the food.

4. Other Relevant Information

Consistent with the 1992 policy, the 1996 procedures, and FDA's experience under the 1996 procedures, FDA is proposing that a notifier provide a discussion of any other information relevant to the safety, nutritional, or other regulatory assessment of the bioengineered food (proposed § 192.25(g)(4)). This requirement would cover any legal status issues about the food that are not explicitly addressed in proposed § 192.25(g)(1), (g)(2), and (g)(3). For example, under proposed § 192.25(g)(4), a notifier could discuss the basis for proposing a specific common or usual name for a bioengineered food, or any other proposed labeling that would accompany the bioengineered food. FDA expects that such issues would be identified during presubmission consultations on specific foods.

FDA requests comment on whether this rule should also include a requirement that a premarket notice for a bioengineered food include methods by which the food could be detected. In particular, the agency is interested in comments on the circumstances under which such methods should or should not be required, and the rationale for any such requirement (e.g., the modification to the crop makes the food acceptable for animal feed but unacceptable for human food). The agency is also interested in comments on whether any such required methods should be for raw agricultural commodities, representative finished foods likely to contain the modified food, or both; and whether any such required methods should contain sufficient information, such as primer sequences, to enable technically-proficient non-government laboratories to use them; and what other criteria, if

any, there should be for required methods (e.g., cost). Such comments may result in a modification to the proposed submission requirements.

5. Narrative

FDA is proposing to require that a notifier provide a narrative that explains the basis for the notifier's view that the bioengineered food is as safe as comparable food and that the bioengineered food is otherwise in compliance with all applicable requirements of the act (proposed § 192.25(g)(5)). The narrative would provide an integrated discussion of the data and information submitted in a PBN. FDA is proposing this requirement because the notifier has the responsibility for determining that the intended use of the bioengineered food is as safe as comparable food and is otherwise lawful. Absent an integrated discussion of the underlying data and information, the basis for the notifier's conclusion about the legal status of the bioengineered food may not be apparent.

IX. Agency Administration of a Premarket Biotechnology Notice

A. Filing Decision

FDA is proposing to do an initial evaluation of the notice within 15 working days to see whether the notice appears to include all elements required under §§ 192.20 and 192.25 (proposed § 192.30(a)). FDA also is proposing to file a PBN that appears to include all required elements, and to contact a notifier to explain what is missing if the PBN does not appear to include all required elements. FDA is proposing this "filing decision" because the timeframe for the agency's response to the notifier (i.e., 120 days (see proposed § 192.5(c) and section V.C of this document) is relatively short. To enable the agency to complete its evaluation in this period, it is essential that the agency have a complete notice when the 120-day period begins.

The proposed timeframe for the filing decision (i.e., within 15 working days) is consistent with the timeframe for the filing decision for a food additive petition (§ 171.1(i)(1)). The proposed process that "FDA will inform the notifier" provides flexibility for the mechanism whereby FDA contacts a notifier. FDA expects to contact the notifier by telephone or possibly by electronic mail and expects that a notifier would provide the missing material promptly. However, should circumstances warrant (e.g., FDA is unable to reach a notifier by telephone, or the notifier does not provide the

materials promptly), under the regulation, FDA could send a letter or telefax to the notifier explaining that the agency had received, but not filed, the PBN and the reasons therefor.

Under proposed § 192.30(a)(1), CFSAN will inform CVM about any PBN that it files. Regardless of whether the bioengineered food would be used in human food, food for animals, or both, this inter-Center communication will ensure that both Centers are aware of all bioengineered foods that are nearing commercialization.

B. Acknowledgment Letter

FDA is proposing to send, within 15 working days of filing a notice, a letter to the notifier (or, when applicable, the notifier's agent) informing the notifier of the date on which FDA filed the PBN (proposed § 192.30(b)). As a practical matter, such a letter would acknowledge receipt as well as inform the notifier of the date of filing.

C. Response Letter

FDA is proposing to respond to a notifier within 120 days of filing a notice (proposed § 192.30(c)). Because all submissions will be sent to CFSAN, CFSAN would issue the response to the notifier, regardless of whether the intended use of the bioengineered food is in human food, food for animals, or both. A response from CFSAN would make clear that CFSAN was aware of, and thus had been notified about, all bioengineered foods, regardless of their intended use.

As with any correspondence, the particular circumstances will determine the full text of the agency's letter. However, the agency believes that a letter would likely fall into one of four general categories (proposed § 192.30(d)(1), (d)(2), (d)(3), and (d)(4)). FDA discusses each of these four categories immediately below.

1. General Categories for FDA's Response

a. *Letter that extends FDA's evaluation.* FDA is proposing that the agency could inform a notifier that the agency is extending its evaluation of the premarket notice by 120 days (proposed § 192.30(d)(1)). Under the regulation, in this letter FDA would also inform the notifier that the agency expects that the bioengineered food will not be marketed during the extended evaluation period.

Ordinarily, FDA expects to send a final response to a notifier within 120 days, particularly if a prospective notifier discusses relevant scientific and regulatory issues with FDA, prior to submitting a PBN about a bioengineered food (see proposed § 192.10 and section

VI of this document). However, there are several circumstances that could prevent the agency from completing its evaluation within that time period. For example, FDA may need to extend the review time if a notifier did not participate in the presubmission consultation program; the issues raised by a particular bioengineered food could be particularly novel and complex; parts of a submission could require clarification, amplification, or correction; or the submission could be poorly written or be of such poor scientific quality that it precludes timely evaluation by the agency.

As discussed previously, FDA is issuing this proposed rule to ensure that it has the appropriate amount of information about bioengineered foods and to help to ensure that all market entry decisions by the industry are made consistently and in full compliance with the law. The goal of this rulemaking would not be achieved if a bioengineered food entered commercial distribution before FDA had completed its evaluation of the applicable notice.

b. *Letter that the notice does not provide a basis.* FDA is proposing that the agency have an option to inform a notifier that the premarket notice does not provide a basis for the notifier's view that the bioengineered food is as safe as comparable food or is otherwise lawful (proposed § 192.30(d)(2)). In so doing, FDA would inform the notifier of the reasons for this conclusion. Under the regulation, in this letter FDA would also inform the notifier that the agency expects that the bioengineered food will not be marketed.

FDA has had experience with another food program, the proposed notification program for GRAS substances, in which some submitted notices do not provide a basis for the notifier's view that the intended use of a substance is lawful (Ref. 18). The underlying reasons why the applicable notices have not provided a basis for a GRAS determination have been quite varied. Likewise, there could be various reasons why a premarket notice does not provide a basis for the notifier's view that the bioengineered food is as safe as comparable food or is otherwise lawful. For example, the notice may not provide a basis for the notifier's view that a substance introduced into the bioengineered food is not an unapproved food additive or that the bioengineered food would not be misbranded. As another example, the notice may not provide a basis to conclude that a bioengineered food that contains an unusually high level of a naturally occurring toxicant would not

be adulterated. As a third example, if the poor quality of a notice makes it difficult for the agency to fully evaluate the notice, regardless of the time period available, FDA may inform the notifier of the inadequacies of the notice rather than extend its evaluation of the notice for another 120 days.

If a notice about a bioengineered food does not provide a basis to conclude that a bioengineered food is as safe as comparable food or is otherwise lawful, that food could be adulterated or misbranded and should not be marketed. If a notifier initiates commercial distribution of a bioengineered food after being informed that the applicable notice is not adequate, FDA will carefully and completely review the legal status of the applicable food and will use all available options to ensure that the food is fully in compliance with all provisions of the act. In particular, in such circumstances, the agency fully intends to bring to bear the complete range of its authorities and resources, including its authority under section 704 of the act (21 U.S.C. 374) to conduct inspections and investigations, collect samples, and perform analyses, as well as its authority under sections 705 and 903 of the act (21 U.S.C. 375 and 393) to engage in publicity and public education. When the agency concludes through the application of these resources that a food is adulterated, misbranded, or otherwise not in full compliance with the act, FDA will utilize the act's legal sanctions, as appropriate, including in rem seizure of violative foods and injunction proceedings against, or criminal prosecution of, those responsible for distributing such foods.

c. *Letter that FDA has no questions.* If, based on its evaluation of a notice, FDA has no questions regarding the notifier's view that the bioengineered food is as safe as comparable food and is otherwise lawful, FDA would inform a notifier of that fact (proposed § 192.30(d)(3)). Because the evaluation of food safety is a time-dependent judgment that is based on general scientific knowledge as well as specific data and information about the food, FDA would qualify its statement to clarify that the agency has no questions "at this time." This proposed response is similar to the letters that FDA has issued in response to submissions received under the 1996 procedures.

d. *Letter that a notifier has withdrawn the notice.* Under proposed § 192.20(g), if a notifier requests that FDA cease to evaluate a PBN, FDA would retain the PBN in its files and classify the PBN as "withdrawn." In such a circumstance,

FDA would bring the notification process to closure by sending the notifier a letter acknowledging that the agency had received a withdrawal letter and had ceased to evaluate the PBN, effective on the date that FDA received the letter (proposed § 192.30(d)(4)). This proposed response is similar to responses issued by FDA under the proposed notification program for GRAS substances when the notifier requests that FDA cease to evaluate a GRAS notice (Ref. 18).

2. Status of the Bioengineered Food at EPA

If the bioengineered food contains a pesticidal substance, FDA is proposing that FDA's response letter will describe the status of the bioengineered food at EPA (proposed § 192.30(e)). If all applicable regulatory processes at EPA have come to closure (proposed § 192.30(e)(1)), FDA would say so and would respond as described above. As discussed above, if regulatory processes at EPA regarding the bioengineered food are still pending, FDA would inform the notifier that FDA does not consider the PBN to satisfy the requirement for premarket notice (proposed § 192.30(e)(2)).

X. Public Disclosure

FDA is proposing to inform notifiers about: (1) The public disclosure provisions that apply to the existence and content of a PBN; (2) procedures that a notifier should use to inform FDA of the notifier's view about whether the existence or content of a PBN is exempt from public disclosure; and (3) the criteria that FDA uses to evaluate the notifier's view (proposed § 192.40(a) through (d)). FDA also is proposing the procedures that FDA will use to disclose the agency's evaluation of, and response to, each PBN (proposed § 192.40(e)). This part of the regulation would ensure that both notifiers and the interested public have information about provisions that derive from the FOIA. FDA requests comment on these proposed provisions. Such comments may result in a modification to the proposed requirements.

A. Existence of the Notice

FDA is proposing that the existence of a filed PBN ordinarily is available for public disclosure on the date that FDA files it (proposed § 192.40(a)(1)). Under the regulation, a notifier who believes that the existence of a PBN is exempt from disclosure would be responsible for asserting that claim (proposed § 192.40(a)(2)). If a notifier claims that the existence of a PBN is confidential, FDA would evaluate that claim and

would disclose the existence of the PBN, unless FDA determines that the criteria for exemption from disclosure in § 20.61 are satisfied (proposed § 192.40(a)(3)). If FDA determines that the existence of a PBN is confidential at the time that the agency files it, the existence of the PBN would become available for public disclosure, in accordance with § 20.61, when the criteria for exemption from disclosure are no longer satisfied (proposed § 192.40(a)(4)).

FDA has previously discussed the FOIA, and the exemption from public disclosure that the FOIA provides for trade secrets and confidential commercial information, with respect to data or information that a developer submits to FDA during a presubmission consultation (section VI.B of this document). Consistent with that discussion, FDA believes that, in most cases, the fact that a notifier had submitted a PBN would not constitute confidential commercial information. Nevertheless, there could be circumstances in which a notifier submits a PBN and has grounds to claim that the existence of the PBN should not be available for public disclosure.

FDA is proposing to make a list of filed PBN's easily accessible to the public (e.g., by placing the information on the Internet or in a paper or electronic file that is available at FDA for public review and copying) (proposed § 192.40(b)). FDA expects that the list of PBN's would include most or all of the information in the synopsis of the PBN. Consistent with current procedures for updating an easily accessible inventory of notices received for another foods program (i.e., the GRAS notification program; see Ref. 18), FDA expects to update the list of filed PBN's on an approximately monthly basis. The proposed regulation to make this information easily accessible to the public is responsive to the input that FDA received at the public meetings that it convened in 1999, and to the comments that FDA received as a result of those meetings.

B. Content of the Notice

FDA is proposing that the data or information in a PBN ordinarily are available for public disclosure on the date that FDA files the PBN (proposed § 192.40(c)(1)). Under the regulation, a notifier who believes that some or all of the content of a PBN is exempt from disclosure would be responsible for asserting that claim (proposed § 192.40(c)(2)). If a notifier claims that some or all of the content of a PBN is confidential, FDA would evaluate that claim. FDA would disclose the content

of the PBN, unless FDA determines that the criteria for exemption from disclosure in § 20.61 are satisfied (proposed § 192.40(c)(3)). If FDA determines that some or all of the content of a PBN is confidential at the time that the agency files it, the data or information in question would become available for public disclosure, in accordance with § 20.61, when the criteria for exemption from disclosure are no longer satisfied (proposed § 192.40(c)(4)).¹⁸

Consistent with the agency's discussion of its view regarding the disclosability of the data or information provided to FDA during a presubmission consultation (section VI.B of this document), FDA believes that, in most cases, most of the data or information in a PBN would not constitute a trade secret. For example, very few of the submissions that FDA has received under its current consultation program identify specific data or information that the developer claims to be exempt under § 20.61. However, when the existence of the PBN is exempt from disclosure, all data and information in the submission would necessarily be exempt from disclosure.

FDA anticipates that the PBN will be easily accessible to the public. Under EFOIA and FDA's proposed rule to implement EFOIA, frequently requested records, or records that are likely to be requested frequently, are placed in an "electronic reading room." As discussed above (see section VII.C of this document), FDA has tentatively concluded that it is likely that each submitted PBN would be requested under FOIA multiple times. Therefore, these records will be easily accessible to the public because they will be available electronically (proposed § 192.40(d)).

C. Disclosure of FDA's Evaluation of, Response to, a Notice

FDA is proposing to make two agency records associated with a PBN easily accessible to the public (e.g., by placing the information on the Internet or in a paper or electronic file that is available at FDA for public review and copying) (proposed § 192.40(e)(1)). The applicable records include the text of the letter issued by the agency in response to each PBN, and the text of the agency's completed evaluation of each PBN.

¹⁸ Section 20.61 describes both criteria for exemption from disclosure and procedures that apply in circumstances where FDA disagrees with the view of a person who submits data or information that some or all of those data or information satisfy the criteria for exemption from disclosure.

The proposed regulation commits to make available the "text" of the agency's letter and the agency's memorandum, rather than a "copy" of these records, to enable FDA to satisfy the regulations by a mechanism other than providing a physical copy of these records (e.g., by providing an electronic copy on the Internet). Consistent with current procedures for updating an easily accessible inventory of notices received for another foods program (i.e., the GRAS notification program; see Ref. 18), FDA expects to add the text of applicable agency letters and memoranda to the easily accessible file on an approximately monthly basis. The proposed regulation to make this information easily accessible to the public is responsive to the input that FDA received at the public meetings that it convened in 1999, and to the comments that FDA received as a result of those meetings.

As discussed previously (proposed § 192.30(c)(1) and section IX.C.1 of this document), a notifier could receive a letter that informs the notifier that FDA is extending its evaluation of the premarket notice by 120 days. Under the proposed regulation to make the agency's response to a PBN easily accessible to the public, such an extension letter would be easily accessible to the public. When FDA issues a final letter regarding the applicable notice, it is likely that the agency would replace the extension letter with the final letter rather than making both letters easily accessible. The fact that the notifier had received an extension letter would still be readily apparent (e.g., because the date of the final response letter would be more than 120 days from the date of the extension letter). In addition, it is likely that FDA's final response letter would acknowledge the fact that the agency had sent a letter extending its evaluation.

XI. Proposed Regulations Regarding Bioengineered Foods That Would Be Used in Animal Feed

FDA is proposing to require the submission to the agency of data and information regarding bioengineered plant-derived foods that would be used in animal feed. FDA's proposal also includes a recommendation that prospective notifiers participate in a presubmission consultation program. In general, these proposed regulations regarding bioengineered foods intended to be fed to animals (proposed part 592) parallel the agency's proposed regulations for human food (proposed part 192). The following discussion addresses areas of importance in the

proposed animal feed regulations (proposed part 592).

The number of different species encompassed by the term "animal," as used in the act, is extraordinarily broad. CVM has regulatory authority over the food consumed by all nonhuman species, ranging from those raised in aquaculture, such as lobster and fish, to pets, birds, and the traditional classes of farm animals like cattle, swine, and horses. These animals may consume parts of a bioengineered plant that are not eaten by people. For example, cattle and other herbivores eat the forage portion of the corn plant (stalk and leaves), which has no human food applications. In addition, animals may eat the byproducts or residues left over from the production of human foods. For example, soybean meal, which is a source of dietary protein widely used in animal diets, is a byproduct from the production of soybean oil, which is primarily used in human foods. As another example, broken rice, which is not desirable for human food, is a major pet food ingredient.

Undesirable substances can concentrate in the byproducts or residues left over from the production of human foods. For example, gossypol, a naturally occurring toxicant in cotton, concentrates in cottonseed meal, which is a byproduct obtained during the manufacture of cottonseed oil. The presence of gossypol limits the use of cottonseed meal in animal feed. As another example, some substances that can cause enlargement of the thyroid naturally occur in rapeseed plants and are concentrated in the meal (commonly called canola meal) that is a byproduct obtained during the manufacture of low erucic acid rapeseed oil (commonly called canola oil). These compounds must remain at a low level for the canola meal to be useful in animal feed.

In some cases, bioengineered foods could make up most of an animal's diet, which the animal could consume for its entire lifespan. For example, in a single year a high-producing dairy cow could eat as much as 6,000 pounds of a nutritional supplement containing added energy and protein. This supplement could contain up to 80 percent corn grain and 20 percent soybean meal. The same dairy cow could also consume as much as 4,380 pounds of fermented corn forage and ears (i.e., whole plant corn silage in that same year). Fattening beef cattle could eat a diet based on 10 percent whole plant corn silage, 80 percent corn grain, and 9 percent soybean meal. A typical swine diet contains 74 percent corn grain and 23 percent soybean meal, while broiler chicks might eat a ration

that is 58 percent corn grain and 35 percent soybean meal. Because these foods may comprise such a large percentage of an animal's diet, an undesirable substance that is introduced into a bioengineered food, even at a low level, has the potential to adversely affect an animal that eats the food.

Because of these factors, notifiers in assembling a PBN to address bioengineered foods to be consumed by animals should pay particular attention to the intended use of the bioengineered food, including the species expected to consume it; the function and level of all introduced or modified substances; and any changes in the composition and characteristics of the food. FDA has concluded that the notices should contain adequate information about any potential safety issues for all substances introduced into, or modified in, the food. Concerns associated with any changes in the composition or characteristics of the bioengineered food should also be addressed. Notifiers should be aware that in some cases, animal diets are formulated using different nutritional parameters than those used by human nutritionists. For example, when a diet is formulated for cattle, nutritionists utilize parameters such as neutral detergent fiber and acid detergent fiber in evaluating the suitability of a potential ingredient. Notices for bioengineered plants intended to be fed to animals should incorporate these differences in how ingredients are evaluated for their nutritional content.

XII. Paperwork Reduction Act

This proposed rule contains information collection provisions that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (the PRA) (44 U.S.C. 3501–3520). A description of these provisions is given below with an estimate of the annual reporting and recordkeeping burden. Included in the estimate is the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing each collection of information.

FDA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be

collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Title: Premarket Notice Concerning Bioengineered Food

Description: Section 701 of the act sets forth authority to issue regulations for the efficient enforcement of the act. Section 201 of the act defines terms utilized within the act. Food is defined by section 201 of the act to mean: “(1) articles used for food or drink for man or other animals, (2) chewing gum, and (3) articles used for components of any such article.” Thus, the act clearly incorporates animal feed and drink into its definition of food.

Section 403 of the act prohibits the misbranding of food. Section 402 of the act prohibits the adulteration of food. Section 409 of the act establishes a premarket approval requirement for

“food additives.” Section 201(s) of the act provides a two-step definition of “food additive.” The first step broadly includes any substance the intended use of which results or may reasonably be expected to result, directly or indirectly, in its becoming a component or otherwise affecting the characteristics of food, which under section 201(f) of the act includes animal food. The second step, however, excludes from the definition of food additive substances that are GRAS by qualified experts.

In this proposed rule, FDA is proposing to require the submission to the agency of data and information regarding plant-derived bioengineered foods. The proposed rule refers to foods derived from plant varieties that are developed using rDNA technology as “bioengineered foods.” FDA is proposing that this submission be made at least 120 days prior to the commercial distribution of such foods. The notice would include data and information

about the bioengineered food and a narrative that provides an integrated discussion of those data and information. The notifier would maintain a record of relevant data and information that are not included in the notice. FDA would make the existence of the notice, and the agency’s evaluation of and response to the notice, easily accessible to the public. The content of the notice would be publicly available consistent with the FOIA and other federal disclosure statutes. FDA is also proposing to include in the regulation a recommendation that prospective notifiers consult with the agency to identify and discuss relevant safety, nutritional, or other regulatory issues regarding a bioengineered food.

Description of Respondents:

Developers, manufacturers, distributors, or importers of food.

FDA estimates the burden of this collection of information as follows:

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN ¹

21 CFR Section	No. of Respondents	Annual Frequency per Response	Total Annual Responses	Hours per Response	Total Hours
192.10(e) through (g)	20	1	20	4	80
192.10(h)(1)	20	1	20	0.5	10
192.10(h)(2)	20	1	20	8	160
192.10(h)(3)(i)	2	1	2	2	4
192.10(h)(3)(ii)	2	1	2	5	10
192.20(b)(2)(i)	2	1	2	2	4
192.20(b)(2)(ii)	2	1	2	5	10
192.20(c)(1)	20	1	20	8	160
192.20(c)(2)	20	1	20	8.4	168
192.20(d)	0.5	1	0.5	20	10
192.20(e)	0.5	1	0.5	2	1
192.20(g)	0.5	1	0.5	1	0.5
192.20(a) through (b)(1) and 192.25	20	1	20	190	3,800
Total					4,417.50

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

TABLE 2.—ESTIMATED ANNUAL RECORDKEEPING BURDEN ¹

21 CFR Section	No. of Recordkeepers	Annual Frequency per Recordkeeping	Total Annual Records	Hours per Recordkeeper	Total Hours
192.25(a)(2)	20	1	20	19	380
Total					380

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

Under the proposed rule, a notifier sends a notice regarding a bioengineered food to CFSAN regardless of whether the intended use is in human food, food for animals, or both. Because FDA routinely issues separate regulations regarding human food and animal feed, the regulations associated with the notice are codified in two parts of title 21: part 192 and part 592. Both CFSAN and CVM have been consulting with developers of bioengineered foods, and

have received submissions of data and information about such foods. Since 1994, FDA has received, on average, eight submissions about bioengineered foods that are ready for commercialization per year. However, given the efficiencies of rDNA techniques, the advances in these techniques, and the rapidly expanding information related to genomes, FDA expects that these techniques are likely to be utilized to an increasingly greater

extent. Thus, for the purpose of this analysis FDA is estimating that the agency would receive 20 PBN’s per year.

In this analysis, FDA is assuming that all notices about bioengineered foods will encompass both human food and food for animals. FDA is making this assumption because this was the case in approximately 70 percent of submissions that FDA has received since 1994. Because some 30 percent of notices may not encompass both human

food and food for animals, FDA's assumption results in a conservative estimate of the reporting and recordkeeping burden.

Because FDA's analysis assumes that all notices will encompass both human food and food for animals, and because all notices are submitted to CFSAN, regardless of the intended use, FDA is estimating the recordkeeping and reporting burden only for the regulations issued in Part 192. FDA is making no separate estimate of the recordkeeping and reporting burden for the regulations issued in Part 592 because this burden is subsumed within the burden estimated for part 192.

A. Hourly Burden to Prepare a Report (Proposed §§ 192.20(a) through (b)(1) and § 192.25)

FDA contacted five firms that had made one or more submissions under FDA's existing procedures, which are summarized in a guidance first issued in 1996 (the 1996 procedures (Ref. 5)). FDA asked each of these firms for an estimate of the hourly burden to prepare a submission under the current process. Three of these firms subsequently provided the requested information. Based on this information, FDA is estimating that the average time to prepare a submission under the 1996 procedures is 150 hours.

The proposed rule would include some reporting requirements that are not described in the 1996 procedures. After considering the amount of time that firms need, on average, to prepare a submission under the 1996 procedures, and after considering the relative contribution of the additional parts, FDA is estimating that a firm would need 32 to 48 additional hours to prepare the additional sections. For the purpose of this analysis, FDA selected the average of these estimates (i.e., 40 additional hours).

FDA is estimating that the hourly burden to prepare a PBN is the sum of the hours that a firm currently spends, on average, to prepare a submission under the 1996 procedures and the additional hours that a firm would spend, on average, to prepare a submission that addresses requirements that are not described under the 1996 procedures. This sum is 150 hours plus 40 hours, or 190 hours.

B. Hourly Reporting Burden Associated With Confidential Information in a Report (Proposed § 192.20(b)(2)(i) and (b)(2)(ii))

FDA expects that most of the data or information in a PBN will be available for public disclosure. However, a few firms that made submissions under the

1996 procedures included information that they considered to be confidential. To ensure that FDA is aware of confidential information, under the proposed rule a notifier must identify any confidential information in the PBN. FDA is estimating that two PBN's per year would contain confidential information and that it would take a notifier 2 hours to identify this information. Under the proposed rule, a notifier who includes confidential information must prepare and submit an additional paper copy that has been edited to delete confidential information (i.e., a redacted copy). FDA is estimating that it would take a notifier 5 hours to prepare the redacted copy. FDA's estimates of the hourly reporting burden associated with confidential information are based on its familiarity with submissions received under the 1996 procedures, including the content and organization of those submissions. In most cases, the confidential information is present in limited locations within a given submission.

C. Hourly Reporting Burden Associated With Electronic Copies of the Report (Proposed §§ 192.20(c)(1) and (c)(2))

Under the proposed rule, a notifier ordinarily would submit an electronic copy that would be in a format that is suitable for FDA to use to make the PBN available in an electronic reading room (e.g., html format). FDA is estimating that it would take 8 hours to format the electronic disclosure copy. Because a notifier who includes confidential information must redact this copy, FDA is estimating that it would take an additional 4 hours to do the redacting and that this would occur in 2 of the 20 notices submitted per year. Thus, FDA is estimating that it would take a total of 8.4 hours, on average, to prepare the electronic disclosure copy. FDA's estimate of the hourly reporting burden associated with an electronic copy is based on its understanding of the attributes of commonly used software programs that likely would be used to prepare the electronic copy.

Under the proposed rule, a notifier may request a waiver from the proposed requirement to submit an electronic disclosure copy, e.g., because the notifier does not have access to the technology that is needed to prepare such a copy. Because a notifier who requests a waiver need only write an explanation of why he is requesting the waiver, FDA estimates that it would take 0.5 hours to request a waiver.

Because most firms who have already consulted with FDA regarding bioengineered foods are large firms who likely would have access to the

appropriate technology, FDA is assuming that a request for a waiver will be a rare event, and may not happen at all. Therefore, in this estimate of the hourly burden to prepare a notice, FDA is making the conservative assumption that all firms will submit an electronic disclosure copy, with an hourly burden of 8 hours, and that no firms will request a waiver, which would have a reduced burden of only 0.5 hours.

In addition, in the proposed rule FDA is recommending that a notifier submit an electronic copy that would be formatted in a manner that is suitable for FDA to use to evaluate the PBN (e.g., portable document format (PDF)). A notifier who submits an electronic evaluation copy would submit one less paper copy. FDA is estimating that it would take 8 hours to format the electronic evaluation copy.

D. Hourly Reporting Burden Associated With English Language Translations, Authorization to Incorporate Information by Reference, and Withdrawal (Proposed § 192.20(d), (e), and (g))

Under the proposed rule, a notifier who includes information in a foreign language must include an English translation that is verified to be accurate and complete. Based on its experience, FDA is estimating that it would take 20 hours to prepare such a translation and that this would happen very rarely (i.e., once every 2 years). However, FDA has limited experience with the hourly burden associated with English language translations and specifically requests comment on this estimate.

Under the proposed rule, a notifier who wishes to incorporate by reference a submission made by another party must include a signed statement from that party, authorizing the notifier to incorporate the information by reference, unless the referenced submission is publicly available (e.g., under the FOIA). FDA is estimating that it would take 2 hours to obtain the signed statement and that this would happen very rarely (i.e., once every 2 years). FDA's estimate is based on its experience with incorporation by reference in another food program (i.e., the food additives program).

Under the proposed rule, a notifier who wishes to withdraw a PBN from FDA's consideration must do so in writing. Because this can be done by a simple letter, FDA is estimating that it would take 1 hour. FDA also is estimating that this would happen very rarely (i.e., once every 2 years).

E. Hourly Reporting Burden Associated With a Voluntary Presubmission Consultation Program (Proposed § 192.10(e) through (g), (h)(2), (h)(3)(i), and (h)(3)(ii))

In the proposed rule, FDA is recommending that prospective notifiers participate in a presubmission consultation program. Accordingly, FDA has estimated the hourly burden to notifiers who choose to participate.

Under the proposed rule, a prospective notifier who requests consultation prepares a single submission to address potential uses of the bioengineered food in both human food and food intended for animals. The prospective notifier would send multiple paper copies of the submission to CFSAN, who would contact CVM when the bioengineered food would be consumed by animals. Based on its experience under the 1996 procedures, FDA is estimating that it would take 0.5 hours to prepare the multiple copies that would be submitted for each request for consultation.

Since 1994, FDA has received on average approximately seven requests per year for consultation about bioengineered foods that are under development (i.e., before the foods are ready for commercialization). However, given the efficiencies of rDNA techniques, the advances in these techniques, and the rapidly expanding information related to genomes, FDA expects that these techniques are likely to be utilized to an increasingly greater extent. For the purpose of this analysis FDA is estimating that the agency would receive 20 requests for consultation per year about bioengineered foods. Based on its experience under the 1996 procedures, FDA is estimating that it would take 4 hours to prepare written materials that accompany the original request for consultation and 8 hours to prepare one or several additional written submissions as the consultation proceeds.

To ensure that FDA is aware of confidential information, a notifier who submits confidential information must both identify the confidential information and prepare and submit an additional paper copy that does not contain such information. FDA is estimating that it would take 2 hours to identify such information in both the original and additional submissions and that it would take 5 hours to prepare redacted copies of these submissions. FDA also is estimating that approximately 2 of 20 requests for consultation would include confidential information. FDA's estimates are based on its familiarity with requests for

consultation under the 1996 procedures, including the content and organization of written materials that accompanied those requests.

F. Hourly Recordkeeping Burden (Proposed § 192.25(a)(2))

Under the proposal, notifiers must retain the data and other information that provides the basis for their conclusions about the bioengineered food. FDA is assuming that notifiers would establish and maintain an administrative file that contains these data and information. Based on its experience with the content of submissions received under the 1996 procedures, FDA is estimating that the one-time process of establishing such a file would equal 10 percent of the hourly burden already estimated for preparing a PBN (i.e., 10 percent of 190 hours, or 19 hours).

In compliance with the PRA, the agency has submitted the information collection provisions of this proposed rule to OMB for review. Interested persons must submit written comments regarding information collection by February 20, 2001, to the Office of Information and Regulatory Affairs, OMB, New Executive Office Bldg., 725 17th St. NW., rm. 10235, Washington, DC 20503, Attn: Desk Officer for FDA.

XIII. Analysis of Economic Impacts

A. Cost-Benefit Analysis

FDA has examined the economic implications of this proposed rule as required by Executive Order 12866. Executive Order 12866 directs agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). Executive Order 12866 classifies a rule as significant if it meets any one of a number of specified conditions, including: having an annual effect on the economy of \$100 million, adversely affecting a sector of the economy in a material way, adversely affecting competition, or adversely affecting jobs. A regulation is also considered a significant regulatory action if it raises novel legal or policy issues. The Office of Management and Budget has determined that this proposed rule is a significant regulatory action as defined by Executive Order 12866.

B. Background

Bioengineered foods have the potential to offer multiple benefits such

as: Improved yield, drought resistance, disease resistance, improved flavor, longer shelf life, increased nutrition, and reduced need for pesticides, among others. Consumers have expressed concern, however, about possible risks that can accompany bioengineered foods. From a public health perspective, the main concerns are allergenicity and toxicity. To ensure that bioengineered foods are as safe as their conventional counterparts, FDA instituted a consultation process with industry to review the development of new bioengineered foods (57 FR 22984 at 22991 and (Ref. 5)). Since then, food producers have completed some 45 consultations about bioengineered foods. To the best of our knowledge all bioengineered foods on the market have gone through FDA's process before they have been marketed.

Under the current process, a developer who intends to commercialize a bioengineered food meets with the agency prior to marketing to identify and resolve relevant safety, nutritional, or other regulatory issues regarding the bioengineered food. When the developer believes that it has accumulated adequate data or information to address and resolve any potential safety or other regulatory issues, the developer submits to FDA a summary of its assessment of these issues. Agency scientists evaluate that summary to determine whether any safety or other regulatory issues are resolved. This process ensures that developers of bioengineered foods are aware of and address safety and other issues prior to marketing.

However, because the consultation process is voluntary, food producers could choose not to notify FDA. Additionally, as food producers in countries that export foods to the United States begin to adopt bioengineered varieties, they may choose not to participate in the voluntary consultation process. Requiring premarket notification for bioengineered foods ensures that FDA will continue to have the opportunity to discuss safety and other regulatory issues with developers before new bioengineered foods go on the market, thereby putting an additional check in place for bioengineered foods.

1. Benefits

Although the current consultation process has been successful in that the agency believes that it has reviewed all of the bioengineered foods that have reached the market, a firm could bypass the current review process. In so doing, the firm may market a product that presents safety or other regulatory issues

that would otherwise have been identified and resolved through consultation with the agency. For example, the food may contain an unexpected allergen or an unapproved food additive, or may be so significantly different from its conventional counterpart that special labeling would be required to enable consumers to identify the difference.

Bioengineering enables developers to expand greatly the range of sources of genes to introduce into foods. Genes code for proteins, and virtually all known food allergens are proteins. Therefore, by transferring a gene from one foodplant to another (and thereby essentially transferring a protein from one food to another) one may transfer the allergenic properties of the first food to the second. Because food allergies can result in serious harm, including anaphylactic shock and death, it is important to know the allergenic profile of food from a plant that is to be used as the source of a gene to be transferred to another foodplant.

It is also possible for a protein that has never been in food before to become an allergen once people become exposed to it in the diet. Therefore, it is also important to know whether a protein from a traditionally nonfood source has characteristics associated with allergenic proteins.

Similarly, because bioengineering enables developers to introduce genetic material from a wider range of sources than has traditionally been possible, there is a greater likelihood that a developer using bioengineering to modify a foodplant may introduce genetic material whose expression results in a substance that is significantly different from substances historically consumed in food. Such a substance may require premarket approval as a food additive because it may not be GRAS.

It is also possible with bioengineering that the newly introduced genetic material may be inserted into the chromosome of a foodplant in a location that causes the food derived from the plant to have higher levels of toxins than normal, or lower levels of a significant nutrient. In the former case, the food may not be safe to eat, or may require special preparation to reduce or eliminate the toxic substance. In the latter case, the food may require special labeling, so that consumers would know that they were not receiving the level of nutrients they would ordinarily expect from consuming a comparable food. It is important therefore for developers to evaluate bioengineered foods from new

plant varieties to determine whether the composition of the food has been altered.

The additional provisions of the proposed rule, beyond what was requested by the 1996 procedures, aid in ensuring that relevant safety questions are addressed by the developer. The submission of a narrative of the developer's reasons for concluding that the bioengineered food is as safe as comparable food and its justification of the choice of comparable foods by the notifier will aid in ensuring that all potential safety issues have been considered. Discussion of unsuitable uses will provide FDA the opportunity to ensure that foods that would not be suitable for particular applications are not marketed for those applications. Submission of a redacted copy will aid the agency in protecting confidential information in the notice and in responding to FOIA requests. Submission of an electronic disclosure copy would facilitate the agency's making the PBN available in an electronic reading room.

2. Costs

For developers who would have gone through FDA's consultation process, the costs associated with the proposed required process would include only costs of the additional provisions of the proposed rule. The required process will be modeled on the experience and knowledge gained from the current consultation process, but there will be a number of new provisions that will have costs for notifiers. First, the rule would require a narrative explaining how the notifier concluded the bioengineered food is as safe as comparable food and that the food is in compliance with the act. Second, notifiers who inform FDA about a bioengineered food that contains a gene that encodes resistance to an antibiotic must specifically discuss the issues associated with the use of that gene. Although this provision was not in the 1992 policy or the 1996 procedures, in 1998 FDA released draft guidance for public comment. Since 1998, most notifiers who are in this situation have included this discussion in their submissions; in addition, many plant varieties are being developed without genes that encode resistance to an antibiotic. Therefore, FDA is considering that the requirement to discuss genes that encode resistance to an antibiotic be a cost of the proposed rule for only one submission per year (that is, FDA is estimating that only one relevant submission would have omitted this discussion without the

rule). Third, notifiers must submit a written justification of their choice of foods that are comparable to the bioengineered food and the historic uses of these comparable foods. Fourth, if the bioengineered food is unsuitable for any applications or uses, notifiers must submit a description of these applications or uses. Because inappropriate uses are seldom an issue, FDA is considering that this issue would arise approximately once every 3 years. Fifth, if the submission includes confidential information, notifiers must submit redacted copies. Because very few submissions under the current process have included confidential information, FDA is considering that approximately one or two copies per year will contain confidential materials. Sixth, notifiers must ordinarily would submit an electronic copy suitable for making the PBN available in an electronic reading room, but could request a waiver if they have access to the technology that would be needed to prepare the copy.

FDA contacted five firms that had made one or more submissions under the 1996 procedures. FDA asked each of these firms for an estimate of the hourly cost associated with preparing a submission under the current process. Three of these firms subsequently provided the requested information. One firm estimated an average cost of \$125 per hour; another firm estimated an average cost of \$48 per hour; a third firm estimated an average cost of \$60 per hour. Based on this information, FDA is estimating that the average cost to prepare a submission under the 1996 procedures is approximately \$78 per hour.

The agency estimated the cost of a notice as the time needed multiplied by \$78, the average cost associated with the person responsible for preparing a notice. Since 1994, FDA has received approximately eight submissions per year, but the agency expects this number of submissions to increase because of the increasing use of the technology. Because most firms who have consulted with FDA under the current process are large firms who likely would have access to the technology that would be needed to prepare an electronic disclosure copy, in this analysis FDA is estimating that no firms would request a waiver from the proposed requirement to submit such a copy. Therefore, total costs for these additional provisions are expected to be between \$16,604 and \$67,444 per year.

TABLE 3.

	Number of submissions per year	Time costs per submission (hours)	Cost per submission	Total annual cost
Narrative	8 to 20	8 to 16	\$624 to \$1,248	\$4992 to \$24960
Antibiotic resistance	1 to 2	8 to 16	\$624 to \$1248	\$624 to \$2496
Comparable foods	8 to 20	8 to 16	\$624 to \$1248	\$4992 to \$24960
Unsuitable uses	1/3	8 to 16	\$624 to \$1248	\$208 to \$416
Electronic disclosure copy	8 to 20	8.4	\$655	\$5242 to \$13104
Redacted paper copy	1 to 2	7	\$546	\$546 to \$1092

For developers who would not have chosen to notify FDA, the cost of the proposed rule would be higher. Regardless of whether they choose to consult with FDA, food producers are statutorily prohibited from marketing misbranded or adulterated foods. To ensure that the new food is not adulterated or misbranded, the developer must generate similar information to what would be required under the proposed notification requirement. Therefore, for these developers, the cost of the proposed notification requirement would be the submission of paperwork documenting the generation of the needed information, not the information itself. FDA's estimate of the time required to prepare a notice is discussed previously (section XII of this document). According to that analysis, the average submission would require 255.5 hours of preparation. Additionally, maintaining records of the notice would require 19 hours by the firm. At an average hourly cost of \$78, the total cost of preparation and recordkeeping for a submission would be \$21,411 (hourly cost x 274.5 hours).

As discussed above, FDA has requested comment on whether this rule should also include a requirement that a premarket notice for a bioengineered food include methods by which the food could be detected. As part of its analysis of impacts, FDA requests comments on the technical feasibility and if feasible, the costs of requiring such methods in a PBN. In particular, FDA requests comments on the feasibility and costs of requiring methods of detection in all circumstances and in a limited set of circumstances, such as foods whose use is restricted in some way. FDA also requests comments on the costs of supplying methods for detection of the bioengineered food in crops and in finished food products.

C. Regulatory Flexibility Act

FDA has examined the economic implications of this proposed rule as required by the Regulatory Flexibility Act (5 U.S.C. 601–612). If a rule has a significant economic impact on a

substantial number of small entities, the Regulatory Flexibility Act requires agencies to analyze regulatory options that would lessen the economic effect of the rule on small entities.

Businesses in Agricultural Services are considered small if they have fewer than 500 employees, and in Commercial Physical and Biological Research (SIC 8731) if they have less than \$5 million in annual receipts. Companies engaged in the development of bioengineered food may fit into either of these categories. Since 1994, more than 45 biotechnology submissions have been completely evaluated by FDA; these submissions were made by 11 distinct companies and 3 universities. Most of these companies are multinationals with hundreds of millions of dollars in annual sales and do not meet the criteria for a small entity. However, at least one of the companies that has notified FDA would meet the small entity definitions.

For firms that would not have notified FDA, the cost may be \$21,411. FDA finds that this proposed rule would have a significant economic impact on a substantial number of small entities.

FDA considered a number of options to ease the burden on small businesses. Extra flexibility for small businesses meeting with FDA was considered. However, the proposed rule as written already includes flexibility for meeting with FDA, allowing phone meetings in lieu of meeting in person. Additional guidance was another option considered. However, the recommended presubmission consultation provides an opportunity for small businesses to get guidance from FDA about regulatory and safety concerns and how they can be dealt with by a small business. Thus, FDA has tentatively determined there is adequate flexibility written into the rule to accommodate the special needs of small businesses.

D. Unfunded Mandates Reform Act

Section 202(a) of the Unfunded Mandates Reform Act of 1995 (Public Law 104–4) requires that agencies prepare a written statement of anticipated costs and benefits before proposing any rule that may result in an

expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100 million in any one year (adjusted annually for inflation). FDA has tentatively determined that this proposed rule is not a significant action as defined in the Unfunded Mandates Reform Act and will not have an effect on the economy that exceeds \$100 million adjusted for inflation in any one year. The correct inflation-adjusted statutory threshold is \$107 million.

XIV. Effective Date

FDA proposes that any final rule that may issue based on this proposal become effective 60 days after the date of publication of the final rule in the **Federal Register**.

XV. Environmental Impact

The agency has determined under 21 CFR 25.30(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environment assessment nor an environmental impact statement is required.

XVI. Comments

Interested persons may submit to the Dockets Management Branch (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852, written comments regarding this proposal by April 3, 2001. Submit written comments on the information collection provisions by February 20, 2001. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

XVII. References

The following references have been placed on display in the Dockets Management Branch (address above) and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 192

Administrative practice and procedure, Food additives, Food labeling, Foods, Reporting and recordkeeping requirements.

21 CFR Part 592

Administrative practice and procedure, Animal feeds, Animal foods, Food additives, Food labeling, Reporting and recordkeeping requirements.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, it is proposed that Title 21 CFR, Chapter I be amended as follows:

1. Add part 192 to read as follows:

PART 192—PREMARKET NOTICE CONCERNING BIOENGINEERED FOOD

Sec.

192.1 Definitions: What terms do I need to know?

192.5 Requirement for premarket biotechnology notice.

192.10 Recommendation for presubmission consultation.

192.20 Premarket biotechnology notice: Administrative information.

192.25 Premarket biotechnology notice—required parts: What must I include in a premarket biotechnology notice?

192.30 FDA evaluation and response: What will I get back from FDA and how long will it take?

192.40 Public disclosure.

Authority: 21 U.S.C. 331, 342, 343, 348, 371.

PART 192—PREMARKET NOTICE CONCERNING BIOENGINEERED FOOD

§ 192.1 Definitions: What terms do I need to know?

(a) A *bioengineered food* means food derived from a plant that is developed using a transformation event.

(b) *Commercial distribution* means introduction, or delivery for introduction, into interstate commerce for sale or exchange for consumption in any form by humans or other animals.

(c) A *notifier* is the person who submits a premarket biotechnology notice under this part. Any person who is responsible for the development, distribution, importation, or sale of a bioengineered food may be a notifier.

(d) A *premarket biotechnology notice* (PBN) is a submission to FDA regarding a bioengineered food that is intended to enter commercial distribution. Under this part, a PBN includes all data and information in the original submission and in any amendments to the original submission.

(e) *Transformation event* means the introduction into an organism of genetic material that has been manipulated in vitro. For the purpose of this part, "organism" refers to plants.

§ 192.5 Requirement for premarket biotechnology notice.

(a) *What foods must I notify FDA about?* You must notify FDA about any bioengineered food, including a bioengineered food derived from a new plant variety modified to contain a pesticidal substance, that will enter commercial distribution unless all of the following conditions are satisfied:

(1) The bioengineered food derives from a plant line that represents a transformation event that has been addressed in a PBN previously submitted to FDA;

(2) The use or application of the bioengineered food has been addressed in a notice previously submitted to FDA; and

(3) A letter from FDA demonstrates that FDA has evaluated the use or application of the bioengineered food and has no questions about it. This would include a letter issued between May 1, 1994, and the effective date of this rule.

(b) *Must the data or other information that I submit to support my PBN be generated from a particular plant line?* The data or other information that you submit to FDA regarding a bioengineered food must be generated from a plant line whose derivation can be traced to the transformation event that is the subject of the notice and that contains the genetic material introduced via the transformation event.

(c) *When do I submit my PBN?* You must submit your PBN at least 120 days before the bioengineered food is marketed.

§ 192.10 Recommendation for presubmission consultation.

(a) *Is there a program that provides an opportunity for me to consult with FDA about a bioengineered food before I submit a PBN?* FDA has established a presubmission consultation program to enable a prospective notifier to identify and discuss relevant safety, nutritional, or other issues regarding a bioengineered food before submitting a PBN about that food. FDA recommends that you participate in this program.

(b) *How does the presubmission consultation program work?* In this program, you inform FDA about the bioengineered food. FDA encourages you to discuss with us safety, nutritional, or other issues that may be associated with the bioengineered food. FDA will establish an administrative file for your consultation. Although FDA may provide written feedback during the consultation, that feedback would not release you from the requirement in § 192.5 to notify FDA about the bioengineered food as described in §§ 192.20 and 192.25.

(c) *Would the fact that I am consulting with FDA be confidential?* (1) In most cases, the fact that you are consulting with FDA would not be confidential.

(2) If you claim that the fact that you are consulting with FDA is confidential, FDA will evaluate your claim. If FDA is asked, under the Freedom of Information Act (FOIA), about whether you are consulting with us, FDA will disclose that fact unless we determine that your claim demonstrates that the criteria for exemption from disclosure in § 20.61 of this chapter are satisfied.

(d) *Would any of the data or other information in the administrative file of my consultation be disclosed to the public?* (1) If the fact that you are consulting with FDA is not confidential, then the data or other information in the administrative file of your presubmission consultation would be available for public disclosure in accordance with § 20.61 of this chapter.

(2) As long as the fact that you are consulting with FDA is confidential, then the data or other information in the administrative file of your presubmission consultation would not be available for public disclosure.

(e) *How do I get started?* To participate in the presubmission consultation program, write to FDA and tell us that you want to consult about a bioengineered food.

(f) *If I participate, what do I provide to FDA?* (1) You must state your view as to whether the fact that you are consulting with FDA, or any or all of the data or other information that you submit to FDA, is exempt from disclosure under the FOIA (i.e., is confidential).

(2) If you claim that the fact that you are consulting with FDA, or that any or all of the data or other information that you submit to FDA is confidential, you must explain the basis for your claim.

(3) We recommend that you send us the following synopsis about the requested consultation:

(i) Your name and address;

(ii) The name of the bioengineered food that is the subject of the presubmission consultation and the plant species from which it is derived;

(iii) The distinctive designation(s) that you use to identify the applicable transformation event(s);

(iv) A list of the identity(ies) and source(s) of introduced genetic material;

(v) A description of the purpose or intended technical effect of the transformation event. This includes expected significant changes in the composition or characteristic properties of food derived from the plant as a result of the transformation event, regardless of whether these changes result from the insertion of new genes or from a modification in the expression of endogenous genes;

(vi) A description of the intended applications or uses of the bioengineered food; and

(vii) A description of any applications or uses that are not suitable for the bioengineered food.

(g) *Where do I send my written request for consultation?* Send your written request for consultation about a bioengineered food to the Office of Premarket Approval (HFS-200), Center for Food Safety and Applied Nutrition, 200 C St. SW., Washington, DC 20204. As necessary and appropriate, the Center for Food Safety and Applied Nutrition (CFSAN) will coordinate FDA's evaluation of your request with the Office of Surveillance and Compliance, Center for Veterinary Medicine (CVM).

(h) *What copies do I send?* (1) You should send an original and at least two paper copies of your written request for consultation.

(2) If you submit additional written information to FDA (i.e., after your original written request), you should send an original and at least two paper copies of each additional submission.

(3) If you claim that any specific data or other information that you provide to FDA during the consultation are confidential, you should:

(i) Clearly identify, in each submission, the data or other information that you claim are confidential;

(ii) Prepare and submit a "redacted" paper copy of the submission (i.e., a copy that does not contain any of those data or information).

(iii) Prepare this redacted paper copy in a manner that clearly identifies the location and relative size of deleted information.

(i) *What will FDA do with my written request for consultation?* (1) FDA will establish an administrative file for your

consultation and will place the following materials in that file:

(i) Any correspondence between you and FDA;

(ii) Any written materials that you provide during the consultation process; and

(iii) A memorandum of each meeting or significant phone call that you have with FDA regarding the subject of your consultation.

(2) If you ask FDA to discuss the bioengineered food with you, we will do so (e.g., at a meeting at its offices or via a telephone conference).

§ 192.20 Premarket biotechnology notice: Administrative information.

(a) *Where do I send my PBN?* Send a PBN regarding a bioengineered food to the Office of Premarket Approval (HFS-200), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C St. SW., Washington, DC 20204. As necessary and appropriate, the Center for Food Safety and Applied Nutrition (CFSAN) will coordinate FDA's evaluation of your PBN with the Office of Surveillance and Compliance, Center for Veterinary Medicine (CVM).

(b) *What paper copies do I send?* (1) At a minimum, you must submit an original paper version and one paper copy of a PBN (including any amendments that you make to your PBN). The original paper version will be the official version at FDA. If, under paragraph (c)(1) of this section, you choose not to send an electronic evaluation copy of your PBN, then you must submit one additional paper copy, for a total of three paper copies.

(2) If you claim that specific data or other information in the PBN are confidential, you must:

(i) Clearly identify, in each submission, the data or information that you claim are confidential;

(ii) Prepare and submit a "redacted" paper copy of the PBN (i.e., a copy that does not contain any of those data or information); and

(iii) Prepare this redacted paper copy in a manner that clearly identifies the location and relative size of deleted information.

(c) *What electronic copies do I send?*

(1) *Evaluation copy.* FDA recommends that you submit an electronic copy that is formatted in a manner that makes it suitable for FDA to use while evaluating your PBN. If you do so, you should submit such an electronic copy of your original PBN and of any amendments that you make to your PBN. To obtain current information about the technical format of this evaluation copy, contact the Office of Premarket Approval (OPA)

at the address listed previously or look on OPA's home page on the Internet.

(2) *Disclosure copy.* (i) Unless waived under paragraph (c)(2)(ii) of this section, you must submit an electronic copy that is formatted in a manner that makes it suitable for FDA to use to make your PBN available to the public in an electronic reading room. This includes an electronic copy of your original PBN and of any amendments that you make to your PBN. If you claim that specific data or other information in the PBN are confidential, you must remove such data or information from the disclosure copy in a manner that clearly identifies the location and relative size of deleted information. To obtain current information about the technical format of this disclosure copy, write to OPA at the address listed previously or look on OPA's home page on the Internet.

(ii) You may request that FDA waive the requirement for an electronic disclosure copy, e.g., if you do not have access to the appropriate technology for formatting such a copy. FDA will grant or deny your request according to its merits.

(d) *May I submit any data or other information, such as a reprint of a published scientific article, in a foreign language?* If you submit any material in a foreign language, you must provide an English translation that is verified to be complete and accurate.

(e) *May I incorporate data or other information that are already retained in FDA's files by referring to them?* (1) If you previously submitted a file to FDA, you may incorporate that file by referring FDA to it.

(2) If someone else previously submitted a file to FDA, the procedure that you may use to incorporate that file into your PBN depends on whether the file is publicly available (e.g., the file is in an electronic reading room or is otherwise available under FOIA).

(i) If the file is publicly available, you may incorporate that file by referring FDA to it.

(ii) If the file is not publicly available, you may incorporate that file by referring FDA to it if the person who submitted the file authorizes you to do so in a signed statement and you include that signed statement in your PBN.

(f) *How can I get additional information that will help me to prepare a PBN?* You can obtain current guidance regarding specific technical issues by writing to OPA at the address listed previously or by looking on OPA's home page on the Internet.

(g) *May I withdraw a PBN from FDA consideration after I send it?* (1) At any time during FDA's evaluation of a PBN,

you may request that FDA cease to evaluate it. Your request would not preclude you from submitting a future PBN about the same bioengineered food.

(2) If you request that FDA cease to evaluate your PBN, FDA will retain your PBN in its files and classify your PBN as "withdrawn."

§ 192.25 Premarket biotechnology notice—required parts: What must I include in a premarket biotechnology notice?

A PBN has seven parts. You must include all of the information described in each part, or explain why it does not apply to the bioengineered food.

(a) *Part I.* In your PBN, you must provide a letter that a responsible official of your organization, or your attorney or agent, dates and signs. In this letter, you inform FDA that you are submitting a PBN under § 192.25, state your position or title, and attest to the following:

(1) It is your view that:

(i) The bioengineered food is as safe as comparable food; and

(ii) The intended use of the bioengineered food is in compliance with all applicable requirements of the Federal Food, Drug, and Cosmetic Act (the act).

(2) You agree to make relevant data or other information that are not included in your PBN available to FDA upon request, either while FDA is evaluating your PBN or for cause.

(3) You agree to two procedures for making relevant data or other information that are not included in your PBN available to FDA by:

(i) Allowing FDA to review and copy these data or information at a specified address during customary business hours; or

(ii) Sending a copy of these data or information to FDA.

(4)(i) Your view as to whether the existence of your PBN, or any or all of the data or other information in your PBN, is exempt from disclosure under the FOIA (i.e., is confidential); and

(ii) If you claim that the existence of the PBN, or any or all of the data or other information in the PBN, is confidential, you must explain the basis for your claim.

(5) To the best of your knowledge, the PBN is a representative and balanced submission that includes information, unfavorable as well as favorable, pertinent to the evaluation of the safety, nutritional, or other regulatory issues that may be associated with the bioengineered food.

(b) *Part II.* In your PBN, you must provide the following synopsis:

(1) *Section 1.* Your name and address;

(2) *Section 2.* The name of the bioengineered food that is the subject of

the PBN and the plant species from which it is derived;

(3) *Section 3.* The distinctive designation(s) that you use to identify the applicable transformation event(s);

(4) *Section 4.* A list of the identity(ies) and source(s) of introduced genetic material;

(5) *Section 5.* A description of the purpose or intended technical effect of the transformation event. This includes expected significant changes in the composition or characteristic properties of food derived from the plant as a result of the transformation event, regardless of whether these changes result from the insertion of new genes or from a modification in the expression of endogenous genes;

(6) *Section 6.* A description of the applications or uses of the bioengineered food; and

(7) *Section 7.* A description of any applications or uses that are not suitable for the bioengineered food.

(c) *Part III.* In your PBN, you must describe the status of the bioengineered food at other Federal agencies and foreign governments.

(1) *Status at the U.S. Department of Agriculture, Animal and Plant Health Inspection Service (APHIS).* A statement as to whether the bioengineered food plant has been the subject of an initiated or completed authorization, or petition for nonregulated status by APHIS, under 7 CFR 340.

(2) *Status at the U.S. Environmental Protection Agency (EPA).* A statement as to whether any plant pesticide residue in the bioengineered food is or has been the subject of a consultation with, or review by, EPA and, if so, a description of the status of that consultation or review.

(3) *Status at foreign governments.* A statement as to whether the bioengineered food is or has been the subject of review by any foreign government and, if so, a description of the status of that consultation or review.

(d) *Part IV.* In your PBN, you must provide the following data or other information about the method of development of the food:

(1) *Section 1.* Characterization of the parent plant including scientific name, taxonomic classification, mode of reproduction, and pertinent history of development.

(2) *Section 2.* Construction of the vector used in the transformation of the parent plant. This includes a thorough characterization of the genetic material intended for introduction into the parent plant and a discussion of the transformation method, open reading frames, and regulatory sequences.

(3) *Section 3.* Characterization of the introduced genetic material, including the number of insertion sites, the number of gene copies inserted at each site, information on deoxyribonucleic acid (DNA) organization within the inserts, and information on potential reading frames that could express unintended proteins in the transformed plant.

(4) *Section 4.* Data or other information related to the inheritance and genetic stability of the introduced genetic material.

(5) *Section 5.* A discussion, as necessary, of other relevant data or other information about the method of development.

(e) *Part V.* In your PBN, you must discuss any newly inserted genes that encode resistance to an antibiotic. FDA recommends that you contact FDA about the agency's current thinking on this topic.

(f) *Part VI.* In your PBN, you must provide the following data or other information about substances (other than DNA, ribonucleic acid (RNA), or pesticidal substances) introduced into, or modified in, the food (including substances that you expect to be present in the bioengineered food at an increased level relative to comparable food):

(1) *Section 1.* Data or other information about the identity and function of substances introduced into, or modified in, the food;

(2) *Section 2.* Data or other information relating to the level in the bioengineered food of substances introduced into, or modified in, the food;

(3) *Section 3.* (i) An estimate of dietary exposure to substances introduced into, or modified in, the food; or

(ii) A statement that explains the basis for your conclusion that an estimate of dietary exposure to these substances is not needed to support your view that the bioengineered food is as safe as comparable food.

(4) *Section 4.* A discussion of the available data or other information that address the potential that a protein introduced into the food will be an allergen. FDA recommends that you contact FDA about the agency's current thinking on this topic.

(5) *Section 5.* A discussion of data or other information relevant to other safety issues that may be associated with the substances introduced into, or modified in, the food.

(g) *Part VII.* In your PBN, you must provide the following data or other information about the food:

(1) *Section 1.* Justification for selecting a particular food(s) as the comparable food to which you will compare the bioengineered food.

(2) *Section 2.* A discussion of historic uses of the comparable food(s) to which you will compare the bioengineered food.

(3) *Section 3.* Data or other information comparing the composition and characteristics of the bioengineered food to those of comparable food(s), with emphasis on:

(i) Levels of significant nutrients;

(ii) Levels of naturally occurring toxicants and antinutrients; and

(iii) Any intended changes to the composition of the food.

(4) *Section 4.* Any other information relevant to the safety, nutrition, or other assessment of the bioengineered food.

(5) *Section 5.* A narrative that explains the basis for your view that the bioengineered food is as safe as comparable food and that the bioengineered food is otherwise in compliance with all applicable requirements of the act.

§ 192.30 FDA evaluation and response: What will I get back from FDA and how long will it take?

(a) Within 15 working days of receipt, FDA will do an initial evaluation of your PBN to determine whether it appears to include all elements required under §§ 192.20 and 192.25.

(1) If your PBN appears to include all required elements, the Center for Food Safety and Applied Nutrition (CFSAN) will file it and will inform the Center for Veterinary Medicine (CVM) of the filing.

(2) If your PBN does not appear to include all required elements, FDA will inform you of that fact and explain what is missing.

(b) Within 15 working days of filing a notice, FDA will send you (or your agent) a letter that informs you of the date on which FDA filed the PBN.

(c) Within 120 days of filing a notice, FDA will send you (or your agent) a letter about its evaluation of your premarket notice.

(d) In general, FDA will respond as follows:

(1) FDA is extending its evaluation of your premarket notice by 120 days and expects that the bioengineered food will not be marketed during that evaluation; or

(2) FDA has completed its evaluation of your premarket notice. Based upon this evaluation, and as discussed in this letter, the premarket notice does not provide a basis for your view that the bioengineered food is as safe as comparable food or is otherwise in compliance with all applicable

requirements of the act. Therefore, the agency expects that the bioengineered food will not be marketed; or

(3) FDA has completed its evaluation of your premarket notice. Based upon this evaluation, the agency has no questions, at this time, regarding your view that the bioengineered food is as safe as comparable food and is otherwise in compliance with all applicable requirements of the act; or

(4) FDA has received a letter in which you withdrew your PBN from its consideration without prejudice to a future filing. Given your letter, FDA ceased to evaluate your PBN on the date that we received your letter.

(e) If your PBN is about a bioengineered food that contains a plant pesticide, FDA will describe the status of the bioengineered food at EPA.

(1) If all applicable regulatory processes at EPA have come to closure, FDA will say so and will respond as described in paragraph (d) of this section.

(2) If regulatory processes at EPA regarding the bioengineered food are still pending, FDA will inform you that FDA does not consider your PBN to satisfy the requirement for premarket notice.

§ 192.40 Public disclosure.

(a) *When could anyone else find out that I sent a PBN to FDA?* (1) Ordinarily, the existence of your PBN is available for public disclosure on the date that FDA files it.

(2) If you believe that the existence of your PBN is confidential, it is your responsibility to say so. The way to do this is by making a claim for confidentiality in the letter that you send in Part I of your PBN (§ 192.25(a)(4)).

(3) If you claim that the existence of your PBN is confidential, FDA will evaluate your claim. FDA will disclose the existence of your PBN, unless FDA determines that your claim demonstrates that the criteria for exemption from disclosure in § 20.61 of this chapter are satisfied.

(4) If FDA determines that the existence of your PBN is confidential at the time that we file it, the existence of your PBN will become available for public disclosure, in accordance with § 20.61 of this chapter, when the criteria for exemption from disclosure in § 20.61 of this chapter are no longer satisfied.

(b) *How could anyone else find out that I sent a PBN to FDA?* (1) FDA will make a list of filed PBN's easily accessible to the public (e.g., by placing the information on the Internet or in a paper or electronic file that is available at FDA for public review and copying).

(2) In general, FDA will use the information submitted in Part II of each PBN (i.e., the information described in § 192.25(b) of this part) to prepare this list and will update this list on an approximately monthly basis.

(c) *Would the data or other information in my PBN (including an amendment to my PBN, or any data or information that I incorporate by reference) be available to the public?* (1) Ordinarily, the data or other information in your PBN are available for public disclosure, in accordance with § 20.61 of this chapter, as of the date that FDA files the PBN.

(2) If you believe that any or all of the data or other information in your PBN is confidential, it is your responsibility to say so. The way to do this is in the letter that you send in Part I of your PBN (§ 192.25(a)(4)). In addition, under § 192.20(b) and (c), it is your responsibility to provide copies of your PBN that do not contain any data or other information that you claim are confidential.

(3) If you claim that any or all of the data or other information in your PBN is confidential, FDA will evaluate your claim. FDA will disclose the data or information in your PBN unless FDA determines that your claim demonstrates that the criteria for exemption from disclosure in § 20.61 of this chapter are satisfied.

(4) If FDA determines that any or all of the data or other information in your PBN is confidential as of the date that we file it, those data or information would be available for public disclosure, in accordance with § 20.61 of this chapter, when the criteria for exemption from disclosure in § 20.61 of this chapter are no longer satisfied.

(5) As long as the existence of your PBN is confidential, then the data or other information in your PBN would not be available for public disclosure.

(d) *How could the public obtain disclosable data and information in my PBN?* Under the FOIA, the public could obtain the disclosable data or other information in your PBN or an amendment to your PBN, or that you incorporate by reference into your PBN, by looking for these data and information in FDA's electronic reading room or by asking FDA to send them a copy of these data and information.

(e) *Would the agency's evaluation of my PBN be available to the public?* FDA will make the following information easily accessible to the public (e.g., by placing the information on the Internet or in a paper or electronic file that is available at FDA for public review and copying):

(1) The text of any letter issued by the agency under § 192.30(c).

(2) The text of the agency's completed evaluation of any notice submitted under this part.

2. Add part 592 to read as follows:

PART 592—PREMARKET NOTICE CONCERNING BIOENGINEERED FOOD

Sec.

592.1 Definitions: What terms do I need to know?

592.5 Requirement for premarket biotechnology notice.

592.10 Recommendation for presubmission consultation.

592.20 Premarket biotechnology notice: Administrative information.

592.25 Premarket biotechnology notice—required parts: What must I include in a premarket biotechnology notice?

592.30 FDA evaluation and response: What will I get back from FDA and how long will it take?

592.40 Public disclosure.

Authority: 21 U.S.C. 331, 341, 343, 348, 371.

§ 592.1 Definitions: What terms do I need to know?

(a) *A bioengineered food* means food derived from a plant that is developed using a transformation event.

(b) *Commercial distribution* means introduction, or delivery for introduction, into interstate commerce for sale or exchange for consumption in any form by humans or other animals.

(c) *A notifier* is the person who submits a premarket biotechnology notice under this part. Any person who is responsible for the development, distribution, importation, or sale of a bioengineered food may be a notifier.

(d) *A premarket biotechnology notice (PBN)* is a submission to FDA regarding a bioengineered food that is intended to enter commercial distribution. Under this part, a PBN includes all data and information in the original submission and in any amendments to the original submission.

(e) *Transformation event* means the introduction into an organism of genetic material that has been manipulated in vitro. For the purpose of this part, "organism" refers to plants.

§ 592.5 Requirement for premarket biotechnology notice.

(a) *What foods must I notify FDA about?* You must notify FDA about any bioengineered food, including a bioengineered food derived from a new plant variety modified to contain a pesticidal substance, that will enter commercial distribution unless all of the following conditions are satisfied:

(1) The bioengineered food derives from a plant line that represents a

transformation event that has been addressed in a PBN previously submitted to FDA;

(2) The use or application of the bioengineered food has been addressed in a notice previously submitted to FDA; and

(3) A letter from FDA demonstrates that FDA has evaluated the use or application of the bioengineered food and has no questions about it. This would include a letter issued between May 1, 1994, and the effective date of this rule.

(b) *Must the data or other information that I submit to support my PBN be generated from a particular plant line?* The data or other information that you submit to FDA regarding a bioengineered food must be generated from a plant line whose derivation can be traced to the transformation event that is the subject of the notice and that contains the genetic material introduced via the transformation event.

(c) *When do I submit my PBN?* You must submit your PBN at least 120 days before the bioengineered food is marketed.

§ 592.10 Recommendation for presubmission consultation.

(a) *Is there a program that provides an opportunity for me to consult with FDA about a bioengineered food before I submit a PBN?* FDA has established a presubmission consultation program to enable a prospective notifier to identify and discuss relevant safety, nutritional, or other issues regarding a bioengineered food before submitting a PBN about that food. FDA recommends that you participate in this program.

(b) *How does the presubmission consultation program work?* In this program, you inform FDA about the bioengineered food. FDA encourages you to discuss with us safety, nutritional, or other issues that may be associated with the bioengineered food. FDA will establish an administrative file for your consultation. Although FDA may provide written feedback during the consultation, that feedback would not release you from the requirement in § 592.5 to notify FDA about the bioengineered food as described in §§ 592.20 and 592.25.

(c) *Would the fact that I am consulting with FDA be confidential?* (1) In most cases, the fact that you are consulting with FDA would not be confidential.

(2) If you claim that the fact that you are consulting with FDA is confidential, FDA will evaluate your claim. If FDA is asked, under the Freedom of Information Act (FOIA), about whether you are consulting with us, FDA will

disclose that fact unless we determine that your claim demonstrates that the criteria for exemption from disclosure in § 20.61 of this chapter are satisfied.

(d) *Would any of the data or other information in the administrative file of my consultation be disclosed to the public?* (1) If the fact that you are consulting with FDA is not confidential, then the data or other information in the administrative file of your presubmission consultation would be available for public disclosure in accordance with § 20.61 of this chapter.

(2) As long as the fact that you are consulting with FDA is confidential, then the data or other information in the administrative file of your presubmission consultation would not be available for public disclosure.

(e) *How do I get started?* To participate in the presubmission consultation program, write to FDA and tell us that you want to consult about a bioengineered food.

(f) *If I participate, what do I provide to FDA?* (1) You must state your view as to whether the fact that you are consulting with FDA, or any or all of the data or other information that you submit to FDA, is exempt from disclosure under the FOIA (i.e., is confidential).

(2) If you claim that the fact that you are consulting with FDA, or that any or all of the data or other information that you submit to FDA, is confidential, you must explain the basis for your claim.

(3) We recommend that you send us the following synopsis about the requested consultation:

- (i) Your name and address;
- (ii) The name of the bioengineered food that is the subject of the presubmission consultation and the plant species from which it is derived;
- (iii) The distinctive designation(s) that you use to identify the applicable transformation event(s);
- (iv) A list of the identity(ies) and source(s) of introduced genetic material;
- (v) A description of the purpose or intended technical effect of the transformation event. This includes expected significant changes in the composition or characteristic properties of food derived from the plant as a result of the transformation event, regardless of whether these changes result from the insertion of new genes or from a modification in the expression of endogenous genes;
- (vi) A description of the intended applications or uses of the bioengineered food; and
- (vii) A description of any applications or uses that are not suitable for the bioengineered food.

(g) *Where do I send my written request for consultation?* Send your written request for consultation about a bioengineered food to the Office of Premarket Approval (HFS-200), Center for Food Safety and Applied Nutrition, 200 C St. SW. Washington, DC 20204. As necessary and appropriate, the Center for Food Safety and Applied Nutrition (CFSAN) will coordinate FDA's evaluation of your request with the Office of Surveillance and Compliance, Center for Veterinary Medicine (CVM).

(h) *What copies do I send?* (1) You should send an original and at least two paper copies of your written request for consultation.

(2) If you submit additional written information to FDA (i.e., after your original written request), you should send an original and at least two paper copies of each additional submission.

(3) If you claim that any specific data or other information that you provide to FDA during the consultation are confidential, you should:

- (i) Clearly identify, in each submission, the data or other information that you claim are confidential; and
- (ii) Prepare and submit a "redacted" paper copy of the submission (i.e., a copy that does not contain any of those data or information).

(iii) Prepare this redacted paper copy in a manner that clearly identifies the location and relative size of deleted information.

(i) *What will FDA do with my written request for consultation?* (1) FDA will establish an administrative file for your consultation and will place the following materials in that file:

- (i) Any correspondence between you and FDA;
- (ii) Any written materials that you provide during the consultation process; and
- (iii) A memorandum of each meeting or significant phone call that you have with FDA regarding the subject of your consultation.

(2) If you ask FDA to discuss the bioengineered food with you, we will do so (e.g., at a meeting at its offices or via a telephone conference).

§ 592.20 Premarket biotechnology notice: Administrative information.

(a) *Where do I send my PBN?* Send a PBN regarding a bioengineered food to the Office of Premarket Approval (HFS-200), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C St. SW., Washington, DC 20204. As necessary and appropriate, the Center for Food Safety and Applied Nutrition (CFSAN)

will coordinate FDA's evaluation of your PBN with the Office of Surveillance and Compliance, Center for Veterinary Medicine (CVM).

(b) *What paper copies do I send?* (1) At a minimum, you must submit an original paper version and one paper copy of a PBN (including any amendments that you make to your PBN). The original paper version will be the official version at FDA. If, under paragraph (c)(1) of this section, you choose not to send an electronic evaluation copy of your PBN, then you must submit one additional paper copy, for a total of three paper copies.

(2) If you claim that specific data or other information in the PBN are confidential, you must:

- (i) Clearly identify, in each submission, the data or information that you claim are confidential;
- (ii) Prepare and submit a "redacted" paper copy of the PBN (i.e., a copy that does not contain any of those data or information); and
- (iii) Prepare this redacted paper copy in a manner that clearly identifies the location and relative size of deleted information.

(c) *What electronic copies do I send?*

(1) *Evaluation copy.* FDA recommends that you submit an electronic copy that is formatted in a manner that makes it suitable for FDA to use while evaluating your PBN. If you do so, you should submit such an electronic copy of your original PBN and of any amendments that you make to your PBN. To obtain current information about the technical format of this evaluation copy, contact the Office of Premarket Approval (OPA) at the address listed previously or look on OPA's home page on the Internet.

(2) *Disclosure copy.*

(i) Unless waived under paragraph (2)(ii) of this section, you must submit an electronic copy that is formatted in a manner that makes it suitable for FDA to use to make your PBN available to the public in an electronic reading room. This includes an electronic copy of your original PBN and of any amendments that you make to your PBN. If you claim that specific data or other information in the PBN are confidential, you must remove such data or information from the disclosure copy in a manner that clearly identifies the location and relative size of deleted information. To obtain current information about the technical format of this disclosure copy, write to OPA at the address listed previously or look on OPA's home page on the Internet.

(ii) You may request that FDA waive the requirement for an electronic disclosure copy, e.g., if you do not have

access to the appropriate technology for formatting such a copy. FDA will grant or deny your request according to its merits.

(d) *May I submit any data or other information, such as a reprint of a published scientific article, in a foreign language?* If you submit any material in a foreign language, you must provide an English translation that is verified to be complete and accurate.

(e) *May I incorporate data or other information that are already retained in FDA's files by referring to them?* (1) If you previously submitted a file to FDA, you may incorporate that file by referring FDA to it.

(2) If someone else previously submitted a file to FDA, the procedure that you may use to incorporate that file into your PBN depends on whether the file is publicly available (e.g., the file is in an electronic reading room or is otherwise available under FOIA).

(i) If the file is publicly available, you may incorporate that file by referring FDA to it.

(ii) If the file is not publicly available, you may incorporate that file by referring FDA to it if the person who submitted the file authorizes you to do so in a signed statement and you include that signed statement in your PBN.

(f) *How can I get additional information that will help me to prepare a PBN?* You can obtain current guidance regarding specific technical issues by writing to OSC at the address listed previously or by looking on CVM's home page on the Internet.

(g) *May I withdraw a PBN from FDA consideration after I send it?* (1) At any time during FDA's evaluation of a PBN, you may request that FDA cease to evaluate it. Your request would not preclude you from submitting a future PBN about the same bioengineered food.

(2) If you request that FDA cease to evaluate your PBN, FDA will retain your PBN in its files and classify your PBN as "withdrawn."

§ 592.25 Premarket biotechnology notice—required parts: What must I include in a premarket biotechnology notice?

A PBN has seven parts. You must include all of the information described in each part, or explain why it does not apply to the bioengineered food.

(a) *Part I.* In your PBN, you must provide a letter that a responsible official of your organization, or your attorney or agent, dates and signs. In this letter, you inform FDA that you are submitting a PBN under § 192.25 and attest to the following:

(1) It is your view that:

(i) The bioengineered food is as safe as comparable food; and

(ii) The intended use of the bioengineered food is in compliance with all applicable requirements of the the Federal Food, Drug, and Cosmetic Act (the act).

(2) You agree to make relevant data or other information that are not included in your PBN available to FDA upon request, either while FDA is evaluating your PBN or for cause.

(3) You agree to two procedures for making relevant data or other information that are not included in your PBN available to FDA by:

(i) Allowing FDA to review and copy these data or information at specified address during customary business hours; or

(ii) Sending a copy of these data or information to FDA.

(4)(i) Your view as to whether the existence of your PBN, or any or all of the data or other information in your PBN, is exempt from disclosure under the FOIA (i.e., is confidential); and

(ii) If you claim that the existence of the PBN, or any or all of the data or other information in the PBN, is confidential, you must explain the basis for your claim.

(5) To the best of your knowledge, the PBN is a representative and balanced submission that includes information, unfavorable as well as favorable, pertinent to the evaluation of the safety, nutritional, or other regulatory issues that may be associated with the bioengineered food.

(b) *Part II.* In your PBN, you must provide the following synopsis:

(1) *Section 1.* Your name and address;

(2) *Section 2.* The name of the bioengineered food that is the subject of the PBN and the plant species from which it is derived;

(3) *Section 3.* The distinctive designation(s) that you use to identify the applicable transformation event(s);

(4) *Section 4.* A list of the identity(ies) and source(s) of introduced genetic material;

(5) *Section 5.* A description of the purpose or intended technical effect of the transformation event. This includes expected significant changes in the composition or characteristic properties of food derived from the plant as a result of the transformation event, regardless of whether these changes result from the insertion of new genes or from a modification in the expression of endogenous genes;

(6) *Section 6.* A description of the applications or uses of the bioengineered food; and

(7) *Section 7.* A description of any applications or uses that are not suitable for the bioengineered food.

(c) *Part III.* In your PBN, you must describe the status of the bioengineered

food at other Federal agencies and foreign governments.

(1) *Status at the U.S. Department of Agriculture, Animal and Plant Health Inspection Service (APHIS).* A statement as to whether the bioengineered food plant has been the subject of an initiated or completed authorization, or petition for nonregulated status by APHIS, under 7 CFR part 340.

(2) *Status at the U.S. Environmental Protection Agency (EPA).* A statement as to whether any plant pesticide residue in the bioengineered food is or has been the subject of a consultation with, or review by, EPA and, if so, a description of the status of that consultation or review.

(3) *Status at foreign governments.* A statement as to whether the bioengineered food is or has been the subject of review by any foreign government and, if so, a description of the status of that consultation or review.

(d) *Part IV.* In your PBN, you must provide the following data or other information about the method of development of the food:

(1) *Section 1.* Characterization of the parent plant including scientific name, taxonomic classification, mode of reproduction, and pertinent history of development.

(2) *Section 2.* Construction of the vector used in the transformation of the parent plant. This includes a thorough characterization of the genetic material intended for introduction into the parent plant and a discussion of the transformation method, open reading frames, and regulatory sequences.

(3) *Section 3.* Characterization of the introduced genetic material, including the number of insertion sites, the number of gene copies inserted at each site, information on deoxyribonucleic acid (DNA) organization within the inserts, and information on potential reading frames that could express unintended proteins in the transformed plant.

(4) *Section 4.* Data or other information related to the inheritance and genetic stability of the introduced genetic material.

(5) *Section 5.* A discussion, as necessary, of other relevant data or other information about the method of development.

(e) *Part V.* In your PBN, you must discuss any newly inserted genes that encode resistance to an antibiotic. FDA recommends that you contact FDA about the agency's current thinking on this topic.

(f) *Part VI.* In your PBN, you must provide the following data or other information about substances (other than DNA, ribonucleic acid (RNA), or

pesticidal substances) introduced into, or modified in, the food (including substances that you expect to be present in the bioengineered food at an increased level relative to comparable food):

(1) *Section 1.* Data or other information about the identity and function of substances introduced into, or modified in, the food;

(2) *Section 2.* Data or other information relating to the level in the bioengineered food of substances introduced into, or modified in, the food;

(3) *Section 3.* (i) An estimate of dietary exposure to substances introduced into, or modified in, the food; or

(ii) A statement that explains the basis for your conclusion that an estimate of dietary exposure to these substances is not needed to support your view that the bioengineered food is as safe as comparable food.

(4) *Section 4.* A discussion of the available data or other information that address the potential that a protein introduced into the food will be an allergen. FDA recommends that you contact FDA about the agency's current thinking on this topic.

(5) *Section 5.* A discussion of data or other information relevant to other safety issues that may be associated with the substances introduced into, or modified in, the food.

(g) *Part VII.* In your PBN, you must provide the following data or other information about the food:

(1) *Section 1.* Justification for selecting a particular food(s) as the comparable food to which you will compare the bioengineered food.

(2) *Section 2.* A discussion of historic uses of the comparable food(s) to which you will compare the bioengineered food.

(3) *Section 3.* Data or other information comparing the composition and characteristics of the bioengineered food to those of comparable food(s), with emphasis on:

- (i) Levels of significant nutrients;
- (ii) Levels of naturally occurring toxicants and antinutrients; and
- (iii) Any intended changes to the composition of the food.

(4) *Section 4.* Any other information relevant to the safety, nutrition, or other assessment of the bioengineered food.

(5) *Section 5.* A narrative that explains the basis for your view that the bioengineered food is as safe as comparable food and that the bioengineered food is otherwise in compliance with all applicable requirements of the act.

§ 592.30 FDA evaluation and response: What will I get back from FDA and how long will it take?

(a) Within 15 working days of receipt, FDA will do an initial evaluation of your PBN to determine whether it appears to include all elements required under §§ 592.20 and 592.25.

(1) If your PBN appears to include all required elements, the Center for Food Safety and Applied Nutrition (CFSAN) will file it and will inform the Center for Veterinary Medicine (CVM) of the filing.

(2) If your PBN does not appear to include all required elements, FDA will inform you of that fact and explain what is missing.

(b) Within 15 working days of filing a notice, FDA will send you (or your agent) a letter that informs you of the date on which FDA filed the PBN.

(c) Within 120 days of filing a notice, FDA will send you (or your agent) a letter about its evaluation of your premarket notice.

(d) In general, FDA will respond as follows:

(1) FDA is extending its evaluation of your premarket notice by 120 days and expects that the bioengineered food will not be marketed during that evaluation; or

(2) FDA has completed its evaluation of your premarket notice. Based upon this evaluation, and as discussed in this letter, the premarket notice does not provide a basis for your view that the bioengineered food is as safe as comparable food or is otherwise in compliance with all applicable requirements of the act. Therefore, the agency expects that the bioengineered food will not be marketed; or

(3) FDA has completed its evaluation of your premarket notice. Based upon this evaluation, the agency has no questions, at this time, regarding your view that the bioengineered food is as safe as comparable food and is otherwise in compliance with all applicable requirements of the act; or

(4) FDA has received a letter in which you withdrew your PBN from its consideration without prejudice to a future filing. Given your letter, FDA ceased to evaluate your PBN on the date that we received your letter.

(e) If your PBN is about a bioengineered food that contains a plant pesticide, FDA will describe the status of the bioengineered food at EPA.

(1) If all applicable regulatory processes at EPA have come to closure, FDA will say so and will respond as described in paragraph (d) of this section.

(2) If regulatory processes at EPA regarding the bioengineered food are still pending, FDA will inform you that

FDA does not consider your PBN to satisfy the requirement for premarket notice.

§ 592.40 Public disclosure.

(a) *When could anyone else find out that I sent a PBN to FDA?* (1) Ordinarily, the existence of your PBN is available for public disclosure on the date that FDA files it.

(2) If you believe that the existence of your PBN is confidential, it is your responsibility to say so. The way to do this is by making a claim for confidentiality in the letter that you send in Part I of your PBN (§ 592.25(a)(4)).

(3) If you claim that the existence of your PBN is confidential, FDA will evaluate your claim. FDA will disclose the existence of your PBN, unless FDA determines that your claim demonstrates that the criteria for exemption from disclosure in § 20.61 of this chapter are satisfied.

(4) If FDA determines that the existence of your PBN is confidential at the time that we file it, the existence of your PBN will become available for public disclosure, in accordance with § 20.61 of this chapter, when the criteria for exemption from disclosure in § 20.61 of this chapter are no longer satisfied.

(b) *How could anyone else find out that I sent a PBN to FDA?*

(1) FDA will make a list of filed PBN's easily accessible to the public (e.g., by placing the information on the Internet or in a paper or electronic file that is available at FDA for public review and copying).

(2) In general, FDA will use the information submitted in Part II of each PBN (i.e., the information described in § 192.25(b) of this chapter) to prepare this list and will update this list on an approximately monthly basis.

(c) *Would the data or other information in my PBN (including an amendment to my PBN, or any data or information that I incorporate by reference) be available to the public?* (1) Ordinarily, the data or other information in your PBN are available for public disclosure, in accordance with § 20.61 of this chapter, as of the date that FDA files the PBN.

(2) If you believe that any or all of the data or other information in your PBN is confidential, it is your responsibility to say so. The way to do this is in the letter that you send in Part I of your PBN (§ 592.25(a)(4)). In addition, under § 592.20(b) and (c), it is your responsibility to provide copies of your PBN that do not contain any data or other information that you claim are confidential.

(3) If you claim that any or all of the data or other information in your PBN is confidential, FDA will evaluate your claim. FDA will disclose the data or information in your PBN, unless FDA determines that your claim demonstrates that the criteria for exemption from disclosure in § 20.61 of this chapter are satisfied.

(4) If FDA determines that any or all of the data or other information in your PBN is confidential as of the date that we file it, those data or information would be available for public disclosure, in accordance with 20.61 of this chapter, when the criteria for exemption from disclosure in § 20.61 of this chapter are no longer satisfied.

(5) As long as the existence of your PBN is confidential, then the data or other information in your PBN would not be available for public disclosure.

(d) *How could the public obtain disclosable data and information in my PBN?* Under the FOIA, the public could obtain the disclosable data or other information in your PBN or an amendment to your PBN, or that you incorporate by reference into your PBN, by looking for these data and information in FDA's electronic reading room or by asking FDA to send them a copy of these data and information.

(e) *Would the agency's evaluation of my PBN be available to the public?*

FDA will make the following information easily accessible to the public (e.g., by placing the information on the Internet or in a paper or electronic file that is available at FDA for public review and copying):

(1) The text of any letter issued by the agency under § 192.30(c) of this chapter.

(2) The text of the agency's completed evaluation of any notice submitted under this part.

Dated: September 22, 2000.

Jane E. Henney,

Commissioner of Food and Drugs.

Donna E. Shalala,

Secretary of Health and Human Services.

BILLING CODE 4160-01-F

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[REG-107047-00]

RIN 1545-AY02

Hedging Transactions

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking and notice of public hearing.

SUMMARY: This document contains proposed regulations relating to the character of hedging transactions. These proposed regulations reflect changes to the law made by the Ticket to Work and Work Incentives Improvement Act of 1999. The proposed regulations affect businesses entering into hedging transactions. This document also provides notice of a public hearing on these proposed regulations.

DATES: Written or electronically generated comments must be received by April 25, 2001. Requests to speak (with outlines of oral comments to be discussed) at the public hearing scheduled for May 16, 2001, at 10 a.m., must be submitted by April 25, 2001.

ADDRESSES: Send submissions to: CC:M&SP:RU (REG-107047-00), room 5226, Internal Revenue Service, POB 7604, Ben Franklin Station, Washington, DC 20044. Submissions may be hand delivered between the hours of 8 a.m. and 5 p.m. to: CC:M&SP:RU (REG-107047-00), Courier's Desk, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC. Alternatively, taxpayers may submit comments electronically via the Internet by selecting the "Tax Regs" option on the IRS Home Page, or by submitting comments directly to the IRS internet site at http://www.irs.gov/tax_regs/regslst.html. The public hearing will be held in the IRS auditorium, 1111 Constitution Ave., NW., Washington, DC.

FOR FURTHER INFORMATION CONTACT:

Concerning the regulations, Jo Lynn Ricks, (202) 622-3920; concerning submissions of comments, the hearing, and/or to be placed on the building access list to attend the hearing, contact Lanita Vandyke, (202) 622-7180 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act

The collection of information contained in this notice of proposed rulemaking has been reviewed and approved by the Office of Management and Budget in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)) under control numbers 1545-1403 and 1545-1480.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number assigned by the Office of Management and Budget.

Books or records relating to a collection of information must be

retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Background

This document contains proposed amendments to 26 CFR part 1 under section 1221 of the Internal Revenue Code (Code). Prior to amendment in 1999, section 1221 generally defined a capital asset as property held by the taxpayer other than: (1) Stock in trade or other types of assets includible in inventory; (2) property used in a trade or business that is real property or property subject to depreciation; (3) certain copyrights (or similar property); (4) accounts or notes receivable acquired in the ordinary course of a trade or business; and (5) U.S. government publications.

In 1994, the IRS published in the **Federal Register** (59 FR 36360) final Treasury regulations under section 1221 providing for ordinary character treatment for most business hedges. The regulations generally apply to hedges that reduce risk with respect to ordinary property, ordinary obligations, and borrowings of the taxpayer and that meet certain identification requirements. (§ 1.1221-2). In 1996, the IRS published in the **Federal Register** (61 FR 517) final regulations on the character and timing of gain or loss from hedging transactions entered into by members of a consolidated group. The final regulations published in 1994 and 1996 are collectively referred to as the Treasury regulations in this preamble.

On December 17, 1999, section 1221 was amended by section 532 of the Ticket to Work and Work Incentives Improvement Act of 1999 (113 Stat. 1860) to provide ordinary gain or loss treatment for hedging transactions and consumable supplies. Section 1221(a)(7) provides ordinary treatment for hedging transactions that are clearly identified as such before the close of the day on which they were acquired, originated, or entered into.

The statute defines a hedging transaction generally to include a transaction entered into by the taxpayer in the normal course of business primarily to manage risk of interest rate, price changes, or currency fluctuations with respect to ordinary property, ordinary obligations, or borrowings of the taxpayer. § 1221(b)(2)(A)(i) and (ii). The statutory definition of hedging transaction also includes transactions to manage such other risks as the Secretary may prescribe in regulations. Section 1221(b)(2)(A)(iii). Further, the statute

grants the Secretary the authority to provide regulations to address the treatment of nonidentified or improperly identified hedging transactions, and hedging transactions involving related parties (sections 1221(b)(2)(B) and (b)(3), respectively). The statutory hedging provisions are effective for transactions entered into on or after December 17, 1999.

Section 1221(a)(8) provides that supplies of a type regularly consumed by the taxpayer in the ordinary course of a taxpayer's trade or business are not capital assets. That provision is effective for supplies held or acquired on or after December 17, 1999.

The legislative history to the hedging provisions states that Congress intended that the approach taken in the Treasury regulations with respect to the character of hedging transactions generally should be codified as an appropriate interpretation of present law. S. Rep. No. 201, 106th Cong., 1st Sess. 24 (1999). These proposed regulations conform the Treasury regulations to these statutory provisions.

Explanation of Provisions

Paragraph (a) of the proposed regulations provides basic rules for the treatment of hedging transactions. The substance of these rules is the same as the rules under § 1.1221-2(a).

Accordingly, paragraph (a)(1) of the proposed regulations generally provides that property that is part of a hedging transaction, as defined in section 1221(b)(2)(A) and paragraph (b) of the proposed regulations, is not a capital asset. Paragraph (a)(2) of the proposed regulations provides a similar rule for short sales and options. Where a short sale or option is part of a hedging transaction, as defined, any gain or loss on the short sale or option is ordinary. Under paragraph (a)(3), if a transaction falls outside the regulations, gain or loss from the transaction is not made ordinary by the fact that property is a surrogate for a non-capital asset, that the transaction serves as insurance against a business risk, that the transaction serves a hedging function, or that the transaction serves a similar function or purpose. As under the Treasury regulations, Congress intended that the hedging rules be the exclusive means through which the gains and losses on hedging transactions are treated as ordinary. S. Rep. No. 201, 106th Cong., 1st Sess. 25 (1999).

The provisions of the proposed regulations generally apply to determine the character of gain or loss from transactions that also are subject to various international provisions of the Code. Paragraph (a)(4) of the proposed

regulations, however, provides that section 988 transactions are excluded from these regulations because gain or loss on those transactions is ordinary under section 988(a)(1). Paragraph (a)(4) of the proposed regulations also provides that the definition of a hedging transaction under § 1.1221-2(b) of the proposed regulations does not apply for purposes of the hedging exceptions to the subpart F rules of section 954(c) and certain hedging rules in the interest allocation regulations under section 864(e).

Regulations under § 1.482-8 will address risk management activities in the context of a global dealing operation. Thus, except to the extent provided in §§ 1.475(g)-2, 1.482-8, and 1.863-3(h), these regulations do not apply in determining the allocation and source of income for a participant in a global dealing operation or whether a risk management function related to the activities of a regular dealer in securities has been conducted.

Proposed regulations under §§ 1.882-5 and 1.884-1 also refer to hedging under § 1.1221-2 for purposes of determining assets and liabilities of a foreign corporation for interest allocation and branch tax purposes. The IRS and Treasury are evaluating the appropriate requirements necessary to implement cross-border and worldwide hedging rules for these purposes and seek comments in this regard. Therefore, paragraph (a)(4) of the proposed regulations provides that the definition of hedging transaction in paragraph (b) of the proposed regulations is inapplicable in determining the hedging requirements under sections 882(c) and 884, except to the extent provided in regulations under those sections.

Paragraph (b) of the proposed regulations restates the definition of hedging transaction in section 1221(b)(2)(A). Under this rule, a hedging transaction is generally a transaction that a taxpayer enters into in the normal course of its business primarily to manage the risk of interest rate or price changes or currency fluctuations with respect to ordinary property, ordinary obligations, or borrowings of the taxpayer.

Paragraph (c) of the proposed regulations provides rules of application designed to ensure that the definition of hedging transaction is applied reasonably to include most common types of business hedges. Congress intended that the approach taken in the Treasury regulations with respect to the character of hedging transactions generally should be codified as an appropriate interpretation of present law. S. Rep. No. 201, 106th Cong., 1st

Sess. 24 (1999). The Senate Finance Committee believed that the Treasury regulations interpret risk reduction flexibly to provide hedging transaction treatment for fixed to floating hedges, certain written call options, dynamic hedges, partial hedges, recycled hedges, and hedges of aggregate risk (see § 1.1221-2(c)). *Id.* at n.12. The Committee believed that (depending on the facts) the treatment of those transactions as hedging transactions is appropriate and that it is also appropriate to modernize the definition of hedging transaction by providing risk management as the standard. *Id.* These proposed regulations revise the Treasury regulations to reflect the risk management standard.

Paragraph (c)(1) of the proposed regulations deals with the meaning of risk management. It provides that, except as otherwise provided in paragraph (c), a transaction satisfies the risk management standard if it reduces risk. To enter into a hedging transaction, the taxpayer must have risk when all of its operations are considered—that is, there must be risk on a “macro” basis. Nonetheless, a hedge of a single asset or liability, or pool of assets or liabilities, will be respected as managing risk if the hedge reduces the risk attributable to the item or items being hedged and if the hedge is reasonably calculated to reduce the overall risk of the taxpayer's operations. In addition, if a taxpayer hedges a particular asset or liability, or a pool of assets or liabilities, and the hedge is undertaken as part of a program to reduce the overall risk of the taxpayer's operations, the taxpayer need not show that the hedge reduces its overall risk.

Paragraph (c)(1) of the proposed regulations also recognizes that fixed to floating hedges and certain types of written options may manage risk and may be hedging transactions in appropriate situations. For example, a covered call with respect to assets held or a written put option with respect to assets to be acquired may be a hedging transaction.

In addition, paragraph (c)(1) of the proposed regulations provides that a hedging transaction includes a transaction that reverses or counteracts a hedging transaction. This rule recognizes that some transactions are used to eliminate some or all of the risk reduction accomplished through another hedging transaction. Although the transactions are not risk reducing if viewed independently, they are considered to be part of the larger hedging transaction.

Paragraph (c)(1) of the proposed regulations further provides that a

taxpayer may hedge any part or all of its risk for any part of the period during which it has risk. The proposed regulations also provide that the fact that a taxpayer frequently enters into and terminates hedging positions is not relevant to whether transactions are hedging transactions.

Except as otherwise provided in paragraph (c) of the proposed regulations, a transaction that is not entered into primarily to reduce risk is not a hedging transaction. For example, the so-called "store-on-the-board" transaction, in which a taxpayer disposes of its production output and enters into a long futures contract with respect to the same product, is not a hedging transaction. In this example, the long futures contract could be viewed as a surrogate for the storage of the commodity. The net proceeds from the sale of the production output and the gain or loss on the long futures contract simulates the price at which the production output would have sold if it had been physically stored and sold at a later time. However, because the production output to which the futures contract relates has been sold, there is no underlying position (with respect to ordinary property held or to be held) that exposes the taxpayer to price risk. Thus, the long position does not reduce risk. Moreover, gain or loss on the contract is not treated as ordinary on the grounds that it is a surrogate for inventory.

Paragraph (c)(2) of the proposed regulations provides that a hedging transaction may be entered into by using a position that was a hedge of one asset or liability to hedge another asset or liability.

Paragraph (c)(3) of the proposed regulations provides that the acquisition of certain assets, such as investments, may not be a hedging transaction. Even though acquisition of these assets may involve some risk reduction, they typically are not acquired primarily to manage risk. For example, a taxpayer's interest rate risk from a floating rate borrowing may be reduced by the purchase of debt instruments that bear a comparable floating rate. The proposed regulations provide that the acquisition of the debt instruments, however, is not made primarily to reduce risk and, therefore, is not a hedging transaction. Similarly, borrowings generally are not made primarily to manage risk. The IRS and Treasury request comments on the circumstances in which the acquisition of debt instruments or borrowings are made primarily to manage risk.

Paragraph (c)(4) defines the normal course requirement of paragraph (b) to

include any transaction entered into in furtherance of a taxpayer's trade or business. Thus, for example, a liability hedge meets this requirement regardless of whether the liability is undertaken to fund current operations, an acquisition, or an expansion of a taxpayer's business. This definition does not apply to other uses of the term "normal course" in the Code or regulations.

Paragraph (c)(5) of the proposed regulations provides that a hedge of property or of an obligation is a hedging transaction only if a sale or exchange of the property, or performance or termination of the obligation, could not produce capital gain or loss. The special rule in the Treasury regulations for noninventory supplies (§ 1.1221-2(c)(5)(ii)), however, is not contained in these proposed regulations. Under the noninventory supply rule, if a taxpayer sells only a negligible amount of a noninventory supply, then, only for purposes of determining whether a hedge of the purchase of that noninventory supply is a hedging transaction, that noninventory supply is treated as ordinary property. This rule is not being proposed because section 1221(a)(8) generally provides ordinary gain or loss treatment for consumable supplies held or acquired on or after December 17, 1999.

Paragraph (c)(6) of the proposed regulations provides that the status of liability hedges as hedging transactions is determined without regard to the use that is made of the proceeds of a borrowing so long as the transaction is entered into in furtherance of the taxpayer's trade or business. The Service and Treasury believe that a liability hedge should not fail to qualify as a hedging transaction because the proceeds of the borrowing being hedged are used to purchase a capital asset.

Paragraph (c)(7) of the proposed regulations provides that, in the case of hedges of aggregate risk, all but a de minimis amount of the risk being hedged must be attributable to ordinary property, ordinary obligations, or borrowings.

Although the purpose of the rules in paragraph (c) is to ensure that the definition of hedging transaction will be interpreted reasonably to cover most common business hedges, not all hedges are intended to be covered. For example, the regulations do not apply where a taxpayer hedges a dividend stream, the overall profitability of a business unit, or other business risks that do not relate directly to interest rate or price changes or currency fluctuations with respect to ordinary property, ordinary obligations, or borrowings. Moreover, the regulations

do not provide ordinary treatment for gain or loss from the disposition of stock where, for example, the stock is acquired to protect the goodwill or business reputation of the acquirer or to ensure the availability of goods.

Paragraph (c)(8) of the proposed regulations provides that a hedging transaction does not include a transaction entered into to manage risks other than interest rate or price changes, or currency fluctuations, unless a regulation, revenue ruling, or revenue procedure provides otherwise. Thus, until such guidance is published, a hedge of volume or revenue fluctuations is not a hedging transaction. One example of this type of hedge is a weather derivative used by an energy producer to hedge against the decrease in volume of sales from variations in weather patterns.

The IRS is considering whether to expand the definition of hedging transaction to include transactions that manage risks other than interest rate or price changes, or currency fluctuations with respect to ordinary property, ordinary obligations or borrowings of the taxpayer. The Service solicits comments on the types of risks that should be covered, including specific examples of derivative transactions that may be incorporated into future guidance.

The status of so-called "gap" hedges is not separately addressed in paragraph (c) of the proposed regulations. Insurance companies, for example, sometimes hedge the "gap" between their liabilities and the assets that fund them. Under the proposed regulations, a hedge of those assets does not qualify as a hedging transaction if the assets are capital assets. Whether a gap hedge qualifies as a liability hedge is a question of fact and depends on whether it is more closely associated with the liabilities than with the assets. For example, a contract to purchase assets is generally not a liability hedge even if the assets are being purchased to fund the liability. Other gap hedges may be appropriately treated as liability hedges and, therefore, may qualify as hedging transactions.

The rules in paragraphs (d), (e) and (f) of the proposed regulations, covering consolidated group hedging, identification and recordkeeping rules, and the effect of identification and non-identification, respectively, are generally unchanged from the corresponding rules in the Treasury regulations. This is because Congress generally intended to codify the approach to hedging transactions that was taken in the Treasury regulations. S.

Rep. No. 201, 106th Cong., 1st Sess. 24 (1999).

Paragraph (d) of the proposed regulations provides rules applicable to hedging by members of a consolidated group. The proposed regulations retain the single-entity approach of the Treasury regulations. That is, they treat the risk of one member of the group as the risk of the other members, as if all the members were divisions of a single corporation. Thus, a member of a consolidated group that hedges the risk of another member by entering into a transaction with a third party may receive ordinary gain or loss treatment on that transaction if the transaction otherwise qualifies as a hedging transaction.

Under this single-entity approach, intercompany transactions are neither hedging transactions nor hedged items. Because they are treated as transactions between divisions of a single corporation, intercompany transactions do not manage the risk of that single corporation and, therefore, fail to qualify as hedging transactions.

The proposed regulations also retain the separate-entity election of the Treasury regulations, permitting a consolidated group to treat its members as separate entities when applying the hedging rules. The election is made by attaching a statement to the group's federal income tax return.

For a group that elects separate-entity treatment, an intercompany transaction is treated as a hedging transaction if and only if: (1) It would qualify as a hedging transaction if entered into with an unrelated party; and (2) it is entered into with a member that, under its method of accounting, marks its position in the intercompany transaction to market. If these requirements are satisfied, the member with respect to which it is an intercompany hedging transaction must account for its position in the transaction under § 1.446-4, and, if that member properly identifies the transaction as a hedging transaction, each member treats the gain or loss from its position in the transaction as ordinary.

The proposed regulations provide that, even when these two requirements are met, these regulations supplant only the character and timing rules of § 1.1502-13. Other aspects of the transaction, such as the source of the gain or loss, are unaffected by these regulations and thus may be governed by other portions of § 1.1502-13.

Pursuant to section 1221(a)(7), paragraph (e)(1) of the proposed regulations provides that hedging transactions must be identified before the close of the day on which they are

entered into. Paragraph (e)(2) of the proposed regulations requires that the item, items, or aggregate risk being hedged be identified substantially contemporaneously with entering into the hedging transaction. The identification must be made no more than 35 days after entering into the hedging transaction.

Paragraph (e)(3) of the proposed regulations contains a series of special rules for identifying certain types of hedging transactions. In the case of inventory, the identification must specify the type or class of inventory to which the hedge relates. If particular inventory purchases or sales transactions are being hedged, the taxpayer must also identify the expected date and the amount to be acquired or sold. In the case of hedges of aggregate risk, the identification requirement is satisfied if a taxpayer's records contain a description of the hedging program and if there is a system for identifying transactions as entered into as part of that program. The intent underlying this rule is to provide verifiable information with respect to the item being hedged without requiring the taxpayer to identify individually the many items that give rise to the aggregate risk being hedged.

Paragraph (e)(4) of the proposed regulations provides rules with respect to how an identification is made. It must be clear that the identification is being made for tax purposes. In lieu of separately identifying each transaction, however, a taxpayer may establish a system in which identification is indicated by the type of transaction or the manner in which the transaction is consummated or recorded.

Paragraph (e)(5) of the proposed regulations deals with the required identification where the taxpayer is a member of a consolidated group, and paragraph (e)(6) of the proposed regulations provides that an identification for purposes of section 1256(e)(2) is also an identification for purposes of § 1.1221-2(e)(1).

Pursuant to section 1221(b)(2)(B), paragraph (f) of the proposed regulations deals with the effect of identification and non-identification. The rules in this paragraph are the same as the rules in paragraph (f) of the Treasury regulations.

The proposed regulations under section 1256 generally restate the rules of § 1.1256(e)-1 that coordinate the identification of hedges for purposes of section 1256(e). The citations to section 1256(e)(2)(C) in the Treasury regulations have been replaced with citations to section 1256(e)(2) in the proposed regulations.

Proposed Effective Date

The proposed regulations are proposed to be effective for transactions entered into on or after January 18, 2001. However, the IRS will not challenge any transaction entered into on or after December 17, 1999, and before January 18, 2001 that satisfies the provisions of these proposed regulations.

Special Analyses

It has been determined that this notice of proposed rulemaking is not a significant regulatory action as defined in Executive Order 12866. Therefore, a regulatory assessment is not required. It is hereby certified that the collection of information in these regulations will not have a significant economic impact on a substantial number of small entities. This certification is based upon the fact that very few small businesses enter into hedging transactions due to their cost and complexity. Further, those small businesses that hedge enter into very few hedging transactions because hedging transactions are costly, complex, and require constant monitoring and a sophisticated understanding of the capital markets. Therefore, a Regulatory Flexibility analysis under the Regulatory Flexibility Act (5 U.S.C. chapter 6) is not required. Pursuant to section 7805(f) of the Internal Revenue Code, this notice of proposed rulemaking will be submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any electronic or written comments (a signed original and eight (8) copies of written comments) that are submitted timely (in the manner described in **ADDRESSES**) to the IRS. The IRS and Treasury request comments on the clarity of the proposed rules and how they may be made easier to understand. All comments will be available for public inspection and copying.

A public hearing has been scheduled for May 16, 2001, beginning at 10 a.m., in the IRS auditorium, Internal Revenue Building, 1111 Constitution Avenue, NW., Washington, DC. Due to building security procedures, visitors must enter at the 10th Street entrance, located between Constitution and Pennsylvania Avenues, NW. In addition, all visitors must present photo identification to enter the building. Because of access restrictions, visitors will not be

admitted beyond the immediate entrance area more than 15 minutes before the hearing starts. For information about having your name placed on the building access list to attend the hearing, see **FOR FURTHER INFORMATION CONTACT**.

The rules of 26 CFR 601.601(a)(3) apply to the hearing. Persons who wish to present oral comments at the hearing must submit written comments and an outline of topics to be discussed and the time to be devoted to each topic (signed original and eight (8) copies) by April 25, 2001. A period of 10 minutes will be allotted to each person making comments. An agenda showing the scheduling of the speakers will be prepared after the deadline for receiving outlines has passed. Copies of the agenda will be available free of charge at the hearing.

Drafting Information

The principal author of these regulations is Jo Lynn Ricks, Office of the Associate Chief Counsel (Financial Institutions and Products). However, other personnel from the IRS and Treasury Department participated in their development.

List of Subjects

26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

26 CFR Part 602

Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 1 is proposed to be amended as follows:

PART 1—INCOME TAXES

Paragraph 1. The authority citation for part 1 is amended by revising the entry for § 1.1221 to read as follows:

Authority: 26 U.S.C. 7805 * * * § 1.1221–2 also issued under 26 U.S.C. 1221(b)(2)(A)(iii), (b)(2)(B), and (b)(3). * * *

Par. 2. Section 1.1221–2 is revised to read as follows:

§ 1.1221–2 Hedging transactions.

(a) *Treatment of hedging transactions*—(1) *In general.* This section governs the treatment of hedging transactions under section 1221(a)(7). Except as provided in paragraph (f)(2) of this section, the term capital asset does not include property that is part of a hedging transaction (as defined in paragraph (b) of this section).

(2) *Short sales and options.* This section also governs the character of

gain or loss from a short sale or option that is part of a hedging transaction. Except as provided in paragraph (f)(2) of this section, gain or loss on a short sale or option that is part of a hedging transaction (as defined in paragraph (b) of this section) is ordinary income or loss.

(3) *Exclusivity.* If a transaction is not a hedging transaction as defined in paragraph (b) of this section, gain or loss from the transaction is not made ordinary on the grounds that property involved in the transaction is a surrogate for a noncapital asset, that the transaction serves as insurance against a business risk, that the transaction serves a hedging function, or that the transaction serves a similar function or purpose.

(4) *Coordination with other sections*—(i) *Section 988.* This section does not apply to determine the character of gain or loss realized on a section 988 transaction as defined in section 988(c)(1) or realized with respect to any qualified fund as defined in section 988(c)(1)(E)(iii).

(ii) *Sections 864(e) and 954(c).* Except as otherwise provided in regulations issued pursuant to sections 864(e) and 954(c), the definition of hedging transaction in paragraph (b) of this section does not apply for purposes of sections 864(e) and 954(c).

(iii) *Global dealing operation.* Except as otherwise provided in §§ 1.475(g)–2, 1.482–8, and 1.863–3(h), the rules of application for purposes of the definition of a hedging transaction in paragraph (c) of this section do not apply in determining the allocation and source of income with respect to a participant in a global dealing operation or in determining whether a risk management function related to the activities of a regular dealer in securities has been conducted. See § 1.482–8(a) for the definitions of global dealing operation, regular dealer in securities, and participant.

(iv) *Sections 882(c) and 884.* Except as otherwise provided in regulations issued under sections 882(c) and 884, the definition of hedging transaction in paragraph (b) of this section does not apply for purposes of those sections.

(b) *Hedging transaction defined.* Section 1221(b)(2)(A) provides that a hedging transaction is any transaction that a taxpayer enters into in the normal course of the taxpayer's trade or business primarily—

(1) To manage risk of price changes or currency fluctuations with respect to ordinary property (as defined in paragraph (c)(5) of this section) that is held or to be held by the taxpayer;

(2) To manage risk of interest rate or price changes or currency fluctuations with respect to borrowings made or to be made, or ordinary obligations incurred or to be incurred, by the taxpayer; or

(3) To manage such other risks as the Secretary may prescribe in regulations (see paragraph (c)(8) of this section).

(c) *Rules of application.* The rules of this paragraph (c) apply for purposes of the definition of the term hedging transaction in section 1221(b)(2)(A) and paragraph (b) of this section. These rules must be interpreted reasonably and consistently with the purposes of this section. Where no specific rules of application control, the definition of hedging transaction must be interpreted reasonably and consistently with the purposes of section 1221(b)(2)(A) and this section.

(1) *Managing risk*—(i) *Transactions that manage risk.* Whether a transaction manages a taxpayer's risk is determined based on all of the facts and circumstances surrounding the taxpayer's business and the transaction. In general, a taxpayer's hedging strategies and policies as reflected in the taxpayer's minutes or other records are evidence of whether particular transactions were entered into primarily to manage the taxpayer's risk.

(ii) *Micro and macro hedges*—(A) *In general.* A taxpayer has risk of a particular type only if it is at risk when all of its operations are considered. Nonetheless, a hedge of a particular asset or liability generally will be respected as managing risk if it reduces the risk attributable to the asset or liability and if it is reasonably expected to reduce the overall risk of the taxpayer's operations. If a taxpayer hedges particular assets or liabilities, or groups of assets or liabilities, and the hedges are undertaken as part of a program that, as a whole, is reasonably expected to reduce the overall risk of the taxpayer's operations, the taxpayer generally does not have to demonstrate that each hedge that was entered into pursuant to the program reduces its overall risk.

(B) *Fixed-to-floating hedges.* Under the principles of paragraph (c)(1)(ii)(A) of this section, a transaction that economically converts an interest rate or price from a fixed rate or price to a floating rate or price may manage risk. For example, if a taxpayer's income varies with interest rates, the taxpayer may be at risk if it has a fixed rate liability. Similarly, a taxpayer with a fixed cost for its inventory may be at risk if the price at which the inventory can be sold varies with a particular factor. Thus, a transaction that converts

an interest rate or price from fixed to floating may be a hedging transaction.

(iii) *Written options.* A written option may manage risk. For example, in appropriate circumstances, a written call option with respect to assets held by a taxpayer or a written put option with respect to assets to be acquired by a taxpayer may be a hedging transaction. See also paragraph (c)(1)(v) of this section.

(iv) *Extent of risk management.* A taxpayer may hedge all or any portion of its risk for all or any part of the period during which it is exposed to the risk.

(v) *Transactions that counteract hedging transactions.* If a transaction is entered into primarily to counteract all or any part of the risk reduction effected by one or more hedging transactions, the transaction is a hedging transaction. For example, if a written option is used to reduce or eliminate the risk reduction obtained from another position such as a purchased option, then it may be a hedging transaction.

(vi) *Number of transactions.* The fact that a taxpayer frequently enters into and terminates positions (even if done on a daily or more frequent basis) is not relevant to whether these transactions are hedging transactions. Thus, for example, a taxpayer hedging the risk associated with an asset or liability may frequently establish and terminate positions that hedge that risk, depending on the extent the taxpayer wishes to be hedged. Similarly, if a taxpayer maintains its level of risk exposure by entering into and terminating a large number of transactions in a single day, its transactions may nonetheless qualify as hedging transactions.

(vii) *Transactions that do not manage risk.* A transaction that is not entered into to reduce a taxpayer's risk does not manage risk. For example, assume that a taxpayer produces a commodity for sale, sells the commodity, and enters into a long futures or forward contract in that commodity in the hope that the price will increase. Because the long position does not reduce risk, and is not otherwise treated as a hedging transaction in this paragraph (c), the transaction is not a hedging transaction. Moreover, gain or loss on the contract is not made ordinary on the grounds that it is a surrogate for inventory. See paragraph (a)(3) of this section.

(2) *Entering into a hedging transaction.* A taxpayer may enter into a hedging transaction by using a position that was a hedge of one asset or liability as a hedge of another asset or liability (recycling).

(3) *No investments as hedging transactions.* If an asset (such as an

investment) is not acquired primarily to manage risk, the purchase or sale of that asset is not a hedging transaction even if the terms of the asset limit or reduce the taxpayer's risk with respect to other assets or liabilities. For example, a taxpayer's interest rate risk from a floating rate borrowing may be reduced by the purchase of debt instruments that bear a comparable floating rate. The acquisition of the debt instruments, however, is not a hedging transaction because the transaction is not entered into primarily to reduce the taxpayer's risk. Similarly, borrowings generally are not made primarily to manage risk.

(4) *Normal course.* Solely for purposes of paragraph (b) of this section, if a transaction is entered into in furtherance of a taxpayer's trade or business, the transaction is entered into in the normal course of the taxpayer's trade or business. This rule applies even if the risk to be managed relates to the expansion of an existing business or the acquisition of a new trade or business.

(5) *Ordinary property and obligations.* Property is ordinary property to a taxpayer only if a sale or exchange of the property by the taxpayer could not produce capital gain or loss regardless of the taxpayer's holding period when the sale or exchange occurs. Thus, for example, property used in a trade or business within the meaning of section 1231(b) (determined without regard to the holding period specified in that section) is not ordinary property. An obligation is an ordinary obligation if performance or termination of the obligation by the taxpayer could not produce capital gain or loss. For purposes of the preceding sentence, termination has the same meaning as in section 1234A.

(6) *Borrowings.* Whether hedges of a taxpayer's debt issuances (borrowings) are hedging transactions is determined without regard to the use of the proceeds of the borrowing.

(7) *Hedging an aggregate risk.* The term hedging transaction includes a transaction that manages an aggregate risk of interest rate changes, price changes, and/or currency fluctuations only if all of the risk, or all but a de minimis amount of the risk, is with respect to ordinary property, ordinary obligations, or borrowings.

(8) *Hedges of other risks.* Except as otherwise determined in a regulation, revenue ruling, or revenue procedure, a hedging transaction does not include a transaction entered into to manage risks other than interest rate or price changes, or currency fluctuations.

(d) *Hedging by members of a consolidated group—*(1) *General rule: single-entity approach.* For purposes of

this section, the risk of one member of a consolidated group is treated as the risk of the other members as if all of the members of the group were divisions of a single corporation. For example, if any member of a consolidated group hedges the risk of another member of the group by entering into a transaction with a third party, that transaction may potentially qualify as a hedging transaction. Conversely, intercompany transactions are not hedging transactions because, when considered as transactions between divisions of a single corporation, they do not manage the risk of that single corporation.

(2) *Separate-entity election.* In lieu of the single-entity approach specified in paragraph (d)(1) of this section, a consolidated group may elect separate-entity treatment of its hedging transactions. If a group makes this separate-entity election, the following rules apply.

(i) *Risk of one member not risk of other members.* Notwithstanding paragraph (d)(1) of this section, the risk of one member is not treated as the risk of other members.

(ii) *Intercompany transactions.* An intercompany transaction is a hedging transaction (an intercompany hedging transaction) with respect to a member of a consolidated group if and only if it meets the following requirements—

(A) The position of the member in the intercompany transaction would qualify as a hedging transaction with respect to the member (taking into account paragraph (d)(2)(i) of this section) if the member had entered into the transaction with an unrelated party; and

(B) The position of the other member (the marking member) in the transaction is marked to market under the marking member's method of accounting.

(iii) *Treatment of intercompany hedging transactions.* An intercompany hedging transaction (that is, a transaction that meets the requirements of paragraphs (d)(2)(ii)(A) and (B) of this section) is subject to the following rules—

(A) The character and timing rules of § 1.1502-13 do not apply to the income, deduction, gain, or loss from the intercompany hedging transaction; and

(B) Except as provided in paragraph (f)(3) of this section, the character of the marking member's gain or loss from the transaction is ordinary.

(iv) *Making and revoking the election.* Unless the Commissioner otherwise prescribes, the election described in this paragraph (d)(2) must be made in a separate statement saying “[Insert Name and Employer Identification Number of Common Parent] HEREBY ELECTS THE APPLICATION OF SECTION 1.1221-”

2(d)(2) (THE SEPARATE-ENTITY APPROACH).” The statement must also indicate the date as of which the election is to be effective. The election must be signed by the common parent and filed with the group’s federal income tax return for the taxable year that includes the first date for which the election is to apply. The election applies to all transactions entered into on or after the date so indicated. The election may be revoked only with the consent of the Commissioner.

(3) *Definitions.* For definitions of consolidated group, divisions of a single corporation, group, intercompany transactions, and member, see section 1502 and the regulations thereunder.

(4) *Examples.* The following examples illustrate this paragraph (d):

General Facts. In these examples, *O* and *H* are members of the same consolidated group. *O*’s business operations give rise to interest rate risk “*A*,” which *O* wishes to hedge. *O* enters into an intercompany transaction with *H* that transfers the risk to *H*. *O*’s position in the intercompany transaction is “*B*,” and *H*’s position in the transaction is “*C*.” *H* enters into position “*D*” with a third party to reduce the interest rate risk it has with respect to its position *C*. *D* would be a hedging transaction with respect to risk *A* if *O*’s risk *A* were *H*’s risk.

Example 1. Single-entity treatment—(i) General rule. Under paragraph (d)(1) of this section, *O*’s risk *A* is treated as *H*’s risk, and therefore *D* is a hedging transaction with respect to risk *A*. Thus, the character of *D* is determined under the rules of this section, and the income, deduction, gain, or loss from *D* must be accounted for under a method of accounting that satisfies § 1.446-4. The intercompany transaction *B-C* is not a hedging transaction and is taken into account under § 1.1502-13.

(ii) *Identification.* *D* must be identified as a hedging transaction under paragraph (e)(1) of this section, and *A* must be identified as the hedged item under paragraph (e)(2) of this section. Under paragraph (e)(5) of this section, the identification of *A* as the hedged item can be accomplished by identifying the positions in the intercompany transaction as hedges or hedged items, as appropriate. Thus, substantially contemporaneous with entering into *D*, *H* may identify *C* as the hedged item and *O* may identify *B* as a hedge and *A* as the hedged item.

Example 2. Separate-entity election; counterparty that does not mark to market. In addition to the *General Facts* stated above, assume that the group makes a separate-entity election under paragraph (d)(2) of this section. If *H* does not mark *C* to market under its method of accounting, then *B* is not a hedging transaction, and the *B-C* intercompany transaction is taken into account under the rules of section 1502. *D* is not a hedging transaction with respect to *A*, but *D* may be a hedging transaction with respect to *C* if *C* is ordinary property or an ordinary obligation and if the other requirements of paragraph (b) of this section

are met. If *D* is not part of a hedging transaction, then *D* may be part of a straddle for purposes of section 1092.

Example 3. Separate-entity election; counterparty that marks to market. The facts are the same as in *Example 2* above, except that *H* marks *C* to market under its method of accounting. Also assume that *B* would be a hedging transaction with respect to risk *A* if *O* had entered into that transaction with an unrelated party. Thus, for *O*, the *B-C* transaction is an intercompany hedging transaction with respect to *O*’s risk *A*, the character and timing rules of § 1.1502-13 do not apply to the *B-C* transaction, and *H*’s income, deduction, gain, or loss from *C* is ordinary. However, other attributes of the items from the *B-C* transaction are determined under § 1.1502-13. *D* is a hedging transaction with respect to *C* if it meets the requirements of paragraph (b) of this section.

(e) *Identification and recordkeeping—(1) Same-day identification of hedging transactions.* Under section 1221(a)(7), a taxpayer that enters into a hedging transaction (including recycling an existing hedging transaction) must clearly identify it as a hedging transaction before the close of the day on which the taxpayer acquired, originated, or entered into the transaction (or recycled the existing hedging transaction).

(2) *Substantially contemporaneous identification of hedged item—(i) Content of the identification.* A taxpayer that enters into a hedging transaction must identify the item, items, or aggregate risk being hedged. Identification of an item being hedged generally involves identifying a transaction that creates risk, and the type of risk that the transaction creates. For example, if a taxpayer is hedging the price risk with respect to its June purchases of corn inventory, the transaction being hedged is the June purchase of corn and the risk is price movements in the market where the taxpayer buys its corn. For additional rules concerning the content of this identification, see paragraph (e)(3) of this section.

(ii) *Timing of the identification.* The identification required by this paragraph (e)(2) must be made substantially contemporaneously with entering into the hedging transaction. An identification is not substantially contemporaneous if it is made more than 35 days after entering into the hedging transaction.

(3) *Identification requirements for certain hedging transactions.* In the case of the hedging transactions described in this paragraph (e)(3), the identification under paragraph (e)(2) of this section must include the information specified.

(i) *Anticipatory asset hedges.* If the hedging transaction relates to the anticipated acquisition of assets by the taxpayer, the identification must include the expected date or dates of acquisition and the amounts expected to be acquired.

(ii) *Inventory hedges.* If the hedging transaction relates to the purchase or sale of inventory by the taxpayer, the identification is made by specifying the type or class of inventory to which the transaction relates. If the hedging transaction relates to specific purchases or sales, the identification must

also include the expected dates of the purchases or sales and the amounts to be purchased or sold.

(iii) *Hedges of debt of the taxpayer—(A) Existing debt.* If the hedging transaction relates to accruals or payments under an issue of existing debt of the taxpayer, the identification must specify the issue and, if the hedge is for less than the full issue price or the full term of the debt, the amount of the issue price and the term covered by the hedge.

(B) *Debt to be issued.* If the hedging transaction relates to the expected issuance of debt by the taxpayer or to accruals or payments under debt that is expected to be issued by the taxpayer, the identification must specify the following information: the expected date of issuance of the debt; the expected maturity or maturities; the total expected issue price; and the expected interest provisions. If the hedge is for less than the entire expected issue price of the debt or the full expected term of the debt, the identification must also include the amount or the term being hedged. The identification may indicate a range of dates, terms, and amounts, rather than specific dates, terms, or amounts. For example, a taxpayer might identify a transaction as hedging the yield on an anticipated issuance of fixed rate debt during the second half of its fiscal year, with the anticipated amount of the debt between \$75 million and \$125 million, and an anticipated term of approximately 20 to 30 years.

(iv) *Hedges of aggregate risk—(A) Required identification.* If a transaction hedges aggregate risk as described in paragraph (c)(7) of this section, the identification under paragraph (e)(2) of this section must include a description of the risk being hedged and of the hedging program under which the hedging transaction was entered. This requirement may be met by placing in the taxpayer’s records a description of the hedging program and by establishing a system under which individual transactions can be identified as being entered into pursuant to the program.

(B) *Description of hedging program.* A description of a hedging program must include an identification of the type of risk being hedged, a description of the type of items giving rise to the risk being aggregated, and sufficient additional information to demonstrate that the program is designed to reduce aggregate risk of the type identified. If the program contains controls on speculation (for example, position limits), the description of the hedging program must also explain how the controls are established, communicated, and implemented.

(4) *Manner of identification and records to be retained—(i) Inclusion of identification in tax records.* The identification required by this paragraph (e) must be made on, and retained as part of, the taxpayer’s books and records.

(ii) *Presence of identification must be unambiguous.* The presence of an identification for purposes of this paragraph (e) must be unambiguous. The identification of a hedging transaction for financial accounting or regulatory purposes does not satisfy this requirement unless the taxpayer’s

books and records indicate that the identification is also being made for tax purposes. The taxpayer may indicate that individual hedging transactions, or a class or classes of hedging transactions, that are identified for financial accounting or regulatory purposes are also being identified as hedging transactions for purposes of this section.

(iii) *Manner of identification.* The taxpayer may separately and explicitly make each identification, or, so long as paragraph (e)(4)(ii) of this section is satisfied, the taxpayer may establish a system pursuant to which the identification is indicated by the type of transaction or by the manner in which the transaction is consummated or recorded. An identification under this system is made at the later of the time that the system is established or the time that the transaction satisfies the terms of the system by being entered, or by being consummated or recorded, in the designated fashion.

(iv) *Examples.* The following examples illustrate the principles of paragraph (e)(4)(iii) of this section and assume that the other requirements of paragraph (e) are satisfied.

(A) A taxpayer can make an identification by designating a hedging transaction for (or placing it in) an account that has been identified as containing only hedges of a specified item (or of specified items or specified aggregate risk).

(B) A taxpayer can make an identification by including and retaining in its books and records a statement that designates all future transactions in a specified derivative product as hedges of a specified item, items, or aggregate risk.

(C) A taxpayer can make an identification by designating a certain mark, a certain form, or a certain legend as meaning that a transaction is a hedge of a specified item (or of specified items or a specified aggregate risk). Identification can be made by placing the designated mark on a record of the transaction (for example, trading ticket, purchase order, or trade confirmation) or by using the designated form or a record that contains the designated legend.

(5) *Identification of hedges involving members of the same consolidated group—(i) General rule: single-entity approach.* A member of a consolidated group must satisfy the requirements of this paragraph (e) as if all of the members of the group were divisions of a single corporation. Thus, the member entering into the hedging transaction with a third party must identify the hedging transaction under paragraph (e)(1) of this section. Under paragraph (e)(2) of this section, that member must also identify the item, items, or aggregate risk that is being hedged, even if the item, items, or aggregate risk relates primarily or entirely to other members of the group. If the members of a group use intercompany transactions to transfer risk within the group, the requirements of paragraph (e)(2) of this section may be met by identifying the intercompany transactions, and the risks hedged by the intercompany transactions, as hedges or hedged items, as appropriate. Because identification of the intercompany transaction as a hedge serves solely to

identify the hedged item, the identification is timely if made within the period required by paragraph (e)(2) of this section. For example, if a member transfers risk in an intercompany transaction, it may identify under the rules of this paragraph (e) both its position in that transaction and the item, items, or aggregate risk being hedged. The member that hedges the risk outside the group may identify under the rules of this paragraph (e) both its position with the third party and its position in the intercompany transaction. Paragraph (d)(4) *Example 1* of this section illustrates this identification.

(ii) *Rule for consolidated groups making the separate-entity election.* If a consolidated group makes the separate-entity election under paragraph (d)(2) of this section, each member of the group must satisfy the requirements of this paragraph (e) as though it were not a member of a consolidated group.

(6) *Consistency with section 1256(e)(2).* Any identification for purposes of section 1256(e)(2) is also an identification for purposes of paragraph (e)(1) of this section.

(f) *Effect of identification and non-identification—(1) Transactions identified—*

(i) *In general.* If a taxpayer identifies a transaction as a hedging transaction for purposes of paragraph (e)(1) of this section, the identification is binding with respect to gain, whether or not all of the requirements of paragraph (e) are satisfied. Thus, gain from that transaction is ordinary income. If the transaction is not in fact a hedging transaction described in paragraph (b) of this section, however, paragraphs (a)(1) and (2) of this section do not apply and the character of loss is determined without reference to whether the transaction is a surrogate for a noncapital asset, serves as insurance against a business risk, serves a hedging function, or serves a similar function or purpose. Thus, the taxpayer's identification of the transaction as a hedging transaction does not itself make loss from the transaction ordinary.

(ii) *Inadvertent identification.* Notwithstanding paragraph (f)(1)(i) of this section, if the taxpayer identifies a transaction as a hedging transaction for purposes of paragraph (e) of this section, the character of the gain is determined as if the transaction had not been identified as a hedging transaction if—

(A) The transaction is not a hedging transaction (as defined in paragraph (b) of this section);

(B) The identification of the transaction as a hedging transaction was due to inadvertent error; and

(C) All of the taxpayer's transactions in all open years are being treated on either original or, if necessary, amended returns in a manner consistent with the principles of this section.

(2) *Transactions not identified—(i) In general.* Except as provided in paragraphs (f)(2)(ii) and (iii) of this section, the absence of an identification that satisfies the requirements of paragraph (e)(1) of this section is binding and establishes that a transaction is not a hedging transaction. Thus, subject to the exceptions, the rules of paragraphs (a)(1) and (2) of this section do

not apply, and the character of gain or loss is determined without reference to whether the transaction is a surrogate for a noncapital asset, serves as insurance against a business risk, serves a hedging function, or serves a similar function or purpose.

(ii) *Inadvertent error.* If a taxpayer does not make an identification that satisfies the requirements of paragraph (e) of this section, the taxpayer may treat gain or loss from the transaction as ordinary income or loss under paragraph (a)(1) or (2) of this section if—

(A) The transaction is a hedging transaction (as defined in paragraph (b) of this section);

(B) The failure to identify the transaction was due to inadvertent error; and

(C) All of the taxpayer's hedging transactions in all open years are being treated on either original or, if necessary, amended returns as provided in paragraphs (a)(1) and (2) of this section.

(iii) *Anti-abuse rule.* If a taxpayer does not make an identification that satisfies all the requirements of paragraph (e) of this section but the taxpayer has no reasonable grounds for treating the transaction as other than a hedging transaction, then gain from the transaction is ordinary. The reasonableness of the taxpayer's failure to identify a transaction is determined by taking into consideration not only the requirements of paragraph (b) of this section but also the taxpayer's treatment of the transaction for financial accounting or other purposes and the taxpayer's identification of similar transactions as hedging transactions.

(3) *Transactions by members of a consolidated group—(i) Single-entity approach.* If a consolidated group is under the general rule of paragraph (d)(1) of this section (the single-entity approach), the rules of this paragraph (f) apply only to transactions that are not intercompany transactions.

(ii) *Separate-entity election.* If a consolidated group has made the election under paragraph (d)(2) of this section, then, in addition to the rules of paragraphs (f)(1) and (2) of this section, the following rules apply:

(A) If an intercompany transaction is identified as a hedging transaction but does not meet the requirements of paragraphs (d)(2)(ii)(A) and (B) of this section, then, notwithstanding any contrary provision in § 1.1502-13, each party to the transaction is subject to the rules of paragraph (f)(1) of this section with respect to the transaction as though it had incorrectly identified its position in the transaction as a hedging transaction.

(B) If a transaction meets the requirements of paragraphs (d)(2)(ii)(A) and (B) of this section but the transaction is not identified as a hedging transaction, each party to the transaction is subject to the rules of paragraph (f)(2) of this section. (Because the transaction is an intercompany hedging transaction, the character and timing rules of § 1.1502-13 do not apply. See paragraph (d)(2)(iii)(A) of this section.)

(g) *Effective date.* The rules of this section apply to transactions entered into on or after January 18, 2001.

Par. 2. Section 1.1256(e)-1 is revised to read as follows:

§ 1.1256(e)-1 Identification of hedging transactions.

(a) *Identification and recordkeeping requirements.* Under section 1256(e)(2), a taxpayer that enters into a hedging transaction must identify the transaction as a hedging transaction before the close of the day on which the taxpayer enters into the transaction.

(b) *Requirements for identification.*

The identification of a hedging transaction for purposes of section 1256(e)(2) must satisfy the requirements of § 1.1221-2(e)(1). Solely for purposes of section 1256(f)(1), however, an identification that does not satisfy all of the requirements of § 1.1221-2(e)(1) is nevertheless treated as an identification under section 1256(e)(2).

(c) *Consistency with § 1.1221-2.* Any identification for purposes of § 1.1221-2(e)(1) is also an identification for purposes of this section. If a taxpayer satisfies the requirements of § 1.1221-2(f)(1)(ii), the transaction is treated as if it were not identified as a hedging transaction for purposes of section 1256(e)(2).

(d) *Effective date.* This section applies to transactions entered into on or after January 18, 2001.

Robert E. Wenzel,

Deputy Commissioner of Internal Revenue.

[REG-105801-00]

RIN 1545-AX92

Capitalization of Interest and Carrying Charges Properly Allocable to Straddles

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking and notice of public hearing.

SUMMARY: This document contains proposed regulations that clarify the application of the straddle rules to a variety of financial instruments. The proposed regulations clarify what constitutes interest and carrying charges and when interest and carrying charges are properly allocable to personal property that is part of a straddle. The proposed regulations also clarify that a taxpayer's obligation under a debt instrument can be a position in personal property that is part of a straddle. The proposed regulations provide guidance

to taxpayers that enter into straddle transactions. This document provides notice of a public hearing on these proposed regulations.

DATES: Written and electronic comments and requests to appear and outlines of topics to be discussed at the public hearing scheduled for May 22, 2001, at 10 a.m., must be submitted by May 1, 2001.

ADDRESSES: Send submissions to: CC:M&SP:RU (REG-105801-00), room 5226, Internal Revenue Service, POB 7604, Ben Franklin Station, Washington, DC 20044. Submissions may be hand delivered between the hours of 8 a.m. and 5 p.m. to: CC:M&SP:RU (REG-105801-00), Courier's Desk, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC.

Alternatively, taxpayers may submit comments electronically via the Internet by submitting comments directly to the IRS Internet site at <http://www.irs.gov/taxregs/reglist.html>. The public hearing will be held in the Auditorium, Internal Revenue Building, 1111 Constitution Avenue, NW., Washington, DC.

FOR FURTHER INFORMATION CONTACT:

Concerning the proposed regulations, Kenneth Christman (202) 622-3950; concerning submission and delivery of comments and the public hearing, Treena Garrett, (202) 622-7180 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

Sections 501 and 502 of the Economic Recovery Tax Act of 1981 (Pub. L. 97-34, 95 Stat. 172) added sections 1092 and 263(g), respectively, to the Internal Revenue Code to address certain deferral and conversion strategies involving economically offsetting positions in actively traded personal property. These economically offsetting positions are called straddles. Section 1092(c)(1).

In general, under section 1092, a taxpayer that realizes a loss on a position in actively traded personal property must defer the recognition of the loss to the extent the taxpayer has unrecognized gain on an economically offsetting position in the property. This deferral rule matches the recognition of loss with the recognition of the economically offsetting income. Section 263(g) addresses interest and carrying charges properly allocable to personal property that is part of a straddle. Under this section, these otherwise deductible expenses are not currently deductible. Instead, they must be capitalized into the basis of the property. By requiring capitalization, section 263(g) prevents:

(1) A taxpayer from gaining a timing advantage by accruing deductions associated with carrying the straddle transaction before recognizing income from a position in personal property that is part of the straddle; and (2) the deductions from having a character different from that of the income.

These proposed regulations provide certain rules with respect to the application of section 263(g) and section 1092.

Explanation of Provisions

The proposed regulations consist of § 1.263(g)-1, which provides a general introduction, and §§ 1.263(g)-2, 1.263(g)-3, 1.263(g)-4, and 1.263(g)-5, described below. The proposed regulations also include a new paragraph 1.1092(d)-1(d).

The proposed regulations generally address four issues: (1) The definition of *personal property* as such term is used in section 263(g) (in § 1.263(g)-2); (2) the type of payments that are subject to the capitalization rules of section 263(g) (in § 1.263(g)-3); (3) the operation of the capitalization rules of section 263(g) (in § 1.263(g)-4); and (4) the circumstances under which an issuer's obligation under a debt instrument can be a position in actively traded personal property and, therefore, part of a straddle (in § 1.1092(d)-1(d)). These issues are discussed in more detail below.

Definition of the Term Personal Property for Purposes of Section 263(g)

Section 263(g)(1) requires capitalization of interest and carrying charges properly allocable to personal property that is part of a straddle (as defined in section 1092(c)). Section 1092(d)(1) defines personal property for purposes of section 1092, as personal property of a type that is actively traded. Commentators have suggested that because sections 263(g) and 1092 were enacted at the same time, the term *personal property* as used in section 263(g) should be given the same definition under section 1092(d)(1). This would limit the definition of personal property in section 263(g) to personal property of a type that is actively traded.

Despite this suggestion, the proposed regulations provide that personal property has its common law meaning in section 263(g) for two reasons. First, the definition in section 1092(d)(1) by its terms applies only for purposes of section 1092. Second, the broader, common law interpretation of personal property more closely accords with the purposes of section 263(g). Application of the limited definition in section

1092(d)(1) for purposes of section 263(g) could result in dissimilar tax treatment of economically similar transactions. For example, adoption of the narrower definition would cause section 263(g) to apply to a transaction in which a taxpayer borrows to purchase actively traded personal property that is a part of a straddle but not to a similar transaction in which the taxpayer borrows to purchase a derivative instrument that is not itself actively traded but is a position in actively traded property.

Consequently, proposed § 1.263(g)-2 defines personal property as a property right, whether or not actively traded, other than a right in real property. This definition includes both financial positions that provide substantial rights but do not impose substantial obligations on the holder (e.g., common stock or a purchased option) and executory contracts that impose both rights and obligations on the holder (e.g., notional principal contracts (NPC's) and forward transactions). However, the definition excludes straddles comprised only of financial positions that impose only obligations on the holder (e.g., the obligor's position in a debt instrument or a writer's position in an option).

Payments That Are Subject to the Capitalization Rules of Section 263(g)

Section 263(g)(1) provides for the capitalization of interest and carrying charges. For this purpose, *interest and carrying charges* are collectively defined in section 263(g)(2) as "interest incurred or continued to purchase or carry the personal property" and "all other amounts (including charges to insure, store, or transport) paid or incurred to carry the personal property," less certain types of income from the personal property.

The phrase "incurred or continued to purchase or carry" also appears in section 265(a)(2), which disallows interest expense on indebtedness incurred or continued to purchase or carry tax-exempt debt. Rev. Proc. 72-18 (1972-1 C.B. 740) sets out rules for determining when this standard is met for purposes of section 265(a)(2). Under that revenue procedure, indebtedness issued by a taxpayer that is not a dealer in tax-exempt obligations meets this standard if: (1) The proceeds of the indebtedness are directly traceable to the purchase of the tax-exempt obligations, (2) the tax-exempt obligations are used as collateral for the borrowing, or (3) the totality of the facts and circumstances supports a reasonable inference that the purpose of the borrowing was to purchase or carry

tax-exempt obligations. In general, the facts-and-circumstances test is met if there is a "sufficiently direct relationship" between the borrowing and the investment in the tax-exempt obligations. Similarly, the proposed regulations provide that a sufficiently direct relationship between indebtedness or other financing and personal property that is part of a straddle exists if payments on the indebtedness or other financing are determined by reference to the value or change in value of the personal property. See § 1.263(g)-3(c).

Section 263(g) also applies to "all other amounts (including charges to insure, store or transport the personal property)" paid or incurred to carry personal property that is part of a straddle. As noted by one commentator, "taxpayers should not be permitted to deduct items incurred in connection with protecting or preserving the value of assets" that are part of a straddle. Therefore, the term, *to carry* in the context of section 263(g) includes the reduction of the risk of holding an asset. Because straddles necessarily involve positions that offset each other, the positions "carry" each other.

Accordingly, under § 1.263(g)-3(b) of the proposed regulations, interest and carrying charges subject to capitalization under section 263(g) include: (1) Otherwise deductible payments or accruals (including interest and original issue discount) on indebtedness or other financing issued or continued to purchase or carry personal property that is part of a straddle; (2) otherwise deductible fees or expenses paid or incurred in connection with the taxpayer's acquiring or holding personal property that is part of a straddle, including, but not limited to, fees or expenses incurred to purchase, insure, store, maintain, or transport the personal property; and (3) other otherwise deductible payments or accruals on financial instruments that are part of a straddle or that carry part of a straddle.

Section 263(g) requires capitalization of interest and carrying charges that exceed certain specified income inclusions (allowable offsets) listed in section 263(g)(2)(B). Section 1.263(g)-3(e) sets forth the allowable offsets, including amounts that are receipts or accruals on financial instruments that are part of a straddle or carry part of a straddle. The Treasury Department and the IRS solicit comments regarding whether other amounts should be treated as allowable offsets for purposes of section 263(g).

Operation of the Capitalization Rules of Section 263(g)

Generally, section 263(g) coordinates the character and timing of items of income and loss attributable to a taxpayer's position in a straddle by allocating interest and carrying charges to the capital account of a position in personal property that is part of the straddle. Proposed regulation § 1.263(g)-4 provides a set of allocation rules governing the "capitalization" of interest and carrying charges.

In many cases, certain allocation rules readily suggest themselves.

Congress was aware of "cash and carry" transactions in adopting section 263(g). See H.R. Rep. No. 201, 97th Cong. 1st Sess. 203-04 (1981). In a typical transaction, a taxpayer borrows to purchase personal property and sells the property forward. The debt instrument generates ordinary deductions (interest expense) that precede predictable (and approximately equal) capital gains on the sale of the personal property. Coordination of the amount and timing of income and loss in a cash and carry transaction is achieved under the proposed regulation by allocating the interest expense to the capital account of the personal property. This rule applies to all transactions in which a taxpayer has borrowed to purchase personal property that is part of a straddle.

If the proceeds of a borrowing are not used to purchase personal property, a second allocation rule allocates interest expense to personal property when the personal property collateralizes the borrowing. See Rev. Proc. 72-18, § 3.03 (disallowing interest deduction for debt secured by tax-exempt obligations); Rev. Rul. 78-348 (1978-2 C.B. 95) (applying yield restrictions to investments pledged by person benefitting from tax-exempt bond financing).

A third allocation rule of the proposed regulations allocates interest on indebtedness to personal property when payments on the indebtedness are determined by reference to the value, or change in value, of the personal property that is part of a straddle.

Fees and charges related to the maintenance of the personal property, such as charges to insure, store, or transport the personal property, are allocated to the capital account of that personal property. See S. Rep. No. 144, 97th Cong. 1st Sess. 154 (1981).

In other cases, the appropriate method for allocating capitalized interest and carrying charges is less obvious. This may be true of payments or accruals on a financial instrument, such as a NPC, described in proposed § 1.263(g)-3(d).

For example, the proposed rules would apply to a taxpayer that holds stock and enters into an equity swap that is a short position with respect to the stock. In such a case, both the stock and the equity swap may be personal property that is part of a straddle, and payments on the equity swap could be capitalized with respect to the capital account of either the stock or the equity swap. However, it may not be clear how a capitalization rule would apply in conjunction with the rules under § 1.446-3 with respect to payments on NPCs. Accordingly, the proposed rules provide that, in cases to which a specific allocation rule is not applicable, interest and carrying charges will be allocated to personal property that is part of a straddle in the manner that is most appropriate under all the facts and circumstances. Proposed regulations § 1.263(g)-4(c) *Example 7* (relating to a straddle consisting of stock and an equity swap) illustrate one application of this facts and circumstances rule. The Treasury Department and the IRS invite comments and suggestions regarding both the proposed specific allocation rules and the general facts and circumstances allocation rule.

The regulations under section 263(g) are proposed to be effective for expenses paid, incurred, or accrued after the date the regulations are adopted as final for straddles established on or after January 17, 2001. See § 1.263(g)-5.

Obligation Under a Debt Instrument as a Position in Personal Property

If a taxpayer is the obligor under a debt instrument that provides for one or more payments linked to the value of actively traded personal property, the value of the taxpayer's obligation under the debt instrument changes as the value of the referenced property changes. For this reason, the taxpayer's position as obligor under the debt instrument functions as a position in the referenced property.

Some commentators have suggested that a debt instrument (other than one denominated in an actively traded foreign currency) cannot be a position of the obligor in personal property that is part of a straddle. Section 1092(d)(7) provides that an obligor's interest in a nonfunctional-currency-denominated debt instrument is treated under section 1092(d)(2) as a position in the nonfunctional currency. From this, the commentators infer that an obligor's interest in a debt instrument may never be treated as an interest in personal property other than a nonfunctional currency.

However, neither the legislative history nor the express language of

section 1092(d)(7) indicates that Congress intended to exclude interests in personal property from the definition of *position* in section 1092(d)(2). A rule that a debt instrument can be a position in currency does not establish that a debt instrument is a position only in currency. This interpretation of section 1092(d)(7) has already been rejected by the IRS and Treasury in § 1.1275-4(b)(9)(vi), which provides that increased interest expense on a contingent payment debt instrument issued by a taxpayer may be a straddle loss subject to section 1092 deferral.

To clarify the definition of *position* under section 1092(d)(2), § 1.1092(d)-1(d) of the proposed regulations explicitly provides that an obligation under a debt instrument may be a position in personal property that is part of a straddle. This provision is proposed to be effective for straddles established on or after January 17, 2001. However, no inference is intended with respect to straddles established prior to January 17, 2001. Thus, in appropriate cases, the IRS may take the position under section 1092(d)(2) that, even in the absence of a regulation, an obligation under a debt instrument was part of a straddle prior to the effective date of § 1.1092(d)-1(d) if the debt instrument functioned economically as an interest in actively traded personal property.

In 1995, the IRS published proposed regulation § 1.1092(d)-(2). See 60 F.R. 21482; FI-21-95, 1995-1 C.B. 935. The proposed regulations clarify the circumstances in which common stock may be personal property for the purposes of section 1092. Because proposed regulation §§ 1.1092(d)-2 and 1.1092(d)-1(d) address similar issues, the IRS proposes to finalize both regulations simultaneously. The Treasury Department and the IRS, therefore, invite additional comment on proposed § 1.1092(d)-(2).

In addition, in 1985, the Treasury Department and the IRS adopted Temporary Regulation § 1.1092(d)-5T(d), which defines the term *loss* for purposes of §§ 1.1092(b)-1T through 1.1092(b)-4T as a loss otherwise allowable under section 165(a). The Treasury Department and the IRS request comments on whether that definition should be expanded to include expenses such as interest and carrying charges or payments on notional principal contracts. If so, how should such a change be coordinated with the proposed regulations in this document?

Special Analyses

It has been determined that this notice of proposed rulemaking is not a

significant regulatory action as defined in Executive Order 12866. Therefore, a regulatory assessment is not required. It also has been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) does not apply to these regulations, and because the regulation does not impose a collection of information on small entities, the Regulatory Flexibility Act (5 U.S.C. chapter 6) does not apply. Pursuant to section 7805(f) of the Internal Revenue Code, this notice of proposed rulemaking will be submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any written or electronic comments (a signed original and eight (8) copies, if written) that are submitted timely (in the manner described in the **ADDRESSES** portion of this preamble) to the IRS. The IRS and Treasury request comments on the clarity of the proposed regulations and how they may be made easier to understand. All comments will be available for public inspection and copying.

A public hearing has been scheduled for May 22, 2001, at 10 a.m. in the Auditorium, Internal Revenue Building, 1111 Constitution Avenue NW., Washington DC. Due to building security procedures, visitors must enter at the 10th Street entrance located between Constitution and Pennsylvania Avenues, NW. In addition, all visitors must present photo identifications to enter the building. Because of access restrictions, visitors will not be admitted beyond the immediate entrance area more than 15 minutes before the hearing starts. For information about having your name placed on the building access list to attend the hearing, see the **FOR FURTHER INFORMATION CONTACT** section of this preamble.

The rules of 26 CFR 601.601(a)(3) apply to the hearing. Persons who wish to present oral comments at the hearing must submit an outline of the topics to be discussed and the time to be devoted to each topic (signed original and eight (8) copies) by May 1, 2001. A period of 10 minutes will be allotted to each person for making comments. An agenda showing the scheduling of the speakers will be prepared after the deadline for receiving outlines has passed. Copies of the agenda will be available free of charge at the hearing.

Drafting Information

The principal author of these regulations is Kenneth Christman, Office of Associate Chief Counsel (Financial Institutions and Products). However, other personnel from the IRS and Treasury Department participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 1 is proposed to be amended as follows:

PART 1—INCOME TAXES

Paragraph 1. The authority citation for part 1 is amended by adding entries in numerical order to read as follows:

Authority: 26 U.S.C. 7805 * * *

Section 1.263(g)-1 also issued under 26 U.S.C. 1092(b)(1).

Section 1.263(g)-2 also issued under 26 U.S.C. 1092(b)(1).

Section 1.263(g)-3 also issued under 26 U.S.C. 1092(b)(1).

Section 1.263(g)-4 also issued under 26 U.S.C. 1092(b)(1).

Section 1.263(g)-5 also issued under 26 U.S.C. 1092(b)(1). * * *

Section 1.1092(d)-1 also issued under 26 U.S.C. 1092(b)(1).

Par. 2. Sections 1.263(g)-1, 1.263(g)-2, 1.263(g)-3, 1.263(g)-4, and 1.263(g)-5 are added to read as follows:

§ 1.263(g)-1 Treatment of interest and carrying charges in the case of straddles; in general.

(a) Under section 263(g), no deduction is allowed for interest and carrying charges allocable to personal property that is part of a straddle (as defined in section 1092(c)). The purpose of section 263(g) is to coordinate the character and the timing of items of income and loss attributable to a taxpayer's positions that are part of a straddle. In order to prevent payments or accruals related to a straddle transaction from giving rise to recognition of deductions or losses before related income is recognized and to prevent the items of loss and income from having different character, no deduction is allowed for interest and carrying charges properly allocable to personal property that is part of a straddle. Rather, such amounts are chargeable to the capital account of the personal property to which the interest and carrying charges are properly allocable.

(b) Section 263(g) does not apply if none of the taxpayer's positions that are

part of the straddle are personal property. Section 263(g) also does not apply to hedging transactions as defined in section 1256(e) (see section 263(g)(3)) or to securities to which the mark-to-market accounting method provided by section 475 applies (see section 475(d)(1)).

(c) Section 1.263(g)-2 provides a definition of personal property for purposes of section 263(g) and §§ 1.263(g)-1 through 1.263(g)-5. Section 1.263(g)-3 provides a definition of interest and carrying charges for purposes of section 263(g), section 1092, §§ 1.263(g)-1 through 1.263(g)-5, and § 1.1092(b)-4T. Section 1.263(g)-4 provides a set of allocation rules governing the capitalization of amounts to which section 263(g) applies.

§ 1.263(g)-2 Personal property to which interest and carrying charges may properly be allocable.

(a) *Definition of personal property.* For purposes of section 263(g) and of §§ 1.263(g)-1 through 1.263(g)-5, *personal property* means property, whether or not actively traded, that is not real property. For purposes of the preceding sentence, a position in personal property may itself be property. In general, however, a position in personal property is not property of a taxpayer unless the position confers or may confer substantial rights on the taxpayer.

(1) *Application to certain financial instruments.* Personal property includes a stockholder's ownership of common stock, a holder's ownership of a debt instrument, and either party's position in a forward contract or in a conventional swap agreement. Personal property does not include a position that imposes obligations but does not confer substantial rights on the taxpayer. Therefore, the obligor's position in a debt instrument generally is not personal property, even though the obligor may have typical rights of a debtor, such as the right to prepay the debt. However, the obligor on a debt instrument has a position in any personal property underlying the debt instrument. See § 1.1092(d)-1(d).

(2) *Options.* For the purposes of applying this section, a put option or call option imposes obligations but does not confer substantial rights on the grantor, whether or not the option is cash-settled.

(b) *Example.* The following example illustrates the rules stated in paragraph (a) of this section:

Example. (i) *Facts.* A purchases 100 ounces of gold at a cost of \$x. A transfers the 100 ounces of gold to a trust that issues multiple classes of trust certificates and is treated as

a partnership for tax purposes. In return, A receives two trust certificates that are not personal property of a type that is actively traded within the meaning of section 1092(d)(1). One certificate entitles A to a payment on termination of the trust at the end of four years equal to the value of the 100 ounces of gold up to a maximum value of \$(x + y). The other certificate entitles A to a payment equal to the amount by which the value of 100 ounces of gold exceeds \$(x + y) on termination of the trust. A sells the second certificate and keeps the first certificate.

(ii) *Analysis.* The trust certificate retained by A is property that is not real property. In addition, ownership of the trust certificate confers certain substantial rights on A. Therefore, although the trust certificate is not personal property of a type that is actively traded, A's interest in the trust certificate is personal property for purposes of section 263(g).

§ 1.263(g)-3 Interest and carrying charges properly allocable to personal property that is part of a straddle.

(a) *In general.* For purposes of section 263(g), section 1092, §§ 1.263(g)-1 through 1.263(g)-5, and § 1.1092(b)-4T, *interest and carrying charges properly allocable to personal property that is part of a straddle* means the excess of interest and carrying charges (as defined in paragraph (b) of this section) over the allowable income offsets (as defined in paragraph (e) of this section).

(b) *Interest and carrying charges.* Interest and carrying charges are otherwise deductible amounts paid or accrued with respect to indebtedness or other financing incurred or continued to purchase or carry personal property that is part of a straddle and otherwise deductible amounts paid or incurred to carry personal property that is part of a straddle. As provided in section 263(g)(2), interest includes any amount paid or incurred in connection with personal property used in a short sale. Interest and carrying charges include—

(1) Otherwise deductible payments or accruals (including interest and original issue discount) on indebtedness or other financing issued or continued to purchase or carry personal property that is part of a straddle;

(2) Otherwise deductible fees or expenses paid or incurred in connection with acquiring or holding personal property that is part of a straddle including, but not limited to, fees or expenses incurred to purchase, insure, store, maintain or transport the personal property; and

(3) Other otherwise deductible payments or accruals on financial instruments that are part of a straddle or that carry part of a straddle.

(c) *Indebtedness or other financing incurred or continued to purchase or carry personal property that is part of a*

straddle. For purposes of paragraph (b)(1) of this section, indebtedness or other financing that is incurred or continued to purchase or carry personal property that is part of a straddle includes—

(1) Indebtedness or other financing the proceeds of which are used directly or indirectly to purchase or carry personal property that is part of the straddle;

(2) Indebtedness or other financing that is secured directly or indirectly by personal property that is part of the straddle; and

(3) Indebtedness or other financing the payments on which are determined by reference to payments with respect to the personal property or the value of, or change in value of, the personal property.

(d) *Financial instruments that are part of a straddle or that carry part of a straddle*. For purposes of paragraph (b)(3), financial instruments that are part of a straddle or that carry part of a straddle include—

(1) A financial instrument that is part of the straddle;

(2) A financial instrument that is issued in connection with the creation or acquisition of a position in personal property if that position is part of the straddle;

(3) A financial instrument that is sold or marketed as part of an arrangement that involves a taxpayer's position in personal property that is part of the straddle and that is purported to result in either economic realization of all or part of the appreciation in an asset without simultaneous recognition of taxable income or a current tax deduction (for interest, carrying charges, payments on a notional principal contract, or otherwise) reflecting a payment or expense that is economically offset by an increase in value that is not concurrently recognized for tax purposes or has a different tax character (for example, an interest payment that is economically offset by an increase in value that may result in a capital gain in a later tax period); and

(4) Any other financial instrument if the totality of the facts and circumstances support a reasonable inference that the issuance, purchase, or continuation of the financial instrument by the taxpayer was intended to purchase or carry personal property that is part of the straddle.

(e) *Allowable income offsets*. The allowable income offsets are:

(1) The amount of interest (including original issue discount) includible in gross income for the taxable year with respect to such personal property;

(2) Any amount treated as ordinary income under section 1271(a)(3)(A), 1278, or 1281(a) with respect to such personal property for the taxable year;

(3) The excess of any dividends includible in gross income with respect to such property for the taxable year over the amount of any deductions allowable with respect to such dividends under section 243, 244, or 245;

(4) Any amount that is a payment with respect to a security loan (within the meaning of section 512(a)(5)) includible in income with respect to the personal property for the taxable year; and

(5) Any amount that is a receipt or accrual includible in income for the taxable year with respect to a financial instrument described in § 1.263(g)-3(d) to the extent the financial instrument is entered into to purchase or carry the personal property.

§ 1.263(g)-4 Rules for allocating amounts to personal property that is part of a straddle.

(a) *Allocation rules*. (1) Interest and carrying charges paid or accrued on indebtedness or other financing issued or continued to purchase or carry personal property that is part of a straddle are allocated, in the order listed—

(i) To personal property that is part of the straddle purchased, directly or indirectly, with the proceeds of the indebtedness or other financing;

(ii) To personal property that is part of the straddle and directly or indirectly secures the indebtedness or other financing; or

(iii) If all or a portion of such interest and carrying charges are determined by reference to the value or change in value of personal property, to such personal property.

(2) Fees and expenses described in § 1.263(g)-3(b)(2) are allocated to the personal property, the acquisition or holding of which resulted in the fees and expenses being paid or incurred.

(3) In all other cases, interest and carrying charges are allocated to personal property that is part of a straddle in the manner that under all the facts and circumstances is most appropriate.

(b) *Coordination with other provisions*. In the case of a short sale, section 263(g) applies after section 263(h). See sections 263(g)(4)(A) and (h)(6). In case of an obligation to which section 1277 (dealing with deferral of interest deduction allocable to accrued market discount) or 1282 (dealing with deferral of interest deduction allocable to certain accruals on short-term

indebtedness) applies, section 263(g) applies after section 1277 and section 1282. See section 263(g)(4)(B). Capitalization under section 263(g) applies before loss deferral under section 1092.

(c) *Examples*. The following examples illustrate the rules stated in §§ 1.263(g)-2, 1.263(g)-3, and 1.263(g)-4.

Example 1. Cash and Carry Silver.

(i) *Facts*. On January 1, 2002, A borrows \$x at 6% interest and uses the proceeds to purchase y ounces of silver from B. At approximately the same time, A enters into a forward contract with C to deliver y ounces of silver to C in one year.

(ii) *Analysis*. The y ounces of silver and the forward contract to deliver y ounces of silver in one year are offsetting positions with respect to the same personal property and therefore constitute a straddle. See sections 1092(c)(1), (c)(3)(A)(i). The proceeds of the debt instrument were used to purchase personal property that is part of the straddle. Consequently, A's interest payments are interest and carrying charges properly allocable to personal property that is part of a straddle. See § 1.263(g)-3(b)(1) & (c)(1). Under § 1.263(g)-4(a)(1)(i), the interest payments must be charged to the capital account for the y ounces of silver purchased by A with the proceeds of the borrowing.

Example 2. Additional indebtedness issued to carry personal property.

(i) *Facts*. The facts are the same as for Example 1 except that during the year 2002, the market price of silver increases and A is required to post variation margin as security for its obligation to deliver y ounces of silver to C. A incurs additional indebtedness to obtain funds necessary to meet A's variation margin requirement.

(ii) *Analysis*. The additional indebtedness is incurred to continue to carry A's holding of z ounces of silver. Consequently, A's interest payments on the additional indebtedness are interest and carrying charges properly allocable to personal property that is part of a straddle and must be charged to the capital account for the y ounces of silver.

Example 3. Contingent payment debt instrument.

(i) *Facts*. On January 1, 2002, D enters into a contract to deliver x barrels of fuel oil to E on July 1, 2004, at an aggregate price equal to \$y. Soon afterward, D issues a contingent payment debt instrument to F with a principal amount of \$z and a 2-year term that pays interest quarterly at a rate determined at the beginning of each quarter equal to the greater of zero and the London Interbank Offered Rate (LIBOR) adjusted by an index that varies inversely with changes in the price of fuel oil (so that the interest rate increases as the price of fuel oil decreases and vice versa). The change in the aggregate amount of interest paid on the \$z of debt due to the functioning of the index approximates the concurrent aggregate change in value of x barrels of fuel oil and, thus, the value of D's interest in the forward contract.

(ii) *Analysis*. The debt instrument and the forward contract are offsetting positions with respect to the same personal property and

constitute a straddle. See section 1092(c)(1), (c)(3)(A)(i). When issued, the debt instrument is a position in personal property that is part of a straddle. See § 1.1092(d)–1(d). Consequently, *D*'s interest payments are interest and carrying charges properly allocable to personal property that is part of a straddle and must be allocated to the capital account for the forward contract for the delivery of *x* barrels of fuel oil to *E*. See §§ 1.263(g)–3(b)(1), (b)(3), (c)(3), and (d)(1) and –4(a)(1)(iii).

Example 4. Financial instrument issued to carry personal property that is part of a straddle. (i) *Facts.* The facts are the same as for Example 3 except that *D* also enters into a two-year interest rate swap under which *D* receives LIBOR times a notional principal amount equal to \$*z* and pays 7% times \$*z*.

(ii) *Analysis.* Because of the relationship between the two-year debt instrument issued by *D* and the interest rate swap, the interest rate swap is a financial instrument that carries personal property that is part of a straddle. See § 1.263(g)–3(d)(4). Net payments made by *D* under the interest rate swap are chargeable to the capital account for the forward contract for the delivery of *x* barrels of fuel oil to *E*. Similarly, net payments received by *D* under the interest rate swap are allowable offsets. See § 1.263(g)–3(e)(5).

Example 5. Contingent payment debt instrument with embedded short position.

(i) *Facts.* On January 1, 1998, *G* purchases 100,000 shares of the common stock of XYZ corporation (which is publicly traded). On January 1, 2002, the 100,000 shares of XYZ corporation common stock were worth \$*x* per share. On that date, *G* issued a contingent payment debt instrument for \$100,000*x*. The terms of the debt instrument provided that the holder would receive an annual payment of \$2,000*x* on December 31 of each year up to and including the maturity date of December 31, 2007. On the maturity date, the holders would also receive a payment of \$100,000*x* plus an additional amount, if the price of an XYZ share exceeded \$1.2*x* on such date, equal to 100,000 times three-quarters of the amount of such excess per share. Thus, *G*'s aggregate payments on the debt instrument varied directly with the increase in value in the XYZ shares.

(ii) *Analysis.* The debt instrument is a position in XYZ stock. See § 1.1092(d)–1(d). The XYZ stock is personal property within the meaning of section 1092(d)(3)(B) because the debt instrument is a position with respect to substantially similar or related property (other than stock) within the meaning of section 1092(d)(3)(B)(i)(II). See § 1.1092(d)–2(c). The debt instrument and the XYZ shares are offsetting positions with respect to the same personal property and constitute a straddle. See sections 1092(c)(1), (c)(3)(A)(i). Consequently, *G*'s interest payments are interest and carrying charges properly allocable to personal property that is part of a straddle, see §§ 1.263(g)–3(b)(1), (b)(3), (c)(3), and (d)(1), and must be allocated to the capital account for the XYZ common stock, see § 1.263(g)–4(a)(1)(iii) and (a)(3).

Example 6. Straddle including partnership interest.

(i) *Facts.* *H* borrows money from *I* to purchase 100 ounces of gold at a cost of \$*u*.

H transfers the 100 ounces of gold and \$*v* to a newly created trust that issues multiple classes of trust certificates and is treated as a partnership for tax purposes. In return, *H* receives two trust certificates. One certificate entitles the holder to a payment on termination of the trust at the end of four years equal to the value of the 100 ounces of gold up to a maximum value of \$(*u* + *w*). The other certificate entitles the holder to a payment equal to the amount by which the value of 100 ounces of gold exceeds \$(*u* + *w*) on termination of the trust. *H* sells the second certificate and keeps the first certificate. *H* also enters into a forward contract to sell 100 ounces of gold for \$1.12*u* per ounce on a date two years after creation of the trust. The trust uses part of the \$*v* and similar cash contributions from other investors to pay costs of storing the gold held by the trust and allocates *H*'s share of the expenses to *H*.

(ii) *Analysis.* The trust certificate retained by *H* and the forward contract entered into by *H* are personal property for the purposes of section 263(g). See § 1.263(g)–2(a). They are also offsetting positions and constitute a straddle. Section 1092(c)(1). The borrowing from *I* is an indebtedness incurred to purchase personal property that is part of a straddle. See §§ 1.263(g)–3(b)(1) and (c)(1). Similarly, the gold storage expenses are expenses incurred due to the taxpayer's holding personal property that is part of a straddle. See § 1.263(g)–3(b)(2). Therefore both the interest on the borrowing and the gold storage expenses must be allocated to the capital account for the partnership interest represented by the retained trust certificate. See § 1.263(g)–4(a)(1)(i) and (a)(2).

Example 7. Equity Swap.

(i) *Facts.* On January 1, 1998, *J* purchases 100,000 shares of the common stock of XYZ corporation (which is publicly traded). On December 31, 2001, the 100,000 shares of XYZ corporation common stock were worth \$*x* per share. On that date, *J* entered into a NPC with *K*. The terms of the NPC provided that *K* would receive an annual payment on December 31 of each year equal to 100,000 times any appreciation in the value of a share of XYZ corporation stock above its price at the end of trading on December 31 of the preceding year and 100,000 times the dividends paid during the year on each share of XYZ corporation stock. In return, on December 31 of each year, *J* would receive an amount equal to LIBOR times the value of 100,000 XYZ shares at the end of trading on December 31 of the preceding year plus 100,000 times the amount of any decrease in the value of a share of XYZ corporation stock below its price at the end of trading on December 31 of the preceding year. Payments between *J* and *K* would be netted and continue up to and including the maturity date of the NPC on December 31, 2008. Thus, *J*'s aggregate payments on the NPC varied directly with the increase in value in the XYZ shares.

(ii) *Analysis.* The NPC is a position in XYZ stock. See § 1.1092(d)–2(c). The XYZ stock is personal property within the meaning of section 1092(d)(3)(B) because the NPC is a position with respect to substantially similar or related property (other than stock) within the meaning of section 1092(b)(3)(B)(i)(II).

See § 1.1092(d)–2(a)(1)(ii). The NPC and the XYZ shares are offsetting positions with respect to the same personal property and constitute a straddle. See sections 1092(c)(1), (c)(3)(A)(i). Consequently, *J*'s payments are interest and carrying charges properly allocable to personal property that is part of a straddle. See §§ 1.263(g)–3(b)(3) and (d)(1). Therefore, they should be allocated to the personal property that is part of the straddle in the manner that is most appropriate under all the facts and circumstances. In this case, because these payments are incurred to carry the XYZ shares, they should be allocated to the capital account for the XYZ common stock. See § 1.263(g)–4(a)(3).

§ 1.263(g)–5 Effective dates.

Sections 1.263(g)–1, 1.263(g)–2, 1.263(g)–3, and 1.263(g)–4 apply to interest and carrying charges properly allocable to personal property that are paid, incurred, or accrued after the date these regulations are adopted as final regulations by publication in the **Federal Register** for a straddle established on or after January 17, 2001.

Par. 3. Section 1.1092(d)–1 is amended by revising paragraph (d) and adding paragraph (e), to read as follows:

§ 1.1092(d)–1 Definitions and special rules.

* * * * *

(d) *Debt instrument linked to the value of personal property.* If a taxpayer is the obligor under a debt instrument one or more payments on which are linked to the value of personal property or a position with respect to personal property, then the taxpayer's obligation under the debt instrument is a position with respect to personal property and may be part of a straddle.

(e) *Effective dates.* Paragraph (b)(1)(vii) of this section applies to positions entered into on or after October 14, 1993. Paragraph (c) of this section applies to positions entered into on or after July 8, 1991. Paragraph (d) of this section is effective for straddles established on or after January 17, 2001.

RIN 1545–AX66

Equity Options With Flexible Terms; Qualified Covered Call Treatment

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking and notice of public hearing.

SUMMARY: This document contains proposed regulations providing guidance on the application of the rules governing qualified covered calls. The new rules address concerns that were created by the introduction of new financial instruments several years after the enactment of the qualified covered call rules. The proposed regulations would provide guidance to taxpayers writing equity call options. This document also provides notice of public hearing on these proposed regulations.

DATES: Written and electronic comments and requests to appear and outlines of topics to be discussed at the public hearing scheduled for May 9, 2001, at 10 a.m., must be submitted by April 18, 2001.

ADDRESSES: Send submissions to: CC:M&SP:RU (REG-115560-99), room 5226, Internal Revenue Service, POB 7604, Ben Franklin Station, Washington, DC 20044. Submissions may be hand delivered between the hours of 8 a.m. and 5 p.m. to: CC:M&SP:RU (REG-115560-99), Courier's Desk, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC. Alternatively, taxpayers may submit comments electronically via the Internet by selecting the "Tax Regs" option of the IRS Home Page, or by submitting comments directly to the IRS Internet site at http://www.irs.gov/tax_regs/reglist.html. The public hearing will be held in the IRS Auditorium, Internal Revenue Building, 1111 Constitution Avenue, NW., Washington, DC.

FOR FURTHER INFORMATION CONTACT: Concerning the regulations, Pamela Lew, (202) 622-3950; concerning submissions and the hearing, Guy Traynor, (202) 622-7180, (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

On June 25, 1998, the IRS published in the **Federal Register** proposed regulations (REG-104641-97, 63 FR 34616) addressing whether strike prices available for equity options with flexible terms affect the definition of a qualified covered call (QCC) under section 1092(c)(4) for equity options with standardized terms. No requests to speak at a public hearing were received, and no public hearing was held.

The proposed regulations provided that strike prices available for equity options with flexible terms do not affect the bench marks used to determine whether equity options with standardized terms are eligible for QCC

treatment. That provision was adopted as § 1.1092(c)-1 of the final regulations (TD 8866), published in the **Federal Register** for January 25, 2000 (65 FR 3812).

The regulatory text of REG-104641-97 did not address whether an equity option with flexible terms is itself eligible for QCC treatment. The preamble to the proposed regulations, however, did request comments about whether equity options with flexible terms should be eligible for QCC treatment and, if eligible, what bench marks should apply. In light of the comments received, consideration was also given to the treatment of over-the-counter options and standardized options with terms of more than one year. After consideration of the written comments, this NPRM proposes regulations addressing the eligibility for QCC treatment of equity options with flexible terms, over-the-counter options and standardized options with terms longer than one year.

QCC Treatment

Section 1092(c) defines a straddle as offsetting positions with respect to personal property. Under section 1092(d)(3)(B)(i)(I), stock is personal property if the stock is part of a straddle that involves an option on that stock or substantially identical stock or securities. Under section 1092(c)(4), however, writing a QCC option and owning the optioned stock is not treated as a straddle under section 1092 if certain conditions are satisfied.

The legislative history of section 1092 indicates that QCCs were excepted from the loss deferral rule for straddles because "they are undertaken primarily to enhance the taxpayer's investment return on the stock and not to reduce the taxpayer's risk of loss on the stock." H.R. Rep. No. 432, 98th Cong., 2d Sess. at 1266-68 (1983). To qualify as a QCC, a covered call must, among other things, be exchange traded and not be deep in the money. An option is exchange traded if the option is traded on a national securities exchange that is registered with the Securities and Exchange Commission or on some other market that the Secretary determines has rules adequate to carry out the purposes of the QCC provisions. An option is deep in the money if the strike price of the option is lower than the lowest qualified bench mark for the stock at the time the option is written.

Section 1092(c)(4)(H) grants the Secretary of the Treasury the authority to prescribe regulations to carry out the purposes of the QCC exception, including regulations modifying the provisions of the exception as

appropriate to take account of changes in the practices of options exchanges.

The introduction of exchange-traded equity options with flexible terms is one such change. Unlike equity options with standardized terms, equity options with flexible terms can have strike prices at other than fixed intervals and have other than standardized expiration dates. Options exchanges have also introduced standardized options with longer terms.

In response to the request for comments, two comments were received. One commentator argued that equity options with flexible terms should not be eligible for QCC treatment. This commentator noted that in 1984, when section 1092(c)(4) was enacted, only equity options with standardized terms were traded on the national exchanges and that it is likely that Congress did not intend to include customizable options within the definition of a QCC. This commentator also pointed out that equity options with flexible terms were developed to compete with over-the-counter (OTC) options, which are not eligible for QCC treatment. The commentator suggested that excluding equity options with flexible terms from QCC treatment would avoid a competitive imbalance from different tax treatment for competing products.

The second commentator stated that, as a matter of statutory analysis, equity options with flexible terms are already eligible for QCC treatment. This commentator argued that QCC treatment is appropriate if the taxpayer is using the option to increase the yield on its stock investment and not to reduce the risk of loss on its stock. In support of this point, the commentator noted that nothing in the applicable legislative history suggests that Congress intended to limit the QCC option exception to standardized options. Alternatively, this commentator argued that because equity options with flexible terms were designed to compete with OTC options, regulations should be promulgated allowing OTC options to qualify for QCC treatment on the same terms as exchange-traded equity options with flexible terms.

Explanation of Provisions

Equity Options With Flexible Terms and Qualifying OTC Options

After consideration of the comments received, the proposed regulations provide that equity options with flexible terms may be QCC options as long as they satisfy the general rules for QCC treatment described in section 1092(c)(4), are not for a term of longer

than one year, and meet other specified requirements. In addition, an equity option with standardized terms must be outstanding for the underlying equity. For purposes of applying the general rules, the bench marks will be the same as those for an equity option with standardized terms on the same stock having the same applicable stock price.

The proposed regulations also provide that certain OTC options may be QCC options so that OTC options that are economically similar to equity options with flexible terms may enjoy the same tax benefits as equity options with flexible terms. Specifically, the proposed regulations provide that an OTC option is eligible for QCC treatment if it is entered into with a person registered with the Securities and Exchange Commission as a broker-dealer or alternative trading system and meets the same requirements for QCC treatment that apply to equity options with flexible terms.

QCC Status for Equity Options With Standardized Terms

In the process of considering the proper treatment for equity options with flexible terms, the IRS examined QCC status in general. At the time that Congress enacted section 1092(c)(4), options available on the national securities exchanges had a term of nine months or less. Congress did not include in the legislative history any guidance on the effect of the time value of money upon the strike price.

Subsequent to the enactment of section 1092(c)(4), the national securities exchanges began offering certain standardized options with expiration dates that are 12 or more months after the date entered into. The longer term of these options may reduce the taxpayer's risk of loss on its stock position because of the time period involved.

Increased risk reduction through the use of long term options applies equally to equity options with flexible terms, OTC options, and equity options with standardized terms. The proposed regulations therefore provide that a one-year term limit also applies to equity options with standardized terms. Comments are requested on this issue, including a discussion of time limitations in general, as well as the appropriateness of a one-year cutoff.

If QCC treatment should apply to longer-term options, it may be appropriate to change the deep-in-the-money standard to prevent the increase in risk reduction. A comment recommending a time limitation greater than one year or recommending that there be no time limitation should also

provide detailed, comprehensive descriptions of possible solutions to the problem of increased risk reduction. Comments should also address the administrability of any proposed solutions.

Proposed Effective Date

These regulations would apply to options entered into on or after 30 days after the date that the Treasury decision adopting these rules as final regulations is published in the **Federal Register**.

Regulations concerning time limitations for equity options with standardized terms would be prospective in nature and would apply to transactions entered into on or after 90 days from the date of publication of the final regulation promulgating such rules.

Special Analyses

It has been determined that this notice of proposed rulemaking is not a significant regulatory action as defined in Executive Order 12866. Therefore, a regulatory assessment is not required. It is hereby certified that these regulations will not have a significant economic impact on a substantial number of small entities. This certification is based upon the fact that these regulations do not impose any recordkeeping or reporting requirements and therefore impose minimal compliance costs, if any, upon any small entities that may be affected. Because equity options with standardized terms will not be eligible for QCC treatment if such options have a duration of more than 1 year, some taxpayers may lose substantive tax benefits. This certification is further based upon the understanding that such taxpayers will not include a substantial number of small entities. Comments are specifically requested on the question of whether a substantial number of small entities (as opposed to large entities or individual investors) will suffer a significant economic impact under these regulations. Therefore, a Regulatory Flexibility Analysis under the Regulatory Flexibility Act (5 U.S.C. chapter 6) is not required. Pursuant to section 7805(f) of the Internal Revenue Code, this notice of proposed rulemaking will be submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any written or electronic comments (a signed original and eight (8) copies, if written) that are submitted timely (in

the manner described in the **ADDRESSES** portion of this preamble) to the IRS. The IRS and Treasury request comments on the clarity of the proposed regulations and how they may be made easier to understand. All comments will be available for public inspection and copying.

A public hearing has been scheduled for May 9, 2001, at 10 a.m., in the IRS Auditorium, Internal Revenue Building, 1111 Constitution Avenue NW., Washington DC. Due to building security procedures, visitors must enter at the 10th Street entrance located between Constitution and Pennsylvania Avenues, NW. In addition, all visitors must present photo identifications to enter the building. Because of access restrictions, visitors will not be admitted beyond the immediate entrance area more than 15 minutes before the hearing starts. For information about having your name placed on the building access list to attend the hearing, see the **FOR FURTHER INFORMATION CONTACT** section of this preamble.

The rules of 26 CFR 601.601(a)(3) apply to the hearing. Persons who wish to present oral comments at the hearing must submit written comments and an outline of the topics to be discussed and the time to be devoted to each topic (signed original and eight (8) copies) by April 18, 2001. A period of 10 minutes will be allotted to each person for making comments. An agenda showing the scheduling of the speakers will be prepared after the deadline for receiving outlines has passed. Copies of the agenda will be available free of charge at the hearing.

Drafting Information

The principal author of these regulations is Pamela Lew, Office of Associate Chief Counsel (Financial Institutions and Products). However, other personnel from the IRS and Treasury Department participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 1 is proposed to be amended as follows:

PART 1—INCOME TAXES

Paragraph 1. The authority citation for part 1 is amended by adding entries in numerical order to read as follows:

Authority: 26 U.S.C. 7805 * * *

Section 1.1092(c)-2 also issued under 26 U.S.C.1092(c)(4)(H).

Section 1.1092(c)-3 also issued under 26 U.S.C. 1092(c)(4)(H). * * *

Par. 2. Section 1.1092(c)-1 is amended as follows:

1. Paragraphs (b) and (d)(1)(ii) introductory text are revised.

2. Paragraphs (c) and (d)(3) are added.

3. Paragraph (e) is revised.

The revisions and addition read as follows:

§ 1.1092(c)-1 Equity options with flexible terms.

* * * * *

(b) *No effect on lowest qualified bench mark for standardized options.* The availability of strike prices for equity options with flexible terms does not affect the determination of the lowest qualified bench mark, as defined in section 1092(c)(4)(D), for an equity option with standardized terms.

(c) *Qualified covered call option status*—(1) *Requirements.* An equity option with flexible terms is a qualified covered call option only if—

(i) The option meets the requirements of section 1092(c)(4)(B) (taking into account paragraph (c)(2) of this section);

(ii) The only payments permitted with respect to the option are a single fixed premium paid not later than 5 business days after the day on which the option is granted, and a single fixed strike price stated as a dollar amount that is payable entirely at (or within 5 business days of) exercise;

(iii) The option is granted not more than 1 year before the day on which the option expires; and

(iv) An equity option with standardized terms is outstanding for the underlying equity.

(2) *Lowest qualified bench mark*—(i) *In general.* For purposes of determining whether an equity option with flexible terms is deep in the money within the meaning of section 1092(c)(4)(C), the lowest qualified bench mark under section 1092(c)(4)(D) is the same for an equity option with flexible terms as the lowest qualified bench mark for an equity option with standardized terms on the same stock having the same applicable stock price.

(ii) *Example.* The following example illustrates the rules set out in paragraph (c)(2)(i) of this section:

Example. Taxpayer owns stock in Corporation X. Taxpayer writes an equity call option with flexible terms on Corporation X stock through a national securities exchange. The applicable stock price for Corporation X stock is \$73.75. Using the bench marks for an equity option with standardized terms with an applicable stock price of \$73.75, the highest available bench mark less than the

applicable stock price is \$70, and the second highest bench mark is \$65. Therefore, an equity call option with flexible terms on Corporation X with a term of 90 days or less will not be deep in the money if the strike price is not less than \$70. If the term is greater than 90 days, an equity call option with flexible terms on Corporation X will not be deep in the money if the strike price is not less than \$65.

(d) * * *

(1) * * *

(ii) That is traded on any national securities exchange which is registered with the Securities and Exchange Commission (other than those described in the SEC Releases set forth in paragraph (d)(1)(i) of this section) and is—

* * * * *

(3) *Equity option with standardized terms* means an equity option that is traded on a national securities exchange registered with the Securities and Exchange Commission and that is not an equity option with flexible terms.

(e) *Effective date*—(1) *In general.* Except as provided in paragraph (e)(2) of this section, this section applies to equity options with flexible terms entered into on or after January 25, 2000.

(2) *Special effective date for paragraph (c).* Paragraph (c) of this section applies to equity options with flexible terms entered into on or after 30 days after the date that the Treasury decision adopting these regulations is published in the **Federal Register**.

Par. 3. Section 1.1092(c)-2 is added to read as follows:

§ 1.1092(c)-2 Equity options with standardized terms.

(a) *One-year limitation.* An equity option with standardized terms (as defined in § 1.1092(c)-1(d)(3)) is a qualified covered call only if—

(1) The option meets the requirements of section 1092(c)(4)(B); and

(2) The option is granted not more than 1 year before the day on which the option expires.

(b) *Effective date.* This section applies to equity options with standardized terms entered into on or after 90 days after the date that the Treasury decision adopting these regulations is published in the **Federal Register**.

Par. 4. Section 1.1092(c)-3 is added.

§ 1.1092(c)-3 Qualifying over-the-counter options.

(a) *In general.* Under section 1092(c)(4)(B)(i), an equity option is not a qualified covered call option unless it is traded on a national securities exchange which is registered with the Securities and Exchange Commission or other market which the Secretary

determines has rules adequate to carry out the purposes of section 1092(c)(4). In accordance with section 1092(c)(4)(H), this requirement is modified as provided in paragraph (b) of this section.

(b) *Qualified covered call option status.* A qualifying over-the-counter option is a qualified covered call option if it meets the requirements of § 1.1092(c)-1(c) after substituting “qualifying over-the-counter option” for “equity option with flexible terms”. For the purposes of this paragraph (b), a qualifying over the counter option is deemed to satisfy the requirements of section 1092(c)(4)(B)(i).

(c) *Qualifying over-the-counter option.* For the purposes of this section, *qualifying over-the-counter option* means an equity option that—

(1) Is not traded on a national securities exchange registered with the Securities and Exchange Commission; and

(2) Is entered into with a person registered with the Securities and Exchange Commission as—

(i) A broker-dealer under section 15 of the Securities Act of 1934 and the regulations thereunder; or

(ii) An alternative trading system under 17 CFR 242.300 *et seq.*

(d) *Effective date.* This section applies to qualifying over-the-counter options entered into on or after 30 days after the date that the Treasury decision adopting these regulations is published in the **Federal Register**.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[REG-114998-99]

RIN 1545-AY71

Obligations of States and Political Subdivisions

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Partial withdrawal of notice of proposed rulemaking; notice of proposed rulemaking by cross-reference to temporary regulations; and notice of public hearing.

SUMMARY: This document withdraws portions of the notice of proposed rulemaking published in the **Federal Register** on January 22, 1998. In the

Rules and Regulations section of this issue of the **Federal Register**, the IRS is issuing temporary regulations that provide guidance to state and local governments that issue bonds for output facilities. The text of those temporary regulations also serves as the text of these proposed regulations. This document provides a notice of public hearing on these proposed regulations.

DATES: Written comments must be received by July 18, 2001. Outlines of topics to be discussed at the public hearing scheduled for July 24, 2001, at 10 a.m. must be received by July 3, 2001.

ADDRESSES: Send submissions to: CC:M&SP:RU (REG-114998-99), room 5226, Internal Revenue Service, POB 7604, Ben Franklin Station, Washington, DC 20044. Submissions may be hand delivered between the hours of 8 a.m. and 5 p.m. to: CC:M&SP:RU (REG-114998-99), courier's desk, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC. Alternatively, taxpayers may submit comments electronically via the Internet by selecting the "Tax Regs" option on the IRS Home Page, or by submitting comments directly to the IRS Internet site at http://www.irs.gov/tax_regs/reglist.html. The public hearing will be held in the Auditorium, Internal Revenue Building, 1111 Constitution Avenue NW., Washington, DC.

FOR FURTHER INFORMATION CONTACT: Concerning the regulations, Rose M. Weber, (202) 622-3980; concerning submissions and the hearing, Treena Garrett, (202) 622-7190 (not toll-free numbers).

SUPPLEMENTARY INFORMATION:

Background

Proposed regulations (REG-110965-97) §§ 1.141-7, 1.141-8 and 1.141-15(f) through (i), published on January 22, 1998 (63 FR 3296), addressed the application of the private activity bond tests of section 141(b) (1) and (2) to output contracts for output facilities and the application of the \$15 million limitation under section 141(b)(4) to output facility financings. These proposed sections are withdrawn.

Sections 1.141-7T, 1.141-8T and 1.141-15T published in the Rules and Regulations portion of this issue of the **Federal Register** are issued to provide guidance on certain aspects of the private activity bond restrictions under section 141 of the Internal Revenue Code.

The text of the temporary regulations also serves as the text of these proposed regulations. The preamble to the

temporary regulations explains the temporary regulations.

Special Analyses

It has been determined that this notice of proposed rulemaking is not a significant regulatory action as defined in Executive Order 12866. Therefore, a regulatory assessment is not required. It has also been determined that section 553(b) of the Administrative Procedure Act (5 U.S.C. chapter 5) does not apply to these regulations, and because the regulations do not impose a collection of information on small entities, the Regulatory Flexibility Act (5 U.S.C. chapter 6) does not apply. Pursuant to section 7805(f) of the Internal Revenue Code, this notice of proposed rulemaking will be submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on its impact on small business.

Comments and Public Hearing

Before these proposed regulations are adopted as final regulations, consideration will be given to any written comments that are submitted timely (preferably a signed original and eight copies) to the IRS. All comments will be available for public inspection and copying.

A public hearing has been scheduled for July 24, 2001, at 10 a.m. in the Auditorium, Internal Revenue Building, 1111 Constitution Avenue, NW., Washington, DC. Because of access restrictions, visitors will not be admitted beyond the lobby more than 15 minutes before the hearing starts.

The rules of 26 CFR 601.601(a)(3) apply to the hearing.

Persons who wish to present oral comments at the hearing must submit written comments by July 18, 2001 and submit an outline of the topics to be discussed and the time to be devoted to each topic by July 3, 2001.

A period of 10 minutes will be allotted to each person for making comments.

An agenda showing the scheduling of the speakers will be prepared after the deadline for receiving outlines has passed. Copies of the agenda will be available free of charge at the hearing.

Drafting Information

The principal authors of these regulations are Bruce M. Serchuk, and Rose M. Weber, Office of Chief Counsel (Tax-exempt and Government Entities), Internal Revenue Service, and Stephen J. Watson, Office of Tax Legislative Counsel, Department of the Treasury. However, other personnel from the IRS and Treasury Department participated in their development.

Partial Withdrawal of Notice of Proposed Rulemaking

Under the authority of 26 U.S.C. 7805, §§ 1.141-7, 1.141-8 and 1.141-15(f) through (i) in the notice of proposed rulemaking that was published on January 22, 1998 (63 FR 3256) are withdrawn.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, 26 CFR part 1 is proposed to be amended as follows:

PART 1—INCOME TAXES

Paragraph 1. The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

Par. 2. Sections 1.141-7 and 1.141-8 are added to read as follows:

§ 1.141-7 Special rules for output facilities.

[The text of this proposed section is the same as the text of § 1.141-7T published elsewhere in this issue of the **Federal Register**.]

§ 1.141-8 \$15 million limitation for output facilities.

[The text of this proposed section is the same as the text of § 1.141-8T published elsewhere in this issue of the **Federal Register**.]

Par. 3. Section 1.141-15 is amended by adding paragraphs (f) through (i) to read as follows:

§ 1.141-15 Effective dates.

* * * * *

(f) through (i) [The text of proposed paragraphs (f) through (i) is the same as the text of § 1.141-15T(f) through (i) published elsewhere in this issue of the **Federal Register**.]

BILLING CODE 4830-01-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[TX-126-1-7477; FRL-6933-8]

Approval and Promulgation of Implementation Plans; Texas; the Dallas/Fort Worth Nonattainment Area; Ozone

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The EPA is proposing to approve the 1-hour ozone Attainment Demonstration State Implementation Plan (SIP), the Post 96 Rate-of-Progress (ROP) plan SIP, and the 15% ROP plan SIP for the Dallas/Fort Worth (DFW) serious ozone nonattainment area. The EPA is also proposing to extend the attainment date for the DFW area to November 15, 2007, from November 15, 1999, based on transport from the Houston/Galveston/Brazoria (HGA) ozone nonattainment area; approve the Motor Vehicle Emissions Budgets contained in the Attainment Demonstration SIP and the Post 1996 ROP plan SIP; approve the State's enforceable commitment to perform a mid-course review and submit a SIP revision to the EPA by May 2004; approve the State's enforceable commitment to revise the SIP Motor Vehicle Emissions Budgets using the MOBILE6 on-road emissions model; approve revisions to the 1990 base year inventory; and find that the DFW area meets the Reasonably Available Control Technology (RACT) requirements for major sources of volatile organic compounds (VOC) emissions. The EPA is also proposing to convert the conditional, interim approval of the DFW 15% plan (63 FR 62943) to a full approval because the requirements for full approval appear to have been met. This proposed action is based on the requirements of the Federal Clean Air Act (the Act) related to ozone demonstrations.

DATES: Written comments must be received on or before March 19, 2001.

ADDRESSES: Written comments on this action should be addressed to Mr. Thomas H. Diggs, Chief, Air Planning Section (6PD-L), at the EPA Region 6 Office listed below. Copies of documents relevant to this action, including the Technical Support Document (TSD) are available for public inspection during normal business hours at the following location.

Environmental Protection Agency, Region 6, Air Planning Section (6PD-L),

1445 Ross Avenue, Dallas, Texas 75202-2733.

Texas Natural Resource Conservation Commission, Office of Air Quality, 12124 Park Circle, Austin, Texas 78753.

Anyone wanting to examine these documents should make an appointment with the appropriate office at least two working days in advance.

SUPPLEMENTARY INFORMATION:

Throughout this document "we," "us," and "our" refers to EPA.

I. Attainment Demonstration and Attainment Date

A. Proposed Action

What Action Are we Taking?

We are proposing to approve the transport demonstration and attainment demonstration SIP developed for the DFW ozone nonattainment area because they meet the Clean Air Act. We believe that the State has adequately followed our 1998 Transport Guidance for demonstrating transport, and that the State's transport demonstration analyses indicate that there are impacts of ozone and ozone precursor transports from the upwind HGA area affecting the DFW area. In addition, we believe that the modeling, the provided weight-of-evidence analyses, and the analysis of transport of ozone and ozone precursor compounds from the HGA area, demonstrate that the control strategy chosen by the State will provide for

attainment of the ozone standard. It is our technical position that the control strategy will provide for attainment of the ozone standard by November 15, 2007.

We are proposing to approve the DFW 1-hour ozone nonattainment area attainment demonstration SIP; the State's request for an extension of the attainment date to November 15, 2007, while retaining the area's current classification as serious; the Motor Vehicle Emissions Budgets; the State's enforceable commitment to conduct a mid-course review (including evaluation of all modeling, inventory data, and other tools and assumptions used to develop this attainment demonstration) and to submit a mid-course review SIP revision, with recommended mid-course corrective actions, to us by May 1, 2004; the Speed Limit Reductions in nine counties (including the DFW 4-county area; Dallas, Tarrant, Collin, and Denton Counties); a Voluntary Mobile Emissions Program in nine counties (including the DFW 4-county area); Transportation Control Measures in the DFW area; the 15% ROP Plan, the Post-1996 ROP Plan; revisions to the 1990 base year inventory; and the State's enforceable commitment to performing new mobile source modeling for the DFW area, using MOBILE6, our on-road mobile emissions factor computer model, within 24 months of the model's release; and, if transportation conformity analysis is to be performed between 12 months and 24 months after the MOBILE6 release, transportation conformity will not be determined until Texas submits a motor vehicle emissions budget which is developed using MOBILE6 and which we find adequate. We are also proposing to find that the DFW area meets all remaining outstanding VOC RACT requirements for major sources.

If the subsequent analyses conducted by the State as part of the mid-course review indicate additional reductions are needed for the DFW area to attain the ozone standard, we will require the State to implement additional controls as soon as possible which demonstrate attainment through photochemical grid modeling. We cannot finalize the proposed action upon the Attainment Demonstration SIP, the State's request for an extension of the attainment date, and the MVEB contained in the Attainment Demonstration SIP unless and until we have fully approved all of the control measures relied upon in the State's Attainment Demonstration SIP for the DFW area and the control measures required by the Act for a serious area such as the DFW area. See

section F., *Action needed on Control Measures* for a complete list of the rulemaking actions which must be completed before we can finalize action on the DFW Attainment Demonstration SIP, the attainment date extension, and the Attainment Demonstration SIP's MVEB. Furthermore, we cannot finalize action on these three items unless and until the Governor submits the finally adopted enforceable commitment regarding MOBILE6. The State has begun its public comment process on an enforceable commitment and has committed to performing new mobile source modeling for the DFW area, using MOBILE6, within 24 months of the model's release. The public hearing is scheduled for January 4, 2001.

Was the Submittal Addressed in Public Hearings and Adopted by the State?

Four Public hearings were held in the DFW area on January 26 and 27, 2000. The State formally adopted the submittal on April 19, 2000. In addition, the State held six other public hearings in other cities on the submittal. The Governor of Texas submitted the Attainment Demonstration SIP, a request for extension of the attainment date for the DFW ozone nonattainment area, adopted rules, orders and initiatives, and the mid-course commitment on April 25, 2000. The State has gone forward with its public participation requirements on a commitment to performing new mobile source modeling for the DFW area, using MOBILE6. The public hearing on this commitment is scheduled for January 4, 2001. We anticipate that the Governor of Texas will submit this adopted enforceable commitment in the Spring of 2001. The Governor also submitted after public notice and hearing, the Post 1996 ROP Plan and revisions to the 1990 base year inventory on October 25, 1999.

B. Attainment Demonstration Contents

What Are the Contents of the Attainment Demonstration Submittal?

The April 25, 2000 submittal, concerning the ozone attainment demonstration and an extension of the attainment date for the DFW ozone nonattainment area, contains:

1. A photochemical modeling demonstration and additional weight-of-evidence analyses supporting the photochemical modeling demonstration,
2. An accompanying control strategy, comprised of:
 - a. Regulations and initiatives in the DFW area (and their documentation);
 - b. Regulations and initiatives in certain counties surrounding the DFW area (and their documentation); and

c. Additional regional rules and orders (and their documentation), relied upon for demonstrating attainment in the DFW area.

3. A 2007 Motor Vehicle Emissions Budget (MVEB) for transportation conformity;

4. A demonstration of transport from the HGA area supporting an attainment date extension to 2007;

5. Emissions growth estimates, and a 2007 forecast emissions inventory; and,

6. A commitment to perform a mid-course review with submittal to us by May 1, 2004.

The attainment control strategy; *i.e.*, regulations, initiatives, and orders, are primarily designed to control Nitrogen Oxides (NO_x) emissions from various sources, since the modeling shows ozone reduction is more sensitive to NO_x controls.

For purposes of this action, we are reviewing the modeling, weight-of-evidence support, the transport analysis, the MVEB, forecasted emissions inventory, the mid-course enforceable commitment, and the Transportation Control Measures, the Speed limit reductions and the Voluntary Mobile Emissions Program local initiatives. We are also reviewing the enforceable commitment to perform new mobile source modeling for the DFW area, using MOBILE6, within 24 months of the model's release, including a provision stating that if transportation conformity analysis is to be performed between 12 months and 24 months after the MOBILE6 release, transportation conformity will not be determined until Texas submits a motor vehicle emissions budget which is developed using MOBILE6 and which we find adequate.

C. Photochemical Modeling

What Model Approach Was Used for the Analysis?

The state used the Comprehensive Air Quality Model with Extensions (CAMx) version 2.01 photochemical grid model to conduct both the SIP attainment demonstration modeling and the downwind transport modeling for the DFW ozone nonattainment area. The State demonstrated that CAMx performed better than UAM version IV, the regulatory model, in the HGA nonattainment area and petitioned us to approve its use in the DFW nonattainment area. We approved the use of CAMx for the DFW ozone nonattainment area based upon the model's better performance in the HGA nonattainment area. This was considered to be valid for the DFW area. The State's modeling activities were

performed as outlined in a series of the modeling protocols, according to our "Guideline for Regulatory Application of the Urban Airshed Model" (July, 1991) (Guideline). The final modeling protocol developed by the State was submitted in August 1999. This protocol was reviewed and approved by us. The State used a relatively large modeling domain with nested grids to capture the influence of regional and long-range transport. The modeling domain covers the DFW ozone nonattainment area which is comprised of Dallas, Tarrant, Collin, and Denton Counties. The modeling domain also covers most counties in central and east Texas, including the ozone nonattainment counties of Harris, Jefferson, Orange, Chambers, Hardin, Liberty, Montgomery, Waller, Brazoria, Galveston, and Fort Bend counties. It also covers a number of other States; *e.g.*, Louisiana and Mississippi in the southeastern portion of the country.

How Were Exceedance Days Evaluated and What Days Were Modeled?

Our 1991 Guideline sets forth a recommended procedure for selecting ozone exceedance days appropriate for conducting a modeling demonstration. This procedure, in part, considers wind rose analyses based upon the four morning hours of 0700 to 1000 local standard time. These wind rose analyses are used to define the meteorological patterns for source-receptor relationships associated with high ozone events. The State used this method for defining meteorological patterns. The number of ozone exceedance days for the period, 1990–1996, associated with each meteorological pattern was identified. The most prominent meteorological pattern for ozone exceedance days (*i.e.*, 70%) was calm winds; *i.e.*, wind speeds < 3mph. The meteorological pattern with southerly winds was the second most prominent pattern with 25% of the ozone exceedance days.

A total of eleven ozone exceedance days were identified as candidates for modeling. From these, the State chose the candidate episodes in 1995 (calm winds) and 1996 (southerly winds), in part, since they are more applicable to the most currently available emissions inventory (the 1996 Periodic) and since more ambient data is generally available for these episodes.

The State selected June 21 and 22, 1995, which form a multi-day episode, as two of the three primary episode days to model from the calm meteorological regime. These two days also had 1-hour exceedances fairly close to the current ozone design value (*i.e.*, 139 ppb). For

the third primary episode day, the State selected July 3, 1996. Although the meteorological pattern on July 3rd had neither calm nor southerly winds, since the two days prior exhibited southerly winds, the rationale for this selection is that July 3rd is associated with southerly winds. It also occurred during the period of enhanced aerometric monitoring. The high ozone episode days the State selected and modeled meet with the requisite three primary episode days and cover the two predominate types of meteorological patterns associated with high ozone in the DFW area. A more complete description of the episode selections and technical rationales can be found in the TSD.

How Was Potential Transport From the HGA Area Addressed?

The State demonstrated the potential transport of ozone and ozone precursors from the upwind HGA nonattainment area upon the DFW area for both the 1995 and the 1996 episodes. This demonstration was primarily based upon two modeling analyses. The first used the same set of air quality and meteorological inputs as used in the base case simulation, but with an emissions data set in which anthropogenic (man-made) emissions

from the 8-county HGA area were eliminated. The second was an ozone source apportionment analysis. The CAMx model has an optional feature which tracks the sources of precursors that contribute to the ozone formed at a given location. This feature was used to assess the culpability of sources in the 8-county HGA nonattainment area to the DFW four-county nonattainment area. These analyses show that for July 3, 1996, 2–4 ppb of ozone in portions of the DFW area comes from HGA sources.

The State also submitted a back trajectory analysis of ozone exceedance days in the DFW area for the six year period, 1993 to 1998. During this period there were 160 exceedance days in the DFW area and approximately ten percent had trajectories going back to the HGA area.

Thus, emissions from the HGA area have the potential to influence DFW's ability to attain the 1-hour ozone standard. It is EPA's proposed technical position that for some ozone exceedance days, the DFW area is affected by transport from the HGA area. On other exceedance days, the DFW area is affected only by ozone precursor emissions generated within the DFW area itself.

Based on this transport demonstration, we propose to grant the State's request for an extension of the

attainment date to November 15, 2007. A detailed discussion of the acceptability of the demonstration is in the section on *EPA's Analysis* in this notice. A discussion of the Transport Policy is in the BACKGROUND section of this notice.

D. Photochemical Modeling Results

What Were the Modeling Results for the Primary Episode Days and for the Future Attainment Date?

The model simulated ozone concentrations on selected primary episode days for the 1995 and 1996 episodes using emissions specific for those days, and emissions forecast to a 2007 future year. The resulting DFW area summary of the performance statistics and ozone peaks for 1995, 1996, and 2007 are shown in Table 1. The normalized bias and gross error performance statistics shown in Table 1 are well below our recommended maximum levels. This indicates that the model adequately replicated the spacial and temporal ozone formation that occurred on these ozone exceedance days. This provides an assurance that the model is useful in testing future control measures. These modeled ozone peaks reflect the results of the 2007 forecast emissions and control strategy for the 1995 and 1996 episode days.

TABLE 1—SUMMARY OF PERFORMANCE STATISTICS AND PEAK OBSERVED AND MODELED OZONE CONCENTRATIONS (PPB) IN THE DFW OZONE NONATTAINMENT AREA

Period	Episode days		
Primary Episode Day	6/21/95	6/22/95	7/3/96
Peak Observed	144	135	144
Peak Modeled Base Case	132.8	137.6	159.2
Peak Modeled 2007 Future Case	121.1	126.1	144.2
Peak Modeled 2007 Post-Control Case	110.3	113.1	131.5
Normalized Bias Greater Than 60 ppb	– 10.1%	– 8.8%	– 3.4%
Normalized Gross Error Greater Than 60 ppb	12.2%	12.5%	15.0%

Do the Modeling Results Demonstrate Attainment of the Ozone Standard?

The *Guidance on Use of Modeled Results to Demonstrate Attainment of the Ozone NAAQS, (June, 1996)* recommends the use of either a statistical or deterministic approach to demonstrate attainment. Both of these approaches allow for the use of Weight-of-Evidence (WOE) to supplement the modeling results. The State elected to use the deterministic approach with WOE. As noted in Table 1, the 1-hour maximum predicted ozone concentration for the 2007 post-control modeling in the DFW area on the controlling day (July 3, 1996) (131.5 ppb) is above the standard; whereas, the

other two episode days modeled are well below the standard.

The 2007 post-control modeling by itself does not conclusively demonstrate attainment of the standard; (*i.e.*, the deterministic test), but its results are so close to attainment to warrant the consideration of WOE analyses that support the demonstration of attainment. The State conducted several WOE analyses (see next section for further details) to provide additional confirmation that the demonstration shows that DFW will attain the standard by 2007 with the planned emission controls.

E. Weight-Of-Evidence

What WOE Analyses and Determinations Are Used To Support the Modeled Attainment Demonstration?

As presented in section D, our 1996 guidance document provides for the use of WOE to complement the control strategy modeling in demonstrating attainment. The key concept behind our June 1996 guidance is that determination of attainment, based on monitored ozone concentrations, allows for some exceedances of the 1-hour standard. Thus, even though the model may show some areas with peak concentrations slightly above the NAAQS, such modeled exceedances do

not necessarily imply that monitored attainment will not be achieved.

Since the 2007 post-control modeling for the July 3, 1996, episode day is the only day exceeding the standard, most of the WOE analyses address this day. The State submitted the following WOE analyses:

1. *Notable higher peak modeled than monitored ozone concentrations:* The monitored peak in the DFW area on July 3, 1996, was 144 ppb versus a modeled peak of 159 ppb. Thus, there is some uncertainty regarding the modeled peak, even though the episode satisfied all of our criteria for model performance.

2. *Meteorology:* As previously indicated, the specific meteorology on July 3, 1996, was not of the types most associated with ozone exceedances in the DFW area. In addition, although the model performance for July 3, 1996, was acceptable, there was an indication that the meteorological features were not fully replicated for this day. There were scattered rain showers in the area which may have presented some meteorological effects which could not be modeled.

3. *Additional ozone reduction metrics:* The State presented additional metrics, aside from the modeled peak. The metrics presented are Area of exceedance, Area-hours of exceedance, and a measure of potential exposure. These metrics measure the geographic extent and temporal duration and duration of the ozone exceedance for various control strategies. The results show that the modeled control strategy produces a significant reduction in each of these additional metrics. This indicates that the selected control strategy should reduce the geographical and temporal aspects of the ozone exceedance, as well as the peak concentration.

4. *Estimated future design value:* The estimated future design value, as recommended in our draft guidance for assessing attainment of the 8-hour standard, is determined by proportioning the change in the modeled ozone results to a change in the design value.

To estimate the future design value, the State developed a ratio of the 2007 post-control modeling results to that of the original Base modeling results. Since episodes chosen for the DFW attainment demonstration occurred during 1995 and 1996, the State used monitoring data collected from 1995 to 1997 in the DFW area to establish the base design values. Then the ratio of the modeling results is multiplied by the 1995–1997 base design value to obtain an estimated future design value. Using this procedure the estimated future

design value for July 3rd is 115.3 ppb, which is less than the standard. This result suggests that it is likely that the area will attain the standard by 2007.

5. *Design value trends:* The State analyzed historic monitored air quality data in the DFW area for the period of 1981 to 1999. The measure of air quality which determines the nonattainment classification is the design value. The design value is the highest of the fourth-highest daily peak ozone concentration over a three year period at any monitoring site in the area. There had been a general downtrend in the design value; however, it has remained constant in recent years. The constant trend has occurred despite dramatic increases in the level of construction and economic activity and substantial growth in the mobile fleet. Existing regulations appear to be adequate to keep the design value constant and new regulations included in the SIP should provide a significant decline in the design value.

6. *New technologies:* The State plans to continue reviewing and implementing new technologies as appropriate for the DFW area. The area will also benefit from our requirements for cleaner vehicles and fuels in the future.

In summary, the State's WOE analyses provide adequate support for the State's attainment demonstration. Maintaining air quality through recent periods is demonstrated and future progress in air quality improvement is shown to be likely. Our decision on the adequacy of the WOE is based on the composite of the analyses, and not on any single element. The WOE complements the modeled control strategy and indicates attainment should be reached by November 15, 2007.

The 1996 guidance recognizes a need to perform a mid-course review as a means for addressing uncertainty in the modeling results. Because of the uncertainty in long term projections, we believe that a viable attainment demonstration that relies on weight of evidence should contain provisions for periodic review of monitoring, emissions, and modeling data to assess the extent to which refinements to emission control measures are needed. The State submitted an enforceable commitment to perform such a mid-course review and to submit a SIP revision by May 2004.

F. Emission Control Strategy

What Emission Control Strategies Were Included in the Attainment Demonstration?

The DFW attainment demonstration SIP is directed at reductions of NO_x since the modeling shows reductions of NO_x will be most effective in bringing the area into attainment of the Standard.

The attainment demonstration SIP relies on a combination of Federal measures, State measures, CAA statutory requirements, local initiatives applied to different groups of counties in, and adjacent to, the DFW area, and projections of the level of control in the HGA area based on enforceable commitments in the November 1999 SIP for the HGA area. The attainment demonstration SIP also relies on Regional measures applied in east and central Texas. Please refer to the TSD for more details regarding these measures, initiatives, growth rates and emission reductions.

Federal Measures: The State included the following Federal Measures in the Future Year Base Case.

1. On-road mobile sources:
 - Tier 2 vehicle emission standards and federal low sulfur gasoline in DFW and HGA.
 - National Low Emitting Vehicles standards.
 - Heavy-duty diesel standards.

We believe that the projected growth rates and emissions reductions from the sources subject to the above federal measures were calculated correctly by the State.

2. Off-road mobile sources:
 - Lawn and garden equipment standards.
 - Tier III heavy-duty diesel standards.
 - Locomotive standards.
 - Compression ignition standards for vehicles and equipment.
 - Spark ignition standards for vehicles and equipment.
 - Recreational marine standards.

We believe that the State correctly projected the growth rates and emissions reductions subject to these federal measures.

CAA Statutory Requirements: The State included the following CAA Statutory Requirements in the Future Year Base Case.

- Phase II reformulated gasoline (RFG) in the DFW four-county nonattainment area and HGA eight-county nonattainment area.
- Texas motorists' choice inspection and maintenance (I/M) program in Harris, Dallas and Tarrant Counties.

We believe that the State correctly projected the growth rates and

emissions reductions from sources subject to these CAA Statutory Requirements.

State Measures: The State included the following State Measures as local (DFW) area controls in the Future Year Base Case.

- Electric generating and industrial point sources—four county area.
- An expanded vehicle Inspection/Maintenance program—nine county area.
- Low emission diesel fuel—nine county area.
- Heavy-duty diesel operating restrictions—four county area.
- Accelerated purchase of Tier 2/3 non-road compression ignition equipment—four county area.
- Airport ground support equipment electrification—airports of a certain size in the four county area.
- Gasoline heavy equipment engines—nine county area.
- Gas-fired water heaters, small boilers, and process heaters—State-wide.

We have already published actions on some of the above control measures in the **Federal Register** as discussed below. We believe that the State correctly projected the growth rates for and the emissions reductions from these affected sources.

Local Measures:

1. Speed limit reductions—nine county area.
2. Voluntary Mobile Emissions Program—nine county area.
3. Transportation Control Measures—four county area.

Our proposed action on these three local measures is discussed in more detail later in this section.

Regional Measures:

1. Agreed orders with Alcoa, Inc. (formerly Aluminum Company of America) for their Milam Facility, and the Eastman Chemical Company, Texas operations, for their facility near Longview, Texas.
2. Electric generating facilities and cement plants in central and eastern Texas.
3. Low Reid Vapor Pressure Gasoline in eastern and central Texas.
4. Stage I gasoline vapor recovery at gas stations in central and eastern Texas.

We have already published actions on the above control measures in the **Federal Register**, as discussed below.

Action Needed on Control Measures

We cannot finalize an action upon the Attainment Demonstration SIP, its MVEB, and the State's Request for an Extension of the Attainment Date until we have finalized action on the following:

1. The revised emission specifications in the DFW area for Electric Utility Boilers, Industrial, Commercial or Institutional Boilers and certain Process Heaters (30 TAC sections 117.104, 117.106, 117.108, 117.116, 117.206 as they relate to the DFW area, and the repeal of sections 117.109 and 117.601 as they relate to the DFW area): Proposed approval October 31, 2000. See 65 FR 64914.

2. Vehicle Inspection/Maintenance program (30 TAC 114.2, 114.50—114.53).

3. Low emission diesel fuel (30 TAC 114.6, 114.312–114.317, 114.319).

4. Non-Road Large Spark-Ignition (LSI) Engines (30 TAC 114.420, 114.421, 114.422, 114.427, and 114.429). Accelerated Purchase of Tier2/Tier3 Non-Road Compression-Ignition Equipment (30 TAC 114.410, 114.412, 114.416, 114.417, and 114.419). Non-Road Construction Equipment Restriction (30 TAC 114.432, 114.436, 114.437, and 114.439). Electrification of Airport Ground Support Equipment (GSE) (30 TAC 114.400, 114.402, 114.406, and 114.409).

5. The State-wide NO_x rules for Water Heaters, Small Boilers, and Process Heaters (30 TAC sections 117.460, 117.461, 117.463, 117.465, 117.467, 117.469): Direct final approval effective December 25, 2000. See 65 FR 64148.

6. The agreed orders with Alcoa, Inc. (formerly Aluminum Company of America) for their Milam Facility, and the Eastman Chemical Company, Texas operations, for their facility near Longview, Texas: Direct final approval effective December 25, 2000. See 65 FR 64148.

7. The NO_x rules for Electric Generating Facilities and cement plants in East and Central Texas (30 TAC sections 117.131, 117.133, 117.134, 117.135, 117.138, 117.141, 117.143, 117.145, 117.147, 117.149, 117.512, 117.260, 117.261, 117.265, 117.273, 117.279, 117.283, 117.524): Proposed approval October 31, 2000. See 65 FR 64914.

8. Lower Reid Vapor Pressure Gasoline in eastern and central Texas (30 TAC sections 114.1, 114.301, 114.304–114.307, and 114.309). Proposed approval November 20, 2000. See 65 FR 69720.

9. Stage I vapor recovery in eastern and central Texas (30 TAC sections 115.222–114.229): Proposed approval December 20, 2000. See 65 FR 79745.

10. VOC rules as RACT for batch processing (30 TAC sections 115.160–115.169) and wastewater (30 TAC sections 115.140–115.149): Proposed approval December 20, 2000. See 65 FR 79745.

11. The administrative revisions to the existing Texas NO_x SIP (30 TAC sections 117.101–117.121, 117.201–117.223, 117.510, 117.520, and 117.570): Proposed approval October 31, 2000. See 65 FR 64914.

12. Texas Clean Fleet Program (30 TAC 114.1, 114.3, 114.150, 114.151, 114.153–114.157, 114.201, 114.202, 114.152).

13. The 15% ROP Plan.

14. The Post 1996 ROP Plan.

15. The revisions to the 1990 base year inventory.

16. The speed limit reductions, the VMEP and the TCMs.

17. The finding that major sources of VOCs in the DFW area are meeting RACT.

It should be noted that several of these measures are the subject of ongoing litigation. Should the State lose, and as a result imperil any reductions needed for attainment, and there are no measures which make up the lost reductions, we may have to disapprove the attainment demonstration SIP.

What Are the Local Initiatives and Are They Approvable?

The State submitted three local initiatives: Speed limit reductions in the nine county area (Dallas, Tarrant, Collin, Denton, Ellis, Johnson, Parker, Rockwall, and Kaufman Counties), a Voluntary Mobile Emissions Program in the nine county area, and Transportation Control Measures in the four county area.

Speed Limit Reductions

The Texas Department of Transportation (TxDOT) revised regulations relating to speed limits to allow TNRCC to submit a request to change speed limits for environmental reasons when justified. Please see adopted rules, 25 TexReg 5686, June 9, 2000; and proposed rules, 25 TexReg 2018, March 10, 2000. TxDOT, using this authority, will lower all 70 mile per hour (mph) speed limits to 65 mph, and all 65 mph speed limits to 60 mph in the four county area. These slower speeds are anticipated to reduce the emissions of NO_x and improve air quality. We propose approval of the speed limit reductions control measure.

Voluntary Mobile Emissions Program (VMEP) Reductions

What Is EPA's VMEP?

Voluntary mobile source strategies that attempt to complement existing regulatory programs through voluntary, non-regulatory changes in local transportation activities or changes in in-use vehicle and engine composition

constitute the VMEP. The Clean Air Act allows SIP credit for new approaches to reducing mobile source emissions. This flexible approach is set forth in section 110. Economic incentive provisions are in sections 182 and 108 of the Act.

Credits generated through VMEP can be counted toward attainment and maintenance of the NAAQS. Up to 3% of the total future year emissions reductions required to attain the appropriate NAAQS may be claimed under the VMEP policy.

What Qualifies for SIP Credit?

The basic framework for ensuring SIP credit for VMEPs is spelled out in guidance that came out under a memorandum from Richard D. Wilson, Acting Assistant Administrator for Air and Radiation, dated October 24, 1997,

entitled "Guidance on Incorporating Voluntary Mobile Source Emission Reduction Programs in State Implementation Plans (SIPs)."

Generally, to obtain credit for a VMEP, a State submits a SIP that:

(1) Identifies and describes a VMEP;
(2) Contains projections of emission reductions attributable to the program, along with any relevant technical support documentation;

(3) Commits to evaluation and reporting on program implementation and results; and

(4) Commits to the timely remedy of any credit shortfall should the VMEP not achieve the anticipated emission reductions.

More specifically, the guidance suggests the following key points be considered for approval of credits. The

credits should be quantifiable, surplus, enforceable, permanent, and adequately supported.

In addition, VMEPs must be consistent with attainment of the standard and with the Rate of Progress requirements and not interfere with other Clean Air Act requirements.

What Did the State Submit?

The State submitted program descriptions that projected emission reductions attributable to each specific program as part of the DFW attainment demonstration submitted April 25, 2000. The State commits to evaluating each program to validate estimated credits. Table 2 lists the programs and projected credits. Programs submitted with no credit assigned are listed in Table 3.

TABLE 2.—VOLUNTARY MOBILE EMISSION REDUCTION PROGRAMS AND CREDITS CLAIMED

Program type	VOC benefits (tons per day)	NO _x benefits (tons per day)
Alternative Fuel Program	0.18	0.18
Employee Trip Reduction	0.29	0.53
Public Education Campaign/Ozone Season Fare Reduction	0.08	0.15
Tier II Locomotive Engines	0 to 0.6	0 to 3.0
Vehicle Retirement Program/Vehicle Maintenance*	0.56	0.77
Total Benefits (tpd)	1.11 to 1.71	1.63 to 4.63

* Emission benefits quantified for the Vehicle Retirement Program only. Emission benefits for Vehicle Maintenance are credited in the Vehicle Inspection and Maintenance Program.

TABLE 3.—VOLUNTARY EMISSION REDUCTION PROGRAMS WITH NO CREDIT ASSIGNED

Sustainable Development
Non-Road Ozone Season Reductions
Off-Road Heavy Duty Diesel Engine Retrofits

The State's goal is 5.0 tons per day of NO_x benefit from the VMEP program. This is within the 3% criteria in our guidance. The State has committed to evaluating and reporting on the program implementation and results and to timely remedy of any credit shortfall.

The State also committed to additional Transportation Control Measures that can be substituted for any shortfall in credit from the estimated credits for VMEP. These include Signal Improvements and Freeway Corridor Management.

Do the VMEPs Meet the Requirements for Approval?

A detailed analysis of all the VMEP measures can be found in the TSD for this document. For each creditable VMEP, the measure was found to be quantifiable. The reductions are surplus by not being substitutes for mandatory, required emission reductions. The measures will be enforced by the State. The reductions will continue at least for

as long as the time period in which they are used by this SIP demonstration, so they are considered permanent. Each measure is adequately supported by personnel and program resources for implementation.

What Action is EPA Taking on the VMEP?

The DFW Attainment SIP VMEP meets the criteria for credit in the SIP. The State has shown that the credits are quantifiable, surplus, enforceable, permanent, adequately supported, and consistent with the SIP and the Act. We propose to approve the VMEP portion of the Texas SIP.

Transportation Control Measures (TCMs)

The State has included a variety of TCMs in the SIP as a control strategy for attainment of the ozone NAAQS. The specific TCMs have been described in detail in Appendix G of the SIP and will be incorporated by reference in the Code of Federal Regulations in the final approval action. Detailed information is necessary for those TCMs used as emissions reduction measures in the SIP to ensure that they are specific and enforceable as required by the Act and reflected in our policy. The TCMs' description in the SIP includes

identification of each project, location, length of each project (if applicable), a brief project description, implementation date, and emissions reductions for both VOC and NO_x.

The TCMs identified through this process and included in the SIP are contained and funded in the metropolitan transportation plan (MTP) and transportation improvement program (TIP) to ensure funding for implementation. We propose approval of the transportation control measures.

What Are the Projected NO_x reductions From the Federal and State Control Measures and Local Initiatives?

Table 4 provides the projected NO_x reductions for the 2007 attainment year resulting from the Federal and State rules, and the local initiatives.

TABLE 4.—NO_x REDUCTION ESTIMATES
(tons per day)

	Reduction
Federal Measures	
On-road mobile	93.00
Off-road mobile	48.00
Total Federal Measures	141.00
State Measures	
Major point sources	129.00
Inspection/Maintenance	54.45

Local Initiatives	
Speed limit reduction	5.42
VMEP (2.4 tpd—5.4 tpd) ...	5.00
TCMs	4.73
Total Local Initiatives	15.15
TOTAL NO _x REDUCTIONS	371.22

G. Motor Vehicle Emissions Budget

What Is a Motor Vehicle Emissions Budget (MVEB) and Why Is it Important?

The MVEB is the level of total allowable on-road emissions established by a control strategy implementation plan or maintenance plan. In this case, the MVEB establishes the maximum level of on-road emissions that can be produced in 2007, when considered with emissions from all other sources, which demonstrate attainment of the NAAQS. It is important because the MVEB is used to determine the conformity of transportation plans and programs to the SIP, as described by section 176(c)(2)(A) of the Act.

What Are the MVEBs Established by This Plan and Proposed for Approval by This Action?

The MVEBs established by this plan and that the EPA is proposing to approve are contained in Table 5.

TABLE 5.—2007 ATTAINMENT YEAR
MOTOR VEHICLE EMISSIONS BUDGETS
(tons per day)

Pollutant	2007
VOC	107.60
NO _x	164.30

What Is the State's Commitment to Revise the Motor Vehicle Emissions Budgets With MOBILE6?

All States whose attainment demonstration includes the effects of the Tier 2/sulfur program have committed to revise and resubmit their motor vehicle emissions budgets after we release MOBILE6. The State has begun its public comment process on an enforceable commitment and has committed to performing new mobile source modeling for the DFW area,

using MOBILE6, within 24 months of the model's release. The public hearing is scheduled for January 4, 2001. In addition, the enforceable commitment includes a provision stating that if a transportation conformity analysis is to be performed between 12 months and 24 months after the release of MOBILE6, transportation conformity will not be determined until the State submits an MVEB which is developed using MOBILE6 and which we find adequate. The North Central Texas Council of Governments and the Department of Transportation have been informed of the commitment.

After adoption by the Commissioners, the Governor of Texas must submit the enforceable commitment to us. If the State fails to meet its commitment to submit revised budgets using MOBILE6, we could make a finding of failure to implement the SIP, which would start a sanctions clock under section 179 of the Act.

What Is the Applicable Budget To Use for Conformity Analysis?

The proposed approval of the MVEB in Table 5 would be effective for conformity purposes only until revised motor vehicle emissions budgets are submitted and we have found them adequate. In other words, the budgets that are part of this attainment demonstration will apply for conformity purposes only until there are new, adequate budgets consistent with the State's commitments to revise the budgets. The revised budgets will apply for conformity purposes as soon as we find them adequate.

We are proposing to limit the duration of our approval in this manner because we are only proposing to approve the attainment demonstrations and their budgets because the States have committed to revise them after we release MOBILE6 and after the State conducts its mid-course review. Therefore, once we have confirmed that the revised budgets are adequate, they will be more appropriate than the budgets we are proposing to approve for conformity purposes now.

If the budgets we propose to approve raise issues about the sufficiency of the attainment demonstration, we will work with the State. If the revised budgets show that motor vehicle emissions are lower than the budgets we approve, a reassessment of the attainment demonstration's analysis will be necessary.

This action does not propose any change to the existing transportation conformity rule or to the way it is normally implemented with respect to other submitted and approved SIPs,

which do not contain commitments to revise the budget.

H. EPA's Analysis

Did the State Adequately Document the Techniques and Data Used To Derive the Modeling Input Data and Modeling Results?

Yes, the submittal from the State thoroughly documented the techniques and data used to derive the modeling input data. The submittal adequately summarized the modeling outputs and the conclusions drawn from these model outputs. The submittal adequately documented the State's weight-of-evidence determinations and the bases for concluding that these determinations support the attainment demonstration.

Did the Modeling Procedures and Input Data Used Comply With the Environmental Protection Agency Guidelines and Clean Air Act Requirements?

Yes, the modeling procedures and input data (including the emissions inventory inputs and procedures) meet the requirements of the Act and are consistent with our July 1991 and June 1996 ozone modeling guidelines.

Does the Emission Control Strategy Meet the Requirements of the Clean Air Act?

Yes, the selected emission control strategy, based upon modeling and the WOE techniques, plus additional information regarding the effect of HGA upon DFW, demonstrates attainment of the 1-hour ozone standard in DFW.

Does the Weight-of-Evidence Support the Attainment Demonstration?

Yes, the submittal adequately documented the State's WOE determinations and the bases for concluding that these determinations adequately complement the attainment demonstration.

The WOE, when viewed in aggregate with the modeling, shows attainment of the standard and thus we are proposing approval.

Has the State Adopted the Selected Emission Control Strategy and Has the State Adopted the Emission Control Regulations Needed to Implement the Emission Control Strategies?

Yes, the State has adopted and submitted the emission control strategies and all associated emission control regulations, orders, and the TCMS, Speed Limit Reductions, and the VMEP initiatives.

Has the State Adopted all Local Measures Required by the Clean Air Act for the Area's Current Ozone Classification?

Yes, the State has adopted all VOC and NO_x emission control requirements required under the Clean Air Act (Act) for a serious ozone nonattainment area. Please see the TSD for a listing of requirements and the dates they were satisfied.

It is our position that the State of Texas has met the 1998 Transport Policy's criteria for adoption and submittal to EPA for approval of all measures required under the Act for an area classified as serious.

Has the State Implemented all Reasonably Available Control Measures?

Yes. Section 172(c)(1) of the Act requires SIPs to provide for the implementation of all reasonably available control measures (RACM) as expeditiously as practicable and for attainment of the standard. We have previously provided guidance interpreting the RACM requirements of 172(c)(1) in the General Preamble. See 57 FR 13498, 13560 (April 16, 1992). In the General Preamble, we indicated our interpretation of section 172(c)(1), under the 1990 amendments, as imposing a duty on States to consider all available control measures and to adopt and implement such measures as are reasonably available for implementation in the particular nonattainment area. We also retained our pre-1990 interpretation of the RACM provisions that where measures that might in fact be available for implementation in the nonattainment area could not be implemented on a schedule that would advance the date for attainment in the area, we would not consider it reasonable to require implementation of such measures. We indicated that States could reject certain RACM measures as not reasonably available for various reasons related to local conditions. A State could include area-specific reasons for rejecting a measure as RACM, such as the rejected measure would not advance the attainment date, or technological and economic feasibility in the area.

We also issued a recent memorandum reaffirming our position on this topic, "Guidance on the Reasonably Available Control Measures (RACM) Requirement and Attainment Demonstration Submissions for Ozone Nonattainment Areas." John S. Seitz, Director, Office of Air Quality Planning and Standards, dated November 30, 1999. A copy can be obtained from www.epa.gov/ttn/oarpg/t1pgm.html. In this

memorandum, we state that in order to determine whether a state has adopted all RACM necessary for attainment and as expeditiously as practicable, the state will need to provide a justification as to why measures within the arena of potential reasonable measures have not been adopted. The justification would need to support that a measure was not reasonably available for that area and could be based on technological or economic grounds.

We reviewed additional potential available measures, as documented in the RACM analysis in the TSD (Appendix C) for this proposed rulemaking. Our analysis showed that the State is already controlling the significant major point sources and area sources to RACM levels and the SIP contains the transportation control measures reviewed nationally, as well as a motor vehicle Inspection and Maintenance program. Based on this analysis, we propose to conclude that any remaining evaluated measures are not reasonably available for the specific DFW area, because (a) some would require an intensive and costly effort for numerous small area sources or transportation control measures, and (b) since the DFW area relies in part on reductions from the upwind HGA area which are substantial, and the reductions projected to be achieved by the evaluated additional set of measures are relatively small, they would not produce emission reductions sufficient to advance the attainment date in the DFW area and, therefore, should not be considered RACM.

Although we encourage areas to implement available RACM measures as potentially cost effective methods to achieve emissions reductions in the short term, we do not believe that section 172(c)(1) requires implementation of potential RACM measures that either require costly implementation efforts or produce relatively small emissions reductions that will not be sufficient to allow the DFW area to achieve attainment in advance of full implementation of all other required measures.

Has the State Established an Acceptable MVEB?

The MVEB budget submitted by the State for the DFW area is adequate and is consistent with all pertinent SIP requirements, and the MVEB is proposed for approval.

Does the DFW Area Meet the RACT Requirements for Major Source VOC Emissions?

On March 7, 1995, as part of our action approving VOC requirements, we

found that the State had implemented RACT on all major sources in the DFW area except those that were to be covered by post-enactment Control Technique Guidelines (CTG's) (44 FR 12438). Since that time many expected CTGs were issued as Alternative Control Technique documents—ACT's. Of the expected CTGs and ACT's, DFW had major sources in the following categories; batch processing, reactors and distillation, wood furniture and aerospace coating. We have approved measures for all of these categories as meeting RACT. (See the TSD for this action for dates.)

With regard to Aerospace coatings, we have approved Alternate RACT determinations for the major sources in the DFW area: Lockheed-Martin, Bell Helicopter Textron, and Raytheon Texas Instruments Systems, Inc. January 20, 1994 (See 59 FR 02532), May 30, 1997 (See 62 FR 29297), and February 9, 1998 (See 63 FR 6491), respectively. With these Alternative RACT determinations, we concluded that RACT was in place for these Aerospace coating sources. On March 27, 1998, we published the National Emission Standards for Hazardous Air Pollutants (NESHAP) final rule and the Control Technique Guideline for Aerospace Manufacturing and Rework facilities. (See 63 FR 15006). The State submitted revisions to its coating rules on July 13, 2000 to ensure the control requirements for Aerospace companies remained consistent with the NESHAP rule. At the same time, the State requested that these replace the Alternative-RACT plans as a part of the Texas SIP. The revised 2000 aerospace rules provide provisions that are more consistent with the new MACT standards and we anticipate that we will propose approval of these provisions. In the mean time, we believe the previously approved alternative RACT plans continue to meet the RACT requirements for these three sources.

Also, with the reclassification of the DFW area to serious, the major source size was decreased to 50 tons per year. This necessitated that the State revise its rules for bakeries and adopt rules for the large offset lithographers category. We have approved the rule revisions for bakeries and the new rules for offset lithographers as meeting the RACT requirements. (See TSD for dates and cites).

Thus, it is our position that RACT is in place for all major sources of VOCs in the DFW area.

Was the Demonstration of Transport From the HGA Area Acceptable To Support the Request for Extension of the Attainment Date?

The policy for the extension of an ozone attainment date is discussed in the **BACKGROUND** section of this notice. The State's compliance with these requirements is discussed here.

a. Identification of the area as a downwind area affected by ozone transport.

We have reviewed the photochemical modeling demonstrations, and are proposing to agree with the State that the July 3, 1996, episode adequately demonstrates transport of pollutants from the HGA area. We are proposing that this transported pollution affects DFW's ability to attain by the current attainment date. Thus, the DFW and HGA areas are inextricably linked. Without controls in the HGA area, the DFW area's ability to attain is jeopardized. We, therefore, propose to find that the State's demonstration of ozone transport meets the criteria in our attainment date extension policy.

b. Submittal of an approvable attainment demonstration.

EPA's review of the attainment demonstration SIP shows that it should be approved. The State has modeled and adopted an acceptable control strategy that demonstrates attainment. We are proposing to approve the attainment demonstration SIP, and to agree that it meets the criteria in the July 1998 transport policy and all other EPA guidance and the regulatory and statutory requirements.

c. Adoption of all applicable local measures required under the area's current ozone classification.

Texas has adopted all VOC and NO_x related emission control requirements required by the Act for a serious ozone nonattainment area. A listing of applicable CAA serious classification-related VOC and NO_x related regulations and their state-adopted dates for the DFW area, is provided in the TSD to this rulemaking.

It is our position that the State of Texas has met the 1998 Transport Policy's criteria for adoption and submittal of all measures required under the Act for an area classified as serious. We must finalize approval actions upon the remaining serious area requirements—the 15% ROP Plan, the Post-96 ROP Plan, the I/M SIP, and the Clean-fuel Vehicle SIP, before we can make a final finding that the DFW area is meeting all of its classification's statutory requirements, however.

d. Implementation of all adopted measures by the time upwind controls are expected.

All of the NO_x and VOC rules will be implemented as expeditiously as practicable, but no later than 2005, two years before the HGA attainment date of November 15, 2007.

We are proposing to find that this transport policy criteria has been met by the State. We are of the opinion that the phase-in compliance dates are as expeditious as practicable compared with the compliance dates of similar sources in serious ozone nonattainment areas of the country.

II. Post 1996 Rate of Progress Plan

A. Proposed Action

What Action Are We Taking?

We are proposing approval of the Post 1996 Rate of Progress (ROP) plan (9% plan), submitted by the Governor on October 25, 1999, which is designed to reduce ozone forming emissions from the baseline emissions by 9% in the DFW nonattainment area for the years 1997–1999. This plan meets the Reasonable Further Progress requirements of the Act (section 182(c)(2)). In addition, we are proposing to approve the MVEBs associated with the 9% plan. We are also proposing to approve the changes to the 1990 base year emissions inventory for the DFW area. The SIP was submitted October 25, 1999, and found complete January 6, 2000.

B. Calculation of Requirements

How Do we Calculate the Needed VOC Emissions Reductions?

Calculating the needed emission reductions is a multi-step process as described below.

Emissions Inventory: The 1990 Final Base Year Inventory is the starting point for calculating the reductions necessary to meet the requirements of the 1990 Act. The 1990 Final Base Year Inventory includes all area, point, non-road mobile, and on-road mobile source emissions in the four county DFW ozone nonattainment area. The 1990 base year inventory was originally approved November 8, 1994 (59 FR 55586). The State revised the VOC inventory on August 8, 1996. These changes were approved November 10, 1998 (63 FR 62943). The state revised the 1990 base year VOC inventory again with the October 25, 1999, SIP revision. The October 25, 1999, SIP revision also contained the State's first revisions to the 1990 base year NO_x emissions inventory. The changes resulted from data gathered for the 1993 and 1996

periodic inventories. Analysis of the changes in the periodic inventories was backcast to the 1990 inventory for consistency since the 1990 inventory remains the ROP beginning point. We have reviewed the inventory revisions and they have been developed in accordance with our guidance on emission inventory preparation. Thus, we are proposing approval of the October 25, 1999, revisions to the 1990 base year inventory. The revised 1990 base year inventory is summarized in Table 6. For more detail on how emissions inventories were estimated, see Appendix H in the TSD for this action.

TABLE 6.—1990 RATE-OF-PROGRESS
BASE YEAR EMISSIONS INVENTORY
(tons per day)

Base year inventory		
Source type	VOC	NO _x
Point	63.98	71.76
Area	174.02	19.99
On-road Mobile	306.60	293.03
Non-road Mobile ...	105.19	166.05
Total	649.79	550.83

Adjusted Base Year Inventory: Section 182(b)(2)(C) explains that the baseline from which emission reductions are calculated should be determined as outlined in section 182(b)(1)(B) for 15% ROP plans. This requires that the baseline exclude emission reductions due to Federal Motor Vehicle Control Programs (FMVCP) promulgated by the Administrator by January 1, 1990, and emission reductions due to the regulation of Reid Vapor Pressure promulgated by the Administrator prior to the enactment of the Clean Air Act Amendments of 1990. These measures are not creditable to the Rate of Progress Plans.

Growth Estimates: States need to provide sufficient control measures in their ROP plans to offset any emissions growth. To do this the State must estimate the amount of growth that will occur. The State uses population and economic forecasts to estimate how emissions will change in the future. Generally, the State followed our standard guidelines in estimating the growth in emissions. For the projection of NO_x emissions from industrial sources, the State used data collected during the development of the 1996 periodic emissions inventory. With the 1996 periodic inventory, Texas surveyed industry to determine why emissions were changing, to determine if changes were actual changes in emissions to the atmosphere, or just

changes in the emission estimation methodology. For example, many sources installed continuous emission monitors between 1990 and 1996, and actual measurements replaced engineering estimates. For more detail on how emissions growth was estimated, see Appendix H in the TSD for this action.

Calculation of Target Level: Table 7 shows how the emissions inventory, adjusted inventories and growth estimates are used to calculate the target levels of emissions and needed emission reductions.

TABLE 7.—CALCULATION OF REQUIRED VOC REDUCTIONS
(tons per day)

1990 Emission Inventory	649.79
1990 Adjusted Relative to 1996	547.54
1990 Adjusted Relative to 1999	535.78
RVP and Fleet Turnover	11.76
9% of 1990 Adjusted Relative to 1999	48.22
1996 Target level	465.52
1999 Target level	405.54
1999 Projection	575.28
Total Reductions required by 1999	169.74
Reductions required by 15%	139.98
Additional Reductions Required	29.76

How Are Those Emission Reductions Achieved?

Table 8 documents how the VOC emission reductions for this 9% plan are to be achieved. The following control measures are used: Aircraft Engines, Transportation Control Measures (TCMs), Windshield washer fluid, Utility Engines 1997–1999, Underground Storage Tank Remediation, vehicle Tier 1, vehicle Inspection/Maintenance, and RFG.

The State also revised its estimates of on-road motor vehicle emissions based on vehicle registration data updated to 1998. We are proposing to find them acceptable.

The State included a variety of TCMs in the SIP as a control strategy for attainment of the ozone NAAQS. The specific TCMs are described in detail in Appendix G of the SIP and will be incorporated by reference in Code of Federal Regulations in the final approval action. Please refer to the detailed discussion of TCM requirements under *Transportation Control Measures* in the Emission Control Strategy sub-section (sub-section I.E) of this action.

The TCMs identified through this process and included in the SIP are contained and funded in the metropolitan transportation plan (MTP) and transportation improvement

program (TIP) to ensure funding for implementation.

Please refer to the TSD for details of our analysis of the control measures and our basis for proposing to find the projected emission reductions from these measures acceptable.

TABLE 8.—SUMMARY OF VOC EMISSION REDUCTIONS
(tons per day)

Required Reduction	29.76
Creditable Reductions	
Aircraft Engines	1.52
TCMs	3.74
Windshield washer fluid	0.29
1998 vehicle registration	3.57
Utility Engine 1997–1999	2.37
UST remediation	1.81
Tier 1, I/M, RFG	16.82
Total	30.12

Does the Plan Achieve the Goal of a 9% Reduction in VOCs From the Baseline for 1997 to 1999?

Yes. Since the required reductions are 29.76 tons per day and the creditable reductions are 30.12 tons per day, the plan has excess reductions of 0.36 tons per day and achieves the goal; therefore, we are proposing approval of the Post 1996 ROP Plan.

Did the State Submit Additional Reductions?

Yes. The State also submitted NO_x reductions. The State's basic NO_x RACT rules were approved September 1, 2000. See 65 FR 53172. We are accepting the State's NO_x reductions as creditable reductions.

TABLE 9.—SUMMARY OF NO_x EMISSION REDUCTIONS
(tons per day)

Required Reduction	0.00
Creditable Reductions	
NO _x RACT	10.45
RFG, I/M, FMVCP Tier I	56.25
Off-road heavy duty diesel	11.98
Total	78.68

C. Motor Vehicle Emissions Budget

What Are the MVEBs Established by This Plan and Approved by This Action?

The MVEBs established by this plan and that we are proposing to approve are contained in Table 10. The MVEBs have been found to meet the adequacy criteria and upon further review of the SIP for approvability continue to be consistent with ROP.

TABLE 10.—1999 9% ROP SIP MOTOR VEHICLE EMISSIONS BUDGETS
(tons per day)

Pollutant	1999
VOC	147.22
NO _x	284.14

III. 15% Rate of Progress Plan

Proposed Action

What Action Are We Taking?

We are proposing full approval of the 15% plan submitted on August 8, 1996, contingent upon us finalizing approval of the State's I/M program for the DFW area. The 15% plan was given conditional, interim approval on November 10, 1998, pending corrections to the DFW I/M program. It was given conditional, interim approval because it relied on emissions reductions from the I/M program that received conditional, interim approval. For further information on the I/M conditional, interim approval, see 62 FR 37138, published on July 11, 1997. We found that the State had met the conditions of the conditional approval. On April 23, 1999, we removed the conditions and granted Texas a final interim approval. See 64 FR 19910. The interim approval expired on February 11, 1999. Texas has submitted significant revisions to the I/M program for the DFW area. The revisions expand the program from the 2 core nonattainment counties to the 4 counties in the nonattainment area plus 5 additional counties. We are taking a separate action on these I/M revisions. Because the revisions appear to have eliminated the last impediment to full approval of the I/M program for the DFW area, we are proposing full approval of the DFW 15% plan. This proposed full approval of the DFW 15% plan will not be finalized until action on the I/M program is complete. If the I/M program is disapproved, a different action on the 15% plan will have to be taken. See 63 FR 62943 and the 15% plan TSD for additional information on the DFW 15% plan.

How Did the Inspection/Maintenance Program Submitted With the Attainment Demonstration Purport To Cure the Previous Deficiencies?

As stated previously, an interim conditional approval for the Motorist Choice Program was proposed on October 3, 1996 (61 FR 51651). An interim final conditional approval was published on July 11, 1997 (62 FR 37138). The conditions were removed from the interim approval on April 23, 1999 (64 FR 19910). The interim

approval status of this program lapsed on February 11, 1999.

The State submitted an approvable 18-month demonstration on February 8, 1999, as required by the National Highway System Designation Act of 1995, Public Law 104-59, section 348(c)(1). The program was not fully approved at that time because one provision of the interim approval remained: that the State provide evidence that the remote sensing program was effective in identifying the shortfall in number of vehicles needed to make up for the lack of a tailpipe testing program in all the nonattainment counties. This evidence has yet to be submitted.

Modeling has since shown that NO_x reductions are essential to reaching attainment in the DFW area. As a result, the Texas Motorist Choice I/M program has been revised to include measurement for NO_x emissions and to provide additional NO_x emission reductions by expanding coverage of the program to all four counties within the DFW nonattainment area (Dallas, Tarrant, Collin and Denton) and selected attainment counties in the DFW consolidated metropolitan statistical area (Ellis, Johnson, Parker, Rockwall, and Kaufman). By revising the program to expand area coverage for NO_x SIP credits, the deficiency that prohibited full approval in DFW appears to be cured. All DFW nonattainment counties will be participating in the full program. As indicated above, we have not taken a final action on the I/M submittal. We will be seeking comment on the I/M program in a separate action.

IV. Background

A. The Relevant Clean Air Act Requirements

The Act requires us to establish National Ambient Air Quality Standards (NAAQS) for certain widespread pollutants that cause or contribute to air pollution that is reasonably anticipated to endanger public health or welfare (Clean Air Act sections 108 and 109). In 1979, we promulgated the 1-hour ground-level ozone standard of 0.12 parts per million (ppm) (120 parts per billion (ppb)). 44 FR 8202 (February 8, 1979).

Ground-level ozone is not emitted directly by sources. Rather, Volatile Organic Compounds (VOC) and Nitrogen Oxides (NO_x), emitted by a wide variety of sources, react in the presence of sunlight to form ground-level ozone. NO_x and VOC are referred to as precursors of ozone.

Ozone formation is accelerated or enhanced under certain meteorological

conditions, such as high temperatures and low wind speeds. Higher ozone concentrations occur downwind of areas with relatively high VOC and NO_x concentrations or in areas subject to relatively high background ozone and ozone precursor concentrations (ozone and ozone precursors entering an area as the result of transport from upwind source areas).

VOC emissions are produced by a wide variety of sources, including stationary and mobile sources. Significant stationary sources of VOC include industrial solvent usage, various coating operations, industrial and utility combustion units, petroleum and oil storage and marketing operations, chemical manufacturing operations, personal solvent usage, etc. Significant mobile sources of VOC include on-road vehicle usage and off-road vehicle and engine usage, such as farm machinery, aircraft, locomotives, and motorized lawn care and garden implements.

NO_x emissions are produced primarily through combustion processes, including industrial and utility boiler use, process heaters and furnaces, and on-road and off-road mobile sources.

An area exceeds the 1-hour ozone standard each time an ambient air quality monitor records a 1-hour average ozone concentration above 124 ppb in any given day (only the highest 1-hour ozone concentration at the monitor during any 24 hour day is considered when determining the number of exceedance days at the monitor). An area violates the ozone standard if, over a consecutive 3-year period, more than 3 days of exceedances are expected to occur at any monitor in the area. 40 CFR Part 50, App. H.

The highest of the fourth-highest daily peak ozone concentrations over the 3 year period at any monitoring site in the area is called the ozone design value for the area. The Act, as amended in 1990, required EPA to designate as nonattainment any area that was violating the 1-hour ozone standard, generally based on air quality monitoring data from the 1987 through 1989 period. Clean Air Act section 107(d)(4); 56 FR 56694 (November 6, 1991). The Act further classified these areas, based on the areas' ozone design values, as marginal, moderate, serious, severe, or extreme.

The control requirements and date by which attainment is to be achieved vary with an area's classification. Marginal areas were subject to the fewest mandated control requirements and had the earliest attainment date, November 15, 1993. Severe and extreme areas are subject to more stringent planning

requirements but are provided more time to attain the standard. Moderate areas were required to attain the 1-hour standard by November 15, 1996. Serious areas were required to attain by November 15, 1999, and severe areas are required to attain by November 15, 2005 or November 15, 2007, depending on the areas' ozone design values for 1987 through 1989. The DFW ozone nonattainment area was initially classified as "moderate" (56 FR 56694) with an attainment date of November 15, 1996. Since the area did not attain the standard by November 15, 1996, we reclassified the area to "serious" on March 20, 1998 (63 FR 8128). The statutory attainment date for a serious area is November 15, 1999. The DFW ozone nonattainment area contains Dallas, Tarrant, Collin, and Denton Counties (40 CFR 81.314 and 81.326).

The specific requirements of the Act for serious ozone nonattainment areas are found in part D, section 182(c) of the Act. Section 172 in part D provides the general requirements for nonattainment plans. Section 172(c)(6) and section 110 require SIPs to include enforceable emission limitations, and such other control measures, means or techniques as well as schedules and timetables for compliance, as may be necessary to provide for attainment by the applicable attainment date. Section 172(c)(1) requires the implementation of all reasonably available control measures as expeditiously as practicable and requires the SIP to provide for attainment of the NAAQS. Section 182(b)(1)(A) requires the SIP to provide for a 15% Rate of Progress Plan and also provide for specific annual reductions in emissions of VOC and NO_x "as necessary to attain" the ozone NAAQS by the applicable attainment date. Our "General Preamble for the Implementation of Title I of the Clean Air Act Amendments of 1990" (57 FR 13498 dated April 16, 1992) provides the interpretive basis for EPA's rulemakings under the nonattainment plan provisions of the Act (General Preamble). Section 182(c)(2)(A) requires that a serious area use photochemical grid modeling or any other methods judged by us to be at least as effective, to demonstrate attainment of the ozone NAAQS by the applicable attainment date. In the General Preamble, we provide that this requirement for demonstrating attainment may be met by the use of EPA-approved modeling techniques.

Section 182(c)(2)(B) of the Act requires each serious and above ozone nonattainment area to submit a SIP revision by November 15, 1994, which describes, in part, how the area will

achieve an actual volatile organic compound (VOC) (and NO_x if required) emission reduction from the baseline emissions of at least 3 percent of baseline emissions per year averaged over each consecutive 3-year period beginning 6 years after enactment (*i.e.*, November 15, 1996) until the area's attainment date. The plan providing for the reduction between November 1996 and November 1999 is referred to as the 9% Plan, the Post-1996 ROP Plan. As part of today's proposal, we are proposing action on the 15% ROP Plan, the 9% ROP Plan, and the attainment demonstration SIP revision submitted by the State of Texas for the DFW serious ozone nonattainment area.

B. Dates of State's SIP Submissions

As a result of the reclassification to serious, the State was required to submit both an attainment demonstration SIP with an attainment date of November 15, 1999; and a Rate of Progress SIP covering the years from November 15, 1996 to November 15, 1999. The State submitted those SIPs on March 19, 1999. The State had previously submitted the moderate area 15% ROP plan on August 8, 1996, before the area was reclassified to serious. The 15% plan was given conditional, interim approval.

Our review showed that the attainment demonstration SIP submitted in 1999 did not contain a control strategy or adopted measures to implement the strategy and the 1999 Post-1996 ROP SIP did not achieve the required 9% reduction in emissions for the time period. Therefore, we found both SIPs incomplete and started sanctions and Federal Implementation plan (FIP) clocks effective May 13, 1999.

A new Post-1996 ROP SIP was submitted October 25, 1999, and was found complete on December 16, 1999, since the new plan contained additional VOC reductions to meet the 9% requirement. The new attainment demonstration SIP was submitted April 25, 2000, and was found complete on June 23, 2000, because it contained a modeled control strategy and adopted regulations to implement the strategy. These two completeness findings stopped the sanctions clocks. The FIP clock continues to run unless and until we approve the 9% ROP Plan and the Attainment Demonstration SIP. Section 110(c)(1)(A) requires EPA to promulgate a FIP for the DFW nonattainment area by May 14, 2001 if we have not approved the SIPs by that time.

C. General Requirements for an Attainment Demonstration and its Motor Vehicle Emissions Budgets

In general, an attainment demonstration SIP includes a modeling analysis showing how an area will achieve the standard by its attainment date and the emission control measures necessary to achieve attainment. The attainment demonstration SIP must include MVEBs for transportation conformity purposes. Transportation conformity is a process required by Section 176(c) of the Act for ensuring that the effects of emissions from all on-road sources are consistent with attainment of the standard. Ozone attainment demonstrations must include the estimates of motor vehicle VOC and NO_x emissions that are consistent with attainment, which then act as a budget or ceiling for the purposes of determining whether transportation plans, programs, and projects conform to the attainment SIP.

D. Ozone Transport Policy and Attainment Date Extensions

The DFW area is classified as serious and, therefore, was required to attain the 1-hour ozone standard by November 15, 1999. The State of Texas, in submitting the April 2000 attainment demonstration SIP, requests an extension of the attainment date to November 15, 2007, based on our July 1998 transport policy.

In developing the attainment demonstration for DFW, the State makes the case that the 1998 Transport Policy is particularly relevant to DFW, which is downwind of the HGA area, and that the DFW area is affected by transport from HGA. If we approve of such a determination for DFW, the area would have until no later than November 15, 2007, the attainment date for HGA, to attain the 1-hour ozone standard.

In the DFW ozone attainment demonstration SIP reviewed here, the State also relies, in part, on regional and statewide NO_x emission reductions in Texas, including the upwind HGA area and eastern and central Texas. The SIP also relies on NO_x reductions from the NO_x SIP Call States where appropriate.

Attainment Demonstration SIPs were originally due November 1994. However, through a series of policy memoranda, we recognized that States had not submitted these attainment demonstrations and were constrained to do so until ozone transport had been further analyzed. One of the policy memoranda addressing the issue of ozone transport is the transport policy issued by us July 16, 1998, entitled "Extension of Attainment Dates for

Downwind Transport Areas". That memorandum included our interpretation of the Act regarding the extension of attainment dates for ozone nonattainment areas that have been classified as moderate or serious for the 1-hour ozone standard and which are downwind of areas that have interfered with their ability to demonstrate attainment of the ozone standard by dates prescribed in the Act. That memorandum stated that we will consider extending the attainment date for an area or a State that:

(1) Has been identified as a downwind area affected by transport from either an upwind area in the same State with a later attainment date or an upwind area in another State that significantly contributes to downwind ozone nonattainment;

(2) Has submitted an approvable attainment demonstration with any necessary, adopted local measures and with an attainment date that shows it will attain the 1-hour standard no later than the date that the emission reductions are expected from upwind areas under the final NO_x SIP call and/or the statutory attainment date for upwind nonattainment areas, *i.e.*, assuming the boundary conditions reflecting those upwind emission reductions;

(3) Has adopted all applicable local measures required under the area's current ozone classification and any additional emission control measures demonstrated to be necessary to achieve attainment, assuming the emission reductions occur as required in the upwind areas; and

(4) Has provided that it will implement all adopted measures as expeditiously as practicable, but no later than the date by which the upwind reductions needed for attainment will be achieved.

Once an area receives an extension of its attainment date based on ozone/precursor transport impacts, the area would no longer be subject to reclassification to a higher ozone nonattainment classification based on its original attainment date. If the DFW area is granted an attainment date extension, it would no longer be subject to a reclassification to severe nonattainment for ozone and no longer subject to the additional emission control requirements that would result from the reclassification to severe nonattainment based on a failure to attain by its original attainment date.

Texas has requested an extension of the attainment date for the DFW nonattainment area in conjunction with the ozone attainment demonstration submittals. The ozone attainment

demonstration SIP uses November 15, 2007 as the ozone attainment date. The chosen 2007 attainment date reflects the statutory attainment date for the HGA area, as the DFW area is downwind of the HGA area and is affected by transport from HGA.

V. Administrative Requirements

Under Executive Order 12866 (58 FR 51735, October 4, 1993), this proposed action is not a "significant regulatory action" and therefore is not subject to review by the Office of Management and Budget. This proposed action merely approves state law as meeting federal requirements and imposes no additional requirements beyond those imposed by state law. Accordingly, the Administrator certifies that this proposed rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). Because this rule proposes to approve pre-existing requirements under state law and does not impose any additional enforceable duty beyond that required by state law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4). For the same reason, this proposed rule also does not significantly or uniquely affect the communities of tribal governments, as specified by Executive Order 13084 (63 FR 27655, May 10, 1998). This proposed rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it merely approves a state rule implementing a federal standard, and does not alter the relationship or the distribution of power and responsibilities established in the Clean Air Act. This proposed rule also is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it is not economically significant.

In reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. In this context, in the absence of a prior existing requirement for the State to use voluntary consensus standards (VCS), EPA has no authority to disapprove a SIP submission for failure to use VCS. It would thus be inconsistent with applicable law for EPA, when it reviews a SIP submission, to use VCS in place of a SIP submission that otherwise satisfies the provisions of

the Clean Air Act. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. The proposed rule does not involve special consideration of environmental justice related issues as required by Executive Order 12898 (59 FR 7629, February 16, 1994). As required by section 3 of Executive Order 12988 (61 FR 4729, February 7, 1996), in issuing this proposed rule, EPA has taken the necessary steps to eliminate drafting errors and ambiguity, minimize potential litigation, and provide a clear legal standard for affected conduct. The EPA has complied with Executive Order 12630 (53 FR 8859, March 15, 1988) by examining the takings implications of the rule in accordance with the "Attorney General's Supplemental Guidelines for the Evaluation of Risk and Avoidance of Unanticipated Takings" issued under the executive order. This proposed rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Attainment, Hydrocarbons, Nitrogen oxides, Ozone, Reporting and recordkeeping requirements.

Authority: 42 U.S.C. 7401 *et seq.*

Dated: January 4, 2001.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 123

[FRL-6933-3]

Water Pollution Control; Program Modification Application by South Dakota To Administer the Sludge Management (Biosolids) Program

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule; second notice of application and public comment period.

SUMMARY: The State of South Dakota has submitted an application to EPA to revise the existing South Dakota Pollutant Discharge Elimination System (SDPDES) program to include administration and enforcement of the sludge management (biosolids) program.

According to the State's proposal dated March 23, 1998, this program would be administered by the South Dakota Department of Environment and Natural Resources (SDDENR).

The application was described in a **Federal Register** notice dated October 5, 2000 (65 FR 59385) and in notices published in the Rapid City Journal and the Sioux Falls Argus-Leader on October 20, 2000. Notices were mailed to persons known to be interested in such matters, including all persons on appropriate State and EPA mailing lists and all permit holders and applicants within the State. There were no comments received during the public comment period. The **Federal Register** notice provided for a 45-day comment period but did not state that a public hearing could be requested and would be considered by EPA. Therefore, EPA is extending the public comment period.

The application from South Dakota is complete and is available for inspection and copying. EPA has reviewed the State's request for delegation for completeness and adequacy and has found that the proposal meets Federal equivalency regulations.

DATES: Comments on this proposed rule received on or before March 5, 2001 will be considered before issuing a final rule. Comments postmarked after this date may not be considered.

ADDRESSES: You can view and copy South Dakota's application for modification from 8:00 a.m. until 5:00 p.m. Monday through Friday, excluding holidays, at the South Dakota Department of Environment and Natural Resources; Joe Foss Building, Pierre, South Dakota or at the EPA Regional Office at 999 18th Street, Denver, Colorado. Requests for copies should be addressed to Kelli Buscher, South Dakota Department of Environment and Natural Resources at the above address or at telephone number 605-773-3351. (There will be a \$15 charge for copies.) Electronic comments are encouraged and should be submitted to brobst.bob@epa.gov or send written comments to Robert Brobst, U.S. EPA/8P-WP, 999 18th Street, Suite 300, Denver, Colorado 80202-2466.

FOR FURTHER INFORMATION CONTACT: Robert Brobst at the above address by phone at (303) 312-6129, or by e-mail at brobst.bob@epa.gov.

SUPPLEMENTARY INFORMATION: Section 405 of the Clean Water Act (CWA), 33 U.S.C. Section 1345, created the sludge management program, allowing EPA to issue permits for the disposal of sewage sludge under conditions required by the CWA. Section 405(c) of the CWA provides that a state may submit an

application to EPA for administering its own program for issuing sewage sludge permits within its jurisdiction. EPA is required to approve each such submitted state program unless EPA determines that the program does not meet the requirements of Sections 304(i) and/or 402(b) of the CWA or the EPA regulations implementing those sections.

South Dakota's application for sludge management program approval contains a letter from the Governor requesting program approval, an Attorney General's Statement, copies of pertinent State statutes and regulations, amendments to the SDPDES Program Description, and amendments to the SDDENR/EPA Memorandum of Agreement (MOA) executed by the Regional Administrator, Region 8, EPA, and the Secretary, Department of Environment and Natural Resources.

The State of South Dakota has existing environmental self-evaluation laws and rules. These provide evidentiary privilege and limited immunity for certain disclosures made in an environmental self-evaluation. SDCL section 1–40–35 provides that no privilege or immunity exists for information required to be collected, developed, maintained, or reported to the department according to State law, rule, regulation, or permit.

South Dakota has incorporated Federal sludge management regulations by reference into its State rules. These rules require record keeping and reporting for certain technical monitoring and assessment, management practices, and certain certifications of compliance. Because these requirements and any requirement in sludge permits would be excluded from the self-evaluation privilege, EPA believes that South Dakota has the authority necessary to administer the sludge management program to assure protection of public health and the environment, and invites comment on this issue.

EPA discussed the SDDENR program application with the South Dakota Office of the U.S. Fish and Wildlife Service and received their concurrence dated June 29, 2000 stating that the proposed program authorization was unlikely to jeopardize the continued existence of any endangered species or threatened species, or result in the destruction or adverse modification of habitat of such species.

By Letter dated October 20, 1999, EPA discussed the program application with the South Dakota State Historic Preservation Officer and received concurrence by letter dated November 5, 1999. The State Historic Preservation

Officer determined that no historic properties would be affected by the addition of the biosolids program.

What are biosolids? Biosolids are, in effect, a slow release nitrogen fertilizer with low concentrations of other plant nutrients. In addition to significant amounts of nitrogen, biosolids also contain phosphorus, potassium, and essential micronutrients such as zinc and iron. Many western soils are deficient in micronutrients. Biosolids are rich in organic matter that can improve soil quality by improving water holding capacity, soil structure and air and water transport. Proper use of biosolids can ultimately decrease topsoil erosion. When applied at agronomic rates (the rates at which plants require nitrogen during a defined growth period), biosolids provide an economic benefit in addition to their environmental benefits.

How do biosolids differ from sewage sludge? Most simply, biosolids is the new name for what had previously been referred to as sewage sludge. Biosolids are primarily treated organic solids at wastewater treatment plants—with the emphasis on the word treated—that are suitable for recycling as a soil amendment. Sewage sludge now refers to untreated primary and secondary organic solids. This differentiates biosolids that have received stabilization treatment at a municipal wastewater treatment plant from other types of existing sludge (such as oil and gas field wastes) that cannot be beneficially recycled as soil amendments.

What are the traditional practices in this region? Until 25 years ago, the traditional practice in this Region was to landfill or incinerate what was then called sewage sludge. During the past quarter century the practice changed to recycling biosolids as soil amendments. States in Region 8 recycle 85% of the biosolids generated in the six state Region.

What Are the Federal Requirements?

The EPA in 1993 set forth requirements for management of all biosolids generated during the process of treating municipal wastewater, commonly called the 503 rule. The 503 rule encourages the beneficial reuse of biosolids, and establishes strict standards under which wastewater residuals can be beneficially recycled as soil amendments. The EPA believes that biosolids are an important resource that can and should be safely recycled. The 503 rule is designed to protect public health and the environment. Most of the requirements were based on the results of extensive multimedia risk assessment

and on more than 25 years of independent research. The 503 rule establishes standards for pathogen destruction and for levels of metals that can be present in biosolids. It also governs the agricultural practices, site restrictions, and crop harvesting restrictions and the stability of the materials by reducing the attraction of disease vectors (such as flies).

Indian Country

South Dakota is not authorized to carry out its Biosolids program in Indian Country, as defined in 18 U.S.C. 1151. This includes, but is not limited to: Lands within the exterior boundaries of the following Indian reservations located within the State of South Dakota:

- A. Cheyenne River Indian Reservation,
- B. Crow Creek Indian Reservation,
- C. Flandreau Indian Reservation,
- D. Lower Brule Indian Reservation,
- E. Pine Ridge Indian Reservation,
- F. Rosebud Indian Reservation,
- G. Standing Rock Indian Reservation,
- and
- H. Yankton Indian Reservation.

EPA held a public hearing on December 2, 1999, in Badlands National Park, South Dakota, and accepted public comments on the question of the location and the extent of Indian Country within the State of South Dakota. In a forthcoming **Federal Register** notice, EPA will respond to the comments that have been received and more specifically identify Indian Country areas in the State of South Dakota.

Public Notice Procedures

Copies of all submitted statements and documents shall become a part of the record submitted to EPA. All comments or objections presented in writing to EPA Region 8 and postmarked within 45 days of this notice will be considered by EPA before it takes final action on South Dakota's request for program modification approval. All written comments and questions regarding the sludge management program should be addressed to Robert Brobst at the above address. The public is also encouraged to notify anyone who may be interested in this matter. A public hearing may be requested. A public hearing will be held if response to this notice indicates significant public interest.

EPA's Decision

EPA will consider and respond to all significant comments received before taking final action on South Dakota's request for Sludge program approval. If no substantial comments are received,

EPA will approve South Dakota's sludge management program. The decision will be based on the requirements of Sections 405, 402 and 304(i) of the CWA and EPA regulations promulgated thereunder.

If the South Dakota program modifications are approved, EPA will so notify the State and anyone who has submitted significant comments. Notice will be published in the **Federal Register** and, as of the date of program approval, EPA will suspend issuance of federal NPDES sludge management permits in South Dakota (except, as discussed above, for those dischargers in "Indian Country"). The State's program will operate in lieu of the EPA-administered program. However, EPA will retain the right, among other things, to object to SDNPDES permits proposed by South Dakota and to take enforcement actions for violations, as allowed by the CWA.

If EPA disapproves South Dakota's sludge management program, EPA will notify the State and anyone who submitted significant comments of the reasons for disapproval and of any revisions or modifications to the State program that are necessary to obtain approval.

Regulatory Flexibility Act

Based on General Counsel Opinion 78-7 (April 18, 1978), EPA has long considered a determination to approve or deny a State NPDES program submission to constitute an adjudication because an "approval," within the meaning of the Administrative Procedure Act (APA), constitutes a "licence," which, in turn, is the project of an "adjudication." For this reason, the statutes and Executive Orders that apply to rulemaking action are not applicable here. Among these are provisions of the Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.* Under the RFA, whenever a Federal agency proposes or promulgates a rule under section 553 of the APA, after being required by that section or any other law to publish a general notice of proposed rulemaking, the Agency must prepare a regulatory flexibility analysis for the rule, unless the Agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. If the Agency does not certify the rule, the regulatory flexibility analysis must describe and assess the impact of a rule on small entities affected by the rule.

Even if the NPDES program approval were a rule subject to the RFA, the Agency would certify that approval of the State proposed SDNPDES program would not have a significant economic

impact on a substantial number of small entities. EPA's action to approve an NPDES program merely recognizes that the necessary elements of an NPDES program have already been enacted as a matter of State law; it would, therefore, impose no additional obligation upon those subject to the State's program. Accordingly, the Regional Administrator would certify that this program, even if a rule, would not have significant economic impact on a substantial number of small entities.

Unfunded Mandates Reform Act

Title II of the Unfunded Mandates Reform Act of 1995 (UMRA), Public Law 104-4, establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and tribal governments and the private sector. Under section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis, for proposed and final rules with "Federal mandates" that may result in expenditures to State, local, and tribal governments, in the aggregate, or to the private sector, of \$100 million or more in any one year. Before promulgating an EPA rule for which a written statement is needed, section 205 of the UMRA generally requires WPA to identify and consider a reasonable number of regulatory alternatives and adopt the least costly, most cost-effective or least burdensome alternative that achieves the objectives of the rule. The provisions of section 205 do not apply when they are inconsistent with applicable law. Moreover, section 205 allows EPA to adopt an alternative other than the least costly, most cost-effective or least burdensome alternative if the Administrator publishes with the final rule an explanation why that alternative was not adopted. Before EPA establishes any regulatory requirements that may significantly or uniquely affect small governments, including tribal governments, it must have developed under section 203 of the UMRA a small government agency plan. The plan must provide for notifying potentially affected small governments, enabling officials of affected small governments to have meaningful and timely input in the development of EPA regulatory proposals with significant Federal intergovernmental mandates, and informing, educating, and advising small governments on compliance with the regulatory requirements.

Today's decision includes no Federal mandates for State, local or tribal governments or the private sector. The Act excludes from the definition of a "Federal mandate" duties that arise from participation in a voluntary

Federal program, except in certain cases where a "federal intergovernmental mandate" affects an annual federal entitlement program of \$500 million or more which are not applicable here. South Dakota's request for approval of its budget management program is voluntary and imposes no Federal mandate within the meaning of the Act. Rather, by having its sludge management program approved, the State will gain the authority to implement the program within its jurisdiction, in lieu of EPA, thereby eliminating duplicative State and Federal requirements. If a State chooses not to seek authorization for administration of a sludge management program, regulation is left to EPA.

EPA's approval of state programs generally may reduce compliance costs for the private sector, since the State, by virtue of the approval, may now administer the program in lieu of EPA and exercise primary enforcement. Hence, owners and operators of sludge management facilities or businesses generally no longer face dual Federal and State compliance requirements, thereby reducing overall compliance costs. Thus, today's decision is not subject to the requirements of sections 202 and 205 of the UMRA.

The Agency recognizes that small governments may own and/or operate sludge management facilities that will become subject to the requirements of an approved State sludge management program. However, small governments that own and/or operate sludge management facilities are already subject to the requirements in 40 CFR parts 123 and 503 and are not subject to any additional significant or unique requirements by virtue of this program approval. Once EPA authorizes a State to administer its own sludge management program and any revisions to that program, these same small governments will be able to own and operate their sludge management facilities or businesses under the approved State program, in lieu of the Federal program. Therefore, EPA has determined that this document contains no regulatory requirements that might significantly or uniquely affect small governments.

Dated: January 4, 2001.

William P. Yellowtail,

Regional Administrator, Region 8.

[Docket No. 001206341-0341-01]

RIN 0660-AA14

Mandatory Reimbursement Rules for Frequency Band or Geographic Relocation of Federal Spectrum-Dependent Systems

AGENCY: National Telecommunications and Information Administration, Commerce.

ACTION: Notice of proposed rulemaking.

SUMMARY: The National Telecommunications and Information Administration (NTIA) proposes to amend its regulations to set forth the rules governing reimbursement to Federal entities by the private sector as a result of reallocation of frequency spectrum. This action is necessary to provide spectrum for future commercial wireless communications service and to compensate the Federal Government for the costs incurred in making that spectrum available.

DATES: Submit comments on or before March 19, 2001. Reply comments are due April 18, 2001.

ADDRESSES: The public is invited to submit written comments in paper or electronic form. Comments may be mailed to Milton Brown, Office of the Chief Counsel, National Telecommunications and Information Administration (NTIA), Room 4713, U.S. Department of Commerce, 1401 Constitution Avenue, N.W., Washington, DC 20230. Paper submissions should include a version on diskette in ASCII, Word Perfect (please specify version), or Microsoft Word (please specify version) format. Comments may be viewed on NTIA's website at <http://www.ntia.doc.gov>.

Comments submitted in electronic form may be sent to reimbursement@ntia.doc.gov. Electronic comments should be submitted in the formats specified above.

FOR FURTHER INFORMATION CONTACT: Milton Brown, NTIA, (202) 482-1816.

SUPPLEMENTARY INFORMATION:

Authority: 47 U.S.C. 921, *et seq.* (Supp. V. 1993); Strom Thurmond National Defense Authorization Act for FY 1999, Pub. L. No. 105-261, 112 Stat. 1920 (1998); 47 U.S.C. 923(g).

I. Introduction

1. NTIA is the executive branch agency principally responsible for

developing and articulating domestic and international telecommunications policy. NTIA acts as the principal advisor to the President on telecommunications policies pertaining to the Nation's economic and technological advancement and to the regulation of the telecommunications industry. NTIA is also responsible for managing the Federal Government's use of the radio spectrum. The Federal Communications Commission (FCC), an independent agency of the Federal Government, manages electromagnetic spectrum used by the private sector, including state and local governments. With the proliferation of radio-based technologies, management and use of the radio spectrum has become increasingly complex. Federal agencies are extremely dependent on spectrum access to provide a wide variety of critical services to the American people. Congress has found that telecommunications and information are vital to the public welfare, national security, and competitiveness of the United States, and that technological advances in the telecommunications and information fields make it imperative that the United States maintain effective national and international policies and programs capable of taking advantage of these continued advancements.¹

II. Background

2. On August 10, 1993, Title VI of the Omnibus Budget Reconciliation Act of 1993 (OBRA 93) was signed into law.² OBRA 93 authorized the FCC to use competitive bidding (auctions) for the reassignment and licensing of spectrum frequencies for certain commercial services. OBRA 93 also directed the Secretary of Commerce to transfer at least 200 megahertz (MHz) of spectrum below 5 gigahertz (GHz) from Federal agencies to the FCC for licensing to the private sector. Pursuant to OBRA 93, NTIA identified Federal bands for reallocation totaling 235 MHz from the Federal Government to non-Government use in its February 1995 Spectrum Reallocation Final Report.³

3. Title III of the Balanced Budget Act of 1997 (BBA 97) required the Secretary of Commerce to identify an additional 20 MHz below 3 GHz for reallocation to non-Federal users.⁴ In response to this

directive, NTIA issued a Spectrum Reallocation Report in February 1998 which identified the additional bands for reallocation.⁵ BBA 97 directed the FCC to auction the 20 MHz by 2002 and the 1710-1755 band identified in the 1995 Spectrum Reallocation Final Report after January 1, 2001.⁶

4. In 1998, Congress passed the Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 (the Act).⁷ This legislation sought to encourage the transfer of electromagnetic spectrum from Federal government to private use by authorizing Federal entities to accept compensation payments when they relocate or modify their frequency use to accommodate non-Federal users of the spectrum.⁸ Indeed the Act requires "any person on whose behalf a Federal entity incurs costs" pursuant to frequency spectrum relocation or modification "to compensate the Federal entity in advance" for the entity's modification or relocation expenses.⁹ The Act also references various expenses associated with frequency relocation or modification that qualify for reimbursement including "the costs of any modification, replacement, or re-issuance of equipment, facilities, operating manuals, or regulations incurred by that entity."¹⁰ Moreover, the Act requires the Federal entity to notify NTIA of the "marginal costs anticipated to be associated with such relocation or with the modifications necessary to accommodate prospective licensees."¹¹

5. The Act directs NTIA and the FCC to "develop procedures for the implementation of [relocation] which * * * shall include a process for resolving any differences that arise between the Federal Government and commercial licensees regarding

⁵ See National Telecommunications and Information Administration, U.S. Department of Commerce, NTIA Special Publication 98-36, Spectrum Reallocation Report (Feb. 1998).

⁶ See note 4 *supra* at section 3002(b). Of the 20 MHz of spectrum, eight (8) MHz (i.e., 139-140.5 MHz, 141.5-143 MHz and 1385-1390 MHz bands) were subsequently reclaimed by the Federal Government in accordance with the National Defense Authorization Act for Fiscal Year 2000, See Pub. L. 106-65, 113 Stat. 512 (1999).

⁷ Pub. L. 105-261, 112 Stat. 1920 (1998) (amending section 113(g) of the NTIA Organization Act (codified at 47 U.S.C. 923(g)).

⁸ See 47 U.S.C. 923(g)(1)(A). "Federal entity" is defined as "any department, agency, or other instrumentality of the Federal Government that utilizes a Government station license obtained under section 305 of the 1934 Act (47 U.S.C. 305)." 47 U.S.C. 923(i).

⁹ See 47 U.S.C. 923(g)(1)(B).

¹⁰ See 47 U.S.C. 923(g)(1)(A).

¹¹ *Id.*

¹ See National Telecommunications and Information Administration Organization Act, 47 U.S.C. 901 (b)(1)-(2).

² Pub. L. 103-66, 107 Stat. 31 (1993).

³ See National Telecommunications and Information Administration, U.S. Department of Commerce, NTIA Special Publication 94-27, *Spectrum Reallocation Final Report* (Feb. 1995).

⁴ Pub. L. 105-33, 111 Stat. 251 (1997).

estimates of relocation or modification costs.”¹²

6. These proposed rules provide a procedure for Federal entities to receive reimbursement for the relocation or modification expenses that they incur as a result of the reallocation of radio spectrum mandated by OBRA 93, BBA 97, and future reallocations. As such, these proposed rules address reimbursement issues associated with the relocation or modification of frequency spectrum that have been reallocated. The proposed rules do not apply to issues involving the reallocation of frequency spectrum. These proposed rules provide a mechanism for the Federal entities to submit estimates of the costs to relocate. The proposed rules direct NTIA to solicit estimates of the costs of relocation from the affected Federal entities, and provide that information to the FCC at least 180 days prior to an auction.¹³

7. The proposed rules also provide procedures for the successful bidder to make payment to the Federal entity after an auction. Pursuant to direction from Congress, the proposed rules also include a process for resolving

differences that arise between the Federal Government and the successful bidder regarding estimates of relocation or modification of costs. To the extent that a successful bidder disagrees with a Federal entity's estimated relocation costs, the proposed rules provide for a mandatory negotiation and/or third-party mediation period. If the parties do not agree to relocation costs within the mandatory negotiation period, the parties must enter into a non-binding arbitration program.

8. As required by section 603 of the Regulatory Flexibility Act, 5 U.S.C. 603, NTIA has prepared an Initial Regulatory Flexibility Analysis (IRFA) of the expected impact on small entities of the proposals suggested in this document. The IRFA is set forth in the Regulatory Flexibility Analysis section of these proposed rules. Written public comments are requested on the IRFA. These comments must be filed in accordance with the same filing deadlines as comments filed in this Notice of Proposed Rulemaking (NPRM), but they must have a separate and distinct heading designating them as responses to the IRFA. NTIA shall send a copy of this NPRM, including the

IRFA, to the Chief Counsel for Advocacy of the Small Business Administration in accordance with section 603(a) of the Regulatory Flexibility Act, 5 U.S.C. 603(a).

III. Discussion

9. These proposed rules have been developed to ensure that the Federal Government is fully reimbursed for the expenses it incurs in retuning, modifying or relocating a system as a result of reallocation. To the extent that there are other ways to accomplish this goal, NTIA will entertain comments from interested parties.

Affected Bands

10. Pursuant to OBRA 93, NTIA identified 235 MHz of Federal Government spectrum for transfer to the private sector.¹⁴ Similarly, NTIA identified another 20 MHz of spectrum for reallocation to the private sector as mandated by the BBA 97.¹⁵ The table below shows the specific frequency bands reallocated from Federal Government use to the private sector as a result of the legislation and Federal Government action.

REALLOCATED FREQUENCY BANDS FROM THE FEDERAL GOVERNMENT TO THE PRIVATE SECTOR

Freq. band (MHz)	Legislation	Bandwidth (MHz)	Schedule
1390–1400	OBRA–93	10	January 1999
1427–1432	OBRA–93	5	January 1999

1432–1435	BBA–97	3	January 1999
2385–2390	BBA–97	5	January 2005

11. On October 17, 1998, the President signed into law the Strom Thurmond National Defense Authorization Act for Fiscal Year 1999, which among other things, amended the NTIA Organization Act to require private sector entities to reimburse

Federal users for relocations due to reallocation of spectrum assignments.¹⁸ The Act also sets forth which spectrum would be the subject of the mandatory reimbursement rules: the 1710–1755 MHz band from the first reallocation report, the 20 MHz identified in the

second reallocation report, and any future reallocations.¹⁹ The affected frequency bands that currently qualify for reimbursement under the proposed rule include the following:

¹² See 47 U.S.C. 923(g)(1)(E).

¹³ We note that the FCC will notify potential bidders prior to the auction of the estimated relocation costs submitted by the Federal entities for the affected bands.

¹⁴ See note 3, *supra*. The Federal Government, however, later reclaimed fifty (50) MHz of this spectrum (*i.e.*, 4635–4685 MHz) and substituted 4940–4990 MHz in its place. See 47 U.S.C. 924(b), 926; see also Letter from Larry Irving, Assistant

Secretary for Communications and Information, U.S. Department of Commerce, to William E. Kennard, Chairman, Federal Communications Commission (March 30, 1999) (notifying FCC of reclamation and substitution of spectrum).

¹⁵ See note 5, *supra*.

¹⁶ The NTIA Spectrum Reallocation Final Report provided for early reallocation band (*i.e.*, 1999) for the top 25 major cities in the United States with the private sector reimbursing the Federal users.

Subsequently, Title III of BBA 97 (entitled “Communications and Spectrum Allocation Provisions”) provides for the reallocation of this band for competitive bidding commencing after January 1, 2001.

¹⁷ See note 14, *supra*.

¹⁸ See note 7, *supra*.

¹⁹ See note 6, *supra*.

Bands That Qualify for Reimbursement

216–220 MHz
 1432–1435 MHz
 1710–1755 MHz
 2385–2390 MHz

12. We seek comment on the affected bands identified above. Future bands that qualify for reimbursement will be identified via a public notice and request for comment.

Mandatory Relocation

13. DOBRA 93 and BBA 97 require NTIA to identify spectrum for reallocation to exclusive non-Government uses. Moreover, Section 3002 of BBA 97 amended the NTIA Organization Act to add a subsection to encourage Federal entities to relocate Government stations from the bands identified in any reallocation report through means of these reimbursement requirements or any other provision of law to “maximize[] the spectrum available for non-Federal use.”²⁰ Nevertheless, in some cases, it may be technically possible for incumbent Federal entities to continue to share the reallocated spectrum with the new commercial licensees. We seek comment on whether these Federal entities should be required to relocate in those cases where sharing is technically possible. If not, we seek comment on the conditions whereby such Federal entities should be permitted to remain in the band and who would pay for any system modification that would enhance spectrum sharing. For example, because the spectrum will be reallocated to exclusive non-Government uses as required by DOBRA 93 or BBA 97, should such a Federal entity be permitted to remain in the band only on a non-interference basis after the appropriate regulatory approvals have been obtained?

14. We also solicit comment on whether a Federal entity should be entitled to reimbursement of relocation costs if it relocates to a landline communications system or commercial radio services.²¹ We note that such an option may provide the most spectrum efficient and cost-effective alternative to a government-exclusive radio frequency system consistent with policy directive set forth in the NTIA Organization Act. For example, section 104 of the NTIA Organization Act provides that the Secretary of Commerce, in assigning frequencies for mobile radio services and other radio services “shall promote efficient and cost-effective use of the

spectrum to the maximum extent feasible.” 47 U.S.C. 903(d)(1). Moreover, the NTIA Organization Act provides that any Federal Government station identified for reallocation shall “to the maximum extent practicable * * * relocate its spectrum use to other frequencies that are reserved for Federal use or to consolidate its spectrum use with other Federal Government stations in a manner that maximizes the spectrum available for non-Federal use.” Id. at section 923(h). There may also be other circumstances where no other frequency is available and a landline or other commercial service is a viable alternative available to the Federal entity that is required to relocate.

Availability of a Comparable Facility

15. The proposed rules do not require a Federal entity to relocate until a comparable facility is available to it for a reasonable time to make adjustments, determine compatibility, and ensure a seamless transition from an existing facility or frequency band(s) to the new or modified facility or frequency band(s). NTIA defines the term “comparable facility” to mean that the replacement facility restores the operational capabilities of the original facility to an equal or superior level. For example, in the 1710–1755 MHz band, the vast majority of Non-DoD Federal Government facilities are fixed point-to-point microwave networks, and may be replaced by fixed microwave facilities in other bands. On the other hand, DoD operates a number of systems, including highly mobile, non-communications systems. These military systems must operate within the limits of established doctrine.

16. NTIA will consider four basic factors to determine comparability of replacement communications facility, although there may be other factors to consider. These four basic factors are communications throughput, system reliability, operating costs, and operational capability. A replacement facility will be considered comparable if the new system’s operational capability, communications throughput and reliability are equal to or greater than that of the system being replaced, taking into account the operating costs.

17. Communications throughput, for the purposes of this proceeding, means the amount of information transferred within the system for a given amount of time. For digital systems, communications throughput is measured in bits per second (bps), for analog systems the communications throughput is measured by the number of voice, video or data channels.

18. System reliability means the percentage of time information is accurately transferred within a system. The reliability of a system is a function of equipment failures (e.g., transmitters, feed lines, antennas, receivers and battery back-up power) and the availability of the frequency channel given the propagation characteristics (e.g., frequency, terrain, atmospheric condition, and noise) and equipment sensitivity. System reliability also includes the ability of a radio-communications station to perform a required function under stated conditions for a stated period of time. System reliability may involve three distinct concepts: Attaining a specified level of performance; the probability of achieving that level; and maintaining that level for a specified time. For digital systems this would be measured by the percent of time the bit error rate (BER) exceeds a desired value, and for analog transmissions this would be measured by the percentage of time that the receiver carrier-to-noise ratio exceeds the receiver threshold. It should be noted for many DoD systems, performance is defined by sophisticated system specifications as related to specific mission requirements. In measuring/assessing DoD systems, these specific system specifications must be used.

19. Operating costs are the costs to operate and maintain the Federal entity’s replacement system. New licensees would compensate federal entities for any increased recurring costs associated with the replacement facilities (e.g., additional rental payments and increased utility fees) for five years after relocation.

20. Operational capability is the measure of a system’s ability to perform its validated functions within doctrinal requirements, including service, joint service, and allied interoperability requirements with related systems.

21. These four factors, however, may not be appropriate measures for all Federal Government stations required to relocate. For example, to measure comparability for radar systems it may be more accurate to compare the minimum required radar target cross section able to be detected at a given range with a specified probability of false alarm under mission-required conditions. Other measures of radar system comparability may include target resolution and the ability to meet performance specifications under adverse conditions such as weather and hostile jamming. Radar and other spectrum-dependent systems may require access to specific frequency bands to perform their missions in an

²⁰ See 47 U.S.C. 923(h).

²¹ We note, however, that the statute provides reimbursement to Federal entities that relocate to “another frequency or frequencies.” 47 U.S.C. 923(g).

optimal manner. For example, long range surveillance functions relatively free of weather effects are optimized at low frequencies and weapon control at higher frequencies. The use of higher frequencies, however, may limit the useful range of some spectrum-dependent systems, such as radar or data links. Such limitations could affect mission performance.

22. NTIA seeks comments on this proposed definition and whether the factors described above are sufficient to determine comparability of facilities. If not, NTIA seeks comment on what other factors should be considered, and whether such factors should be tailored to specific Federal Government systems to be relocated.

Frequency Assignments Eligible for Reimbursement

23. The proposed rules outline the conditions, limitations and eligibility requirements for reimbursement of the costs associated with relocation as a result of reallocation.

24. *Equipment/system modification:* Sometimes radiocommunication systems in certain bands can be modified to tune outside of the reallocated band to the upper or lower portion of the incumbent band. Retuning is oftentimes less expensive to implement, assuming there is no congestion in the upper portion of the band as a result of the migration and assuming the transmitter-receiver frequency separation can be met. Retuning could save an agency a considerable amount of money because it does not require additional towers or stations, new feed lines or associated equipment. Thus, to the extent that a Federal entity that is required to relocate is able to modify its equipment, with the result that the retuned equipment provides operational capabilities comparable with its original system, NTIA proposes to limit reimbursement to the costs associated with re-tuning. We note, however, that modification/retuning may not be possible when taking into consideration the factor of "operational comparability" as noted above. We seek comment on this proposed limitation.

25. *Old Assignments versus new assignments:* NTIA identified the Federal bands for reallocation from the Federal Government to non-Government use in the February 1995 Spectrum Reallocation Final Report, as well as the February 1998 Spectrum Reallocation Report. On October 17, 1998, the President subsequently signed into law the National Defense Authorization Act for Fiscal Year 1999 that requires the private sector to reimburse Federal

entities for the cost of relocation or modification of systems as a result of reallocation. Thus, for purposes of these proposed rules, we propose to characterize an old assignment to a Federal entity as one that was authorized before October 17, 1998, and a new assignment as one that was authorized after October 17, 1998. With respect to reimbursement under these rules, we propose that only old assignments within the affected bands (*i.e.*, 216–220 MHz, 143–1435 MHz, 1710–1755 MHz, 2385–2390 MHz) would be entitled to reimbursement. NTIA believes that the costs associated with any new assignment requested by Federal entities after the respective dates of reallocation reports in the affected bands should be borne by that Federal entity rather than a new commercial licensee to prevent unjust enrichment. We seek comment on this limitation.

26. *Exempted Federal power agencies:* Assignments made to Federal power agencies (FPAs) are statutorily exempt from the requirements to relocate under the reallocation reports.²² Thus, the 1995 Spectrum Reallocation Final Report provides a list of frequency assignments in the 1710–1755 MHz band that support the FPAs and that are not required to relocate.²³ NTIA believes, however, that Section 923(g)(1)(A) of Title 47 of the U.S. Code can be read to permit an FPA to accept reimbursement for relocations undertaken on a voluntary basis. We seek comment on whether an FPA that wishes to relocate from a band of spectrum identified for reallocation can accept voluntary reimbursement from a commercial licensee. If so, should the parties be subject to these proposed rules or be left exclusively to voluntary negotiations?

27. *Other government stations:* Under the 1995 Spectrum Reallocation Final Report and the 1998 Spectrum Reallocation Report, NTIA also exempted other Federal Government assignments from the requirement to relocate from the bands identified for reallocation either indefinitely or for a longer term of years.²⁴ We seek

comment on whether these Federal entities can accept reimbursement for voluntarily relocating these stations to a commercial licensee, and if so, whether such negotiations should be subject to these proposed rules.

28. *Experimental Stations:* In general, the proposed rules do not permit reimbursement for relocated frequency assignments for experimental stations or experimental testing stations. An "experimental station" means a station utilizing radio waves in experiments with a view to the development of science or technique. An "experimental testing station" is used for the evaluation or testing of electronics, equipment or systems, including site selection and transmission path surveys. These stations are oftentimes temporary use stations and are operated on a non-interference basis. NTIA believes that most experimental stations not be entitled to reimbursement under the statute. Reimbursement, however, would still be required for frequency assignments to experimental stations for systems that are in the developmental stage that have been certified for spectrum support by NTIA for Stage 3 developmental testing.²⁵ Because systems at the Stage 3 are certified for testing of proposed operational hardware and potential equipment configurations, we believe that these systems are entitled to reimbursement. We seek comment on our treatment of experimental stations in the proposed rules.

Cost Sharing

29. NTIA proposes to adopt a cost-sharing plan where the potential requirement to reimburse a Federal entity for relocation costs could disproportionately fall upon one potential bidder or licensee or a small number of potential bidders or licensees. For example, there may be multiple bidders in a geographic area for small bandwidth that may result in division of a Federal entity's bandwidth. There is no mechanism in place to compensate the Federal entity for that portion of the spectrum that is not licensed or acquired by any particular auction winner. In these circumstances, one auction winner could be made to pay for the entire spectrum allocation held by the Federal entity, despite the

²² See 47 U.S.C. § 923(c)(4)(C). The term Federal power agency refers to the Tennessee Valley Authority, the Bonneville Power Administration, the Western Area Power Administration, the Southwestern Power Administration, the Southeastern Power Administration, and the Alaska Power Administration.

²³ See Spectrum Reallocation Final Report, NTIA Special Publication 95–32, Appendix E, Tables 1 and 2.

²⁴ See *id.* at Appendix E (Exempted Safety-of-Life Fixed Microwave Stations in the 1710–1755 MHz band); see also 1998 Spectrum Reallocation Report at 3–18 (Table 3–2), 3–38 (Table 3–4), 3–48 (Table

3–6), 4–1 (Table 4–1) (setting forth the sites exempt from relocation or with special relocation dates in the 216–220 MHz, 1432–1435 MHz, and 2385–2390 MHz bands).

²⁵ NTIA Manual of Regulations and Procedures for Federal Radio Frequency Management, Section 10.3.1 (September 1995). Stage 3 certification is required for testing proposed operational hardware and potential equipment configurations.

fact that only a portion of the bandwidth is needed. On the other hand, auction bidders that need only a portion of the bandwidth may perceive the cost of relocating a Federal entity too expensive in the absence of a cost-sharing plan, and thus may forgo providing a particular service to a geographic area.²⁶ To ensure that no private entity bears the full cost burden of relocating a government entity and to ensure that a geographic area is not denied service because the costs of reimbursement are disproportionate, we seek comment on whether a cost sharing plan, among auction winners, should be implemented. We also seek comment on what measures might reasonably be implemented to assure that the federal entity is guaranteed full payment from multiple licensees. We also seek comment on whether a band manager or some other entity that licensees may establish would be appropriate to serve as a clearinghouse to administer the cost-sharing plan. Although we contemplate developing a cost-sharing plan and criteria for identifying a clearinghouse for each auction, NTIA proposes to determine on a case-by-case basis whether a cost-sharing plan is needed for each auction. We seek comment on whether this case-by-case approach is appropriate.

30. If the proposed cost-sharing plan is adopted, NTIA proposes and seeks comment on whether it should be administered by an industry-supported organization or the government. NTIA does not propose at this time to designate any particular organization as the representative of the industry that will benefit from the auction of government spectrum, nor does NTIA propose any particular form that such an organization might take. NTIA seeks comment on the criteria it should use in designating a clearinghouse, and on whether it should be an existing organization or a new entity created for this purpose. NTIA also seeks comment on how the clearinghouse would be funded. If a clearinghouse is established receipts from expenses already incurred would be submitted to the clearinghouse for accounting purposes. We propose to sunset the cost-sharing

plan to five years after any auction of a government spectrum subject to reimbursement rules. We believe that it is important to set a date certain on which any clearinghouse will be dissolved, and adopt a cost-sharing plan with the fewest possible variables so that it will be easy to administer.

31. We also seek comment on how a negotiation framework can best be established so as to minimize the personnel and other budgetary costs to the Government. For example, should NTIA establish a negotiation framework that will permit relocation of each Government system on a system-wide basis? Under such a framework, a Federal agency could request that all auction winners with frequency assignments that require that the agency relocate its system, participate in a single negotiation process so that a system-wide relocation solution can be achieved. Each Federal entity would provide a single point of contact for such consolidated negotiations. NTIA believes that such a negotiation mechanism could benefit both affected agencies and the private sector by streamlining administrative processes and reducing negotiating costs for both parties.

Sunset of Reimbursement Rights

32. The Defense Authorization Act of 1999 mandated reimbursement to Federal agencies and did not limit the time period for reimbursement. Thus, these proposed rules do not provide a sunset provision with respect to the reimbursement rights of Federal entities. We seek comments on our proposal not to include a sunset provision in these rules. Specifically, we seek comment on whether the statute precludes a sunset date.

Costs to Relocate

33. The proposed rules identify the marginal relocation and modification costs that are reimbursable. NTIA proposes to define "marginal costs" as the costs that will be incurred by a Federal entity to achieve comparable capability of systems relocated to a new frequency assignment or band or otherwise modified. Specifically, marginal costs would include all engineering, equipment, software, site acquisition and construction costs, as well as any legitimate and prudent transaction expenses, including outside consultants, and reasonable additional costs incurred by the Federal entity that are attributable to relocation, including increased recurring costs associated with the replacement facilities. Marginal costs would include costs related to the need to achieve comparable capability

when replacing, modifying or reissuing equipment in order to relocate when the systems that must be procured or developed have increased functionality due to technological growth, but would not include costs related to optional increased functionality that is independent of the need to achieve comparable capability. To the extent that a Federal entity needs to accelerate the introduction of systems and equipment to allow for relocation earlier than the Federal entity had planned, replacement costs of the accelerated systems and equipment shall be included in marginal costs. Marginal costs would also include the costs of any modification or replacement of equipment, software, facilities, operating manuals, training costs, or regulations that are attributable to relocation. Marginal costs would not include costs related to routine upgrades and operating costs and lifecycle replacements that would have occurred prior to the date of the required relocation. The costs identified as reimbursable in these proposed rules conform to those identified by Congress in 47 U.S.C. § 923(g)(1)(A) and 923(g)(2)(A). We seek comment on this definition of marginal costs.

34. Consistent with the statute, the proposed rules would require reimbursement payments to be made in advance of relocation. The proposed rules would also require the successful bidder to guarantee to pay all marginal costs as a precondition of NTIA's withdrawal of the relevant Federal license. The proposed rules also would permit payments to be made in cash or in kind, as agreed to by the affected Federal entity. The proposed rules further require that cash payments be made in the account of the Federal entity in the Treasury of the United States, or in a separate account as authorized by law.

Notification of Marginal Costs

35. Under 47 U.S.C. 923(g)(1)(A), NTIA must provide information to the FCC so that the FCC can advise potential bidders of the marginal costs of relocation or modification. This statute also requires Federal entities that propose to relocate to notify NTIA of the marginal costs anticipated to be associated with such relocation or with modifications necessary to accommodate a prospective licensee. NTIA's proposed rules thus require Federal entities that propose to relocate, modify or retune systems to provide such marginal cost information to NTIA at least 240 days prior to an FCC

²⁶ There also may be circumstances where the national nature of federal systems is such that the requirement to reimburse a federal entity for relocation costs may disproportionately fall on a small number of successful bidders. Thus, a particular licensee's geographic area may cover a critical element of a much larger national system, such as a system where a small number of satellite uplink transmitter terminals, each located at a specific site, communicates to many satellites. In other situations, there are highly mobile systems (e.g., airborne telemetry or data link systems) that are not related to any specific geographic area.

auction.²⁷ In turn, NTIA intends to provide this information to the FCC at least 180 days prior to such auction so that the FCC will have a sufficient amount of time to notify potential bidders.²⁸

Negotiation and Mediation

36. Under the proposed rules, within 30 days after the license is granted, the auction winner would be required to contact the Federal entity that is required to relocate. Under the proposed rules, receipt of the notification by the Federal entity would trigger a 135-day negotiation and/or third-party mediation period between the Federal entity and the auction winner. During the mandatory negotiation period, parties are encouraged to resolve any differences with respect to relocation or modification costs or any other related issues. If, at the end of the 135-day period, the parties have not reached an agreement with respect to relocation, under the proposed rules, the parties may agree, by mutual consent, to extend the mandatory negotiation period. We believe that this mandatory negotiation period affords the parties an opportunity to freely, and without constraints, negotiate the terms relative to relocation. To the extent that the 135-day period is insufficient, we believe that the extension of time provision gives the party additional time that may be necessary to come to an agreement. This provision would also allow the parties to take advantage of a neutral third party to help facilitate the negotiation process without rendering a decision. We solicit comments on the proposed rule to require mandatory party-to-party negotiations and/or third-party mediation.

37. Under the proposed rules, the parties would be required to negotiate relocation or modification costs in good faith during the mandatory negotiation period. Good faith requires each party to provide information to the other that is reasonably necessary to facilitate the relocation process. Good faith means that (1) neither party may refuse to negotiate; and (2) each party must behave in a manner necessary to

facilitate negotiation in a timely manner. We seek comments on these good faith obligations.

Non-Binding Arbitration

38. If the parties have not reached agreement and do not agree to extend the negotiation/mediation period, or if a previously extended negotiation/mediation period expires, the proposed rules would require the parties to enter into non-binding arbitration. The parties would have to agree on the arbitrator, and to prevent bias, the arbitrator would not be the same person as the mediator if mediation has been used by the parties and failed. Each party would pay its own costs for arbitration and share equally the cost of the arbitrator. The arbitrator's non-binding decision may be requested by NTIA as part of the record in a petition for relocation, as described below. The recommended decision may be a factor, among others, in NTIA's determination on a petition for relocation. We seek comments on the proposed requirement that parties enter into non-binding arbitration. We also seek comments on any alternative proposal for the resolution of disputes between the parties.

Petition for Relocation

39. Under 47 U.S.C. 923(g)(2), an auction winner seeking to relocate a Federal Government station must submit a petition for relocation to NTIA. Under the proposed rules, NTIA requires that a copy of the petition also be simultaneously provided to the FCC.²⁹ Moreover, under the proposed rule, NTIA's determination on the petition would be set forth in writing within six months after the petition has been filed and be provided to the auction winner and the Federal entity. The statute requires NTIA to limit or terminate the Federal entity's license within six months after receiving the petition if the following requirements are met:

(A) the person seeking relocation of the Federal Government station has guaranteed to pay all relocation or modification costs incurred by the Federal entity, including all engineering, equipment, site acquisition and construction, and regulatory fee costs;

(B) all activities necessary for implementing the relocation or modification have been completed, including construction of replacement facilities (if necessary and appropriate) and identifying and obtaining new frequencies for use by the relocated Federal Government station;

(C) any necessary replacement facilities, equipment modifications, or other changes have been implemented and tested to ensure that the Federal Government station is able to accomplish its purposes; and

(D) NTIA has determined that the proposed use of the spectrum frequency band to which the Federal entity will relocate is consistent with:

(i) Obligations undertaken by the United States in international agreements and United States national security and public safety interests; and

(ii) The technical characteristics of the band and other uses of the band.

If NTIA does not act within 6 months after the Petition for Relocation is filed, the Petition is deemed denied. NTIA's determination, or failure to act on a Petition within 6 months, would be final and conclusive upon the parties.

40. The proposed rules would permit an auction winner to file a petition for relocation anytime after an agreement has been reached on marginal costs. The proposed rules also permit an auction winner to file a petition for relocation if the parties fail to reach agreement and non-binding arbitration has occurred. In that case, the auction winner may file a petition for relocation with NTIA after a decision has been rendered by the arbitrator. Any recommended decision by the arbitrator may be requested by NTIA as part of the record in a petition for relocation determination. The recommended decision may be a factor, among others, in the NTIA determination on the petition for relocation. In making its determination, NTIA will consult with the affected Federal entity and, as appropriate, may also consult with the Office of Management and Budget and other executive branch agencies. We seek comment on these proposed rules as they relate to the Petition for Relocation.

41. In certain circumstances, it may be beneficial for the Federal entity to seek voluntary withdrawal of an assignment after the parties reach an agreement through negotiation, mediation, or non-binding arbitration. NTIA anticipates the vast majority of relocations to occur under agreements reached between the parties, thus permitting voluntary withdrawals of assignments would greatly streamline the administrative process of making the spectrum available to auction winners. NTIA

²⁷ The marginal costs submitted on behalf of the Federal agencies as part of the notification process may be subject to review and approval by the Office of Management and Budget (OMB). OMB's review would assure the accuracy of the costs. See also Section 1064(d) of the Strom Thurmond National Defense Authorization Act for Fiscal Year 1999, Pub. L. No. 105-261, 112 Stat. 1920 (1998).

²⁸ For example, we anticipate that the first FCC auction for spectrum frequency subject to these rules will occur in December 2001. In that case, NTIA would provide cost information to the FCC no later than June 1, 2001. Therefore, the Federal entities would have to provide estimated cost information to NTIA by April 1, 2001.

²⁹ We note that the statute permits the Federal entity to reclaim its facilities if it demonstrates to the FCC that the new facilities are not comparable. See 47 U.S.C. 923(g)(3). Rules regarding the Federal entity's right to reclaim will be promulgated by the FCC. See also Reallocation of the 216-220 MHz, 1390-1395 MHz, 1427-1429 MHz, 1429-1432 MHz, 1432-1435 MHz, 1670-1675 MHz, and 2385-2390 MHz Government Transfer Bands, ET Docket No. 00-221, Notice of Proposed Rule Making, FCC 00-395, at ¶ 64 (November 20, 2000).

seeks comment on permitting such voluntary requests for assignment withdrawal as an alternative to the petition for relocation in cases in which the parties have reached agreement.

Unclassified, Classified and Sensitive Assignments

42. *Unclassified government facilities.* With respect to unclassified government facilities, we propose to provide the following information to the FCC prior to an auction of the affected bands:

- (1) List of Government facilities.
- (2) Government agency operating each facility.
- (3) Location of each facility.
- (4) General type of operation and equipment (e.g., fixed microwave, tactical mobile radio, etc.).
- (5) Whether the facility can be retuned, modified, or must be relocated.
- (6) Estimated marginal cost of retuning, modification, or relocation.
- (7) Whether the facility overlaps to one or more license areas or spectrum blocks.
- (8) Total estimated costs of relocation for all assignments.

43. *Classified government facilities.* These proposed rules would permit reimbursement to the Federal entity, even if an assignment is classified. As defined in the proposed rule and consistent with Executive Order 12958,³⁰ a "classified assignment" would be a frequency assignment and information related to a frequency assignment that has been determined pursuant to Executive Order 12958 or any predecessor order to require protection against unauthorized disclosure and that is marked as "confidential," "secret," or "top secret" to indicate its classified status when in documentary form. As directed by Executive Order 12958, Executive Order 12968³¹ and related national security regulations, classified assignment can only be made available to individuals with the appropriate clearances and with a "need to know" (need for access) in order to perform or assist in performing a lawful and authorized government function.

44. Prior to an auction, Federal entities will provide a single, consolidated and unclassified figure to NTIA for the cost of relocating, retuning, or modifying all such classified systems. NTIA will provide this information to the FCC which in turn will provide the figure to bidders with the following conditions: To the extent it is consistent with national security considerations, the figure may be broken down by

license service area and spectrum block to give those bidding on a geographic basis the best indication possible of the cost they may have to pay to relocate, retune or modify the systems at issue. Following the auction, the winner may apply for a facility clearance pursuant to the National Industrial Security Program Operating Manual and related individual security clearances. If those clearances and accesses are granted, classified information may be made available with regard to certain Government systems in accordance with the terms and conditions prescribed in the clearances and accesses provided, and subject to the overall rules and authorities found in Executive Order 12958, Executive Order 12968, and related federal laws, rules and regulations.

45. *Sensitive assignments.* As defined in the proposed rule, a "sensitive assignment" would be a frequency assignment and information related to a frequency assignment (e.g. operations or technical parameters) that are not releasable to the public under the Freedom of Information Act or relevant laws or regulations.³² Prior to an auction, Federal entities will provide a single, consolidated and unclassified figure to NTIA for the cost of relocating, retuning, or modifying all such sensitive systems. NTIA will provide this information to the FCC which in turn will provide the figure to bidders with the following conditions: To the extent it is consistent with the sensitive nature of the assignment, the figure may be broken down by license service area and spectrum block to give those bidding on a geographic basis the best indication possible of the cost they may have to pay to relocate, retune or modify the systems at issue. Following the auction, we propose that the government agency release the sensitive information to the winning licensee pursuant to a non-disclosure agreement.

46. We seek comment on our proposed treatment of these assignments.

Other Information

Executive Order 12866

47. This proposed rule has been determined to be significant under section 3(f) of Executive Order 12866.

Executive Order 13312

48. This rule does not contain policies with Federalism implications sufficient to warrant preparation of a Federalism assessment under Executive Order 12612.

Regulatory Flexibility Act

49. As required by the Regulatory Flexibility Act (RFA)³³ NTIA has prepared an Initial Regulatory Flexibility Analysis (IRFA) of the possible impact that this proposed rule, if adopted, would have on small entities. Written public comments are requested on the IRFA. Comment must be identified as responses to the IRFA and must be filed by the deadlines for comments on the NPRM.

Initial Regulatory Flexibility Analysis

50. As required by the Regulatory Flexibility Act (RFA), NTIA has prepared this present Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on small entities by the policies and rules proposed in this NPRM. Written public comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments on this NPRM.

A. Need for, and Objectives of, the Proposed Rules

51. The Strom Thurmond National Defense Authorization Act for Fiscal Year 1999 authorized Federal entities to accept compensation payments when they relocate or modify their frequency use to accommodate non-Federal users of the spectrum.³⁴ In essence, the Act requires the private sector to reimburse Federal entities for the costs that are incurred as a result of the reallocation of radio spectrum mandated by Title VI of the Omnibus Budget Reconciliation Act of 1993 (OBRA 93),³⁵ the Balanced Budget Act of 1997 (BBA 97) and future reallocations. The Act also directs NTIA and the Federal Communications Commission (FCC) to "develop procedures for the implementation of [relocation] which * * * shall include a process for resolving any differences that arise between the Federal Government and commercial licensees regarding estimates of relocation and modification costs."³⁶

52. This initial regulatory flexibility analysis provides, to the extent possible, relevant information regarding reimbursement such as the Federal frequency assignments for reallocation and the estimated relocation costs that will ultimately be borne by the private sector. As stated above Congress directed NTIA and the FCC to develop procedures for the implementation of the reimbursement process. Pursuant to

³³ See 5 U.S.C. 603.

³⁴ 47 U.S.C. 923(g)(1).

³⁵ Pub. L. 103-66, 107 Stat. 31 (1993).

³⁶ See 47 U.S.C. 923(g)(1)(E).

³⁰ Exec. Order No. 12958, 3 CFR 333 (1995).

³¹ Exec. Order No. 12968, 3 C.F.R. 391 (1995).

³² Many of these assignments involve federal public safety and law enforcement activities.

this direction from Congress, NTIA prepared this NPRM. NTIA is not able to determine the type of entities that will be potential bidders for the particular spectrum frequencies at issue here, thus NTIA is unable to fully describe the effect that the proposed rules will have on small entities. However, significant economic impacts are unlikely because it is expected that bidders in an auction for the eligible spectrum, including small entities, will factor in the estimated relocation costs and adjust their bids accordingly.

B. Federal Frequency Assignments Subject to Reallocation

53. On August 10, 1993 OBRA 93 was signed into law. OBRA 93 authorized the FCC to use competitive bidding (auctions) for the reassignment and licensing of spectrum frequencies for certain commercial services. OBRA 93 also directed the Secretary of Commerce to transfer at least 200 megahertz (MHz) of spectrum below 5 gigahertz (GHz) from Federal agencies to the FCC for licensing to the private sector. Pursuant to OBRA 93, NTIA identified Federal bands for reallocation totaling 235 MHz from the Federal Government to non-Government use in its February 1995 Spectrum Reallocation Final Report.³⁷ Subsequently, BBA-97 required the Secretary of Commerce to identify an additional 20 MHz below 3 GHz for reallocation to non-Federal users.³⁸ In response to this directive, NTIA issued a Spectrum Reallocation Report in February 1998 which identified the additional bands for reallocation.³⁹ The specific frequency bands that currently qualify for reimbursement pursuant to the proposed rules are: 216–220 MHz; 1432–1435 MHz; 1710–1755 MHz; and 2385–2390 MHz.

C. Estimated Relocation Costs

54. At this point, NTIA does not have the final estimated costs of relocation for all of the bands identified in the NPRM. In fact, the NPRM proposes dates for the Federal entities to provide that information to NTIA. The final spectrum reallocation reports prepared by NTIA in response to OBRA 93 and BBA 97 identified estimates of implementation costs to Federal agencies of approximately \$1.5 billion based on data provided by major

Federal agencies. Subsequent modifications to these estimates have been made based on a report to Congress from the Department of Defense (DoD), and changes to the reallocation plan as directed by the National Defense Authorization Act for FY 2000. Taking these factors into account, the current reimbursable long-term cost estimates to the Federal agencies of implementing the spectrum reallocations under OBRA 93 and BBA 97 is between \$460–\$810 million.

Although NTIA identifies spectrum to reallocate from the Federal government to the private sector, NTIA does not determine how the spectrum will be used by the private sector. The Federal Communications Commission, through its regulations identifies options for making use of bands transferred from Government to non-Government use pursuant to OBRA 93 and BBA 97. In fact, the FCC recently issued an NPRM on the allocation of 27 megahertz of spectrum from the 216–220 MHz, 1390–135 MHz, 1427–1429 MHz, 1429–1432 MHz, 1432–1435 MHz, 1670–1675 MHz, and 2385–2390 MHz bands.⁴⁰ In that NPRM, the FCC proposes general Fixed Service and Mobile Service allocation for these bands, and solicits comments on other possible allocations and potential service rules for the services to which the bands may be allocated. The FCC also solicits comments on its Initial Regulatory Flexibility Analysis of the NPRM which describes the number of small entities to which its proposed rules would apply.

In accordance with 5 U.S.C. 603, the following information is provided to conduct the necessary initial regulatory flexibility analysis:

D. Legal Basis

55. The objective of the proposed rule is to establish procedures to compensate the Federal Government for expenses it incurs in relocating to a new frequency as a result of a reallocation of spectrum. Congress determined that the Federal Government should be reimbursed by commercial licensees that are awarded spectrum previously held by the Federal Government. The legal basis for the proposed rule is the Defense Authorization Act for Fiscal Year 1999 which directs NTIA and the FCC to develop procedures to implement reimbursement, including a process for resolving differences that arise between

the parties regarding estimates of relocation or modification costs.

E. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

56. It is difficult, if not impossible, to estimate the number of small entities, if any, to which the proposed rule would apply. The rule applies to winners of a competitive bidding (auction) that the FCC will hold at an undetermined date after January 2001. There is no way to predict, at this point in time, the type of entities that will be potential bidders for the spectrum that the FCC makes available. In fact, entities that are not even in existence at this time may be participating in a future auction for the particular spectrum frequency at issue. The FCC may impose eligibility requirements, however the auctions are usually open to any type of entity. Any estimate of the number of small entities to which this proposed rule will apply should be made after the FCC makes a determination of the type of service that the FCC allocates for these bands of spectrum. The proposed rules, however, require the FCC to provide the estimated cost of reimbursement to potential bidders. Thus, to the extent that a small entity is a potential bidder, it will be able to calculate its costs to bid on the particular spectrum frequency, taking into account the estimated cost to reimburse the Federal Government. As stated above the estimated costs of relocation at this time is between \$460–\$810 million. Because these costs are only estimates and bids may be adjusted to reflect these costs, it is difficult at this time to determine the impact that these costs will have on small entities. We solicit public comment on this IRFA as to the impact that the proposed rule will have on small entities as well as any alternative ways to alleviate such an impact.

F. Description of Projected Reporting, Recordkeeping and Other Compliance Requirements

57. The proposed rules do not impose reporting, record keeping or other compliance requirements on the private sector, small entities or otherwise.

G. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rules

58. It does not appear that any other Federal rule duplicates, overlaps or conflicts with the proposed rule. The proposed rules are focused on reimbursement to Federal entities for relocation costs from specific spectrum frequencies. No other Federal rule requires the private sector to reimburse

³⁷ See National Telecommunications and Information Administration, U.S. Department of Commerce, NTIA Special Publication 94–27, *Spectrum Reallocation Final Report* (Feb. 1995).

³⁸ Pub. L. 105–33, 111 Stat. 251 (1997).

³⁹ Of the 20 MHz of spectrum, eight (8) MHz were subsequently reclaimed by the Federal Government in accordance with the National Defense Authorization Act for Fiscal Year 2000. See Pub. L. 106–65, 113 Stat. 512 (1999).

⁴⁰ Reallocation of the 216–220 MHz, 1390–1395 MHz, 1427–1429 MHz, 1429–1432 MHz, 1432–1435 MHz, 1670–1675 MHz, and 2385–2390 MHz Government Transfer Bands, ET Docket No. 00–221, Notice of Proposed Rule Making, FCC 00–395, at ¶ 64 (November 20, 2000).

Federal entities for relocation costs of the specific radio spectrum frequencies identified in the proposed rules. The FCC, however, will promulgate service rules regarding these spectrum frequencies, however, we do not anticipate that the FCC's rules will duplicate, overlap or conflict with this proposed rule.

H. Steps Taken To Minimize Significant Economic Impact on Small Entities, and Significant Alternatives Considered

59. As stated above, the applicable statute requires NTIA to develop rules to implement the reimbursement process.⁴¹ The NPRM, proposes and solicits comment on a number of alternatives which would minimize economic impact on small entities. For example, the proposed rules solicit comments on whether a Federal entity could retune or modify its equipment outside of the reallocated band to the upper or lower portion of the incumbent band. Re-tuning is usually less expensive to implement and can save an agency a considerable amount of money thus lessening the reimbursement obligation of the private sector. Another alternative in the proposed rule which could minimize the economic impact on small entities is the proposal to permit Federal entities to relocate to a landline communications system or a commercial radio service. Such an option may be a cost-effective alternative to the Federal entity relocating to another frequency. Again, this alternative may reduce reimbursement expenses that would be borne by the private sector and, perhaps, small entities. To the extent that there are other ways to accomplish the stated objectives of Congress, the proposed rule states that "[t]hese proposed rules have been developed to ensure that the Federal Government is fully reimbursed for the expenses it incurs in retuning, modifying or relocating a system as a result of reallocation. To the extent that there are other ways to accomplish this goal, NTIA will entertain comments from interested parties. Comments received addressing alternatives to the proposed rules will be discussed in a more thorough analysis in the Final Rule.

Proposed Rules

Accordingly, NTIA amends 47 CFR chapter III by adding part 301 to read as follows:

PART 301—MANDATORY REIMBURSEMENT FOR FREQUENCY BAND OR GEOGRAPHIC RELOCATION OF SPECTRUM-DEPENDENT SYSTEMS

Subpart A—General Information

Sec.

301.1 Purpose.

301.10 Applicability.

301.20 Definitions.

Subpart B—Procedure for Reimbursement for Relocations and Dispute Resolution.

301.100 Costs to relocate.

301.110 Notification of marginal costs.

301.120 Negotiations and mediation.

301.130 Nonbinding arbitration.

301.140 Petition for relocation.

301.150 Request for withdrawal.

Authority: 47 U.S.C. 921 *et seq.*; Pub. L. 105–261, 112 Stat. 1920.

Subpart A—General Information

§ 301.1 Purpose.

Pursuant to Public Law 105–261 (112 Stat. 1920), private sector entities are required to reimburse Federal users for relocation of Federal Government stations from one or more frequencies due to reallocation. Reimbursement costs are in addition to any costs paid by the successful bidder for the frequency spectrum at the FCC auction.

301.10 Applicability.

(a) *Affected bands.*

(1) These provisions apply to the following bands of frequencies located below 3 gigahertz:

(i) 216 to 220 MHz

(ii) 1432 to 1435 MHz

(iii) 1710 to 1755 MHz

(iv) 2385 to 2390 MHz

(2) NTIA may periodically identify additional bands that are subject to this part in a notice published in the **Federal Register**.

(b) *Availability of comparable facility.* The Federal entity will not relocate until a comparable facility, or modification to an existing facility, is available for enough time to determine comparability, make adjustments, and ensure a seamless handoff. The factors to be considered in determining comparability are communications throughput, system reliability, operating costs, and operational capability as defined in this part.

(c) *Frequency Assignments Eligible for Reimbursement.*

(1) *Equipment modification/retuning.* To the extent that a Federal entity that

is required to relocate is able to modify/re-tune its equipment with the result that the modified equipment provides operational capabilities comparable with the original system, reimbursement will be limited to the marginal costs associated with modification/retuning.

(2) *Old assignments/new assignments.* Old assignments are those that were authorized prior to October 17, 1998 (i.e., 216–220 MHz, 143–1435 MHz, 1710–1755 MHz, 2385–2390 MHz). New assignments are those assignments in the affected bands that were authorized after October 17, 1998. New assignments in the affected bands are not eligible for reimbursement under these rules.

(3) *Exempted Federal power agencies.* Frequency assignments in the 1710–1755 MHz band that support the Federal power agencies that are exempt from reallocation requirements are not entitled to reimbursement under these rules.

(4) *Experimental stations.* Frequency assignments for experimental stations or experimental testing stations are not entitled to reimbursement under this part. Reimbursement shall apply to experimental stations that have been certified for spectrum support by NTIA for stage 3 developmental tests under section 10.3.1. of the *NTIA Manual of Federal Regulations and Procedures for Federal Radio Frequency Management*. This manual is available on NTIA's website at <http://www.ntia.doc.gov/osmhome/redbook/redbook.html>. The manual is also available from the U.S. Government Printing Office (S/N: 903–008–0025–3).

(5) *Certain other government stations.* Other exempted stations identified under the *1995 Spectrum Reallocation Final Report* and the *1998 Spectrum Reallocation Report* are not entitled to reimbursement under these rules. These reports are available at <http://www.ntia.doc.gov>.

(d) *Sunset of reimbursement rights.* There is no sunset of reimbursement rights for affected agencies.

§ 301.20 Definitions.

As used in this part:

(a) The term *allocation* means an entry in the national table of frequency allocations (47 CFR 2.105) of a given frequency band for the purpose of its use by one or more radiocommunication services, or the radio astronomy service under specified conditions.

(b) The term *assignment* means authorization given for a radio station to use a radio frequency or radio frequency channel under specified conditions.

(c) The term *auction* means the competitive bidding process that Congress authorized the Federal

⁴¹ See 47 U.S.C. 923(g)(1)(E).

Communication Commission to use in title VI of the Omnibus Budget Reconciliation Act of 1993 and the Balanced Budget Act of 1997 for the reassignment and licensing of spectrum identified in § 301.10(a) of this subpart for certain commercial radio-based services.

(d) The term *classified assignment* means a frequency assignment and information related to a frequency assignment that has been determined pursuant to Executive Order 12958 or any predecessor order to require protection against unauthorized disclosure and that is marked as "confidential," "secret," or "top secret" to indicate its classified status when in documentary form.

(e) The term *Commission* or *FCC* means the Federal Communications Commission.

(f) The term *communications throughput* means the amount of information transferred within the system for a given amount of time. For digital systems, the communications throughput is measured in bits per second (bps) and for analog systems the communications throughput is measured by the number of voice, video or data channels.

(g) The term *comparable facility* means that the replacement facility restores the operational capabilities of the original facility to an equal or superior level taking into account at least four factors: communications throughput, system reliability, operating costs, and operational capability.

(h) The term *experimental station* means a station utilizing radio waves in experiments with a view to the development of science or technique.

(i) The term *experimental testing station* refers to an experimental station used for the evaluating or testing of electronics equipment or systems, including site selection and transmission path surveys, which have been developed for operational use.

(j) The term *Federal entity* means any department, agency or other instrumentality of the Federal Government that utilizes a Government station license obtained under section 305 of the Communications Act of 1934 (47 U.S.C. 305).

(k) The term *in-kind* means the value of non-cash contributions provided by non-Federal private parties. In-kind contributions may be in the form of real property, equipment, supplies and other expendable property, and the value of goods and services directly benefitting and specifically identifiable to the project or program.

(l) The term *marginal costs* means the costs that will be incurred by a Federal

entity to achieve comparable capability of systems relocated to a new frequency assignment or band or otherwise modified.

(m) The term *mediation* means a flexible and voluntary dispute resolution procedure in which a specially trained mediator facilitates negotiations to reach a mutually agreeable resolution. The mediator may not dictate a settlement. The mediation process involves one or more sessions in which counsel, parties and the mediator participates, and may continue over the period of time specified in this part. The mediator can help the parties improve communication, clarify interests, and probe the strengths and weaknesses of positions. The mediator can also identify areas of agreement and help generate options that lead to a settlement.

(n) The term *NTIA* means the National Telecommunications and Information Administration.

(o) The term *operational costs* means the cost to operate and maintain the federal entity's replacement facility. New licensees would compensate federal entities for any increased recurring costs associated with the replacement facilities for five years after relocation. Such costs shall include, but not be limited to additional rental payments and increased utility fees.

(p) The term *operational capability* means the measure of a system's ability to perform its validated functions within doctrinal requirements, including service, joint service, and allied interoperability requirements with related systems.

(q) The term *relocation* refers to the process of moving a system that is displaced as a result of reallocation.

(r) The term *sensitive assignments* refer those assignments whose operations or technical parameters are not releasable to the public under the Freedom of Information Act.

(s) The term *system reliability* means the percentage of time information is accurately transmitted within a system. The reliability of a system is a function of equipment failures (e.g., transmitters, feed lines, antennas, receivers and battery back-up power), the availability of the frequency channel given the propagation characteristics (e.g., frequency, terrain, atmospheric condition and noise), and equipment sensitivity. System reliability also includes the ability of a radio-communications station to perform a required function under stated conditions for a stated period of time. System reliability may involve three concepts: attaining a specified level of performance; the probability of

achieving that level; and maintaining that level for a specified time. For digital systems, system reliability shall be measured by the percentage of time the bit error rate (BER) exceeds a desired value, and for analog transmissions, this would be measured by the percentage of time that the received carrier-to-noise ratio exceeds the receiver threshold.

Subpart B—Procedure for Reimbursement for Relocations and Dispute Resolution

§ 301.100 Costs to relocate.

(a) *Relocation costs.* The auction winner is required to reimburse the Federal entity for all costs incurred as a result of modification, retuning and/or relocation.

(b) *Method of reimbursement.* Reimbursement payments shall be made in advance of relocation and may be in cash or in kind as agreed to by the affected Federal entity. Any such payment in cash shall be deposited in the account of such Federal entity in the Treasury of the United States or in a separate account as authorized by law. If actual costs are less than the payments made, the Federal entity shall refund the difference.

§ 301.110 Notification of marginal costs.

(a) NTIA shall provide the Federal entity's estimated marginal cost information to the FCC at least 180 days before to an auction. Marginal costs are the costs that will be incurred by a Federal entity to achieve comparable capability of systems relocated to a new frequency assignment or band or otherwise modified. Specifically, marginal costs would include all engineering, equipment, software, site acquisition and construction costs, as well as any legitimate and prudent transaction expenses, including outside consultants, and reasonable additional costs incurred by the Federal entity that are attributable to relocation, including increased recurring costs associated with the replacement facilities. Marginal costs would include costs related to the need to achieve comparable capability when replacing, modifying or reissuing equipment in order to relocate when the systems that must be procured or developed have increased functionality due to technological growth, but would not include costs related to optional increased functionality that is independent of the need to achieve comparable capability. To the extent that a Federal entity needs to accelerate the introduction of systems and equipment to allow for relocation earlier than the Federal entity had planned, replacement costs of the accelerated systems and equipment shall be included in marginal costs. Marginal

costs would also include the costs of any modification or replacement of equipment, software, facilities, operating manuals, training costs, or regulations that are attributable to relocation. Marginal costs would not include costs related to routine upgrades and operating costs and lifecycle replacements that would have occurred prior to the date of the required relocation. Any Federal entity that proposes to relocate shall notify NTIA at least 240 days before the auction of the marginal costs anticipated to be associated with relocation or with modifications necessary to accommodate prospective licensees. The information provided to NTIA must also include the name and telephone number of a person within the Federal entity that can be contacted by the auction winner.

(b) Unclassified assignments. NTIA will provide the following information to the FCC prior to the auction with respect to unclassified government facilities:

- (1) List of Government facilities.
- (2) Government agency operating each facility.
- (3) Location of each facility.
- (4) General type of operation and equipment.
- (5) Whether the facility can be retuned, modified, or must be relocated.
- (6) Estimated marginal cost of retuning, modification, or relocation.
- (7) Whether the facility overlaps to one or more license areas or spectrum blocks.
- (8) Total estimated costs of relocation for all assignments.

(c) Classified assignments. Prior to an auction, Federal entities will provide a single, consolidated and unclassified figure to NTIA for the cost of relocating, retuning, or modifying all such classified systems. NTIA will provide this information to the FCC which in turn will provide the figure to bidders with the following conditions: To the extent it is consistent with national security considerations, the figure may be broken down by license service area and spectrum block to give those bidding on a geographic basis the best indication possible of the cost they may have to pay to relocate, retune or modify the systems at issue. Following the auction, the winner may apply for a facility clearance pursuant to the *National Industrial Security Program Operating Manual* and related individual security clearances. The manual is available through the Defense Security Service at <http://www.dss.mil/isec/nistom.htm> or the Government Printing Office (ISBN 0-16-045560-X). If those clearances and

accesses are granted, classified information may be made available with regard to certain Government systems in accordance with the terms and conditions prescribed in the clearances and accesses provided, and subject to the overall rules and authorities found in Executive Order 12958, Executive Order 12968, and related Federal laws, rules, and regulations.

(d) Sensitive assignments. Prior to an auction, Federal entities will provide a single, consolidated, and unclassified figure to NTIA for the cost of relocating, retuning, or modifying all such sensitive systems. NTIA will provide this information to the FCC which in turn will provide the figure to bidders with the following conditions: To the extent it is consistent with the sensitive nature of the assignment, the figure may be broken down by license service area and spectrum block to give those bidding on a geographic basis the best indication possible of the cost they may have to pay to relocate, retune, or modify the systems at issue. Following the auction, the government agency shall release the sensitive information to the winning licensee pursuant to a non-disclosure agreement.

§ 301.120 Negotiations and mediation.

(a) Within 30 days after the license is granted, the auction winner is required to contact the Federal entity that occupies the band that the FCC has awarded to the auction winner. Receipt of this notification by the Federal entity triggers the 135-day period for negotiation or mediation between the Federal entity and the auction winner. During this period, parties are encouraged to resolve any differences with respect to relocation or modification costs or any other related issues, either through party-to-party negotiations and/or a third party mediator. If, at the end of the 135-day period, the parties have not reached an agreement with respect to relocation, the parties may agree to extend the negotiation period.

(b) Good faith obligation. The parties are required to negotiate in good faith. Good faith means that:

- (1) Neither party may refuse to negotiate; and
- (2) Each party must behave in a manner necessary to facilitate the relocation process in a timely manner. Classified or sensitive information will be treated in accordance with § 301.110 of this subpart.

§ 301.130 Nonbinding arbitration.

If the parties have not reached agreement to extend the negotiation/mediation period, or if a previously

extended negotiation/mediation period expires, the parties shall enter into nonbinding arbitration. The parties shall agree on an arbitrator, and the arbitrator may not be the same person as the mediator if mediation has been used by the parties and failed. The parties may design such rules for arbitration as deemed appropriate. The arbitrator's nonbinding decision may be requested by NTIA as part of the record in its determination on a petition for relocation under § 301.140. The decision may be a factor, among other things, in the NTIA determination on a petition for relocation.

301.140 Petition for relocation.

(a) In general. An auction winner seeking to relocate a Federal Government station must submit a petition for relocation to NTIA. A copy of the petition must also be simultaneously provided to the FCC. NTIA's determination shall be set forth in writing within 6 months after the petition for relocation has been filed, and be provided to the auction winner and the Federal entity. NTIA shall limit or terminate the Federal entity's operating license within 6 months after receiving the petition if the following requirements are met:

(1) The person seeking relocation of the Federal Government station has guaranteed to pay all modification and relocation costs incurred by the Federal entity, including all engineering, equipment, site acquisition and construction, and regulatory fees;

(2) All activities necessary for implementing the relocation or modification have been completed, including construction of replacement facilities (if necessary and appropriate) and identifying and obtaining new frequencies for use by the relocated Federal Government station (where such station is not relocating to spectrum reserved exclusively for Federal use);

(3) Any necessary replacement facilities, equipment modifications, or other changes have been implemented and tested to ensure that the Federal Government station is able to accomplish its purposes; and

(4)(i) NTIA has determined that the proposed use of the spectrum frequency band to which the Federal entity will relocate its operations is

(A) Consistent with obligations undertaken by the United States in international agreements and with United States national security and public safety interests; and

(B) Suitable for the technical characteristics of the band and consistent with other uses of the band.

(ii) In exercising its authority, NTIA shall consult with the Secretary of Defense, the Secretary of State, or other appropriate officers of the Federal Government

(5) If these requirements are not met, NTIA shall notify the petitioner that the request is declined and why.

(6) If NTIA does not issue a determination under this section within 6 months of the filing of a petition for relocation, the petition for relocation is deemed to be denied.

(7) In making its determination under this section, NTIA shall consult with the affected Federal entity and, as appropriate, the Office of Management and Budget and other executive branch agencies.

(b) *Petition after agreement between the parties.* The auction winner may file a petition for relocation pursuant to § 301.140 of this subpart at anytime after the parties have reached agreement on relocation in negotiations or mediation as provided in § 301.120 of this subpart and submit the agreement as evidence of having met the requirements of the petition for relocation.

(c) *Petition after failure to reach an agreement.* If the parties fail to reach an agreement as provided in § 301.120 and non-binding arbitration has occurred pursuant to § 301.130, the auction winner may file a petition for relocation with NTIA after a decision has been rendered by the arbitrator. Any recommended decision by the arbitrator may be requested by NTIA as part of the record in a petition for relocation under § 301.140. The recommended decision may be a factor, among others, in the NTIA determination on the petition for relocation.

§ 301.150 Request for withdrawal.

If the parties reach an agreement in negotiations or mediation or agree with the decision of the arbitrator, the Federal entity may seek voluntary withdrawal of the assignments that are the subject of the relocation.

Dated: January 11, 2001.

Gregory L. Rohde,

Assistant Secretary for Communications and Information.

BILLING CODE 3510-60-P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

RIN 1018-AG71

Endangered and Threatened Wildlife and Plants; Determinations of Whether Designation of Critical Habitat is Prudent for 81 Plants and Proposed Designations for 76 Plants From the Islands of Kauai and Niihau, Hawaii

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule; reopening of comment period and public hearing.

SUMMARY: The U.S. Fish and Wildlife Service (Service) gives notice of a public hearing on the prudency determinations for 81 plants and the proposed critical habitat designations for 76 plants from the islands of Kauai and Niihau, Hawaii. In addition, the comment period which originally closed on January 8, 2001, will be reopened. The new comment period and hearing will allow all interested parties to submit oral or written comments on the proposal. We are seeking comments or suggestions from the public, other concerned governmental agencies, the scientific community, industry, or any other interested parties concerning the proposed rule. Comments already submitted on the proposed rule need not be resubmitted as they will be fully considered in the final determination.

DATES: The comment period for this proposal now closes on February 19, 2001. Any comments received by the closing date will be considered in the final decision on this proposal. The public hearing will be held from 1:00 p.m. to 3:00 p.m. and 6:00 p.m. to 8:00 p.m. on Tuesday, February 6, 2001, on the island of Kauai, Hawaii. Prior to the public hearing, the Service will be available from 12:30 to 1:00 p.m. and from 5:30 to 6:00 p.m. to provide information and to answer questions.

ADDRESSES: The public hearing will be held at the Radisson Kauai Beach Resort, Pakalana Room, 4331 Kauai Beach Drive, Lihue, Kauai. Comments and materials concerning this proposal should be sent to the Field Supervisor, U.S. Fish and Wildlife Service, Pacific Islands Ecoregion Office, 300 Ala Moana Boulevard, Room 3-122, P.O. Box 50088, Honolulu, Hawaii 96850. Comments and materials received will be available for public inspection, by appointment, during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Paul Henson, at the above address, phone 808-541-3441, facsimile 808-541-3470.

SUPPLEMENTARY INFORMATION:

Background

On November 7, 2000, the Service published a notice of prudency determinations for 81 plants species and proposed designations of critical habitat for 76 plant species from the islands of Kauai and Niihau, Hawaii, pursuant to the Endangered Species Act of 1973, as amended (Act) in the **Federal Register** (65 FR 66808). The original comment period closed on January 8, 2001. The comment period now closes on February 19, 2001. Written comments should be submitted to the Service (see **ADDRESSES** section).

A total of 95 species historically found on Kauai and Niihau were listed as endangered or threatened species under the Act, between 1991 and 1996. Some of these species may also occur on other Hawaiian islands. At the time each plant was listed, we determined that designation of critical habitat was not prudent because designation would increase the degree of threat to the species and/or would not benefit the species.

Due to litigation, we reconsidered our previous prudency determinations for the 95 plants. From this review, we are proposing that critical habitat is prudent for 76 of these species because the potential benefits of designating critical habitat essential for the conservation of these species outweigh the risks of designation. We are proposing that the designation of critical habitat is not prudent for five species. The remaining 14 species historically found on Kauai and/or Niihau, no longer occur on these islands. However, these species do occur on other islands, so proposed prudency determinations will be made in future rules addressing plants on those islands.

This proposed rule also proposes designation of critical habitat for the 76 species. Twenty-three critical habitat units, covering a total of 24,539.23 hectares (60,636.42 acres), are proposed for designation on the islands of Kauai and Niihau.

Section 4(b)(5)(E) of the Act (16 U.S.C. 1531 *et seq.*), requires that a public hearing be held if it is requested within 45 days of the publication of a proposed rule. In response to a request from a government agency of the State of Hawaii, the Service will hold a public hearing on the date and at the address described in the **DATES** and **ADDRESSES** sections above.

Anyone wishing to make an oral statement for the record is encouraged

to provide a written copy of their statement and present it to the Service at the hearing. In the event there is a large attendance, the time allotted for oral statements may be limited. Oral and written statements receive equal consideration. There are no limits to the length of written comments presented at the hearing or mailed to the Service. Legal notices announcing the date, time, and location of the hearing will be published in newspapers concurrently with the **Federal Register** notice.

Comments from the public regarding the accuracy of this proposed rule are sought, especially regarding:

(1) The reasons why critical habitat for any of these species is prudent or not prudent;

(2) The reasons why any particular area should or should not be designated as critical habitat for any of these species;

(3) Specific information on the amount and distribution of habitat for any of these species;

(4) Land use practices and current or planned activities in the subject areas and their possible impacts on proposed critical habitat;

(5) Any economic or other relevant impacts resulting from the proposed designations of critical habitat, including any impacts on small entities or families; and

(6) Economic and other potential values associated with designating critical habitat for the 76 plant species such as those derived from non-consumptive uses (e.g., hiking, camping, birding, enhanced watershed protection, increased soil retention, "existence values", and reductions in administrative costs).

Reopening of the comment period will enable the Service to respond to the request for a public hearing on the proposed action. The comment period on this proposal now closes on February 19, 2001. Written comments should be submitted to the Service office listed in the **ADDRESSES** section.

Author

The primary authors of this notice Benton Pang and Christa Russell (see **ADDRESSES** section).

Authority: The authority for this action is the Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*).

Dated: January 3, 2001.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

RIN 1018-AH05

Endangered and Threatened Wildlife and Plants; Proposed Designation of Critical Habitat for *Sidalcea oregana* var. *calva* (Wenatchee Mountains checker-mallow)

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), propose to designate critical habitat for *Sidalcea oregana* var. *calva* (Wenatchee Mountains checker-mallow), pursuant to the Endangered Species Act of 1973, as amended (Act). An estimated maximum of 2,486 hectares (6,137 acres) lies within the boundary of the proposed critical habitat designation, located in Chelan County, Washington. If this proposal is made final, section 7 of the Act requires Federal agencies to insure that any action they fund, authorize, or carry out does not result in the destruction or adverse modification of critical habitat. Section 4 of the Act requires us to consider economic and other impacts of specifying any particular area as critical habitat. We solicit data and comments from the public on all aspects of this proposal, including data on the economic and other impacts of the designation. We may revise this proposal to incorporate or address new information received during the comment period.

DATES: We will accept comments until March 19, 2001. Public hearing requests must be received by March 5, 2001.

ADDRESSES: Comment Submission: If you wish to comment, you may submit your comments and materials concerning this proposal by any one of several methods:

You may submit written comments and information to Gerry Jackson, Manager, Western Washington Office, U.S. Fish and Wildlife Service, 510 Desmond Drive SE, Suite 102, Lacey, Washington, 98503-1263.

You may send comments by electronic mail (e-mail) to: checkermallow@fws.gov. See the Public Comments Solicited section below for file format and other information about electronic filing.

You may hand-deliver comments to our Western Washington Office at the address given above.

Comments and materials received, as well as supporting documentation used

in the preparation of this proposed rule, will be available for inspection, by appointment, during normal business hours at the address listed above.

FOR FURTHER INFORMATION CONTACT: Ted Thomas, Ecologist, Endangered Species Branch, Western Washington Office (see **ADDRESSES** section) (telephone 360/753-4327; facsimile 360/534-9331).

SUPPLEMENTARY INFORMATION:

Background

Sidalcea oregana var. *calva*, the Wenatchee Mountains checker-mallow, is known to occur at six sites (populations). It is a plant found in mid-elevation wetlands and moist meadows in central Washington. The plant communities where the species is found are usually associated with meadows that have surface water or saturated soils during the spring and early summer. The species may also be found in open conifer forests dominated by *Pinus ponderosa* (ponderosa pine) and *Pseudotsuga menziesii* (Douglas-fir), and on the margins of shrub and hardwood thickets adjacent to seeps, springs, or small drainages. Soils are primarily composed of silt loams and clay loams with a high percentage content of organic material, and they are poorly drained.

A member of the mallow family (Malvaceae), *Sidalcea oregana* var. *calva* is an herbaceous perennial with a stout taproot that branches at the root-crown giving rise to several stems. Plants range in height from 20 to 150 centimeters (cm) (8 to 60 inches (in.)). Plants vary from glabrous (lacking hairs and glands) to pubescent (hairy) or stellate (with star-shaped hairs) below, and finely stellate above. Flower clusters with one to many stalked flowers are arranged singly along a common stem. The flowers have pink petals 1 to 2 cm (0.4 to 0.8 in.) long, and are borne on stalks ranging from 1 to 10 millimeters (mm) (0.04 to 0.4 in.) in length. The calyx (outer whorl of floral parts) ranges from uniformly finely stellate to bristly with a mixture of longer, simple to four-rayed, spreading hairs. These hairs are sometimes as long as 2.5 to 3 mm (0.1 to 0.12 in.) (Hitchcock and Cronquist 1961).

Flowering begins in the middle of June and peaks in the middle to end of July. Fruits are ripe in August. The species reproduces only from seed. Based on examination of seed capsules the production of seed appears to be high (Gamon 1987). The somewhat clumped distribution of mature *Sidalcea oregana* var. *calva* plants suggests that seed dispersal is restricted to the areas near to mature plants, unless the seeds

are moved by animals or transported by water.

The physical and biological habitat features essential to the conservation of *Sidalcea oregana* var. *calva* include open meadows with surface water or saturated upper soil profiles in the spring and early summer; open conifer forests dominated by ponderosa pine and Douglas-fir; and the margins of shrub and hardwood thickets. All of these habitats have surface water or saturated soils well into the early summer. Elevations range from 488 to 1,000 meters (m) (1,600 to 3,300 feet (ft)). The species is generally found on flats or benches, but may also occur in small ravines and occasionally on gently sloping uplands.

Concentrations of *Sidalcea oregana* var. *calva* are found in the wetter portions of moist meadow habitat, in open forests in slight topographic depressions, on the perimeter of shrub and hardwood thickets dominated by quaking aspen (*Populus tremuloides*), and along permanent or intermittent streams in sparsely forested draws. Frequently associated plant species include quaking aspen, black hawthorn (*Crataegus douglasii*), common snowberry (*Symphoricarpos albus*), serviceberry (*Amelanchier alnifolia*), few-flowered peavine (*Lathyrus pauciflorus*), northern mule's-ear (*Wyethia amplexicaulis*), sticky purple geranium (*Geranium viscosissimum*), western bistort (*Polygonum bistortoides*), leafy aster (*Aster foliaceus*), Watson's willow-herb (*Epilobium watsonii*), false hellebore (*Veratrum californica*), and rudbeckia (*Rudbeckia occidentalis*) (Washington Department of Natural Resources (WDNR) 2000). One-half of the *Sidalcea oregana* var. *calva* populations are found in association with *Delphinium viridescens* (Wenatchee larkspur), a former Federal category 1 candidate plant species. The latter species was removed from candidate status on February 28, 1996 (61 FR 7610), because it was found to be more abundant or widespread than previously believed.

At the time the final rule for *Sidalcea oregana* var. *calva* was published (64 FR 71680), just five sites were known to exist. During mid-summer 1999, a sixth population was discovered on private property in Pendleton Canyon, an area that was burned and opened up by the Tyee Fire of 1994. This location is less than 8 kilometers (km) (5 miles (mi)) from the Camas Meadow population.

The wetland and moist meadow complex at Camas Meadows, an area managed as a Natural Area Preserve (NAP) by the WDNR, contains the largest population of *Sidalcea oregana*

var. *calva*. The Camas Meadow NAP includes approximately 539 hectares (ha) (1,333 acres (ac)) (WDNR 2000), and is located in the rural/wildland interface about 16 km (10 mi) south of Leavenworth, Washington. An estimated 3,300 *Sidalcea oregana* var. *calva* individuals occur there. Low density, rural residential home sites have been developed adjacent to the NAP. Also, the Camas Meadows Bible Camp has occupied the southern perimeter of the meadow since the late 1940s, and the U.S. Forest Service (Forest Service) administers properties surrounding the NAP.

Another population is located north of the Camas Meadow NAP, on land administered by WDNR, and has approximately 30 individual plants. At the time the final rule was published (64 FR 71680), this population occurred on private land. The private landowners have since traded this land to the State.

In addition to these two populations of *Sidalcea oregana* var. *calva*, two other populations of *Sidalcea oregana* var. *calva* are known to be present on private lands. One population, of about 200 individuals, is located at the Mountain Home Resort. The second population is located in Pendleton Canyon, and consists of about 60 plants. The last two known populations are located on Forest Service lands, containing less than 10 individual plants combined. The combined number of individual plants for all six populations is approximately 3,600.

The primary threats to *Sidalcea oregana* var. *calva* include habitat fragmentation and destruction due to alterations of hydrology, rural residential development and associated activities, conversion of native wetlands to orchards and other agricultural uses, competition from native and non-native plants, recreation, seed and plant collection, and fire suppression and associated activities. To a lesser extent, the species is threatened by livestock grazing, road construction, and timber harvesting and associated impacts including changes in surface runoff in the small watersheds in which the plant occurs.

Previous Federal Action

Federal action on *Sidalcea oregana* var. *calva* began when we published an updated Notice of Review for plants, published in the **Federal Register** on December 15, 1980 (45 FR 82480). This notice included *Sidalcea oregana* var. *calva* as a category 1 candidate species. Category 1 candidates were defined as those taxa for which we had sufficient information on the biological vulnerability and threats to support

preparation of listing rules. The Notice of Review published on September 27, 1985 (50 FR 39526), included *Sidalcea oregana* var. *calva* as a category 2 candidate species. Category 2 candidates were defined as taxa for which available information indicated that a proposal to list as endangered or threatened was possibly appropriate, but for which persuasive data on biological vulnerability and threats were not sufficient to support a proposed rule.

Notices of review published on February 21, 1990 (55 FR 6184), and September 30, 1993 (58 FR 51144), identified the plant as a category 1 candidate species. Upon publication of the February 28, 1996, Notice of Review (61 FR 7596), we ceased using category designations and included *Sidalcea oregana* var. *calva* as a candidate species. Candidate species are those for which we have on file sufficient information on biological vulnerability and threats to support proposals to list the species as threatened or endangered.

On August 1, 1997, we published the proposed rule to list *Sidalcea oregana* var. *calva* as an endangered species (62 FR 41328). The final determination to list *Sidalcea oregana* var. *calva* as an endangered species was published in the **Federal Register** on December 22, 1999 (64 FR 71680). In the final rule, we found that designation of critical habitat for the species was prudent. Due to insufficient funding in our listing budget at the time, critical habitat designation was deferred in order to focus our limited resources on higher priority critical habitat, including court-ordered designations, and other listing actions (64 FR 71685), while still allowing us to put in place protections needed for the protection of *S. oregana* var. *calva* through the listing process.

Critical Habitat

Critical habitat is defined in section 3 of the Act as—(i) the specific areas within the geographic area occupied by a species, at the time it is listed in accordance with the Act, on which are found those physical or biological features (I) essential to the conservation of the species and (II) that may require special management considerations or protection; and (ii) specific areas outside the geographic area occupied by a species at the time it is listed, upon a determination that such areas are essential for the conservation of the species. “Conservation” means the use of all methods and procedures that are necessary to bring an endangered or a threatened species to the point at which listing under the Act is no longer necessary.

Critical habitat receives protection under section 7 of the Act through the prohibition against destruction or adverse modification of critical habitat with regard to actions carried out, funded, or authorized by a Federal agency. Section 7 also requires conferences on Federal actions that are likely to result in the destruction or adverse modification of critical habitat. In our regulations at 50 CFR 402.02, we define destruction or adverse modification as “* * * the direct or indirect alteration that appreciably diminishes the value of critical habitat for both the survival and recovery of a listed species. Such alterations include, but are not limited to, alterations adversely modifying any of those physical or biological features that were the basis for determining the habitat to be critical.” Aside from the added protection that may be provided under section 7, the Act does not provide other forms of protection to lands designated as critical habitat. Because consultation under section 7 of the Act does not apply to activities on private or other non-Federal lands that do not involve a Federal nexus, critical habitat designation would not afford any additional protections under the Act against such activities.

In order to be included in a critical habitat designation, the habitat must first be “essential to the conservation of the species.” Critical habitat designations identify, to the extent known using the best scientific and commercial data available, habitat areas that provide essential life cycle needs of the species (i.e., areas on which are found the primary constituent elements, as defined at 50 CFR 424.12(b)).

Section 4 requires that we designate critical habitat at the time of listing and based on what we know at the time of the designation. When we designate critical habitat at the time of listing or under short court-ordered deadlines, we will often not have sufficient information to identify all areas of critical habitat. We are required, nevertheless, to make a decision and thus must base our designations on what, at the time of designation, we know to be critical habitat.

Within the geographic area occupied by the species, we will designate only areas currently known to be essential. Essential areas should already have the features and habitat characteristics that are necessary to sustain the species. We will not speculate about what areas might be found to be essential if better information became available, or what areas may become essential over time. If the information available at the time of designation does not show that an area

provides essential life cycle needs of the species, then the area should not be included in the critical habitat designation. Within the geographic area occupied by the species, we will not designate areas that do not now have the primary constituent elements, as defined at 50 CFR 424.12(b), that provide essential life cycle needs of the species.

Our regulations state that, “The Secretary shall designate as critical habitat areas outside the geographic area presently occupied by the species only when a designation limited to its present range would be inadequate to ensure the conservation of the species.” (50 CFR 424.12(e)). Accordingly, when the best available scientific and commercial data do not demonstrate that the conservation needs of the species require designation of critical habitat outside of occupied areas, we will not designate critical habitat in areas outside the geographic area occupied by the species.

The Service’s Policy on Information Standards Under the Endangered Species Act, published in the **Federal Register** on July 1, 1994 (Vol. 59, p. 34271), provides criteria, establishes procedures, and provides guidance to ensure that decisions made by the Service represent the best scientific and commercial data available. It requires Service biologists, to the extent consistent with the Act and with the use of the best scientific and commercial data available, to use primary and original sources of information as the basis for recommendations to designate critical habitat. When determining which areas are critical habitat, a primary source of information should be the listing package for the species. Additional information may be obtained from a recovery plan, articles in peer-reviewed journals, conservation plans developed by states and counties, scientific status surveys and studies, and biological assessments or other unpublished materials (i.e. gray literature).

Habitat is often dynamic, and species may move from one area to another over time. Furthermore, we recognize that designation of critical habitat may not include all of the habitat areas that may eventually be determined to be necessary for the recovery of the species. For these reasons, all should understand that critical habitat designations do not signal that habitat outside the designation is unimportant or may not be required for recovery. Areas outside the critical habitat designation will continue to be subject to conservation actions that may be implemented under Section 7(a)(1) and

to the regulatory protections afforded by the section 7(a)(2) jeopardy standard and the Section 9 take prohibition, as determined on the basis of the best available information at the time of the action. We specifically anticipate that federally funded or assisted projects affecting listed species outside their designated critical habitat areas may still result in jeopardy findings in some cases. Similarly, critical habitat designations made on the basis of the best available information at the time of designation will not control the direction and substance of future recovery plans, habitat conservation plans, or other species conservation planning efforts if new information available to these planning efforts calls for a different outcome.

Methods

In determining areas that are essential to conserve *Sidalcea oregana* var. *calva*, we used the best scientific information available to us. This information included habitat suitability and site-specific species information, as well as discussions with Wenatchee National Forest and WDNR scientists about the management and conservation of this species. We have emphasized areas of current and historical *Sidalcea oregana* var. *calva* occurrences; maintenance of the genetic interchange necessary for the viability of a regional metapopulation; and maintenance of the integrity of the watershed hydrologic processes on which the wetlands and moist meadows that support the species depend. A metapopulation is a group of spatially separated populations that can occasionally exchange genes. The populations in a metapopulation are usually thought of as undergoing interdependent extinction and colonization, where individual populations may go extinct, but later recolonize from another population. Linking the known populations provides pathways for gene flow as well as opportunities for colonization by the species of areas where it may be extirpated. We believe that the maintenance of a viable regional metapopulation as well as the integrity of the hydrologic processes that control the wetland and moist meadow habitat are essential to the conservation of *Sidalcea oregana* var. *calva*.

We used data on known and historic locations and soil maps to identify areas important to the species. We mapped critical habitat based on orthoquads and aerial photos available from WDNR, and ground-checked these areas. We included areas with wetland vegetation communities dominated by native grasses and forbs and generally free of

woody shrubs, hardwood trees, or conifers that would produce shade and/or compete with *Sidalcea oregana* var. *calva*. Seeps, springs and riparian corridors that have clay loam and silt loam soils were included because of their importance to maintaining the hydrologic processes that are essential to the conservation of the species. Inclusion of these areas also allows for the natural expansion of *Sidalcea oregana* var. *calva* populations that is essential for the conservation of the species.

Primary Constituent Elements

In accordance with section 3(5)(A)(i) of the Act and regulations at 50 CFR 424.12, in determining which areas to propose as critical habitat, we must consider those physical and biological features (primary constituent elements) that are essential to the conservation of the species. These include, but are not limited to, the following: space for individual and population growth, and for normal behavior; food, water, air, light, minerals or nutrients, or physiological requirements; cover or shelter; sites for breeding, reproduction, or rearing of offspring, germination, or seed dispersal; and habitats that are protected from disturbance or are representative of the historic geographical and ecological distribution of a species.

The primary constituent elements of critical habitat for *Sidalcea oregana* var. *calva* are those that are essential for the primary biological needs of the species. The area we propose to designate as critical habitat provides the primary constituent elements for the species, which include: surface water or saturated upper soil profiles; a wetland plant community dominated by native grasses and forbs, and generally free of woody shrubs and conifers that would produce shade and competition for *Sidalcea oregana* var. *calva*; seeps and springs on fine textured soils (clay loams and silt loams), which contribute to the maintenance of hydrologic processes necessary to support meadows which remain moist into the early summer; and elevations of 488 m–1,000 m (1,600–3,300 ft).

Criteria Used To Identify Critical Habitat

In an effort to map areas that have the features essential to the conservation of the species, we used data on known *Sidalcea oregana* var. *calva* locations. We also considered the existing status of lands in designating areas as critical habitat. *Sidalcea oregana* var. *calva* is known to occur on Federal, State, and private lands. We are not aware of any

Tribal lands essential to the conservation of *Sidalcea oregana* var. *calva*, or any in or near the proposed critical habitat designation. However, should we learn of any Tribal lands in the vicinity of the critical habitat designation subsequent to this proposal, we will coordinate with the Tribes before making a final determination as to whether any Tribal lands should be included as critical habitat for *Sidalcea oregana* var. *calva*.

In defining critical habitat boundaries, we made an effort to avoid developed areas, such as towns and other similar lands, that are unlikely to contribute to *Sidalcea oregana* var. *calva* conservation. However, limitations in our ability to map critical habitat for *Sidalcea oregana* var. *calva* did not allow us to exclude all developed areas, such as towns, or housing developments, or other lands unlikely to contain the primary constituent elements essential for conservation of *Sidalcea oregana* var. *calva*. Existing features and structures within the boundaries of the mapped unit, such as buildings, roads, aqueducts, railroads, airports, other paved areas, lawns, and other rural residential landscaped areas will not contain one or more of the primary constituent elements and are, therefore, not critical habitat. Federal actions limited to those areas would not trigger a section 7 consultation, unless they affect the species and/or primary constituent elements in adjacent critical habitat.

Proposed Critical Habitat

We are proposing critical habitat in one unit, comprised of 2,484 ha (6,135 ac). The approximate area, by land ownership, of this unit is shown in Table 1; lands proposed are under private, State, and Federal ownership. All of the proposed critical habitat for *Sidalcea oregana* var. *calva* is in Chelan County, Washington, and includes Camas Creek and the adjacent Pendleton Canyon sub-basin. The area proposed for critical habitat includes all of the lands that have the primary constituent elements below 1,000 m (3,300 ft) within the Camas Creek watershed and in the small tributary within Pendleton Canyon before its confluence with Peshastin Creek, and includes: (1) The entire area encompassed by the Camas Meadow Natural Area Preserve, which is administered by the WDNr; (2) two populations located on Forest Service land; (3) the small drainage north of the Camas Land, administered by the WDNr; and (4) the population on private property located in Pendleton Canyon.

Portions of the designated critical habitat are presumably unoccupied by *Sidalcea oregana* var. *calva* at present, although the entire area has not been recently surveyed. Soil maps indicate that the entire area provides suitable habitat for the species, and there may be additional, but currently unknown, populations present here. Because protection of the hydrological processes is necessary to ensure the viability of the wetland habitat of the species, we consider the entire area essential to the survival, eventual recovery, and delisting of *Sidalcea oregana* var. *calva*.

Wetlands and moist meadow habitat (native grassland and forb-dominated vegetation) suitable for *Sidalcea oregana* var. *calva* is generally surrounded by upland conditions, which are dominated by ponderosa pine and Douglas-fir forests. These upland conditions are less suitable as habitat for the species and are not essential to the conservation of the species. Moist meadow openings within sparse ponderosa pine and Douglas-fir forests, however, are suitable habitat and are included in this proposed critical habitat designation.

Pursuant to the definition of critical habitat in section 3 of the Act, any area so designated must also require “special management considerations or protections.” Some areas essential to the conservation of the species may not be designated critical habitat if they already have adequate special management. Adequate special management or protection is provided by a legally operative plan that addresses the maintenance and improvement of the essential elements and provides for the long-term conservation of the species. The Service considers a plan adequate when it meets all of the following three criteria: (1) The plan provides a conservation benefit to the species (*i.e.*, the plan must maintain or provide for an increase in the species’ population or the enhancement or restoration of its habitat within the area covered by the plan); (2) the plan provides assurances that the management plan will be implemented (*i.e.*, those responsible for implementing the plan are capable of accomplishing the objectives, have an implementation schedule and/or have adequate funding to implement the management plan); and, (3) the plan provides assurances the conservation plan will be effective (*i.e.*, it identifies biological goals, has provisions for reporting progress, and is of a duration sufficient to implement the plan and achieve the plan’s goals and objectives). If an area is covered by a plan that meets these criteria, it does not

constitute critical habitat as defined by the Act.

The Camas Land NAP is managed by the WDNR, and a final Management Plan (Plan) for the area was approved in June, 2000. The NAP was established in 1989 to protect the large populations of *Sidalcea oregana* var. *calva* and *Delphinium viridescens* (Wenatchee larkspur) that occur at Camas Meadow. The general management policy described in the Plan applies to all NAPs managed by the WDNR. These include: (1) Protection of outstanding examples of rare or vanishing terrestrial or aquatic ecosystems, rare plant and animal species and unique geologic features; (2) the role of NAPs as a baseline to compare with similar ecosystems that are under the influence of human activities; and (3) areas that are important to preserving natural features of scientific or educational value. However, the Plan does not

provide a specific management plan or prescription designed to conserve *Sidalcea oregana* var. *calva*, beyond permitting natural ecological and physical processes to continue (WDNR 2000). The Plan does call for management actions to enhance wet meadow habitat, which will benefit *Sidalcea oregana* var. *calva* by removing competing vegetation, including controlling noxious weeds; thinning ponderosa pine in the uplands; and improving and replacing culverts. However, these actions have not yet been implemented, and it is too early to assess their effectiveness.

Although the species is listed as endangered by the WDNR's Natural Heritage Program (1994), there is no State Endangered Species Act in the State of Washington. The WDNR designation provides no legal protection for *Sidalcea oregana* var. *calva*, and there are no State laws that specifically

protect plants on State lands. Therefore, we believe that this management plan alone does not provide sufficient protection for *Sidalcea oregana* var. *calva*, and have included the Camas Land NAP within the proposed critical habitat designation.

Private residential properties on the periphery of the Camas Land NAP and the Camas Meadow Bible Camp located on the south side of the Camas Land, within the area designated as critical habitat, are not included in the designation. Private residential properties in the vicinity of the Camas Land NAP have been altered by the planting of lawns, installation of septic systems, and horse pastures. These properties are generally located in upland conditions that do not provide the primary constituent elements of critical habitat necessary for the long-term protection and conservation of *Sidalcea oregana* var. *calva*.

TABLE 1.—APPROXIMATE AREA OF PROPOSED CRITICAL HABITAT IN HECTARES (HA) AND ACRES (AC)¹ IN CHELAN COUNTY, WASHINGTON, BY LAND OWNERSHIP

[Area estimates reflect the proposed critical habitat unit boundaries; however, existing features and structures, such as buildings, roads, aqueducts, railroads, airports, other paved areas, lawns, and other rural residential landscaped areas not containing one or more of the primary constituent elements are not designated as critical habitat for *Sidalcea oregana* var. *calva*]

	Federal	Local/state	Private	Total
Areas Known to be Currently Occupied	0.5 ha (1 ac)	38 ha (94 ac)	0.5 ha (1 ac)	39 ha (96 ac)
Areas of Suitable Habitat of Unknown Occupancy	830 ha (2,050 ac)	540 ha (1,334 ac)	1,075 ha (2,655 ac)	2,445 ha (6,039 ac)
Total				2,484 ha (6,135 ac)

¹ Approximate acres have been converted to hectares (1 ha = 2.47 ac). Hectares and acres greater than 1 have been rounded to the nearest 5, except for totals which are sums of rows or columns.

We have determined that the habitat supporting the population found at the Mountain Home Resort (Resort) is not essential to the conservation of the species. This population is disjunct from the remaining populations, and located in an area entirely surrounded with private residences, private timberlands, and a road administered by Chelan County. The habitat on this property that contains *Sidalcea oregana* var. *calva*, and the former candidate species *Delphinium viridescens*, is confined to a small linear area associated with a drainage ditch adjacent to the Mountain Home road and is bordered on the north and south by gravel access roads leading to residences. It is likely that the habitat resulted from the construction of the road and the creation of the drainage ditch. The habitat is now dominated by non-native, sod-forming grasses and forbs mixed with native vegetation (Dottie Knecht, Forest Service, pers. comm. 2000). The class-B Washington

State noxious weed, *Potentilla recta* (sulfur cinquefoil) (Washington Administrative Code 16-750-011) is frequently encountered in monitoring plots at this site, although at low cover (D. Knecht, pers. comm. 2000). Moving out of the occupied habitat and up the hill towards the Resort, the vegetation is also dominated by sod-forming pasture and lawn grasses, including *Agrostis alba* (creeping bentgrass), *Alopecurus pratensis* (meadow foxtail), *Phleum pratense* (timothy grass), and *Bromus inermis* (smooth brome). These species are not consistent with the primary constituent elements.

Through observation of the adjacent properties along the Mountain Home road, it is evident that, if the Resort were not present and the land had not been cleared to create a vista, the marginal habitat where the small population is found at this site would be forested with conifers mixed with hardwood trees and shrubs. Such habitat does not contain the vegetative

requirements and open conditions of the primary constituent elements.

The population at the Resort is also disjunct from the other populations of the species, which are more than 16 km (10 mi) distant. Because of fragmentation and the patchy distribution of habitat between this population and other populations of the species, the persistence of this population cannot be assured. We believe that the most appropriate conservation strategy for *Sidalcea oregana* var. *calva* is one that focuses on the protection and expansion of the core habitat of the species rather than the protection of isolated populations of doubtful viability. Except through artificial means, there is no opportunity for gene exchange between this population and the other populations. Although no genetic testing has been conducted for this species, a small population, such as that found at the Resort, is likely to have reduced genetic diversity, which can result in decreased

population viability due to inbreeding (Schemske *et al.* 1994).

Although the ability to predict random environmental events (stochastic events) is low, events such as forest fires (e.g., the 1994 Rat Creek and Hatchery Creek Fires) and rain-on-snow flooding do occur. The effects of these stochastic events are most acute in small populations (Schemske *et al.* 1994). As a result of an increased importance of stochastic processes and changes in ecological interactions in declining populations, the probability of a population extirpation is expected to be negatively correlated with its size (Schemske *et al.* 1994).

The population found at Pendleton Canyon is on privately-owned land that has been included as critical habitat because it has the primary constituent elements required by *Sidalcea oregana* var. *calva*. It is located in a wildland setting with none of the modifications typically associated with a residence, unlike the private residences near Camas Meadow or the population of *Sidalcea oregana* var. *calva* at the Resort which lack the primary constituent elements and have been excluded from critical habitat designation.

The Recovery Team for *Sidalcea oregana* var. *calva* will be providing guidance on recovery planning for this species. The Recovery Team may provide additional guidance regarding the areas proposed for critical habitat designation. We will evaluate any of the Recovery Team's recommendations and re-examine our critical habitat designation, if necessary, to provide for the conservation of the species.

Effects of Critical Habitat Designation

Section 7 Consultation

Section 7(a) of the Act requires that Federal agencies, including the Service, must ensure that actions they fund, authorize, or carry out do not destroy or adversely modify critical habitat to the extent that the action appreciably diminishes the value of the critical habitat for the survival and recovery of the species. Individuals, organizations, States, local governments, and other non-Federal entities are affected by the designation of critical habitat only if their actions occur on Federal lands, require a Federal permit, license, or other authorization, or involve Federal funding.

Under section 7(a) of the Act, Federal agencies, including the Service, evaluate their actions with respect to any species that is proposed or listed as endangered or threatened and with respect to its critical habitat, if any is designated or proposed. Regulations implementing

this interagency cooperation provision of the Act are codified at 50 CFR part 402. Section 7(a)(4) and regulations at 50 CFR 402.10 requires Federal agencies to confer with us on any action that is likely to jeopardize the continued existence of a proposed species or result in destruction or adverse modification of proposed critical habitat. Conference reports provide conservation recommendations to assist the agency in eliminating conflicts that may be caused by the proposed action. The conservation recommendations in a conference report are advisory.

We may issue a formal conference report if requested by a Federal agency. Formal conference reports on proposed critical habitat contain a biological opinion that is prepared according to 50 CFR 402.14, as if critical habitat were designated. If such designation occurs, we may adopt the formal conference report as a biological opinion, if no significant new information or changes in the action alter the content of the opinion (see 50 CFR 402.10(d)).

When a species is listed or critical habitat is designated, section 7(a)(2) requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of the species or to destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into consultation with us. Through this consultation, we would advise the agencies whether the permitted actions would likely jeopardize the continued existence of the species or destroy or adversely modify critical habitat.

When we issue a biological opinion concluding that a project is likely to result in the destruction or adverse modification of critical habitat, we also provide reasonable and prudent alternatives to the project, if any are identifiable. Reasonable and prudent alternatives are defined at 50 CFR 402.02 as alternative actions identified during consultation that can be implemented in a manner consistent with the intended purpose of the action, that are consistent with the scope of the Federal agency's legal authority and jurisdiction, that are economically and technologically feasible, and that the Director believes would avoid the likelihood of jeopardizing the continued existence of listed species or resulting in the destruction or adverse modification of critical habitat. Reasonable and prudent alternatives can vary from slight project modifications to extensive redesign or relocation of the project. Costs associated with implementing a

reasonable and prudent alternative are similarly variable.

Regulations at 50 CFR 402.16 require Federal agencies to reinstate consultation on previously reviewed actions in instances where critical habitat is subsequently designated and the Federal agency has retained discretionary involvement or control over the action or such discretionary involvement or control is authorized by law. Consequently, some Federal agencies may request reinitiation of consultation or conferencing with us on actions for which formal consultation has been completed, if those actions may affect designated critical habitat or adversely modify or destroy proposed critical habitat.

Activities on private or State lands requiring a permit from a Federal agency, such as a permit from the U.S. Army Corps of Engineers (Corps) under section 404 of the Clean Water Act, or a section 10(a)(1)(B) permit from the Service, or some other Federal action, including funding (e.g., from the Federal Highway Administration or Federal Emergency Management Agency) will also be subject to the section 7 consultation process. Federal actions not affecting listed species or critical habitat, and actions on non-Federal lands that are not federally funded, authorized, or permitted do not require section 7 consultation. Not all of the areas within the unit is capable of supporting *Sidalcea oregana* var. *calva* or its primary constituent elements, and such areas would not be subject to section 7 consultation. However, in the interests of having a clear boundary that is readily located on the ground, or because of mapping uncertainties, we have included some areas that may not be critical habitat as described below.

To properly portray the effects of critical habitat designation, we must first compare the section 7 requirements for actions that may affect critical habitat with the requirements for actions that may affect a listed species. Section 7 prohibits actions funded, authorized, or carried out by Federal agencies from jeopardizing the continued existence of a listed species or destroying or adversely modifying the listed species' critical habitat. Actions likely to "jeopardize the continued existence" of a species are those that would appreciably reduce the likelihood of the species' survival and recovery. Actions likely to "destroy or adversely modify" critical habitat are those that would appreciably reduce the value of critical habitat for the survival and recovery of the listed species.

Common to both definitions is an appreciable detrimental effect on both

survival and recovery of a listed species. Given the similarity of these definitions, actions likely to destroy or adversely modify critical habitat would almost always result in jeopardy to the species concerned, particularly when the area of the proposed action is occupied by the species concerned. Designation of critical habitat in areas known to be occupied by *Sidalcea oregana* var. *calva*, and areas where the species is detected in surveys at the time of the action, is not likely to result in a significant regulatory burden above that already in place due to the presence of the listed species. For some previously reviewed actions, in instances where critical habitat is subsequently designated, and in those cases where activities occur on designated critical habitat where *Sidalcea oregana* var. *calva* is not found at the time of the action, an additional section 7 consultation with the Service not previously required may be necessary for actions funded, authorized, or carried out by Federal agencies.

Section 4(b)(8) of the Act requires us to briefly describe and evaluate in any proposed or final regulation that designates critical habitat those activities involving a Federal action that may adversely modify such habitat or that may be affected by such designation. When determining whether any of these activities may adversely modify critical habitat, we base our analysis on the effects of the action on the entire critical habitat area and not just on the portion where the activity will occur. Adverse effects on constituent elements or segments of critical habitat generally do not result in an adverse modification determination unless that loss, when added to the environmental baseline, is likely to appreciably diminish the capability of the critical habitat to satisfy essential requirements of the species. In other words, activities that may destroy or adversely modify critical habitat include those that alter the primary constituent elements (defined above) to an extent that the value of critical habitat for both the survival and recovery of the *Sidalcea oregana* var. *calva* is appreciably diminished.

Activities that, when carried out, funded, or authorized by a Federal agency, may affect critical habitat and require that a section 7 consultation be conducted include, but are not limited to:

(1) Damming, water diversion, channelization, excess groundwater pumping, repair and replacement of culverts, or other actions that appreciably reduce the hydrologic

function and surface area of rivers, streams, seeps or springs;

(2) Timber harvesting and road construction that directly or indirectly effects the hydrology of sites harboring the species;

(3) Rural residential construction that include concrete pads for foundations and the installation of septic systems where a permit under section 404 of the Clean Water Act (33 U.S.C. 1344 *et seq.*) would be required from the Corps;

(4) Activities that alter watershed characteristics in ways that would appreciably reduce groundwater recharge or alter natural flooding regimes to alter natural, dynamic wetland communities. Such activities may include manipulation of vegetation such as timber harvesting, road construction, maintaining an unnatural fire regime either through fire suppression, or too frequent or poorly-timed prescribed fires, residential and commercial development, and grazing of livestock or horses that reduces fire frequency or otherwise degrades watershed values;

(5) Activities that appreciably degrade or destroy native wetland communities, such as livestock or horse grazing, land clearing, harvesting of trees or other forest products, introducing or encouraging the spread of non-native plant species; and

(6) Activities that appreciably alter stream channel morphology such as sand and gravel mining, road construction, channelization, impoundment, watershed disturbances, off-road vehicle use, heavy or poorly planned recreational uses, and possibly other uses.

Any of the above activities that appreciably diminish the value of critical habitat to the degree that they affect the survival and recovery of *Sidalcea oregana* var. *calva* may be considered an adverse modification or destruction of critical habitat. We note that such activities may also jeopardize the continued existence of the species.

If you have questions regarding whether specific activities will constitute destruction or adverse modification of critical habitat resulting from a Federal action, contact Gerry Jackson, Manager, Western Washington Office (see ADDRESSES section). Requests for copies of the regulations on listed wildlife, and inquiries about prohibitions and permits may be addressed to the U.S. Fish and Wildlife Service, Branch of Endangered Species, 911 N.E. 11th Ave, Portland, Oregon 97232 (telephone 503/231-2063; facsimile 503/231-6243).

Available Conservation Measures

Activities by the landowners of the Mountain Home Resort have resulted in positive conservation measures for the species. The landowners have cooperated and supported the monitoring of this population by the Forest Service since 1994 when, during the Rat Creek and Hatchery Creek fires, approximately one-half of the area occupied by *Sidalcea oregana* var. *calva* and *Delphinium viridescens* was bulldozed and leveled to create a fire safety zone. After the fires, the landowners permitted the Forest Service and volunteers to restore and plant grass seed on their land to reduce erosion in the small drainage area where these two species occur. Within about 2 years, the hydrologic processes had returned to normal and *Delphinium viridescens* resprouted from rhizomes. *Sidalcea oregana* var. *calva* recolonized by seed from neighboring parent plants and the soil seed bank stored in soils not disturbed by bulldozers.

Economic Analysis

Section 4(b)(2) of the Act requires us to designate critical habitat on the basis of the best scientific and commercial information available and to consider the economic and other relevant impacts of designating a particular area as critical habitat. We may exclude areas from critical habitat upon a determination that the benefits of the exclusions outweigh the benefits of specifying the areas as critical habitat. We cannot exclude the areas from critical habitat when the exclusion will result in the extinction of the species. We will conduct an analysis of the economic impacts of designating these areas as critical habitat prior to making a final determination. When completed, we will announce the availability of this economic analysis with a notice in the **Federal Register**; if necessary, we will reopen the comment period at that time.

Public Comments Solicited

We intend that any final action resulting from this proposal be as accurate and as effective as possible. Therefore, we solicit comments or suggestions from the public, other concerned governmental agencies, the scientific community, industry, or any other interested party concerning this proposed rule. We particularly seek comments concerning:

(1) The reasons why any habitat should or should not be determined to be critical habitat as provided by section 4 of the Act, including whether the benefits of designation will outweigh any benefits of exclusion;

(2) Specific information on the amount and distribution of *Sidalcea oregana* var. *calva* and its habitat, and what habitat is essential to the conservation of the species and why;

(3) Land use practices and current or planned activities in the subject areas and their possible impacts on proposed critical habitat;

(4) Any foreseeable economic or other impacts resulting from the proposed designation of critical habitat, in particular, any impacts on small entities or families; and

(5) Economic and other values associated with designating critical habitat for *Sidalcea oregana* var. *calva* such as those derived from nonconsumptive uses (e.g., hiking, camping, birdwatching, enhanced watershed protection, improved air quality, increased soil retention, and "existence values.").

If you submit comments by e-mail, please submit them as an ASCII file and avoid the use of special characters and any form of encryption. Please also include "Attn: [RIN number]" and your name and return address in your e-mail message. If you do not receive a confirmation from the system that we have received your e-mail message, contact us directly by calling our Western Washington Office at telephone number 360/753-9440.

Our practice is to make comments available for public review during regular business hours, including names and home addresses of respondents. Individual respondents may request that we withhold their home address from the rulemaking record, which we will honor to the extent allowable by law. In some circumstances, we would withhold from the rulemaking record a respondent's identity, as allowable by law. If you wish for us to withhold your name and/or address, you must state this prominently at the beginning of your comment. However, we will not consider anonymous comments. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, available for public inspection in their entirety.

Peer Review

In accordance with our policy published on July 1, 1994 (59 FR

34270), we will seek the expert opinions of at least three appropriate and independent specialists regarding this proposed rule. The purpose of this review is to ensure listing decisions are based on scientifically sound data, assumptions, and analyses. We will send these peer reviewers copies of this proposed rule immediately following publication in the **Federal Register**. We will invite these peer reviewers to comment, during the public comment period, on the specific assumptions and conclusions regarding the proposed designation of critical habitat.

We will consider all comments and information received during the 60-day comment period on this proposed rule during preparation of a final rulemaking. Accordingly, the final decision may differ from this proposal.

Clarity of the Rule

Executive Order 12866 requires each agency to write regulations/notices that are easy to understand. We invite your comments on how to make this proposed rule easier to understand including answers to questions such as the following: (1) Are the requirements in the proposed rule clearly stated? (2) Does the proposed rule contain technical language or jargon that interferes with the clarity? (3) Does the format of the proposed rule (grouping and order of sections, use of headings, paragraphing, etc.) aid or reduce its clarity? (4) Is the description of the proposed rule in the **SUPPLEMENTARY INFORMATION** section of the preamble helpful in understanding the proposed rule? What else could we do to make the proposed rule easier to understand? Send any comments that concern how we could make this proposed rule easier to understand to the Gerry Jackson, Manager, Western Washington Office (see **ADDRESSES** section of this rule).

Required Determinations

Regulatory Planning and Review

In accordance with Executive Order 12866, this document is a significant rule and was reviewed by the Office of Management and Budget (OMB). We are preparing a draft analysis of this proposed action, which will be available for public comment, to determine the economic consequences of designating the specific areas as critical habitat. The

availability of the draft economic analysis will be announced in the **Federal Register** and in local newspapers so that it is available for public review and comments.

(a) This rule will not have an annual economic effect of \$100 million or more or adversely affect an economic sector, productivity, jobs, the environment, or other units of government. *Sidalcea oregana* var. *calva* was listed as an endangered species in 1999. In fiscal years 1999 through 2000, we conducted 1 formal section 7 consultation with a Federal agency to ensure that their actions would not jeopardize the continued existence of the species.

Under the Act, critical habitat may not be adversely modified by a Federal agency action; critical habitat does not impose any restrictions on non-Federal persons unless they are conducting activities funded or otherwise sponsored, authorized, or permitted by a Federal agency (see Table 2 below). Section 7 requires Federal agencies to ensure that they do not jeopardize the continued existence of the species. Based upon our experience with the species and its needs, we conclude that any Federal action or authorized action that could potentially cause an adverse modification of the proposed critical habitat would currently be considered as "jeopardy" under the Act in areas occupied by *Sidalcea oregana* var. *calva*. Accordingly, the designation of currently occupied areas as critical habitat does not have any incremental impacts on what actions may or may not be conducted by Federal agencies or non-Federal persons that receive Federal authorization or funding. Designation of unoccupied areas as critical habitat may have impacts on what actions may or may not be conducted by Federal agencies or non-Federal persons who receive Federal authorization or funding. We will evaluate any impact through our economic analysis (under section 4 of the Act; see Economic Analysis section of this rule). Non-Federal persons that do not have a Federal "sponsorship" of their actions are not restricted by the designation of critical habitat (however, they continue to be bound by the provisions of the Act concerning "take" of the species).

TABLE 2. IMPACTS OF *Sidalcea Oregana* VAR. *Calva* LISTING AND CRITICAL HABITAT DESIGNATION

Categories of activities	Activities potentially affected by species listing only	Additional activities potentially affected by critical habitat designation ¹
Federal activities potentially affected ² .	Activities conducted by the Army Corps of Engineers, U.S. Forest Service, Environmental Protection Agency, Federal Highway Administration.	Activities by these Federal Agencies in any unoccupied critical habitat areas.
Private or other non-Federal activities potentially affected ³ .	Activities that require a Federal action (permit, authorization, or funding) and may remove or destroy <i>Sidalcea oregana</i> var. <i>calva</i> habitat by mechanical, chemical, or other means (e.g., grading, discing, ripping, and tilling, water diversion, impounding, groundwater pumping, irrigation, construction, road building, herbicide application, recreational use, etc.) or appreciably decrease habitat value or quality through indirect effects (e.g., edge effects, invasion of exotic plants or animals, fragmentation of habitat).	Funding, authorization, or permitting such actions by Federal Agencies in any unoccupied critical habitat areas.

¹ This column represents activities potentially affected by the critical habitat designation in addition to those activities potentially affected by listing the species.

² Activities initiated by a Federal agency.

³ Activities initiated by a private or other non-Federal entity that may need Federal authorization or funding.

(b) This rule will not create inconsistencies with other agencies' actions. As discussed above, Federal agencies have been required to ensure that their actions do not jeopardize the continued existence of *Sidalcea oregana* var. *calva* since the listing in 1999. The prohibition against adverse modification of critical habitat is not expected to impose any additional restrictions to those that currently exist in areas of occupied habitat. We will evaluate any impact of designating unoccupied habitat areas through our economic analysis. Because of the potential for impacts on other Federal agency activities, we will continue to review this proposed action for any inconsistencies with other Federal agency actions.

(c) This proposed rule, if made final, will not materially affect entitlements, grants, user fees, loan programs, or the rights and obligations of their recipients. Federal agencies are currently required to ensure that their activities do not jeopardize the continued existence of the species, and, as discussed above, we do not anticipate that the adverse modification prohibition (resulting from critical habitat designation) will have any incremental effects in areas of occupied habitat.

(d) This rule will not raise novel legal or policy issues. The proposed rule follows the requirements for determining critical habitat contained in the Act.

Regulatory Flexibility Act (5 U.S.C. 601 et seq.)

In the economic analysis (required under section 4 of the Act), we will determine whether designation of critical habitat will have a significant effect on a substantial number of small entities. Many of these activities sponsored by Federal agencies within

the proposed critical habitat areas are carried out by small entities (as defined by the Regulatory Flexibility Act) through contract, grant, permit, or other Federal authorization. As discussed under Regulatory Planning and Review above, this rule is not expected to result in any restrictions in addition to those currently in existence for areas of occupied critical habitat. We will also evaluate whether critical habitat designation of unoccupied areas will significantly affect a substantial number of small entities. As indicated on Table 1 (see Proposed Critical Habitat Designation section), we designated property owned by State and Federal governments, and private property.

Within these areas, the types of Federal actions or authorized activities that we have identified as potential concerns are:

(1) Activities such as damming, water diversion, channelization, excess groundwater pumping, repair and replacement of culverts, or other actions that appreciably reduce the hydrologic function and surface area of rivers, streams, seeps or springs;

(2) Activities such as timber harvesting and road construction that directly or indirectly effects the hydrology of sites harboring the species; and

(3) Activities such as rural residential construction that include concrete pads for foundations and the installation of septic systems where a permit under section 404 of the Clean Water Act (33 U.S.C. 1344 *et seq.*) would be required from the Corps.

(4) Activities that alter watershed characteristics in ways that would appreciably reduce groundwater recharge or alter natural flooding regimes to alter natural, dynamic wetland communities. Such activities may include manipulation of vegetation

such as timber harvesting, road construction, maintaining an unnatural fire regime either through fire suppression, or too frequent or poorly-timed prescribed fires, residential and commercial development, and grazing of livestock or horses that reduces fire frequency or otherwise degrades watershed values;

(5) Activities that appreciably degrade or destroy native wetland communities, such as livestock or horse grazing, land clearing, harvesting of trees or other forest products, introducing or encouraging the spread of non-native plant species; and

(6) Activities that appreciably alter stream channel morphology such as sand and gravel mining, road construction, channelization, impoundment, watershed disturbances, off-road vehicle use, heavy or poorly planned recreational uses, and possibly other uses.

Small Business Regulatory Enforcement Fairness Act (5 U.S.C. 804(2))

In the economic analysis, we will determine whether designation of critical habitat will cause (a) any effect on the economy of \$100 million or more, (b) any increases in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or (c) any significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. As discussed above, we anticipate that the designation of critical habitat will not have any additional effects on these activities in areas of critical habitat occupied by the species.

Designation of unoccupied areas as critical habitat may have impacts on what actions may or may not be

conducted, or how they will be conducted, by Federal agencies or non-Federal persons who receive Federal authorization or funding. We will evaluate any impact through our economic analysis.

Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*)

In accordance with the Unfunded Mandates Reform Act (2 U.S.C. 1501 *et seq.*):

(a) We believe this rule will not “significantly or uniquely” affect small governments. A Small Government Agency Plan is not required. Small governments will be affected only to the extent that any programs having Federal funds, permits, or other authorized activities must ensure that their actions will not adversely affect the critical habitat. However, as discussed above, these actions are currently subject to equivalent restrictions through the listing protections of the species, and no further restrictions are anticipated to result from critical habitat designation of occupied areas. In our economic analysis, we will evaluate whether designation of unoccupied areas has any significant effect on small governments.

(b) This rule will not produce a Federal mandate of \$100 million or greater in any year; that is, it is not a “significant regulatory action” under the Unfunded Mandates Reform Act. The designation of critical habitat imposes no obligations on State or local governments.

Takings

In accordance with Executive Order 12630, this rule does not have significant takings implications. A takings implication assessment is not required. As discussed above, the designation of critical habitat affects only Federal agency actions. The rule will not increase or decrease the current restrictions on private property concerning take of *Sidalcea oregana* var. *calva*. Due to current public knowledge of the species’ protection under the Act, the prohibition against take of the species both within and outside of the designated areas, and the fact that critical habitat provides no incremental restrictions in areas of occupied critical habitat, we do not anticipate that property values will be affected by the critical habitat designation. Additionally, critical habitat designation does not preclude development of habitat conservation plans and issuance of incidental take permits.

Federalism

In accordance with Executive Order 13132, the rule does not have significant Federalism effects. A Federalism assessment is not required. In keeping with Department of the Interior and Department of Commerce policy, we requested information from and coordinated development of this critical habitat proposal with appropriate State resource agencies in Washington. The designation of critical habitat in areas currently occupied by *Sidalcea oregana* var. *calva* imposes no additional restrictions to those currently in place and, therefore, has little incremental impact on State and local governments and their activities. The designation may have some benefit to these governments in that the areas essential to the conservation of the species are more clearly defined, and the primary constituent elements of the habitat necessary to the survival of the species are specifically identified. While making this definition and identification does not alter where and what federally sponsored activities may occur, it may assist these local governments in long-range planning (rather than waiting for case-by-case section 7 consultations to occur).

Civil Justice Reform

In accordance with Executive Order 12988, the Office of the Solicitor has determined that this rule does not unduly burden the judicial system and meets the requirements of sections 3(a) and 3(b)(2) of the Order. We propose to designate critical habitat in accordance with the provisions of the Act and plan a public hearing on the proposed designation during the comment period. The rule uses standard property descriptions and identifies the primary constituent elements within the designated areas to assist the public in understanding the habitat needs of *Sidalcea oregana* var. *calva*.

Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*)

This rule does not contain any information collection requirements that requires Office of Management and Budget approval under the Paperwork Reduction Act.

National Environmental Policy Act

We determined that we do not need to prepare an Environmental Assessment and/or an Environmental Impact Statement as defined by the National Environmental Policy Act of 1969 in connection with regulations adopted pursuant to section 4(a) of the Endangered Species Act, as amended. We published a notice outlining our

reasons for this determination in the **Federal Register** on October 25, 1983 (48 FR 49244).

Government-to-Government Relationship With Tribes

In accordance with the President’s memorandum of April 29, 1994, “Government-to-Government Relations with Native American Tribal Governments” (59 FR 22951) and 512 DM 2, we understand that federally recognized Tribes must be related to on a Government-to-Government basis.

We are not aware of any Tribal lands essential for the conservation of *Sidalcea oregana* var. *calva*. therefore, we are not proposing to designate critical habitat for *Sidalcea oregana* var. *calva* on Tribal lands.

Proposed Rule Promulgation

Accordingly, we propose to amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations as set forth below:

PART 17—[AMENDED]

1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 16 U.S.C. 1531–1544; 16 U.S.C. 4201–4245; Pub. L. 99–625, 100 Stat. 3500; unless otherwise noted.

2. In § 17.12(h) revise the entry for *Sidalcea oregana* var. *calva* under “FLOWERING PLANTS” to read as follows:

§ 17.12 Endangered and threatened plants.

* * * * *

(h) * * *

Species		Historic range	Family	Status	When listed	Critical habitat	Special rules
Scientific name	Common name						
FLOWERING PLANTS							
*	*	*	*	*	*		*
<i>Sidalcea oregana</i> var. <i>calva</i> .	Wenatchee Moun- tains checker-mal- low.	U.S.A. (WA)	Malvaceae—(Mal- low).	E	673	17.96(a)	N/A
*	*	*	*	*	*		*

3. In § 17.96, as proposed to be amended at 65 FR 66865, November 7, 2000, amend paragraph (b) by adding an entry for *Sidalcea oregana* var. *calva* after the entry for *Kokia drynarioides* under the family Malvaceae to read as follows:

§ 17.96 Critical habitat-plants.

* * * * *

(b) * * *

Family Malvaceae: *Sidalcea oregana* var. *calva* (Wenatchee Mountains checker-mallow).

Washington, Chelan County. From USGS 7.5' quadrangle maps Peshastin and Tip Top, Washington. T. 23 N., R. 18 E., beginning at a point on Camas Creek in the NW¼ of NW¼ of section 35 at approximately 47°26'52"N latitude and 120°38'57" W longitude proceeding downstream (northwesterly), expanding in all directions to include the entire

wetland complex that comprises the Camas Meadow Natural Area Preserve, to a point approximately 0.4 km (0.25 mi) from the confluence of Pendleton Creek and Peshastin Creek, located at 47°31'06" and 120°37'18" W longitude. From this last point, the western boundary of the designated critical habitat parallels Peshastin Creek to a point at the southwest of the designated area located at 47°28'46" N latitude and 120°38'57" W longitude. The maximum elevation of the designated critical habitat is 1,000 m (3,300 ft) and the lowest elevation is 488 m (1,600 ft).

Within this area, critical habitat includes water courses and wetland habitat out to the beginning of upland habitat. Critical habitat does not include existing features and structures, such as buildings, roads, aqueducts, railroads, airports, other paved areas, lawns, and other rural residential landscaped areas

not containing one or more of the primary constituent elements.

Known primary constituent elements of critical habitat for *Sidalcea oregana* var. *calva* include: surface water or saturated upper soil profiles; a wetland plant community dominated by native grasses and forbs, and generally free of woody shrubs and conifers that would produce shade and competition for *Sidalcea oregana* var. *calva*; seeps and springs on fine textured soils (clay loams and silt loams), which contribute to the maintenance of hydrologic processes necessary to support meadows which remain moist into the early summer; and elevations of 488 m–1,000 m (1,600–3,300 ft).

Federal Register

Vol. 66, No. 12

Thursday, January 18, 2001

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

Intent to Prepare an Environmental Impact Statement for Southwestern Region, Arizona, Coconino County, Coconino National Forests

AGENCY: Forest Service, USDA.

SUMMARY: The Coconino National Forest is planning to prepare an environmental impact statement on a proposal to improve grassland and woodland conditions for wildlife and manage livestock grazing use on the Pickett Lake and Padre Canyon Grazing Allotments during the next 10 years.

DATES: Comments in response to this Notice of Intent concerning the scope of the analysis should be received in writing by on or before February 20, 2001.

ADDRESSES: Send written comments to USDA Forest Service, Coconino National Forest, Peaks Ranger Station, 5075 N Hwy 89, Flagstaff, AZ 86004. Electronic mail may be sent to mhannemann@fs.fed.us.

Responsible Official: The Forest Supervisor of the Coconino National Forest, Supervisor's Office 2323 Greenlaw Lane, Flagstaff, AZ 86004, will decide what actions are most appropriate for managing the Pickett and Padre Range Allotments.

FOR FURTHER INFORMATION CONTACT: Mike Hannemann, Interdisciplinary Team Leader, Peaks Ranger District, (520) 526-0866.

SUPPLEMENTARY INFORMATION: This proposal includes 14,774 acres of pinyon, juniper and ponderosa pine treatments. Ponderosa pine cuts would be on trees <6" in diameter at breast height (DBH). Slash crushing and seeding will be done in pinyon and juniper treatment areas where slash is heavy and dense trees have removed the grass seed source from the area. Approximately \$258,810 will be spent

on cutting the trees. Approximately \$95,500 will be spent on slash crushing, harrowing and seeding. Approximately \$126,500 would be spent on archaeological surveys on the tree cutting areas. The Forest Service will look for grants and partners to supplement normal Forest Service funds to complete the pinyon and juniper treatments, slash crushing, harrowing and seeding.

This proposal also has a Forest Service permit of up to 850 cattle from June 1 to September 30 on the 34,814 acres Pickett Lake Allotment and up to 125 cattle from August 1 to September 30 on the 20,993 acres Padre Canyon Allotment. This is a 10% reduction in cattle use on Pickett Lake Allotment and a 31% reduction in cattle use on the Padre Canyon Allotment. In addition, this proposal has a combined grazing system option of up to 913 cattle from June 1 to September 30 on both allotment areas, a 14% overall reduction in cattle use. In addition to maintaining current range structures, approximately \$25,600 will be spent on one mile of barbed wire fence, four miles of pipeline and five drinkers. The Forest Service will spend approximately \$13,700 primarily for materials and the permittee will spend approximately \$11,900 primarily for installation of the improvements.

Preliminary issues include the effect of grazing on the environment, especially watershed conditions and pronghorn antelope habitat.

The Proposed action was mailed to 104 individuals, organizations and cooperating resource agencies for review and comment on January 5, 2001. From comments received, the Team will develop statements to capture the substantive issues and developed alternatives other than the proposed action. If you would like a copy of the proposed action please contact our office. Your comments will be included in our environmental analysis.

It is anticipated that environmental analysis and preparation of the draft and final environmental impact statements will take about six months. The Draft Environmental Impact Statement can be expected April of 2001 and the Final EIS in summer. The comment period on the draft environmental impact statement extends 45 days from the date the Environmental Protection Agency

publishes the notice of availability in the **Federal Register**.

The Forest Service believes, at this early stage, it is important to give reviewers notice of several court rulings related to public participation in the environmental review process. To be the most helpful, comments on the draft environmental impact statement should be as specific as possible and may address the adequacy of the statement or the merits of the alternatives discussed (see Council of Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3).

In addition, Federal court decisions have established that reviewers of draft environmental impact statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewers' position and contentions. *Vermont Yankee Nuclear Power Corp. v. NRDC* 435 US 519, 553 (1978). Environmental objections that could have been raised at the draft state may be waived if not raised until after completion of the final environmental impact statement. *City of Angoon v. Hodel* 9th Circuit, 1986) and *Wisconsin Heritages, Inc v. Harris*, 490F. Supp. 1334, 1338 (E.D. Wis. 1980). The reason for this is to ensure that substantive comments and objections are made available to the Forest Service at a time when it can meaningfully consider them in the final environmental impact statement.

To assist the Forest Service in identifying and considering issues and concerns on the proposal action, comments on the draft environmental impact statement should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft environmental impact statement or the merits of the alternatives formulated and discussed in the statement. Reviewers may wish to refer to the Council of Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.

Dated: January 5, 2001.

Jim Golden,

Forest Supervisor.

Forest Service

Intergovernmental Advisory Committee Meeting

AGENCY: Forest Service, USDA.

ACTION: Notice of meeting.

SUMMARY: The Intergovernmental Advisory Committee (IAC) will meet on February 1, 2001, at the Hilton Hotel, 921 SW 6th Avenue, Portland, Oregon 97204-1296. The purpose of the meeting is to continue discussions on the implementation of the Northwest Forest Plan (NFP). The meeting will begin at 9:30 a.m. and continue until 3:30 p.m. Agenda items to be discussed include, but are not limited to: IAC Topics for advice, the Aquatic Riparian Effectiveness Monitoring Plan, and an update on the survey and Manage Record of Decision. The IAC meeting will be open to the public and is fully accessible for people with disabilities. Interpreters are available upon request in advance. Written comments may be submitted for the record at the meeting. Time will also be scheduled for oral public comments. Interested persons are encouraged to attend.

FOR FURTHER INFORMATION CONTACT:

Questions regarding this meeting may be directed to Steve Odell, Executive Director, Regional Ecosystem Office, 333 SW, 1st Avenue, P.O. Box 3623, Portland, OR 97208 (Phone: 503-808-2166).

Dated: January 11, 2001.

Stephen J. Odell,

Designated Federal Official.

DEPARTMENT OF COMMERCE

Bureau of Export Administration

Action Affecting Export Privileges; Michel V. Diago; Order Amending the Order Denying Permission To Apply for or Use Export Licenses

On, September 7, 1997, the acting director of the Office of Exporter Services entered an Order (the 1994 Order) against Michel V. Diago denying his export privileges until February 25, 2003, based upon his February 25, 1993, conviction in the United States District Court for the Northern District of California of violating the Export Administration Act of 1979 as amended (50 U.S.C.A. app. 2401-2420 (1991, Supp. 1993, and Public Law 103-277, July 5, 1994) ¹ the Act). The 1994 Order was issued under the authority of Section 1(h) of the Act and Sections 766.25 and 750.8(a) of the Export Administration Regulations (currently codified at 15 CFR Parts 730-774 (1999)) (the Regulations). The 1994 Order was published in the **Federal Register** (50 FR 47299, September 15, 1994).

In the Matter of: MICHAEL V. DIAGO, 1183 Calle del Arroyo, Sonoma, California 95476.

On, October 18, 1994 Diago, through counsel, filed an appeal from the Order with the Under Secretary for Export Administration (Under Secretary), pursuant to Part 789 (currently Part 756) of the Regulations. On December 22, 2000, the Under Secretary issued his final decision on that appeal and granted partial relief from the terms of the 1994 Order by terminating the denial period as of December 31, 2000.

Accordingly, the 1994 Order is hereby amended to as follows:

Ordered

I. The date "February 25, 2003" in fourth paragraph and in the paragraphs labeled II and V of the 1994 Order is amended to read December 31, 2000.

II. A copy of this Order shall be delivered to Diago. This Order shall be published in the **Federal Register**.

Dated: January 2, 2001.

Eileen Albanese,

Director, Office of Exporter Services.

BILLING CODE 3510-DT-M

DEPARTMENT OF COMMERCE

International Trade Administration

Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of opportunity to request administrative review of antidumping or countervailing duty order, finding, or suspended investigation.

Background

Each year during the anniversary month of the publication of an antidumping or countervailing duty order, finding, or suspension of investigation, an interested party, as defined in section 771(9) of the Tariff Act of 1930, as amended (the Act), may request, in accordance with section 351.213 (2000) of the Department of Commerce (the Department) regulations, that the Department conduct an administrative review of that antidumping or countervailing duty order, finding, or suspended investigation.

Opportunity to Request a Review:

Not later than the last day of January 2001, interested parties may request an administrative review of the following orders, findings, or suspended investigations, with anniversary dates in January for the following periods:

	Period
Antidumping duty proceedings	
Brazil: Brass Sheet and Strip, A-351-603	1/1/00-12/31/00
Brazil: Stainless Steel Wire Rod, A-351-819	1/1/00-12/31/00
Canda: Brass Sheet and Strip, A-122-601	1/1/00-12/31/00
France: Anhydrous Sodium Metasilicate (ASM), A-427-098	1/1/00-12/31/00
France: Stainless Steel Wire Rods, A-427-811	1/1/00-12/31/00
Taiwan: Stainless Steel Cooking Ware, A-583-603	1/1/00-12/31/00
The People's Republic of China: Potassium Permanganate, A-570-001	1/1/00-12/31/00
The Republic of Korea: Stainless Steel Cooking Ware, A-580-601	1/1/00-12/31/00

¹ The Act expired on August 20, 1994, Executive Order 12924 (3 CFR 1994 Comp. 917 (1995)), extended by Presidential Notices of August 15, 1995 (3 CFR, 1995 Comp. 501 (1996)), August 14, 1996

(3 CFR 1996 Comp. 298 (1997)), August 13, 1997 (3 CFR 1997 Comp. 306 (1998)), and August 13, 1998 (3 CFR, 1998 Comp. 294 (1999)), continued the Export Administration Regulations in effect

under IEEPA. The Act was renewed and signed into law by the President on November 13, 2000.

	Period
Countervailing Duty Proceedings	
Brazil: Brass Sheet and Strip, C-351-604	1/1/00-12/31/00
Taiwan: Stainless Steel Cooking Ware, C-583-604	1/1/00-12/31/00
The Republic of Korea: Stainless Steel Cooking Ware, C-580-602	1/1/00-12/31/00
Suspension Agreements	
Japan: Sodium Azide, A-588-839	1/1/00-12/31/00

In accordance with section 351.213(b) of the regulations, an interested party as defined by section 771(9) of the Act, may request in writing that the Secretary conduct an administrative review. For both antidumping and countervailing duty reviews, the interested party must specify the individual producers or exporters covered by an antidumping finding or an antidumping or countervailing duty order or suspension agreement for which it is requesting a review, and the requesting party must state why it desires the Secretary to review those particular producers or exporters. If the interested party intends for the Secretary to review sales of merchandise by an exporter (or a producer if that producer also exports merchandise from other suppliers) which were produced in more than one country of origin and each country of origin is subject to a separate order, then the interested party must state specifically, on an order-by-order basis, which exporter(s) the request is intended to cover.

Six copies of the request should be submitted to the Assistant Secretary for Import Administration, International Trade Administration, Room 1870, U.S. Department of Commerce, 14th Street & Constitution Avenue, NW., Washington, DC 20230. The Department also asks parties to serve a copy of their requests to the Office of Antidumping/Countervailing Enforcement, Attention: Sheila Forbes, in room 3065 of the main Commerce Building. Further, in accordance with section 351.303(f)(1)(i) of the regulations, a copy of each request must be served on every party on the Department's service list.

The Department will publish in the **Federal Register** a notice of "Initiation of Administrative Review of Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation" for requests received by the last day of January 2001. If the Department does not receive, by the last day of January 2001, a request for review of entries covered by an order, finding, or suspended investigation listed in this notice and for the period identified above, the Department will instruct the Customs Service to assess antidumping or countervailing duties on

those entries at a rate equal to the cash deposit of (or bond for) estimated antidumping or countervailing duties required on those entries at the time of entry, or withdrawal from warehouse, for consumption and to continue to collect the cash deposit previously ordered.

This notice is not required by statute but is published as a service to the international trading community.

Dated: January 11, 2001.

Holly A. Kuga,

Acting Deputy Assistant Secretary, Group II for Import Administration.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Evaluation of Coastal Zone Management Programs

AGENCY: Office of Ocean and Coastal Resource Management, National Ocean Service, National Oceanic and Atmospheric Administration (NOAA), DOC.

ACTION: Notice of intent to evaluate.

SUMMARY: The NOAA Office of Ocean and Coastal Resource Management (OCRM) announces its intent to evaluate the performance of the Commonwealth of the Northern Mariana Islands Coastal Management Program, the California San Francisco Bay Conservation and Development Commission/State Coastal Conservancy Coastal Program, and the Puerto Rico Coastal Management Program.

These evaluations will be conducted pursuant to section 312 of the Coastal Zone Management Act of 1972 (CZMA), as amended and regulations at 15 CFR Part 923.

The CZMA requires continuing review of the performance of states with respect to coastal program implementation. Evaluation of Coastal Zone Management Programs require findings concerning the extent to which a state has met the national objectives, adhered to its coastal program document approved by the Secretary of

Commerce, and adhered to the terms of financial assistance awards funded under the CZMA.

The evaluations will include a site visit, consideration of public comments, and consultations with interested Federal, State, and local agencies and members of the public. Public meetings will be held as part of the site visits.

Notice is hereby given of the dates of the site visits for the listed evaluations, and the dates, local times, and locations of the public meetings during the site visits.

The Commonwealth of the Northern Mariana Islands Coastal Management Program evaluation site visit will be from February 26-March 9, 2001. One public meeting will be held during the week. The public meeting will be held on Tuesday, March 6, 2001, at 5:30 p.m., at the Joeten Kiyu Library, Saipan.

The California San Francisco Bay Conservation and Development Commission/State Coastal Conservancy Coastal Program site visit will be from March 5-9, 2001. One public meeting will be held during the week. The public meeting will be held on Wednesday, March 7, 2001, from 4-6 p.m., in the McAteer-Petris Room, at the BCDC offices, 50 California Street, Suite 2600, San Francisco, California.

The Puerto Rico Coastal Management Program evaluation site visit will be from March 12-16, 2001. One public meeting will be held during the week. The public meeting will be held on Tuesday, March 13, 2001, at 6 p.m., at The Department of Natural and Environmental Resources Auditorium, Avenue Munoz Rivera, Stop 3½, San Juan, Puerto Rico.

Copies of States' most recent performance reports, as well as OCRM's notifications and supplemental request letters to the States, are available upon request from OCRM. Written comments from interested parties regarding these Programs are encouraged and will be accepted until 15 days after the public meeting. Please direct written comments to Margo E. Jackson, Deputy Director, Office of Ocean and Coastal Resource Management, NOS/NOAA, 1305 East-West Highway, 10th Floor, Silver Spring, Maryland 20910. When the evaluations are completed, OCRM will place a notice in the **Federal Register**

announcing the availability of the Final Evaluation Findings.

FOR FURTHER INFORMATION CONTACT:

Margo E. Jackson, Deputy Director, Office of Ocean and Coastal Resource Management, NOS/NOAA, 1305 East-West Highway, Silver Spring, Maryland 20910, (301) 713-3155, Extension 114.

(Federal Domestic Assistance Catalog 11.419 Coastal Zone Management Program Administration)

Dated: January 10, 2001.

Capt. Ted I. Lillestolen,

Deputy Assistant Administrator for Ocean Services and Coastal Zone Management.

DEPARTMENT OF EDUCATION

Submission for OMB Review; Comment Request

AGENCY: Department of Education.

SUMMARY: The Leader, Regulatory Information Management Group, Office of the Chief Information Officer invites comments on the submission for OMB review as required by the Paperwork Reduction Act of 1995.

DATES: Interested persons are invited to submit comments on or before February 20, 2001.

ADDRESSES: Written comments should be addressed to the Office of Information and Regulatory Affairs, Attention: Lauren Wittenberg, Acting Desk Officer, Department of Education, Office of Management and Budget, 725 17th Street, NW., Room 10235, New Executive Office Building, Washington, DC 20503 or should be electronically mailed to the internet address Lauren_Wittenberg@omb.eop.gov.

FOR FURTHER INFORMATION CONTACT:

Section 3506 of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35) requires that the Office of Management and Budget (OMB) provide interested Federal agencies and the public an early opportunity to comment on information collection requests. OMB may amend or waive the requirement for public consultation to the extent that public participation in the approval process would defeat the purpose of the information collection, violate State or Federal law, or substantially interfere with any agency's ability to perform its statutory obligations. The Leader, Regulatory Information Management Group, Office of the Chief Information Officer, publishes that notice containing proposed information collection requests prior to submission of these

requests to OMB. Each proposed information collection, grouped by office, contains the following: (1) Type of review requested, e.g., new, revision, extension, existing or reinstatement; (2) Title; (3) Summary of the collection; (4) Description of the need for, and proposed use of, the information; (5) Respondents and frequency of collection; and (6) Reporting and/or Recordkeeping burden. OMB invites public comment.

Dated: January 11, 2001.

John Tressler,

Leader, Regulatory Information Management, Office of the Chief Information Officer.

Office of Educational Research and Improvement

Type of Review: Reinstatement.

Title: National Assessment of Adult Literacy.

Frequency: One time.

Affected Public: Businesses or other for-profit.

Reporting and Recordkeeping Hour Burden:

Responses: 956

Burden Hours: 703

Abstract: The 2002 National Adult Assessment of Literacy (NAAL) will assess the current status of the English language skills of adults in the United States, as well as how literacy proficiencies have changed since the 1992 National Adult Literacy Survey (NALS). The sample consists of adults 16 years of age and older who reside in private households at the time of the assessment.

Requests for copies of the proposed information collection request may be accessed from <http://edicsweb.ed.gov>, or should be addressed to Vivian Reese, Department of Education, 400 Maryland Avenue, SW., Room 4050, Regional Office Building 3, Washington, DC 20202-4651. Requests may also be electronically mailed to the internet address OCIO_IMG_Issues@ed.gov or faxed to 202-708-9346. Please specify the complete title of the information collection when making your request. Comments regarding burden and/or the collection activity requirements should be directed to Kathy Axt at her internet address Kathy_Axt@ed.gov. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service, (FIRS) at 1-800-877-8339.

BILLING CODE 4000-01-M

DEPARTMENT OF EDUCATION**[CFDA NO. 84.334]****Office of Postsecondary Education;
Notice Inviting Applications for New
Awards for Fiscal Year 2001—Gaining
Early Awareness and Readiness for
Undergraduate Programs—GEAR UP**

Purpose of Program: The purpose of this program is to increase the number of low-income students who are prepared to enter and succeed in college. Through improved academic preparation and early awareness activities, eligible students are provided comprehensive mentoring, counseling, outreach and supportive services, including information to students and their parents about the benefits of postsecondary education and the availability of Federal financial assistance to attend college. Through the scholarship component, which is mandatory for State grants and recommended for Partnership grants, eligible students may receive scholarships for higher education.

Eligible Applicants: 1. For Partnership grants, eligible applicants include at least—

- One institution of higher education. This may be any degree-granting two-year or four-year college or university;

- One local educational agency (school district) on behalf of one or more schools with a 7th grade and the high school(s) that the students at these middle schools would normally attend. Generally, at least 50 percent of the students attending the participating school with a 7th grade must be eligible for free or reduced-price lunches.

However, as an alternative, Partnerships may choose to work with one or more grade levels of students, beginning not later than the 7th grade, who reside in public housing; and

- Two additional organizations, such as businesses, professional associations, community-based organizations, State Agencies, elementary schools, philanthropic organizations, religious groups, and other public or private organizations.

2. For State grants, eligible applicants are State Agencies as designated by the State's Governor, one per State.

Applications Available: January 19, 2001.

Deadline for Transmittal of Applications: March 30, 2001.

Deadline for Intergovernmental Review: May 29, 2001.

Available Funds: Approximately \$35,500,000 for Partnership grants and \$23,000,000 for State grants. Federal funds shall provide not more than 50 percent of the total cost of any project

funded by a grant under this program, except as provided for under 34 CFR 694.7. The non-Federal share of project costs may be in-cash or in-kind, fairly valued, including services, supplies or equipment.

Estimated Average Awards: No minimum, maximum or average award has been established for Partnership grants. The size of each Partnership grant will depend on the number of students served. However, there is a maximum annual Federal contribution of \$800 per student for Partnership grants.

State grants have a \$2.5 million maximum and no minimum award.

Estimated Number of Awards: Approximately 9–12 State grant awards and approximately 75–90 Partnership grant awards, depending on the size and configuration of each Partnership.

Note: The Department is not bound by any estimates in this notice.

Project Period: Up to 60 months.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 80, 86, 97, 98 and 99. (b) The regulations for this program in 34 CFR part 694.

Authorized Activities: Section 404D, 404E, 404F, and 404G of the Higher Education Act of 1965, as amended. [20 U.S.C. 1070a-24]

Selection Criteria: The Secretary uses the selection criteria in accordance with 34 CFR 75.209 and 75.210 to evaluate applications for Gaining Early Awareness and Readiness for Undergraduate Programs. The application package includes the selection criteria and the points assigned to the criteria.

Page Limits: The application narrative (Part 4 of the application) is limited to the equivalent of no more than 40 pages using the following standards:

- A "page" is 8.5" x 11", on one side only, with 1" margins at the top, bottom, and both sides.

- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.

- Use a font that is either 12-point or larger or no smaller than 10 pitch (characters per inch).

The page limit does not apply to Part 1, the cover sheet; Part 2, the Table of Contents; Part 3 the Abstract; or Part 5, the budget section, including the narrative budget justification; the assurances and certifications; or the resumes, the bibliography, or the letters

of support. However, you must include all of the application narrative (Part 4) in the page limit. Reviewers will not read any pages of your application that exceed the page limit if you apply these standards or exceed the equivalent of the page limit.

Priorities*Competitive Priorities***Competitive Preference Priority 1**

Under 34 CFR 75.105(c)(2)(i) and 34 CFR 694.15(b), the Secretary will give preference to Partnership projects that establish or maintain financial assistance programs that award scholarships to participating students, either in accordance with section 404E of the Higher Education Act of 1965, or in accordance with GEAR UP regulations 34 CFR 694.11. The Secretary will award up to five (5) points in addition to any points the applicant earns under the selection criteria, to applicants who meet this priority, depending on how well the application meets the priority.

Competitive Preference Priority 2

Under 34 CFR 75.105(c)(2)(ii) and 34 CFR 694.15(a), the Secretary gives competitive preference to an application for a Partnership or State grant that serves a substantial number or percentage of students who reside in or attend school in an Empowerment Zone, Supplemental Empowerment Zone, or Enterprise Community, under 34 CFR 75.105(2)(ii) and 34 CFR 694.15(a). This preference means that an applicant meeting this criterion would be placed above another application of comparable merit, and the preference will be used in the selection process as a tie-breaker.

For Applications Contact: Education Publications Center (EDPUBS), P.O. Box 1398, Jessup, Maryland 20794-1398. Telephone (toll free) 1-877-433-7827. Fax: (301) 470-1244. If you use a telecommunications device for the deaf (TDD) you may call toll free 1-877-576-7734. You may also contact EDPUBS at its web site: <http://www.ed.gov/pubs/edpubs.html>.

Or you may contact EDPUBS at its e-mail address: edpubs@inet.ed.gov.

If you request an application from EDPUBS, be sure to identify this competition as follows: CFDA number 84.334.

FOR FURTHER INFORMATION CONTACT: U.S. Department of Education, Office of Postsecondary Education, Gaining Early Awareness and Readiness for Undergraduate Programs, 1990 K Street, NW., Room 6252, Washington, DC

20006-8524, telephone 202-502-7676, fax (202) 502-7675, or e-mail gearup@ed.gov

If you use a telecommunications device for the deaf (TDD), you may call the Federal Information Relay Service (FIRS) at 1-800-877-8339.

Individuals with disabilities may obtain this document or a copy of the GEAR UP application package in an alternative format (e.g., Braille, large print, audiotape, or computer diskette) upon request to the contact number listed under **FOR FURTHER INFORMATION CONTACT**. However, the Department is not able to reproduce in an alternative format the standard forms included in the application package.

Electronic Access to This Document

You may view this document, as well as all other Department of Education documents published in the **Federal Register** in text or Adobe Portable Document Format (PDF) on the Internet at either of the following sites:
<http://ocfo.ed.gov/fedreg.htm>
<http://www.ed.gov/new.html>

To use PDF you must have Adobe Acrobat Reader, which is available free at either of the previous sites. If you have any questions about using PDF, call the U.S. Government Printing Office (GPO) at (202) 512-1530 or, toll free, at 1-888-293-6498.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: <http://www.access.gpo.gov/nara/index.html>.

Program Authority: 20 U.S.C. 1070a-21—20 U.S.C. 1070a-28.

Dated: January 12, 2001.

A. Lee Fritschler,

Assistant Secretary, Office of Postsecondary Education.

[FR Doc. 01-1529 Filed 1-17-01; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

[CFDA No.: 84.128G]

Migrant and Seasonal Farmworkers Program; Notice Inviting Applications for New Awards for Fiscal Year (FY) 2001

Purpose of Program: To provide grants for vocational rehabilitation services to individuals with disabilities who are migrant or seasonal farmworkers, as determined in accordance with rules prescribed by the Secretary of Labor, and to the family members who are residing with those

individuals (whether or not those family members are individuals with disabilities).

Eligible Applicants: A State designated agency; nonprofit agencies working in collaboration with a State agency; and a local agency working in collaboration with a State agency.

Applications Available: January 30, 2001.

Deadline for Transmittal of Applications: March 30, 2001.

Deadline for Intergovernmental Review: May 30, 2001.

Estimated Available Funds: \$528,000.

Estimated Range of Awards: \$150,000–\$170,000.

Estimated Average Size of Awards: \$165,000.

Estimated Number of Awards: 3.

Note: The Department is not bound by any estimates in this notice.

Reasonable Accommodations: We will consider, and may fund, requests for additional funding as an addendum to an application to reflect the costs of reasonable accommodations necessary to allow individuals with disabilities to be employed on the project as personnel on project activities.

Project Period: Up to 60 months.

Applicable Regulations: The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 80, 81, 82, 85, and 86.

Note: The regulations in 34 CFR part 79 apply to applicants except federally recognized Indian tribes.

Note: The regulations in 34 CFR part 86 apply to institutions of higher education only.

Priority: This competition focuses on projects designed to meet the priority in the notice of final competitive preference for this program, published in the **Federal Register** on November 22, 2000 (65 FR 70408). Under 34 CFR 75.105 (c)(2)(i) the Assistant Secretary adds a competitive preference to applications that are otherwise eligible for funding under this program.

The maximum score under the selection criteria for this program is 100 points; however, we will also use the following competitive preference so that up to an additional 10 points may be earned by an applicant for a total possible score of 110 points.

Up to 10 points may be earned based on the extent to which an application includes effective strategies for employing and advancing in employment qualified individuals with disabilities as project employees in projects awarded under this program. In determining the effectiveness of those strategies, we will consider the

applicant's prior success, as described in the application, in employing and advancing in employment qualified individuals with disabilities.

Therefore, within this competitive preference, applicants can be awarded up to a total of 10 points in addition to those awarded under the published selection criteria for this program (The selection criteria to be used for this competition will be provided in the application package for this competition). That is, an applicant meeting this competitive preference could earn a maximum total of 110 points.

Application Procedures:

Note: Some of the procedures in these instructions for transmitting applications differ from those in the Education Department General Administrative Regulations (EDGAR) (34 CFR 75.102). Under the Administrative Procedure Act (5 U.S.C. 553) the Department generally offers interested parties the opportunity to comment on proposed regulations. However, these amendments make procedural changes only and do not establish new substantive policy. Therefore, under 5 U.S.C. 553(b)(A), the Secretary has determined that proposed rulemaking is not required.

Pilot Project for Electronic Submission of Applications

The U.S. Department of Education is expanding its pilot project of electronic submission of applications to include certain formula grant programs, as well as additional discretionary grant competitions. The Migrant and Seasonal Farmworkers Program (CFDA 84.128G) is one of the programs included in the pilot project. If you are an applicant under the Migrant and Seasonal Farmworkers Program, you may submit your application to us in either electronic or paper format.

The pilot project involves the use of the Electronic Grant Application System (e-APPLICATION, formerly e-GAPS) portion of the Grant Administration and Payment System (GAPS). We request your participation in this pilot project. We shall continue to evaluate its success and solicit suggestions for improvement.

If you participate in this e-APPLICATION pilot, please note the following:

- Your participation is voluntary.
- You will not receive any additional point value or penalty because you submit a grant application in electronic or paper format.
- You can submit all documents electronically, including the Application for Federal Assistance (ED 424), Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.

- Fax a signed copy of the Application for Federal Assistance (ED 424) after following these steps:

1. Print ED 424 from the e-APPLICATION system.

2. Make sure that the institution's Authorizing Representative signs this form.

3. Before faxing this form, submit your electronic application via the e-APPLICATION system. You will receive an automatic acknowledgement, which will include a PR/Award number (an identifying number unique to your application).

4. Place the PR/Award number in the upper right hand corner of ED 424.

5. Fax ED 424 to the Application Control Center within three working days of submitting your electronic application. We will indicate a fax number in e-APPLICATION at the time of your submission.

- We may request that you give us original signatures on all other forms at a later date. You may access the electronic grant application for the Migrant and Seasonal Farmworkers Program at: <http://e-grants.ed.gov>.

We have included additional information about the e-APPLICATION pilot project (see Parity Guidelines between Paper and Electronic Applications) in the application package.

For Applications Contact: Education Publications Center (ED Pubs), P.O. Box 1398, Jessup, MD 20794-1398. Telephone (toll free): 1-877-433-7827. FAX: (301) 470-1244. If you use a telecommunications device for the deaf (TDD), you may call (toll free): 1-877-576-7734.

You may also contact ED Pubs via its Web site: <http://www.ed.gov/pubs/edpubs.html>.

Or you may contact ED Pubs at its e-mail address: edpubs@inet.ed.gov.

If you request an application from ED Pubs, be sure to identify this competition as follows: CFDA number 84.128G.

Individuals with disabilities may obtain a copy of the application package in an alternative format by contacting the Grants and Contracts Services Team (GCST), U.S. Department of Education, 400 Maryland Avenue, SW., room 3317, Switzer Building, Washington, DC 20202-2550. Telephone: (202) 205-8351. If you use a telecommunications device for the deaf (TDD), you may call the Federal Information Relay Service (FIRS) at 1-800-877-8339. However, the Department is not able to reproduce in an alternative format the standard forms included in the application package.

FOR FURTHER INFORMATION CONTACT:

Mary E. Chambers, U.S. Department of Education, 400 Maryland Avenue, SW., room 3322, Switzer Building, Washington, DC 20202-2647.

Telephone (202) 205-8435. If you use a telecommunications device for the deaf (TDD), you may call the Federal Information Relay Service (FIRS) at 1-800-877-8339.

Individuals with disabilities may obtain a copy of this document in an alternative format (e.g., Braille, large print, audiotope, or computer diskette) on request to the contact person listed in the preceding paragraph.

Electronic Access to This Document

You may view this document, as well as other Department of Education documents published in the **Federal Register**, in text or Adobe Portable Document Format (PDF) on the Internet at either of the following sites:

<http://ocfo.ed.gov/fedreg.htm>

<http://www.ed.gov/news.html>

To use the PDF you must have Adobe Acrobat Reader, which is available free at either of the previous sites. If you have questions about using PDF, call the U.S. Government Printing Office (GPO), toll free, at 1-888-293-6498; or in the Washington, DC, area at (202) 512-1530.

Note: The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available on GPO Access at: <http://www.access.gpo.gov/nara/index.html>

Program Authority: 29 U.S.C. 774.

Dated: January 12, 2001.

Judith E. Heumann,

Assistant Secretary for Special Education and Rehabilitative Services.

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Recognition of Accrediting Agencies, State Agencies for the Approval of Public Postsecondary Vocational Education, and State Agencies for the Approval of Nurse Education

AGENCY: National Advisory Committee on Institutional Quality and Integrity, Department of Education (The Advisory Committee).

What Is the Purpose of This Notice?

The purpose of this notice is to invite written comments on accrediting agencies whose applications to the Secretary for initial or renewed recognition will be reviewed at the Advisory Committee meeting to be held

on May 23-25, 2001. The notice also invites written comments on agencies submitting interim reports that will be reviewed at the May meeting. Further, the notice invites written comments on one Federal agency seeking degree-granting authority.

Where Should I Submit My Comments?

Please submit your written comments by March 5, 2001 to Carol Griffiths, Chief, Accrediting Agency Evaluation, Accreditation and State Liaison. You may contact her at the U.S. Department of Education, 1990 K Street, NW, 7th Floor, Room 7105, Washington, DC 20006-8509, telephone: (202) 219-7011. Individuals who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service at 1-800-877-8339.

What Is the Authority for the Advisory Committee?

The National Advisory Committee on Institutional Quality and Integrity is established under Section 114 of the Higher Education Act (HEA), as amended, 20 U.S.C. 1011c. One of the purposes of the Advisory Committee is to advise the Secretary of Education on the recognition of accrediting agencies and State approval agencies.

Will This Be My Only Opportunity To Submit Written Comments?

Yes, this notice announces the only opportunity you will have to submit written comments. However, a subsequent **Federal Register** notice will announce the meeting and invite individuals and/or groups to submit requests to make oral presentations before the Advisory Committee on the agencies that the Committee will review. That notice, however, does not offer a second opportunity to submit written comment.

What Happens to the Comments That I Submit?

We will review your comments, in response to this notice, as part of our evaluation of the agencies' compliance with the Secretary's Criteria for Recognition of Accrediting Agencies. The Criteria are regulations found in 34 CFR part 602 (for accrediting agencies) and in 34 CFR part 603 (for State approval agencies).

We will also respond to your comments, as appropriate, in the staff analyses we present to the Advisory Committee at its May 2001 meeting. Therefore, in order for us to give full consideration to your comments, it is important that we receive them by March 5, 2001. In all instances, your comments about agencies seeking initial

or continued recognition must relate to the Criteria for the Recognition. In addition, your comments for any agency whose interim report is scheduled for review must relate to the issues raised and the Criteria for Recognition cited in the Secretary's letter that requested the interim report. You may obtain a copy of the Secretary's letter by calling (202) 219-7011.

What Happens to Comments Received After the Deadline?

We will treat any negative comments received after the deadline as complaints. If such comments, upon investigation, reveal that the accrediting agency is not acting in accordance with the Criteria for Recognition, we will take action either before or after the meeting, as appropriate. We will also notify the commentors of the disposition of those comments.

What Agencies Are on the Agenda for the Meeting?

The Secretary of Education recognizes accrediting agencies and State approval agencies for public postsecondary vocational education and nurse education if the Secretary determines that they meet the Criteria for Recognition. Recognition means that the Secretary considers the agency to be a reliable authority as to the quality of education offered by institutions or programs that are encompassed within the scope of recognition he grants to the agency. The following agencies will be reviewed during the May 2001 meeting of the Advisory Committee:

Nationally Recognized Accrediting Agencies

Petition for Initial Recognition

1. Teacher Education Accreditation Council (Requested scope of recognition: The accreditation of professional education programs in institutions offering baccalaureate and graduate degrees for the preparation of teachers and other professional personnel for elementary and secondary schools).

Petitions for Renewal of Recognition

1. Accrediting Council for Independent Colleges and Schools (Requested scope of recognition: The accreditation of private postsecondary institutions offering business and business-related programs and the accreditation and preaccreditation ("Recognized Candidate") of junior and senior colleges of business (including senior colleges with master's degree programs), as well as independent, freestanding institutions offering only

graduate business and business-related programs at the master's degree level).

2. American College of Nurse-Midwives, Division of Accreditation (Current scope of recognition: The accreditation and preaccreditation ("Preaccreditation") of basic certificate and graduate nurse-midwifery education programs for registered nurses, as well as the accreditation and preaccreditation of pre-certification nurse-midwifery education programs) (Requested scope of recognition: The current scope of recognition plus the accreditation of midwifery education programs for non-nurses at the post-baccalaureate or higher academic level that lead to certificates or graduate degrees).

3. American Council on Pharmaceutical Education (Requested scope of recognition: The accreditation and preaccreditation ("Precandidate" and "Candidate") of professional degree programs in pharmacy leading to the degrees of Baccalaureate in Pharmacy and Doctor of Pharmacy).

4. Association for Clinical Pastoral Education, Inc., Accreditation Commission (Requested scope of recognition: The accreditation of clinical pastoral education (CPE) centers and CPE and supervisory CPE programs).

5. American Dental Association, Commission on Dental Accreditation (Requested scope of recognition: The accreditation of predoctoral dental education programs (programs leading to the D.D.S. or D.M.D. degree); dental auxiliary education programs (dental assisting, dental hygiene and dental laboratory technology); and advanced dental educational programs (general practices residency, advanced general dentistry, and the specialties of dental public health, endodontics, oral pathology, orthodontics, oral and maxillofacial surgery, pedodontics, periodontics, and prosthodontics)).

6. American Occupational Therapy Association, Accreditation Council for Occupational Therapy Education (Current scope of recognition: The accreditation of entry-level professional occupational therapy educational programs awarding baccalaureate degrees, post-baccalaureate certificates, professional master's degrees, and combined baccalaureate/master's degrees, and also for the accreditation of occupational therapy assistant programs leading to an associate degree or certificate) (Requested scope of recognition: The current scope of recognition plus the accreditation of entry-level doctoral degree professional occupational therapy educational programs and the accreditation of

programs offered principally through distance education).

7. Council on Chiropractic Education, Commission on Accreditation (Requested scope of recognition: The accreditation of Doctor of Chiropractic programs and single-purpose institutions offering the Doctor of Chiropractic program).

8. Commission on Opticianry Accreditation (Requested scope of recognition: The accreditation of two-year programs for the ophthalmic dispenser and one-year programs for the ophthalmic laboratory technician).

9. Joint Review Committee on Education in Radiologic Technology (Requested scope of recognition: The accreditation of educational programs for radiographers and radiation therapists).

10. Joint Review Committee on Educational Programs in Nuclear Medicine Technology (Requested scope of recognition: The accreditation of higher education programs for the nuclear medicine technologist).

11. Southern Association of Colleges and Schools, Commission on Colleges (Requested scope of recognition: The accreditation and preaccreditation ("Candidate for Accreditation") of degree-granting institutions of higher education in Alabama, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas, and Virginia).

12. Western Association of Schools and Colleges, Accrediting Commission for Senior Colleges and Universities (Requested scope of recognition: The accreditation and preaccreditation ("Candidate for Accreditation") of senior colleges and universities in California, Hawaii, the United States territories of Guam and American Samoa, the Republic of Palau, the Federated States of Micronesia, the Commonwealth of the Northern Mariana Islands, and the Republic of the Marshall Islands).

Interim Reports (An interim report is a follow-up report on an accrediting agency's compliance with specific criteria for recognition that was requested by the Secretary when the Secretary granted renewed recognition to the agency.)

1. American Physical Therapy Association, Commission on Accreditation in Physical Therapy Education.

2. American Psychological Association, Committee on Accreditation.

3. Commission on Collegiate Nursing Education.

4. National Accrediting Commission of Cosmetology Arts and Sciences.

5. National Association of Nurse Practitioners in Women's Health, Council on Accreditation.

6. Transnational Association of Christian Colleges and Schools, Accreditation Commission.

State Agencies Recognized for the Approval of Public Postsecondary Vocational Education

Interim Report

1. Kansas Board of Regents.

Federal Agency Seeking Degree-Granting Authority

In accordance with the Federal policy governing the granting of academic degrees by Federal agencies (approved by a letter from the Director, Bureau of the Budget, to the Secretary, Health, Education, and Welfare, dated December 23, 1954), the Secretary is required to establish a review committee to advise the Secretary concerning any legislation that may be proposed that would authorize the granting of degrees by a Federal agency. The review committee forwards its recommendation concerning a Federal agency's proposed degree-granting authority to the Secretary, who then forwards the committee's recommendation and the Secretary's recommendation to the Office of Management and Budget for review and transmittal to the Congress. The Secretary uses the Advisory Committee as the review committee required for this purpose. Accordingly, the Advisory Committee will review the following institution at this meeting:

Proposed Master's Degree-Granting Authority

1. U.S. Marine Corps University, Quantico, VA (request to award a master's degree in Strategic Studies).

Where Can I Inspect Petitions and Third-Party Comments Before and After the Meeting?

Subject to the provisions of 5 U.S.C. 522, petitions, interim reports, and those third-party comments received in advance of the meeting, will, upon written request, be made available, on appointment, for inspection and copying at the U.S. Department of Education, 1990 K Street, NW., 7th Floor, Room 7105, Washington, DC 20006-8509, telephone (202) 219-7011 until May 4, 2001. They will be available again after the May 23-25 Advisory Committee meeting.

Authority: 5 U.S.C. Appendix 2.

Dated: January 11, 2001.

A. Lee Fritschler,

Assistant Secretary for Postsecondary Education.

[FR Doc. 01-1473 Filed 1-17-01; 8:45 am]

BILLING CODE 4000-01-P

DEPARTMENT OF ENERGY

Management of Certain Plutonium Residues and Scrub Alloy Stored at the Rocky Flats Environmental Technology Site

AGENCY: U.S. Department of Energy.

ACTION: Amended Record of Decision.

SUMMARY: The Department of Energy (DOE) has decided to revise its approach to managing approximately 315 kg of plutonium fluoride residues (containing approximately 142 kg of plutonium) that currently are stored at the Rocky Flats Environmental Technology Site (Rocky Flats Site). In an earlier Record of Decision (63 FR 66136, December 1, 1998), DOE decided that these plutonium fluoride residues would be shipped to the Savannah River Site (SRS) for processing and storage pending disposition. Due to the opening of the Waste Isolation Pilot Plant (WIPP) in New Mexico on March 26, 1999, and other circumstances, including delays in securing shipping container certification required prior to transporting the plutonium fluoride residues to SRS, DOE has now decided to prepare the plutonium fluoride residues appropriately and ship them to WIPP for disposal. This will help avoid delays in meeting the closure schedule for the Rocky Flats Site.

ADDRESSES: The potential environmental impacts of alternative approaches for management of these residues are analyzed in the Final Environmental Impact Statement on Management of Certain Plutonium Residues and Scrub Alloy Stored at the Rocky Flats Environmental Technology Site (hereinafter referred to as the Residues EIS) (DOE/EIS-0277F, August 1998) and were part of the basis for three prior Records of Decision issued for the plutonium-bearing residues at the Rocky Flats Site. Copies of the Residues EIS; the first and second Records of Decision (63 FR 66136, December 1, 1998, and 64 FR 8068, February 18, 1999, respectively); the first Amended Record of Decision (64 FR 47780, September 1, 1999); and this Amended Record of Decision and the Supplement Analysis (referenced herein) can be accessed from the DOE's NEPA Web site at <http://www.tis.eh.doe.gov/nepa>, under NEPA

Analyses, or can be obtained by contacting the Center for Environmental Management Information, P.O. Box 23769, Washington, DC 20026-3769, telephone 1-800-736-3282 (in Washington, DC: 202-863-5084).

For further information concerning the management of plutonium residues and scrub alloy currently stored at the Rocky Flats Site, contact: Dr. W. Eric Huang, Program Manager, Rocky Flats Office (EM-33), Office of Site Closure, Environmental Management, U.S. Department of Energy, 19901 Germantown Road, Germantown, MD 20874, Telephone: 301-903-4630.

For further information concerning DOE's National Environmental Policy Act (NEPA) process, contact: Ms. Carol Borgstrom, Director, Office of NEPA Policy and Compliance (EH-42), U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585, Telephone (202) 586-4600, or leave a message at 1-800-472-2756.

SUPPLEMENTARY INFORMATION:

I. Background

In August 1998, DOE issued the Residues EIS that assessed the potential environmental impacts of processing certain plutonium residues and scrub alloy stored at the Rocky Flats Site near Golden, Colorado, in preparation for disposal or other disposition. These materials were produced in conjunction with nuclear weapons activities conducted by DOE during the Cold War and the materials are no longer needed. Currently, DOE is cleaning up and disposing of (where appropriate) such materials. The plutonium residues analyzed in the Residues EIS included approximately 315 kg of plutonium fluoride residues containing approximately 45 percent plutonium by weight (approximately 142 kg of plutonium). In the Residues EIS, the plutonium fluoride residues were included as part of a category called "wet residues," having an average of approximately 7 percent plutonium by weight. (Residues EIS Table 2-1.)

The Residues EIS analyzed three alternative technologies and a no-action alternative for processing plutonium fluoride residues stored at the Rocky Flats Site. The selected alternative for the plutonium fluoride residues in the first Record of Decision in 1998 was the preferred alternative in the Residues EIS, which is Purex processing and storage at SRS pending disposition (*italicized below*).

- *Alternative 1.* Dissolving the plutonium fluoride residues in acid and precipitating the plutonium with oxalic acid, at the Rocky Flats Site. The

recovered plutonium would be packaged for storage at the Rocky Flats Site. (This is the no-action alternative.)

- *Alternative 2.* Blending down the plutonium fluoride residues at the Rocky Flats Site with an inert material so that each container would meet the safeguards termination limit for plutonium fluorides (0.2 percent plutonium by weight). The blended material would then be packaged into pipe overpack components and subsequently packaged into 55-gallon drums for transportation and disposal at the Waste Isolation Pilot Plant¹ (WIPP).

- *Alternative 3.* Two technologies for separation of plutonium from plutonium fluoride residues were analyzed.

- Repackaging the plutonium fluoride residues at the Rocky Flats Site for transportation to SRS and separation of the plutonium there using the Purex process. The processed plutonium would be stored at SRS pending disposition as mixed oxide nuclear fuel or disposed of as vitrified high-level waste in a geologic repository.*

- Dissolving the plutonium fluoride residues in acid and precipitating the plutonium with oxalic acid at the Rocky Flats Site (this is the same as the no-action alternative). The recovered plutonium then would be dispositioned as mixed oxide nuclear fuel or disposed of as vitrified high-level waste in a geologic repository.

II. Original Decision

In addition to this amended Record of Decision, DOE has issued two Records of Decision and an earlier amended Record of Decision for the final Residues EIS. The first Record of Decision, issued on November 25, 1998 (63 FR 66136, December 1, 1998), addressed materials from each of the categories of Rocky Flats plutonium residues (*i.e.*, ash, salt, wet, and direct repackage) and scrub alloy. This first Record of Decision (Section VII.D.1) stated that DOE had decided to transport the plutonium fluoride residues to SRS and use the F-Canyon, where the Purex plutonium separation process is located, to separate plutonium (*i.e.*, one of the two sub-alternatives of Alternative 3 in the Residues EIS). The separated plutonium would then have been subject to disposition as mixed oxide fuel or

disposed of as vitrified high-level waste pursuant to decisions that DOE made after completion of the Surplus Plutonium Disposition Environmental Impact Statement (DOE/EIS-0283, November 1999; Record of Decision, 65 FR 1608, January 11, 2000).

The first Record of Decision (Section VII.D.2) explained that the Purex plutonium separation process at SRS was selected for the plutonium fluoride residues because it posed less technical risk and would cost less than the establishment of a new acid dissolution/plutonium oxide recovery capability at the Rocky Flats Site (Alternative 1). The Record of Decision further explained that blend down² (to meet the safeguards termination limit) (Alternative 2) would result in a very large increase in the amount of transuranic waste requiring disposal, which would increase the cost of disposing of the material.

III. Events Since Issuance of the First Record of Decision

Since issuance of the first Record of Decision in 1998, DOE has been preparing to ship the plutonium fluoride residues to SRS for separation and has not undertaken any activity that would alter the chemical or physical conditions of these residues. Initially, DOE had planned to begin shipment of the plutonium fluoride residues to SRS by January 2000 and to complete these shipments by September 2000. Removal of these materials from the Rocky Flats Site by September 2000 would have supported near-term closure of the Protected Area³ of the Site and, subsequently, closure of the entire Site by 2006.

Before shipping plutonium fluoride residues to SRS, however, DOE must certify the shipping container for plutonium fluoride residues, and additional testing required before certification would take at least 15 months to complete. Further delay in implementing the earlier decision (*i.e.*, plutonium separation using the Purex process at SRS) would in turn delay closure of the Protected Area and associated buildings, extend decommissioning schedules, and ultimately delay closure of the entire Rocky Flats Site. A delay in the closure of the Rocky Flats Site would be costly due to extended site security needs and

site services, eliminating the cost advantages of implementing the earlier decision.

At the time the Residues EIS was being prepared, DOE believed that it was impractical to apply a variance to safeguards termination limits for plutonium fluoride residues due to the high plutonium concentration and the relative ease of recovering the plutonium from the residue matrix. Although the amount of the plutonium fluoride residues was small (315 kg), the amount of plutonium present in these residues (about 142 kg) subjected them at that time to a set of safeguards requirements to maintain control of the residues and to ensure that the plutonium in them was not stolen or diverted for illicit use (*e.g.*, to construct a nuclear weapon). Therefore, the Residues EIS only analyzed the impacts of blending and repackaging the plutonium fluorides to meet the safeguards termination limits for them (0.2 weight percent), and did not analyze an alternative to blend these particular residues down to less than 10 weight percent plutonium.

The Rocky Flats Site has since developed a blending matrix of inert material that would result in a blended material from which plutonium recovery is difficult. This development, in addition to the application of other conditions, has allowed the Rocky Flats Site to obtain a "variance" to the safeguards termination limits from DOE's Office of Defense Nuclear Nonproliferation. The other conditions applied include a modification of the packaging components of the pipe overpack container to make it more difficult to divert any plutonium and a re-evaluation of the recovery processing steps required to separate plutonium from the plutonium fluoride residues in their present condition. All these special conditions have made the application of a variance for the plutonium fluoride residues and their shipment to WIPP practical.

WIPP's opening in March 1999 and the issuance of WIPP's hazardous waste permit by the New Mexico Environment Department in November 1999 provided DOE with the option to dispose of a blended-down plutonium fluoride residues matrix at WIPP. Because the plutonium fluoride residues contain hazardous constituents, these residues would be subject to the requirements of WIPP's hazardous waste permit.

IV. Decision

After consideration of the potential environmental impacts identified in the Residues EIS, the new circumstances discussed above, and a Supplement

¹ The Waste Isolation Pilot Plant, located near Carlsbad, New Mexico, is DOE's geologic repository for disposal of defense-related transuranic wastes. Transuranic waste contains alpha-emitting radionuclides with half-lives greater than 20 years in concentrations greater than 100 nanocuries per gram of waste at time of assay.

² Blend down is a process in which an inert material is mixed with a plutonium-bearing residue to reduce its plutonium concentration.

³ The Protected Area is the area at the Rocky Flats Site that is encompassed by physical barriers, subject to access control, surrounding a material access area or area containing special nuclear material.

Analysis (DOE/EIS-0277-SA-1), discussed below, DOE has decided to blend down the plutonium fluoride residues with inert material to less than 10 percent, apply a variance to the safeguards termination limits, and dispose of these residues at WIPP.

V. Basis for the Decision

The delay in obtaining the certification for the shipping container needed to transport the plutonium fluoride residues to SRS could prevent DOE from closing the Rocky Flats Site by 2006. DOE now has the ability to blend down this category of residues to less than 10 weight percent of plutonium and meet the variance requirements for safeguards termination limits. For the reasons described below in Section VI, DOE has concluded that blending the plutonium fluoride residues down to less than 10% plutonium by weight and shipping them to WIPP for disposal would have low impacts, well within those analyzed in the Residues EIS.

DOE's decision complies with Section 309 of the Fiscal Year 2001 Energy and Water Development Appropriations Act (Pub. L. 106-377), which specifies that: "None of the funds in this Act may be used to dispose of transuranic waste in WIPP which contains concentrations of plutonium in excess of 20 percent by weight for the aggregate of any material category on the date of enactment of this Act, or is generated after such date. For the purposes of this section, the material categories of transuranic waste at the Rocky Flats Environmental Technology Site include: (1) Ash residues, (2) salt residues, (3) wet residues, (4) direct repackage residues, and (5) scrub alloy as referenced in the 'Final Environmental Impact Statement on Management of Certain Plutonium Residues and Scrub Alloy Stored at the Rocky Flats Environmental Technology Site.'" (Plutonium fluoride residues are part of the "wet residues" category, which overall contains approximately 7 percent plutonium by weight.)

Furthermore, disposal of the plutonium fluoride residues at WIPP now provides the least technical risk and most cost-effective approach to the management of plutonium fluoride residues, and supports the Rocky Flats closure schedule of 2006. Therefore, there are no longer cost, waste management, or schedule advantages in shipping the plutonium fluoride residues to SRS for separation.

VI. Prior NEPA Analysis

DOE prepared a Supplement Analysis for the Final Environmental Impact Statement on Management of Certain

Plutonium Residues and Scrub Alloy Stored at the Rocky Flats Environmental Technology Site (DOE/EIS-0277-SA-1). This Supplement Analysis was developed to determine whether the activities and impacts associated with blending down the plutonium fluoride residues to less than 10 percent plutonium by weight with a matrix of inert material, applying a safeguard termination limit variance, and disposing of the resulting blend at WIPP were encompassed within previous NEPA reviews or would present any significant new information or circumstances relevant to environmental concerns.

The results of this Supplement Analysis indicated that the activities and potential environmental impacts associated with the new action are encompassed within the activities and impacts analyzed under Alternative 2 (blend down) of the Residues EIS. In addition, the overall impacts for the new action will be very small for both the public and workers and within the levels of impacts considered in the Residues EIS. Worker exposure during the new blend down activities would be reduced to 8 person-rem from 365 person-rem estimated in the Residues EIS. The number of Latent Cancer Fatalities (LCF) for the total worker population would be smaller for the new action (0.003) than for Alternative 2 (0.142). The difference in LCF for the total worker population between Alternative 2 and the new action is a result of two factors. The first is a reduced duration of the blend down operation as blending down to less than 10 weight percent plutonium rather than 0.2 weight percent plutonium will result in a shorter period in which the material is handled. Secondly, enhanced worker shielding will reduce worker exposure during the blend-down activities. Additionally, the new action has fewer drums for transportation reducing the potential for traffic accidents during transportation of plutonium fluoride residues to WIPP. Accordingly, DOE determined that carrying out the new action would not constitute a substantial change in actions previously analyzed and would not constitute significant new circumstances or information relevant to environmental concerns and bearing on the previously analyzed action or its impacts. Therefore, DOE did not need to undertake additional NEPA analysis before issuing this amendment to the 1998 Record of Decision.

VII. Conclusion

This Amended Record of Decision is effective upon being made public, in

accordance with DOE's NEPA implementation regulations (10 CFR 1021.315).

Issued in Washington, D.C., this 11th day of January 2001.

Carolyn L. Huntton,

Assistant Secretary for Environmental Management.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Rocky Flats

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Rocky Flats. The Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that public notice of these meetings be announced in the **Federal Register**.

DATES: Thursday, February 1, 2001, 6 p.m. to 9:30 p.m.

ADDRESSES: Arvada Center for the Arts and Humanities, 6901 Wadsworth Boulevard, Arvada, CO.

FOR FURTHER INFORMATION CONTACT: Ken Korkia, Board/Staff Coordinator, Rocky Flats Citizens Advisory Board, 9035 North Wadsworth Parkway, Suite 2250, Westminster, CO, 80021; telephone (303) 420-7855; fax (303) 420-7579.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE and its regulators in the areas of environmental restoration, waste management, and related activities.

Tentative Agenda:

1. Quarterly update by the Environmental Protection Agency.
2. Presentation and discussion on recent worker contamination and safety violations at the site.
3. Draft recommendations on Radionuclide Soil Action Level review process.
4. Other Board business may be conducted as necessary.

Public Participation: The meeting is open to the public. Written statements may be filed with the Board either before or after the meeting. Individuals who wish to make oral statements pertaining to agenda items should contact Ken Korkia at the address or telephone number listed above. Requests must be received at least five days prior to the meeting and reasonable provisions will be made to include the presentation in the agenda. The Deputy

Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Each individual wishing to make public comment will be provided a maximum of five minutes to present their comments.

Minutes: The minutes of this meeting will be available for public review and copying at the Public Reading Room located at the Office of the Rocky Flats Citizens Advisory Board, 9035 North Wadsworth Parkway, Suite 2250, Westminster, CO 80021; telephone (303) 420-7855. Hours of operations for the Public Reading Room are 9 a.m. to 4 p.m., Monday–Friday, except Federal holidays. Minutes will also be made available by writing or calling Deb Thompson at the address or telephone number listed above.

Issued at Washington, DC on January 12, 2001.

Rachel M. Samuel,

Deputy Advisory Committee Management Officer.

[FR Doc. 01-1480 Filed 1-17-01; 8:45 am]

DEPARTMENT OF ENERGY

Environmental Management Site-Specific Advisory Board, Semi-Annual Chairs Meeting

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: This notice announces a meeting of the Environmental Management Site-Specific Advisory Board (EM SSAB), Semi-Annual Chairs Meeting. The Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770) requires that public notice of these meetings be announced in the **Federal Register**.

DATES: Thursday, February 8, 2001, 6:45 a.m.–5:30 p.m.

Friday, February 9, 2001, 8 a.m.–5:30 p.m.

Saturday, February 10, 2001 8 a.m.–1:30 p.m.

ADDRESSES: St. Tropez All Suite Hotel, 455 East Harmon Avenue, Las Vegas, Nevada 89101, Phone: (702) 369-5400 or (800) 666-5400.

FOR FURTHER INFORMATION CONTACT: Martha Crosland, Designated Federal Officer, U.S. Department of Energy, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 586-5793.

SUPPLEMENTARY INFORMATION:

Purpose of the Board: The purpose of the Board is to make recommendations to DOE and its regulators in the areas of future use, cleanup levels, waste disposition, and cleanup priorities.

Tentative Agenda

Thursday, February 8, 2001: EM SSAB Chairs Meeting (Day 1)

6:45 a.m.–5:30 p.m., Joint tour of the Nevada Test Site and Yucca Mountain

6:00 p.m.–7:00 p.m., Opening reception at the St. Tropez Hotel

Friday, February 9, 2001: EM SSAB Chairs Meeting (Day 2)

6:30–8:00 a.m., Continental Breakfast buffet in Truffles Lounge

8:00–8:20 a.m., Opening/Welcoming Remarks/Overview of Agenda (Martha Crosland, DOE/HQ; Carl Gertz, DOE/NV AMEM; etc.)

8:20–8:25 a.m., Introduction of Facilitators and Review of Ground Rules (Ted McAdam, *et al.*)

8:25–9:30 a.m., Round Robin Ice Breaker. SSAB Chairs will introduce participants from their Boards and briefly list their Boards' Top Three Issues of Concern

9:30–9:40 a.m., Overview of Survey Results and Objectives of Topic-Specific Round Robins and Facilitated Discussions

9:40–10:30 a.m., Topic #1 Round Robin (five minutes for each SSAB). What is your Board's desired composition and how are new members recruited and selected? How effective is that process?

10:30–10:45 a.m., Morning break

10:45–11:25 a.m., Topic #1 Facilitated Discussion

11:25 a.m.–12:05 p.m., Topic #2 Round Robin (four minutes for each SSAB). How does your Board develop its annual work plan? How does your Board set its agenda?

12:05–12:40 p.m., Topic #2 Facilitated Discussion

12:40–1:45 p.m., Buffet lunch served in the hotel

1:45–2:25 p.m., Topic #3 Round Robin (four minutes for each SSAB). How are your Boards's committees structured? How do your Board's committees function? Do non-members participate in committee work?

2:25–3:00 p.m., Topic #3 Facilitated Discussion

3:00–3:15 p.m., Afternoon Break

3:15–3:55 p.m., Topic #4 Round Robin (four minutes for each SSAB). How does your Board develop its recommendations/advice? To whom are your recommendations addressed?

3:55–4:30 p.m., Topic #4 Facilitated Discussion

4:30–5:15 p.m., Review and Approval of Stewardship Core Value Statements

5:15–5:30 p.m., Public Comment

5:30–7:00 p.m., Free time

7:00 p.m. Dine Around Las Vegas.

Groups depart for area restaurants—transportation to be provided

Saturday, February 10, 2001: EM SSAB Chairs Meeting (Day 3)

6:30–8:00 a.m., Continental Breakfast Buffet in Truffles Lounge

8:00–8:10 a.m., Welcome and Recap of Previous Day's Work (Martha Crosland or Ted McAdam)

8:10–8:50 a.m., Topic #5 Round Robin (five minutes for each SSAB). How does your Board conduct public outreach and how effective is that effort?

8:50–9:25 a.m., Topic #5 Facilitated Discussion

9:35–10:15 a.m., Topic #6 Round Robin (five minutes for each SSAB). How does your Board conduct self-evaluations, who else evaluates the Board's performance, and how effective is/are that/those process(es)?

10:15–10:55 a.m., Topic #6 Facilitated Discussion

10:55–11:10 a.m., Morning break

11:10a.m.–12:10 p.m., Facilitated

Discussion of Issues of Concern to Each Site. Issues discussed will be based on those recorded during the Friday morning Ice Breaker Round Robin discussion.

12:10–12:30 p.m., Updates from DOE Headquarters

- Revised DOE Public Participation Policy Public Review & Comment
- Status Report Regarding Changes at DOE Under the New Administration (Betty Nolan)

12:30–12:45 p.m., Critique of the SSAB Chairs Meeting

12:45–1:00 p.m., Future SSAB Meetings and Workshops—Martha Crosland

1:00–1:15 p.m., Public comment

1:15–1:30 p.m., Closing remarks

1:30 p.m., Adjourn

(Agenda topics may change up to the day of the meetings: please contact Martha Crosland, Designated Federal Officer, (202) 586-5793 for the current agenda.)

Public Participation: The meeting is open to the public. Written statements may be filed with the Board facilitator either before or after the meeting. Individuals who wish to make oral statements pertaining to agenda items should contact the Board Chair at their specific site, or Martha Crosland. Requests must be received five days prior to the meeting and reasonable provision will be made to include the presentation in the agenda. The Designated Federal Officer, Martha Crosland, U.S. Department of Energy, is empowered to conduct the meeting in a

fashion that will facilitate the orderly conduct of business. Each individual wishing to make public comment will be provided a maximum of five minutes to present their comments.

Minutes: A written summary of this meeting will be available for public review and copying at the Freedom of Information Public Reading Room, 1E-190, Forrestal Building, 1000 Independence Avenue, SW, Washington, DC, 20585 between 9 a.m. and 4 p.m., Monday–Friday, except Federal holidays. The meeting summary will also be available by writing the EM–SSAB Chair or Designated Deputy Federal Officer of every EM–SSAB that participated in the meeting.

Issued at Washington, DC on January 11, 2001.

Rachel Samuel,

Deputy Advisory Committee Management Officer.

DEPARTMENT OF ENERGY

[FE Docket No. 00–53–NG, et al.]

Office of Fossil Energy; Chinook Pipeline Company (The Successor to Xeno, Inc.), et al.; Orders Granting and Transferring Authority To Import and Export Natural Gas

AGENCY: Office of Fossil Energy, DOE.

ACTION: Notice of orders.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy gives notice that during December 2000, it issued Orders granting and transferring

authority to import and export natural gas. These Orders are summarized in the attached appendix and may be found on the FE website at <http://www.fe.doe.gov>, or on the electronic bulletin board at (202) 586–7853. They are also available for inspection and copying in the Office of Natural Gas & Petroleum Import & Export Activities, Docket Room 3E–033, Forrestal Building, 1000 Independence Avenue, S.W., Washington, D.C. 20585, (202) 586–9478. The docket room is open between the hours of 8 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, D.C., on January 9, 2001.

Clifford P. Tomaszewski,

Manager, Natural Gas Regulation, Office of Natural Gas & Petroleum, Import & Export Activities, Office of Fossil Energy.

Attachment.

APPENDIX.—ORDERS GRANTING AND TRANSFERRING IMPORT/EXPORT AUTHORIZATIONS

[DOE/FE Authority]

Order No.	Date Issued	Importer/Exporter FE Docket No.	Import volume	Export volume	Comments
1615–A	12/04/00	Chinook Pipeline Company (The Successor to Xeno, Inc.) 00–53–NG.			Transfer of blanket export authority.
992–A	12/08/00	Engage Energy Canada, L.P. (The Successor to Westcoast Gas Services Inc.) 94–74–NG.			Transfer of long-term import authority.
993–A	12/08/00	Engage Energy Canada, L.P. (The Successor to Westcoast Gas Services Inc.) 94–75–NG.			Transfer of long-term import authority.
994–A	12/08/00	Engage Energy Canada, L.P. (The Successor to Westcoast Gas Services Inc.) 94–76–NG.			Transfer of long-term import authority.
996–A	12/08/00	Engage Energy Canada, L.P. (The Successor to Westcoast Gas Services Inc.) 94–78–NG.			Transfer of long-term import authority.
1656	12/08/00	Pemex Gas Y Petroquimica Basica 00–93–NG.	(1)160 Bcf		Import and export a combined total to and from Canada and Mexico, beginning on January 1, 2001, and extending through December 31, 2002.
1657	12/08/00	Hunt Oil Company of Canada, Inc. 00–95–NG.	6 Bcf		Import from Canada beginning on December 1, 2000, and extending through November 30, 2002.
1658	12/15/00	Engage Energy Canada, L.P. 00–96–NG.	1,000 Bcf	1,000 Bcf	Import from Canada, including LNG and export to Canada, beginning on January 1, 2001, and extending through December 31, 2002.
1659	12/18/00	The Montana Power Company 00–94–NG.	20 Bcf		Import from Canada beginning on February 7, 2001, and extending through February 6, 2003.
1660	12/21/00	Coast Energy Group, A Division of Cornerstone Propane L.P. 00–99–NG.		40 Bcf	Import and export a combined total to and from Canada and Mexico, beginning on January 1, 2001, and extending through December 31, 2002.
1661	12/22/00	Sprague Energy Corp. 00–98–NG	50 Bcf		Import from Canada beginning on January 1, 2001, and extending through December 31, 2002.
1662	12/26/00	Wisconsin Gas Company 00–97–NG.	200 Bcf		Import from Canada beginning on January 1, 2001, and extending through December 31, 2002.

BILLING CODE 6450-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RP01-208-000]

Amoco Production Company, et al.; Notice of Emergency Petition

DATE: January 11, 2001.

Take notice that on January 5, 2001, Amoco Production Company, BP Exploration & Oil Inc., Chevron U.S.A. Inc., ExxonMobil Gas Marketing Company, a division of Exxon Mobil Corporation, and Shell Offshore Inc. (Producers) tendered for filing an emergency petition requesting the Commission to issue an immediate temporary restraining order, prior to January 9, 2001, to prevent Southern Natural Gas Company from shutting in natural gas supply upstream of the Toca processing plants, located in Louisiana. In addition, the Producers request the Commission to schedule an emergency technical conference to explore all of the issues as soon as possible.

Producers states that copies of the filing have been served upon each person designated on the official service list compiled by the Secretary in this proceeding.

Any person desiring to be heard or to protest said filing should file a motion to intervene or a protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with sections 385.214 or 385.211 of the Commission's Rules and Regulations. All such motions or protests must be filed on or before January 16, 2001. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. This filing may be viewed on the

web at <http://www.ferc.fed.us/online/rims.htm> (call 202-208-2222 for assistance). Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site at <http://www.ferc.fed.us/efi/doorbell.htm>.

David P. Boergers,

[Docket No. RP01-46-002]

Carnegie Interstate Pipeline Company; Notice of Compliance Filing

January 11, 2001.

Take notice that on January 8, 2001, Carnegie Interstate Pipeline Company (CIPCO), tendered for filing as part of its FERC Gas Tariff, Original Volume No. 1, the following revised tariff sheets, with an effective date of November 1, 2000:

Substitute first Revised Tariff Sheet No. 116

CIPCO states that this tendered sheet is filed in compliance with Order No. 587-L, issued in Docket No. RM96-1-014 by the Commission on June 30, 2000 and implements 18 CFR 284.(c)(ii), regarding the netting and trading of imbalances on CIPCO's system, and further responds to the Commission's directive in its Order of December 21, 2000, herein.

CIPCO states that a copy of the filing is being served on each of CIPCO's jurisdictional customers and interested state commissions.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Section 385.211 of the Commission's Rules and Regulations. All such protests must be filed in accordance with Section 154.210 of the Commission's Regulations. Protests will be considered by the Commission in determining the

appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room. Central Hudson Gas & Electric; Notice of Filing

January 11, 2001.

Take notice that on December 11, 2000, Central Hudson Gas and Electric Corporation (Central Hudson), tendered for filing its FERC Rate Schedule No. 201 which sets forth the terms and charges for transmission facilities provided by the Company to Consolidated Edison company of New York, Inc., and Niagara Mohawk Power Corporation for the transmission of output from the Roseton Generating Station.

Rate Schedule FERC No. 201 is issued in compliance with the October 10, 2000 order issued in Docket No. ER00-3661-000, which required the Company to file rate schedule designations as required in Order No. 614. Accordingly, Rate Schedule FERC No. 201 supersedes Rate Schedule FERC No. 42.

Central Hudson states that a copy of its filing was served on Con Edison, Niagara Mohawk and the State of New York Public Service Commission.

Any person desiring to be heard or to protest such filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions and protests should be filed on or before January 22, 2001. Protests will be considered by the Commission to determine the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection. Notice of Application for Amendment of License and Soliciting Comments, Motions To Intervene, and Protests

January 11, 2001.

a. *Application Type:* Application to Amend License for the Big Creek Nos. 2A, 8 & Eastwood Power Station Project.
b. *Project No:* 67-089.

c. *Date Filed:* January 12, 2000, and supplemented on November 9, 2000.

d. *Applicant:* Southern California Edison Company (SCE).

e. *Name of Project:* Big Creek Nos. 2A, 8 & Eastwood Power Station Project.

f. *Location:* The project is located on the South Fork San Joaquin River and Big Creek in Fresno County, California. The project utilizes lands of the Sierra National Forest.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)-825(r).

h. *Applicant Contact:* Mr. Stephen E. Pickett, Vice President and General Counsel, Southern California Edison Company, 2244 Walnut Grove Avenue, P.O. Box 800, Rosemead, CA 91770, (626) 302-4459.

i. *FERC Contact:* Any questions on this notice should be addressed to Mr. Vedula Sarma at (202) 219-3273 or by e-mail at vedula.sarma@ferc.fed.us.

j. *Deadline for filing comments and/or motions:* February 16, 2001.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site at <http://www.ferc.fed.us/efi/doorbell.htm>.

Please include the project number (P-67-089) on any comments or motions filed.

k. *Description of Filing:* SCE proposes to remove 1.7 miles of transmission line from Big Creek #2A-Big Creek #8, and 5.6 miles of transmission line from Big Creek #8-Big Creek #3 from the project's license since they are part of the SCE's Transmission System Network. SCE also proposes to revise the project boundary by removing a telephone line, caretaker building, warehouse, microwave tower, and other miscellaneous project features because they are no longer used for project purposes. The proposed modifications would reduce the amount of federal lands used by the project by 158.4 acres.

l. *Locations of the Application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE, Room 2A, Washington, DC 20426, or by calling (202) 208-1371. This filing may be viewed on <http://www.ferc.fed.us/online/rims.htm> [call (202) 208-2222 for assistance]. A copy is also available for inspection and reproduction at the address in item h above.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Filing and Service of Responsive Documents—Any filings must bear in all capital letters the titles "COMMENTS", "RECOMMENDATIONS FOR TERMS AND CONDITIONS", "PROTEST", OR

“MOTION TO INTERVENE”, as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission’s regulation to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. A copy of any motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

Agency Comments—Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency’s comments must also be sent to the Applicant’s representatives.

David P. Boergers,
Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RP96–312–038]

Tennessee Gas Pipeline Company; Notice of a Change in Rates

January 11, 2001.

Take notice that on January 3, 2001, Tennessee Gas Pipeline Company (Tennessee), tendered for filing a notice of a change in rates for the October 18, 2000 Negotiated Rate Agreement between Tennessee and Dynegy Energy Marketing and Trade (Dynegy). The notice substitutes a fixed rate in place of a Margin calculation for certain volumes for TGP Service Package No. 35092. The fixed prices are effective from January 2, 2001 through January 31, 2001.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Section 385.211 of the Commission’s Rules and Regulations. All such protests must be filed on or before January 18, 2001. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Copies of this filing are on file with the Commission and are

available for public inspection in the Public Reference Room. This filing may be viewed on the web at <http://www.ferc.fed.us/online/rims.htm> (call 202–208–2222 for assistance). Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission’s web site at <http://www.ferc.fed.us/efi/doorbell.htm>.

David P. Boergers,
Secretary.

BILLING CODE 6717–01–M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EG01–96–000, et al.]

PSEG Nuclear LLC, et al.; Electric Rate and Corporate Regulation Filings

January 11, 2001.

Take notice that the following filings have been made with the Commission:

1. PSEG Nuclear LLC

[Docket No. EG01–96–000]

Take notice that on December 29, 2000, PSEG Nuclear LLC (PSEG Nuclear or Applicant), having its principal place of business at 80 Park Plaza, T–16, Newark, New Jersey, filed with the Federal Energy Regulatory Commission an application for redetermination of exempt wholesale generator status pursuant to Part 365 of the Commission’s regulations.

PSEG Nuclear is a limited liability company organized under the laws of the State of Delaware. PSEG Nuclear will be engaged, directly or indirectly through an affiliate as defined in Section 2(a)(11)(B) of the Public Utility Holding Company Act of 1935, exclusively in owning, or both owning and operating eligible generating facilities, and engaging in sales of electric energy at wholesale.

Comment date: February 1, 2001, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

2. Duke Energy Audrain, LLC

[Docket No. EG01–97–000]

Take notice that on January 3, 2001, Duke Energy Audrain, LLC (Duke Audrain) filed an application with the Federal Energy Regulatory Commission (the Commission) for determination of exempt wholesale generator status

pursuant to Section 32 of the Public Utility Holding Company Act of 1935, as amended, and Part 365 of the Commission’s regulations.

Duke Audrain is a Delaware limited liability company that will be engaged directly and exclusively in the business of owning and operating all or part of one or more eligible facilities to be located in Audrain County, Missouri. The eligible facilities will consist of an approximately 640 MW natural gas-fired, simple cycle electric generation plant and related interconnection facilities. The output of the eligible facilities will be sold at wholesale.

Comment date: February 1, 2001, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

3. Guadalupe Power Partners, LP

[Docket No. EG01–98–000]

Take notice that on January 4, 2001, Guadalupe Power Partners, LP (GPP), filed with the Federal Energy Regulatory Commission an application for redetermination of exempt wholesale generator status pursuant to Part 365 of the Commission’s regulations.

GPP is a Delaware limited partnership which will own and/or operate a natural gas-fired electric generating facility with an expected generating capacity of 1,000 MW to be located in Guadalupe County, Texas within the region governed by the Electric Reliability Council of Texas (ERCOT) and sell electricity at wholesale.

Comment date: February 1, 2001, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

4. Hamakua Energy Partners, L.P.

[Docket No. EG01–99–000]

Take notice that on January 8, 2001, Hamakua Energy Partners, L.P., a Hawaii limited partnership, with its principal office located at J. A. Jones Drive, Charlotte, North Carolina 28287, filed with the Federal Energy Regulatory Commission (Commission) information with respect to a change in facts relative to its status as an exempt wholesale generator and an Application for determination that it remains an exempt wholesale generator pursuant to Part 365 of the Commission’s regulations and Section 32 of the Public Utility Holding Company Act of 1935, as amended. Applicant is a Hawaii limited partnership that will be engaged directly and exclusively in operating an

approximately 63 MW net naphtha and distillate oil-fired power plant (the Facility) located in Honakaa, in the northern coastal region of the island of Hawaii, and selling energy at wholesale from the Facility.

Comment date: February 1, 2001, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

5. MEP Pleasant Hill Operating, LLC

[Docket No. EG01-100-000]

Take notice that on January 8, 2000, MEP Pleasant Hill Operating, LLC (MEPPH Operating), filed with the Federal Energy Regulatory Commission (Commission) an application for determination of exempt wholesale generator status pursuant to Part 365 of the Commission's regulations and Section 32(a) of the Public Utility Holding Company Act of 1935. MEPPH Operating and CPN Pleasant Hill Operating, LLC (CPNPH Operating) will operate and sell power at wholesale from generation facilities under construction in Cass County, Missouri.

Comment date: February 1, 2001, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

6. North Carolina Power Holdings, LLC

[Docket No. EG01-101-000]

Take notice that on January 8, 2001, North Carolina Power Holdings, LLC (NCPH), a limited liability company with its principal place of business at 1400 Smith Street, Houston, Texas 77002, filed with the Federal Energy Regulatory Commission (Commission) an application for determination of exempt wholesale generator status pursuant to Part 365 of the Commission's regulations.

NCPH states that it will be engaged directly and exclusively in the business of owning two 35 MW generation facilities located in Elizabethtown and Lumberton, North Carolina. NCPH will sell its capacity exclusively at wholesale. A copy of the filing was served upon the Securities and Exchange Commission and the North Carolina Utilities Commission.

Comment date: February 1, 2001, in accordance with Standard Paragraph E at the end of this notice. The Commission will limit its consideration of comments to those that concern the adequacy or accuracy of the application.

7. Ogden Martin Systems of Fairfax, Inc.

[Docket No. ES01-11-002]

Take notice that on January 5, 2001, Ogden Martin Systems of Fairfax, Inc. filed with the Commission an amendment to its application in the above-referenced proceeding, seeking to increase the amount of debt it may issue from \$142 million to \$160 million.

Comment date: January 23, 2001, in accordance with Standard Paragraph E at the end of this notice.

8. Duke Energy Audrain, LLC

[Docket No. ER01-884-000]

Take notice that on January 3, 2001, Duke Energy Audrain, LLC (Duke Audrain), tendered for filing pursuant to Section 205 of the Federal Power Act its proposed FERC Electric Tariff No. 1.

Duke Audrain seeks authority to sell energy and capacity, as well as ancillary services, at market-based rates, together with certain waivers and preapprovals. Duke Audrain also seeks authority to sell, assign, or transfer transmission rights that it may acquire in the course of its marketing activities.

Duke Audrain seeks an effective date sixty (60) days from the date of filing for its proposed rate schedules.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

9. American Electric Power Service Corporation

[Docket No. ER01-67-001]

Take notice that on January 8, 2001, American Electric Power Service Corporation tendered for filing, on behalf of the operating companies of the American Electric Power System (AEP), a proposed amendment to the Open Access Transmission Tariff accepted for filing by the Commission in Docket No. ER98-2786-000. The amendment is being submitted in response to a December 7, 2000 deficiency letter in this docket.

AEP requests waiver of notice to permit an effective date of December 1, 2000 for such amendments.

Copies of the filing have been served upon AEP's transmission customers and the state utility regulatory commissions of Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

10. American Electric Power Service Corporation

[Docket No. ER01-257-001]

Take notice that on January 8, 2001, the American Electric Power Service Corporation (AEPSC), tendered for filing an Amendment to Filing in No. Docket ER01-257-000. In AEPSC's initial filing on October 25, 2000, AEPSC failed to provide designations for a Transaction Confirmation Agreement (Confirmation Agreement) which was submitted for filing by the AEP Companies in the above referenced docket. Pursuant to the Commissions' Order No. 614 in Docket No. RM99-12-000, AEPSC respectfully designates the Confirmation Agreement with the City of Vernon, California as Service Agreement No. 269 under the Wholesale Market Tariff of the AEP Operating Companies (Power Sales Tariff).

The Power Sales Tariff was accepted for filing effective October 10, 1997, and has been designated AEP Companies' FERC Electric Tariff Original Volume No. 5. AEPSC respectfully requests waiver of notice to permit this the Confirmation Agreement to be made effective as initially requested on or prior to October 1, 2000.

A copy of the filing was served upon the Parties and the State Utility Regulatory Commissions of Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

11. Atlantic City Electric Company, Baltimore Gas & Electric Company, Delmarva Power & Light Company, Metropolitan Edison Company, PP&L Inc., PECO Energy Company, Potomac Electric Power Company, Public Service Electric and Gas Company, UGI Utilities, Inc.

[Docket No. ER01-897-000]

Take notice that on January 5, 2001, Potomac Electric Power Company (Pepco), tendered for filing a Notice of Assignment pursuant to which PPL Montour, LLC (PPLM) and Allegheny Energy Supply Conemaugh, LLC (AESCL) will, as part of Pepco's transfer of its ownership interests in the Conemaugh Generating Station to PPLM and AESCL, replace Pepco as a Generating Station Owner under the Conemaugh Generating Station Interconnection Agreement (Agreement) which is designated as follows: Atlantic City Electric Company Rate Schedule FERC No. 75; Baltimore Gas & Electric Company Rate Schedule FERC No. 58; Delmarva Power & Light Company Rate

Schedule FERC No. 124; Metropolitan Edison Company Rate Schedule FERC No. 77; PP&L Inc. Rate Schedule FERC No. 168; PECO Energy Company Rate Schedule FERC No. 123; Potomac Electric Power Company Rate Schedule FERC No. 46; Public Service Electric and Gas Company Rate Schedule FERC No. 166; and, UGI Utilities, Inc. Rate Schedule FERC No. 9.

The Agreement will become effective at the time Pepco's ownership interest in the Conemaugh Generating Station is transferred to PPLM and AESC.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

12. Arizona Public Service Company

[Docket No. ER01-898-000]

Take notice that on January 5, 2001, Arizona Public Service Company (APS), tendered for filing umbrella Service Agreements to provide Short-Term Firm and Non-Firm Point-to-Point Transmission Service to Morgan Stanley Capital Group, Inc., under APS' Open Access Transmission Tariff.

A copy of this filing has been served on Morgan Stanley Capital Group, Inc., and the Arizona Corporation Commission.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

13. Louisville Gas and Electric Company, Kentucky Utilities Company

[Docket No. ER01-899-000]

Take notice that on January 5, 2001, Louisville Gas and Electric Company (LG&E) and Kentucky Utilities Company (KU), 220 West Main Street, Louisville, Kentucky 40202, tendered for filing with the Commission a notice that LG&E and KU were withdrawing from the Midwest Independent System Operator, Inc. (MISO), a motion requesting the Commission to authorize and approve such withdrawal effective upon the earliest date on which the Commission authorizes and approves the withdrawal from the MISO of either Commonwealth Edison Company or Illinois Power Company, and a motion requesting the Commission to authorize the recovery of LG&E's and KU's associated costs.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

14. Pennsylvania Electric Company

[Docket No. ER01-900-000]

Take notice that on January 5, 2001, Potomac Electric Power Company (Pepco), tendered for filing a Notice of Assignment pursuant to which PPL Montour, LLC (PPLM) and Allegheny

Energy Supply Conemaugh, LLC (AESC) will replace Pepco under the 115 kV Seward-Conemaugh Interconnection Facilities Agreement (Agreement), Penelec Rate Schedule No. 63, as part of Pepco's transfer of its ownership interests in the Conemaugh Generating Station to PPLM and AESC.

The Agreement will become effective at the time Pepco's ownership interest in the Conemaugh Generating Station is transferred to PPLM and AESC.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

15. Pennsylvania Electric Company

[Docket No. ER01-901-000]

Take notice that on January 5, 2001, Potomac Electric Power Company (Pepco), tendered for filing a Notice of Assignment pursuant to which PPL Montour, LLC (PPLM) and Allegheny Energy Supply Conemaugh, LLC (AESC) will replace Pepco under the Conemaugh Generating Station Operating Agreement (Agreement), Penelec Rate Schedule No. 100, as part of Pepco's transfer of its ownership interests in the Conemaugh Generating Station to PPLM and AESC.

The Agreement will become effective at the time Pepco's ownership interest in the Conemaugh Generating Station is transferred to PPLM and AESC.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

16. California Power Exchange Corporation

[Docket No. ER01-902-000]

Take notice that on January 5, 2001, the California Power Exchange Corporation (CalPX), tendered for filing its proposed Tariff Amendment No. 22, consisting of a revised Sheet No. 59 and a new Sheet No. 59A to its Tariff. The purpose of Tariff Amendment No. 22 is to change the credit requirements pertaining to its current full requirements customers, namely Pacific Gas and Electric Company, Southern California Edison Company, and San Diego Gas Electric Company (IOUs). Tariff Amendment No. 22 modifies the credit rating requirements pertaining to the IOUs as a result of the Commission's December 15, 2000 order (93 FERC ¶ 61,294) and as a result of recent changes in institutional credit ratings for PG&E and Edison.

To permit the IOU's to continue trading in the CalPX Markets, CalPX requests waiver of the Commission's notice requirements to permit the tendered filing to become effective as of the date of this filing.

CalPX states that it has served this filing on its participants and on the California Public Utilities Commission and has also posted this filing on its website (www.calpx.com).

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

17. Central Hudson Gas & Electric Corporation

[Docket No. ER01-903-000]

Take notice that on January 8, 2001, Central Hudson Gas and Electric Corporation (Central Hudson), tendered for filing its Rate Schedule FERC No. 202 which sets forth the terms and charges for substation service provided by the Company to Consolidated Edison Company of New York, Inc.

Rate Schedule FERC No. 202, which supersedes Rate Schedule FERC No. 43, also provides the development of actual costs for 1999 related to the provision of the aforementioned substation service.

Central Hudson indicates that the actual costs amounted to \$274,659 for 1999 and will be the basis, excluding the New York State Gross Earnings Tax which was eliminated effective January 1, 2000, on which the estimated charges of \$272,599 for 2000 will be billed.

Central Hudson states that a copy of its filing was served on Con Edison and the State of New York Public Service Commission.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

18. MEP Pleasant Hill Operating, LLC

[Docket No. ER01-905-000]

Take notice that on January 8, 2001, MEP Pleasant Hill Operating, LLC (MEPPH Operating), an indirect wholly owned subsidiary of UtiliCorp United Inc., tendered for filing a rate schedule to engage in sales at market-based rates and two service agreements thereunder. MEPPH Operating included in its filing a proposed code of conduct.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

19. Xcel Energy Services

[Docket No. ER01-907-000]

Take notice that on January 8, 2001, Xcel Energy Services Inc. (XES), on behalf of Cheyenne Light, Fuel & Power (CLF&P), tendered for filing a letter approving its application for membership in the Western Systems Power Pool (WSPP).

CLF&P requests the Commission to allow its membership in the WSPP to become effective on January 9, 2001.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

20. Allegheny Energy Service Corporation, on Behalf of Monongahela Power Company, The Potomac Edison Company, West Penn Power Company (Allegheny Power)

[Docket No. ER01-908-000]

Take notice that on January 8, 2001, Allegheny Energy Service Corporation on behalf of Monongahela Power Company, The Potomac Edison Company and West Penn Power Company (Allegheny Power), filed Service Agreement No. 334 to add Strategic Energy, L.L.C. to Allegheny Power's Open Access Transmission Service Tariff.

The proposed effective date under the agreement is January 5, 2001.

Copies of the filing have been provided to the Public Utilities Commission of Ohio, the Pennsylvania Public Utility Commission, the Maryland Public Service Commission, the Virginia State Corporation Commission, and the West Virginia Public Service Commission.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

21. Consumers Energy Company

[Docket No. ER01-909-000]

Take notice that on January 8, 2001, Consumers Energy Company (Consumers), tendered for filing executed Firm and Non-Firm Point to Point Transmission Service Agreements with Nordic Electric, LLC (Customer) pursuant to the Joint Open Access Transmission Service Tariff filed on December 31, 1996 by Consumers and The Detroit Edison Company (Detroit Edison).

Both Agreements have effective dates of January 1, 2001.

Copies of the filed agreements were served upon the Michigan Public Service Commission, Detroit Edison, and the Customer.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

22. Consumers Energy Company

[Docket No. ER01-910-000]

Take notice that on January 8, 2001, Consumers Energy Company (Consumers), tendered for filing executed Firm and Non-Firm Point to Point Transmission Service Agreements with Commonwealth Edison Company and the City of Holland, Michigan Board of Public Works (Customers) pursuant to Consumers' Open Access Transmission

Service Tariff filed on July 9, 1996 by Consumers.

All four Agreements have effective dates of January 1, 2001.

Copies of the filed agreements were served upon the Michigan Public Service Commission and the Customers.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

23. Niagara Mohawk Power Corporation

[Docket No. ER01-906-000]

Take notice that on January 8, 2001, Niagara Mohawk Power Corporation (Niagara Mohawk), tendered for filing an amendment to Niagara Mohawk's firm transmission service agreement with AES NY, L.L.C., FERC Rate Schedule No. 165, pursuant to Section 35.13 of the Code of Federal Regulations, 18 CFR 35.13.

Comment date: January 29, 2001, in accordance with Standard Paragraph E at the end of this notice.

24. San Diego Gas & Electric Company, Complainant, v. Sellers of Energy and Ancillary Services Into Markets Operated by the California Independent System Operator and the California Power Exchange, Respondents

[Docket No. EL00-95-011]

Take notice that on January 8, 2001, Southern California Edison Company (Edison) tendered for filing pursuant to Ordering Paragraph (A) of the commission's December 15, 2000 Order Directing Remedies for California Wholesale Electric Markets (the Order), 93 FERC ¶ 61,294, its compliance filing.

Comment date: February 1, 2001, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest such filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection. This filing may also be viewed on the Internet at <http://www.ferc.fed.us/online/rims.htm> (call 202-208-2222 for assistance).

www.ferc.fed.us/online/rims.htm (call 202-208-2222 for assistance).

David P. Boergers,
Secretary.

[FR Doc. 01-1477 Filed 1-17-01; 8:45 am]

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. EC01-46-000, et al.]

Virginia Electric and Power Company, et al.; Electric Rate and Corporate Regulation Filings

January 10, 2001.

Take notice that the following filings have been made with the Commission:

1. Virginia Electric and Power Company

[Docket No. EC01-46-000]

Take notice that on January 8, 2001, Virginia Electric and Power Company (the Company) filed Exhibit G to supplement its Section 203 application in the above-captioned proceeding (the Application). In the Application, the Company committed to submit other federal and state applications in Exhibit G to the Commission when those applications are complete.

The Applicant states that copies of the filing have been served upon the utility commissions of the states of Virginia and North Carolina and the Company's wholesale requirements customers.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

2. San Joaquin Cogen Limited

[Docket No. ER01-896-000]

Take notice that on January 5, 2001, San Joaquin Cogen Limited (San Joaquin), an Exempt Wholesale Generator that owns and operates a natural gas-fired cogeneration facility in Lathrop, California tendered for filing a Power Purchase/Sale Transaction Confirmation (Agreement) in the above-captioned docket.

San Joaquin requests that the Agreement be permitted to become effective January 1, 2001.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

3. FirstEnergy Operating Companies

[Docket No. ER00-3771-003]

Take notice that on January 5, 2001, The Cleveland Electric Illuminating Company, Ohio Edison Company, Pennsylvania Power Company and The

Toledo Edison Company (collectively, the FirstEnergy Operating Companies), tendered for filing a red-lined version of their FERC Electric Tariff, First Revised Volume No. 3, in which they are offering to make available ancillary services and interconnected operations services. The FirstEnergy Operating Companies state that this tariff identifies modifications to a tariff submitted in September 2000 that were required by the Order Accepting for Filing, as Modified, Proposed Tariff and Service Agreement which was issued in this proceeding on November 22, 2000.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

4. Southern Company Services, Inc.

[Docket Nos. ER99-3531-002; ER99-4384-002]

Take notice that on January 5, 2001, Southern Company Services, Inc., as agent for Alabama Power Company, Georgia Power Company, Gulf Power Company, Mississippi Power Company and Savannah Electric and Power Company (collectively Southern Companies), tendered for filing a refund report in compliance with the Commission's November 22, 2000, Letter Order in the above-referenced proceeding. The refund results from settlement rates associated with Southern Companies' generator balancing service tariff.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

5. Florida Power & Light Company

[Docket No. ER01-874-000]

Take notice that on January 3, 2001, Florida Power & Light Company (FPL), tendered for filing Service Agreements between El Paso Merchant Energy, L.P.; DTE Energy Trading, Inc.; and Rainbow Energy Marketing Corporation for service pursuant to FPL's Market Based Rates Tariff

FPL requests that the Service Agreements be made effective on December 7, 2000.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

6. Cinergy Services, Inc.

[Docket No. ER01-875-000]

Take notice that on January 3, 2001, Cinergy Services, Inc. (Provider), tendered for filing a Firm Point-To-Point Service Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Provider and Cinergy Services, Inc., (Customer).

This service agreement has a yearly firm transmission service with LGE Energy via the Gibson Unit Nos. 1-5 Generating Station.

Provider and Customer are requesting an effective date of January 1, 2001.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

7. Cinergy Services, Inc.

[Docket No. ER01-876-000]

Take notice that on January 3, 2001, Cinergy Services, Inc. (Provider), tendered for filing a Firm Point-To-Point Service Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Provider and Cinergy Services, Inc., (Customer).

This service agreement has a yearly firm transmission service with LGE Energy via the Gibson Unit Nos. 1-5 Generating Station.

Provider and Customer are requesting an effective date of January 1, 2001.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

8. Cinergy Services, Inc.

[Docket No. ER01-877-000]

Take notice that on January 3, 2001, Cinergy Services, Inc. (Provider), tendered for filing a Firm Point-To-Point Service Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Provider and Cinergy Services, Inc., (Customer).

This service agreement has a yearly firm transmission service with LGE Energy via the Gibson Unit Nos. 1-5 Generating Station.

Provider and Customer are requesting an effective date of January 1, 2001.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

9. Cinergy Services, Inc.

[Docket No. ER01-878-000]

Take notice that on January 3, 2001, Cinergy Services, Inc. (Provider), tendered for filing a Non-Firm Point-To-Point Service Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Cinergy and Engage Energy America Corp., (Customer).

Provider and Customer are requesting an effective date of December 11, 2000.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

10. Cinergy Services, Inc.

[Docket No. ER01-879-000]

Take notice that on January 3, 2001, Cinergy Services, Inc. (Provider), tendered for filing a Firm Point-To-Point Service Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Provider and Engage Energy America Corp., (Customer).

Provider and Customer are requesting an effective date of December 11, 2000.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

11. Cinergy Services, Inc.

[Docket No. ER01-880-000]

Take notice that on January 3, 2001, Cinergy Services, Inc. (Provider), tendered for filing a service agreement and a Network Operating Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Provider and Strategic Energy, L.L.C., (Customer).

Provider and Customer are requesting an effective date of December 14, 2000.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

12. Cinergy Services, Inc.

[Docket No. ER01-881-000]

Take notice that on January 3, 2001, Cinergy Services, Inc. (Provider), tendered for filing a service agreement and a Network Operating Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Provider and FirstEnergy Services Corp., (Customer).

Provider and Customer are requesting an effective date of December 14, 2000.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

13. Cinergy Services, Inc.

[Docket No. ER01-882-000]

Take notice that on January 3, 2001, Cinergy Services, Inc. (Provider), tendered for filing a service agreement and a Network Operating Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Provider and Newenergy, Inc., (Customer).

Provider and Customer are requesting an effective date of December 14, 2000.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

14. Cinergy Services, Inc.

[Docket No. ER01-883-000]

Take notice that on January 3, 2000, Cinergy Services, Inc. (Provider),

tendered for filing a service agreement and a Network Operating Agreement under Cinergy's Open Access Transmission Service Tariff (OATT) entered into between Provider and Allegheny Energy Supply Company, LLC (Customer).

Provider and Customer are requesting an effective date of December 14, 2000.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

15. PJM Interconnection, L.L.C.

[Docket No. ER01-885-000]

Take notice that on January 3, 2001, PJM Interconnection, L.L.C. (PJM), tendered for filing an executed interim interconnection service agreement between PJM and PSEG Fossil L.L.C.

PJM requests a waiver of the Commission's 60-day notice requirement to permit the effective dates agreed to by the parties.

Copies of this filing were served upon PSEG Fossil L.L.C. and the state electric utility regulatory commissions within the PJM control area.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

16. Southern Indiana Gas and Electric Company

[Docket No. ER01-886-000]

Take notice that on January 4, 2001, Southern Indiana Gas and Electric Company (SIGECO), on tendered for filing service agreements for firm and non-firm transmission service under Part II of its Transmission Services Tariff with Engage Energy America Corp. and for firm transmission service with Aquila Energy Marketing Corporation, respectively.

Copies of the filing were served upon each of the parties to each service agreements.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

17. New England Power Company

[Docket No. ER01-888-000]

Take notice that on January 3, 2001, New England Power Company (NEP), tendered for filing a service agreement between NEP and American Paper Mills of Vermont, Inc. (American) for Firm Local Generation Delivery Service under NEP's FERC Electric Tariff, Original Volume No. 9.

Copies of the filing have been served upon American and the Vermont Public Service Board.

Comment date: January 24, 2001, in accordance with Standard Paragraph E at the end of this notice.

18. Boston Edison Company

[Docket No. ER01-890-000]

Take notice that on January 4, 2001, Boston Edison Company, tendered for filing with the Commission an unexecuted Interconnection Agreement Between Sithe Mystic Development LLC and Boston Edison Company.

Comment date: January 25, 2001, in accordance with Standard Paragraph E at the end of this notice.

19. Allegheny Energy Service Corporation on behalf of Allegheny Energy Supply Company, LLC

[Docket No. ER01-891-000]

Take notice that on January 4, 2000, Allegheny Energy Service Corporation on behalf of Allegheny Energy Supply Company, LLC (Allegheny Energy Supply), tendered for filing Service Agreement No. 107 to add one (1) new Customer to the Market Rate Tariff under which Allegheny Energy Supply offers generation services.

Allegheny Energy Supply proposes to make service available as of January 3, 2001 to Calpine Energy Services, L.P.

Copies of the filing have been provided to the Public Utilities Commission of Ohio, the Pennsylvania Public Utility Commission, the Maryland Public Service Commission, the Virginia State Corporation Commission, the West Virginia Public Service Commission, and all parties of record.

Comment date: January 25, 2001, in accordance with Standard Paragraph E at the end of this notice.

20. Entergy Services, Inc.

[Docket No. ER01-892-000]

Take notice that on January 4, 2001, Entergy Services, Inc., on behalf of Entergy Arkansas, Inc., Entergy Gulf States, Inc., Entergy Louisiana, Inc., Entergy Mississippi, Inc., and Entergy New Orleans, Inc., (collectively, the Entergy Operating Companies), tendered for filing a Non-Firm Point-To-Point Transmission Service Agreement and a Short-Term Firm Point-To-Point Transmission Service Agreement both between Entergy Services, Inc., as agent for the Entergy Operating Companies, and Plum Point Energy Associates, LLC.

Comment date: January 25, 2001, in accordance with Standard Paragraph E at the end of this notice.

21. Carolina Power & Light Company

[Docket No. ER01-893-000]

Take notice that on January 4, 2001, Carolina Power & Light Company (CP&L), tendered for filing an executed Service Agreement between CP&L and the following eligible buyer, Powerex

Corp. Service to this eligible buyer will be in accordance with the terms and conditions of CP&L's Market-Based Rates Tariff, FERC Electric Tariff No. 4, for sales of capacity and energy at market-based rates.

CP&L requests an effective date of January 2, 2001 for this Service Agreement.

Copies of the filing were served upon the North Carolina Utilities Commission and the South Carolina Public Service Commission.

Comment date: January 25, 2001, in accordance with Standard Paragraph E at the end of this notice.

22. Entergy Services, Inc.

[Docket No. ER01-894-000]

Take notice that on January 5, 2001, Entergy Services, Inc. (Entergy), on behalf of Entergy Arkansas, Inc., Entergy Gulf States, Inc., Entergy Louisiana, Inc., Entergy Mississippi, Inc., and Entergy New Orleans, Inc. (collectively, the Entergy Operating Companies), tendered for filing a Second Revised Network Integration Transmission Service Agreement between Entergy, as agent for the Entergy Operating Companies, and East Texas Electric Cooperative, Inc., Sam Rayburn G&T Electric Cooperative, Inc., and Tex-La Electric Cooperative of Texas, Inc., (NITSA). Entergy states that this filing includes the Second Amendment to the NITSA and additionally reconciles alterations to the NITSA filed in Docket No. ER00-3610-000 and Docket Nos. EL99-6-001, ER99-231-001, ER99-232-001, and ER99-487-001 (consolidated).

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

23. The Dayton Power and Light Company

[Docket No. ER01-895-000]

Take notice that on January 5, 2001, The Dayton Power and Light Company (Dayton), tendered for filing a service agreement establishing Enron Power Marketing, Inc. as a customer under the terms of Dayton's FERC Electric Tariff, Original Volume No. 10.

Dayton requests an effective date of one day subsequent to this filing for the service agreements. Accordingly, Dayton requests waiver of the Commission's notice requirements.

Copies of this filing were served upon Enron Power Marketing, Inc. and the Public Utilities Commission of Ohio.

Comment date: January 26, 2001, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest such filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426, in accordance with rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection. This filing may also be viewed on the Internet at <http://www.ferc.fed.us/online/rims.htm> (call 202-208-2222 for assistance).

David P. Boergers,
Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Accepted for Filing and Soliciting Motions To Intervene and Protests

January 11, 2001.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Type of Application:* New Major License.

b. *Project No.:* 2031-046.

c. *Date Filed:* August 30, 2000.

d. *Applicant:* Springville City.

e. *Name of Project:* Bartholomew Hydroelectric Project.

f. *Location:* Northeast of Springville City, within Bartholomew Canyon and on Hobbie Creek, in Utah County, Utah. The project is partially situated on federal lands within the Unita National Forest.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)-825(r).

h. *Applicant Contact:* Matthew Cassel at Psomas Consultants, 2825 East Cottonwood Parkway, #120, Salt Lake City, Utah 84121; (801) 270-5777.

i. *FERC Contact:* Jim Haimes, james.haimes@ferc.fed.us; (202) 219-2780.

j. *Deadline for Filing Motions to Intervene and Protest:* 60 days from the issuance date of this notice.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426. Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site at <http://www.ferc.fed.us/efi/doorbell.htm>.

The Commission's Rules of Practice and Procedure require all persons and entities filing requests to intervene in the subject proceeding to serve a copy of each document they file with the Commission on each person on the official service list for the subject project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. This application is not ready for environmental analysis at this time.

l. *Description of the Project:* The project, which does not include a dam or reservoir, operates using relatively small quantities of water removed from underground springs or small creeks located at high elevations and then transported via buried penstocks to three powerhouses and a powerhouse addition having a combined installed capacity of 2,000 kilowatts (kW). The project produces an average of approximately 4,653,000 kilowatt-hours of energy per year, primarily during the high runoff season each spring. Flows used to generate electricity either are diverted to the licensee's water distribution system for domestic and industrial consumption or are released into Hobbie Creek.

The project also includes the following two transmission facilities: (1) A 5.9-mile-long line, which includes one 1-mile-long, underground segment and a 4.9-mile-long overhead segment, from Upper Bartholomew powerhouse to Hobbie Creek powerhouse; and (2) a 6.9-mile-long, 12.47-kilovolt, underground cable from Lower Bartholomew powerhouse to Springville City's electric distribution system.

Although there are no developed recreational facilities within the boundaries of the subject project, Springville City owns and operates a 200-unit campground and an 18-hole golf course in the general vicinity of Hobbie Creek powerhouse. In addition, the Rotary Club operates a park on City-owned property. This facility includes a ball field and a picnic area with approximately 20 tables/grills. Further, the Forest Service operates two small

campgrounds along the right fork Hobbie Creek.

m. A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, Room 2A, located at 888 First Street, NE, Washington, DC 20426, or by calling (202) 208-1371. The application may be viewed on the web at <http://www.ferc.fed.us/online/rims.htm> (call (202) 208-2222 for assistance). A copy is also available for inspection and reproduction at the address in item h above.

n. Anyone may submit a protest or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, 385.211, and 385.214. In determining the appropriate action to take, the Commission will consider all protests filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any protests or motions to intervene must be received on or before the specified deadline date for the particular application.

o. All filings must: (1) bear in all capital letters the title "PROTEST" or "MOTION TO INTERVENE;" (2) set forth in the heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. Agencies may obtain copies of the application directly from the applicant. A copy of any protest or motion to intervene must be served upon each representative of the applicant specified in the subject application.

David P. Boergers,
Secretary.

BILLING CODE 6717-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Request for Extension of Time To Commence and Complete Project Construction and Soliciting Comments, Motions To Intervene, and Protests

January 11, 2001.

Take notice that the following application has been filed with the Commission and is available for public inspection:

a. *Application Type*: Request for Extension of Time to Commence Project Construction.

b. *Project No.*: 3701-031.

c. *Date Filed*: December 27, 2000.

d. *Applicant*: Yakima-Tieton Irrigation District.

e. *Name of Project*: Tieton Dam Hydroelectric Project.

f. *Location*: The proposed project would be located at the Bureau of Reclamation's Tieton Dam and Reservoir on the Tieton River, in Yakima County, Washington. The Bureau's dam and reservoir and a portion of the project's proposed transmission line occupy U.S. Forest Service lands.

g. *Filed Pursuant to*: Public Law 104-244.

h. *Applicant Contact*: Richard Dieker, Secretary/Manager, Yakima-Tieton Irrigation District, Tieton Headquarters, 470 Camp 4 Road, Yakima, WA 98908, (509) 678-4101.

i. *FERC Contact*: Any questions on this notice should be addressed to Mr. Lynn R. Miles, at (202) 219-2671, or e-mail address: lynn.miles@ferc.fed.us

j. *Deadline for filing comments and or motions*: February 16, 2001.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, Mail Code: 888 First Street, NE., Washington, DC 20426. Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site at <http://www.ferc.fed.us/efi/doorbell.htm>.

Please include the project numbers (3701-031) on any comments or motions filed.

k. *Description of the Request*: The licensee has requested that the Commission grant its third and final extension of time request to commence project construction for an additional two-year period. The deadline to commence project construction for FERC Project No. 3701 would be extended to May 31, 2003. The deadline for completion of construction would be extended to May 31, 2005. The licensee's request is filed pursuant to sections 4.200(c) and 4.202(a) of the Commission's regulations..

l. *Locations of the Application*: A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE., Room 2A, Washington, DC 20425, or by calling (202) 208-1371.

This filing may be viewed on <http://www.ferc.fed.us/online/rims.htm> (call (202) 208-2222 for assistance). A copy

is also available for inspection and reproduction at the address in item h above.

m. Individuals desiring to be included on the Commission's mailing list should so indicate by writing to the Secretary of the Commission.

Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Filing and Service of Responsive Documents—Any filings must bear in all capital letters the title "COMMENTS", "RECOMMENDATIONS FOR TERMS AND CONDITIONS", "PROTESTS", OR "MOTION TO INTERVENE", as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. A copy of any motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

Agency Comments—Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

David P. Boergers,
Secretary.

[FR Doc. 01-1427 Filed 1-17-01; 8:45 am]

BILLING CODE 6717-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Accepted for Filing and Soliciting Motions To Intervene, Protests, and Comments

January 11, 2001.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Type of Application*: Preliminary Permit.

b. *Project No.*: 11862-000.

c. *Date filed*: November 3, 2000.

d. *Applicant*: Crest Energy Company.

e. *Name of Project*: Eagle Mountain Project.

f. *Location*: In Riverside County, California. The project would utilize federal land managed by the Bureau of Land Management.

g. *Filed Pursuant to*: Federal Power Act, 16 U.S.C. 791(a)-825(r).

h. *Applicant Contact*: Mr. Arthur W. Lowe, Eagle Crest Energy Corporation, P.O. Box 2155, Palm Desert, CA 92261, (760) 779-0040.

i. *FERC Contact*: Robert Bell, (202) 219-2806.

j. *Deadline for filing motions to intervene, protests and comments*: 60 days from the issuance date of this notice.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. "Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site at <http://www/ferc.fed.us/efi/doorbell.htm>".

The Commission's Rules of Practice and Procedure require all interveners filing documents with the Commission to serve a copy of that document on each person in the official service list for the project. Further, if an intervener files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Project*: The proposed pumped storage project would consist of: (1) A proposed 1,150-foot-long, 77-foot-high upper reservoir dam; (2) a proposed 450-foot-long, 27-foot-high upper reservoir dam; (3) a proposed upper reservoir having a surface area of 210 acres, with a storage capacity of 23,600 acre-feet and a

normal water surface elevation of 2,472 feet msl; (4) a proposed lower reservoir having a surface area of 150 acres, with storage capacity of 26,000 acre-feet and normal water surface elevation of 1,100 feet msl located within the East Pit of the inactive Eagle Mountain Mine; (5) two proposed intake and outlet structures; (6) a proposed 4,400-foot-long, 29-foot-diameter tunnel; (7) a proposed powerhouse containing three generating units having a total installed capacity of 1,000 MW; (8) a proposed 8,500-foot-long, 29-foot-diameter tailrace tunnel; (9) a proposed 83-mile-long, 500 kV transmission line; and (10) appurtenant facilities.

The project would have an annual generation of 6,000 GWh that would be sold to a local utility.

1. A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE., Room 2A, Washington, DC 20426, or by calling (202) 208-1371. The application may be viewed on <http://www.ferc.fed.us/online/rims.htm> (call (202) 208-2222 for assistance). A copy is also available for inspection and reproduction at the address in item h above.

Preliminary Permit—Anyone desiring to file a competing application for preliminary permit for a proposal project must submit the competing application itself, or a notice of intent to file such an application, to the Commission on or before the specified comment date for the particular application (See 18 CFR 4.36). Submission of a timely notice of intent allows an interested person to file the competing preliminary permit application no later than 30 days after the specified comment date for the particular application. A competing preliminary permit application must conform with 18 CFR 4.30(b) and 4.36.

Preliminary Permit—Any qualified development applicant desiring to file a competing development application must submit to the Commission, on or before a specified comment date for the particular application, either a competing development application or a notice of intent to file such an application. Submission of a timely notice of intent to file a development application allows an interested person to file the competing application no later than 120 days after the specified comment date for the particular application. A competing license application must conform with 18 CFR 4.30(b) and 4.36.

Notice of intent—A notice of intent must specify the exact name, business address, and telephone number of the

prospective applicant, and must include an unequivocal statement of intent to submit, if such an application may be filed, either a preliminary permit application or a development application (specify which type of application). A notice of intent must be served on the applicant(s) named in this public notice.

Proposed Scope of Studies under Permit—A preliminary permit, if issued, does not authorize construction. The term of the proposed preliminary permit would be 36 months. The work proposed under the preliminary permit would include economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on the results of these studies, the Applicant would decide whether to proceed with the preparation of a development application to construct and operate the project.

Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Filing and Service of Responsive Documents—Any filings must bear in all capital letters the title "COMMENTS", "NOTICE OF INTENT TO FILE COMPETING APPLICATION", "COMPETING APPLICATION", "PROTEST", "MOTION TO INTERVENE", as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. An additional copy must be sent to Director, Division of Hydropower Administration and Compliance, Federal Energy Regulatory Commission, as the above-mentioned address. A copy of any notice of intent, competing application or motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

Agency Comments—Federal, state, and local agencies are invited to file comments on the described application.

A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

David P. Boergers,

Secretary.

BILLING CODE 6717-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Accepted for Filing and Soliciting Motions To Intervene, Protests, and Comments

January 11, 2001.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Type of Application*: Preliminary Permit.

b. *Project No.*: 11865-000.

c. *Date filed*: November 20, 2000.

d. *Applicant*: Kabatica General Partners.

e. *Name of Project*: Lower Rocky Creek Project.

f. *Location*: On Rocky Creek, in Whatcom County, Washington. The project would utilize federal lands within Mt. Baker-Snoqualmie National Forest.

g. *Filed Pursuant to*: Federal Power Act, 16 U.S.C. 791(a)-825(r).

h. *Applicant Contact*: Mr. Dan Mahar, Kabatica General Partners, 2210 Huron Street, Bellingham, WA 98226, (360) 739-8128.

i. *FERC Contact*: Robert Bell, (202) 219-2806.

j. *Deadline for filing motions to intervene, protests and comments*: 60 days from the issuance date of this notice.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426. "Comments and protests may be filed electronically via the Internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site at <http://www.ferc.fed.us/efi/doorbell.htm>"

The Commission's Rules of Practice and Procedure require all interveners filing documents with the Commission to serve a copy of that document on each person in the official service list

for the project. Further, if an intervenor files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Project:* The proposed project would consist of: (1) An existing 60-foot-long, 60-foot-high Rocky Creek Diversion Dam with a negligible impoundment; (2) a proposed intake; (3) a proposed 300-foot-long, 4-foot-diameter steel penstock; (4) a proposed powerhouse containing a generating having an installed capacity of 1 MW; (5) a proposed tailrace; (6) a proposed 2-mile-long 34 kV underground transmission line; and (7) appurtenant facilities.

The project would have an annual generation of 25 MWh that would be sold to a local utility.

1. A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street NE., Room 2A, Washington, DC 20426, or by calling (202) 208-1371. The application may be viewed on <http://www.ferc.fed.us/online/rims.htm> (call (202) 208-2222 for assistance). A copy is also available for inspection and reproduction at the address in item h above.

Preliminary Permit—Anyone desiring to file a competing application for preliminary permit for a proposed project must submit the competing application itself, or a notice of intent to file such an application, to the Commission on or before the specified comment date for the particular application (see CFR 4.36). Submission of a timely notice of intent allows an interested person to file the competing preliminary permit application no later than 30 days after the specified comment date for the particular application. A competing preliminary permit application must conform with 18 CFR 4.30(b) and 4.36.

Preliminary Permit—Any qualified development applicant desiring to file a competing development application must submit to the Commission, on or before a specified comment date for the particular application, either a competing development application or a notice of intent to file such an application. Submission of a timely notice of intent to file a development application allows an interested person to file the competing application no later than 120 days after the specified comment date for the particular application. A competing license application must conform with 18 CFR 4.30(b) and 4.36.

Notice of intent—A notice of intent must specify the exact name, business address, and telephone number of the prospective applicant, and must include an unequivocal statement of intent to submit, if such an application may be filed, either a preliminary permits application or a development application (specify which type of application). A notice of intent must be served on the applicant(s) named in this public notice.

Proposed Scope of Studies under Permit—A preliminary permit, if issued, does not authorize construction. The term of the proposed preliminary permit would be 36 months. The work proposed under the preliminary permit would include economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on the results of these studies, the Applicant would decide whether to proceed with the preparation of a development application to construct and operate the project.

Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Filing and Service of Responsive Documents—Any filings must bear in all capital letters the title "COMMENTS", "NOTICE OF INTENT TO FILE COMPETING APPLICATION", "COMPETING APPLICATION", "PROTEST", "MOTION TO INTERVENE", as applicable, and the Project Number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. An additional copy must be sent to Director, Division of Hydropower Administration and Compliance, Federal Energy Regulatory Commission, at the above-mentioned address. A copy of any notice of intent, competing application or motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

Agency Comments—Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

David P. Boergers,
Secretary.

BILLING CODE 6717-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Accepted for Filing and Soliciting Motions To Intervene, Protests, and Comments

January 11, 2001.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection:

a. *Type of Application:* Preliminary Permit.

b. *Project No.:* 11866-000.

c. *Dated filed:* November 30, 2000.

d. *Applicant:* Davis Hydro.

e. *Name of Project:* Rock Creek

Diversion Dam Project.

f. *Location:* On the North Fork Feather River, In Plumas County, California. The project would utilize no federal lands. This project is for additional capacity to the licensed Rock Creek and Cresta Dams Project, FERC No. 1962.

g. *Filed Pursuant to:* Federal Power Act, 16 U.S.C. 791(a)-825(r).

h. *Applicant Contact:* Mr. Richard Ely, d.b.a. Davis Hydro, 27264 Meadowbrook Drive, Davis, CA 95616, (530) 753-8864.

i. *FERC Contact:* Robert Bell, (202) 219-2806.

j. *Deadline for filing motions to intervene, protests and comments:* 60 days from the issuance date of this notice.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE, Washington, D.C. 20426. Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site at <http://www.ferc.fed.us/efi/doorbell.htm>.

The Commission's Rules of Practice and Procedure require all interveners

filing documents with the Commission to serve a copy of that document on each person in the official service list for the project. Further, if an intervener files comments or documents with the Commission relating to the merits of an issue that may effect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Description of Project:* The proposed project would consist of: (1) The existing 550-foot-long, 126-foot-high Rock Creek Diversion Dam; (2) the existing reservoir having a surface area of 80 acres and a storage capacity of 4,669 acre-feet and a normal water surface elevation of 2,216 feet msl; (3) a proposed intake; (4) a proposed powerhouse containing three generating units having a total installed capacity of 900 kW; (5) a proposed 1,300-foot-long 60 kV transmission line; and (9) appurtenant facilities.

The project would have an annual generation of 6 GWh that would be sold to a local utility.

1. A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE, Room 2A Washington, D.C. 20426, or by calling (202) 208-1371. The application may be viewed on <http://www.ferc.fed.us/online/rims.htm> (call (202) 208-2222 for assistance). A copy is also available for inspection and reproduction at the address in item h above.

Preliminary Permit—Anyone desiring to file a competing application for proposed project must submit the competing application itself, or a notice of intent to file such an application, to the Commission or before the specified comment date for the particular application (see 18 CFR 4.36). Submission of a timely notice of intent allows an interested person to file the competing preliminary permit application no later than 30 days after the specified comment date for the particular application. A competing preliminary permit application must conform with 18 CFR 4.30(b) and 4.36.

Preliminary Permit—Any qualified development applicant desiring to file a competing development application must submit to the Commission, on or before a specified comment date for the particular application, either a competing development application or a notice of intent to file such an application. Submission of a timely notice of intent to file a development application allows an interested person to file the competing application no later than 120 days after the specified

comment date for the particular application. A competing license application must conform with 18 CFR 4.30(b) and 4.36.

Notice of intent—A notice of intent must specify the exact name, business address, and telephone number of the prospective applicant, and must include an unequivocal statement of intent to submit, if such an application may be filed, either a preliminary permit application or a development application (specify which type of application). A notice of intent must be served on the applicant(s) named in this public notice.

Proposed Scope of Studies under Permit—A preliminary permit, if issued, does not authorize construction. The term of the proposed preliminary permit would be 36 months. The work proposed under the preliminary permit would include economic analysis, preparation of preliminary engineering plans, and a study of environmental impacts. Based on the results of these studies, the Applicant would decide whether to proceed with the preparation of a development application to construct and operate the project.

Comments, Protests, or Motions to Intervene—Anyone may submit comments, a protest, or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, .211, .214. In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any comments, protests, or motions to intervene must be received on or before the specified comment date for the particular application.

Filing and Service of Responsive Documents—Any filings must bear in all capital letters the title "COMMENTS", "NOTICE OF INTENT TO FILE COMPETING APPLICATION", "COMPETING APPLICATION", "PROTEST", "MOTION TO INTERVENE", as applicable, and the Project number of the particular application to which the filing refers. Any of the above-named documents must be filed by providing the original and the number of copies provided by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. An additional copy must be sent to Director, Division of Hydropower Administration and Compliance, Federal Energy Regulatory Commission, at the above-mentioned address. A copy of any notice of intent,

competing application or motion to intervene must also be served upon each representative of the Applicant specified in the particular application.

Agency Comments—Federal, state, and local agencies are invited to file comments on the described application. A copy of the application may be obtained by agencies directly from the Applicant. If an agency does not file comments within the time specified for filing comments, it will be presumed to have no comments. One copy of an agency's comments must also be sent to the Applicant's representatives.

David P. Boergers,
Secretary.

BILLING CODE 6717-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Application Accepted for Filing and Soliciting Motions To Intervene, Protests, Comments, Recommendations, and Terms and Conditions

January 11, 2001.

Take notice that the following hydroelectric application has been filed with the Commission and is available for public inspection.

a. *Type of Application:* Conduit Exemption.

b. *Project No.:* 11867-000.

c. *Date Filed:* December 26, 2000.

d. *Applicant:* The Metropolitan Water District of Southern California.

e. *Name of Project:* Diamond Valley Lake Small Conduit Hydroelectric Project.

f. *Location:* In Riverside County, California. The project would be located in the Wadsworth Pumping Plant and would utilize water from Diamond Valley Lake. Diamond Valley Lake, an off-stream reservoir, stores water from the Colorado River Aqueduct that the Wadsworth Plant pumps into it from a forebay on the San Diego Canal. The California Aqueduct will be a source of water for the Lake by gravity flow, when construction of the Inland Feeder pipeline is complete. The project would not occupy federal or tribal lands.

g. *Filed Pursuant to:* Federal Power Act 16 USC 791(a)-825(r).

h. *Applicant Contact:* Mr. Joseph E. Tait, Assistant General Manager, The Metropolitan Water District of Southern California, P.O. Box 54153, Los Angeles, CA 90054-0153, (213) 217-6860.

i. *FERC Contact:* James Hunter, (202) 219-2839.

j. *Status of Environmental Analysis:* This application is ready for environmental analysis at this time—see the following paragraphs about filing responsive documents.

k. *Deadline for filing motions to intervene, protests and comments:* February 16, 2001.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE, Washington, DC 20426. Comments and protests may be filed electronically via the internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site at <http://www.ferc.fed.us/efi/doorbell.htm>.

Please include the project number (P-11867-000) on any comments, protests, or motions filed.

The Commission's Rules of Practice and Procedure require all interveners filing documents with the Commission to serve a copy of that document on each person in the official service list for the project. Further, if an intervener files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

l. *Description of Project:* The project would consist of modifying the 12 existing pumps in the Wadsworth Plant to operate in a reverse turbine-generating mode. Energy currently dissipated in pressure control valves as water is released from the Lake into the Canal could then be captured. Each pump/generator would have an installed capacity of 3.3 megawatts (MW), for a total installed capacity of 39.6 MW. The average annual generation would be 30 gigawatt hours.

m. *Available Locations of Application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference and Files Maintenance Branch, located at 888 First Street, NE., Room 2A, Washington, DC 20426, or by calling (202) 208-1371. This filing may be viewed on <http://www.ferc.fed.us/online/rims.htm> (call (202) 208-2222 for assistance). A copy is also available for inspection and reproduction at the address shown in item h above.

Development Application—Any qualified applicant desiring to file a competing application must submit to the Commission, on or before the specified deadline date for the particular application, a competing development application, or a notice of intent to file such an application. Submission of a timely notice of intent

allows an interested person to file the competing development application no later than 120 days after the specified deadline date for the particular application. Applications for preliminary permits will not be accepted in response to this notice.

Notice of intent—A notice of intent must specify the exact name, business address, and telephone number of the prospective applicant, and must include an unequivocal statement of intent to submit, if such an application may be filed, either a preliminary permit application or a development application (specify which type of application). A notice of intent must be served on the applicant(s) named in the public notice.

Protests or Motions to Intervene—Anyone may submit a protest or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210, 385.211, and 385.214. In determining the appropriate action to take, the Commission will consider all protests filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding. Any protests or motions to intervene must be received on or before the specified deadline date for the particular application.

Filing and Service of Responsive Documents—The application is ready for environmental analysis at this time, and the Commission is requesting comments, reply comments, recommendations, terms and conditions, and prescriptions.

The Commission directs, pursuant to Section 4.34(b) of the Regulations (see Order No. 533 issued May 8, 1991, 56 FR 23108, May 20, 1991) that all comments, recommendations, terms and conditions and prescriptions concerning the application be filed with the Commission within 30 days from the issuance date of this notice. All reply comments must be filed with the Commission within 75 days from the date of this notice.

Anyone may obtain an extension of time for these deadlines from the Commission only upon a showing of good cause or extraordinary circumstances in accordance with 18 CFR 385.2008.

All filings must (1) bear in all capital letters the title "PROTEST", "MOTION TO INTERVENE", "NOTICE OF INTENT TO FILE COMPETING APPLICATION," "COMPETING APPLICATION," "COMMENTS," or "REPLY COMMENTS," "RECOMMENDATIONS," "TERMS AND CONDITIONS," or "PRESCRIPTIONS;" (2) set forth in the

heading the name of the applicant and the project number of the application to which the filing responds; (3) furnish the name, address, and telephone number of the person protesting or intervening; and (4) otherwise comply with the requirements of 18 CFR 385.2001 through 385.2005. All comments, recommendations, terms and conditions or prescriptions must set forth their evidentiary basis and otherwise comply with the requirements of 18 CFR 4.34(b). Agencies may obtain copies of the application directly from the applicant. Any of these documents must be filed by providing the original and the number of copies required by the Commission's regulations to: The Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. A copy of any protest or motion to intervene must be served upon each representative of the applicant specified in the particular application. A copy of all other filings in reference to this application must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 4.34(b) and 385.2010.

David P. Boergers,

Secretary.

Alverno Hydroelectric Project; Notice of Teleconference

January 11, 2001.

A teleconference will be convened by staff of the Office of Energy Projects on January 23, 2001, at 2:00 p.m. EST to discuss measures to protect fish and wildlife resources made by the U.S. Fish and Wildlife Service and Michigan Department of Natural Resources under section 10(j) of the Federal Power Act. On October 20, 2000, a notice of availability of draft environmental assessment (DEA) was issued for the Alverno Hydroelectric Project.

In letters dated November 8, 2000, to the U.S. Fish and Wildlife Service and the Michigan Department of Natural Resources, the Commission's staff explained that the resource agency recommended measures to protect fish and wildlife resources were considered in the DEA, but did not recommend adopting all of them. We will discuss

the resource agency recommendations that staff did not recommended for adoption.

Anyone wishing to participate by teleconference should call 1-888-928-9122. They will need to give the operator the passcode "COSTELLO" and the leader "JOHN COSTELLO".

If you have any questions about the teleconference, please call John Costello at (202) 219-2914 or e-mail at john.costello@ferc.fed.us.

David P. Boergers,
Secretary.

BILLING CODE 6717-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Third Interstate Natural Gas Facility-Planning Seminar

January 11, 2001.

The Office of Energy Projects will hold the third in a series of public meetings around the country for the purposes of exploring and enhancing strategies for constructive public participation in the earliest stages of natural gas facility planning. This seminar will be held in Tampa, Florida on Thursday, February 15, 2001. We are inviting interstate natural gas companies; Federal, state and local agencies; landowners and non-governmental organizations with an interest in developing new ways of doing business to join us in this effort. We will discuss the facility planning process, not the merits of any pending or planned pipeline projects.

The staff of the Commission's Office of Energy Projects will give a briefing on the results of our first two seminars in Albany, NY and Chicago, IL. We will discuss problems that were identified and potential solutions that were offered in the seminars.

Join us as we continue to explore new strategies being employed by the natural gas industry, agencies, and citizens to learn about each others' concerns and to engage the public and agencies in participatory project design. Interactive discussions will be held with panelists from various Federal and state agencies, representatives from natural gas companies, and private landowners or citizen representatives who have had relevant experiences. There will be substantial opportunity for the sharing of experiences and knowledge during both the panel discussions and in the interactive "brainstorming" session. So,

bring your ideas with you and prepare to share them.

The objectives of the meeting are:

- Build upon the discussions from the first two seminars in Albany, NY and Chicago, IL.
- Explore steps taken to identify the parties directly involved with and affected by natural gas facility siting and/or permitting, so they can work together and resolve issues.
- Explore the best avenues for involving people and agencies toward fostering settlements through creative issue resolution.
- To encourage the submission of filings with no or few contested issues in order to reduce the Commission's processing time.
- Discuss the potential benefits of an interstate natural gas pipeline project.

Note: One of our panels this time will focus on the potential benefits of pipelines from each parties' perspective.

We are building on what was learned at our prior meetings and continuing to work toward developing a toolbox of the best available techniques for increasing public involvement and developing solutions to issues during the pre-filing planning process. This will help to plan projects with less opposition that can achieve faster action from the Commission with less controversy and fewer conditions.

The meeting in Tampa, Florida will be held at the Holiday Inn City Centre, located in Tampa, Florida. The meeting is scheduled to start at 9:30 a.m. and finish at 4 p.m. A preliminary agenda and directions to the Holiday Inn City Centre are enclosed. Also, see attachment 2 regarding the selection of locations of future meetings.

If you plan to attend, please email our team at: gasoutreach@ferc.fed.us by February 6, 2001. Or, you can respond via facsimile to Pennie Lewis-Partee at 202-208-0353. Please include in the response the names, addresses, and telephone numbers of all attendees from your organization. We will send an acknowledgment of your request.

To help us enhance our panel discussions, please consider issues and/or questions you would like to have addressed at the meetings and email them to us. If you have any questions, you may contact any of the staff listed below:

Richard Hoffmann, 202/208-0066
Lauren O'Donnell, 202/208-0325
Jeff Shenot, 202/219-2178
Howard Wheeler, 202/208-2299

J. Mark Robinson,

Director, Division of Environmental & Engineering Review, Office of Energy Projects.
Attachments (2).

Agenda

3rd Interstate Natural Gas Facility Planning Seminar, Federal Energy Regulatory Commission, Holiday Inn City Centre, Tampa, Florida

February 15, 2001—9:30 a.m. to 4 p.m.

9:30 a.m.—Introductions

Welcome: Mark Robinson, Director, Division of Environmental & Engineering Review, Office of Energy Projects, FERC, Rich Hoffmann, Office of Energy Projects (OEP), FERC

9:45—The Pipeline Planning/Approval Process—Lauren O'Donnell, OEP, What's the role of FERC?

10:00—Summary of Comments from the Albany and Chicago Meetings—Rich Hoffmann

10:30—Panel 1. Perspectives on Project Announcement, Route Planning, and How To Work Together—Howard Wheeler, OEP, Moderator.

[Discussion of factors re: announcement of the project, planning of the route, types of surveys needed; extent of disturbance, and who to tell. What are the needs of the various stakeholders?]

Representative from Duke Energy
John Ryan, League of Environmental Organizations, Ken Huntington, Florida Department of Environmental Protection

[10-minute discussion by each panelist with interactive Q&A session with panelists and audience for remainder of Panel]

12:00—Lunch

1:00—Panel 2. What are the Benefits (real and potential) of a natural gas project and right-of-way?—Lauren O'Donnell, Moderator

[Discussion of the various types of benefits of a pipeline project to the company, the individual, local area, region and/or state. How to identify them, how to advertise them.]

Pal Mulieri, County Commissioner, Pasco County, FL, John Shafer, Enron, Citizen/NGO Representative

[10 minute discussion by each panelist with interactive Q&A session with panelists and audience for remainder of Panel]

2:00—Discussion by Kearns & West, Inc., on Stakeholder Involvement.—Ann Gunning

2:15—Brainstorming Session * * *

OEP Staff will lend an all-participants discussion of issues regarding:

- How best to involve landowners and communities.
- How best to work with applicants and agencies;
- How to coordinate with multiple agencies/jurisdictions;
- How to get information on the need for a project; and
- How to describe workspace/right-of-way requirements.

3:55—Summary of the Day

Directions to: Holiday Inn City Centre [813-223-1351]

• Holiday Inn City Centre is located at 111 West Fortune Street, Tampa, FL 33602

• Take Interstate I-275 to exit #25—Ashley Street; Keep bearing right (Fortune St. will “Y” into Ashley St.—stay right); Holiday Inn is on the right side of the street.

Future Meetings?

Between now and September of 2001, we will conduct additional seminars at locations around the country. Locations for the meetings will be selected based on the history of past, present and especially future pipeline projects where interstate natural gas markets are developing or expanding.

Areas we are considering for meetings include:

Boston, Massachusetts/Portland, Maine Area.—March/April, 2001
Seattle/Puget Sound Washington—May/June, 2001 and/or
Reno, Nevada or Salt Lake City, Utah—July/August, 2001

If you care to voice your opinion about these or other areas, please follow the instructions for contacting us in the notice.

BILLING CODE 6717-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket Nos. ER00-3591-000, ER00-1969-001, ER01-94-000, and ER01-180-000]

New York Independent System Operator, Inc.; Supplemental Notice of Technical Conference

January 11, 2001.

The December 11, 2000, notice in this proceeding indicated that a technical conference will be held on January 22 and 23, 2001. That conference will be held in Hearing Rooms 5 and 6 (which will be combined to form one large

room) at the offices of the Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. The conference will commence at 9:30 a.m. on January 22, 2001.

The agenda for the conference is set forth below. To facilitate efficient discussion, the various industry sectors should designate a spokesperson for their sector, although additional views may be stated as necessary. By 5:00 p.m. on January 18, 2001, participants should inform Stanley Wolf at 202-208-0891 or stanley.wolf@ferc.fed.us or Penny Murrell at 202-208-0531 or penny.murrell@ferc.fed.us, who the spokesperson for the industry sectors are, and for which sessions/topics listed below. If the industry sector cannot reach consensus on its selection of spokespersons, members of that sector may separately inform Mr. Wolf or Ms. Murrell of their selections. Staff may select some or all of these to participate in the discussions. Rather than repeat at length prior pleadings, spokespersons are requested to merely refer to such pleadings where appropriate.

David P. Boergers,
Secretary.

Technical Conference Schedule

Day 1: Morning Session 9:30-12:30

I. State of the Markets—Panel—3 hours

This panel will be comprised of a representative from each sector including, NYISO, Transmisison Owners, the Public Service Commission of New York State, Generators, Power Marketers, Endusers, and Public Power and Environment. The discussion will focus on the overall state of NYISO's markets; how things are going overall; whether the markets are generally working; what the major problems are in the markets; whether there are structural issues; whether there are any major problems with market rules and, if so, the solutions to the problems. This session will include a presentation by NYISO's Project Priority Team on the current status of its efforts to identify and assign priorities to the tasks facing the NYISO, focusing on preparations for the Summer 2001.

Lunch

Day 1: Afternoon Session 1:30-6:00

II. Energy Markets: What needs to be in place by Summer 2001? 3½ hours

This session will start with a presentation by NYISO on the changes that are proposed to be in place by Summer 2001. Discussions can include the details of the specific projects and whether the priorities proposed for these projects are reasonable. The

discussion may include the following topics:

NYISO “hybrid” fixed block generation pricing proposal
Out of merit commitment
Prorata curtailments
System security and adequacy during Summer 2001
Other reliability concerns
NO_x issues
Demand Response Mechanism
Billing issues
Data posting requirements
Communication and market information issues

III. Non-Spinning Reserves Markets—1 hour

This presentation will begin with a presentation by NYISO regarding the state of its NSR markets and the projects underway to make this a more competitive market. Discussions will follow concerning the short-term and long-term problems associated with these markets and the changes that are necessary to address these problems. Topics include:

Competitiveness of 10-minute non-spinning reserves markets
Physical self-supply of operating reserves
Use of western resources to meet operating reserves requirements
Locational pricing

Day 2: Morning Session 9:30-12:00

IV. Market Protection Measures—2½ hours

This session will include a presentation by NYISO regarding the use of its authority under its TEP. Discussions should follow regarding the extent of NYISO's price corrections and issuances of Extraordinary Corrective Actions (ECAs) under this authority and whether certain authority of the TEP should continue temporarily or if certain authority should be made a permanent part of the tariff. Participants may also discuss participant proposals concerning various market protection measures such as: circuit breaker, bid caps, in-city mitigation, and expanded rate correction authority

Lunch

Day 2: Afternoon Session 1:00-4:30

V. Energy Markets: Longer-term Fixes—2 hours

This session will start with a presentation by NYISO regarding the longer term changes necessary in its energy markets. Discussions can focus on the projects that will need to be in place in the longer term and whether the priorities established for these changes are reasonable. Topics include:

Central East constraint
Generation
Seams Issues (RTOs)—Impact of
NYISO practices and procedures on
regional transactions
Balancing Market Evaluation (BME)
performance and improvements
Virtual bidding, trading hubs and
other proposals enhancing liquidity

VI. Next Steps—1½ hours

This session will be used to finalize a list of priorities for projects in the energy and NSR markets and to establish deadlines for their completion. This session will also be used to establish any further procedures required, including setting dates for initial and reply comments.

[FRL-6934-2]

Science Advisory Board; Notification of Public Advisory Committee Meeting

Pursuant to the Federal Advisory Committee Act, Public Law 92-463, notice is hereby given that the Science Advisory Board's (SAB's) Executive Committee will meet on the dates and times noted below. All times noted are Eastern Time. The meetings are open to the public, however, seating is limited and available on a first come basis.

1. Executive Committee— Teleconference Meeting—February 1, 2001

The U.S. EPA's Science Advisory Board (SAB) will conduct a public teleconference meeting on Thursday, February 1, 2001 between the hours of 1 and 3 p.m. Eastern Time. The meeting will be coordinated through a conference call connection in Room 6013 in the U.S. EPA, Ariel Rios Building, 1200 Pennsylvania Avenue, NW., Washington, DC 20460. The public is encouraged to attend the meeting in the conference room noted above. However, the public may also attend through a telephonic link, to the extent that lines are available. Additional instructions about how to participate in the conference call can be obtained by calling Ms. Diana Pozun no earlier than one week prior to the meeting (beginning on January 25) at (202) 564-4544, or via e-mail at pozun.diana@epa.gov.

Purpose of the Meeting: In this meeting, the Executive Committee plans to review reports from some of its

Committees/Subcommittee, most likely including the following:

(a) Natural Attenuation Research Subcommittee of the Environmental Engineering Committee (EEC) "Review of EPA's Natural Attenuation Research Program" (see 65 FR 60189, dated October 10, 2000 for details).

(b) Radiation Advisory Committee (RAC): "An SAB Advisory: A Review of ORIA's Use and Adaptation of GENII Environmental Radiation Dosimetry System, GENII Version 2 (v.2)" (see 65 FR 18095, dated April 6, 2000 for details).

Availability of Review Materials: Drafts of the reports that will be reviewed at the meeting will be available to the public on the SAB website (<http://www.epa.gov/sab>) by close-of-business on January 16, 2001.

For Further Information: Any member of the public wishing further information concerning this meeting or wishing to submit brief oral comments must contact Dr. Donald Barnes, Designated Federal Officer, Science Advisory Board (1400A), U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue, NW., Washington, DC 20460; telephone (202) 564-4533; FAX (202) 501-0323; or via e-mail at barnes.don@epa.gov. Requests for oral comments must be in writing (e-mail preferred) and received by Dr. Barnes no later than noon Eastern Time on January 25, 2001.

2. Executive Committee—February 5-6, 2001

The U.S. EPA Science Advisory Board's (SAB's) Executive Committee will conduct a public meeting on Monday and Tuesday, February 5-6, 2001. The meeting will convene each day at 8:30 a.m. in Room 6013, U.S. Environmental Protection Agency, Ariel Rios Building, 1200 Pennsylvania Avenue, NW, Washington, DC 20460. The meeting will adjourn no later than 5 p.m. each day.

Purpose of the Meeting: At this meeting, the Executive Committee will receive updates from its committees and subcommittees concerning their recent and planned activities. As part of these updates, some committees will present draft reports for Executive Committee review and approval. We anticipate that the following report will be completed by the SAB Subcommittee involved and be ready for Executive Committee review at this meeting, however, to determine if this, or any other reports are under consideration at this meeting, please contact Ms. Diana Pozun at (202) 564-4544 or pozun.diana@epa.gov. Draft report(s) will appear on the Science Advisory Board website

(www.epa.gov/sab) approximately two weeks prior to the meeting.

(a) Dioxin Reassessment Review Committee (DRRC) of the Science Advisory Board (SAB) "Review of EPA's Draft Exposure and Human Health Reassessment of 2,3,7,8-Tetrachlorodibenzo-p-Dioxin (TCDD) and Related Compounds" (see 65 FR 60190, dated October 10, 2000 for details).

As part of this two day meeting, the Executive Committee will also: (a) Meet with various Agency officials to discuss matters of mutual interest; (b) receive briefings from Agency staff on various topics; and (c) discuss future business of the Board including projects for FY2001.

Availability of Materials: The draft meeting agenda and drafts of any reports that will be reviewed at the meeting will be available to the public on the SAB website (<http://www.epa.gov/sab>) by close-of-business on January 22, 2001.

For Further Information: Any member of the public wishing further information concerning this meeting should contact Dr. Donald G. Barnes, Designated Federal Officer (DFO) for the Executive Committee at U.S. EPA Science Advisory Board (1400A), 1200 Pennsylvania Avenue NW., Washington, DC 20460; phone (202) 564-4533; fax (202) 501-0323; or via e-mail at barnes.don@epa.gov. Those wishing to submit brief oral comments should contact Dr. Barnes, *in writing*, no later than close of business January 29, 2001.

Providing Oral or Written Comments at SAB Meetings

It is the policy of the Science Advisory Board to accept written public comments of any length, and to accommodate oral public comments whenever possible. The Science Advisory Board expects that public statements presented at its meetings will not be repetitive of previously submitted oral or written statements.

Oral Comments: In general, each individual or group requesting an oral presentation at a face-to-face meeting will be limited to a total time of ten minutes. For teleconference meetings, opportunities for oral comment will usually be limited to no more than three minutes per speaker and no more than fifteen minutes total. Deadlines for getting on the public speaker list for a meeting are given above. Speakers should bring at least 35 copies of their comments and presentation slides for distribution to the reviewers and public at the meeting. *Written Comments:* Although the SAB accepts written comments until the date of the meeting (unless otherwise stated), written

comments should be received in the SAB Staff Office at least one week prior to the meeting date so that the comments may be made available to the committee for their consideration. Comments should be supplied to the appropriate DFO at the address/contact information noted above in the following formats: one hard copy with original signature, and one electronic copy via e-mail (acceptable file format: WordPerfect, Word, or Rich Text files (in IBM-PC/Windows 95/98 format). Those providing written comments and who attend the meeting are also asked to bring 25 copies of their comments for public distribution.

General Information: Additional information concerning the Science Advisory Board, its structure, function, and composition, may be found on the SAB website (<http://www.epa.gov/sab>) and in The FY2000 Annual Report of the Staff Director which is available from the SAB Publications Staff at (202) 564-4533 or via fax at (202) 501-0256. Committee rosters, draft Agendas and meeting calendars are also located on our website.

Meeting Access: Individuals requiring special accommodation at this meeting, including wheelchair access to the conference room, should contact Dr. Barnes at least five business days prior to the meeting so that appropriate arrangements can be made.

Dated: January 11, 2001.

Donald G. Barnes,

Staff Director, Science Advisory Board.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[OPP-60059; FRL-6762-9]

Notice of Receipt of Request for Cancellation of Registration of *Bacillus thuringiensis* (B.t.) subspecies *tolworthi* Cry9C and the Genetic Material Necessary for its Production in Corn

AGENCY: Environmental Protection Agency (EPA)

ACTION: Notice.

SUMMARY: In accordance with section 6(f)(1) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended, EPA is issuing a notice of receipt of a request by Aventis CropScience USA LP the sole U.S. registrant, to cancel their registration of *Bacillus thuringiensis* (B.t.) subspecies *tolworthi* Cry9C and the genetic

material necessary for its production in corn.

DATES: Unless the request is withdrawn, the Agency will approve these use deletions and the deletions will become effective on February 20, 2001.

FOR FURTHER INFORMATION CONTACT: By mail: Phil Hutton, Biopesticides and Pollution Prevention Division, Office of Pesticide Programs (7511C), Environmental Protection Agency, 1200 Pennsylvania Ave., NW., Washington, DC 20460; telephone number: (703) 308-8260; e-mail address: hutton.phil@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

Section 6(f)(1) of FIFRA, provides that a registrant of a pesticide product may at any time request that any of its pesticide registrations be canceled. The Act further provides that, before acting on the request, EPA must publish a notice of receipt of any such request in the **Federal Register**. Thereafter, the Administrator may approve such a request.

II. Background

On May 12, 1998, EPA issued a registration to Plant Genetic Systems (America) Inc. for StarLink™ corn (original EPA Registration No. 70218-1). StarLink™ contains the active ingredient *Bacillus thuringiensis* subsp. *tolworthi* Cry9C protein and the genetic material necessary for its production in corn. EPA issued the registration, but restricted the use of the pesticide to field corn used for feed, industrial non-food uses, and seed increase because the Agency could not find that there was a reasonable certainty of no harm from its use in human food, based on a concern that the protein Cry9C could be allergenic. The Agency's assessment of Cry9C revealed that it has particular characteristics in common with known allergens: it is relatively heat stable and does not readily breakdown in simulated digestive fluids. This raises the possibility that it could be a human allergen. However, EPA determined that, notwithstanding its concern with respect to human ingestion of Cry9C, Cry9C was "safe" and when used as animal feed, would not present unreasonable risks to human health. Because the protein does not transfer to meat and poultry products, use in animal feed would not result in human dietary exposure to the protein/potential allergen.

On October 29, 1998, the StarLink™ corn registration was conveyed from Plant Genetic Systems (America) to AgrEvo USA. AgrEvo USA and Rhone

Poulenc Ag Company subsequently formed Aventis CropScience USA LP (Aventis). As of February 22, 2000, the StarLink™ corn registration is now held by Aventis under registration number 264-669.

Test data from several sources demonstrate that StarLink™ corn was diverted into human food. Data from Aventis, Kraft Corporation, and the Food and Drug Administration confirmed the presence of Aventis' Cry9C DNA (the genetic material necessary for the production of Cry9C) in Taco Bell taco shells when tested using polymerase chain reaction (PCR) primers. The PCR primers used are unique to the Aventis *cry9c* gene.

III. Intent to Cancel Registration

This notice announces receipt by the Agency of an application from Aventis, to cancel the registration for StarLink™ corn (EPA Registration No. 264-669). The active ingredient in this product is *Bacillus thuringiensis* subsp. *tolworthi* Cry9C protein and the genetic material necessary for its production in corn.

The 30-day comment period will permit other interested members of the public to comment prior to the Agency's approval of the deletions. Users of this product who desire continued use should contact both the EPA contact person listed above, and the registrant at the following address: Dr. Sally Van Wert, Aventis CropScience, P.O. Box 12014, 2 T.W. Alexander Drive, Research Triangle Park, NC 27709; telephone: (919) 549-2379, to discuss withdrawal of the application for cancellation before February 20, 2001. It should be noted however, that this cancellation is being proposed because Aventis has failed to ensure that StarLink™ corn will not be diverted to human food, it is incumbent on any proponent of further use to demonstrate either: (1) That further use will not be diverted to human food, or (2) that StarLink™ corn is safe for human consumption because it will not present an unreasonable allergenic risk.

IV. Existing Stocks Provision

For the purpose of this notice, existing stocks are defined as those stocks of Cry9C corn grain and corn seed (EPA Registration No. 264-669) that exist before the date on which the registration of this product is canceled. Under section 6(a)(1), the Administrator may permit the continued sale or use of existing stocks of a pesticide whose registration has been canceled, if she determines that such sale or use would be consistent with the purposes of FIFRA (7 U.S.C. 136d(a)(1)). Sales of corn grain produced by farmers growing

StarLink™ corn or that corn in the required 660 foot buffer may only be sold or used for domestic animal feed or industrial non-food uses and cannot be sold for planting. No StarLink™ seed corn may be sold or distributed. Because of significant concerns regarding the potential for StarLink™ corn to enter the human food stream of commerce, the U.S. Department of Agriculture has undertaken an incentive program to ensure that all StarLink™ corn currently on the farm is either fed to livestock on the farm, or is directed only to domestic animal feed or industrial non-food uses.

This existing stocks disposition does not prohibit growers from using existing stocks of StarLink™ grain as animal feed. Nor will feeding animals StarLink™ corn render meat or milk derived from such animals adulterated. The existing tolerance exemption for the Cry9C protein and the genetic material necessary for its production, found at 40 CFR 180.1192, is not revoked by this Notice.

List of Subjects

Environmental protection, Pesticides and pests, Product registrations.

Dated: January 8, 2001.

Susan B. Hazen,

Deputy Director, Office of Pesticide Programs.

BILLING CODE 6560-50-S

ENVIRONMENTAL PROTECTION AGENCY

[FRL-6933-9]

Implementation Guidance for Radionuclides

AGENCY: Environmental Protection Agency.

ACTION: Notice, request for comments on the draft radionuclides implementation guidance.

SUMMARY: The United States Environmental Protection Agency (EPA) published the final National Primary Drinking Water Regulation for Radionuclides on December 7, 2000, in the **Federal Register** (65 FR 76708). The EPA has also prepared the Draft Implementation Guidance for the Radionuclides Rule. This Notice is announcing the availability of this draft document and asking for comments from stakeholders and the public. These comments will be considered in developing the Final Implementation Guidance document. The EPA encourages the full participation of all

stakeholders and the public throughout this process.

The Draft Implementation Guidance for the Radionuclides Rule is a comprehensive reference to assist States in implementing the Rule. The draft guidance was developed based on the Final Rule, with input and review from EPA Headquarters and Regional staff, and comments from States and the public on a previous version of the document. Along with summaries of the Rule and implementation timelines, the document contains: A detailed explanation of the rule requirements; guidance for violation determinations, and significant non-compliance definitions; Safe Drinking Water Information (SDWIS) reporting requirements; guidance for State primacy revision applications, and special primacy requirements; and a series of "stand-alone" fact sheet guidance materials for States and Public Water Systems. The guidance document describes the new standards for uranium, as well as the revisions to the radionuclides monitoring framework.

The Appendices to the document provide further information and tools to assist States and EPA Regional Offices with primacy revisions and Rule implementation, including: Violation tables to assist with compliance determination; a sample Extension Agreement between EPA and the States to document how implementation responsibilities will be shared if States do not submit a primacy applications by the deadline; a primacy revision crosswalk; a "stand-alone" State reporting guidance; rule training materials; and beta and photon emitter conversion tables.

DATES: Comments must be submitted on or before March 30, 2001.

ADDRESSES: Address all comments concerning this Notice to Ed Thomas, Office of Ground Water and Drinking Water (MC-4606), U.S. Environmental Protection Agency, 1200 Pennsylvania Avenue, NW., Washington, DC 20460. See **SUPPLEMENTARY INFORMATION** section for information to request a copy of the draft guidance and electronic addresses. **FOR FURTHER INFORMATION CONTACT:** For general information related to the Radionuclides Rule, contact: Ed Thomas, at (202) 260-0910 or e-mail to thomas.edwin@epamail.epa.gov.

SUPPLEMENTARY INFORMATION: Copies of the draft guidance may be obtained by contacting the Safe Drinking Water Hotline at 800-426-4791, or at EPA's Office of Ground Water and Drinking Water's (OGWDW) Web Site: <http://www.epa.gov/safewater/rads/implement.html>, or by contacting Ed

Thomas of OGWDW at (202) 260-0910 or by e-mail at thomas.edwin@epamail.epa.gov.

Cynthia C. Dougherty,

Director, Office of Ground Water and Drinking Water, Environmental Protection Agency.

FEDERAL DEPOSIT INSURANCE CORPORATION

Sunshine Act Meeting

Pursuant to the provisions of the "Government in the Sunshine Act" (5 U.S.C. 552b), notice is hereby given that the Federal Deposit Insurance Corporation's Board of Directors will meet in open session at 9:00 a.m. on Friday, January 19, 2001, to consider the following matters:

Summary Agenda: No substantive discussion of the following items is anticipated. These matters will be resolved with a single vote unless a member of the Board of Directors requests that an item be moved to the discussion agenda.

Summary reports, status reports, and reports of actions taken pursuant to authority delegated by the Board of Directors.

Memorandum and resolution re: Final Amendments to Part 308—Rules of Practice and Procedure, to implement the requirements of the Program Fraud Civil Remedies Act.

Memorandum re: Information Sharing and Confidentiality Agreement Pursuant to Section 307 of Gramm-Leach-Bliley Act.

Discussion Agenda: Memorandum and Resolution Re: Proposed Amendments to Part 325—Capital Standards for Nonfinancial Equity Investments.

The meeting will be held in the Board Room on the sixth floor of the FDIC Building located at 550—17th Street, N.W., Washington, D.C.

The FDIC will provide attendees with auxiliary aids (e.g., sign language interpretation) required for this meeting. Those attendees needing such assistance should call (202) 416-2089 (Voice); (202) 416-2007 (TTY), to make necessary arrangements.

Requests for further information concerning the meeting may be directed to Mr. Robert E. Feldman, Executive Secretary of the Corporation, at (202) 898-6757.

Dated: January 12, 2001.

Federal Deposit Insurance Corporation.
Robert E. Feldman,
Executive Secretary.

FEDERAL MARITIME COMMISSION

Notice of Agreement(s) Filed

The Commission hereby gives notice of the filing of the following agreement(s) under the Shipping Act of 1984. Interested parties can review or obtain copies of agreements at the Washington, DC offices of the Commission, 800 North Capitol Street, NW., Room 940. Interested parties may submit comments on an agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days of the date this notice appears in the **Federal Register**.

Agreement No.: 011642-004.

Title: East Coast United States/East Coast of South America Vessel Sharing Agreement.

Parties: A.P. Moller-Maersk Sealand, P&O Nedlloyd Limited, P&O Nedlloyd B.V., Oceanica AGW Com. E Rep. Ltda.,

Compania Sud Americana de Vapores, S.A., Companhia Libra de Navegacao S.A., Alianca Navegacao e Logistica Ltda., Hamburg-Sud.

Synopsis: The proposed amendment: deletes Euroatlantic Container Line and Braztrans Transportes Maritimos Limitada as parties to the agreement; adds Companhia Libra de Navegacao S.A. as a party to the agreement; revises slot allocations; and reflects the various trade names used by certain parties.

Dated: January 12, 2001.

By Order of the Federal Maritime Commission.

Bryant L. VanBrakle,

Secretary.

BILLING CODE 6730-01-P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Board of Governors of the Federal Reserve System

SUMMARY:

Background

On June 15, 1984, the Office of Management and Budget (OMB) delegated to the Board of Governors of the Federal Reserve System (Board) its approval authority under the Paperwork Reduction Act, as per 5 CFR 1320.16, to approve of and assign OMB control numbers to collection of information requests and requirements conducted or sponsored by the Board under conditions set forth in 5 CFR 1320 appendix A.1. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. Copies of the OMB 83-Is and supporting statements and approved collection of information instruments are placed into OMB's public docket files. The Federal Reserve may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Request for Comment on Information Collection Proposal

The following information collection, which is being handled under this delegated authority, has received initial Board approval and is hereby published for comment. At the end of the comment period, the proposed information collection, along with an analysis of comments and recommendations received, will be submitted to the Board for final approval under OMB delegated authority. Comments are invited on the following:

A. Whether the proposed collection of information is necessary for the proper performance of the Federal Reserve's functions; including whether the information has practical utility;

B. the accuracy of the Federal Reserve's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used;

C. ways to enhance the quality, utility, and clarity of the information to be collected; and

D. ways to minimize the burden of information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Comments must be submitted on or before March 19, 2001.

ADDRESSES: Comments, which should refer to the OMB control number or agency form number, should be addressed to Jennifer J. Johnson, Secretary, Board of Governors of the Federal Reserve System, 20th and C Streets, NW., Washington, DC 20551, or mailed electronically to regs.comments@federalreserve.gov. Comments addressed to Ms. Johnson may be delivered to the Board's mail room between 8:45 a.m. and 5:15 p.m., and to the security control room outside of those hours. Both the mail room and the security control room are accessible from the courtyard entrance on 20th Street between Constitution Avenue and C Street, NW. Comments received may be inspected in room M-P-500 between 9 a.m. and 5 p.m., except as provided in section 261.14 of the Board's Rules Regarding Availability of Information, 12 CFR 261.14(a).

A copy of the comments may also be submitted to the OMB desk officer for the Board: Alexander T. Hunt, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 3208, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: A copy of the proposed form and instructions, the Paperwork Reduction

Act Submission (OMB 83-I), supporting statement, and other documents that will be placed into OMB's public docket files once approved may be requested from the agency clearance officer, whose name appears below. Mary M. West, Federal Reserve Board Clearance Officer (202-452-3829), Division of Research and Statistics, Board of Governors of the Federal Reserve System, Washington, DC 20551. Telecommunications Device for the Deaf (TDD) users may contact Diane Jenkins (202-452-3544), Board of Governors of the Federal Reserve System, Washington, DC 20551.

Proposal to Approve Under OMB Delegated Authority the Implementation of the Following Survey:

1. *Report Title:* Central Bank Survey of Foreign Exchange and Derivatives Market Activity.

Agency Form Number: FR 3036.

OMB Control Number: 7100-0285.

Frequency: one-time.

Reporters: Financial institutions that serve as intermediaries in the wholesale foreign exchange and derivatives market, dealers, and brokers.

Annual Reporting Hours: 9,458 hours.

Estimated Average Hours Per

Response: Turnover survey: 50 hours; outstandings survey: 15 hours for FR 2436 reporters, 60 hours for non-FR 2436 reporters.

Number of Respondents: 161. Small businesses are not affected.

General Description of Report: This information collection is voluntary (12 U.S.C. 248(a), 353-359, and 461) and is given confidential treatment (5 U.S.C. 552(b)(4)).

Abstract: The survey is the latest in an ongoing series of surveys conducted by central banks every three years. The survey will be conducted in April and June of 2001 by the Federal Reserve Bank of New York. Data from the survey will provide information about the size and structure of the global markets for foreign exchange and financial derivatives transactions. The survey is part of a data collection effort conducted by over fifty other central banks and monetary authorities. The data will be useful to the Federal Reserve Board, other government agencies, and market participants for determining public policy relating to financial markets. Aggregate results from each central bank's survey will be provided to the Bank for International Settlements for the production of global market statistics.

Board of Governors of the Federal Reserve System, January 11, 2001.

Jennifer J. Johnson,

Secretary of the Board.

BILLING CODE 6210-01-P

FEDERAL RESERVE SYSTEM**Change in Bank Control Notices; Acquisition of Shares of Bank or Bank Holding Companies**

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. The notices also will be available for inspection at the office of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than January 31, 2001.

A. Federal Reserve Bank of Atlanta (Cynthia C. Goodwin, Vice President) 104 Marietta Street, N.W., Atlanta, Georgia 30303-2713:

1. *Nancy Barr Dixon*, Eufaula, Alabama; *Michael Charles Dixon, Sr.*, Eufaula, Alabama; *Hope Cotton Dixon*, Eufaula, Alabama; *Michael Charles Dixon, Jr.*, Eufaula, Alabama; *Claudia Dixon Balkcom*, Atlanta, Georgia; *Heather Barr Dixon*, Eufaula, Alabama; *Marian Christine Dixon*, Birmingham, Alabama; *Rebecca Janie Mac Dixon*, Auburn, Alabama; *Robert Mack Dixon*, Eufaula, Alabama; *Mary Elliott Dixon*, Eufaula, Alabama; *Mary Clayton Dixon*, Eufaula, Alabama; *Eric Ross Fenichel*, Atlanta, Georgia; *Janie Dixon King*, Eufaula, Alabama; *William Daniel King*, Eufaula, Alabama; *Robert Mack Dixon, Jr.*, Eufaula, Alabama; *Preston Copeland Dixon*, Birmingham, Alabama; *James Franklin Dixon, III*, Birmingham, Alabama; *Rita Hallett Dixon*, Birmingham, Alabama; *Thomas Seay Lawson, Jr.*, Montgomery, Alabama; *Sarah Clayton Lawson*, Montgomery, Alabama; and *Preston Copeland Clayton, Jr.*, Eufaula, Alabama; all to retain voting shares of Eufaula BancCorp, Inc., Eufaula, Alabama, and thereby indirectly retain voting shares of Southern Bank of Commerce, Eufaula, Alabama, and First American Bank of Walton County, Santa Rosa Beach, Florida.

Board of Governors of the Federal Reserve System, January 11, 2001.

Robert deV. Frierson,

Associate Secretary of the Board.

BILLING CODE 6210-01-S

FEDERAL RESERVE SYSTEM**Formations of, Acquisitions by, and Mergers of Bank Holding Companies**

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 et seq.) (BHC Act), Regulation Y (12 CFR Part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The application also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States. Additional information on all bank holding companies may be obtained from the National Information Center website at www.ffiec.gov/nic/.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than February 9, 2001.

A. Federal Reserve Bank of Richmond (A. Linwood Gill, III, Vice President) 701 East Byrd Street, Richmond, Virginia 23261-4528:

1. *First Bancorp*, Troy, North Carolina; to merge with Century Bancorp, Inc., Thomasville, North Carolina, and thereby indirectly acquire voting shares of Home Savings, Inc., SSB, Thomasville, North Carolina.

B. Federal Reserve Bank of Chicago (Phillip Jackson, Applications Officer) 230 South LaSalle Street, Chicago, Illinois 60690-1414:

1. *American Bancorporation*, Cedar Falls, Iowa; to become a bank holding company by acquiring 100 percent of the voting shares of The Newburg Corporation, Saint Ansgar, Iowa, and thereby indirectly acquire voting shares of Cedar Valley State Bank, Saint Ansgar, Iowa.

Board of Governors of the Federal Reserve System, January 11, 2001.

Robert deV. Frierson,

Associate Secretary of the Board.

BILLING CODE 6210-01-S

FEDERAL RESERVE SYSTEM**Notice of Proposals to Engage in Permissible Nonbanking Activities or to Acquire Companies that are Engaged in Permissible Nonbanking Activities**

The companies listed in this notice have given notice under section 4 of the Bank Holding Company Act (12 U.S.C. 1843) (BHC Act) and Regulation Y (12 CFR Part 225) to engage *de novo*, or to acquire or control voting securities or assets of a company, including the companies listed below, that engages either directly or through a subsidiary or other company, in a nonbanking activity that is listed in § 225.28 of Regulation Y (12 CFR 225.28) or that the Board has determined by Order to be closely related to banking and permissible for bank holding companies. Unless otherwise noted, these activities will be conducted throughout the United States.

Each notice is available for inspection at the Federal Reserve Bank indicated. The notice also will be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether the proposal complies with the standards of section 4 of the BHC Act. Additional information on all bank holding companies may be obtained from the National Information Center website at www.ffiec.gov/nic/.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than January 31, 2001.

A. Federal Reserve Bank of Chicago (Phillip Jackson, Applications Officer) 230 South LaSalle Street, Chicago, Illinois 60690-1414:

1. *Northwest Suburban Bancorp, Inc.*, Mount Prospect, Illinois; to engage *de novo* in purchasing loan participations from its subsidiary banks, pursuant to § 225.28(b)(1) of Regulation Y.

Board of Governors of the Federal Reserve System, January 11, 2001.

BILLING CODE 6210-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Program Announcement 01017]

National Partnerships for Human Immunodeficiency Virus (HIV) Prevention With a Focus on Business and Labor, Youth-at-High Risk, and Migrant Workers; Notice of Availability of Funds

A. Purpose

The Centers for Disease Control and Prevention (CDC) announces the availability of fiscal year (FY) 2001 funds for a cooperative agreement program for National Partnerships for Human Immunodeficiency Virus (HIV) Prevention. This program addresses the "Healthy People 2010" focus areas of HIV Educational and Community-Based Programs, and Sexually Transmitted Diseases. For a conference copy of "Healthy People 2010", visit the internet site:

<http://www.health.gov/healthypeople>.

The purpose of the program is to develop local, regional, State, and

national leadership and support for HIV prevention programs and policies, and to provide technical assistance and service delivery in support of capacity building and skills development for Community-based organizations (CBOs), State and local health departments, and other organizations conducting HIV prevention activities at the local, regional, state, and national levels. This announcement is intended to help address gaps in leadership and technical assistance in the development and delivery of HIV prevention services.

For the purpose of this announcement the following definitions apply:

Leadership activities are defined as the development of communication and mobilization strategies including network development, partnership formation and coalition building, to raise and maintain community, as well as national awareness of HIV prevention needs and programs in specified populations. Leadership activities may also include developing and implementing strategies for needs assessments, policy analysis and service integration in collaboration with the private sector, federal partners, health departments, CBOs and Community planning groups (CPGs).

Technical assistance activities are defined as the provision of information and skills, consultation and training for individuals and organizations to improve the delivery and effectiveness of HIV prevention interventions. Service delivery activities may also be included under the technical assistance activity. Technical assistance funds available under this announcement must support assistance that improves the capacity of recipient agencies to design, develop, implement, and/or evaluate effective HIV prevention interventions for one or more of the three populations described below.

B. Eligible Applicants

To be eligible for funding under this announcement, applicants must be (1) a tax-exempt, non-profit national business or labor related, youth related, or migrant worker related organization; or (2) an academic institution working in a contractual relationship with a community-based partner; or (3) a federally recognized Indian tribal government, a non-federally recognized tribe or other organization that qualifies under the Indian Civil Rights Act, State Charter Tribes, Urban Indian Health Programs, Indian Health Boards, and/or Inter-Tribal Councils.

If you are applying to conduct activities internationally, you must demonstrate having at least two years of experience conducting leadership or

technical assistance activities in an international setting.

Indian Tribal governments, non-federally recognized tribes and other organizations that qualify under the Indian Civil Rights Act, State Charter Tribes, Urban Indian Health Programs, Indian Health Boards, and Inter-Tribal Councils may apply under each category provided that these entities meet the eligibility criteria described under each category.

Proof of non-profit tax-exempt status must be provided with the application. CDC will not accept an application without proof of tax-exempt status. Non-profit tax-exempt status is determined by the Internal Revenue Service (IRS) Code, Section 501(c)(3). Tax-exempt status may be proved by providing a current copy of the 501(c)(3) non-profit tax-exempt of the current IRS Determination Letter.

Note: Public Law 104-65 states that an organization described in section 501(c)(4) of the Internal Revenue Code of 1986 that engages in lobbying activities is not eligible to receive Federal funds constituting an award, grant, cooperative agreement, contract, loan, or any other form. Below is additional eligibility criteria for each category.

Category I—Business- or Labor-Related Organization Programs

A. A business- or labor-related organization is a professional or voluntary organization, that (1) has businesses, business leaders, or labor leaders as a focus or constituency; or (2) is a labor union; or (3) is a trade association. In addition, the organization (4) has a formal or informal network, chapters, affiliates, constituent organizations, or offices in at least two U.S. States or territories; and (5) has access to or relationships with national or regional corporate, business, union, or labor leaders and managers (e.g., human resource managers). For example, a labor union with chapters in at least two States would meet the definition of a national business- or labor-related organization, whereas an individual State chapter of a national labor union would not.

B. Has a documented two year record of providing technical assistance or leadership activities focusing on HIV prevention with business and labor organizations and their employees or members.

Category II—Youth-Related Organization Programs

A. A youth-related organization is an organization that has youth, and/or service providers who work with youth, as a focus or constituency. The

organization must have a formal or informal network, chapters, affiliates, constituent organizations, or offices in at least two U.S. States or territories. For example, an agency with a linked network of youth-serving providers with members residing in at least 2 States or Territories would meet the definition of a youth-related organization, whereas an individual chapter of a national organization would not.

B. Has a documented two year record of providing technical assistance, prevention services and/or leadership activities focusing on HIV prevention for Gay, Lesbian, Bisexual, Transgender and Questioning (GLBTQ) youth, homeless/run-away or street youth, and/or young women of color.

C. Has a young person, age 24 or younger from the target population, on the Board of Directors that oversees programmatic activities, or has an Advisory Committee to the Board of Directors that is made up of young people age 24 or younger from the target population.

Category III—Migrant Worker-Related Programs

A. A migrant worker-related organization is an organization that has migrant workers and/or the service providers who work with migrant workers, as a focus or constituency. The organization must have a formal or informal network, chapters, affiliates, constituent organizations, or offices in at least two U.S. States or territories. For example, an agency with a linked network of migrant worker-serving providers with members residing in at least two States or Territories would meet the definition of a migrant farmworker-related organization, whereas an individual chapter of a national organization would not.

B. Has a documented two year record of providing culturally tailored technical assistance or leadership activities focusing on HIV prevention for migrant workers.

C. Availability of Funds

Approximately \$2.2 million is available in FY 2001 to fund approximately 9 awards. It is expected that the average award will be \$225,000 ranging from \$200,000 to \$300,000. It is expected that the awards will begin on or about April 1, 2001, and will be made for a 12-month budget period within a project period of up to four years. Funding estimates may change.

Continuation awards within an approved project period will be made on the basis of satisfactory progress as evidenced by required reports,

satisfactory site visits and the availability of funds.

Applicants may apply for funding in up to two categories, and within each category applicants may apply for one or both of the two activities, as defined in the section on "Recipient Activities". A separate application package and budget must be submitted for EACH category.

1. Category I—Business- or Labor-related Organization Programs up to three awards, including:

- Up to two that address Activity A (Leadership Activities); and
- Up to two that address Activity B (Technical Assistance Activities).

2. Category II—Youth-related Organization Programs up to three awards, including:

- Up to two that address Activity A (Leadership Activities), and
- Up to two that address Activity B (Technical Assistance Activities).

3. Category III—Migrant Farmworker-related Programs up to three awards, including:

- Up to two that address Activity A (Leadership Activities), and
- Up to two that address Activity B (Technical Assistance Activities).

Use of Funds

1. Funds available under this announcement must support activities that engage and develop their constituent communities for the purpose of increasing awareness, leadership, participation, and support for HIV prevention and/or increase the ability of organizations to design, develop, implement, and evaluate effective HIV prevention interventions.

2. These Federal funds may not supplant or duplicate existing funding for these activities.

3. The applicant must perform a substantial portion of the program activities and cannot serve merely as a fiduciary agent. Applications requesting funds to support only managerial and administrative functions will not be accepted.

4. No funds will be provided for direct patient care, including substance abuse treatment, medical treatment, or medications.

5. Before using funds awarded through this cooperative agreement to develop HIV prevention materials, recipients must check with the CDC National Prevention Information Network (NPIN) to determine if suitable materials are already available. Also, materials developed by recipients must be made available for dissemination through the CDC NPIN. Successful applicants will be contacted by NPIN for

information on program resources for use in referrals and resource directories. Also, grantees should send three copies of all educational materials developed under this cooperative agreement to NPIN for inclusion in NPIN's databases.

Funding Preferences

Preference for funding in all categories will be given to:

1. Ensuring that leadership development and/or technical assistance is available to the designated target populations as a primary focus; and
2. Addressing gaps in current national/regional or local technical assistance services (gaps may be defined by geography; target population, race/ethnicity, risk behavior; or intervention type).
3. Ensuring that technical assistance activities will address a variety of intervention types (e.g., small group intervention, counseling and testing, prevention case management) and strategies or programs that raise awareness about HIV.
4. Ensuring that technical assistance activities will address diverse target population groups.

Additional Funding Preference for Category I—Business and Labor:

Preference for funding will be given to ensuring that both business and labor organizations are funded in at least one of the two designated activities.

D. Program Requirements

In conducting activities to achieve the purpose of this program, the recipient will be responsible for the activities under 1. (Recipient Activities), and CDC will be responsible for the activities listed under 2. (CDC Activities).

1. Recipients in All Categories Must Conduct the Following Activities

- a. Incorporate cultural competency and linguistic appropriateness into all technical assistance and skills building efforts, including those involving the development, production, dissemination, and marketing of health communication or prevention messages;
- b. Use epidemiologic data, behavioral research, and program evaluation, to inform technical assistance and intervention development which meet the needs of the designated populations;
- c. Coordinate program activities with relevant public sector partners, including national, regional, State, and local HIV prevention programs and Capacity Building Assistance (CBA) providers to prevent duplication of efforts. (Please see Attachment III for a list of the Division of HIV/AIDS Prevention Capacity-Building and

Technical Assistance Providers. Also, see Section G. "Submission and Deadline" for online availability of complete program announcement, attachments, and forms);

d. Review and ensure consistency with applicable State and local comprehensive HIV prevention community plans when conducting program activities at the State and local levels;

e. Facilitate the dissemination of successful prevention interventions and program models through meetings, workshops, conferences, and communications with project officers;

f. Compile "lessons learned" from the project and share these with the CDC;

g. Monitor and conduct process evaluations on all major program activities and services supported with CDC HIV prevention funds under this cooperative agreement;

h. Submit CDC forms for initiating and completing technical assistance services. Forms will be provided by CDC.

2. Category I—Business- or Labor-Related Organization Programs—Recipient Activities

a. Activity A—Leadership Activities

(1) Develop and promote, at the national, State, and local levels, and when appropriate, at the international level, leadership in and support for HIV prevention policies and strategies, that promote private-public partnerships to enhance HIV/AIDS awareness and prevention;

(2) Influence and strengthen, at the national, State, and local levels, and when appropriate, international level, private sector engagement in shaping societal and community norms that dispel HIV/AIDS stigma, reduce discrimination against persons with HIV/AIDS, and facilitate HIV prevention by encouraging the adoption and maintenance of safer behaviors;

(3) Support the private sector development of policies and programs addressing HIV/AIDS and HIV prevention education in the workplace, at the national, State, regional, local, and when appropriate, international levels.

b. Activity B—Technical Assistance Activities

(1) Provide businesses and business- and labor-related organizations with technical assistance related to:

- Adopting and implementing appropriate CDC-recommended policies on HIV/AIDS in the workplace
- Educating managers and labor leaders about these policies

- Educating workers about HIV/AIDS in the workplace

- Educating workers and their families about HIV prevention, and
- Contributing to community efforts to control HIV transmission;

(2) Facilitate State and local HIV prevention community planning groups, health departments, CBOs, and other HIV prevention providers in working with business, labor, and business- and labor-related organizations to strengthen and promote HIV prevention efforts in the community;

(3) Facilitate business, labor and business- and labor-related organizations in working with State and local HIV prevention community planning groups, health departments, CBOs, and other HIV prevention providers to strengthen and promote HIV prevention efforts in the community.

These services are to be provided through the use of information transfer, skills building, technical consultation, technical services, and technology transfer. These services should be culturally appropriate and based in science.

(4) Implement a plan for developing and maintaining ongoing technical assistance and service delivery collaboration with CDC-funded CBOs, other CBOs, and State and local Health Departments.

(5) Implement a system that responds to technical assistance and service delivery requests. The system must include mechanisms for assessing and prioritizing requests; linking requests to other technical assistance and service resources and to services provided by other Technical Assistance providers.

(6) Identify and complement the technical assistance and service delivery efforts for the target population available locally. Cooperate with other national, regional, State, and local technical assistance and service providers to (a) avoid duplication of effort and (b) ensure that capacity-building assistance is allocated according to gaps in available services and the needs of organizations serving youth at high risk for acquiring and transmitting HIV and other STDs.

(7) Coordinate program activities with appropriate national, regional, State, and local governmental and non-governmental HIV prevention partners (e.g., health departments, CBOs and CPGs). (Note: For this announcement, the term "coordinate" means exchanging information and altering activities for mutual benefit.)

(8) Incorporate cultural competency, age, linguistic and educational appropriateness into all capacity-building activities;

3. Category II—Youth-Related Organization Programs—Recipient Activities

a. Activity A—Leadership

(1) Develop and promote, at the national, State, and local levels, and when appropriate, at the international level, leadership support for HIV prevention policies, programs and services for HIV prevention for young women of color; homeless, run-away and/or street youth; and/or Gay, Lesbian, Bisexual, Transgender and Questioning (GLBTQ) youth;

(2) Influence and strengthen, at the national, State, and local levels, and when appropriate, at the international level, societal and community norms that dispel HIV/AIDS stigma, reduce discrimination against persons with HIV/AIDS, and facilitate HIV prevention by supporting the adoption and maintenance of safer behaviors in youth.

b. Activity B—Technical Assistance

1. Include CDC-funded CBOs, other CBOs, Health Department staff, State education agencies, and other potential consumers of the proposed services in planning and evaluating the proposed technical assistance and service delivery program.

2. Ensure the effective and efficient provision of technical assistance and/or delivery of effective services to address HIV prevention for the designated youth populations. (Examples include, but are not limited to, intervention replication or adaptation, use of behavioral and social sciences to increase intervention effectiveness, increasing the cultural competence and linguistic appropriateness of interventions, service integration, developing effective health communications messages, conducting population-based needs assessments, and evaluation planning and implementation.) Recipients should work closely with CDC to identify interventions for the designated youth populations that have a sound basis in science or proven program experience and are suitable for dissemination.

For a compilation of intervention types (e.g. small group interventions, counseling and testing, prevention case management) and other proven interventions please refer to the CDC Compendium of Effective Programs, titled, "Compendium of HIV Prevention Interventions with Evidence of Effectiveness" November 1999, CDC Prevention Research Synthesis to reach the designated population (e.g. young women of color, GLBTQ youth, runaway, homeless, or street youth). The "Compendium of HIV Prevention Interventions with Evidence of

Effectiveness" may be found in Attachment II and on the CDC home page Internet address. (See Section G. "Submission and Deadline" for online availability of complete program announcement, attachments, and forms).

These services are to be provided through the use of information transfer, skills building, technical consultation, technical services, and technology transfer. These services should be culturally appropriate and based in science.

3. Implement a plan for developing and maintaining ongoing technical assistance and service delivery collaboration with CDC-funded CBOs, other CBOs, and State and local Health Departments.

4. Implement a system that responds to technical assistance and service delivery requests. The system must include mechanisms for assessing and prioritizing requests; linking requests to other technical assistance and service resources and to services provided by other Technical Assistance providers.

5. Identify and complement the technical assistance and service delivery efforts for the target population available locally. Cooperate with other national, regional, State, and local technical assistance and service providers including Capacity Building Assistance (CBA) providers, to (a) avoid duplication of effort and (b) ensure that capacity-building assistance is allocated according to gaps in available services and the needs of organizations serving youth at high risk for acquiring and transmitting HIV and other STDs.

6. Coordinate program activities with appropriate national, regional, State, and local governmental and non-governmental HIV prevention partners (e.g., health departments, CBOs, CBA providers) and CPGs.

(Note: For this announcement, the term "coordinate" means exchanging information and altering activities for mutual benefit.)

7. Incorporate cultural competency, age, linguistic and educational appropriateness into all capacity-building activities;

8. Assist State and local HIV prevention community planning groups, health departments, CBOs, and other HIV prevention providers in working with youth and youth serving organizations to strengthen and promote HIV prevention among youth in the community.

9. Assist youth serving organizations in working with State and local HIV prevention community planning groups, health departments, CBOs, and other HIV prevention providers to strengthen

and promote HIV prevention among youth in the community.

10. Participate in the CDC-coordinated Capacity-Building Assistance Network to enhance communication, coordination, and training.

4. Category III—Migrant Worker-Related Programs—Recipient Activities

a. Activity A—Leadership

1. Develop and promote, at the national, State, regional and local levels, and when appropriate, at the international level, leadership support for HIV prevention policies, programs and services for HIV prevention for migrant workers.

2. Influence and strengthen, at the national, State, and local levels, and when appropriate, at the international level, societal and community norms that dispel HIV/AIDS stigma, reduce discrimination against migrant workers with HIV/AIDS, and facilitate HIV prevention by supporting the adoption and maintenance of safer behaviors in migrant workers.

b. Activity B—Technical Assistance

1. Include CDC-funded CBOs, other CBOs, Health Department staff, State education agencies, and other potential consumers of the proposed services in planning and evaluating the proposed technical assistance and service delivery program.

2. Ensure the effective and efficient provision of technical assistance and/or delivery of effective services to address HIV prevention for migrant workers.

(Examples include, but are not limited to, intervention replication or adaptation, use of behavioral and social sciences to increase intervention effectiveness, increasing the cultural competence and linguistic appropriateness of interventions, service integration, developing effective health communications messages, conducting population-based needs assessments, and evaluation planning and implementation.) Recipients should work closely with CDC to identify interventions for the migrant worker population that have a sound basis in science or proven program experience and are suitable for dissemination.

These services are to be provided through the use of information transfer, skills building, technical consultation, technical services, and technology transfer. These services should be culturally and linguistically appropriate and based in science.

3. Implement a plan for developing and maintaining ongoing technical assistance and service delivery

collaboration with CDC-funded CBOs, other CBOs, and State and local Health Departments.

4. Implement a system that responds to requests for technical assistance and service delivery. The system must include mechanisms for assessing and prioritizing requests; linking requests to other technical assistance and service resources and to services provided by other Technical Assistance providers.

5. Identify and complement the technical assistance and service delivery efforts for the target population available locally. Cooperate with other national, regional, State, and local technical assistance and service providers to (a) avoid duplication of effort, and (b) ensure that technical assistance is allocated according to gaps in available services and the needs of organizations serving migrant workers at risk for acquiring and transmitting HIV and other STDs.

6. Coordinate program activities with appropriate national, regional, State, and local governmental and non-governmental HIV prevention partners (e.g., health departments, CBOs, CBA providers), other technical assistance providers and CPGs. (Note: For this announcement, the term "coordinate" means exchanging information and altering activities for mutual benefit.)

7. Incorporate cultural and linguistic competency, and educational appropriateness into all technical assistance and prevention activities;

8. Assist State and local HIV prevention community planning groups, health departments, CBOs, and other HIV prevention providers in working with migrant workers and/or organizations serving migrant workers to strengthen and promote HIV prevention among this community.

9. Assist migrant serving organizations in working with State and local HIV prevention community planning groups, health departments, CBOs, and other HIV prevention providers to strengthen and promote HIV prevention among youth in the community.

2. CDC Activities

a. Serve as the coordinator for technical assistance and service provision as part of CDC's overall capacity-building programs and network by ensuring coordination and collaboration with other capacity building and technical assistance providing grantees.

b. Provide consultation to recipients regarding planning, developing, implementing and evaluating technical assistance services. CDC will provide consultation and assistance and may

also employ contractors; national, regional, and local organizations; and peer-to-peer assistance from CDC-funded partners.

c. Provide up-to-date scientific information on the risk factors for HIV infection, prevention measures, and program strategies for the prevention of HIV infection. Work closely with recipients to identify interventions that have a sound basis in science or proven program experience and are suitable for dissemination.

d. Facilitate and promote collaboration through the exchange of program information, coalition maintenance strategies, and technical assistance/capacity-building assistance among CBOs; State and local health departments; HIV prevention community planning Groups; national, regional, and local organizations; and other HIV prevention partners.

e. Support train-the-trainer opportunities that enhance capacity-building/technical assistance delivery systems.

f. Facilitate and collaborate in the dissemination of successful capacity-building/technical assistance strategies and successful innovations through meetings of grantees, workshops, and conferences.

g. Collaborate with recipients to standardize a system for tracking and reporting all technical assistance requests and delivery.

h. Coordinate an evaluation of the overall assistance program.

E. Application Content for All Applicants

Use the information in the Program Requirements, Other Requirements, and Evaluation Criteria sections to develop the application content. Your application will be evaluated on the evaluation criteria listed, so it is important to follow them in laying out your application. The narrative should be no more than 40 double-spaced pages (excluding the budget and attachments). Number each page, including appendices and attachments sequentially and provide a complete "Table of Contents" to the application and its attachments. Please begin each separate section of the application on a new page. The original and each copy of the application set must be submitted unstapled and unbound.

All material must be typewritten with a font of 10 pitch or 12 point on 8½" by 11" paper, with at least 1" margins, headings and footers; and printed on one side only. Materials which should be part of the basic plan will not be accepted if placed in the attachments.

Attachments should be unbound and printed in black and white.

In developing the application, follow the format and instructions outlined below.

1. Proof of Eligibility

Include documents as specified below as proof of eligibility. Applicants must complete this section. Failure to provide the required documentation will result in your application being disqualified and returned to you without further review.

a. Indicate if your organization is a national, regional or local organization. Attach the specific charge from your organization's Articles of Incorporation, Bylaws, or a resolution from its executive board or governing body to operate nationally, regionally (in multiple states or territories), or internationally and proof of informal networks which allows your organization to work in multiple states and/or regions.

b. Indicate if your organization is (1) business or labor related, or a labor union/trade association, (2) youth related, (3) migrant worker related, (4) an academic institution working in a contractual relationship with a community-based partner or (5) a federally recognized Indian tribal government or a non-federally recognized tribe or other organization that qualifies under the Indian Civil Rights Act, State Charter Tribe, Urban Indian Health Program, Indian Health Board, or Inter-Tribal Council.

c. Does your organization have a currently valid 501(c)(3) non-profit tax-exempt status? Attach to this section a copy of the current, valid Internal Revenue Service (IRS) determination letter of your organization's 501(c)(3) non-profit tax-exempt status.

If you are applying as an academic institution: Include a "Memoranda of Understanding" which provides a detailed description and time-line of the activities to be conducted by the community-based partner with which you are contracting.

If you are applying to conduct international activities: Include documented evidence which demonstrates that you have at least two years of experience conducting leadership or technical assistance activities in an international setting.

If your organization conducts Business-or Labor-related programs:

(a) Submit documentation proving that your organization has businesses, business leaders, or labor leaders as a focus or constituency: or (1) is a labor union; or (2) is a trade association. In addition, the organization (3) has a

formal or informal network, chapters, affiliates, constituent organizations, or offices in at least two U.S. States or territories; and (4) has access to national or regional corporate, business, union, or labor leaders and managers (e.g., human resource managers).

(b) Submit the following documents to demonstrate that your organization has a two year record of providing technical assistance, conducting leadership activities focusing on HIV prevention with business and labor organizations and their employees or members and/or delivering HIV prevention services: (1) Attach to this section a list of clients, including the organization name, location (i.e., city and State), dates of service, and type(s) of assistance provided, (2) Provide copies of memoranda of understanding, agreements, or contracts and/or consultants, (3) training agendas, (4) newspaper articles, (5) correspondence from recipients of assistance, (6) program brochures, (7) extracts from previous grants to support comparable activities.

If your organization conducts youth-related programs:

(a) Submit documentation demonstrating that your organization has a formal or informal network, chapters, affiliates, constituent organizations, or offices in at least two U.S. States or territories.

(b) Attach the following documents as evidence that your organization has a two year record of providing technical assistance, conducting leadership activities focusing on HIV prevention for youth and/or delivering HIV prevention services: (1) Attach to this section a list of clients, including the organization name, location (i.e., city and State), dates of service, and type(s) of assistance provided, (2) Provide copies of memoranda of understanding, agreements, or contracts/consultants, (3) training agendas, (4) newspaper articles, (5) correspondence from recipients of assistance, (6) program brochures, (7) extracts from previous grants to support comparable activities.

(c) Attach a complete list of the members of your board, governing body or advisory committee along with their positions on the board, age and gender as evidence that a person age 24 or younger participates on the Board that oversees programmatic activities, or that your organization has an Advisory Committee to the Board that is made up of young people age 24 or younger.

If your organization conducts Migrant Worker-related programs:

(a) Submit evidence of having a formal or informal network, chapters, affiliates, constituent organizations, or

offices in at least two U.S. States or territories.

(b) Attach the following documents as evidence that your organization has a documented two year record of providing culturally tailored technical assistance, conducting leadership activities focusing on HIV prevention for migrant workers and/or delivering HIV prevention services: (1) Attach to this section a list of clients, including the organization name, location (i.e., city and State), dates of service, and type(s) of assistance provided, (2) Provide copies of memoranda of understanding, agreements, or contracts/consultants, (3) training agendas, (4) newspaper articles, (5) correspondence from recipients of assistance, (6) program brochures, (7) extracts from previous grants to support comparable activities.

2. Abstract (not to exceed two pages)

Summarize your proposed program activities. Include the following:

- a. category and activity for which the application is being made;
- b. brief summary of the need for the proposed activities and how the target audience perceives risk behaviors and preventive measures;
- c. brief description of organizational history and capacity;
- d. proposed first budget period objectives;
- e. brief summary of proposed plan of operation;
- f. brief description of planned collaborations with governmental and non-governmental organizations;
- g. brief summary of plans for evaluating the activities of this project (only process evaluation is required); and

3. Organizational History and Capacity

4. Assessment of Need

5. Long-term Goals

6. Program Proposal

- a. Objectives
- b. Plan of Operation
- c. Prioritize Program Activities
- d. Coordination/Collaboration
- e. Communications
- f. Time Line

7. Scientific, Theoretical, or Conceptual Foundation for Proposed Activities

8. Plan for Process Evaluation

9. Project Management and Staffing

10. Budget Breakdown and Justification

For the personnel section, indicate the job title, annual salary/rate of pay, and percentage of time spent on this program.

For contracts contained within the application budget, identify the

contractor, if known, describe the services to be performed, justify the use of a third party, and provide a breakdown of and justification for the estimated costs of the contracts, the kinds of organizations or parties to be selected, the period of performance, and the method of selection.

Note: If indirect costs are requested, you must provide a copy of your organization's current negotiated Federal indirect cost rate agreement.

11. Attachments

Provide the following as attachments:

- a. Proof of nonprofit status;
- b. An organizational chart and listing of existing and proposed staff, including volunteer staff;
- c. Description of collaborating organizations or institutions, if appropriate and original, signed letters from the chief executive officers of each such organization or institution assuring their understanding of the intent of this program announcement, the proposed program, their role in the proposed program, and the responsibilities of recipients;
- d. A description of any funding being received from CDC or other sources to conduct activities related to HIV and similar to those proposed which includes:

(1) A summary of funds and income received to conduct HIV/AIDS programs. This summary must include the name of the sponsoring organization/source of income, level of funding, a description of how the funds have been used, and the budget period. In addition, identify proposed personnel devoted to the project you are proposing and personnel supported by other funding sources and the activities they support.

(2) A summary of the objectives and activities of the funded programs described above.

(3) A description of how funds requested in this application will be used differently or in ways that will expand upon the funds already received, applied for, or being received; and

(4) An assurance that the funds being requested will not duplicate or supplant funds received from any other Federal or non-Federal source. CDC awarded funds can be used to expand or enhance services supported with other Federal or non-Federal funds.

e. Independent audit statements from a certified public accountant for the previous 2 years.

F. Evaluation Criteria

Each application will be evaluated individually against the following

criteria by an independent review group appointed by CDC.

1. Organizational History and Capacity: (15 Total Points)

a. The extent to which the applicant describes their role as a national, regional, local or international entity and how they meet the eligibility criteria defined in this program announcement; describes their existing organizational structure, including constituent or affiliate organizations or networks, how that structure will support the proposed program activities, and how the proposed program will have the capacity to reach targeted communities or groups in multiple States or territories. (3 points)

b. The extent to which the applicant describes their past and current experience in developing and implementing similar programs in the appropriate category and activity; for leadership activities, describes capacity for and expertise in leadership development; for technical assistance activities, describes capacity and expertise in providing technical assistance; for HIV service delivery, describes capacity and expertise in delivering HIV prevention services. (3 points)

c. The extent to which the applicant describes their knowledge of HIV transmission and behavioral and social interventions for preventing HIV transmission, and experience in developing and implementing effective HIV prevention strategies and activities appropriate to the target audience; discusses their capacity and expertise in providing educational or prevention services to the target populations at risk for HIV. (3 points)

d. The degree to which the applicant describes their capacity to provide culturally competent and linguistically appropriate services that respond effectively to the cultural, gender, age, environmental, social and multilingual character of the target audiences, including any history of providing such services. (3 points)

e. The degree to which the applicant describes their experience and ability to (1) collaborate with other governmental and non-governmental organizations, including other national agencies or organizations, State and local health departments, CPGs, and State and local non-governmental organizations that provide HIV prevention services; and (2) coordinate program development with existing governmental and private prevention efforts. (2 points)

f. For any of the above areas in which the applicant does not have capacity or expertise, the degree to which the

applicant describes measures to ensure that the proposed program obtains that capacity (e.g., through a collaborating organization or a subcontractor). (1 point)

2. Assessment of Need (10 Total Points)

The extent to which the applicant clearly identifies the need that will be addressed by the proposed program; describes how the need for the proposed program was assessed; includes epidemiologic and other data used to identify the need, an inventory of resources currently available that address the identified need, and an analysis of the gap between the identified need and the resources currently available to address the need (i.e., how will proposed activities or program address an important unmet HIV prevention need or risk-group?). State why the funds being applied for in this application are necessary to address the need.

3. Long-term Goals: (5 Total Points)

The extent to which the applicant describes the broad goals that the proposed program aims to achieve over the course of the project period; and describes how these goals relate to the prevention of HIV infection, either directly or indirectly.

4. Program Proposal (25 Total Points)

The extent to which the applicant describes the proposed program, including:

a. *Objectives:* Provides specific, realistic, time-phased and measurable objectives to be accomplished during the first budget period. Describes how these objectives relate to the program's long-term goals. Describes possible barriers to or facilitators for reaching these objectives. (5 points)

b. *Plan of Operation:* Describes in detail the methods (i.e., strategies and activities) used to achieve the proposed goals and objectives, and perform the required recipient activities. Identifies program staff responsible for conducting the proposed activities. Describes specifically how general and activity-specific requirements will be addressed. Describes their roles and responsibilities and those of each collaborating institution, organization, subcontractor or CBA provider in performing the proposed activities. (5 points)

c. *Prioritize Program Activities:* Describes how program activities will be prioritized to place emphasis on the target populations or communities that are disproportionately affected by HIV/AIDS. (4 points)

d. *Coordination/Collaboration:* Describes how they will work and

coordinate with other national, regional, State, and local governmental and nongovernmental organizations, including CBA providers, the private sector, as well as other HIV prevention providers, to conduct the proposed activities. Describes how they will ensure consistency with applicable State and local comprehensive HIV prevention community plans when conducting program activities at the State and local levels. (4 points)

e. *Communications:* Describes how they will share successful approaches with other organizations and how "lessons learned" will be compiled and disseminated. (3 points)

f. *Time Line:* Provides a time line that indicates the approximate dates by which activities will be accomplished. (4 points)

5. Scientific, Theoretical, or Conceptual Foundation for Proposed Activities: (15 Total Points)

The extent to which the applicant provides a detailed description of the scientific, theoretical, or conceptual foundation on which the proposed activities are based and which support the potential effectiveness of these activities for addressing the stated need.

6. Plan of Evaluation: (15 Total Points)

The extent to which the applicant describe how activities to monitor progress to determine if the objectives are being achieved, and determine if the methods used to deliver the proposed activities are effective. Describes how data will be collected, analyzed, and used to improve the program.

7. Project Management and Staffing: (15 Total Points)

The extent to which the applicant describes how the proposed program will be managed and staffed, including the location of the program within the organization. Describe in detail each existing or proposed position by job title, function, general duties, and activities. Include the level of effort and allocation of time for each project activity by staff positions. If the identity of any key personnel who will fill a position is known, provide their curriculum vitae (not to exceed two pages per person) as an attachment. Note experience and training related to the proposed project.

8. Budget Breakdown and Justification: (Not Scored)

The extent to which the applicant provides a detailed budget for each proposed activity. Justifies all operating expenses in relation to the stated objectives and planned priority

activities. Provides specific information about the program purpose of each budget item and itemizes calculations wherever appropriate. CDC may not approve or fund all proposed activities.

For the personnel section, indicates the job title, annual salary/rate of pay, and percentage of time spent on this program.

G. Submission and Deadline

Application: Submit the original and two copies of PHS 5161-1 (OMB Number 0937-0189) and Assurance of Compliance with the "Requirements of AIDS-related written materials, pictorials, audiovisuals, questionnaires, survey instruments, and educational sessions in Centers for Disease Control and Prevention (CDC) Assistance Programs".

Forms are available at the following Internet addresses: www.cdc.gov/ * * *. Forms or in the application kit.

The PHS 5161-1 form is available at <http://forms.psc.gov/forms/phs/ps5161-1.pdf>

The Assurance of Compliance Form is available at

<http://www.cdc.gov/od/pgo/forms/hivpanel.htm>

On or before February 23, 2001 submit the application to the Grants Management Specialist identified in the "Where to Obtain Additional Information" section of this announcement.

Deadline: Applications shall be considered as meeting the deadline if they are either:

(a) Received on or before the deadline date; or

(b) Postmarked on or before the deadline date and received in time for submission to the independent review group.

(Applicants must request a legibly dated U.S. Postal Service postmark or obtain a legibly dated receipt from a commercial carrier or U.S. Postal Service. Private metered postmarks shall not be acceptable as proof of timely mailing.)

Late Applications: Applications which do not meet the criteria in (a) or (b) above are considered late applications, will not be considered, and will be returned to the applicant.

H. Other Requirements

Technical Reporting Requirements

Provide CDC with original plus two copies of:

1. Progress reports quarterly including technical assistance and service delivery requested and delivered;

2. financial status report, no more than 90 days after the end of the budget period; and

3. final financial and performance reports, no more than 90 days after the end of the project period.

Send all reports to the Grants Management Specialist identified in the "Where to Obtain Additional Information" section of this announcement.

The following additional requirements are applicable to this program. For a complete description of each, see Attachment I in the application kit. (List all applicable requirements by number and title. The Grants Management Branch will include the applicable descriptions in the application kit.)

AR-4 HIV/AIDS Confidentiality

Provisions

AR-5 HIV Program Review Panel

I. Authority and Catalog of Federal Domestic Assistance Number

This program is authorized under section 317(k)(2) of the Public Health Service Act, [42 U.S.C. 247b(k)(2)], as amended. The Catalog of Federal Domestic Assistance number is 93.941.

J. Where to Obtain Additional Information

This and other CDC announcements can be found on the CDC home page Internet address—<http://www.cdc.gov> click on "Funding" then "Grants and Cooperative Agreements."

To receive additional written information and to request an application kit, call 1-888-GRANTS4 (1-888 472-6874).

You will be asked to leave your name and address and will be instructed to identify the Announcement number of interest.

If you have questions after reviewing the contents of all the documents, business management technical assistance may be obtained from: Julia L. Valentine, Grants Management Specialist, Grants Management Branch, Procurement and Grants Office, Centers for Disease Control and Prevention, 2920 Brandywine Road, Room 3000, Atlanta, GA 30341-4146, Telephone number: 770-488-2732, Email address: jxv1@cdc.gov.

For program technical assistance, contact: Karena Sapsis, Public Health

Advisor, Training and Technical Support Systems Branch, Division of HIV/AIDS Prevention, National Center for HIV, STD and TB Prevention, Centers for Disease Control and Prevention, 1600 Clifton Rd., NE Mailstop E-40, Atlanta, GA 30333, Telephone: (404)639-5221 email: kes0@cdc.gov.

Dated: January 11, 2001.

Sandra R. Manning,

Acting Director, Procurement and Grants Office, Centers for Disease Control and Prevention (CDC).

Disease, Disability, and Injury Prevention and Control Special Emphasis Panel (SEP): National Partnerships for HIV Prevention with a Focus on Business and Labor, Youth, and Migrant Workers

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), the Centers for Disease Control and Prevention (CDC) announces the following meeting.

Name: Disease, Disability, and Injury Prevention and Control Special Emphasis Panel (SEP): National Partnerships for HIV Prevention with a Focus on Business and Labor, Youth, and Migrant Workers, Program Announcement #01017, meeting.

Times and Dates: 11 a.m.–p.m., March 4, 2001 (Open), 8:30 a.m.–4:30 p.m., March 5, 2001 (Closed), 8:30 a.m.–8:45 a.m., March 6, 2001 (Open), 8:45 a.m.–4:30 p.m., March 6, 2001 (Closed).

Place: National Center for HIV, STD, and TB Prevention, CDC, 8 Corporate Square Blvd., Conference Room 1A, B, and C, and 2A and 2C, Atlanta, Georgia 30329.

Status: Portions of the meeting will be closed to the public in accordance with provisions set forth in section 552b(c)(4) and (6), Title 5 U.S.C., and the Determination of the Associate Director for Management and Operations, CDC, pursuant to Public Law 92-463.

Matters to be Discussed: The meeting will include the review, discussion, and evaluation of applications received in response to Program Announcement #01017.

Contact Person for more Information: Elizabeth A. Wolfe, Prevention Support Office, National Center for HIV, STD, and TB Prevention, CDC, Corporate Square Office Park, 8 Corporate Square Boulevard, M/S E07, Atlanta, Georgia 30329, telephone 404/639-8025.

The Director, Management Analysis and Services office has been delegated the

authority to sign Federal Register notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Dated: January 11, 2001.

Carolyn J. Russell,

Director, Management Analysis and Services Office, Centers for Disease Control and Prevention CDC.

Centers for Disease Control and Prevention

Advisory Council for the Elimination of Tuberculosis: Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), the Centers for Disease Control and Prevention (CDC) announces the following council meeting.

Name: Advisory Council for the Elimination of Tuberculosis (ACET).

Times and Dates: 8:30 a.m.-5 p.m., February 13, 2001; 8:30 a.m.-12 p.m., February 14, 2001.

Place: Corporate Square, Building 8, 1st Floor Conference Room, Atlanta Georgia 30333.

Status: Open to the public, limited only by the space available. The meeting room accommodates approximately 100 people.

Purpose: This council advises and makes recommendations to the Secretary of Health and Human Services, the Assistant Secretary for Health, and the Director, CDC, regarding the elimination of tuberculosis. Specifically, the Council makes recommendations regarding policies, strategies, objectives, and priorities; addresses the development and application of new technologies; and reviews the extent to which progress has been made toward eliminating tuberculosis.

Matters to be Discussed: Agenda items include issues pertaining to the Institute of Medicine Report "Ending Neglect", TB Drug Susceptibility Testing and TB in Low Incidence Areas.

Contact Person for More Information: Paulette Ford, National Center for HIV, STD, and TB Prevention, 1600 Clifton Road, NE, M/S E-07, Atlanta, Georgia 30333, telephone 404/639-8008.

The Director, Management Analysis and Services Office, has been delegated the authority to sign Federal Register Notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Dated: January 11, 2001.

Carolyn J. Russell,

Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Comment Request

Proposed Projects

Title: Title IV-E Foster Care and Adoption Assistance Financial Report.

OMB No.: 0970-0205.

Description: This form is used by States and Puerto Rico to facilitate the reporting of expenditures for the Foster Care and Adoption Assistance programs. State agencies (including Puerto Rico) use this form to report data on a quarterly basis. The form provides specific data regarding financial disbursements, obligations and estimates. It provides States with a mechanism to request grant awards and certify the availability of State matching funds. Failure to collect this data would seriously compromise the Administration for Children and Families' ability to issue grant awards and monitor expenditures. This form is also used to prepare ACF budget submission to Congress.

Respondents: States and Puerto Rico.

ANNUAL BURDEN ESTIMATES

Instrument	Number of respondents	Number of responses per respondent	Average burden hours per response	Total burden hours
IV-E-1	52	4/YR	25	5200

Estimated Total Annual Burden Hours: 5200.

In compliance with the requirements of section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, the Administration for Children and Families is soliciting public comment on the specific aspects of the information collection described above. Copies of the proposed collection of information can be obtained and comments may be forwarded by writing to the Administration for Children and Families, Office of Information Services, 370 L'Enfant Promenade, SW., Washington, DC 20447, Attn: ACF

Reports Clearance Officer. All requests should be identified by the title of the information collection.

The Department specifically requests comments on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d)

ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 60 days of this publication.

Dated: January 11, 2001.

Bob Sargis,

Reports Clearance Officer.

Food and Drug Administration

[Docket No. 00D-1598]

Draft Guidance for Industry: Voluntary Labeling Indicating Whether Foods Have or Have Not Been Developed Using Bioengineering; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA (we)) is announcing the availability of a draft guidance for industry entitled "Voluntary Labeling Indicating Whether Foods Have or Have Not Been Developed Using Bioengineering." FDA developed this draft guidance to assist manufacturers, who wish to voluntarily label their foods (human and animal) as being made with or without bioengineering or the use of bioengineered ingredients, to ensure that labeling is truthful and not misleading. FDA is taking this action in response to requests from food manufacturers and as part of the Clinton administration's initiatives to strengthen science-based regulation of bioengineered foods and consumer access to information.

DATES: Submit written comments concerning the draft guidance to ensure adequate consideration in the preparation of a revised guidance, if warranted, by March 19, 2001. However, you may submit written comments at any time. Submit written comments concerning the collection of information by March 19, 2001.

ADDRESSES: Submit written comments on the draft guidance and the collection of information to the Dockets Management Branch (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Identify the comments with the docket number found in brackets in the heading of this document. Submit written requests for single copies of the draft guidance entitled "Draft Guidance for Industry: Voluntary Labeling Indicating Whether Foods Have or Have Not Been Developed Using Bioengineering" to the Office of Nutritional Products, Labeling, and Dietary Supplements (HFS-800), Center for Food Safety and Applied Nutrition, Food and Drug Administration, 200 C St. SW., Washington, DC 20204. Send one self-addressed adhesive label to assist that office in processing your request, or include a fax number to

which the draft guidance may be sent. Alternatively, you may request a copy of the draft guidance by calling 202-205-4561, or you may fax your request to 202-205-4594. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance.

FOR FURTHER INFORMATION CONTACT:

Regarding human food issues:

Catalina Ferre-Hockensmith, Center for Food Safety and Applied Nutrition (HFS-822), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202-205-4168.

Regarding animal feed issues:

William D. Price, Center for Veterinary Medicine (HFV-200), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 301-827-6652.

SUPPLEMENTARY INFORMATION:

I. Background

In the **Federal Register** of May 29, 1992 (57 FR 22984), FDA published its "Statement of Policy: Foods Derived from New Plant Varieties" (the 1992 policy). The 1992 policy applies to foods (human and animal) developed from new plant varieties, including varieties that are developed using recombinant deoxyribonucleic acid (rDNA) technology, which is often referred to as "genetic engineering," "biotechnology," or "bioengineering." The 1992 policy provides guidance to industry on scientific and regulatory issues related to bioengineered foods and solicited written comments from interested persons. It includes guidance on questions to be answered by developers of foods from new plant varieties to ensure that the new products are safe and comply with applicable legal requirements.

In the 1992 policy, we also address the labeling of foods derived from new plant varieties, including plants developed by bioengineering. The 1992 policy does not establish special labeling requirements for bioengineered foods as a class of foods. The 1992 policy states that we have no basis for concluding that bioengineered foods differ from other foods in any meaningful or uniform way, or that, as a class, foods developed by the new techniques present any different or greater safety concern than foods developed by traditional plant breeding.

Although we do not require special labeling for bioengineered foods, as a class of foods, in the 1992 policy we advised that labeling requirements that apply to foods in general also apply to foods produced using biotechnology. Section 403(i) of the Federal Food, Drug,

and Cosmetic Act (the act) (21 U.S.C. 343(i)) requires that each food bear a common or usual name or, in the absence of such a name, an appropriately descriptive term. In addition, under section 201(n) of the act (21 U.S.C. 321(n)), the labeling of food must reveal all facts that are material in light of representations made in the labeling or in light of consequences that may result from the use of the foods. Thus:

- If a bioengineered food is significantly different from its traditional counterpart, such that the common or usual name no longer adequately describes the new food, the name must be changed to describe the difference.
- If an issue exists for the food or a constituent of the food regarding how the food is used or consequences of its use, a statement must be made on the labeling to describe the issue.
- If a bioengineered food has a significantly different nutritional property, its labeling must reflect the difference.
- If a new food includes an allergen that consumers would not expect to be present based on the name of the food, the presence of that allergen must be disclosed in the labeling.

In the **Federal Register** of April 28, 1993 (58 FR 25837), we requested data and information (the 1993 information request) on certain labeling issues that had arisen from the labeling guidance in the 1992 policy. In 1999, we held three public meetings (64 FR 57470, October 25, 1999). The purpose of those meetings was for us to share our current approach and experience over the previous 5 years regarding bioengineered foods, to solicit views on whether our policies should be modified, and to gather information to be used to assess the most appropriate means of providing information to the public about bioengineered products in the food supply. We received more than 50,000 written comments about our policy regarding safety and labeling of bioengineered foods. The theme related to labeling in those comments and the testimony at the meetings was that there are very strongly held but divergent views as to whether bioengineered foods should be required to bear special labeling. However, there was general agreement that providing more information to consumers about bioengineered foods would be useful. A number of comments supported the need for guidance from FDA regarding appropriate ways that industry could voluntarily provide information on a food label about bioengineering.

We have reviewed information in the comments received in response to the 1992 policy and the 1993 information request as well as the comments from the meetings held in 1999. Most of the comments that addressed labeling requested mandatory disclosure of the fact that the food or its ingredients was bioengineered or was produced from bioengineered food. However, these comments did not provide data or other information regarding consequences to consumers from eating the foods or any other basis for us to find under section 201(n) of the act that such a disclosure was a material fact. Many of the comments expressed concern about possible long-term consequences from consuming bioengineered foods, but they did not contend that any of the bioengineered foods already on the market have adverse health effects. The comments were mainly expressions of concern about the unknown. We are still not aware of any data or other information that would form a basis for concluding that the fact that a food or its ingredients was produced using bioengineering is a material fact that must be disclosed under sections 403(a) and 201(n) of the act. We are, therefore, reaffirming our decision to not require special labeling of all bioengineered foods.

We are providing guidance to assist manufacturers who wish to label their foods voluntarily as being made with or without the use of bioengineered ingredients. While the use of bioengineering is not a material fact, many consumers are interested in the information, and some manufacturers may want to respond to this consumer desire. We developed this guidance using information from the comments and from focus groups, as well as other resources. The guidance is intended to help manufacturers ensure that their labeling is truthful and not misleading. In addition, because the act defines food as articles used for food or drink for man or other animals, this guidance applies to animal feeds as well as to human foods.

The guidance addresses the use of statements in the labeling of foods that are bioengineered or contain bioengineered ingredients. It is intended to provide guidance on how a manufacturer may make statements in the labeling about bioengineered foods and ingredients, without such statements being false or misleading.

The guidance also addresses the use of statements in the labeling that indicate that the food, or its ingredients, was not bioengineered. The agency is soliciting comments on the entire guidance document, but it is

particularly interested in comments on how the draft guidance deals with statements like "GMO free," "GM free," "biotech free," and "no genetically engineered materials." For example, we are seeking comment on whether, and how, statements like "GM free" or "no genetically engineered material" can be made without being false or misleading. In the guidance document, FDA advises that the term "free" may be difficult to use without being false or misleading. If it implies "zero," it may be very difficult to substantiate. The adventitious presence of bioengineered material may make a "zero" claim inaccurate. Further, these terms would be misleading if they imply that the food is superior because the food is not bioengineered. We have concluded that the use, or absence of use, of bioengineering in the production of a food is not a fact that is material either with respect to consequences resulting from the use of the food or due to representations on the labeling.

We suggest in the guidance that terms like "GM free" and "biotech free" either not be used in bioengineering labeling statements or be in a context that makes clear that a zero level of bioengineered material is not implied. We recognize that the terms are popular among those manufacturers who have already made label statements that a food was not bioengineered. FDA requests comments on whether statements like "GM free," "biotech free," and "no genetically engineered materials" can be made without being false or misleading, and, if so, how. Does such a statement imply zero content of bioengineered material? If so, would a clarifying statement help the consumer to understand that there may be some low level of bioengineered material present? Should substantiation of no detectable bioengineered material be required in the absence of a clarifying statement? Does "biotech free" or another similar term imply that the labeled food is superior to foods that are not so labeled? If so, would a clarifying statement, for example, a statement that the absence of the use of bioengineering does not make the food superior to food not so labeled or to a bioengineered food or ingredient, clarify the term adequately? Would such a clarifying statement be needed in all instances or are there some uses of "GM free" and similar terms that would not imply that the labeled food is superior, and why? We specifically request comment on these as well as any other aspects of how to avoid false or misleading statements in the labeling about the absence of use of bioengineering in the production of a food or its ingredients.

This Level 1 draft guidance represents our current thinking on the voluntary labeling indicating whether foods have or have not been developed using bioengineering. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such an approach satisfies the requirements of applicable statutes, and regulations. The draft guidance is being distributed for comment purposes in accordance with FDA's good guidance practices (65 FR 56468, September 19, 2000).

II. Paperwork Reduction Act of 1995

Under the Paperwork Reduction Act of 1995 (the PRA) (44 U.S.C. 3501–3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. "Collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on: (1) Whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Title: Suggested Documentation for Substantiating Whether Foods Have or Have Not Been Developed Using Bioengineering

Description: The 1992 policy stated that the method of development of a new plant variety, including plants developed using bioengineering, is not information that is material under section 201(n) of the act and, therefore, would not be required in the labeling of

food. This conclusion is consistent with our historic interpretation of section 201(n) of the act, in that the method of plant breeding is not required to be disclosed in labeling. In the 1993 information request, we requested additional information on labeling issues that had risen from our 1992 policy. Subsequently, in 1999, we held three public meetings to get public input on our existing policy with regard to its premarket review of foods produced through biotechnology and the labeling of such products. In response to comments that we received on our 1992 policy, the 1993 information request, and the public meetings, we decided to develop guidance for voluntary labeling indicating whether foods have or have not been developed using bioengineering. This guidance will assist manufacturers in labeling foods

that have or have not been developed using bioengineering so that the labeling statement is truthful, not misleading, and scientifically valid. The information that the manufacturers will collect is documentation of handling practices so that they can truthfully label their products to indicate, if they so choose, whether the food has or has not been developed using bioengineering.

In general, FDA anticipates that manufacturers that claim that a product is not developed using bioengineered material would substantiate the claim. If validated testing is not available to ensure the absence of bioengineered material for a specific food, we suggest that manufacturers document handling practices to substantiate a claim that a food was not developed using bioengineering, rather than using a "free" claim. Thus, to substantiate handling practices, the manufacturers would have to document the source of

such foods. Examples of documentation that we anticipate will demonstrate handling practices and procedures about how the food was processed are recordkeeping, certifications or affidavits from farmers, processors, and others in the food production and distribution chain. We are neither suggesting that firms maintain a certain set list of documents nor are we suggesting that anything less or different would likely be considered unacceptable. Rather, we are leaving it to each firm's discretion to maintain appropriate documentation to demonstrate that the food was produced using traditional methods.

Description of Respondents:

Manufacturers of foods that were and were not produced using bioengineering.

FDA estimates the burden of this collection of information as follows:

TABLE 1.—ESTIMATED ANNUAL REPORTING BURDEN ¹

No. of Respondents	Annual Frequency per Response	Total Annual Responses	Hours per Response	Operating and Maintenance Costs	Total Hours
893	21	18,753	1	\$1,781,400	18,753

¹ There are no capital costs associated with this collection of information.

TABLE 2.—ESTIMATED ANNUAL RECORDKEEPING BURDEN ¹

No. of Recordkeepers	Annual Frequency per Recordkeeper	Total Annual Records	Hours per Recordkeeper	Operating and Maintenance Costs	Total Hours
68	26	1,768	1	\$53,040	1,768

¹ There are no capital costs associated with this collection of information.

FDA estimates that almost all of the organic producers and manufacturers who have issued statements that they will not use bioengineered ingredients will choose to label, and therefore, will incur the reporting burden. We determined the estimates for the annual reporting burden by using the approximately 18,753 products (16,985 organic products and 1,768 non-organic products) from producers who may not use bioengineered ingredients in their products. These manufacturers include producers who market to a niche of consumers who choose not to use products with bioengineered ingredients and manufacturers who have stated that they do not use bioengineered ingredients in their products. We estimated that the numbers of firms that will choose to label is 893 (825 firms for organic products and 68 for non-organic products). We estimated that the manufacturers of these products would choose to state on their label and in

their labeling that those products were not developed using bioengineering. Such labeling would increase their paperwork burden. The estimates on the annual reporting burden (table 1 of this document) are based on agency knowledge of, and experience with, food labeling. The 18,753 product estimate may be too low if FDA has been unable to identify all producers that could use non-bioengineering labels or if FDA's labeling guidance encourages producers who have not issued bioengineering statements to now use such statements on the label. On the other hand, this may be an overestimate if some producers, who have been making statements indicating that they will try to use foods that were not developed using bioengineering, choose not to label their products.

We believe that the burden associated with the voluntary labeling of foods that have not been developed using bioengineering would be a one-time

burden for the small number of firms that would decide, voluntarily, to add this additional information to the labels for their products, separate from any other label changes for their products. We estimate that at least 90 percent of firms would coordinate the addition of the statement on the label that their products were not developed using bioengineering with other changes in their labels, in which case the voluntary cost of transmitting the information to consumers in labeling would be included almost entirely in the cost of other voluntary or required labeling changes. The incremental cost for these 803 firms (893 x 90 percent) would be approximately \$50 per label for 16,878 labels, or \$843,900 total. For the remaining 90 firms that would not coordinate changes with other labeling changes, we estimate that the cost would be approximately \$500 per label for 1,875 labels, or \$937,500 total. The estimated total operating and

maintenance costs in table 1 of this document are, therefore, \$1,781,400.

When determining the annual recordkeeping burden (table 2 of this document), we estimated that the number of firms that would maintain records to substantiate labeling that their products were not developed using bioengineering is the same as the number of respondents with the reporting burden minus the number of firms marketing organic products (i.e., 68). We did not include products that are labeled "organic" in the estimated annual recordkeeping burden because according to a proposal in the **Federal Register** of March 13, 2000 (65 FR 13512), issued by the Agriculture Marketing Service of the U.S. Department of Agriculture, a food labeled as "organic" would not be permitted to contain bioengineered materials. Therefore, the 16,985 organic products available today would be able to bear a voluntary labeling statement that the food was not developed using bioengineering. Thus, there is no additional paperwork burden to substantiate a claim that a product is not developed using bioengineering for these products. Because most of the non-organic products whose producers have stated they will not use bioengineered ingredients are made by large firms for whom the verification process is not likely to impose a significant burden relative to the size of their operation, we assume that the paperwork processing time associated with testing or source verification for these products is approximately 1 hour for a total of 1,768 hours per year. Therefore, FDA estimated that the total recordkeeping burden would be 1,768 hours per year. Based on our experience, we have estimated that the overhead and maintenance cost are \$30 per hour. The estimated total operating and maintenance cost in table 2 of this document are, therefore, \$53,040 total.

III. Comments

Interested persons may submit to the Dockets Management Branch (address

above) written comments on the draft guidance by March 19, 2001, to ensure adequate consideration in the preparation of a revised guidance, if warranted. However, interested persons may submit written comments at any time. Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Submit to the Dockets Management Branch written comments concerning this collection of information by March 19, 2001. The guidance and received comments are available for public examination in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

IV. Electronic Access

An electronic version of the draft guidance also is available on the Internet at <http://www.cfsan.fda.gov/dms/>.

Dated: November 15, 2000.

Margaret M. Dotzel,

Associate Commissioner for Policy.

BILLING CODE 4160-01-F

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Agency Information Collection Activities: Proposed Collection: Comment Request

In compliance with the requirement for opportunity for public comment on proposed data collection projects (section 3506(c)(2)(A) of Title 44, United States Code, as amended by the Paperwork Reduction Act of 1995, Pub. L. 104-13), the Health Resources and Services Administration (HRSA) publishes periodic summaries of proposed projects being developed for submission to OMB under the

Paperwork Reduction Act of 1995. To request more information on the proposed project or to obtain a copy of the data collection plans and draft instruments, call the HRSA Reports Clearance Officer on (301) 443-1129.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Proposed Project: Organ Procurement and Transplantation Network (42 CFR Part 121, OMB No. 0915-0184): Extension

The operation of the Organ Procurement and Transplantation Network (OPTN) necessitates certain recordkeeping and reporting requirements in order to perform the functions related to organ transplantation under contract to HHS. This is a request for an extension of the current recordkeeping and reporting requirements associated with the OPTN. These data will be used by HRSA in monitoring the contracts for the OPTN and the Scientific Registry and in carrying out other statutory responsibilities. Information is needed to match donor organs with recipients, to monitor compliance of member organizations with OPTN rules and requirements, and to ensure that all qualified entities are accepted for membership in the OPTN.

The estimated annual response burden is as follows:

ESTIMATED ANNUAL REPORTING AND RECORDKEEPING BURDEN

Section and activity	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
121.3(b)(2)—OPTN membership and application requirements for OPOs, hospitals, histocompatibility laboratories	30	1	30	40	1,200
121.6(c)—Submitting criteria for organ acceptance	900	1	900	0.1	90
121.6(c)—Sending criteria to OPOs	900	1	900	0.1	90
121.7(b)(4)—Reasons for Refusal	900	0.5	34,200	0.1	3,420
121.7(e)—Transplant to prevent organ wastage	900	0.5	420	0.1	42
121.9(b)—Designated Transplant Program Requirements	10	1	10	2	20

ESTIMATED ANNUAL REPORTING AND RECORDKEEPING BURDEN—Continued

Section and activity	Number of respondents	Responses per respondent	Total responses	Hours per response	Total burden hours
Total	940	38.8	36,460	.1	4,862

Send comments to Susan G. Queen, Ph.D., HRSA Reports Clearance Officer, Room 14–33, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857. Written comments should be received within 60 days of this notice.

Dated: January 10, 2001.

Jane M. Harrison,

National Institutes of Health

National Institute of Arthritis and Musculoskeletal and Skin Diseases; Notice of Closed Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Arthritis and Musculoskeletal and Skin Diseases Special Emphasis Panel.

Date: January 22, 2001.

Time: 2:00 pm to 2:30 pm.

Agenda: To review and evaluate grant applications.

Place: 45 Natcher Bldg., Rm 5As25u, Bethesda, MD 20892, (Telephone Conference Call).

Contact Person: Tommy L. Broadwater, PhD, Chief, Grants Review Branch, National Institutes of Health, NIAMS, Natcher Bldg., Room 5As25U, Bethesda, MD 20892, 301-594-4952.

This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.

(Catalogue of Federal Domestic Assistance Program Nos. 93.846, Arthritis, Musculoskeletal and Skin Diseases Research, National Institutes of Health, HHS)

Dated: January 9, 2001.

LaVerne Y. Stringfield,

Director, Office of Federal Advisory Committee Policy.

National Library of Medicine; Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of a meeting of the Board of Regents of the National Library of Medicine.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign

language interpretation or other reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and/or contract proposals and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications and/or contract proposals, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Board of Regents of the National Library of Medicine.

Date: February 27–28, 2001.

Open: February 27, 2001, 9:00 am to 4:40 pm.

Agenda: Administrative Reports and Program Discussion.

Place: National Library of Medicine, Board Room, Bldg 38, 2E–09, 8600 Rockville Pike, Bethesda, MD 20894.

Closed: February 27, 2001, 4:40 pm to 5:00 pm.

Agenda: To review and evaluate grant applications.

Place: National Library of Medicine, Board Room, Bldg 38, 2E–09, 8600 Rockville Pike, Bethesda, MD 20894.

Open: February 28, 2001, 9:15 am to 11:30 am.

Agenda: Administrative Reports and Program Discussion.

Place: National Library of Medicine, Board Room, Bldg 38, 2E–09, 8600 Rockville Pike, Bethesda, MD 20894.

Contact Person: Donald A.B. Lindberg, MD, Director, National Library of Medicine, National Institutes of Health, PHS, DHHS, Bldg 38, Room 2E17B, Bethesda, MD 20894. (Catalogue of Federal Domestic Assistance Program Nos. 93.879, Medical Library Assistance, National Institutes of Health, HHS)

BILLING CODE 4140–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive License: Method for Preparing 17 α -Acetoxy-11 β -(4-N,N-Dimethylaminophenyl)-19-Norpregna-4, 9-Diene-3,20-Dione, Intermediates Useful in the Method, and Methods for the Preparation of Such Intermediates

AGENCY: National Institutes of Health, Public Health Service, DHHS.

ACTION: Notice.

SUMMARY: This is notice, in accordance with 35 U.S.C. 209(c)(1) and 37 CFR 404.7(a)(1)(i), that the National Institutes of Health (NIH), Department of Health and Human Services, is contemplating the grant of an exclusive license worldwide to practice the invention embodied in: U.S. Patent Application Serial No. 08/413,755, filed March 30, 1995, issuing as U.S. Patent 5,929,262 entitled, “Method for Preparing 17 α -Acetoxy-11 β -(4-N,N-Dimethylaminophenyl)-19-Norpregna-4, 9-Diene-3,20-Dione, Intermediates Useful in the Method, and Methods for the Preparation of such Intermediates” to HRA Pharma, a corporation of France, having a place of business in Paris, France. The patent rights in this invention have been assigned to the United States of America, as represented by the Department of Health and Human Services.

DATES: Only written comments and/or application for a license which are received by the NIH Office of Technology Transfer on or before April 18, 2001 will be considered.

ADDRESSES: Requests for a copy of the patent applications, inquiries, comments and other materials relating to the contemplated license should be directed to: Dennis H. Penn, Pharm.D., Technology Licensing Specialist, Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, MD 20852–3804; Telephone: (301) 496–7056, ext. 211; Facsimile: (301) 402–0220.

SUPPLEMENTARY INFORMATION: In an effort to develop an efficacious treatment for human reproductive disorders this invention describes methods for the synthesis of 17 α -Acetoxy-11 β -(4-N,N-Dimethylaminophenyl)-19-Norpregna-4,9-Diene-3,20-Dione Intermediates Useful in the Method, and Methods for the Preparation of such Intermediates This compound may have utility in treating

human reproductive disorders and hormone sensitive tumors.

The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless, within 90 days from the date of this published Notice, NIH received written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

The field of use may be limited to the use of the invention for the synthesis 17 α -Acetoxy-11 β -(4-N,N-Dimethylaminophenyl)-19-Norpregna-4, 9-Diene-3,20-Dione and intermediates useful in the method of synthesis and preparation of such intermediates.

Properly filed competing applications for a license filed in response to this notice will be treated as objections to the contemplated license. Comments and objections submitted in response to this notice will not be made available for public inspection, and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: January 8, 2001.

Jack Spiegel,

Director, Division of Technology Development and Transfer, Office of Technology Transfer.

BILLING CODE 4140–01–M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive License: Orally Active Derivatives of 1,3,5(10)-Estratriene

AGENCY: National Institutes of Health, Public Health Service, DHHS.

ACTION: Notice.

SUMMARY: This is notice, in accordance with 35 U.S.C. 209(c)(1) and 37 CFR 404.7(a)(1)(i), that the National Institutes of Health (NIH), Department of Health and Human Services, is contemplating the grant of an exclusive license worldwide to practice the invention embodied in: U.S. Patent Application Series No. 08/122,853, filed September 17, 1993, issuing as U.S. Patent 5,554,603 on September 10, 1996 entitled, “Orally Active Derivatives of 1,3,5(10)-Estratriene” to the R.W. Johnson Pharmaceutical Research Institute, a corporation of Delaware, having a place of business in Raritan, New Jersey. The patent rights in this invention have been assigned to the

United States of America, as represented by the Department of Health and Human Services.

DATES: Only written comments and/or application for a license which are received by the NIH Office of Technology Transfer on or before March 19, 2001 will be considered.

ADDRESSES: Requests for a copy of the patent applications, inquiries, comments and other materials relating to the contemplated license should be directed to: Dennis H. Penn, Pharm.D., Technology Licensing Specialist, Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, MD 20852-3804; Telephone: (301) 496-7056, ext. 211; Facsimile: (301) 402-0220.

SUPPLEMENTARY INFORMATION: In an effort to develop an efficacious treatment for human reproductive disorders this invention describes orally active derivatives of 1,3,5(10)-estratriene. This compound may have utility as a contraceptive and as an estrogen replacement for the treatment and prevention of postmenopausal conditions.

The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless, within 60 days from the date of this published Notice, NIH received written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

The field of use may be limited to the use of the invention for the development of pharmaceutical compounds for use as a contraceptive and for treatment and prevention of postmenopausal conditions.

Properly filed competing applications for a license filed in response to this notice will be treated as objections to the contemplated license. Comments and objections submitted in response to this notice will not be made available for public inspection, and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: January 8, 2001.

Jack Spiegel,

Director, Division of Technology Development and Transfer, Office of Technology Transfer.

BILLING CODE 4140-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Prospective Grant of Exclusive License: Prophylactic and/or Therapeutic Vaccine Against *Pseudomonas Aeruginosa*, *Chlamydia*, *Trachomatis* and *Mycoplasma Pneumonia*

AGENCY: National Institutes of Health, Public Health Service, DHHS.

ACTION: Notice.

SUMMARY: This is notice in accordance with 15 U.S.C. 209(c)(1) and 37 CFR 404.7(a)(1)(i) that the National Institutes of Health (NIH), Department of Health and Human Services, is contemplating the grant of a limited field of use exclusive worldwide license to practice the inventions embodied in U.S. Serial Number 09/462,682, filed January 10, 2000 (claiming priority to U.S. Provisional Patent Application Serial No. 60/052,375, filed July 11, 1997), entitled "Pseudomonas exotoxin A-Like Chimeric Immunogens" and U.S. Serial Number 09/462,713 filed May 12, 2000 (claiming priority to U.S. Provisional Patent Application Serial No. 60/056,924, filed July 11, 1997), entitled "Pseudomonas Exotoxin A-like Chimera Immunogens for eliciting a secretory IgA-Mediated Immune Response" to Trinity BioSystems, L.L.C. of Los Altos Hills, California, U.S.A. The United States as represented by the Department of Health and Human Services is an assignee of these patent rights.

DATES: Only written comments and/or applications for a license which are received by NIH on or before March 19, 2001 will be considered.

ADDRESSES: Requests for a copy of these patent applications, inquiries, comments, and other materials relating to the contemplated license should be directed to: Carol A. Salata, Technology Licensing Specialist, Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, MD 20852-3804; Telephone: (301) 496-7735 ext. 232; Facsimile: (301) 402-0220; E-mail: salatac@OD.NIH.GOV. A signed Confidential Disclosure Agreement (CDA) may be required to receive copies of the patent applications.

SUPPLEMENTARY INFORMATION: The patent applications describe the use of *Pseudomonas* exotoxin A-like chimeric immunogens in which a non-native epitope is inserted into a domain. These immunogens are useful to elicit humoral, cell-mediated and mucosal

immune responses against the non-native epitope.

The prospective exclusive license will be royalty-bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7.

It is anticipated that this license may be limited to the field of use as a prophylactic and/or therapeutic vaccine against *Pseudomonas aeruginosa*, *Chlamydia trachomatis* and *Mycoplasma pneumoniae*. Trinity BioSystems will use *Pseudomonas* exotoxin A to target and deliver pathogen peptide epitopes wherein said pathogen peptide epitopes are inserted into or replace a domain of *Pseudomonas* exotoxin A.

This prospective exclusive license may be granted unless within 60 days from the date of this published notice, NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7.

Applications for a license filed in response to this notice will be treated as objections to the grant of the contemplated license. Comments and objections submitted in response to this notice will not be made available for public inspection, and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: January 8, 2001.

Substance Abuse and Mental Health Services Administration

Office for Women's Services; Notice of Meeting

Pursuant to Public Law 92-463, notice is hereby given of the meeting of the Advisory Committee for Women's Services of the Substance Abuse and Mental Health Services Administration (SAMHSA) on Friday January 26, 2001.

The meeting of the Advisory Committee for Women's Services will include a discussion of policy and program issues relating to women's substance abuse and mental health service needs; the SAMHSA fiscal year 2001 budget; specific Committee goals for the current year, planning discussions for SAMHSA's Third National Conference on Women,

consideration of the September 29, 2000 meeting minutes; and other policy issues.

A summary of the meeting and/or a roster of committee members may be obtained from: Nancy P. Brady, Executive Secretary, Advisory Committee for Women's Services, Office for Women's Services, SAMHSA, Parklawn Building, Room 13-99, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone: (301) 443-5184.

Substantive information may be obtained from the contact whose name and telephone number is listed below.

Committee Name: Advisory Committee for Women's Services.

Meeting Date(s): Friday January 26, 2001.

Meeting Time: 2:30-5:00 p.m.

Place: 5600 Fishers Lane, Parklawn Building Room 16-105, Rockville, MD 20857.

Open: January 26, 2001.

Contact: Nancy P. Brady, Room 13-99, Parklawn Building, Telephone: (301) 443-8964.

Dated: January 8, 2001.

Toian Vaughn,

Committee Management Officer, Substance Abuse and Mental Health Services Administration.

BILLING CODE 4162-20-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-4651N-01]

Proposed Information Collection, Comment Request, Economic Opportunities for Low- and Very Low-Income Persons

AGENCY: Office of the Assistant Secretary for Fair Housing and Equal Opportunity, HUD.

ACTION: Notice

SUMMARY: The proposed information collection requirement concerning the Section 3 program will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comment Due Date:* March 19, 2001.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Valerie T. Hayes, Department of Housing and Urban Development, 451

7th Street, SW., Room 5235, Washington, DC 20410. Telephone number (202) 708-3633.

FOR FURTHER INFORMATION CONTACT:

Valerie T. Hayes, Department of Housing and Urban Development, 451 7th Street, SW, Washington, DC 20410, telephone (202) 708-3633. (This is not a toll-free number). Hearing or speech-impaired individuals may access this number TTY by calling the toll-free Federal Information Relay Service at 1-800-877-8399.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 34, as amended).

This Notice is soliciting comments from members of the public and affecting agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Notice of Submission of Proposed Information Collection to OMB

Title of Proposal: Economic Opportunity for Low- and Very Low-Income Persons *Office:* Fair Housing and Equal Opportunity.

OMB Control Number: 2529-0043.

Description of the need for the information and proposed use: The information will be used by the Department to monitor program recipients' compliance with Section 3. HUD Headquarters will use the information to assess the results of the Department's efforts to meet the statutory objectives of Section 3. Also, the data collected will be used by recipients as a self-monitoring tool. If the information is not collected, HUD will be unable to prepare the mandatory reports to Congress or to assess the effectiveness of Section 3.

Agency form numbers, if applicable: Form HUD 60002 and HUD 958.

Members of affected public: State and local governments or their agencies,

public and private non-profit organizations, or other public entities.

Estimation of the total numbers of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: On an annual basis approximately 58,594 respondents (HUD recipients) will submit one report to HUD. It is estimated that two hours per annual reporting period will be required of the recipients to prepare the Section 3 report for a total of 117,186 hours.

Status of the proposed information collection: Reinstatement of a currently approved collection to reflect the collection of information from HUD recipients.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35, as amended.

Dated: January 8, 2001.

John H. Waller,

Deputy Assistant Secretary for Economic Development.

[FR Doc. 01-1402 Filed 1-17-01; 8:45 am]

BILLING CODE 4210-28-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-4655-N-01]

Proposed Information Collection: Comment Request—Recertification of Family Income, Composition and Statistical Report—Section 235(b) and Section 234(b), (i), and (j)

AGENCY: Office of the Assistant Secretary for Housing, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* March 19, 2001.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Wayne Eddins, Reports Management Officer, Department of Housing and Urban Development, 451 7th Street, SW., L'Enfant Plaza Building, Room 8001, Washington, DC 20410.

FOR FURTHER INFORMATION CONTACT:

Joseph McCloskey, Director, Office of Single Family Asset Management, Department of Housing and Urban Development, 451 7th Street SW.,

Washington, DC 20410, telephone (202) 708-1672 (this is not a toll free number) for copies of the proposed forms and other available information.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Recertification of Family Income and Composition.

OMB Control Number, if applicable: 2502-0082.

Description of the need for the information and propose use: Housing Programs, Housing Subsidy, Recertification of forms HUD-93101 and 93101A are submitted by homeowners to mortgagees to determine their continued eligibility for assistance and to determine the amount of assistance a homeowner is to receive. The forms are also used by mortgagees to report statistical and general program data to HUD.

Agency form numbers, if applicable: HUD-93101 and HUD-93101A.

Estimation of the total numbers of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: The number of respondents is 77,265; the frequency of responses are on occasion, monthly, and

annually; estimated time to prepare collection is 1.25 hours per response; and the total annual burden hours requested are 96,581.

Status of the proposed information collection: Reinstatement without change.

Authority: The Paperwork Reduction Act of 1995, 44 U.S.C., Chapter 35, as amended.

Dated: January 12, 2001.

William C. Apgar,

Assistant Secretary for Housing—FHA.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-4650-N-02]

Notice of Submission of Proposed Information Collection to OMB; Mortgagee's Application for Partial Settlement (Multifamily Mortgage)

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below has been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comments Due Date:* February 20, 2001.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. comments should refer to the proposal by name and/or OMB approval number (2502-0427) and should be sent to: Joseph F. Lackey, Jr., OMB Desk Officer, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT:

Wayne Eddins, Reports Management Officer, Q, Department of Housing and Urban Development, 451 Seventh Street, Southwest, Washington, DC 20410; e-mail Wayne_Eddins@HUD.gov; telephone (202) 708-2374. This is not a

toll-free number. Copies of the proposed forms and other available documents submitted to OMB may be obtained from Mr. Eddins.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposal for the collection of information, as described below, to OMB for review, as required by the Paperwork Reduction Act (44 U.S.C. Chapter 35). The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the OMB approval number, if applicable; (4) the description of the need for the information and its proposed use; (5) the agency form number, if applicable; (6) what members of the public will be affected by the proposal; (7) how frequently information submissions will be required; (8) an estimate of the total number of hours needed to prepare the information submission including number of respondents, frequency of response, and hours of response; (9) whether the proposal is new, an extension, reinstatement, or revision of an information collection requirement; and (10) the name and telephone number of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

This Notice Also Lists the Following Information

Title of Proposal: Mortgagee's Application for Partial Settlement (Multifamily Mortgage).

OMB Approval Number: 2502-0427.

Form Numbers: HUD-2537.

Description of the Need for the Information and Its Proposed Use: When a FHA insured multifamily mortgage goes into default, the mortgagee may file a claim to receive insurance benefits. HUD Form 2537 provides required data to process a partial claim payment within 24 to 48 hours after assignment or conveyance of a multifamily mortgage.

Respondents: Business or other-for-profit, State, Local or Tribal Government.

Frequency of Submission: On occasion.

Reporting Burden:

	Number of respondents	×	Frequency of response	×	Hours per response	=	Burden hours
215			1		3.98		54

Total Estimated Burden Hours: 54.
Status: Reinstatement, without change.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. 35, as amended.

Dated: January 9, 2001.

Submission of Proposed Information Collection to OMB—Lender Qualifications for Multifamily Accelerated Processing (Map)

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below has been submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comment Due Date:* February 20, 2001.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB approval number (2502-0541) and should be sent to: Joseph F. Lackey, Jr., OMB Desk Officer, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT:

Wayne Eddins, Reports Management Officer, Q, Department of Housing and Urban Development, 451 Seventh Street, Southwest, Washington, DC 20410; e-mail Wayne_Eddins@HUD.gov; telephone (202) 708-2374. This is not a toll-free number. Copies of the proposed forms and other available documents

submitted to OMB may be obtained from Mr. Eddins.

SUPPLEMENTARY INFORMATION: The Department has submitted the proposal for the collection of information, as described below, to OMB for review, as required by the Paperwork Reduction Act (44 U.S.C. Chapter 35). The Notice lists the following information: (1) The title of the information collection proposal; (2) the office of the agency to collect the information; (3) the OMB approval number, if applicable; (4) the description of the need for the information and its proposed use; (5) the agency form number, if applicable; (6) what members of the public will be affected by the proposal; (7) how

frequently information submissions will be required; (8) an estimate of the total number of hours needed to prepare the information submission including number of respondents, frequency of response, and hours of response; (9) whether the proposal is new, an extension, reinstatement, or revision of an information collection requirement; and (10) the name and telephone number of an agency official familiar with the proposal and of the OMB Desk Officer for the Department.

This Notice also list the following information:

Title of Proposal: Lender Qualifications for Multifamily Accelerated Processing (MAP).

OMB Approval Number: 2502-0541.
Form Numbers: None.

Description of the Need for the Information and its Proposed Use: To participate in MAP, lenders will be required to show that they have an experienced multifamily underwriter on staff, and that they have a satisfactory record on lending on multifamily housing properties. Qualified lenders can then take advantage of a mortgage application plan that will take substantially less processing.

Respondents: Business or other-for-profit.

Frequency of Submission: On occasion.

BILLING CODE 4210-01-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-4638-N-02]

Notice of Certain Operating Cost Adjustment Factors

AGENCY: Office of the Secretary, HUD.

ACTION: Publication of Fiscal Year (FY) 2001 Operating Cost Adjustment Factors (OCAFs) for Section 8 rent adjustments at contract renewal under section 524 of the Multifamily Assisted Housing Reform and Affordability Act of 1997 (MAHRA), as amended by the Preserving Affordable Housing for Senior Citizens and Families into the 21st Century Act of 1999, and under the Low-Income Housing Preservation and Resident Homeownership Act of 1990 (LIHPHA) Projects assisted with Section 8 Housing Assistance Payments.

SUMMARY: This notice that establishes factors used in calculating rent adjustments under section 524 of the Multifamily Assisted Housing Reform and Affordability Act of 1997 (MAHRA) as amended by the Preserving Affordable Housing for Senior Citizens and Families into the 21st Century Act of 1999, and under the Low-Income

Housing Preservation and Resident Homeownership Act of 1990 (LIHPHA), was published on January 10, 2001, but the appendix to the notice was inadvertently not published. This notice is therefore republished with the appendix.

EFFECTIVE DATE: January 10, 2001.

FOR FURTHER INFORMATION CONTACT:

Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW, Washington, DC 20410; telephone (202) 708-3000; (This is not a toll-free number). Hearing or speech-impaired individuals may access this number via TTY by calling the toll-free Federal Information Relay Service at 1-800-877-8339.

SUPPLEMENTARY INFORMATION:

This notice was originally published on January 10, 2001 (66 FR 1997), but

the appendix to the notice was inadvertently not published. This notice is therefore republished with the appendix.

I. Operating Cost Adjustment Factors (OCAFs)

Section 514(e)(2) of the FY 1998 HUD Appropriations Act requires HUD to establish guidelines for rent adjustments based on an operating cost adjustment (OCAF) factor. The legislation requiring HUD to establish OCAFs for LIHPRA projects and projects with contract renewals under section 524 of MAHRA is similar in wording and intent. HUD has therefore developed a single factor to be applied uniformly to all projects utilizing OCAFs as the method by which rents are adjusted.

Additionally, section 524 of the Act gives HUD broad discretion in setting OCAFs—referring simply to “operating cost factors established by the Secretary.” The sole exception to this grant of authority is a specific requirement that application of an OCAF shall not result in a negative rent adjustment. OCAFs are to be applied uniformly to all projects utilizing OCAFs as the method by which rents are adjusted upon expiration of the term of the contract. OCAFs are applied to project contract rent less debt service.

An analysis of cost data for FHA-insured projects showed that their operating expenses could be grouped into nine categories: wages, employee benefits, property taxes, insurance, supplies and equipment, fuel oil, electricity, natural gas, and water and sewer. Based on an analysis of these data, HUD derived estimates of the percentage of routine operating costs that were attributable to each of these nine expense categories. Data for projects with unusually high or low expenses due to unusual circumstances were deleted from analysis.

States are the lowest level of geographical aggregation at which there are enough projects to permit statistical analysis. Additionally, no data were available for the Western Pacific Islands. Data for Hawaii was therefore used to generate OCAFs for these areas.

The best current measures of cost changes for the nine cost categories were selected. The only categories for which current data are available at the State level are for fuel oil, electricity, and natural gas. Current price change indices for the other six categories are only available at the national level. The Department had the choice of using dated State-level data or relatively current national data. It opted to use national data rather than data that would be two or more years older (e.g.,

the most current local wage data are for 1996). The data sources for the nine cost indicators selected used were as follows:

Labor Costs—6/99 to 6/00 Bureau of Labor Statistics (BLS), “Employment Cost Index, Private Sector Wages and Salaries Component at the National Level.”

Employment Benefit Costs—6/99–6/00 (BLS), “Employment Cost Index, Employee Benefits at the National Level.”

Property Taxes—6/99–6/00 (BLS), “Consumer Price Index, All Items Index.”

Goods, Supplies, Equipment—6/99–6/00 (BLS), “Producer Price Index, Finished Goods Less Food and Energy.”

Insurance—6/99–6/00 (BLS), “Consumer Price Index, Tenant and Household Insurance.”

Fuel Oil—Energy Information Agency, Petroleum Marketing Annual 1999, Table 18, “Prices of No.2 Distillate to Residences by PAD District and Selected States,” (Petroleum Administration for Defense District (PADD) average changes were used for the States with too little fuel oil consumption to have values.)

Electricity—Energy Information Agency, Electric Power Annual Volume 1, 1999, Table 22 “Retail Sales of Electricity, Revenue and Average Revenue per Kilowatt-hour (and RSEs) by U.S. Electric Utilities to Ultimate Consumers by Census Division and State, 1998–1999—Residential.”

Natural Gas—Energy Information Agency, Natural Gas Annual, 1999, Table 22, “Average Price of Natural Gas Delivered to Residential Consumers by State, 1995–1999 (Preliminary).”

Water and Sewer—6/99–6/00, (BLS), “Consumer Price Index—Detailed Report.”

The sum of the nine cost components equals 100 percent of operating costs for purposes of OCAF calculations. To calculate the OCAFs, the selected inflation factors are multiplied by the relevant State-level operating cost percentages derived from the previously referenced analysis of FHA insured projects. For instance, if wages in Virginia comprised 50 percent of total operating cost expenses and wages increased by 4 percent from June 1999 to June 2000, the wage increase component of the Virginia OCAF for FY 2001 would be 2.0 percent ($4\% \times 50\%$). This 2.0 percent would then be added to the increases for the other eight expense categories to calculate the FY 2000 OCAF for Virginia. These types of calculations were made for each State for each of the nine cost components,

and are included as the Appendix to this Notice.

II. MAHRA OCAF Procedure

The Multifamily Assisted Housing Reform and Affordability Act of 1997, Title V of Public Law 105–65 (approved October 7, 1997), 42 U.S.C. 1437f (MAHRA) as amended by the Preserving Affordable Housing for Senior Citizens and Families into the 21st Century Act of 1999, created the Mark-to-Market Program to reduce the cost of Federal housing assistance, enhance HUD’s administration of such assistance, and to ensure the continued affordability of units in certain multifamily housing projects. Section 524 of MAHRA authorizes renewal of Section 8 project-based assistance contracts for projects without Restructuring Plans under the Mark-to-Market Program, including renewals that are not eligible for Plans and those for which the owner does not request Plans. Renewals must be at rents not exceeding comparable market rents except for certain projects. For Section 8 Moderate Rehabilitation projects, other than single room occupancy projects (SROs) under the Stewart B. McKinney Homeless Assistance Act (McKinney Act, 42 U.S.C. 11301 *et seq.*), that are eligible for renewal under section 524(b)(3) of MAHRA, the renewal rents are required to be set at the lesser of: (1) The existing rents under the expiring contract, as adjusted by the OCAF; (2) fair market rents (less any amounts allowed for tenant-purchased utilities; or (3) comparable market rents for the market area.

III. Findings and Certifications

Environmental Impact

This notice sets forth rate determinations and related external administrative requirements and procedures that do not constitute a development decision affecting the physical condition of specific project areas or building sites. Accordingly, under 24 CFR 50.19(c)(6), this notice is categorically excluded from environmental review under the National Environmental Policy Act of 1969 (42 U.S.C. 4321).

Executive Order 13132, Federalism

This notice does not have federalism implications and does not impose substantial direct compliance costs on State and local governments or preempt State law within the meaning of Executive Order 13132 (entitled “Federalism”).

Catalog of Federal Domestic Assistance Number. The Catalog of Federal Domestic

Assistance Number for this program is 14.187.

Dated: January 10, 2001.

Andrew Cuomo,
Secretary.

BILLING CODE 4210-33-P

**DEPARTMENT OF HOUSING AND
URBAN DEVELOPMENT**

[Docket No. FR-4558-N-04]

**Mortgage Review Board:
Administrative Actions—Clarification**

AGENCY: Office of Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Public Notice, Mortgagee Review Board, Clarification of Administrative Action.

SUMMARY: In compliance with Section 202(c) of the National Housing Act, notice is given of the cause and description of administrative actions taken by HUD's Mortgage Review Board against HUD-approved mortgagees. This notice provides clarification regarding the description of and the cause for administrative action against a HUD-approved mortgagee.

FOR FURTHER INFORMATION CONTACT: D. Jackson Kinkaid, Secretary to the Mortgage Review Board, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410; telephone (202) 708-3041 extension 3574 (this is not a toll-free number). Hearing or speech-impaired persons may access this number via TTY by calling the toll-free Federal Information Relay Service at 1-800-877-8339.

SUPPLEMENTARY INFORMATION: Section 202(c) of the National Housing Act (added by Section 142 of the Department of Housing and Urban Development Reform Act of 1989, Pub. L. 101-235, approved December 15, 1989), requires that HUD "publish a description of and the cause for administrative actions against a HUD-approved mortgagee" by the Department's Mortgage Review Board. In compliance with the requirements of Section 202(c)(5), notice is hereby given of a clarification of a previously published description and cause for an administrative action against a HUD-approved mortgagee. The specific mortgagee that is the subject of this clarification is James B. Nutter & Company, Kansas City, Missouri, pursuant to an administrative action originally reported at 65 FR 53734 (#44) published on September 5, 2000. The clarification regarding the administrative action taken against this mortgagee is noted below:

1. James B. Nutter & Company, Kansas City, Missouri.

Action: Proposed settlement agreement of disputed matters that included a payment to the Department.

Cause: A review by HUD's Quality Assurance Division discovered alleged

failures to comply with HUD/FHA Loss Mitigation and other HUD/FHA requirements.

Dated: January 10, 2001.

William C. Apgar,

Assistant Secretary for Housing-Federal Housing Commissioner, Chairman, Mortgagee Review Board.

BILLING CODE 4210-27-M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Notice of Availability of the Draft Environmental Assessment and Land Protection Plan for the Proposed Establishment of Green River National Wildlife Refuge, Henderson County, KY

AGENCY: Fish and Wildlife Service, Department of the Interior.

ACTION: Notice of availability of the Draft Environmental Assessment and Land Protection Plan for the proposed establishment of Green River National Wildlife Refuge.

SUMMARY: This notice advises the public that the U.S. Fish and Wildlife Service, Southeast Region, proposes to establish a new national wildlife refuge in the Scuffletown Bottoms area in Henderson County, Kentucky. The purpose of the proposed refuge is to protect, restore and manage a valuable complex of wetland habitats for the benefit of migrating and wintering waterfowl, non-game land birds, and other native fish and wildlife. A Draft Environmental Assessment and Land Protection Plan for the establishment of the proposed refuge has been prepared by Service biologists in coordination with the Kentucky Department of Fish and Wildlife Resources. The assessment considers the biological, environmental, and socioeconomic effects of establishing the refuge and evaluates three alternative actions and their potential impacts on the environment. Written comments or recommendations concerning the proposal are welcomed and should be sent to the address given below.

DATES: Land acquisition planning for the project is currently underway. The draft environmental assessment and land protection plan will be available to the public for review and comment on January 22, 2001. Written comments must be received no later than March 9, 2001, in order to be considered for the preparation of the final environmental assessment.

ADDRESSES: If you wish to comment, you may submit your comments by any of several methods. You may mail your comments to Mr. Charles R. Danner, Team Leader, Planning and Support Team, U.S. Fish and Wildlife Service, 1875 Century Boulevard, Atlanta, Georgia 30345. You may hand-deliver your comments to Mr. Danner at the same address. Or you may submit your comments by telephone at 1-800-419-9582. Our practice is to make comments, including names and home addresses of respondents, available for public review during regular business hours. Individual respondents may request that we withhold their home address from the record, which we will honor to the extent allowable by law. There also may be circumstances in which we would withhold from the record a respondent's identity, as allowable by law, if you wish us to withhold your name and/or address, you must state this prominently at the beginning of your comment. However, we will not consider anonymous comments. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations and businesses, available for public inspection in their entirety.

SUPPLEMENTARY INFORMATION: The proposal would establish a national wildlife refuge on up to 23,000 acres of wetlands and bottomland hardwoods along the confluence of the Green and Ohio Rivers in Henderson County, Kentucky. The Service is proposing to establish the refuge through a combination of fee title purchases from willing sellers and leases, conservation easements, or cooperative agreements from willing landowners.

The goals of the proposed refuge would be to provide (1) Habitat for migrating and wintering waterfowl, (2) habitat for non-game land birds, (3) habitats for a natural diversity of fish and wildlife, (4) nesting habitat for wood ducks and other locally nesting migratory waterfowl, (5) quality hunting and sportfishing opportunities, and (6) opportunities for environmental education, interpretation, and wildlife-oriented recreation.

Dated: January 5, 2001.

Sam D. Hamilton,
Regional Director.

BILLING CODE 4310-55-M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[ID-957-1430-BJ]

Idaho: Filing of Plats of Survey

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The plats of the following described lands were officially filed in the Idaho State Office, Bureau of Land Management, Boise, Idaho, effective 9 a.m., on the dates specified:

The plat representing the entire survey record of the dependent resurvey of a portion of the subdivisional lines, T. 5 N., R. 1 E., Boise Meridian, Idaho, Group Number 1092, was accepted October 2, 2000. The plat was prepared to meet certain administrative needs of the Bureau of Land Management.

The plat representing the dependent resurvey of a portion of the east boundary and of the subdivisional lines, and the subdivision of section 36, T. 2 S., R. 36 E., Boise Meridian, Idaho, and the plat representing the dependent resurvey of portions of the east and north boundaries, and the subdivisional lines, and the subdivision of sections 13, 14, and 24, T. 3 S., R. 36 E., Boise Meridian, Idaho, Group Number 999, were accepted November 6, 2000. The plats were prepared to meet certain administrative needs of the Bureau of Indian Affairs, Fort Hall Agency.

FOR FURTHER INFORMATION CONTACT: Duane Olsen, Chief, Cadastral Survey, Idaho State Office, Bureau of Land Management, 1387 South Vinnell Way, Boise, Idaho 83709-1657, 208-373-3980.

Dated: January 3, 2001.

Harry K. Smith,

Acting Chief, Cadastral Surveyor for Idaho.

BILLING CODE 4310-GG-P

DEPARTMENT OF THE INTERIOR

Bureau of Reclamation

Definition and Payback of Inadvertent Overruns for Delivery of Lower Colorado River Water; Notice of Public Comment Period

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of public comment period.

SUMMARY: The Bureau of Reclamation (Reclamation) proposes a policy that will identify inadvertent overruns, will

establish procedures that account for inadvertent overruns, and will define subsequent payback requirements to the Colorado River mainstream, and invites comments on its draft proposal.

DATES: Comments on this notice must be received at the address below on or before March 24, 2001.

ADDRESSES: If you wish to comment, you may mail comments to Deputy Area Manager, Boulder Canyon Operations Office, Lower Colorado Region, Bureau of Reclamation, BCOO-1010, P.O. Box 61470, Boulder City, Nevada 89006. You may also comment via the Internet at InadvertentOverrun@lc.usbr.gov. If you comment via the Internet, please submit comments as an ASCII file avoiding the use of special characters and any form of encryption. If you do not receive a confirmation via e-mail that we have received your Internet message, please contact us directly at (702) 293-8592.

Our practice is to make comments, including names and home addresses of respondents, available for public review. Individual respondents may request that we withhold their home address from public disclosure, which we will honor to the extent allowable by law. There also may be circumstances in which we would withhold a respondent's identity from public disclosure, as allowable by law. If you wish us to withhold your name and/or address, you must state this prominently at the beginning of your comment. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, available for public disclosure in their entirety.

FOR FURTHER INFORMATION CONTACT: Mr. John Redlinger, (702) 293-8592.

SUPPLEMENTARY INFORMATION: In its June 3, 1963 opinion in the case of *Arizona v. California* (373 U.S. 546), the Supreme Court of the United States held that the Congress has directed the Secretary of the Interior (Secretary) to administer a network of useful projects constructed by the Federal Government on the lower Colorado River, and it has entrusted the Secretary with sufficient power to direct, manage, and coordinate their operation. The Court held that this power must be construed to permit the Secretary to allocate and distribute the waters of the mainstream of the Colorado River within the boundaries set down by the Boulder Canyon Project Act (45 Stat. 1057, 43 U.S.C. 617) (BCPA). The Secretary has entered into contracts for the delivery of Colorado River water with entities in Arizona, California, and Nevada in accordance with section 5 of the BCPA. The

Secretary has the responsibility of operating Federal facilities on the Colorado River and delivering mainstream Colorado River water to users in Arizona, California, and Nevada that hold entitlements, including present perfected rights, to such water.

Article V of the Decree of the Supreme Court of the United States in *Arizona v. California* dated March 9, 1964 (376 U.S. 340) requires the Secretary to compile and maintain records of diversions of water from the mainstream, of return flow of such water to the mainstream as is available for consumptive use in the United States or in satisfaction of the Mexican Treaty obligation, and of consumptive use of such water. Reclamation reports this data each year in the Decree Accounting Record.

Pursuant to the Criteria for Coordinated Long-Range Operation of Colorado River Reservoirs developed as a result of the Colorado River Basin Project Act of September 30, 1968, the Secretary annually consults with representatives of the governors of the Colorado River Basin States, general public and others and issues an Annual Operating Plan (AOP) for the coordinated operation of the Colorado River reservoirs. Reclamation also requires each Colorado River water user in the Lower Basin to schedule water deliveries in advance for the following calendar year (calendar year is the annual basis for decree accounting of consumptive use in the lower Colorado basin) and to later report its actual water diversions and returns to the mainstream.

Pursuant to 43 CFR part 417, prior to the beginning of each calendar year, Reclamation consults with entities holding BCPA section 5 contracts (Contractor) for the delivery of water. Under these consultations, Reclamation makes recommendations relating to water conservation measures and operating practices in the diversion, delivery, distribution, and use of Colorado River water. Reclamation also makes a determination of the Contractor's estimated water requirements for the ensuing calendar year to the end that deliveries of Colorado River water to each Contractor will not exceed those reasonably required for beneficial use under the respective BCPA contract or other authorization for use of Colorado River water. Reclamation then monitors the actual water orders, receives reports of measured diversions and return flows from major Contractors and federal establishments, estimates unmeasured diversions and return flows, calculates consumptive use from preliminary

diversions and measured and unmeasured return flows, and reports these records on an individual and aggregate monthly basis. Later, when final records are available, Reclamation prepares and publishes the final Decree Accounting Record on a calendar year basis.

For various reasons, a user may inadvertently consumptively use Colorado River water in an amount that exceeds the amount available under its entitlement (inadvertent overrun). Further, the final Decree Accounting Record may show that an entitlement holder inadvertently diverted water in excess of the quantity of the entitlement that may not have been evident from the preliminary records. Reclamation is therefore considering an administrative policy that defines inadvertent overruns, establishes procedures that account for the inadvertent overruns and defines the subsequent requirements for pay back to the Colorado River mainstream.

Any effects of the proposed administrative policy decision on the environment will be addressed pursuant to the National Environmental Policy Act.

Inadvertent Overruns

Reclamation is proposing for the Lower Colorado River Basin an inadvertent overrun policy that would include the following features:

a. Inadvertent overruns are those which the Secretary deems to be beyond the control of the water user; for example, overruns due to the discrepancy between preliminary and final stream flow and diversion records, or overruns due to an unanticipated but lawful use by a higher-priority water user.

b. An inadvertent overrun is Colorado River water diverted, pumped or received by an entitlement holder in excess of the water user's entitlement for that year. The inadvertent overrun policy provides a structure to pay back the amount of water diverted, pumped or received in excess of entitlement. The inadvertent overrun policy does not create any right or entitlement to this water, nor does it expand the underlying entitlement in any way. An entitlement holder has no right to order, divert, pump or receive an inadvertent overrun. If, however, water is diverted, pumped or received inadvertently in excess of entitlement, and the Contractor's State's apportionment of Colorado River water for that year is exceeded, the inadvertent overrun policy will govern the payback.

c. Payback will be required to commence in the calendar year that

immediately follows the release date of a Decree Accounting Record that reports uses that are in excess of an individual's entitlement.

d. Payback must be made only from measures that are above and beyond the normal consumptive use of water (extraordinary conservation measures). Extraordinary conservation measures mean actions taken to conserve water that otherwise would not return to the mainstream of the Colorado River and be available for beneficial consumptive use in the United States or to satisfy the Mexican treaty obligation. Any entitlement holder with a payback obligation must submit to Reclamation, along with its water order, a plan which will show how it will intentionally forbear use of Colorado River water by extraordinary conservation and/or following measures sufficient to meet its payback obligation, which are in addition to the measures found in its Reclamation approved conservation plan. Plans for payback could also include supplementing Colorado River system water supplies with non-system water supplies. Water banked off-stream or groundwater from areas not hydrologically connected to the Colorado River or its tributaries are examples of such supplemental supplies.

e. Maximum cumulative inadvertent overrun accounts will be specified for individual entitlement holders as 10 percent of an entitlement holder's normal year consumptive use entitlement. (Normal year means a year for which the Secretary has determined that sufficient mainstream Colorado River water is available for release to satisfy 7.5 maf of annual consumptive use in the States of California, Arizona and Nevada.)

f. The number of years within which an overrun, calculated from consumptive uses reported in final Decree Accounting Records, must be paid back, and the minimum payback required for each year shall be as follows:

1. In a year in which the Secretary makes a flood control release or a space building release, any accumulated amount in the overrun account will be forgiven.

2. If the Secretary has declared a 70 R surplus in the AOP, any payback obligation will be deferred at the entitlement holder's option.

3. When Lake Mead elevation is between the elevation for a 70R surplus declaration and elevation 1125 feet above mean sea level on January 1, the payback obligation must be paid back in full within 3 years, with a minimum payback that year of the greater of 20

percent of the individual entitlement holder's maximum allowable cumulative overrun account amount or 33.3 percent of the total account balance.

4. When Lake Mead elevation is at or below elevation 1,125 feet above mean sea level on January 1, the total account balance will be paid back in full in that calendar year.

5. For any year in which the Secretary declares a shortage under the Decree, the total account will be paid back in full that calendar year, and further accumulation of inadvertent overruns will be suspended as long as shortage conditions prevail.

g. A separate inadvertent overrun account may be established in those limited cases in which a lower priority user is, or has agreed to be, responsible for consumptive uses by one or more un-quantified senior water entitlement or right holders having finite service area acreage. The separate inadvertent overrun account will be limited to a maximum cumulative amount of 10 percent of the senior right holders average consumptive use. Such inadvertent overrun accounts will be the assigned responsibility of the lower priority user. If, however, such senior entitlement or right holders' approved aggregate calendar year water orders are in excess of the specified amount above which the lower priority user will be responsible, such excess will not be deemed inadvertent and the lower priority user's water order for that year will be reduced accordingly by Reclamation.

h. Each month, Reclamation will monitor the actual water orders, receive reports of measured diversions and return flows from Contractors and federal establishments, estimate unmeasured diversions and return flows, and project individual and aggregate consumptive uses for the year. Should preliminary determinations indicate that monthly consumptive uses by individual users, or aggregate uses, when added to the approved schedule of uses for the remainder of that year, exceed contract entitlements but are not exceeding the maximum inadvertent overrun account amount, Reclamation will notify in writing the appropriate entities that the preliminary determinations are forecasting annual uses in excess of their entitlements.

i. During years in which an entitlement holder is forbearing use to meet its payback obligation, should preliminary determinations of monthly consumptive uses indicate that sufficient forbearance is not projected to occur, Reclamation will also notify the appropriate entitlement holders in

writing that the preliminary determinations are forecasting that their annual payback obligations are not on target or being met. If this condition occurs for two consecutive years, in the second year Reclamation will advise the entitlement holder in writing by July 31, will consult with the entitlement holder on a modified release schedule and will limit releases to the entitlement holder for the remainder of the year such that by the end of the year the individual entitlement holder has met their payback obligation.

j. Should preliminary determinations indicate that monthly consumptive uses by individual users, or aggregate uses, when added to the approved schedule of uses for the remainder of that year, exceed the individual entitlement holder's maximum cumulative overrun account amount, Reclamation will advise the entitlement holder in writing by July 31, will consult with the entitlement holder on a modified release schedule and will limit releases to the entitlement holder for the remainder of the year such that by the end of the year the individual entitlement holder's maximum cumulative overrun account amount has not been exceeded.

k. Procedures will be established for accounting for inadvertent overruns on an annual basis and for supplementing the final Decree Accounting Record.

Reclamation invites comments on the features noted above and in particular on: what limits might be placed on any maximum cumulative overrun account; the duration of the payback period; and from what types of water would payback be allowed.

Public Meetings

Reclamation will hold public meetings to present information and solicit public input if there is a sufficient level of interest. Submit any request for a public meeting to Mr. John Redlinger (see **ADDRESSES**).

Dated: January 12, 2001.

Robert W. Johnson,

Regional Director, Lower Colorado Regional Office.

[FR Doc. 01-1531 Filed 1-17-01; 8:45 am]

BILLING CODE 4310-MN-P

DEPARTMENT OF THE INTERIOR

Bureau of Reclamation

[INT-DES-01-02]

Pick-Sloan Missouri Basin Program, Angostura Unit, South Dakota

AGENCY: Bureau of Reclamation, Interior.

ACTION: Notice of availability and public hearing on draft environmental impact statement (DEIS).

SUMMARY: Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969, as amended, the Department of the Interior, Bureau of Reclamation, has prepared a DEIS on the proposed renewal of a long-term water service contract for irrigation water from the Federal Angostura Unit, Cheyenne River basin, South Dakota. The DEIS describes four alternatives, including no action, and evaluates their environmental consequences. No Preferred Alternative has been chosen at this time. One will be selected after the public review period. Public hearings have been scheduled to provide interested parties an opportunity to provide oral or written comments on the proposed renewal of a long-term water service contract.

DATES: A 90-day public review and comment period commences with the publication of this notice. Written comments on the DEIS should be submitted by April 27, 2001.

Written comments from interested parties unable to attend the hearings, those not wanting to make oral presentations, or those wishing to supplement their oral presentations at the public hearing should be transmitted to the Rapid City Field Office by April 27, 2001, for inclusion in the public record.

Public hearings have been scheduled for the following dates, times, and locations:

February 13, 2001, 7-9 PM, Rushmore Plaza Holiday Inn 505 N 5th St., Rapid City, South Dakota

February 14, 2001, 7-9 PM, Mueller Civic Center, 801 S. 6th St., Hot Springs, South Dakota

February 15, 2001, 1-5 PM, Oglala Lakota College, 3 Mile Creek, Piya Wiconi Rd., Kyle, South Dakota

February 21, 2000, 2-4 PM, Super 8 Motel, West Highway 212, Eagle Butte, South Dakota

February 22, 2001, 2-4 PM, Lower Brule Convention Center, Lower Brule Sioux Tribe, Lower Brule, South Dakota

Written comments on the DEIS should be submitted to the Rapid City Field Office Manager (Attention: Kenneth Parr), 515 9th Street, Room 101, Rapid City, SD 57701, or through email to kparr@gp.usbr.gov.

Our practice is to make comments, including names and home addresses of respondents, available for public review. Individual respondents may request that we withhold their home

address from public disclosure, which we will honor to the extent allowable by law. There also may be circumstances in which we will withhold a respondent's identity from public disclosure, as allowable by law. If you wish us to withhold your name and/or address, you must state this prominently at the beginning of your comment. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, available for public disclosure in their entirety.

You may request a Summary of the DEIS or the entire DEIS (with appendices in printed copy or on computer disk). Copies may be obtained from the above address, by telephone (605) 394-9757 ext. 3004, or through email at kparr@gp.usbr.gov. Copies are also available for public inspection and review on the internet at "www.dka.gp.usbr.gov" in the "Current Activities" section under "Angostura Unit".

See **SUPPLEMENTARY INFORMATION** section for additional addresses where the DEIS is available for public inspection and review.

FOR FURTHER INFORMATION CONTACT: Kenneth Parr, Rapid City Field Office, 515 9th Street, Room 101, Rapid City, SD 57701 telephone—(605) 394-9757 ext. 3004, or email kparr@gp.usbr.gov

Hearing Process Information

Organizations and individuals wishing to present oral statements are strongly encouraged to contact Kenneth Parr, Bureau of Reclamation, Rapid City Field Office, at the address above, telephone (605) 394-9757 ext. 3004, or email at kparr@gp.usbr.gov, to announce their intention to participate in the public hearing. Requests to make presentations will also be accepted at the hearings. Written statements may also be submitted at the hearings.

Oral statements at the public hearings will be limited to 5 minutes. If time permits, the hearing officer may allow speakers to extend their oral statement after all persons wishing to comment have been heard. Whenever possible, speakers will be scheduled according to the time preference requested in their letter or telephone request. Scheduled speakers not present at the public hearing when called will lose their privilege in the scheduled order and will be recalled at the end of all the scheduled speakers. Those registering at the meetings may choose from the remaining time slots.

Please notify Reclamation at least 2 weeks in advance of the scheduled hearing if you require special needs in order to participate in the public hearing. Those having special needs should contact Kenneth Parr at (605) 394-9757 or through the Federal Relay System at (800) 877-8339 or via e-mail at kparr@gp.usbr.gov. Smoking will be prohibited in the hearing room and surrounding area.

Dated: January 3, 2001.

Gerald Kelso,

Assistant Regional Director.

BILLING CODE 4310-MN-P

INTERNATIONAL TRADE COMMISSION

[Investigation 332-425]

U.S.-Korea FTA: The Economic Impact of Establishing a Free Trade Agreement (FTA) Between the United States and the Republic of Korea

AGENCY: United States International Trade Commission.

ACTION: Institution of investigation and scheduling of public hearing.

EFFECTIVE DATE: January 9, 2001.

SUMMARY: Following receipt of a request on December 18, 2000, from the Senate Committee on Finance (Committee), the Commission instituted investigation No. 332-425, U.S.-Korea FTA: The Economic Impact of Establishing a Free Trade Agreement (FTA) Between the United States and the Republic of Korea, under section 332(g) of the Tariff Act of 1930 (19 U.S.C. 1332(g)). The Commission plans to submit its report by September 18, 2001.

As requested by the Committee, in its report the Commission will provide to the extent possible:

- An overview of the Korean economy
- An overview of the current economic relationship between the United States and the Republic of Korea, including a discussion of the important industry sectors in both countries
- An inventory and analysis of the main barriers (tariff and nontariff) to trade between the United States and the Republic of Korea
- To the extent data are available, the estimated effects of eliminating all quantifiable trade barriers (tariff and nontariff), with special attention to agricultural goods, on:
 - The volume of trade in goods and services between the two countries
 - Sectoral output and gross domestic product for each country
 - Wages and employment across industry sectors for each country
 - Final prices paid by consumers in each country
 - A qualitative assessment of the effects of removing nonquantifiable trade barriers

FOR FURTHER INFORMATION CONTACT:

Information may be obtained from Christine McDaniel, Project Leader (TEL: 202-708-5404; EMAIL: cmcdaniel@usitc.gov), Office of Economics, or Alan Fox, Deputy Project Leader (TEL: 202-205-3267; EMAIL: afox@usitc.gov), Office of Economics, U.S. International Trade Commission, Washington, DC, 20436. For information on the legal aspects, contact William

Gearhart (TEL: 202-205-3091; EMAIL: wgearheart@ustic.gov), Office of the General Counsel. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the TDD terminal on (202) 205-1810.

Background: In its letter to the Commission, the Committee stated that a number of the United States' trading partners have aggressively pursued free trade area negotiations that may segment markets to the commercial disadvantage of the United States. The Committee indicated that over the course of the next several months it expects to ask the Commission for a series of investigations under section 332 related to the economic impact of negotiating bilaterally or regionally with particular trading partners in the absence of a new round of multilateral talks.

Public Hearing: A public hearing in connection with the investigation will be held at the U.S. International Trade Commission Building, 500 E Street SW, Washington, DC, beginning at 9:30 a.m. on May 17, 2001. All persons shall have the right to appear, by counsel or in person, to present information and to be heard. Requests to appear at the public hearing should be filed with the Secretary, United States International Trade Commission, 500 E Street SW, Washington, DC 20436, no later than 5:15 p.m., April 27, 2001. Any prehearing briefs (original and 14 copies) should be filed no later than 5:15 p.m., May 4, 2001; the deadline for filing post-hearing briefs or statements is 5:15 p.m., May 25, 2001. In the event that, as of the close of business on April 27, 2001, no witnesses are scheduled to appear at the hearing, the hearing will be canceled. Any person interested in attending the hearing as an observer or nonparticipant may call the Secretary of the Commission (202-205-1806) after April 27, 2001, to determine whether the hearing will be held.

Written Submissions: In lieu of or in addition to participating in the hearing, interested parties are invited to submit written statements (original and 14 copies) concerning the matters to be addressed by the Commission in its report on this investigation. Commercial or financial information that a submitter desires the Commission to treat as confidential must be submitted on separate sheets of paper, each clearly marked "Confidential Business Information" at the top. All submissions requesting confidential treatment must conform with the requirements of section 201.6 of the Commission's Rules of Practice and Procedure (19 CFR

201.6). All written submissions, except for confidential business information, will be made available in the Office of the Secretary of the Commission for inspection by interested parties. To be assured of consideration by the Commission, written statements relating to the Commission's report should be submitted to the Commission at the earliest practical date and should be received no later than the close of business on May 25, 2001. All submissions should be addressed to the Secretary, United States International Trade Commission, 500 E Street SW, Washington, DC 20436. The Commission's rules do not authorize filing submissions with the Secretary by facsimile or electronic means.

Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202-205-2000. General information concerning the Commission may also be obtained by accessing its Internet server (<http://www.usitc.gov>).

List of Subjects

Republic of Korea, Free Trade Agreement, Tariffs, and Imports.

Issued: January 10, 2001.

By order of the Commission.

Donna R. Koehnke,
Secretary.

BILLING CODE 7020-02-P

INTERNATIONAL TRADE COMMISSION

[Investigations Nos. 731-TA-919-920 (Preliminary)]

Certain Welded Large Diameter Line Pipe From Japan and Mexico

AGENCY: United States International Trade Commission.

ACTION: Institution of antidumping investigations and scheduling of preliminary phase investigations.

SUMMARY: The Commission hereby gives notice of the institution of investigations and commencement of preliminary phase antidumping investigations Nos. 731-TA-919-920 (Preliminary) under section 733(a) of the Tariff Act of 1930 (19 U.S.C. 1673b(a)) (the Act) to determine whether there is a reasonable indication that an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports from Japan and Mexico of certain welded large diameter

line pipe¹ that are alleged to be sold in the United States at less than fair value. Unless the Department of Commerce extends the time for initiation pursuant to section 732(c)(1)(B) of the Act (19 U.S.C. 1673a(c)(1)(B)), the Commission must reach a preliminary determination in antidumping investigations in 45 days, or in this case by February 26, 2001. The Commission's views are due at the Department of Commerce within five business days thereafter, or by March 5, 2001.

For further information concerning the conduct of these investigations and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A through E (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

EFFECTIVE DATE: January 10, 2001.

FOR FURTHER INFORMATION CONTACT:

Diane J. Mazur (202-205-3184), Office of Investigations, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202-205-1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202-205-2000. General information concerning the Commission may also be obtained by accessing its internet server (<http://www.usitc.gov>).

SUPPLEMENTARY INFORMATION:

Background.—These investigations are being instituted in response to a petition filed on January 10, 2001, by Berg Steel Pipe Corp., Panama City, FL; American Steel Pipe Division of American Cast Iron Pipe Co., Birmingham, AL; and Stupp Corp., Baton Rouge, LA.

Participation in the investigations and public service list.—Persons (other than petitioners) wishing to participate in the investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in sections 201.11 and 207.10 of the Commission's rules, not later than seven days after publication of this notice in the **Federal Register**. Industrial users and (if the merchandise under investigation is sold at the retail level) representative consumer organizations

¹ For purposes of these investigations certain welded large diameter line pipe are welded circular carbon and alloy products of a kind used in oil and gas pipelines with an outside diameter greater than 16 inches, regardless of stenciling. The products are provided for in subheadings 7305.11.10, 7305.11.50, 7305.12.10, 7305.12.50, 7305.19.10, and 7305.19.50 of the Harmonized Tariff Schedule of the United States.

have the right to appear as parties in Commission antidumping investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to these investigations upon the expiration of the period for filing entries of appearance.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to section 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in these investigations available to authorized applicants representing interested parties (as defined in 19 U.S.C. 1677(9)) who are parties to the investigations under the APO issued in the investigations, provided that the application is made not later than seven days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Conference.—The Commission's Director of Operations has scheduled a conference in connection with these investigations for 9:30 a.m. on January 31, 2001, at the U.S. International Trade Commission Building, 500 E Street SW., Washington, DC. Parties wishing to participate in the conference should contact Diane Mazur (202-205-3184) not later than January 29, 2001, to arrange for their appearance. Parties in support of the imposition of antidumping duties in these investigations and parties in opposition to the imposition of such duties will each be collectively allocated one hour within which to make an oral presentation at the conference. A nonparty who has testimony that may aid the Commission's deliberations may request permission to present a short statement at the conference.

Written submissions.—As provided in sections 201.8 and 207.15 of the Commission's rules, any person may submit to the Commission on or before February 5, 2001, a written brief containing information and arguments pertinent to the subject matter of the investigations. Parties may file written testimony in connection with their presentation at the conference no later than three days before the conference. If briefs or written testimony contain BPI, they must conform with the requirements of sections 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's rules do not authorize filing of submissions with the Secretary by facsimile or electronic means.

In accordance with sections 201.16(c) and 207.3 of the rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to section 207.12 of the Commission's rules.

Issued: January 10, 2001.

By order of the Commission.

Donna R. Koehnke,

Secretary.

BILLING CODE 7020-02-P

INTERNATIONAL TRADE COMMISSION

[Inv. No. 337-TA-438]

In the Matter of Certain Plastic Molding Machines With Control Systems Having Programmable Operator Interfaces Incorporating General Purpose Computers, and Components Thereof; Notice of a Commission Determination Not to Review an Initial Determination Terminating the Investigation on the Basis of a Settlement Agreement

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has determined not to review the presiding administrative law judge's ("ALJ's") initial determination ("ID") granting a joint motion to terminate the above-captioned investigation on the basis of a settlement agreement.

FOR FURTHER INFORMATION: Peter L. Sultan, Office of the General Counsel, U.S. International Trade Commission, telephone (202) 205-3094.

SUPPLEMENTARY INFORMATION: The Commission instituted this investigation on October 13, 2000, based on a complaint filed by Milacron Inc. ("Milacron") alleging that respondents UBE Industries, Ltd. and UBE Machinery Inc. (collectively "UBE") violated section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, by importing, selling for importation, or selling within the United States after importation certain plastic molding machines with control systems having

programmable operator interfaces incorporating general purpose computers, and components thereof, that infringe certain claims of Milacron's U.S. Letters Patent 5,062,052, as amended by Reexamination Certificate B1 5,062,052.

On November 6, 2000, Milacron and UBE entered into a settlement agreement, which included an agreement to file a joint motion to terminate the investigation. On November 13, 2000, Milacron and UBE filed the joint motion to terminate the investigation, which was supported by the Commission investigative attorney.

On December 20, 2000, the ALJ issued an ID (Order No. 2) granting the joint motion to terminate the investigation on the basis of the settlement agreement. None of the parties filed a petition to review the subject ID. The Commission subsequently determined not to review the subject ID.

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, and Commission rule 210.42, 19 CFR 210.42. Copies of the public version of the ALJ's ID and all other nonconfidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street, SW., Washington, DC 20436, telephone 202-205-2000. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202-205-1810. General information concerning the Commission may also be obtained by accessing its Internet server (<http://www.usitc.gov>).

Issued: January 10, 2001.

By order of the Commission.

Donna R. Koehnke,

Secretary.

INTERNATIONAL TRADE COMMISSION

[USITC SE-01-003]

Sunshine Act Meeting

AGENCY HOLDING THE MEETING: United States International Trade Commission.

TIME AND DATE: January 22, 2001 at 2:00 p.m.

PLACE: Room 101, 500 E Street SW, Washington, DC 20426, Telephone: (202) 205-2000.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED:

1. Agenda for future meeting: none.
2. Minutes.
3. Ratification List.
4. Inv. Nos. 701-TA-409-412 and 731-TA-909-912 (Preliminary) (Low-Enriched Uranium from France, Germany, the Netherlands, and the United Kingdom)—briefing and vote. (The Commission is currently scheduled to transmit its determination to the Secretary of Commerce on January 22, 2001; Commissioners' opinions are currently scheduled to be transmitted to the Secretary of Commerce on January 29, 2001.)

5. Outstanding action jackets:

(1) Document No. GC-00-100: Concerning Inv. No. 337-TA-432 (Certain Semiconductor Chips with Minimized Chip Package Size and Products Containing Same).

(2) Document No. INV-00-223: Approval of final report in Inv. No. TA-204-3 (Lamb Meat).

In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

Issued: January 12, 2001.

By order of the Commission:

Donna R. Koehnke,

Secretary.

BILLING CODE 7020-02-P

JUDICIAL CONFERENCE OF THE UNITED STATES

Hearing of the Judicial Conference Advisory Committee on Rules of Civil Procedure

AGENCY: Judicial Conference of the United States, Advisory Committee on Rules of Civil Procedure.

ACTION: Notice of open hearing.

SUMMARY: The Advisory Committee on Rules of Civil Procedure has proposed amendments to Rule C of the Supplemental Rules for Certain Admiralty and Maritime Claims. A public hearing on the amendments is scheduled to be held in Washington, DC on March 12, 2001.

The Judicial Conference Committee on Rules Practice and Procedure submits this rule for public comment. All comments and suggestions with respect to the amendments must be placed in the hands of the Secretary as soon as convenient and, in event, not

later than April 2, 2001. Those wishing to testify should contact the Secretary at the address below in writing at least 21 days before the hearing. All written comments on the proposed rule amendments should be mailed to: Peter G. McCabe, Secretary, Committee on Rules of Practice and Procedure of the Judicial Conference of the United States, Thurgood Marshall Federal Judiciary Building, Washington, DC 20544.

Comments on the proposed rule amendments may also be sent electronically via the Internet at <http://www.uscourts.gov/rules>. In accordance with established procedures all comments submitted on the proposed amendments are available to public inspection.

The text of the proposed rule amendments and the accompanying Committee Notes can be found at the United States Federal Courts' Home Page at <http://www.uscourts.gov/rules> on the Internet.

FOR FURTHER INFORMATION CONTACT: John K. Rabiej, Chief, Rules Committee Support Office, Administrative Office of the United States Courts, Washington, DC 20544, telephone (202) 502-1820.

Dated: January 12, 2001.

John K. Rabiej,

Chief, Rules Committee Support Office.

BILLING CODE 2210-55-M

DEPARTMENT OF LABOR

Office of the Secretary

Submission for OMB Review; Comment Request

January 8, 2001.

The Department of Labor (DOL) has submitted the following public information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (Pub. L. 104-13, 44 U.S.C. Chapter 35). A copy the ICR, with applicable supporting documentation, may be obtained by calling the Department of Labor. To obtain documentation for BLS, ETA, PWBA, and OASAM contact Karin Kurz ((202) 693-4127 or by E-mail to Kurz-Karin@dol.gov). To obtain documentation for ESA, MSHA, OSHA, and VETS contact Darrin King ((202) 693-4129 or by E-mail to King-Darrin@dol.gov).

Comments should be sent to Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for BLS, DM,

ESA, ETA, MSHA, OSHA, PWBA, or VETS, Office of Management and Budget, Room 10235, Washington, DC 20503 ((202) 395-7316), within 30 days from the date of this publication in the **Federal Register**.

The OMB is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Type of Review: New collection.

Agency: Employment and Training Administration.

Title: Workforce Investment Act (WIA) Employment and Training Administration (ETA) Financial Reporting Requirements for Indian and Native American (INA) Grantee Activities.

OMB Number: 1205-0New.

Affected Public: State, Local, or Tribal Government; business or other for-profit; not-for-profit institutions.

Frequency: Quarterly.

Number of Respondents: 150.

Estimated Time Per Respondent: 12 hours.

Total Burden Hours: 1,800.

Description: The collection of data for this report will provide accountability to the Department who is charged by law with the responsibility for ensuring that all WIA funds are expended in accordance with applicable laws and regulations while grantees are carrying out the purposes for which their grant was awarded. (Subtitle E, Sec. 185 and 29 CFR 668.600.)

Ira L. Mills,

Departmental Clearance Officer.

[FR Doc. 01-1446 Filed 1-17-01; 8:45 am]

BILLING CODE 4510-30-M

DEPARTMENT OF LABOR**Employment and Training
Administration****Workforce Investment Act: Migrant and
Seasonal Farmworker Youth Program
Under WIA Section 127(b)(1)(A)(iii) and
Section 167**

AGENCY: Employment and Training
Administration, Labor.

ACTION: Notice of Proposed Data
Collection.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation process to provide the general public and Federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA95) [44 U.S.C. 3506(c)(2)(A)]. This process helps to ensure that requested data can be provided in the desired format, reporting burdens are minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, the Employment and Training Administration (ETA), in consultation with the Migrant and Seasonal Farmworker Employment and Training Advisory Committee, is soliciting comments concerning the proposed institution of a "reporting and performance standards system for the Youth Title I-D Section 167 National Farmworker Jobs Programs of the Workforce Investment Act (WIA)". A copy of the proposed information collection request (ICR) can be obtained by contacting the office listed below in the address section of this notice.

DATES: Written comments must be submitted to the office listed in the addressee section below on or before March 19, 2001.

ADDRESSES: Alicia Fernandez-Mott, Chief, Division of Seasonal Farmworker Programs, Employment and Training Administration, U.S. Department of Labor, Room N-4641, 200 Constitution Avenue, NW, Washington, DC 20210. Telephone: (202) 693-3729 (VOICE) or (202) 693-3818 (FAX) (these are not toll-free numbers) or INTERNET: afernandez@dola.gov.

FOR FURTHER INFORMATION CONTACT: Copies of the information collection request are available for inspection in the Division of Seasonal Farmworker Programs at the above address, and will be mailed to persons who request copies

in writing from Alicia Fernandez-Mott at the above address.

SUPPLEMENTARY INFORMATION:**I. Background**

The Employment and Training Administration of the Department of Labor, in consultation with the Migrant and Seasonal Farmworker Employment and Training Advisory Committee, is requesting approval for a new reporting and performance standards system for Youth Title I-D Section 167 National Farmworker Jobs Programs of the Workforce Investment Act (WIA), youth grantees for three program years (July 1, 2000 to June 30, 2003). This is the first time since the Comprehensive Employment and Training Act (CETA), that funds have been appropriated for farmworker youth activities. The Department has developed the following recommended planning and reporting requirements.

II. Desired Focus of Comments

The Department of Labor is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's burden estimate for the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

III. Current Action

This proposed ICR will be used by approximately 10 Workforce Investment Act (WIA) section 167 (d) youth grantees as the primary reporting and performance measurement vehicle for enrolled youths, their characteristics, training and services provided, outcomes, including job placement and retention, and attainment of basic skills, as well as detailed financial data on program expenditures.

Type of Review: New.

Agency: Employment and Training Administration.

Title: Planning, reporting, and performance system for WIA title I-D,

Section 167(d) National Farmworker Jobs Program youth grantees.

OMB Number: 1205-0NEW.

Catalog of Federal Domestic

Assistance Number:

Record Keeping: Grantees shall retain supporting and other documents necessary for the compilation and submission of the subject reports for three years after submission of the final financial report for the grant in question [29 CFR 97.42 and/or 29 CFR 95.53].

Affected Public: State agencies; private, non-profit corporations.

Cite/Reference/Form/etc.: The collection instrument is the Youth, Title I-D, Section 167 National Farmworker Jobs Programs Planning, Reporting, and Performance System and related instructions. OMB-approved forms are provided for use in gathering information at the grantee field office level.

Total Respondents: 10.

Frequency: Annually for planning information; quarterly for both financial information and participation and characteristics information.

Total Annual Responses:

Planning—30 (one narrative, one Budget Information Summary, and one Program Planning Summary per grantee per year).

Participant Reporting—40 (one Program Status Summary per quarter, per grantee per year).

Participant Record Keeping (NFJP SPIR)—5,000 records.

There are four statutorily-required quarterly financial status reports per grantee per year, by year of appropriation. At this time, it is anticipated that the Standard Form (SF) 269 will be used to fulfill this requirement. Therefore, no separate collection/burden information for this standard form is being included here. For participation and characteristics information, there are four quarterly submissions per year, regardless of the year(s) of funding expended during the program year. There is only one format for the participation and characteristics report.

Average Time per Grantee Response:
Annual Plan—5 hours (narrative only).

Budget Information Summary (BIS)—15 hours; [ETA 8595].

Program Planning Summary (PPS)—15 hours; [ETA 8596].

Program Status Summary (PSS)—7 hours; [ETA 8598].

Record Keeping (SPIR)—3 hours (per participant record).

The individual time per response varies widely depending on the degree of automation attained by individual grantees. Grantees also vary according to

the numbers of individuals served in each program year. If the grantee has a fully-developed and automated MIS, the response time is limited to one-time programming plus processing time for each response.

Estimated Total Annual Burden Hours:

Total Burden Hours—15,630 hours per year.

Planning narrative (NFJP)—10 responses times 5 hours per response equals 50 burden hours.

BIS (NFJP)—10 responses times 15 hours per response equals 150 burden hours.

PPS (NFJP)—10 responses times 15 hours per response equals 150 burden hours.

PSS (NFJP)—4 responses per grantee times 7 hours per response times 10 grantees equals 280 burden hours.

Record Keeping (NFJP SPIR)—5,000 files times 3 hours per file equals 15,000 hours.

Even though no burden estimate for the SF-269 is included here, it should be noted that expenditures must be reported on by year of appropriation, regardless of the year in which the funds were expended. Thus, if more than one year's appropriation is expended in a given quarter, two FSR's (or more) must be submitted for that period.

Total Burden Cost (capital/startup):
\$0—.

Total Burden Cost (operating/maintaining):

Youth Title I-D National Farmworker Jobs Program—15,630 hours times \$15.00 per hour equals \$224,450.00.

Costs may vary widely among grantees, from nearly no additional cost to some higher figure, depending on the state of automation attained by each grantee and the wages paid to the staff actually completing the various forms. All costs associated with the submission of these forms are allowable grant expenses.

Comments submitted in response to this request will be summarized and/or included in the Office of Management and Budget request for approval of the information collection. All comments will become a matter of public record.

Signed at Washington, DC, this 11th day of January, 2001.

James C. DeLuca,

Acting Director, Office of National Programs.
[FR Doc. 01-1445 Filed 1-17-01; 8:45 am]

BILLING CODE 4510-30-P

DEPARTMENT OF LABOR

Pension and Welfare Benefits Administration

Proposed Extension of Information Collection; Comment Request; ERISA Technical Release 91-1

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA 95) (44 U.S.C. 3506(c)(2)(A)). This helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

Currently, the Pension and Welfare Benefits Administration is soliciting comments concerning the extension of the information collection request (ICR) incorporated in its Technical Release 91-1 related to the transfer of excess assets from a defined benefit plan to a retiree health benefits account. A copy of the ICR may be obtained by contacting the office listed in the addresses section of this notice.

DATES: Written comments must be submitted to the office shown in the addresses section below on or before March 19, 2001.

ADDRESSES: Gerald B. Lindrew, Office of Policy and Research, U.S. Department of Labor, Pension and Welfare Benefits Administration, 2000 Constitution Avenue, NW., Room N-5647, Washington, DC 20210. Telephone: (202) 219-4782; Fax: (202) 219-4745. These are not toll-free numbers.

SUPPLEMENTARY INFORMATION:

I. Background

ERISA section 101(e) sets forth certain notice requirements which must be satisfied before an employer may transfer excess assets from a defined benefit plan to a retiree health benefits account as otherwise permissible after satisfying the conditions set forth in section 420 of the Internal Revenue Code of 1986, as amended (Code). Section 101(e)(1) describes the plan administrator's obligation to provide advance written notification of such transfers to participants and beneficiaries. Section 101(e)(2)(A)

describes the employer's obligation to provide advance written notification to the Secretaries of Labor and Treasury, the administrator, and each employee organization representing participants in the plan. The requirements relating to advance notification of transfers to retiree health benefit accounts were added to ERISA as part of the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101-508). The ICR included in ERISA Technical Release 9-1 provides guidance on the type of information to be provided in the notices to both the participants and beneficiaries and the Secretaries.

II. Desired Focus of Comments

The Department is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

III. Current Action

This notice requests comments on the extension of the ICR included in ERISA Technical Release 91-1. The Department is not proposing or implementing changes to the existing ICR at this time.

Type of Review: Extension of a currently approved collection of information.

Agency: Pension and Welfare Benefits Administration, Department of Labor.

Titles: ERISA Technical Release 91-1.

OMB Number: 1210-0084.

Affected Public: Individuals or households; Business or other for-profit; Not-for-profit institutions.

Respondents: 66.

Frequency of Response: One time.

Responses: 231,000.

Estimated Total Burden Hours: 5,775.

Total Burden Cost (Operating and Maintenance): \$90,000.

Comments submitted in response to this notice will be summarized and/or

included in the request for OMB approval of the information collection request; they will also become a matter of public record.

Dated: January 11, 2001.

Gerald B. Lindrew,

Deputy Director, Office of Policy and Research, Pension and Welfare Benefits Administration.

[FR Doc. 01-1448 Filed 1-17-01; 8:45 am]

BILLING CODE 4510-29-M

DEPARTMENT OF LABOR

Pension and Welfare Benefits Administration

Proposed Extension of Information Collection; Comment Request; Prohibited Transaction Exemption 92-6

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA 95) (44 U.S.C. 3506(c)(2)(A)). This helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

Currently, the Pension and Welfare Benefits Administration is soliciting comments concerning the information collection request (ICR) incorporated in Prohibited Transaction Class Exemption 92-6 (PTCE 92-6), pertaining to the sale of individual life insurance or annuity contracts by a plan. A copy of the ICR may be obtained by contacting the office listed in the addresses section of this notice.

DATES: Written comments must be submitted to the office shown in the **ADDRESSES** section below on or before March 19, 2001.

ADDRESSES: Gerald B. Lindrew, Office of Policy and Research, U.S. Department of Labor, Pension and Welfare Benefits Administration, 200 Constitution Avenue, NW., Room N-5647, Washington, DC 20210. Telephone: (202) 219-4782; Fax: (202) 219-4745. These are not toll-free numbers.

SUPPLEMENTARY INFORMATION:

I. Background

Prohibited Transaction Class Exemption 92-6 exempts from the prohibited transaction restrictions of the Employee Retirement Security Act of 1974 (ERISA) the sale of individual life insurance or annuity contracts by a plan to participants, relatives of participants, employers any of whose employees are covered by the plan, other employee benefit plans, owner-employees or shareholder-employees. In the absence of this exemption, certain aspects of these transactions might be prohibited by section 406 of ERISA.

Recordkeeping requirements incorporated within the class exemption are intended to protect the interests of plan participants and beneficiaries. The disclosure requirements protect plan participants by putting them on notice of the plan's intention to sell insurance or annuity contracts under which they are insured, and by giving the participants the right of first refusal to purchase such contracts.

II. Desired Focus of Comments

The Department is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

III. Current Action

This notice requests comments on the extension of the ICR included in PTCE 92-6. The Department is not proposing or implementing changes to the existing ICR at this time.

Type of Review: Extension of currently approved collection of information.

Agency: Pension and Welfare Benefits Administration.

Title: Prohibited Transaction Class Exemption 92-6.

OMB Number: 1210-0063.

Affected Public: Individuals or households; business or other for-profit; not-for-profit institutions

Respondents: 76,560.

Frequency of Response: On occasion.

Responses: 7,656.

Estimated Total Burden Hours: 1,276.

Estimated Burden Cost (Operating and Maintenance): \$2,833.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of the information collection request; they will also become a matter of public record.

Dated: January 11, 2001.

Gerald B. Lindrew,

Deputy Director, Office of Policy and Research, Pension and Welfare Benefits Administration.

BILLING CODE 4510-29-M

DEPARTMENT OF LABOR

Pension and Welfare Benefits Administration

Proposed Extension of Information Collection; Comment Request; Regulation Regarding Participant Directed Individual Account Plans Under ERISA 404(c)

ACTION: Notice.

SUMMARY: The Department of Labor, as part of its continuing effort to reduce paperwork and respondent burden, conducts a preclearance consultation program to provide the general public and Federal agencies with an opportunity to comment on proposed and continuing collections of information in accordance with the Paperwork Reduction Act of 1995 (PRA 95) (44 U.S.C. 3506(c)(2)(A)). This helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

Currently, the Pension and Welfare Benefits Administration is soliciting comments concerning the extension of the information collection request (ICR) incorporated in a regulation pertaining to participant directed individual account plans under section 404(c) of the Employee Retirement Income Security Act of 1974 (ERISA). A copy of the ICR may be obtained by contacting the office listed in the addresses section of this notice.

DATES: Written comments must be submitted to the office shown in the

ADDRESSES section below on or before March 19, 2001.

ADDRESSES: Gerald B. Lindrew, Office of Policy and Research, U.S. Department of Labor, Pension and Welfare Benefits Administration, 200 Constitution Avenue, NW, Room N-5647, Washington, D.C. 20210. Telephone: (202) 219-4782; Fax: (202) 219-4745. These are not toll-free numbers.

SUPPLEMENTARY INFORMATION:

I. Background

Section 404(c) of ERISA provides that if an individual account pension plan permits a participant or beneficiary to exercise control over assets in his account and the participant or beneficiary in fact exercises such control, that participant or beneficiary shall not be deemed to be a fiduciary by such exercise of control, and that no person otherwise a fiduciary shall be liable for any loss or breach that results from this exercise of control.

The opportunity to exercise control includes the opportunity to obtain sufficient information to make informed decisions with respect to investment alternatives. This regulation describes the type and extent of information required to be made available to participants and beneficiaries for this purpose. In the absence of such disclosures, participants might not be able to make informed decisions about investing their individual accounts, and persons who are otherwise fiduciaries with respect to these plans would not be afforded relief from the fiduciary responsibility provisions of Title I of ERISA with respect to these transactions.

II. Desired Focus of Comments

The Department is particularly interested in comments which:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology,

e.g., permitting electronic submission of responses.

III. Current Action

This notice requests comments on the extension of the ICR included in the regulation pertaining to participant directed individual account plans under Section 404(c) of ERISA. The Department is not proposing or implementing changes to the existing ICR at this time.

Type of Review: Extension of a currently approved collection of information.

Agency: Pension and Welfare Benefits Administration, Department of Labor.

Title: Regulation Regarding Participant Directed Individual Account Plans (ERISA section 404(c) Plans).

OMB Number: 1210-0090.

Affected Public: Individuals or households; business or other for-profit institutions.

Respondents: 294,800.

Frequency of Response: On occasion.

Responses: 294,800.

Estimated Total Burden Hours: 52,900.

Total Burden Cost (Operating and Maintenance): \$23.1 million.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of the information collection request; they will also become a matter of public record.

Dated: January 11, 2001.

Gerald B. Lindrew,

Deputy Director, Office of Policy and Research, Pension and Welfare Benefits Administration.

BILLING CODE 7590-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 35-27336; 70-9633]

Filings Under the Public Utility Holding Company Act of 1935, as Amended ("Act")

January 11, 2001.

Notice is hereby given that the following filing(s) has/have been made with the Commission pursuant to provisions of the Act and rules promulgated under the Act. All interested persons are referred to the application(s) and/or declaration(s) for complete statements of the proposed transaction(s) summarized below. The application(s) and/or declaration(s) and any amendment(s) is/are available for public inspection through the Commission's Branch of Public Reference.

Interested persons wishing to comment or request a hearing on the application(s) and/or declaration(s) should submit their views in writing by February 2, 2001, to the Secretary, Securities and Exchange Commission, Washington, DC 20549-0609, and serve a copy on the relevant applicant(s) and/or declarant(s) at the address(es) specified below. Proof of service (by affidavit or, in the case of an attorney at law, by certificate) should be filed with the request. Any request for hearing should identify specifically the issues of facts or law that are disputed. A person who so requests will be notified of any hearing, if ordered, and will receive a copy of any notice or order issued in the matter. After February 2, 2001, the application(s) and/or declaration(s), as filed or as amended, may be granted and/or permitted to become effective.

Unitil Corporation, et al. (70-9633)

Unitil Corporation ("Unitil"), a registered holding company, and its subsidiary companies, Concord Electric Company, Exeter & Hampton Electric Company, Fitchburg Gas and Electric Light Company ("Fitchburg"), Unitil Power Corp., Unitil Realty Corp., Unitil Resources, Inc. and Unitil Services Corp. (collectively, "Subsidiaries" and, together with Unitil, "Applicants"), all

located at 6 Liberty Lane West, Hampton, New Hampshire 03842-1720, have filed a post-effective amendment under sections 6(a), 7, 9(a), 10 and 12(b) of the Act and rules 43 and 45 under the Act, to a previously filed application-declaration.

By orders dated June 30, 1997, June 9, 2000, and December 15, 2000 (HCAR Nos. 26737, 27182, and 27307, respectively) ("Prior Orders"), the Commission authorized through June 30, 2003 ("Authorization Period"): (1) The Applicants to make unsecured short-term borrowings and to operate a system money pool ("Money Pool"); (2) Unitil to incur short-term borrowings from banks in an aggregate amount not to exceed \$35 million ("Unitil Borrowing Authority"); and (3) Fitchburg to incur short-term borrowings from third parties and the other Applicants through the Money Pool in an aggregate amount not to exceed \$20 million ("Fitchburg Borrowing Authority").

Applicants seek approval through the Authorization Period to increase: (1) the Unitil Borrowing Authority to \$45 million and (2) the Fitchburg Borrowing Authority to \$30 million. Applicants state that the requested increases in Unitil Borrowing Authority and Fitchburg Borrowing Authority will remain subject to the parameters as set forth in the Prior Orders.

Applicants state that the prices Unitil's subsidiaries, Unitil Power and Fitchburg, pay for wholesale electric and natural gas energy commodities have become unpredictably volatile. According to Applicants, the prices have risen sharply, putting a heavy strain on Unitil's working capital and significantly increasing its short-term borrowing requirements. Applicants state that the requested authorization is necessary to satisfy the cost of their wholesale energy obligations.

For the Commission by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,
Secretary.

BILLING CODE 8010-01-M

SECURITIES AND EXCHANGE COMMISSION

[Rel. No. IC-24824; File No. 812-12350]

Cova Series Trust, et al.

January 11, 2001.

AGENCY: Securities and Exchange Commission (the "Commission").

ACTION: Notice of Application under Section 17(b) of the Investment Company Act of 1940 (the "1940 Act") for an exemption from Section 17(a) of the Act.

Summary of Application: Applicants request an order to permit certain series of Met Investors Series Trust ("MIT") to acquire all of the assets and liabilities of Cova Series Trust ("CST") and Securities First Trust ("SFT"). Because of certain affiliations, applicants may not rely on Rule 17a-8 under the Act.

Applicants: CST, SFT, MIT, Cova Financial Services Life Insurance Company ("Cova Financial Services Life"), Cova Financial Life Insurance Company ("Cova Financial Life", together with Cova Financial Services Life, "Cova Life"), Security First Life Insurance Company ("Security First Life") and Firstar Investment Research & Management Company, LLC ("FIRMCO").

Filing Dates: The application was filed on December 6, 2000.

Hearing or Notification of Hearing: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Secretary of the Commission and serving Applicants with a copy of the request, personally or by mail. Hearing request should be received by the Commission by 5:30 p.m. on February 2, 2001, and should be accompanied by proof of service on Applicants, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Secretary of the Commission.

ADDRESSES: Secretary, Securities and Exchange Commission, 450 Fifth Street, N.W., Washington, D.C. 20549-0609. Applicants: Cova Series Trust, Cova Financial Services Life Insurance Company and Cova Financial Life Insurance Company, One Tower Lane, Suite 3000, Oakbrook Terrace, Illinois, 60181; Security First Trust and Security First Life Insurance Company, 11365 W. Olympic Boulevard, Los Angeles, California 90064; Met Investors Series Trust, 610 Newport Centre Drive, Suite 1350, Newport Beach, California 92660; and Firstar Investment Research & Management Company, LLC, 777 E. Wisconsin Avenue, Suite 800, Oakbrook Terrace, Illinois 60181; Stacy H. Ostrowski, Esq., Sullivan & Worcester LLP, 1025 Connecticut Avenue, N.W., Suite 1000, Washington, DC 20036.

FOR FURTHER INFORMATION CONTACT: Joyce M. Pickholz, Senior Counsel, or Keith E. Carpenter, Branch Chief, Office of Insurance Products, Division of Investment Management, at (202) 942-0670.

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application is available for a fee from the Commission's Public Reference Branch, 450 Fifth Street, N.W., Washington, DC 20549-0102 (tel. (202) 942-8090).

Applicants' Representations

1. CST is a Massachusetts business trust registered under the 1940 Act as an open-end management investment company and is presently comprised of thirteen separate series, all of which are involved in the proposed transactions. Shares of each portfolio of CST are sold only to certain accounts of Cova Life and its affiliates to fund benefits under certain individual flexible premium and modified single premium variable life insurance policies and certain individual and group variable annuity contracts ("Variable Contracts") issued by Cova Life and its affiliates. As of the date of the application, Cova Life and its affiliates are the majority, and in most cases, the only shareholders of record of the Cova Portfolios.¹ CST, along with its series, are referred to herein collectively, as the "Cova Portfolios."

2. SFT is a Massachusetts business trust registered under the 1940 Act as an open-end management investment company and is presently comprised of four separate series. Shares of each series of SFT are sold only to certain accounts of Security First Life to fund benefits under certain Variable Contracts issued by Security First Life and to qualified pension and retirement plans. As of the date of this application, Security First Life's Separate Account A, its group employee 401(k) plan and its General Account are the only shareholders of record of the series of SFT. All four series are involved in the proposed transactions. SFT, along with its series, are referred to herein collectively, as the "Security First Portfolios" and collectively with the Cova Portfolios as the "Acquired Portfolios."

3. MIT is a newly created Delaware business trust registered under the 1940 Act as an open-end management investment company comprised of fourteen separate series which were

¹ For ease of reference, the term "shareholder" is used hereinafter to refer to Variable Contract owners that are unit holders of any registered separate account that invests in a respective SFT Portfolio or Cova Portfolio (as defined herein).

established for purposes of the proposed transactions described herein. If shareholders approve the proposed transaction, MIT will be the surviving entity after the Cova and Security First Portfolios are merged into corresponding investment portfolios of MIT. A Registration Statement on Form N-1A was filed with the Commission for the newly created MIT and its series on October 23, 2000 and will become effective on the closing date of the proposed transactions. All of MIT's series are involved in the proposed transactions for which exemptive relief is being sought. MIT and its series are referred to herein collectively as the "Met Portfolios" and as the "Acquiring Portfolios."

4. Met Investors Advisory Corp. (formerly known as Security First Investment Management Corporation) ("Met Advisor") serves as investment adviser to SFT and will be the investment adviser to MIT but has delegated responsibility for the day-to-day management of the series to various unaffiliated sub-adviser. Met Advisory is a wholly-owned subsidiary of Security First Group, Inc. ("SFG"). SFG (which on or before February 5, 2001, will change its name to Met Investors Group, Inc.) is an indirect wholly-owned subsidiary of Metropolitan Life Insurance Company, a New York life insurance company ("MetLife"). Met Advisory is registered as an investment adviser under the Investment Advisers Act of 1940, as amended (the "Advisers Act").

5. Cova Investment Advisory Corporation ("Cova Advisory") serves as investment adviser to CST but has delegated responsibility for the day-to-day management of the series to certain unaffiliated investment sub-advisers.² Cova Advisory is an indirect wholly-owned subsidiary of MetLife. Cova Advisory is registered as an investment adviser under the Advisers Act.

6. Security First Life is a stock life insurance company founded in 1960 and organized under the laws of the State of Delaware. Security First Life is authorized to transact the business of life insurance, including annuities, and is currently licensed to do business in 49 states and the District of Columbia. Security First Life is a wholly-owned subsidiary of SFG.

7. Cova Financial Services Life is a stock life insurance company founded in 1981 and organized under the laws of

² Shares of certain of the Cova Portfolios are held by their respective unaffiliated sub-advisers, including FIRMCO as discussed herein.

the State of Missouri. Cova Financial Life, is a stock insurance company founded in 1972 and organized under the laws of the State of California. Cova Financial Services Life and Cova Financial Life are indirect wholly-owned subsidiaries of Met Life. Cova Life and its affiliates are authorized to transact the business of life insurance, including annuities, and among them are currently licensed to do business in 47 states and the District of Columbia.

8. FIRMCO currently serves as the investment sub-adviser to the Balanced, Equity Income and the Growth & Income Equity Portfolios of CST and will serve as investment adviser to the Firststar Balanced, Firststar Equity Income and the Firststar Growth & Income Equity Portfolios (collectively the "Firststar Portfolios") of the newly created MIT. FIRMCO is a subsidiary of Firststar Corporation. FIRMCO is registered as an investment adviser under the Advisers Act. FIRMCO currently owns of record 5% or more of each of the Balanced, Equity Income and Growth & Income Equity Portfolios of CST.

9. On November 1, 2000 and November 2, 2000, the Boards of Trustees of the Acquired Portfolios, including a majority of the Trustees who are not interested persons under Section 2(a)(19) of the 1940 Act (the "Disinterested Trustees"), authorized agreements and plans of reorganization (with respect to the Fund Reorganizations as defined below) (the "Plans") pursuant to which certain series of MIT will acquire all of the assets and stated liabilities of certain series of CST and SFT. Pursuant to the terms of the Plans, the Acquired Portfolios have agreed to sell all of their assets (subject to the assumption of certain stated liabilities) to certain corresponding Acquiring Portfolios in exchange for shares of the Acquiring Portfolios (the "Fund Reorganizations"). The exchange will take place at the respective net asset values calculated as of the close of business on the business day next preceding the date on which the Fund Reorganizations will occur. Shareholders of the Acquired Portfolios will exchange their shares for Class A shares of the Acquiring Portfolios. As a result of the Fund Reorganizations, each Acquired Portfolio shareholder will receive Acquiring Portfolio shares having an aggregate net asset value equal to the aggregate net asset value of the corresponding Acquired Portfolio's shares held by that shareholder. After the distribution of the Acquiring Portfolios' shares and the winding up of the Acquired Portfolios' business, the Acquired Portfolios will be liquidated.

10. No sales charge will be imposed in connection with Class A shares of the Acquiring Portfolios received by the Acquired Portfolios' shareholders. Accordingly, no sales charges will be incurred by shareholders of the Acquired Portfolios in connection with their acquisition of shares of the Acquiring Portfolios in the Fund Reorganizations. Upon consummation of the transactions described above, each Acquired Portfolio will distribute its full and fractional shares of the Acquiring Portfolio *pro rata* to its shareholders of record, determined as of the exchange date.

11. Prior to the Fund Reorganizations, the shareholders of the Acquired Portfolio and the Acquiring Portfolio will hold shares with similar characteristics. Shares of the Acquired Portfolios and Class A shares of the Acquiring Portfolios are sold without a front-end sales charge or a contingent deferred sales charge and are not subject to any Rule 12b-1 fees.

12. The investment objectives of each of the Acquired Portfolios is generally either identical to or similar to that of the corresponding Acquiring Portfolios. The investment strategies of each Acquired Portfolio and its corresponding acquiring Portfolio generally are also either identical or similar.

13. Each Plan may be terminated by the mutual agreement of the Boards of the Portfolios on behalf of the Acquiring Portfolio and the Acquired Portfolio, respectively.

14. The Boards of CST and SFT, on behalf of each of the Acquired Portfolios, including in each case a majority of Disinterested Trustee, approved the Fund Reorganization as in the best interests of shareholders and determined that the interests of existing shareholders will not be diluted as a result of the Fund Reorganizations. The Board of each Portfolio considered, among other things, (a) the terms and conditions of each Fund Reorganization; (b) whether the Fund Reorganization would result in the dilution of shareholders' interests; (c) the expense ratios, fees and expenses of the Acquiring Portfolios before the Fund Reorganization and the estimated expense ratios of the Acquiring Portfolios after the Reorganization; (d) comparability of the Acquiring and Acquiring Portfolios' investment restrictions; (e) the investment experience, expertise and resources of the investment advisers; (f) the service and distribution resources available to MIT and the anticipated increased array of investment alternatives available to shareholders of MIT; (g) the fact that the

costs estimated to be incurred by the Portfolios as a result of the Fund Reorganizations will not be borne by the Portfolios but will be borne by MetLife or an affiliate; and (h) the expected federal income tax consequences of the Fund Reorganizations.

15. Each Fund Reorganization is subject to the approval of the Acquiring Portfolios shareholders. Special Meetings of the Shareholders of the Acquired Portfolios are scheduled to be held on or about January 26, 2000. Cova Life and its affiliates and Security First Life will vote all shares of the Acquired Portfolios in accordance with and in proportion to timely voting instructions received from Variable Contract owners participating in separate accounts requested under the 1940 Act, the value of which are invested in shared of the Acquired Portfolio through such separate accounts at the record date. Shares of each Acquired Portfolio for which properly executed voting instructions are not received, including shares not attributable to Variable Contracts, will be voted in the same proportion as that of shares of such Acquired Portfolio for which instructions are received. Proxy materials have been mailed to the Variable Contract owners participating in registered separate accounts holding shares of the Acquired Portfolios. Proxies are not being solicited from 401(k) plan participants or any investment sub-advisers who hold shares of a Portfolio. The 401(k) plan fiduciary will vote its shares in proportion to the vote of Variable Contract owners.

16. Fund Reorganizations also are subject to the approval of the board of trustees of MIT (the "MIT Board"), on behalf of each of the Acquiring Portfolios, including in each case a majority of Disinterested Trustees. Prior to consummating the Fund Reorganization, the MIT Board will have reviewed the terms of the Fund Reorganizations and will have determined that the transactions are in the best interests of the Acquiring Portfolios. In approving the Plans, the Board will consider the relevant factors including, but not limited to those factors considered by the CST and SFT Boards.

17. MetLife or an affiliate will be responsible for the expenses incurred in connection with the Fund Reorganizations.

18. The Plans are subject to a number of conditions precedent, including requirements that (a) the Plans shall have been approved by the Boards on behalf of each of the Acquiring Portfolios and the Acquired Portfolio

and approved by the requisite votes of the holders of the outstanding shares of each of the Acquired Portfolios in accordance with the provisions of each Portfolio's Agreement and Declaration of Trust and By-laws; (b) the Acquired Portfolio and the Acquiring Portfolio have received opinions of counsel stating, among other things, that (i) each Fund Reorganization will constitute a "fund reorganization" under Section 368 of the Internal Revenue Code of 1986, as amended (the "Code"), (ii) the Acquiring Portfolio and the Acquired Portfolio is a "party to a fund reorganization" within the meaning of Section 368 of the Code, (iii) no gain or loss will be recognized by the Acquiring Portfolio upon the receipt of the assets of the Acquired Portfolio solely in exchange for the Acquiring Portfolio shares and the assumption by the Acquiring Portfolio of the identified liabilities of the Acquired Portfolio and (iv) no gain or loss will be recognized by the Acquired Portfolio upon the transfer of the Acquired Portfolio's assets to the Acquiring Portfolio in exchange for the Acquiring Portfolio shares and the assumption by the Acquiring Portfolio of the identified liabilities of the Acquired Portfolio or upon the distribution of the Acquiring Portfolio shares to Acquired Portfolio shareholders in exchange for their shares of the Acquired Portfolio; and (c) the Acquired Portfolio and the Acquiring Portfolio shall have received from the Commission an order exempting the Fund Reorganizations from the provisions of Section 17(a) of the 1940 Act.

Applicants' Legal Analysis

1. Section 17(a) of the 1940 Act provides, in pertinent part, that it is unlawful for any affiliated person of a registered investment company, or any affiliated person of such a person, "(1) knowingly to sell any security or other property to such registered company * * * [or] (2) knowingly to purchase from such registered company * * * any security or other property * * *" Section 2(a)(3) of the 1940 Act defines the term "affiliated person" of another person in include, in pertinent part, "(A) any person directly or indirectly owning, controlling, or holding with power to vote, 5 per centum or more of the outstanding voting securities of such other person; (B) any person 5 per centum or more of whose outstanding voting securities are directly or indirectly owned, controlled, or held with power to vote, by such other person; (C) any person directly or indirectly controlling, controlled by, or under common control with, such other

person * * *; and (E) if such other person in an investment company, any is an investment advises thereof * * *"

2. Applicants assert that Rule 17a-8 under the 1940 Act may not be available to exempt the proposed transactions described herein. The premise of Rule 17a-8 is that the investment companies involved in mergers or consolidations are under common control by virtue of having a common investment adviser, directors and/or officers and no other affiliation exists. In this case, certain of the Portfolios may be deemed to be affiliated persons or affiliated persons of each other because of the Insurance Companies and FIRMCO's share ownership of the Portfolios.

3. Section 17(b) of the 1940 Act provides that, notwithstanding Section 17(a), any person may file with the Commission an application for an order exempting a proposed transaction from one or more provisions of that subsection and that the Commission shall grant such application and issue such order of exemption if evidence establishes that "(1) the terms of the proposed transaction, including the consideration to be paid or received, are reasonable and fair and do not involve overreaching on the part of any person concerned; (2) the proposed transaction is consistent with the policy of each registered investment company concerned, as recited in its registration statement and reports filed under [the 1940 Act], and (3) the proposed transaction is consistent with the general purpose of [the 1940 Act] * * *."

4. Applicants submit that the terms of the Fund Reorganizations satisfy the standards set forth in section 17(b), in that the terms are fair and reasonable and do not involve overreaching on the part of any person concerned. Applicants note that the Boards of Trustees of CST and SFT, including the Disinterested Trustees, found that participation in the Fund Reorganization is in the best interests of each Portfolio based on the following factors: (a) The interests of shareholders will not be diluted; (b) the Portfolio's investment objectives and policies generally are substantially similar; (c) certain operational efficiencies may be achieved upon the combination of the Portfolios as a result of the economies of scale associated with a more diverse family of mutual funds; (d) no sales charges will be imposed in connection with the Fund Reorganizations; (e) the service and distribution resources available to MIT and the anticipated increased array of investment alternatives available to shareholders of MIT; (f) the transactions will be free

from Federal income taxes; (g) the conditions and policies of Rule 17a-8 under the 1940 Act will be followed; (h) the transfer of securities in exchange for shares will be at relative net asset value; and (i) no overreaching by any person concerned with the transactions will occur.

Conclusion

For the reasons and upon the facts set forth above, Applicants state that the requested order meets the standards set forth in Section 17(b) and should, therefore, be granted.

For the Commission, by the Division of Investment Management, under delegated authority.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. IC-24823 (812-12276)]

PaineWebber PACE Select Advisors Trust and Mitchell Hutchins Asset Management, Inc.; Notice of Application

January 11, 2001.

AGENCY: Securities and Exchange Commission ("Commission")

ACTION: Notice of application for an order under section 6(c) of the Investment Company Act of 1940 (the "Act") to amend a prior order that granted an exemption from section 15(a) of the Act and rule 18f-2 under the Act.

Summary of Application: Applicants request an order amending a prior order ("Prior Order") that permits them to enter into and materially amend investment sub-advisory contracts without receiving shareholder approval.¹

Applicants: PaineWebber PACE Select Advisors Trust (formerly, Managed Accounts Services Portfolio Trust) (the "Trust") and Mitchell Hutchins Asset Management Inc. ("Mitchell Hutchins").

Filing Date: The application was filed on November 30, 1999 and amended on January 5, 2001.

Hearing or Notification of Hearing: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Commission's Secretary and serving

¹ *Managed Accounts Services Portfolio Trust and Mitchell Hutchins Asset Management, Inc., Investment Company Act Release Nos. 21590 (Dec. 15, 1995) (notice) and 21666 (Jan. 11, 1996) (order).*

applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on February 5, 2001, and should be accompanied by proof of service on applicants, in the form of an affidavit, or for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission's Secretary.

ADDRESSES: Secretary, Commission, 450 Fifth Street, N.W., Washington, D.C. 20549-0609. Applicants: 1285 Avenue of the Americas, New York, New York 10019.

FOR FURTHER INFORMATION CONTACT: Sara P. Crovitz, Senior Counsel, at (202) 942-0667 or Nadya Roytblat, Assistant Director, at (202) 942-0564 (Division of Investment Management, Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the Commission's Public Reference Branch, 450 Fifth Street, N.W., Washington, D.C. 20549-0101, (202) 942-8090.

Applicants' Representations

1. The Trust is an open-end management investment company currently composed of twelve investment portfolios ("Portfolios"). Mitchell Hutchins, a wholly owned subsidiary of PaineWebber, acts as investment manager and administrator to the Trust and is responsible, subject to oversight by the Board of Trustees of the Trust ("Board") for the selection of investment sub-advisers ("Sub-Advisers") and the ongoing review of the Sub-Advisers' performance.

2. On January 11, 1996, applicants received the Prior Order permitting the Trust and Mitchell Hutchins to enter into sub-advisory agreements ("Sub-Advisory Agreements") for the Portfolios without obtaining shareholder approval. Among other things, the Prior Order is subject to a condition that requires a notice, in the form of an information statement, be sent to shareholders following the hiring of a new Sub-Adviser or the implementation of a material change to a Sub-Advisory Agreement. Applicants seek to amend the Prior Order to preserve the requirement to provide notice to shareholders regarding the hiring of a new Sub-Adviser, but to eliminate the requirement to provide a notice in the form of an information statement of other material changes to a Sub-

Advisory Agreement. Applicants state that supplements to the Trust's prospectus or statements of additional information serve as a more appropriate and less costly alternative to the latter requirement. Applicants also seek to amend the Prior Order to eliminate the requirement that shares of the Trust be offered exclusively to participants in the PaineWebber PACE Program (the "Pace Program") or other asset allocation services.

Applicants' Legal Analysis

1. Section 6(c) of the Act authorizes the Commission to exempt persons or transactions from any provisions of the Act to the extent that such exemptions are necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Applicants submit that amending the Prior Order as requested would be consistent with the standards of section 6(c) of the Act.

Applicants' Conditions

Applicants agree that the order granting the requested relief will be subject to the following conditions:

1. Before a Portfolio may rely on the order, the operation of the Portfolio in the manner described in the application will be approved by a majority of the outstanding voting securities of the Portfolio, as defined in the Act, or in the case of a Portfolio whose public shareholders purchased shares on the basis of a prospectus containing the disclosure contemplated by condition 2 below, by the sole initial shareholder before offering shares of such Portfolio to the public.

2. The Trust will disclose in all prospectuses relating to any Portfolio the existence, substance and effect of any order granted pursuant to the application. In addition, each Portfolio relying on the requested order will hold itself out to the public as employing the management structure described in the application. The prospectus will prominently disclose that Mitchell Hutchins has the ultimate responsibility (subject to oversight by the Board) to oversee the Sub-Advisers and recommend their hiring, termination and replacement.

3. At all times, a majority of the trustees of the Trust will be persons each of whom is not an "interested person" of the Trust (as defined in section 2(a)(19) of the Act) (the "Independent Trustees"), and the nomination of new or additional Independent Trustees will be placed within the discretion of the then existing Independent Trustees.

4. Mitchell Hutchins will not enter into a Sub-Advisory Agreement with any Sub-Adviser that is an affiliated person (as defined in section 2(a)(3) of the Act) of the Trust, Mitchell Hutchins or the Portfolios, other than by reason of serving as a Sub-Adviser to one or more of the Portfolios (the "Affiliated Sub-Adviser") without such agreement, including the compensation to be paid thereunder, being approved by the shareholders of the applicable Portfolio.

5. When a Sub-Adviser change is proposed for a Portfolio with an Affiliated Sub-Adviser, the trustees of the Trust, including a majority of the Independent Trustees, will make a separate finding, reflected in the Board minutes, that the change is in the best interests of the Portfolio and its shareholders and does not involve a conflict of interest from which Mitchell Hutchins or the Affiliated sub-Adviser derives an inappropriate advantage.

6. Within 90 days of the hiring of any new Sub-Adviser, the Trust will furnish shareholders of the applicable Portfolio all information about a new Sub-Adviser that would be included in a proxy statement. Such information will include any change in such disclosure caused by the addition of a new Sub-Adviser. The Trust will meet this condition by providing shareholders with an information statement meeting the requirements of Regulation 14C and Schedule 14C and Item 22 of Schedule 14A under the Securities Exchange Act of 1934.

7. Mitchell Hutchins will provide general management and administrative services to the Trust, and, subject to review and approval by the Board, will: (a) Set the Portfolios' overall investment strategies; (b) evaluate, select and recommend Sub-Advisers to manage all or a part of the Portfolio's assets; (c) allocate and, when appropriate, reallocate the Portfolios' assets among Sub-Advisers; (d) monitor and evaluate the investment performance of Sub-Advisers; and (e) implement procedures reasonably designed to ensure that the Sub-Advisers comply with the relevant Portfolio's investment objectives, policies and restrictions.

8. No Trustee or officer of the Trust or director or officer of Mitchell Hutchins will own directly or indirectly (other than through a pooled investment vehicle that is not controlled by any such Trustee, director or officer) any interest in a Sub-Adviser except for: (a) Ownership of interest in Mitchell Hutchins or in any entity that controls, is controlled by, or is under common control with Mitchell Hutchins; or (b) ownership of less than 1% of the outstanding securities of any class of

equity or debt of a publicly traded company that is either a Sub-Adviser or an entity that controls, is controlled by, or is under common control with a Sub-Adviser.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010-01-M

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 24825; 812-12352]

CityFed Financial Corp.; Notice of Application

January 11, 2001.

AGENCY: Securities and Exchange Commission ("SEC" or "Commission").

ACTION: Notice of application for an order under sections 6(c) and 6(e) of the Investment Company Act of 1940 ("Act") for exemption from all provisions of the Act, except sections 9, 17(a) (modified as discussed in the application), 17(d) (modified as discussed in the application), 17(e), 17(f), 36 through 45, and 47 through 51 of the Act and the rules thereunder.

SUMMARY OF APPLICATION: The requested order would exempt the applicant, CityFed Financial Corp. ("CityFed"), from certain provisions of the Act until the earlier of one year from the date the requested order is issued or such time as CityFed would no longer be required to register as an investment company under the Act. The order would extend an exemption granted until February 9, 2001.¹

FILING DATES: The application was filed on December 4, 2000 and amended on January 10, 2001.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving applicant with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on February 5, 2001, and should be accompanied by proof of service on applicant, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the

request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street, NW., Washington, DC 20549-0609. CityFed, 4 Young's Way, P.O. Box 3126, Nantucket, MA 02584.

FOR FURTHER INFORMATION CONTACT:

Bruce R. MacNeil, Senior Counsel, at (202) 942-0634, or Mary Kay Frech, Branch Chief, at (202) 942-0564 (Division of Investment Management, Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the SEC's Public Reference Branch, 450 Fifth Street, NW., Washington, DC 20549-0102 (tel. no. 202-942-8090).

Applicant's Representations

1. CityFed was a savings and loan holding company that conducted its savings and loan operations through its wholly-owned subsidiary, City Federal Savings Bank ("City Federal"). During the five-year period ending December 31, 1988, City Federal was the source of substantially all of CityFed's revenues and income. As a result of substantial losses in its mortgage banking and real estate operations, City Federal was unable to meet its regulatory capital requirements. Accordingly, on December 7, 1989, the Office of Thrift Supervision ("OTS") placed City Federal into receivership and appointed the Resolution Trust Corporation ("RTC") as City Federal's receiver. City Federal's deposits and substantially all of its assets and liabilities were acquired by a newly created federal mutual savings bank, City Savings, F.S.B. ("City Savings"). The OTS appointed the RTC as receiver of City Savings.

2. Once City Federal was placed into receivership, CityFed no longer conducted savings and loan operations through any subsidiary. Thus, since December 8, 1989, almost all of CityFed's assets consisted of cash that has been invested in (i) money market instruments with a maturity of one year or less, and (ii) money market mutual funds.

3. On June 2, 1994, the OTS issued a Notice of Charges ("OTS Action") against CityFed and certain current or former directors and, in some cases, officers of CityFed and City Federal ("Individual Respondents"). The OTS Action sought restitution from and a civil money penalty against both CityFed and the Individual Respondents. Also on June 2, 1994, the

OTS issued a Temporary Order to Cease and Desist ("Temporary Order") against CityFed. The Temporary Order sought to freeze CityFed's assets by placing them in various respects under the controls of the OTS. On October 26, 1994, CityFed and the OTS entered into an escrow agreement with CoreStates Bank, N.A. (now First Union National Bank ("First Union")) ("Escrow Agreement") pursuant to which CityFed transferred substantially all of its assets to First Union for deposit into an escrow account. The Escrow Agreement provided CityFed with \$15,000 per month for operating expenses and allowed CityFed to sell and purchase securities in the escrow account.

4. On May 19, 2000, CityFed finalized with the OTS and the Federal Deposit Insurance Corporation ("FDIC"), the statutory successor to the RTC, a settlement of the OTS Action ("Settlement"). Pursuant to the Settlement, the OTS dismissed with prejudice the OTS Action and the FDIC gave full and complete releases to CityFed and the Individual Respondents. In turn, CityFed and the Individual Respondents gave full and complete releases to the OTS and the FDIC. The OTS also dissolved the Temporary Order and authorized First Union to release to CityFed all of its assets remaining in the escrow account.

5. On December 7, 1992, the RTC filed suit against CityFed and two former officers of City Federal seeking damages of \$12 million for failure to maintain the net worth of City Federal ("First RTC Action"). In light of the filing of the OTS Action on June 2, 1994, the RTC and CityFed agreed to dismiss without prejudice the RTC's claim against CityFed in the First RTC Action. Pursuant to the Settlement, the FDIC released CityFed from all claims in the First RTC Action.

6. The RTC also filed suit against several former directors and officers of City Federal alleging gross negligence and breach of fiduciary duty with respect to certain loans ("Second RTC Action"). The RTC sought in excess of \$200 million in damages. CityFed states that all of the defendants in the Second RTC Action have settled with the RTC or the FDIC. Pursuant to the Settlement, the FDIC assigned any rights it acquired in these settlements to CityFed. Under its bylaws, CityFed may be obligated to indemnify these former officers and directors and pay their legal expenses, including settlement amounts. On the advice of counsel to a special committee of CityFed's board of directors, comprised of directors who have not been named in the First or Second RTC Action, CityFed advanced reasonable

¹ CityFed Financial Corp., Investment Company Act Release Nos. 24252 (Jan. 13, 2000) (notice) and 24283 (Feb. 9, 2000) (order).

defense costs to the former directors and officers named in the Actions. CityFed is unable to determine with any accuracy the extent of its liability with respect to these indemnification claims, although the amount may be material.

7. On August 7, 1995, CityFed, acting in its own right and as shareholder of City Federal, filed a civil action in the United States Court of Federal Claims seeking damages for loss of "supervisory goodwill" on its books as a result of various acquisitions by City Federal of troubled depository institutions. Pursuant to the Settlement, CityFed assigned to the FDIC all of CityFed's interest in its supervisory goodwill action, ceased to be a party to the case, and has no right to share in the recovery in that case, should there be one.

8. CityFed is subject to a number of loss contingencies for which it is currently unable to assess reasonably the probability or range of loss. CityFed intends to resolve all claims against it at the minimum cost possible. While CityFed's board of directors has considered from time to time whether to engage in an operating business, CityFed states that it cannot resume an operating business at the present time because the amount required to resolve its currently outstanding claims cannot be reasonably estimated and could exceed CityFed's assets. Following the Settlement, CityFed may undergo reorganization, perhaps involving a bankruptcy proceeding. It is anticipated that CityFed's outstanding claims, including its indemnification claims, will be addressed prior to, or as part of, any reorganization.

9. CityFed states that at present there is no public market for its stock and that it is traded sporadically in the over-the-counter market. Since City Federal's receivership, the operating expenses of CityFed have consisted of the employees' salaries, office expenses, and accounting and legal expenses. CityFed currently has one full-time employee and one office. As of September 30, 2000, CityFed held cash and securities of approximately \$6.4 million.

Applicant's Legal Analysis

1. Section 3(a)(1)(A) defines an investment company as any issuer "is or holds itself out as being engaged primarily * * * in the business of investing, reinvesting or trading in securities." Section 3(a)(1)(C) further defines an investment company as an issuer who is engaged in the business of investing in securities that have a value in excess of 40% of the issuer's total assets (excluding government securities and cash).

2. Section 6(c) of the Act provides that the SEC may exempt any person from any provision of the Act "if and to the extent that such exemption is necessary or appropriate in the public interest." Section 6(e) provides that in connection with any SEC order exempting an investment company from any provision of section 7, certain specified provisions of the Act shall be applicable to such company, and to other persons in their transactions and relations with such company, as through such company were registered under the Act, if the SEC deems it necessary or appropriate in the public interest or for the protection of investors.

3. CityFed acknowledges that it may be deemed to fall within one of the Act's definitions of an investment company. Accordingly, CityFed requests an exemption under sections 6(c) and 6(e) from all provisions of the Act, subject to certain exceptions described below. CityFed requests an exemption until the earlier of one year from the date of the requested order or such time as it would no longer be required to register as an investment company under the Act.

4. In determining whether to grant an exemption for a transient investment company, the SEC considers such factors as whether the failure of the company to become primarily engaged in a non-investment business or excepted business or liquidate within one year was due to factors beyond its control; whether the company's officers and employees during that period tried, in good faith, to effect the company's investment of its assets in a non-investment business or excepted business or to cause the liquidation of the company; and whether the company invested in securities solely to preserve the value of its assets. CityFed believes that it meets these criteria.

5. CityFed believes that its failure to become primarily engaged in a non-investment business by February 9, 2001, is due to factors beyond its control. CityFed asserts that the amount required to resolve its currently outstanding claims cannot be reasonably estimated and could exceed its assets. If CityFed is unable to resolve these claims successfully, it states that it may seek protection from the bankruptcy courts or liquidate. CityFed also asserts that it probably will not be in a position to determine what course of action to pursue until most, if not all, of its contingent liabilities are resolved. Additionally, CityFed states that its circumstances are unlikely to change over the requested one-year period in light of the number of claims currently pending against it. Since the filing of its initial application for exemptive relief

under sections 6(c) and 6(e) on October 19, 1990, CityFed has invested in money market instruments and money market mutual funds solely to preserve the value of its assets.

6. During the term of the proposed exemption, CityFed states that it will comply with sections 9, 17(a) and (d) (subject to the modifications described in condition 4, below), 17(e), 17(f), 36 through 45, and 47 through 51 of the Act and the rules thereunder.

Applicant's Conditions

CityFed agrees that the requested order will be subject to the following conditions:

1. CityFed will not purchase or otherwise acquire any securities other than short-term U.S. government securities, certificates of deposit, commercial paper rated A-1/P-1, and shares of registered money market funds; except that CityFed may acquire equity securities of an issuer that is not an investment company as defined in section 3(a) of the 1940 Act or is relying on an exclusion from the definition of investment company under section 3(c) of the 1940 Act other than section 3(c)(1) or 3(c)(7), in connection with the acquisition of an operating business as evidenced by a resolution approved by CityFed's board of directors.

2. CityFed will not hold itself out as being engaged in the business of investing, reinvesting, owning, holding, or trading in securities.

3. CityFed's Form 10-KSB, Form 10-QSB and annual reports to shareholders will state that an exemptive order has been granted pursuant to sections 6(c) and 6(e) of the Act and that CityFed and other persons, in their transactions and relations with CityFed, are subject to sections 9, 17(a), 17(d), 17(e), 17(f), 36 through 45, and 47 through 51 of the Act, and the rules thereunder, as if CityFed were a registered investment company, except as permitted by the order requested hereby.

4. Notwithstanding sections 17(a) and 17(d) of the Act, an affiliated person (as defined in section 2(a)(3) of the Act) of CityFed may engage in a transaction that otherwise would be prohibited by these sections with CityFed:

a. If such proposed transaction is first approved by a bankruptcy court on the basis that (i) The terms thereof, including the consideration to be paid or received, are reasonable and fair to CityFed, and (ii) the participation of CityFed in the proposed transaction will not be on a basis less advantageous to CityFed than that of other participants; and

b. In connection with each such transaction, CityFed shall inform the

bankruptcy court of (i) the identity of all of its affiliated persons who are parties to, or have a direct or indirect financial interest in, the transaction; (ii) the nature of the affiliation; and (iii) the financial interests of such persons in the transaction.

For the Commission, by the Division of Investment Management, under delegated authority.

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-43827; File No. SR-CBOE-00-60]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Chicago Board Options Exchange, Inc. To Change Its Membership Application Posting Process and Clarify Its Membership Rules

January 9, 2001.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² notice is hereby given that on November 22, 2000, the Chicago Board Options Exchange, Inc. ("CBOE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The CBOE proposes to change its membership application posting process and to make some clarifying revisions to its membership rules.

Below is the text of the proposed rule change. Proposed new language is italicized and proposed deletions are in brackets.

Chicago Board Options Exchange, Incorporated—Rules

* * * * *

Chapter III—Membership

* * * * *

Application Procedures and Approval or Disapproval

Rule 3.9.

(a)–(d) Unchanged.

(e) Within a reasonable time following receipt of an application for membership *from an applicant that has not been a member within 6 months prior to the date of receipt of the application by the Membership Department*, an application to change membership capacity statutes set forth in Rule 3.2(b) or 3.3(b), or an application to change Clearing Members, the name of the applicant and the application request shall be published in the Exchange Bulletin and posted on the Exchange Bulletin Board. The Membership Committee shall determine for each type of the foregoing applications the required time period that the above information must be posted on the Exchange Bulletin Board, provided that in no event shall any such required posting period be less than 10 days. Notwithstanding the foregoing, the required posting period for a member's application to change Clearing Members shall be waived if the Clearing Member(s) that will no longer be guaranteeing the member's Exchange transactions consent to such waiver in a form and manner prescribed by the Exchange. The Membership Committee may also determine to implement a posting period requirement for other types of applications submitted pursuant to paragraph (a) of this Rule. The Membership Committee may shorten or waive a required posting period for an applicant if the Membership Committee determines that doing so is warranted due to extenuating circumstances.

(f) The Membership Department shall investigate each applicant applying to be a member organization, each associated person required to be approved by the Membership Committee pursuant to Rule 3.6(b), and each applicant applying to be an individual member (with the exception of *any associated person applicant that is a current member*, any [individual] member applicant *that* [who] was a [an individual] member within 6 months prior to the date of receipt of that applicant's membership application by the Membership Department, *and any member or associated person applicant that was investigated by the Membership Department within 6 months prior to the date of receipt of that applicant's application by the Membership Department*). The Membership Department may [also] investigate *any applicant that is not required to be investigated pursuant to*

this paragraph (f) and any other person or organization that submits an application pursuant to paragraph (a) of this Rule.

(g) Unchanged.

(h) The Membership Committee may approve an application submitted pursuant to paragraph (a) of this Rule only if any applicable posting period requirement pursuant to paragraph (e) of this Rule has been satisfied, any investigation pursuant to paragraph (f) of this Rule has been completed, and any applicable orientation and exam requirements pursuant to paragraph (g) of this Rule have been satisfied.

* * * Interpretations and Policies:

.01-.02 Unchanged.

* * * * *

Purchase of Membership

Rule 3.13.

(a)–(b) Unchanged.

(c) Payment. Not later than the second business day following the acceptance of a bid pursuant to paragraph (a) of this Rule or the matching of a bid and offer pursuant to paragraph (b) of this Rule, the purchaser shall deliver to the Membership Department a certified or cashier's check *in the amount of the purchase price* made payable to the Exchange [covering the purchase price of the membership] *or complete a wire transfer in the amount of the purchase price to an Exchange account designated the Exchange.*

Sale and Transfer of Membership

Rule 3.14.

(a)–(b) Unchanged.

(c) Transfer by Owner. The owner of a transferable membership may transfer the membership without adhering to the provisions contained in Rule 3.13(b) and paragraph (a) of this Rule so long as one of the following qualifying circumstances is applicable to and descriptive of the desired transfer and the transferee is approved to be an owner or lessor:

(i) The owner of a transferable membership (whether or not the membership is registered for a member organization) requests the transfer of the membership to the member's spouse, brother, sister, parent, child, grandparent, or grandchild;

(ii) The owner of a transferable membership requests the transfer of the membership to an organization which has succeeded, through statutory merger, exchange of stock, or acquisition of assets to the business of the transferor;

(iii) The owner of a transferable membership requests the transfer of the

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

membership to an organization in which the transferor will maintain an interest at least equal in value to the current market price of the membership; or

(iv) The owner of a transferable membership requests the transfer of such membership to an individual or organization which is a partner or shareholder *with a 50% or greater interest in* [of] the transferor as part or all of a [liquidation] distribution of the transferor.

(d)(i)–(d)(vii) Unchanged.

(viii) The grant of an Authorization to Sell a membership shall include the grant of a security interest (A) in any proceeds from the sale of the membership that the grantee of the Authorization to Sell is entitled to receive pursuant to Rule 3.15(v)[,] and (B) *in the membership to the extent necessary to establish the priority of the preceding security interest in such proceeds.* A [a] properly executed Authorization to Sell form that has been filed with the Membership Department shall constitute a security agreement which grants the foregoing security interest to the grantee of the Authorization to Sell. The grantee of an Authorization to Sell may act to perfect the foregoing security interest under applicable law, which may include the filing of one or more UCC–1 Financing Statements. However, failure by a grantee of an Authorization to Sell to perfect the foregoing security interest under applicable law shall not affect the rights of the grantee under the Rules. In the event of a cancellation of an Authorization to Sell pursuant to paragraph (d)(iv) of this Rule, the grantee of the Authorization to Sell shall promptly file a Termination Statement with every filing authority where UCC–1 Financing Statement were filed with respect to the Authorization to Sell. The grantee of an Authorization to Sell shall promptly file with the Membership Department a file-stamped copy of any UCC filings made with respect to the Authorization to Sell.

Member Death Benefit

Rule 3.24

(a) Unchanged.

(b) The following individuals shall be eligible for the Member Death Benefit:

(i) any individual who is an active member at the time of his or her death; and

(ii) any individual who (i) was an active member within 90 days prior to the date of his or her death and (ii) was an active member during at least 274 out of 365 days preceding the date of his or

her last termination from active member status.

(c) For the purposes of this Rule, the term “active member” shall mean any *individual member* [natural person] who is a nominee of a member organization, a Chicago Board of Trade exerciser, a lessee of an Exchange membership, or an owner of an Exchange membership that is not being leased to a lessee.

(d)–(e) Unchanged.

* * * * *

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of this proposed rule change is to change the Exchange's membership application posting process and to make some clarifying revisions to the Exchange's membership rules.

CBOE Rule 3.9(e) requires that a posting be included in the Exchange Bulletin and on the Exchange Bulletin Board with respect to any application for membership, any application from a current member to change membership capacity statuses, and any application to change Clearing Members (unless the posting is waived under certain specified circumstances in accordance with the provisions of the Rule). CBOE Rule 3.9(e) also provides that the posting period on the Exchange Bulletin Board be no less than ten days, and that the Exchange's Membership Committee shall determine the required posting period for each of these types of applications in conformity with this minimum time period. The posting period for each of these application categories is fourteen days. The posting is required to set forth the name of the applicant and the application request, and its purpose is to provide members with an opportunity to submit information concerning an applicant that may bear on the applicant's qualifications and fitness for

membership under the Exchange's rules. Under CBOE Rule 3.9(h), an application may not be approved, among other things, until any applicable posting requirement has been satisfied.

There are two related factors that have caused the Exchange to propose changing its membership application posting process. First, the Exchange receives no submissions from members in response to the postings for the vast majority of applicants that are posted to the membership on the Exchange's Bulletin Board as part of the posting process. Second, the Exchange has a less extensive and shorter application process for current members that are applying to change membership capacity statutes and for member applicants that have been a member within the prior six months. In most cases, the Exchange is able to process these applications well before the expiration of the posting period. According, the vast majority of these applicants are required to wait for a period of time following the completion of the processing of their applications for their new membership capacities to become effective. This results in inefficiency in the conduct of business on the Exchange as well as inconvenience to these applicants.

As a result, the Exchange is proposing to change its membership application posting process in a manner that seeks to eliminate this inefficiency and inconvenience while at the same time preserving the ability of members to submit information concerning the qualifications and fitness for membership of applicants. Specifically, the Exchange is proposing to amend CBOE Rule 3.9(e) to eliminate the requirement that there be a posting period for current members that are applying to change membership capacity statuses and for member applicants that have been a member within the prior six months. Additionally, the Exchange intends to notify its membership via circular that the Membership Department will accept submissions concerning any current or former member at any time (in contrast to the current limited formal submission period during the posting period) and that these submissions will be retained in the member's membership file.³ Subsequently, if a current or former member submits any membership

³ The CBOE indicated that the circular will be detailed and widely disseminated. The circular will be attached to the back of the CBOE rule book and made readily available to the public. Telephone conversation between Arthur Reinstein, Associate General Counsel, CBOE, and Sapna C. Patel, Attorney, Division of Market Regulation, Commission (Jan. 5, 2001).

application and there is a submission for that current or former member in the membership file at the time of submission of the application, the submission concerning that current or former member will be reviewed and considered in the same manner that occurs under the posting process.

The Exchange is proposing to retain the posting period requirement for new membership applicants (*i.e.*, those membership applicants that have never been a member or that have not been a member within the prior six months). The posting period generally does not result in a delay in processing these applications because they are subject to a more extensive and longer application process that takes in excess of fourteen days (during which there is adequate time to complete a fourteen day posting). In addition, the Exchange is proposing to retain the posting period for an application to change Clearing Members (which in the vast majority of cases is waived pursuant to the current provision of CBOE Rule 3.9(e), which provides for the waiver of this posting period if the Clearing Member(s) that will no longer be guaranteeing the member's Exchange transactions consents to such a waiver).

The Exchange is also proposing to make the following clarifying changes to its membership rules:

First, the Exchange is proposing to revise CBOE Rule 3.9(f) to clarify those categories of membership applicants for which the Exchange does not conduct a background investigation due to the fact that the applicant is a current member, the applicant was recently a member, or the Exchange recently conducted a background investigation concerning the applicant. Specifically, CBOE is proposing to revise Rule 3.9(f) to clarify that the Membership Department is not required under CBOE Rule 3.9(f) to investigate the following categories of applicants: (i) Any associated person applicant that is a current member, (ii) any member applicant that was a member within six months prior to the date of receipt of that applicant's membership application by the Membership Department, and (iii) any member or associated person applicant that was investigated by the Membership Department within six months prior to the date of receipt of that applicant's application by the Membership Department. In addition, CBOE is proposing to revise Rule 3.9(f) to clarify that the Membership Department retains the discretion to investigate any applicant that is not required to be investigated under CBOE Rule 3.9(f) if the Membership Department determines that a

background investigation is warranted under the circumstances.

Second, CBOE is proposing to revise Rule 3.13(c) to clarify that the Exchange will accept payment for the purchase of a membership by a certified or cashier's check or via a wire transfer.

Third, the Exchange is proposing to clarify the provisions of CBOE Rule 3.14(c)(iv). CBOE Rule 3.14(c)(iv) sets forth one of the four circumstances pursuant to which a membership may be transferred without going through the normal auction process for the purchase and sale of Exchange memberships. Specifically, CBOE Rule 3.14(c)(iv) provides that the owner of a transferable membership may request the transfer of the membership to an individual or organization which is a partner or shareholder of the transferor as part or all of a distribution of the transferor. Under CBOE Rule 3.3.01, the transferee could also be a limited liability company member if the transferor were a limited liability company. CBOE is proposing to clarify Rule 3.14(c)(iv) in two respects. First, CBOE is proposing to revise Rule 3.14(c)(iv) to clarify that the transferee must have at least a fifty percent interest in the transferor. Without this provision, a person could avoid the normal membership auction process by becoming a nominal partner or shareholder in a member organization and then having the member organization transfer the membership to that partner or shareholder. Second, CBOE is proposing to revise Rule 3.14(c)(iv) to delete the word "liquidation" due to the fact that it results in confusion as to what constitutes a liquidation distribution and what constitutes a non-liquidation distribution (given that an entity can have partial liquidation in which it does not distribute all of its assets and continues in operation following the partial liquidation). Because the Exchange has interpreted Rule 3.14(c)(iv) to permit membership transfers in connection with partial liquidation distributions, and because the Exchange believes there is no meaningful distinction in this context between a partial liquidation distribution and a regular distribution, the Exchange is proposing to delete the word "liquidation" to make it easier for members to understand CBOE Rule 3.14(c)(iv).

Fourth, the Exchange is proposing to clarify the nature of the security interest received by the grantee of an Authorization to Sell under CBOE Rule 3.14(d)(viii). CBOE Rule 3.14(d) provides an owner of a transferable membership the ability to voluntarily grant to another member an

Authorization to Sell the membership. The grantee of an Authorization to Sell is vested with all of the authority provided for under the Exchange's Constitution and Rules relating to the sale of the membership. The grantee of an Authorization to Sell also has the right on the sale of the membership to submit claims against the grantor pursuant to CBOE Rule 3.15(b), to be satisfied out of the proceeds of the sale of the membership, that are related to the grantor's Exchange business activities. CBOE Rule 3.14(d)(viii) provides that the grant of an Authorization to Sell a membership includes the grant of a security interest in any proceeds from the sale of the membership that the grantee of the Authorization to Sell is entitled to receive under CBOE Rule 3.15(b). The exchange is proposing to revise CBOE Rule 3.14(d)(viii) to clarify that the grant of an Authorization to Sell also includes the grant of a security interest in the membership itself to the extent necessary to establish the priority of the security interest in the membership sale proceeds the grantee is entitled to receive under CBOE Rule 3.15(b). The Exchange has interpreted CBOE Rule 3.14(d)(viii) to provide for such a security interest in the membership itself and believes that the grant of such a security interest is fairly and reasonably implied from the existing language of CBOE Rule 3.14(d)(viii). The Exchange is simply proposing to revise CBOE Rule 3.14(d)(viii) to make the language of CBOE Rule 3.14(d)(viii) more explicit in this regard.

Finally, the Exchange is proposing to revise CBOE Rule 3.24, the Exchange's Member Death Benefit Rule, to make clear that the term "active member" under that Rule only includes individual members and is not intended to include associated persons who are not individual members pursuant to the Exchange's Rules. Specifically, the definition of the term "active member" in CBOE Rule 3.24(c) would be revised to replace the words "natural person" in that definition with the words "individual member." The remainder of the definition of "active member" in CBOE Rule 3.24(c) would not be revised. Thus, as revised, the definition of "active member" contained in CBOE Rule 3.24(c) would state that the term "active member" shall mean any individual member who is a nominee of a member organization, a Chicago Board of Trade exerciser, a lessee of an Exchange membership, or an owner of an Exchange membership that is not being leased to a lessee. CBOE Rule 3.24(b) provides that the following

individuals are eligible for the member Death Benefit: (i) Any individual who is an active member at the time of his or her death; and (ii) any individual who (a) was an active member within ninety days prior to the date of his or her death, and (b) was an active member during at least 274 out of the 365 days preceding the date of his or her termination from active member status.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with Section 6(b) of the Act⁴ in general, and in particular, with Section 6(b)(5) of the Act,⁵ in that it is designed to remove impediments to and perfect the mechanism of a free and open market and to protect investors and the public interest. The proposed rule change seeks to revise the Exchange's membership application posting process in a manner that will reduce inefficiency in the conduct of business on the Exchange and inconvenience to membership applicants while preserving the ability of members to submit information concerning the qualifications and fitness for membership of membership applicants. The proposed rule change will also clarify certain provisions of the Exchange's membership rules making it easier for members to understand those rules.

B. Self-Regulatory Organization's Statement on Burden Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549-0609. Copies of the submission, all subsequent amendments, all written statement with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the CBOE. All submissions should refer to File No. SR-CBOE-00-60 and should be submitted by February 8, 2001.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.⁶

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-43829; File No. SR-CBOE-00-10]

Self-Regulatory Organizations; Order Granting Approval of Proposed Rule Change by the Chicago Board Options Exchange, Inc., and Notice of Filing and Order Granting Accelerated Approval of Amendment No. 1, to Permit the Chairman of the Appropriate Floor Procedure Committee to Decrease the Size of Orders Eligible for Entry Into the Retail Automatic Execution System During Unusual Market Conditions

January 10, 2001.

I. Introduction

On March 28, 2000, the Chicago Board Options Exchange, Inc. ("CBOE" or "Exchange") filed with the Securities

and Exchange Commission ("Commission") pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")¹ and Rule 19b-4 thereunder,² a proposed rule change that would grant the Chairman of an appropriate Floor Procedure Committee ("FPC"), or his designee, the authority to decrease the size of orders eligible for entry into the Exchange's Retail Automatic Execution System ("RAES") during unusual market conditions. On January 3, 2001, the Exchange filed Amendment No. 1 to the proposed rule change.³

The proposed rule change was published for comment in the **Federal Register** on June 8, 2004.⁴ The Commission received no comments on the proposal. This order approves the proposal.

II. Description of Proposal

Currently, the appropriate FPC of the CBOE has the authority to determine the size of orders eligible for entry into RAES up to a maximum of seventy-five contracts.⁵ In this proposal, the Exchange is seeking to amend Interpretation .05 to Rule 6.8, *RAES Operations*, to allow the Chairman of the appropriate FPC, or the Chairman's designee,⁶ to exercise the authority of the FPC to decrease the size of orders eligible for entry into RAES for option classes during unusual market conditions.⁷

In its filing, the Exchange represented that it is sometimes necessary to temporarily reduce the eligible order size levels for RAES in situations where unusual market conditions exist. However, under the current Exchange rules, a decision to decrease the eligible

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Letter from Angelo Evangelou, Counsel, CBOE, to Jennifer Colihan, Attorney, Division of Market Regulation ("Division"), Commission, dated January 2, 2001. ("Amendment No. 1"). In Amendment No. 1, the Exchange clarified that the Chairman may designate his authority solely to: (1) another member of the FPC, or (2) or (2) two CBOE floor officials.

⁴ See Securities Exchange Act Release No. 42862 (May 30, 2000), 65 FR 36481.

⁵ See Exchange Rules 6.8(a)(i) and 6.8(e). The Commission recently approved a proposed rule change by the Exchange to increase the maximum size of RAES-eligible orders to seventy-five contracts. See Securities Exchange Act Release No. 43517 (November 3, 2000), 65 FR 69082 (November 15, 2000).

⁶ See Amendment No. 1, *supra* note 3.

⁷ The Exchange has represented that the minimum level to which the Chairman, or his designee, may decrease the size of orders eligible for entry into RAES pursuant to the proposed rule is ten contracts. Telephone conversation between Angelo Evangelou, Counsel, CBOE, and Jennifer Colihan, Attorney, Division, Commission, on September 8, 2000.

⁴ 15 U.S.C. 78f(b).

⁵ 15 U.S.C. 78f(b)(5).

⁶ 17 CFR 200.30-3(a)(12).

order size must be made by the appropriate FPC. The Exchange represented that it is not practicable to provide notice to all the members of the appropriate FPC and convene a meeting during the day to make the decision to decrease eligible order size in the event of an unusual market situation.

Consequently, the Exchange seeks to delegate the authority provided in CBOE Rule 6.8(a)(i) to the Chairman of the appropriate FPC, or to the Chairman's designee, to decrease the eligible order size for RAES in unusual market conditions,⁸ provided that the Chairman or his designee believes that the action is warranted and provided that the decision is made for no more than one trading day (as is currently the case for the Chairman increasing the order size eligibility for RAES).⁹ To the extent that the conditions continue to exist on the following trading day, the Chairman or his designee must review the situation and make an independent decision to decrease the RAES eligible order size for that subsequent day. Further, any decisions made by the Chairman or his designee to decrease the RAES eligible order size for a particular option class for consecutive days will be reviewed by the FPC at its next regularly scheduled meeting. After reviewing these decisions, the FPC can provide guidance to the Chairman or his designee about the use of this authority if the FPC considers it appropriate.

III. Discussion

After careful review, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange and, in particular, the requirements of section 6(b) of the Act¹⁰ and the rules and regulations thereunder.¹¹ Section 6(b)(5) of the

⁸ According to the Exchange, unusual market conditions may include drastic movement in the security underlying an option, or news pending about the issuer of the underlying security. Telephone conversation between Angelo Evangelou, Counsel, CBOE, and Jennifer Colihan, Attorney, Division, Commission, on September 8, 2000.

⁹ Under CBOE Rule 6.8, Interpretation .05, the Chairman of the appropriate FPC currently is authorized to increase the order size eligibility for RAES if he believes that the action is in the interest of alleviating a potential backlog of unexecuted orders in situations where a particular class of option is experiencing a large influx of orders, and provided the decision is made for no more than one trading day. That rule, however, does not permit the Chairman to decrease the order size eligibility maximum.

¹⁰ 15 U.S.C. 78f(b).

¹¹ In approving this rule change, the Commission has considered the proposal's impact on efficiency, competition, and capital formation, consistent with section 3(f) of the Act. 15 U.S.C. 78c(f).

Act¹² states that the rules of an exchange must be designed to facilitate securities transactions and to remove impediments to and perfect the mechanism of a free and open market. The Commission believes that granting the Chairman of the appropriate FPC, or the Chairman's designee, the discretion to exercise the authority of the Committee to decrease the size of orders for entry into RAES is consistent with these statutory provisions.¹³

The Commission further believes that the requirement that the FPC review any decision made by the Chairman or his designee to decrease the size of orders eligible for entry into RAES for consecutive days will help ensure that the Chairman, or his designee, only uses the discretion in limited circumstances that require that such action be taken to ensure the market's integrity and adequate function. Finally, the Commission notes that because this proposed rule involves changing the parameters of the eligible RAES order size, any action taken pursuant to the proposed rule must be documented in accordance with CBOE Rule 6.8, Interpretation .08.¹⁴

IV. Amendment No. 1

In Amendment No. 1, the Exchange clarified that the Chairman may designate his authority to decrease the size of orders for entry into RAES during unusual market conditions only to: (1) Another member of the FPC, or (2) two CBOE floor officials.¹⁵ The Commission believes that this limitation

¹² 15 U.S.C. 78f(b)(5).

¹³ The Commission notes that approval of this rule change is not dispositive of whether all aspects of the revised Interpretation comply with the terms and conditions of section IV.h.(i)(bb) of the Order Instituting Public Administrative Proceedings Pursuant to Section 19(h)(1) of the Securities Exchange Act of 1934, Making Finding and Imposing Remedial Sanctions (the "Order"). The parties to the Order, including the Exchange, are required to "specify the circumstances, if any, under which automated execution systems can be disengaged or operated in any manner other than the normal manner set forth in the exchange's rules and require the documentation of the reasons for each decision to disengage an automated execution system or operate it in any manner other than the normal manner." The Order further provides that parties to the Order must submit to the Commission staff draft proposed rule changes that comply with the requirements set forth above no later than six months from the date of the Order. See Securities Exchange Act Release No. 43268 (September 11, 2000).

¹⁴ The Commission notes that Interpretation .08 to CBOE rule 6.8 requires the CBOE to document instances in which the Chairman or his designee decrease RAES order size eligibility levels pursuant to this proposal. See Securities Exchange Act Release No. 43196 (August 22, 2000), 65 FR 52800 (August 30, 2000) (noticing immediate effectiveness of SR-CBOE-00-38, which implemented Interpretation .08).

¹⁵ See Amendment No. 1, *supra* note 3.

will help to ensure that only those persons with sufficient knowledge and judgment will be vested with the authority to make decisions that will affect the manner in which RAES is operated, and consequently the manner in which customer orders are executed. The Commission believes that it would be inappropriate for the Chairman of an FPC to delegate his authority to make decisions regarding how RAES is operated to an unlimited number of persons, with varying degrees of knowledge and aptitude for making such decisions.

The Commission, therefore, finds that Amendment No. 1 is consistent with section 6(b)(5) of the Act,¹⁶ which requires that the rules of an exchange be designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in relating, clearing, settling, processing information with respect to, and facilitating transactions in securities. The Commission also finds good cause to approve Amendment No. 1 to the proposed rule change prior to the thirtieth day after the date of publication of notice of filing of the amendment in the **Federal Register**. The Commission notes that Amendment No. 1 merely clarifies precisely who is eligible to be the "Chairman's designee" for purposes of the proposed interpretation. Accordingly, the Commission believes that there is good cause, consistent with section 6(b)(5) and 19(b) of the Act¹⁷ to approve Amendment No. 1 on an accelerated basis.

V. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning Amendment No. 1, including whether Amendment No. 1 is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549-0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying at the Commission's Public Reference Room. Copies of such filing will also be

¹⁶ 15 U.S.C. 78f(b)(5).

¹⁷ 15 U.S.C. 78f(b)(5) and 78s(b).

available for inspection and copying at the principal office of the Exchange. All submissions should refer to File No. SR-CBOE-00-10 and should be submitted by February 8, 2001.

VI. Conclusion

For all of the aforementioned reasons, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange.

It Is Therefore ordered, pursuant to section 19(b)(2) of the Act,¹⁸ that the proposed rule change (SR-CBOE-00-10), as amended, is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.¹⁹

Margaret H. McFarland,

Deputy Secretary.

[FR Doc. 01-1485 Filed 1-17-01; 8:45 am]

BILLING CODE 8010-02-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 43824; File No. SR-EMCC-00-05]

Self-Regulatory Organizations; Emerging Markets Clearing Corporation; Order Approving a Proposed Rule Change Relating to Increasing the Minimum Clearing Fund Requirement for All EMCC Members to \$3,000,000 and Establishing Two Tiers of Inter-Dealer Broker Membership Standards

January 9, 2001.

On July 14, 2000, the Emerging Markets Clearing Corporation ("EMCC") filed with the Securities and Exchange Commission ("Commission") and on August 16, 2000, and November 1, 2000, amended a proposed rule change (File No. SR-EMCC-00-05) pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act").¹ Notice of the proposal was published in the **Federal Register** on December 1, 2000.² No comment letters were received. For the reasons discussed below, the Commission is approving the proposed rule change.

I. Description

The purpose of the rule change is to (i) increase the minimum clearing fund

requirement for all EMCC members to \$3,000,000 from the current required minimum of \$1,000,000 and (ii) provide two tiers of IDB membership standards.³

With respect to the increased minimum clearing fund requirement, EMCC's risk advisory subgroup reviewed EMCC's two years of operations, including trade files and daily margin calculations. The subcommittee concluded that, generally, members' calculated clearing fund requirements did not go below \$3,000,000. Moreover, raising the minimum requirement from \$1,000,000 to \$3,000,000 is consistent with the clearing fund requirements imposed on IDBs by other clearing corporations,⁴ and it addresses the fact that IDB members have a potential clearing fund loss liability that could well exceed the current \$1,000,000 clearing fund minimum. Accordingly, EMCC has determined that it would be more appropriate to have a greater amount of IDB funds on hand to cover the potential exposure than to have to request such a deposit if needed due to a loss. Therefore, EMCC has determined that it is appropriate to increase all members', including IDBs', minimum clearing fund requirement to \$3,000,000.

The rule change also separates IDBs into two membership categories based on excess net capital or excess financial resources. Those IDBs with excess net capital, or excess financial resources for a broker or dealer regulated by the Securities and Futures Authority Limited, of between \$10,000,000 and \$20,000,000 will be margined using an "event factor" of 1.5 instead of the factor of 1.25 currently used in EMCC's base margining formula. This factor is representative of the volatilities experienced during the last three emerging market events.⁵ Those IDBs with excess net capital or excess financial resources of more than \$20,000,000 will be margined under the current event factor of 1.25.

EMCC believes that the two-tier membership standard will permit it to better collateralize the risk posed by IDBs with lower levels of capital. EMCC recognizes that the clearing fund is a key mitigant to market risk in the event

of member insolvency and feels that margining those IDBs with less than \$20,000,000 excess regulatory capital at an event factor of 1.5 should mitigate the risk of their lower capital levels.

The effective date for these approved changes will be thirty days following the date the Commission approves the filing for current members and will be immediately for any applicant who becomes a member after the rule change is approved.

II. Discussion

Section 17A(b)(3)(F) of the Act requires that the rules of a clearing agency be designed to assure the safeguarding of securities and funds which are in the custody or control of the clearing agency for which it is responsible.⁶ The Commission believes that the approval of EMCC's rule change is consistent with this Section. The Commission believes it is prudent for EMCC to have a greater amount of IDB funds on hand to cover the potential exposure than to have to request such a deposit if needed and to increase all members', including IDBs', minimum clearing fund requirements to \$3,000,000. In addition, the Commission believes that the two-tier membership standard whereby EMCC will margin IDBs with less than \$20,000,000 excess regulatory capital at an event factor of 1.5 will permit EMCC to better collateralize the risk posed by IDBs with lower levels of capital.

III. Conclusion

On the basis of the foregoing, the Commission finds that the proposal is consistent with the requirements of the Act and in particular with the requirements of section 17A of the Act and the rules and regulations thereunder.

It is Therefore Ordered, pursuant to section 19(b)(2) of the Act, that the proposed rule change (File No. SR-EMCC-00-05) be and hereby is approved.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.⁷

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-43830; File No. SR-ISE-00-19]

Self Regulatory Organizations; Notice of Filing of Proposed Rule Change by the International Securities Exchange LLC Adopting an Obvious Error Rule

January 10, 2001.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on November 20, 2000, the International Securities Exchange LLC ("ISE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organizations Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is proposing to adopt new ISE Rule 720, which gives the Exchange the authority to bust or adjust trades that result from clearly erroneous orders or quotations. Proposed new language is *italicized*.

* * * * *

Rule 720. Obvious Errors

The Exchange shall either bust a transaction or adjust the execution price of a transaction that results from an Obvious Error as provided in this Rule.

(a) *Definition of obvious Error. For purposes of this Rule only, Obvious Error will be deemed to have occurred when:*

(1) *during regular market conditions (including rotations), the execution price of a transaction is higher or lower than the Theoretical Price for the series by an amount equal to at least two (2) times the maximum bid/ask spread allowed for the option, so long as such amount is 50 cents or more; or*

(2) *during fast market conditions (i.e., the Exchange has declared a fast market status for the option in question), the execution price of a transaction is higher or lower than the Theoretical Price for the series by an amount equal to at least three (3) times the maximum bid/ask spread allowed for the option, so long as such amount is 50 cents or more.*

(b) *Definition of Theoretical Price. For purposes of this Rule only, the Theoretical Price of an option is:*

(1) *if the series is traded on at least one other options exchange, the last bid or offer, just prior to the trade, found on the exchange that has the most liquidity in that option as provided in Supplementary Material .02 below; or*

(2) *if there are no quotes for comparison purposes, as determined by the Obvious Error Panel.*

(c) *Adjustments. Where the execution price of a transaction executed as the result of an Obvious Error is adjusted, the adjusted price will be:*

(1) *the Theoretical Price of the option in the case where the erroneous price is displayed in the market and subsequently executed by quotes or orders that did not exist in the System at the time of the erroneous price was entered; or*

(2) *the last bid or offer, just prior to the trade, found on the exchange that has the most liquidity in that option as provided in Supplementary Material .03 below in the case where an erroneous price executes against quotes or orders already existing in the System at the time the erroneous price was entered.*

(d) *Obvious Error Procedure. Designated personnel in the Exchange's market control center ("Market Control") shall administer the application of this Rule as follows.*

(1) *Notification. If a market maker on the Exchange believes that it participated in a transaction that was the result of an Obvious Error, it must notify Market Control within five (5) minutes of the execution. If an Electronic Access Member believes an order it executed on the Exchange was the result of an Obvious Error, it must notify Market Control within twenty (20) minutes of the execution. Except as provided below, no relief under this Rule will be provided unless notification is made within the prescribed time periods.*

(2) *Adjust or Bust. Market Control will determine whether there was an Obvious Error as defined above. If it is determined that an Obvious Error has occurred, Market Control shall take one of the following actions: (i) where each party to the transaction is a market maker on the Exchange, the execution price of the transaction will be adjusted unless both parties agree to bust the trade within ten (10) minutes of being notified by Market Control of the Obvious Error, or³ (ii) where at least one*

party to the Obvious Error is not a market maker on the Exchange, the trade will be busted unless both parties agree to adjust the price of the transaction within thirty (30) minutes of being notified by Market Control of the Obvious Error.

(e) *Obvious Error Panel.*

(1) *Composition. An Obvious Error Panel will be comprised of representatives from three (3) Members that are market makers on the Exchange, at least one (1) of which shall be a representative from a Member that is a Competitive Market Maker and not also a Primary market Maker.*

(2) *Request for Review. If a party affected by a determination made under this Rule so requests, the Obvious Error Panel will review decisions made by market Control under this Rule, including whether an Obvious Error occurred, whether the correct Theoretical Price was used, and whether an adjustment was made at the correct price. A party may also request that the Obvious Error Panel provide relief under this Rule in cases where the party failed to provide the notification required in paragraph (d)(1), but unusual circumstances must merit special consideration. The Obvious Error Panel shall review the facts and render a decision on the day of the transaction. All determinations by the Obvious Error Panel shall be final.*

Supplementary Material to Rule 720

.01 *For purposes of paragraph (a) of this Rule, the maximum bid/ask spread shall be the maximum bid/ask spread allowed under Rule 803(b), unless a wider spread has been allowed by the Exchange for the option because of unusual market conditions, such as high market volatility.*

.02 *The Theoretical Price will be determined under paragraph (b)(1) above as follows: (i) the bid price from the exchange providing the most volume will be used with respect to an erroneous bid price entered on the Exchange, and (ii) the offer price from the exchange providing the most volume will be used with respect to an erroneous offer price entered on the Exchange.*

.03 *The price to which a transaction is adjusted under paragraph (c)(2) above will be as follows: (i) the bid price from the exchange providing the most volume for the option will be used with respect to an erroneous offer price entered on the Exchange, and (ii) the offer price from the exchange providing the most volume for the option will be used with*

³ The ISE corrected a typographical error that appeared in the proposed rule language. Telephone conversation between Katherine Simmons, Vice President and Associate General Counsel, ISE, and

² 17 CFR 240.19b-4.

respect to an erroneous bid price entered on the Exchange. If there are no quotes for comparison purposes, the adjustment price will be determined by the Obvious Error Panel.

.04 When Market Control determines that an Obvious Error has occurred and action is warranted under paragraph (d)(2) above, the identity of the parties to the trade will be disclosed to each other in order to encourage conflict resolution.

.05 Each market maker firm shall designate at least one person that is knowledgeable about options market making on the ISE to be called upon by the Exchange to participate on an Obvious Error Panel. In no case shall an Obvious Error Panel include a person related to a party to the Obvious Error in question. To the extent reasonably possible, the Exchange shall call upon representatives of each market maker to participate on an Obvious Error Panel on an equally frequent basis.

* * * * *

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to adopt new ISE Rule 720 that would allow it to either adjust or bust a transaction in circumstances where a member or its customer has made an error and the price of the execution is "obviously" not correct.⁴ In such situations, the Exchange does not believe it is consistent with just and equitable principles of trade to permit one market participant to receive a wind-fall at the

expense of another market participant that made an obvious error. Conversely, the Exchange does not seek to permit market participants to reconsider poor trading decisions. The ISE believes that the proposed rule contains objective standards regarding when a transaction was clearly the result of an "obvious error," under what circumstances a trade will be adjusted or busted, and to what price a trade will be adjusted if adjustment is appropriate under the circumstances.

Under proposed ISE Rule 720, when a member believes that it has participated in a transaction that was the result of an obvious error, it must notify ISE Market Control within a specified time of the execution. The proposed rule requires Exchange market makers, who are continuously monitoring their transactions on the ISE, to notify ISE Market Control within five minutes of an execution. The proposed rule allows Electronic Access Members, which may handle customer orders on multiple exchanges simultaneously and which may need to contact customers for instruction, up to twenty minutes to notify ISE Market Control.

ISE Market Control will determine whether there was an obvious error according to the following objective criteria: (1) An obvious error will be deemed to have occurred during normal market conditions when the execution price of a transaction is higher or lower than the theoretical price⁵ for the series by an amount equal to at least two times the maximum bid/ask spread allowed for the option, so long as such amount is 50 cents or more; and (2) an obvious error will be deemed to have occurred during fast market conditions when the execution price of a transaction is higher or lower than the theoretical price for the series by an amount equal to at least three times the maximum bid/ask spread allowed for the option, so long as such amount is 50 cents or more.⁶ ISE Market Control is not given any discretion under proposed ISE Rule 720 to take actions with respect to transactions that do not come within the objective obvious error criteria. In situations where the theoretical price is not objectively determinable, a panel of member representatives will be

convened to determine the theoretical price.

If it is determined that a transaction is the result of an obvious error, ISE Market Control will take one of the following actions: (1) Where each party to the transaction is an Exchange market maker,⁷ the execution price of the transaction will be adjusted unless both parties agree to bust the trade; or (2) where at least one party to the obvious error is not a market maker on the Exchange, the trade will be busted unless both parties agree to adjust the price of the transaction. In the first instance, Exchange market makers, who commonly hedge transactions immediately, have indicated a preference for adjusting the price of a transaction rather than changing their positions. Thus, the default action will be to adjust the price of the execution according to the objective criteria discussed below. In the second instance, where customer limit orders may be involved, the Exchange does not believe it appropriate to adjust the price of a transaction without the consent of the market participants. Accordingly, the default will be to bust the trade unless both sides agree to adjust the price. The default action will be taken unless agreement is reached within ten minutes in the case where both parties are Exchange market makers, and within thirty minutes where at least one party is not an Exchange market maker.

Where an adjustment is made to a transaction price, the adjusted price will be determined by objective criteria. The adjusted price will be equal to the theoretical price of the option in the case where the erroneous price is displayed in the market and subsequently executed by quotes or orders that did not exist in the system at the time the price was entered. For example, if an option had a bid of \$5 and offer of \$5.20 on the options exchange with the most volume in that option and due to an erroneous quotation, the ISE displayed a bid of \$7 that was executed against by an incoming sell order or market maker offer, the adjustment price would be \$5, which is the fair price at which a market participant could have sold the option at the time of the transaction. The ISE would presume that, in this situation, the seller knew that the price was

⁴ While current ISE Rule 804(d)(2) gives the Exchange some flexibility with respect to customer orders when a market maker's quote is obviously an error, it only states that an obviously erroneous quote may not be "firm" for customer orders. ISE Rule 804 does not expressly give the Exchange authority to bust an executed transaction, nor does it contain any guidelines for determining when a quotation is obviously erroneous.

⁵ The theoretical price of an option in the case of an erroneous bid (offer) is the last bid (offer), just prior to the trade, found on the exchange that has the most liquidity in that option other than the ISE. If there are no quotes for comparison purposes, the theoretical price will be determined by an obvious error panel.

⁶ The reason for requiring a greater deviation from the theoretical price during fast market conditions is that when the price of an underlying is moving rapidly, it is not as "obvious" that an option price might be in error.

⁷ A party to a transaction will be considered an Exchange market maker under proposed ISE Rule 720 if the resulting position is booked in an ISE market maker account. For example, under ISE Rule 803, a Competitive Market Maker ("CMM") on the ISE may execute up to 25 percent of its total volume in securities to which it is not appointed. An obvious error involving two CMMs will be adjusted under proposed ISE Rule 720 unless both agree to bust the trade.

obviously erroneous as compared to the price being displayed by the primary options exchange for the option.

Where a participant enters a quotation or order in error that executes against standing interest on the Exchange, the contra side to the transaction had no notice of an erroneous price and took no action to execute at the erroneous price. In this instance, the adjustment price will be the bid (offer) price from the exchange providing the most volume in the case of an erroneous offer (bid) price entered on the Exchange. The ISE believes that this will result in a more favorable adjustment price for the participant with standing interest in the book than the participant that made the error. As a result, in the previous example, if the erroneous bid of \$7 executed against an offer in the system at \$6.50, the adjustment price would be \$5.20 (the offer price) instead of 5 (the bid price). Again, the only time an adjustment will be made to the price of a transaction is in the case where both parties were ISE market makers or where both parties agree to the adjustment.

Finally, proposed ISE Rule 720 specifies that each market maker firm will designate at least one person that is knowledgeable about options market making on the ISE to be called upon by the Exchange to participate on an obvious error panel.⁸ Proposed ISE Rule 720 provides that an obvious error panel will have the authority to: (1) Determine a theoretical price when there is no quote for an option on another options exchanges; and (2) upon request by a party to a potential obvious error, review whether the correct theoretical price was used and whether an adjustment was made at the correct price. A party to a potential obvious error may also request that the obvious error panel provide relief under the proposed rule in cases where the party failed to give notice within the required time periods, but there must be unusual circumstances to merit this special consideration. All determinations by an obvious error panel will be made on the same day as the transaction in question and shall be final.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act⁹ in general, and furthers the objectives of Section

6(b)(5)¹⁰ in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism for a free and open market and a national market system, and, in general, to protect investors and the public interest.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange did not solicit or receive written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549-0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying at

the Commission's Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All submissions should refer to File No. SR-ISE-00-19 and should be submitted by February 8, 2001.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.¹

Margaret H. McFarland,

Deputy Secretary.

BILLING CODE 8010-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-43831; File No. JR-NASA-00-72]

Self-Regulatory Organizations; Notice of Filing and Immediate Effectiveness of Proposed Rule Change by the National Association of Securities Dealers, Inc. Relating to Nasdaq's Transaction Credit Pilot Program

January 10, 2001.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on December 13, 2000, the National Association of Securities Dealers, Inc. ("NASD" or "Association"), through its wholly owned subsidiary The Nasdaq Stock Market, Inc. ("NASDAQ"), filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by Nasdaq. Nasdaq has designated this proposal as one establishing or changing a due, fee, or other charge imposed by the Association under Section 19(b)(3)(A)(ii) of the Act,³ which renders the proposal effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Nasdaq proposes to amend NASD Rule 7010, System Services, to extend Nasdaq's transaction credit pilot program for an additional three months for Tape A and B reports. The text of the proposed rule change is below. Proposed new language is in italics. Proposed deletions are in brackets.

¹ 17 CFR 200.30-3(a)(12).

7010. System Services

(a)–(b) No Change.

(c) * * *

(1) No Change.

(2) Exchange-Listed Securities

Transaction Credit. For a pilot period, qualified NASD members that trade securities listed on the NYSE and Amex in over-the-counter transactions reported by the NASD to the Consolidated Tape Association may receive from the NASD transaction credits based on the number of trades so reported. To qualify for the credit with respect to Tape A reports, an NASD member must account for 500 or more average daily Tape A reports of over-the-counter transactions as reported to the Consolidated Tape during the concurrent calendar quarter. To qualify for the credit with respect to Tape B reports, an NASD member must account for 500 or more average daily Tape B reports of over-the-counter transactions as reported to the Consolidated Tape during the concurrent calendar quarter. If an NASD member is so qualified to earn credits based either on its Tape A activity, or its Tape B activity, or both, that member may earn credits from one or both pools maintained by the NASD, each pool representing 40% of the revenue paid by the Consolidated Tape Association to the NASD for each of Tape A and Tape B transactions. A qualified NASD member may earn credits from the pools according to the member's pro rata share of the NASD's over-the-counter trade reports in each of Tape A and Tape B for each calendar quarter starting with July 1, 2000 for Tape A reports (April 1, 2000 for Tape B reports) and ending with the calendar quarter starting on [October 1, 2000] January 1, 2001.

* * * * *

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, Nasdaq included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. Nasdaq has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Nasdaq proposes to extend through March 31, 2001, its pilot program to provide a transaction credit⁴ to NASD members that exceed certain levels of trading activity in exchange-listed securities. Nasdaq's InterMarket is a quotation, communication, and execution system that allows NASD members to trade stocks listed on the New York Stock Exchange ("NYSE") and the American Stock Exchange ("Amex"). The InterMarket competes with regional exchanges like the Chicago Stock Exchange ("CHX") and the Cincinnati Stock Exchange ("CSE") for retail order flow in stocks listed on the NYSE and the Amex. The NASD collects trade reports from broker-dealers trading these securities in the over-the-counter ("OTC") market and provides the trade reports to the Consolidated Tape Association ("CTA") for inclusion in the Consolidated Tape. As a participant in the CTA Plan, the NASD is entitled to a portion of the revenue that the CTA generates by selling this market data information. NASD's share of the revenues is based on trades that it reports on behalf of these broker-dealers in NYSE-listed securities ("Tape A") and in Amex-listed securities ("Tape B").

The Transaction Credit Pilot Program began in 1999.⁵ Under the Program, NASD shares a portion of these tape revenues by providing a transaction credit to NASD members who exceed certain levels of OTC trading activity in NYSE and Amex securities. The Program helps InterMarket market makers and investors lower costs associated with trading listed securities. The Program also is an important tool for Nasdaq to compete against other exchanges (particularly CSE and CHX) that offer similar programs⁶ and thereby

maintain market share in listed securities.

The Program works as follows:

Nasdaq calculates two separate pools of revenue from which credits can be earned: one representing 40% of the gross revenues received by the NASD from the CTA for providing trade reports in NYSE-listed securities executed in the InterMarket for dissemination by CTA (Tape A), and the other representing 40% of the gross revenue received from the CTA for reporting Amex trades (Tape B).

Eligibility for transaction credits is based on concurrent quarterly trading activity. For example, an InterMarket participant that enters the market for Tape A or Tape B securities during a particular quarter and prints an average of 500 daily trades of Tape A securities during the time it is in the market, or that averages 500 Tape B prints during such quarter, would be eligible to receive transaction credits based on its trades during the third quarter. Only those NASD members who continue to average an appropriate daily execution level are eligible for transaction credits and thus able to receive a pro-rata portion of the appropriate pool.⁷ These thresholds permit the NASD to recover appropriate administrative costs related to NASD members that do not exceed the threshold and to provide an incentive for NASD members to actively trade in these securities.

The current Program will expire on December 31, 2000. Because the Program has helped Nasdaq maintain market share in listed securities, Nasdaq proposes to extend the current Program through the first quarter of 2001. Nasdaq's transaction credit program is being proposed on a pilot basis only. There can be no guarantee that transaction credits will be available to qualifying NASD members beyond the term of the pilot.

2. Statutory Basis

Nasdaq believes the proposed rule change is consistent with section 15A(b)(6) of the Act⁸ in the proposal is designed to promote just and equitable principles of trade and to remove impediments to and perfect the mechanism of a national market system and, in general, to protect investors and the public interest. Nasdaq also believes

⁴ The transaction credit can be applied to any and all charges imposed by the NASD or its non-self-regulatory organization affiliates. Any remaining balance may be paid directly to the member.

⁵ See Securities Exchange Act Release No. 41174 (March 16, 1999), 64 FR 14034 (March 23, 1999) (SR-NASD-99-13). The Program was subsequently extended. See Securities Exchange Act Release Nos. 42095 (November 3, 1999), 64 FR 61680 (November 12, 1999) (SR-NASD-99-59); 42672 (April 12, 2000), 65 FR 21225 (April 20, 2000) (SR-NASD-00-10); and 42907 (June 7, 2000), 65 FR 37445 (June 14, 2000) (SR-NASD-00-32).

⁶ See Securities Exchange Act Release No. 38237 (February 4, 1997), 62 FR 6592 (February 12, 1997) (SR-CHX-97-01) and 39395 (December 3, 1997), 62 FR 65113 (December 10, 1997) (SR-CSE-97-12).

⁷ As explained in Nasdaq's original pilot filing, the qualification thresholds were selected based on Nasdaq's belief that such numbers represent clear examples of a member's commitment to operating in the InterMarket and competing for order flow. See Securities Exchange Act Release No. 41174 (March 16, 1999), 64 FR 14034 (March 23, 1999) (SR-NASD-99-13).

⁸ 15 U.S.C. 78o-3(b)(6).

the proposal is consistent with Section 15A(b)(5) of the Act⁹ in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility of system which the Association operates or controls.

B. Self-Regulatory Organization's Statement on Burden on Competition

Nasdaq does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The proposed rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act¹⁰ and subparagraph (f)(2) of Rule 19b-4 thereunder,¹¹ because it establishes or changes a due, fee, or other charge imposed by the Association. At any time within 60 days of the filing of the proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549-0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in

the Commission's Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the NASD. All submissions should refer to file number SR-NASD-00-72 and should be submitted by February 8, 2001.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.¹²

Margaret H. McFarland,

Deputy Secretary.

[FR Doc. 01-1410 Filed 1-17-01; 8:45 am]

BILLING CODE 8010-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-43822; File No. SR-PHLX-01-01]

Self-Regulatory Organizations; Notice of Filing of Proposed Rule Change by the Philadelphia Stock Exchange, Inc. Relating to the Dissemination of Options Quotations With Size

January 8, 2001.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on January 8, 2001, the Philadelphia Stock Exchange, Inc. ("Phlx" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Phlx. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Phlx, pursuant to Rule 19b-4 of the Act, proposes to amend, on a temporary basis, Exchange Options Floor Procedure Advice ("OFPA") F-7, Bids and Offers, to state that the size of any bid or offer in a quotation disseminated by the Exchange shall be equal to the AUTO-X guarantee for the quoted option and shall be firm, except that the disseminated size of bids and offers of customer limit orders shall be ten (10) contracts and shall be firm, regardless of the actual size of such orders.

The complete text of the proposed rule change is available at the Office of the Secretary, Phlx and at the Commission.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Phlx included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Phlx has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to codify the Exchange's initial program for the dissemination of options quotations with size. It is anticipated that, on or about January 22, 2001, the Option Price Reporting Authority ("OPRA") will begin to support the dissemination of options quotations that include the size, or the number of contracts, represented in disseminated bids and offers on the Exchange.

On November 17, 2000, the Commission amended the Quote Rule³ to require options exchanges and options market makers to publish firm quotes. The amended Quote Rule will require options exchanges to either: (1) Comply with the Quote Rule as it applies in the equity markets and collect from their members and make available to vendors the size associated with each quotation; or (2) establish by rule and periodically publish the quotation size for which their members' quotations are firm. The compliance date for the amendments to the Quote Rule is April 1, 2000.

While it is anticipated that OPRA will have the necessary systems capacity to accept and disseminate quotations with size by late January 2001, and that one or more options exchanges will be in a position to disseminate actual quotation size at that time, the Phlx will not have completed its application of the systems changes necessary to permit it to disseminate actual quotation size for a number of months.

Therefore, until the Exchange's systems disseminate actual quotation size on a quote-by-quote basis, the Phlx seeks herein to establish by rule and

¹⁰ 15 U.S.C. 78s(b)(3)(A)(ii).

¹¹ 17 CFR 240.19b-4(f)(2).

¹² 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ Exchange Act Rule 11Ac1-1; 17 CFR 240.11Ac1-1; see Securities Exchange Act Release No. 43591 (November 17, 2000), 65 FR 75439 (December 1, 2000) (File No. S7-17-00).

periodically publish, on its web site and through regulatory circulars to Exchange members and member organizations, the quotation size for which its members' quotations are firm as required by Rule 11Ac1-1(d)(1)(i) under the Act.⁴

In addition, the Exchange proposes to voluntarily disseminate to OPRA the applicable automatic execution size guarantee for each quoted option, except that with respect to customer limit orders the Phlx would disseminate a size of 10 contracts, regardless of the actual size of the customer order. In all cases, the Phlx would be firm for its disseminated quotation size (without regard to whether the given order would be eligible for automatic execution via the Exchange's automatic execution feature, AUTO-X).⁵

Until the Phlx has completed its application of the systems changes necessary to automatically update its quotation size on a continuous basis, the Phlx believes that the instant proposal represents a vast improvement over the current system, by increasing transparency and providing the market place with considerably more information upon which to base order routing decisions.

Finally, the Phlx expects to begin providing quotations with actual size on a floor-wide basis within one year. The Exchange will undertake to submit a further proposed rule change when the Exchange is able to disseminate actual size associated with its options quotes and customer limit orders.

The instant proposed rule change does not affect in any respect the Exchange's obligations concerning non-public customer orders.⁶ Prior to the April 1, 2001 mandatory compliance date of the amended Quote Rule, the Exchange will establish firm quote requirements with respect to broker-dealers, as required by the amended Quote Rule.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6 of the Act⁷ in general, and in particular, with Section 6(b)(5),⁸ in that

it is designed to perfect the mechanism of a free and open market and a national market system, protect investors and the public interest and promote just and equitable principles of trade by increasing transparency and providing the market place with considerably more information upon which to base order routing decisions.

Finally, after consultation with Commission staff, the Phlx believes that the proposed rule change described in this filing, including permitting SQF users to disseminate actual size when they are able to do so (as described in Footnote No. 5) is consistent with the amended Quote Rule.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Phlx does not believe that the proposed rule change will impose any inappropriate burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days or such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Phlx consents, the Commission will:

(A) By order approve such proposed rule change, or,

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549-0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the

public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the Phlx. All submissions should refer to file No. SR-Phlx-01-01 and should be submitted by February 8, 2001.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.⁹

Margaret H. McFarland,
Deputy Secretary.

DEPARTMENT OF STATE

[Public Notice 3549]

Culturally Significant Objects Imported for Exhibition; Determinations: **"Gauguin's Nirvana: Portrait of Meyer de Haan"**

AGENCY: United States Department of State.

ACTION: Notice.

SUMMARY: Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985, 22 U.S.C. 2459), the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, and Delegation of Authority No. 236 of October 19, 1999, as amended, I hereby determine that the objects to be included in the exhibition "Gauguin's Nirvana: Portrait of Meyer de Haan" imported from abroad for the temporary exhibition without profit within the United States, are of cultural significance. These objects are imported pursuant to loan agreements with the foreign lenders. I also determine that the exhibition or display of the exhibit objects at the Wadsworth Atheneum Museum of Art, Hartford, CT from on or about January 26, 2001, through on or about April 29, 2001, is in the national interest. Public Notice of these Determinations is ordered to be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of exhibit objects, contact Jacqueline Caldwell, Attorney-Adviser, Office of the Legal Adviser, U.S. Department of State (telephone: 202/619-6982). The address is U.S. Department of State, SA-

Overseas Security Advisory Council (OSAC) Meeting Notice; Closed Meeting

The Department of State announces a meeting of the U.S. State Department—Overseas Security Advisory Council on February 13, 14, and 15, in San Diego, California. Pursuant to Section 10(d) of the Federal Advisory Committee Act and 5 U.S.C. 552b(c)(1) and (4), it has been determined the meeting will be closed to the public. Matters relative to classified national security information as well as privileged commercial information will be discussed. The agenda will include updated committee reports, a world threat overview and a round table discussion that calls for the discussion of classified and corporate proprietary/security information as well as private sector physical and procedural security policies and protective programs at sensitive U.S. Government and private sector locations overseas.

For more information contact Marsha Thurman, Overseas Security Advisory Council, Department of State, Washington, D.C. 20522-1003, phone: 202-663-0533.

Dated: January 10, 2001.

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

Notice of Meeting of the Industry Sector Advisory Committee on Small and Minority Business (ISAC-14)

AGENCY: Office of the United States
Trade Representative.

ACTION: Notice of meeting.

SUMMARY: The Industry Sector Advisory Committee on small and Minority Business will hold a meeting on January 29, 2001, from 9:15 a.m. to 3 p.m. The meeting will be opened to the public from 9:15 a.m. to 3 p.m.

DATES: The meeting is scheduled for January 29, 2001, unless otherwise notified.

ADDRESSES: The meeting will be held at the Department of Commerce, Conference room 4830, located at 14th Street between Pennsylvania and Constitution Avenues, NW., Washington, DC.

FOR FURTHER INFORMATION CONTACT:

Millie Sjoberg, (202) 482-4792, Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230 (principal contact), or Dominic Bianchi, Office of the United States Trade Representative, 1724 F Street, NW., Washington, D.C. 20508, (202) 395-6120.

SUPPLEMENTARY INFORMATION: The following topics will be discussed:

- Discussion on 2001 APEC Small and Medium-sized enterprise (SME) Ministerial;
- Discussion on 2001 Summit of the Americas;
- Discussion on infrastructure security;
- Discussion on trade finance;
- Discussion on customs issues;
- Discussion on electronic commerce;
- Discussion on SME advocacy and outreach; and,
- Committee business.

BILLING CODE 3190-01-M

DEPARTMENT OF TRANSPORTATION

Coast Guard

[USCG-2001-8660]

Random Drug Testing Rate for Covered Crewmembers

AGENCY: Coast Guard, DOT.

ACTION: Notice of minimum random drug testing rate.

SUMMARY: The Coast Guard has set the calendar year 2001 minimum random drug testing rate at 50 percent of covered crewmembers. An evaluation of the 1999 Management Information System (MIS) data collection forms submitted by marine employers determined that random drug testing on covered crewmembers for the calendar year 1999 resulted in positive test results 1.7 percent of the time. Based on this percentage, we will maintain the minimum random drug testing rate at 50 percent of covered crewmembers for the calendar year 2001.

DATES: The minimum random drug testing rate is effective January 1, 2001 through December 31, 2001. You must submit your 2000 MIS reports no later than March 15, 2001.

ADDRESSES: You must mail your annual MIS report to Commandant (G-MOA), U.S. Coast Guard Headquarters, 2100 Second Street SW., Room 2403, Washington, DC 20593-0001.

FOR FURTHER INFORMATION CONTACT: For questions about this notice, please contact Lieutenant Jennifer Ledbetter, Project Manager, Office of Investigations and Analysis (G-MOA), U.S. Coast Guard Headquarters, telephone 202-267-0684.

SUPPLEMENTARY INFORMATION: Under 46 CFR 16.230, the Coast Guard requires marine employers to establish random drug testing programs for covered crewmembers on inspected and uninspected vessels. All marine employers are required to collect and

maintain a record of drug testing program data for each calendar year, January 1 through December 31. You must submit this data to the Coast Guard in an annual MIS report (Form CG-5573 found in appendix B of 46 CFR 16). You may either submit your own MIS report or have a consortium or other employer representative submit the data in a consolidated MIS report. The chemical drug testing data is essential to analyze our current approach for deterring and detecting illegal drug abuse in the maritime industry.

Since 1999 MIS data indicates that the positive random testing rate is greater than one percent industry-wide (1.7 percent), the Coast Guard announces that the minimum random drug testing rate is set at 50 percent of covered employees for the period of January 1, 2001 through December 31, 2001 in accordance with 46 CFR 16.230(e).

You must submit your MIS report to the Coast Guard no later than March 15 of each calendar year. Each year we will publish a notice reporting the results of the previous calendar year's MIS data, and the minimum annual percentage rate for random drug testing for the next calendar year.

Dated: January 8, 2001.

R.C. North,

Rear Admiral, U.S. Coast Guard, Assistant Commandant for Marine Safety and Environmental Protection.

BILLING CODE 4910-15-M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Aviation Rulemaking Advisory Committee and Executive Committee; Meetings

AGENCY: Federal Aviation Administration (FAA), DOT,

ACTION: Notice of meeting.

SUMMARY: The FAA is issuing this notice to advise the public of a meeting of the full Aviation Rulemaking Advisory Committee (ARAC) and Executive Committee of the Federal Aviation Administration's Aviation Rulemaking Advisory Committee. It has been nearly ten years since the last full committee meeting and the membership has expanded considerably since that time. The purpose of the meeting is to bring the full Committee together to discuss operational procedures, the future vision for ARAC, and committee accomplishments.

DATES: The full ARAC meeting will be held February 7, 2001, from 10 a.m.-12 Noon and the Executive Committee will begin at 1 p.m.

ADDRESSES: The meeting will be held at the Hyatt Regency Crystal City, 2799 Jefferson Davis Highway, Arlington, VA 22202.

FOR FURTHER INFORMATION CONTACT:

Gerri Robinson, Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591, telephone (202) 267-9678; fax (202) 267-5075; e-mail Gerri.Robinson@faa.gov.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463; 5 U.S.C. App. II), notice is hereby given of a meeting of the full Aviation Rulemaking Advisory Committee and the Aviation Rulemaking Advisory Committee Executive Committee to be held on February 7, 2001, at Hyatt Regency Crystal City. The agenda will include:

Full ARAC Committee Meeting, 10 a.m.-12 Noon:

- Welcome and introductions—Anthony Fazio, Executive Director, and Albert Prest, Chair.

- Remarks—Thomas E. McSweeney, Association Administrator for Regulation and Certification, Federal Aviation Administration.

- Federal Advisory Committee Act (FACA) requirements.

- Roles/Responsibilities.

- Public accessibility to ARAC information.

- Scheduled comments and statements to the committee.

- Adjournment.

Executive Committee Meeting, 1:00 p.m.

- Review and approval of previous meeting minutes.

- Status Report Fuel Tank Inerting working group.

- Status Report from Assistant Chairs.

- Remarks from other EXCOM members.

- Proposed meetings dates for CY 2001: May 9, August 8, and Nov. 7.

Attendance is open to the interested public but will be limited to the space available. Please contact the person listed under the heading **FOR FURTHER INFORMATION CONTACT** by January 31, 2001, if you plan to attend either of these meetings, plan to present a verbal statement, or you are in need of assistance or require a reasonable accommodation for this meeting. Requests to present a verbal statement should include a written summary of the remarks. Please focus your remarks and/or statements on the operations of ARAC, specific activities, projects or

goals of the advisory committee, and benefits to the aviation public.

Individuals making verbal presentations or providing written statements at either meeting should bring at least 25 copies of the written material to the meeting. Copies of the materials may be provided to the audience at the discretion of the submitter.

The Committee will try to accommodate all speakers. Each speaker will be limited to no more than a 5-minute presentation. If available time does not permit this, speakers generally will be scheduled on a first-come-first-served basis. However, ARAC leadership reserves the right to exclude some speakers, if necessary, to present a balance of viewpoints and issues.

Issued in Washington, DC, on January 11, 2001.

Anthony F. Fazio,

Executive Director, Aviation Rulemaking Advisory Committee.

BILLING CODE 4910-13-M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent To Rule on Application To Impose and Use the Revenue From a Passenger Facility Charge (PFC) at Cincinnati/Northern Kentucky International Airport, Covington, KY

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent to rule on application.

SUMMARY: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Cincinnati/Northern Kentucky International Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101-508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

DATES: Comments must be received on or before February 20, 2001.

ADDRESSES: Comments on this application may be mailed or delivered in triplicate to the FAA at the following address: Memphis Airports District Office, 3385 Airways Boulevard, Suite 302, Memphis, Tennessee 38116-3841.

In addition, one copy of any comments submitted to the FAA must be mailed or delivered to Mr. Robert F. Holscher, Director of Aviation of the Kenton County Airport Board at the

following address: P.O. Box 752000, Cincinnati, Ohio 45275-2000.

Air carriers and foreign air carriers may submit copies of written comments previously provided to the Kenton County Airport Board under section 158.23 of Part 158.

FOR FURTHER INFORMATION CONTACT: Mr. Jerry O. Bowers, Program Manager, Memphis Airports District Office, 3385 Airways Boulevard, Suite 302, Memphis, Tennessee 38116-3841, (901) 544-3495, Extension 21. The application may be reviewed in person at this same location.

SUPPLEMENTARY INFORMATION: The FAA proposes to rule and invites public comment on the application to impose and use the revenue from a PFC at Cincinnati/Northern Kentucky International Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101-508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

On January 10, 2001, the FAA determined that the application to impose and use the revenue from a PFC submitted by Kenton County Airport Board was substantially complete within the requirements of section 158.25 of Part 158. The FAA will approve or disapprove the application, in whole or in part, no later than April 26, 2001.

The following is a brief overview of the application.

PFC Application No.: 01-06-C-00-CVG.

Level of the proposed PFC: \$3.00.

Proposed charge effective date: July 1, 2001.

Proposed charge expiration date: March 1, 2002.

Total estimated net PFC revenue: \$22,216,000.

Brief description of proposed project(s): Implement Noise Compatibility Program (NCP) Measures—1999 Part 150 Study Update, Construct Upgrade to Aircraft Rescue and Firefighting (ARFF) Facility, Close South Detention Basin, and Acquire FAR 107.14 Security Access System—reimbursement for original acquisition.

Class or classes of air carriers which the public agency has requested not be required to collect PFCs: (1) FAR Part 121 supplemental operators which operate at the Airport without an operating agreement with the Board and enplane less than 1,500 passengers per year and (2) Part 135 on-demand air taxis, both fixed wing and rotary.

Any person may inspect the application in person at the FAA office

listed above under **FOR FURTHER INFORMATION CONTACT**.

In addition, any person may, upon request, inspect the application, notice and other documents germane to the application in person at the Kenton County Airport Board.

Issued in Memphis, Tennessee on January 10, 2001.

LaVerne F. Reid,

Manager, Memphis Airports District Office, Southern Region.

Federal Aviation Administration

Notice of Intent To Rule on Application To Use and To Impose and Use the Revenue From a Passenger Facility Charge (PFC) at Meadows Field Airport, Bakersfield, CA

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent to rule on application.

SUMMARY: The FAA proposes to rule and invites public comment on the application to use and to impose and use the revenue from a PFC at Meadows Field Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101-508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158).

DATES: Comments must be received on or before February 20, 2001.

ADDRESSES: Comments on this application may be mailed or delivered in triplicate to the FAA at the following address: Airports Division, 15000 Aviation Blvd., Room 3024, Lawndale, CA 90261. In addition, one copy of any comments submitted to the FAA must be mailed or delivered to Mr. Raymond Bishop, Director of Airports of the county of Kern at the following address: 1401 Skyway Drive, Suite 200, Bakersfield, CA 93308. Air carriers and foreign air carriers may submit copies of written comments previously provided to the county of Kern under section 158.23 of Part 158.

FOR FURTHER INFORMATION CONTACT: Mr. David Delshad, Airports Program Engineer, Standards Section, Airports Division, 15000 Aviation Blvd., Room 3024, Lawndale, CA 90261, Telephone: (310) 725-3627. The application may be reviewed in person at this same location.

SUPPLEMENTARY INFORMATION: The FAA proposes to rule and invites public comment on the application to use and to impose and use the revenue from a PFC at Meadows Field Airport under the provisions of the Aviation Safety and Capacity Expansion Act of 1990 (Title IX of the Omnibus Budget Reconciliation Act of 1990) (Pub. L. 101-508) and Part 158 of the Federal Aviation Regulations (14 CFR Part 158). On December 15, 2000, the FAA determined that the application to use and to impose and use the revenue from a PFC submitted by the county of Kern was substantially complete within the requirements of § 158.25 of Part 158. The FAA will approve or disapprove the application, in whole or in part, no later than March 17, 2001. The following is a brief overview of the application.

Project No. 1 (use project)

Level of proposed PFC: \$3.00.

Charge effective date: January 1, 2000.

Proposed charge expiration date: May 1, 2002.

Total estimated PFC revenue: \$317,000.

Brief description of proposed project: Land acquisition for Airport Expansion Project No. 2 (impose and use project).

Level of Proposed PFC: \$4.50.

Proposed charge effective date: June 1, 2001.

Proposed charge expiration date: February 1, 2014.

Total estimated PFC revenue: \$9,086,000.

Brief description of proposed project: Construct new passenger terminal Class or classes of air carriers which the public agency has requested not be required to collect PFCs: None.

Any person may inspect the application in person at the FAA office listed above under **FOR FURTHER INFORMATION CONTACT**. In addition, any person may, upon request, inspect the application, notice and other documents germane to the application in person at the Meadows Field Airport Administration Office.

Issued in Hawthorne, California, on December 22, 2000.

Ellsworth Chan,

Acting Manager, Airports Division Western-Pacific Region.

[FR Doc. 01-1552 Filed 1-17-01; 8:45 am]

BILLING CODE 4910-13-M

ACTION: Notice of Intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an environmental impact statement will be prepared for a proposed road project in King County, Washington.

FOR FURTHER INFORMATION CONTACT: Elizabeth Healy, Transportation and Environmental Engineer, Federal Highway Administration, 711 South Capitol Way, Suite 501, Olympia, Washington 98501-1284, Telephone: (360) 534-9323 or Alan Andree, Senior Engineer, King County, Road Services Division, Department of Transportation, King Street Center M.S. KSC-TR-0231, 201 South Jackson Street, Seattle, WA 98104-3856, Telephone: (206) 296-8086.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the Washington State Department of Transportation and King County Department of Transportation, will prepare an environmental impact statement (EIS) on a proposal to improve a portion of Northwest Novelty Hill Road in King County, Washington. The proposed improvement to the Northeast Novelty Hill Road would involve improvements to the road, and would include stormwater detention facilities, safety improvements and pedestrian, equestrian and bicycle facilities. The project is located between Avondale Road Northeast and the Redmond Ridge (formerly Northridge and Blakely Ridge) urban planned developments, including intersection improvements at 243rd Avenue Northeast, an approximately three mile long corridor.

Improvements to the road are considered necessary to reduce anticipated traffic congestion and improve safety by increasing vehicle capacity and providing improved pedestrian and bicycle facilities. Alternatives under consideration include (1) taking no action; (2) constructing a three-lane road; (3) constructing a five-lane road. Incorporated into and studied with the various build alternatives will be design variations of grade and alignment.

Letters describing the proposed action and soliciting comments will be sent to appropriate Federal, State, and local agencies, and to private organizations and citizens who have previously expressed or are known to have interest in this proposal. A series of public meetings will be held in King County between January 2001 and February 2002. In addition, a public hearing will be held. Public notice of actions related to the proposal which identify the date,

time and place of the meetings and hearings, and note the length of review periods will be published when appropriate. The draft EIS will be available for public and agency review and comment prior to the public hearing. A formal scoping meeting is planned for Tuesday, January 23, 2001 and will be announced in the local news media and through a public mailing.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments, and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA at the address provided above.

Issued on: January 9, 2001.

Elizabeth Healy,

Transportation and Environmental Engineer, Olympia, Washington.

[FR Doc. 01-1508 Filed 1-17-01; 8:45 am]

BILLING CODE 4910-22-M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: King County, WA

AGENCY: Federal Highway Administration, King County, Washington.

ACTION: Notice of intent to prepare an environmental impact statement.

SUMMARY: The FHWA is issuing this notice to advise the public that a joint NEPA/SEPA Environmental Impact Statement will be prepared for a proposed bicycle/pedestrian trail. The trail would be located primarily along a former rail corridor on the east side of Lake Sammamish between the Cities of Issaquah and Redmond in King County, Washington. The EIS will be prepared in conjunction with King County Department of Construction and Facilities Management.

FOR FURTHER INFORMATION CONTACT: Elizabeth Healy, Transportation and Environmental Engineer, Federal Highway Administration, 711 S. Capitol Way, Suite 501, Olympia, WA 98501, Telephone (360) 753-9480; or Ms. Robin Cole, Project Manager, King County Department of Construction and Facilities Management, 500 Fourth

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: King County, WA

AGENCY: Federal Highway Administration (FHWA), DOT.

Avenue, Room 320, Seattle, WA 98104, Telephone (206) 296-4261.

SUPPLEMENTARY INFORMATION: The purpose of the proposed project is to design and construct a multi-use recreational trail and alternative transportation corridor primarily within the 10.8-mile former Burlington-Northern Santa Fe rail corridor, and to protect the federal railbanking status of the corridor, which was granted in September 1998. This East Lake Sammamish Trail would extend along the east side of Lake Sammamish from Redmond to Issaquah, linking King County's Marymoor Park and West Lake Sammamish Trail to Lake Sammamish State Park and other local and regional trails.

At this time, three alternatives are being considered: a No Action alternative, use of primarily the existing railbed with some off-railbed use, and use of the existing rail corridor with some off-corridor use. The range of alternatives may, however, be modified as a result of public involvement process.

Potential Environmental Issues

King County has conducted a community outreach and preliminary environmental evaluation process. As a result, the County and FHWA have identified the following areas of potentially significant environmental impacts associated with the proposed project: surface water, geology and soils, noise, land and shoreline use, vegetation, wildlife, fisheries, public services and utilities, transportation, safety, recreation, and aesthetics. Additional areas of potential impact may be identified during public involvement.

Public Involvement and Scoping Meetings

During spring and summer 2000, Neighborhood Vision Workshops and User Group Workshops were held by King County to gather information from neighbors of the trail and potential user groups including cyclists, runners, pedestrians, and equestrians.

King County held a public SEPA scoping meeting on November 15, 2000 to provide an opportunity for the public to help the project team identify issues for consideration and evaluation in the environmental review process. The meeting was held at the Inglewood Junior High School, 24120 NE 8th, Redmond, WA 98053.

A public scoping meeting will be held on February 20, 2001 to provide additional opportunity to ensure that proposed alternatives respond to previous input and are comprehensive.

Notice of this meeting was also published in local newspapers, including the Seattle Times, the Eastside Journal, and the Issaquah Press. The February 20th scoping meeting will be held at: Skyline High School (Commons Area), 1122-228th Avenue SE, Sammamish, WA 98075, from 6:00 p.m. to 8:30 p.m.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments, and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the EIS should be directed to the FHWA at the address provided above.

BILLING CODE 4910-22-M

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Petition for Waiver of Compliance

In accordance with part 211 of title 49 Code of Federal Regulations (CFR), notice is hereby given that the Federal Railroad Administration (FRA) received a request for a waiver of compliance with certain requirements of its safety standards. The individual petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

Battle Ground, Yacolt & Chelatchie Prairie Railroad

[Docket Number FRA-2000-8501]

The Battle Ground, Yacolt & Chelatchie Prairie Railroad seeks a permanent waiver of compliance with the Safety Glazing Standards, 49 CFR part 223.1(c) which requires certified glazing in all locomotive windows, with the exception of locomotives used in yard service.

The Battle Ground, Yacolt & Chelatchie Prairie Railroad seeks relief for locomotive number 112 (AAR number designation pending), built in 1951 by American Locomotive Company (ALCO) for the Longview,

Portland and Northern Railroad. This locomotive is currently equipped with Duolite A25, Duolite A5 110, Safety Sheeting AS2 Laminated M91 and Laminated Auto Safety Glazing. The operating railroad indicates that the locomotive will be utilized in passenger excursion service between Battle Ground, Washington (MP 14) and Chelatchie, Washington (MP 33).

All communications concerning these proceedings should identify the appropriate docket number (e.g., Waiver Petition Docket Number FRA-2000-8501 and must be submitted to the Docket Clerk, DOT Central Docket Management Facility, Room PL-401, Washington, DC 20590-0001. Communications received within 45 days of the date of this notice will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable. All written communications concerning these proceedings are available for examination during regular business hours (9 a.m.-5 p.m.) at the above facility. All documents in the public docket are also available for inspection and copying on the Internet at the docket facility's Web site at <http://dms.dot.gov>.

Issued in Washington, DC on January 10, 2001.

Grady C. Cothen, Jr.,

Deputy Associate Administrator for Safety Standards and Program Development.

BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Waiver Petition Docket Number FRA-2000-8268]

Petition for Waivers of Compliance

In accordance with 49 CFR §§ 211.9 and 211.41, notice is hereby given that the Federal Railroad Administration (FRA) has received a request for a waiver of compliance with certain requirements of the Federal safety laws and regulations. The petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

Burlington Northern Santa Fe Railway Company

Burlington Northern Santa Fe Railway (BNSF) seeks a permanent waiver of compliance from certain requirements of 49 CFR part 229 (Railroad Locomotive Safety Standards) for a

select group of C-44-9W locomotives, road numbers BNSF 700-799, 960-1123, 4300-4999, and 5370-5499. Specifically, BNSF requests a waiver from 49 CFR 229.23(a), which requires that the interval between any two periodic inspections may not exceed 92 days. BNSF proposes to extend this interval to 122 days on this group of locomotives.

In support of this proposal BNSF states: "These locomotives contain the industry's latest technology in the areas of safety and reliability, are microprocessor controlled and equipped with New York Air Brake Corporation computer controlled brakes." They cite calendar day inspections and other inspections that are done every 3 to 4 days which will help ensure safe operation. Since April 1, 1999, they have been performing periodic inspections every 61 days. They estimate that they have had a 0.87% defect rate after 61 days. In conclusion BNSF states: "Extending the periodic maintenance interval from 92 to 122 days will not adversely effect the safety or performance of C44-9W locomotives."

Interested parties are invited to participate in these proceedings by submitting written reviews, data, or comments. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request. FRA will schedule a public hearing in connection with these proceedings if the basis is found to be sufficient.

All communications concerning these proceedings should identify the appropriate docket number, (e.g., Waiver Petition Docket Number FRA-2000-8268) and must be submitted to the DOT Docket Management Facility, Room PL-401 (Plaza Level), 400 Seventh Street, SW., Washington, DC 20590. Communications received within 45 days from the date of this notice will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable. All written communications concerning these proceedings are available for examination during regular business hours (9 a.m.-5 p.m.) at the above facility. All documents in the public docket are also available for inspection and copying on the Internet at the docket facility's web site at <http://dms.dot.gov>.

Issued in Washington, DC on January 11, 2001.

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Petition for Waiver of Compliance

In accordance with part 211 of title 49 Code of Federal Regulations (CFR), notice is hereby given that the Federal Railroad Administration (FRA) received a request for a waiver of compliance with certain requirements of its safety standards. The individual petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

Carthage, Knightstown & Shirley Railroad Company

[Docket Number FRA-2000-8364]

The Carthage, Knightstown & Shirley Railroad Company (CKSI) seeks a permanent waiver of compliance for two locomotives from the requirements of the Safety Glazing Standards, 49 CFR part 223, which requires certified glazing in all locomotive windows, except those locomotives used in yard service. The railroad indicates that the locomotives number CKSI 468 and CKSI 215 are General Electric 45 ton center cab locomotives used passenger excursion service through mostly rural areas, 10 mile round trip in the Knightstown, Indiana area. The railroad operates May through October, on weekends, Friday, Saturday, and Sunday.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number (e.g., Waiver Petition Docket Number FRA-2000-8364) and must be submitted in triplicate to the Docket Clerk, DOT Central Docket Management Facility, Room PL-401, Washington, DC 20590-

0001. Communications received within 45 days of the date of this notice will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable. DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Petition for Waiver of Compliance

In accordance with part 211 of title 49 Code of Federal Regulations (CFR), notice is hereby given that the Federal Railroad Administration (FRA) received a request for a waiver of compliance with certain requirements of its safety standards. The individual petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

Massena Terminal Railroad Company

[Docket Number FRA-2000-7949]

Massena Terminal Railroad Company (MSTR) seeks a permanent waiver of compliance with the Railroad Safety Appliance Standards, 49 CFR part 231.28(a) Running Boards, which references 231.1(c) Running Boards: (1) Number—One longitudinal running board; (2) Dimensions—Longitudinal running board shall be not less than 18 and preferably 20 inches in width; and (3) Location—Full length of car, center of roof.

MSTR is seeking relief for 75 Aluminum Covered Hopper Cars that were originally designed with 10 hatch covers, five down each side, and a running board positioned down the center of the car. Due to financial considerations MSTR has recently contracted with a facility, for the loading and unloading of these cars, that cannot accommodate this design. To facilitate the loading process MSTR has

removed the running boards and positioned six (6) hatches down the center of the car. MSTR states that the loading facility employees access the roof via a permanent platform built to the same height as the car roof. They further claim that the cars are repaired at a site with a similar platform and to their knowledge no one else mounts the top of the car, therefore the running boards are unnecessary. They contend that the running boards would create a tripping hazard if applied down each side of the car roof as is currently the case with other covered hoppers with center mounted hatches. MSTR also cites cost and time constraints in relocating the running board as this would require removing two more hatch covers, welding aluminum plates over the hatches and remounting the running boards on the outside of the cars.

All communications concerning these proceedings should identify the appropriate docket number (e.g., Waiver Petition Docket Number FRA-2000-7949) and must be submitted to the Docket Clerk, DOT Central Docket Management Facility, Room P1-401 (Plaza Level), 400 Seventh Street, SW., Washington, DC 20590-0001. Communications received within 45 days of the date of this notice will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable. All written communications concerning these proceedings are available for examination during regular business hours (9 a.m.-5 p.m.) at the above facility. All documents in the public docket are also available for inspection and copying on the Internet at the docket facility's Web site at <http://dms.dot.gov>.

Petition for Waiver of Compliance

In accordance with part 211 of title 49 Code of Federal Regulations (CFR), notice is hereby given that the Federal Railroad Administration (FRA) received a request for a waiver of compliance with certain requirements of its safety standards. The individual petition is described below, including the party seeking relief, the regulatory provisions

involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

Blacklands Railroad

[Docket Number FRA-2000-8366]

The Blacklands Railroad (BLR) of Sulphur Springs, Texas, has petitioned for a permanent waiver of compliance for one locomotive from the requirements of Safety Glazing Standards, 49 CFR part 223, which requires certified glazing. The BLR is located in Sulphur Springs, Texas. The BLR states that this locomotive is used in light switching service and operates over 65 miles of track, from Greenville, TX, through Commerce, Sulphur Springs, TX. It also states that it has an additional 10 miles of trackage rights over the Union Pacific Railroad for interchange in their Mt. Pleasant yard. The average track speed is 10-15 miles per hour with a maximum speed of 20 miles per hour.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

The individual petition is described below, including the party seeking relief, the regulatory provisions involved, the nature of the relief being requested, and the petitioner's arguments in favor of relief.

Oil Creek & Titusville Lines

The Oil Creek & Titusville Lines (OCTL), seeks a waiver of compliance from certain provisions of the Safety Glazing Standards, 49 CFR 223, which requires certified glazing, for one locomotive. The OCTL is located in Titusville, Pennsylvania. The OCTL states they operate a short line freight operation and additionally an excursion railroad operation over 15.8 miles of track through rural countryside and one community on an average of two (2) round trips per week freight and three (3) round trips per week for passenger excursions.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-00-7638; Notice 2]

Recommendations for Establishing Global Technical Regulations Under the United Nations/Economic Commission for Europe 1998 Global Agreement; Motor Vehicle Safety

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation.

ACTION: NHTSA's recommendations to WP.29 for regulations to be considered under the 1998 Global Agreement.

SUMMARY: In July 2000, NHTSA published a notice seeking comments on its preliminary recommendations for the first motor vehicle safety technical regulations to be considered for establishment under the United Nations Economic Commission for Europe 1998 Global Agreement. NHTSA has reviewed and considered all public comments submitted in response to the notice and has prepared final recommendations to present to the World Forum for the Harmonization of Vehicle Regulations (WP.29) at the March 2001 meeting in Geneva. NHTSA will use the recommendations in deliberating with other Contracting Parties concerning the adoption of a program of work under the 1998 Global Agreement.

FOR FURTHER INFORMATION CONTACT: For technical and policy issues: Ms. Julie Abraham, Director, Office of International Policy and Harmonization, National Highway Traffic Safety Administration, 400 Seventh Street, SW, Washington, DC 20590. Telephone: (202) 366-2114. Fax: (202) 366-2559.

For legal issues: Nancy Bell, Attorney Advisor, Office of the Chief Counsel, NCC-20, National Highway Traffic Safety Administration, 400 Seventh Street, SW, Washington, DC 20590. Telephone: (202) 366-2992. Fax: (202) 366-3820.

SUPPLEMENTARY INFORMATION: You may read the materials placed in Docket No.

NHTSA-00-7638 (*e.g.*, the comments submitted in response to the request for comments by other interested persons) by visiting the address: Docket Management, Room PL-401, 400 Seventh Street, SW., Washington, DC, 20590. The hours of the Docket Management System (DMS) are indicated above in the same location. Alternatively, you may read the materials electronically on the Internet. To do so, take the following steps:

(1) Go to the Web page of the Department of Transportation DMS (<http://dms.dot.gov/>).

(2) On that page, click on "search" near the top of the page or scroll down to the words "Search the DMS Web" and click on them.

(3) On the next page (<http://dms.dot.gov/search/>), scroll down to "Docket Number" and type in the four-digit docket number (7638) shown in the title at the beginning of this notice. After typing the docket number, click on "search."

(4) On the next page ("Docket Summary Information"), which contains docket summary information for the materials in the docket you selected, scroll down to "search results" and click on the desired materials. You may download the materials.

Table of Contents

I. Background

II. NHTSA's Final Recommendations to WP.29

A. Consideration of Comments

B. Recommended Priorities

III. Future Actions

I. Background

The U.S. became a signatory to the United Nations/Economic Commission for Europe (UN/ECE) Agreement Concerning the Establishment of Global and Technical Regulations for Wheeled Vehicles, Equipment and Parts Which Can Be Fitted And/or Be Used On Wheeled Vehicles (the "1998 Global Agreement") in June 1998. The 1998 Global Agreement, which entered into force on August 25, 2000, provides for the establishment of global technical regulations regarding the safety, emissions, energy conservation and theft prevention of wheeled vehicles, equipment and parts.¹ The Agreement contains procedures for establishing global technical regulations by either harmonizing existing regulations or developing a new regulation.

On July 18, 2000, in anticipation of the entry into force of the 1998 Global

¹ The covered equipment and parts inside, but are not limited to, exhaust systems, tires, engines, acoustic shields, anti-theft alarms, warning devices and child restraint systems.

Agreement, NHTSA published a notice to obtain public comments on a list of preliminary recommendations of standards or aspects of standards for consideration by Contracting Parties in prioritizing the development and establishment of global technical regulations under the 1998 Global Agreement. (65 Fed. Reg. 44565) In that notice, NHTSA placed its recommendations into two categories based on available information and analysis concerning the relative level of stringency and benefits of U.S. and foreign standards. The first category, the "Priority Recommendations," included some foreign standards or aspects of those standards that may represent best safety practices among existing national and regional regulations and that may lead to the improvement of vehicle safety in the U.S. NHTSA stated that, in allocating agency resources among the priority recommendation, it will give priority to the recommendations in this category. The second category, the "Other Recommendations," included U.S. standards or aspects of standards that may represent best current safety practices and that may lead to improvement of vehicle safety worldwide. NHTSA believes that the standards in this category should obtain international review and feedback and be considered in the establishment of global technical regulations under the 1998 Global Agreement.

In addition to the above mentioned categories, the notice also noted the suggestions that had been received by the United Nations' Economic Commission for Europe World Forum for Development of Global Technical Regulations (WP.29) from the governments of Japan and the Russian Federation and various industry and consumer groups. These suggestions are posted in the NHTSA docket (NHTSA-00-7638).

In response to NHTSA's request for suggestions for changes to its preliminary recommendations, the agency received comments from Advocates for Highway and Auto Safety, the Alliance of Automobile Manufacturers, Flat Glass Manufacturers Association of Japan, Honda, the International Organization of Motor Vehicle Manufacturers (OICA), the Rubber Manufacturers Association, and Toyota.

II. NHTSA's Final Recommendations to WP.29

A. Consideration of Comments

NHTSA has reviewed the comments submitted in response to the July 2000 notice. In addition, NHTSA has

reviewed the suggestions that had been submitted by the governments of Japan and the Russian Federation and various industry and consumer groups to WP.29. These suggestions have been placed in the docket for the request for comments (NHTSA-00-7638).

The majority of those who commented on NHTSA's approach to priority setting indicated that they support NHTSA's approach in principle, but believe that modifications are needed. The reasons for these modifications included: (1) The need to continue work on standards for which resources already have been expended and considerable progress has been made; (2) the need to select regulations that are easier to harmonize from both the technical and the political points of view; (3) the need to include regulations that have been harmonized between Europe and Japan (under the 1958 Agreement); (4) cost-savings to industry and consumers; (5) the list of specific standards under each category is not comprehensive or includes subjects that ought to be removed because of the lack of a clear association with the category; and (6) harmonizing specific aspects of standards is not sufficient.

In response to the comments, NHTSA wishes to clarify its approach to priority setting. NHTSA's statutory mission, and thus the focus of its rulemaking activities, is improving vehicle safety. Accordingly, NHTSA must continue to focus its resources on those standards that improve motor vehicle safety in the U.S.

However, the agency also devotes considerable effort to refining and updating its standards to permit technological innovation, avoid imposing unnecessary regulatory burdens, and improve regulatory effectiveness. Accordingly, NHTSA recognizes the merit in including other standards in the work of WP.29. NHTSA agrees that consideration should be given to including some standards based on the fact that harmonization work is already underway and progress has been made on them. NHTSA itself has already spent considerable resources on some of these standards. With the expenditure of limited additional resources, NHTSA can work with other contracting parties toward their establishment as global technical regulations. NHTSA will also continue to collaborate with other contracting parties to the 1998 Global Agreement on standards of importance to those contracting parties. In addition, NHTSA agrees with including some standards on the basis that it may be easy to harmonize them. NHTSA believes that working on those standards will help

the U.S. and other contracting parties gain experience with the process of the 1998 Global Agreement.

B. Recommended Priorities

NHTSA's recommended priorities are largely unchanged. However, NHTSA has decided to reorganize its recommendations according to the subject matter responsibilities of the WP.29 Working Parties of Experts to examine their potential impact on the workload for each of the Working Parties. Upon reviewing its preliminary recommendations and the specific standards that were recommended by other contracting parties, interest groups or commenters for each of the Working Parties of Experts, NHTSA found that the majority of the standards would be assigned to the Working Party on Passive Safety (GRSP). Therefore, in the interest of promoting a manageable workload, the agency has decided to defer some of its recommendations. In addition, based on the considerations discussed above, NHTSA added Motorcycle Brakes to its list of recommendations for the Working Party on Brakes and Running Gear (GRRF).

NHTSA's final recommendations to WP.29 are categorized below according to the Working Parties of Experts. These recommendations focus on standards that NHTSA believes could be productively worked on in the immediate future. NHTSA will continue to work on several long term projects that are currently underway in NHTSA and are also being coordinated in the International Harmonized Research Activities (IHRA). NHTSA will also reevaluate the list set out below on a regular basis to assess whether a revision is merited.

In announcing its final recommendations, NHTSA wants to reaffirm its commitment to achieving the goals of the National Traffic and Motor Vehicle Safety Act. Further, the agency cautions that its recommendations to WP.29 under the 1998 Global Agreement should not be confused with its more inclusive list of rulemaking activities under the Vehicle Safety Act.

NHTSA's final recommendations to be submitted to WP.29 at the March 2001 meeting.

1. *Working Party on Passive Safety*
 - Head restraints
 - Lower anchorages and tethers for child safety seats
 - Door retention components
 - Dummies (10 year old frontal dummy and 50th percentile side impact dummy)
 - Frontal impact (full/offset) protection

2. *Working Party on Brakes and Running Gears*
 - Tires
 - Motorcycle brakes
3. *Working Party on Lighting and Light-Signaling*
 - Signal lamp visibility
4. *Working Party on General Safety*
 - Windshield wipers and washers
 - Controls and displays
 - Vehicle classification

III. Future Actions

At the March 2001 meeting in Geneva, NHTSA will use its final recommendations in deliberating with the other Contracting Parties to the 1998 Global Agreement about a program of work for the Working Parties of Experts. NHTSA will report to the public on the final outcome of the deliberations after that meeting.

Issued on January 12, 2001.

Rosalyn G. Millman,

Deputy Administrator.

[Docket No. NHTSA-99-6324; Notice 2]

EMB Incorporated; Grant of Application for Temporary Exemption From Federal Motor Vehicle Safety Standards Nos. 108 and 120

This notice grants the application by EMB Incorporated ("EMB") of Sebastopol, California, for a 2-year exemption from portions of Federal Motor Vehicle Safety Standard Nos. 108 *Lamps, Reflective Devices and Associated Equipment*, and 120 *Tire Selection and Rims for Motor Vehicles Other Than Passenger Cars*. The company does business as Electric Motorbike, Inc., and has petitioned on behalf of its Lectra VR24 motorcycle. In the opinion of the company, a temporary exemption "would make the development or field evaluation of a low-emission motor vehicle easier and would not unreasonably lower the safety level of that vehicle" (49 U.S.C. 30113(b)(3)(B)(iii)).

Notice of receipt of the petition was published on July 17, 2000, and an opportunity afforded for comment (65 FR 44092).

The discussion that follows is based on information contained in EMB's application.

Why EMB needs a temporary exemption. The company is developing

zero-emission (electric battery-powered) vehicles. Due to a lack of readily-available components for these vehicles needed to comply with Federal Motor Vehicle Safety Standards Nos. 108 and 120, as explained below, EMB must petition for an exemption from portions of them, until July 1, 2002, as explained below.

EMB's arguments why an exemption would facilitate the development and field evaluation of a low-emission motor vehicle and would not unreasonably degrade the safety of that vehicle. In order to make the company's products available for wider use, EMB believes that a test and development period is necessary to optimize product features and functions. During the development stage, it is likely that several design changes will be made "to optimize the product for acceptance by the wider public."

It is important to place a limited number of the product in service in order to gain insights into the features, functions and operating characteristics of the product.

In order to do so, the petitioner requested the following temporary exemptions:

1. Standard No. 108

EMB utilizes a 24-volt lighting system which presently creates an incompatibility with available lighting equipment, necessitating a temporary exemption from three requirements of Standard No. 108.

Table IV of Standard No. 108 requires motorcycle turn signal lamps to meet the applicable requirements of SAE Standard J588NOV8 *Turn Signal Lamps*. However, section 5.1.1.7 of Standard No. 108 provides that "a motorcycle turn signal lamp need meet only one-half of the minimum photometric values specified in Table 1 and Table 3" of SAE J588NOV84. EMB stated that "turn signals which operate at this voltage are difficult to locate." However, it has found a supplier in Spain "which offers European-compliant turn signals for 24-volt operation." The turn signal unit "meets European requirements 50R E9." EMB believes that the European standard is equivalent to that of section 5.1.1.7, *e.g.*, that an exemption would not unduly degrade the safety of the vehicle.

Table III of Standard No. 108 requires motorcycles to be equipped with turn signal lamps and a turn signal operating unit. Section 5.5.6 requires all vehicles equipped with a turn signal operating unit to have also an illuminated pilot indicator, which will inform the operator when one or more turn signal lamps fails to operate. However, no

indication is required if a variable-load turn signal flasher has been installed on a motor vehicle type specified in section 5.5.6. A motorcycle is not one of the vehicle types specified, and the Lectra VR24 incorporates a variable load flasher. As noted above, the company uses a 24-volt DC power source for turn signal lamps. Outage indication is not presently available in 24 volt DC flasher units, therefore, the turn signal indicator on the dashboard will not indicate a failed lamp.

EMB argued that the open nature of the motorcycle makes it "easy for an operator to check for proper operation of all lights and signals * * *."

EMB also sought exemption from certain portions of Section 7.9 which specifies headlighting requirements for motorcycles. In pertinent part, EMB wishes to meet the photometric specifications of Figure 32. At the present time, motorcycle headlamps are not available in 24-volt versions, and the company has chosen "a military vehicle headlamp" manufactured by "Wagner Corporation." This headlamp "does meet requirements for passenger car headlighting systems." The upper beam of the headlamp meets all requirements for motorcycle headlamp upper beams, and complies with all lower beam test points as well, with the exception of Test Point 2D-3L, where there is a shortfall of 7 percent.

EMB argued that the shortfall does not unreasonably degrade safety because the Lectra VR24 is designed for a cruising speed of 30 mph and the headlamp does meet requirements for this equipment on motor driven cycles.
