The record does not indicate that this requirement presents significant obstacles to designers with respect to their choice of exterior finishes. Nor does it show that it would be difficult to accommodate the requirements in the structural design.

Paragraph (e) Perimeter Columns

Paragraph (e)(1) of the final rule prohibits the erection of perimeter columns unless the column extends a minimum of 48 inches (1.2m) above the finished floor to permit installation of perimeter safety cables prior to the

erection of the next tier, except where constructibility does not allow. Final rule paragraph 1926.760(a)(2) requires that the perimeter safety cables be installed at the final interior and exterior perimeters of the structure's finished floors of multi-story structures as soon as the decking has been installed. When the safety cables must be attached to the perimeter columns, the columns must be at least 48 inches above the finished floor in order for the perimeter cable system to comply with the requirements of Subpart M. Paragraph § 1926.760(d) requires that perimeter safety cable systems conform to the criteria for guardrail systems in § 1926.502.

Some commenters (Exs. 13–320; 13–245; 13–209, p. 19) argued, as with section 1926.756(d), that OSHA has no jurisdiction to put design restrictions on the engineering community. Although they contended that would limit their flexibility in structural design and in the materials they use, they did not specify how their design capability would be impaired. American Bridge Co. (Ex. 206X; p.55–56) suggested that it was more appropriate to place an obligation on the contractor and erector to ensure that “the cable [is] 42 to 45 inches above the working surface and sufficiently anchored to withstand a horizontal force of X amount of pounds at a point 45 inches above the working surface.”

OSHA is convinced that the industry can accommodate this requirement. As noted, no commenter submitted details on the extent of design impairment or examples of the projected negative effect of this requirement. It is appropriate for OSHA to require the engineering of safety elements into the design of perimeter columns if they provide support for a fall protection system. Paragraph 1926.760(a)(2) requires perimeter cables to be installed on multi-story buildings as soon as the decking is completed. OSHA agrees with SENRAC's conclusion that the presence of holes or attachments on the columns facilitates the erection of the cables therefore minimizing the installers' exposure to a perimeter fall. OSHA also agrees that columns are an appropriate and often-used support for the perimeter safety cable.

Paragraph (e)(2) requires that the perimeter columns have holes or other devices in or attached to them at 42–45 inches above the finished floor and the midpoint between the finished floor and the top hole to permit the installation of perimeter cables, except where constructibility does not allow. This allows the erector to install the cables promptly when the columns have been erected.

A commenter (Ex. 206X; pp.67–68) believed that by specifying the method of erecting perimeter cables, the industry is denied the opportunity to negotiate language in its contracts. The general contractor has no reason to include any language to protect the fabricator because it knows the OSHA regulation requires the fabricator to make the holes or attachments available to be utilized by the erectors. The fabricator has no control over the system's installation, condition, maintenance, or use and subjects the fabricator to lawsuits regarding any accident involving the perimeter safety cable systems.

Fabricators and engineers also argued that the proposal impermissibly regulates employers beyond the steel erection industry by requiring fabricators to install holes or attachment points. Some fabricators testified that this section would limit their flexibility in engineering a structure. Grewe Jenkins Design & Construction Company (Ex. 201X; p.17) stated that by requiring a shop to attach bolts or holes, it would be limiting the methods and means by which an employer may protect its employees from perimeter falls. They also argued this requirement may necessitate regulations for the design of the different types of attachments that fabricators and engineers may use. The American Institute of Steel Construction (Ex. 13–209) objected to OSHA prescribing how to manufacture its product.

A commenter representing AISC (Ex. 206X; p. 59) testified that fabricators do not control the erection sequence and schedule of placement of structural steel elements which is set forth on contract documents. Neither do they dictate, he argues, how steel erectors will utilize the holes and attachments that they are required to provide. In his view, the fabricator assumes liability because it would be difficult to defend litigation regarding system failure: (a) If they cannot be assured that it will be erected and maintained properly, and (b) if they have no prior knowledge of where and how the members with the holes or attachments are going to be installed during the erection sequence. AISC believed that this provision would make fabricators liable for any failure of the perimeter cable system, including the incorrect field installation of attachments. They assert that this would be unfair since they have no control over how the cables are installed or maintained. Hagerman Construction Corporation (Ex. 13–224) commented that additional staff would be needed and the cost of liability insurance would skyrocket. These combined factors, they

argue, could help to drive up the price of the steel members.

OSHA requires that holes or attachments for erecting perimeter cables are on or in the perimeter columns before the steel can be erected because it believes that it is appropriate to engineer safety components into a structure just as public safety specifications are adhered to in the drafting stage of a structure.

The proposed provision, paragraph (e)(3), stated that holes or devices "shall be provided by the fabricator/supplier and shall be in or attached to perimeter columns * * *". OSHA has revised this provision to make clear that, in addition to requiring that the columns have holes or devices, the erector may not erect perimeter columns, unless the columns comply with paragraph (e)(2). In final paragraph (e)(2), the erector is prohibited from erecting the perimeter columns in the absence of the holes or attachments.

SENAC and OSHA agree that getting the perimeter safety cables erected properly and promptly will help to reduce the number of falls to the exterior of the building. This provision not only affects steel erectors but other trades that follow them in the construction sequence of the building. Incorporation of the perimeter system into the design of the structure enables all trades to be protected against perimeter falls most quickly and effectively.

Some commenters were not convinced that providing the erectors with attachments will help to aid in the erection of perimeter cables. Southern Iron Works (Ex. 206X; p.107) asserted that they have often provided steel erectors clips that the erectors did not use. Since the proposed standard did not expressly require the erector to use the holes or attachments supplied by the fabricator, they argued that the fabricator may needlessly incur this expense.

While the standard does not require the erectors (or any other trade) to use the holes or attachments, it does require the installation of perimeter cables (see § 1926.760). OSHA assumes that the installer of the perimeter cables will use the holes or attachments because that will be easier than the option of installing stanchions to support the cable.

An erector representing the Steel Erectors Association of America (SEAA) (Ex. 203X; pp.73-74) testified that it is common for holes/attachments to be included in contract requirements through negotiation. He stated that he had holes drilled in columns on 90% of his jobs, and that fabricators have been

providing them for 5 years for projects in his area. A general contractor (Ex. 203X; p.168-169) decided that it made more sense to use holes/attachments, since using the columns does away with the need for installing stanchion posts. SEAA stated that if holes/attachments were required by regulation, steel fabricators would comply with little or no economic damage to the industry because all steel erection projects would have to follow the same rules. Erectors and fabricators are presently negotiating these sort of safety measures into their contracts.

The steel erection industry already meets a variety of architectural and public safety needs, and designs and manufactures structural components so precisely as to locate holes and calculate loads for every nut and bolt. OSHA is confident that this industry can also arrange to have these holes/attachments in perimeter columns. These holes and/or attachments will make the construction of the structure safer for the employees that have to use it as a work platform. Commenters in opposition to requiring holes and/or attachments gave no explanation in the record as to why this requirement would make it more difficult to design or produce columns.

The claim that holes/attachments would affect architectural finishes was similarly unsubstantiated. Even if there were some instances where that would be a problem, the final standard includes an exception where constructability does not allow them to be installed.

FABCO (Ex. 13-21) stated that putting holes in the flanges could "cripple" the strength of the flanges unless heavier, more expensive members were used. They suggest that perimeter cables be supported by an engineered, temporary clamping device of the erector's design or, at the erector's option, by making additional holes or using shop-installed column attachments.

OSHA acknowledges that a hole in the flanges of a column could compromise the structural design of the structure, especially if the column is part of a "moment resisting" frame. "Crippling" may occur when the web is subjected to high compressive stresses from concentrated loads and/or reactions. Failure by fracture could also occur under some circumstances. However, the claim that the holes/attachments may compromise the structural design assumes that the holes would be installed only after the column was already designed, without regard to the need to accommodate the holes. However, it is clear that from an engineering standpoint, the effect of

holes (or attachments) on the strength of columns needs to be factored into the structural design. The evidence that was introduced to show why that could not be done was not convincing. While in some instances larger columns might be necessary to accommodate holes, information on the number of those instances was not submitted to the record. It should be noted that holes are not required if constructability does not allow, and that the provision allows the installation of attachments instead of holes.

AISC (Ex. 13-209) stated that attachments could get damaged or cause stacking problems in stockyards. FABCO (Ex. 3-21) indicated that they could get knocked off while being delivered. While these comments indicate that more care would have to be taken, these are not particularly difficult problems to overcome. Some steel components already have angles and other protruding attachments.

Perimeter cable holes can be engineered into the original design of the columns as any other hole would be. At times, perimeter columns must be strengthened to compensate for drilling a hole in a structural member, adding cost to the process. However, OSHA believes that those instances will be minimal in comparison to the number of columns that currently are able to accommodate perimeter cable holes.

E-M-E Steel Erection Company (Ex. 202X; p.31) testified that they currently weld nuts to columns while others use washers in the field. They think that having holes put in the columns will cost a few dollars more but that they are worth the extra cost. In addition, the costs must be considered in the context of the lives that can be saved by both the fall protection afforded by the perimeter cables and by the speed in which they may be erected, which will greatly reduce employees' exposure to fall hazards while installing the cables.

The physical criteria that the perimeter cables must meet are found in § 1926.760(d)(3). That section references § 1926.502, and Appendix G repeats that section to assist employers and employees.

Section 1926.757 Open Web Steel Joists

Some of the most serious risks facing the ironworker are encountered during the erection of open web steel joists, particularly landing loads on unbridged joists and improperly placing loads on joists. Based on an analysis of ironworker fatalities from January 1984 to December 1990 OSHA determined that of the approximately 40 fatalities caused by collapse, more than half were

related to the erection of steel joists (Ex. 9–14A). Although the existing OSHA steel erection standard addresses joist hazards in a limited manner, this final rule section significantly increases protection from the most hazardous activities during joist erection. The Agency believes that the combination of specification and performance requirements in this section will provide more comprehensive protection to workers engaged in these activities.

Paragraph (a) General.

Paragraph (a) of the final rule provides general requirements for the erection of steel joists. To make the requirements of paragraphs (a)(1) through (a)(5) of the proposed rule more understandable, OSHA has reorganized them in the final rule. The requirements that relate to stabilization of the joist attached at a column are contained in paragraph (a)(1). Those joists that do not, for design reasons, attach at the columns are addressed in a new paragraph (a)(2). Paragraphs (a)(3) and (a)(4) address conditions that apply to joists that attach either at or near the columns.

Paragraph (a)(1) requires that where steel joists are utilized, and columns are not framed in at least two directions with solid web structural steel members, a steel joist (commonly referred to as the “OSHA joist,” see explanation below in the discussion of paragraph (a)(1)) must be field-bolted at the column except as provided in paragraph (a)(2) of this section which addresses these joists installed near the column. This paragraph is nearly identical to the existing steel erection standard provision, § 1926.751(c)(1). The final rule paragraph (a)(1) differs from the proposed paragraph (a)(1) in that it does not contain the phrase “or near” when describing the location of the joist in relation to the column. The SJI (Ex. 13–208) suggested deleting this language in paragraph (a)(1) and treating joists installed near the column separately because of feasibility considerations. The purpose of the stabilizer plate, required by paragraph (a)(1)(i) of this section, is to provide stabilization and prevent rotation of the extended bottom chord of the joist required by paragraph (a)(1). The Agency agrees with SJI that when the joist is not located directly at the column, it is not possible to stabilize the bottom chord using a stabilizer plate on the column, and some other means of stabilizing the bottom chord must be provided. Therefore, paragraph (a)(2) has been added to the final rule to address the situation where a steel joist attaches near, but not at, the column. SJI also suggested deleting the language, “to

provide lateral stability to the column during erection,” which describes the purpose of bolting the joist. SJI argues that joists are not designed to do this but simply to support a uniform load. Nonetheless, this language comes from the existing standard and SENRAC believed it to be an accurate description of an additional function of this joist, whether designed for this purpose or not. Accordingly, the final rule retains this language requiring lateral stability during erection.

Final rule paragraphs (a)(1)(i) through (a)(1)(iii) refer to special requirements for joists connected at the column. Paragraph (a)(1)(i) is virtually identical to paragraph (a)(4) of the proposed rule. It requires a minimum 6-inch by 6-inch vertical stabilizer plate to extend at least 3 inches (76 mm) below the bottom chord of the steel joist. The plate is required to have a $1\frac{3}{16}$ inch (21 mm) hole placed in it to provide an attachment point for guying or plumbing cables. The SJI (Ex. 13–208) suggested language to better describe the stabilizer plate. They noted that for the stabilizer plate to function as intended, the plate would need to have a minimum length and width of 6 inches and be oriented vertically so that the bottom chord of the joist will straddle the plate. Bottom chords of joists are essentially two angle irons placed back to back with steel webbing welded in between into triangles. The space created between the angle irons by the webbing is large enough so that the bottom chord, when extended to the column, can straddle the stabilizer plate, thus preventing the OSHA joist from rotating. OSHA agrees that these changes would improve the requirement. Paragraph (a)(1)(ii) works in conjunction with paragraph (a)(1)(i) and requires that the bottom chords of steel joists at columns be stabilized to prevent rotation. This provision largely carries forward the language of proposed paragraph (a)(5). The SJI (Ex. 13–208) commented in support of this provision stating that it “* * * clarifies and reiterates the need to prevent horizontal axis rotation of joists and joist girders during erection.”

The foregoing provisions will result in a more stable primary structure upon which to erect the remaining steel joists in each bay. Since the sequence of guying is essential to safety, a stabilizer plate provides a ready attachment point for more efficient guying, thus helping to prevent collapse as the steel is set in place.

Final rule paragraph (a)(2) attempts to clarify the proposed rule by addressing the situation where the joist required by paragraph (a)(1) of this section does not

attach at the column but, rather, near the column. Two commenters (Ex. 13–208 and 13–153) suggested that the standard address this situation. It was noted by a commenter (Ex. 13–153) that this can occur at expansion joints, unequal bay spacing and non-rectangular buildings. The Agency agrees with the commenters and recognizes that the proposed rule paragraphs (a)(1) and (a)(5) could not apply unless the joist or joist girder were attached at the column. Since the joist or joist girder cannot always be attached at the columns (due to design constraints), this paragraph provides a means to ensure that the joist nearest the column, (that serves the same purpose as a joist at the column) is as stable as a joist that is attached at the column.

The Agency believes that the clarification referred to above is necessary due to the feasibility and sequencing complications that arise when OSHA joists are not attached at the column. For example, attaching a stabilizer plate to a column is much simpler than providing the same plate on a narrow solid web beam or a steel joist girder. In addition, since the sequencing of erection of the structure is frequently not known beforehand, the erector needs to stabilize the bottom chord of the OSHA joist on both sides of the column. This is necessary because erection could begin at either end of the column line as dictated by conditions at the site at the time of erection.

Accordingly, final rule paragraph (a)(2) requires that where constructibility does not allow the steel joist to be installed at the column, an alternate means of stabilizing joists must be installed on both sides near the column. Such alternate means must provide stability equivalent to OSHA joists attached at the column; be designed by a qualified person; be shop installed; and be included in the erection drawings. OSHA believes that, even though OSHA joists are attached to the column the overwhelming majority of the time, workers need to receive the same protection from collapse when the OSHA joist is attached near the column. Thus, the alternate means of stabilization must be considered and planned in the early stages of design and material preparation.

An additional protection that was intended by SENRAC but not specifically referred to in the proposal had to do with the release of hoisting cables for OSHA joists. The Committee addressed timing of the release of hoisting cables for all joists other than OSHA joists in § 1926.757(d). Seeing the need for clarification, SJI recommended

language addressing the release of hoisting cables from the OSHA joist (Ex. 13–208). Accordingly, both final paragraphs (a)(1) and (a)(2) of this section require that hoisting cables not be released until the seat at each end of the steel joist is attached and the joist is stabilized. For OSHA joists that are field-bolted at the column, paragraph (a)(1)(iii) prohibits hoisting cables from being released until the seat at each end of the joist is bolted and both ends of the bottom chord of the joist are restrained by the stabilizer plate. In addition, for OSHA joists installed near the column, paragraph (a)(2)(ii) prohibits hoisting cables from being released until the seat at each end of the joist is field-bolted and the joist is stabilized.

Paragraph (a)(3) (proposed paragraph (a)(2)) requires that a steel joist (OSHA joist) at or near the column that spans 60 feet or less be designed with sufficient lateral stiffness that the joist does not need erection bridging to maintain its stability when an employee goes out onto it to release the hoisting cable. Since the joist at the column is the OSHA joist and is either the first joist in place or the joist that boxes the bay, there is no other joist in place nearby for the erector to attach erection bridging. Therefore, without this provision, compliance with the final rule's bridging requirements would be infeasible for an OSHA joist. Consequently, the OSHA joist itself must possess sufficient lateral stiffness to allow the erection process to progress safely. One comment (Ex. 13–208) was received in support of the requirement. The commenter felt that the need to design and manufacture heavier joists for placement at columns is reasonable to insure the safe placement of these critical OSHA joists.

Paragraph (a)(4) of the final rule (proposed paragraph (a)(3)) addresses a longer steel joist at the same position. This provision requires that steel joists located at or near the column that span more than 60 feet must be set in tandem, *i.e.*, two steel joists must be attached together, usually with all bridging installed (both bolted diagonal erection and horizontal bridging). These larger OSHA joists are commonly used in open structures such as warehouses, gymnasiums and arenas. This provision also allows the use of alternate means of erection of such long span steel joists, provided that the alternative is designed by a qualified person to ensure equivalent stability and is included in a site-specific erection plan. This paragraph is effectively the same as proposed paragraph (a)(3) except that "or near" was added as explained

above. According to SJI (Ex. 13–208), joists tied together with standard bridging will not possess sufficient stability to serve as a working platform in all cases. However, both the proposed rule and the final rule require that the erector install all bridging (not just erection bridging) when these long joists are set in tandem as OSHA joists.

Compliance with these provisions should help to satisfy the stability requirements of paragraph (a)(5) of this section (proposed paragraph (a)(6)). Paragraph (a)(5) prohibits the placement of steel joists or steel joist girders on any support structure unless it has been stabilized. This is essentially the same as proposed paragraph (a)(6) but it has been revised to include steel joist girders along with steel joists. This language change was recommended by SJI (Ex. 13–208). They also commented in support of the requirement by stating that this paragraph to stabilize joist support structures is one of the best elements of the steel erection standard and will substantially enhance worker safety in steel erection. OSHA agrees that the provision needs to include steel joist girders for consistency since they are also connected to the support structure.

Another commenter (Ex. 13–210) indicated that the term "stabilized" is open to interpretation and should be defined. OSHA disagrees and feels that the requirements in paragraphs (a)(1) through (a)(4) of this section together with provisions in several other sections of the standard adequately set out the stability requirements for the structure without the need to define "stabilized".

Paragraph (a)(6) (proposed paragraph (a)(7)) of the final rule addresses the hazard that arises when a single steel joist or a bundle of joists are placed on the structure and then left unattended and unattached. An example of this might involve lighter steel joists, under 40 feet in length, that would not require erection bridging under this section. A common practice in erecting these lighter joists, which can be set in place by hand, is to have a crane set the columns, steel joist girders, or solid web primary members and bolted joists at the columns as required by paragraph (a)(1) of this section, thus boxing the bays. The crane would then place a bundle of filler joists at an end or, more likely, at the center of the bay for installation by hand, and then move on to the next bay. Because cranes are among the more costly pieces of equipment on a steel erection job, minimizing crane time at the site is cost effective. This provision requires that, when steel joists are landed on structures, they be secured to prevent

unintentional displacement, *i.e.*, the bundles must remain intact prior to installation until the time comes for them to be set. This paragraph also prevents those ironworkers who are shaking out the filler joists from getting too far ahead of those workers welding the joists, a practice that leaves many joists placed but unattached. Paragraph (b)(3) of this section, discussed below, requires that at least one end of each steel joist be attached immediately upon placement in its final erection position and before additional joists are placed. Another example of a situation addressed by this paragraph is if the exact dimensions of a piece of mechanical equipment to be installed in the decking are not known. A common practice, when this occurs, is to leave a joist unattached until the dimension is known. This paragraph requires such a joist to be secured (probably to the support structure or an attached joist) pending its final attachment. One comment was received by SJI (Ex. 13–208). SJI supported this provision stating that it " * * * will greatly reduce accidental displacement caused by striking the bundles while placing other construction materials." This paragraph is substantively unchanged from the proposed rule.

Paragraph (a)(7) of the final rule (proposed paragraph (a)(11)) addresses the potential for failure that can occur when a steel joist or joist girder is modified from its original manufactured state. As reflected in the proposed rule, the Agency believes modifications to joists can have disastrous consequences if performed by jobsite personnel without taking into account the design characteristics of the joist or joist girder. This provision prohibits modification without the prior approval of the project structural engineer of record. The only change to this provision from the proposed rule is the inclusion of steel joist girders for consistency since neither joists or joist girders should be modified without SER approval. This language change was recommended by SJI (Ex. 13–208).

Final rule paragraph (a)(8)(i) requires that, except for steel joists that have been pre-assembled into panels (panelized), connections of individual steel joists to steel structures in bays of 40 feet (12.2 m) or more shall not be made unless they have been fabricated to allow for field bolting during erection. This means that both the joists and the supporting member must be fabricated with holes to allow the joists to be bolted to the supporting structure; otherwise they are prohibited from being erected. Final rule paragraph (a)(8)(ii) requires that, unless

constructibility does not allow, these connections must be made by field bolting.

These paragraphs replace paragraph (a)(8) of the proposed rule, and have been modified to require that the holes in the joists be used for the connection of the joists and to allow for welding of the joists in situations where constructibility will not permit the joists to be bolted. As reflected in the proposed rule, the Agency has found that many long steel joists that are placed in bays of 40 feet or more have a greater tendency to twist or rotate, which creates hazards for the workers installing them. This finding was based on several examples of hazardous situations that steel erectors encounter when working with these long joists. The record shows that certain joists that are thin and flexible can be difficult to install because of their "sweep" (tendency to bend). Bolting these types of joists first allows straightening of the joist, correcting its camber and eliminating torque. Additionally, after bolting, final welding can be more easily accomplished. Bolting is safer whenever unattached joists could be displaced by wind or construction activity, by the movement of employees, by trailing welding leads, by accidental impact against the supporting structure by a crane or other equipment, or by harmonic motion, or vibration. Further, joists can roll and pop welds due to the movement of a worker on the joist or the stresses caused by removing the sweep, which could cause a collapse. Finally, there are unique hazards associated with welding. These include impairment of the vision and balance of an employee working at elevation while wearing a welding hood.

Many comments were received in response to proposed paragraph (a)(8). These comments fell into three major groups. In the first group of comments, the commenters claimed that holes for bolting joists were not needed because: (1) Welding joist ends [instead of bolting] is not dangerous; (2) there are no data supporting a need for the requirement; and (3) the holes will have to be drilled, but bolting was optional, many of the holes would not be used by the erector. Consequently, they claimed, millions of unused holes would be needlessly drilled. They contended that welding is really a safety concern, in this situation OSHA should require that the holes be used.

Addressing the first and second issue of this group, several commenters stated that welding joist ends is not dangerous and there are no statistics to support the need for the requirement. They contended that the assumption that

welding joist ends is more hazardous than bolting is not supported by industry data. Specifically, some commenters referred to a Steel Joist Institute (SJI) study of 100 accidents involving steel joists over a 14 year period which showed that none were a result of welding joist ends. Some commenters also referred to OSHA IMIS data reviewed by both OSHA staff and a SENRAC workgroup (Exs. 9–14A and 9–42) showing no fatalities related to joist end welding over the seven and eleven year periods, respectively. Two commenters (Ex. 13–9 and 13–18) stated that, based on their experience, they had never heard of or witnessed an accident related to welding of joists. The Steel Joist Institute (Ex. 66), referring to the SENRAC meetings, comment period and public hearing, stated "[n]o data was produced which suggests that bolting is inherently safer than the welding of joist ends to their supporting members."

OSHA's accident data do not cast any light on whether welding of joist ends is a hazard. These data in many cases do not provide enough detail as to the role of welding in the reported accidents involving joists.

Addressing the third issue of this group, numerous commenters asserted that the proposed rule would require millions of holes to be drilled or punched, most of these holes would not be used since the proposal did not require that these members be bolted. These concerns become moot since the final rule does require that the members be bolted unless constructibility does not allow. Eleven commenters specifically stated that, since the requirement would be optional, erectors would most likely choose not to use the holes. One commenter in particular (Ex. 13–158) stated that "[i]t is apparent that this provision would cause joist manufacturers and steel fabricators to punch or drill millions of unnecessary holes every year." Several other commenters (Exs. 13–21, 13–25, 13–97, 13–186 and 13–279) also suggested that millions of holes will be drilled or punched and will not be used. One commenter (Ex. 13–290) stated "* * * these connections would not be used especially since they are optional." Another commenter (Ex. 13–144) responded "[t]he only significant effect of this new requirement is increasing the cost of fabrication of steel girders." and "* * * it only requires manufacturers to provide the holes in the girders. The proposed rule does not require the steel erectors to actually use the holes." A commenter (Ex. 13–309) stated they believe that "* * * this rule will add cost to fabrication of joists and that the bolted connections will not be

used by steel erectors in the field." Metro Fabricators, Inc. (Ex. 13–62) responded "[d]ue to the additional cost involved in bolting each joint, our erectors (subcontracted) have indicated that they would elect not to use the bolted procedure." As indicated above, the final rule requires that the holes be used and the connections be made by field bolting unless constructibility does not allow.

In the second major group of comments, commenters claimed that bolting is more dangerous than welding because: (1) Erectors will install erection bolts and then replace them with high strength bolts. To do that the surface will have to be prepped in accordance with AISC. Or, if the designers require a final weld, the erector will have to come back to weld, doubling the connection time and increasing fall exposure. If high strength bolts are required for a final connection, the erector must handle extra tools, bolts, nuts, washers, etc. and prep the surface; (2) Unused holes will weaken the members. If an erector elects not to use the holes, the designer may require that the holes be filled since unfilled holes may be a deficiency; (3) The holes will have to be slotted, which does not provide the rigidity of a weld; and (4) Welding is easier than installing a bolt from the top and a nut from the bottom.

Addressing the first issue in this group, many commenters (41) raised a concern about the structural integrity of the bolted connection because the holes would have to be slotted or oversized. In particular, they argued that bolts used to meet the proposed paragraph would be erection bolts, which would have to be replaced with high strength bolts. This, they asserted, would require that the surface also be prepped in accordance with AISC requirements. One commenter (Ex. 13–357) claimed that if the designers require a final weld, the worker would have to come back to weld the connection, also doubling the connection time and increasing fall exposure. These re-connections would be necessary to provide lateral stability to the top flange of the supporting member. Another commenter (Ex. 13–342) stated:

* * * the erection connection will not be the final connection. A final connection by welding or replacement of the erection bolts with high strength bolts will have to be provided. The bolted connection would require proper cleaning and preparation of the connecting surfaces, use of plate washers, and torquing of the bolts.

Moreover, erectors would not install final high strength bolts during this erection phase due to the time to prep and install the bolts to AISC

specifications. A final bolted connection during this phase would be extremely expensive since the crane would be on site during the whole process. As indicated below, erectors want to get the joists up as quickly as possible to reduce the crane time on the job.

The Professional Engineers Group, Inc. (Ex. 13-110) responded that the "[b]est case scenario is the erector uses erection bolts and then goes back to make a final connection, either bolted or welded. This places the erector's personnel in a position twice that can lead to an accident rather than once." A steel erector (Ex. 13-118) commented "[t]he use of erection bolts is only a temporary attachment; a worker will still have to return to each location to 'complete' the connection, resulting in an increased exposure." Further, this commenter stated "* * * the net result of this proposed rule change will be increased costs, reduced market share, and increased worker exposure." A steel fabricator (Ex. 13-283) responded that their joist suppliers had advised them that "* * * a bolted connection will very often not be acceptable for a final connection since more load may be present than can be transferred without additional welding."

Four commenters (Exs. 13-6, 13-57, 13-89 and 13-277) suggested that if high strength bolts would be required for a final connection, the worker would have to handle extra tools, bolts, nuts, washers, etc. and as mentioned above, the surface would be required to be prepped prior to installing the bolts. These added activities would create additional hazards to the steel erector. One commenter, a General Contractor (Ex. 13-6), responded that the proposed paragraph (a)(8) would: increase the number of falling/dropped objects creating an overhead hazard; increase the possibility of pinching, crushing or cutting fingers, and; increase injuries due to the significant amount of time needed for the alignment process. These commenters claimed that the bolts will only serve as a temporary connection and that a rigid final connection will be required by either replacing the erection bolts with high strength bolts or welding the joist ends.

All of these concerns are addressed by the revision to paragraph (a)(8) in the final rule, which requires the use of bolts in the initial connection but is silent on the final connection. The bolted connection covered by paragraph (a)(8) serves as an initial erection connection, making the structure stable more quickly for the worker. In addition, the erection bolts would not need to be replaced by high strength bolts where the final connection is made

by welding. If the employer elects to have the final rigid connection to be a bolted connection, the surface preparation would then be necessary. However, whether bolted or welded, the final rigid connection will be made from a deck or otherwise more stable structure. Thus, the employees performing the final connection will have lower exposure to collapse and falls.

The Agency believes that the total time involved by the worker in making a complete connection as required by this provision is actually less than making an initial and final welded connection. As discussed in more detail below, the erection bolt takes about 15 seconds to install. The welder will not be exposed to the hazards of welding on or at an unstable connection or sites because the joists will be stable at the point they are connected to the primary structure with these bolts. As Mr. Cushing testified, (Ex. 208X; p. 399) when performing the final weld, "[Y]ou would weld in production mode. You wouldn't be welding and tying up the crane." Since much of the testimony against this provision was economic in nature, OSHA recognizes that freeing the crane up sooner would result in a cost savings.

The contention that the worker would have to do the connection twice—once to initially install an erection bolt and again to replace it with a permanent, high-strength bolt (or weld the joint)—is based on two assumptions: first, that the initial bolts would be erection bolts, and second, that the need for slotted holes to make the initial connection may require a final rigid connection to replace the erection connection, thus requiring workers to visit the connection twice. As explained below, this provision does not create the need for an additional visit to the connection since this is already necessary when initial welded connections are used.

OSHA notes, however, that the Steel Joist Institute Technical Digest No. 9 currently recommends that "Immediately after each subsequent joist is set in its proper position, one side of the joist bearing seat on each end of the joist should be tack welded." The Technical Digest further recommends that "After all of the bridging is installed, the final welds are made on the bearing seats of the joists." Thus, the SJI recommendations already require two visits to the joist end attachments.

Under current practices, where welding is used for the attachment of joists, the worker welds one end of the joist, installs bridging which helps to straighten out the joist, and then welds the other end. Normally, both sides of

one end or alternate sides of both ends are attached to the primary member with a weld smaller than the final weld required in § 1926.757(b). This smaller weld is commonly referred to as a "tack weld". This allows the worker greater flexibility in pulling the sweep out of the joist while installing the erection bridging. Nevertheless, even when using welding to attach joists, a second visit to the initial attachment point must be made to make the final weld.

Some commenters (Ex. 13-6, 13-89, 13-97 and 13-191) stated that welding is easier and safer than bolting and that welding is currently the recommended method of attachment by the Steel Joist Institute. The Agency expects that this will continue to be the standard practice for joists in bays less than 40 feet, and the final rule does not require field bolting for these shorter joists. However, due to the inherent instability of joists over 40 feet and other considerations discussed above, final paragraph (a)(8) provides a safer environment to erect the longer joists. As discussed earlier, even if the joists are attached with erection bolts initially, the erector may make the final attachment by welding—but the connection work will then be performed from a more stable structure.

Addressing the second issue of this group, many commenters (see for example Ex. 13-97 and 13-228) were unsure whether the designers will require unused holes to be filled. This will not be a concern since in most cases the final rule requires that the holes be used unless constructibility does not allow. Commenters generally felt that the holes will either have to be filled or larger members used to account for the holes. If the holes require filling, the commenters suggest, there would be a significant burden on the erector. It is unclear how many erectors would choose to bolt joists if given the option. According to the Steel Erectors Association of America (SEAA) survey of their members (Ex. 29), most SEAA members would elect not to bolt. In that survey, however, 11 members did state that they felt this is a safe practice. Paragraph (a)(8) of the final rule requires that holes be provided for field bolting, and that for the initial connection of these joists be performed by field bolting, with a very limited exception. The Agency agrees that it would be inappropriate to require the holes be provided and not require that they be used.

As mentioned above, many commenters stated, if it were an option, that erectors would elect not to use the optional holes as proposed for connection of the joists. This led to commenters concerns as to whether the

unused bolting holes would weaken the structural member and whether the erector would need to fill them. Four commenters responded directly to this issue (Exs. 13-97, 13-153, 13-228, and 13-261). SteelFab (Exs. 13-97 and 13-261) stated "[o]wners and even designers may not know whether these open holes are a structural deficiency." On the other hand, a commenter (Ex. 13-228) feels strongly that "* * * the architect will most certainly require erectors to plug the unfilled holes, again resulting in increased exposure of the erectors." In addition, HABCO (Ex. 13-153) suggested "[t]here is a huge design penalty for open holes in a girder top chord versus holes containing bolts." and "[t]his, in turn, will require the erector to either drag an air hose to each end of each joist, or a torque wrench." This commenter went on to state that the girder size would have to be increased if there are holes in the member that might not get filled, leading to an associated cost increase of approximately 25%. "Therefore, if the designer is required to design holes into the girder top chords, and if the fabricator is required to furnish holes, the erector *must* be required to fill them with properly sized and torqued bolts." As already discussed, these concerns of unfilled holes are all addressed by bolting requirements in the final rule, requiring the holes to be used.

In addressing the third issue of this group, many commenters (Exs. 13-43 through 13-48, 13-54, 13-55, 13-56, 13-71, 13-77, 13-152, 13-217, 13-256, 13-265, 13-266, 13-355) responded that the holes required by proposed paragraph (a)(8) would need to be slotted (or oversized) and that slotted holes would not provide the necessary rigidity that a weld does. EMC Structural Engineers (Exs. 13-43 through 13-48) noted that to allow for field tolerances as a result of the proposed provision "* * * all bolt holes will not be simple round holes but instead will be slotted holes which will allow the sweep to remain in the joist." Another commenter (Ex. 13-217) stated that the requirement would require installing bolts and then having to weld the joist "to freeze the connection" as a result of using a slotted hole on the joist. In addition this commenter stated that using "* * * proper amount of bridging as the joists are being set, and using an established safety procedure, we can set the joist safely without bolting each joist as they are set." Another commenter (13-335) responded that they:

* * * have spoken with several joist manufacturers and they have indicated that in order to meet this proposed provision,

they will have to pre-punch all joists with [slotted] holes. The slotted holes would be required for field adjustments/construction tolerances. This would create a significant problem from our (the Structural-Engineer-of-Record's) standpoint. With slotted holes placed in the joists for bolting, we would have to design the beams as laterally unsupported.

These commenters indicated that holes must be slotted to allow for field adjustments. They contended that since the joists are long and tend to curve somewhat, some room is needed to pull the joist into place; exact sized holes would not, in most cases, be workable, the holes would have to be slotted. This, in turn, would not allow the initial connection to serve as the final rigid connection, and most likely a final weld would be necessary. OSHA recognizes the validity of some of these concerns. The final provision contemplates that the initial bolted connections will, in fact, be temporary connections and that the joists will be stabilized with a final weld or high strength bolt connection for the rigid connection. The required initial bolting is intended to increase employee safety during the initial placement and connection of the joists.

The fourth issue of this group was addressed by two commenters (Exs. 13-97 and 13-165) claiming that welding is easier than bolting. They suggested that welding is a faster and safer anchoring application for joists, and that it is easier to weld from the top than install a bolt from the top and a nut from the bottom. In contrast, Phil Cordova, SENRAC member and owner of a steel erection company, described the time it takes to weld versus bolting the joist (Ex. 208X; p. 199). When asked how long it takes to tack a joist initially, Mr. Cordova stated:

You have many considerations that take place there. You need to get the endow of a joist. You need to find the proper location. You need to get a man up there who is in a secure position to work without vision of the ground by working under a welding hood to tack this. A tack could take quite a significant amount of time. Meaning, by the time they get set up in position, it could be five to ten minutes on each tack.

Further, Mr. Cordova described the time it would take to put in an erection bolt and tighten it by stating:

That would just be a few seconds. Quite significantly, under a minute. We are talking, by the time you thread the bolt down through the hole and put the nut on it, an ironworker could put each nut and bolt on there on the magnitude of about 10 to 15 seconds—I would think.

In the final analysis, the issue is, whether an initial joist attachment with erection bolts provides greater stability

and exposes the employee to less risk of falls or collapse than an initial joist attachment with tack welds. OSHA believes that it does. OSHA believes the bolting requirements of this paragraph will reduce both fall and collapse hazards.

The third major group of comments on this paragraph addressed costs, fabrication burden, and feasibility issues.

Some commenters felt that the bolting provision was unnecessary since the other requirements in § 1926.757 adequately addressed the activities and procedures that cause the accidents in joist erection. According to the commenters, joist collapses are most often associated with inadequate bridging and placing a construction load on unstable, un-bridged joists. One commenter (Ex. 13-40) stated:

* * * all joists are bolted adjacent to the column in each bay [currently required by § 1926.751(c)(1) and proposed as § 1926.757(a)(1)]. This, along with the recent requirement for joists of 40 feet and longer to have bolted bridging in place before slackening the hoisting lines [proposed § 1926.757(d)(1)], and not permitting the application of any loads to the joist until the bridging is installed [proposed § 1926.757(e)(2)], provide a safe erection procedure. I am not aware of any instances where, when these procedures were followed, there has been an accident that additional bolting of the ends of the joists would have prevented. All of the accidents are a result of direct violations of these requirements.

Another commenter, the USCCG (Ex. 63), suggested that:

[a]ny possible safety concerns addressed by this paragraph are better addressed by the other joist provisions dealing with installation and anchorage of bridging, keeping the hoisting cable in place until one end is attached, stabilization of the structure prior to installing joists, among other provisions * * *. The causes of joist collapse are addressed by the other provisions of [proposed § 1926.757].

The Steel Joist Institute (Ex. 66) agreed that other provisions in proposed § 1926.757 addressed joist erection hazards and stated:

[t]he holes for bolting are not required to prevent unintentional displacement as the proposed rule contains a multitude of other provisions that address this concern. Specifically, paragraphs (a)(2), (a)(6), (a)(7), (b)(3) and (c)(1)[referring to paragraphs of proposed § 1926.757] * * *

The Agency agrees that the proposed requirements for landing and placing joists, structure stabilization prior to joist erection, and attachment requirements contained in paragraphs (b)(3) and (c)(1) address many of the hazards identified as causing many

accidents in joist erection. However, the hazard addressed by paragraph (a)(8) is uniquely associated with long, limber joists and is not adequately addressed in these other provisions of the standard.

Several concerns were raised by commenters about the feasibility of bolting. Specifically, the preamble of the proposed rule stated that prior to sizing a structural member for supporting mechanical equipment, the structural engineer of record or design engineer must know the exact operating weight and physical footprint of the equipment that will be imposed onto the structure. This type of information is critical in the sizing of the foundations and the primary and secondary structural members (63 FR 43473). Their concern was that if the size of the equipment is not known prior to fabrication of the steel members, joists may need to be moved to accommodate the equipment during erection. In that situation, the bolt holes would be in the wrong place and another means of attachment would have to be used. Seven commenters responded to the issue of location and size of mechanical equipment. Two commenters (Ex. 13-294 and 13-308) stated "[t]he structural engineer does not need the exact size, weight or location of equipment to properly size the members. Approximate weights and dimensions are sufficient for design." Another commenter (Ex. 13-184) responded that:

* * * The supporting member of [the] joist can be drawn & fabricated without knowing the exact location of [the] bar joist since the joist is field welded to the supporting member. Delays in fabrication and shipping of these supporting members will become commonplace. Coordination will become a nightmare.

In a post hearing comment (Ex. 52), the National Council of Structural Engineers Associations (NCSEA), commented that "[l]ocation of services and equipment are often not finalized until erection of the steel frame is well underway, or perhaps even complete." Another commenter (Ex. 13-64) responded that "[t]he welded detail allows for joist spacing to be revised to suit mechanical coordination up until installation. In today's fast track projects, this flexibility is demanded." The SJI, in a post hearing comment (Ex. 66) added that:

[t]he most pernicious cost-factor will be the interruption of scheduled work in the fabricator shop to await the final positioning of heating, air conditioning and other mechanical equipment. [further] * * * the design, fabrication and manufacture of structural steel and steel joists is on a just-in-time basis. To hold everything in abeyance until the mechanical equipment is decided

upon, purchased and available will frustrate the whole construction sequence and drive up the carrying costs of steel construction.

In addition, commenters raised several general feasibility concerns about the hole requirement in paragraph (a)(8). They stated that it would be difficult to line the holes up (Ex. 13-233), the reality of construction would not allow the procedure to be effective (Ex. 13-278), and since that the joist manufacturer and steel fabricator are most often separate businesses, the coordination of precise hole locations would not be easy (Ex. 13-226). The American Institute of Steel Construction (AISC) (Ex. 13-209) addressed the coordination concern by stating:

[t]o allow for bolting on every job, the fabricator and the joist manufacturer must know the exact joist spacing to prepare shop drawings of the individual members for approval and fabrication. This presents a severe logistical problem since contractors commonly purchase steel well in advance of the building's mechanical system * * * [s]afe, existing practice allows the fabricator to order joists and mill steel (long lead-time items) prior to finalization of all other elements of the project design. The proposed requirement would not allow for field adjustment of the joists if exact hole location is required. In addition, if the final location of the joists is not known during the fabrication, how will the fabricator know where to put the holes and if the location changes, as it often does, there is no means to move the holes? In addition, field adjustability is not possible with bolted hole connections causing problems for mechanical equipment of which the location may not be known prior to fabrication.

OSHA agrees that there is a need to allow for situations where field adjustment is needed. Paragraph (a)(8)(ii) of the final rule allows for immediate welding of the joist and also for movement of the joist where constructibility does not allow for bolting. In these instances, where a joist would need to be moved to allow for the placement of mechanical equipment or if the joist location had to change after fabrication and prior to erection, a weld would be permitted to secure the joist if it is necessary for the joist to be positioned such that the holes cannot be used. In addition, as stated in the preamble to the proposed rule, the Agency hopes this will create better pre-job communication between the fabricator and erector. Furthermore, OSHA notes that all solid-web member construction requires precise hole alignment. Therefore, the Agency feels that if solid web structural steel can be fabricated with precise hole alignment for multi-story sky scrapers, sports stadiums and other large structures,

then the same can be done for open web steel joist structures.

Another concern was that the proposed provision would unnecessarily increase the hazards to fabrication workers to put the holes in the members. Vulcraft (Ex. 13-289) stated:

* * * the cost to people ordering these products will increase due to the additional, unnecessary fabrication requirements, this will increase the safety and health risk of the fabrication workers and this risk is much greater than the non-risk of welding the ends of joists in the field."

Another commenter (Ex. 13-25) stated "[f]abricators will drill millions of holes for no reason; [there is] no justification for exposing shop fabricators to additional hazards." Several commenters (Exs. 13-41, 13-234, 13-290, 13-165, 13-14, 13-144, 13-22, 13-42, 13-309, 13-226, 13-51 and 13-209) further suggested that the requirement would place additional burdens on the fabricator, primarily a cost burden. The American Institute of Steel Construction (AISC) (Ex. 13-209) stated that the requirement "* * * imposes tremendous economic, manufacturing, scheduling, detailing and other burdens on both the structural steel fabricator and the steel joist manufacturer to install bolt holes to accommodate an erection method that will be merely optional." Another commenter (Ex. 13-42) stated "* * * the passing of this final rule would, in some cases[,] probably double the cost of detailing beams that would support bolted connections for joists 40 feet or [over]."

Another concern of the fabrication industry involved small fabricators and their inability to compete with the larger fabricators to drill or punch holes in the members. One commenter (Ex. 13-22), referring to the proposed provision, stated "[t]his would put an unnecessary, and unfair burden on small fabricators who do not have computerized drilling and/or punching lines by greatly increasing the cost of labor." Another commenter (Ex. 13-12) again referring to proposed paragraph (a)(8), stated that if the rule were adopted, he would be forced to close his business. Because he has a small shop and all holes are drilled by hand, he said that he would not be able to compete with larger shops that have automated equipment.

The Agency believes that paragraph (a)(8) will increase safety for those workers installing larger joists. The record does not demonstrate that the provision will increase exposure to hazards in the fabrication industry. In addition, since the final rule requires that the holes be used for erection of the

joists, the fabricator will not be needlessly drilling the holes.

Finally, many commenters suggested that the proposed requirement would increase the cost of joist erection without increasing employee safety. Without any identified increase in safety, many commenters felt that the increase in costs to the steel joist industry and the structural steel fabrication industry is unjustified. One commenter (Ex. 13-252) noted “* * * adding 10 to 15 percent for additional labor and materials will only serve to push these jobs out of the reach of many small businesses.” Additionally, SJI in a post hearing comment (Ex. 66) presented an economic analysis of the impact of this proposal on the steel joist industry that showed a first year cost of \$68,000,000 for this provision. They also noted that structural steel fabricators anticipate an increase in cost of \$126 per ton if the proposed regulation is implemented. That amounts to an increase cost for fabricated structural steel of \$184.8 million, above the costs to the joist industry. Another commenter (Ex. 13-342) responded “the cost of steel projects will increase significantly with little, if any, advantage in job site safety. Cost increases will result because of the joist girder top chord or beam top flange will have to be increased in size and holes will have to be punched in every joist seat. Erection cost increases will also result in making the final connection.”

One commenter (Ex. 13-57) responded that their company has never had a worker injured during the process of welding joist ends to structural steel beams, and that the proposed change to paragraph (a)(8) would neither improve safety nor stability, might require increased beam sizes and might create a tripping hazard. Another commenter (Ex. 13-89) stated that the proposed paragraph would not provide any safety benefit and could increase accidents due to the efforts to bolt the ends of non-rigid joists which would require a difficult balancing act to perform. Other commenters expressed concern that proposed paragraph (a)(8) could be detrimental to the steel joist industry. Specifically, the added costs for engineering, coordination, fabrication and erection will make this type of construction non-competitive.

As indicated above, paragraph (a)(8) only applies to long and limber joists (40 feet or more in length) to ensure that at the critical time of initial connection, the employee is not exposed to a hazard as a result of the joist not being adequately secured upon its placement. The Agency believes that the costs

(addressed in the economic analysis) of this provision will be accompanied by an significant increase in safety. In addition, as was discussed earlier, there may be a cost savings in erection time by performing the bolted connection. SENRAC member Alan Simmons of the Ironworkers International Union, and an ironworker with much field experience, stated at the hearing (Ex. 208X, p. 189), “It takes considerably less time to bolt than to weld a joist in my opinion.” In addition, Mike Cushing, an ironworker for 29 years, described in testimony (Ex. 208X; p. 377) how bolting is easier, faster and safer than welding. “With welding, there is no right spot, you have to pull a tape, get drums out and determine the exact location of the joist to weld it. With holes, you just stick the bolt in the hole just like any other piece of iron.” He goes on to state that “* * * welding is not a very long process, but laying it [the connection point of the joists] out, it probably will take longer than to do the actual welding.” Also, Steve Rank (Ex. 208X; p. 204), a SENRAC member and an ironworker with much field experience, stated that these long joists pose a displacement hazard as well as a hazard to the ironworkers that are stepping onto and dragging welding weight over them. He states that alignment is a serious issue, and that such long joists can pop the welds and lead to accidents during erection.

In summary, most of the concerns expressed about the proposed requirements for the holes for bolting long steel joists are eliminated by final § 1926.757(a)(8) which does not just require that holes be provided for field bolting; it also requires that initial connections be field bolted instead of welded. In addition, many of the remaining concerns are eliminated by the constructibility exceptions.

In the proposed rule, OSHA justified the need for the holes in the joists for the following reasons: (1) The provision is necessary because certain joists that are thin and flexible can be difficult to install because of their sweep. Bolting these types of joists first allows straightening of the joist, thus returning its camber and eliminating torque. Additionally, after bolting, welding can be more easily accomplished. (2) Long steel joists that are placed in bays of 40 feet or more have a greater tendency to twist or rotate, which creates hazards for the workers installing them. (3) Bolting is safer whenever unattached joists could be displaced by wind or construction activity, by the movement of employees, by trailing welding leads, by accidental impact against the supporting structure by a crane or other

equipment, or by harmonic motion or vibration. (4) The vision and balance of an employee working at elevation can be impaired while wearing a welding hood, which may make bolting a safer approach in this situation. (5) Joists can roll and pop welds due to the movement of a worker on the joist or the stresses caused by removing the sweep; if the weld breaks, the joist fails and may cause a structural collapse.

The Agency believes that a bolted erection connection in joists in bays of 40 feet or more will reduce the risk of an employee fall or collapse that can result when a long, unstable steel joist breaks loose from its attachment. Slotted holes for bolting will provide easier plumbing-up and alignment before the final rigid attachment is completed. Sweep can be taken out and the bridging installed without fear that the seat will break off. When asked for his sense of the cost savings to a steel erector, Mr. Cordova, who has used bolted connections in steel joists, stated (Ex. 208X; p. 211):

I think it is a significant saving in that they can protect their workers by minimizing the exposure of the worker out there on the structure that's unstable. If you have a bolted slotted connection, you can stabilize the structure.

Bolted connections help protect employees from falling. Barry Cole of Miller Safety (Ex. 208X; p. 252) stated: “Whenever we can give a guy a better grip, a better handling, or a better way mechanically with some certainty and some instantaneous versus long, drawn out, [sic] then you're better off.” Mr. Cole went on to describe bolted connections as a type of fall protection “[b]ecause they reduce exposure to a loss of balance * * *.” In the Summary of the Final Economic and Regulatory Flexibility Analysis (Section V), below, OSHA addresses the issue of cost impact to steel joist fabricators.

SENRAC determined, and OSHA concurs, that bolting of longer joists for their initial connection will provide additional stability during this unstable erection period.

Paragraph (a)(9) of the final rule (proposed paragraph (a)(10)) prohibits the use of steel joists and steel joist girders as anchorage points for a fall arrest system unless written direction allowing such use is obtained from a qualified person. Although performance criteria and manufacturer's specifications are not currently available regarding the adequacy of steel joists and steel joist girders as anchorages for fall protection systems, this provision recognizes that some joists and girders may be strong enough to meet the load

requirements for anchorages in § 1926.760. One commenter (Ex. 13–210) suggested that the structural engineer of record should be the one to provide the approval. OSHA believes the SER may not have the knowledge of steel joist erection necessary to approve tie-off to joists. The qualified person, however, as defined is the appropriate entity to make the determination.

Paragraph (a)(10) of the final rule (proposed paragraph (a)(9)) addresses the hazard posed by bridging joists without establishing an adequate terminus point for the bridging. Bridging is not effective until a terminus point is created. “Bridging,” an operation integral to steel joist construction, refers to the steel elements that are attached between the joists (from joist to joist) to provide stability. “Erection bridging” is defined as “* * * the bolted diagonal bridging that is required to be installed prior to releasing the hoisting cables from the steel joists.” “Horizontal bridging,” usually angle iron, is attached between steel joists, to the top and bottom chords of each joist, by welding. There are several provisions in this section that require bridging to be anchored. This means, by definition, that the steel joist bridging must be connected to a bridging terminus point. The term, “bridging terminus point,” is defined as follows:

Bridging terminus point means a wall, beam, tandem joists (with all bridging installed and a horizontal truss in the plane of the top chord) or other element at an end or intermediate point(s) of a line of bridging that provides an anchor point for the steel joist bridging.

Final rule paragraph (a)(10) simply requires that a terminus point be established prior to installing the bridging in order for the bridging to be anchored. OSHA is aware that steel erection is a progressive process that requires one piece to be erected before the subsequent piece can be attached to it. This provision requires pre-planning to determine the particular location of the terminus point for the attachment of bridging. To assist in developing or determining terminus points, OSHA is providing illustrative drawings of examples of bridging terminus points in non-mandatory Appendix C. In addition, paragraph (c)(5) of this section, discussed below, deals with the situation in an erection sequence where the permanent bridging terminus points are not yet in existence at the time the joists and bridging are erected. This provision remains the same as the proposed rule and no comments were received on this paragraph.

Paragraph (b) Attachment of Steel Joists and Joist Girders

There are three types of joists identified by SJI as being used in the steel erection industry. The K-Series open web steel joists, having joist depths from 8 inches through 30 inches, are primarily used to provide structural support for floors and roofs of buildings. Although light in weight, they possess a high strength to weight ratio (Ex. 9–141). The LH-Series steel joists span up to and including 96 feet. These joists are used for the direct support of floor or roof slabs or decks between walls, beams, and main structural members, and their depths range from 18 inches to 48 inches. The “Deep Longspan,” or DLH-Series joists can run up to 144 feet and have depths from 52 inches through 72 inches. The attachment of all three series of joists is addressed in paragraph (b) of this section. The hazard addressed in this paragraph is the adequacy of the attachment of joists that could affect the stability of the joist and thus the safety of the employee erecting the joist. Paragraphs (b)(1) and (b)(2) specify the minimum attachment specifications for the lighter and the heavier joists, respectively. At a minimum, the K-Series must be attached with either two 1/8” (3 mm) fillet welds 1 inch (25 mm) long, or with two 1/2” (13 mm) bolts. In addition, the provision provides alternative performance language “or the equivalent” to allow for attachment by any another means that provides at least equivalent connection strength. Similarly, at a minimum, the LH-Series and DLH-Series must be attached with either two 1/4” (6 mm) fillet welds 2 inches (51 mm) long, or with two 3/4” (19 mm) bolts. Again, OSHA is providing performance language, “or the equivalent,” for the reasons discussed above. Paragraphs (b)(1) and (b)(2) were adopted from SJI specifications. One commenter (Ex. 13–208) commented on these paragraphs in support stating that these provisions have “* * * been adopted from the Steel Joist Institute Specifications and emphasize the need for positive attachment of joists to [their] supporting elements.” Final paragraphs (b)(1) and (b)(2) remain unchanged from the proposed rule.

Paragraph (b)(3) of the final rule addresses the hazards associated with the following improper erection sequence: landing joists on the support structure; spreading them out unattached to their final position; and then attaching them. This procedure creates the potential for worker injury because joists handled in this manner may fall or the structure may collapse. To eliminate these hazards, this

paragraph requires, with one exception discussed in paragraph (b)(4) below, that each steel joist be attached, at least at one end on both sides of the seat, immediately upon placement in its final erection position, before any additional joists are placed. The language, “both sides of the seat”, is added in the final rule to clarify what OSHA means by attachment. One comment was received on this provision (Ex. 13–208). It supported the requirement, stating that “[t]his is a good provision that establishes the need to secure joists as they are placed thus preventing inadvertent displacement.”

Paragraph (b)(4) is an exception to the paragraph (b)(3) “attachment upon final placement” requirement. It addresses the situation where steel joists have been pre-assembled into panels prior to placement on the support structure. One commenter (Ex. 13–308) stated that in applying the proposed provision, one might confuse the corners of the panels with the steel joists creating the panels. The Agency agrees that the proposed language could cause confusion, and that we need to clarify that it is the corners of the panel that must be attached to the structure. Final rule paragraph (b)(4) has been re-worded to require that panels that have been pre-assembled from steel joists with bridging must be attached to the structure at each corner before the hoisting cables are released.

Pre-assembly of panels usually involves the installation of diagonal and horizontal bridging to form a platform at ground level, which eliminates fall hazards associated with attaching bridging at elevated work stations. Placing joists on the support structure in this manner eliminates the single joist instability concerns. Furthermore, because of the inherent stability of these pre-assembled panels, this paragraph requires only that the four corners of the panel be attached to the support structure before releasing the hoisting cables. The attachment can be either bolted or welded.

An additional benefit of panelizing joists is that, following installation on the primary support structure, in all likelihood, the panel will immediately provide anchorage points for fall protection systems.

Additionally, the pre-assembly allows for alternative joist erection methods such as a hybrid form of steel erection involving steel/wood-panelized roof structures, where wooden decking (dimensional wood and plywood) is attached to a single steel joist and the resulting panels are set on the support structure (Exs. 9–94, 9–95). Again, by placing joists on the support structure in

this manner, the instability concerns and other hazards associated with attaching single joists are avoided. The same commenter (Ex. 13–208) supported this provision by stating “[t]his is a strong provision that extends the requirement for attachment even in instances when the erector chooses to panelize joists for erection.”

Paragraph (c) Erection of steel joists. Paragraph (c)(1) of the final rule requires that for joists that require bridging as provided in Tables A and B, at least one end of each steel joist must be attached on both sides of the seat to the support structure before the hoisting cables can be released. This paragraph is nearly identical to the proposed paragraph (c)(1) except that it was clarified by adding “on both sides of the seat” so that it is understood that two attachments are required at the one end of the joist. Thus, an end attachment is considered to be attachment of both sides of the joist seat. This change is consistent with the change in paragraph (b)(3) above. For further clarification, to address an oversight in the proposed standard and to conform with SJI specifications, this provision has been limited to the joists that require bridging as identified in Table A or B. This clarification will allow smaller lighter joists (that do not require bridging and can be landed in bundles) to be placed on the structure and spread out by hand. Once the joists have been placed in their final position, however, they must be attached in accordance with paragraph (b)(3) of this section.

The Agency also determined that paragraph (c) did not properly address the erection of heavy joists over 60 feet. Therefore, final rule paragraph (c)(2) has been added to address the special erection needs of these long heavy joists to conform with SJI specifications. This paragraph will require that the seat on both ends of the joist be attached permanently and the bridging requirements of paragraph (d) met before hoisting cables can be released. The SJI (Ex. 13–208) commented that it is necessary to require that the joists be secured at least at one end prior to allowing workers on the joists.

Paragraph (c)(3) of the final rule (proposed paragraph (c)(2)) addresses steel joists that do not require erection bridging as required by Tables A and B. This paragraph has been revised to eliminate the reference to joists that span 40 feet or less. This was done to be consistent with paragraph (d) of this section as discussed below.

In the last 25 years, many new and different open web steel joists have been manufactured. In developing Tables A and B, SJI demonstrated that there are

dozens of joists that span less than 40 feet that require erection bridging to maintain stability during erection. SJI also demonstrated that there are joists over 40 feet that do not need such bridging. The Agency has accepted these findings and is following SJI recommendations with respect to which joists need erection bridging. SJI (Ex. 13–208) commented in support of the provision allowing only one worker on the joists that do not need bridging “* * * prior to the joist being secured and the bridging being installed and anchored.”

Based on the recognition of the inherent danger of employees working on unstable joists, paragraph (c)(4) of the final rule (proposed paragraph (c)(3)) requires that no employee be allowed on steel joists, where the span is equal to or greater than the span shown in Table A or B, unless the requirements of paragraph (d) of this section are met. This paragraph has also been modified in the final rule as a result of the changes to paragraph (d). Since the 40 foot minimum length has been eliminated, this paragraph now prohibits workers from going out on any joist that is equal to or longer than the span specified for that joist in Table A or B unless the bridging provisions of paragraph (d) of this section are met. The SJI (Ex. 13–208) commented in support of this requirement.

Paragraph (c)(5) of the final rule (proposed paragraph (c)(4)) addresses the situation where the erection sequence calls for joists to be erected before the permanent bridging terminus points have been established. This situation commonly occurs in a single story structure that has masonry or architectural precast walls installed after the steel is partially or fully erected. Complying with paragraph (c)(5) will involve pre-planning and the addition of temporary bridging terminus points to provide stability and prevent structure collapse in this situation. Examples of bridging terminus points can be found in Appendix C. SJI (Ex. 13–208) commented in support of this provision by stating “[t]his provision recognizes situations when it is simply not possible to terminate or anchor bridging utilizing standard procedures. In those situations it is imperative that provisions be made to provide the necessary stability.”

Paragraph (d) Erection Bridging

Paragraph (d) of the final rule provides that, where the span of the steel joist is equal to or greater than the span shown in Tables A and B, a row of bolted diagonal erection bridging must be installed near the midspan of

the joist, the bolted diagonal erection bridging must be installed and anchored before the hoisting cables can be released, and no more than one employee is allowed on the joist until all other bridging (diagonal and horizontal bridging) is installed and anchored.

Final rule paragraph (d) has been revised from the proposed rule by eliminating the requirement that all joists in bays of 40 through 60 feet (in addition to those equal to or greater to the spans in Table A and B) have bridging. Under the final rule, the requirements of paragraph (d)(1) apply only to the joists identified in the Tables as needing bridging.

Under the current standard, joists less than 40 feet long do not require bridging, but all joists 40 feet and over do. The proposed rule was somewhat different. Like the current standard, bridging would have been required when erecting any joist 40 feet or longer. Unlike the current standard, however, bridging would also have been required when erecting those joists less than 40 feet long that are identified in Tables A or B as requiring that procedure.

Tables A and B rate the stability (when unbraced) of a wide range of joists—including joists 40 feet and over. According to the Tables, a number of steel joists over 40 feet are stable without bridging. Nonetheless, the proposed rule would have required bridging for all joists over 40 feet in length.

Tables A and B were developed for the proposed rule and were based on the SJI tables. The SJI tables were developed in 1994 and designed to rate the capacity of joists with respect to a uniform dead load (an unmoving weight resting on the joist) and live loading (for example, a person walking on a completed roof). SJI developed the tables to determine which joists could support, without bridging, a static 300 pound load placed on the top cord at the mid-span of the joist.

SJI retained a consultant to develop and check their tables for a single point loading in the center of the joists. The consultant first developed a theoretical equation to evaluate the joists, and rated the joists. The joists were then field tested for a stationary point loading. The testing corroborated the theoretical ratings. SJI provided this information to SENRAC and the information was used in the development of Tables A and B in the proposal. The Tables relate the attachment and bridging requirements to the actual performance of particular joists.

SENRAC decided to use the portion of the tables that identified the need for

bridging of joists less than 40 feet in the proposed rule. The proposal required bridging for all joists over 40 feet, although the SJI tables indicated that certain joists with spans from 40 to 60 feet do not require erection bridging. SENRAC based its decision on the following: (1) OSHA's current steel erection standard requires all joists over 40 feet to be braced, and (2) the SJI tables are not reliable because the loads imposed during the SJI tests were static loads; the loads imposed by an employee are dynamic.

There were a number of commenters that objected to the failure of the proposal to use the Steel Joist Institute (SJI) Tables in their entirety. The Steel Erectors Association of America (SEAA) (Ex. 13-203) stated that it could not understand why only half of SJI's stabilization tables was used. In its view, if the testing is valid the testing should be accepted in its entirety or not used at all.

Another commenter, Mr. Eddie Williams (Ex. 203X; p. 171), testified that 40 feet is not necessarily an appropriate threshold for the requirement—there may be joists that are 30 feet that need a row of x-bridging in the center while others are stable well over 40 feet without bridging. Speaking as an erector, he believes that it is acceptable to rely on the SJI tables above 40 feet. Mr. Cary Andrews (Ex. 204X; p. 133) and Mr. Studebaker (Ex. 204X; p. 33) in similar statements said that 40 feet should not be a threshold. They stated that the requirement for bolted x-bridging should be based on the stability of the particular joist.

SJI (Ex. 13-208) stated that it strongly objects to the imposition of the 40 foot rule for erection bridging. It reports that extensive SJI research has proven that many joists over 40 feet exhibit a sufficient degree of stiffness to allow for safe erection without erection bridging. SJI submitted the tables based on their research. In SJI's view, the choice of a 40-foot span as the point at which erection bridging must be used is arbitrary.

A commenter, (Ex. 201X; p. 79 and Ex. 13-334), questioned the Agency's authority to regulate the design of structures. They believe that this is a matter that should not be regulated. Another commenter, Mr. Emile Troup, from the National Council of Structural Association (Ex. 13-308), said that: (1) joists listed in Tables A and B are susceptible to instability without external support; and (2) proposed rule paragraphs 1926.757(c) and (d) are cumbersome. Mr. Troup believes that the paragraphs should be simplified to make it easier for structural engineers,

joist manufacturers and erectors to understand the requirements. Mr. Studebaker, (Ex. 204X; p. 141) challenged the reliability of the SENRAC tables. The results reflected in the tables are based on static load testing. He argues that this is improper since the loads actually imposed during erection are dynamic loads, such as when an ironworker leans to install bridging. Ironworkers move across the joist and move back off of it and try to balance and stabilize themselves. In his view, the 300 pounds is a safe limit but it could be increased slightly.

In support of the proposal, Mr. Lott (Ex. 204X; p. 100) said that the lack of bridging could cause buckling failure. As the ironworker moves toward the center, the compressive force in the top chord is increased. If there is a failure, the member will fail in compression. Mr. Williams (Ex. 204X; p. 95) supported requiring bridging in joists over 40 feet.

As discussed earlier, OSHA believes that it is as necessary and appropriate at times to require building components to meet the safety needs of those constructing a building as it is to require a completed structure to meet the safety needs of its occupants. A well established principle of occupational safety and health is that eliminating or reducing a hazard by modifying the design of whatever is posing the hazard is preferable to relying exclusively on controlling a hazard through personal protective equipment.

An open web joist is light and has a high degree of strength along one axis—its height. In other words, once in place, it can resist loads placed along its top edge. However, the joist is extremely weak along the secondary axis—for a truss in place, this means that it has little capacity to resist a force pressing against the (wide) side of the truss. In its 1994 presentation before SENRAC, SJI addressed the research on stability that it used to develop its tables was addressed. The research showed that many joists over 40 feet exhibit sufficient stiffness for safe erection without erection bridging.

In response to the concern that the dead loading tests were insufficient, the Agency's engineers evaluated the tests and methodology used to develop the tables. The Agency's engineers estimate that for a 200 pound worker with 50 pounds of equipment, an additional 50 pounds of live loading will provide a safety factor of 1.2. In their opinion a test with a larger static loading is not needed and this is an appropriate safety factor for this type of situation. Consequently, the Agency believes that the SJI tables that were originally

submitted by SJI are reasonable. SJI's research demonstrated that the joists over 40 feet identified in the Table as not needing erection bridging during erection are sufficiently stable. In addition, the record lacks evidence showing that the tables are unreliable. In sum, the record does not show a basis for cutting off the SJI Tables at 40 feet. OSHA has therefore incorporated the SJI tables in their entirety in the final rule and modified the proposal's provisions accordingly.

Paragraph (d)(1)(i) of the final rule requires that bolted diagonal erection bridging be installed near the midspan of the joist. In the proposed rule, the provision stated simply that this row of erection bridging had to be bolted diagonal bridging, but there was no requirement to install the bridging. This provision was clarified in the final rule by requiring that the bolted diagonal erection bridging be installed near the midpoint of the joist.

Paragraph (d)(1)(ii) prohibits releasing the hoisting cables until the bolted diagonal erection bridging is installed and anchored. As proposed, the provision did not require the bridging to be anchored. One commenter (Ex. 13-208) suggested that the wording "and anchored" be added because bridging does not perform its function unless it is anchored. He pointed out that paragraph (a)(9) of this section requires that a bridging terminus point be established before bridging is installed (it refers to Appendix C, which provides examples of bridging terminus points). That suggests that, in the proposal, the intent was for the bridging to be anchored.

OSHA agrees that, to be effective, the bridging must be anchored, and has added this anchoring requirement to clarify that in order to comply with this paragraph and paragraph (a)(9) of this section, the bridging must be anchored.

Paragraph (d)(1)(iii) prohibits more than one employee from being on the joist until all the bridging is installed. This provision will require that all bridging that is required for the joist (both bolted diagonal and horizontal bridging) be installed before additional employees are allowed on the joist. No comments were received on this provision, and it is promulgated without change.

Paragraph (d)(2) addresses the bridging requirements for steel joists over 60 feet through 100 feet. Paragraph (d)(2)(i) has been added to the final rule. It requires that all rows of bridging for these spans be bolted diagonal bridging. This provision was added in response to a comment from SJI (Ex. 13-208) in which they stated that for these longer

joists, bolted diagonal bridging provides necessary stability for the joist. The Agency's addition of this requirement reflects the current best practice in the industry.

Paragraph (d)(2)(ii) of the final rule requires that two rows of bolted diagonal erection bridging be installed at the third points of the joists that span 60 through 100 feet in length. An explicit requirement that the bridging be installed has been added, as explained above with respect to paragraph (d)(1)(i).

Paragraph (d)(2)(iii) of the final rule (proposed paragraph (d)(2)(ii)) prohibits the hoisting cables from being released until these two rows of erection bridging are installed and anchored. The phrase "and anchored" was added for the reasons discussed with respect to paragraph (d)(1)(ii) above.

Paragraph (d)(2)(iv) of the final rule (proposed paragraph (d)(2)(iii)) requires that no more than two employees be allowed on a span until all other bridging is installed and anchored. The phrase "and anchored" has been added for the reasons discussed with respect to paragraph (d)(1)(ii) above. This paragraph provides that all the bolted diagonal bridging that is required for the joist must be installed and anchored (to a bridging terminus point) before more than two employees are allowed on the joist.

Paragraph (d)(3) applies to steel joists where the span is between 100 feet through 144 feet. Paragraph (d)(3)(i) requires bolted diagonal bridging for all rows of bridging. The Agency received no comments on this provision and it is unchanged in the final rule. Paragraph (d)(3)(ii) prohibits the hoisting cables to be released until all bridging is installed and anchored. There were no specific comments on the proposed provision. However, as explained above, the words "and anchored" have been added for consistency.

Paragraph (d)(3)(iii) restricts access to no more than two employees until all bridging is installed and anchored. There were no specific comments on this provision. However, the words "and anchored" have been added as explained above.

Paragraph (d)(4) applies to steel members spanning over 144 feet and requires that erection of these members be in accordance with § 1926.756. The Agency received no comment on this provision and it is unchanged in the final rule.

Paragraph (d)(5) requires the installation of bridging before the release of hoisting cables on any steel joist specified in paragraphs (c)(2), (d)(1), (d)(2) and (d)(3). There were no

specific comments on this provision. However, as explained above, the words "and anchored" have been added. The final rule paragraph requires that where any steel joist in paragraphs (c)(2) and (d)(1), (d)(2) and (d)(3) of this section is a bottom chord bearing joist, a row of bolted diagonal bridging shall be provided near the support(s). This bridging shall be installed and anchored before the hoisting cable(s) is released.

Paragraph (d)(6) specifies that when bolted diagonal erection bridging is required by this section, the erection drawings must indicate the bridging and the erection drawings shall be the exclusive indicator of the proper bridging placement. This is to eliminate any confusion that might arise where bridging placement is specified through other means; reliance is to be placed only on the erection drawings for this information. In addition, shop-installed bridging clips or functional equivalents must be provided where bridging bolts to the steel joists. Paragraph (d)(6) also requires that when a common bolt and nut attach two pieces of bridging to a steel joist, the nut that secures the first piece of bridging may not be removed from the bolt for the attachment of the second piece. In addition, when bolted diagonal erection bridging is required, bridging attachments may not protrude above the top chord of the steel joist. No comments on paragraph (d)(6) were received and it is promulgated as proposed.

Paragraph (e) Landing and Placing Loads

The work practice provisions found in § 1926.754(e) regarding the hoisting, landing and placing of deck bundles, in general, have already been discussed above. This paragraph (e) of § 1926.757 also addresses the hazards of landing and placing loads on steel joists. As discussed earlier, the proposed term "decking;" has been changed to "metal decking" in the final rule. This definition clarifies that paragraphs (e)(1) through (e)(5) apply to all activities associated with metal decking that is used as a support element for either a floor or roof system.

Paragraph (e)(1) applies to any employer who places a load on steel joists during steel erection. This paragraph requires that the load is adequately distributed so that the carrying capacity of any steel joist is not exceeded. After this general requirement is met, the employer must meet the specific conditions set forth in the remainder of § 1926.757(e).

The Agency received no comment on this provision, and therefore,

promulgates this requirement as proposed.

Paragraph (e)(2) prohibits placement of any construction loads on steel joists until all bridging is installed and anchored and all joist bearing ends are attached in accordance with § 1926.757(b). As defined in the final rule, a construction load means any load other than the weight of the employee(s), the joists and the bridging bundle. Although bundles of decking constitute a construction load under this definition, under certain conditions decking can be placed safely on the steel joists before all the bridging is installed and anchored. These conditions form the basis for the exceptions in paragraph (e)(4) of this section.

The Agency received no comment on this provision, and therefore, promulgates this requirement as proposed.

Paragraph (e)(3) provides requirements for safe and stable placement of bridging bundles on steel joists. A bridging bundle is not considered a "construction load." The weight of the bridging bundle is limited to 1,000 pounds because bridging will be placed on the joists before they have been fully stabilized. To ensure safe placement, this paragraph requires that the bundle of joist bridging be placed over a minimum of 3 steel joists that are secured at one end. Also, to ensure stability of the load, this provision requires that the edge of the bridging bundle be positioned within 1 foot of the secured end (some clearance is necessary for material handling purposes and to provide employee access to the steel joist's attachment point).

The Agency received no comments on this provision, and therefore, promulgates this requirement as proposed.

Paragraph (e)(4) sets forth special conditions which must be met before an employer is permitted to place a bundle of decking on steel joists that do not yet have all bridging installed. This paragraph applies only to bundles of decking and not to other construction loads. All six conditions must be met before the exception to the provisions of § 1926.757(e)(2) applies.

Paragraph (e)(4)(i) requires employers to determine, based on information from a qualified person, that the structure or portion of the structure is capable of safely supporting the load of decking. This determination must be documented in a site-specific erection plan which is made available at the construction site.

Paragraph (e)(4)(ii) requires that the bundle of metal decking be placed over

a minimum of three joists to distribute the load.

Paragraph (e)(4)(iii) requires that the three steel joists supporting the bundle of metal decking have both ends attached to the support structure. The attachments must meet the requirements prescribed in § 1926.757(b).

Paragraph (e)(4)(iv) requires at least one row of bridging be attached and anchored to the three joists specified in § 1926.757(e)(4)(iii). The qualified person determines the type of bridging, erection bridging or horizontal bridging, needed to satisfy this requirement.

Paragraph (e)(4)(v) limits the weight of the bundle of metal decking to 4,000 pounds (1816 kg).

Paragraph (e)(4)(vi) requires that the edge of the bundle of metal decking be placed within a foot (0.30 m) of the bearing surface of the joist.

In the proposed rule, this paragraph stated that, "The edge of the bundle of decking is placed within 1 foot (.30m) of the bearing surface of the joist end." One commenter (Ex. 13–208) requested that it be revised to reference § 1926.757(e)(5) since both requirements are the same. The Agency agrees that the requirements are identical and has revised the provision accordingly for consistency.

Paragraph (e)(5) specifies the location for safe placement of all construction loads, not just metal decking, by requiring that the edge of the construction load be positioned within 1 foot of the secured end of the steel joists in order to enhance the stability of the load (some clearance is necessary for material handling purposes and for access to the steel joist's attachment point to the support structure).

Section 1926.758 Systems-engineered metal buildings

During SENRAC's deliberations on the prerequisites for anchor bolts, beams, columns and open web steel joists, the Committee discussed many anomalies that appeared to be associated with systems-engineered metal buildings. The Committee was advised by the Metal Building Manufacturers Association (MBMA) that over 50 percent of industrial buildings in steel erection are systems-engineered. This type of building frequently has lighter, cold formed members such as girts, eave struts and purlins (see definitions). Larger members in this type of construction are called rigid frames, a term not used in conventional steel erection. There are a large number of small specialized steel erectors who exclusively perform systems-engineered metal building erection. In light of these considerations and in an effort to

facilitate compliance with this subpart, SENRAC developed a separate section for systems-engineered metal buildings. OSHA proposed a separate section and continues this approach in the final rule.

This section sets forth requirements to erect systems-engineered metal buildings safely. Systems-engineered metal buildings are defined in the definition section of this proposal. Systems-engineered metal buildings include structures ranging from small sheds to larger structures such as warehouses, gymnasiums, churches, airplane hangers and arenas.

Systems-engineered metal buildings use different types of steel members and a different erection process than typical steel erection. Many contractors erect systems-engineered metal buildings exclusively. An overwhelming majority of these erectors are small employers (63 FR 43477). The erection of systems-engineered metal structures presents certain unique hazards that are not addressed specifically by OSHA's existing steel erection standard. Although some of the hazards are similar to general steel erection, other hazards, such as those associated with anchor bolts, construction loads and double connections, are different.

Most of the requirements in this section are similar to those in other sections of this document. Where a conflict arises between a provision in the systems-engineered metal building section and that of another section of subpart R, to the extent that the work being performed is systems-engineered metal building work, the more specific systems-engineered metal building section would apply. This section, however, must not be interpreted to mean that (apart from sections 1926.755 and 1926.757), the other provisions of subpart R do not apply to systems-engineered metal buildings where appropriate.

In the proposed rule, the title of this section was "Pre-engineered metal buildings." During the public hearing, a representative of the Metal Building Manufacturers Association (MBMA) (Ex. 207X; pp. 246–247), advised SENRAC that the title of this section used an out-of-date term, and suggested that it be replaced with a more current term such as "metal-building systems." MBMA's position was based on its view that "buildings are predominately custom engineered for each application and are no longer selected from a catalog of standard designs." The Agency believes that MBMA's suggestion is valid. However, MBMA's suggested term "metal-building systems" could be too broadly interpreted and mistakenly

applied to all buildings made entirely of metal instead of only to those which are engineered and supplied as a complete, integrated product. Therefore, OSHA believes that "systems-engineered metal buildings" better reflects that intent and has changed the title accordingly.

Paragraph (a) states that all of the requirements contained in subpart R apply to systems-engineered metal buildings except for §§ 1926.755 (Column Anchorage) and 1926.757 (Open Web Steel Joists). This paragraph has been revised from the proposed rule to clarify that § 1926.758 contains all anchor bolt and joist requirements that are specific to systems-engineered metal buildings.

Paragraph (b) requires all structural columns be anchored by at least four anchor bolts. One commenter expressed concern with this requirement and observed that different anchorage designs, including some with fewer bolts, could meet the safety intent of this paragraph (Ex. 13–153). It is conceivable that under certain conditions, other designs for anchorages could provide the stability needed for safe construction. However, it would be very difficult for those responsible for erecting the structures to know if, from an engineering standpoint, these other approaches would provide sufficient stability. OSHA has decided to defer to the expertise of the Committee, which found that a four-bolt system would be more effective and simpler to institute.

Another commenter supported the Agency's efforts to ensure column stability while questioning the Agency's authority to compel structural design specifications that will require engineering expertise (Ex.13–210). As noted earlier in the discussion of Column Anchorage (§ 1926.755) and Double Connections (§ 1926.756(c)), the Agency believes it is appropriate to prohibit the erection of structural members that lack key safety features.

Additionally, one commenter asked if this requirement would apply to all columns or just to those with structural significance (Ex. 13–173). As discussed in the Column Anchorage section, the Agency has added definitions for columns and posts. The intent of adding these definitions was to distinguish between columns that need to have four bolts and those that do not. Those definitions apply to this section as well. Only columns that fit the definition are required to have four anchor rods/bolts.

The requirement in paragraph (c) is unique to the erection of systems-engineered metal buildings because rigid frames are found only in this type of structure. This paragraph requires that rigid frames have 50 percent of

their bolts or the number of bolts specified by the manufacturer (whichever is greater) installed and tightened on both sides of the web adjacent to each flange before the hoisting equipment is released. Like final § 1926.756(a), this provision requires an adequate number of bolts to ensure stability before the hoist line is released. Rigid frames are fully continuous frames that provide the main structural support for a systems-engineered metal building. They provide the support that is typically provided by columns and beams in conventional steel erection. Due to design and load requirements, connections in rigid frames occupy a greater area and require more than two bolts upon initial connection. The remaining bolts are used to attach other members to the structure and provide stability against wind loading. To allow these connections to be bolted only with two bolts would not be adequate in many cases to prevent a collapse hazard. No comments were received on this paragraph and it is promulgated as proposed.

Paragraph (d) also pertains to stability and prohibits construction loads from being placed on any structural steel framework unless such framework has been safely bolted, welded or otherwise adequately secured. Without proper bolting or welding to provide stability, a construction load could cause a collapse of the structure. No commenter were received on paragraph (d) and it remains unchanged in the final rule.

For clarity, the regulatory text of proposed paragraphs (e)(1) and (e)(2) has been incorporated into a single paragraph (e) in the final rule. However, the paragraph is promulgated with the proposed requirements intact.

Paragraph (e) pertains to double connections in systems-engineered metal buildings. When girts or eave struts share common connection holes, a double connection hazard exists. As with § 1926.756(c), a seat or similar connection will prevent one member from becoming displaced during the double connection activity. In girt and eave strut to frame connections where girts or eave struts share common connection holes, paragraph (e) requires that at least one bolt with its wrench-tight nut remain in place for the connection of the first member unless a field-attached seat or similar connection device is present to secure the first member so that the girt or eave strut is always secured against displacement. In addition, paragraph (e) maintains that the seat or similar connection device must be provided by the manufacturer of the girt or eave strut so that it is

designed properly for the intended use. Because this form of double connection is unique to systems-engineered metal building construction and might not be considered a double connection under a literal reading of § 1926.756(c), this provision specifically addresses girt and eave strut to frame connections.

Changes to proposed paragraph (e)(2) were suggested by two commenters (Ex. 13–153), one who recommended that “the seat or similar connection that would normally be welded to the frame, * * * should be provided by the frame manufacturer * * *”. The other commenter (Exs. 43 and 207X) suggested that paragraph (e) be revised to reflect current steel erection methods in which the responsibility of installing temporary girt or eave supports is assigned to the erector. This suggestion also included a request to delete paragraph (e)(2).

Systems-engineered metal buildings are designed as an integrated product—each element is designed for the completed unit. In fact, MBMA (Ex. 207X) pointed out (in the context of what the title should be for the section) that almost all metal buildings are now “custom engineered.” Consequently, the designers of the building are particularly well situated to know where the double connections will be, the loads on the seats during assembly, and how to design the seats. In contrast, the erector does not normally have this type of design expertise and is not well situated to assess the type of seat or other connection device necessary for each particular double connection.

Paragraph (f) provides that both ends of all steel joists or cold formed joists shall be fully bolted and/or welded to the support structure before releasing the hoisting cables, allowing an employee on the joists, or allowing any construction loads on the joists. A commenter suggested that this paragraph be deleted because joists are addressed more thoroughly in § 1926.757 (Ex. 13–153). Two building trades representatives submitted similar comments expressing concern that paragraph (f)(1) was inconsistent with § 1926.756(a) and that the requirement for joist ends to be fully bolted or welded is excessive. (Exs. 13–210 and 13–222). SENRAC found that systems-engineered metal buildings are erected differently than other steel structures. These different construction methods were discussed in the preamble for the proposed rule (63 FR 43477). Systems-engineered metal buildings rely on these connections for stability and strength. These construction methods are essential to guard against collapse of systems-engineered metal buildings.

Therefore, the Agency is deferring to SENRAC's expertise with respect to this difference and promulgates this paragraph unchanged.

Paragraph (g) prohibits the use of purlins and girts as anchorage points for a fall arrest system unless written approval to do so is obtained from a qualified person. Generally, purlins and girts are lightweight members designed to support the final structure. They may not have been designed to resist the force of a fall arrest system. If, however, a qualified person determines that the purlin or girt is of sufficient strength to support a fall arrest system, it may be used for that purpose. The qualified person would be required to provide written documentation of this determination. This requirement is identical to the one for steel joists in proposed § 1926.757(a)(9).

Paragraph (h) provides that purlins may only be used as a walking/working surface when installing safety systems, after all permanent bridging has been installed and fall protection is provided. Purlins are “Z” or “C” shaped lightweight members, generally less than 1/8” thick, 2–4” wide on the top and up to 40 feet long. They are not designed to be walked on and, because of their shape, are likely to roll over when used as a walking/working surface if not properly braced. One commenter (Ex. 43) suggested that the use of cold-formed joists as walking/working surfaces should be prohibited along with purlins in paragraph (h). OSHA has not included cold-formed joists in this paragraph because they provide greater stability than do purlins which are not designed to be used as walking/working surfaces without the addition of specific safety precautions.

Paragraph (i) addresses the placement of construction loads on systems-engineered metal buildings to prevent collapse due to improper loading of the structure. This paragraph requires that construction loads be placed within a zone that is not more than 8 feet (2.5 m) from the centerline of the primary support member. Unlike conventional decking, systems-engineered metal building decking bundles are lighter, and the sheets in the bundle are staggered. This staggering means that the bundles must be set so that the end of one bundle overlaps another bundle since the lengths of the sheets vary. The zone needs to be big enough to allow for the lapping while still having the support of the structure. An 8 foot (2.5 m) zone allows enough room to meet these objectives. No comments were received and the final remains as proposed.

Section 1926.759 Falling object protection

This section sets forth the requirements for providing employees with protection from falling objects. A real, everyday hazard posed to steel erection employees is loose items that have been placed aloft that can fall and strike employees working below.

Paragraph (a) requires that all materials, equipment, and tools that are not in use while aloft be secured against accidental displacement. The Agency received no comments on this section of the standard, and the provision is unchanged in the final rule.

The intent of paragraph (b) is that, when it is necessary to have work performed below on-going steel erection activities (other than hoisting), effective overhead protection must be provided to those workers to prevent injuries from falling objects. If this protection is not provided, work by other trades is not to be permitted below steel erection work. One way controlling contractors can reduce the hazards associated with falling objects is by scheduling work in such a way that employees are not exposed.

In the proposed rule, this section was titled, "overhead protection." Most of the comments OSHA received on this section confused this provision with the requirements for protecting workers from falling objects associated with hoisting operations, which is addressed by § 1926.753(d). OSHA has changed the title of this paragraph to "Protection from falling objects other than materials being hoisted" so employers will not confuse the two provisions.

As proposed, § 1926.759(b) stated that, "The controlling contractor shall ensure that no other construction processes take place below steel erection unless adequate overhead protection for the employees below is provided." Two commenters (Exs. 13–318 and 201X; p. 120) stated that the controlling contractor may not always be able to ensure that nobody is working under a steel erector. In other words, these commenters believe that the use of the word "ensure" would make the controlling contractor strictly liable—would have to guarantee—that no one worked below the steel erection activities. The use of the word "ensure" in this standard does not make the controlling contractor liable if it institutes reasonable measures to comply with the requirement. All defenses normally available to employers are equally available where a requirement is phrased using the term "ensure."

For a different reason, however, the Agency has rephrased the provision to read that the controlling contractor will "bar" other construction processes below steel erection. This change was made to more directly state that the employer must institute measures to keep employees out of the area below the steel erection activities.

Section 1926.760 Fall Protection

Paragraph (a) General Requirements

Paragraph (a) sets the fall protection threshold height for steel erection activities. Final paragraph (a)(1) requires that, with two exceptions, each employee covered by this rule who is on a walking/working surface with an unprotected side or edge more than 15 feet (4.6m) above a lower level must be protected by conventional fall protection (systems/devices that either physically prevent a worker from falling or arrest a worker's fall). One exception allows connectors to not use their personal fall protection to avoid hazards while working at heights between 15 and 30 feet. The other exception allows workers engaged in decking in a controlled decking zone to work without conventional fall protection at heights between 15 and 30 feet.

This is essentially the same as the proposed rule and SENRAC's recommendation. OSHA added a provision setting out the types of protection allowed. Protection must be provided by the use of guardrail systems, safety net systems, personal fall arrest systems, positioning devices systems or fall restraint systems. The Agency also re-worded the exception for connectors to clarify that they are permitted to not use their fall protection system where, in their sole discretion, they determine that is necessary to avoid a hazard.

Prior to enactment of this final rule, the fall protection requirements for steel erection were in three separate provisions. Depending on the structure and the type of fall exposure, one of the following applied: §§ 1926.750(b)(1)(ii), 1926.750(b)(2)(i) (both are in subpart R), or § 1926.105(a) (subpart E, Personal Protective and Life Saving Equipment). These provisions were the subject of considerable litigation, the product of which was the following: (1) In single story structures, § 1926.105(a) applied, which required fall protection at and above 25 feet for both fall hazards to the interior and exterior of the structure; (2) in multi-tiered buildings, § 1926.750 applied to fall hazards to the interior of the building. Several courts held that, under that standard, fall protection was required at and above 30 feet; (3) in

multi-tiered buildings, § 1926.105(a) applied to fall hazards to the exterior of the building, which required fall protection at and above 25 feet. With the exception of § 1926.754(b)(3), the final rule eliminates distinctions between interior and exterior fall hazards and tiered versus untiered buildings for the fall protection trigger heights.

The fall protection rules for steel erection differ from the general fall protection rules in subpart M, which set six feet as the trigger height for fall protection. OSHA agrees with SENRAC that steel erection activities are different from most other construction activities. The different trigger height reflects these differences. OSHA also agrees with SENRAC that the former fall protection rules relating to steel erection are insufficiently protective and need to be strengthened.

In examining the issue of the threshold height for requiring conventional fall protection, SENRAC considered 29 CFR 1926 subpart M, the general fall protection standard for construction. In general, the subpart M trigger height for fall protection is six feet. SENRAC evaluated whether the trigger height in steel erection should be different than that in subpart M and concluded that it needed to be higher.

Steel erection differs from general construction in three major respects—the narrowness of the working surface, its location above, rather than below, the rest of the structure, and a minimum distance of approximately 15 feet to the next lower level. We explained the steel erection process in the proposal as follows (63 FR 43478–79):

Initially, vertical members, referred to as columns, are anchored to the foundation. The columns are then connected with solid web beams or steel joists and joist girders to form an open bay. In a multi-story building, the columns are usually two stories high. These structural members are set by connectors in conjunction with a hoisting device (typically a crane). When the two-story columns are set in place, the connector installs the header beams at the first level, which forms the first bay. Each floor is typically 12.5 to 15 feet in height. After an exterior bay is formed ("boxing the bay"), the filler beams or joists are placed in the bay. The connector then ascends the column to the next level, where the exterior members are connected to form a bay, and so on. The floor or roof decking process basically consists of hoisting and landing of deck bundles and the placement and securing of the metal decking panels.

In short, a new, very narrow working surface is constantly being created as skeletal steel is erected at various heights. For many steel erectors, especially connectors, the work starts at the top level of the structure.

The special circumstances of steel erection can make conventional fall protection very difficult to deploy below 15 feet. For many steel erectors, especially connectors, the work starts at the top level of the structure. This means that anchor points above foot level are often limited or unavailable. Because of the nature of the structure, the available fall arrest distance is usually about 15 feet.

Thus, we noted in the proposal that fall equipment manufacturers appeared before the Committee and discussed the relationship between the fall distance when fall arrest systems are used and the trigger height for requiring fall protection (63 FR 43479). The location of anchor points, in conjunction with a number of other factors, will affect the fall arrest distance—the distance a worker will fall before the fall arrest system stops the fall. The fall arrest distance is the sum of the distance the worker falls before the fall arrest system begins to stop the fall, plus the additional distance that it takes for the system to slow and then finally stop the fall completely. Other factors that affect the fall arrest distance include the type of fall protection system used, the type of components and how the system is configured and anchored. The degree of mobility needed for the worker, location of available anchor points, and the need to limit the arresting forces on the worker's body also affect the choice of system and its installation.

Personal fall arrest systems commonly used by workers in full body harnesses often have one of the following: (1) Shock absorbing lanyard; (2) self-retracting lifeline; (3) rope grab with vertical lifeline; or (4) shock absorbing lanyard with rope grab and vertical lifeline. Fall arrest distances can vary with different types and lengths of lanyards. The distances can also vary in systems that permit the user to adjust the amount of slack.

The three common types of anchorage systems include: (1) Horizontally mobile and vertically rigid (such as a trolley connected to a flange of a structural beam); (2) horizontally fixed and vertically rigid (such as an eyebolt, choker or clamp connected to a structural beam, column or truss); and (3) horizontally mobile and vertically flexible (such as a horizontal lifeline suspended between two structural columns or between stanchions, which are attached to a structural beam and designed to support the lifeline). Eight feasible combinations of personal fall arrest systems and anchorage connectors were discussed (63 FR 43479). The total fall distance can differ significantly depending on how the system is

configured. A system using an anchorage connector, harness and shock absorbing lanyard will have a total fall distance between 3 and 23 feet, while the total fall distance for a system using an anchorage connector, harness and self-retracting lifeline will measure between 4 and 10.5 feet. (Exs. 6–10 and 9–77-Tables 6 and 7). In 1995, one fall protection manufacturer indicated to SENRAC that the lowest point of the ironworker's body should be at least 12.5 feet above the nearest obstacle in the potential fall path when using a properly rigged, rigidly anchored, personal fall arrest system of the shock absorbing lanyard type or self-retracting lifeline type. In view of the types of equipment available, potential locations of anchor points, and typical distance between work surfaces and the next lower level, the Committee determined that 15 feet was an appropriate threshold for requiring fall protection, subject to the two exceptions mentioned above.

OSHA received comments supporting a requirement for fall protection beginning at 15 feet (Exs. 13–354; 13–151; and 13–207C). The National Erectors Association (Ex. 208X, p. 115) supported a 15-foot rule and testified against the “one size fits all” trend (relative to having a 6-foot rule). Robert Banks of the Safety Advisory Committee of Structural Steel (Ex. 205X, p. 294) felt that, when finalized, the proposed rule would generate widespread use of personal fall arrest equipment. Innovative Safety, (Ex. 207X, pp. 15–16) testified that 15 feet was realistic and that various fall arrest systems could be used at that height. One commenter (Ex. 13–246) advocated a 10-foot rule.

However, OSHA also received comments and testimony in support of a 6-foot fall protection rule. Several commenters advocated consistency between Subpart R and M (Exs. 13–159; 13–148; 13–121; 13–260; and 13–215). Some general contractors stated they support a 6-foot fall protection rule for steel erectors (Exs. 207X, p. 211; 207X, pp. 134–135, p. 172; 207X, pp. 182–186; 207X, p. 172; 13–366; 13–352; 13–306; 13–346; 13–340; 13–338; 13–240; 13–229; 13–214; 13–192; 13–167; and 13–159). Five of these companies testified to the successful implementation of their 6-foot programs for steel erection for all steel erection operations, including connecting and decking. For example, a representative from Kellogg Brown & Root testified (Ex. 207X, pp. 133–134) that their company has had a 6-foot policy for eight years. When the structure cannot accommodate fall protection or fall prevention systems, their company uses aerial lifts and/or

scissors lifts. W.S. Bellows Construction Corp. implemented a 6-foot fall protection policy in 1994 (Ex. 207X, pp. 136–141) when subpart M took effect. Bellows testified that their policy has increased productivity, decreased insurance costs, and saved lives. An official from CENTEX Construction Co., a general contractor, declared (Ex. 207X, pp. 182–186) that his company, because of positive experiences on earlier projects, implemented a policy to hire only subcontractors using 6-foot programs. Turner Construction Company's spokesman testified (Ex. 207X, p. 211) that their company would prefer a 6-foot rule, but could operate with a 15-foot threshold.

Four commenters referenced the fatality statistics and were concerned that OSHA included the SENRAC fall protection provisions in the proposed rule. These commenters contended that technology was available to protect steel erection workers at 6 feet (Nigel Ellis Ex. 23; Beacon Skanska Const. Co. Ex.—13–285; Clark Construction. Co. Ex. 202X, p. 9–10; and Joseph Fitzgerald Ex. 13–31). However, one of these commenters, Mr. Nigel Ellis, acknowledged that preplanning might not preclude all the anchorage point problems, and where employers prove that it is infeasible to provide overhead anchorage points, the rule should contain provisions that would permit free fall distances greater than 6 feet. For example, if workers are in situations where the only anchor point is at foot level, there would be difficulties when using personal fall protection at 6 feet. In general, in order to use a personal fall arrest system at 6 feet, the system would have to either be anchored above the worker's head or set up to restrain the worker from stepping past an open side or hole. For many steel erection activities, he noted this may be difficult to achieve at 6 feet.

During the rulemaking process, SENRAC and OSHA analyzed accident information derived from OSHA's IMIS system. There were two studies on steel erection fatalities—a seven-year OSHA study and a subsequent eleven-year OSHA/SENRAC study (which included the previous study's data; Exs. 9–14A; 9–42 and 49). An earlier OSHA five-year study of construction fatalities in general showed that 8% of the fatal falls occurred between 6 and 10 feet and that 25% occurred between 11 and 20 feet. However, of that 25%, the Agency does not know how many ironworker fatalities occurred between 11 and 15 feet. With this significant gap in the data, we cannot determine whether a high proportion of the falls between 11 and 20 feet occurred below 15 feet. We note that much of the steel erection

work involving single story structures, such as warehouses, is done at or above 15 feet.

After analyzing the entire record, the Agency has determined that the use of conventional fall protection at 15 feet and above is necessary and feasible in most cases. While some general contractors and large industrial steel erectors may be providing fall protection below 15 feet, the data are unclear with respect to how much of a need there may be for requiring fall protection in steel erection at those lower heights. Also, many situations in steel erection do not permit connecting fall protection below 15 feet. In addition, steel erection work that is done between 6 and 15 feet is often performed from ladders, scaffolds, or personnel work platforms (63 FR 43479). Therefore, OSHA has decided not to require conventional fall protection in steel erection below 15 feet.

Paragraph (a)(2) covers requirements for perimeter safety cables. It is modified from the proposal and moved from proposed § 1926.756(f)(1). It specifies that perimeter safety cables shall be installed at the final interior and exterior perimeters of multi-story structures as soon as the decking has been installed. These cables must be installed regardless of other fall protection systems in use. They must meet the criteria for guardrail systems in subpart M (1926.502(b)).

The final requirements differ from those proposed by specifying when the cables must be installed: "as soon as the decking has been installed." Although the proposal's preamble stated SENRAC's and OSHA's intention that "these cables * * * be installed as soon as the deck has been installed * * *" (63 FR 43471), the proposed regulatory text carried over the broader language of the current requirement that cables be installed "during structural steel assembly." To carry out SENRAC's intention, as well as to improve clarity, we have specified when the cables must be installed, so that they can protect the detail crews which follow the decking crews (Id.).

The final rule also changes the minimum thickness requirement of the cable to $\frac{1}{4}$ " to conform to the guardrail specifications required in subpart M (§ 1926.502(b)). We had proposed the cable be at least $\frac{1}{2}$ ", which was the previous requirement of subpart R. We agree with the commenters that the subpart M requirements for guardrails are appropriate for the perimeter safety cables in steel erection.

The Associated General Contractors of Wisconsin and D.C. (Exs. 13-334 and

13-210) suggested that the name "perimeter cable" be changed to "perimeter cable guardrails" to be consistent with Subpart M. Because the term "perimeter safety cable" is so commonly used in the steel erection industry, the Agency has decided not to adopt this suggestion.

A few participants (Exs. 206X, p. 55; 13-63; and 13-209) stated that the meaning of perimeter is undefined because the perimeter may change as work progresses. However, in the vast majority of buildings the perimeter columns define the final perimeter where the edges will not be expanded. LeMessurier Consultants (Ex. 13-127) suggested that the proposed words "periphery" and "perimeter" lead the reader to believe that only the outermost edges of the structure have to be guarded and that the final interior perimeters (such as for atriums) are similar to final exterior perimeters in that these edges will not be expanded. We agree, and the final text makes clear that the final "interior" as well as the final "exterior" must be protected by the use of safety cables. However, we are not including an appendix with diagrams, as suggested, because of the wide variety of perimeter configurations.

One commenter (Ex. 206X, p. 55) testified that the steel erectors had the ingenuity to erect the perimeter safety cables and should be responsible for complying with the standard. Others commented that it should be the controlling contractor's responsibility to comply with the standard or to make sure, by contract, that competent people do the work and that it is a common practice for erectors to be tasked, by contract, with installing perimeter safety cables along with their other work.

The majority of the general contractors testified (see for example, Exs. 13-63, 13-116, 13-161 and 13-203) that they were opposed to making the controlling contractor responsible for the erection of equipment required in the steel erection standard. They feel the erectors are the most experienced at erecting perimeter safety cables and should have that responsibility.

The perimeter cable provision in the proposal did not specify either the steel erector or the controlling contractor as responsible for installing the perimeter cables. Section 1926.750(a) states, in part, that "the requirements of this subpart apply to employers engaged in steel erection unless otherwise specified." Since the perimeter cable provision does not specify any particular entity as responsible for installing the cables, all employers engaged in steel erection with respect to

the project are responsible for compliance with this provision, including the controlling contractor. The extent of the controlling contractor's responsibility for complying with this provision would be determined in accordance with the Agency's multi-employer policy; that policy applies to all controlling employers, irrespective of the type of construction.

Paragraph (a)(3) requires that connectors and employees working in controlled decking zones be protected from fall hazards as provided in paragraphs (b) and (c) of this section, respectively. The final rule retains (with some modifications) the proposed exceptions to the general requirement that fall protection be provided at heights above 15 feet. According to paragraphs (b) and (c), employers of connectors are partly excepted from the general rule and employers of leading edge decking workers are excepted from some of the general fall protection requirements if they comply with specified alternative procedures in these paragraphs. These provisions were the subject of much division of opinion both during SENRAC's deliberations and during the post-proposal phase of this rulemaking procedure. We discuss these provisions immediately below.

Paragraph (b) provides a special rule for employers of connectors. Paragraphs (b)(1) and (b)(2) are unchanged from the proposal. Paragraph (b)(1) requires each connector be protected from fall hazards of more than two stories or 30 feet (9.1 m) above a lower level, whichever is less. Protection at this height is currently required by OSHA's existing steel erection standard for all employees engaged in steel erection. Paragraph (b)(2) requires each connector to complete connector training in accordance with § 1926.761. Such training must be specific to connecting and cover the recognition of hazards, and the establishment, access, safe connecting techniques and work practices required by § 1926.756(c) and § 1926.760(b).

Final paragraph (b)(3) provides that connectors must be provided, at heights over 15 and up to 30 feet above a lower level, with a personal fall arrest system, positioning device system or fall restraint system and wear the equipment necessary to be tied off, or be provided with other means of protection from fall hazards in accordance with paragraph (a)(1) (or, for protection against perimeter falls, (a)(2)) of this section.

This provision reflects SENRAC's findings that at times connectors need to remain unencumbered. The revised

final provision also makes clear that this exception applies only where the employer has provided the connector with a complete personal fall protection system. This includes a personal fall arrest system as defined in § 1926.751 with secure anchorages for tying off. Employers may, of course, protect connectors working between 15 feet and 30 feet with another allowable fall protection system, in which case this limited exception does not apply.

The Committee's minutes (Ex. 6–1 through 6–11) show that the proposed "connector exception" was a compromise position. It was adopted by the Committee after listening to testimony of connector panels, fall protection equipment representatives, general contractor representatives, and steel erector representatives, all presenting differing views on whether connectors need different fall protection requirements than other non-connecting ironworkers. The Committee was informed that California's rule allowed the connector to be untied between 15 and 30 feet and the rule appears to be operating successfully (June 27–29, 1995-Committee Minutes). SENRAC told OSHA that it intended to define "connector" narrowly because the primary purpose of the definition was to specifically define which ironworkers are covered by the "connection exemption."

We proposed this exemption to reflect SENRAC's consensus agreement. As shown above, SENRAC recognized that the issue of fall protection for connectors was highly controversial. The minutes of the Committee show that some of its members agreed on the provision only when they were assured that within 3 years from the rule's effective date, the Agency would evaluate the available accident data and assess whether the rule was sufficiently protective.

The proposal set out reasons why SENRAC believed that this exception was necessary: "The Committee believes that under certain conditions, the connector is at greater risk if he/she is tied off. For example, in the event of structural collapse, a tied-off connector could be forced to ride the structure to the ground." (63 FR 43480).

The major concern of proponents of the exception both during SENRAC's meetings and during the rulemaking comment period and hearing, was that connectors needed freedom of movement and requiring them to tie-off would hinder this. The concern, as stated previously, was that in the event of structural collapse, a connector would be forced to "ride the structure to the ground" if tied off, whereas he/

she could jump free of the collapsing structure if he/she were not tied off. The ability to move without restraint in order to get away from incoming loads is also stated as a reason for connectors not to tie off.

The following discussion of the record combines information in the minutes of the committee with as information and comment submitted directly into the post-proposal record.

Fall protection was discussed during every SENRAC meeting. From the start, some committee participants stated that connectors need to remain unencumbered, both to do their job and to avoid dangerous conditions they commonly face. In the July, 1994 meeting where the full committee met with the fall protection workgroup, this point was made. Participants noted that connectors and some other steel erection workers are highly trained and experienced. It was stated that it would be a "greater hazard" to tie off such highly experienced people. (The term "greater hazard" has a precise legal meaning; it is an affirmative defense which requires employers to demonstrate various elements in order to be relieved of a citation. However, throughout SENRAC's discussions and the subsequent rulemaking, the term was used informally.) In its deliberations, SENRAC considered whether there are any jobs that requires a person to not be protected from fall protection because it is technically and economically infeasible. In the August, 1994 SENRAC meeting, a group of connectors from the Ironworkers Local #7 discussed "their experiences and views on the relative merits of mandatory fall protection for connectors and other workers." They uniformly stated that they needed to remain unencumbered when they were working with hoisting equipment and some members recounted personal experiences where they were able to escape collapses and incoming steel only because they were not tied off. By the November 27–December 1, 1995 meeting, SENRAC agreed on a consensus view incorporating the limited exception for connectors, as proposed. A few participants insisted that OSHA review fall statistics within 3 years after the final rule becomes effective, to check on whether the exception is adequately protective of connectors.

Issue #12 in the proposal asked the public to comment on whether there should be specific criteria indicating when connectors should tie-off. We also asked if it was feasible or posed a greater hazard for connectors to tie-off and if it should be the employer's

responsibility to determine where and when fall protection should be required. Several ironworkers testified during the December 1998 hearings about their personal experiences and belief that it is important to be able to move freely and, at times, to jump off a collapsing steel member.

Several commenters (Exs. 13–68; 13–345; 13–349; 13–331; and 13–114) stated connectors needed freedom of movement up to 30 feet. One commenter (Ex. 13–114) said the concern is not with falling, but being able to get away from the steel during a collapse. A member of the Ironworkers' Panel No. 1 testified (Ex. 205X, pp. 312–313) that even though the connector appears to be "running around like he's crazy, he's not. He has a place to go, and he knows where he is going at all times."

A number of other commenters objected to allowing connectors to choose whether to use fall protection, but none of these individuals indicated that they had experience connecting (Exs. 13–31; 13–60; 13–210; 13–222; and 13–334). The point was made, however, that, "in the case of structural collapse, the connector will 'ride the structure to the ground' whether or not he/she is tied off" (Ex. 13–31). The companies described above that advocated requiring fall protection at 6 feet require the connectors on their projects to be tied-off at all times. Furthermore, some commenters supporting the connector exception acknowledge that incoming steel can injure or kill connectors when they are not tied-off; Peterson Beckner Industries, Inc., (Ex. 13–354) related the case of two employees who were hit by incoming loads: the one who was tied off was hit and suffered a broken arm. The one who was not tied off was knocked off of a beam at the exterior of a building and was killed.

The record also contains two studies on steel erection fatalities—a seven-year study and a subsequent eleven-year study (which included the previous study's data) (Exs. 9–14A; 9–42 and 49). The eleven-year study categorized fatalities in a number of ways, including by "activity" and by "cause." Of the various causes listed, collapse was the third highest at 15.8% of the fatalities (the highest category was falls from slipping at 24%; second was "unknown" at 17%). By activity, connecting was second highest at 17% (the most dangerous activity was decking, at 23%).

The concern about collapses is the most cited reason for allowing connectors to not use fall protection equipment. SENRAC recommended and OSHA proposed new provisions that

address the causes of collapses such as inadequately cured concrete column foundations and inadequate or improperly repaired anchor bolts. The final rule addresses these by requiring concrete to be properly cured, a sufficient number of anchor bolts to support the columns and that anchor bolts are properly repaired (§ 1926.752(a); § 1926.755(a); and § 1926.755(b)). This should reduce the risk of collapse to connectors.

With respect to uncontrolled incoming steel exposing connectors to struck-by hazards, the final rule contains criteria for hoisting and rigging of steel members to minimize the likelihood of a suspended load shifting, falling and striking employees. Paragraph (a) of 1926.753 requires a competent person to perform a pre-shift visual inspection of the crane, and for qualified riggers to inspect all rigging prior to each shift. Section 1926.753(b) addresses working under the load. This paragraph requires employers to minimize employee exposures to the extent possible; however, it may be necessary for certain employees, such as connectors and those hooking and unhooking loads, to briefly work directly below a suspended load. To minimize this hazard, qualified riggers are required to rig the load to prevent displacement and to use a self-closing safety latch (or equivalent). These precautions are designed to minimize the chance of components disengaging from the hook and causing the load to fall, which should also reduce the risk to connectors.

After reviewing the comments and testimony submitted to the rulemaking record after the proposal was published, OSHA has determined that the post-proposal rulemaking record is similar to the comment and testimony submitted to the Committee during its meetings and in various workgroup meetings. In addition, the consensus agreement of the Committee, which included representatives of all interests affected by this rule, reflects an agreement that employee safety would be promoted by the adoption of the proposed standard, including the connector exception. Comment and testimony submitted by connectors and various representatives of ironworker employees overwhelmingly supported the proposed provision allowing connectors to not tie-off when working below 30 feet. For all these reasons, the Agency has decided to defer to the determinations of the Committee and allow connectors to not be tied-off in order to avoid hazards. The definition of "connector" reflects SENRAC's intention to define that term narrowly.

And as requested by some members of SENRAC, OSHA will examine the compliance experience of this provision within 3 years to determine if connectors are adequately protected from falls applying these provisions.

In sum, since the Committee considered the full range of evidence on this issue in its deliberations, the Agency is deferring to its expertise and assessment of that evidence. The Committee's expertise, in combination with the information relied upon by the Committee, has provided OSHA with much of the supporting evidence for this standard. While other approaches for protecting connectors against falls may be possible, based on the Agency's concurrence with the negotiated proposal, the information in the record, including material used and generated by SENRAC during the negotiating process, OSHA has relied on the Committee's expertise and decided in this instance in favor of the approach recommended by SENRAC.

Paragraph (c) Controlled Decking Zone (CDZ).

The final standard's provisions for controlled decking zones (CDZ) are mostly unchanged from the proposal. The CDZ is an alternative to fall protection for leading edge decking workers between 15 and 30 feet above a lower level. If an employer establishes a CDZ that conforms to paragraph (c), employees authorized to be in that zone who are trained pursuant to § 1926.761, do not have to be provided with or use a fall protection system. OSHA proposed the provision based on SENRAC's consensus view that this alternative approach to fall protection would substantially reduce the number of accidents involving falls during decking.

Paragraph (c)(1) requires that each employee doing leading edge work in a CDZ must be protected from fall hazards of more than two stories or 30 feet, whichever is less. CDZs are inappropriate for decking operations at and above these heights. For example, single story, high bay warehouse structures and pre-engineered metal buildings often require decking operations more than 30 feet above lower levels. The exception would not apply in these situations.

An important aspect of a CDZ is controlled access. OSHA fatality data (Ex. 9–14 and 9–49), indicate that some employees who suffered fatal falls from areas that were being decked were not engaged in leading edge work. Paragraph (c)(2) limits access to the CDZ exclusively to those employees who are

actually engaged in and trained in the hazards involved in leading edge work.

Final paragraph (c)(3) addresses the physical limits of a CDZ, and requires that the boundaries be designated and clearly marked. The CDZ shall not be more than 90 feet (27.4 m) wide and 90 feet (27.4 m) deep from any leading edge, and control lines, or the equivalent (for example, the perimeter wall), shall be used to restrict access to the area.

The proposal asked for public comment on whether a definition of "control lines" was necessary, or whether non-mandatory appendix D, which describes acceptable criteria for control lines, provided an adequate description. It also asked whether appendix D should be incorporated into the fall protection provisions.

Several commenters (Exs. 13–113, 13–170G, 13–344, 13–173, 13–210 and 13–215) requested that Subpart R's control line criteria conform to the criteria found in subpart M—§ 1926.502(g)(3). In the final rule, OSHA has made the provision more consistent with subpart M where possible. A new paragraph was added to subpart R's appendix D regarding flagging or marking of the control line with highly visible material. The only remaining difference in the control line requirements is the allowable distance from the leading edge. A control line for a controlled decking zone is to be erected not more than 90 feet (27.4 m) from the leading edge, while the maximum distance permitted in Subpart M is 25 feet. The longer maximum distance in Subpart R is needed because of the size of the bays that are decked.

A commenter (Ex. 13–86), a contractor who performs traditional and pre-engineered steel erection, asked OSHA to conform the requirements for "control lines" in subpart R with the requirements for "warning lines" in subpart M since, in its view, the two systems serve basically the same purpose. OSHA disagrees with the commenter. We believe the systems perform different functions and therefore need different criteria to address those differences.

The controlled decking zone section requires that the boundaries of the zone be designated and clearly marked and that the access be limited exclusively to those employees engaged in leading edge work. One means of fulfilling this obligation is to erect control lines. While other methods might also be used, control lines are commonly used to restrict access to the unprotected area by creating a highly visible boundary. Their high visibility readily defines the area in which employees will work

without conventional fall protection, and visually warns employees that access is limited to authorized personnel. Warning line systems, however, are erected close to the edge of a roof (as close as 6 feet). They delineate the area where mechanical equipment may be used on roofs, and warn employees when they are approaching a fall hazard. The criteria for warning lines contemplated that there would be unintended contact with the line (such as an employee backing into it), and that such contact will attract the employee's attention, enabling the employee to stop in time to avoid falling off the roof. As referenced in the preamble to subpart M (59 FR 40712), the basis for the warning line system originated from the 1980 rule for Guarding of Low-Pitched-Roof-Perimeters During the Performance of Built-Up Roofing Work (45 FR 75618-631). The 1980 preamble specifically stated that warning lines function by providing a direct physical contact with the employees. This direct physical contact with the line dictates that the criteria for warning lines be substantially stronger and more rigid than a system whose primary function is to limit access by a visual warning.

Paragraph (c)(4) states that each employee working in a CDZ must complete the CDZ training, as specified in this subpart. Employees are required to be trained to recognize the hazards associated with working in a controlled decking zone, and trained in the establishment, access, safe installation techniques and work practices required by certain sections of this subpart, such as § 1926.754(e)—Decking and § 1926.760(c)—Controlled Decking Zone.

Paragraph (c)(5) requires that during initial placement, deck panels shall be placed to ensure full support by structural members. This provision addresses the specific hazard that results when full support is absent when placing metal decking. For example, in steel joist construction, metal deck sheets are typically 20 feet or longer and may span more than 4 joists (typically spaced 5 feet apart). A hazard is created if the deck is placed so that only three joists are supporting the sheet and the deck ends are unsupported. A worker not using fall protection and stepping onto the unsupported end of a deck sheet so placed is exposed to a potentially fatal fall hazard.

Paragraph (c)(6) states that unsecured decking in a CDZ shall not exceed 3000 square feet (914.4 m²). This section is intended to limit the area of unsecured decking in which employees work.

Because metal decking sheets are typically not uniformly sized and can create alignment problems, it is common practice to install a series of unsecured sheets on the structural member prior to fastening. The Committee believed that 3000 s.f. would be necessary for the metal decking to be placed and then properly aligned prior to tack welding.

The final rule, in § 1926.760(c)(6), prohibits more than 3000 feet of unsecured decking in the CDZ. This provision is unchanged from the proposal. OSHA explained this provision in the preamble to the proposal as follows: "The proposal would limit the area of unsecured deck to 3000 square feet (914.4 m²) to restrict the exposure to employees engaged in the placement of these deck sheets. Given the dimensions of typical bay (a typical bay is approximately 9000 s.f.), 3000 square feet was determined to be an appropriate limit that would allow for the decking to be placed and alignment to be performed prior to tack welding. This limit would thus greatly reduce the hazards associated with large areas of decking being left unattached and unattended." (63 FR 43481). The Steel Decking Institute's representative, Robert Paul, recommended that the provision be changed to require immediate securing of the decking in a CDZ. "The SDI cannot endorse the concept of a CDZ with deck being unfastened and petitions that it be changed. Our position is and [has] always been that decking can be fastened immediately and should not be walked on until after it is fastened." (Ex. 203X; p. 98). Phil Cordova, a SENRAC member, acknowledged that immediate securing was probably feasible in some cases: "* * * I think that you're probably correct on some decks probably need to be attached immediately." (Ex. 203X; p. 104). By contrast, SDI acknowledged in testimony that there were instances where you could not immediately attach the decking: In response to Mr. Cordova's question: "How would you align these decks if they're attached and they vary in size?", Mr. Paul stated: "Most decks, those with a nestable side lap, certainly have an adjustability that they can be laid to a varying level of coverage. Even decks that have a button punchable side lap within the standard button punchable type side up, there is some leeway to it. Some decks cannot. Some decks do need to be incremented that have no adjustability in the button punchable side lap. And really the only way to put those down is to increment them." (Ex. 203X; p. 105). Mr. Cordova

elaborated on the kind of decking which cannot be immediately secured. It is "type B" decking, a corrugated type of decking used generally as a "roof deck, not as a floor deck" that "we generally see in warehouse applications". (Ex. 203X; p. 142-143). Mr. Cordova agreed that this type of decking is used in multi-story structures as well (*Id.*).

Since this issue was so closely considered by the Committee during its deliberations, the Agency has decided to defer to its judgment and promulgate the provision essentially unchanged. Although the final rule does not require it, OSHA encourages employers to use alternative kinds of decking which are easier to attach initially, wherever such decking is appropriate and available.

Paragraph (c)(7) states that safety deck attachments shall be performed in the CDZ from the leading edge back to the control line and shall have at least two attachments per panel. This provision was intended to address the hazard in leading edge work that arises when an employee turns his/her back to the leading edge while attaching deck sheets. This provision will help prevent employees from inadvertently stepping off the leading edge. Safety deck attachments are usually accomplished with tack welds but can also be achieved with a mechanical attachment, such as self-drilling screws, or pneumatic fasteners.

Paragraph (c)(8) prohibits final deck attachments and the installation of shear connectors from being done in the CDZ. Activities such as these are not leading edge work, and employees performing this type of work can be readily protected from falls by the use of conventional fall protection.

Phil Cordova, testifying for the Decking Panel of SENRAC, stated: "this controlled decking zone that [SENRAC has] created will save lives. It will make the job a lot safer. This is our recommendation * * *" (Ex. 208X; p. 143). Fred Coddington, another member of SENRAC, testified that the CDZ provision "was one of the most important decisions made during the course of SENRAC" (Ex. 208X; p. 211). Mr. Coddington noted that the decision to recommend the CDZ "influenced other segments of the proposed standard, which deal with decking such as loads, covering holes and other things. They were all part of a real * * * compromise * * *" (*Id.*).

Some of the comments to the record questioned the sufficiency of the CDZ alternative to prevent falls in light of the statistical information in the record showing that a high percentage of steel erection fatalities result from decking accidents. SENRAC believed that many

of the accidents attributed as falls during decking will be prevented by the restricted access of the CDZ, and by requirements for decking construction in paragraph § 1926.754. SENRAC's position was stated by Mr. Coddling at the rulemaking hearing:

[M]any of these accidents were merely not people just walking off or falling off the leading edge of decking, but * * * (were due to) the lack of knowledge on how to install floor or roof decking; * * * people were walking through the area that had no business in the area (and) were falling and slipping through the sheets; that they had no idea the sheets were loose and could become displaced; that there was improper bearing on the sheets on the structural beam supporting them; that bundles of the decking were landed on unsecured members.

(*Id.* at 67).

As pointed out by the testimony of Mr. Robert Samela, president of a metal deck erecting company operating as deck erectors since 1972, "this reduction in fatalities ignores the positive effects of additional training * * *" (Ex. 208X; p. 138–139).

The question of whether to require conventional fall protection for decking operations was vigorously debated during the SENRAC deliberations. SENRAC reached its position after various contractors, equipment manufacturers and decking workers appeared before the Committee and discussed both the feasibility of conventional fall protection and whether to rely instead on CDZs to protect workers from falls.

When OSHA proposed the standard, we asked the public for information about the feasibility and hazard potential of providing fall protection to deckers (63 FR 43485). Comments were submitted which indicated that some general contractors had successfully employed fall protection systems for decking workers (Ex. 207X; pp. 172–173, 207X; pp. 235–239, 202X; pp. 153–154, 207X; pp. 292–293 and 13–73). However, the evidence and objections to the provision submitted after the proposal were similar to the evidence and objections considered by the Committee during its deliberations. Virtually all the employees who testified or submitted opinions into the record on their experience on the decking issue supported the Committee's recommended provisions for the CDZ alternative to fall protection.

On this record, the Agency defers to the Committee and leaves the provision unchanged in the final rule. Other approaches for protecting decking employees against falls may be possible. However, based on the Agency's

concurrence with the negotiated proposal and its reliance on the Committee's expertise, we have decided to promulgate SENRAC's CDZ alternative as proposed.

The CDZ alternative has built-in restrictions and will allow only a small number of workers to work without fall protection. Although the accident data presented to the record shows that decking accidents rank first in fatalities in steel erection, further analysis shows that some of the "decking" fatalities involved workers doing other jobs (for example, roofers falling onto unsecured decking; see also Ex. 9–14 and 9–49). The CDZ alternative applies only to workers performing leading edge work and initially attaching the decking. These are the only workers who are allowed to enter a CDZ. We agree with Mr. Bill Shuzman's statement (Ex. 208X; p. 130) that: "The controlled decking zone deals with a very small percentage of the number of people who are considered deckers. These are the people who do leading edge deck work." Further, the CDZ alternative provisions to fall protection apply only while leading edge work is being performed. "Leading edge" in this standard has the same meaning as in subpart M, OSHA's general construction fall protection standard. That standard, § 1926.500 (b), states that "leading edge means the edge of a * * * walking/working surface (such as the deck) which changes location as additional * * * decking [is] placed * * *". For decking in steel erection, the core "leading edge" tasks are lifting decking panels from the bundles placed on the secured decking next to the leading edge, and placing and aligning the panels prior to tack welding. As soon as the decking for the leading edge is finished (placed for fastening), that area no longer qualifies for use of a CDZ, and any employees in the area must be otherwise protected from falls.

The provisions making up this exception clearly limit the exception's application. We emphasize that the CDZ is not a general exception to fall protection requirements for all employees who install decking, or who work in the area while decking is being installed. Paragraph § 1926.760(c) states that a CDZ alternative to fall protection is allowed only for decking employees when metal decking is being initially installed and while that decking material forms the leading edge of a work area.

A core requirement of the CDZ alternative is § 1926.761(c)(3), which specifies that only employees trained in accordance with the standard's CDZ training provisions are allowed in the

CDZ. That provision requires that each employee be provided training in "the nature of the hazards associated with work within a controlled decking zone; and the establishment, access, proper installation techniques and work practices required by § 1926.760(c) and § 1926.754(e). This special CDZ training supplements the required fall hazard training in § 1926.761(a). OSHA believes that the implementation of these new training provisions will improve the safety of all employees who work in areas where decking is being installed. The record contains evidence that some employers are already providing this training. At the hearing Mr. Michael White of the Training Department of the International Association of Bridge, Structural Ornamental and Reinforcing Ironworkers stated that his organization, "in response to the new training provisions" has already started to develop specialized training curriculum for CDZ workers and other activities required to be trained under SENRAC's recommended standard. According to the statement read by Mr. White, these training programs "will be taught at approximately 160 training centers as an integral part of the apprenticeship training and journeyman training conducted at these centers. In addition, this new training curricula will also be used at the annual Ironworkers Instructors Training Program, * * * held * * * for a period of two weeks to train persons who are certified instructors in local and state ironworker training programs through the United States * * *" (Ex. 208X; pp. 62–63). Mr. Coddling (Ex. 208X; p. 65), an employer representative, also testified that he introduced SENRAC's training recommendations on CDZ work and other areas at the annual instructor training referenced by Mr. White. "There were some 500 participants that I reviewed those (the decking requirements and several of the connecting requirements) with." Mr. Coddling continued: "I really want to point out that we as employer contractor representatives have also taken steps to coordinate this training curriculum, which is being developed."

Paragraph (d) Criteria for Fall Protection Equipment

A new paragraph (d) was added to the final rule to clearly state that the protective systems mentioned in paragraph (a)(1) must conform to the criteria found in subpart M. Several commenters felt that proposed paragraph (a)(2) was too confusing. Some confusion resulted from the proposed rule's requirement that restraint systems meet the requirements

of § 1926.502. The confusion stems from the fact that § 1926.502 does not mention restraint systems.

Final paragraph (d)(1) requires guardrail systems, safety net systems, personal fall arrest systems, positioning device systems and their components to conform to the criteria in § 1926.502. Section 1926.502 does contain requirements for components of personal fall arrest systems, many of which are also used in restraint systems.

Final paragraph (d)(2) clarifies that the components used in a restraint system in steel erection work must meet the requirements in § 1926.502 for those components. Proposed paragraph (a)(2) indicated that the terms "fall restraint system" and "positioning device system" were interchangeable. Two fall protection consultants, Mr. Dan Paine and Mr. Nigel Ellis, testified that the terms should be distinguished. Mr. Paine describes a restraint system as a means to restrain someone from falling by not allowing them to get to the leading edge (Ex. 207X, pp. 12–13). Mr. Ellis says (Ex. 202X, pp. 128–129) that OSHA should decide whether fall restraint is a means of restricting a person's motion towards an edge or is the same as a work positioning device. He further stated that these systems are poorly understood by the construction industry, manufacturers and by various OSHA offices due to the similarity of their components. Other commenters (Exhibits 13–3, 13–192 and 13–221) expressed concern over allowing workers to fall while wearing a body belt, apparently in reference to the fact that body belts are permitted to be used in positioning devices and restraint systems. They urged consistency between subparts R and M.

The Agency has recognized that restraint systems and positioning devices refer to different types of protective devices. Under subpart M, a positioning device (1) allows an employee to be supported on an elevated, vertical work surface, such as formwork or rebar assemblies; (2) permits the worker to work with both hands free while leaning backwards, and (3) limits a fall to up to two feet. Restraint systems are not mentioned in subpart M. However, the Agency has defined restraint systems in letters of interpretation as systems that prevent workers from being exposed to any fall. Restraint systems may be used on either a horizontal or vertical work surface.

In brief, a positioning device enables an employee to work in a position that allows the employee to fall, but only up to two feet. A fall restraint system prevents the employee from reaching an

open side or edge, thus preventing the employee from falling.

Because the Agency has correctly distinguished these devices in the past, the final rule has been changed to be consistent with these distinctions. Both systems must use components that comply with § 1926.502. We are reprinting the criteria from § 1926.502 in Appendix G to assist employers and employees.

Final rule paragraph (d)(3) requires that perimeter safety cables must comply with the relevant criteria for guardrail systems in § 1926.502. E–M–E, Inc. (Ex. 202X; p. 65) testified that other trades often use the cables to climb or tie off to. Perimeter safety cables must not be used as an anchorage point for personal fall arrest systems unless they were engineered to serve that purpose.

The proposed rule included perimeter safety cables as one of the specified methods of fall protection and specified that the cables consist of ½-inch wire rope or equivalent. Final paragraph (d)(1) requires that if perimeter safety cables are used, they must consist of ¼ inch wire rope or its equivalent. OSHA retained the requirement for the cables to be made of wire due to the higher probability that these cables may be struck by loads or exposed to the heat of welding on steel structures.

Many commenters asked to change the ½ inch diameter requirement for perimeter cables to ¼ inch. Arguments were made that some companies have already purchased ¼ inch cable and a switch to ½ inch would be costly. We presume that those companies have invested in ¼ inch cable to comply with Subpart M, which requires ¼ inch cables for fall protection systems, for their non-steel erection work. Vulcraft (Ex. 13–4) and Fred Weber, Inc. (Ex. 13–218) had concerns that if the ¼ inch cable requirement were switched, those that have invested in ¾ inch would have to switch to ¼ inch.

The final rule in paragraph § 1926.760(d)(3) explicitly states that perimeter safety cables shall meet the criteria for guardrail systems in § 1926.502(b) (subpart M). This was not clear in the proposed regulatory text as pointed out by some rulemaking participants. Mr. Bob Emmerich, AGC of Wisconsin, testified (Ex. 201X, p. 78, pp. 88–90, pp. 107–108) that his organization agreed with the proposal, but felt the requirement should be consistent with subpart M. He stated that confusion could be avoided if the criteria for perimeter safety cables in subpart R mirrored that in subpart M's guardrail provision. Others also advocated consistency with subpart M (Exs. 13–173; 13–210 and 13–215).

Under Subpart M, § 1926.502 (b)(9), top and midrail cables must be at least ¼ inch ("to prevent cuts and lacerations"), but they may be thicker. So, employers operating under Subpart M now, with large stocks of ¼ inch cable, will not have to purchase ½ inch cable if they begin working on steel erection jobs.

A safety consultant (Ex. 13–151) suggested that instead of specifying a minimum diameter, we specify the strength, grade, lay and cores of the cable, as well as the spacing between the supports. We point out that, apart from the ¼ inch diameter requirement, subpart M specifies strength and deflection performance requirements in lieu of specifications.

Paragraph (e) addresses the need to ensure that fall protection equipment is maintained even after steel erectors have completed their work. Usually, perimeter safety cables are initially installed and maintained by the steel erector, but the cables remain on site after steel erection work is completed. With this provision, the fall protection equipment will only be left in place if the controlling contractor (or its authorized representative) has taken responsibility for ensuring that it will be properly maintained. Without this provision, the fall protection could fall into disrepair and become ineffective. This requirement is fairly similar to the AISC Code of Standard Practice (Ex. 9–36, p. 15) which states:

When safety protection provided by the erector is left remaining in an area to be used by other trades after steel erection activity is completed, the owner shall be responsible for accepting and maintaining this protection, assuring that it is adequate for the protection of all other affected trades, assuring that it complies with all applicable safety regulations when being used by other trades, indemnifying the erector from any damages incurred as a result of the safety protection's use by other trades, removing the safety equipment when no longer required and returning it to the erector in the same condition as it was received.

Commenters in support of the provision stated that steel erectors were concerned that if they left their fall protection in place after finishing their work, nobody would maintain the fall protection, and they would be held liable. OSHA agrees with the commenters that this could give employers of other trades a false sense of security, and could cause employees to be injured.

Other commenters asserted that controlling contractors should not be required to provide fall protection to the employees of other employers. First, this provision does not require the

controlling contractor to accept responsibility for the fall protection equipment. The controlling contractor has the option of refusing to accept responsibility. If it refuses to accept responsibility, then the fall protection equipment must be removed. Second, the controlling contractor already has obligations with respect to the safety of employees of other employers under the Agency's multi-employer policy. A controlling contractor may refuse to accept responsibility for the equipment and require the other trades to erect and maintain their own fall protection equipment. Such a decision would be consistent with both that policy and this provision. As a practical matter, it was SENRAC's view that the controlling contractor is in the best position to make the decision about whether to accept responsibility for the equipment, since it has authority over the site and can best coordinate the other trades and deal with the ramifications of this type of decision. The record does not show that view to be unreasonable.

Section 1926.761 Training

The OSHA steel erection standard has many new requirements involving more widespread use of personal fall protection equipment and special procedures for making multiple lifts, for decking activities in controlled decking zones and for connecting. SENRAC and OSHA recognized the need for a separate training section to address these and other requirements. The requirements in § 1926.761 supplement OSHA's general training and education requirements for construction contained in § 1926.21.

Since the employer can choose the provider, method and frequency of training that are appropriate for the employees being trained, the employer has flexibility in developing and implementing a training program. The program must meet the requirements of this section, and each employee must be provided the training prior to exposure to the hazard. The employer can choose the provider, method and frequency of training that are appropriate for the employees being trained. The provider may be an outside, professional training organization or other qualified entity, or the employer may develop and conduct the training in-house.

A commenter (Ex. 13-246) pointed out that the training provisions do not require that the employer verify that the employees understand what they have been taught. Another commenter (Ex. 13-216) recommended that OSHA's goal should be to mandate that ironworkers are trained and certified as competent by their employer.

The requirement to provide training is met only when the training is effective in providing the knowledge stipulated in these provisions. An effective training program necessarily involves some means of determining whether the instruction is understood by the employee. This can be done in a variety of ways, such as formal oral or written tests, observation, or through discussion. The previous commenter added that retraining is not addressed but needs to be included with a requirement for annual refresher training with verification (Ex. 13-246). Another commenter (Ex. 13-354) asserted that there is no mention of prior training received from previous employers. He argued that if an ironworker has been trained by his previous employers to possess a certain skill or skills (for example, a connector), it seems costly and unnecessary to require the ironworker to be re-trained prior to going to work for another employer.

While retraining/refresher training is not specifically addressed, the employer is responsible for making sure that it has programs necessary to comply with the training requirements in § 1926.21(b)(2): "The employer shall instruct each employee in the recognition and avoidance of unsafe conditions and the regulations applicable to his work environment to control or eliminate any hazards or other exposure to illness or injury." Steel erection involves progressive sequences of erection, so that the work environment on any one day may involve entirely different or unique new hazards than the day before and that new employees may enter the erection process when it is already underway. In order to apply § 1926.21 during steel erection activities, an employer would have to assess the type of training needed on a continuing basis as the environment and changes in personnel occur. It is the employer's responsibility to determine if an employee needs retraining in order to strengthen skills required to safely perform the assigned job duties, and whenever the work environment changes to include newly recognized or encountered hazards. This is a key element in the employer's accident prevention program.

Where an employer hires a worker, such as a connector, who is already trained and skilled, OSHA anticipates that the employee's high level of knowledge will be readily apparent and easily ascertained by informal discussion and observation.

A commenter (Ex. 13-216) suggested that the complexity of the steel erection standard will require extensive training

to ensure that ironworkers are aware of the new way of performing their work. The Safety Advisory Committee of the Structural, Ornamental, Rigging and Reinforcing Steel Industry (SAC) (Ex. 208X; p. 68) commented that they support the training requirements as proposed.

OSHA agrees that additional training will be required to ensure that the employees are aware of and understand the regulations applicable to their work environment. However, the Agency believes that the new requirements in this rule are needed to make steel erection safer, and the additional training requirements will play a major role in achieving that increased safety.

Paragraph (a) requires that all training required by this section be provided by a qualified person. As discussed earlier, a "qualified person," is defined in § 1926.751 as one who, by possession of a recognized degree, certificate, or professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated the ability to solve or resolve problems relating to the subject matter, the work, or the project.

Paragraphs (b)(1) through (b)(5) require employers to provide a training program for all employees exposed to fall hazards. The program must include training and instruction in recognition and identification of fall hazards in the work area [(b)(1)]; the use and operation of guardrail systems, personal fall arrest systems, fall restraint systems, safety net systems, controlled decking zones and other protection to be used [(b)(2)]; the correct procedures for erecting, maintaining, disassembling, and inspecting the fall protection systems to be used [(b)(3)]; the procedures to be followed to prevent falls to lower levels and through or into holes and openings in walking/working surfaces and walls [(b)(4)]; and the fall protection requirements of § 1926.760 [(b)(5)].

In the proposal, paragraph (b)(2) stated that training had to be given with respect to perimeter safety cables as well as guardrails. The reference to perimeter safety cables in the training section has been deleted in the final rule because, under the final rule, perimeter safety cables are considered guardrails (under § 1926.760 (b)(3), they must meet the requirements for guardrails in § 1926.502). There were no comments received regarding these provisions, and no other changes were made in the final rule.

Paragraph (c) requires specialized training for employees engaged in multiple lift rigging procedures, connecting activities and work in controlled decking zones, due to the

hazardous nature of these activities. There were no comments received regarding the provisions in § 1926.761(c)(1), (c)(2) and (c)(3), and they are promulgated without change.

Paragraphs (c)(1)(i) and (c)(1)(ii) require additional training for employees performing multiple lift rigging in accordance with the provisions in § 1926.753(e). The special training includes, at a minimum, the nature of the hazards associated with multiple lifts; and the proper procedures and equipment to perform multiple lifts.

Paragraphs (c)(2)(i) and (c)(2)(ii) require employers to ensure that each connector has been provided training in the hazards associated with connecting, and in the establishment, access, proper connecting techniques and work practices required by § 1926.760(b) (fall protection) and § 1926.756(c) (double connections).

Paragraphs (c)(3)(i) and (c)(3)(ii) require employers to provide additional training for controlled decking zone employees. The training must cover the hazards associated with work within a controlled decking zone, and the establishment, access, proper installation techniques and work practices required by § 1926.760(b) (fall protection) and § 1926.754(e) (decking operations).

Appendices to Subpart R

The following appendices neither create additional obligations nor eliminate obligations otherwise contained in the standard. They are intended to provide useful, explanatory material and information to employers and employees who wish to use it as an aid to understanding and complying with the standard.

Appendix A to Subpart R—Guidelines for Establishing the Components of a Site-Specific Erection Plan (Non-Mandatory). As explained in the discussion for the section governing site-specific erection plans (§ 1926.752), this appendix was developed by SENRAC as a non-mandatory set of guidelines to assist employers in complying with the requirements of final paragraph § 1926.752(e). If an employer follows these guidelines to prepare a site-specific erection plan, it will be deemed as complying with the requirements of paragraph § 1926.752(e). No comments were received on this Appendix and it remains unchanged from the proposed rule except for adding “anchor rod” in (c)(3)(iii) to be consistent with the changes made to § 1926.755 of the final rule.

Appendix B to Subpart R—Acceptable Test Methods for Testing Slip-Resistance of Walking/Working Surfaces (Non-Mandatory). Appendix B is provided to serve as a non-mandatory guide to assist employers in complying with the requirements of final rule paragraph § 1926.754(c)(3). The two nationally recognized test methods referred to in appendix B, ASTM F1677–96 (Standard Test Method for Using a Portable Inclineable Articulated Strut Slip Tester) and ASTM F1679–96 (Standard Test Method for Using a Variable Incidence Tribometer), provides the protocol for testing coatings for skeletal structural steel surfaces to obtain the documentation or certification required by § 1926.754(c)(3). No comments were received on this Appendix and it remains unchanged from the proposed rule except for correcting the cite to ASTM F1677–96 which was incorrectly identified as ASTM F1678–96 in the proposed rule.

Appendix C to Subpart R—Illustrations of Bridging Terminus Points (Non-Mandatory). This appendix is a non-mandatory guide to assist employers in understanding the requirements of section §§ 1926.757(a)(10) and 1926.757(c)(5). The illustrations show several (but not all) common bridging terminus points. This Appendix remains unchanged from the proposed rule except that a reference was added to § 1926.757(a)(10) which was overlooked in the proposed rule and correcting an inaccurate reference to § 1926.757(c)(3) in the proposed rule. This appendix is provided to employers as a non-mandatory guide to assist in complying with the requirements of sections 1926.757(a)(10) and 1926.757(c)(5).

The Agency received two written comments addressing this appendix. One commenter (Ex. 13–308) stated that: (1) The anchors indicated in many of the figures should be labeled as “appropriate anchors” rather than “lag with shield or embedded anchor;” (2) lag shield anchors are not always appropriate; and (3) the notation “looped around top chord” should be changed to “wrapped around top chord.” The other commenter (Ex. 13–151) identified a number of deficiencies in the illustrations.

The Agency’s engineers reviewed the comments on the illustrations and believe the illustrations are accurate illustrations of some common bridging terminus points. The titles of the illustrations are terms that are commonly understood in the industry. These illustrations were not meant to cover all construction site situations.

Therefore, the agency has not changed the illustrations or the titles. The proposed text in Appendix C is adopted as a nonmandatory reference.

Appendix D to Subpart R—Illustration of the Use of Control Lines to Demarcate Controlled Decking Zones (CDZs) (Non-Mandatory). Appendix D is provided to serve as a non-mandatory guide to assist employers in complying with the requirements of final rule paragraph § 1926.760(c)(3). If the employer follows these guidelines to establish a control line to demarcate a CDZ, OSHA will accept the control line as meeting the requirements of paragraph § 1926.760(c)(3). This appendix neither creates additional obligations nor eliminates obligations otherwise contained in the standard. It is intended to provide useful explanatory material and information to employers and employees who wish to use it as an aid to understanding and complying with the standard. No comments were received on this appendix and it remains unchanged from the proposed rule.

Appendix E to Subpart R—Training: (Non-Mandatory). Appendix E is provided to serve as a non-mandatory guide to assist employers in complying with the requirements of final paragraph § 1926.761. Even before the existence of OSHA, the Ironworkers International Union provided apprenticeship training in steel erection to its members. This training has been approved by the U.S. Department of Labor’s Bureau of Apprenticeship Training for over forty years. As soon as this program is updated to reflect the requirements of this new subpart R, training under this program will be deemed as complying with the training requirements of § 1926.761. As stated in Article XI of the current approved National Apprenticeship and Training Standards for Ironworkers:

The [Ironworkers Joint Apprenticeship] Committee shall seek the cooperation of all employers to instruct the apprentices in safe and healthful work practices and shall insure that the apprentices are trained in facilities and other environments that are in compliance with either the occupational safety and health standards promulgated by the Secretary of Labor under [the OSH Act] or state [plan] standards* * * (Ex. 9–139; p. 8).

Training approved by the U.S. Department of Labor’s Bureau of Apprenticeship Training is not the only training that OSHA will accept under this standard. Employers may choose to provide their own training, provided that it fulfills the requirements of § 1926.761.

As proposed, Appendix E stated: "The training requirements of § 1926.761 will be deemed to have been met if employees have completed a training course on steel erection, including instruction in the provisions of this standard, that has been approved by the U.S. Department of Labor's Bureau of Apprenticeship."

One commenter (Ex. 13-222) indicated that there are many other avenues for training that are not approved by the U.S. Department of Labor's Bureau of Apprenticeship Training, such as trade associations, training organizations, consultants and in-house training programs; yet the appendix does not include any sources other than those approved by the U.S. Department of Labor's Bureau of Apprenticeship Training.

Another commenter (Ex. 13-210) expressed a similar concern, stating that the Appendix implies that the only training that is acceptable is training done through an apprenticeship program approved by the U.S. Department of Labor's Bureau of Apprenticeship Training. The commenter recommended that trade associations, training organizations, consultants and in-house training programs be included in Appendix E as acceptable/recognized training entities; if not, then Appendix E should be omitted. Another commenter (Ex. 201X; p. 82) recommended that OSHA either state in Appendix E that "employers may choose to provide their own training, provided that it fulfills the requirements of § 1926.761," or omit appendix E.

OSHA has decided to retain appendix E as proposed. We emphasize that appendix E does not require that training be approved by the U.S. Department of Labor's Bureau of Apprenticeship Training. Training provided by others is sufficient if it meets the requirements of § 1926.761. The Appendix simply identifies certain training—training approved by the U.S. Department of Labor's Bureau of Apprenticeship Training—that OSHA deems acceptable to meet the requirements of § 1926.761. It is appropriate for OSHA to acknowledge a training program that is administered through another office within the Department of Labor.

Training approved by the U.S. Department of Labor's Bureau of Apprenticeship Training may be used as a guide for developing and assessing other training programs. The proposed text in Appendix E is adopted as proposed.

Appendix F to Subpart R—Perimeter Columns (Non-Mandatory). Since

perimeter safety cables are the method prescribed by § 1926.756(e) for guarding of perimeters, final rule appendix F provides guidance for installing them. As proposed, the first part of appendix F stated that, "in multi-story structures, the project structural engineer of record (SER) may facilitate the ease of erecting perimeter safety cables, where structural design allows, by placing column splices sufficiently high so as to accommodate perimeter safety cables located at 42–45 inches above the finished floor. The SER may also consider allowing holes to be placed in the column web, when the column is oriented with the web perpendicular to the structural perimeter, at 42–45 inches above the finished floor and at the midpoint between the finished floor and the top cable * * *".

The National Council of Structural Engineers (Ex. 13-308) suggested that the reference to the SER be removed and replaced by a reference to a "competent person." Commenters, including a staff member from Minnesota DOT-Office of Bridges and Structures (Ex. 13-359), stated that the erector is the most competent party when it comes to erecting perimeter cables. In their view it has been a responsibility written into their contracts in the past and the responsibility should remain with them. It was also argued in testimony (201X; p. 49) that if SERs were to follow the guidelines in appendix F, they would be taking on the responsibility of ensuring that the components of a perimeter cable system comply with the requirements of subpart R, which would raise liability issues.

Apart from these concerns, the Agency has determined that this first part of the appendix could be confusing. The appendix may give the impression that having columns extend a minimum of 48 inches above the finished floor to permit installation of perimeter safety cables prior to the erection of the next tier is suggested but not required. That is not the case—it is required by § 1926.756(e)(1). The standard also requires perimeter columns to be supplied with holes or other devices in or attached to perimeter columns at 42–45 inches above the finished floor and the midpoint between the finished floor and the top cable to permit installation of perimeter safety cables (except where constructibility does not allow). Therefore, this first part of the appendix has been omitted in the final rule.

The rest of the proposed appendix does not refer to the SER. It is being retained because it contains design suggestions that would facilitate compliance with the requirements of § 1926.756(e). The appendix

recommends that column splices be placed at every other or fourth levels, as design allows.

Appendix G to Subpart R—Fall Protection Systems Criteria and Practices from § 1926.502 (Non-Mandatory). Appendix G is provided to assist employers in complying with the requirements of § 1926.760(d). Appendix G restates paragraphs (b) through (e) of § 1926.502, which provide the criteria for guardrail systems, safety net systems, personal fall arrest systems and positioning device systems. These criteria are referenced by § 1926.760(d), and are included here for the convenience of employers and employees.

Appendix H to Subpart R—Double Connections (Non-Mandatory). Appendix H illustrates two methods (clipped end connection and staggered connection) that an employer may use to comply with the requirement in § 1926.756(c)(1) by maintaining at least a one bolt connection with its wrench tight nut while making a double connection. These two methods are not the only ways to comply with the standard.

These illustrations were added in response to a commenter's suggestion that OSHA add an illustration to show an example of a clipped end connection (Ex. 13-207). Clipped end and staggered connections are sound, engineered methods for maintaining a one bolt connection throughout the double connection process. OSHA is adding an illustration of a staggered connection as well, which is also an effective means of maintaining the one bolt connection.

V. Summary of the Final Economic and Regulatory Flexibility Analysis

Introduction

This final standard is a significant regulatory action under Executive Order (EO) 12866 and a major rule under the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act. Accordingly, OSHA has developed a final economic analysis (FEA)(Ex. 83) of the costs, benefits, and regulatory and non-regulatory alternatives of the rule, as required by the EO. The FEA revises OSHA's preliminary economic analysis (Ex. 11) and is based upon a thorough review of the rulemaking record. This section of OSHA's notice of final rulemaking summarizes the Agency's economic analysis of the final steel erection standard.

The Regulatory Flexibility Act of 1980, as amended in 1996, requires OSHA to determine whether the Agency's regulatory actions will have a

significant impact on a substantial number of small entities. Making such a determination for this final standard required OSHA to perform a screening analysis to identify any such impacts. OSHA's screening analysis indicated that the rule might, under two worst-case scenarios, have significant impacts on a substantial number of small entities. Accordingly, OSHA has prepared a Final Regulatory Flexibility Analysis, summarized below, to accompany the final steel erection rule.

OSHA's final economic analysis and final regulatory flexibility analysis include a description of the industries potentially affected by the standard; a summary of the major changes between OSHA's existing steel erection standard (subpart R of Part 1926) and the final rule; an evaluation of the risks addressed; an assessment of the benefits attributable to the final standard; a determination of the technological

feasibility of the new requirements; an estimate of the costs employers will incur to comply with the standard; a determination of the economic feasibility of compliance with the standard; and an analysis of the potential worst-case economic and other impacts associated with this rule, including those on small businesses. Below are summaries of each of the major sections of OSHA's final economic analysis.

Affected Industries

This final steel erection standard affects industries and establishments within the construction industry. Table 1 presents the industry groups in construction that will be directly affected by the final standard. Construction employers who are subject to the rule because they have employees engaged in steel erection activities are concentrated within SIC 1791,

Structural Steel Erection, an industry with 4,675 establishments and 55,965 employees in 1998, as reported by Dun & Bradstreet [D&B, 1998]. Within this industry, 3,898 establishments, or 83 percent of the total number of establishments, employed nineteen or fewer employees in 1998, while 3,238 establishments (69 percent) employed nine or fewer employees. SIC 1791, however, also includes employers and workers who perform construction activities other than steel erection, notably pre-cast concrete erection. Further, contractors primarily engaged in other activities sometimes have employees engaged in steel erection. Thus, any comprehensive profile of the steel erection industry must, in addition to examining affected industry groups, focus on the type of work and the trade of the workers engaged in this form of construction.

TABLE 1.—INDUSTRY GROUPS IN CONSTRUCTION POTENTIALLY AFFECTED BY THE FINAL STEEL ERECTION STANDARD

SIC	Industry group	Iron workers ^a	Establishments with 1–9 employees		Establishments with 1–19 employees		Establishments with 1–99 employees		Establishments with 100 + employees		All Establishments ^b	
			Number of establishments	Total employment	Number of establishments	Total employment	Number of establishments	Total employment	Number of establishments	Total employment	Number of establishments	Total industry employment
15	Building Construction—General Contractors and Operative Builders	19,310	273,905	765,249	291,906	989,256	302,859	1,362,573	925	169,293	305,474	1,531,866

^a U.S. Department of Labor, Bureau of Labor Statistics, Occupational Employment Statistics Survey, 1998.

^b For some industry groups, Dun & Bradstreet identified a small percentage of establishments and sales that could not be classified by establishment size. OSHA included these data in the totals in this table.

Source: U.S. Department of Labor, OSHA, Office of Regulatory Analysis, based on Dun & Bradstreet, National Profile of Businesses software, Dun & Bradstreet Information Services, 1998.

The workers directly benefitting from the final standard are identified in occupational surveys as structural metal workers; in the industry, they are known as iron workers. According to the Bureau of Labor Statistics' Occupational Employment Statistics Survey [BLS, 1998], there were 56,840

structural metal workers in construction in 1998, the majority of whom are found in SIC 179, Miscellaneous Special Trade Contractors (26,440 structural metal workers), and SIC 154, Contractors—Nonresidential Buildings (16,950 structural metal workers) (Table 1). For this final economic analysis, OSHA

used the BLS employment total for structural metal workers to estimate the number of iron workers potentially affected by the final rule in its benefits assessment and cost analysis.

Final Changes to OSHA's Steel Erection Standard

This final steel erection standard modifies and strengthens the steel erection standard it replaces in a number of areas. For example, the final standard includes a scope section that identifies the types of construction projects and activities subject to the rule. Structures excluded from coverage under the scope of the standard are steel electrical transmission towers, steel communication and broadcast towers, steel water towers, steel light towers, steel tanks, and reinforced and pre-cast concrete structures. The final rule also includes a new section addressing site layout, site-specific erection plans, and construction sequence. Other revisions to the existing standard include:

- Explicit requirements for hoisting and rigging and the protection of workers and the public from the hazards of overhead loads;
- Additional and strengthened requirements for the structural steel assembly of beams, columns, joists, decking, and systems-engineered metal buildings, including provisions for the protection of employees from tripping hazards and slippery surfaces on walking/working surfaces;
- Modified and clarified requirements for fall protection for connectors, decking assemblers, and other iron workers during the erection of structural steel; and
- New requirements for training in fall hazards, multiple lift rigging, connecting, and controlled decking zones.

For the final economic analysis, OSHA identified those requirements of the final rule that would create substantial impacts or generate substantial benefits for members of the

regulated community, including workers. For many provisions of the rule, current industry practice in many establishments is adequate to meet these requirements. OSHA estimates that current industry practice meets the final regulatory requirements for 50 percent to 98 percent of affected projects with regard to providing fall arrest systems (*i.e.*, 50 percent—98 percent of affected workers currently are supplied with this equipment, with the percentage increasing with the height of the building), and that current industry practice in the use of personnel nets is such that 20 percent of affected projects meet the final regulatory requirements; 75 percent of workers receive safety training that would meet the final regulatory requirements; nearly 100 percent of all construction uses 2-rod (bolt) column anchorage (but only 10 percent use 4-rod anchorage); and 50 percent to 98 percent of projects, depending on building height, already meet the final regulatory requirements for guardrail systems. OSHA anticipates that the final standard's requirements pertaining to overhead loads, trips and slips, falls, falling objects, collapses, and worker training will both generate substantial benefits for affected employers and impose costs on them.

Evaluation of Risk and Potential Benefits

For this final economic analysis, OSHA developed a profile of the risks facing iron workers who are performing steel erection operations. OSHA's risk profile for steel erection is based on data from the Bureau of Labor Statistics' National Census of Fatal Occupational Injuries, data from the Bureau's Survey of Occupational Injuries and Illnesses, and an analysis by a SENRAC workgroup of OSHA fatality/catastrophe

inspection data obtained from the Agency's Integrated Management Information System.

OSHA anticipates that the final standard will significantly reduce the number of accidents and fatalities currently reported in the steel erection industry, particularly those accidents caused by falls from elevated levels and by objects such as dislodged structural members and building materials striking workers. OSHA believes that the more protective requirements for fall protection, structural stability, and training in the final standard will help to save lives and prevent injuries in the iron worker workforce. For accidents involving events or exposures potentially addressed by the final standard, OSHA estimates that approximately 35 fatalities and 2,279 lost-workday injuries currently occur annually among structural metal workers (see Table 2, below); this is the current industry risk baseline used in this analysis. OSHA projects that full compliance with the final standard would prevent 30 of these fatalities and 1,142 of these lost-workday injuries. Eight of these fatalities and 303 serious injuries could be prevented if employers were currently in compliance with OSHA's existing steel erection standard. The final standard will thus prevent an additional 22 fatalities and 838 injuries that would not be prevented even by full compliance with the existing standard. Further, OSHA believes that issuance of this new final steel erection standard will enhance compliance even with provisions that were included in the existing standard because the final revision allows for more flexibility in compliance, is easier to understand, and is effectively targeted toward steel erection hazards.

TABLE 2.—SUMMARY OF ESTIMATED NUMBER OF DEATHS AVERTED AND INJURIES AVOIDED BY FULL COMPLIANCE WITH THE FINAL STEEL ERECTION STANDARD

	Number of fatalities and lost-workday injuries currently occurring among iron workers (a)	Number of fatalities and lost-workday injuries preventable by compliance with the existing standard	Additional number of fatalities and lost-workday injuries preventable by compliance with the final standard	Total number of fatalities and lost-workday injuries preventable by compliance with the existing and final standards	Number of fatalities and lost-workday injuries judged not to be preventable by either standard based on analysis of accident and fatality data
Fatalities	35	8	22	30	5
Lost-Workday Injuries	2,279	303	838	1,142	1,137

Note: Figures in the rows may not sum to totals due to rounding.

(a) Includes fatalities and injuries judged to be potentially preventable by the final standard.

Source: U.S. Department of Labor, OSHA, Office of Regulatory Analysis.

In addition to saving lives and improving overall safety in the steel erection industry, OSHA believes that the final standard, once fully implemented by erection contractors, will yield substantial cost savings to parties within and connected with the industry and ultimately to society as a whole. These monetized benefits take the form of reductions in employer, employee, and insurer accident-related costs in several areas: the value of lost output associated with temporary total disabilities and permanent partial disabilities; reductions in accident-related medical costs; reductions in administrative expenses incurred by workers' compensation insurance providers (including employers who self-insure); and indirect costs related to productivity losses to other workers, work stoppages, and the conduct of accident investigations and reports. Applying data from the construction and insurance industries on the direct costs of accidents and data from the literature on the indirect costs of accidents and other tort- and administrative-related costs to OSHA's estimate of avoided injuries (see Chapter III in the final economic analysis), the Agency has monetized the value of the cost savings employers and society will accrue by avoiding these injuries. The monetized benefits therefore underestimate the true benefits that will be realized by the standard. They also do not, in accordance with Agency policy, attempt to place a monetary value on the lives the final rule will save. These benefits estimates are thus gross underestimates of the true benefits that will be realized by the standard. OSHA estimates that annual cost savings of \$10.4 million would result from full compliance with the current rule and an additional \$29.1 million would be saved as a result of full compliance with the final rule (Table 3).

TABLE 3.—SUMMARY OF ANNUAL INCREMENTAL MONETIZED BENEFITS OF PREVENTABLE LOST-WORKDAY INJURIES ATTRIBUTABLE TO THE FINAL STEEL ERECTION STANDARD

Lost Output Associated with Temporary Disabilities	\$4,397,104
Lost Output Associated with Permanent Disabilities	14,586,035
Medical Costs	4,009,699
Insurance Costs (Administrative)	2,437,064
Indirect Costs	3,686,840
Costs Associated with Liability Claims Avoided	N/Q
Total Cost Savings ..	29,116,743

N/Q—Not Quantified
Source: U.S. Department of Labor, OSHA, Office of Regulatory Analysis.

In addition to these monetized benefits, cost savings to employers attributable to a decline in the number of third-party liability suits can be expected. Although quantification of these tort-related legal defense costs and dollar awards is difficult because of the lack of data, OSHA believes that these employer costs are substantial and would be reduced significantly through compliance with the final standard.

Technological Feasibility and Compliance Costs

Consistent with the legal framework established by the OSH Act and court decisions, OSHA has assessed the technological feasibility of the final steel erection standard. The final rule clarifies and strengthens the Agency's existing standard, provides more stringent and specific requirements in some areas, and includes requirements for some steel erection hazards newly addressed by the Agency. Many of the final revisions are consistent with current construction means and methods used by leading firms within the steel erection industry. The success of these firms in this competitive industry demonstrates that the requirements of the final standard can be met with existing equipment and

production methods. Moreover, the final standard is based on a consensus draft recommended to the Agency by a negotiated rulemaking committee consisting of divergent industry interests—including small employers—who would be affected by any changes to subpart R. Among these changes, addressing ironworker activity on walking and working surfaces is an innovative approach to safety that requires that coatings of structural members meet a standard for slip-resistance. Evidence from SENRAC meetings and elsewhere in the record point to the feasibility of this standard (see the discussion on this provision in Section IV, Summary and Explanation of the Rule). In this and other areas in the steel erection draft, the committee reached consensus on the language, thereby implicitly acknowledging the feasibility of the final revisions to the standard. Therefore, OSHA has determined that the final steel erection standard is technologically feasible.

OSHA developed estimates of the costs of compliance for construction employers subject to the final standard; OSHA's analysis is based on the preliminary economic analysis and additional data gathering and analysis. OSHA estimated annualized compliance costs for two compliance scenarios: (1) Costs to achieve compliance with OSHA's existing steel erection standard, and (2) costs to achieve compliance with the final standard. OSHA's cost estimates take into account the extent of current industry compliance, i.e., the extent to which employers are already in compliance with the requirements of OSHA's existing standard and with the requirements of the final steel erection standard. Accounting for these costs, i.e., subtracting them from the costs attributed to the final standard, is important because only those costs employers would actually incur to come into compliance with the final standard are properly attributed to that standard.

Table 4 presents OSHA's annualized compliance cost estimates, by provision or safety control, for establishments in the industries subject to the final standard.

Note: Figures in the table may not sum to totals due to rounding.

^a Total compliance costs were distributed among industry groups according to the percentage of iron workers employed in that group (see Table 1). Within SIC groups, costs were distributed by share of revenue for firms in the size class.

^b Other industries potentially affected by the final steel erection standard employ a small percentage of iron workers. These industry groups are: SIC 153, General Building Contractors—Operative Builders; and SIC 177, Concrete Work. Because firms in these industries are seldom involved directly in structural steel erection, OSHA has grouped them separately.

Source: U.S. Department of Labor, OSHA, Office of Regulatory Analysis.

OSHA projects that full compliance with the final standard will, after deducting costs incurred to achieve compliance with the existing standard, result in net (or incremental) annualized costs of \$78.4 million for affected establishments. Among incremental annualized costs, expenditures for slip-resistant coatings of skeletal structural steel are expected to total \$29.5 million, or 38 percent of total costs; expenditures for the safe design and erection of steel joists required by the final standard account for \$19.3 million, or 25 percent of total costs; fall arrest systems account for \$14.4 million, or 18 percent of total

costs; and expenditures for anchor bolts necessary for structural stability account for \$11.0 million, or 14 percent of total costs. Other control costs associated with compliance with the final steel erection standard are those for guardrails (\$2.9 million); recordkeeping associated with administrative controls (1.4 million); and training (\$1.0 million). In addition, OSHA anticipates that the expanded use of fall arrest systems in bridge erection will eventually lead to a dramatic reduction in the use of personnel safety nets on those projects, resulting in estimated cost savings of \$5.2 million.

Potential Economic Impacts

OSHA analyzed the potential impacts of these compliance costs on prices, profits, construction output and other economic indices in the steel erection industry. In particular, OSHA examined potential economic impacts on establishments in SIC 1791, Structural Steel Erection, where the majority of the 57,000 structural metal workers are employed. This analysis shows that the final standard is economically feasible for these firms.

OSHA examined the potential economic impacts of the final standard by making two assumptions used by

economists to bound the range of possible impacts: the worst-case assumption of no-cost pass-through, *i.e.*, that employers will be unable to pass any of the costs of compliance forward to their customers, and the worst-case assumption of full-cost pass-through, *i.e.*, that employers will be able to pass all of the costs of compliance forward to their customers. As summarized in Table 5, below, OSHA estimates that, if affected firms in SIC 1791 were forced to absorb these compliance costs entirely from profits (a highly unlikely scenario), profits would be reduced by an average of 6.5 percent. If, at the other extreme, affected firms were able to pass all of these compliance costs forward to general contractors and project owners, OSHA projects that the price (revenue)

increase required to pay for these costs would be less than 1 percent (0.40 percent). A price increase of 0.40 percent would have little, if any, effect on the choice between steel erection and other forms of building.

In addition to examining the economic effects of the final standard on firms in SIC 1791, OSHA estimated the impacts of the final standard on two other construction industry divisions involving steel erection: (1) The entire construction sector; and (2) construction activity where structural steel constitutes the physical core of the project, termed "steel-frame construction" by OSHA.

For the dollar value of business for the entire construction sector, OSHA totaled 1996 sales data for SICs 15, 16,

and 17 provided in a Dun & Bradstreet national business database [D&B, 1996a]. OSHA derived pre-tax income (Column 2 in Table 5) for the construction sector by, first, calculating industry profit using Dun & Bradstreet data on post-tax return on sales (post-tax profits) and, second, applying a formula that converts post-tax income to pre-tax income based on tax rates in the U.S. corporate tax code. OSHA found that, for the construction sector as a whole, price impacts under full cost pass-through would be 0.01 percent, and profit impacts assuming no cost pass-through would be 0.2 percent. Thus in the context of the construction sector as a whole, the final standard would have little impact.

TABLE 5.—POTENTIAL ECONOMIC IMPACTS OF THE FINAL STEEL ERECTION STANDARD ON SELECTED SECTORS WITHIN THE CONSTRUCTION INDUSTRY

[Under Worst-Case Conditions, 1996 Revenue and Profit Data]

	Dollar value of business (a) (\$millions)	Pre-tax income (b)(\$millions)	Compliance costs as a percent of revenue (c)	Compliance costs as a percent of profit (c)
SIC 1791, Structural Steel Erection	9,285.7	562.4	0.39	6.49
Construction Sector as a Whole	768,155.9	43,839	0.01	0.18
Steel-Frame Construction (d)	119,979.2	6,847.2	0.07	1.15

(a) Based on data from Dun & Bradstreet, National Profile of Businesses, 1996.

(b) Based on data from Dun & Bradstreet, National Profile of Businesses, 1996; Dun & Bradstreet, Industry Norms and Key Business Ratios, 1996; and OSHA profit calculations.

(c) Revenue and profit impacts were calculated by dividing annual compliance costs for each of the four construction sectors shown in the table by, respectively, the dollar value of business and pre-tax income. Compliance costs assigned to these sectors are based on total costs of \$78.4 million and were applied as follows: construction sector as a whole—\$78.4 million; steel-frame construction—\$78.4 million; and SIC 1791, Structural Steel Erection—\$36.5 million.

(d) Steel-Frame Construction is defined by OSHA as the body of construction projects where steel framing constitutes the physical core of the structure. The dollar value of business and pre-tax income for Steel-Frame Construction were computed by applying the percentage of the value of the steel market share (15.6 percent), excluding that for tanks and towers, of all construction starts to the dollar value of business and pre-tax income for the entire construction sector. Data on the steel market share for 1995 are based on memoranda to OSHA from Construction Resources Analysis, College of Business Administration, University of Tennessee, Knoxville [Exs. 9-143 and 9-144].

Source: U.S. Department of Labor, OSHA, Office of Regulatory Analysis.

OSHA calculated the value of steel-frame construction using data provided by the Construction Resources Analysis office of the University of Tennessee, College of Business Administration on the value of the steel market share of the entire construction industry. In this calculation, OSHA applied the percentage of the value of the steel market share (15.6 percent), excluding that for tanks and towers, of all construction starts to the dollar value of business and pre-tax income for the entire construction sector, thereby eliminating all non-steel construction (as defined in the final standard) from the earnings total. Price increases for steel frame construction as a whole are of particular interest because they represent the price increases to the ultimate customers of steel erection services, the purchasers of buildings, bridges, etc. Under the worst-case price

increase scenarios, the price of such projects would increase by 0.1 percent. It is exceedingly unlikely that a customer would fail to go ahead with a project as a result of a price increase of this magnitude.

OSHA believes that, prior to the generation of the cost savings projected to accrue from implementation of the standard, most steel erectors will handle the increase in direct costs by increasing their prices somewhat and absorbing the remainder from profits. Within steel erection markets, the particular blend of impacts experienced by a given firm will depend on the degree of competition with concrete erection and other alternative types of construction in the firm's local market area. Although these minimal economic impacts would be felt by most affected employers after implementation of the standard, OSHA anticipates—based on testimony by

members of SENRAC and other industry representatives whose current fall protection programs and other safety measures mirror those required by the final standard [Exs. 6-3, 6-8, and 6-10]—that offsetting cost savings will at least partially reverse any negative economic impacts.

Regulatory Flexibility Screening Analysis

The Regulatory Flexibility Act of 1980 (RFA), as amended in 1996 (5 U.S.C. 601 *et seq.*), requires regulatory agencies to determine whether regulatory actions will have a significant impact on a substantial number of small entities. Pursuant to the RFA, OSHA has assessed the potential small-business impact of the final steel erection standard under two worst-case scenarios. On the basis of a regulatory flexibility screening assessment and the

underlying data, summarized below, OSHA has determined that the final standard will have a significant impact on a substantial number of small entities. Thus, OSHA has conducted a full Final Regulatory Flexibility Analysis, as required. OSHA's Final Regulatory Flexibility Analysis follows the screening analysis presented in this section.

The Small Business Administration defines small entities, or "concerns," in terms of the number of employees or the annual receipts of establishments in affected sectors. For employers in SIC 17, small concerns are defined by SBA as those with \$7.0 million or less in annual receipts. OSHA has estimated that in SIC 1791, Structural Steel Erection, based on 1998 data from Dun & Bradstreet (D&B) and using D&B's estimate of the dollar value of business to represent annual receipts, the class of establishments with 99 or fewer employees comes closest to the class of firms qualifying as small concerns under the SBA definition. Not all firms in this class would have annual receipts of less than \$7.0 million; however, OSHA has conservatively chosen to overestimate the number of small firms rather than try to extrapolate the number of small firms from the limited data available. Establishments with 99 or fewer employees represent 98.4 percent of the 4,675 establishments and employ 75.4 percent of the 55,965 workers in SIC 1791, according to Dun & Bradstreet's national market profile [D&B, 1998].

In this regulatory flexibility screening analysis, OSHA assessed the impacts of compliance costs within the industry group with the largest concentration of affected employers and employees, SIC 1791, Structural Steel Erection. According to data from the Bureau of Labor Statistics, of the approximately 57,000 iron workers in construction, roughly 26,000 are employed in SIC

179, Miscellaneous Special Trade Contractors. OSHA believes that the great majority of these workers are found in SIC 1791, Structural Steel Erection, because the other industries in SIC 179 (glass and glazing, excavation work, wrecking and demolition, installation and erection of building equipment (such as installing elevators, revolving doors and industrial machinery and specialty trade contractors not elsewhere classified) are unlikely to employ significant numbers of iron workers. This contention is supported by the fact that available data on iron worker deaths (see Table III-2 in the final economic analysis) show that SIC 1791 accounted for roughly 90 percent of iron worker deaths in SIC 179 in 1994-98. Total employment for all trades in SIC 1791 is 55,965 workers, according to Dun & Bradstreet [D&B, 1998]. BLS and D&B data indicate that iron workers constitute roughly 47 percent of the labor force in SIC 1791, the largest concentration of iron workers in any four-digit group where iron workers are employed. In addition, only firms in SIC 1791 earn the majority of their revenues from steel erection. (According to the definitions used in the SIC system, this means that firms that do steel erection but are classified in other sectors earn only a minority of their total revenues from their steel erection business.)

Compared with all other industry groups in the construction industry, firms in SIC 1791 have the greatest number of iron workers per firm and the highest percentage of iron workers relative to total employment. Since the costs of compliance are approximately proportional to the number of iron workers in a given firm, establishments in SIC 1791 will experience the greatest economic impact.

In this analysis of impacts, OSHA estimated the costs of compliance for SIC 1791 by applying the percentage of

iron workers in that industry group, presented in Table 1, to the total costs estimated for all affected industry groups in construction. According to the 1998 BLS employment survey [BLS, 1998], SIC 179, Miscellaneous Special Trade Contractors, employs approximately 47 percent of the 56,840 iron workers in the entire construction sector. Assuming that most, if not all of the iron workers in SIC 179 are employed in SIC 1791, OSHA estimates that 47 percent of the iron workers in construction are employed in SIC 1791. OSHA estimates that, in general, compliance costs under the final standard are proportional to employment. Thus, compliance costs in SIC 1791 can be approximated by applying to total costs the percentage of iron workers (47 percent) in SIC 1791. Therefore, OSHA estimates that if net annual costs for all of construction will be \$78.4 million, then net annual costs in SIC 1791 will be 47 percent (46.5 percent before rounding) of total costs, or \$36.5 million.

To assess the possible economic impacts of the final standard on small firms in SIC 1791, OSHA distributed compliance costs within size classes according to an estimate of the percent of revenue (gross sales) earned by establishments within those size classes. Applying Dun & Bradstreet revenue figures, OSHA has determined that costs represent less than one percent (0.40 percent after rounding) of revenues for firms with 99 or fewer employees, so that under the extreme case of full-cost pass-through to consumers, prices would rise by no more than one percent (see Table 6, below). Similarly, for the very smallest firms, those with fewer than ten employees, price impacts are projected to be low: 0.40 percent after rounding.

TABLE 6.—POTENTIAL ECONOMIC IMPACTS OF THE FINAL STEEL ERECTION STANDARD ON SMALL FIRMS IN THE STEEL ERECTION INDUSTRY UNDER WORST-CASE CONDITIONS

[1996 Revenue and Profit Data]

	Annual compliance costs (a) (\$millions)	Compliance cost per establishment ^a	Dollar value of business ^b (\$millions)	Revenue per establishment ^b	Pre-tax income ^c (\$millions)	Pre-tax income per establishment ^c	Compliance costs as a percent of revenue	compliance costs as a percent of profit
SIC 1791, Structural Steel Erection	36.5	8,175.7	9,285.7	2,080,606.0	562.4	126,024.2	0.39	6.49
SIC 1791, 1-99 Employees	25.0	5,758.8	6,369.2	1,465,541.8	395.8	91,074.8	0.39	6.32
SIC 1791, 1-9 Employees	8.9	2,866.7	2,260.8	729,530.4	95.8	30,898.0	0.39	9.28

^aBased on Table 4 and data on number of establishments from Dun & Bradstreet, National Profile of Businesses, 1996. Compliance costs for size groups were derived by applying the percentage of revenue in the size groups to total costs for all of SIC 1791.

^bBased on data from Dun & Bradstreet, National Profile of Businesses, 1996.

^cBased on data from Dun & Bradstreet, National Profile of Businesses, 1996; Dun & Bradstreet, Industry Norms and Key Business Ratios, 1995-96; and OSHA profit calculations.

Source: U.S. Department of Labor, OSHA, Office of Regulatory Analysis.

Under the alternate scenario of full-cost profit absorption (an extremely unlikely scenario) among steel erection contractors with 99 or fewer employees, profit impacts would be 6.3 percent; for firms with one to nine employees, profit impacts would be 9.3 percent. Thus, costs as a percentage of profits and revenues for SIC 1791 are lower when a small entity is defined to include all firms within the SBA size standards (less than \$7 million in revenue) than for small entities employing fewer than 10 workers. The difference in these projected profit impacts for the two smaller size categories of firms reflects a difference in the 1995–96 profit rates for the two groups [D&B, 1996b] applied by OSHA in this impacts analysis: (1) an average 3.6 percent rate of net-profit-after-tax-to-net-sales for establishments with fewer than ten employees (roughly defined as those with assets of less than \$250,000) and (2) an average 4.9 percent post-tax profit/sales ratio for establishments with one to ninety-nine employees (roughly defined as those with assets of \$250,000 to \$1 million) (see Chapter VI in the final economic analysis for further explanation).

OSHA believes that most small erectors will, along with the rest of the industry, receive economic benefits from compliance with the final rule that will serve to significantly offset any direct cost impacts. As noted above, employer representatives on the committee and at the public hearing commented on numerous occasions that the safety program implicit within the final standard is compatible with maintaining a profitable business operation, and that such a program would, in fact, improve profitability and competitiveness [Exs. 6–3; 6–8; 6–10; 202X, pp. 99, 119; 206X, pp. 274–275]. Therefore, OSHA anticipates that most small entities will experience minimal economic impacts as a result of implementation of the final standard. However, since compliance costs under the worst-case scenario exceed 5 percent of profits in some of the industries affected, OSHA's internal guidelines with respect to the Regulatory Flexibility Act require the Agency to conduct a full Final Regulatory Flexibility Analysis.

Regulatory Flexibility Analysis

The Regulatory Flexibility Act, as amended in 1996, requires that a Final Regulatory Flexibility Analysis contain the following elements:

- (1) A succinct statement of the need for and objectives of the rule;
- (2) A summary of the significant issues raised by public comments in response to the initial regulatory

flexibility analysis, a summary of the Agency's assessment of such issues, and a statement of any changes made to the rule as a result of such comments;

(3) A description and an estimate of the number of small businesses to which the rule will apply or an explanation of why no such estimate is available; and

(4) A description of the projected reporting, recordkeeping and other compliance requirements of the rule, including an estimate of the classes of small entities that will be subject to the requirements and the type of professional skills necessary for preparation of the report or record.

In addition, a Regulatory Flexibility Analysis must contain a description of the steps the Agency has taken to minimize any significant economic impacts on small entities consistent with the stated objectives of applicable statutes, including a statement of the factual, policy and legal reasons for selecting the alternative adopted in the final rule, and the reasons for rejecting each of the other significant alternatives [SBA, 2000].

Reasons for the Final Rule

According to OSHA's analysis of accident data for an eleven-year period (1984–1994), 319 fatalities involved hazardous conditions that are addressed by OSHA's current and revised steel erection standard (for details, see Chapter III, Risk Assessment and Benefits, and Appendix B of the preliminary economic analysis). Based on a review of BLS injury census data for the period 1994–98, OSHA estimates that an average of 35 fatalities and 2,279 lost-workday injuries annually involve circumstances that would be addressed by provisions in the final OSHA steel erection standard. For an industry with an estimated work-force of only 56,840 workers, these fatality and injury levels clearly demonstrate that the risk confronting these workers is significant. Therefore, OSHA has developed final regulatory text that is designed to address this risk.

Objectives of the Final Rule

The objective of this final standard is to reduce the risk of occupational exposure to a variety of hazards on steel erection construction worksites, such as those involving falls, slips, trips, being struck by or crushed by objects or loads, and structural collapses. These occupational hazards will be reduced by this final rule through the use of engineering controls, work practice controls, inspections of worksite conditions, training, communication, and recordkeeping. Implementation of

these measures has been shown to minimize or eliminate occupational exposure to these hazards during the erection of steel structures and thus to reduce the risk of injury or death among workers.

Significant Issues Raised in the Initial Regulatory Flexibility Analysis

Among the issues raised in the notice of proposed rulemaking and in the initial regulatory flexibility analysis, the most significant concerned the impact of the proposed standard on small fabricators of structural steel members, including shops that fabricate open web steel joists and that complete the final detailing and coating of other structural steel members. These firms would be affected by provisions in the final rule that require joists, columns, and girders to arrive at the site meeting certain design specifications. For example, joists erected in bays of 40 feet or greater must be designed for bolting in the final connection of joists to the permanent structure. Therefore, all joist fabricators who produce joists that meet this criterion must drill or punch holes in appropriate locations on the joists to allow for bolting at the site.

In the pre-proposal period and during the hearing, the Steel Joist Institute argued that some small firms may lack the equipment to prepare joists as required by the standard, and that as a result such firms could be severely impacted (*see, for example, Ex. 204X, pp. 60–63*). However, buildings requiring joists of over 40 feet in length represent only a portion of the total market. In the Preliminary Economic Analysis, OSHA suggested that, to the extent that there are small firms lacking suitable equipment, such firms could still produce fabricated steel for a variety of steel erection projects and for portions of other projects. As a result, in that analysis, OSHA did not anticipate a significant impact, if any, on those firms that lack the proper equipment to prepare joists of greater than 40 feet for bolting.

In the Initial Regulatory Flexibility Analysis, OSHA solicited comment on two issues: (1) Whether there are small firms lacking suitable equipment to prepare joists in the manner prescribed by the rule; and (2) the percentage of the steel framing market that requires the use of joists of greater than 40 feet in length. In response, the Steel Joist Institute (SJI) presented cost data to demonstrate that the proposed requirement for bolt holes would severely impact the joist manufacturing industry. SJI stated that production costs for the industry as a whole could rise by as much as 11 percent after the

rule is promulgated and joist fabricators are required to drill and punch holes in the joists (Ex. 204X, p. 62). The American Institute of Steel Construction echoed these concerns about the economic impacts of the proposed joist requirements (Ex. 13–209).

As a result of these concerns, OSHA examined the impact of the final standard on the fabricated structural metal industry (SIC 3441), which produces iron and steel for structural purposes such as the construction of bridges and buildings, even though these employers are not affected by employers under the OSH Act. This sector would need to bore holes in joists greater than 40 feet in length so they can be bolted rather than welded (§ 1926.757). In addition, this sector would need to supply seats or equivalent connection devices for double connections (§ 1926.756); supply holes or other devices attached to perimeter columns to permit installation of perimeter safety cables (§ 1926.756); provide a vertical stabilizer plate on each column for steel joists (§ 1926.757); and ensure, through approved test methods, that paint coatings on top surfaces of structural steel members achieve a minimum average slip resistance (§ 1926.754).

OSHA's impact analysis assumes that this sector would bear all of the costs associated with these provisions of the final standard concerning open web joists, slip resistance of skeletal structural steel, column connections for perimeter safety cables and double connections. In fact, however, because of contractual arrangements among fabricators, steel erectors and building owners, most of the costs borne by the fabricators affected by this provision would be transmitted through steel erectors to building owners and would appear in the bid price of the project or would be incurred as onsite costs.

For purposes of this analysis, OSHA has defined small firms in the fabricated structural metal industry using the SBA definition of small firms: firms with fewer than 500 employees. Department of Commerce data show that there were 2,891 small firms in this sector in 1997. (Small firms represented 99.7 percent of all firms). Department of Commerce data also show that these small firms had total revenues of over \$13.3 billion, over 80 percent of all industry revenues. Dun and Bradstreet data show that in fiscal year 1995, the median profits for firms in this sector were a healthy 3.5 percent of sales. Small firms were assumed to bear costs in proportion to their revenues. OSHA has not estimated costs to small fabricators for the design, engineering, testing, and manufacture of

the special devices and coatings that will be supplied to steel erectors to enable them to achieve compliance with the final standard. However, OSHA anticipates that even if all of the costs of these provisions of the standard are borne by the fabricated structural metal industry, these costs will represent only a small percentage (0.37 percent) of revenues and 10.5 percent of profits for small firms in this sector (if all compliance costs were absorbed from profits, a highly unlikely scenario). Thus, OSHA finds that the costs of the standard will not cause a significant impact on small firms in this sector.

On the other hand, other speakers at the hearing who have field experience on this issue testified that the bolted joist provision could lead to cost savings by reducing the exposure time of workers who would otherwise be welding the connection (Ex. 208X, pp. 211, 252). After weighing this offsetting evidence, the Agency has concluded that in the fabricated structural metal industry, any additional production costs—and associated increases in prices for materials used by steel erectors—are likely to be offset, at least to some extent, by cost savings and benefits (fatalities and injuries avoided) in the industry—structural steel erection—directly affected by the rule. Therefore, OSHA believes that the provision is justified. In this preamble to the final rule, OSHA makes similar arguments for the other provisions in the standard, discussed above, that impact parties that are indirectly affected by the standard. In sum, OSHA finds that these provisions of the final rule are essential for the comprehensive safety program envisioned by this final steel erection standard.

In another example of a provision in the final rule where smaller entities connected to the steel erection industry would be affected by design criteria, § 1926.754 of the final standard specifies that coatings of structural steel members must achieve a minimum average slip resistance—with documentation or certification that the standard has been reached, based on an appropriate test method—before workers are permitted to walk the top surface of the steel member. Thus, all fabricators who coat steel members before shipping to the site would need to certify that the steel members meet the slip resistance standard. It is also possible that there may be impacts on small paints and coatings manufacturers. OSHA anticipates that the most likely scenario is that costs of friction resistant coatings will be passed forward to fabricators, and, in turn, to steel erection firms.

OSHA has examined the technological and economic implications of these and other issues raised in the rulemaking that affect smaller entities and has addressed any concerns about inequitable regulatory impacts on those entities in this preamble to the final standard and in the final economic analysis. In sum, based on comment in the record, OSHA finds that, although some smaller firms may experience impacts as a result of the design specifications in the final rule, these cost impacts can generally be passed forward to intermediate and final customers in the market—that is, the steel erectors, general contractors, owners and tenants of the building project—in such a way as to minimize impacts on the market share of smaller fabrication shops. Furthermore, OSHA believes that technological developments and market innovations will help to smooth the transition to the new market environment created by the final rule. For additional discussion of these technological and economic issues and their small-firm implications, see IV. Summary and Explanation of the Final Rule in this preamble and Chapter IV, Technological Feasibility, in the final economic analysis.

Description of the Number of Small Entities

For this rulemaking, OSHA has identified the population at risk of injury in the construction workforce and the industry groups where steel erection is conducted, but cannot with certainty estimate the number of small entities to which the final rule will apply because some firms even in SIC 1791 often perform work unrelated to steel erection and some firms in other SICs occasionally do steel erection work. There were no comments in the record that directly addressed this question. In SIC 1791, Structural Steel Erection, where the majority of iron workers are employed, there are roughly 4,544 establishments defined as small by the SBA, *i.e.*, these entities earn less than \$7 million in annual revenue. If all establishments in SIC 1791 were affected by the final standard, then small entities would comprise 97 percent of all affected entities, using the SBA size standard. There are 3,898 very small establishments, *i.e.*, those employing fewer than 20 employees in SIC 1791; these very small establishments comprise 83 percent of all establishments in the industry.

Description of the Reporting, Recordkeeping and Other Compliance Requirements of the Final Rule

The final rule would require, in the following provisions, that employers establish and maintain records for the use of engineering controls, work practices, inspections, and training:

- Site layout, site-specific erection plan, and construction sequence;
- Hoisting and rigging;
- Structural steel assembly;
- Open-web steel joists; and
- training.

Most steel erection employers would be affected by the reporting and recordkeeping requirements in these sections. In estimating the cost of establishing and maintaining the records for each of these control areas, OSHA used the wage rate of the applicable professional personnel. To give two examples: (1) For the cost of certifying that lift rigging meets manufacturer's specifications, OSHA applied the wage rate for an ironworker supervisor; and (2) for the costs of documenting alternative methods for joist erection, OSHA applied the wage rates of a project manager and a structural engineer. All recordkeeping requirements included in the final rule could be performed by existing staff in any of the covered industries. A detailed description of the recordkeeping requirements appears in Chapter II, Industry Profile, and in Chapter V, Costs of Compliance, of this final economic analysis.

Relevant Federal Rules

In this final rule, OSHA is revising the current safety standard for steel erection that has been in place with little change for nearly 30 years. OSHA believes that this thorough and comprehensive revision to existing subpart R will provide greater protection and eliminate ambiguity and confusion, thereby improving safety in this important segment of the construction industry. There are no other federal workplace rules or guidelines that overlap with the OSHA steel erection standard.

Significant Alternatives Considered

Through its deliberations, the Negotiated Rulemaking Committee considered alternatives to many of the provisions of the final standard. Several of these, and the Committee's choices with respect to them, are discussed below. For example, the final standard features, wherever possible, performance language that permits maximum flexibility for achieving safety outcomes. In the area of site-specific plans, the final rule provides an

opportunity to those employers who select alternative means and methods for complying with certain sections of the standard, and to incorporate these alternatives into a site-specific erection plan. OSHA considered small contractors when it elected not to propose a universal requirement for a site-specific erection plan for all steel erection sites. Instead, the final standard provides guidelines for establishing a site-specific erection plan in a non-mandatory appendix to assist employers who choose to develop such a plan, as recommended by SENRAC.

Other areas of the final standard that involve the consideration of alternatives and are responsive to small contractors include rules for the safe use of cranes and other lifting equipment and the proper assembly of metal buildings other than those constructed of heavy structural steel. In light of the number of small steel erectors potentially affected by the hoisting and rigging section of the final standard, OSHA has attempted to minimize the burden of the pre-shift visual crane inspections by having the inspection checklist apply only to the most essential safety elements, as recommended by SENRAC. Additionally, since there are a large number of small builders who erect pre-engineered metal structures exclusively, OSHA determined that a separate section in the final standard dedicated to this type of steel erection would ease compliance for small erectors.

The Regulatory Flexibility Act emphasizes the importance of performance-based standards for small businesses. For example, in § 1926.760, Fall Protection, employers are required to protect certain employees exposed to fall distances of 15 feet or greater. Paragraph (a)(1) of § 1926.760 lists the types of general safety systems—*i.e.*, guardrail systems, safety net systems, personal fall arrest systems, positioning device systems or fall restraint systems—that must be used by employers to provide fall protection to their employees. However, the standard does not mandate particular engineering solutions by structure type, site location, crew size, or other criteria. Employers are free to select any one system or combination of systems that is most compatible with company practice and employee protection so long as the performance measure—fall protection at 15 feet—is achieved.

As another example of OSHA's concern for the potential impacts on small businesses, the final standard minimizes recordkeeping burden where training, notifications, and other forms of communication are required, as recommended by SENRAC. Regarding

training provisions, general instruction in fall hazards is mandated for all employees exposed to that risk, but the scope of additional special training is limited to three particularly hazardous activities: multiple lift rigging, connecting, and decking. Employers are to ensure that the training is provided but do not have to document or certify the program. Other requirements where communication will be necessary, including those involving field curing of concrete footings and modification of anchor bolts, were written in such a way as to limit the notifications to cover only the most essential information.

Supplementary explanatory materials, presented in appendices to the standard, are intended to assist employers in complying with the rule and otherwise providing a safer workplace.

Another approach recommended by the Regulatory Flexibility Act is compliance date phase-ins for small businesses. Throughout their deliberations, the negotiated rulemaking advisory committee recognized the importance of effective outreach to the steel erection community prior to and following promulgation of the standard. In fact, as stated by a committee member prior to the issuance of the proposed standard, many employers in the industry are aware of, and have already begun to align their safety programs with, the standard (Ex. 9–156). With the exception of the requirement addressing slip resistance of skeletal structural steel (the date for mandatory compliance with this provision is five years after the effective date of the standard), the standard as a whole becomes effective within 180 days. OSHA believes that any compliance extensions for affected employers, including small employers, would only marginally ease the economic burden, given the progress in occupational safety already underway throughout industry and the non-capital-intensive nature of the rule, and would delay unnecessarily the protection of workers who would otherwise benefit from compliance with the rule.

In sum, throughout the process of negotiated rulemaking and during the period leading to this notice of final rulemaking for OSHA's steel erection standard, alternatives that would benefit small employers were considered and addressed on a routine basis. After considering a number of alternatives and adopting those that were consistent with the mandate imposed by the OSH Act, OSHA has developed a final rule that would minimize the burden on small employers, while maintaining the level of worker protection mandated by the OSH Act.

Non-Regulatory Alternatives

The primary objective of this final standard on structural steel erection is to minimize the number of construction worker injuries and fatalities. To develop this standard, OSHA employed negotiated rulemaking using an advisory committee composed of representatives from the construction industry (both labor and management and both small and larger firms), the insurance industry, the engineering field, and Federal and State government regulatory and research agencies. OSHA itself was also a member of the committee.

OSHA also examined throughout this rulemaking a number of non-regulatory approaches to enhancing workplace safety, including the operation of the classical free market, the tort liability insurance system and the workers' compensation insurance system. OSHA has concluded that these social and economic alternatives to a Federal workplace standard fail to adequately protect workers from the hazards associated with structural steel erection in the construction industry. The private market offers economic signals that could have the potential to direct workers toward desirable combinations of risk and reward. However, market imperfections and social and economic institutions—such as limitations to mobility, accumulated benefits, and social welfare programs—prevent workplaces from achieving the most optimal safety outcomes, creating inefficient, inadequately compensated risks for workers. Tort liability laws and workers' compensation provide some protection, but fall far short of fully compensating injured employees for the loss of wages, the medical costs, and the legal and other costs resulting from workplace accidents. Furthermore, these approaches are inherently reactive, rather than proactive, and largely fail to introduce progressive safety programs at all levels of industry. Therefore, OSHA finds that this final revision to the steel erection standard provides the necessary remedy.

VI. Environmental Assessment

The final rule has been reviewed in accordance with the requirements of the National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 *et seq.*), the regulations of the Council on Environmental Quality (CEQ) (40 CFR part 1500), and DOL NEPA Procedures (29 CFR part 11). The provisions of the standard focus on the reduction and avoidance of accidents occurring during structural steel erection. Consequently, no major negative impact is foreseen on air, water or soil quality, plant or animal life, the use of land or other aspects of the environment.

VII. Federalism

Executive Order 13132, "Federalism," (64 FR 43255; Aug. 10, 1999), sets forth fundamental Federalism principles, Federalism policymaking criteria, and provisions for consultation by Federal agencies with State or local governments when policies are being formulated which potentially affect them. The Order generally requires that agencies, to the extent possible, refrain from limiting State policy options; consult with States prior to taking actions that would restrict State policy options; and take such action only when there is clear constitutional authority

and the presence of a problem of national scope. Executive Order 13132 also provides that agencies shall not promulgate regulations which have significant Federalism implications and impose substantial direct compliance costs on State or local governments, unless the agency consults with State and local officials early in the process of developing the proposed regulation and provides a summary Federalism impact statement in the preamble of the final rule. Finally, the Order provides for preemption of State law only if there is a clear Congressional intent for the agency to do so, and provides that any such preemption is to be limited to be limited to the extent possible.

Executive Order 13132 required agencies to have in place by January 31, 2000 an intergovernmental consultation process for proposed regulations with Federalism implications; the Steel Erection standard was published for public comment prior to that date, on August 13, 1998, and accordingly was not subject to the new consultation procedure.

Among the Federalism policy criteria addressed by Executive Order 13132 is the principle that national action limiting the policymaking discretion of the States shall be taken only when "national activity is appropriate in light of the presence of a problem of national significance." Since many steel erection-related injuries and fatalities are reported every year in every State and since the hazards of steel erection work are present in workplaces in every State of the Union, steel erection hazards are clearly a national problem. The final standard on steel erection is written so that employees in every State will be protected by the standard. To the extent that there are any State or regional peculiarities, States with occupational safety and health plans approved under section 18 of the OSH Act can develop their own comparable State standards to deal with any special problems.

In short, there is a clear national problem related to occupational safety and health for employees exposed to MSD hazards in the workplace. Any steel erection standard developed by States that have elected to participate under section 18 of the OSH Act would not be preempted by this final rule if the State standard is determined by Federal OSHA to be "at least as effective" as the Federal standard.

Another policy criterion expressed in the Executive Order is that "regulatory preemption of State law shall be restricted to the minimum level necessary to achieve the objectives of the statute pursuant to which the

regulations are promulgated.” The preemptive effects of the final steel erection standard upon the States are determined by the OSH Act itself: as an occupational safety and health standard issued under section 6(b) of the Act, the standard preempts any State or local law which regulates the issue of workplace steel erection protection. *Gade v. Nat'l Solid Waste Management Ass'n*, 505 U.S.C. 88 (1992). However, neither the OSH Act nor this standard completely displace State responsibilities which relate to steel erection injuries and fatalities in the workplace; pursuant to section 4(b)(4) of the OSH Act, State laws and programs which address the rights of employers or employees with respect to injuries or illnesses arising out of employment, including State worker compensation programs, are not subject to preemption under the OSH Act. Moreover, under section 18(b) of the Act, any State which wishes to assume responsibility for adopting and enforcing safety or health standards on issues addressed by OSHA standards may do so by submitting and obtaining Federal OSHA approval of a State plan under 18(b) of the Act; among other things, the State plan must include standards which are “at least as effective as” those of Federal OSHA. Accordingly, OSHA finds that the final steel erection standard is consistent with the policies set forth in Executive Order 13132 relating to preemption of State laws.

Section 6(b) of the Executive Order provides that agencies shall not issue regulations which impose “substantial direct compliance costs” on State or local governments without consulting with State and local officials early in the process of developing the proposed regulation, and without including in the preamble to the final rule a Federalism impact statement. The OSH Act specifically exempts workplaces maintained by States or their political subdivisions from coverage under Federal safety and health standards issued by OSHA, and accordingly nothing in the steel erection standard requires any compliance expenditure by State or local governments. However, 18(c)(6) of the Act requires any State which administers an OSHA-approved State plan to apply the same State occupational safety or health standards applied to private-sector employers to workplaces maintained by State and local government. Slightly under one-half the States and Territories have chosen to implement State plans and enforce “at least as effective” State health and safety standards to public sector workplaces. Thus, State and local

employers in States which have elected to administer approved State plans will likely incur roughly comparable compliance costs, and will likely attain comparable benefits in the form of reduced injuries and compensation costs, as employers directly subject to the Federal steel erection standard. These costs of complying with State safety regulations are not “direct” costs which trigger the application of 6(b) of the Executive Order. Moreover, compliance costs to protect public workers under an approved State plan do not constitute an unfunded Federal mandate under the Unfunded Mandates Relief Act, which does not apply to Federal programs where State participation is voluntary, see 2 U.S.C. 658(5) and 1502.

In summary, the final steel erection standard imposes no substantial direct impact on State or local governments; it indirectly affects State or local employers only in States which have chosen to administer Federally-approved State plans. The final standard contains no special preemption provisions, and preempts State steel erection requirements only to the extent provided by Congress in the OSH Act for any section 6 standard. So therefore the rule does not have Federalism implications as defined in the Executive Order.

The Assistant Secretary certifies that OSHA has complied with applicable requirements of E.O. 13132 in preparing the final steel erection standard. State comments were invited on the proposed rule, and were fully considered in the development of this final rule.

VIII. Unfunded Mandates

For the purposes of the Unfunded Mandates Reform Act of 1995, as well as Executive Order 12875, this rule does not include any Federal mandate that may result in increased expenditures by State, local, and tribal governments, or increased expenditures by the private sector of more than \$100 million in any year.

IX. OMB Review Under the Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995, agencies are required to seek OMB approval for all collections of information. As a part of the approval process, agencies are required to solicit comment from affected parties with regard to the collection of information, including the financial and time burdens estimated by the agencies for the collection of information.

This final rule contains collections of information as defined in OMB's regulations at 60 FR 44978 (August 29,

1995) in § 1926.752(a)(1), § 1926.752(a)(2), § 1926.753(c)(5), § 1926.753(e)(2), § 1926.754(c)(3), § 1926.757(a)(4), § 1926.757(a)(7), § 1926.757(a)(9) § 1926.757(e)(4)(i), § 1926.758(g), and § 1926.761. OSHA's rationale for the need to collect information is set forth in the discussion of each of these provisions in Section IV of this preamble.

OSHA solicited comment from the public on all aspects of these collections of information, but the Agency received no comments. In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520), OSHA requested Office of Management and Budget (OMB) approval of the collections of information described above. OMB has granted approval of the information requirements under OMB Control Number 1218–0237. The approval expires on October 31, 2001.

X. State Plan Standards

The 25 States and territories with their own OSHA approved occupational safety and health plans must adopt a comparable standard within six months of the publication date of this final standard. These 25 states and territories are: Alaska, Arizona, California, Connecticut (for state and local government employees only), Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, New York (for state and local government employees only), North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Virgin Islands, Washington, and Wyoming. Until such time as a state standard is promulgated, Federal OSHA will provide interim enforcement assistance, as appropriate, in these states.

XI. List of Subjects

List of Subjects in 29 CFR Part 1926

Structural steel erection, Construction industry, Construction safety, Occupational Safety and Health Administration, Occupational safety and health.

XII. Authority

This document was prepared under the direction of Charles N. Jeffress, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210.

Accordingly, pursuant to sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, and 657); section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 333), Secretary of Labor's Order No. 6–96 (62 FR 111), and 29 CFR

part 1911, the Agency amends part 1926 of Title 29 of the Code of Federal Regulations as set forth below.

Signed at Washington, D.C., this 8th day of January, 2001.

Charles N. Jeffress,

Assistant Secretary of Labor.

PART 1926—[AMENDED]

Subpart M—Fall Protection

1. The authority citation for subpart M of Part 1926 is revised to read as follows:

Authority: Sec. 107, Contract Work Hours and Safety Standards Act (Construction Safety Act) (40 U.S.C. 333); Sec. 4, 6, 8, Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Orders Nos. 1–90 (55 FR 9033), 6–96 (62 FR 111); and 3–2000 (65 FR 50017), as applicable, and 29 CFR Part 1911.

2. Paragraphs (a)(2) (v) and (vi) of § 1926.500 are redesignated as paragraphs (a)(2) (vi) and (vii), respectively. In addition, paragraphs (a)(2) (iii) and (v) and (a)(3)(iv) are revised to read as follows:

§ 1926.500 Scope, application, and definitions applicable to this subpart.

(a) * * *

(2) * * *

(iii) Fall protection requirements for employees performing steel erection work (except for towers and tanks) are provided in subpart R of this part.

* * * * *

(v) Requirements relating to fall protection for employees engaged in the erection of tanks and communication and broadcast towers are provided in § 1926.105.

* * * * *

(3) * * *

* * * * *

(iv) Section 1926.502 does not apply to the erection of tanks and communication and broadcast towers. (Note: Section 1926.104 sets the criteria for body belts, lanyards and lifelines used for fall protection during tank and communication and broadcast tower erection. Paragraphs (b),(c) and (f) of § 1926.107 provide definitions for the pertinent terms.)

* * * * *

Subpart R—[Amended]

3. The authority citation for subpart R of part 1926 is revised to read as follows:

Authority: Sec. 107, Contract Work Hours and Safety Standards Act (Construction Safety Act) (40 U.S.C. 333); Sec. 4, 6, and 8, Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's

Order No. 3–2000 (65 FR 50017), and 29 CFR part 1911.

4. Subpart R of part 1926 is revised to read as follows:

Subpart R—Steel Erection

Sec.

1926.750 Scope.

1926.751 Definitions.

1926.752 Site layout, site-specific erection plan and construction sequence.

1926.753 Hoisting and rigging.

1926.754 Structural steel assembly.

1926.755 Column anchorage.

1926.756 Beams and columns.

1926.757 Open web steel joists.

1926.758 Systems-engineered metal buildings.

1926.759 Falling object protection.

1926.760 Fall protection.

1926.761 Training.

Appendix A to Subpart R—Guidelines for establishing the components of a site-specific erection plan: Non-Mandatory Guidelines for Complying with § 1926.752(e)

Appendix B to Subpart R—Acceptable test methods for testing slip-resistance of walking/working surfaces: Non-Mandatory Guidelines for Complying with § 1926.754(c)(3)

Appendix C to Subpart R—Illustrations of bridging terminus points: Non-Mandatory Guidelines for Complying with § 1926.757(a)(10) and § 1926.757(c)(5)

Appendix D to Subpart R—Illustration of the use of control lines to demarcate controlled decking zones (CDZs): Non-Mandatory Guidelines for Complying with § 1926.760(c)(3)

Appendix E to Subpart R—Training: Non-Mandatory Guidelines for Complying with § 1926.761

Appendix F to Subpart R—Perimeter columns: Non-Mandatory Guidelines for Complying with § 1926.756(e) to Protect the Unprotected Side or Edge of a Walking/Working Surface

Appendix G to Subpart R—Fall protection systems criteria and practices from § 1926.502: Non-Mandatory Guidelines for Complying with Complying with § 1926.760(d)

Appendix H to Subpart R—Double connections: Illustration of a clipped end connection and a staggered connection: Non-Mandatory Guidelines for Complying with Complying with § 1926.756(c)(1)

Subpart R—Steel Erection

§ 1926.750 Scope.

(a) This subpart sets forth requirements to protect employees from the hazards associated with steel erection activities involved in the construction, alteration, and/or repair of single and multi-story buildings, bridges, and other structures where steel erection occurs. The requirements of this subpart apply to employers engaged in steel erection unless otherwise specified. This subpart does not cover

electrical transmission towers, communication and broadcast towers, or tanks.

Note to paragraph (a): Examples of structures where steel erection may occur include but are not limited to the following: Single and multi-story buildings; systems-engineered metal buildings; lift slab/tilt-up structures; energy exploration structures; energy production, transfer and storage structures and facilities; auditoriums; malls; amphitheaters; stadiums; power plants; mills; chemical process structures; bridges; trestles; overpasses; underpasses; viaducts; aqueducts; aerospace facilities and structures; radar and communication structures; light towers; signage; billboards; scoreboards; conveyor systems; conveyor supports and related framing; stairways; stair towers; fire escapes; draft curtains; fire containment structures; monorails; aerialways; catwalks; curtain walls; window walls; store fronts; elevator fronts; entrances; skylights; metal roofs; industrial structures; hi-bay structures; rail, marine and other transportation structures; sound barriers; water process and water containment structures; air and cable supported structures; space frames; geodesic domes; canopies; racks and rack support structures and frames; platforms; walkways; balconies; atriums; penthouses; car dumpers; stacks/reclaimers; cranes and cranesways; bins; hoppers; ovens; furnaces; stacks; amusement park structures and rides; and artistic and monumental structures.

(b)(1) Steel erection activities include hoisting, laying out, placing, connecting, welding, burning, guying, bracing, bolting, plumbing and rigging structural steel, steel joists and metal buildings; installing metal decking, curtain walls, window walls, siding systems, miscellaneous metals, ornamental iron and similar materials; and moving point-to-point while performing these activities.

(2) The following activities are covered by this subpart when they occur during and are a part of steel erection activities: rigging, hoisting, laying out, placing, connecting, guying, bracing, dismantling, burning, welding, bolting, grinding, sealing, caulking, and all related activities for construction, alteration and/or repair of materials and assemblies such as structural steel; ferrous metals and alloys; non-ferrous metals and alloys; glass; plastics and synthetic composite materials; structural metal framing and related bracing and assemblies; anchoring devices; structural cabling; cable stays; permanent and temporary bents and towers; falsework for temporary supports of permanent steel members; stone and other non-precast concrete architectural materials mounted on steel frames; safety systems for steel erection; steel and metal joists; metal decking and raceway systems and accessories; metal

roofing and accessories; metal siding; bridge flooring; cold formed steel framing; elevator beams; grillage; shelf racks; multi-purpose supports; crane rails and accessories; miscellaneous, architectural and ornamental metals and metal work; ladders; railings; handrails; fences and gates; gratings; trench covers; floor plates; castings; sheet metal fabrications; metal panels and panel wall systems; louvers; column covers; enclosures and pockets; stairs; perforated metals; ornamental iron work, expansion control including bridge expansion joint assemblies; slide bearings; hydraulic structures; fascias; soffit panels; penthouse enclosures; skylights; joint fillers; gaskets; sealants and seals; doors; windows; hardware; detention/security equipment and doors, windows and hardware; conveying systems; building specialties; building equipment; machinery and plant equipment, furnishings and special construction.

(c) The duties of controlling contractors under this subpart include, but are not limited to, the duties specified in §§ 1926.752 (a) and (c), 1926.755(b)(2), 1926.759(b), and 1926.760(e).

§ 1926.751 Definitions.

Anchored bridging means that the steel joist bridging is connected to a bridging terminus point.

Bolted diagonal bridging means diagonal bridging that is bolted to a steel joist or joists.

Bridging clip means a device that is attached to the steel joist to allow the bolting of the bridging to the steel joist.

Bridging terminus point means a wall, a beam, tandem joists (with all bridging installed and a horizontal truss in the plane of the top chord) or other element at an end or intermediate point(s) of a line of bridging that provides an anchor point for the steel joist bridging.

Choker means a wire rope or synthetic fiber rigging assembly that is used to attach a load to a hoisting device.

Cold forming means the process of using press brakes, rolls, or other methods to shape steel into desired cross sections at room temperature.

Column means a load-carrying vertical member that is part of the primary skeletal framing system. Columns do not include posts.

Competent person (also defined in § 1926.32) means one who is capable of identifying existing and predictable hazards in the surroundings or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.

Connector means an employee who, working with hoisting equipment, is placing and connecting structural members and/or components.

Constructibility means the ability to erect structural steel members in accordance with subpart R without having to alter the over-all structural design.

Construction load (for joist erection) means any load other than the weight of the employee(s), the joists and the bridging bundle.

Controlled Decking Zone (CDZ) means an area in which certain work (for example, initial installation and placement of metal decking) may take place without the use of guardrail systems, personal fall arrest systems, fall restraint systems, or safety net systems and where access to the zone is controlled.

Controlled load lowering means lowering a load by means of a mechanical hoist drum device that allows a hoisted load to be lowered with maximum control using the gear train or hydraulic components of the hoist mechanism. Controlled load lowering requires the use of the hoist drive motor, rather than the load hoist brake, to lower the load.

Controlling contractor means a prime contractor, general contractor, construction manager or any other legal entity which has the overall responsibility for the construction of the project—its planning, quality and completion.

Critical lift means a lift that (1) exceeds 75 percent of the rated capacity of the crane or derrick, or (2) requires the use of more than one crane or derrick.

Decking hole means a gap or void more than 2 inches (5.1 cm) in its least dimension and less than 12 inches (30.5 cm) in its greatest dimension in a floor, roof or other walking/working surface. Pre-engineered holes in cellular decking (for wires, cables, etc.) are not included in this definition.

Derrick floor means an elevated floor of a building or structure that has been designated to receive hoisted pieces of steel prior to final placement.

Double connection means an attachment method where the connection point is intended for two pieces of steel which share common bolts on either side of a central piece.

Double connection seat means a structural attachment that, during the installation of a double connection, supports the first member while the second member is connected.

Erection bridging means the bolted diagonal bridging that is required to be

installed prior to releasing the hoisting cables from the steel joists.

Fall restraint system means a fall protection system that prevents the user from falling any distance. The system is comprised of either a body belt or body harness, along with an anchorage, connectors and other necessary equipment. The other components typically include a lanyard, and may also include a lifeline and other devices.

Final interior perimeter means the perimeter of a large permanent open space within a building such as an atrium or courtyard. This does not include openings for stairways, elevator shafts, etc.

Girt (in systems-engineered metal buildings) means a “Z” or “C” shaped member formed from sheet steel spanning between primary framing and supporting wall material.

Headache ball means a weighted hook that is used to attach loads to the hoist load line of the crane.

Hoisting equipment means commercially manufactured lifting equipment designed to lift and position a load of known weight to a location at some known elevation and horizontal distance from the equipment's center of rotation. “Hoisting equipment” includes but is not limited to cranes, derricks, tower cranes, barge-mounted derricks or cranes, gin poles and gantry hoist systems. A “come-a-long” (a mechanical device, usually consisting of a chain or cable attached at each end, that is used to facilitate movement of materials through leverage) is not considered “hoisting equipment.”

Leading edge means the unprotected side and edge of a floor, roof, or formwork for a floor or other walking/working surface (such as deck) which changes location as additional floor, roof, decking or formwork sections are placed, formed or constructed.

Metal decking means a commercially manufactured, structural grade, cold rolled metal panel formed into a series of parallel ribs; for this subpart, this includes metal floor and roof decks, standing seam metal roofs, other metal roof systems and other products such as bar gratings, checker plate, expanded metal panels, and similar products. After installation and proper fastening, these decking materials serve a combination of functions including, but not limited to: a structural element designed in combination with the structure to resist, distribute and transfer loads, stiffen the structure and provide a diaphragm action; a walking/working surface; a form for concrete slabs; a support for roofing systems; and a finished floor or roof.

Multiple lift rigging means a rigging assembly manufactured by wire rope rigging suppliers that facilitates the attachment of up to five independent loads to the hoist rigging of a crane.

Opening means a gap or void 12 inches (30.5 cm) or more in its least dimension in a floor, roof or other walking/working surface. For the purposes of this subpart, skylights and smoke domes that do not meet the strength requirements of § 1926.754(e)(3) shall be regarded as openings.

Permanent floor means a structurally completed floor at any level or elevation (including slab on grade).

Personal fall arrest system means a system used to arrest an employee in a fall from a working level. A personal fall arrest system consists of an anchorage, connectors, a body harness and may include a lanyard, deceleration device, lifeline, or suitable combination of these. The use of a body belt for fall arrest is prohibited.

Positioning device system means a body belt or body harness rigged to allow an employee to be supported on an elevated, vertical surface, such as a wall or column and work with both hands free while leaning.

Post means a structural member with a longitudinal axis that is essentially vertical, that: (1) weighs 300 pounds or less and is axially loaded (a load presses down on the top end), or (2) is not axially loaded, but is laterally restrained by the above member. Posts typically support stair landings, wall framing, mezzanines and other substructures.

Project structural engineer of record means the registered, licensed professional responsible for the design of structural steel framing and whose seal appears on the structural contract documents.

Purlin (in systems-engineered metal buildings) means a "Z" or "C" shaped member formed from sheet steel spanning between primary framing and supporting roof material.

Qualified person (also defined in § 1926.32) means one who, by possession of a recognized degree, certificate, or professional standing, or who by extensive knowledge, training, and experience, has successfully demonstrated the ability to solve or resolve problems relating to the subject matter, the work, or the project.

Safety deck attachment means an initial attachment that is used to secure an initially placed sheet of decking to keep proper alignment and bearing with structural support members.

Shear connector means headed steel studs, steel bars, steel lugs, and similar devices which are attached to a

structural member for the purpose of achieving composite action with concrete.

Steel erection means the construction, alteration or repair of steel buildings, bridges and other structures, including the installation of metal decking and all planking used during the process of erection.

Steel joist means an open web, secondary load-carrying member of 144 feet (43.9 m) or less, designed by the manufacturer, used for the support of floors and roofs. This does not include structural steel trusses or cold-formed joists.

Steel joist girder means an open web, primary load-carrying member, designed by the manufacturer, used for the support of floors and roofs. This does not include structural steel trusses.

Steel truss means an open web member designed of structural steel components by the project structural engineer of record. For the purposes of this subpart, a steel truss is considered equivalent to a solid web structural member.

Structural steel means a steel member, or a member made of a substitute material (such as, but not limited to, fiberglass, aluminum or composite members). These members include, but are not limited to, steel joists, joist girders, purlins, columns, beams, trusses, splices, seats, metal decking, girts, and all bridging, and cold formed metal framing which is integrated with the structural steel framing of a building.

Systems-engineered metal building means a metal, field-assembled building system consisting of framing, roof and wall coverings. Typically, many of these components are cold-formed shapes. These individual parts are fabricated in one or more manufacturing facilities and shipped to the job site for assembly into the final structure. The engineering design of the system is normally the responsibility of the systems-engineered metal building manufacturer.

Tank means a container for holding gases, liquids or solids.

Unprotected sides and edges means any side or edge (except at entrances to points of access) of a walking/working surface, for example a, floor, roof, ramp or runway, where there is no wall or guardrail system at least 39 inches (1.0 m) high.

§ 1926.752 Site layout, site-specific erection plan and construction sequence.

(a) *Approval to begin steel erection.* Before authorizing the commencement of steel erection, the controlling contractor shall ensure that the steel

erector is provided with the following written notifications:

(1) The concrete in the footings, piers and walls and the mortar in the masonry piers and walls has attained, on the basis of an appropriate ASTM standard test method of field-cured samples, either 75 percent of the intended minimum compressive design strength or sufficient strength to support the loads imposed during steel erection.

(2) Any repairs, replacements and modifications to the anchor bolts were conducted in accordance with § 1926.755(b).

(b) *Commencement of steel erection.* A steel erection contractor shall not erect steel unless it has received written notification that the concrete in the footings, piers and walls or the mortar in the masonry piers and walls has attained, on the basis of an appropriate ASTM standard test method of field-cured samples, either 75 percent of the intended minimum compressive design strength or sufficient strength to support the loads imposed during steel erection.

(c) *Site layout.* The controlling contractor shall ensure that the following is provided and maintained:

(1) Adequate access roads into and through the site for the safe delivery and movement of derricks, cranes, trucks, other necessary equipment, and the material to be erected and means and methods for pedestrian and vehicular control. Exception: this requirement does not apply to roads outside of the construction site.

(2) A firm, properly graded, drained area, readily accessible to the work with adequate space for the safe storage of materials and the safe operation of the erector's equipment.

(d) *Pre-planning of overhead hoisting operations.* All hoisting operations in steel erection shall be pre-planned to ensure that the requirements of § 1926.753(d) are met.

(e) *Site-specific erection plan.* Where employers elect, due to conditions specific to the site, to develop alternate means and methods that provide employee protection in accordance with § 1926.753(c)(5), § 1926.757(a)(4) or § 1926.757(e)(4), a site-specific erection plan shall be developed by a qualified person and be available at the work site. Guidelines for establishing a site-specific erection plan are contained in Appendix A to this subpart.

§ 1926.753 Hoisting and rigging.

(a) All the provisions of § 1926.550 apply to hoisting and rigging with the exception of § 1926.550(g)(2).

(b) In addition, paragraphs (c) through (e) of this section apply regarding the

hazards associated with hoisting and rigging.

(c) *General.* (1) Pre-shift visual inspection of cranes.

(i) Cranes being used in steel erection activities shall be visually inspected prior to each shift by a competent person; the inspection shall include observation for deficiencies during operation. At a minimum this inspection shall include the following:

(A) All control mechanisms for maladjustments;

(B) Control and drive mechanism for excessive wear of components and contamination by lubricants, water or other foreign matter;

(C) Safety devices, including but not limited to boom angle indicators, boom stops, boom kick out devices, anti-two block devices, and load moment indicators where required;

(D) Air, hydraulic, and other pressurized lines for deterioration or leakage, particularly those which flex in normal operation;

(E) Hooks and latches for deformation, chemical damage, cracks, or wear;

(F) Wire rope reeving for compliance with hoisting equipment manufacturer's specifications;

(G) Electrical apparatus for malfunctioning, signs of excessive deterioration, dirt, or moisture accumulation;

(H) Hydraulic system for proper fluid level;

(I) Tires for proper inflation and condition;

(J) Ground conditions around the hoisting equipment for proper support, including ground settling under and around outriggers, ground water accumulation, or similar conditions;

(K) The hoisting equipment for level position; and

(L) The hoisting equipment for level position after each move and setup.

(ii) If any deficiency is identified, an immediate determination shall be made by the competent person as to whether the deficiency constitutes a hazard.

(iii) If the deficiency is determined to constitute a hazard, the hoisting equipment shall be removed from service until the deficiency has been corrected.

(iv) The operator shall be responsible for those operations under the operator's direct control. Whenever there is any doubt as to safety, the operator shall have the authority to stop and refuse to handle loads until safety has been assured.

(2) A qualified rigger (a rigger who is also a qualified person) shall inspect the rigging prior to each shift in accordance with § 1926.251.

(3) The headache ball, hook or load shall not be used to transport personnel

except as provided in paragraph (c)(4) of this section.

(4) Cranes or derricks may be used to hoist employees on a personnel platform when work under this subpart is being conducted, provided that all provisions of § 1926.550 (except for § 1926.550(g)(2)) are met.

(5) Safety latches on hooks shall not be deactivated or made inoperable except:

(i) When a qualified rigger has determined that the hoisting and placing of purlins and single joists can be performed more safely by doing so; or

(ii) When equivalent protection is provided in a site-specific erection plan.

(d) *Working under loads.*

(1) Routes for suspended loads shall be pre-planned to ensure that no employee is required to work directly below a suspended load except for:

(i) Employees engaged in the initial connection of the steel; or

(ii) Employees necessary for the hooking or unhooking of the load.

(2) When working under suspended loads, the following criteria shall be met:

(i) Materials being hoisted shall be rigged to prevent unintentional displacement;

(ii) Hooks with self-closing safety latches or their equivalent shall be used to prevent components from slipping out of the hook; and

(iii) All loads shall be rigged by a qualified rigger

(e) *Multiple lift rigging procedure.*

(1) A multiple lift shall only be performed if the following criteria are met:

(i) A multiple lift rigging assembly is used;

(ii) A maximum of five members are hoisted per lift;

(iii) Only beams and similar structural members are lifted; and

(iv) All employees engaged in the multiple lift have been trained in these procedures in accordance with § 1926.761(c)(1).

(v) No crane is permitted to be used for a multiple lift where such use is contrary to the manufacturer's specifications and limitations.

(2) Components of the multiple lift rigging assembly shall be specifically designed and assembled with a maximum capacity for total assembly and for each individual attachment point. This capacity, certified by the manufacturer or a qualified rigger, shall be based on the manufacturer's specifications with a 5 to 1 safety factor for all components.

(3) The total load shall not exceed:

(i) The rated capacity of the hoisting equipment specified in the hoisting equipment load charts;

(ii) The rigging capacity specified in the rigging rating chart.

(4) The multiple lift rigging assembly shall be rigged with members:

(i) Attached at their center of gravity and maintained reasonably level;

(ii) Rigged from top down; and

(iii) Rigged at least 7 feet (2.1 m) apart.

(5) The members on the multiple lift rigging assembly shall be set from the bottom up.

(6) Controlled load lowering shall be used whenever the load is over the connectors.

§ 1926.754 Structural steel assembly.

(a) Structural stability shall be maintained at all times during the erection process.

(b) The following additional requirements shall apply for multi-story structures:

(1) The permanent floors shall be installed as the erection of structural members progresses, and there shall be not more than eight stories between the erection floor and the upper-most permanent floor, except where the structural integrity is maintained as a result of the design.

(2) At no time shall there be more than four floors or 48 feet (14.6 m), whichever is less, of unfinished bolting or welding above the foundation or uppermost permanently secured floor, except where the structural integrity is maintained as a result of the design.

(3) A fully planked or decked floor or nets shall be maintained within two stories or 30 feet (9.1 m), whichever is less, directly under any erection work being performed.

(c) *Walking/working surfaces.*

(1) *Shear connectors and other similar devices.*

(i) *Tripping hazards.* Shear connectors (such as headed steel studs, steel bars or steel lugs), reinforcing bars, deformed anchors or threaded studs shall not be attached to the top flanges of beams, joists or beam attachments so that they project vertically from or horizontally across the top flange of the member until after the metal decking, or other walking/working surface, has been installed.

(ii) *Installation of shear connectors on composite floors, roofs and bridge decks.* When shear connectors are used in construction of composite floors, roofs and bridge decks, employees shall lay out and install the shear connectors after the metal decking has been installed, using the metal decking as a working platform. Shear connectors

shall not be installed from within a controlled decking zone (CDZ), as specified in § 1926.760(c)(8).

(2) *Slip resistance of metal decking.* [Reserved]

(3) *Slip resistance of skeletal structural steel.* Workers shall not be permitted to walk the top surface of any structural steel member installed after July 18, 2006 that has been coated with paint or similar material unless documentation or certification that the coating has achieved a minimum average slip resistance of .50 when measured with an English XL tribometer or equivalent tester on a wetted surface at a testing laboratory is provided. Such documentation or certification shall be based on the appropriate ASTM standard test method conducted by a laboratory capable of performing the test. The results shall be available at the site and to the steel erector. (Appendix B to this subpart references appropriate ASTM standard test methods that may be used to comply with this paragraph (c)(3)).

(d) *Plumbing-up.*

(1) When deemed necessary by a competent person, plumbing-up equipment shall be installed in conjunction with the steel erection process to ensure the stability of the structure.

(2) When used, plumbing-up equipment shall be in place and properly installed before the structure is loaded with construction material such as loads of joists, bundles of decking or bundles of bridging.

(3) Plumbing-up equipment shall be removed only with the approval of a competent person.

(e) *Metal decking.*—(1) *Hoisting, landing and placing of metal decking bundles.*

(i) Bundle packaging and strapping shall not be used for hoisting unless specifically designed for that purpose.

(ii) If loose items such as dunnage, flashing, or other materials are placed on the top of metal decking bundles to be hoisted, such items shall be secured to the bundles.

(iii) Bundles of metal decking on joists shall be landed in accordance with § 1926.757(e)(4).

(iv) Metal decking bundles shall be landed on framing members so that enough support is provided to allow the bundles to be unbanded without dislodging the bundles from the supports.

(v) At the end of the shift or when environmental or jobsite conditions require, metal decking shall be secured against displacement.

(2) *Roof and floor holes and openings.* Metal decking at roof and floor holes

and openings shall be installed as follows:

(i) Framed metal deck openings shall have structural members turned down to allow continuous deck installation except where not allowed by structural design constraints or constructibility.

(ii) Roof and floor holes and openings shall be decked over. Where large size, configuration or other structural design does not allow openings to be decked over (such as elevator shafts, stair wells, etc.) employees shall be protected in accordance with § 1926.760(a)(1).

(iii) Metal decking holes and openings shall not be cut until immediately prior to being permanently filled with the equipment or structure needed or intended to fulfill its specific use and which meets the strength requirements of paragraph (e)(3) of this section, or shall be immediately covered.

(3) *Covering roof and floor openings.*

(i) Covers for roof and floor openings shall be capable of supporting, without failure, twice the weight of the employees, equipment and materials that may be imposed on the cover at any one time.

(ii) All covers shall be secured when installed to prevent accidental displacement by the wind, equipment or employees.

(iii) All covers shall be painted with high-visibility paint or shall be marked with the word "HOLE" or "COVER" to provide warning of the hazard.

(iv) Smoke dome or skylight fixtures that have been installed, are not considered covers for the purpose of this section unless they meet the strength requirements of paragraph (e)(3)(i) of this section.

(4) *Decking gaps around columns.*

Wire mesh, exterior plywood, or equivalent, shall be installed around columns where planks or metal decking do not fit tightly. The materials used must be of sufficient strength to provide fall protection for personnel and prevent objects from falling through.

(5) *Installation of metal decking.* (i) Except as provided in § 1926.760(c), metal decking shall be laid tightly and immediately secured upon placement to prevent accidental movement or displacement.

(ii) During initial placement, metal decking panels shall be placed to ensure full support by structural members.

(6) *Derrick floors.* (i) A derrick floor shall be fully decked and/or planked and the steel member connections completed to support the intended floor loading.

(ii) Temporary loads placed on a derrick floor shall be distributed over the underlying support members so as

to prevent local overloading of the deck material.

§ 1926.755 Column anchorage.

(a) *General requirements for erection stability.* (1) All columns shall be anchored by a minimum of 4 anchor rods (anchor bolts).

(2) Each column anchor rod (anchor bolt) assembly, including the column-to-base plate weld and the column foundation, shall be designed to resist a minimum eccentric gravity load of 300 pounds (136.2 kg) located 18 inches (.46m) from the extreme outer face of the column in each direction at the top of the column shaft.

(3) Columns shall be set on level finished floors, pre-grouted leveling plates, leveling nuts, or shim packs which are adequate to transfer the construction loads.

(4) All columns shall be evaluated by a competent person to determine whether guying or bracing is needed; if guying or bracing is needed, it shall be installed.

(b) *Repair, replacement or field modification of anchor rods (anchor bolts).*

(1) Anchor rods (anchor bolts) shall not be repaired, replaced or field-modified without the approval of the project structural engineer of record.

(2) Prior to the erection of a column, the controlling contractor shall provide written notification to the steel erector if there has been any repair, replacement or modification of the anchor rods (anchor bolts) of that column.

§ 1926.756 Beams and columns.

(a) *General.* (1) During the final placing of solid web structural members, the load shall not be released from the hoisting line until the members are secured with at least two bolts per connection, of the same size and strength as shown in the erection drawings, drawn up wrench-tight or the equivalent as specified by the project structural engineer of record, except as specified in paragraph (b) of this section.

(2) A competent person shall determine if more than two bolts are necessary to ensure the stability of cantilevered members; if additional bolts are needed, they shall be installed.

(b) *Diagonal bracing.* Solid web structural members used as diagonal bracing shall be secured by at least one bolt per connection drawn up wrench-tight or the equivalent as specified by the project structural engineer of record.

(c) (1) *Double connections at columns and/or at beam webs over a column.* When two structural members on

opposite sides of a column web, or a beam web over a column, are connected sharing common connection holes, at least one bolt with its wrench-tight nut shall remain connected to the first member unless a shop-attached or field-attached seat or equivalent connection device is supplied with the member to secure the first member and prevent the column from being displaced (See Appendix H to this subpart for examples of equivalent connection devices).

(2) If a seat or equivalent device is used, the seat (or device) shall be designed to support the load during the double connection process. It shall be adequately bolted or welded to both a supporting member and the first member before the nuts on the shared bolts are removed to make the double connection.

(d) *Column splices.* Each column splice shall be designed to resist a minimum eccentric gravity load of 300 pounds (136.2 kg) located 18 inches (.46 m) from the extreme outer face of the column in each direction at the top of the column shaft.

(e) *Perimeter columns.* Perimeter columns shall not be erected unless:

(1) The perimeter columns extend a minimum of 48 inches (1.2 m) above the finished floor to permit installation of perimeter safety cables prior to erection of the next tier, except where constructibility does not allow (see Appendix F to this subpart);

(2) The perimeter columns have holes or other devices in or attached to perimeter columns at 42–45 inches (107–114 cm) above the finished floor and the midpoint between the finished floor and the top cable to permit installation of perimeter safety cables required by § 1926.760(a)(2), except where constructibility does not allow. (See Appendix F to this subpart).

§ 1926.757 Open web steel joists.

(a) *General.* (1) Except as provided in paragraph (a)(2) of this section, where steel joists are used and columns are not framed in at least two directions with solid web structural steel members, a steel joist shall be field-bolted at the column to provide lateral stability to the column during erection. For the installation of this joist:

(i) A vertical stabilizer plate shall be provided on each column for steel joists. The plate shall be a minimum of 6 inch by 6 inch (152 mm by 152 mm) and shall extend at least 3 inches (76 mm) below the bottom chord of the joist with a $1\frac{3}{16}$ inch (21 mm) hole to provide an attachment point for guying or plumbing cables.

(ii) The bottom chords of steel joists at columns shall be stabilized to prevent rotation during erection.

(iii) Hoisting cables shall not be released until the seat at each end of the steel joist is field-bolted, and each end of the bottom chord is restrained by the column stabilizer plate.

(2) Where constructibility does not allow a steel joist to be installed at the column:

(i) an alternate means of stabilizing joists shall be installed on both sides near the column and shall:

(A) provide stability equivalent to paragraph (a)(1) of this section;

(B) be designed by a qualified person;

(C) be shop installed; and

(D) be included in the erection drawings.

(ii) hoisting cables shall not be released until the seat at each end of the steel joist is field-bolted and the joist is stabilized.

(3) Where steel joists at or near columns span 60 feet (18.3 m) or less, the joist shall be designed with sufficient strength to allow one employee to release the hoisting cable without the need for erection bridging.

(4) Where steel joists at or near columns span more than 60 feet (18.3 m), the joists shall be set in tandem with all bridging installed unless an alternative method of erection, which provides equivalent stability to the steel joist, is designed by a qualified person and is included in the site-specific erection plan.

(5) A steel joist or steel joist girder shall not be placed on any support structure unless such structure is stabilized.

(6) When steel joist(s) are landed on a structure, they shall be secured to prevent unintentional displacement prior to installation.

(7) No modification that affects the strength of a steel joist or steel joist girder shall be made without the approval of the project structural engineer of record.

(8) *Field-bolted joists.* (i) Except for steel joists that have been pre-assembled into panels, connections of individual steel joists to steel structures in bays of 40 feet (12.2 m) or more shall be fabricated to allow for field bolting during erection.

(ii) These connections shall be field-bolted unless constructibility does not allow.

(9) Steel joists and steel joist girders shall not be used as anchorage points for a fall arrest system unless written approval to do so is obtained from a qualified person.

(10) A bridging terminus point shall be established before bridging is

installed. (See Appendix C to this subpart.)

(b) *Attachment of steel joists and steel joist girders.* (1) Each end of “K” series steel joists shall be attached to the support structure with a minimum of two $\frac{1}{8}$ -inch (3 mm) fillet welds 1 inch (25 mm) long or with two $\frac{1}{2}$ -inch (13 mm) bolts, or the equivalent.

(2) Each end of “LH” and “DLH” series steel joists and steel joist girders shall be attached to the support structure with a minimum of two $\frac{1}{4}$ -inch (6 mm) fillet welds 2 inches (51 mm) long, or with two $\frac{3}{4}$ -inch (19 mm) bolts, or the equivalent.

(3) Except as provided in paragraph (b)(4) of this section, each steel joist shall be attached to the support structure, at least at one end on both sides of the seat, immediately upon placement in the final erection position and before additional joists are placed.

(4) Panels that have been pre-assembled from steel joists with bridging shall be attached to the structure at each corner before the hoisting cables are released.

(c) *Erection of steel joists.* (1) Both sides of the seat of one end of each steel joist that requires bridging under Tables A and B shall be attached to the support structure before hoisting cables are released.

(2) For joists over 60 feet, both ends of the joist shall be attached as specified in paragraph (b) of this section and the provisions of paragraph (d) of this section met before the hoisting cables are released.

(3) On steel joists that do not require erection bridging under Tables A and B, only one employee shall be allowed on the joist until all bridging is installed and anchored.

NM = diagonal bolted bridging not mandatory for joists under 40 feet.

(4) Employees shall not be allowed on steel joists where the span of the steel joist is equal to or greater than the span shown in Tables A and B except in accordance with § 1926.757(d).

(5) When permanent bridging terminus points cannot be used during erection, additional temporary bridging terminus points are required to provide stability. (See appendix C of this subpart.)

(d) *Erection bridging.* (1) Where the span of the steel joist is equal to or greater than the span shown in Tables A and B, the following shall apply:

(i) A row of bolted diagonal erection bridging shall be installed near the midspan of the steel joist;

(ii) Hoisting cables shall not be released until this bolted diagonal erection bridging is installed and anchored; and

(iii) No more than one employee shall be allowed on these spans until all other bridging is installed and anchored.

(2) Where the span of the steel joist is over 60 feet (18.3 m) through 100 feet (30.5 m), the following shall apply:

(i) All rows of bridging shall be bolted diagonal bridging;

(ii) Two rows of bolted diagonal erection bridging shall be installed near the third points of the steel joist;

(iii) Hoisting cables shall not be released until this bolted diagonal erection bridging is installed and anchored; and

(iv) No more than two employees shall be allowed on these spans until all other bridging is installed and anchored.

(3) Where the span of the steel joist is over 100 feet (30.5 m) through 144 feet (43.9 m), the following shall apply:

(i) All rows of bridging shall be bolted diagonal bridging;

(ii) Hoisting cables shall not be released until all bridging is installed and anchored; and

(iii) No more than two employees shall be allowed on these spans until all bridging is installed and anchored.

(4) For steel members spanning over 144 feet (43.9 m), the erection methods used shall be in accordance with § 1926.756.

(5) Where any steel joist specified in paragraphs (c)(2) and (d)(1), (d)(2), and

(d)(3) of this section is a bottom chord bearing joist, a row of bolted diagonal bridging shall be provided near the support(s). This bridging shall be installed and anchored before the hoisting cable(s) is released.

(6) When bolted diagonal erection bridging is required by this section, the following shall apply:

(i) The bridging shall be indicated on the erection drawing;

(ii) The erection drawing shall be the exclusive indicator of the proper placement of this bridging;

(iii) Shop-installed bridging clips, or functional equivalents, shall be used where the bridging bolts to the steel joists;

(iv) When two pieces of bridging are attached to the steel joist by a common bolt, the nut that secures the first piece of bridging shall not be removed from the bolt for the attachment of the second; and

(v) Bridging attachments shall not protrude above the top chord of the steel joist.

(e) *Landing and placing loads.* (1) During the construction period, the employer placing a load on steel joists shall ensure that the load is distributed so as not to exceed the carrying capacity of any steel joist.

(2) Except for paragraph (e)(4) of this section, no construction loads are allowed on the steel joists until all bridging is installed and anchored and all joist-bearing ends are attached.

(3) The weight of a bundle of joist bridging shall not exceed a total of 1,000 pounds (454 kg). A bundle of joist bridging shall be placed on a minimum of three steel joists that are secured at one end. The edge of the bridging bundle shall be positioned within 1 foot (.30 m) of the secured end.

(4) No bundle of decking may be placed on steel joists until all bridging has been installed and anchored and all joist bearing ends attached, unless all of the following conditions are met:

(i) The employer has first determined from a qualified person and documented in a site-specific erection plan that the structure or portion of the structure is capable of supporting the load;

(ii) The bundle of decking is placed on a minimum of three steel joists;

(iii) The joists supporting the bundle of decking are attached at both ends;

(iv) At least one row of bridging is installed and anchored;

(v) The total weight of the bundle of decking does not exceed 4,000 pounds (1816 kg); and

(vi) Placement of the bundle of decking shall be in accordance with paragraph (e)(5) of this section.

(5) The edge of the construction load shall be placed within 1 foot (.30 m) of the bearing surface of the joist end.

§ 1926.758 Systems-engineered metal buildings.

(a) All of the requirements of this subpart apply to the erection of systems-engineered metal buildings except §§ 1926.755 (column anchorage) and 1926.757 (open web steel joists).

(b) Each structural column shall be anchored by a minimum of four anchor rods (anchor bolts).

(c) Rigid frames shall have 50 percent of their bolts or the number of bolts specified by the manufacturer (whichever is greater) installed and tightened on both sides of the web adjacent to each flange before the hoisting equipment is released.

(d) Construction loads shall not be placed on any structural steel framework unless such framework is safely bolted, welded or otherwise adequately secured.

(e) In girt and eave strut-to-frame connections, when girts or eave struts share common connection holes, at least one bolt with its wrench-tight nut shall remain connected to the first member unless a manufacturer-supplied, field-attached seat or similar connection device is present to secure the first member so that the girt or eave strut is always secured against displacement.

(f) Both ends of all steel joists or cold-formed joists shall be fully bolted and/or welded to the support structure before:

(1) Releasing the hoisting cables;

(2) Allowing an employee on the joists; or

(3) Allowing any construction loads on the joists.

(g) Purlins and girts shall not be used as an anchorage point for a fall arrest system unless written approval is obtained from a qualified person.

(h) Purlins may only be used as a walking/working surface when installing safety systems, after all permanent bridging has been installed and fall protection is provided.

(i) Construction loads may be placed only within a zone that is within 8 feet (2.5 m) of the center-line of the primary support member.

§ 1926.759 Falling object protection.

(a) *Securing loose items aloft.* All materials, equipment, and tools, which are not in use while aloft, shall be secured against accidental displacement.

(b) *Protection from falling objects other than materials being hoisted.* The controlling contractor shall bar other construction processes below steel

erection unless overhead protection for the employees below is provided.

§ 1926.760 Fall protection.

(a) *General requirements.* (1) Except as provided by paragraph (a)(3) of this section, each employee engaged in a steel erection activity who is on a walking/working surface with an unprotected side or edge more than 15 feet (4.6 m) above a lower level shall be protected from fall hazards by guardrail systems, safety net systems, personal fall arrest systems, positioning device systems or fall restraint systems.

(2) *Perimeter safety cables.* On multi-story structures, perimeter safety cables shall be installed at the final interior and exterior perimeters of the floors as soon as the metal decking has been installed.

(3) Connectors and employees working in controlled decking zones shall be protected from fall hazards as provided in paragraphs (b) and (c) of this section, respectively.

(b) *Connectors.* Each connector shall:

(1) Be protected in accordance with paragraph (a)(1) of this section from fall hazards of more than two stories or 30 feet (9.1 m) above a lower level, whichever is less;

(2) Have completed connector training in accordance with § 1926.761; and

(3) Be provided, at heights over 15 and up to 30 feet above a lower level, with a personal fall arrest system, positioning device system or fall restraint system and wear the equipment necessary to be able to be tied off; or be provided with other means of protection from fall hazards in accordance with paragraph (a)(1) of this section.

(c) *Controlled Decking Zone (CDZ).* A controlled decking zone may be established in that area of the structure over 15 and up to 30 feet above a lower level where metal decking is initially being installed and forms the leading edge of a work area. In each CDZ, the following shall apply:

(1) Each employee working at the leading edge in a CDZ shall be protected from fall hazards of more than two stories or 30 feet (9.1 m), whichever is less.

(2) Access to a CDZ shall be limited to only those employees engaged in leading edge work.

(3) The boundaries of a CDZ shall be designated and clearly marked. The CDZ shall not be more than 90 feet (27.4 m) wide and 90 (27.4 m) feet deep from any leading edge. The CDZ shall be marked by the use of control lines or the equivalent. Examples of acceptable procedures for demarcating CDZ's can be found in Appendix D to this subpart.

(4) Each employee working in a CDZ shall have completed CDZ training in accordance with § 1926.761.

(5) Unsecured decking in a CDZ shall not exceed 3,000 square feet (914.4 m²).

(6) Safety deck attachments shall be performed in the CDZ from the leading edge back to the control line and shall have at least two attachments for each metal decking panel.

(7) Final deck attachments and installation of shear connectors shall not be performed in the CDZ.

(d) *Criteria for fall protection equipment.* (1) Guardrail systems, safety net systems, personal fall arrest systems, positioning device systems and their components shall conform to the criteria in § 1926.502 (see Appendix G to this subpart).

(2) Fall arrest system components shall be used in fall restraint systems and shall conform to the criteria in § 1926.502 (see Appendix G). Either body belts or body harnesses shall be used in fall restraint systems.

(3) Perimeter safety cables shall meet the criteria for guardrail systems in § 1926.502 (see Appendix G).

(e) *Custody of fall protection.* Fall protection provided by the steel erector shall remain in the area where steel erection activity has been completed, to be used by other trades, only if the controlling contractor or its authorized representative:

(1) Has directed the steel erector to leave the fall protection in place; and

(2) Has inspected and accepted control and responsibility of the fall protection prior to authorizing persons other than steel erectors to work in the area.

§ 1926.761 Training.

The following provisions supplement the requirements of § 1926.21 regarding the hazards addressed in this subpart.

(a) *Training personnel.* Training required by this section shall be provided by a qualified person(s).

(b) *Fall hazard training.* The employer shall provide a training program for all employees exposed to fall hazards. The program shall include training and instruction in the following areas:

(1) The recognition and identification of fall hazards in the work area;

(2) The use and operation of guardrail systems (including perimeter safety cable systems), personal fall arrest systems, positioning device systems, fall restraint systems, safety net systems, and other protection to be used;

(3) The correct procedures for erecting, maintaining, disassembling,

and inspecting the fall protection systems to be used;

(4) The procedures to be followed to prevent falls to lower levels and through or into holes and openings in walking/working surfaces and walls; and

(5) The fall protection requirements of this subpart.

(c) *Special training programs.* In addition to the training required in paragraphs (a) and (b) of this section, the employer shall provide special training to employees engaged in the following activities.

(1) *Multiple lift rigging procedure.* The employer shall ensure that each employee who performs multiple lift rigging has been provided training in the following areas:

(i) The nature of the hazards associated with multiple lifts; and

(ii) The proper procedures and equipment to perform multiple lifts required by § 1926.753(e).

(2) *Connector procedures.* The employer shall ensure that each connector has been provided training in the following areas:

(i) The nature of the hazards associated with connecting; and

(ii) The establishment, access, proper connecting techniques and work practices required by § 1926.756(c) and § 1926.760(b).

(3) *Controlled Decking Zone Procedures.* Where CDZs are being used, the employer shall assure that each employee has been provided training in the following areas:

(i) The nature of the hazards associated with work within a controlled decking zone; and

(ii) The establishment, access, proper installation techniques and work practices required by § 1926.760(c) and § 1926.754(e).

Appendix A to Subpart R—Guidelines for Establishing the Components of a Site-specific Erection Plan: Non-mandatory Guidelines for Complying with § 1926.752(e).

(a) *General.* This appendix serves as a guideline to assist employers who elect to develop a site-specific erection plan in accordance with § 1926.752(e) with alternate means and methods to provide employee protection in accordance with § 1926.752(e), § 1926.753(c)(5), § 1926.757(a)(4) and § 1926.757(e)(4).

(b) *Development of a site-specific erection plan.* Pre-construction conference(s) and site inspection(s) are held between the erector and the controlling contractor, and others such as the project engineer and fabricator before the start of steel erection. The purpose of such conference(s) is to develop and review the site-specific erection plan that will meet the requirements of this section.

(c) *Components of a site-specific erection plan.* In developing a site-specific erection plan, a steel erector considers the following elements:

(1) The sequence of erection activity, developed in coordination with the controlling contractor, that includes the following:

(i) Material deliveries;

(ii) Material staging and storage; and

(iii) Coordination with other trades and construction activities.

(2) A description of the crane and derrick selection and placement procedures, including the following:

(i) Site preparation;

(ii) Path for overhead loads; and

(iii) Critical lifts, including rigging supplies and equipment.

(3) A description of steel erection activities and procedures, including the following:

(i) Stability considerations requiring temporary bracing and guying;

(ii) Erection bridging terminus point;

(iii) Anchor rod (anchor bolt) notifications regarding repair, replacement and modifications;

(iv) Columns and beams (including joists and purlins);

(v) Connections;

(vi) Decking; and

(vii) Ornamental and miscellaneous iron.

(4) A description of the fall protection procedures that will be used to comply with § 1926.760.

(5) A description of the procedures that will be used to comply with § 1926.759.

(6) A description of the special procedures required for hazardous non-routine tasks.

(7) A certification for each employee who has received training for performing steel erection operations as required by § 1926.761.

(8) A list of the qualified and competent persons.

(9) A description of the procedures that will be utilized in the event of rescue or emergency response.

(d) *Other plan information.* The plan:

(1) Includes the identification of the site and project; and

(2) Is signed and dated by the qualified person(s) responsible for its preparation and modification.

Appendix B to Subpart R—Acceptable Test Methods for Testing Slip-Resistance of Walking/Working Surfaces (§ 1926.754(c)(3)). Non-mandatory Guidelines for Complying With § 1926.754(c)(3).

The following references provide acceptable test methods for complying with the requirements of § 1926.754(c)(3).

- Standard Test Method for Using a Portable Inclineable Articulated Strut Slip Tester (PIAST)(ASTM F1677-96)

- Standard Test Method for Using a Variable Incidence Tribometer (VIT)(ASTM F1679-96)

Appendix D to Subpart R—Illustration of the Use of Control Lines to Demarcate Controlled Decking Zones (CDZs): Non-mandatory Guidelines for Complying with § 1926.760(c)(3)

(1) When used to control access to areas where leading edge and initial securement of metal deck and other operations connected with leading edge work are taking place, the controlled decking zone (CDZ) is defined by a control line or by any other means that restricts access.

(i) A control line for a CDZ is erected not less than 6 feet (1.8 m) nor more than 90 feet (27.4 m) from the leading edge.

(ii) Control lines extend along the entire length of the unprotected or leading edge and are approximately parallel to the unprotected or leading edge.

(iii) Control lines are connected on each side to a guardrail system, wall, stanchion or other suitable anchorage.

(2) Control lines consist of ropes, wires, tapes, or equivalent materials, and supporting stanchions as follows:

(i) Each line is rigged and supported in such a way that its lowest point (including sag) is not less than 39 inches (1.0 m) from the walking/working surface and its highest point is not more than 45 inches (1.3 m) from the walking/working surface.

(ii) Each line has a minimum breaking strength of 200 pounds (90.8 kg).

Appendix E to Subpart R—Training: Non-mandatory Guidelines for Complying with § 1926.761

The training requirements of § 1926.761 will be deemed to have been met if employees have completed a training course on steel erection, including instruction in the provisions of this standard, that has been approved by the U.S. Department of Labor Bureau of Apprenticeship.

Appendix F to Subpart R—Perimeter Columns: Non-Mandatory Guidelines for Complying with § 1926.756(e) To Protect the Unprotected Side or Edge of a Walking/Working Surface

In multi-story structures, when holes in the column web are used for perimeter safety cables, the column splice must be placed sufficiently high so as not to interfere with any attachments to the column necessary for the column splice. Column splices are recommended to be placed at every other or fourth levels as design allows. Column splices at third levels are detrimental to the erection process and should be avoided if possible.

Appendix G to Subpart R—§ 1926.502 (b)–(e) Fall Protection Systems Criteria and Practices

(b) “Guardrail systems.” Guardrail systems and their use shall comply with the following provisions:

(1) Top edge height of top rails, or equivalent guardrail system members, shall be 42 inches (1.1 m) plus or minus 3 inches (8 cm) above the walking/working level. When conditions warrant, the height of the top edge may exceed the 45-inch height, provided the guardrail system meets all other criteria of this paragraph (§ 1926.502(b)).

Note: When employees are using stilts, the top edge height of the top rail, or equivalent member, shall be increased an amount equal to the height of the stilts.

(2) Midrails, screens, mesh, intermediate vertical members, or equivalent intermediate structural members shall be installed between the top edge of the guardrail system and the walking/working surface when there is no wall or parapet wall at least 21 inches (53 cm) high.

(i) Midrails, when used, shall be installed at a height midway between the top edge of the guardrail system and the walking/working level.

(ii) Screens and mesh, when used, shall extend from the top rail to the walking/working level and along the entire opening between top rail supports.

(iii) Intermediate members (such as balusters), when used between posts, shall be not more than 19 inches (48 cm) apart.

(iv) Other structural members (such as additional midrails and architectural panels) shall be installed such that there are no openings in the guardrail system that are more than 19 inches (.5 m) wide.

(3) Guardrail systems shall be capable of withstanding, without failure, a force of at least 200 pounds (890 N) applied within 2 inches (5.1 cm) of the top edge, in any outward or downward direction, at any point along the top edge.

(4) When the 200 pound (890 N) test load specified in paragraph (b)(3) of this section (§ 1926.502) is applied in a downward direction, the top edge of the guardrail shall not deflect to a height less than 39 inches (1.0 m) above the walking/working level. Guardrail system components selected and constructed in accordance with the appendix B to subpart M of this part will be deemed to meet this requirement.

(5) Midrails, screens, mesh, intermediate vertical members, solid panels, and equivalent structural members shall be capable of withstanding, without failure, a force of at least 150 pounds (666 N) applied

in any downward or outward direction at any point along the midrail or other member.

(6) Guardrail systems shall be so surfaced as to prevent injury to an employee from punctures or lacerations, and to prevent snagging of clothing.

(7) The ends of all top rails and midrails shall not overhang the terminal posts, except where such overhang does not constitute a projection hazard.

(8) Steel banding and plastic banding shall not be used as top rails or midrails.

(9) Top rails and midrails shall be at least one-quarter inch (0.6 cm) nominal diameter or thickness to prevent cuts and lacerations. If wire rope is used for top rails, it shall be flagged at not more than 6-foot intervals with high-visibility material.

(10) When guardrail systems are used at hoisting areas, a chain, gate or removable guardrail section shall be placed across the access opening between guardrail sections when hoisting operations are not taking place.

(11) When guardrail systems are used at holes, they shall be erected on all unprotected sides or edges of the hole.

(12) When guardrail systems are used around holes used for the passage of materials, the hole shall have not more than two sides provided with removable guardrail sections to allow the passage of materials. When the hole is not in use, it shall be closed over with a cover, or a guardrail system shall be provided along all unprotected sides or edges.

(13) When guardrail systems are used around holes which are used as points of access (such as ladderways), they shall be provided with a gate, or be so offset that a person cannot walk directly into the hole.

(14) Guardrail systems used on ramps and runways shall be erected along each unprotected side or edge.

(15) Manila, plastic or synthetic rope being used for top rails or midrails shall be inspected as frequently as necessary to ensure that it continues to meet the strength requirements of paragraph (b)(3) of this section (§ 1926.502).

(c) *Safety net systems.* Safety net systems and their use shall comply with the following provisions:

(1) Safety nets shall be installed as close as practicable under the walking/working surface on which employees are working, but in no case more than 30 feet (9.1 m) below such level. When nets are used on bridges, the potential fall area from the walking/working surface to the net shall be unobstructed.

(2) Safety nets shall extend outward from the outermost projection of the work surface as follows:

Vertical distance from working level to horizontal plane of net	Minimum required horizontal distance of outer edge of net from the edge of the working surface
Up to 5 feet	8 feet
More than 5 feet up to 10 feet	10 feet
More than 10 feet	13 feet

(3) Safety nets shall be installed with sufficient clearance under them to prevent contact with the surface or structures below when subjected to an impact force equal to the drop test specified in paragraph (4) of this section [§ 1926.502].

(4) Safety nets and their installations shall be capable of absorbing an impact force equal to that produced by the drop test specified in paragraph (c)(4)(i) of this section [§ 1926.502].

(i) Except as provided in paragraph (c)(4)(ii) of this section (§ 1926.502), safety nets and safety net installations shall be drop-tested at the jobsite after initial installation and before being used as a fall protection system, whenever relocated, after major repair, and at 6-month intervals if left in one place. The drop-test shall consist of a 400 pound (180 kg) bag of sand 30+ or - 2 inches (76+ or - 5 cm) in diameter dropped into the net from the highest walking/working surface at which employees are exposed to fall hazards, but not from less than 42 inches (1.1 m) above that level.

(ii) When the employer can demonstrate that it is unreasonable to perform the drop-test required by paragraph (c)(4)(i) of this section (§ 1926.502), the employer (or a designated competent person) shall certify that the net and net installation is in compliance with the provisions of paragraphs (c)(3) and (c)(4)(i) of this section (§ 1926.502) by preparing a certification record prior to the net being used as a fall protection system. The certification record must include an identification of the net and net installation for which the certification record is being prepared; the date that it was determined that the identified net and net installation were in compliance with paragraph (c)(3) of this section (§ 1926.502) and the signature of the person making the determination and certification. The most recent certification record for each net and net installation shall be available at the jobsite for inspection.

(5) Defective nets shall not be used. Safety nets shall be inspected at least once a week for wear, damage, and other deterioration. Defective components shall be removed from service. Safety nets shall also be inspected after any occurrence which could affect the integrity of the safety net system.

(6) Materials, scrap pieces, equipment, and tools which have fallen into the safety net shall be removed as soon as possible from the net and at least before the next work shift.

(7) The maximum size of each safety net mesh opening shall not exceed 36 square inches (230 cm) nor be longer than 6 inches (15 cm) on any side, and the opening, measured center-to-center of mesh ropes or webbing, shall not be longer than 6 inches (15 cm). All mesh crossings shall be secured to prevent enlargement of the mesh opening.

(8) Each safety net (or section of it) shall have a border rope for webbing with a minimum breaking strength of 5,000 pounds (22.2 kN).

(9) Connections between safety net panels shall be as strong as integral net components and shall be spaced not more than 6 inches (15 cm) apart.

(d) "Personal fall arrest systems." Personal fall arrest systems and their use shall comply

with the provisions set forth below. Effective January 1, 1998, body belts are not acceptable as part of a personal fall arrest system.

Note: The use of a body belt in a positioning device system is acceptable and is regulated under paragraph (e) of this section (§ 1926.502).

(1) Connectors shall be drop forged, pressed or formed steel, or made of equivalent materials.

(2) Connectors shall have a corrosion-resistant finish, and all surfaces and edges shall be smooth to prevent damage to interfacing parts of the system.

(3) Dee-rings and snaphooks shall have a minimum tensile strength of 5,000 pounds (22.2 kN).

(4) Dee-rings and snaphooks shall be proof-tested to a minimum tensile load of 3,600 pounds (16 kN) without cracking, breaking, or taking permanent deformation.

(5) Snaphooks shall be sized to be compatible with the member to which they are connected to prevent unintentional disengagement of the snaphook by depression of the snaphook keeper by the connected member, or shall be a locking type snaphook designed and used to prevent disengagement of the snaphook by the contact of the snaphook keeper by the connected member. Effective January 1, 1998, only locking type snaphooks shall be used.

(6) Unless the snaphook is a locking type and designed for the following connections, snaphooks shall not be engaged:

- (i) directly to webbing, rope or wire rope;
- (ii) to each other;
- (iii) to a dee-ring to which another snaphook or other connector is attached;
- (iv) to a horizontal lifeline; or
- (v) to any object which is incompatibly shaped or dimensioned in relation to the snaphook such that unintentional disengagement could occur by the connected object being able to depress the snaphook keeper and release itself.

(7) On suspended scaffolds or similar work platforms with horizontal lifelines which may become vertical lifelines, the devices used to connect to a horizontal lifeline shall be capable of locking in both directions on the lifeline.

(8) Horizontal lifelines shall be designed, installed, and used, under the supervision of a qualified person, as part of a complete personal fall arrest system, which maintains a safety factor of at least two.

(9) Lanyards and vertical lifelines shall have a minimum breaking strength of 5,000 pounds (22.2 kN).

(10)(i) Except as provided in paragraph (d)(10)(ii) of this section [§ 1926.502], when vertical lifelines are used, each employee shall be attached to a separate lifeline.

(ii) During the construction of elevator shafts, two employees may be attached to the same lifeline in the hoistway, provided both employees are working atop a false car that is equipped with guardrails; the strength of the lifeline is 10,000 pounds [5,000 pounds per employee attached] (44.4 kN); and all other criteria specified in this paragraph for lifelines have been met.

(11) Lifelines shall be protected against being cut or abraded.

(12) Self-retracting lifelines and lanyards which automatically limit free fall distance to 2 feet (0.61 m) or less shall be capable of sustaining a minimum tensile load of 3,000 pounds (13.3 kN) applied to the device with the lifeline or lanyard in the fully extended position.

(13) Self-retracting lifelines and lanyards which do not limit free fall distance to 2 feet (0.61 m) or less, ripstitch lanyards, and tearing and deforming lanyards shall be capable of sustaining a minimum tensile load of 5,000 pounds (22.2 kN) applied to the device with the lifeline or lanyard in the fully extended position.

(14) Ropes and straps (webbing) used in lanyards, lifelines, and strength components of body belts and body harnesses shall be made from synthetic fibers.

(15) Anchorages used for attachment of personal fall arrest equipment shall be independent of any anchorage being used to support or suspend platforms and capable of supporting at least 5,000 pounds (22.2 kN) per employee attached, or shall be designed, installed, and used as follows:

(i) as part of a complete personal fall arrest system which maintains a safety factor of at least two; and

(ii) under the supervision of a qualified person.

(16) Personal fall arrest systems, when stopping a fall, shall:

(i) limit maximum arresting force on an employee to 900 pounds (4 kN) when used with a body belt;

(ii) limit maximum arresting force on an employee to 1,800 pounds (8 kN) when used with a body harness;

(iii) be rigged such that an employee can neither free fall more than 6 feet (1.8 m), nor contact any lower level;

(iv) bring an employee to a complete stop and limit maximum deceleration distance an employee travels to 3.5 feet (1.07 m); and,

(v) have sufficient strength to withstand twice the potential impact energy of an employee free falling a distance of 6 feet (1.8 m), or the free fall distance permitted by the system, whichever is less.

Note: If the personal fall arrest system meets the criteria and protocols contained in Appendix C to subpart M, and if the system is being used by an employee having a combined person and tool weight of less than 310 pounds (140 kg), the system will be considered to be in compliance with the provisions of paragraph (d)(16) of this section [§ 1926.502]. If the system is used by an employee having a combined tool and body weight of 310 pounds (140 kg) or more, then the employer must appropriately modify the criteria and protocols of the Appendix to provide proper protection for such heavier weights, or the system will not be deemed to be in compliance with the requirements of paragraph (d)(16) of this section (§ 1926.502).

(17) The attachment point of the body belt shall be located in the center of the wearer's back. The attachment point of the body harness shall be located in the center of the wearer's back near shoulder level, or above the wearer's head.

(18) Body belts, harnesses, and components shall be used only for employee

protection (as part of a personal fall arrest system or positioning device system) and not to hoist materials.

(19) Personal fall arrest systems and components subjected to impact loading shall be immediately removed from service and shall not be used again for employee protection until inspected and determined by a competent person to be undamaged and suitable for reuse.

(20) The employer shall provide for prompt rescue of employees in the event of a fall or shall assure that employees are able to rescue themselves.

(21) Personal fall arrest systems shall be inspected prior to each use for wear, damage and other deterioration, and defective components shall be removed from service.

(22) Body belts shall be at least one and five-eighths (1 $\frac{5}{8}$) inches (4.1 cm) wide.

(23) Personal fall arrest systems shall not be attached to guardrail systems, nor shall they be attached to hoists except as specified in other subparts of this Part.

(24) When a personal fall arrest system is used at hoist areas, it shall be rigged to allow the movement of the employee only as far as the edge of the walking/working surface.

(e) *Positioning device systems.* Positioning device systems and their use shall conform to the following provisions:

(1) Positioning devices shall be rigged such that an employee cannot free fall more than 2 feet (.9 m).

(2) Positioning devices shall be secured to an anchorage capable of supporting at least twice the potential impact load of an employee's fall or 3,000 pounds (13.3 kN), whichever is greater.

(3) Connectors shall be drop forged, pressed or formed steel, or made of equivalent materials.

(4) Connectors shall have a corrosion-resistant finish, and all surfaces and edges shall be smooth to prevent damage to interfacing parts of this system.

(5) Connecting assemblies shall have a minimum tensile strength of 5,000 pounds (22.2 kN)

(6) Dee-rings and snaphooks shall be proof-tested to a minimum tensile load of 3,600 pounds (16 kN) without cracking, breaking, or taking permanent deformation.

(7) Snaphooks shall be sized to be compatible with the member to which they are connected to prevent unintentional disengagement of the snaphook by depression of the snaphook keeper by the

connected member, or shall be a locking type snaphook designed and used to prevent disengagement of the snaphook by the contact of the snaphook keeper by the connected member. As of January 1, 1998, only locking type snaphooks shall be used.

(8) Unless the snaphook is a locking type and designed for the following connections, snaphooks shall not be engaged:

(i) directly to webbing, rope or wire rope;

(ii) to each other;

(iii) to a dee-ring to which another snaphook or other connector is attached;

(iv) to a horizontal lifeline; or to depress the snaphook keeper and release itself.

(v) to any object which is incompatibly shaped or dimensioned in relation to the snaphook such that unintentional disengagement could occur by the connected object being able to depress the snaphook keeper and release itself.

(9) Positioning device systems shall be inspected prior to each use for wear, damage, and other deterioration, and defective components shall be removed from service.

(10) Body belts, harnesses, and components shall be used only for employee protection (as part of a personal fall arrest system or positioning device system) and not to hoist materials.

Appendix H to Subpart R--- Double Connections: Illustration of a Clipped End Connection

and a Staggered Connection: Non-Mandatory Guidelines for Complying with

§1926.756(c)(1).

Clipped end connections are connection material on the end of a structural member which has a notch at the bottom and/or top to allow the bolt(s) of the first member placed on the opposite side of the central member to remain in place. The notch(es)

fits around the nut or bolt head of the opposing member to allow the second member to be bolted up without removing the bolt(s) holding the first member.

Staggered connections are connection material on a structural member in which all of the bolt holes in the common member web

are not shared by the two incoming members in the final connection. The extra hole in the column web allows the erector to maintain at

least a one bolt connection at all times while making the double connection.

BILLING CODE 4510-26-P

Federal Register

**Thursday,
January 18, 2001**

Part VII

Department of the Interior

Fish and Wildlife Service

**50 CFR Part 86
Boating Infrastructure Grant Program;
Final Rule**

DEPARTMENT OF THE INTERIOR**Fish and Wildlife Service****50 CFR Part 86****RIN 1018-AF38****Boating Infrastructure Grant Program****AGENCY:** Fish and Wildlife Service, Interior.**ACTION:** Final rule.

SUMMARY: This regulation provides for the uniform administration of the national Boating Infrastructure Grant Program and survey authorized by Section 7404 of the Sportfishing and Boating Safety Act of 1998. Through this program, the U.S. Fish and Wildlife Service will provide funds to States to install or upgrade tie-up facilities for transient recreational boats 26 feet or more in length.

DATES: This rule is effective on February 20, 2001.

ADDRESSES: The administrative record for this rule, including copies of comments received, is available for viewing Monday through Friday, 8 am to 4 pm, in the Division of Federal Aid, 4401 North Fairfax Drive, Room 140, Arlington, VA 22203.

FOR FURTHER INFORMATION CONTACT: Steve Farrell, Project Officer, U.S. Fish and Wildlife Service, Division of Federal Aid, 4401 North Fairfax Drive, Suite 140, Arlington, Virginia 22203; telephone (703) 358-2156; fax (703) 358-1705; email <steve_farrell@fws.gov>.

SUPPLEMENTARY INFORMATION:**Background****Economic Status of Boating in the United States**

Historically, coastal and inland waterways were the first highways along our shores and into the interior of the continent. Americans used boats almost exclusively for transportation of people and goods. Today we use more than 12 million recreational boats to cruise and fish. Recreational boating is now a significant economic activity in many areas of the country and in many respects exceeds that of waterborne commerce. Given the present demographic forces, we expect this rule to have a positive economic impact by adding facilities to accommodate larger cruising boats.

Purpose of the Boating Infrastructure Grant Program

Recreational boats 26 feet or more in length, called "nontrailerable" boats, represent about 4 percent, or more than

600,000, of the recreational boats in the United States. Although we have approximately 12,000 marinas in the United States, Congress recognized that insufficient tie-up facilities exist for transient, nontrailerable boats for reasonable and convenient access from our navigable waters. These boaters are unable to enjoy many recreational, cultural, historic, scenic, and natural resources of the United States. We also have an insufficient quantity of marinas or commercial tie-up facilities along extended stretches of our coastlines and rivers that benefit transient, nontrailerable boats. In many parts of the country, the number of places to tie-up, moor, or anchor a cruising boat, especially during a storm, is limited. Basic features, such as tie-ups, fuel, utilities, and restrooms, are often nonexistent. As a result, Congress passed the Sport Fishing and Boating Safety Act of 1998 (16 U.S.C. 777g). Under the Act, the U.S. Fish and Wildlife Service conducts the Boating Infrastructure Grant (BIG) Program. The BIG Program will provide \$32 million to States and Territories over 4 years to construct, renovate, or maintain tie-up facilities for recreational boats 26 feet or more in length.

This program will:

(a) Create dockage for transient recreational boats 26 feet or more in length for recreational opportunities and safe harbors;

(b) Provide navigational aids for boaters to use these facilities;

(c) Enhance access to recreational, historic, cultural, natural, and scenic resources;

(d) Strengthen local ties to the boating community and its economic benefits;

(e) Promote public/private partnerships and entrepreneurial opportunities;

(f) Provide continuity of public access to the shore; and

(g) Promote awareness of transient boating opportunities.

The Act also directs us to:

(a) Develop a national framework or methodology to conduct a boat access needs assessment or survey to determine the adequacy of facilities for recreational boats of all sizes;

(b) Encourage States to complete the boat access needs survey; and

(c) Complete a comprehensive national assessment of boat access needs and facilities (the assessment will be a compilation of information from the States' surveys into a national report of boat access needs).

Analysis of Public Comments and Changes Made to the Proposed Rule

On January 20, 2000, the U.S. Fish and Wildlife Service (Service) published a proposed rule in the **Federal Register** (65 FR 3331) and requested comments on the proposed rule and information collection for the national BIG Program. The Service received 13 written responses by the close of the comment period on March 20, 2000. The responses came from nongovernmental organizations, a private individual, and Federal and State employees and agencies.

We received a total of 170 comments from the 13 written responses covering the following areas: survey (74), criteria for selection (11), State plans (8), clarifications (3), suspected typographical errors (3), and comments of a general nature (71). We may not reflect these actual numbers in the list below due to combining similar comments or questions. We have addressed all of the comments in this section of the preamble and made any necessary changes to the proposed rule. As a result, some sections of the proposed rule were combined or eliminated. Comments pertaining to the proposed information collection are addressed under Substantive Comments, Issues 1 through 9.

The following is clarification or analysis and reporting of any substantial changes to the rule that the Service made in response to these comments. The Service also corrected other minor errors in the proposed rule, as described below.

Minor Changes

In § 86.12(n), in response to a comment asking us to define "transient," we are adding the following definition, "Passing through or by a place, staying 10 days or less."

In § 86.13(d), we changed "seasonal" to "transient" to avoid confusing wording.

In § 86.13(f), in response to a suggestion, we added "docks" after the word "floating" to clarify.

In § 86.13, in response to suggestions, we added at paragraphs (o), (p), and (q), "dockside" to clarify where utilities are placed.

In § 86.13, in response to a suggestion, we added "(r) Debris deflection booms."

In § 86.13, in response to suggestions, we added "(s) Marine fueling stations."

In § 86.20(a)(1), in response to a suggestion, we added a second sentence as follows: "You must design new construction and renovations to last at least 20 years."

In § 86.20(e)(1), in response to a suggestion, we deleted from

subparagraph (vii) to end, as the activities listed in the proposed rule are not appropriate preconstruction activities.

In § 86.20, in response to a suggestion, we added a new item, “(f) Produce information and education materials such as charts, cruising guides, and brochures.”

In § 86.21(d), in response to a suggestion, we changed the sentence to read: “Construct or renovate principal structures not expected to last at least 20 years.”

In § 86.44(b), in response to a suggestion, we replaced “* * * we will” with “* * * The State must * * *”

In § 86.54(f)(1)(i) in the proposed rule (now § 86.53(d)(1)(i)), in response to several comments, we changed the section to clarify that no State Tier One proposal may exceed \$100,000 in any given fiscal year.

Substantive Changes

Issue 1. Questions and comments on the survey included issues of respondent burden (how long to complete a section), unclear questions, issues of confidentiality, site-specific questions, and the value of answers to specific questions in determining national need.

Response: In response to all of the comments received on the technical aspects of the proposed survey, we completed significant revisions to the survey instrument. We considered all comments and redesigned the survey, improved guidance and questions, and decreased the time burden for completion. The revised survey began its approval process when it was published in the **Federal Register** (65 FR 63606) on October 24, 2000 for a 60-day public comment period. The survey will be ready for use during the FY 2001 grant cycle, and the Service will notify eligible applicants upon receiving OMB approval.

Issue 2. How can States pay for the survey?

Response: States can pay the costs for conducting the survey using Federal Aid in Sport Fish Restoration program funds, and credit expenditures toward the 15% minimum used for motor boat access (16 U.S.C. 777g (g)(4)).

Issue 3. Is the survey required?

Response: The Service does not require States to conduct surveys to receive funding under the national BIG program. However, the Service must produce a comprehensive national assessment of recreational boat access needs and facilities. The States, by conducting and forwarding their survey results to the Service, are ensuring that

their needs are known (16 U.S.C. 777g (g)(2)). States may use existing, recent survey results, approved by the appropriate Service Regional Office, to determine boating infrastructure needs (§ 86.113).

Issue 4. States completing a survey should receive ranking points.

Response: No “points” are assigned in the criteria for completing a survey; the only available points are outlined in § 86.60. States must use the survey results to develop a State plan for boating infrastructure. The plan (any plan certified by the Service Regional Office) is then eligible for 15 ranking points.

Issue 5. Can States add questions to the survey?

Response: States cannot add any questions to the survey. If OMB approves the final survey as written, we will reimburse States only for administering it as approved.

Issue 6. Typographical errors occur in the survey tables.

Response: We fixed typographical errors in both tables describing the type of participant in survey parts.

Issue 7. States should submit survey results electronically.

Response: The Service wants the results transmitted to the Service Regional Offices in a common electronic format, such as Microsoft Word, Word Perfect, Excel or Quattro Pro. We added a requirement regarding electronic transmission of results to § 86.111.

Issue 8. Clarify “boat service providers” as the term relates to public access.

Response: We changed § 86.102(b)(2)(i) and (ii) to include a phrase that specifies boat service providers “who allow public access.”

Issue 9. What are the survey response rate requirements?

Response: We changed § 86.115 to read “plus or minus 10 percent.” We also replaced the language that suggests a 70 percent response rate with language that says the State is responsible for selecting a statistically valid sample size.

Issue 10. In § 86.60, the points do not add up to 100, or no points are allowed for completing surveys.

Response: This section needed several minor editorial changes to make it clear and concise. Among these, we changed the point total to 105. The issue regarding awarding points for completing surveys is addressed in Issue 4.

Issue 11. According to § 86.54, why are proposals that are awarded less than 60 points when held to the criteria in § 86.60 automatically moved to Tier Two?

Response: We removed this “60 point” break when we revised the Tier One/Two break.

Issue 12. By awarding 15 points for a State plan, the Service is making State plans mandatory, penalizing all nonplan proposals.

Response: State plans are desirable under the Act (16 U.S.C. 777g (g)). They help set priorities and describe how a State will fulfill recreational boaters’ needs. We can also use plans to help set national priorities in the comprehensive national assessment of recreational boat access needs and facilities described in the Act. The plan nonetheless is optional. The Act states, “A State may develop a plan for,” and in the proposed rule, § 86.131 states “Plans are voluntary.” However, the Service will award 15 criteria points to any acceptable plan, already existing and current, or a newly developed plan based on the OMB-approved survey or other recent approved survey results. The reason for the 15 criteria points is that projects coming from an accepted plan will establish priorities based on a formal needs assessment.

Issue 13. Add a statement to identify priorities in the State plan in § 86.60(b)(1).

Response: We added to § 86.60(b)(1), after the word “following” “priorities identified in” your State’s program plan. We also agreed with the second thought presented in this comment and changed “construct and renovate” to “construct, renovate, and maintain.”

Issue 14. Change the point values assigned to certain criteria.

Response: We are not making a change to the final rule as a result of this comment. We believe that we did a thorough job of stakeholder involvement when we assigned these point values.

Issue 15. A possible conflict exists in § 86.60(b)(4) about match funds.

Response: We have changed § 86.60(b)(4) to read “Include private, local, or other State funds in addition to the non-Federal match described in § 86.42.”

Issue 16. Because of typographical errors in § 86.60(b)(4)(i), the percentage range was left out.

Response: In § 86.60(b)(4), we changed paragraph (i) to read “Twenty-six percent to thirty-five percent—5 points,” paragraph (ii) to remove the word “above” at the end, and paragraph (iii) to insert the word “and” so it reads “Fifty percent and above—15 points.”

Issue 17. Add the word “proposed” before “tie-up” to the second sentence in § 86.60(b)(5), and delete the word “access” from the same sentence.

Response: We do not believe this suggestion adds to the clarity of the

sentence. We are making no changes to the proposed rule as a result of this comment.

Issue 18. In § 86.60(b)(6), change the wording of the sentence to restrict the sites to those near population centers and raise the value of the points assigned.

Response: We believe this change would unnecessarily restrict State proposals. We believe the sentence is clear and the points are appropriate. The sentence remains unchanged.

Issue 19. In § 86.60(b)(7), substitute "enhanced opportunities" for "access."

Response: We are not changing this paragraph as a result of this comment because we believe the sentence is clear as written.

Issue 20. In § 86.60(b)(8), add "adjacent" before the word "community," and add "as the result of construction, renovation, or increased use," at the end of the first sentence.

Response: We believe this change would unnecessarily restrict the program criteria. The proposed sentence stands unchanged.

Issue 21. Allow Tier One dollars to finance State plans because not to do so creates an unfunded Federal mandate.

Response: The Act states that "* * * a State may develop and submit to the Secretary a plan for* * *," not "must" (16 U.S.C. 777g-1 (c)). A mandate does not exist. However, States may do planning under other Sport Fish Restoration Act grant programs for purposes eligible under those programs and apply the resulting plan to the BIG Program.

Issue 22. Will the Service accept existing plans?

Response: The Service will accept any plan certified by the appropriate Service Regional Office that ensures that public boat access is and will be adequate to meet the needs of recreational boaters on your State's waters (§ 86.134).

Issue 23. What are the products of the National Assessment?

Response: The products of the Comprehensive National Assessment are listed in § 86.124.

Issue 24. Complying with the National Environmental Policy Act and the Endangered Species Act could cause up to 2 years of delay.

Response: All grantees must agree to and certify compliance with all applicable Federal laws. We use a certified "Assurances" statement. We are making no changes to the proposed rule as a result of this comment.

Issue 25. Can States use consultant fees, design, permitting, and construction administration costs as match for Tier One projects?

Response: Allowable matching and cost-sharing regulations are in 43 CFR

12.64; specific questions should be directed to the appropriate Service Regional Office.

Issue 26. Reduce match to where local governments or small marinas can compete for funds.

Response: In accordance with the Act, only States are eligible for funding under this grant program.

Issue 27. Are pre-award costs allowable?

Response: Only as described under § 86.20.

Issue 28. Who assumes the administrative burden after the program expires in 3 years?

Response: We discuss maintenance of approved projects in 50 CFR 80.17.

Issue 29. How much money can we charge the public to tie-up?

Response: The going rate in the locality determines the amount for the facility. We are making no change to the proposed rule as a result of this comment.

Issue 30. For projects in Tier Two that exceed available funding in Tier Two, what is the methodology for awarding funds other than what States request?

Response: There is none. We cannot exceed established spending levels. If a State requires funds from two or more different programs to obtain full funding, the State is responsible for securing the funds.

Issue 31. In § 86.20(a)(3), substitute "deep enough" for "6 feet of depth at the lowest tide * * *."

Response: We researched these depths before making this specification, and we are not making the recommended change.

Issue 32. In § 86.20(a)(5)(iii), delete the reference to "this program," so that the sentence reads: "You may use funds from the Clean Vessel Act Program."

Response: We encourage the construction of pumpout stations with either set of funds. We are making no changes to the proposed rule as a result of this comment.

Issue 33. In § 86.20(e)(1), add "contract documents."

Response: No contract should be prepared and awarded until after we sign a grant; therefore, contract documents are not allowed as a pre-agreement cost. We are making no changes to the proposed rule as a result of this comment.

Issue 34. In § 86.21(e) and (g), add note on one-time dredging to (e) and add dinghy docks to (g).

Response: We address one-time dredging in § 86.20, and dinghy docks are not for transient vessels more than 26 feet in length. We are making no changes to the proposed rule as a result of this comment.

Issue 35. In § 86.21, make the State plan eligible for funding under BIG.

Response: State plans are eligible activities under the Sport Fish Restoration Act (16 U.S.C. 777).

Issue 36. In accordance with § 86.30, must I allow the public to use grant-funded facilities?

Response: Yes, § 86.30 specifies that reasonable access must be allowed and explains what that means.

Issue 37. In regard to § 86.54, one responder commented that the criterion referenced in § 86.60 was developed for competitive Tier Two projects and was not meant for Tier One projects. Tier One project funding was developed for States meeting the requirements in §§ 86.13 and 86.20.

Response: We agree and will change § 86.54(f)(1)(ii) (now § 86.53(d)(1)(ii) in the final rule) to read "* * * using the eligibility requirements in §§ 86.14 and 86.20." (Section 86.13 from the proposed rule has become § 86.14 in the final rule.)

Issue 38. In regard to § 86.55(f), why are two sets of \$100,000 proposals required? Why not require one \$200,000 proposal?

Response: Tier One proposals in the first grant cycle will be funded by 2 different fiscal years. To provide additional clarity, we replaced the second sentence in § 86.55(f) (now § 86.54(f)) with wording similar to the following, "We will fund one proposal for each fiscal year provided that each proposal meets the eligibility requirements in §§ 86.13 (now 86.14) and 86.20."

Issue 39. Sections 86.20 and 86.21 conflict in useful life of some outputs.

Response: We do not agree. Principal structures expected to last 20 years or more are different from navigational aids which may have a shorter lifespan. Only principal structures must be designed to last at least 20 years, therefore a conflict does not exist.

Issue 40. In regard to § 86.56, after the Service awards funds for a project, if it is found not to meet compliance requirements, where will these funds go?

Response: If a State cannot bring the project into compliance according to § 86.56 (now § 86.55), the funds may revert as required by the Act (16 U.S.C. 777c).

Issue 41. Regarding § 86.60(b), a respondent recommended considering construction in remote areas in the scoring priority and adding a statement to the Regulatory Flexibility Act section to give criteria points for remote sites.

Response: Section 86.60(b)(6) and (7) considers remote areas as they relate to significant links to prominent

destinations, way-points, and national, regional, and local significant areas. Therefore, we do not see the need to alter the present guidance.

Issue 42. In § 86.60(b)(8), how will we assess “significant positive economic impact?”

Response: States should assess the economic impact of projects using a cost/benefit analysis as described in the example in § 86.60(b)(8). States should address this issue, along with all the other criteria, in the grant proposal.

Issue 43. In § 86.82(b), replace the word “slippage” with “deviation.”

Response: “Slippage” is the term used in 43 CFR 12.80(b)(2)(ii), which provides reporting requirements for assistance programs. We are making no changes to the proposed rule as a result of this comment.

Issue 44. In § 86.80, remove the requirement for quarterly reports.

Response: We are removing the requirement for quarterly reporting for Tier One projects only, according to 43 CFR 12.80, Monitoring and Reporting Program Performance.

Issue 45. In § 86.91, make States give credit to the Sport Fish Restoration Program for BIG grants.

Response: Credit to the Sport Fish Restoration Program remains optional. We have nothing on which to base making this issue mandatory. We are changing “may” in the last sentence to “* * * are encouraged to * * *”.

Issue 46. Could priority for services at tie-up facilities be given to transient boats over 26 feet in length? If so, how would States enforce the priority?

Response: No. While we intend the program to benefit transient, nontrailerable boats, States must give equal public access to all boaters. Consequently, enforcement is unnecessary.

Issue 47. The Service Director should convene a nongovernmental advisory committee to provide expertise on “recreational boating facilities needs.”

Response: Under the Federal Advisory Committee Act (Pub. L. 92-463, 5 U.S.C. App.1), requirements for creating an advisory committee would significantly delay the distribution of the first cycle grant funds. However, opportunities may exist for the nongovernmental community to participate in the grant selection process, and the Service will investigate such opportunities.

Issue 48. Are maintenance and operation costs in remote areas eligible under § 86.20(4)?

Response: We cover maintenance under § 86.20(a); we specifically exclude operation and janitorial costs under § 86.21.

Issue 49. Provide sufficient time to rank and award proposals.

Response: We changed the application period for the first grant cycle to allow applicants 90 days to submit grant proposals to the appropriate Service Regional Office. This change occurs in § 86.50.

Regulatory Planning and Review (E.O. 12866)

In accordance with the criteria in Executive Order 12866, this rule is a significant regulatory action according to the following:

(a) This rule will not have an annual economic effect of \$100 million or adversely affect an economic sector, productivity, jobs, the environment, or other units of government. Program funds total \$8 million per year for 4 years, for a total of \$32 million. Program funds for surveys total \$1,050,000. States must match these amounts with 25 percent or \$2 million per year. State match totals \$8 million over 4 years. The program will not negatively affect an economic sector, productivity, jobs, and other units of government. The program will have a positive effect on these factors.

(b) This rule will not create inconsistencies with other agencies’ actions. We will require the necessary Federal, State, and local reviews and permits before allowing construction of all facilities approved under the program. These reviews will ensure that this rule will not create inconsistencies with other agencies’ actions.

(c) This rule will materially affect entitlements, grants, user fees, loan programs, or the rights and obligations of their recipients. This rule establishes a new grant program using existing funds that are otherwise available to State natural resource agencies under the Sport Fish Restoration Act (16 U.S.C. 777-777m). Recipients will voluntarily accept all stipulations prior to the Service awarding funds for facility construction. The program only obligates the recipient to maintain the facility. User fees are not mandatory and the program allows only enough charges to maintain the facility established by the grant.

(d) This rule will not raise novel legal or policy issues. This program will award funds to States to install facilities for transient nontrailerable boats. We will review all actions for compliance with the National Environmental Policy Act. This grant program is similar to past Federal Aid grant programs for construction of facilities.

Regulatory Flexibility Act

The Department certifies that this document will not have a significant economic effect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). Eight million dollars will be available annually for a 4-year period. The effects of these regulations occur to agencies in the States, Puerto Rico, Guam, the Virgin Islands, American Samoa, the District of Columbia, and the Northern Mariana Islands. These are not small entities under the Regulatory Flexibility Act. Some small entities, mainly marina operators, may receive grant funds. The program will place facilities where none exist now, in remote areas where no competition exists, and in populated areas where marinas have not previously installed them. Employment, investment, productivity, and innovation should all increase because the program will construct facilities to attract transient boaters. The result will be a net transfer of expenditures in the area. U.S.-based enterprises’ ability to compete with foreign-based enterprises should not be affected by this rule.

Small Business Regulatory Enforcement Fairness Act (SBREFA)

This regulation is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act, as discussed in the Regulatory Planning and Review and Regulatory Flexibility Act sections above.

Unfunded Mandates Reform Act

This regulation does not impose an unfunded mandate on State, local, or tribal governments or the private sector of more than \$100 million per year. This regulation does not have a significant or unique effect on State, local, tribal governments, or the private sector. The rule establishes a grant program that States may participate in voluntarily. A statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not necessary.

Takings (E.O. 12630)

In compliance with Executive Order 12630, this regulation does not have significant takings implications. The rule provides standardized procedures for administering a Federal discretionary grant program.

Federalism Assessment (E.O. 13132)

In compliance with Executive Order 13132, this regulation does not have sufficient Federalism implications to warrant the preparation of a Federalism Assessment. Through this regulation,

eligible States will receive grants for construction, renovation, maintenance of boating facilities, and public information and education programs. Therefore, the rule is consistent with Executive Order 13132.

Civil Justice Reform (E.O. 12988)

In compliance with Executive Order 12988, the Office of the Solicitor has determined that this regulation does not unduly burden the judicial system and meets the requirements of §§ 3(a) and 3(b)(2) of the Order.

Paperwork Reduction Act

The information collection requirements contained in this regulation are only those necessary to fulfill applicable grant application requirements of 43 CFR Part 12; see 43 CFR 12.4 for information concerning OMB approval of those requirements. We have submitted the collections of information contained in this rule to the Office of Management and Budget for approval as required under 44 U.S.C. 3501 *et seq.* The Service will not collect this information until OMB has granted us approval. Additionally, no person may be required to respond to a collection of information unless it displays a currently valid OMB number.

The information collection requirement related to the surveys has a current OMB Approval Number 1018-0106 under the provisions of 44 U.S.C. 3501 *et seq.* In response to the comments received on the technical aspects of the proposed survey, we revised the survey improving the guidance, questions, and a lower time burden for completion.

What Intergovernmental Review Procedures Must I as a State follow?

Executive Order 12372, "Intergovernmental Review of Federal Programs," and 43 CFR Part 9, "Intergovernmental Review of Department of the Interior Programs and Activities," applies to the national BIG Program. Under the Order, you may design your own processes to review and comment on proposed Federal assistance under covered programs.

What Is My Responsibility as a State if I Participate in the Executive Order Process Having Single Points of Contact?

You should alert your Single Points of Contact (SPOC) to the prospective applications and receive any necessary instructions to provide material the SPOC requires. You must submit all required materials, if any, to the SPOC and show the date of this submittal (or the date of contact if the SPOC does not

require submittal) on the narrative. If you are from a State that chooses to exempt the grants, you need take no action regarding E.O. 12372.

Author

The principal author of this rule is Steve Farrell, Project Officer, U.S. Fish and Wildlife Service, Division of Federal Aid, 4401 North Fairfax Drive, Suite 140, Arlington, Virginia 22203.

Regulation Promulgation

Accordingly, the Service hereby establishes part 86, subchapter F of Chapter I, Title 50 Code of Federal Regulations, as set forth below:

List of Subjects in 50 CFR Part 86

Administrative practice and procedure, Boats and boating, Grant programs—recreation, Natural resources, Recreation and recreation areas, Reporting and record keeping requirements.

For the reasons set out in the preamble, we amend Subchapter F of Chapter I, Title 50 of the Code of Federal Regulations, by adding a new part 86 to read as follows.

PART 86—BOATING INFRASTRUCTURE GRANT (BIG) PROGRAM

Subpart A—General Information About the Grant Program

Sec.

- 86.10 What does this regulation do?
- 86.11 What does the national BIG Program do?
- 86.12 Definitions of Terms Used in Part 86
- 86.13 What is boating infrastructure?
- 86.14 Who may apply for these grants?
- 86.15 How does the grant process work?
- 86.16 What are the information collection requirements?

Subpart B—Funding State Grant Proposals

- 86.20 What activities are eligible for funding?
- 86.21 What activities are ineligible for funding?

Subpart C—Public Use of the Facility

- 86.30 Must I allow the public to use the grant-funded facilities?
- 86.31 How much money may I charge the public to use tie-up facilities?

Subpart D—Funding Availability

- 86.40 How much money is available for grants?
- 86.41 How long will the money be available?
- 86.42 What are the match requirements?
- 86.43 May someone else supply the match?
- 86.44 What are my allowable costs?
- 86.45 When will I receive the funds?

Subpart E—How States Apply for Grants

- 86.50 When must I apply?
- 86.51 To whom must I apply?

- 86.52 What information must I include in my grant proposals?
- 86.53 What are funding tiers?
- 86.54 How must I submit proposals?
- 86.55 What are my compliance requirements with Federal laws, regulations, and policies?

Subpart F—How the Service Selects Projects To Receive Grants

- 86.60 What are the criteria used to select projects for grants?
- 86.61 What process does the Service use to select projects for grants?
- 86.62 What must I do after my project has been selected?
- 86.63 May I appeal if my project is not selected?

Subpart G—How States Manage Grants

- 86.70 What are my requirements to acquire, install, operate, and maintain real and personal property?
- 86.71 How will I be reimbursed?
- 86.72 Do any other Federal requirements apply to this program?
- 86.73 What if I do not spend all the money?
- 86.74 What if I need more money?

Subpart H—Reporting Requirements for the States

- 86.80 What are my reporting requirements for this grant program?
- 86.81 When are the reports due?
- 86.82 What must be in the reports?

Subpart I—State Use of Signs and Sport Fish Restoration Symbols

- 86.90 What are my responsibilities for information signs?
- 86.91 What are my program crediting responsibilities?
- 86.92 Who can use the SFR logo?
- 86.93 Where should I use the SFR logo?
- 86.94 What crediting language should I use?

Subpart J—Service Completion of the National Framework

- 86.100 What is the National Framework?
- 86.101 What is the Service schedule to adopt the National Framework?
- 86.102 How did the Service design the National Framework?

Subpart K—How States Will Complete a Boat Access Needs Survey (Survey)

- 86.110 What does the survey do?
- 86.111 Must I do a survey?
- 86.112 What are the advantages of doing a survey?
- 86.113 What if I have recently completed a survey?
- 86.114 Do I need to conduct a survey if I already have a plan for installing tie-up facilities?
- 86.115 How should I administer the survey?
- 86.116 May I change the questions in the survey?
- 86.117 [Reserved]
- 86.118 What does this survey include?

Subpart L—Completing the Comprehensive National Assessment

- 86.120 What is the Comprehensive National Assessment?
- 86.121 What does the Comprehensive National Assessment do?

- 86.122 Who completes the Comprehensive National Assessment?
- 86.123 Comprehensive National Assessment schedule.
- 86.124 What are the Comprehensive National Assessment products?

Subpart M—How States Will Complete the State Program Plans

- 86.130 What does the State program plan do?
- 86.131 Must I do a plan?
- 86.132 What are the advantages to doing a plan?
- 86.133 What are the plan standards?
- 86.134 What if I am already carrying out a plan?
- 86.135 [Reserved]
- 86.136 What must be in the plan?
- 86.137 What variables should I consider?

Authority: 16 U.S.C. 777g, 777g-1.

Subpart A—General Information About the Grant Program

§ 86.10 What does this regulation do?

In this part, the terms “I,” “you,” “my,” and “your” refer to the State agency seeking participation in the national Boating Infrastructure Grant (BIG) Program. “We” and “us” refers to the Fish and Wildlife Service. This part establishes your requirements under the Sportfishing and Boating Safety Act of 1998 to:

- (a) Participate in the national BIG Program,
- (b) Complete your boat access survey, and
- (c) Develop State plans to install tie-up facilities for transient nontrailerable recreational vessels.

§ 86.11 What does the national BIG Program do?

This program provides funds for States to construct, renovate, and maintain tie-up facilities with features for transient boaters in vessels 26 feet or more in length, and to produce and distribute information and educational materials about the program.

§ 86.12 Definitions of terms used in part 86.

For the purposes of this part, the following terms are defined:

Construct means engaging in activities that produce new capital improvements and increase the value or usefulness of existing property. These activities include building new tie-up facilities or replacing or expanding existing tie-up facilities.

Grant means financial assistance the Federal Government awards to an eligible applicant.

Grant agreement means a contractual agreement used to obligate Federal Aid funds for carrying out work covered by an approved grant proposal.

Maintain means engaging in activities that allow the facility to continue to function, such as repairing docks. These activities exclude routine janitorial activities.

Navigable waters means waters connected to or part of the jurisdictional waters of the United States that transient nontrailerable recreational vessels currently use or can use.

Nontrailerable recreational vessels mean motorized boats 26 feet or more in length manufactured for and operated primarily for pleasure, including vessels leased, rented, or chartered to another person for his or her pleasure.

Project means a specific plan or design.

Proposal means a description of one or more projects for which a State requests grant funds.

Recreational waters means navigable waters that vessels use for recreational purposes.

Renovate means to rehabilitate or repair a tie-up facility to restore it to its original intended purpose, or to expand its purpose to allow transient nontrailerable recreational vessels.

States means individual States within the United States, the District of Columbia, the Commonwealth of Puerto Rico, Guam, American Samoa, the Virgin Islands, and the Commonwealth of the Northern Mariana Islands.

Survey instrument means a tool developed by the Service and approved by OMB to assess the need for boating facilities.

Tie-up facilities mean facilities that transient nontrailerable recreational vessels occupy temporarily, not to exceed 10 consecutive days; for example, temporary shelter from a storm; a way station en route to a destination; a mooring feature for fishing; or a dock to visit a recreational, historic, cultural, natural, or scenic site.

Transient means passing through or by a place, staying 10 days or less.

Water-body means the lake, section of river, or specific area of the coast, such as a harbor or cove, where tie-up facilities or boat access sites are located.

§ 86.13 What is boating infrastructure?

Boating infrastructure refers to features that provide stopover places for transient nontrailerable recreational vessels to tie up. These features include, but are not limited to:

- (a) Mooring buoys (permanently anchored floats designed to tie up nontrailerable recreational vessels);
- (b) Day-docks (tie-up facilities that do not allow overnight use);
- (c) Navigational aids (e.g., channel markers, buoys, and directional information);

(d) Transient slips (slips that boaters with nontrailerable recreational vessels occupy for no more than 10 consecutive days);

(e) Safe harbors (facilities protected from waves, wind, tides, ice, currents, etc., that provide a temporary safe anchorage point or harbor of refuge during storms);

(f) Floating docks and fixed piers;

(g) Floating and fixed breakwaters;

(h) Dinghy docks (floating or fixed platforms that boaters with nontrailerable recreational vessels use for a temporary tie-up of their small boats to reach the shore);

(i) Restrooms;

(j) Retaining walls;

(k) Bulkheads;

(l) Dockside utilities;

(m) Pumpout stations;

(n) Recycling and trash receptacles;

(o) Dockside electric service;

(p) Dockside water supplies;

(q) Dockside pay telephones;

(r) Debris deflection booms; and

(s) Marine fueling stations.

§ 86.14 Who may apply for these grants?

You, with authority from your State Government. You must identify one key contact only and submit proposals through this person.

§ 86.15 How does the grant process work?

To ensure that grants address the highest national priorities identified in the Act, we make funds available on a competitive basis. You must submit your proposals by the appropriate date as specified in § 86.50. You must address certain questions and criteria (listed in § 86.52) to be eligible and competitive. We will conduct a panel review of all proposals, and the Service Director will make the final grant awards. You may begin work on your project only after you receive a fully executed grant agreement.

§ 86.16 What are the information collection requirements?

This part contains both routine information collection and survey requirements, as follows:

(a) The routine information collection requirements for grants applications and associated record keeping contained in this part are only those necessary to fulfill applicable requirements of 43 CFR part 12. These requirements include record keeping and reporting requirements. See 43 CFR 12.4 for information concerning OMB approval of those requirements.

(b) The revised information collection requirements related to the surveys will be submitted to OMB for approval as changed. They will not be imposed until

we receive OMB approval under the provisions of 44 U.S.C. 3501 *et seq.* The surveys are voluntary and are for States

to determine the adequacy, number, location, and quality of facilities that provide public access for all sizes of

recreational boats. The public's burden estimate for the survey is as follows:

Type of information	Number of respondents*	Average time required per response (minutes)	Annual burden hours
Boat owners: Part A	11,200	12	2,240
Boat owners: Part B	28,000	12	5,600
Boat Service Providers: Part C	8,400	20	2,800
Boat Service Providers: Part D	4,000	20	1,333

* These numbers are not additive since some boaters will fill out both Parts A and B, and most of the providers will fill out both Parts C and D.

(c) Send comments regarding this collection of information to the Service Information Collection Clearance Officer, MS—222 ARLSQ, Fish and Wildlife Service, Washington, DC 20240, and the Office of Management and Budget, Department of Interior, Desk Officer, 1849 C Street, NW., Washington, DC 20503. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. OMB has up to 60 days to approve or disapprove the information collection but may respond after 30 days. Therefore, to ensure maximum consideration, you must send your comments to OMB by the above referenced date.

Subpart B—Funding State Grant Proposals

§ 86.20 What activities are eligible for funding?

Your project is eligible for funding if you propose to:

(a) Construct, renovate, and maintain either publicly or privately owned boating infrastructure tie-up facilities. To be eligible you must:

(1) Build these tie-up facilities on navigable waters, available to the public. You must design new construction and renovations to last at least 20 years;

(2) Design these tie-up facilities for temporary use for transient nontrailerable recreational vessels;

(3) Build these tie-up facilities in water deep enough for nontrailerable recreational vessels to navigate (a minimum of 6 feet of depth at the lowest tide or other measure of lowest fluctuation);

(4) Provide security, safety, and service for these boats; and,

(5) Install a pumpout station, if you construct a facility for overnight stays:

(i) If there is already a pumpout within a reasonable distance (generally within 2 miles) of the facility, you may not need one;

(ii) For facilities intended as day stops, we encourage you to install a pumpout; and,

(iii) You may use funds from the BIG program, or the Clean Vessel Act pumpout grant program also administered by us, to pay for a pumpout station.

(b) Do one-time dredging only, to give transient vessels safe channel depths between the tie-up facility and maintained channels or open water.

(c) Install navigational aids, limited to giving transient vessels safe passage between the tie-up facility and maintained channels or open water.

(d) Apply funds to grant administration.

(e) Fund preliminary costs:

(1) Preliminary costs may include any of the following activities completed before signing a grant agreement:

(i) Conducting appraisals;

(ii) Administering environmental reviews and permitting;

(iii) Conducting technical feasibility studies, for example, studies about environmental, economic, and construction engineering concerns;

(iv) Carrying out site surveys and engaging in site planning;

(v) Preparing cost estimates; and

(vi) Preparing working drawings, construction plans, and specifications.

(2) We will fund preliminary costs only if we approve the project.

(3) If the project is approved, the appropriate Service Regional Director must still approve preliminary costs.

(f) Produce information and education materials such as charts, cruising guides, and brochures.

§ 86.21 What activities are ineligible for funding?

Your project is ineligible for funding if you propose to:

(a) Complete a project that does not provide public benefits, for instance, a project that is not open to the public for use;

(b) Involve law enforcement activities;

(c) Significantly degrade or destroy valuable natural resources or alter the cultural or historic nature of the area;

(d) Construct or renovate principal structures not expected to last at least 20 years;

(e) Do maintenance dredging;

(f) Fund operations or routine, custodial, and janitorial maintenance of the facility;

(g) Construct, renovate, or maintain boating infrastructure tie-up facilities for nontrailerable vessels, for example the following:

(1) Tie-up slips available for occupancy for more than 10 consecutive days by a single party;

(2) Dryland storage;

(3) Haul-out features; and

(4) Boating features for trailerable or “car-top” boats (boats less than 26 feet in length), such as launch ramps and carry-down walkways.

(h) Develop a State program plan to construct, renovate, and maintain boating infrastructure tie-up facilities; and

(i) Conduct surveys to determine boating access needs.

(1) You may conduct the survey with funds allocated to motorboat access to recreational waters under subsection (b)(1) of section 8 of the Federal Aid in Sport Fish Restoration Act of 1950, as amended (16 U.S.C. 777).

(2) You may combine surveys under one contractor where feasible if you can realize a cost or other savings.

Subpart C—Public Use of the Facility

§ 86.30 Must I allow the public to use the grant-funded facilities?

(a) You must allow reasonable access to all recreational vessels for the useful life of the tie-up facilities. Accessible to the public means located where the public can reasonably reach the facility and where all boats typical to that facility can easily use it, charging equitable fees, and being open for reasonable periods. You must allow public access to the shore and basic features such as fuel and restrooms in facilities that have them. You must specify precise details of the public access in the contract with the facility

manager. We do not require public access to the remainder of a park or marina where the facility is found. Nor do we require any restrictions in that park or marina.

(b) You must comply with Americans with Disabilities Act requirements when you construct or renovate all tie-up facilities under this grant.

§ 86.31 How much money may I charge the public to use tie-up facilities?

You may charge the public only a reasonable fee, based on the prevailing rate in the area. You must determine a fee that does not pose an unreasonable, competitive amount, based on other publicly and privately owned tie-up facilities in the area. You must approve any proposed changes in fee structure by a sub-grantee.

Subpart D—Funding Availability

§ 86.40 How much money is available for grants?

There is \$32 million available for grants under the BIG program (\$8 million per year for fiscal years 2000–2003).

§ 86.41 How long will the money be available?

Under the Act, funding for the BIG program is provided for FY 2000–2003.

Each year's funds remain available for obligation for a total of three fiscal years (e.g. FY 2000 funds will remain available through FY 2002) (16 U.S.C. 777c(b)(3)(B)).

§ 86.42 What are the match requirements?

The Act authorizes the Secretary of the Interior (through the Director of the U.S. Fish and Wildlife Service (Service)) to award grants to States to pay up to 75 percent of the cost to construct, renovate, or maintain tie-up facilities for transient nontrailerable recreational vessels. You or a partner must pay the remaining project cost—at least a 25 percent match is required. Title 43 CFR 12.64 applies to cost sharing or matching requirements for Federal grants.

§ 86.43 May someone else supply the match?

Third-party contribution, including property and in-kind services, is allowable, but must be necessary and reasonable to accomplish grant objectives. In-kind contributions must also represent the current market value of noncash contributions that the third party furnishes as part of the grant.

§ 86.44 What are my allowable costs?

(a) The State may spend grant funds to pay only costs that are necessary and

reasonable to accomplish the approved grant objectives. Grant costs must meet the applicable Federal cost principles in 43 CFR 12.62. You may purchase informational and program signs as allowable costs.

(b) If you include purposes other than those eligible under the Act, you must prorate the costs equitably according to Federal cost principles in 43 CFR 12.62 and 50 CFR 80.15.

§ 86.45 When will I receive the funds?

Once you sign the grant agreement, we will make the funds available.

Subpart E—How States Apply for Grants

§ 86.50 When must I apply?

(a) We will accept proposals between February 20, 2001, and May 18, 2001, for the first grant cycle; between July 1, 2001, and September 30, 2001, for the second grant cycle; and between July 1, 2002, and September 30, 2002, for the third grant cycle. This program starts fiscal year 2000 and ends fiscal year 2003. We will have \$16 million to award the first grant cycle, and \$8 million each cycle after that.

(b) The annual schedule follows:

Action	FY 2000–2001	FY 2002	FY 2003
We announce the beginning of the grant cycle.	February 20, 2001	July 1, 2001	July 1, 2002.
You submit your grant proposal by	May 18, 2001	September 30, 2001	September 30, 2002.
Regions submit the proposals to Washington by.	June 18, 2001	October 31, 2001	October 31, 2002.
We rank the proposals by	July 17, 2001	November 30, 2001	November 30, 2002.
The Director approves proposals by.	August 16, 2001	December 31, 2001	December 31, 2002.
Regions finalize their grant agreements by.	October 15, 2001	February 28, 2002	February 28, 2003.

§ 86.51 To whom must I apply?

You must submit your proposals to the appropriate regional office of the

U.S. Fish and Wildlife Service. See the chart below for the address you will need.

Region	State	Address	Telephone
1	California, Hawaii, Idaho, Nevada, Oregon, Washington, American Samoa, Commonwealth of the Northern Mariana Islands, and Guam.	Division of Federal Aid, U.S. Fish & Wildlife Service, Eastside Federal Complex, 911 NE 11th Avenue, Portland, OR 97232–4181.	503–231–6128, Fax: 503–231–6996
2	Arizona, New Mexico, Oklahoma, and Texas.	Division of Federal Aid, U.S. Fish & Wildlife Service, P.O. Box 1306, 625 Silver, SW, Suite 325, Albuquerque, NM 87102.	505–248–7450, Fax: 505–248–7471
3	Illinois, Indiana, Iowa, Michigan, Minnesota, Missouri, Ohio, and Wisconsin.	Division of Federal Aid, U.S. Fish & Wildlife Service, Bishop Henry Whipple Federal Building, 1 Federal Drive, Fort Snelling, MN 55111–4056.	612–713–5130, Fax: 612–713–5290
4	Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Puerto Rico, and the Virgin Islands.	Division of Federal Aid, U.S. Fish & Wildlife Service, 1875 Century Boulevard, Suite 324, Atlanta, Georgia 30345.	404–679–4159, Fax: 404–679–4160

Region	State	Address	Telephone
5	Connecticut, Delaware, District of Columbia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont, Virginia, and West Virginia.	Division of Federal Aid, U.S. Fish & Wildlife Service, 300 Westgate Center Drive, Hadley, MA 01035-9589.	413-253-8200, Fax: 413-253-8487
6	Colorado, Kansas, Montana, Nebraska, North Dakota, South Dakota, Utah, and Wyoming.	Division of Federal Aid, U.S. Fish & Wildlife Service, Denver Federal Center, P.O. Box 25486, Lake Plaza North Building, 134 Union Boulevard, 4th Floor, Denver, Colorado 80225.	303-236-7392, Fax: 303-236-8192
7	Alaska	Division of Federal Aid, U.S. Fish & Wildlife Service, 1011 East Tudor Road, Anchorage, Alaska 99503.	907-786-3435, Fax: 907-786-3575

§ 86.52 What information must I include in my grant proposals?

You must submit the following standard forms and narrative for all projects (Tier One and Tier Two) (see § 86.53):

(a) Standard Form 424 series as prescribed by the Office of Management and Budget. The SF 424 series consists of the Applications for Federal Assistance (SF 424), Budget Information—Non-Construction Programs (SF 424A), Assurances—Non-Construction Programs (SF 424B), Budget Information—Construction Programs (SF 424C), and Assurances—Construction Programs (SF 424D). Submit forms appropriate for either construction or nonconstruction projects. Forms are available from your appropriate Service Regional Office.

(b) Information requested under OMB Circular A-102 (Application Booklet for Federal Aid Grants—pending approval under the Paperwork Reduction Act).

§ 86.53 What are funding tiers?

(a) This grant program will consist of two tiers of funding.

(i) You may apply for one or both tiers.

(ii) The two tiers will allow all States some certainty of base level funding.

(b) Tier One funding will ensure broad geographical distribution to meet the needs of transient nontrailerable recreational vessels.

(c) Tier Two funding will allow States with large projects to compete with other States with large projects based on individual project merits.

(d) We describe the two tiers as follows:

(1) Tier One Projects.

(i) You may submit a proposal with an unlimited number of projects within this tier. However, your total request cannot exceed \$100,000 of Federal funds for any given fiscal year.

(ii) Tier One projects must meet the eligibility requirements in §§ 86.14 and 86.20.

(2) Tier Two Projects.

(i) While we expect available funds for Tier Two proposals to be between \$3 million and \$4 million per grant cycle, we have no dollar limit for Tier Two proposals. You may submit any number of projects, which we will score and rank separately according to the criteria in § 86.60.

(ii) Each project will compete nationally against every other project in Tier Two.

(iii) Tier Two projects must also meet the eligibility requirements in §§ 86.14 and 86.20.

§ 86.54 How must I submit proposals?

(a) You may apply for either Tier One funding or Tier Two funding or both.

(b) You may submit more than one project proposal within Tier One and Tier Two.

(c) You may submit one proposal that includes Tier One and Tier Two projects.

(d) If your proposal includes Tier One and Tier Two projects, you must describe Tier One projects separately from Tier Two projects.

(e) You must describe each project in Tier Two separately, so that the Service can rank and score each project in Tier Two separately.

(f) For the first grant cycle, which includes fiscal years 2000 and 2001, a State may submit one Tier One proposal not to exceed \$100,000 per fiscal year. States should submit proposals between February 20, 2001, and May 18, 2001. We will fund one Tier One proposal per State for each fiscal year provided that each proposal meets the eligibility requirements in §§ 86.14 and 86.20. Fiscal year 2000 funds are available only for Tier One proposals. Tier One proposals need not meet the criteria in § 86.60. We will fund Tier Two

proposals received between February 20, 2001, and May 18, 2001, that meet the criteria in §§ 86.14, 86.20, and 86.60 with fiscal year 2001 funds and the remainder of fiscal year 2000 funds.

(g) For the remaining grant cycles, you may submit only one proposal of Tier One projects per fiscal year.

(h) When we approve projects, the appropriate Service Regional Office will determine how many grant agreements are necessary.

§ 86.55 What are my compliance requirements with Federal laws, regulations, and policies?

(a) To receive Federal funds, you must agree to and certify compliance with all applicable Federal laws, regulations, and policies. You must submit an Assurance Statement, as described in 43 CFR part 12.51(c), that describes how you comply with Federal grant requirements; and

(b) You may have to provide additional documentation to comply with environmental and other laws, as defined in Fish and Wildlife Service Manual 523 FW 1 (available on the internet at <http://www.fws.gov/directives/523fw1.html>). The Service Regional Office Grant Administrator may request preliminary evidence at the grant proposal stage that the proposed project will meet these compliance requirements. Consult with the appropriate Service Regional Office for specific applicability.

Subpart F—How the Service Selects Projects To Receive Grants

§ 86.60 What are the criteria used to select projects for grants?

(a) We will rank all Tier Two proposals according to the criteria in paragraph (b) of this section and the attached chart, which sets forth points we will ascribe for various factors.

(b) We will consider proposals that:

- (1) Plan to construct, renovate, and maintain tie-up facilities for transient nontrailerable recreational vessels following priorities identified in your State's program plan (see Subpart M for State program plan information) that the Secretary of the Interior has approved under section 7404(c) of the Sportfishing and Boating Safety Act. 15 points.
- (2) Provide for public/private and public/public partnership efforts to develop, renovate, and maintain tie-up facilities. These partners must be other than the Service and lead State agency:
 - (i) One partner 5 points.
 - (ii) Two partners 10 points.
 - (iii) Three or more partners 15 points.
- (3) Use innovative techniques to increase the availability of tie-up facilities for transient nontrailerable recreational vessels (includes education/information). 0–15 points.
- (4) Include private, local, or other State funds in addition to the non-Federal match, described in § 86.42:
 - (i) Twenty-six percent to thirty-five percent 5 points.
 - (ii) Between thirty-six and forty-nine percent 10 points.
 - (iii) Fifty percent and above 15 points.
- (5) Are cost efficient. Proposals are cost efficient when the tie-up facility or access site's features add a high value compared with the funds from the proposal, for example, where you construct a small feature such as a transient mooring dock within an existing harbor that adds high value and opportunity to existing features (restrooms, utilities, *etc.*). A proposal that requires installing all of the above features would add less value for the cost. 0–10 points.
- (6) Provide a significant link to prominent destination way points such as those near metropolitan population centers, cultural or natural areas, or that provide safe harbors from storms. 10 points.
- (7) Provide access to recreational, historic, cultural, natural, or scenic opportunities of national, regional, or local significance. Projects that provide access to opportunities of national, regional, or local significance receive 5 points for each, for a maximum of 15 points.
- (8) Provide significant positive economic impacts to a community. For example, a project that costs \$100,000 and attracts a number of boaters who altogether spend \$1 million a year in the community. 1–5 points.
- (9) Include multi-State efforts that result in coordinating location of tie-up facilities 5 points.
- (10) Total possible points 105 points.

Criteria	Points
(1) Construct Tie-up Facilities	15
(2) Provide Partnership Efforts	5–15
(3) Use Innovative Techniques	0–15
(4) Include Other Funding Sources	5–15
(5) Are Cost Efficient	0–10
(6) Provide Way Point Linkage	10
(7) Provide Access To Opportunities	5–15
(8) Provide Significant Economic Impacts	1–5
(9) Include Multi-State Efforts	5
(10) Total Possible Points	105

§ 86.61 What process does the Service use to select projects for grants?

The Service's Division of Federal Aid convenes a panel of professional staff to review, rank, and recommend funding to the Service Director. This panel will include representatives from the Service's Washington, DC, and Regional Offices. The Director may convene an advisory panel of nongovernmental organizations to advise and make recommendations to the Federal panel. The Service Director will select projects for grants by August 16, 2001, August 10, 2001, and August 10, 2002, for the three grant cycles.

§ 86.62 What must I do after my project has been selected?

After we approve your award, we will notify you to work with the appropriate Service Regional Office to fulfill the grant documentation requirements and finalize the grant agreement.

§ 86.63 May I appeal if my project is not selected?

If you have a difference of opinion over the eligibility of proposed activities or differences arising over the conduct of work, you may appeal to the Director. Final determination rests with the Secretary of the Interior (50 CFR 80.7).

Subpart G—How States Manage Grants

§ 86.70 What are my requirements to acquire, install, operate, and maintain real and personal property?

(a) You will find applicable regulations for this subject in 43 CFR 12.71 and 12.72. If you have questions about applicability, contact the appropriate Service Regional Office.

(b) You must ensure that the design and installation of tie-up facilities provide for substantial structures that will have a significant longevity, at least 20 years.

(c) You must ensure that you operate, maintain, and use the tie-up facilities and features for the stated grant purpose. You must obtain prior written approval from the appropriate Service Regional Director before you can convert these tie-up facilities to other uses.

§ 86.71 How will I be reimbursed?

For details on how we will pay you, refer to 43 CFR 12.61.

§ 86.72 Do any other Federal requirements apply to this program?

For administrative requirements not covered under these specific guidelines, check 43 CFR 12, which generally applies to all Federal grant programs.

§ 86.73 What if I do not spend all the money?

Funds not obligated or expended after 3 fiscal years from the date of the award revert to the Secretary of Transportation for use in State recreational boating safety programs. (16 U.S.C. 777c(b)(3)(B), 16 U.S.C. 777c(b)(4))

§ 86.74 What if I need more money?

Funds for grants are available only on a competitive basis. Therefore, if you need more money, you must compete in the next grant cycle.

Subpart H—Reporting Requirements for the States

§ 86.80 What are my reporting requirements for this grant program?

(a) For all projects, you must submit to the appropriate Service Regional Office an annual report and a final performance report and otherwise comply with 43 CFR 12.80.

(b) For Tier Two projects, you must submit quarterly reports according to 43 CFR 12.80.

§ 86.81 When are the reports due?

Reports are due as follows:

(a) Annual reports are due 90 days after the grant year ends;

(b) The final performance report is due 90 days after the expiration or termination of grant support;

(c) Tier Two quarterly reports are due January 31, April 30, July 31, and October 31 unless specified otherwise in the grant agreement; and

(d) The State must report certified percentage of completion data and other significant developments in accordance

with the grant agreement or 43 CFR 12.80.

§ 86.82 What must be in the reports?

The reports must include the following:

(a) You must identify the actual accomplishments compared to the objectives established for the period;

(b) You must identify the reasons for any slippage if established objectives were not met; and

(c) You must identify any additional pertinent information including, when appropriate, analysis and explanation of cost overruns or high unit costs.

Subpart I—State Use of Signs and Sport Fish Restoration Symbols

§ 86.90 What are my responsibilities for information signs?

You should install appropriate information signs at boating infrastructure tie-up facilities. You should ensure that this information is clearly visible, directing boaters to the facility. Information should show fees, restrictions, hours of operation, a contact name, and telephone number to report an inoperable facility.

§ 86.91 What are my program crediting responsibilities?

You should give public credit to the Federal Aid in Sport Fish Restoration (SFR) program as the source of funding for the BIG Program. You should recognize this program by using the SFR logo. You are encouraged to use the crediting logo identified in § 80.26 of this chapter to identify national BIG Program projects.

§ 86.92 Who can use the SFR logo?

The States may use the SFR logo and should encourage others to display it. Other people or organizations may use the logo for purposes related to the national BIG Program as authorized in § 80.26 of this chapter.

§ 86.93 Where should I use the SFR logo?

You should display the logo on tie-up facilities that you construct, acquire, develop, or maintain under these grants. You should also use the logo on printed material or other visual representations that relate to project accomplishments or education/information. Refer to § 85.47 of this chapter for logo colors.

§ 86.94 What crediting language should I use?

Suggested examples of language to use when crediting the national BIG Program follow:

(a) Example 1: The Federal Aid in Sport Fish Restoration Program funded this facility thanks to your purchase of fishing equipment and motorboat fuels.

(b) Example 2: The Federal Aid in Sport Fish Restoration Program is funding this construction thanks to your purchase of fishing equipment and motorboat fuels. And,

(c) Example 3: The Federal Aid in Sport Fish Restoration Program funded this (pamphlet) thanks to your purchase of fishing equipment and motorboat fuels.

Subpart J—Service Completion of the National Framework

§ 86.100 What is the National Framework?

The National Framework is the survey, required by the Act, you must use to determine boating access needs in your State. Through a State survey, you must conduct a boating access needs assessment or data collection to determine the adequacy, number, location, and quality of tie-up facilities and boat access sites providing access to recreational waters for all sizes of recreational boats.

§ 86.101 What is the Service schedule to adopt the National Framework?

The Secretary of the Interior adopted the National Framework on September 28, 2000 via a notice in the **Federal Register** (Volume 65, Number 189, Page 58284).

§ 86.102 How did the Service design the National Framework?

The Framework divides the survey into two components: boater survey, and boat access provider survey.

(a) The purpose of the boater survey component is to identify boat user preferences and concerns for existing and needed access available to the public.

(1) The nontrailerable boat data set will fulfill informational needs for you to develop your State program plans as called for in the Act.

(2) The boater survey will survey registered boat owners in your State for two types of boats:

(i) Part A—for nontrailerable recreational vessels.

(ii) Part B—for trailerable and “car-top” boats (less than 26 feet long).

(b) The purpose of the boat access provider component is to identify boat access providers’ ideas about current and needed facility and site locations and perceptions of boat user preferences and concerns regarding access. We developed these questions to guide interviews of boat access facility and site managers.

(1) The nontrailerable boat data set will fulfill the informational needs for you to develop your State plans as called for in the Act.

(2) The boat access provider survey will survey facility providers in your State for two types of boats:

(i) Part C—a survey to all providers in your State who allow public access, including State agency and non-State entities (Federal and local government entities, corporate and private/commercial providers), and operate tie-up facilities for nontrailerable recreational vessels.

(ii) Part D—a survey to all providers in your State who allow public access and operate boat access sites for boats less than 26 feet long.

Subpart K—How States Will Complete Access Needs Surveys

§ 86.110 What does the State survey do?

The State survey determines the status of boating access facilities for all recreational boats in your State and your future boater access needs.

§ 86.111 Must I do a survey?

The Act does not require surveys. They are voluntary. However, if you do a survey, you must complete it following the National Framework to receive funds. You must transmit the results to the Service Regional Offices in a common electronic format, such as Microsoft Word, Word Perfect, Excel or Quattro Pro.

§ 86.112 What are the advantages of doing a survey?

Surveys provide the information necessary to fully understand the needs of boaters in your State. Surveys allow you to develop a meaningful plan to provide better access to boaters. Use surveys to complete the plan.

§ 86.113 What if I have recently completed a boat access survey?

If the recent survey substantially answers the provisions in § 86.118, the appropriate Service Regional Office will determine if it is sufficient to meet the needs of the program. If the Regional Office determines that the survey is not sufficient, you must complete that portion(s) or an entire new survey to receive credit for completing a recent survey.

§ 86.114 Do I need to conduct a survey if I already have a plan for installing tie-up facilities?

You need not conduct the survey if the appropriate Secretary of the Interior certifies that you have developed and are carrying out a State program plan, as described in Subpart M of this chapter, that ensures that public boat access exists and is adequate to meet the needs of recreational boaters on your waters.

§ 86.115 How should I administer the survey?

Use a consultant or university specializing in administration of such surveys. Use sample sizes large enough to achieve statistical accuracy so the estimate is within plus or minus 10 percent of the true number.

(a) You may use a telephone, mail, or other type of survey for a sample population of boaters within the State. Costs for telephone and mail surveys are roughly similar. However, response rates for mail surveys are generally lower.

(b) For boat access providers, we prefer that you survey all State agency and non-State providers, but you may survey a sample population.

(c) You may develop your own methodology to collect data, which may include telephone, mail, fax, or other inventory means. We do not expect you to use automated, electronic, mechanical, or similar means of information collection.

(d) Data collected are unique to each respondent. Data collection should use standard survey method criteria to gather information from each respondent.

§ 86.116 May I change the questions in the survey?

You must not change the questions because we need information that is comparable nationwide. We have developed a survey instrument for completing the surveys. We are seeking approval from OMB on the survey questions and the OMB approval does not extend to additional questions.

§ 86.117 Reserved for survey approval schedule.**§ 86.118 What does this survey instrument include?**

(a) We divided this survey into four parts. Part A being for transient nontrailerable boat owners. Part B is for trailerable or "car-top" boat owners. Part C is for State agency and non-State providers of facilities for nontrailerable recreational vessels in the State. Part D is for State and non-State providers of access sites for trailerable or "car-top" boats.

(b) Follow these instructions to complete Part A—BOAT OWNER SURVEY FOR TIE-UP FACILITIES FOR NONTRAILERABLE RECREATIONAL VESSELS:

(1) If the boater owns a nontrailerable recreational vessel, ask the boater to fill out Part A;

(2) If the boater owns more than one boat 26 feet or more in length, ask the boater to provide information for the boat he or she uses most often;

(3) If the boater owns at least one boat more than and at least one boat less than 26 feet in length, ask the boater to fill out both Parts A and B; and,

(4) You should use a sample size large enough to achieve statistical accuracy so the estimate is within 10 percent of the true number.

(c) Follow these instructions to complete Part B—BOAT OWNER SURVEY FOR TRAILERABLE OR "CAR-TOP" BOAT ACCESS SITES:

(1) If the boater owns a boat less than 26 feet long, ask the boater to fill out Part B;

(2) If the boater owns more than one boat less than 26 feet long, ask the boater to provide information for the boat he or she uses most;

(3) If the boater owns at least one boat more than and at least one boat less than 26 feet in length, ask the boater to complete both Parts A and B; and,

(4) You should use a sample size large enough to achieve statistical accuracy so the estimate is within 10 percent of the true number.

(d) Parts C and D are surveys for providers of tie-up facilities and boat access sites. Part C is for State agency and non-State providers of facilities for nontrailerable recreational vessels in the State. Part D is for State and non-State providers of boat access sites for boats less than 26 feet in length.

(e) Follow these instructions to complete Part C—STATE AGENCY AND NON-STATE PROVIDER SURVEY FOR TIE-UP FACILITIES:

(1) Ask State agency and non-State providers of tie-up facilities for nontrailerable recreational vessels to fill out Part C.

(2) If more than one State agency manages these facilities, send this survey to all of those agencies.

(3) If the State agency or non-State provider awards grants to others who provide facilities, ask these grantees to respond for these facilities instead of the State agency or non-State provider.

(4) If a State agency or non-State provider operates facilities and sites for both nontrailerable and trailerable boats, ask the provider to fill out both Parts C and D.

(5) Ask State agency and non-State providers to identify all tie-up facilities.

(6) For all questions, if you need additional space, make copies of the appropriate page.

(f) Follow these instructions to complete Part D—STATE AGENCY AND NON-STATE PROVIDER SURVEY FOR TRAILERABLE BOAT ACCESS SITES:

(1) Ask State agency and non-State providers of access sites for boats less than 26 feet long to fill out Part D.

(2) Non-State providers include the Federal Government, local government, corporations, private owners, and others.

(3) If more than one State agency manages these sites, send this survey to all of them.

(4) If the State agency or non-State provider awards grants to others who provide sites, ask these grantees to respond for these sites instead of the State agency or non-State provider.

(5) If a State agency or non-State provider operates facilities and sites for both nontrailerable and trailerable boats, ask the provider to fill out both Parts C and D.

(6) We prefer that the State agency or non-State provider identify all boat access sites and water-bodies, but if he or she has many sites and water-bodies, the provider may group the information together rather than identify each site individually.

(7) For all questions, if you need additional space, make copies of the appropriate page.

Subpart L—Completing the Comprehensive National Assessment**§ 86.120 What is the Comprehensive National Assessment?**

The Comprehensive National Assessment is a national report integrating the results of State boat access needs and facility surveys.

§ 86.121 What does the Comprehensive National Assessment do?

The Comprehensive National Assessment determines nationwide the adequacy, number, location, and quality of public tie-up facilities and boat access sites for all sizes of recreational boats.

§ 86.122 Who completes the Comprehensive National Assessment?

The Service completes the Assessment. We will develop standards in consultation with the States.

§ 86.123 Comprehensive National Assessment schedule.

Using the results from the State surveys, the Service will compile the results and produce the Comprehensive National Assessment by September 30, 2003.

§ 86.124 What are the Comprehensive National Assessment products?

The Comprehensive National Assessment products are:

(a) A single report, including the following information:

(1) A national summary of all the information gathered in the State surveys.

(2) A table of States showing the results of the information gathered.

(3) One-page individual State summaries of the information.

(4) Appendices that include the survey questions, and names, addresses, and telephone numbers of State contacts.

(5) An introduction, background, methodology, results, and findings.

(6) Information on the following:

(i) Boater trends, such as what types of boats they own, where they boat, and how often they boat.

(ii) Boater needs, such as where facilities and sites are now found, where boaters need new facilities and boat access sites, and what changes of features boaters need at these facilities and sites. And

(iii) Condition of facilities.

(b) Summary report abstracting important information from the final national report. And

(c) A key findings fact sheet suitable for widespread distribution.

Subpart M—How States Will Complete the State Program Plans

§ 86.130 What does the State program plan do?

The State program plan identifies the construction, renovation, and maintenance of tie-up facilities needed to meet nontrailerable recreational vessel user needs in the State.

§ 86.131 Must I do a plan?

The Act does not require plans. Plans are voluntary. However, if you do a plan, you must complete it following these regulations.

§ 86.132 What are the advantages to doing a plan?

Plans provide the information necessary to fully understand the needs of boaters operating nontrailerable recreational vessels in your State. The plan will make you more competitive when you submit grants under this program. We will give you 15 points for having an approved plan.

§ 86.133 What are the plan standards?

You must base State program plans on a recent, completed survey following the National Framework.

§ 86.134 What if I am already carrying out a plan?

You need not develop a program plan if we certify that you have developed and are carrying out a plan that ensures public boat access is and will be adequate to meet the needs of recreational boaters on your waters.

§ 86.135 Reserved for plan approval schedule.

§ 86.136 What must be in the plan?

The plan must:

(a) Identify current boat use and patterns of use.

(b) Identify current tie-up facilities and features open to the public and their condition.

(c) Identify boat access user needs and preferences and their desired locations. Include repair, replacement, and expansion needs and new tie-up facilities and features needed.

(d) Identify factors that inhibit boating in specific areas, such as lack of facilities, or conditions attached that inhibit full use of facilities. Identify strategies to overcome these problems.

(e) Include information about the longevity of current tie-up facilities.

§ 86.137 What variables should I consider?

You should consider the following variables:

- (a) Location of population centers,
- (b) Boat-based recreation demand,
- (c) Cost of development,
- (d) Local support and commitment to maintenance,
- (e) Water-body size,
- (f) Nature of the fishery and other resources,
- (g) Geographic distribution of existing tie-up facilities,
- (h) How to balance the need for new tie-up facilities with the cost to maintain and improve existing facilities.

Dated: December 8, 2000.

Kenneth L. Smith,

Acting Assistant Secretary for Fish and Wildlife and Parks.

Part VIII

Department of Health and Human Services

Administration for Children and Families

**45 CFR Part 1310
Head Start Program; Final Rule**

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

45 CFR Part 1310

RIN 0970-AB24

Head Start Program

AGENCY: Administration on Children, Youth and Families (ACYF), Administration for Children and Families (ACF), DHHS.

ACTION: Final rule.

SUMMARY: This final rule implements the statutory provision for establishing requirements for the safety features and the safe operation of vehicles used by Head Start agencies to transport children participating in Head Start programs.

DATES: 45 CFR 1310.11 and 1310.15(c) are effective January 20, 2004. 45 CFR 1310.12(a) and 1310.22(a) are effective January 18, 2006. 45 CFR 1310.2(c) and 1310.12(b) are effective February 20, 2001. The other provisions of this part are effective January 18, 2002.

FOR FURTHER INFORMATION CONTACT: Douglas Klafehn, Deputy Associate Commissioner, Head Start Bureau, Administration for Children, Youth and Families, P.O. Box 1182, Washington, DC 20013; (202) 205-8572.

SUPPLEMENTARY INFORMATION:

- I. Program Purpose
 - II. Background and Purpose of Rule
 - III. Summary of Major Provisions of the Rule
 - IV. Rulemaking History
 - V. Section-by-Section Discussion of Comments
 - VI. Impact Analysis
 - VII. List of Subjects in 45 CFR Part 1310
- Final Rule

SUPPLEMENTARY INFORMATION

I. Program Purpose

Head Start is authorized under the Head Start Act (the Act), Title VI, Subtitle A, Chapter 8 of the Public Law 97-35, the Omnibus Reconciliation Act of 1981 (42 U.S.C. 9801 *et seq.*). It is a national program providing comprehensive child development services primarily to low-income children, predominantly age three to the age of compulsory school attendance, and their families. To help enrolled children achieve their full potential, Head Start programs provide comprehensive health, nutritional, educational, social and other services.

Additionally, section 645A, of the Head Start Act provides authority to fund programs for families with infants

and toddlers. Programs receiving funds under the authority of this section are referred to as Early Head Start programs. Programs are required to provide for the direct participation of the parents of enrolled children in the development, conduct, and direction of local programs. Parents also receive training and education to foster their understanding of and involvement in the development of their children.

While Head Start is intended to serve primarily children whose families have incomes at or below the poverty line, or who receive public assistance, Head Start regulations permit up to 10 percent of the children in local programs to be from families who do not meet these low-income criteria. The Act also requires that a minimum of 10 percent of the enrollment opportunities in each program be made available to children with disabilities. Such children are expected to participate in the full range of Head Start services and activities with their non-disabled peers and to receive needed special educational and related services.

The Head Start Improvement Act of 1992 contained a provision that requires the Head Start Bureau to develop regulations for the safe transportation of Head Start children. In addition, the Final Report of the Advisory Committee on Head Start Quality and Expansion included in its recommendations the development of “* * * regulations to assure that safe and effective transportation services are available.” Finally, In July 1999 the National Transportation Safety Board (NTSB) sent a letter to the Department of Health Human Services reporting findings from the investigation of four accidents in which children being transported in non-conforming vans were killed. One of the fatalities was a Head Start child. The NTSB issued clear

recommendations to Head Start based on its findings. The NTSB’s letter stated that “when States allow children to be transported in vehicles not meeting Federal school bus construction standards, NHTSA’s intent of protecting school children is undermined * * *. The Safety Board is firmly convinced that the best way to maximize pupil transportation safety is to require the use of school buses or buses built to equivalent occupant crash protection standards.” The NTSB commented that the release of the Head Start Transportation “* * * rulemaking should be expedited to prevent future injuries and fatalities to children enrolled in Head Start programs”. The specific recommendations included that “Head Start children be transported in vehicles built to Federal school bus

structural standards or the equivalent” and that guidelines provided by the National Highway Traffic Safety Administration’s Guideline for the Safe Transportation of Preschool Age Children in School Buses be mandated in the rule. The guidelines are related to child passenger restraint systems. The development of “Performance Standards” for Head Start transportation supports the goal of ensuring that children and families receive high quality Head Start services.

II. Background and Purpose of the Rule

The authority for this final rule is found in sections 640(i) and 644(a) and (c) and 645A(b)(9) of the Head Start Act (42 U.S.C. 9801 *et seq.*). Section 640(i) directs the Secretary to issue regulations establishing requirements for the safety features and the safe operation of vehicles used to transport children participating in Head Start programs. Section 645A(b)(9) requires that Early Head Start agencies comply with requirements established by the Secretary concerning design and operation of such programs. Sections 644(a) and (c) require the issuance of regulations setting standards for organization, management, and administration of Head Start programs.

Since the inception of the program, most Head Start agencies have routinely provided transportation for some Head Start children to and from the classroom when needed, although there has never been a requirement to do so. To date, information on transportation provided to Head Start programs has been limited to a series of Information Memoranda which provide guidance to programs on issues around transportation safety, but which do not require any action on the part of Head Start agencies. The following is a summary of that information:

ACYF-IM-82-01, “Bus Safety,” issued on January 19, 1982. This Information Memorandum addresses the applicability of The National Highway Traffic Safety Administration’s (NHTSA) Federal Motor Vehicle Safety Standards (45 CFR Part 571) to school buses with a seating capacity of eleven (11) or more. The Administration for Children, Youth and Families suggested that all buses purchased or leased to transport Head Start children meet the NHTSA standards.

ACYF-IM-83-06, “Transportation Safety,” issued March 24, 1983. This Information Memorandum provided notification to Head Start programs of a Highway Accident Report prepared by the National Transportation Safety Board (NTSB) on an accident involving a Head Start vehicle. As a result of their

investigation, the NTSB recommended that ACYF advise all Head Start programs of the circumstances of the accident in hopes that the report would draw attention to the importance of transportation safety. The Information Memorandum also notified programs of the NTSB's recommendation that ACYF adopt, and emphasize the need for adherence to, the policies and guidelines provided by the National Highway Traffic Safety Administration's (NHTSA) Pupil Transportation Safety Standards, Highway Safety Program Standard Number 17 (now Guideline 17). A copy of Standard 17 was included and programs were "urged" to use the Standard to assess the adequacy of their transportation systems.

ACYF-IM-93-10. "Transportation," issued on March 18, 1993. This Information Memorandum replaced ACYF-IM-82-01 and ACYF-IM-83-06, since both the Federal Motor Vehicle Safety Standards (FMVSS) and NHTSA's Pupil Transportation Safety Standards had been revised. The Information Memorandum provided Head Start programs with a copy of the new Guideline 17 and again encouraged programs to purchase only vehicles that meet the FMVSS for school buses. The Information Memorandum also provided Head Start programs with new information regarding the Federal Highway Administration's (FHWA) Commercial Motor Vehicle Safety Act and the Commercial Driver's License (CDL) program.

As these issuances have been advisory and not legally binding, there have been differing degrees of implementation. Not all Head Start agencies offer transportation services and, among the agencies that do provide transportation, there are varying degrees of quality and safety.

Because of the impact on the overall quality of services provided to children and families and to assure them access to services, we strongly believe that transportation services in Head Start must meet safety and quality regulations. Many low income families who enroll children in Head Start have limited, if any, access to regular transportation. They often do not own, or cannot afford to operate, a vehicle. They frequently are geographically isolated from, or unable to afford, public transportation. Some communities do not provide any public transportation. Head Start transportation services may be required to ensure the enrollment and attendance of the highest need children.

When Head Start children are transported to and from the program, it is important that the time spent in

transit be safe and support Head Start learning experiences. In a typical rural Head Start program some children are transported over long distances and spend a significant part of their day en route to and from the classroom. Therefore, the time children spend on the vehicle should be treated with the same level of importance as the time the children spend in the classroom and in other program activities.

We know from experience and documentation that significant variation exists among States in terms of whether or not drivers and vehicles that transport Head Start children are included under the purview of State school bus requirements.

In developing this rule, the Head Start Bureau commissioned a survey of the States to determine whether and the extent to which, the requirements in the State's pupil transportation safety plan applied to Head Start programs. Of the 48 States that responded to the survey, 14 of them stated that their Head Start programs are covered by the State regulations governing pupil transportation, 23 States responded that their Head Start programs are not covered, 10 States gave a conditional response and one (1) State did not know. The survey also indicated significant variation among the States in the amount of training required for school bus drivers. Of the 45 States that responded to this question, 39 have some mandated training requirements for school bus drivers, three States reported that driver training was handled at the local level, and three States reported no mandated training requirements for school bus drivers. More significantly, only 13 States reported mandated driver training for Head Start bus drivers.

This variation, both in the way Head Start programs are viewed by the States as well as differing requirements among the States, limits reliance on the States as the sole source of transportation safety standards for Head Start programs.

Variation among the States in regulation of Head Start transportation services and oversight, was one of the primary determinants of our decision to develop minimum standards for all Head Start programs, regardless of the State or jurisdiction in which they operate.

We have substantially revised the proposed rule by providing that within five years of the date of publication of these regulations, Head Start agencies must use for activities defined as "transportation services", either a school bus or an "Allowable Alternate Vehicle." These two classes of vehicles

are defined in the regulations under section 1310.3. The term "Allowable Alternate Vehicle" is used to describe a vehicle which complies with the FMVSS applicable to school buses related to crash survivability and mirrors, but does not meet the other FMVSS which apply to crash prevention, such as the requirements for flashing school bus lights and stop arms, or the provisions in Guideline 17 relating to the color of the vehicle and the use of lights and stop arms. All other parts of the regulation, with the exception of Section 1310.11 and Section 1310.15(a) which are effective three years from the date of publication and Sections 1310.2(c) and 1310.12(b) which are effective 30 days from the date of publication, are effective one year from the date of publication.

The provisions that are effective in one year are important to child passenger safety and pose less burden to grantees than the vehicle, safety restraint, and monitor provisions. The Notice of Proposed Rulemaking included a three year phase-in period for all of the provisions with the exception of driver training. The NPRM invited comments about the feasibility of the three year period. The implementation periods that were selected for each provision resulted from review of the comments and analysis of current Head Start requirements. To improve transportation safety as quickly as possible where it was reasonable the implementation period was changed to one year.

The additional category of vehicle was added to address two significant issues raised during the NPRM comment period. The first issue related to the fact that some States prohibit Head Start and other community based programs from using school buses. The second issue related to concerns raised by Community Transportation Agencies (CTAs) about their ability to continue serving Head Start programs if all Head Start agencies providing transportation services were required to use only school buses. Some CTAs operate vehicles which serve both Head Start grantees and other community organizations, and believe that using only school buses to provide transportation for Head Start programs would interfere with their ability to use the same vehicles to meet the needs of other segments of the community. Other groups, such as senior citizens, might object to the use of school buses to meet their needs, and it would be prohibitively expensive for the CTAs to have separate vehicles to meet the needs of Head Start programs and those of

other groups. Reconciling the opposing issues related to vehicle structural safety took several years of painstaking work. Significant progress was accomplished through the contributions of the Joint Department of Health and Human Services and Department of Transportation Coordinating Council on Human Services Transportation (now known as the Coordinating Council on Access and Mobility). The development of the allowable alternate vehicle evolved through information exchange, inclusion of multiple perspectives, and willingness to compromise in order to improve the safety of children.

We believe that recognizing an additional class of vehicle without the exterior crash avoidance features is not appropriate since those features are not necessary to serving Head Start children. Under Section 1310.20(b)(6), children who must cross the street or highway to board or after exiting the vehicle because curbside drop-off or pick-up is impossible, must be escorted across the street by a bus monitor or other adult. The crash avoidance features are therefore unnecessary to ensure the safety of children being transported to and from Head Start programs.

Formerly, NHTSA interpreted the statutes it is charged with enforcing to prohibit vendors from selling vehicles for use in transporting children enrolled in Head Start programs that do not meet the standards adopted pursuant to those statutes for school buses. The basis for this position was its interpretation of the term "school" in the definition of "schoolbus" appearing in 49 U.S.C. 30125(a)(1) to include Head Start programs.

At the suggestion of the Head Start Bureau, NHTSA reconsidered its interpretation in light of the new wording added to the Head Start Act by the Coats Human Service Reauthorization Act of 1998, Section 102, Pub. L. 105-285, 112 Stat. 2702, 2703. The statute amended Section 636 of the Head Start Act (42 U.S.C. 9831) to provide that "[i]t is the purpose of this subchapter to promote *school readiness* by enhancing the social and cognitive development of low-income children through the provision, to low-income children and their families, of health, educational, nutritional, social, and other services that are determined, based on family needs assessments to be necessary." (Emphasis added.) In view of the rewording of the statute, NHTSA agreed that it was no longer appropriate to consider the Head Start program to be a school program.

The change in NHTSA's position made it possible for the Head Start

program to authorize use of a separate category of vehicle, the "Allowable Alternate Vehicle", to transport children enrolled in Head Start programs. The Allowable Alternate Vehicle symbolizes the cooperative approach adopted by the Departments of Transportation and Health and Human Services, over the course of nearly a decade, to solve the complicated problems related to improving the safety of Head Start transportation services.

Vehicles meeting the specifications of Allowable Alternate Vehicles are currently in use in some States that prohibit Head Start programs from using school buses. These vehicles also may be used in States where Head Start is not included under pupil transportation regulations and a program chooses a vehicle with the structural features, but not the appearance, of a school bus. The Head Start Bureau anticipates that manufacturers will be able to meet the increased demand for alternate vehicles because school bus manufacturers currently produce such vehicles.

In the development of the rule, we have, with only minor variations, adopted a number of the relevant provisions of Guideline 17 and have referenced several of the Federal Motor Vehicle Safety Standards applicable to school buses. This final rule was developed through ongoing consultation with the National Highway Traffic Safety Administration on the application of the FMVSS and Guideline 17 to Head Start programs.

It should be noted that we do not want to place Head Start agencies in conflict with State requirements. On the contrary, it is our intention to continue to work with the States beyond the implementation of the rule to enhance the relationship between Head Start programs and the State agencies responsible for pupil transportation safety. Toward that end, we consulted with the National Association of State Directors of Pupil Transportation throughout the development of this rule.

Where Guideline 17 lacked specificity or was silent on some aspect that is important for transporting Head Start children, we relied on other resources, such as the National Standards for School Bus Operations, in determining regulatory criteria. For example, the regulation includes requirements for the content of driver training and rules for trip routing. The Transportation Research Board's (TRB) Special Report 222 provided valuable information regarding the use of seat belts on school buses, the need for strict rules for trip routing, and the need to train children in safe riding practices both on and off the bus.

The TRB's examination of the use of seat belts on school buses in Special Report 222, along with NHTSA's recommendation in Guideline 17 that passengers in vehicles with a gross vehicle weight rating of less than 10,000 pounds (which is the class of vehicle most frequently used by Head Start programs) use occupant restraints, raises an issue of special significance to the safe transportation of Head Start children. The use of standard Type I (lap) and Type II (lap and shoulder) seat belts is inappropriate for children who weigh 50 pounds or less, because of the potential for injury from the seat belt itself. Children weighing 50 pounds or less should be seated in child restraint systems designed in accordance with FMVSS No. 213, "Child Restraint Systems." Since almost all Head Start children fall into this lower weight category, we have included such a requirement in the rule. Our decision to include this requirement is based on consultation with organizations such as the American Academy of Pediatrics, the Children's National Medical Center in Washington, DC and the Riley Hospital for Children, Automotive Safety for Children Program in Indianapolis, Indiana. The regulation provides that within three years of its publication, all vehicles must be equipped for use of child restraint systems. In some instances, this may require replacement of existing vehicles. While the regulation allows up to five years to use school buses or allowable alternate vehicles, the full five years will not be available if vehicles are being used that cannot accommodate, or be safely retrofitted to accommodate child restraint systems. We recognize the financial effect that a three year versus a five year implementation period may have for some grantees. We urge grantees to evaluate existing vehicles for capacity to accommodate child restraint systems and plan accordingly. The use of child restraint systems for children weighing 50 pounds or less is critical to their safety.

We have excluded the transportation provided under the Head Start and Early Head Start home-based program option from the requirement for use of school buses or allowable alternate vehicles, and the requirements on driver qualifications and bus monitors. In the home-based option, it may only be necessary to transport parents and children to twice monthly group socializations and other program activities. Usually, the transportation is provided in a vehicle other than a school bus driven by the home visitor, although many programs already use

school buses to transport children enrolled in home-based programs. We anticipate that programs already using school buses will continue the practice. Programs will also need to comply with other requirements of the regulations when transporting children enrolled in home-based programs. We also expect that as more grantees acquire school buses and allowable alternate vehicles for use in transporting children enrolled in other program options, they will make available to children enrolled under the home-based option the same transportation services provided to children enrolled under other program options. We are, however, reluctant at this time to apply the same requirements under the home-based option as other options because local circumstances may at times make it impossible to comply fully with the requirements of the regulations. There may be situations, for example, in rural communities with widely dispersed populations when it will not be possible for a grantee to coordinate its use of vehicles to provide the necessary services using school buses or allowable alternate vehicles to meet the needs of children enrolled in the home-based option as well as those enrolled under the other options that it operates.

It should be noted that the requirements in the regulation which are generally applicable to Head Start, Early Head Start and delegate agencies, such as the requirements for safety education in 45 CFR 1310.21, the requirement for release of a child to a parent, legal guardian, or other individual identified in writing by the parents in 45 CFR 1310.10(g) and the use of appropriate child restraint systems in 45 CFR 1310.11, apply to services under the home-based option.

We recognize that implementing this regulation will require programs to learn its provisions and determine their application in reference to existing State regulations. There are a variety of resources available to support agencies. The Head Start Act requires that an allotment of Head Start and Early Head Start funding be dedicated to training and technical assistance for staff and parents. This is accomplished through a variety of avenues, many of which will be instrumental in supporting grantees as they adopt the provisions of the transportation regulation. The training and technical assistance network consists of local, regional, and national resources. Each region has a Quality Improvement Center (QIC) which supplies the Head Start and Early Head Start programs in its region with a variety of training opportunities that are responsive to program needs and

emerging issues. Several of the QIC staff have become experts in transportation issues based on the current needs of grantees they serve. The Head Start Publications Management Center provides the vehicle for distributing information material to all of the Head Start and Early Head Start Grantees and delegate agencies. Materials offered by the Publications Center include the "Transportation Tool Kit" which was developed to provide Head Start programs with resources and information related to transportation services. There are also various training opportunities available through each State's Department of Transportation and several national organizations, including the International Center for Injury Prevention and the Community Transit Assistance Program, have volunteered to participate in providing training to Head Start programs. The National Highway Traffic Safety Program offers extensive training resources and has already been involved in providing materials to Head Start programs. The NHTSA document entitled "Guideline for the Safe Transportation of Pre-school Age Children in School Buses" was distributed to all grantee and delegate agencies in 1999.

III. Summary of the Major Provisions of the Rule

A summary of the major provisions of the final rule follows. The rule:

- Establishes requirements for transportation services for all Head Start, Early Head Start and delegate agencies that transport children to and from program activities;
- Requires that, beginning five years from the publication of the regulation, vehicles used to provide transportation services to Head Start, Early Head Start, and delegate agency program activities be either "school buses" or "allowable alternate vehicles" as those terms are defined in the regulation;
- Requires that children receiving Head Start, Early Head Start and delegate agency transportation services be seated in height and weight-appropriate child restraint systems when the vehicle is equipped for use of such devices.
- Describes the minimum qualifications for operators of vehicles that are used to provide transportation services to children enrolled in Head Start, Early Head Start and delegate agency program activities;
- Describes the training requirements for operators of vehicles that are used to provide transportation service to children enrolled in Head Start, Early Head Start and delegate agencies;

- Describes the vehicle and pedestrian safety training requirements for parents and children;
- Describes the requirements for transportation of children with disabilities; and
- Defines the role of Head Start, Early Head Start and delegate agencies in local efforts to plan and implement coordinated transportation systems in order to achieve greater overall cost effectiveness in providing safe transportation.

The contents of this rule include aspects of the following Department of Transportation guidelines and standards:

- Highway Safety Program Guideline No. 17, "Pupil Transportation Safety," referred to in this text as Guideline 17, published in the **Federal Register** (56 FR 19270, April 26, 1991) and (57 FR 56991, December 2, 1992);
- 49 CFR part 571—Federal Motor Vehicle Safety Standards;
- 49 CFR part 383—Commercial Driver's License Standards: Requirements and Penalties; 49 CFR part 391—Qualifications of Drivers;
- 1990 National Standards for School Buses and School Bus Operations, National Safety Council; and
- Special Report 222, "Improving School Bus Safety," Transportation Research Board, National Research Council, 1989.

We also reviewed the National Highway Traffic Safety Administration's "1999 Guideline for the Safe Transportation of Pre-school Age Children in School Buses." This document confirms that, based on conclusive crash testing research results, preschool age children are most safely transported on school buses when seated using weight-appropriate child safety restraint systems.

IV. Rulemaking History

On June 15, 1995, the Department published a Notice of Proposed Rule Making (NPRM) in the **Federal Register** (60 FR 31612), proposing regulations establishing requirements for the safety features and the safe operation of vehicles used by Head Start agencies to transport enrolled children, safety education, and transportation coordination. Copies of the proposed rule were mailed to all Head Start grantee and delegate agencies. Interested individuals were given 60 days in which to comment on the proposed rule. During the 60-day comment period the Department received more than 800 comments from more than 300 respondents. The respondents included Head Start grantees and public and private agencies and individuals

interested in Head Start transportation services.

V. Section-by-Section Discussion of Comments

The comments were analyzed and categorized according to regulatory section and again by nature of comment. Only those sections for which comments were made or to which changes were made are discussed below. The discussion of the sections follows the order of the NPRM table of contents and a notation is made wherever the section designations have been changed or deleted from the final rule.

Subpart A—General

Section 1310.1—Purpose

There were no significant comments submitted in response to this section. Language was added to the final rule to clarify that training in pedestrian safety is an included element of the regulation. Language was also added to the effect that agencies must make reasonable efforts to coordinate resources in order to control costs and improve the quality and availability of transportation services.

Section 1310.2—Applicability

Section 1310.2(a) (re-designated as Section 1310.2(c) in the final rule)

This section described the rule's applicability to all Head Start grantees, Early Head Start grantees and delegate agencies.

Comments. Paragraph (a) in the proposed rule specified the rule's applicability to all Head Start grantees and delegate agencies that provide transportation to children. Several respondents objected on the grounds that a school bus would not be able to safely navigate the challenging terrain encompassed within their program area.

Response. We recognize that there are rare circumstances when programs may use non-traditional forms of transportation (e.g., boats for some island programs) to bring children to and from the program. Waiver authority has been added to the final rule under Section 1310.2(c) so that, on a case-by-case basis, the Department of Health and Human Services official may permit exclusion from one or more requirements of the final rule based on "good cause". Good cause will exist only if adherence to a requirement of the Part itself causes a safety hazard in the circumstances faced by the Head Start, Early Head Start or delegate agency. The waiver provision will take effect 30 days after publication of the regulation.

We have excluded home-based program transportation from the vehicle, drive qualification, and bus monitor provisions of the regulation. Home-based Head Start programs may provide transportation to small groups of children and their parents twice per month. Many home-based programs currently use school buses for such transportation and home-based programs are strongly encouraged to use school buses or allowable alternate vehicles whenever possible. When the State in which a Head Start or Early Start program operates sets a higher standard than this regulation, agencies shall comply with the State regulation.

The rule is applicable to all Head Start and Early Head Start grantees and delegate agencies regardless of whether they offer transportation services or not. Some provisions are not applicable if an agency does not provide any transportation services, either directly or through another organization. This includes sub-parts related to vehicles, drivers and trip routing. Other sections are applicable regardless of whether the program provides transportation services or not. Sections which provide requirements for all grantees and delegate agencies include, Section 1310.10(a), (b) and (g), Section 1310.21(a), (c)(2), and (e) and Section 1310.22(c).

Section 1310.3 Definitions

This section supplied definitions for the relevant terms used in the regulation. There were no comments submitted in response to this section of the proposed rule. We have deleted several definitions for terms that were either deleted from the regulation or are self-explanatory and added clarifying language to several others. The term "Transportation" is redefined under "Transportation Services" in the final rule. We added definitions for the terms "Agency", "Agency Providing Transportation Services", "Delegate Agency", "Early Head Start Agency", "Early Head Start Program", "Head Start Agency", "Head Start Program" and "seat belt cutter" to clarify the use of these terms in the regulation. We also added a definition of the "Allowable Alternate Vehicle" because it is a term used in the final rule. We added a definition for "school bus" as the term is used throughout the regulation. Deleted definitions were: "coordinated transportation", "crossing control arm", "stop signal arm", "driver", "winter packs", "driver qualifications", "Guideline 17", "transportation supervisor", "training", "school bus loading zone", and "vehicle". The

remaining terms are listed alphabetically in the final rule.

Subpart B—Transportation Requirements

Section 1310.10 General

Section 1310.10(a) (re-designated in the final rule as Section 1310.10(c))

This section required that programs providing transportation to Head Start children comply with the applicable requirements of this Part.

Comments. The majority of letters were supportive and indicated that adoption of the NPRM would yield safer and higher quality transportation services for children in Head Start. Some other respondents expressed concern that the requirement jeopardizes some transportation services provided for Head Start children by public school districts, regional transit authorities and contractors. Many writers expressed support for the increased safety the regulation affords, but are concerned about the cost of compliance. For example, respondents wrote that the increased costs associated with bus monitors, driver certification and training, child safety restraints, using vehicles that meet the identified safety standards, and providing communication equipment would be prohibitive without additional grant funds. Several also objected that the three-year phase in period was unrealistic with respect to replacement of existing vehicles. Some respondents recommended that waivers be allowable for all or most of the rule's requirements.

Response. The requirements of the regulation are essential in assuring the safe transportation of preschool age children. However, waivers under section 1310.2(c) of the final rule shall be granted on a case-by-case basis where adherence to a specific provision would cause a safety hazard in the circumstances faced by the Head Start, Early Head Start, or delegate agency. Requests for waivers should be made to the responsible official of the Department of Health and Human Services.

In response to comments that three years is not a reasonable period for replacement of existing vehicles in order to comply with the regulations, the effective date of sections 1310.12(a) and 1310.22(a), which now provide that children enrolled in Head Start agencies be transported in either school buses or allowable alternate vehicles, will be five years from the date of publication of this part in the **Federal Register**. This change will provide additional time for

necessary financial planning and upgrading and replacing vehicles.

The requirement which appeared in the NPRM at section 1310.11(i) that children are seated in child safety restraint systems is addressed in the final regulation sections 1310.11 and 13.10.15(a) and (d). Those provisions require that beginning on the date three years from publication in the **Federal Register**, each vehicle used to transport children enrolled in Head Start must be equipped for use of height and weight appropriate child restraint systems which conform to the performance requirements (49 CFR 571.213) for use by children weighing fifty pounds or less who will be transported in the vehicle. This requirement can be met either by retrofitting vehicles already in service or by acquiring new vehicles. For an additional explanation of the reasons for the change in the requirements regarding child safety restraint systems, see the discussion of section 1310.11 in this preamble.

Section 1310.10(b)

Paragraph (b) required that Head Start programs assess and document annually decisions about providing transportation to some, all, or none of the enrolled children.

Comments. Several respondents interpreted the requirement to mean programs are required to transport all children. Others feared they would not be allowed to enroll children they could not transport. Respondents objected to the requirement on the basis that additional transportation requirements are too expensive and they would need to reduce their enrollment to meet the transportation requirements.

Response. The requirement's intent is that programs provide transportation services to the degree possible when the lack of such services would preclude an eligible child from participating in Head Start. It requires programs to consider the most efficient and appropriate service provision. The language in the final rule was clarified to make sure that Head Start agencies assist as many children as possible to obtain transportation, either by providing it directly or through some other means, but are not required to transport every child in the program. We deleted the requirement for specified documentation of Head Start agencies' efforts under this section as unnecessarily burdensome.

Section 1310.10(c) (re-designated as Section 1310.10(a) in the final rule)

The section required Head Start agencies that do not provide transportation to some or all of the

enrolled children to provide reasonable assistance to help families arrange transportation for their children to and from the program.

Comments. One respondent expressed concern that an implied liability would exist for a Head Start agency that recommended or arranged child transportation services.

Response. We agree that child safety is a primary concern and that programs must be cautious in assisting families in making alternative transportation arrangements. The regulation requires Head Start agencies to assist as many children as possible who need transportation to attend the program to get that transportation. Parents and guardians are responsible for the safety of children in their care when they bring those children to or from Head Start program activities. When the grantee or delegate agency cannot provide transportation services, possible alternative arrangements may be suggested to parents. This is consistent with Head Start Performance Standard 1304.41(a)(2) which requires grantees and delegates agencies to support collaborations that promote the access of children and families to resources that are responsive to their needs.

Section 1310.10(d) (deleted from the final rule)

Paragraph (d) required each Head Start program providing transportation services to have designated full or part-time transportation supervisor to ensure compliance with the requirements of this Part.

Comments. Some respondents objected that if the transportation services are provided contractually or via a school district, a Head Start employed transportation supervisor is not necessary. The objection most frequently cited was that an additional staff position could not be accommodated through existing grant funds.

Response. The requirement for a designated transportation supervisor reflected recognition of the critical nature of safe transportation services and the time and expertise required to ensure safety. Upon consideration of the comments and given the variety of Head Start staffing patterns, we determined that a separate dedicated staff position may not always be necessary to ensure safe and effective transportation services. The language in the final rule specifies transportation regulation oversight and compliance with the applicable requirements of this part in section 1310.10(c). Head Start agencies providing transportation through another organization or individual must

monitor the compliance of the transportation provider with the requirements of this part.

Section 1310.10(e) (re-designated as Section 1310.15(c) in the final rule)

Paragraph (e) required vehicles providing Head Start transportation be staffed with at least one bus monitor in addition to the driver.

Comments. The objections to this paragraph related mainly to the cost of employing bus monitors or the belief that monitors are not necessary for small groups of children. Some respondents indicated that finding volunteer monitors is too difficult. Several writers objected to requiring bus monitors to wear seatbelts as they felt this would negatively impact the monitor's ability to assist children during the ride. Several writers recommended additional monitors for larger groups of children.

Response. The final rule maintains the requirement of at least one bus monitor on vehicles transporting Head Start children. Preschool children require adult supervision and assistance to safely board and exit the vehicle, fasten safety restraints, and to evacuate the vehicle in the event of emergencies. The driver's attentions must be primarily focused on safe operation of the vehicle. The final regulations provide in section 1310.15(d) that, except for bus monitors while they are assisting children, all occupants of the vehicle must be seated and wearing seat belts while the vehicle is in motion. As necessary based on passenger needs, programs may elect to assign more than one monitor to a vehicle. Although the term "bus monitor" is being used in the regulations, the requirement in 45 CFR 1310.15(c) applies to all vehicles, except for those used to transport children served under the home-based option, used to provide transportation services after the effective date of the provision.

Section 1310.10(f)

Paragraph (f) required that all accidents involving Head Start vehicles, with or without children on board, must be reported in accordance with State regulations for reporting school bus accidents. There were no specific comments to this section. The language in the final rule was changed to reference "applicable State requirements" to improve clarity.

Section 1310.10(g) (re-designated as Section 1310.10(d)(1) in the final rule)

Paragraph (g) required that vehicles transportation Head Start children be equipped with a communication system for use in the event of emergencies. The

NPRM referenced a citizen band radio as an example of a communication system.

Comment. Many writers understood the NPRM to require citizen band radios on vehicles that transport Head Start children and objected on several grounds. Notably, some State police departments have advised against this device fearing it could inform potential criminals of the location of a stranded bus load of children and staff. Most respondents were supportive of equipping vehicles that transport Head Start children with communication capacity.

Response. The final rule continues to require a communication system on vehicles, but defers to grantees to select the most appropriate equipment.

Section 1310.10(h) (deleted from the final rule)

Paragraph (h) required the use of special equipment (e.g., winter packs and air conditioning) as necessary for vehicles transporting Head Start children in extreme climatic conditions.

Comments. Some writers requested a definition "extreme climatic conditions." Others stated that the appropriate outfitting of buses should be a local decision.

Response. It was not our intent that this section be prescriptive. We agreed with the respondents who stated that the appropriate outfitting of vehicles should be a local decision and have deleted the special equipment for climate extremes from the final rule.

Section 1310.10(i) (re-designated as Section 1310.10(g), in the final rule)

Paragraph (i) specified that children must be released only to authorized individuals.

Comments. There were few comments in response to this section of the proposed regulation. Two writers recommended clarifying the section to stipulate that child release procedures be required even if the Head Start program is not directly providing the transportation services. One respondent was concerned that a parent with a disability might be unable get outside to put their child on the vehicle and meet the child at the end of the day.

Response. The language in the final rule contains clarification to reinforce that all providers of Head Start, Early Head Start and delegate agency services, including transportation services, must abide by the child release regulation. The provision allows for a child's parent or legal guardian to designate, in writing, other individuals authorized to pick up the child.

Section 1310.11—Vehicles (re-designated as Sections 1310.12–1310.15 in the final rule)

Section 1310.11(a) (re-designated as Section 1310.12(a) in the final rule)

Paragraph (a) specified that vehicles used to transport Head Start children must comply with the recommendations regarding "school buses" as provided in Guideline 17 and prohibited the use of vans in transporting Head Start children.

Comments. This NPRM section elicited the largest number of comments. A number of respondents strongly objected to the prohibition against using vans. While a few writers advocated the use of buses over vans for safety advantages, most stated that programs would not be able to afford to replace vans with school buses and that buses are an inefficient method to transport individual or small groups of children. There were also comments that in some regions of the country, roads are unpaved and require four wheel drive vehicles. Many individuals cited very geographically large service areas as an impediment to reasonably efficient school bus use. One writer cited a State rule permitting the use of qualified vans and drivers if the number of children is fewer than ten and the route would be excessively long if a regular school bus was used.

Response. Substantial effort was devoted to creating a solution that would both improve the safety of vehicles providing Head Start transportation services, not contradict existing State regulations, and be reasonable for use by various transportation providers. The solution provides for the use of either a vehicle that qualifies as a "school bus" or an "Allowable Alternate Vehicle" which is not a school bus but does meet the structural, or crash protection, standards of a school bus. This decision to require that Head Start transportation service providers only use vehicles with the interior safety features required for school buses reflects the research demonstrating that school buses are safer than other vehicles.

The National Highway Traffic Safety Administration confirms that based on research, "school buses have been and remain the safest form of highway transportation" (*School Bus Safety: Safe Passage for America's Children* (1998), p. 5). NHTSA based its conclusion in part on data documenting that the school bus occupant fatality rate of 0.2 fatalities per 100 million vehicle miles traveled (VMT) is much lower than the rates for passenger cars (1.5 per 100 million VMT) or light trucks and vans

(1.3 per hundred million VMT). NHTSA established the Federal Motor Vehicle Safety Standards (FMVSS) to make school buses stronger and to provide improved occupant protection (p. 7).

Further evidence of serious safety hazards posed by the use of vans is provided by the National Transportation Safety Board's Highway Special Investigation report titled "Pupil Transportation In Vehicles Not Meeting Federal School Bus Standards" (June 1999). The report's findings are based on the investigation of child fatalities in four accidents where children were being transported in vehicles that did not meet the crash protection standards of school buses. One of the accidents involved children being transported to a Head Start program. The report includes detailed analysis of the crashworthiness of the nonconforming vehicles and provides a table describing the crash protection attributes of different vehicle types. Fifteen-passenger vans do not possess the joint strength or roof rollover protection provided by school buses. Federal school bus standards require that body panel joints be strong enough to resist separation during a crash that can cause sharp cutting edges and openings through which children can be ejected. The Safety Board included a comparison of two accidents, one involving a school bus and one involving a fifteen-passenger van. Although the bus was struck by a much larger, heavier truck it suffered far less intrusion damage than the fifteen-passenger van. The Board found that if the children involved in the van accident had been on a bus, they would have had more "survivable space." The report concludes that "given their better crashworthiness and occupant protection, had school buses or buses providing equivalent occupant crash protection been used in the four accidents * * * the vehicles probably would have suffered less damage and the passengers may have suffered fewer and less severe injuries."

Based on its report, the National Transportation Safety Board issued a letter to the Department of Health and Human Services (July, 1999) recommending the expedition of the rule requiring that Head Start Children be transported in vehicles built to Federal school bus structural standards or the equivalent and that the guidelines from the National Highway Safety Administration's Guideline for the safe Transportation of Preschool Age Children in School Buses regarding child passenger restraint systems be incorporated in the regulation. Both of the Safety Board's recommendations are reflected in the final rule.

Because all children attending Head Start must be accompanied by an adult if they cross a street or highway to board or exit a vehicle, the final regulation permits the use of an "Allowable Alternate Vehicle" which would not be identified as a "school bus," be painted yellow or equipped with flashing lights and a stop arm. The final regulation provides for waiver of one or more of its specific requirements when adherence to a requirement of this part would itself create a safety hazard in the circumstances faced by the Head Start, Early Head Start, or delegate agency, such as when use of a school bus or allowable alternate vehicle is ruled out because of terrain in the area served by the grantee or some other safety factor. In response to the concern about navigating unpaved roads, it should be noted that four wheel drive school buses are currently available.

Section 1310.11(b) (re-designated as Section 1310.12(a) in the final rule)

Section 1310.11(b)(1) (deleted from the final rule)

Paragraph (b)(1) stated that vehicles used for Head Start transportation must comply with all of the Federal Motor Vehicle Safety Standards (FMVSS) for school buses.

Comments. Some respondents objected that Head Start should not be required to use vehicles meeting the FMVSS if Head Start is not included in the State's pupil transportation regulations. Many people asked for additional clarification regarding the definition of allowable exceptions. For example, are medical visits considered incidental and do they require a vehicle complying with the FMVSS for school buses? Cost was again a major topic and several writers suggested a gradual implementation period to reasonably replace existing vehicles with school buses. One writer was concerned that school buses do not include the proper safety restraint systems for young children. Again, several respondents said that school buses cannot navigate rural roadways, which may be unpaved, or very narrow. One comment noted that some States prohibit transit authorities from using school buses and the rule would effectively prevent those agencies from providing Head Start transportation services.

Response. Under section 1310.12(a) the final rule requires that when school buses, as defined in the rule, are used for the planned transportation of Head Start children, they must comply with the FMVSS for school buses, including both crash prevention and crash survivability standards.

In response to the concern that school buses may not be the most practical vehicle to provide transportation in certain circumstances, an alternative acceptable vehicle has been defined in the rule for the purpose of Head Start transportation. The alternative vehicle, called the "allowable alternate vehicle," is defined in these regulations as one which must meet the FMVSS applicable to school buses for crash survivability and mirrors (49 CFR part 571), but is not required by these regulations to meet the standards related to visibility and traffic control. The latter are collectively called crash prevention standards and they include the color of the vehicle, flashing school bus lights, and a stop arm. Crash prevention standards are related to the appearance of vehicles. They include FMVSS 49 CFR 571.108 and 571.131. Requiring the allowable alternate vehicle to meet the crash survivability standards, but not the crash prevention standards, permits greater flexibility in vehicle appearance while maintaining the structural safety features afforded by school buses.

Because Head Start children must be accompanied by an adult when they must cross the street before boarding or after exiting the vehicle, the crash avoidance features are not required for allowable alternate vehicles.

Incidental transportation, which is the unplanned, necessary, transportation of a single child or small group of children for some exceptional purpose, is not required to meet the requirements of the rule relating to transportation services. The distinction between planned and unplanned transportation is designed to allow transportation of children to occur as necessary in unanticipated or exceptional situations. Programs should make every effort to use school buses or allowable alternate vehicles whenever possible. Section 1310.11(b)(1) was deleted in the final rule as it duplicated provisions already specified.

Section 1310.11(b)(2) (re-designated as Section 1310.10(d)(2) and (3) in the final rule)

Proposed paragraph (b)(2) described the requirement that vehicles that transport Head Start children be properly equipped with a fire extinguisher and a first aid kit with location signs for both visibly posted.

Comment. One comment was submitted suggesting most standard first aid kits do not contain adequate supplies for conditions such as shock or severe bleeding.

Response. The final rule maintains the requirement that vehicles transporting Head Start children must be equipped with a fire extinguisher and

first aid kit. Seat belt cutters were added to the required safety devices in response to concerns that child safety restraints might slow evacuation of children in an emergency. Grantees are reminded to follow applicable State agency guidelines concerning contents of first aid kit.

Section 1310.11(b)(3) (re-designated under Section 1310.12(a) in the final rule)

Paragraph (b)(3) required that vehicles used to transport Head Start children be equipped with mirrors complying with 49 CFR 571.111.

Comments. There were not comments in response to this section of the proposed regulation.

Response. The specific provision regarding mirrors was deleted as its content is included within the definitions for school buses and allowable alternate vehicles.

Section 1310.11(b)(4) (deleted from the final rule)

Paragraph (b)(4) required that bus steps be equipped with a lower step panel at the primary access point to permit children to step on and off the bus unassisted.

Comments. Several respondents objected to the lower step panel on the grounds that it is too prescriptive and may be unsafe on certain terrain. Further, it was noted that Head Start children vary in size and physical ability and are expected to always have adult assistance when boarding or exiting a Head Start vehicle.

Response. The requirement was deleted from the final rule because we agree with comments that it was more prescriptive than necessary.

Section 1310.11(b)(5) (re-designated as Section 1310.12(a) and (b)(2) in the final rule)

Proposed paragraph (b)(5) stated that vehicles providing Head Start transportation services must be equipped with reverse beepers.

Comments. Writers regarded the reverse beepers as unnecessary because the proposed rule prohibited backing up.

Response. The rule specifies that "vehicles must not be required to back up * * * [on their routes] except when necessary for reasons of safety or because of physical barriers." This requirement reflects that it is not safe for school bus routes to be mapped so that backing up is necessary. A bus, however, may need to back up for reasons of safety or physical barrier. In either instance the reverse beepers notify pedestrians of the driver's

intention and could prevent accidents and injury. Therefore, the provision was retained.

Section 1310.11(b)(6) (provision addressed in Section 1310.22 in the final rule)

Paragraph (b)(6) specified that vehicles that transport Head Start children must be equipped to accommodate children's special needs (e.g., wheelchair lifts).

Comments. Many respondents interpreted the section to mean that every Head Start vehicle must be equipped to meet the potential needs of children with disabilities and were concerned about unnecessary effort and prohibitive expense. Several respondents asked for clarification regarding the definition of "special equipment" and the portion of an agency's fleet that should be so equipped.

Response. The language in the final rule, section 1310.22(b), specifies that Head Start agencies must meet the requirements of the Americans with Disabilities Act, section 504 of the Rehabilitation Act of 1973, and the Head Start Performance Standards for Children with Disabilities. It is not necessary, or advisable, that every vehicle transporting Head Start children be equipped with a wheelchair lift. We emphasize that Head Start programs must be prepared to meet the special transportation needs of children with disabilities who enroll in the program. Agencies must consider the needs of children with disabilities when arranging for transportation services using school buses or allowable alternate vehicles. Whenever possible, children with disabilities must be transported along with their peers who do not have disabilities.

Section 1310.11(c) (deleted from the final rule)

Paragraph (c) specified that, to the extent allowable within State requirements, vehicles that transport Head Start children must comply with the following recommendations for identification and equipment of a school bus contained in Guideline 17: (1) Be identified with the words "School Bus" printed in letters not less than eight inches high, located between the warning signal lamps as high as possible without impairing visibility of the lettering from both front and rear, and have no other lettering on the front or rear of the vehicle except as required by Federal Motor Vehicle Safety Standards (FMVSS), 49 CFR part 571; (2) be painted National School Bus Glossy Yellow, in accordance with the

specification of National Institute of Standards and Technology (NIST) Federal Standard No. 595a, Color 13432, except that the hood should be either that color or lusterless black, matching NIST Federal Standard No. 595a, Color 37038; (3) have bumpers of glossy black, matching NIST Federal Standard 595a, Color 17038, unless, for increased visibility, they are covered with a reflective material; (4) be equipped with a stop signal arm as specified in FMVSS No. 131 (49 CFR 571.131) and a crossing control arm; and (5) be equipped with a system of signal lamps that conforms to the performance requirements of FMVSS No. 108 (49 CFR 571.108).

Comments. No significant comments were received in response to paragraphs (c)(1)–(2). There were, however, a few respondents objecting to the bumper color requirement on the grounds it would require expensive retrofitting of existing vehicles. There were also respondents who objected to paragraphs (c)(4) and (5) which required that vehicles comply with the FMVSS for stop signal arms, crossing control arms, and signal lamps. Several respondents indicated that crossing control arms are unnecessary because Head Start children should only enter or exit buses curbside. There were objections to increased costs for all safety features.

Response. The safety features that would have been required by the proposed Section 1310.11(c)(1)–(5) were deleted from the final regulations because they are not necessary in view of the requirement that children using Head Start vehicles be accompanied by a bus monitor or other adult when they must cross the street before boarding or after exiting the vehicle. The final rule identified the required features for allowable alternate vehicles and school buses under its definitions, Section 1310.3.

Section 1310.11(d) (re-designated as Section 1310.14 in the final rule)

Section 1310.11(d)(1) (re-designated as Section 1310.14 in the final rule)

Paragraph (d)(1) required Head Start agencies to assure that vehicle specifications are correctly provided and that the intended use is identified in bid announcements.

Comments. Respondents requested that bus specifications and purchase procedures be provided by the Head Start Bureau.

Response. Requirements for vehicles to be used in Head Start transportation services are defined in the final rule either explicitly or through reference to other requirements, such as provisions of the FMVSS. Grantees can comply

with the requirement to ensure that bid solicitations include correct vehicle specifications by citing or restating the relevant requirements of these regulations, as well as any applicable State requirements. Since the relevant Federal specifications are set forth in the regulations, no changes were made to the final rule.

Section 1310.11(d)(2) (re-designated as Section 1310.14 in the final rule)

Section 1310.11(e) (re-designated as Sections 1310.12(a) and (b) in the final rule)

Paragraph 1310.11(e) specified that existing vehicles not compliant with the FMVSS and the minimum capacity requirement must be replaced within a three-year period. It also reminded readers that, in accordance with 42 U.S.C. 9839(g)(2)(c), Head Start funds may be used for capital expenditures to purchase buses.

Comments. Many respondents objected to the three-year phase in period as far shorter than the useful life of some vehicles. Several individuals suggested periods between five and ten years as more accomplishable and reasonable.

Response. Head Start agencies that are transporting children enrolled in their programs in vehicles which do not meet the requirements under Section 1310.12 should consider replacing those vehicles with compliant vehicles as soon as possible. The allowable limit for vehicle replacement has been extended to five years in order to accommodate the useful life of vehicles that are relatively new at the time the rule is published. Also, the wording of the final regulation has been changed to require that each agency providing transportation services must transport children enrolled in its programs in school buses or allowable alternate vehicles that are equipped for use of height and weight appropriate child restraint systems, and that have reverse beepers. It should be noted that existing vehicles which cannot be equipped to safely accommodate child restraint systems must be replaced within three years of publication of the final rule. We recognize that in a minority of cases this could necessitate vehicle replacement before the full five year period expires or the vehicle's useful life is completely exhausted. This constitutes a reasonable compromise because it will affect relatively few vehicles, three years is an adequate amount of planning time, and restraint systems are essential to child passenger safety. The implementation of child restraint systems should occur as quickly as is reasonably possible.

Paragraph (b) was added to the final rule to clarify that, beginning thirty days after publication of the rule, vehicles purchased with Head Start funds for use transporting children must meet the requirements of paragraph (a).

The language reminding readers that Head Start funds may be used for capital expenditures including buses was deleted as it appears elsewhere (as referenced above) and it is not directly a part of this regulation.

Section 1310.11(f) and (h) (combined and re-designated as Section 1310.15(a) in the final rule)

Paragraph (f) proposed that all passengers on a Head Start vehicle be seated while it is in motion. Paragraph (h) proposed that bus drivers, monitors and other passengers must wear seat belts when the vehicle is in motion.

Comments. Two respondents stated that bus monitors may need to attend to children while the bus is moving and therefore might not be able to remain seated.

Response. While the vehicle is in motion, all children and adults must be wearing appropriate safety restraints. In the event of an emergency while the bus is moving, the monitor may need to unfasten his or her seatbelt and move to assist a child. The language in the final rule was changed slightly to require that, other than a monitor assisting a child, all passengers must remain seated and use appropriate safety restraints while the vehicle is in motion.

Section 1310.11(g) (re-designated as Section 1310.10(e) in the final rule)

Paragraph (g) stated that the use of auxiliary seating was prohibited.

Comments. Several respondents objected to the prohibition against auxiliary seating in wheelchair lift equipped vehicles or adjacent to an emergency door.

Response: The NPRM did intend to prohibit correctly installed auxiliary seating. The final rule clarifies that all seats must be permanent and pass inspection.

Section 1310.11(i) (re-designated as Section 1310.15(a) in the final rule)

The NPRM indicated that children weighing less than 50 pounds should be seated using child safety restraint seats.

Comments. There were few responses to this item. One respondent objected to the cost and space implications of child safety seats, saying that installing the seats would reduce seating capacity by a third. Another respondent suggested that transportation staff training in the correct use of transportation safety seat use be required in the final rule. A final

respondent expressed concern that use of child restraint systems would delay the evacuation of children in an emergency.

Response. Because the National Highway Traffic Safety Administration Guideline for the Safe Transportation of Preschool Children in School Buses concludes that children weighing 50 pounds or less are most safely transported on school buses when they are seated in age- and weight-appropriate restraint systems, this requirement was retained with explicit reference to the 50-pound requirement (National Highway Traffic Safety Administration, 1999). It is expected that programs will make sure transportation staff receive instruction in the correct use of the child restraint system. There are more child restraint systems and more vehicle configurations than were available when the NPRM was published in 1995. The three year implementation period for child safety seats and the five year period for vehicle implementation was designed to provide planning time for grantees with regard to issues such as seat spacing. The final rule requires vehicles transporting Head Start children to be equipped with seat belt cutters which could be used to speed the evacuation of children in an emergency.

Section 1310.11(j) (re-designated as Section 1310.15(b) in the final rule)

Section 1310.11(k) (re-designated as Section 1310.13 in the final rule)

Section 1310.11(k)(1) (re-designated as Section 1310.13(a) in the final rule)

This standard proposed a thorough safety inspection of each vehicle at least annually through a State licensed or operated inspection system.

Comments. One response objected that the requirement is too prescriptive, another suggested it should specifically identify inspection components, a third voiced concern that the rule would conflict with State regulations and a final respondent stated unconditional support.

Response. Regular vehicle inspections are an integral element of safe transportation services. As provided in section 1310.2(a) of the final rule, this provision will apply except when there is an applicable State or local requirement that sets a higher standard.

Section 1310.11(k)(2) (re-designated as Section 1310.13(b) in the final rule)

Section 1310.11(k)(3) (re-designated as Section 1310.13(c) in the final rule)

Section 1310.12—Driver Qualifications (re-designated as Section 1310.16 in the final rule)

Section 1310.12(a) (re-designated as Section 1310.16(a) in the final rule)

Section 1310.12(a)(1) (deleted from the final rule)

Paragraph (a)(1) addressed Head Start transportation service driver qualifications. The proposed requirement was that drivers be at least 21 years of age.

Comments. Several people wrote that they currently use drivers who are eighteen or nineteen years and older as is allowable in their States. Others strongly supported that drivers be at least 21 years old.

Response. The minimum age requirement was removed from the final rule. The final regulation requires that all drivers of vehicles providing Head Start transportation possess Commercial Drivers Licenses and meet physical and other requirements.

Section 1310.12(a)(2) (re-designated as Section 1310.16(a)(1) in the final rule)

Paragraph (a)(2) listed the requirement that drivers providing Head Start transportation possess a Commercial Driver's License (CDL).

Comments. The majority of objections were to the cost implications of having current drivers obtain and meet the ongoing requirements for the CDL. Several respondents were also concerned that the wages paid to Head Start drivers are not competitive with public school bus drivers or commercial truck drivers. One writer objected that the CDL requirement is "just a way to ensure that all Head Start drivers are drug and alcohol tested." A few respondents were concerned about the implications of the CDL requirement for the Home-based program option.

Response. The Commercial Driver's License requirements establish a driver's qualifications to operate the appropriate class of passenger vehicle. The CDL is viewed as the best assurance that drivers will meet essential minimum standards. The final rule retains the CDL requirement in States where such licenses are granted. All operators of commercial motor vehicles are required to have CDLs. Commercial motor vehicles include vehicles designed to carry 16 or more passengers, including the driver. Many States have extended the inclusion to all vehicles used to provide pupil transportation. To

obtain a CDL, vehicle operators must pass written and driving tests in accordance with Federal Standards for the vehicle the person intends to operate. The knowledge test includes such topics as proper procedures for loading and unloading passengers, proper response to emergencies, proper response at railroad crossings and proper braking procedures. The skills test requires applicants to demonstrate basic vehicle control, safe driving, and air brake skills. The topics addressed by the CDL tests are deemed essential for operators of vehicles transporting children. The cost of transportation services may increase as current transportation providers employ drivers with CDLs to meet the requirements of this part. However, many providers already employ CDL drivers as is required by their State. Grantees and delegate agencies will need to assess current practice and make training and budget plans accordingly.

Home-based programs are encouraged to use drivers with CDL's to provide child transportation services, however, home-based programs are excluded from the vehicle type, driver qualification and bus monitor provisions of this regulation. Incidental transportation is not included under the provisions of this Part.

Section 1310.12(a)(3) (re-designated as Section 1310.16(a)(2) in the final rule)

Paragraph (a)(3) proposed that drivers meet physical, mental, moral, and other requirements established by Federal and State regulations, including rules regarding drug and alcohol use.

Comments. The majority of respondents emphasized the importance of drug and alcohol testing. Some objected to the term "moral requirements" as too subjective.

Response. We agreed with writers that the word "moral" is subject to variable interpretation and it was deleted from the final rule.

Section 1310.12(b) (re-designated as Section 1310.16(b) in the final rule)

Paragraph (b) proposed that each Head Start agency establish its own applicant screening procedure and system for informing applicants of required background checks. Criteria for the rejection of applicants not meeting the requirements would also be established.

Comments. There were two respondents who indicated that their current background check procedures are adequate. Several comments supported the importance of background checks as part of applicant screening.

Response. Driver background checks are an important element of safe transportation services. Some agencies will find that they already meet the requirements of the rule and others will need to establish or improve their systems. This section remains unchanged in the final rule.

Section 1310.12(c) (re-designated as Section 1310.16(b)(1) in the final rule)

Section 1310.12(c)(1) (re-designated under Section 1310.16(b) in the final rule)

Paragraph (c)(1) proposed that applicant screening procedures include an application that provides employment history, educational background, and personal references. There were no significant comments to this section. However, paragraph (c)(1) was removed and the introductory language in (c) edited to include a reference to 45 CFR 1304.52(b)(1), which contains requirements for staff recruitment and selection.

Section 1310.12(c)(2) (re-designated under Section 1310.16(b) in the final rule)

This paragraph required an interview and screening procedure to help establish that an applicant is "of good moral character" and does not abuse drugs or alcohol.

Comments. Writers objected to the phrase "good moral character" as subjective and ambiguous.

Response. We agree that the term "good moral character" is difficult to define and it was deleted from the final rule. The required physical, interviews and background checks will help identify any candidate who fails to meet established employment criteria. In the interest of accuracy and inclusiveness, the term "State Department of Motor Vehicles" was changed to the final rule to "appropriate State agency."

Section 1310.12(c)(4) (re-designated as Section 1310.16(b)(3) in the final rule.)

This section proposed that drivers have physical examinations.

Comments. Writers were generally supportive of physical examinations for bus drivers.

Response. This provision has been rewritten to require that after a conditional offer of employment and before the applicant begins work as a driver, a medical examination must be performed by a licensed doctor of medicine or osteopathy to establish that the individual possesses the physical ability to perform any job-related functions with any necessary accommodations. The wording of the provision was changed to make the

provision consistent with the requirements of the Americans with Disabilities Act.

Section 1310.13—Driver Training (re-designated as Section 1310.17 in the final rule)

Section 1310.13(a) (re-designated as Section 1310.17(a) in the final rule)

Paragraph (a) in the NPRM required that driver training plans include both pre-service and annual in-service training programs.

Comments. There were not comments specifically applicable to paragraph (a). Comments on other sections reflected a need to clarify the requirements in this section.

Response. The provision was reworded in the final rule to clarify that drivers must receive training prior to operating a vehicle and annually thereafter. The words "pre-service" and "in-service" were replaced to reflect the growing number of twelve month programs.

Section 1310.13(b)(1) (re-designated as Section 1310.17(b) in the final rule.)

The section proposed that drivers transporting Head Start children receive a minimum of 40 hours of skills training prior to providing transportation and outlined specific skill areas.

Comments. This area attracted multiple comments objecting to the 40 hour pre-service requirement on the grounds it is excessive and unreasonable. Others stated that the pre-service training regulation is substantially more than their State requires for public school drivers. Another respondent raised the practical difficulty of providing 40 hours of pre-service training to a driver hired during the program year, rather than at the beginning.

Response. We agree with the respondents who wrote the 40 hours of pre-service training may, in some cases, be more than necessary. Per respondent recommendation, the language in the final rule has been changed to require training topics, rather than hours. Each program will decide on the number of hours necessary to effectively cover the required material. The required content of training remains unchanged and programs are expected to design training plans that will include the required skill areas.

Section 1310.13(b)(1)(i)–(vii) (re-designated as Section 1310.17(b)(1)–(7) in the final rule)

Section 1310.13(b)(2)(i)–(iii) (re-designated as Section 1310.17(b)(2) and (c) in the final rule)

Paragraphs (b)(2)(i)–(iii) specified pre-service training in addition to the previously listed skills training.

Comments. Respondents again objected to the time requirement for pre-service training.

Response. The final rule has been modified to allow the non-skills based training to occur in accordance with the agency's driver training plan. This allows programs to design and deliver training that is effective and efficient in meeting individual program needs.

Section 1310.13(c)(2) (re-designated under Section 1310.17 in the final rule)

Section 1310.13(c)(1) and (2) (deleted from the final rule)

These items proposed eight hours of in-service training annually to maintain and enhance driver skills.

Comments. Respondents were evenly split on whether eight hours would constitute too much or too little in-service driver training.

Response. The final rule specifies content requirements for in-service training and leaves decisions concerning the number of hours of training to individual Head Start agencies. Sections 1310.13(c)(1) and (2) were deleted from the final rule.

Section 1310.13(d) (re-designated as Section 1310.17(e) in the final rule)

Section 1310.13(e) (re-designated as Section 1310.17(f) in the final rule)

Section 1310.13(f) (Re-designated as Section 1310.17(a) in the final rule)

Paragraph (f) stated that drivers of vehicles that transport Head Start children employed on the effective date of this regulation must meet the pre-service training as new drivers within three months of that date.

Comments. There were several comments suggesting that three months is insufficient to provide the required training for existing drivers.

Response. There are two changes in the final rule that address the above concerns and provide time requirement relief. The first is that the rule identifies training topic requirements, but leaves decisions about the amount of training time necessary to the grantee. The second is that the time to train currently employed drivers has been extended from three months from the provisions' effective date to one year and 90 days from that date. This change will allow

agencies to use their regularly scheduled staff training to provide the required driver training. Programs are expected to provide the required training to drivers as quickly as possible.

Section 1310.13(g) (re-designated as Section 1310.17(f)(1) in the final rule)

Paragraph (g) specified that Head Start drivers must be evaluated annually by the transportation supervisor and that the evaluation must include an on-board observation of driving performance.

Comments. Respondents requested that the wording be changed from "transportation supervisor" to "supervisor" to allow local flexibility in performing this function.

Response. While the supervisory functions outlined for transportation services in the NPRM remain, the requirement for a "transportation supervisor" has been deleted. We anticipate that most programs directly providing transportation services will employ a full- or part-time person to supervise transportation services. Some programs may elect to assign the supervisory responsibilities to an existing position. Agencies that use another organization or an individual for transportation services will monitor a contract or agreement that requires the contractor to perform driver supervision.

Section 1310.13(h) (re-designated as Section 1310.17(f)(2) in the final rule)

Paragraph (h) proposed that programs should provide the same pre- and in-service training to bus monitors that they provide for drivers.

Comments. Many respondents objected to this requirement on the basis that bus monitors are often volunteers who would not be amenable or available for this training. Some respondents also indicated that it is not necessary that bus monitor training be as rigorous as driver training.

Response. The final rule was changed to state that programs must specifically provide bus monitors with training in the areas of: child boarding and exiting procedures, use of child restraint systems, responding to emergencies, emergency evacuation procedures, use of special equipment, required paperwork, child pick up and release procedures and pre- and post-trip vehicle checks (e.g., ensure that there are no safety hazards and that no child is left on the bus). The burden of the requirement has been eased by eliminating the requirement that monitors receive exactly the same training as drivers. The provisions identifies types of training that monitors

must receive to ensure that safety-related topics are included.

Section 1310.20—Trip Routing
Section 1310.20(b)(1)

This paragraph proposed limiting the transit time for a child to or from Head Start to no more than one-hour unless there is express written approval from the Regional Office.

Comments. Several writers stated that the one-hour limit is unrealistic or even impossible in rural areas.

Response. We acknowledge that limiting bus routes to one-hour is problematic in some areas. We wish to stress that children should spend the shortest amount of time possible on the Head Start vehicle given the routing safety parameters outlined in Section 1310.20(a) and the geography of the service area. The language in the final rule has been modified to allow greater flexibility.

Section 1310.20(b)(2)

The NPRM proposed that vehicles transporting Head Start children may not be loaded beyond capacity at any time.

Comments. A few respondents proposed that, because preschool children are "small," three could be seated per bench even though this exceeds the vehicle's posted capacity.

Response. All children receiving Head Start transportation must be seated with a size-appropriate safety restraint in a manufacturer designated seat. The final rule retains the stipulation that at no time may vehicle capacity be exceeded. The wording of the provision has been changed by eliminating the first sentence of the proposed rule to clarify the requirement.

Section 1310.20(b)(3)

The proposed rule stated that vehicles should not be required to back up or perform "U" turns during routes.

Comments. Some respondents objected on the grounds that there may be situations (e.g., roads with no outlet) when a three-point or "U" turn is required. It was noted that prohibiting "U" turns could result in more need for children to cross the street. Finally, a contradiction between the preamble's prohibition of "U" turns and this section's use of the term "should not" was identified.

Response. The final rule emphasizes that vehicles must not be required to back up on their routes or make "U" turns, except when necessary for reasons of safety or because of physical barriers. Every effort to avoid these maneuvers must be made through route planning. Extreme caution must be used

in negotiating “U” turns, backing up, or three point turns.

Section 1310.20(b)(4)–(6)

These paragraphs proposed that Head Start vehicle stops should: be located to minimize traffic disruptions and allow the driver a good field of view in front of and behind the vehicle; and minimize the need for children to cross the street to board or leave the vehicle. In addition, the section proposed that if children must cross the street or highway after boarding or exiting the vehicle, they must be escorted across the street by the driver, bus monitor, or another adult, and that under no circumstances may a school bus stop be located in a way that children must cross the street or highway unless the vehicle is equipped to stop traffic as described in the proposed section 1310.11(c)(1)–(5).

Comments. Respondents strongly objected to a driver leaving the vehicle to accompany a child across the street. It was also noted that some States prohibit flashing red lights in urban areas.

Response. We agree that under no circumstance should a driver leave the vehicle to escort a child across the street and have changed the final rule to so state. The requirement for equipping school buses with flashing red lights and other exterior features proposed in section 1310.11(c)(1)–(5) has been withdrawn from the final regulation. The bus monitor or another adult must accompany every child boarding or exiting the bus. The word “should” which appeared in the NPRM was changed to “must” to clarify that this is a requirement and not a recommendation.

Section 1310.20(b)(7)

The section proposed establishment of specific procedures in the event alternate routes are required by hazardous weather or other situations.

Comments. Respondents requested clarification of the NPRM phrase “or other situations which may arise that could affect the safety of the children en route.”

Response. The final rule, while recognizing that every contingency cannot be anticipated, has listed several events that could lead to the need to find a different route. The intent is to assure that there are specific procedures in place in the event unplanned re-routing is required by any situation. Possible hazards, in addition to weather conditions such as ice or water build up, include water or natural gas line breaks, emergency road repair, natural disaster damage caused by earthquake,

tornado, or flood, a motor vehicle accident, a building fire, or a crime scene.

Section 1310.21—Safety Education

Section 1310.21(a)

This requirement proposed that Head Start programs should provide pedestrian safety training to caregivers and children who do not receive Head Start transportation.

Comments. All respondents supported this section. It was noted that programs will need to use careful practices to emphasize that preschool age children should not be crossing the street alone. Also, there was a suggestion that the phrase “as developmentally appropriate” be included in the section.

Response. We have re-worded the final rule slightly to emphasize that preschool children must not cross the street alone. We have also specified that pedestrian safety teaching must be appropriate for each child’s development. Finally, we removed specific content requirements so grantees may design training to meet individual community needs and conditions.

Section 1310.21(b)(1)–(5)

Paragraph (b) identified the safety instruction that Head Start programs would be required to provide to children transported to and from the program.

Comments. Comments were submitted suggesting the safety education be included in the daily lesson plan and that nationally produced videos be supplied for programs to use for safety instruction.

Response. The final rule remains unchanged except that the term “bus” is changed to “vehicle” to clarify applicability to various transportation possibilities. The rule defines the content safety teaching must include, but leaves the method to the local program.

Section 1310.21(c) (re-designated Section 1310.21(c)(1) in the final rule)

Section 1310.21(e) (re-designated as Section 1310.21(c)(2) in the final rule)

Paragraph (e) proposed that child and caregiver safety training should occur within the first five days of the program year.

Comments. There were many objections that the five-day time limit is unreasonable and, in some cases, impossible.

Response. As suggested by respondents, the final rule was modified to allow that safety instruction must

occur within the first thirty days of the program year.

Section 1310.21(f) (re-designated as Section 1310.21(d) in the final rule)

This section proposed that a minimum of two bus evacuation drills per year in addition to the one required under section 1310.21 (b)(5) be required.

Comments. The comments ranged from recommending monthly evacuation drills to suggesting that the drills themselves could pose a safety risk and are unnecessary.

Response. The requirement is consistent with the pupil transportation regulations in many States and, therefore, remains unchanged in the final rule.

Section 1310.21(g) (re-designated as Section 1310.21(e) in the final rule)

Paragraph (g) proposed that teachers should develop daily activities to remind children of the safety procedures.

Comments. Some respondents questioned the need for daily lessons.

Response. The final rule requires staff to make safety reminders an integral, developmental and individualized part of program experiences rather than a discrete, daily, directly instructed lessons. The word “should” was replaced by “must” because passenger and pedestrian safety awareness are essential elements of safe transportation service. Based on data indicating that most school bus related fatalities occur when a child is in the loading zone, NHTSA states that “educating children on how to be safe pedestrians is fundamental to school bus safety” (*School Bus Safety: Safe Passage for America’s Children*, p.7)

Section 1310.22—Children With Disabilities

This section of the NPRM specified that transportation services to children with disabilities enrolled in Head Start comply with the Head Start performance Standards on Service for Children with Disabilities.

Comments. There were no significant comments to this section of the regulation. Other sections provoked concerns that the proposed rule would require all vehicles used for Head Start transportation be wheelchair accessible.

Response. Head Start and Early Head Start programs are currently obligated to meet the requirements of the Americans with Disabilities Act, Head Start Performance Standards on Services for Children with Disabilities and Section 504 of the Rehabilitation Act of 1973. Under these regulations they must accommodate the special needs of

children with disabilities. Paragraph (a) of this section in the final rule was amended to clarify that Head Start transportation services must be accessible and that children with disabilities should be transported on vehicles that meet the requirements for school buses or allowable alternate vehicles. Transportation provided under the home-based option is excepted from this provision unless the agency uses school buses or allowable alternate vehicles to transport other children enrolled in the home-based option. This exception has been created because it may not always be possible to ensure that when the agency does not regularly use school buses or allowable alternate vehicles to transport children receiving home-based services that an accessible school bus or allowable alternate vehicle will be available from another source when needed. The rule also specifies that, whenever possible, children with disabilities should be transported on the same vehicles used to transport other children in the program.

Section 1310.23—Coordinated Transportation

Section 1310.23 (a)(1) (re-designated under Section 1310.23(a) and 1310.23(b)(1) in the final rule)

Paragraphs (a) and (a)(1) proposed that Head Start grantees coordinate transportation resources with other human service agencies whenever possible to maximize access and efficiency. Agencies would be required to provide an analysis of the cost of providing transportation directly versus contracting for the service.

Comments. Many respondents cited examples of difficulties obtaining transportation services from other providers. In particular, it was noted that while public schools might like to transport Head Start children, they rarely have space available on their buses. Finally, respondents noted that the vehicles used by other human service agencies would likely not meet Head Start vehicle requirements.

Response. The NPRM was prefaced with the phrase “whenever possible and to the extent feasible.” It is understood that the opportunities for coordinated transportation services will vary across communities. The final rule was changed to clarify transportation coordination activities in which Head Start transportation providers will participate whenever possible. The phrase “coordinate transportation services as follows” was deleted from the final rule as it is unnecessary.

Section 1310.23(a)(3) (re-designated as § 1310.23(b)(3) in the final rule)

The NPRM stated that where no coordinated transportation system exists in a community, the Head Start grantee should make every effort to provide the impetus for the formation of a transportation coordinating council.

Comments. Respondents suggested that the language needs to more strongly emphasize recognition that, with the exception of the local education agency (LEA), Head Start may be the only transportation service provider operating in some communities.

Response. The phrases “make every effort” and “where feasible” in the NPRM were intended to reflect responsiveness to individual community needs. The requirement in the final rule specifies that when there is no coordinated transportation system, Head Start agencies will identify any other agencies providing transportation and support the establishment of a local transportation coordinating council where reasonable.

Section 1310.23(a)(4) (deleted from the final rule)

This item specified that records be maintained to document compliance with the coordination requirements.

Comments. Respondents objected to keeping additional records.

Response. We agree with the respondents that this paragraph posed an unnecessary burden and have deleted it from the final rule. However, programs are expected to support the continuity and efficiency of community transportation whenever possible.

VI. Impact Analysis

Executive Order 12866

Executive Order 12866 requires that regulations be drafted to ensure that they are consistent with the priorities and principles set forth in this Executive Order. The Department has determined that this rule is consistent with these priorities and principles. This final rule implements the statutory authority to promulgate regulations for the safe transportation of Head Start children.

Congress made no additional appropriation to fund this new authority, however, and so any money spent toward the purchase of vehicles, additional personnel, training or other purposes related to this regulation is money that would have been spent otherwise by the program or other programs from the same appropriation amount. We believe that we have focused these rules in ways that

encourage maximum cost-effectiveness in transportation spending decisions.

Executive Order 13132

Executive Order 13132 on Federalism applies to policies that have federalism implications, defined as “regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.” This rule does not have federalism impacts as defined in the Executive Order.

The Head Start Bureau surveyed the States to determine the applicability of State pupil transportation regulations to the Head Start program and learn about each States pupil transportation system. The Bureau also consulted extensively with Head Start programs and the Department of Transportation in the development of the regulation.

Family Well-Being Impact

As required by Section 654 of the Treasury and General Government Appropriation Act of 1999, we have assessed the impact of this final rule on family well-being. This rule will improve the safety of preschool children being transported to and from Head Start programs and promote pedestrian and passenger safety training to adults and children.

Regulatory Flexibility Act of 1980

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) requires the Federal government to anticipate and reduce the impact of rules and paperwork requirements on small businesses. For each rule with a “significant economic impact on a substantial number of small entities” an analysis must be prepared describing the rule’s impact on small entities. Small entities are defined by the Act to include small businesses, small non-profit organizations and small governmental entities. These regulations would affect small entities. However, it should be noted that many Head Start agencies already provide transportation services in accordance with State and local requirements. Furthermore, the increased costs associated with implementing this regulation’s provisions are small and well within grantees’ capacity to manage. The total estimate of \$18.9 million, less than one-third of one-percent of Head Start’s annual budget, is comprised of three requirements. These are: \$4.8 million to employ additional bus monitors for those relatively few programs currently operating vehicles without monitors;

\$10 million to recruit and retain qualified bus drivers with Commercial Driver's Licenses for programs currently using drivers without the credential; and \$4.1 million to purchase child safety restraint systems. ACF acknowledges that compliant vehicles can, in some cases, be more costly than non-compliant vehicles. However, these additional costs are generally offset by the fact that compliant vehicles may last longer, accommodate more children, and incur lower insurance costs than non-compliant vehicles.

Currently, approximately 75 percent of all programs offer transportation services to some or all of their enrolled children and about 53 percent of all Head Start enrolled children receive transportation services. It is not anticipated that the implementation of the rule will cause any significant change in the numbers of children being transported.

We believe that meeting the requirements of this regulation is feasible and will not impose excessive burden because we are providing a five-year phase-in period for compliance with vehicle requirements, a three-year compliance period for child safety restraint systems, and a twelve-month compliance period for other provisions of the rule. The five-year implementation period was adopted in response to comments elicited by the NPRM indicating that the useful life of a vehicle may be longer than the three years proposed in the NPRM. Therefore, the potential financial burden posed by the regulation will be significantly offset by avoiding the premature replacement of vehicles. The five-year period is further supported by the fact that 20–30 percent of the vehicles operated by Head Start are replaced each year. The rule offers ample margins to absorb the useful life of most existing vehicles. The financial burden on Head Start agencies that acquire vehicles meeting the standards in these regulations is further eased by a provision in the Head Start Act which authorizes the Secretary to allow Head Start grantees to use grant funds to pay the cost of amortizing the principal and the interest on loans to finance the purchase of vehicles (42 U.S.C. 9839(g)(2)(C)). Finally, grantees have been instructed for several years to purchase only conforming vehicles with Federal funds, so the majority of vehicles in the existing fleet are school buses or qualify as allowable alternate vehicles. For the reasons outlined above, no additional costs are anticipated related to vehicle replacement.

The potential burden imposed by the transportation regulation's requirement

for bus monitors is lessened by the fact that Head Start agencies that directly operate transportation services already employ more than 7,500 bus monitors. Many other organizations providing transportation services to children enrolled in Head Start also currently, either voluntarily or in response to State or local regulation, staff vehicles providing transportation to Head Start and Early Head Start agencies with bus monitors in addition to the driver. This part of the regulation has a three-year implementation period to ease the impact by providing planning time for transportation providers not currently employing or using volunteer bus monitors. In addition, many bus monitors fulfill dual roles, such as kitchen aide or teacher aide and bus monitor. This may be financially advantageous to both the employee and the employer and represents a mechanism to further reduce the impact of the provisions.

The regulation specifies that agencies must offer transportation assistance to families when transportation services are not provided through the Head Start program. This requirement is consistent with section 1304.41(a)(2) which directs grantee and delegate agencies to "promote the access of children and families to community services that are responsive to their needs * * *". Because such assistance is an integral element of the ongoing work of grantees and delegate agencies, the provision poses no additional burden.

The decision to require two-way communication capacity on vehicles was carefully weighed in consideration of both its contributions to improved safety and increased cost. Many vehicles that transport children are now supplied with two-way communication devices. While the requirement represents an expense for some operators, the flexibility regarding type of equipment and the steadily decreasing cost for communication equipment suggest a minimal financial burden.

Head Start and Early Head Start grantees and delegate agencies that currently rely on drivers who do not possess Commercial Drivers Licenses (CDLs) may find an increased cost associated with recruiting and retaining drivers with that license or retaining transportation services from another organization that supplies drivers with CDLs. However, in 1993, the Administration for Children and Families issued an Information Memorandum (ACYF-IM-9310) advising Head Start grantees and delegate agencies of the requirement that any vehicle designed to carry 16 or more passengers must be operated by a

driver with a CDL. Many drivers providing Head Start transportation services currently possess CDLs and there is not an anticipated increase in the overall number of drivers, therefore; the burden of the provision is diminished.

Substantial attention was dedicated to assessing alternative methods for improving transportation safety through channels other than the provisions of this regulation. Extensive research, the strongly worded recommendations of the National Transportation Safety Board and Head Start's 35-year history providing transportation services to very young children guided development of each of the regulation's provisions.

For example, some respondents suggested that the adult-to-child ratio while children are being transported should be the same as the one required in Head Start classrooms. That would result in, depending on the children's ages, between one adult for every nine children and one adult for every four children. Another commenter indicated that bus monitors are not necessary at all as the driver can handle vehicle operation and child safety needs without assistance. The decision to require a minimum of one bus monitor per vehicle ensures that children's safety needs will be met, the driver can focus primarily on operating the vehicle, and that the burden is reasonable. One monitor is considered adequate during transportation, but not in the classroom, because children are not mobile while riding the vehicle and the space is contained. The NPRM provisions required the exclusive use of vehicles meeting the Federal standards for a school bus in providing Head Start transportation services. The provision was modified in the final rule to permit the use of an allowable alternate vehicle. The alternate vehicle provides a higher degree of flexibility for transportation providers and is responsive to many of the comments elicited by the NPRM.

We believe that as Head Start agencies become more familiar with these requirements, any additional burden will be rendered less significant through the improved transportation safety for Head Start children. For these reasons, the Secretary certifies that these rules will not have a significant impact on substantial numbers of small entities.

Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act (Pub. L. 104–4) requires agencies to prepare an assessment of anticipated costs and benefits before proposing any rule that may result in an expenditure by State, local, and tribal governments,

in the aggregate, or by the private sector, of \$100,000,000 or more in any one year (adjusted annually for inflation). This rule does not impose any mandates on State, local, or tribal governments, or the private sector that will result in an expenditure of \$100,000,000 or more in any one year. Resources presently allocated by Head Start programs for transportation services are substantial and may be supplemented as necessary to meet additional requirements posed by the rule over the course of the implementation period.

Congressional Review

This rule is not a major rule as defined in 5 U.S.C., Chapter 8.

Paperwork Reduction Act

Under the Paperwork Reduction Act of 1980, Public Law 96–511, all Departments are required to submit to the Office of Management and Budget (OMB) for review and approval any reporting or record-keeping requirement inherent in a proposed or final rule. This final rule contains no new information collection requirements.

List of Subjects in 45 CFR Part 1310

Head Start, Reporting and recordkeeping requirements, Transportation.

(Catalog of Federal domestic Assistance Program Number 93.600, Project Head Start)

Dated: September 6, 2000.

Olivia A. Golden,

Assistant Secretary for Children and Families.

Approved: October 11, 2000.

Donna E. Shalala,

Secretary.

For the reasons set forth in the Preamble, 45 CFR Chapter XIII is amended by adding Part 1310 as follows:

PART 1310—HEAD START TRANSPORTATION

Subpart A—General

Sec.

1310.1 Purpose.

1310.2 Applicability.

1310.3 Definitions.

Subpart B—Transportation Requirements

1310.10 General.

1310.11 Child Restraint Systems.

1310.12 Required use of School Buses or Allowable Alternate Vehicles.

1310.13 Maintenance of vehicles.

1310.14 Inspection of new vehicles at time of delivery.

1310.15 Operation of vehicles.

1310.16 Driver qualifications.

1310.17 Driver and bus monitor training.

Subpart C—Special Requirements

1310.20 Trip routing.

1310.21 Safety education.

1310.22 Children with disabilities.

1310.23 Coordinated transportation.

Authority: 42 U.S.C. 9801 *et seq.*

Subpart A—General

§ 1310.1 Purpose.

Under the authority of sections 640(i) and 645A(b)(9) of the Head Start Act (42 U.S.C. 9801 *et seq.*), this part prescribes regulations on safety features and the safe operation of vehicles used to transport children participating in Head Start and Early Head Start programs. Under the authority of sections 644(a) and (c) and 645A(b)(9) of the Head Start Act, this part also requires Head Start, Early Head Start, and delegate agencies to provide training in pedestrian safety and to make reasonable efforts to coordinate transportation resources to control costs and to improve the quality and the availability of transportation services.

§ 1310.2 Applicability.

(a) This rule applies to all Head Start and Early Head Start agencies, and their delegate agencies (hereafter, agency or agencies), including those that provide transportation services, with the exceptions provided in this section, regardless of whether such transportation is provided directly on agency owned or leased vehicles or through arrangement with a private or public transportation provider. Transportation services to children served under the home-based Option for Head Start and Early Head Start services are excluded from the requirements of 45 CFR 1310.12, 1310.15(c), and 1310.16. Except when there is an applicable State or local requirement that sets a higher standard on a matter covered by this part, agencies must comply with requirements of this part.

(b) Sections 1310.12(a) and 1310.22(a) of this part are effective January 18, 2006. Sections 1310.11 and 1310.15(c) of this part are effective January 20, 2004. Paragraph (c) of this section and § 1310.12(b) of this part are effective February 20, 2001. All other provisions of this part are effective January 18, 2002.

(c) Effective February 20, 2001 an agency may request a waiver of specific requirements of this part, except for the requirements of this paragraph. Requests for waivers must be made in writing to the responsible Health and Human Services (HHS) official, as part of an agency's annual application for financial assistance or amendment thereto, based on good cause. "Good cause" for a waiver will exist when adherence to a requirement of this part

would itself create a safety hazard in the circumstances faced by the agency. Under no circumstance will the cost of complying with one or more of the specific requirements of this part constitute good cause. The responsible HHS official is not authorized to waive any requirements of the Federal Motor Vehicle Safety Standards (FMVSS) made applicable to any class of vehicle under 49 CFR part 571. The responsible HHS official shall have the right to require such documentation as the official deems necessary in support of a request for a waiver. Approvals of waiver requests must be in writing, be signed by the responsible HHS official, and be based on good cause.

§ 1310.3 Definitions.

Agency as used in this regulation means a Head Start or Early Head Start or delegate agency unless otherwise designated.

Agency Providing Transportation Services means an agency providing transportation services, either directly or through another arrangement with a private or public transportation provider, to children enrolled in its Head Start or Early Head Start program.

Allowable Alternate Vehicle means a vehicle designed for carrying eleven or more people, including the driver, that meets all the Federal Motor Vehicle Safety Standards applicable to school buses, except 49 CFR 571.108 and 571.131.

Bus monitor means a person with specific responsibilities for assisting the driver in ensuring the safety of the children while they ride, board, or exit the vehicle and for assisting the driver during emergencies.

Child Restraint System means any device designed to restrain, seat, or position children who weigh 50 pounds or less which meets the requirements of Federal Motor Vehicle Safety Standard No. 213, Child Restraint Systems, 49 CFR 571.213.

Commercial Driver's License (CDL) means a license issued by a State or other jurisdiction, in accordance with the standards contained in 49 CFR part 383, to an individual which authorizes the individual to operate a class of commercial motor vehicles.

Delegate Agency means a local public or private not-profit or for-profit agency to which a Head Start or Early Head Start agency has delegated all or part of its responsibility for operation of a Head Start program.

Early Head Start Agency means a public or private non-profit or for-profit agency or delegate agency designated to operate an Early Head Start program

pursuant to Section 645A of the Head Start Act.

Early Head Start Program means a program of services provided by an Early Head Start Agency funded under the Head Start Act.

Federal Motor Vehicle Safety Standards (FMVSS) means the National Highway and Traffic Safety Administration's standards for motor vehicles and motor vehicle equipment (49 CFR part 571) established under section 30111 of Title 49, United States Code.

Fixed route means the established routes to be traveled on a regular basis by vehicles that transport children to and from Head Start or Early Head Start program activities, and which include specifically designated stops where children board or exit the vehicle.

Head Start Agency, means a local public or private non-profit or for-profit agency designated to operate a Head Start program pursuant to Section 641 of the Head Start Act.

Head Start Program means a program of services provided by a Head Start agency or delegate agency and funded under the Head Start Act.

National Driver Register means the National Highway Traffic Safety Administration's automated system for assisting State driver license officials in obtaining information regarding the driving records of individuals who have been denied licenses for cause; had their licenses denied for cause, had their licenses canceled, revoked, or suspended for cause, or have been convicted of certain serious driving offenses.

National Standards for School Buses and School Bus Operations means the recommendations resulting from the Eleventh National Conference on School Transportation, May 1990, published by the National Safety Council, Chicago, Illinois.

Reverse beeper means a device which automatically sounds an intermittent alarm whenever the vehicle is engaged in reverse.

School Bus means a motor vehicle designed for carrying 11 or more persons (including the driver) and which complies with the Federal Motor Vehicle Safety Standards applicable to school buses.

Seat Belt Cutter means a special device that may be used in an emergency to rapidly cut through the seat belts used on vehicles in conjunction with child restraint systems.

State means any of the several States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, any territory or possession of the

United States, or any agency or instrumentality of a State exclusive of local governments.

Transportation Services means the planned transporting of children to and from sites where an agency provides services funded under the Head Start Act. Transportation services can involve the pick-up and discharge of children at regularly scheduled times and pre-arranged sites, including trips between children's homes and program settings. The term includes services provided directly by the Head Start and Early Head Start grantee or delegate agency and services which such agencies arrange to be provided by another organization or an individual. Incidental trips, such as transporting a sick child home before the end of the day, or such as might be required to transport small groups of children to and from necessary services, are not included under the term.

Trip routing means the determination of the fixed routes to be traveled on a regular basis for the purpose of transporting children to and from the Head Start or Early Head Start program or activities.

Subpart B—Transportation Requirements

§ 1310.10 General.

(a) Each agency must assist as many families as possible who need transportation in order for their children to attend the program in obtaining that transportation.

(b) When an agency has decided not to provide transportation services, either for all or a portion of the children, it must provide reasonable assistance to the families of such children to arrange transportation to and from its activities. The specific types of assistance being offered must be made clear to all prospective families in the program's recruitment announcements.

(c) Each agency providing transportation services is responsible for compliance with the applicable requirements of this Part. When an agency provides transportation through another organization or an individual, the agency must ensure the compliance of the transportation provider with the requirements of this part.

(d) Each agency providing transportation services, must ensure that each vehicle used in providing such services is equipped with:

- (1) a communication system to call for assistance in case of an emergency;
- (2) safety equipment for use in an emergency, including a charged fire extinguisher that is properly mounted

near the driver's seat and a sign indicating its location;

(3) a first aid kit and a sign indicating the location of such equipment; and

(4) a seat belt cutter for use in an emergency evacuation and a sign indicating its location.

(e) Each agency providing transportation services must ensure that any auxiliary seating, such as temporary or folding jump seats, used in vehicles of any type providing such services are built into the vehicle by the manufacturer as part of its standard design, are maintained in proper working order, and are inspected as part of the annual inspection required under § 1310.13(a) of this subpart.

(f) Each agency providing transportation services must ensure that all accidents involving vehicles that transport children receiving such services are reported in accordance with applicable State requirements.

(g) Each agency must ensure that children are only released to a parent or legal guardian, or other individual identified in writing by the parent or legal guardian. This regulation applies when children are not transported and are picked up from the classroom, as well as when they are dropped off by a vehicle. Agencies must maintain lists of the persons, including alternates in case of emergency, and up-to-date child rosters must be maintained at all times to ensure that no child is left behind, either at the classroom or on the vehicle at the end of the route.

§ 1310.11 Child Restraint Systems.

Effective January 20, 2004, each agency providing transportation services must ensure that each vehicle used to transport children receiving such services is equipped for use of height- and weight-appropriate child safety restraint systems.

§ 1310.12 Required use of School Buses or Allowable Alternate Vehicles.

(a) Effective January 18, 2006, each agency providing transportation services must ensure that children enrolled in its program are transported in school buses or allowable alternate vehicles that are equipped for use of height- and weight-appropriate child restraint systems, and that have reverse beepers. As provided in 45 CFR 1310.2(a), this paragraph does not apply to transportation services to children served under the home-based option for Head Start and Early Head Start.

(b) Effective February 20, 2001, each Head Start and Early Head Start agency receiving permission from the responsible HHS official to purchase a vehicle with grant funds for use in

providing transportation services to children in its program or a delegate agency's program must ensure that the funds are used to purchase a vehicle that is either a school bus or an allowable alternate vehicle and is equipped

(1) for use of height- and weight-appropriate child restraint systems; and

(2) with a reverse beeper.

(c) As provided in 45 CFR 1310.2(a), paragraph (b) of this section does not apply to vehicles purchased for use in transporting children served under the home-based option for Head Start and Early Head Start.

§ 1310.13 Maintenance of vehicles.

Each agency providing transportation services must ensure that vehicles used to provide such services are maintained in safe operating condition at all times. The organization operating the vehicle must establish and implement procedures for:

(a) a thorough safety inspection of each vehicle on at least an annual basis through an inspection program licensed or operated by the State;

(b) systematic preventive maintenance on such vehicles; and

(c) daily pre-trip inspection of the vehicles by the driver.

§ 1310.14 Inspection of new vehicles at the time of delivery.

Each agency providing transportation services must ensure that bid announcements for school buses and allowable alternate vehicles for use in transporting children in its program include the correct specifications and a clear statement of the vehicle's intended use. Such agencies must ensure that there is a prescribed procedure for examining such vehicles at the time of delivery to ensure that they are equipped in accordance with the bid specifications and that the manufacturer's certification of compliance with the applicable FMVSS is included with the vehicle.

§ 1310.15 Operation of vehicles.

Each agency providing transportation services, either directly or through an arrangement with another organization or an individual, to children enrolled in its program must ensure that:

(a) On a vehicle equipped for use of such devices, any child weighing 50 pounds or less is seated in a child restraint system appropriate to the height and weight of the child while the vehicle is in motion.

(b) Baggage and other items transported in the passenger compartment are properly stored and secured and the aisles remain clear and

the doors and emergency exits remain unobstructed at all times.

(c) Effective January 20, 2004, there is at least one bus monitor on board at all times, with additional bus monitors provided as necessary, such as when needed to accommodate the needs of children with disabilities. As provided in 45 CFR 1310.2(a), this paragraph does not apply to transportation services to children served under the home-based option for Head Start and Early Head Start.

(d) Except for bus monitors who are assisting children, all vehicle occupants must be seated and wearing height- and weight- appropriate safety restraints while the vehicle is in motion.

§ 1310.16 Driver qualifications.

(a) Each agency providing transportation services must ensure that persons who drive vehicles used to provide such services, at a minimum:

(1) in States where such licenses are granted, have a valid Commercial Driver's License (CDL) for vehicles in the same class as the vehicle the driver will operating; and

(2) meet any physical, mental, and other requirements established under applicable law or regulations as necessary to perform job-related functions with any necessary reasonable accommodations.

(b) Each agency providing transportation services must ensure that there is an applicant review process for use in hiring drivers, that applicants for driver positions must be advised of the specific background checks required at the time application is made, and that there are criteria for the rejection of unacceptable applicants. The applicant review procedure must include, at minimum:

(1) all elements specified in 45 CFR 1304.52(b), with additional disclosure by the applicant of all moving traffic violations, regardless of penalty;

(2) a check of the applicant's driving record through the appropriate State agency, including a check of the applicant's record through the National Driver Register, if available in the State; and

(3) after a conditional offer of employment to the applicant and before the applicant begins work as a driver, a medical examination, performed by a licensed doctor of medicine or osteopathy, establishing that the individual possesses the physical ability to perform any job-related functions with any necessary accommodations.

(c) As provided in 45 CFR 1310.2(a), this section does not apply to transportation services to children

served under the home-based option for Head Start and Early Head Start.

§ 1310.17 Driver and bus monitor training.

(a) Each agency providing transportation services must ensure that persons employed to drive vehicles used in providing such services will have received the training required under paragraphs (b) and (c) of this section no later than 90 days after the effective date of this section as established by § 1310.2 of this part. The agency must ensure that drivers who are hired to drive vehicles used in providing transportation services after the close of the 90 day period must receive the training required under paragraphs (b) and (c) prior to transporting any child enrolled in the agency's program. The agency must further ensure that at least annually after receiving the training required under paragraphs (b) and (c), all drivers who drive vehicles used to provide such services receive the training required under paragraph (d) of this section.

(b) Drivers must receive a combination of classroom instruction and behind-the-wheel instruction sufficient to enable each driver to:

(1) operate the vehicle in a safe and efficient manner;

(2) safely run a fixed route, including loading and unloading children, stopping at railroad crossings and performing other specialized driving maneuvers;

(3) administer basic first aid in case of injury;

(4) handle emergency situations, including vehicle evacuation procedures;

(5) operate any special equipment, such as wheelchair lifts, assistance devices or special occupant restraints;

(6) conduct routine maintenance and safety checks of the vehicle; and

(7) maintain accurate records as necessary.

(c) Drivers must also receive instruction on the topics listed in 45 CFR 1304.52(k)(1), (2) and (3)(i) and the provisions of the Head Start Program Performance Standards for Children with Disabilities (45 CFR 1308) relating to transportation services for children with disabilities.

(d) Drivers must receive refresher training courses including the topics listed in paragraphs (b) and (c) of this section and any additional necessary training to meet the requirements applicable in the State where the agency operates.

(e) Each agency providing transportation services must ensure that drivers who transport children receiving

the services qualify under the applicable driver training requirements in its State.

(f) Each agency providing transportation services must ensure that:

- (1) the annual evaluation of each driver of a vehicle used to provide such services includes an on-board observation of road performance; and
- (2) before bus monitors assigned to vehicles used to provide such services begin their duties, they are trained on child boarding and exiting procedure, use of child restraint systems, any required paperwork, responses to emergencies, emergency evacuation procedures, use of special equipment, child pick-up and release procedures and pre- and post-trip vehicle check.

Subpart C—Special Requirements

§ 1310.20 Trip routing.

(a) Each agency providing transportation services must ensure that in planning fixed routes the safety of the children being transported is the primary consideration.

(b) The agency must also ensure that the following basic principles of trip routing are adhered to:

(1) The time a child is in transit to and from the Head Start or Early Head Start program must not exceed one hour unless there is no shorter route available or any alternative shorter route is either unsafe or impractical.

(2) Vehicles must not be loaded beyond the maximum passenger capacity at any time.

(3) Vehicles must not be required to back up or make “U” turns, except when necessary for reasons of safety or because of physical barriers.

(4) Stops must be located to minimize traffic disruptions and to afford the driver a good field of view in front of and behind the vehicle.

(5) When possible, stops must be located to eliminate the need for children to cross the street or highway to board or leave the vehicle.

(6) If children must cross the street before boarding or after leaving the vehicle because curbside drop off or pick up is impossible, they must be escorted across the street by the bus monitor or another adult.

(7) Specific procedures must be established for use of alternate routes in the case of hazardous conditions that could affect the safety of the children who are being transported, such as ice or water build up, natural gas line breaks, or emergency road closing. In selecting among alternatives, transportation providers must choose routes that comply as much as possible with the requirements of this section.

§ 1310.21 Safety education.

(a) Each agency must provide training for parents and children in pedestrian safety. The training provided to children must be developmentally appropriate and an integral part of program experiences. The need for an adult to accompany a preschool child while crossing the street must be emphasized in the training provided to parents and children. The required transportation and pedestrian safety education of children and parents, except for the bus evacuation drills required by paragraph (d) of this section, must be provided within the first thirty days of the program year.

(b) Each agency providing transportation services, directly or through another organization or an individual, must ensure that children who receive such services are taught:

- (1) safe riding practices;
- (2) safety procedures for boarding and leaving the vehicle;
- (3) safety procedures in crossing the street to and from the vehicle at stops;
- (4) recognition of the danger zones around the vehicle; and
- (5) emergency evacuation procedures, including participating in an emergency evacuation drill conducted on the vehicle the child will be riding.

(c) Each agency providing transportation services must provide training for parents that:

- (1) emphasizes the importance of escorting their children to the vehicle stop and the importance of reinforcing the training provided to children regarding vehicle safety; and
- (2) complements the training provided to their children so that safety practices can be reinforced both in Head Start and at home by the parent.

(d) Each agency providing transportation services must ensure that at least two bus evacuation drills in addition to the one required under paragraph (b)(5) of this section are conducted during the program year.

(e) Each agency providing transportation services must develop activities to remind children of the safety procedures. These activities must be developmentally appropriate, individualized and be an integral part of the Head Start or Early Head Start program activities.

§ 1310.22 Children with disabilities.

(a) Effective January 18, 2006 each agency must ensure that there are school buses or allowable alternate vehicles adapted or designed for transportation of children with disabilities available as necessary to transport such children enrolled in the program. This requirement does not apply to the

transportation of children receiving home-based services unless school buses or allowable alternate vehicles are used to transport the other children served under the home-based option by the grantee. Whenever possible, children with disabilities must be transported in the same vehicles used to transport other children enrolled in the Head Start or Early Head Start program.

(b) Each Head Start, Early Head Start and delegate agency must ensure compliance with the Americans with Disabilities Act (42 U.S.C. 12101 *et seq.*), the HHS regulations at 45 CFR part 84, implementing Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794), and the Head Start Program Performance Standards on Services for Children with Disabilities (45 CFR part 1308) as they apply to transportation services.

(c) Each agency must specify any special transportation requirements for a child with a disability when preparing the child's Individual Education Plan (IEP) or Individual Family Service Plan (IFSP), and ensure that in all cases special transportation requirements in a child's IEP or IFSP are followed, including:

- (1) special pick-up and drop-off requirements;
- (2) special seating requirements;
- (3) special equipment needs;
- (4) any special assistance that may be required; and
- (5) any special training for bus drivers and monitors.

§ 1310.23 Coordinated transportation.

(a) Each agency providing transportation services must make reasonable efforts to coordinate transportation resources with other human services agencies in its community in order to control costs and to improve the quality and the availability of transportation services.

(b) At a minimum, the agency must:

(1) identify the true costs of providing transportation in order to knowledgeably compare the costs of providing transportation directly versus contracting for the service;

(2) explore the option of participating in any coordinated public or private transportation systems existing in the community; and

(3) where no coordinated public or private non-profit transportation system exists in the community, make every effort to identify other human services agencies also providing transportation services and, where reasonable, to participate in the establishment of a

local transportation coordinating
council.

Part IX

Department of Labor

**Occupational Safety and Health
Administration**

**29 CFR Part 1910
Occupational Exposure to Bloodborne
Pathogens; Needlesticks and Other Sharps
Injuries; Final Rule**

DEPARTMENT OF LABOR**Occupational Safety and Health Administration****29 CFR Part 1910****[Docket No. H370A]****RIN 1218-AB85****Occupational Exposure to Bloodborne Pathogens; Needlestick and Other Sharps Injuries; Final Rule**

AGENCY: Occupational Safety and Health Administration (OSHA), Department of Labor

ACTION: Final Rule; Request for Comment on the Information Collection (Paperwork) Requirements

SUMMARY: The Occupational Safety and Health Administration is revising the Bloodborne Pathogens standard in conformance with the requirements of the Needlestick Safety and Prevention Act. This Act directs OSHA to revise the Bloodborne Pathogens standard to include new examples in the definition of engineering controls along with two new definitions; to require that Exposure Control Plans reflect how employers implement new developments in control technology; to require employers to solicit input from employees responsible for direct patient care in the identification, evaluation, and selection of engineering and work practice controls; and to require certain employers to establish and maintain a log of percutaneous injuries from contaminated sharps.

DATES: Effective Date: The effective date is April 18, 2001. Written comments: Written comments on the Information Collection Requirements must be submitted on or before March 19, 2001.

ADDRESSES: Copies of materials in the docket may be obtained from the OSHA Docket Office, Room N-2625, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210, Telephone (202) 693-2350. Referenced documents are included in Docket H370A and are identified by the exhibit number indicated.

Submit written comments on the Information Collection Requirements to the Docket Office, Docket No. ICR-0180 (2001), OSHA, U.S. Department of Labor, Room N-2625, 200 Constitution Avenue, NW., Washington, DC 20210; telephone: (202) 693-2350. Commenters may transmit written comments of 10 pages or less in length by facsimile to (202) 693-1648.

In compliance with 28 U.S.C. 2112(a), the Agency designates the Associate Solicitor for Occupational Safety and

Health, Office of the Solicitor, Room S-4004, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210, as the recipient of petitions for review of the standard.

FOR FURTHER INFORMATION CONTACT:

Bonnie Friedman, Director, OSHA Office of Public Affairs, Room N-3647, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210. Telephone: (202) 693-1999.

SUPPLEMENTARY INFORMATION:**I. Events Leading to the Amended Final Rule**

Blood and other potentially infectious materials have long been recognized as a potential threat to the health of employees who are exposed to these materials by percutaneous contact (penetration of the skin). Injuries from contaminated needles and other sharps have been associated with an increased risk of disease from more than 20 infectious agents (Exs. 3-172GG, 3-274C). The primary agents of concern in current occupational settings are the human immunodeficiency virus (HIV), hepatitis B virus (HBV), and hepatitis C virus (HCV).

To reduce the health risk to workers whose duties involve exposure to blood or other potentially infectious materials, OSHA promulgated the Bloodborne Pathogens (BBP) standard (29 CFR 1910.1030) on December 6, 1991 (56 FR 64004). The provisions of the standard were based on the Agency's determination that a combination of engineering and work practice controls, personal protective equipment, training, medical surveillance, hepatitis B vaccination, signs and labels, and other requirements would minimize the risk of disease transmission.

Needlesticks and other percutaneous injuries resulting in exposure to blood or other potentially infectious materials continue to be of concern due to the high frequency of their occurrence and the severity of the health effects associated with exposure. The Centers for Disease Control and Prevention has estimated that healthcare workers in hospital settings sustain 384,325 percutaneous injuries involving contaminated sharps annually (Ex. 5-4). When non-hospital healthcare workers are included, the best estimate of the number of percutaneous injuries involving contaminated sharps is 590,164 per year (Ex. 3-172V). When these injuries involve exposure to infectious agents, the affected workers are at risk of contracting disease. Workers may also suffer from adverse side effects of drugs used for post-exposure prophylaxis and from

psychological stress due to the threat of infection following an exposure incident.

Since publication of the BBP standard, a wide variety of medical devices have been developed to reduce the risk of needlesticks and other sharps injuries. These "safer medical devices" replace sharps with non-needle devices or incorporate safety features designed to reduce the likelihood of injury. In a September 9, 1998, Request for Information (RFI), OSHA solicited information on occupational exposure to bloodborne pathogens due to percutaneous injury (63 FR 48250). Based in part on the responses to the RFI, the Agency has pursued an approach to minimize the risk of occupational exposure to bloodborne pathogens that involves three components. First, the Agency proposed that the revised Recordkeeping standard (29 CFR 1904) include a requirement that all percutaneous injuries from contaminated needles and other sharps be recorded on OSHA logs (61 FR 4030). Second, OSHA issued a revised compliance directive for the BBP standard on November 5, 1999, to reflect advances made in medical technology and treatment. The directive guides OSHA's compliance officers in enforcing the standard and ensures that consistent inspection procedures are followed. Third, the Agency placed amendment of the bloodborne pathogens standard on its regulatory agenda to more effectively address sharps injuries.

Congress was prompted to take action in response to growing concern over bloodborne pathogen exposures from sharps injuries and in response to recent technological developments that increase employee protection. On November 6, 2000, the Needlestick Safety and Prevention Act was signed into law. The Act directs OSHA to revise the BBP standard in accordance with specific language included in the Act.

II. Statutory Authority

On November 6, 2000, President Clinton signed the Needlestick Safety and Prevention Act, Pub. L. 106-430. The Act requires OSHA to revise the BBP standard within six months of the Act's enactment. To facilitate expeditious completion of this directive, Congress explicitly exempted OSHA from procedural requirements generally attending rulemaking under OSH Act 6(b) and from the procedural requirements of the Administrative Procedure Act (5 U.S.C. 500 *et seq.*).

III. Summary and Explanation

The revisions to OSHA's BBP standard required under the Needlestick Safety and Prevention Act can be broadly categorized into four areas: modification of definitions relating to engineering controls; revision and updating of the Exposure Control Plan; solicitation of employee input; and recordkeeping.

The revised standard adds two additional terms to the definition section found in paragraph (b) and alters the definition of one other term. It adds "Sharps with Engineered Sharps Injury Protections" and defines this term as "a nonneedle sharp or a needle device used for withdrawing body fluids, accessing a vein or artery, or administering medications or other fluids, with a built-in safety feature or mechanism that effectively reduces the risk of an exposure incident." This term encompasses a broad array of devices that make injury involving a contaminated sharp less likely, and includes, but is not limited to, syringes with a sliding sheath that shields the attached needle after use; needles that retract into a syringe after use; shielded or retracting catheters used to access the bloodstream for intravenous administration of medication or fluids; and intravenous medication delivery systems that administer medication or fluids through a catheter port or connector site using a needle that is housed in a protective covering.

The revised standard also adds the term "Needleless Systems," which is defined as "a device that does not use needles for: (A) The collection of bodily fluids or withdrawal of body fluids after initial venous or arterial access is established; (B) the administration of medication or fluids; or (C) any other procedure involving the potential for occupational exposure to bloodborne pathogens due to percutaneous injuries from contaminated sharps." "Needleless Systems" provide an alternative to needles for the specified procedures, thereby reducing the risk of percutaneous injury involving contaminated sharps. Examples of needleless systems include, but are not limited to, intravenous medication delivery systems that administer medication or fluids through a catheter port or connector site using a blunt cannula or other non-needle connection, and jet injection systems that deliver subcutaneous or intramuscular injections of liquid medication through the skin without use of a needle.

The definition of "Engineering Controls" has been modified to include as examples "safer medical devices,

such as sharps with engineered sharps injury protections and needleless systems." This change clarifies that safer medical devices are considered to be engineering controls under the standard. The term "Engineering Controls" includes all control measures that isolate or remove a hazard from the workplace, encompassing not only sharps with engineered sharps injury protections and needleless systems but also other medical devices designed to reduce the risk of percutaneous exposure to bloodborne pathogens. Examples include blunt suture needles and plastic or mylar-wrapped glass capillary tubes, as well as controls that are not medical devices, such as sharps disposal containers and biosafety cabinets.

The expanded definitions reflect the intent of Congress to have OSHA amend the BBP standard to clarify

* * * the direction already provided by OSHA in its Compliance Directive; namely, that employers who have employees with occupational exposure to bloodborne pathogens must consider and, where appropriate, use effective engineering controls, including safer medical devices, in order to reduce the risk of injury from needlesticks and from other sharp medical instruments * * * (Ex. 5-3).

Thus, the revised definitions do not reflect any new requirements being placed on employers with regard to protecting workers from sharps injuries, but are meant only to clarify the original standard, and to reflect the development of new safer medical devices since that time.

Paragraph (c)(1)(iv) of the standard is revised to add new requirements to the annual review and update of the Exposure Control Plan. The review and update of the plan is now required to "(A) reflect changes in technology that eliminate or reduce exposure to bloodborne pathogens; and (B) document annually consideration and implementation of appropriate commercially available and effective safer medical devices designed to eliminate or minimize occupational exposure." Thus, the additional provisions require that employers, in their written Exposure Control Plans, account for innovations in procedure and technological developments that reduce the risk of exposure incidents. This would include, but would not be limited to, newly available medical devices designed to reduce the risk of percutaneous exposure to bloodborne pathogens. Consideration and implementation of safer medical devices could be documented in the Exposure Control Plan by describing the safer devices identified as candidates for

adoption; the method or methods used to evaluate devices and the results of evaluations; and justification for selection decisions. This information must be updated at least annually.

The revised Exposure Control Plan requirements make clear that employers must implement the safer medical devices that are appropriate, commercially available, and effective. No one medical device is appropriate in all circumstances of use. For purposes of this standard, an "appropriate" safer medical device includes only devices whose use, based on reasonable judgment in individual cases, will not jeopardize patient or employee safety or be medically contraindicated. Although new devices are being continually introduced, OSHA recognizes that a safer device may not be available for every situation. If a safer device is not available in the marketplace, the employer is not required to develop any such device. Furthermore, the revised requirements are limited to the safer medical devices that are considered to be "effective." For purposes of this standard, an "effective" safer medical device is a device that, based on reasonable judgment, will make an exposure incident involving a contaminated sharp less likely to occur in the application in which it is used.

Paragraph (c)(1)(v) of the revised standard now requires that "An employer, who is required to establish an Exposure Control Plan shall solicit input from non-managerial employees responsible for direct patient care who are potentially exposed to injuries from contaminated sharps in the identification, evaluation, and selection of effective engineering and work practice controls and shall document the solicitation in the Exposure Control Plan." This change represents a new requirement, which is performance-oriented. No specific procedures for obtaining employee input are prescribed. This provides the employer with flexibility to solicit employee input in any manner appropriate to the circumstances of the workplace. A dental office employing two hygienists, for example, may choose to conduct periodic conversations to discuss identification, evaluation, and selection of controls. A large hospital, on the other hand, would likely find that an effective process for soliciting employee input requires the implementation of more formal procedures. The solicitation of input required by the standard requires employers to take reasonable steps to obtain employee input in the identification, evaluation, and selection of controls. Methods for soliciting employee input may include

involvement in informal problem-solving groups; participation in safety audits, worksite inspections, or exposure incident investigations; participation in analysis of exposure incident data or in job or process hazard analysis; participation in the evaluation of devices through pilot testing; and involvement in a safety and health committee properly constituted and operated in conformance with the National Labor Relations Act.

Employee input can serve to assist the employer in overcoming obstacles to the successful implementation of control measures. A number of respondents to the RFI indicated that they encountered some resistance when new devices required staff members to adopt new techniques, or when staff members perceived that use of the device might have an adverse effect on the patient (e.g., Exs. 3-50, 3-79, 3-99, 3-133). As a way of addressing this resistance, staff involvement in the selection process can play an important role in the acceptance and proper use of safer medical devices (e.g., Exs. 3-18, 3-42, 3-56, 3-88, 3-324, 3-355). According to their experience, the participation of frontline workers can help to overcome the following barriers:

- Safer medical devices often require adjustments in technique, and a number of respondents noted that staff members are often reluctant to revise practices to which they have become accustomed.
- Equipment compatibility problems. With the broad array of devices being used in healthcare settings, it is critical to ensure that devices will work together when necessary.
- The need for continued evaluation of devices and the allotment of sufficient time for adequate device evaluation. After initial use by employees, some facilities found it necessary to replace the device originally selected with a more suitable device.

The Community Health Network (CHN) of San Francisco provides an example of a safety and health committee with responsibility for sharps injury prevention (Ex. 5-5). Representatives of both labor and management serve on the committee, and are provided with access to non-confidential information regarding bloodborne pathogen exposure incidents at CHN facilities. The committee is responsible for establishing criteria for safer devices; overseeing device evaluation by representative groups of device users; and selecting preferred devices for purchase. The committee is also responsible for developing safer

alternatives to work practices that are associated with exposure incidents.

The concept of involving a team in sharps injury prevention programs is supported by the American Hospital Association (AHA) in guidelines to assist hospitals and health systems in developing such programs (Ex. 5-1). According to AHA, a successful program revolves around communication, education, training, and collaboration. Among the specific steps recommended are assembling a multidisciplinary team that includes representation of frontline workers and departments using devices; selecting targeted devices for evaluation; pilot-testing of devices; and collecting data after a device is adopted to evaluate its impact.

The standard requires that employers seek input from non-managerial employees responsible for direct patient care who are potentially exposed to injuries from contaminated sharps. Employees involved in administering treatment or performing any procedure in the presence of an individual receiving care are considered to be involved in direct patient care. For example, an employee who uses a needle syringe to collect blood from patients in a nursing home, or an employee who administers flu vaccinations in a factory employee health unit, would both be considered to be involved in direct patient care and engaged in activities that put them at risk of direct exposure due to needlestick injuries. Employers may also choose to include other employees in the request for input, such as lab technicians, housekeeping staff, maintenance workers, and management-level personnel who may be at risk of injury involving contaminated sharps. An employer who is otherwise required to establish an Exposure Control Plan under the standard, but does not have any non-managerial employees responsible for direct patient care who are potentially exposed to injuries from contaminated sharps, is not required to solicit employee input with respect to this provision.

The revised standard does not require employers to request input from all potentially exposed employees involved in direct patient care; however, the employees involved by the employer should represent the range of exposure situations encountered in the workplace. Input from employees covered by a collective-bargaining agreement may also be requested through their authorized bargaining agent.

The revised standard requires that solicitation of input from employees be

documented in the Exposure Control Plan. Employers can meet this obligation by identifying the employees who were involved and describing the process by which input was requested. Employers should also describe the input obtained with regard to identification, evaluation, and selection of controls. Evidence that employee input has been sought can include, for example, meeting minutes, copies of documents used to request employee participation, or records of responses received from employees such as reports evaluating the effectiveness of a safer medical device in trial applications.

The requirement for solicitation of input from employees has been designated as paragraph (c)(1)(v) in the revised standard. The requirement that the Exposure Control Plan be made available to the Assistant Secretary of Labor for Occupational Safety and Health and the Director of the National Institute for Occupational Safety and Health upon request, previously designated as paragraph (c)(1)(v), has been moved and is now paragraph (c)(1)(vi) in the revised standard.

The recordkeeping requirements of the standard at paragraph (h) have been amended by adding paragraph (h)(5) to require that employers maintain a sharps injury log to serve as a tool for identifying high risk areas and evaluating devices. Paragraph (h)(5)(i) now states, "The employer shall establish and maintain a sharps injury log for the recording of percutaneous injuries from contaminated sharps. The information in the sharps injury log shall be recorded and maintained in such manner as to protect the confidentiality of the injured employee. The sharps injury log shall contain, at a minimum: (A) The type and brand of device involved in the incident, (B) the department or work area where the exposure incident occurred, and (C) an explanation of how the incident occurred." The sharps injury log must be maintained for the period required by 29 CFR 1904. The requirement to establish and maintain the log only applies to employers who are otherwise required to maintain a log of occupational injuries and illnesses under 29 CFR 1904 (OSHA's Recordkeeping rule).

The sharps injury log must include the specified minimum information regarding the device involved (if known), the location of the incident, and the description of the events that resulted in the injury. The level of detail presented should be sufficient to allow ready identification of the device, location, and circumstances surrounding an exposure incident (e.g.,

the procedure being performed, the body part affected, objects or substances involved and how they were involved) so that the intended evaluation of risk and device effectiveness can be accomplished.

Information in the sharps injury log must be recorded and maintained in a manner that protects the privacy of the injured employee. If data from the log are made available to other parties, any information that directly identifies an employee (e.g., name, address, social security number, payroll number) or information that could reasonably be used to identify indirectly a specific employee (e.g., exact age, date of initial employment) must be withheld.

The format of the sharps injury log is not specified. The employer is permitted to determine the format in which the log is maintained (e.g., paper or electronic), and may include information in addition to that required by the standard, so long as the privacy of injured workers is protected. The Agency recognizes that many employers already compile reports of percutaneous exposure incidents in a variety of ways. Existing mechanisms for collecting these reports will be considered sufficient to meet the requirements of the standard for maintaining a sharps injury log, provided that the information gathered meets the minimum requirements specified in the standard, and the confidentiality of the injured employee is protected.

Under newly published revisions to OSHA's Recordkeeping rule (29 CFR 1904), employers are required to record sharps injuries involving contaminated objects on the OSHA 300 Log of Work-Related Injuries and Illnesses and the OSHA 301 Injury and Illness Incident Report (the new forms replace the current 200 and 101 forms). When the revisions become effective, employers may elect to use the OSHA 300 and 301 forms to meet the sharps injury log requirements, provided two conditions are met. First, the employer must enter the type and brand of the device on either the 300 or 301 form. Second, the employer must maintain the records in a way that segregates sharps injuries from other types of work-related injuries and illnesses, or allows sharps injuries to be easily separated. For example, if OSHA 300 and 301 records are maintained on a computer, the employer must ensure that the computer is able to produce a record of sharps injuries that does not include other

types of work-related injuries and illnesses (i.e., through using a program that allows for sorting of entries by injury type). If records are kept on paper forms, the employer would need to use a separate page of the 300 Log for sharps injuries.

The revisions to the Recordkeeping rule will not become effective until January 1, 2002, at the earliest, and until then many sharps injuries involving contaminated objects will not be recordable on the OSHA log. Therefore, employers must keep a separate sharps log from the effective date of this rule until the revised Recordkeeping rule becomes effective.

These revisions to the BBP standard become effective April 18, 2001. Exposure Control Plans that are reviewed and updated on or after this effective date must reflect the requirements of the revised standard. Percutaneous exposure incidents that occur on or after this effective date must be recorded on the sharps injury log.

OSHA's BBP standard, including the amendments herein promulgated, is applicable to general industry and shipyard employment (as referenced in 29 CFR 1915.1030).

IV. Economic Analysis

Incremental Costs of the Mandated Revisions to the Standard

OSHA has determined that the total cost of this action is \$33,814,991 per year, and thus, that it is not an economically significant regulatory action within the meaning of Executive Order 12866. However, the rule is defined as a significant rule under the Executive Order, and has been reviewed by the Office of Management and Budget. This amendment to the final standard does not involve any new engineering requirements to protect workers from sharps injuries, but it does include two new recordkeeping requirements: First, the amended standard requires employers to "establish and maintain a sharps injury log for the recording of percutaneous injuries * * *" However, for recordable needlestick incidents, OSHA already requires employers to collect much of the information needed for developing such a log under other rules, the Recording and Reporting Occupational Injuries and Illnesses regulation (29 CFR 1904) in particular. Moreover, OSHA has recently published revisions to 29 CFR 1904 that would cover the remaining, previously nonrecordable

needlestick injuries. Second, the current action requires any employer "who is required to establish an Exposure Control Plan" to "solicit input from non-managerial employees responsible for direct patient care who are potentially exposed to injuries from contaminated sharps in the identification, evaluation, and selection of effective engineering and work practice controls and shall document the solicitation in the Exposure Control Plan." The methodology OSHA has used for computing costs for each requirement of the amended standard is presented in the next two sections.

Cost of Establishing and Maintaining a Sharps Injury Log

The rule requires employers to maintain a log for all needlestick and sharps injuries. At a minimum, the sharps injury log must contain: "(A) The type and brand of device involved in the incident, (B) the department or work area where the exposure incident occurred, and (C) an explanation of how the incident occurred." The costs attributable to the log correspond directly to the number of needlestick and sharps injuries. The International Health Care Worker Safety Center (IHCWSC) provides the best available estimate of the number of needlestick injuries (Ex. 3-172V). IHCWSC has computed that 590,164 needlestick and sharps injuries occur annually.

Needlestick and sharps injury cases will require an effort pertaining to collection of data on the type and brand of device, the department or work area where the incident occurred, and an explanation of how the incident occurred. Because the amount of information required to be collected is limited, OSHA estimates that it will require an average of five minutes per case (0.08 hours) to collect the data and enter it onto the separate log. Assuming that the task of collecting information related to the incident and entry onto the log will be conducted by an individual with the skill level of a Personnel Training and Labor Relations Specialist, an hourly wage of \$26.32 is used to compute cost. (The hourly wage for Personnel Training and Labor Relations Specialist as reported in the Bureau of Labor Statistics Occupational Employment Statistics Survey is \$19.03; benefits are computed at 38.3 percent of the hourly wage.) Thus, the incremental annual cost of the separate sharps injury log is:

$$(590,164 \text{ cases}) \times (0.08 \text{ hours/case}) \times (\$26.32/\text{hour}) = \$1,294,352.$$

In summary, OSHA estimates that the total annual cost of maintaining a sharps injury log will be \$1,294,352. This estimate is likely to overstate true costs for at least three reasons. First, for already recordable incidents, the data needed to maintain a separate sharps injury log are already collected and entered into a log format for other purposes, namely for the requirements set forth by 29 CFR Part 1904. It is unlikely that the data will need to be "re-entered." Instead, businesses are likely to develop procedures for automating the process or for organizing log information, thereby significantly reducing the incremental costs associated with this incremental action. For nonrecordable cases, the data collection required by the Needlestick Safety and Prevention Act and this revision to the BBP standard will be required under 29 CFR Part 1904 (once revisions to Part 1904 become effective), so that the incremental costs associated with the separate sharps injury log are short-term in nature. Finally, and perhaps most importantly, the above

cost estimate significantly overstates costs because it includes costs for all establishments in SIC 80. Under revisions to 29 CFR Part 1904, SICs 801, 802, 803, 804, 807, and 809 are exempted from recordkeeping requirements under Part 1904 and will thus not be required by this amendment to the BBP standard to keep a needlestick and sharps injury log. This is potentially significant because SICs 801, 802, 803, 804, 807, and 809 constitute 31 percent of employment for SIC 80, though not necessarily 31 percent of sharps injuries.

Cost of Solicitation of Employee Input

The cost associated with solicitation of employee input is comprised of three components: (1) The initial solicitation, conducted by a manager; (2) the employee response; and (3) documentation of the solicitation in the Exposure Control Plan.

The cost of the initial solicitation is likely to vary with establishment size, number of incidents, and employee interest. The establishments that will be

affected are those that are: (1) Required to develop an Exposure Control Plan, and (2) have employees who are involved in direct patient care and who are potentially exposed to needlestick injuries. The overwhelming majority of such establishments are in SIC 80, Health Services. County Business Patterns reports that in 1997 (1997 data are used as the most recent year for which data are available using the SIC reporting system), there were 502,724 establishments in SIC 80. OSHA estimates that the initial solicitation or call for employee input will require an average of 15 minutes (0.25 hours) of managerial time. The wage rate of a Medicine and Health Care Manager is \$33.22 per hour, including fringe benefits. (The hourly wage for a Medicine and Health Care Manager reported in the Bureau of Labor Statistics Occupational Employment Statistics Survey is \$24.02; benefits are computed at 38.3 percent of the hourly wage.) The estimated cost of the initial solicitation is:

$$(502,724 \text{ establishments}) \times (0.25 \text{ hours/establishment}) \times (\$33.22/\text{hour}) = \$4,175,080.$$

The cost associated with the employee response varies with the number of employees and the response rate to the initial solicitation. According to County Business Patterns, there were 11,348,141 individuals employed in SIC 80 in 1997. OSHA estimates that it will

require 15 minutes (0.25 hours) of employee time to respond to the solicitation and that approximately 33 percent of employees will respond. Using a wage rate of \$25.90 (which is the total hourly compensation in 1998 for professional specialty and technical

employees in Health Services reported in the Bureau of Labor Statistics publication *Employer Costs for Employee Compensation, 1986–1988*), the estimated costs associated with employee response are:

$$(11,348,141 \text{ employees}) \times (33\% \text{ response rate}) \times (0.25 \text{ hours/employee}) \times (\$25.90/\text{hour}) = \$24,248,140.$$

Note that it is implicitly assumed that input is solicited from *all* employees. This assumption will result in an overstatement of costs because the standard requires that input be solicited only from the fraction of employees who are involved in direct patient care and

who are potentially exposed to needlestick injuries.

Finally, the revised standard requires that the employer document the solicitation in the Exposure Control Plan. Because the affected employers are already required to establish a Plan, the incremental effort associated with this

documentation will be small. OSHA estimates that it will require only 15 minutes (0.25 hours) of managerial time. Thus, the total annual cost of documenting the solicitation in the Exposure Control Plan is estimated to be:

$$(502,724 \text{ establishments}) \times (0.25 \text{ hours/establishment}) \times (\$33.22/\text{hour}) = \$4,175,080.$$

In summary, OSHA has estimated the total cost of the solicitation to be \$32,598,300 (\$4,175,080 + \$24,248,140 + \$4,175,080). This estimate is likely to overstate the cost because employers have several avenues for achieving this requirement of the standard, many of which will reduce costs. For example, employers are not required to solicit input from all employees and could meet the requirement by, for example, consulting a properly constituted safety committee consisting of a subset of employees. In fact, recent state

legislation has mandated sharps safety committees in a number of states. In these situations, the only incremental cost associated with the solicitation mandated by this amendment to the BBP standard will be documentation of the solicitation in the Exposure Control Plan.

Total Cost and Cost Per Establishment

According to the above analysis, the maximum total annual cost of this action is \$33,892,653, consisting of \$1,294,352 associated with maintaining

a sharps injury log and \$32,598,300 associated with soliciting and documenting employee input into the Exposure Control Plan. This amounts to \$67 per establishment, per year, which will not cause significant economic impact on either large or small affected establishments.

V. Unfunded Mandates

OSHA has determined that, for the purposes of section 202 of the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1532), this rule does not include any

federal mandate that may result in increased expenditures by state, local, or tribal governments in the aggregate of more than \$100 million, or increased expenditures by the private sector of more than \$100 million. Moreover, the Agency has determined that for purposes of section 203 of the Act, this rule does not significantly or uniquely affect these entities.

Background

The Unfunded Mandates Reform Act was enacted in 1995. While much of the Act is designed to assist the Congress in determining whether its actions will impose costly new mandates on state, local, and tribal governments, the Act also includes requirements to assist federal agencies to make this same determination with respect to regulatory actions.

Analysis

As discussed in Section IV, Economic Analysis, this rule will have incremental costs of \$34 million per year, all of which are associated with maintaining the sharps injury log and soliciting and documenting employee information. These total costs represent an average cost of \$67 per year per affected establishment. OSHA does not anticipate any disproportionate budgetary effects upon any particular region of the nation, or particular state, local or tribal governments, or urban or rural communities.

VI. Environmental Impacts

The National Environmental Policy Act requires that "major Federal actions significantly affecting the quality of the human environment" be accompanied by a statement addressing the environmental impact of the proposed action. (42 U.S.C. 4332(C)) Department of Labor regulations establish a criteria for determining when an environmental impact statement is required in a rulemaking proceeding:

Preparation of an environmental impact statement will always be required for proposals for promulgation, modification or revocation of health standards which will significantly affect air, water or soil quality, plant or animal life, the use of land or other aspects of the human environment.

29 CFR 11.10 (a)(3)

OSHA has concluded that no significant environmental impacts would result from this rulemaking. This final standard expands the universe of engineering controls permissible for reducing occupational exposure to bloodborne pathogens. It also widens the scope of Exposure Control Plan review, requires maintenance of a sharps injury log, and mandates the

solicitation of input from employees on the identification, evaluation, and selection of effective engineering and work practice controls. The Agency has not identified any impacts of these requirements on the environment.

VII. Federalism

This standard has been reviewed in accordance with the Executive Order on Federalism (Executive Order 13132, 64 FR 43255, Aug. 10, 1999). The order requires that agencies, to the extent possible, refrain from limiting state policy options; consult with states prior to taking actions that would restrict state policy options; and take such action only when there is clear constitutional authority and the presence of a problem of national scope. Executive Order 13132 also provides that agencies shall not promulgate regulations that have significant Federalism implications and impose substantial direct compliance costs on state or local governments, unless the agency consults with state and local officials early in the process of developing the proposed regulation and provides a summary Federalism impact statement in the preamble of the final rule. Finally, the Order provides for preemption of state law only if there is a clear Congressional intent for the agency to do so, and provides that any such preemption is to be limited to the extent possible.

Under Section 6(b) of the Executive Order, an agency is exempt from state consultation requirements if it is promulgating a regulation that is required by statute. The amendments to OSHA's BBP standard codified in this rule were explicitly written by Congress and enacted as Public Law 106-430. Moreover, Congress clearly intended the revised BBP standard to have the same legal effect as other standards issued under 6(b) of the Occupational Safety and Health Act of 1970. Nonetheless, OSHA has consulted extensively with those 25 States and territories that operate OSHA-approved State plans with regard to OSHA policy on safe needle devices and the requirements of the subject legislation.

Section 18 of the OSH Act expresses Congress' intent to preempt state laws relating to issues on which Federal OSHA has promulgated occupational safety and health standards. Under the OSH Act, a state can avoid preemption only if it submits, and receives Federal approval for, a State plan for the development and enforcement of standards. OSHA-approved State plans operate under authority of State law and must adopt occupational safety and health standards which, among other

things, must be at least as effective in providing safe and healthful employment and places of employment as Federal standards.

In *Gade v. National Solid Wastes Management Assoc.*, the U.S. Supreme Court reaffirmed the view that Section 18 of the OSH Act effectively preempts states without approved plans from adopting or enforcing any laws that directly, substantially, and specifically regulate occupational safety and health. 505 U.S. 88, 107 (1992). However, needlestick laws in states without an OSHA-approved State plan would not be affected to the extent to which they regulate the occupational safety and health conditions of state or local government employees (see Section 3(5) of the OSH Act).

VIII. State Plan States

The 23 states and 2 territories that operate their own federally approved occupational safety and health plans must adopt a comparable amended standard within six months of the publication date of a final Federal OSHA standard. The States and territories with this obligation include: Alaska, Arizona, California, Connecticut (for State and local government employees only), Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, New York (for State and local government employees only), North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Virgin Islands, Washington, and Wyoming. Until such time as state and territorial standards are amended, Federal OSHA will provide interim enforcement assistance, as appropriate.

IX. Paperwork Reduction Act

This final rule contains new collection of information (paperwork) requirements in revisions to the Bloodborne Pathogen Standard (1910.1030 and 1915.1030) made as a result of the Needlestick Safety and Prevention Act (Pub. L. 106-430). These new paperwork requirements are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA 95), 44 U.S.C. 3501 *et seq.*, and its regulation at 5 CFR Part 1320. OSHA solicits public comments concerning its estimate of the burden hours and costs for the revised paperwork requirements. The Agency will summarize the comments received and include a summary of them in its request to OMB to approve the information collection requirements; they will also become a matter of public record. OSHA seeks this information as part of its continuing effort to reduce

paperwork and respondent burden. The information helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed.

The Needlestick Safety and Prevention Act requires employers, who have exposure control plans in accordance with § 1910.1030 (c)(1)(iv), "to review and update such plans to reflect changes in technology that eliminate or reduce exposure to bloodborne pathogens." The exposure control plan must also "document consideration and implementation of appropriate commercially available and effective safer medical devices designed to eliminate or minimize occupational exposure." Employers required to have exposure control plans must also "solicit input from non-managerial employees responsible for direct patient care who are potentially exposed to injuries from contaminated sharps in the identification, evaluation, and selection of effective engineering and work practice controls and shall document the solicitation in the Exposure Control Plan."

The Needlestick Safety and Prevention Act also requires employers, who currently maintain a log of occupational injuries and illnesses under 29 CFR 1904, to "establish and maintain a sharps injury log for the recording of percutaneous injuries from contaminated sharps." The information in the sharps injury log must be recorded and maintained so that the confidentiality of the injured worker is protected. The log must contain at least the following information: "(A) the type and brand of device involved in the incident; (B) the department or work area where the exposure incident occurred; and (C) an explanation of how the incident occurred."

Respondents are not required to comply with collection of information (paperwork) requirements unless a currently valid OMB control number is displayed (§ 1320.5 (b)(2)(i)). OSHA will publish the OMB control number as soon as it receives approval on its ICR for the revised collections. A copy of the Agency's revised ICR for the BBP standard is available for inspection and copying as part of Docket ICR1218-0180(2000) in the OSHA Docket Office, U.S. Department of Labor, Room N-2625, 200 Constitution Avenue, NW., Washington, DC 20210, or you may request a mailed copy by telephoning Todd Owen at (202) 693-2444.

Comments on the ICR should be submitted to the Docket Office, Docket Number ICR-0180 (2001), OSHA, U.S. Department of Labor, Room N-2625, 200 Constitution Avenue, NW., Washington, DC 20210, telephone: (202) 693-2350. Commenters may transmit written comments of 10 pages or less in length by facsimile to (202) 693-1648.

The Department and OMB are particularly interested in comments that

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Title: Bloodborne Pathogens standard (29 CFR 1910.1030).

OMB Number: 1218-0180 (Revision).

Frequency: Employers must: annually review their exposure control plans; initially establish and maintain a sharps injury log; as necessary, make injury recordings in the log; and solicit input from non-managerial employees.

Affected Public: The respondents are those employers that must maintain an exposure control plan, and employers who are required to maintain a log of occupational injuries and illnesses under 29 CFR part 1904.

Total Respondents: 502,724 establishments.

Average time per response: Three to five minutes for employers to record needlestick incidents; fifteen minutes for employers to solicit non-managerial employees on effective engineering and work practice controls; fifteen minutes for employers to modify their existing exposure control plans.

Estimated Burden Hours: 49,180 hours for employers to log needlestick incidents; 125,681 hours for employers to solicit non-managerial employees; and 125,681 hours for employers to update existing exposure control plans.

Estimated Cost (Operation and Maintenance): 0.

X. Authority and Signature

This document was prepared under the direction of Charles N. Jeffress, Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210.

Accordingly, pursuant to sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657) and the Needlestick Safety and Prevention Act (Pub. L. 106-430, 114 Stat. 1901, November 6, 2000); and Secretary of Labor's Order No. 3-2000 (65 FR 50017), 29 CFR part 1910 is amended as set forth below.

List of Subjects in 29 CFR Part 1910

Blood, Blood diseases, Health, Healthcare, Hepatitis B virus, Hepatitis C virus, Hospitals, Human immunodeficiency virus, Needlestick, Occupational safety and health, Sharps injury.

Signed at Washington, DC, this 10th day of January 2001.

Charles N. Jeffress,

Assistant Secretary of Labor for Occupational Safety and Health.

XI. Amended Final Rule and Appendix

The Occupational Safety and Health Administration is amending part 1910 of title 29 of the Code of Federal Regulations as follows:

PART 1910—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

1. The authority citation for 29 CFR part 1910, subpart Z, is revised to read as follows:

Authority: Sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order No. 12-71 (36 FR 8754), 8-76 (41 FR 25059), 9-83 (48 FR 35736), 1-90 (55 FR 9033), 6-96 (62 FR 111), or 3-2000 (65 FR 50017), as applicable; and 29 CFR part 1911.

All of subpart Z issued under Sec. 6(b) of the Occupational Safety and Health Act, except those substances that have exposure limits listed in Tables Z-1, Z-2, and Z-3 of 29 CFR 1910.1000. The latter were issued under Sec. 6(a) (29 U.S.C. 655(a)).

Section 1910.1000, Tables Z-1, Z-2 and Z-3 also issued under 5 U.S.C. 553, Section 1910.1000 Tables Z-1, Z-2, and Z-3 not issued under 29 CFR part 1911 except for the arsenic (organic compounds), benzene, and cotton dust listings.

Section 1910.1001 also issued under section 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 333) and 5 U.S.C. 553.

Section 1910.1002 not issued under 29 U.S.C. 655 or 29 CFR part 1911; also issued under 5 U.S.C. 553.

Sections 1910.1018, 1910.1029 and 1910.1200 are also issued under 29 U.S.C. 653.

Section 1910.1030 is also issued under Pub. L. 106-430, 114 Stat. 1901.

2. Section 1910.1030 is amended as follows:

A. In § 1910.1030, paragraph (b), the definition for "Engineering Controls" is revised and definitions are added in alphabetical order to read as set forth below:

B. Paragraph (c)(1)(iv) is revised to read as set forth below:

C. Paragraph (c)(1)(v) is redesignated paragraph (c)(1)(vi), and a new paragraph (c)(1)(v) is added to read as set forth below:

D. A new paragraph (h)(5) is added to read as set forth below:

§ 1910.1030 Bloodborne pathogens.

* * * * *

(b) * * *

Engineering controls means controls (e.g., sharps disposal containers, self-sheathing needles, safer medical devices, such as sharps with engineered sharps injury protections and needleless systems) that isolate or remove the bloodborne pathogens hazard from the workplace.

* * * * *

Needleless systems means a device that does not use needles for:

(1) The collection of bodily fluids or withdrawal of body fluids after initial venous or arterial access is established;

(2) The administration of medication or fluids; or

(3) Any other procedure involving the potential for occupational exposure to bloodborne pathogens due to percutaneous injuries from contaminated sharps.

* * * * *

Sharps with engineered sharps injury protections means a nonneedle sharp or a needle device used for withdrawing body fluids, accessing a vein or artery, or administering medications or other fluids, with a built-in safety feature or mechanism that effectively reduces the risk of an exposure incident.

* * * * *

(c) * * *

(1) * * *

(iv) The Exposure Control Plan shall be reviewed and updated at least annually and whenever necessary to reflect new or modified tasks and procedures which affect occupational exposure and to reflect new or revised employee positions with occupational exposure. The review and update of such plans shall also:

(A) Reflect changes in technology that eliminate or reduce exposure to bloodborne pathogens; and

(B) Document annually consideration and implementation of appropriate commercially available and effective safer medical devices designed to eliminate or minimize occupational exposure.

(v) An employer, who is required to establish an Exposure Control Plan shall solicit input from non-managerial employees responsible for direct patient

care who are potentially exposed to injuries from contaminated sharps in the identification, evaluation, and selection of effective engineering and work practice controls and shall document the solicitation in the Exposure Control Plan.

* * * * *

(h) * * *

(5) *Sharps injury log.* (i) The employer shall establish and maintain a sharps injury log for the recording of percutaneous injuries from contaminated sharps. The information in the sharps injury log shall be recorded and maintained in such manner as to protect the confidentiality of the injured employee. The sharps injury log shall contain, at a minimum:

(A) The type and brand of device involved in the incident,

(B) The department or work area where the exposure incident occurred, and

(C) An explanation of how the incident occurred.

(ii) The requirement to establish and maintain a sharps injury log shall apply to any employer who is required to maintain a log of occupational injuries and illnesses under 29 CFR 1904.

(iii) The sharps injury log shall be maintained for the period required by 29 CFR 1904.6.

* * * * *

BILLING CODE 4510-26-P

Federal Register

**Thursday,
January 18, 2001**

Part X

Department of Labor

Office of the Secretary

29 CFR Part 4

**Service Contract Act; Labor Standards for
Federal Service Contracts; Final Rule**

DEPARTMENT OF LABOR**Office of the Secretary****29 CFR Part 4**

RIN 1215-AB26

Service Contract Act; Labor Standards for Federal Service Contracts

AGENCY: Wage and Hour Division, Employment Standards Administration, Labor.

ACTION: Final rule.

SUMMARY: This document adopts as a final rule an amendment to the regulations exempting certain contracts for commercial services meeting specific criteria from coverage under the McNamara-O'Hara Service Contract Act (SCA). The proposed regulation was issued based on a request by the Administrator for Federal Procurement Policy, Office of Federal Procurement Policy (OFPP), in a May 12, 1999, letter to the Secretary of Labor, representing that the requested exemptions were both necessary and proper in the public interest, and in accord with the remedial purpose of the SCA to protect prevailing labor standards. Amendments/modifications were made to the OFPP-requested exemptions based on the written comments submitted in response to the proposed rule.

EFFECTIVE DATE: March 19, 2001.

FOR FURTHER INFORMATION CONTACT:

William W. Gross, Director, Office of Wage Determinations, Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Room S-3028, 200 Constitution Avenue, NW., Washington, DC 20210; telephone (202) 693-0062. This is not a toll-free number.

SUPPLEMENTARY INFORMATION:**I. Paperwork Reduction Act**

This rule contains no reporting or recordkeeping requirements subject to the Paperwork Reduction Act of 1980 (Pub. L. 96-511). The existing information collection requirements contained in Regulations, 29 CFR part 4 were previously approved by the Office of Management and Budget under OMB control number 1215-0150.

II. Background

On October 1, 1995, the Federal Acquisition Regulations were amended to implement provisions of the Federal Acquisition Streamlining Act (FASA). One provision of the final regulation, 48 CFR 12.504(a)(10), provided that the requirements of the McNamara-O'Hara

Service Contract Act (SCA) are not applicable to subcontracts at any tier for the acquisition of commercial items or services. This provision of the final rule had not been included in the proposed regulation. When the Department of Labor became aware of the regulation, the Administrator of the Wage and Hour Division wrote to the Administrator for Federal Procurement Policy, OFPP, questioning the appropriateness of the FAR regulation. The Department of Labor stated its view that questions of coverage and exemptions under the SCA were properly within the purview of the Secretary of Labor pursuant to section 4 of SCA. After a review of the issue by the FAR Council the Administrator for Federal Procurement Policy wrote to the Secretary of Labor and requested that the Department propose an exemption for a more limited group of commercial service contracts (both prime contracts and subcontracts). The Administrator stated that the FAR Council had concluded that a blanket exemption of all subcontracts for commercial items may not adequately serve the Administration's policy of supporting exemptions of the SCA only where they do not undermine the purposes for which the SCA was enacted. In addition, the FAR Council recognized the Department's authority to exempt contracts as well as subcontracts on all types of contracts. Therefore the FAR Council agreed that any exemption from the coverage of SCA for subcontracts for the acquisition of commercial items or components should be accomplished under the Secretary of Labor's authority in the SCA, and stated that it would withdraw the FAR provision.

The FAR Council indicated that the adoption of their recommendations would further the commitment of the Administration to be more commercial-like, encourage broader participation in government procurement by companies doing business in the commercial sector, and reinforce their commitment to reduce government-unique terms and conditions from their contracts. Furthermore, the FAR Council represented that the limited exemptions that it proposed could be accomplished without compromising the remedial purpose of the SCA to protect prevailing labor standards.

On July 26, 2000, the Department of Labor published an NPRM, proposing the limited exemption from the SCA recommended by the FAR Council. On the same date, the FAR Council published a final rule in the **Federal Register** removing SCA from the list of laws inapplicable to subcontracts for commercial items, previously at FAR at 48 CFR 12.504(a)(10). The FAR final

rule became effective August 25, 2000. As a result, a small group of commercial subcontracts that were previously exempted under the FAR rule and that also meet the requirements of DOL's proposed rule could change from exempt to nonexempt and back to exempt if the DOL proposal becomes final as it was proposed. Therefore, to prevent the disruption that could be caused by such changes, including the possible disruption of services if the current subcontractor did not agree to continue the subcontract services under the requirements of SCA, the Department also published a final rule in the same **Federal Register**, temporarily exempting from the SCA those commercial subcontracts which met the criteria of the proposed rule. The rule was to remain in effect for one year, or until final action was taken on the NPRM, whichever occurred first. With the publication of this final rule, the final rule for commercial subcontracts is superceded and is withdrawn.

The NPRM addressed two separate but somewhat related issues. First, the NPRM proposed to modify the current exemption for the maintenance and repair of Automated Data Processing (ADP) equipment, 29 CFR 4.123(e)(1), to reflect terminology changes in law that have occurred since the exemption was originally established; broaden the exemption to cover information technology as currently defined; apply the exemption to installation services; and apply the exemption to subcontracts as well as prime contracts. Second, a new exemption was proposed, similar to the current ADP exemption, to exempt both prime contractors and subcontractors for a specified subset of commercial services that meet certain criteria.

III. Summary/Analysis of the Comments

A total of eleven comments were received. Three comments from contractor associations are generally supportive of but recommend certain changes to the proposed exemption. Eight comments—one from a contractor association and seven from union organizations—are generally opposed to all or specific portions of the proposed exemption. Since most of the comments focus on the proposed services or the proposed criteria for exemption, this summary also is organized on the basis of individual services and criteria.

Before addressing the individual services, however, several commenters raise an overarching issue regarding the statutory and regulatory requirements for exemption under the Service Contract Act. The American Federation

of Labor—Congress of Industrial Organizations (AFL–CIO), the Laborers’ International Union of North America (LIUNA), and the Building and Construction Trades Department, AFL–CIO (Building Trades), note that section 4(b) of SCA limits the Secretary of Labor the authority to grant exemptions from SCA to those situations where the exemption is “necessary and proper in the public interest or to avoid the serious impairment of government business, and is in accord with the remedial purpose of this Act to protect prevailing labor standards.” The AFL–CIO and LIUNA further note that 29 CFR 4.123, the Department’s regulation implementing section 4(b) of SCA, provides that “a request for exemption from the Act’s provisions will be granted upon a strong affirmative showing” that the statutory requirements for exemption are met. They argue that the reasons proffered are inadequate as a matter of law. The AFL–CIO further states that the FAR Council offers no factual support for its requested exemption, and that “the Department cannot defer to the FAR Council’s unsupported ‘representations’ as to whether the exemptions satisfy the ‘public interest’ and serious impairment’ standards.”

The Department agrees that exemptions from the SCA may only be granted upon a strong affirmative showing that the statutory requirements for exemption are met. This does not mean, however, that the Department cannot or should not give great weight to the representations of the FAR Council. The FAR Council’s experience with and knowledge of the Federal procurement process is clear, and we believe it is appropriate to give the FAR Council’s representations due consideration. Absent evidence or arguments to the contrary, a representation by the FAR Council may constitute a “strong affirmative showing” that the requirements for exemption are met. Therefore, on the one hand, we did not summarily reject the FAR Council’s request, and on the other hand, the FAR Council’s representations have not been accepted without question. They have been evaluated in light of the comments received.

The AFL–CIO also argues that there is no basis for the proposal to expand the FAR exemption for subcontracts to both prime contracts and subcontracts. The Department disagrees with this comment. The Department notes that SCA coverage and exemptions are commonly applicable to both prime contracts and subcontracts, and the Department sees no basis for limiting

the exemption for certain commercial services to subcontracts, provided the required showing is met.

A. Expansion of the current ADP exemption

Based upon the recommendation of the FAR Council, the Department proposed that the current ADP maintenance exemption be updated to reflect the current statutory definition of “information technology” and be consistent with other regulations. Further, the proposal added installation services to the current regulatory exemption where those services are not subject to the Davis-Bacon Act. The FAR Council noted that service contracts often involve installation of information technology (IT) equipment, for example installing and maintaining a local area network, or installing and maintaining new telephones or a telephone system. The same employees are performing installation as are performing maintenance and repair services. Thus, the FAR Council argued that the same conditions supporting the exemption for the maintenance services also support an exemption for installation services. Finally, the FAR Council recommended that the exemption be made applicable to subcontracts as well as prime contracts.

The Council of Defense and Space Industry Associations (CODSIA) and the Contract Services Association (CSA) support the expansion of the current ADP exemption to a broader IT definition. CODSIA states that it is “pleased that the Department of Labor has virtually exempted all IT prime and subcontracts from the Service Contract Act.” CSA states that the “new ‘ADP’ exemption has been significantly enlarged to a new definition of IT.” Both CODSIA and CSA state that the proposed rule recognizes that “the IT marketplace provides a vibrant and effective guarantor of fair wage practices for virtually all IT workers.”

The AFL–CIO, LIUNA and the Building Trades all oppose changing the current ADP exemption to adopt a new information technology definition. The unions also oppose the addition of installation services. The AFL–CIO states that the “growth of data networks does not change the fundamental distinction between the manipulation of data by computers—which is automated data processing—and the transmission of data over telecommunications networks—which is a telecommunications service.” The AFL–CIO further states that installing and maintaining new telephone lines or a telephone system is not automated data processing. The AFL–CIO states that the

proposal “inappropriately extends the ADP exemption to service work that involves the ‘switching, interchange, transmission, or reception of data or information.’”

It goes on to note:

“Installation and maintenance of telephone lines (where unregulated) has historically been covered by the SCA. The service work has not changed substantially even when installation and maintenance involves data rather than voice networks. The service work involved in the installation and maintenance of a local area data network is comparable to the service work involved in the installation and maintenance of a voice PBX or Centrex system, work which is currently covered by the SCA.”

The FAR Council’s request to change the current ADP definition was made primarily to reflect the current statutory definition of information technology and be consistent with other regulations. The FAR Council did not indicate that the definition needed to be expanded because it was having difficulty procuring telecommunications services. With respect to the addition of installation services, the FAR Council indicated only that the same employees are performing installation services as are performing maintenance and repair services. Thus, the FAR Council concluded that the same conditions supporting the exemption for maintenance services also support an exemption for installation services.

Based upon this description, the Department did not view the change in definition to “information technology” and the addition of installation services to be a significant expansion to the ADP exemption. Rather, the Department considered these changes to be mostly language changes to reflect other statutory terminology changes. The comments—both for and against the proposed change—clearly indicate that the proposed change is a significant expansion of the current exemption. In this light, we have concluded that the present record does not constitute a “strong affirmative showing” that the proposed exemption meets the requirements for exemption in section 4(b) of the Act. Therefore, the current ADP definition will be retained and installation services will not be added to the scope of exempt ADP maintenance services.

With respect to applying the ADP exemption to subcontracts, the Department specifically asked “whether there is any reason that the exemption at the prime contract level should not be applied equally to subcontracts that meet the criteria.” As mentioned above, SCA coverage and exemptions ordinarily apply to both prime and

subcontracts, where the criteria are met. There were no substantive comments against the application of the ADP exemption to both prime and subcontracts. That aspect of the proposed change will be retained. However, the certification requirement is modified to make it clear that a certification by a prime contractor that it meets the criteria also constitutes a certification that if it subcontracts the services, the subcontractor in turn will meet the criteria.

CODSIA and CSA also express concern that the NPRM apparently eliminated "scientific equipment and medical apparatus equipment" from the exemption. To the contrary, the Department did not propose to eliminate such equipment. Rather, the NPRM simply did not reprint those portions of the regulation that were not affected by the proposal. The final regulation reprints the exemption in its entirety, with the clarification that in order to be exempt, a contract or subcontract must be principally for the services in question.

B. New exemptions for Commercial Services

The NPRM was intended to address certain situations where an employee's work on a government contract represents a small portion of his or her time and the balance of the time is spent on commercial work. In such cases, the FAR Council represented that the Government loses the full benefits of competition for its service contracts because some contractors decline to compete for Government work due to specific government requirements. To remedy this situation, the FAR Council recommended an exemption framework that it believed would protect prevailing labor standards and avoid the undercutting of such standards by contractors. The proposed exemption would apply only to a specified list of commercial services for which the FAR Council has found a particular need for an SCA exemption. In addition, in order that the exemption comport with the statutory requirement that it be in accord with the remedial purposes of the Act to protect prevailing labor standards, the proposed regulation provided a number of criteria which must be satisfied.

In selecting the services to which it believed the new exemption should apply, the FAR Council focused on services which the Government is having difficulty acquiring or for which the Government is getting limited competition, or where the Government is unable to acquire the quality of services needed because commercial

sources are reluctant to do business with the Government, thereby causing impairment to Government business. The FAR Council stated that it avoided selecting services where the Government may be in a position to motivate the payment of less than prevailing wages by contractors striving to win Government contracts. The factual basis for the FAR Council's view that the proposed exemption for each of the specified services is necessary and proper in the public interest or to avoid the serious impairment of Government business was set forth in the NPRM.

1. Proposed Exempt Services

a. Automated data processing and telecommunication services. Unlike the current exemption for ADP equipment, which applies to maintenance and service of ADP hardware, the new proposed exemption for ADP and telecommunications services would have exempted a broad range of software-type services within the information technology industry. The FAR Council explained that in this information age, the Federal Government is contracting for more and more information technology (IT) services. This is driven by the need to maximize the use of technology to improve the efficiency and effectiveness of agency performance. However, increasingly the Government is less of a player in the IT marketplace in terms of market share (less than 3%). IT providers have an abundance of work in an industry with a tight labor market. The FAR Council stated that IT providers are often reluctant or unwilling to deal with Government unique requirements such as the Service Contract Act when they have an abundance of work available and are experiencing difficulty keeping pace with their commercial work. The FAR Council further represented that unless the Federal Government can more closely align the Government's contracting practices and requirements with commercial practice, it will not be able to generate enough interest to permit the Federal Government to take full advantage of the opportunities to use information technology and to obtain the requisite quality of services needed to satisfy critical agency mission needs.

Many of the comments group this new proposed exemption for software services with the ADP maintenance services and the comments clearly address both proposed exemptions. For example, CODSIA and CSA are "pleased that the Department of Labor has virtually exempted all IT prime and subcontracts." Other than this broad

reference to IT, CODSIA and CSA do not separately comment on the individual services on the proposed list. With respect to the new list of services, both CODSIA and CSA primarily express concern that this list is too limited.

Similarly, most of the union commenters comment together on both the new ADP/telecommunications exemption and the expansion of the current ADP exemption. In commenting on the proposed new exemption for ADP and telecommunication services, the AFL-CIO states that "one of the predominant purposes and effect of the proposed rule is to eliminate coverage in one of the largest growth sectors of the Nation's economy, the ADP, IT and telecommunications industry." The AFL-CIO and the Building Trades contend that the services within the scope of this proposed new exemption "are performed by many employees enjoying the protection of prevailing wage standards under the SCA. There is no guarantee that these service employees will not experience a reduction in wages and benefits or lose their jobs as a result of application of the exemption in the proposed rule."

These union commenters also challenge the FAR Council's justification for the proposed exemption. In addition to the comments on telecommunications, summarized above, the AFL-CIO states that the Communications Workers of America (CWA) (one of its member unions) represent employees performing "network integration" services for several large companies, and that these firms would be at a disadvantage in bidding for government contracts under the proposed exemption. They also state that the International Brotherhood of Teamsters (IBT) perform "a multitude of very technical work with regard to data collection and distribution for the Department of Defense" in Alaska. LIUNA states that the FAR Council stated that the Government "is contracting for more and more information (IT) services * * * [but n]owhere has the FAR Council stated that it cannot obtain these services or that there are actual instances where this has occurred." The union commenters also state that the proposed ADP exemption is contrary to Congressional intent, as expressed in the 1976 amendments to the SCA, to comprehensively cover white collar service workers.

Based upon the comments, it is clear that all parties—those in favor of the proposal as well as those opposed—view the combined expansion of the current ADP exemption and the addition of ADP and telecommunication

services to the proposed additional list of exempt services as an intent to exempt virtually the entire ADP, IT and telecommunications industry. While the Department still believes that the additional criteria would limit the proposed exemption to a smaller set of contracts than those apparently envisioned by the commenters, the Department also recognizes that the scope of the new ADP and telecommunications exemption is broadly defined. Compared with the other exemptions proposed, the proposed ADP exemption is not as tightly focused on an area where the Government has been having trouble obtaining bidders. In light of the comments and representations challenging the need for a broad-based ADP and telecommunications exemption, the Department has concluded that the record does not adequately demonstrate that the statutory requirements for exemption have been met for this broad classification of ADP and telecommunication services. If at some future time the FAR Council or an individual agency can demonstrate that the statutory requirements for exemption are met for a more specific type of ADP or telecommunications service, then the Department will consider such a request based upon the facts applicable to that specific type of procurement or specific service.

b. Automotive or other vehicle maintenance services. Federal agencies that maintain a fleet of automobiles have a need for services such as normal maintenance (e.g., changing oil and filters, rotating tires, etc.), mechanical repairs, paint and body work, glass replacement, and other repairs needed to maintain the automobile or other vehicle. Unless the agency has a dedicated Government facility for such work, it is contracted out to commercial firms. The FAR Council stated that the General Services Administration (GSA), which is responsible for providing Interagency Fleet Management Services, has been unsuccessful in contracting for these services because of the unwillingness of commercial sources to deal with Government unique requirements such as the Service Contract Act for the small amount of Government work involved. As a result, GSA and other agencies often acquire these services on an as needed basis using micro-purchase procedures and the Government Purchase Card. The FAR Council stated that unless GSA and other agencies can more closely align the Government's contracting practices and requirements with commercial

practice, it will not be able to generate enough interest or business to permit the Federal Government to take advantage of the quality improvements and lower prices that will likely result from establishing contractual relationships with commercial service centers. While the individual transactions are small (typically under \$2,500), the aggregate volume and dollar value of transactions across the nation is substantial. The Federal Government would benefit from the lower prices it can negotiate for parts and supplies used to service vehicles if it were able to contract for services rather than treat each transaction individually. Additionally, the Federal Government could expect to receive better service because it will be viewed as a "corporate" customer who gives its business to a particular contractor(s) in a certain location. The FAR Council stated that an exemption is necessary to permit the Government to enhance the quality of service while reducing its cost through leveraging the Federal Government's collective buying power.

The FAR Council provided the following specific example: The Department of Interior's Office of Aircraft Services in Boise, ID, contracts for maintenance of about 100 of its own aircraft and also provides contract support for other agencies such as the U.S. Forest Service. The Office of Aircraft Services reports that it has about a dozen contracts at various locations around the country. These are commercial services procured from commercial sources where the maintenance of Government aircraft is performed alongside regular non-government aircraft. Contractors' work is predominantly non-government. Some commercial contractors have refused to do work for the Government because of concerns with the SCA requirements. The result has been limited competition for such contracts.

Only a few comments were received regarding this service, and none of those comments provide any detailed information. The AFL-CIO states that contractors supplying "automotive and other vehicle maintenance services to the government often subcontract these services, and members of IBT perform this work for both prime contractors and subcontractors and enjoy SCA protection. An exemption for this work risks a loss of that protection, particularly under fixed price contracts where there may be an incentive to cut employment costs." This comment, however, does not address the limiting effect that the application of the required criteria will have on the application of the exemption to these

services. As noted in the proposal, the exemption would not apply to contracts for the operation of a Government motor pool or similar facility. Further, the exemption would not apply where the volume of the government work is such that the contractor could perform the work with a workforce dedicated to the government contract. As noted in the FAR Council's request, GSA and other government agencies often acquire these services on an as needed basis using micro-purchase procedures and the Government Purchase Card. Thus, in many cases the services that would be covered by this exemption are not now subject to the prevailing wage requirements of SCA, and in these cases the exemption would not result in loss of SCA protection for employees currently working on SCA covered contracts. Furthermore, under the criteria discussed below, the exemption would not be available unless price is equal to or less important than the combination of other non-price or cost factors in selecting the contractor. Therefore, the Department has concluded that the statutory requirements for exemption are met for this narrow vehicle maintenance service category.

c. Financial services. Increasingly, the Government is contracting for and using the services of financial institutions that provide credit, debit, or purchase cards. These cards are used by Federal employees while traveling or to make small purchases for commercial items to meet the day-to-day needs of their organizations. The providers of these services use the financial networks of firms like VISA, MASTERCARD, and American Express to provide the services. The FAR Council stated that while the Federal Government's use of these services is significant, it represents a small fraction of the transactions that flow through the financial infrastructure. Transactions flowing through the networks are processed in the same fashion and by the same workforce regardless of the ultimate user of the cards. As a result, the FAR Council stated that it is very difficult to get competition for these services when the Federal Government imposes unique requirements on the contractors. It stated that contractors will not change their way of doing business to accommodate a customer that represents a small portion of their business; it is impossible for them to segregate what is done for the Federal Government from commercial activity.

None of the comments specifically opposes this category of services. Therefore, based upon the FAR Council's recommendation, this

exemption for financial services meeting the specified criteria is adopted.

d. Lodging at hotels/motels. Agencies of the Federal Government often contract with hotels/motels for meeting rooms for conferences of limited duration (e.g., one to five days). These contracts may be for conferences where attendance is limited to Government employees or may involve attendance by other organizations and/or the public. These contracts may also involve furnishing lodging and meals to those participating in the conference. In other cases, agencies establish contractual arrangements with hotels/motels to obtain special rates for lodging when the agency has a large number of employees that frequently travel to a particular location. The hotel/motel agrees to special reduced rates in exchange for being designated a preferred provider for the agency travelers to that city/location. In both of these cases, the FAR Council stated that hotels/motels are unwilling to agree to contract with the Government when it would mean they would have to pay different rates to employees as a result of a Service Contract Act wage determination or would have to keep special/different payroll or other records. Typically these contracts are for relatively small dollar amounts (less than \$25,000). The FAR Council stated that this severely limits the Government's ability to contract for these services when needed.

Several union commenters oppose the inclusion of this service category. The Hotel Employees and Restaurant Employees International Union (HERE) state that this exemption "clearly disadvantages hotels/motels which are unionized or paying prevailing wages as compared to the status quo existing under the SCA." HERE states that if "certain hotels/motels are unwilling to contract with the Government, the Government can simply contract with unionized hotels/motels, which * * * will have no problem fulfilling the requirements of the SCA without paying different rates to employees just for Government events." HERE's comments also focus on the prevailing fringe benefit requirements of SCA, and it notes that maintaining the level of benefits is particularly important in a low-wage industry such as the hotel/motel industry. HERE also states that there is no justification for eliminating the protections of section 4(c), which it considers an "integral aspect of the SCA's attempt to protect prevailing wages and fringe benefits." The AFL-CIO makes very similar comments regarding this service category, and points out that the FAR Council does

not assert that it has been unable to contract for its required services, but just that "certain hotels/motels" have refused to enter into contracts.

The Department has considered these comments within the context of the types of lodging services outlined in the proposal. With respect to conferences, the Government does not always contract for these services in the same manner. In some cases, the Government may simply have the hotel/motel hold a block of rooms for conference participants. The rooms are then reserved and paid for by the participants. In these situations the Government may also reserve and pay for meeting rooms. In other cases, especially if the conference participants are all from the same agency and the number of participants is known, the agency may award a contract not only for meeting rooms but also for lodging. In the first situation, the contract is typically less than \$2500 and SCA prevailing wage requirements would not be applicable; however, in the latter situation SCA would apply. Under the proposal, both types of contracts would be treated the same and neither would be covered by SCA where the regulatory criteria are met.

The Department is sympathetic to the issues raised by the union commenters, especially their comments relative to fringe benefits. However, as the above examples demonstrate, even if this proposal were not adopted, SCA still would not apply to a large number of Government meetings and conferences at private hotels/motels. Furthermore, while the comments regarding the availability of union hotels/motels willing to accept the application of SCA might be true in large cities with a substantial number of union establishments, that scenario might not always be the case for meetings in smaller metropolitan or nonmetropolitan areas. While government meetings and conferences may be frequent in cities such as Washington, DC, they would not be frequent in small metropolitan areas. As HERE acknowledges, hotels/motels are not likely to change their pay practices simply to attract Government conferences or meetings.

With respect to other types of lodging contracts, these are ordinarily long-term contracts where the Government has a continuing need for a block of rooms, e.g., lodging for military recruits or government employees attending training at an agency training center, and the agency enters into a contract with a hotel/motel for number of rooms over a longer period of time. The application of SCA to this type of

contract is more direct, and determining compliance with SCA is simpler. Unlike conferences or meetings that are one-time contracts, these lodging contracts fulfill a continuing lodging need.

Furthermore, contrary to the comments of HERE, section 4(c) provisions would apply to options, and to renewals for services currently subject to section 4(c).

Based upon the foregoing, the Department has determined that it will revise the proposed exemption for lodging services and apply the exemption only to contracts for meetings or conferences. Contracts for a block of rooms on a continuing basis would be outside the scope of the exemption. As already noted, the application of SCA to contracts with hotels/motels for conferences currently varies depending upon the form of the contract. Further, it is the Department's view that the application or non-application of SCA to these contracts does not impact the remedial purpose of the Act to protect prevailing labor standards. On the other hand, contracts for a block of rooms on a continuing basis are different. Regardless of their form, these contracts should all be subject to SCA at the present time, and the record does not provide adequate support for extending the exemption to this type of lodging contract.

e. Maintenance services for all types of specialized building or facility equipment. Agencies that operate and maintain Government owned and/or operated buildings often contract for operation and maintenance of the building or facility and the prime contractor will then typically subcontract for services related to specialized equipment. In other cases, the Government will contract directly for the maintenance and servicing of such equipment. In either case, the FAR Council reported that it is very difficult to acquire the quality of service needed from contractors who are not authorized representatives of the manufacturer and therefore do not have access to parts needed for repairs and training that is essentially only available from the original equipment manufacturer. While there may be other contractors who indicate they have the capability to provide the service, the FAR Council states that experience often shows that the quality of service obtained from such sources is not satisfactory. The FAR Council stated that the Government, as a result of the reluctance of some of the best contractors to accept Government unique requirements such as those related to the Service Contract Act, is deprived of the opportunity to improve the quality of service for the

maintenance and servicing of critical building equipment and systems.

The Mechanical Contractors Association of America (MCAA), AFL-CIO, LIUNA, International Union of Elevator Constructors (IUEC), United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada (UA), International Union of Operating Engineers (IUOE), and Building Trades all strongly oppose the proposed exemption for this category. Although the comments all provide slightly different individual perspectives, the thrust of these comments is similar: (1) qualified contractors and employees can and do perform these services with the application of SCA; and (2) this exemption would have a negative impact upon workers currently covered by SCA.

Several commenters challenge the FAR Council statement that the exemption is needed because "some of the best contractors" are reluctant to accept government unique requirements such as SCA. MCAA—a mechanical construction industry trade association with about 2,000 member firms—states that its member firms compete for federal agency building systems contracts that are the subject of the NPRM. It also asserts that alternate procurement and contracting planning would be a better way to address any problems with lack of offerors or diminished contracting leverage. MCAA states that "[c]ompetent firms will compete for federal contract opportunities when those contracts are fairly awarded and administered and are performed with high business and labor standards applied to all contractors." The AFL-CIO, and others contend that the "best" contractors do not have a problem paying prevailing wages, and this exemption would "attract lower quality contractors that pay lower wages, hire less skilled and less productive employees and perform less well." Several commenters note that the proposed exemption would encourage agencies to replace on-site stationary engineers employed by SCA covered contractors with employees assigned to a number of buildings on a service route. To the extent that a legitimate problem exists, the commenters contend that it is not caused by the application of SCA and the FAR Council should seek other solutions. The IUOE stated that it has 120,000 members who are stationary engineers employed in the field of operations and maintenance of mechanical, electrical, electronic and plumbing systems, including computer-operated HVAC systems and/or

automated building control systems, fire life safety systems, elevators, and escalators. The IUOE expressed its concern that the proposed rule would have the potential to replace more highly skilled stationary engineers in Government facilities with entry level workers. They also state that there are very few HVAC applications where "a manufacturer or original equipment supplier can validate that only their mechanics or technicians can properly service the equipment in question. If that were true, the commercial facilities that exist in the United States would not be able to function without constant interaction and a mandatory lifetime service agreement from the manufacturer." The IUEC notes that the proposed exemption does not "make any sense" in the context of the elevator industry. The IUEC states that "in the elevator industry, the lead, national manufacturing companies * * * are all signatory to collective bargaining agreements with the IUEC under which they are obligated to pay contractual rates that are tantamount to prevailing wages. Thus, if there is in fact reluctance on the part of these manufacturers to bid on federal maintenance, it is not because they do not want to pay prevailing wages, because they are doing that already."

Based upon the comments, the record does not support the conclusion that the statutory requirements for exemption are met, and this category of service will be deleted from the final rule. It is evident that this work is currently performed under SCA contracts. Furthermore, as discussed below, if the Government needs to contract only with the original manufacturer or supplier, that exemption remains available.

f. Installation, maintenance, calibration or repair services for all types of equipment where services are obtained from the equipment manufacturer or supplier of the equipment. Agencies acquire a wide range of equipment and often have a need to acquire services to install, maintain, calibrate, service or repair the equipment from the manufacturer or original supplier in order to avoid compromising a warranty or because proprietary information needed to perform the work is only available from the manufacturer, an authorized representative of the manufacturer or the supplier of the equipment. Typically, these contracts involve sophisticated equipment that requires access to proprietary information or requires employees involved in performing the work to have extensive training that is often only available through the manufacturer or equipment

supplier. In such cases, the Government's need to contract with a particular source or a limited number of sources must be properly justified and approved, if applicable, under the statutory competition requirements outlined in 48 CFR part 6 of the Federal Acquisition Regulation. Examples of the types of equipment include automated building control systems, HVAC equipment, building security systems, and elevators or escalators. The FAR Council reported that in many of these cases, the Government has limited leverage to negotiate with the contractor to accept Government unique requirements such as those related to the Service Contract Act and has had great difficulty obtaining services from commercial sources who are unwilling to accommodate such requirements.

The commenters that oppose the exemption for specialized building or facility equipment also oppose the exemption for other equipment services obtained from the manufacturer of supplier of the equipment. Many of their comments apply equally to both service categories. For example, IUEC notes that the major elevator manufacturers are already paying prevailing wages pursuant to their collective bargaining agreements. Therefore, any reluctance to contract with the Government on the part of these companies should not be caused by a concern with the SCA.

The Department believes, however, that there is an important difference between the proposed exemptions. While the services for specialized building or facility equipment could be performed by the manufacturer or supplier of the equipment, the services relative to this category must be performed by the manufacturer or supplier. Further, this exemption was not intended to provide an exemption for the manufacturer or supplier when they are competing with other service providers, but to limit the exemption to situations where the manufacturer or supplier is the only source for the services. In a sole source situation, as set forth in the FAR at 48 CFR 6302-1, other contractors are not disadvantaged because there are not other contractors available to perform the services. Therefore the Department believes that the statutory requirements for exemption are met for this narrow sole source exemption. The Department notes that the sole source aspect of this exemption was discussed in the preamble, but was not set forth in the regulatory language. The regulatory language of the final rule has been clarified to specify that the exemption

shall only apply when the contract is awarded on a sole source basis.

g. Transportation of persons by air, motor vehicle, rail, or marine on regularly scheduled routes or via standard commercial services (not including charter services) The General Services Administration (GSA) enters into contracts with airlines called "City Pairs" so that Federal employees traveling on Government business can get discount air fares.

Under these contracts, Federal employees typically obtain tickets through travel management contracts awarded by GSA or other agencies and the Federal employee travels on regularly scheduled routes of commercial airlines but receive tickets at a substantial discount. While the Federal Government's use of these services is significant, it represents a small fraction of the transactions that flow through the airlines. Tickets that are issued to Federal travelers flow through the same networks and are processed in the same fashion as other travelers. As a result, the FAR Council reported that it is very difficult to get competition for these services if the Federal Government imposes unique requirements like those in the Service Contract Act on the contractors. The airlines will not change their way of doing business to accommodate a customer that represents a small portion of their business. It is impossible for them to segregate what is done for the Federal Government from commercial activity. The Federal Government also enters into similar contracts for the carriage of passengers by other modes of transportation.

The AFL-CIO and LIUNA both oppose this exemption. The AFL-CIO states that "[m]any IBT members work in the industries covered by this proposed exemption. The FAR Council's rationale for this exemption is unpersuasive and it could have a serious detrimental impact on service workers." LIUNA comments that the "FAR Council nowhere states that it cannot obtain these services or that any contractor has refused to bid in these categories of services."

The proposed exemption mirrors an exemption for the carriage of mail that was granted prior to the 1972 amendments to SCA. The exemption was necessary because mail is not considered to be freight and the transportation of mail did not fall within the scope of the transportation exemption in section 7(3) of SCA. Because the exemption for the carriage of mail was granted prior to the 1972 amendments, it was not accompanied by a finding that the exemption was in

accord with the remedial purpose of the Act to protect prevailing labor standards. Nevertheless, the Department is not aware of any instance where the exemption for the transportation of mail has adversely impacted prevailing labor standards.

The exemption for the transportation of persons is necessary at this time because of deregulation in the transportation industry. When the "City Pairs" contracts were first awarded, these contracts fell within the scope of the transportation exemption in section 7(3). With deregulation, it is not clear that "City Pair" fares still constitute published tariffs. Since SCA has not been applied to these contracts previously, the Department has concluded that the exemption would not have a detrimental impact on service workers. In addition, the Department has concluded that the application of SCA to these contracts would seriously impair government business and would likely cause the contracts to be discontinued. Therefore, the statutory requirements for exemption are met for these transportation services. The Department wishes to emphasize that this exemption is narrow, extending only to common carriers providing the services in question to the general public, as well as the Government. It does not extend to charter services, where the Government contracts with a carrier to provide the service just to the Government, such as shuttle buses between Government buildings. The wording of the proposal has been clarified in the final rule.

h. Real estate services. Federal agencies involved in acquiring and disposing of real property often contract for real estate services, including lease acquisition, real property appraisal, broker, space planning, lease renegotiation, tax abatement, and real property disposal services. The primary classes of workers that are involved in performing the work are appraisers, leasing specialists, brokers, space planners, interior designers, fire safety engineers, and project managers. In many cases, the employees are required by contracts with the Government to be licensed. In many cases, the Department of Labor has not established wage determinations that apply to these classes of workers. The individual requirements are typically relatively low dollar value (under \$25,000) and require that services be performed in a variety of different geographic locations. Knowledge of the local real estate market is required to perform the services effectively. Therefore, individual employees, particularly in

rural areas, spend only a small fraction of their time working on Government contracts.

While the Federal Government's use of these services is significant, it represents a small fraction of the transactions that flow through the industry/commercial sources. As a result, the FAR Council reported that it is very difficult to get competition for these services where the Federal Government imposes unique requirements like those in the Service Contract Act on the contractors. The contractors will not change their way of doing business to accommodate a customer that represents a small portion of their business. The FAR Council stated that as the Government continues to downsize, it must rely more and more on commercial sources for these services and it is critical that the Federal Government has access to well-qualified sources of supply for these types of services.

LIUNA opposed this exemption simply by commenting that the "FAR Council nowhere states that it cannot obtain these services or that any contractor has refused to bid in these categories of services." No other comments were directed specifically at this service category. While LIUNA is correct that the FAR Council did not state that contractors had "refused to bid," the FAR Council did report that it is very difficult to get competition for these services. The Department does not believe that LIUNA's comment, unsupported by factual statements as to how the work is currently done or as to how the Government could obtain the services, is of sufficient weight to counter the FAR Council's representations. Therefore the exemption for real estate services is retained in the final rule.

i. Relocation services. Employee relocation services are available for Federal employees or military personnel and their families being transferred to new duty stations anywhere within the continental United States and Puerto Rico. These contracts offer a multitude of flexible services to customize a solution that best meets the employee's needs. The contracts save time and money and reduce stress by offering Federal employees and military these services: Home marketing assistance, home sales services, destination area services, management reporting services, mortgage counseling, property management services, and other related services. The individual requirements are typically relatively low dollar value (under \$25,000) and require that services be performed in a variety of different geographic locations.

Knowledge of the local real estate market is required to perform the services effectively. Therefore, individual employees, particularly in rural areas, spend a fraction of their time working on Government contracts.

While the Federal Government's use of these services is significant, the FAR Council stated that it represents a small fraction of the transactions that flow through the industry/commercial sources. As a result, it is very difficult to get competition for these services if the Federal Government imposes unique requirements like those in the Service Contract Act on the contractors. The contractors will not change their way of doing business to accommodate a customer that represents a small portion of their business. The FAR Council stated that it is in the Government's interest to maximize the availability of these services to its personnel; accordingly it is detrimental to the Government's interests when it is unable to attract commercial sources as providers of these services.

LIUNA opposed this exemption with the same comments that it made relative to real estate services. In this case also, although the FAR Council did not state that contractors had "refused to bid," the FAR Council did report that it is very difficult to get competition for these services. LIUNA's comment is not sufficient to change the Department's preliminary conclusion in the NPRM that the statutory criteria for exemption have been met.

The American Moving and Storage Association (AMSA) supported the proposed exemption and stated that the term "relocation services" should be clarified to specifically include moving and storage services. AMSA states that its members have "usually performed their services pursuant to FAR-exempt rate tenders rather than contracts. Formerly, the rates contained in tenders were predicated upon published tariff rates that were also filed with the Interstate Commerce Commission. Today, the rates and charges offered for Federal Government service are contained in published tariffs that must be available for inspection * * * but are not filed with a Federal regulatory agency although the tariffs are filed with contracting Government Agencies." AMSA notes that the Department of Defense has recently replaced rate tenders with contracts subject to SCA for several test relocation programs. AMSA analyzes moving and storage services to demonstrate how these services meet all of the proposed exemption criteria.

The application of the SCA section 7(3) exemption for transportation

services is not the subject to this rulemaking. That exemption is explained in § 4.118 and the Department has not proposed any change to that section. As indicated in that section, the section 7(3) exemption has only had application to services performed under rate tenders. Even before deregulation, DOD agencies had numerous contracts for moving and storage services that have always been subject to SCA. Since deregulation, it is the Department's experience that even those previously exempt tender services are now performed pursuant to contracts subject to SCA, rather than by tender agreement, as evidenced by the DOD test relocation contracts noted in the AMSA comments.

When the Department proposed the exemption for relocation services, it never considered moving and storage services within the scope of the proposed exemption. None of the services listed in the preamble to the proposed rule—home marketing assistance, home sales services, destination area services, management reporting services, mortgage counseling, or property management services—is similar to moving and storage services. If the Department intended moving and storage to be included within the scope of this exemption, it certainly would have listed moving and storage services and not have included this dominant aspect of the relocation within the catch-all phrase "other related services."

Based upon the comments and the recommendation of the FAR Council, the Department has concluded that the statutory requirements for exemption are met for the relocation services described in the proposal. The final rule will be clarified, however, to indicate clearly that moving and storage services are not within the scope of this exemption.

j. Other Services. The preamble to the proposal specifically solicited comments regarding the listed services and asked whether other services should be added to that list. The Department indicated that if sufficient justification were received for any additional service, it would issue a new proposal to add the new service. As noted in the discussion of relocation services AMSA submitted comments recommending that the definition of relocation services be clarified to specifically indicate that moving and storage services would fall within the scope of that exemption. As discussed above, the Department never intended moving and storage services to be a part of relocation services and has not adopted that recommendation. The

Department believes that the AMSA comment is more appropriately considered as a recommendation for the addition of a new service to the list. In that regard, while AMSA has submitted comments to show how moving and storage services typically meet the proposed criteria, it has not demonstrated that such an exemption is "necessary and proper in the public interest or to avoid the serious impairment of government business, and is in accord with the remedial purpose of [the] Act to protect prevailing labor standards." Accordingly, the Department is not issuing a new proposal at this time to add moving and storage services to the list of exempt services.

CODSIA and CSA both comment that the criteria should be applied to all commercial services and should not be limited to those services listed in the proposal. CODSIA and CSA specifically identify trash pickup, pest control, and childcare as services for which an exemption would be appropriate. As with AMSA's comments regarding moving and storage services, however, CODSIA and CSA have not provided a more specific justification to demonstrate that their recommended expansion of the list of services (to either all commercial services or the three specified additional services) meets the statutory requirements for exemption, and the Department is not issuing a new proposal at this time to add these services to the list.

Finally, a clarifying revision has been made to the introductory language to the list of exempt services to make it clear that the contract must be principally for the listed service in order to be exempt.

2. Proposed Criteria

As explained above, the listed services would only be exempt if specified criteria were satisfied. The recommended criteria were intended to limit the exemption to those procurements where the services being procured are such that it would be more efficient and practical for an offeror to perform the services with a workforce that is not primarily assigned to the performance of government work. Thus, contracts for base support services where the work is performed by an on-site dedicated workforce would not meet the exemption criteria. Similarly, contracts where the services have been performed by a dedicated group of federal employees (A-76 procurements) would be unlikely to meet the exemption criterion that the workers perform only a small part of their time on the contract; however, the NPRM explained that it is possible that some

subcontracts for a portion of those services might meet the criteria for exemption.

The criteria were designed to ensure that the remedial purpose of the Act to protect prevailing labor standards is preserved. This would be accomplished in two ways. First, the proposed exemption would apply only when the contract award is not determined primarily upon the factor of cost. Therefore, the contractor providing the best service at a somewhat higher cost would not be at a competitive disadvantage. Second, the criteria would limit the application of the exemption to circumstances where the nature of the procurement dictates that the most efficient and practical performance of the workload can be accomplished with a workforce that is not dedicated to working primarily on the Government contract. Thus, the competitive pressures upon employee wages that might exist if the services were performed by a workforce dedicated to the Government contract would not come into play on the contracts within the scope of the recommended exemption. Furthermore, even if a contractor might be inclined to use a dedicated workforce or to reduce wages to secure the Government contract, the criteria would forbid that practice.

Several comments were received regarding the proposed criteria for exemption. These comments will be organized and analyzed based upon each individual criterion.

(1) *The services are commercial services.* The NPRM explained that a basic underlying purpose of the proposed exemption was to permit a prospective contractor to utilize its commercial compensation practices for both Government and private commercial work. If the prospective contractor does not currently perform the solicited services, then conforming to the SCA requirements would not cause the contractor to alter its commercial compensation practices.

The AFL-CIO commented that this criterion is easily met, covering virtually all commercial contractors that do not exclusively rely upon government contracts. CODSIA commented, "if the contracting officer is using FAR part 12, then presumption should exist that the service being solicited will be COMMERCIAL." CSA made comments similar to CODSIA's.

This criterion was not intended to be limiting to any considerable extent. This criterion is intended only to distinguish services that are unique or specially adapted for the government contract from those that are not provided in the

commercial marketplace. The Department agrees that services of the type described in paragraph (f) of the definition of "commercial item" at FAR 2.101 would meet the requirements of this criterion; however, other aspects of the definition of "commercial item" in FAR 2.101 are not fully consistent with all aspects of this proposed exemption. Also, the definition in FAR 2.101 may change in the future. Therefore, the Department has not included any reference to FAR parts 2, 10, or 12 in the commercial service criterion, and the final rule retains the language in the proposal for this criterion.

(2) *The prime or subcontract will be awarded on a sole source basis or primarily upon factors other than cost.* One of the basic purposes of the Service Contract Act is to counteract the negative impact that competition based on price alone may have upon wages. If a contract is awarded on a sole source basis, there is no competition and price is clearly not the basis for awarding the contract. For the majority of other contracts that are competitively awarded, this criterion would attempt to largely remove wages from consideration by making quality of service and other non-cost factors equal to or more important than the bottom-line price. If one assumes that the best employees (contractors) are paid (pay) higher wages, then this criterion would allow these employees (contractors) to compete on the basis of the employees' increased productivity and higher quality service. These employees/contractors should not be disadvantaged even though the employee wages and possibly the resulting contract price are somewhat higher than the lowest offer.

The AFL-CIO comments that "[e]ven in best value contracting, price will always play a critical and often decisive role. . . . If the Government truly wished to obtain the best quality services at the best cost, the better approach is for agencies to fully maintain SCA rates, and then use best value contracting to hire the most qualified contractors that offer the best price."

This criterion is not intended to imply that all best value contracts should be exempt from SCA. In fact, the opposite is true and most best value service contracts will remain subject to SCA. This criterion is intended to operate in conjunction with all of the other criteria, and help to ensure that prevailing wage and benefit rates are not adversely affected by the application of this exemption. This criterion is retained without change in the final rule.

(3) *The services are furnished at catalogue or market prices.* This

criterion was designed to ensure that the contractor will provide the services to the Government on the same basis that the contractor services commercial accounts. Combined with the other criteria, this requirement should ensure that contractors do not decrease employee compensation as a part of the competitive contracting process.

The AFL-CIO commented that this criterion differs from § 4.123(e)(1)(ii)(B) because it contemplates that market price information could also be established by surveying firms in a particular industry or market. This additional sentence in the criterion applicable to the new services was not intended to imply that the market price would or could be determined in a manner different from the determination of market price under § 4.123(e)(1)(ii)(B). To avoid any confusion, however, this additional sentence will be deleted from the criterion in the final rule, and this criterion will be consistent with the language currently used in § 4.123(e)(1)(ii)(B).

(4) *The service employees performing the exempt services will spend only a small portion of their time (a monthly average of less than 20%) servicing the government contract.* The NPRM explained that if the employees spend only a small portion of their available work hours on the Government contract, the contractor would not likely be willing to alter its compensation practices simply to obtain the Government contract. (Note: Criterion 5 would also specifically preclude any such change in compensation practices.) Furthermore, the criteria for exemption would not be satisfied by rotating the workforce and having different employees work on the contract each day of the week. In the Department's experience it would be extraordinary for a contractor to staff a contract in this manner. Therefore in such a case, although each individual employee would spend less than 20% of his/her work hours on the Government contract, a contracting officer or prime contractor (in the case of a subcontract) could not certify—as required by Criterion 6—that all or nearly all offerors would staff the contract with service employees who spend only a small portion of their time on the project.

This criterion generated considerable comment on both sides of the issue. CODSIA and CSA both strongly oppose any type of hours restriction whatsoever. CODSIA notes that several of the proposed criteria have their foundation in the current ADP exemption, but it states that "the Department has effectively eviscerated

the previous foundation by adding a new qualification that requires a potential commercial subcontractor to perform the work without being able to dedicate the company's workforce in excess of more than 20% of the service worker's annualized hours to the government contract." CODSIA further states that "no commercial company would execute a government subcontract with the understanding (and obligation) that its service workers cannot be dedicated to the subcontract until completion . . . [t]herefore, no prudent company will seek to meet this qualification and the SCA will apply." CODSIA concludes that "SCA wages should not be superimposed upon the commercial market place due to an artificial, ill-founded criterion," and "the workforce requirement should be eliminated."

CSA makes many of the same comments as CODSIA but focuses those comments on the application of the criterion to subcontracts. CSA also states "no commercial service subcontractor will contract under an obligation that clearly impairs the efficient performance of its work." CSA concludes that "the 20% limitation should be eliminated for commercial service subcontractors."

On the other side of the issue, several union commenters take the position that the 20% criterion should be more limiting. The AFL-CIO comments that under the proposed rule a service contract worker could spend virtually all of his or her time performing work that has been covered by SCA, but receive no SCA protection. "[I]f a contractor had numerous service contracts with one or more government agencies, and no employee spent more than 19.9 percent of his or her time on any one contract, the contractor could be exempt from the SCA even if one or more of its employees spent 99 percent of his or her time on five separate contracts, taken together." The AFL-CIO states that this criterion "would encourage bid splitting by government agencies and contractors to avoid SCA coverage." Therefore, it recommends that § 4.123(e)(2)(ii)(D) require that "contractors treat the total time spent on government contracts or subcontracts cumulatively in calculating employee time allocated to government contract work." Also, "[t]o further ensure that contractors perform a significant amount of government contract work remain subject to the SCA," AFL-CIO recommends that "the Department should also place a cap on the total amount of time a contractor can devote to government contracts and still be eligible for the exemption." AFL-CIO

suggests five percent as a reasonable level. Finally, the AFL-CIO states that "[w]ithout recordkeeping requirements, the contractor itself may not know if any employee works a monthly average of more than 20 percent of available hours on an annualized basis on a government contract or subcontract." "To address the exemptions' failure to include recordkeeping requirements," the AFL-CIO suggests that "the regulation define a 'small portion' of a worker's time as 'no more than 20 percent in any one month.'"

The Department believes that these comments overlook the primary purpose of this criterion. The criterion is not designed to dictate how the contractor manages its workforce, but rather to describe the nature of the services being procured. The proposed criteria are designed to complement each other and to work as a whole. Therefore, each individual criterion must be evaluated within the context of the whole. In evaluating this criterion, therefore, it is important to remember that a subsequent criterion requires that the contracting officer (or the prime contractor in the case of a subcontract) determine in advance that all or nearly all of the prospective contractors will meet the criteria. Therefore, the 20 percent criterion should primarily serve as a guide for the contracting officer in evaluating the services to be procured. A hypothetical example might illustrate this point better. An agency is contracting for routine maintenance on a fleet of automobiles. The fleet is large enough that the agency expects to have at least five cars in the shop at all times. In this example, a contractor could clearly perform the government work with a dedicated workforce. Because it is therefore highly unlikely that all or nearly all the bidders would perform the contract in a way that would meet this criterion, the contracting officer would make the determination that the exemption would not apply to this procurement. The fact that a large repair shop could divide the work and ensure that none of its mechanics spends more than 20 percent of his or her time (on an annualized monthly basis) servicing the government vehicles would not alter the determination that SCA applies to this contract. An example of an exempt vehicle maintenance contract would be one where the government's fleet is relatively small or dispersed so that it is not likely that more than one or two vehicles per month will be serviced by one facility. In this case, the mechanics for all or nearly all of the offerors would clearly spend less than 20 percent of their time servicing the government

vehicles. The contractor's certification that its employees will not spend more than 20 percent of their time servicing the government vehicles is largely a confirmation that the contracting officer's evaluation of the nature of the contract work was correct.

Because the contracting officer should have already determined that all or nearly all offerors would meet this criterion, no contractor should be required to restructure its workforce to comply with the 20 percent limitation. Furthermore, the limitation requires employees to spend no more than 20 percent of their hours on the contract on an annualized basis, thereby permitting longer hours where required by the interim exigencies of the contract or to accommodate short-term workforce fluctuations. Therefore, the underlying basis for the CODSIA and CSA recommendation to delete this criterion should not exist. If a contractor could perform the services with a dedicated workforce, then the contracting officer should not consider the exemption to be applicable.

Further, with respect to the AFL-CIO's recommendation that the 20 percent limitation be based upon all government work and not just the contract in question, this is a question for which the contracting office would not have direct knowledge, and is something that would change from one contractor to the next. If the AFL-CIO's recommendation were adopted, one company might be exempt because it only had one government contract whereas another would be subject to SCA because it had numerous contracts. This would convert the determination on application of the exemption from one based upon the overall requirements of the contract to a determination based upon the individual contractor's workforce utilization. The Department does not intend this exemption to permit the situation where an exempt contractor would compete against a nonexempt contractor, and we have not adopted the AFL-CIO recommendation. Similarly, we have not adopted the AFL-CIO recommendation to limit the overall amount of Government work that an exempt contractor would be allowed to perform.

Finally, the Department has not adopted the AFL-CIO's recommendation to apply the 20 percent limitation on a month-by-month basis rather than an annualized monthly average. As already explained, this criterion was established primarily to describe the nature of the exempt services. In the automotive maintenance example described previously, the

Department does not believe that the exemption should be denied simply because in one month the agency's entire fleet of twenty vehicles needs servicing and for the remainder of the year no more than one car per month is in the shop. While the contracting officer should have informed knowledge about the amount of work anticipated over a normal year period, the contracting officer may not always be able to predict when repairs will be needed. The application of the exemption should not be impacted by unexpected fluctuations in service needs as long as the overall nature of the contract is not changed. Accordingly, the Department has not changed this annualized monthly average concept.

The criterion is adopted with a minor wording change to make it clear that the 20% limitation applies on an employee-by-employee basis, rather than an average of all of the employees working on the contract.

(5) *The contractor utilizes the same compensation plan for both contract and commercial work.* This criterion would ensure that the employees servicing the government contract will be compensated exactly as they would be if they were servicing a commercial account. Thus, the prevailing labor standards for private work would not be impacted in any way by the award of the Government contract. Furthermore, because contract award is not determined primarily on the basis of cost (Criterion 2), the contractor paying the lowest wages would not have a competitive advantage over other employers who pay average or above average wages. These contractors would compete for the Government work on the same basis that they compete for private work—quality of service and overall value.

The AFL-CIO and LIUNA commented that the Department improperly substituted the term “equivalent commercial wage” for the statutory term “prevailing.” The AFL-CIO recommended that this criterion be changed to require that the contractor's compensation plan be not less than the SCA wages and benefits. If this recommendation were adopted, the exemption would serve no purpose. If the contractor is already paying SCA rates then it should not matter whether SCA is applied to the contract. This comment, however, also goes to the issue of whether the exemption is “in accord with the remedial purpose of the Act to protect prevailing labor standards.” The Department believes that the criteria as a whole achieve this goal. If the employer does not change its pay practices to obtain the Government

contract, prevailing wages should not be affected. Furthermore, an employer would be unlikely to change its pay practices in any event where no worker spends more than 20% of his or her time on the Government contract. In addition, the criteria limit the application of the exemption to situations where employee wages are not a primary factor in deciding which company is awarded the contract. Thus, the Government contract should not serve to either increase or decrease prevailing labor standards. This recommendation, therefore, is not adopted, and the criterion is retained in the final rule as proposed.

(6) *The contracting officer determines in advance that all or nearly all of the offerors will meet the requirements of the criteria.* This requirement was designed to ensure that all contractors compete on an equal basis, and that a contractor subject to SCA would not be forced to compete against a contractor that would be exempt from SCA. Furthermore, as noted in the discussion of Criterion 4, this requirement—which takes into consideration not only the practices of likely offerors but also the nature of the contract requirements—is a necessary safeguard to prevent individual offerors from juggling staffing patterns simply in an effort to avoid SCA coverage. This criterion also would serve to protect those employees (either contractor or Federal employees) who might currently be engaged in performing the solicited services on a full-time basis.

The AFL-CIO noted that this criterion is designed to ensure that all contractors compete on an equal basis. The AFL-CIO questions whether the criterion accomplishes this goal since it only requires that all or “nearly all” of the offerors meet the requirements of the other criteria. The AFL-CIO suggests that this standard be changed to require that all offerors meet the requirements.

The Department's intention is that a contracting officer would not make this determination unless he or she has a high degree of confidence that all offerors will meet the requirements. It is unlikely that any contracting officer would feel able to determine absolutely that every offeror will qualify for the exemption. The “or nearly all” language therefore would permit the extraordinary situation where one bidder might not qualify as exempt. Returning to the automotive maintenance example described previously, an employer with a single employee and a relatively small number of commercial customers could bid on the contract to maintain on average a few vehicles a month. With that small

volume of government work, the workforce for “nearly all” prospective contractors would spend less than 20 percent of their time working on the contract. The single employee working for a company with relatively few commercial accounts, however, might spend more than 20 percent of his or her time performing work on the contract. While this company's offer might be rejected for other reasons (e.g., the contract might require a capacity to service more than one vehicle at a time—a capacity that the two-person shop might not possess), the fact that one non-exempt contractor might bid on the contract should not negate the application of the exemption to everyone else. The Department believes that retaining some amount of flexibility in this regard is appropriate, and the criterion is retained.

The Department would like to emphasize that “nearly all” does not mean most or a majority. The words “nearly all” are intended to recognize the possibility of exceptional circumstances where an individual offeror might not meet all of the criteria. If this offeror receives the contract, of course, the contract would be subject to SCA prevailing wage requirements. On the other hand, the Department realizes that there may be circumstances where, once bids are received, the contracting officer determines that he or she was incorrect in the determination that all or nearly all bidders would meet the exemption requirements. The regulation has therefore been revised to provide that in such circumstances SCA will apply to the procurement.

(7) *The exempted contractor or subcontractor certifies to the provisions of criteria (1) and (3) through (5).* This criterion would provide a mechanism for addressing and correcting situations where the exemption may have been misapplied. If the Department of Labor, in its enforcement, determines that the contract is not in fact exempt, it would require that SCA stipulations be included in the contract. In the case of a subcontract, the prime contractor, who in almost all cases would have SCA stipulations already included in its contract, would be ultimately responsible for compliance with the requirements of the Act. The Department could therefore require that the SCA requirements be effective as of the date of contract award. The Department noted in the NPRM that an exempt contractor or subcontractor would not be required to keep any particular records to meet its burden of showing that the criteria are satisfied.

CODSIA and CSA both comment that this was an unauthorized certification

requirement. They note that section 4301 of the Clinger-Cohen Act of 1996 (Pub. L. 104-106) prohibits the imposition of contractor and subcontractor certification requirements in the Federal Acquisition Regulations unless the certification is required by statute or justified in writing and approved by the FAR Council and the Administrator of the Office of Federal Procurement Policy (OFPP). While CODSIA and CSA correctly identify the procedural requirements for approval of these certifications, the Department does not consider this to be a substantive deficiency since the FAR Council and the Administrator of OFPP recommended the certifications. The Department notes that no contracting officer can be expected to know whether individual contractors in fact satisfy the exemption. Therefore the Department considers certification essential to ensure that the criteria for the exemption have been met. The FAR Council has now made the required justification, and it has been approved by the Administrator of OFPP. Therefore the certification requirement is retained, and modified to make it clear that a certification by a prime contractor that it meets the criteria also constitutes a certification that if it subcontracts the services, the subcontractor in turn will meet the criteria.

CSA also "recommends that the Department adopt the same policy that accompanies the Buy America Act (BAA) certification. Under the BAA policy, the contracting officer is permitted to accept the contractor's self-certification." In considering this comment the Department notes that the contracting officer or the prime contractor has already reviewed the requirements of the proposed contract/subcontract and has determined that all or nearly all of the offerors will meet the criteria. Therefore, the contracting officer or prime contractor should have no reason to question the contractor/subcontractor's certification. Accordingly, the Department has concluded that it is not necessary for the contracting officer or prime contractor to review the contractor/subcontractor's certification and this requirement has been deleted from the final rule. The fact that the requirement for review has been eliminated, however, does not mean that the contracting officer or prime contractor may not review the certification if they choose to do so, such as where they possess information which causes them to question the validity of the certification. Further, if it is determined that the certification is not correct, then the contracting officer

or the prime contractor should not proceed with award of an exempt contract or subcontract. Because the contracting officer will no longer be required to review the certification in advance, the Department has also amended the regulation to delete the language applying SCA as of the date of the Department's determination. As provided in § 4.5(c)(2) of the regulations, the Department may require retroactive application of the SCA where it determines it is appropriate under the circumstances.

The AFL-CIO, while not opposing the criterion, commented that in the absence of a formal monitoring system, it is unlikely that any misapplication of the exemption would ever be identified. The Department shares the AFL-CIO's concern that this exemption not be misapplied. Certainly, the Department expects that contracting agencies and prime contractors would exercise their responsibilities to ensure that such misapplication is minimized. At the same time, the Department recognizes that mistakes may be made; however, the Department does not believe that the mere possibility of a mistake should preclude adopting an exemption that is otherwise justified. The Department will monitor allegations of abuse to determine whether future changes in this exemption are warranted.

3. Other Issues

Several commenters raised additional issues that were not specifically related or limited to a single aspect of the proposed exemptions. Those issues are addressed separately in this section.

Several union commenters, including the AFL-CIO and LIUNA, recommended that the exclusion for contracts subject to the provisions of section 4(c) of SCA be expanded to include "resolicitations and other successor contracts for substantially the same services." They also recommended that this limitation be added to contracts under the current ADP exemption. The Department agrees that the regulation should be revised to make it clear that the exemption does not apply to any contract which is subject to section 4(c), as well as all options exercised and extensions of the contract. The Department does not believe, however, that there is sufficient justification to extend this limitation to all future resolicitations for substantially the same services, where the predecessor contract was not subject to section 4(c). In addition, the Department does not believe sufficient justification has been presented to add this requirement to the existing ADP exemption. This

exemption has been in existence for nearly twenty years and the Department is not aware of any problems arising from the absence of this requirement.

Several union commenters recommended that the Department promulgate a new procedure under which the contracting agency is required to demonstrate in advance of issuing the solicitation that the section 4(d) requirements are satisfied for a proposed exemption of a particular contract or subcontract. This recommendation is consistent with other union comments that the contracting officers and prime contractors should not be delegated the responsibility to decide whether a contractor is exempt from SCA coverage. The purpose of the proposed exemptions, however, is to carefully describe a class of contracts where exemption from SCA is appropriate. Every day contracting officers decide whether SCA should be applied to a particular contract, and the decisions required to be made in this case are no different. The Department does not believe that case-by-case determination is necessary where, as in the instant situation, the record supports an exemption for a particular class of contracts.

4. Conclusion

For the reasons discussed above, the Department has concluded that the exemptions as set forth in this rule are necessary and proper in the public interest or to avoid serious impairment of Government business, and are in accordance with the remedial purpose of the Service Contract Act to protect prevailing labor standards. The list of services is narrowly tailored to include only commercial services which the Government has had difficulty in acquiring or where the Government is getting limited competition because of unique requirements imposed by the Government. The additional criteria, when viewed as a whole, are designed to ensure that the contractor will not be motivated to change its wage practices and pay less than the prevailing wage in order to obtain the Government contract, and that the Government in turn will not be motivated to award contracts to offerors who pay less than prevailing wages.

IV. Regulatory Flexibility Act

Under the Regulatory Flexibility Act, Public Law 96-354 (94 Stat. 1164; 5 U.S.C. 601 *et seq.*), Federal Agencies are required to prepare and make available for public comment and initial regulatory flexibility analysis that describes the anticipated impact of

proposed rules on small entities. The Department received no comments regarding the Regulatory Flexibility Analysis prepared for this rule.

(1) The Need for and Objectives of the Rule

This rule was made at the request of the Administrator for Federal Procurement Policy, OFPP, in her letter of May 12, 1999. The Administrator, on behalf of the FAR Council, stated that the exemption "will further the commitment of the Administration to be more commercial-like, encourage broader participation in government procurement by companies doing business in the commercial sector, and reinforce our commitment to reduce government-unique terms and conditions from our contracts. We believe that all of this can be accomplished without compromising the purpose of the SCA to protect prevailing labor standards." The FAR Council developed a short list of services to which it believed an exemption should apply in the best interest of the Government and to avoid impairment to Government business.

Pursuant to section (4)(b) of SCA, the Secretary of Labor may grant reasonable exemptions to the provisions of the Act, but only in special circumstances where the "exemption is necessary and proper in the public interest or to avoid the serious impairment of government business, and is in accord with the remedial purpose of this Act to protect prevailing labor standards."

After a review of the comments and the representations of the FAR Council, the Department of Labor determined that the exemption, as revised based upon the public comments, will be both "necessary and proper in the public interest" and will also be "in accord with the remedial purpose of th[e] Act to protect prevailing labor standards."

(2) Summary of Significant Issues Raised by the Public Comments in Response to the Initial Regulatory Flexibility Analysis

The Department received a number of comments regarding the proposed exemptions. Those comments are discussed in detail in the preamble to this rule. The Department did not receive separate comments concerning its initial regulatory flexibility analysis.

(3) Number of Small Entities Covered Under the Rule

The definition of "small business" varies considerably depending upon the policy issues and circumstances under review, the industry being studied, and the measures used. The Small Business

Administration's Office of Advocacy generally uses employment data as a basis for size comparisons, with firms having fewer than 100 employees or fewer than 500 employees defined as small. The types of services covered by the proposed exemptions span a variety of industries. Based upon analyses done by the U.S. Small Business Administration, Office of Advocacy, some of the industries affected by the proposed exemptions are characterized as "large-business-dominated industries" (e.g., air transportation and business credit institutions) and others are characterized as "small-business-dominated industries" (e.g., automotive repair and real estate).¹ Thus, at least some of the services covered by the exemption would be performed primarily by small businesses. In fact, with the exception of those contracts for financial services involving the issuance and servicing of cards, the contracts for the transportation of persons, and contracts with equipment manufacturers, it would appear that a majority of the contracts affected by the proposed exemption likely would be performed by small businesses.

It is also difficult to determine with precision the value of Federal contracts that would be affected by the exemption. Federal Procurement Data System (FPDS) compiles and reports information on approximately 500,000 annual transactions exceeding \$25,000; however, as discussed above, many of the contracts covered by the exemption (e.g., food and lodging contracts for conferences) are currently or would likely be less than \$25,000. Also, the criteria that must be met for the specified services to be within the scope of the exemption will limit the application of the exemptions to a relatively small subset of contracts within a specific SIC code. Thus, FPDS data does not provide an accurate estimate of the contracts potentially covered by the exemption. Nevertheless, in view of the limiting criteria for the listed services, the total value of the exempt contracts should be relatively small, and it is believed that the SCA would no longer apply to only a relatively small number of contracts that currently contain SCA wage determination provisions.

(4) Reporting, Recordkeeping and Other Compliance Requirements of the Rule

The exemption does not impose any new reporting or recordkeeping requirements. Although offerors are required to certify that the criteria for

exemption are met, offerors are not required to maintain records to support the certification. The certification, which can be submitted as part of the bid package, is an important element to satisfy the statutory requirement that exemptions be "in accordance with the remedial purpose of the Act to protect prevailing labor standards." Contractors and subcontractors to whom the exemption applies will not be required to comply with the wage and reporting requirements of the SCA.

(5) Description of the Steps Taken To Minimize the Significant Economic Impact on Small Entities Consistent With the Objectives of the Service Contract Act

The exemption does not contain any new reporting, recordkeeping, or other compliance requirements applicable to small business. Rather, the exemption would relieve small businesses and other contractors from the requirements of the SCA on certain contracts where the contractor certifies that the requirements of the exemption have been met. Furthermore, any contractor performing on a contract within the scope of the exemption may elect to perform the contract under the requirements of SCA rather than make the necessary certifications. Because application of the exemption will have been determined in advance by the contracting officer, the Department anticipates that questions regarding proper application of the exemption will be rare. Contractors will not be required to maintain any records to support the exemption, although they may be required to furnish payroll and other existing records to the Department in the event of an investigation.

V. Executive Order 12866 and 13132; Section 202 of the Unfunded Mandates Reform Act of 1995; Small Business Regulatory Enforcement Fairness Act

This rule is being treated as a "significant regulatory action" within the meaning of Executive Order 12866 because of the significant impact of this rule on other agencies. Therefore, the Office of Management and Budget has reviewed the rule. However, the Department concurs with the view of the Federal Acquisition Regulatory Council that this rule is not "economically significant" as defined in section 3(f)(1) of E.O. 12866, and therefore it does not require a full economic impact analysis under section 6(a)(3)(C) of the Order. Under the new exemption, contracts would not be exempt unless price is equal to or less important than the combination of other non-price or cost factors in selecting the

¹ The State of Small Business: A Report of the President, 1996 (1997).

contractor. Therefore it is not anticipated that the changed rule will have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy, a sector of the economy, productivity, jobs, the environment, public health or safety, or State, local, or tribal governments or communities.

The Department has similarly concluded that this rule is not a "major rule" requiring approval by the Congress under the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*). It will not likely result in (1) an annual effect on the economy of \$100 million or more; (2) a major increase in costs or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or (3) significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of U.S.-based enterprises to compete with foreign-based enterprises in domestic or export markets.

For purposes of the Unfunded Mandates Reform Act of 1995, this rule does not include any federal mandate that may result in excess of \$100 million in expenditures by state, local and tribal governments in the aggregate, or by the private sector. Furthermore, the requirements of the Unfunded Mandates Reform Act, 2 U.S.C. 1532, do not apply here because the rule does not include a "Federal mandate." The term "Federal mandate" is defined to include either a "Federal intergovernmental mandate" or a "Federal private sector mandate." 2 U.S.C. 658(6). Except in limited circumstances not applicable here, those terms do not include an enforceable duty which is "a duty arising from participation in a voluntary program." 2 U.S.C. 658(7)(A). A decision by a contractor to bid on Federal service contracts is purely voluntary in nature, and the contractor's duty to meet Service Contract Act requirements arises "from participation in a voluntary Federal program."

The Department has also reviewed this rule in accordance with Executive Order 13132 regarding federalism, and has determined that it does not have "federalism implications." The rule does not "have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government."

VI. Document Preparation

This document was prepared under the direction and control of Thomas M. Markey, Deputy Administrator, Wage

and Hour Division, Employment Standards Administration, U.S. Department of Labor.

List of Subjects in 29 CFR Part 4

Administrative practice and procedures, Employee benefit plans, Government contracts, Investigations, Labor, Law enforcement, Minimum wages, Penalties, Recordkeeping requirements, Reporting requirements, wages.

Accordingly, for the reasons set out in the preamble, 29 CFR part 4 is amended as set forth below:

PART 4—LABOR STANDARDS FOR FEDERAL SERVICE CONTRACTS

1. The authority citation for part 4 is revised to read as follows:

Authority: 41 U.S.C. 351 *et seq.*; 41 U.S.C. 38 and 39; 5 U.S.C. 301.

2. Section 4.123(e) is revised to read as follows:

§ 4.123 Administrative limitations, variances, tolerances, and exemptions.

(e) The following types of contracts have been exempted from all the provisions of the Service Contract Act of 1965, pursuant to section 4(b) of the Act, which exemptions the Secretary of Labor found are necessary and proper in the public interest or to avoid serious impairment of the conduct of Government business, and are in accord with the remedial purpose of the Act to protect prevailing labor standards:

(1)(i) Prime contracts or subcontracts principally for the maintenance, calibration, and/or repair of:

(A) Automated data processing equipment and office information/word processing systems;

(B) Scientific equipment and medical apparatus or equipment where the application of microelectronic circuitry or other technology of at least similar sophistication is an essential element (for example, Federal Supply Classification (FSC) Group 65, Class 6515, "Medical Diagnostic Equipment"; Class 6525, "X-Ray Equipment"; FSC Group 66, Class 6630, "Chemical Analysis Instruments"; Class 6665, "Geographical and Astronomical Instruments", are largely composed of the types of equipment exempted under this paragraph);

(C) Office/business machines not otherwise exempt pursuant to paragraph (e)(1)(i)(A) of this section, where such services are performed by the manufacturer or supplier of the equipment.

(ii) The exemptions set forth in this paragraph (e)(1) shall apply only under the following circumstances:

(A) The items of equipment are commercial items which are used regularly for other than Government purposes, and are sold or traded by the contractor (or subcontractor in the case of an exempt subcontract) in substantial quantities to the general public in the course of normal business operations;

(B) The prime contract or subcontract services are furnished at prices which are, or are based on, established catalog or market prices for the maintenance, calibration, and/or repair of such commercial items. An "established catalog price" is a price included in a catalog, price list, schedule, or other form that is regularly maintained by the manufacturer or the contractor, is either published or otherwise available for inspection by customers, and states prices at which sales currently, or were last, made to a significant number of buyers constituting the general public. An "established market price" is a current price, established in the usual course of trade between buyers and sellers free to bargain, which can be substantiated from sources independent of the manufacturer or contractor; and

(C) The contractor utilizes the same compensation (wage and fringe benefits) plan for all service employees performing work under the contract as the contractor uses for these employees and equivalent employees servicing the same equipment of commercial customers;

(D) The contractor certifies to the provisions in this paragraph (e)(1)(ii). Certification by the prime contractor as to its compliance with respect to the prime contract also constitutes its certification as to compliance by its subcontractor if it subcontracts out the exempt services. The certification shall be included in the prime contract or subcontract.

(iii)(A) Determinations of the applicability of this exemption to prime contracts shall be made in the first instance by the contracting officer on or before contract award. In making a judgment that the exemption applies, the contracting officer shall consider all factors and make an affirmative determination that all of the conditions in paragraph (e)(1) of this section have been met.

(B) Determinations of the applicability of this exemption to subcontracts shall be made by the prime contractor on or before subcontract award. In making a judgment that the exemption applies, the prime contractor shall consider all factors and make an affirmative determination that all of the conditions in paragraph (e)(1) have been met.

(iv)(A) If the Administrator determines after award of the prime

contract that any of the requirements in paragraph (e)(1) for exemption has not been met, the exemption will be deemed inapplicable, and the contract shall become subject to the Service Contract Act, effective as of the date of the Administrator's determination. In such case, the corrective procedures in § 4.5(c)(2) shall be followed.

(B) The prime contractor is responsible for compliance with the requirements of the Service Contract Act by its subcontractors, including compliance with all of the requirements of this exemption (see § 4.114(b)). If the Administrator determines that any of the requirements in paragraph (e)(1) for exemption has not been met with respect to a subcontract, the exemption will be deemed inapplicable, and the prime contractor may be responsible for compliance with the Act effective as of the date of contract award.

(2)(i) Prime contracts or subcontracts principally for the following services where the services under the contract or subcontract meet all of the criteria set forth in paragraph (e)(2)(ii) of this section and are not excluded by paragraph (e)(2)(iii):

(A) Automobile or other vehicle (*e.g.*, aircraft) maintenance services (other than contracts to operate a Government motor pool or similar facility);

(B) Financial services involving the issuance and servicing of cards (including credit cards, debit cards, purchase cards, smart cards, and similar card services);

(C) Contracts with hotels/motels for conferences, including lodging and/or meals which are part of the contract for the conference (which shall not include ongoing contracts for lodging on an as needed or continuing basis);

(D) Maintenance, calibration, repair and/or installation (where the installation is not subject to the Davis-Bacon Act, as provided in § 4.116(c)(2)) services for all types of equipment where the services are obtained from the manufacturer or supplier of the equipment under a contract awarded on a sole source basis;

(E) Transportation by common carrier of persons by air, motor vehicle, rail, or marine vessel on regularly scheduled routes or via standard commercial services (not including charter services);

(F) Real estate services, including real property appraisal services, related to housing federal agencies or disposing of real property owned by the Federal Government; and

(G) Relocation services, including services of real estate brokers and appraisers, to assist federal employees or military personnel in buying and selling homes (which shall not include

actual moving or storage of household goods and related services).

(ii) The exemption set forth in this paragraph (e)(2) shall apply to the services listed in paragraph (e)(2)(i) only when all of the following criteria are met:

(A) The services under the prime contract or subcontract are commercial—*i.e.*, they are offered and sold regularly to non-Governmental customers, and are provided by the contractor (or subcontractor in the case of an exempt subcontract) to the general public in substantial quantities in the course of normal business operations.

(B) The prime contract or subcontract will be awarded on a sole source basis or the contractor or subcontractor will be selected for award on the basis of other factors in addition to price. In such cases, price must be equal to or less important than the combination of other non-price or cost factors in selecting the contractor.

(C) The prime contract or subcontract services are furnished at prices which are, or are based on, established catalog or market prices. An established price is a price included in a catalog, price list, schedule, or other form that is regularly maintained by the contractor or subcontractor, is either published or otherwise available for inspection by customers, and states prices at which sales are currently, or were last, made to a significant number of buyers constituting the general public. An established market price is a current price, established in the usual course of trade between buyers and sellers free to bargain, which can be substantiated from sources independent of the manufacturer or contractor.

(D) Each service employee who will perform services under the Government contract or subcontract will spend only a small portion of his or her time (a monthly average of less than 20 percent of the available hours on an annualized basis, or less than 20 percent of available hours during the contract period if the contract period is less than a month) servicing the government contract or subcontract.

(E) The contractor utilizes the same compensation (wage and fringe benefits) plan for all service employees performing work under the contract or subcontract as the contractor uses for these employees and for equivalent employees servicing commercial customers.

(F) The contracting officer (or prime contractor with respect to a subcontract) determines in advance, based on the nature of the contract requirements and knowledge of the practices of likely offerors, that all or nearly all offerors

will meet the requirements in paragraph (e)(2)(ii) of this section. Where the services are currently being performed under contract, the contracting officer or prime contractor shall consider the practices of the existing contractor in making a determination regarding the requirements in paragraph (e)(2)(ii). If upon receipt of offers, the contracting officer finds that he or she did not correctly determine that all or nearly all offerors would meet the requirements, the Service Contract Act shall apply to the procurement, even if the successful offeror has certified in accordance with paragraph (e)(2)(ii)(G) of this section.

(G) The contractor certifies in the prime contract or subcontract, as applicable, to the provisions in paragraph (e)(2)(ii)(A) and (C) through (E) of this section. Certification by the prime contractor as to its compliance with respect to the prime contract also constitutes its certification as to compliance by its subcontractor if it subcontracts out the exempt services. If the contracting officer or prime contractor has reason to doubt the validity of the certification, SCA stipulations shall be included in the prime contract or subcontract.

(iii)(A) If the Administrator determines after award of the prime contract that any of the requirements in paragraph (e)(2) for exemption has not been met, the exemption will be deemed inapplicable, and the contract shall become subject to the Service Contract Act. In such case, the corrective procedures in § 4.5(c)(2) shall be followed.

(B) The prime contractor is responsible for compliance with the requirements of the Service Contract Act by its subcontractors, including compliance with all of the requirements of this exemption (see § 4.114(b)). If the Department of Labor determines that any of the requirements in paragraph (e)(2) for exemption has not been met with respect to a subcontract, the exemption will be deemed inapplicable, and the prime contractor may be responsible for compliance with the Act, as of the date of contract award.

(iv) The exemption set forth in this paragraph (e)(2) does not apply to solicitations and contracts:

(A) Entered into under the Javits-Wagner-O'Day Act, 41 U.S.C. 47;

(B) For the operation of a Government facility or portion thereof (but may be applicable to subcontracts for services set forth in paragraph (e)(2)(ii) that meet all of the criteria of paragraph (e)(2)(ii)); or

(C) Subject to section 4(c) of the Service Contract Act, as well as any

options or extensions under such contract.

Signed at Washington, DC, on this 11th day of January, 2001.

T. Michael Kerr,

Administrator, Wage and Hour Division.

**Federal Acquisition Regulation;
Prohibition of Acquisition of Products
Produced by Forced or Indentured
Child Labor**

AGENCIES: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Final rule.

SUMMARY: The Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council (Councils) are issuing a final rule to amend the Federal Acquisition Regulation (FAR) to implement the specific requirements of Executive Order 13126, Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor, as well as to prescribe further appropriate actions to comply with the broad policy of the Executive Order (*i.e.*, to enforce laws prohibiting the manufacture or importation of products that have been mined, produced, or manufactured wholly or in part using forced or indentured child labor).

DATES: *Effective Date:* February 20, 2001.

Applicability Date: The FAR, as amended by this rule, is applicable to solicitations issued on or after February 20, 2001 per FAR 1.108(d).

FOR FURTHER INFORMATION CONTACT: The FAR Secretariat, Room 4035, GS Building, Washington, DC, 20405, (202) 501-4755, for information pertaining to status or publication schedules. For clarification of content, contact Ms. Linda Nelson, Procurement Analyst, at (202) 501-3775. Please cite FAC 97-23, FAR case 1999-608.

SUPPLEMENTARY INFORMATION:**A. Background**

This final rule amends the FAR by adding a new FAR subpart on prohibition of acquisition of products produced by forced or indentured child labor (Subpart 22.15), adding a new certification regarding knowledge of child labor for listed end products (FAR 52.212-3 and 52.222-18), and adding a clause at 52.222-19, that requires cooperation with authorities if the

solicitation included the certification provision and provides remedies for violations relating to use of forced or indentured child labor.

On June 12, 1999, the President signed Executive Order 13126, Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor (the Executive Order). The Executive Order states a broad policy that executive agencies must take appropriate actions to enforce the laws prohibiting the manufacture or importation of products mined, produced, or manufactured wholly or in part by forced or indentured child labor.

Section 2 of the Executive Order directed the Department of Labor (DoL), in consultation with the Department of Treasury and the Department of State, to publish in the **Federal Register** a list of products (the List, identified by their country of origin, for which there is a reasonable basis to believe that such product may have been mined, produced, or manufactured by forced or indentured child labor. DoL published the preliminary List in the **Federal Register** on September 6, 2000 (65 FR 54108-54112), and solicited public comment. After receipt and consideration of the public comments, DoL is publishing the final List in today's **Federal Register**.

Section 3 of the Executive Order required the Councils to issue a proposed rule, amending the FAR to implement the policy expressed in the Executive Order. Accordingly, the Councils published a proposed rule in the **Federal Register** on September 6, 2000 (65 FR 54104-54107). Public comments on the proposed rule were due by November 6, 2000.

Ten respondents submitted public comments. Most comments received did not object to the basic policy but were outside the scope of the case, because they request FAR revisions that go beyond the scope of the Executive Order or are inconsistent with the requirements of the Executive Order.

For example, some suggested expanding the scope of the mandate of the Executive Order in the regulation to address products made by convict labor and forced or indentured labor by persons 18 or older—clearly outside the purview of this rulemaking. Other respondents suggested using a different definition of “forced or indentured child labor,” a comment that has been addressed in the companion rule being issued simultaneously by the Department of Labor. The Councils carefully considered all comments in formulation of the final rule.

The Councils are issuing a final rule that is the same as the proposed rule,

except for minor editorial changes. This is a significant regulatory action, and therefore, was subject to review under Section 6(b) of Executive Order 12866, Regulatory Planning and Review, dated September 30, 1993. This rule is not a major rule under 5 U.S.C. 804.

B. Regulatory Flexibility Act

The Department of Defense, the General Services Administration, and the National Aeronautics and Space Administration certify that this final rule will not have a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*, because only a small percentage of acquisitions are for products on the DoL List, there is minimal impact on offerors providing a listed product that originates in a country other than the corresponding countries identified on the DoL List, and not all offerors responding to solicitations for these acquisitions are small entities. With regard to the clause that requires cooperation with authorities and provides remedies for violations relating to use of forced or indentured child labor, we expect that very few contractors are furnishing end products or components produced by forced or indentured child labor. The rule does not apply to micro-purchases.

The Councils did not receive any comments regarding the Regulatory Flexibility Act as a result of publication of the proposed rule in the **Federal Register** at 65 FR 54104.

C. Nonstatutory Certification Approval

In accordance with Section 29 of the Office of Federal Procurement Policy Act, 41 U.S.C. Section 425, the FAR Council has requested approval from the Administrator for Federal Procurement Policy for inclusion of a nonstatutory certification in the Federal Acquisition Regulation. In the absence of an Administrator, that approval has been granted by the Director of the Office of Management and Budget in accordance with the Federal Vacancies Reform Act of 1998, 5 U.S.C. 3348(b)(2).

D. Paperwork Reduction Act

The Paperwork Reduction Act (Pub. L. 104-13) applies. This final rule contains information collection requirements that have been submitted to the Office of Management and Budget (OMB) which will not take effect prior to OMB approval of these provisions. Two respondents commented on the estimated burden of the information collection requirements.

The Councils note that the average response time reflects the average

burden on all contractors, including those who must simply certify that they are not supplying products that were mined, produced, or manufactured in the corresponding country identified on the DoL List. We also anticipate that, given the need to comply with the Tariff Act of 1930, many offerors would already have taken steps that would enable them to make the necessary certification, before they sought to supply a product from a country identified on the DoL List.

The proposed rule erroneously stated the estimated hours per response as .30 hours rather than .5 hours (30 minutes). This does not change the total estimate of 250 response burden hours per year. The revised annual reporting burden is estimated as follows:

Respondents: 500.

Responses per respondent: 1.

Total annual responses: 500.

Preparation hours per response: .5.

Total response burden hours: 250.

List of Subjects in 48 CFR Parts 22 and 52

Government procurement.

Dated: January 12, 2001.

Al Matera,

Acting Director, Federal Acquisition Policy Division.

Federal Acquisition Circular

Federal Acquisition Circular (FAC) 97-23 is issued under the authority of the Secretary of Defense, the Administrator of General Services, and the Administrator for the National Aeronautics and Space Administration.

All Federal Acquisition Regulation (FAR) changes and other directive material contained in FAC 97-23 are effective February 20, 2001.

Dated: January 11, 2001.

R.D. Kerrins, Jr.,

Acting Director, Defense Procurement, Department of Defense.

Dated: January 11, 2001.

David A. Drabkin,

Deputy Associate Administrator, Office of Acquisition Policy, General Services Administration.

Dated: January 12, 2001.

Anne Guenther,

Acting Associate Administrator for Procurement, National Aeronautics and Space Administration.

Therefore, DoD, GSA, and NASA amend 48 CFR Parts 22 and 52 as set forth below:

1. The authority citation for 48 CFR Parts 22 and 52 continues to read as follows:

Authority: 40 U.S.C. 486(c); 10 U.S.C. chapter 137; and 42 U.S.C. 2473(c).

PART 22—APPLICATION OF LABOR LAWS TO GOVERNMENT ACQUISITIONS

2. Add Subpart 22.15 to read as follows:

Subpart 22.15—Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor

Sec.

22.1500 Scope.

22.1501 Definitions.

22.1502 Policy.

22.1503 Procedures for acquiring end products on the List of Products Requiring Contractor Certification as to Forced or Indentured Child Labor.

22.1504 Violations and remedies.

22.1505 Solicitation provision and contract clause.

22.1500 Scope.

This subpart applies to acquisitions of supplies that exceed the micro-purchase threshold.

22.1501 Definitions.

As used in this subpart—

Forced or indentured child labor means all work or service—

(1) Exacted from any person under the age of 18 under the menace of any penalty for its nonperformance and for which the worker does not offer himself voluntarily; or

(2) Performed by any person under the age of 18 pursuant to a contract the enforcement of which can be accomplished by process or penalties.

List of Products Requiring Contractor Certification as to Forced or Indentured Child Labor means the list published by the Department of Labor in accordance with Executive Order 13126 of June 12, 1999, Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor. The list identifies products, by their country of origin, that the Departments of Labor, Treasury, and State have a reasonable basis to believe might have been mined, produced, or manufactured by forced or indentured child labor.

22.1502 Policy.

Agencies must take appropriate action to enforce the laws prohibiting the manufacture or importation of products that have been mined, produced, or manufactured wholly or in part by forced or indentured child labor (19 U.S.C. 1307, 29 U.S.C. 201, *et seq.*, and 41 U.S.C. 35, *et seq.*). Agencies should

make every effort to avoid acquiring such products.

22.1503 Procedures for acquiring end products on the List of Products Requiring Contractor Certification as to Forced or Indentured Child Labor.

(a) When issuing a solicitation for supplies expected to exceed the micro-purchase threshold, the contracting officer must check the List of Products Requiring Contractor Certification as to Forced or Indentured Child Labor (the List) (www.dol.gov/dol/ilab) (see 22.1505(a)). Appearance of a product on the List is not a bar to purchase of any such product mined, produced, or manufactured in the identified country, but rather is an alert that there is a reasonable basis to believe that such product may have been mined, produced, or manufactured by forced or indentured child labor.

(b) The requirements of this subpart that result from the appearance of any end product on the List do not apply to a solicitation or contract if the identified country of origin on the List is—

(1) Canada, and the anticipated value of the acquisition is \$25,000 or more (see 25.405);

(2) Israel, and the anticipated value of the acquisition is \$50,000 or more (see 25.406);

(3) Mexico, and the anticipated value of the acquisition is \$54,372 or more (see 25.405); or

(4) Aruba, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Italy, Japan, Korea, Liechtenstein, Luxembourg, Netherlands, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, or the United Kingdom and the anticipated value of the acquisition is \$177,000 or more (see 25.403(b)).

(c) Except as provided in paragraph (b) of this section, before the contracting officer may make an award for an end product (regardless of country of origin) of a type identified by country of origin on the List the offeror must certify that—

(1) It will not supply any end product on the List that was mined, produced, or manufactured in a country identified on the List for that product, as specified in the solicitation by the contracting officer in the Certification Regarding Knowledge of Child Labor for Listed End Products; or

(2)(i) It has made a good faith effort to determine whether forced or indentured child labor was used to mine, produce, or manufacture any end product to be furnished under the contract that is on the List and was mined, produced, or manufactured in a country identified on the List for that product; and

(ii) On the basis of those efforts, the offeror is unaware of any such use of child labor.

(d) Absent any actual knowledge that the certification is false, the contracting officer must rely on the offerors' certifications in making award decisions.

(e) Whenever a contracting officer has reason to believe that forced or indentured child labor was used to mine, produce, or manufacture an end product furnished pursuant to a contract awarded subject to the certification required in paragraph (c) of this section, the contracting officer must refer the matter for investigation by the agency's Inspector General, the Attorney General, or the Secretary of the Treasury, whichever is determined appropriate in accordance with agency procedures, except to the extent that the end product is from the country listed in paragraph (b) of this section, under a contract exceeding the applicable threshold.

(f) Proper certification will not prevent the head of an agency from imposing remedies in accordance with section 22.1504(a)(4) if it is later discovered that the contractor has furnished an end product or component that has in fact been mined, produced, or manufactured, wholly or in part, using forced or indentured child labor.

22.1504 Violations and remedies.

(a) *Violations.* The Government may impose remedies set forth in paragraph (b) of this section for the following violations (note that the violations in paragraphs (a)(3) and (a)(4) of this section go beyond violations of the requirements relating to certification of end products) (see 22.1503):

(1) The contractor has submitted a false certification regarding knowledge of the use of forced or indentured child labor.

(2) The contractor has failed to cooperate as required in accordance with the clause at 52.222-19, Child Labor Cooperation with Authorities and Remedies, with an investigation of the use of forced or indentured child labor by an Inspector General, the Attorney General, or the Secretary of the Treasury.

(3) The contractor uses forced or indentured child labor in its mining, production, or manufacturing processes.

(4) The contractor has furnished an end product or component mined, produced, or manufactured, wholly or in part, by forced or indentured child labor. Remedies in paragraphs (b)(2) and (b)(3) of this section are inappropriate unless the contractor knew of the violation.

(b) *Remedies.* (1) The contracting officer may terminate the contract.

(2) The suspending official may suspend the contractor in accordance with the procedures in subpart 9.4.

(3) The debarring official may debar the contractor for a period not to exceed 3 years in accordance with the procedures in subpart 9.4.

22.1505 Solicitation provision and contract clause.

(a) Except as provided in paragraph (b) of 22.1503, insert the provision at 52.222-18, Certification Regarding Knowledge of Child Labor for Listed End Products, in all solicitations that are expected to exceed the micro-purchase threshold and are for the acquisition of end products (regardless of country of origin) of a type identified by country of origin on the List of Products Requiring Contractor Certification as to Forced or Indentured Child Labor, except solicitations for commercial items that include the provision at 52.212-3, Offeror Representations and Certifications—Commercial Items. The contracting officer must identify in paragraph (b) of the provision at 52.222-18, Certification Regarding Knowledge of Child Labor for Listed End Products, or paragraph (i)(1) of the provision at 52.212-3, any applicable end products and countries of origin from the List. For solicitations estimated to equal or exceed \$25,000, the contracting officer must exclude from the List in the solicitation end products from any countries identified at 22.1503(b), in accordance with the specified thresholds.

(b) Insert the clause at 52.222-19, Child Labor—Cooperation with Authorities and Remedies, in all solicitations and contracts for the acquisition of supplies that are expected to exceed the micro-purchase threshold.

PART 52—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

3. In section 52.212-3, revise the date of the provision; add, in alphabetical order, in paragraph (a) the definition "Forced or indentured child labor"; and add paragraph (i) to read as follows:

52.212-3 Offeror Representations and Certifications—Commercial Items.

* * * * *

OFFEROR REPRESENTATIONS AND CERTIFICATIONS—COMMERCIAL ITEMS (February 2001)

(a) * * *

* * * * *

Forced or indentured child labor means all work or service—

(1) Exactd from any person under the age of 18 under the menace of any penalty for its

nonperformance and for which the worker does not offer himself voluntarily; or

(2) Performed by any person under the age of 18 pursuant to a contract the enforcement of which can be accomplished by process or penalties.

* * * * *

(i) *Certification Regarding Knowledge of Child Labor for Listed End Products (Executive Order 13126).* [The Contracting Officer must list in paragraph (i)(1) any end products being acquired under this solicitation that are included in the List of Products Requiring Contractor Certification as to Forced or Indentured Child Labor, unless excluded at 22.1503(b).]

(1) *Listed end products.*

Listed End Product

Listed Countries of Origin

(2) *Certification.* [If the Contracting Officer has identified end products and countries of origin in paragraph (i)(1) of this provision, then the offeror must certify to either (i)(2)(i) or (i)(2)(ii) by checking the appropriate block.]

☐ (i) The offeror will not supply any end product listed in paragraph (i)(1) of this provision that was mined, produced, or manufactured in the corresponding country as listed for that product.

☐ (ii) The offeror may supply an end product listed in paragraph (i)(1) of this provision that was mined, produced, or manufactured in the corresponding country as listed for that product. The offeror certifies that it has made a good faith effort to determine whether forced or indentured child labor was used to mine, produce, or manufacture any such end product furnished under this contract. On the basis of those efforts, the offeror certifies that it is not aware of any such use of child labor.

3a. Effective March 12, 2001, the date of the clause at 52.212-3 is amended by removing "(February 2001)" and adding (MAR 2001) in its place).

4. In section 52.212-5, revise the date of the clause and the introductory text of paragraph (b); redesignate paragraphs (b)(16) through (b)(27) as (b)(17) through (b)(28), respectively, and add new paragraph (b)(16) to read as follows:

52.212-5 Contract Terms and Conditions Required to Implement Statutes or Executive Orders—Commercial Items.

* * * * *

Contract Terms and Conditions Required to Implement Statutes or Executive Orders—Commercial Items (February 2001)

* * * * *

(b) The Contractor shall comply with the FAR clauses in this paragraph (b) that the Contracting Officer has indicated as being incorporated in this contract by reference to implement

provisions of law or Executive orders applicable to acquisitions of commercial items or components:

[Contracting Officer must check as appropriate.]

* * * * *

____(16) 52.222–19, Child Labor—Cooperation with Authorities and Remedies (E.O. 13126).

* * * * *

5. In section 52.213–4, revise the date of the clause; redesignate paragraphs (b)(1)(vii) through (xi) as (b)(1)(viii) through (xii), respectively, and add new paragraph (vii) to read as follows:

52.213–4 Terms and Conditions—Simplified Acquisitions (Other than Commercial Items).

* * * * *

Terms and Conditions—Simplified Acquisitions (Other Than Commercial Items) (February 2001)

* * * * *

(vii) 52.222–19, Child Labor—Cooperation with Authorities and Remedies (JAN 2001) (E.O. 13126). (Applies to contracts for supplies exceeding the micro-purchase threshold.)

* * * * *

5a. Effective March 12, 2001, the date of the clause at 52.213–4 is amended by removing “February 2001” and adding “(MAR 2001)” in its place.)

6. Add new sections 52.222–18 and 52.222–19 to read as follows:

52.222–18 Certification Regarding Knowledge of Child Labor for Listed End Products.

As prescribed in 22.1505(a), insert the following provision:

Certification Regarding Knowledge of Child Labor for Listed End Products (February 2001)

(a) *Definition.*

Forced or indentured child labor means all work or service—

(1) Exacted from any person under the age of 18 under the menace of any penalty for its nonperformance and for which the worker does not offer himself voluntarily; or

(2) Performed by any person under the age of 18 pursuant to a contract the enforcement of which can be accomplished by process or penalties.

(b) *Listed end products.* The following end product(s) being acquired under this solicitation is (are) included in the List of Products Requiring Contractor Certification as to Forced or Indentured Child Labor, identified by their country of origin. There is a reasonable basis to believe that listed endproducts from the listed countries of origin may have been mined, produced, or manufactured by forced or indentured child labor.

Listed End Product

Listed Countries of Origin

(c) *Certification.* The Government will not make award to an offeror unless the offeror, by checking the appropriate block, certifies to either paragraph (c)(1) or paragraph (c)(2) of this provision.

☐ (1) The offeror will not supply any end product listed in paragraph (b) of this provision that was mined, produced, or manufactured in a corresponding country as listed for that end product.

☐ (2) The offeror may supply an end product listed in paragraph (b) of this provision that was mined, produced, or manufactured in the corresponding country as listed for that product. The offeror certifies that it has made a good faith effort to determine whether forced or indentured child labor was used to mine, produce, or manufacture such end product. On the basis of those efforts, the offeror certifies that it is not aware of any such use of child labor. (End of provision)

52.222–19 Child Labor—Cooperation with Authorities and Remedies.

As prescribed in 22.1505(b), insert the following clause:

Child Labor—Cooperation With Authorities and Remedies (February 2001)

(a) *Applicability.* This clause does not apply to the extent that the Contractor is supplying end products mined, produced, or manufactured in—

(1) Canada, and the anticipated value of the acquisition is \$25,000 or more;

(2) Israel, and the anticipated value of the acquisition is \$50,000 or more;

(3) Mexico, and the anticipated value of the acquisition is \$54,372 or more; or

(4) Aruba, Austria, Belgium, Denmark, Finland, France, Germany, Greece, Hong Kong, Ireland, Italy, Japan, Korea, Liechtenstein, Luxembourg, Netherlands, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, or the United Kingdom and the anticipated value of the acquisition is \$177,000 or more.

(b) *Cooperation with Authorities.* To enforce the laws prohibiting the manufacture or importation of products mined, produced, or manufactured by forced or indentured child labor, authorized officials may need to conduct investigations to determine whether forced or indentured child labor was used to mine, produce, or manufacture any product furnished under this contract. If the solicitation includes the provision 52.222–18, Certification Regarding Knowledge of Child Labor for Listed End Products, or the equivalent at 52.212–3(i), the Contractor agrees to cooperate fully with authorized officials of the contracting agency, the Department of the Treasury, or the Department of Justice by providing reasonable access to records, documents, persons, or premises upon reasonable request by the authorized officials.

(c) *Violations.* The Government may impose remedies set forth in paragraph (d) for the following violations:

(1) The Contractor has submitted a false certification regarding knowledge of the use of forced or indentured child labor for listed end products.

(2) The Contractor has failed to cooperate, if required, in accordance with paragraph (b) of this clause, with an investigation of the use of forced or indentured child labor by an Inspector General, Attorney General, or the Secretary of the Treasury.

(3) The Contractor uses forced or indentured child labor in its mining, production, or manufacturing processes.

(4) The Contractor has furnished under the contract end products or components that have been mined, produced, or manufactured wholly or in part by forced or indentured child labor. (The Government will not pursue remedies at paragraph (d)(2) or paragraph (d)(3) of this clause unless sufficient evidence indicates that the Contractor knew of the violation.)

(d) *Remedies.* (1) The Contracting Officer may terminate the contract.

(2) The suspending official may suspend the Contractor in accordance with procedures in FAR Subpart 9.4.

(3) The debarring official may debar the Contractor for a period not to exceed 3 years in accordance with the procedures in FAR Subpart 9.4. (End of clause)

[FR Doc. 01–1503 Filed 1–17–01; 8:45 am]

BILLING CODE 6820–EP–P

**DEPARTMENT OF DEFENSE
GENERAL SERVICES
ADMINISTRATION
NATIONAL AERONAUTICS AND
SPACE ADMINISTRATION**

48 CFR Chapter 1

Federal Acquisition Regulation; Small Entity Compliance Guide

AGENCIES: Department of Defense (DoD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Small entity compliance guide.

SUMMARY: This document is issued under the joint authority of the Secretary of Defense, the Administrator of General Services and the Administrator for the National Aeronautics and Space Administration. This *Small Entity Compliance Guide* has been prepared in accordance with Section 212 of the Small Business Regulatory Enforcement Fairness Act of 1996 (Public Law 104–121). It consists of a summary of the rule appearing in Federal Acquisition Circular (FAC) 97–23 which amends the Federal Acquisition Regulation (FAR). Interested parties may obtain further information regarding this rule by

referring to FAC 97-23 which precedes this document. This document is also available via the Internet at <http://www.arnet.gov/far>.

FOR FURTHER INFORMATION CONTACT:

Laurie Duarte, FAR Secretariat, (202) 501-4225. For clarification of content, contact Ralph De Stefano, Procurement Analyst, General Services Administration, at (202) 501-1758.

Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor (FAC 97-23, FAR Case 1999-608)

This final rule amends the FAR by adding a new FAR subpart on prohibition of acquisition of products produced by forced or indentured child labor (Subpart 22.15), adding a new certification regarding knowledge of child labor for listed end products (FAR 52.212-3 and 52.222-18), and adding a

clause at 52.222-19, which requires cooperation with authorities if the solicitation included the certification provision and provides remedies for violations relating to use of forced or indentured child labor.

Dated: January 12, 2001.

Al Matera,

Acting Director, Federal Acquisition Policy Division.

BILLING CODE 6820-EP-P

DEPARTMENT OF LABOR**Office of the Secretary****Bureau of International Labor Affairs;
Procedural Guidelines for the
Maintenance of the List of Products
Requiring Federal Contractor
Certification as to Forced or
Indentured Child Labor Under 48 CFR
Subpart 22.15 and E.O. 13126****AGENCY:** Office of the Secretary, Labor.**ACTION:** Notice of procedural guidelines.

SUMMARY: This notice sets out procedural guidelines pertaining to the submission of information, review, and reporting process utilized by the Department of Labor's International Child Labor Program in maintaining and revising the list of products requiring certification as to forced or indentured child labor, pursuant to amendments to the Federal Acquisition Regulation (FAR), 48 CFR Subpart 22.15 and Executive Order No. 13126 ("Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor").

EFFECTIVE DATE: January 18, 2001.

FOR FURTHER INFORMATION CONTACT: Ami Thakkar, International Child Labor Program, Bureau of International Labor Affairs, Room S-5303, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210; telephone: (202) 208-4843; fax: (202) 219-4923.

SUPPLEMENTARY INFORMATION: Executive Order No. 13126 ("Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor") was signed by President Clinton on June 12, 1999. The Executive Order declared that it was "the policy of the United States Government * * * that the executive agencies shall take appropriate actions to enforce the laws prohibiting the manufacture or importation of goods, wares, articles, and merchandise mined, produced, or manufactured wholly or in part by forced or indentured child labor."

Pursuant to Section 2 of the Executive Order, and following public notice and comment (including a public hearing held on August 10, 1999), the Department of Labor is publishing in today's **Federal Register** a final list of products, identified by their country of origin, that the Department, in consultation and cooperation with the Departments of State and Treasury, has a reasonable basis to believe might have mined, produced or manufactured with forced or indentured child labor. The List can be accessed on the Internet at www.dol.gov/dol/ilab or can be obtained from: International Child Labor

Program, Bureau of International Labor Affairs, Room S-5303, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210; telephone: (202) 208-4843; fax (202) 219-4923.

Pursuant to Section 3 of the Executive Order, in today's **Federal Register**, the Federal Acquisition Regulatory Councils published a final rule, pursuant to which federal contractors who supply products which appear on the list issued by the Department of Labor must certify to the contracting officer that the contractor or, in the case of an incorporated contractor, a responsible official of the contractor has made a good faith effort to determine whether forced or indentured child labor was used to mine, produce, or manufacture any product furnished under the contract and that, on the basis of those efforts, the contractor is unaware of any such use of child labor. The regulation also imposes other requirements with respect to contracts for products on the Department of Labor's list.

The Department of Labor expects that, over time, new information may become available with respect to the use of forced or indentured child labor and that other developments relevant to the list of products requiring certification as to forced or indentured child labor may occur. For example, new instances of the use of forced or indentured child labor may be discovered. Alternatively, the practice of using forced or indentured child labor in a particular country or industry may be effectively eliminated.

Accordingly, to carry out the purposes of FAR Subpart 22.15 and Executive Order No. 13126, the Department of Labor, may be required to examine and/or revise the list originally published today. The Department of Labor believes that it would be appropriate to establish a process by which members of the public may bring relevant information to the attention of the Department of Labor.

This Notice sets out the procedural guidelines that the Department of Labor intends to follow to maintain, examine, and, as appropriate, revise the list of products required by Executive Order No. 13126 and incorporated in 48 CFR Subpart 22.15. Under the guidelines, public notice and opportunity for comment will be provided before a product is added to, or deleted from, the Department of Labor's list.

Signed at Washington, DC, this 5th day of January, 2001.

Andrew J. Samet,*Deputy Under Secretary for International Affairs.***Notice of Procedural Guidelines**

Section A. What Department of Labor Office Is Responsible for Maintaining the List of Products Requiring Federal Contractor Certification as to Forced or Indentured Child Labor?

1. The International Child Labor Program, within the Bureau of International Labor Affairs of the U.S. Department of Labor, will review all submissions of information relevant to the List of Products Requiring Federal Contractor Certification as to Forced or Indentured Child Labor, as published pursuant to Executive Order No. 13126 ("Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor"), and reflected in the FAR 48 CFR Subpart 22.15.

2. The International Child Labor Program, in consultation with the Departments of State and Treasury, will determine if such submissions may establish the need to add entries to, or delete entries from, the List of Products Requiring Federal Contractor Certification as to Forced or Indentured Child Labor.

Section B. What Do the Terms Used in These Procedural Guidelines Mean?

As used in these Guidelines:

"*Adequate information*" means information relevant to the development of a reasonable basis for belief that a particular product included or not included on the List might have been mined, produced, or manufactured wholly or in part by forced or indentured child labor;

"*The List*" means the List of Products Requiring Contractor Certification as to Forced or Indentured Child Labor as published in accordance with Executive Order 13126 and reflected in FAR 48 CFR Subpart 22.15;

"*Non-governmental organization*" means any scientific, professional, business, non-profit, or public interest organization or association which is neither affiliated with, nor under the direction of, a government;

"*Office*" means the International Child Labor Program of the Bureau of International Labor Affairs of the United States Department of Labor;

"*Person*" means one or more individuals, non-governmental organizations, labor organizations, partnerships, associations, corporations, governmental entities, or legal representatives.

Section C. What Are the Functions of the Office With Respect to the List?

1. The Office shall—

(a) In consultation and cooperation with the Departments of State and Treasury, compile and maintain a current list of products and their countries of origin contained on the List;

(b) Periodically review and revise the List, as appropriate, either on the basis of information submissions from members of the public or on its own initiative, subject to public notice and comment;

(c) Receive, accept for review, and review information submissions pertaining to the inclusion on or deletion from the List, as set out in Sections D, E, and F;

(a) Consider and weigh several factors including: the nature of the information describing the use of forced or indentured child labor; the source of the information; the date of the information; the extent of corroboration of the information by appropriate sources; whether the information involved more than an isolated incident; and whether recent and credible efforts are being made to address forced or indentured child labor in a particular country and industry; and

(e) Include in the List the name and telephone number of the office responsible for its maintenance.

2. The List shall indicate—

(a) The names of products, identified by their country of origin, for which there is a reasonable basis to believe that the product might have been mined, produced, or manufactured wholly or in part by forced or indentured child labor;

(b) The date on which the product was included on the List.

3. Questions on the List—information is available by direct request to the Office by writing the International Child Labor Program, Bureau of International Labor Affairs, Rm. S-5303, U.S. Department of Labor, 200 Constitution Ave, NW., Washington, DC 20210.

Section D. How May a Person Submit Information to the Office Regarding Adding or Deleting a Product From the List?

1. Any person may file an information submission with the Office regarding either the inclusion of a product on the List or the deletion of a product from the List. A single copy is satisfactory for filing. Filing may be by hand delivery, mail delivery, or facsimile transmission.

2. The submission should identify clearly the person filing the submission and should be signed and dated. It should state with specificity the product

and its country of origin which the submitter requests the Office to consider and should include relevant information available to the submitter.

Section E. How will the Office decide to accept a submission of information?

1. Within 60 days, unless there are good reasons for delay, the Office will decide whether to accept a submission of information for review. The Office may communicate with the submitter during this period regarding any matter relating to the decision.

2. In general, the Office may accept a submission of information if it provides adequate information and if a review would not be inconsistent with Executive Order No. 13126 or applicable laws or regulations.

3. The Office may decline to accept a submission for review if, in its discretion, it determines that:

(a) The submission does not identify clearly the person filing the submission or is not signed and dated;

(b) The submission does not provide adequate information;

(c) The matter raised is not within the scope of 48 CFR Subpart 22.15 or Executive Order No. 13126.

(d) The submission is substantially similar to a recent submission and significant new information has not been provided; or

(e) Review of the submission would otherwise be inappropriate.

4. If the Office declines to accept a submission for review, the Office promptly will notify the submitter in writing and will provide the reasons for the decision.

5. If the Office accepts a submission of information, review will follow those procedures described in Section F.

Section F. What review process will be followed after a submission of information is accepted by the Office?

1. Following a decision by the Office to accept a submission of information, the Office will conduct such further examination of the available information as necessary or appropriate to assist the Office in making a determination.

2. Except for information exempt from public inspection, information relevant to the review will be placed in a public file. Information exempt from public inspection will be placed in a separate file.

3. The Office, in its discretion, may hold a hearing regarding the product raised in the submission of information, for the purpose of receiving information from interested persons.

4. The Office, after consulting with the Departments of Treasury and State,

will publish in the **Federal Register** a notice of initial determination, which will include any proposed alteration to be made to the List. Public comments will be accepted for at least 30 days following publication of the **Federal Register** notice. Submissions relating to the same product and country may be resolved by joint determinations.

5. Any person may submit, in person, in writing, or through a representative, information and argument in support of or in opposition to the proposed determination, including any additional specific information that relates to the proposed revision of the List. The Office will consider all comments prior to publication of a final determination, which will be made in consultation and cooperation with the Departments of State and Treasury.

Section G. What process will the Office use to update the List on its own initiative?

1. If the Office obtains adequate information, other than through public submission, it will publish in the **Federal Register** a notice of initial determination, which will include any proposed alteration to be made to the List. Public comments will be accepted for at least 30 days following publication of the notice of initial determination.

2. Any person may submit, in person, in writing, or through a representative, information and argument in support of or in opposition to the initial determination, including any additional specific information that relates to the proposed revision of the List. The Office will consider all comments prior to publication of a final determination, made in consultation and cooperation with the Departments of State and Treasury.

Section H. How will the Office communicate a final determination about a product's placement on the List?

1. A final determination on whether a product will be added to, or deleted from, the List will be published in the **Federal Register**.

2. The List will be revised in accordance with a final determination as to a particular product, identified by its country of origin. The Office will maintain a current copy of the List.

[FR Doc. 01-952 Filed 1-17-01; 8:45 am]

BILLING CODE 4510-28-P

DEPARTMENT OF LABOR

Office of the Secretary

**Bureau of International Labor Affairs;
Notice of Final List of Products
Requiring Federal Contractor
Certification as to Forced or
Indentured Child Labor Under
Executive Order No. 13126**

SUMMARY: As required by Executive Order No. 13126 ("Prohibition of Acquisition of Products Produced by Forced or Indentured Child Labor"), this notice sets forth a final list of products, by country of origin, which the Department of Labor, the Department of State, and the Department of the Treasury believe may have been mined, produced, or manufactured by forced or indentured child labor. Under a final rule by the Federal Acquisition Regulatory Council, published in today's issue of the **Federal Register**, which also implements Executive Order No. 13126, federal contractors who supply products on the list are required to certify, among other things, that they have made a good faith effort to determine whether forced or indentured child labor was used to produce the item. The Department of Labor is also publishing, in today's issue of the **Federal Register**, procedural guidelines that describe how the list of products will be updated in the future, through a public notice-and-comment process.

FOR FURTHER INFORMATION CONTACT: Ami Thakkar, International Child Labor Program, Bureau of International Labor Affairs, Room S-5303, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, DC 20210; telephone: (202) 208-4843; fax: (202) 219-4923.

SUPPLEMENTARY INFORMATION:**I. Background**

Executive Order No. 13126, which was published in the **Federal Register** on June 19, 1999 (64 FR 32383-32385), required the Federal Acquisition Regulatory Council (the Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council) to issue proposed rules to amend the Federal Acquisition Regulation (FAR), with respect to the procurement by federal agencies of products that may have been mined, produced, or manufactured with forced or indentured child labor. A proposed rule was published in the **Federal Register** on September 6, 2000 (65 FR 54104-54107), and public comment was invited. A final rule is being published in today's **Federal Register**.

Under that final rule, certain procurement related requirements will

apply to products that appear on a list published by the Department of Labor, pursuant to Section 2 of Executive Order No. 13126, which required the Department of Labor, in consultation and cooperation with the Department of the Treasury and the Department of State, to "publish in the **Federal Register** a list of products, identified by their country of origin, that those Departments have a reasonable basis to believe might have been mined, produced, or manufactured by forced or indentured child labor."

As authorized by the Executive Order, the Department of Labor held a public hearing on August 10, 1999, at which several witnesses presented oral and written testimony concerning the development of a list of products. On September 6, 2000, in consultation and cooperation with the Department of State and the Department of the Treasury, the Department of Labor published a preliminary list of products in the **Federal Register** (65 FR 54108-54112), explained how the preliminary list was developed, and invited public comment. The public comment period closed on November 6, 2000.

II. Summary and Discussion of Significant Comments

Twenty-four comments were received. In developing the final list of products, the three Departments have carefully reviewed and considered the public comments received. The following is a summary of the significant comments and the three Departments' response.

A. Comments on the definition of "forced or indentured child labor"

Several comments raise issues related to the definition of "forced or indentured child labor" used in determining the proposed list of products that may be produced by forced or indentured child labor. Executive Order No. 13126 defines

"forced or indentured child labor" as: all work or service (1) exacted from any person under the age of 18 under the menace of any penalty for its nonperformance and for the worker does not offer himself voluntarily; or (2) performed by any person under the age of 18 pursuant to a contract the enforcement of which can be accomplished by process or penalties.

As explained in the Department of Labor's September 6, 2000 **Federal Register** notice, the "two aspects of the definition represent alternatives which are not mutually exclusive." 65 FR 54109.

The definition of "forced or indentured child labor" in Executive Order No. 13126 is derived from, and generally consistent with, the Tariff Act

of 1930, 19 U.S.C. 1307. That statute, enforced by the Customs Service of the Treasury Department, prohibits the importation into the United States of "all goods, wares, articles, and merchandise mined, produced, or manufactured wholly or in part in any foreign country by convict labor or/and forced labor or/and indentured labor under penal sanctions."

The Tariff Act specifically defines "forced labor" as "all work or service which is exacted from any person under the menace of any penalty for its nonperformance and for which the worker does not offer himself voluntarily." The first part of the Executive Order's definition of "forced or indentured child labor" incorporates this statutory language.

The Tariff Act does not specifically define "indentured labor under penal sanctions" (the term used in that statute). The second part of the Executive Order's definition of "forced or indentured child labor" is intended to incorporate the Tariff Act's concept of indentured labor, as it involves children. This part of the Executive Order definition is derived directly from the legislative history of the Tariff Act. See 71 Cong. Rec. 4488-4499 (daily ed. Oct. 14, 1929).

In comments on behalf of the organizations in the Child Labor Coalition, the International Labor Rights Fund questions the definition of "forced or indentured child labor" in the Executive Order and urges the development of a different, significantly broader definition. The Fund's comments identify various abusive working conditions that the Fund suggests "should be encompassed explicitly in the definition of 'forced or indentured child labor.'" The Fund's comments do not refer to any specific basis in U.S. or international law for such an expanded definition.

The Department of Labor's September 6, 2000 **Federal Register** notice explained how the Labor, State, and Treasury Departments have applied the definition in the Executive Order and have evaluated a wide range of working conditions for the possibility of coercion, the essential element of the first part of the definition. 65 FR 54109. The Department of Labor, in consultation and cooperation with the Departments of State and Treasury, is charged with implementing the Executive Order and its definition of "forced or indentured child labor." That definition is appropriately derived from the Tariff Act, as explained above, since the Executive Order embodies a procurement policy intended to be consistent with the Tariff Act. As has

been previously noted, some child labor abuses may not meet the established definition of "forced or indentured child labor."

The United States Council for International Business, in a comment noting its strong support for international efforts to end forced and indentured child labor, asks for clarification concerning the second part of the definition of "forced or indentured child labor" in the Executive Order with respect to situations in which persons under age 18: (1) Work under a legally enforceable "collective bargaining agreement freely negotiated by the employer and the union representing workers in the bargaining unit;" or (2) work under individual employment contracts that contain a "penalty clause that is triggered by early termination," but where "excessive process or penalties" (as opposed to "customary cancellation penalties") are not involved.

The information provided by the U.S. Council is not detailed, especially with respect to individual employment contracts and the so-called "penalty clause." On the basis of the description provided by the U.S. Council, however, it appears possible, depending on the facts, that neither situation would come within the second part of the Executive Order's definition of "forced or indentured child labor," as interpreted consistently with the Tariff Act of 1930. As a general matter, there is no indication that Congress was concerned about legitimate collective bargaining agreements or legitimate employment contracts, providing for ordinary legal remedies, when it enacted the Tariff Act. In any case, neither situation described by the U.S. Council clearly implicates the concept of indentured labor under penal sanctions. For example, a child apparently would not be subject to criminal penalties, to a judicial order requiring the child to continue working, or to a state-sanctioned monetary penalty, as a means of enforcing the agreement or contract. With respect to employment contracts, the U.S. Council does not appear to be describing truly punitive provisions, designed to deter young workers from quitting employment in circumstances of exploitation or duress. Because there is no suggestion that children are being coerced to enter into a contract or to work under it, the first part of the Executive Order definition also may not apply to the situations described by the U.S. Council. The application of the Executive Order, of course, will depend on the specific factual circumstances of particular cases. Circumstances that suggest

coercion, including coercion related to making or enforcing employment contracts, will be carefully examined.

In his comment, Senator Tom Harkin raises concerns about the application of the definition of "forced or indentured child labor" in the development of the list of products. The Departments have attempted to apply the definition in a way that is both consistent with the Tariff Act and takes into account the actual circumstances in which children work. We will continue to do so, based on available information, as the list of products is updated.

B. Comment on Statutory Authority

One comment questions the statutory authority for action by the three Departments to implement Executive Order 13126, since matters of federal acquisition policy are involved. The list of products called for in the Executive Order serves to trigger requirements for federal contractors under revisions to the Federal Acquisition Regulation, to be adopted by the Civilian Agency Acquisition Council and the Defense Acquisition Regulations Council. The authority for the Executive Order, and for the regulations that implement it, derives in part from the Federal Property and Administrative Services Act of 1949 (also known as the Procurement Act), 40 U.S.C. 471 *et seq.*, which among other things authorizes the President to prescribe federal acquisition policy and directives.

C. Comment on the Burden of Proof Once a Product Is Listed

Senator Harkin expresses concern that products might be removed from the list, if new information demonstrating the continued use of forced or indentured child labor were not regularly supplied by non-governmental sources. He suggests instead that products should remain on the list, unless new information showed that the prior use of forced or indentured child labor had been effectively addressed. In fact, the list will be updated in line with the principle supported by Senator Harkin. Once a product is placed on the list, it will remain there, unless and until the three Departments have adequate information to justify removing the product from the list. The public notice-and-comment process by which the list will be updated is described in a separate notice in today's **Federal Register**.

D. Comment on the "Reasonable Basis to Believe" Standard

The International Labor Rights Fund, on behalf of the other organizations in the Child Labor Coalition, requests

clarification of the Executive Order's standard for placing a product on the list: That the three Departments have a "reasonable basis to believe" that forced or indentured child labor was used. The Fund is correct in pointing out that this threshold is relatively low. The standard is appropriate, given the nature of the list. The list does not reflect a determination that forced or indentured child labor actually was used to produce a particular product. Rather, it establishes the need for further inquiry by a federal contractor who wishes to supply the product, in order to make sure that forced or indentured child labor was not, in fact, used.

As the September 6, 2000 **Federal Register** notice explained, the three Departments have applied the "reasonable basis to believe" standard to develop the list. There, we identified several factors that were considered and weighed: "the nature of the information describing the use of forced or indentured child labor; the source of the information; the date of the information; the extent of corroboration of the information by appropriate sources; and whether the information involved more than an isolated incident." 65 FR 54109. The three Departments have also taken into account "whether recent, credible efforts are being made to address forced or indentured child labor in a particular country." 65 FR 54109.

E. Comments on Effect of Prior Executive Branch Reports Addressing Child Labor

The International Labor Rights Fund, on behalf of the Child Labor Coalition, questions whether the three Departments gave sufficient weight to prior reports addressing the use of child labor, published by the Department of Labor and the Department of State. In particular, the Fund states that the Department of Labor's series *By the Sweat and Toil of Children* "should constitute prima facie evidence for purposes of identifying countries and products that should be identified pursuant to E.O. 13126." In fact, the three Departments did consider previously published reports and carefully reviewed information that was cited in those reports. The reports themselves, however, cannot serve as a substitute for the determination required by Executive Order. Moreover, in some instances, the reports completed in 1994 and 1995 relied upon information that may no longer be considered current, in a few cases the reports reflected information on isolated occurrences, and in others, there is information on more recent and credible

efforts to eliminate child labor in the product identified.

F. Comments on the Inclusion of Products From Burma

Several comments were received supporting the inclusion of products from Burma on the preliminary list. These comments include a letter from a number of members of Congress, specifically Representatives Kucinich, Kaptur, McHugh, Evans, Slaughter, Nadler, Sanders, Waxman, George Miller, Payne, Ackerman, DeFazio, Abercrombie, Delahunt, McDermott, Tierney, McKinney, McGovern, Lee, Moakley, Carson, Doggett, Stark, Sandlin, Baldwin, and Sherrod Brown.

G. Comments on the Exclusion of Certain Products and Countries

Various comments express a concern that the list included an insufficient number of products and countries. For example, many of the comments, including those from Representatives Tom Campbell and Tom Tancredo, object to the exclusion of several countries, on the basis that these countries have well known "forced and indentured labor systems". Some comments refer to Congressional testimony where specific products were named by region as examples of products "flowing into America." One comment, discussed below, mentions a specific product and country.

As explained, in considering which products and countries would be placed on the preliminary list, the three Departments considered and weighed a number of factors including: The nature of the information describing the use of forced or indentured child labor; the source of the information; the date of the information; the extent of corroboration of information by appropriate sources; whether the information involved more than an isolated incident; and whether recent and credible efforts are being made to address forced or indentured child labor in a particular country or industry.

None of the comments described above provides additional information sufficient to support the inclusion of additional products and countries on the list. First, the Executive Order required the development of a list of products, by country of origin. Many of the comments named countries, but failed to identify specific products. In other cases, products were mentioned without reference to specific countries. Second, to satisfy the Executive Order standard, the Departments must have information on an individual product, in a particular country, which may be made with forced or indentured child

labor. Such information was not provided in the comments received, with one exception. Third, the scope of the Executive Order is limited to forced and indentured child labor, that is labor by persons under the age of 18. The comments received refer to forced labor in a country and in some cases, sector. However, this alone does not provide sufficient information of forced or indentured child labor.

The Department of Labor welcomes future submissions providing information on specific products produced by forced or indentured child labor in specific countries. Submissions should follow the procedures outlined elsewhere in today's **Federal Register**.

As indicated, one comment did provide current and specific information: Professor Kevin Bales of Free the Slaves submitted new information concerning the use of forced or indentured child labor in the cocoa industry in the Ivory Coast. Since this product was not considered when creating the preliminary list, the International Child Labor Program of the Bureau of International Labor Affairs will consider the information as a submission for review pursuant to the newly-announced procedures for updating the current list.

H. Comments on Recent and Credible Efforts

Several comments question the factors which the three Departments took into consideration when determining which products and countries would be on the list. Senator Tom Harkin states that the presence of programs or the commitment to initiate programs aimed at eliminating child labor is not a justification to leave any product or country off the list.

The International Labor Rights Fund, on behalf of the Child Labor Coalition, makes a similar comment regarding carpets in South Asia, stating that efforts being undertaken in the industry to eliminate child labor did not justify their exclusion.

Again, in considering which products and countries would be placed on the preliminary list, the three Departments took into consideration a number of factors including the extent of recent and credible efforts undertaken in a particular country and industry aimed at addressing forced or indentured child labor. The Department of Labor will continue to assess the progress of these efforts and welcomes further information from the public on them.

I. Comments on Products From India

Senator Harkin and several other submitters specifically object to the

failure to include any products from India on the list. The three Departments based their decision on the fact that the Government of India is now making extensive efforts, in collaboration with the International Labor Organization's International Program on the Elimination of Child Labor to prevent and eliminate child labor in the following sectors: hand-rolled beedi cigarettes, brassware, hand-made bricks, fireworks, footwear, hand-blown glass bangles, hand-made locks, hand-dipped matches, hand-broken quarried stones and hand-spun/hand-loomed silk. The Department of Labor will monitor the effectiveness of these efforts, and will welcome public comments on the credibility and progress of such efforts.

J. Other Comments

One comment states that the description of the products listed on the preliminary list were "vague" and that products should be identified by the standard category codes that are used by the Customs Service and Census Bureau. The three Departments believe that the descriptions are sufficiently specific. The Executive Order does not require the use of standard category codes in the products list. At this time, the Departments do not have reason to believe that the addition of standard category codes to the list would result in more efficient implementation of the Executive Order.

Another comment suggests that the inputs of the Department of State and Treasury into the Executive Order consultation process be described and that the joint determination process for compiling the list be disclosed. The Departments of Labor, State and Treasury consulted extensively before compiling the list, as mandated by the Executive Order. As a result, the preliminary list underwent a thorough interagency process.

Another similar comment suggests that the responsibility of implementing the Executive Order should rest with an acquisition policy agency, with advisory and support roles by the Departments of Labor, State and Treasury. In fact, as already described, the appropriate acquisition organizations are responsible for implementing the Executive Order, through revisions to the Federal Acquisition Regulation. Furthermore, the Executive Order mandates the Department of Labor, in coordination with the Departments of State and Treasury to publish a list of products.

Several comments suggest a broader scope for the Executive Order, rather than its current mandate to prohibit the acquisition of goods made with forced

or indentured child labor by the federal government. These comments are beyond the scope of the present initiative, which is intended to implement the Executive Order, not to modify it. Development of a products list, and accompanying procurement regulations, based on standards broader than those in the Executive Order would require additional public notice-and-comment procedures, as well as significant additional research and investigation by the three Departments. These steps would unnecessarily delay the implementation of the Executive Order. Without ruling out the possibility of future steps, should they be determined to be appropriate, the three Departments have chosen to proceed to finalize the product list contemplated by the Executive Order.

K. Request for Information on Carpets

In the preliminary notice, the three Departments invited comment on the measures taken in South Asia to eliminate forced and indentured labor in the carpet sector, including labeling and monitoring initiatives that are currently in place. Specifically, the Department sought public comment on the sufficiency of these initiatives and whether or not a certification or label from a credible monitoring program could adequately serve the purposes of the Executive Order. The Departments received a comment from the International Labor Rights Fund, on behalf of the Child Labor Coalition,

stating that there are impressive programs dealing with child labor in the carpet sector, particularly Rugmark. The submitter also said in order to avoid giving "a free pass" to producers who are not participating in the innovative programs, carpets should be included on the list. Although carpets are not being included in this final list, the Departments are considering how best to address the issue raised by the International Labor Rights Fund, while continuing to encourage innovative labeling and monitoring initiatives in the carpet sector. The Department of Labor requests additional public comment on the issue raised by the International Labor Rights Fund.

L. Request for Information on Cotton and Sugarcane

The Departments requested information on whether there was forced or indentured child labor in the production of cotton and sugarcane in Pakistan. No comments were received and existing information is insufficient; therefore, the Departments have not included these products on the final list.

III. Final List of Products

The three Departments have determined that it would be appropriate to publish a final list of products that comprises the products on the preliminary list. No comments objected to the inclusion of these products. The basis for including those products on the list is set forth in detail in the

Department of Labor's September 6, 2000 notice in the **Federal Register** (65 FR 54108-54112). The final list of products appears below. In addition, in today's issue of the **Federal Register**, the Department of Labor is publishing procedural guidelines for updating the final list in the future.

Based on recent, credible, and appropriately corroborated information from various sources, the Department of Labor, the Department of State, and the Department of the Treasury have concluded that there is a reasonable basis to believe that the following products, identified by their country of origin, might have been mined, produced, or manufactured by forced or indentured child labor:

Bamboo(Burma)
Beans (including yellow, soya, and green beans) (Burma)
Bricks (hand-made) (Burma, Pakistan)
Chilies (Burma)
Corn (Burma)
Pineapples (Burma)
Rice (Burma)
Rubber (Burma)
Shrimp (aquaculture)(Burma)
Sugarcane (Burma)
Teak (Burma)

Signed at Washington, D.C., this 5th day of January, 2001.

Andrew J. Samet,

Deputy Under Secretary for International Affairs.

BILLING CODE 4510-28-P

Federal Register

**Thursday,
January 18, 2001**

Part XII

General Services Administration

**41 CFR Parts 101–6, et al.
Real Property Policies; Final Rule**

GENERAL SERVICES ADMINISTRATION

41 CFR Parts 101–6, 101–17, 101–18, 101–19, 101–20, 101–33, 101–47, 102–71, 102–72, 102–73, 102–74, 102–75, 102–76, 102–77, 102–78, 102–79, 102–80, 102–81, 102–82

[FPMR Amendment D–97]

RIN 3090–AF95

Real Property Policies

AGENCY: Office of Government-wide Policy, GSA.

ACTION: Final rule.

SUMMARY: The General Services Administration (GSA) is adding coverage on real property policies to the Federal Management Regulation (FMR). A section has been added to each affected Federal Property Management Regulations (FPMR) part to direct readers to the additional policy coverage contained in the FMR. The FMR coverage is written in plain language to provide agencies with updated regulatory material that is easy to read and understand.

EFFECTIVE DATE: January 18, 2001.

FOR FURTHER INFORMATION CONTACT: Stanley C. Langfeld, Director, Real Property Policy Division, at (202) 501–1737.

SUPPLEMENTARY INFORMATION:

A. Background

This final rule describes the current real property policies applicable to GSA and Federal agencies to whom GSA real property authority has been delegated. The policies contained in this rule reflect the way that real property operations are currently conducted and these policies have been separated from their procedural components resulting in a more efficient and easy to understand regulation.

The policies contained in this rule were published as a proposed rule at 62 FR 42444, August 7, 1997. GSA received several comments on the proposed rule. The comments were from an individual, special interest groups, and Federal agencies. All comments were considered in the formulation of the final rule. GSA believes the final regulation is responsive to the concerns raised by all parties providing comments.

B. Executive Order 12866

The General Services Administration (GSA) has determined that this final rule is not a significant regulatory action for the purposes of Executive Order 12866.

C. Regulatory Flexibility Act

This final rule is not required to be published in the **Federal Register** for comment. Therefore, the Regulatory Flexibility Act does not apply.

D. Paperwork Reduction Act

The Paperwork Reduction Act does not apply because this final rule does not impose reporting, recordkeeping or information collection requirements which require the approval of the Office of Management and Budget pursuant to 44 U.S.C. 3501 *et seq.*

E. Small Business Regulatory Enforcement Fairness Act

This final rule is also exempt from Congressional review prescribed under 5 U.S.C. 801 since it relates solely to agency management and personnel.

List of Subjects in 41 CFR Parts 101–6, 101–17, 101–18, 101–19, 101–20, 101–33, 101–47 and 102–71 Through 102–82

Administrative practice and procedure, Blind, Concessions, Federal buildings and facilities, Fire prevention, Government property management, Homeless, Individuals with disabilities, Occupational safety and health, Parking, Real property acquisition, Security measures, Surplus Government property, Utilities.

For the reasons set forth in the preamble, GSA amends 41 CFR chapters 101 and 102 as follows:

CHAPTER 101—[AMENDED]

PART 101–6—MISCELLANEOUS REGULATIONS

1. The authority citation for part 101–6 is revised to read as follows:

Authority: 31 U.S.C. 1344(e)(1); 40 U.S.C. 486(c).

2. Amend § 101–6.300 by adding paragraph (g) to read as follows:

§ 101–6.300 Federal facility ridesharing general policy.

* * * * *

(g) For more information on Federal facility ridesharing, see 41 CFR parts 102–71 through 102–82. To the extent that any policy statements in this subpart are inconsistent with the policy statements in 41 CFR parts 102–71 through 102–82, the policy statements in 41 CFR parts 102–71 through 102–82 are controlling.

3. Amend § 101–6.600 by designating the existing text as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 101–6.600 Scope of subpart.

* * * * *

(b) For more information on fire protection (firesafety) engineering, see 41 CFR parts 102–71 through 102–82. To the extent that any policy statements in this subpart are inconsistent with the policy statements in 41 CFR parts 102–71 through 102–82, the policy statements in 41 CFR parts 102–71 through 102–82 are controlling.

4. Part 101–17 is revised to read as follows:

PART 101–17—ASSIGNMENT AND UTILIZATION OF SPACE

Authority: 40 U.S.C. 285, 304c, 601 *et seq.*, 490 note; E.O. 12072, 43 FR 36869, 3 CFR, 1978 Comp., p. 213.

§ 101–17.0 Cross-reference to the Federal Management Regulation (FMR) (41 CFR chapter 102, parts 102–1 through 102–220).

For information on assignment and utilization of space, see FMR part 102–79 (41 CFR part 102–79).

PART 101–18—ACQUISITION OF REAL PROPERTY

5. The authority citation for part 101–18 is revised to read as follows:

Authority: Sec. 1–201(b), E.O. 12072, 43 FR 36869, 3 CFR, 1978 Comp., p. 213.

6. Amend § 101–18.000 by designating the existing text as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 101–18.000 Scope of part.

* * * * *

(b) For more information on the acquisition of real property, see 41 CFR parts 102–71 through 102–82. To the extent that any policy statements in this part are inconsistent with the policy statements in 41 CFR parts 102–71 through 102–82, the policy statements in 41 CFR parts 102–71 through 102–82 are controlling.

PART 101–19—CONSTRUCTION AND ALTERATION OF PUBLIC BUILDINGS

7. The authority citation for part 101–19 is revised to read as follows:

Authority: 40 U.S.C. 486(c), 490 and 601–619; 86 Stat. 216.

8. Amend § 101–19.000 by designating the existing text as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 101–19.000 Scope of part

* * * * *

(b) For more information on the construction and alteration of public buildings, see 41 CFR parts 102–71 through 102–82. To the extent that any policy statements in this part are

inconsistent with the policy statements in 41 CFR parts 102-71 through 102-82, the policy statements in 41 CFR parts 102-71 through 102-82 are controlling.

PART 101-20—MANAGEMENT OF BUILDINGS AND GROUNDS

9. The authority citation for part 101-20 is revised to read as follows:

Authority: 40 U.S.C. 486(c).

10. Amend § 101-20.000 by designating the existing text as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 101-20.000 Scope of part.

* * * * *

(b) For more information on the management of buildings and grounds, see 41 CFR parts 102-71 through 102-82. To the extent that any policy statements in this part are inconsistent with the policy statements in 41 CFR parts 102-71 through 102-82, the policy statements in 41 CFR parts 102-71 through 102-82 are controlling.

11. The Appendix to Subchapter D is amended by adding § 101-17.000 to interim rule D-1 to read as follows:

Appendix to Subchapter D—Temporary Regulations

* * * * *

Federal Property Management Regulations; Interim Rule D-1

* * * * *

§ 101-17.000 Scope of part.

For more information on location of space, see 41 CFR parts 102-71 through 102-82. To the extent that any policy statements in this part are inconsistent with the policy statement in 41 CFR parts 102-71 through 102-82, the policy statements in 41 CFR parts 102-71 through 102-82 are controlling.

* * * * *

PART 101-33—PUBLIC UTILITIES

12. The authority citation for part 101-33 is revised to read as follows:

Authority: 40 U.S.C. 486(c).

13. Amend § 101-33.000 by designating the existing text as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 101-33.000 Scope of part.

* * * * *

(b) For more information on the management of public utility services, see 41 CFR parts 102-71 through 102-82. To the extent that any policy statements in this part are inconsistent with the policy statements in 41 CFR

parts 102-71 through 102-82, the policy statements in 41 CFR parts 102-71 through 102-82 are controlling.

PART 101-47—UTILIZATION AND DISPOSAL OF REAL PROPERTY

14. The authority for part 101-47 is revised to read as follows:

Authority: 40 U.S.C. 486(c).

15. Amend § 101-47.000 by designating the existing text as paragraph (a) and adding a new paragraph (b) to read as follows:

§ 101-47.000 Scope of part.

* * * * *

(b) For more information on the utilization and disposal of real property, see 41 CFR parts 102-71 through 102-82. To the extent that any policy statements in this part are inconsistent with the policy statements in 41 CFR parts 102-71 through 102-82, the policy statements in 41 CFR parts 102-71 through 102-82 are controlling.

CHAPTER 102—[AMENDED]

16. Parts 102-71 through 102-82 are added to subchapter C to read as follows:

PART 102-71—GENERAL

Sec.

102-71.5 What are the scope and philosophy of the General Services Administration's (GSA) real property policies?

102-71.10 How are these policies organized?

102-71.15 What happens if the policy statements in this part and parts 102-72 through 102-82 of this chapter conflict with policy statements in 41 CFR parts 101-6, 101-17 through 101-20, 101-33, and 101-47?

102-71.20 What definitions apply to GSA's real property policies?

102-71.25 Who must comply with GSA's real property policies?

102-71.30 How must these real property policies be implemented?

102-71.35 Are agencies allowed to deviate from GSA's real property policies?

Authority: 40 U.S.C. 486(c).

§ 102-71.5 What are the scope and philosophy of the General Services Administration's (GSA) real property policies?

GSA's real property policies contained in this part and parts 102-72 through 102-82 of this chapter apply to Federal agencies, including the GSA/ Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services. These policies cover the acquisition, management, and utilization and disposal of real property

by Federal agencies that initiate and have decisionmaking authority over actions for real property services. The detailed guidance implementing these policies is contained in separate customer service guides.

§ 102-71.10 How are these policies organized?

GSA has divided its real property policies into the following functional areas:

- (a) Delegation of authority;
- (b) Real estate acquisition;
- (c) Facility management;
- (d) Real property disposal;
- (e) Design and construction;
- (f) Art-in-architecture;
- (g) Historic preservation;
- (h) Assignment and utilization of space;
- (i) Safety and environmental management;
- (j) Security; and
- (k) Utility services.

§ 102-71.15 What happens if the policy statements in this part and parts 102-72 through 102-82 of this chapter conflict with policy statements in 41 CFR parts 101-6, 101-17 through 101-20, 101-33, and 101-47?

The policies in this part and parts 102-72 through 102-82 of this chapter apply to 41 CFR parts 101-17 through 101-20, 101-33, and 101-47. To the extent that any policy statements elsewhere in 41 CFR parts 101-17 through 101-20, 101-33, and 101-47 are inconsistent with the policy statements in this part and parts 102-72 through 102-82 of this chapter, the policy statements in this chapter are controlling.

§ 102-71.20 What definitions apply to GSA's real property policies?

The following definitions apply to GSA's real property policies:
Executive agency means any Executive department or independent establishment in the Executive branch of the Government, including any wholly owned Government corporation.

Federal agency means any Executive agency or any establishment in the legislative or judicial branch of the Government (except the Senate, the House of Representatives, and the Architect of the Capitol and any activities under his or her direction).

Federal Government real property services provider means any Federal Government entity operating under, or subject to, the authorities of the Administrator of General Services, that provides real property services to Federal agencies. This definition also includes private sector firms under contract with Federal agencies that

deliver real property services to Federal agencies. This definition excludes any entity operating under, or subject to, authorities other than those of the Administrator of General Services.

Public building means:

(1) Any building which is suitable for office and/or storage space for the use of one or more Federal agencies or mixed ownership corporations, such as Federal office buildings, post offices, customhouses, courthouses, border inspection facilities, warehouses, and any such building designated by the President. It also includes buildings of this sort that are acquired by the Federal Government under the Administrator's installment-purchase, lease-purchase, and purchase-contract authorities.

(2) *Public building* does not include buildings:

- (i) On the public domain.
- (ii) In foreign countries.
- (iii) On Indian and native Eskimo properties held in trust by the United States.
- (iv) On lands used in connection with Federal programs for agricultural, recreational, and conservation purposes.
- (v) On or used in connection with river, harbor, flood control, reclamation or power projects, or for chemical manufacturing or development projects, or for nuclear production, research, or development projects.
- (vi) On or used in connection with housing and residential projects.
- (vii) On military installations.
- (viii) On Department of Veteran's Affairs' installations used for hospital or domiciliary purposes.
- (ix) Excluded by the President.

§ 102-71.25 Who must comply with GSA's real property policies?

Federal agencies operating under, or subject to, the authorities of the Administrator of General Services must comply with these policies.

§ 102-71.30 How must these real property policies be implemented?

Each Federal Government real property services provider must provide services that are in accord with the policies presented in parts 102-71 through 102-82 of this chapter. Also, Federal agencies must make the provisions of any contract with private sector real property services providers conform to the policies in parts 102-71 through 102-82 of this chapter.

§ 102-71.35 Are agencies allowed to deviate from GSA's real property policies?

Yes, see § 102-2.60 through 102-2.110 of this chapter to request a deviation from the requirements of these real property policies.

PART 102-72—DELEGATION OF AUTHORITY

Sec.

- 102-72.5 What is the scope of this part?
- 102-72.10 What basic policy governs delegation of authority to Federal agencies?
- 102-72.15 What criteria must a delegation meet?
- 102-72.20 Are there limitations on this delegation of authority?
- 102-72.25 What are the different types of delegations of authority?
- 102-72.30 What are the different types delegations related to real estate leasing?
- 102-72.35 What are the requirements for obtaining an ACO delegation from GSA?
- 102-72.40 What are facility management delegations?
- 102-72.45 What are the different types of facility management delegations?
- 102-72.50 What are Executive agencies' responsibilities under a delegation of real property management and operation authority from GSA?
- 102-72.55 What are the requirements for obtaining a delegation of real property management and operation authority from GSA?
- 102-72.60 What are Executive agencies' responsibilities under a delegation of individual repair and alteration project authority from GSA?
- 102-72.65 What are the requirements for obtaining a delegation of individual repair and alteration project authority from GSA?
- 102-72.70 What are Executive agencies' responsibilities under a delegation of lease management authority (contracting officer representative authority) from GSA?
- 102-72.75 What are the requirements for obtaining a delegation of lease management authority (contracting officer representative authority) from GSA?
- 102-72.80 What are Executive agencies' responsibilities under a disposal of real property delegation of authority from GSA?
- 102-72.85 What are the requirements for obtaining a disposal of real property delegation of authority from GSA?
- 102-72.90 What are Executive agencies' responsibilities under a security delegation of authority from GSA?
- 102-72.95 What are the requirements for obtaining a security delegation of authority from GSA?
- 102-72.100 What are Executive agencies' responsibilities under a utility service delegation of authority from GSA?
- 102-72.105 What are the requirements for obtaining a utility services delegation of authority from GSA?

Authority: 40 U.S.C. 486(c), (d) and (e).

§ 102-72.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102-72.10 What basic policy governs delegation of authority to Federal agencies?

The Administrator of General Services may delegate and may authorize successive redelegations of the real property authority vested in the Administrator to any Federal agency.

§ 102-72.15 What criteria must a delegation meet?

Delegations must be in the Government's best interest, which means that GSA must evaluate such factors as whether a delegation would be cost effective for the Government in the delivery of space.

§ 102-72.20 Are there limitations on this delegation of authority?

Federal agencies must exercise delegated real property authority and functions according to the parameters described in each delegation of authority document, and Federal agencies may only exercise the authority of the Administrator that is specifically provided within the delegation of authority document.

§ 102-72.25 What are the different types of delegations of authority?

The basic types of GSA Delegations of Authority are:

- (a) Delegation of Leasing Authority;
- (b) Delegation of Real Property Management and Operation Authority;
- (c) Delegation of Individual Repair and Alteration Project Authority;
- (d) Delegation of Lease Management Authority (Contracting Office Representative Authority);
- (e) Delegation of Administrative Contracting Officer (ACO) Authority;
- (f) Delegation of Real Property Disposal Authority;
- (g) Security Delegation of Authority; and
- (h) Utility Services Delegation of Authority.

§ 102-72.30 What are the different types of delegations related to real estate leasing?

Delegations related to real estate leasing include the following:

- (a) Categorical space delegations, Agency special purpose space delegations, and delegations to specific agencies for certain space and lands outside urban areas (see § 101-18.104 of this title).

(b) The Administrator of General Services has issued a standing delegation of authority (under a program known as "Can't Beat GSA Leasing") to the heads of all Federal agencies to accomplish all functions relating to leasing of general purpose space for terms of up to 20 years regardless of geographic location. This delegation includes some conditions Federal

agencies must meet when conducting the procurement themselves, such as training in lease contracting and reporting data to GSA.

(c) An Administrative Contracting Officer (ACO) delegation, in addition to lease management authority, provides Federal agencies with limited contracting officer authority to perform such duties as paying and withholding lessor rent and modifying lease provisions that don't change the lease term length or the amount of space under lease.

§ 102-72.35 What are the requirements for obtaining an ACO delegation from GSA?

When Federal agencies don't exercise the delegation of authority for general purpose space mentioned in § 102-72.30(b), GSA may consider granting an ACO delegation when Federal agencies:

(a) Occupy at least 90 percent of the building's GSA-controlled space or Federal agencies have the written concurrence of 100 percent of rent-paying occupants covered under the lease; and

(b) Have the technical capability to perform the leasing function.

§ 102-72.40 What are facility management delegations?

Facility management delegations give Executive agencies authority to operate and manage buildings day to day, to perform individual repair and alteration projects and manage real property leases.

§ 102-72.45 What are the different types of delegations related to facility management?

The principal types of delegations involved in the management of facilities are:

(a) Real property management and operation authority;

(b) Individual repair and alteration project authority; and

(c) Lease management authority (contracting officer representative authority).

§ 102-72.50 What are Executive agencies' responsibilities under a delegation of real property management and operation authority from GSA?

With this delegation, Executive agencies have the authority to operate and manage buildings day to day. Delegated functions may include building operations, maintenance, recurring repairs, minor alterations, historic preservation, concessions, and energy management of specified buildings subject to the conditions in the delegation document.

§ 102-72.55 What are the requirements for obtaining a delegation of real property management and operation authority from GSA?

An Executive agency may be delegated real property management and operation authority when it:

(a) Occupies at least 90 percent of the space in the Government-controlled facility or has the concurrence of 100 percent of the rent-paying occupants to perform these functions; and

(b) Demonstrates that it can perform the delegated real property management and operation responsibilities.

§ 102-72.60 What are Executive agencies' responsibilities under a delegation of individual repair and alteration project authority from GSA?

With this delegation of authority, Executive agencies have the responsibility to perform individual repair and alterations projects. Executive agencies are delegated repair and alterations authority for reimbursable space alteration projects up to the simplified acquisition threshold, under § 101-20.106 of this title.

§ 102-72.65 What are the requirements for obtaining a delegation of individual repair and alteration project authority from GSA?

Executive agencies may be delegated repair and alterations authority for other individual alteration projects when they demonstrate the ability to perform the delegated repair and alterations responsibilities and when such a delegation promotes efficiency and economy.

§ 102-72.70 What are Executive agencies' responsibilities under a delegation of lease management authority (contracting officer representative authority) from GSA?

When an Executive agency does not exercise the delegation of authority mentioned in § 102-72.30(b) to lease general purpose space itself, it may be delegated, upon request, lease management authority to manage the administration of one or more lease contracts awarded by GSA.

§ 102-72.75 What are the requirements for obtaining a delegation of lease management authority (contracting officer representative authority) from GSA?

An Executive agency may be delegated lease management authority when it:

(a) Occupies at least 90 percent of the building's GSA-controlled space or has the written concurrence of 100 percent of rent-paying occupants covered under the lease to perform this function; and

(b) Demonstrates the ability to perform the delegated lease management responsibilities.

§ 102-72.80 What are Executive agencies' responsibilities under a disposal of real property delegation of authority from GSA?

With this delegation, Executive agencies have the authority to utilize and dispose of excess or surplus real and related personal property and to grant approvals and make determinations subject to the conditions in the delegation document.

§ 102-72.85 What are the requirements for obtaining a disposal of real property delegation of authority from GSA?

While disposal delegations to Executive agencies are infrequent, GSA may delegate authority to them based on situations involving certain low-value properties and when they can demonstrate that they have the technical expertise to perform the disposition functions. GSA may grant special delegations of authority to Executive agencies for the utilization and disposal of certain real property through the procedures set forth in part 101-47, subpart 101-47.6, of this title.

§ 102-72.90 What are Executive agencies' responsibilities under a security delegation of authority from GSA?

With a security delegation, Executive agencies have the authority and responsibility to protect persons and property at the locations identified in the delegation document.

§ 102-72.95 What are the requirements for obtaining a security delegation of authority from GSA?

Executive agencies may be delegated security authority when any of the following conditions exist:

(a) A clear and unique security requirement;

(b) A critical national security issue;

(c) An intelligence or law enforcement mission; or

(d) The current security contractor is ineffective.

§ 102-72.100 What are Executive agencies' responsibilities under a utility service delegation of authority from GSA?

With this delegation, Executive agencies have the authority to negotiate and execute utility services contracts for periods over one year but not exceeding ten years for their use and benefit. Agencies also have the authority to intervene in utility rate proceedings to represent the consumer interests of the Federal Government, if so provided in the delegation of authority.

§ 102-72.105 What are the requirements for obtaining a utility services delegation of authority from GSA?

Executive agencies may be delegated utility services authority when they

have the technical expertise and adequate staffing.

PART 102-73—REAL ESTATE ACQUISITION

Sec.

- 102-73.5 What is the scope of this part?
- 102-73.10 What is the basic real estate acquisition policy?
- 102-73.15 What real estate acquisition and related services must Federal agencies provide?
- 102-73.20 When may Federal agencies consider leases of privately owned land and buildings to satisfy their space needs?
- 102-73.25 Are Federal agencies required to give priority consideration to space in buildings under the custody and control of the United States Postal Service in fulfilling Federal agency space needs?
- 102-73.30 On what basis must Federal agencies acquire leases?
- 102-73.35 Are Executive agencies required to acquire leased space by negotiation?
- 102-73.40 Is the CICA applicable to lease acquisition?
- 102-73.45 What policy must Executive agencies comply with in locating Federal facilities?
- 102-73.50 What historic preservation provisions must Federal agencies comply with when acquiring space by lease?
- 102-73.55 With whom may Federal agencies enter into lease agreements?
- 102-73.60 Are there any limitations on leasing certain space?
- 102-73.65 When may Federal agencies consider acquiring leases with purchase options?
- 102-73.70 What scoring rules must Federal agencies follow when considering leases and leases with purchase options?
- 102-73.75 When may Federal agencies consider purchase of buildings?
- 102-73.80 What factors must Executive agencies consider when purchasing sites?
- 102-73.85 What land acquisition policy must Federal agencies follow?
- 102-73.90 What relocation assistance policy must Federal agencies follow?
- 102-73.95 Is a prospectus required for all acquisition, construction or alteration projects?
- 102-73.100 What happens if the project exceeds the prospectus threshold?

Authority: 40 U.S.C. 486(c); Sec. 3(c), Reorganization Plan No. 18 of 1950 (40 U.S.C. 490 note); Sec. 1-201(b), E.O. 12072, 43 FR 36869, 3 CFR, 1978 Comp., p. 213.

§ 102-73.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102-73.10 What is the basic real estate acquisition policy?

If suitable Government-controlled space is unavailable, Executive agencies

must acquire real estate and related services in an efficient and cost effective manner.

§ 102-73.15 What real estate acquisition and related services must Federal agencies provide?

Federal agencies, upon approval from GSA, may provide real estate and related services, including leases (with and without purchase options), building purchase, purchase of sites, condemnation, and relocation assistance.

§ 102-73.20 When may Federal agencies consider leases of privately owned land and buildings to satisfy their space needs?

Federal agencies may consider leases of privately owned land and buildings only when needs cannot be satisfactorily met in Government-controlled space and one or more of the following conditions exist:

(a) Leasing is more advantageous to the Government than constructing a new building, or more advantageous than altering an existing Federal building;

(b) New construction or alteration is unwarranted because demand for space in the community is insufficient, or is indefinite in scope or duration; or

(c) Federal agencies cannot provide for the completion of a new building within a reasonable time.

§ 102-73.25 Are Federal agencies required to give priority consideration to space in buildings under the custody and control of the United States Postal Service in fulfilling Federal agency space needs?

Yes, after considering the availability of GSA-controlled space, Federal agencies must extend priority consideration to available space in buildings under the custody and control of the United States Postal Service (USPS) in fulfilling Federal agency space needs.

§ 102-73.30 On what basis must Federal agencies acquire leases?

Federal agencies must acquire leases on the most favorable basis to the Federal Government, with due consideration to maintenance and operational efficiency, and at charges consistent with prevailing market rates for comparable facilities in the community.

§ 102-73.35 Are Executive agencies required to acquire leased space by negotiation?

Yes, Executive agencies must acquire leased space by negotiation, except where the sealed bid procedure is required by the Competition in Contracting Act of 1984 (CICA), as amended (41 U.S.C. 253(a)). See also 40

U.S.C. 618(b) with respect to the use of competitive procedures for the acquisition of leaseholds in buildings constructed for Federal Government use.

§ 102-73.40 Is the CICA applicable to lease acquisition?

Yes, Executive agencies must obtain full and open competition among suitable locations meeting minimum Government requirements, except as otherwise provided by CICA.

§ 102-73.45 What policy must Executive agencies comply with in locating Federal facilities?

When acquiring space by lease, Executive agencies must comply with the location policies in § 101-17.205 and § 102-79.90 (E.O. 13006 (61 FR 26071, 3 CFR, 1996 Comp., p. 195)) of this title.

§ 102-73.50 What historic preservation provisions must Federal agencies comply with when acquiring space by lease?

When acquiring space by lease, Federal agencies must comply with the provisions of section 110(a) of the National Historic Preservation Act of 1966, as amended, (16 U.S.C. 470h-2(a)), regarding the use of historic properties.

§ 102-73.55 With whom may Federal agencies enter into lease agreements?

Federal agencies, upon approval from GSA, may enter into lease agreements with any person, copartnership, corporation, or other public or private entity, which do not bind the Government for periods in excess of twenty years (40 U.S.C. 490(h)(1)). This policy does not include persons who might otherwise be barred from contracting with the Federal Government (e.g., debarred or suspended contractors or Members of Congress).

§ 102-73.60 Are there any limitations on leasing certain space?

Yes, the limitations on leasing certain space are as follows:

(a) In general, Federal agencies may not lease any space to accommodate computer and telecommunications operations; secure or sensitive activities related to the national defense or security; or a permanent courtroom, judicial chamber, or administrative office for any United States court, if the average annual net rental cost of leasing such space would exceed the prospectus threshold (40 U.S.C. 606(e)).

(b) Federal agencies may lease such space only if the Administrator of General Services first determines that leasing such space is necessary to meet

requirements which cannot be met in public buildings and submits such reasons to the Committee on Environment and Public Works of the Senate and the Committee on Public Works and Transportation of the House of Representatives in accordance with 40 U.S.C. 606(e).

§ 102-73.65 When may Federal agencies consider acquiring leases with purchase options?

Agencies may consider leasing with a purchase option at or below fair market value when one or more of the following conditions exist:

- (a) The purchase option offers economic and other advantages to the Government and is consistent with the Government's goals;
- (b) The Government is the sole or major tenant of the building, and has a long-term need for the property; or
- (c) Leasing with a purchase option is otherwise in the best interest of the Government.

§ 102-73.70 What scoring rules must Federal agencies follow when considering leases and leases with purchase options?

All Federal agencies must follow the budget scorekeeping rules for leases, capital leases, and lease-purchases identified in appendices A and B of OMB Circular A-11 (For availability, see 5 CFR 1310.3).

§ 102-73.75 When may Federal agencies consider purchase of buildings?

Agencies may consider purchase of buildings on a case-by-case basis when one or more of the following conditions exist:

- (a) It is economically more beneficial to own and manage the property;
- (b) There is a long-term need for the property;
- (c) The property is an existing building, or a building nearing completion, that can be purchased and occupied within a reasonable time; or
- (d) When otherwise in the best interests of the Government.

§ 102-73.80 What factors must Executive agencies consider when purchasing sites?

Agencies must locate proposed Federal buildings on sites that are most advantageous to the United States. Executive agencies must consider factors such as whether the site will contribute to economy and efficiency in the construction, maintenance and operation of the individual building, and how the proposed site relates to the Government's total space needs in the community. Prior to acquiring, constructing or leasing buildings (or sites for such buildings), Federal agencies must use, to the maximum

extent feasible, historic properties available to the agency. In site selections, Executive agencies must consider Executive Orders 12072 (3 CFR, 1978 Comp., p. 213) and 13006 (40 U.S.C. 601a note). In addition, Executive agencies must consider all of the following:

- (a) Maximum utilization of Government-owned land (including excess land) whenever it is adequate, economically adaptable to requirements and properly located, where such use is consistent with the provisions of part 101-47, subpart 101-47.8, of this title.
- (b) A site adjacent to or in the proximity of an existing Federal building which is well located and is to be retained for long-term occupancy.
- (c) The environmental condition of proposed sites prior to purchase: The sites must be free from contamination, unless it is otherwise determined to be in the best interests of the Government to purchase a contaminated site (e.g., reuse of a site under an established "Brownsfields" program).
- (d) Purchase options to secure the future availability of a site.
- (e) All applicable policies concerning the location of Federal facilities (e.g., to give first priority to locating facilities in rural areas under the Rural Development Act (7 U.S.C. 2204b-1)).

§ 102-73.85 What land acquisition policy must Federal agencies follow?

Federal agencies must follow a land acquisition policy that:

- (a) Encourages and expedites the acquisition of real property by agreements with owners;
- (b) Avoids litigation, including condemnation actions, where possible and relieves congestion in the courts;
- (c) Provides for consistent treatment of owners; and
- (d) Promotes public confidence in Federal land acquisition practices.

§ 102-73.90 What relocation assistance policy must Federal agencies follow?

Federal agencies, upon approval from GSA, must provide appropriate relocation assistance under the Uniform Relocation Assistance and Real Property Acquisition Policies Act (42 U.S.C. 4651-4655) to eligible owners and tenants of property purchased for use by Federal agencies. Appropriate relocation assistance means that the Federal agency must pay the displaced person for actual reasonable moving expenses (in moving himself, his family, business, etc.); actual direct losses of tangible personal property as a result of moving or discontinuing a business; actual reasonable expenses in searching for a replacement business or farm; and

actual reasonable expenses necessary to reestablish a displaced farm, nonprofit organization, or small business at its new site, but not to exceed \$10,000. The implementing regulations are found in 49 CFR part 24 (see § 105-51.000 of this title).

§ 102-73.95 Is a prospectus required for all acquisition, construction or alteration projects?

(a) No, a prospectus is not required if the dollar value of a project does not exceed the prospectus threshold. The Public Buildings Act of 1959, as amended, 40 U.S.C. 601-619, establishes a prospectus threshold, applicable to Federal agencies operating under, or subject to, the authorities of the Administrator of General Services, for the construction, alteration, purchase, and acquisition of any building to be used as a public building, and establishes a prospectus threshold to lease any space for use for public purposes. (Because of the important role the prospectus approval process plays in the budget preparation and planning process and with Congressional oversight responsibilities, Federal agencies must continue to prepare and submit prospectuses for all projects that exceed the prospectus threshold identified in § 102-73.55. All GSA delegations of leasing, alteration, and construction authority are subject to this policy.)

(b) Public Law 104-66, 109 Stat. 734, eliminated the prospectus submission requirement of the Public Buildings Act of 1959 (40 U.S.C. 606(a) and 610(b)).

§ 102-73.100 What happens if the project exceeds the prospectus threshold?

Such projects require approval by the Senate and the House of Representatives if the dollar value exceeds the prospectus threshold. In order to obtain this approval, prospectuses for such projects must be submitted to GSA and the Administrator of General Services will transmit the proposed prospectuses to Congress for consideration by the Senate and the House of Representatives.

PART 102-74—FACILITY MANAGEMENT

Sec.

- 102-74.5 What is the scope of this part?
- 102-74.10 What is the basic facility management policy?
- 102-74.15 What are occupancy services?
- 102-74.20 What responsibilities do Executive agencies have regarding occupancy services?
- 102-74.25 What standard in providing occupancy services must Executive agencies follow?

- 102-74.30 What building services must Executive agencies provide?
- 102-74.35 What are concessions services?
- 102-74.40 When must Federal agencies provide concessions services?
- 102-74.45 Are Federal agencies required to give blind vendors priority in operating vending facilities?
- 102-74.50 What are conservation programs?
- 102-74.55 What are asset services?
- 102-74.60 What asset services must an Executive agency provide?
- 102-74.65 What standard in providing asset services must Executive agencies follow?
- 102-74.70 What Federal facility ridesharing policy must Executive agencies follow?
- 102-74.75 What steps must Executive agencies take to promote ridesharing at Federal facilities?
- 102-74.80 What specific ridesharing information must Executive agencies report to the Administrator of General Services?
- 102-74.85 Where should Executive agencies send their Federal Facility Ridesharing Reports?
- 102-74.90 Are there any exceptions to these ridesharing reporting requirements?

Authority: 40 U.S.C. 486(c); E.O. 12191, 45 FR 7997, 3 CFR, 1980 Comp., p 138.

§ 102-74.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102-74.10 What is the basic facility management policy?

Executive agencies must manage, operate, and maintain Government-owned and leased buildings in a manner that provides for quality space and services consistent with their operational needs and that accomplish overall Government objectives. The management, operation, and maintenance of buildings and building systems must:

- (a) Be cost effective and energy efficient;
- (b) Be adequate to meet the agencies' missions;
- (c) Meet nationally recognized standards; and
- (d) Be at an appropriate level to maintain and preserve the physical plant assets, consistent with available funding.

§ 102-74.15 What are occupancy services?

Occupancy services are:

- (a) Building services (see § 102-74.30);
- (b) Concession services; and
- (c) Conservation programs.

§ 102-74.20 What responsibilities do Executive agencies have regarding occupancy services?

Executive agencies, upon approval from GSA, must manage, administer, and enforce the requirements of agreements (such as Memoranda of Understanding, etc.) and contracts that provide for the delivery of occupancy services.

§ 102-74.25 What standard in providing occupancy services must Executive agencies follow?

Executive agencies must provide occupancy services that substantially conform to nationally recognized standards. As needed, Executive agencies may adopt other standards for buildings and services in Federally-controlled facilities in order to conform to statutory requirements and to implement cost-reduction efforts.

§ 102-74.30 What building services must Executive agencies provide?

Executive agencies, upon approval from GSA, must provide:

(a) Building services such as custodial, solid waste management (including recycling), heating and cooling, landscaping and grounds maintenance, tenant alterations, minor repairs, building maintenance, integrated pest management, signage, parking, and snow removal, at appropriate levels to support Federal agency missions; and

(b) Arrangements for raising and lowering the United States flags at appropriate times. In addition, agencies must display P.O.W. and M.I.A. flags at locations specified in 36 U.S.C. 189a on P.O.W./M.I.A. flag display days.

§ 102-74.35 What are concessions services?

Concessions services are services such as dry cleaners, gift shops, vending facilities (onsite preparation facilities, prepackaged facilities, sundry facilities, and vending machines), cafeterias, employee health units, and public pay telephones.

§ 102-74.40 When must Federal agencies provide concessions services?

Federal agencies, upon approval from GSA, must provide concessions services where building population supports such services and when the availability of existing commercial services is insufficient to meet Federal agency needs. See the Randolph-Sheppard Act, as amended, 20 U.S.C. 107 *et seq.*, and part 101-20, subpart 101-20.2, of this title.

§ 102-74.45 Are Federal agencies required to give blind vendors priority in operating vending facilities?

With certain exceptions, the Randolph-Sheppard Act requires that blind persons licensed under the provisions of the Act be authorized to operate vending facilities on any Federal property, including leased buildings. The Act imposes a positive obligation on Federal agencies to have suitable sites for vending facilities in buildings that they acquire.

§ 102-74.50 What are conservation programs?

Conservation programs are programs that improve energy and water efficiency and promote the use of solar and other renewable energy. These programs must promote and maintain an effective source reduction activity (reducing consumption of resources such as energy, water and paper), resource recovery activity (obtaining materials from the waste stream that can be recycled into new products), and reuse activity (reusing same product before disposition, such as reusing unneeded memos for scratch paper).

§ 102-74.55 What are asset services?

Asset services include repairs (as opposed to those minor repairs identified in § 102-74.30(a)), alterations, and modernizations for real property assets. Typically, these are the type of repairs and alterations necessary to preserve or enhance the value of the real property asset.

§ 102-74.60 What asset services must Executive agencies provide?

Executive agencies, upon approval from GSA, must provide asset services such as repairs (in addition to those minor repairs identified in § 102-74.30(a)), alterations, and modernizations for real property assets. Federal agencies must follow the prospectus submission and approval policy identified in §§ 102-73.95 and 102-73.100.

§ 102-74.65 What standard in providing asset services must Executive agencies follow?

Executive agencies must provide asset services that maintain continuity of Government operations, continue efficient building operations, extend the useful life of buildings and related building systems, and provide a quality workplace environment that enhances employee productivity.

§ 102-74.70 What Federal facility ridesharing policy must Executive agencies follow?

Executive agencies must actively promote the use of ridesharing

(carpools, vanpools, privately leased buses, public transportation, and other multi-occupancy modes of travel) by personnel working at Federal facilities to conserve energy, reduce congestion, improve air quality, and provide an economical way for Federal employees to commute to work.

§ 102-74.75 What steps must Executive agencies take to promote ridesharing at Federal facilities?

Agencies must:

- (a) Establish an annual ridesharing goal for each facility.
- (b) Report to the Administrator of General Services by June 1 of each year the goals established, the means developed to achieve those goals, and the progress achieved.
- (c) Cooperate with State and local ridesharing agencies where such agencies exist.

§ 102-74.80 What specific ridesharing information must Executive agencies report to the Administrator of General Services?

The head of each agency must submit to GSA by June 1 of each year a report which includes all of the following:

- (a) The name, address, title, and telephone number of the agencywide Employee Transportation Coordinator (ETC).
- (b) A narrative on actions taken and barriers encountered in promoting ridesharing within the agency.
- (c) Information on any noticeable facility achievements.
- (d) A copy of instructions issued to the agency's facility ETC's for implementing the Federal Facility Ridesharing Program.

§ 102-74.85 Where should Executive agencies send their Federal Facility Ridesharing Reports?

Agencies must send their Federal Facility Ridesharing Reports to the Real Property Policy Division (MPR), General Services Administration, 1800 F Street, NW., Washington, DC 20405.

§ 102-74.90 Are there any exceptions to these ridesharing reporting requirements?

Yes, facilities with less than 100 full-time employees or less than 100 full-time employees on the largest shift are not required to submit an annual report. Agencies must not subdivide buildings, groups of buildings, or worksites for the purpose of meeting the exception standards.

PART 102-75—REAL PROPERTY DISPOSAL

Sec.

- 102-75.5 What is the scope of this part?
- 102-75.10 What basic real property disposal policy governs Executive agencies?

102-75.15 What real property disposal services must Executive agencies provide?

102-75.20 What are Executive agencies' responsibilities concerning the utilization of excess property?

102-75.25 What are Executive agencies' responsibilities concerning real property surveys?

102-75.30 When may landholding Federal agencies grant rights for non-Federal interim use of excess property reported to GSA?

102-75.35 What are Executive agencies' responsibilities concerning the disposal of surplus property?

102-75.40 When may Executive agencies dispose of surplus real property by exchange for privately owned property?

102-75.45 When may Executive agencies outlease surplus real property for non-Federal interim use?

102-75.50 What are Federal agencies' reporting responsibilities under the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411)?

102-75.55 What are Executive agencies' responsibilities concerning public benefit conveyances?

102-75.60 When may Executive agencies conduct negotiated sales?

102-75.65 What are Executive agencies' responsibilities concerning negotiated sales?

102-75.70 What can Executive agencies do to eliminate the potential for windfall profits to public agencies in negotiated sales?

102-75.75 What is a negotiated sale for economic development purposes?

102-75.80 What are Executive agencies' responsibilities concerning public sales?

102-75.85 How can Federal agencies obtain related disposal services?

102-75.90 What type of appraisal value must be obtained for real property disposal transactions?

102-75.95 Are appraisals required for all real property disposal transactions?

102-75.100 Who must appraise the real property?

Authority: 40 U.S.C. 486(c), 483(a), and 484; E.O. 12512, 50 FR 18453, 3 CFR, 1985 Comp., p. 340.

§ 102-75.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102-75.10 What basic real property disposal policy governs Executive agencies?

Executive agencies must provide, in a timely, efficient, and cost effective manner, the full range of real estate services necessary to support their real property utilization and disposal needs. Landholding agencies must make surveys of real property under their jurisdiction to identify property that is

unutilized, underutilized, or not being put to optimum use. Executive agencies must have adequate procedures in place to promote the effective utilization and disposal of such real property.

§ 102-75.15 What real property disposal services must Executive agencies provide?

Executive agencies must provide real property disposal services for real property assets under their custody and control. These real property disposal services include utilization of excess property, surveys, disposal of surplus property, public benefit conveyances, negotiated sales, public sales, related disposal services, and appraisals.

§ 102-75.20 What are Executive agencies' responsibilities concerning the utilization of excess property?

Executive agencies' responsibilities concerning the utilization of excess property are to:

- (a) Increase the identification and reporting of their excess real property;
- (b) Achieve maximum use of their excess real property, in terms of economy and efficiency, to minimize expenditures for the purchase of real property;
- (c) Provide for the transfer of excess real property among Federal agencies, to mixed-ownership Government corporations, and to the municipal government of the District of Columbia; and
- (d) Obtain assistance from GSA in resolving conflicting requests for transferring real property that the involved agencies cannot resolve.

§ 102-75.25 What are Executive agencies' responsibilities concerning real property surveys?

A landholding agency's responsibilities concerning real property surveys are to:

- (a) Survey real property under its control (*i.e.*, that property reported on its financial statements) at least annually to identify property that is not needed, underutilized, or not being put to optimum use. When other needs for the property are identified or recognized, the agency must determine whether continuation of the current use or another use would better serve the public interest, considering both the Federal agency's needs and the property's location. In conducting annual reviews of their property holdings, § 101-47.801(b) of this title and other applicable GSA regulations provide guidelines for Executive agencies to consider in identifying unneeded Federal real property;
- (b) Maintain its inventory of real property at the absolute minimum

consistent with economical and efficient conduct of the affairs of the agency; and

(c) Promptly report to GSA real property that it has determined to be excess.

§ 102-75.30 When may landholding Federal agencies grant rights for non-Federal interim use of excess property reported to GSA?

Landholding Federal agencies may grant rights for non-Federal interim use of excess property reported to GSA, when it is determined that such excess property is not required for the needs of any Federal agency.

§ 102-75.35 What are Executive agencies' responsibilities concerning the disposal of surplus property?

Executive agencies must obtain from GSA a determination that their excess real property is not needed for Federal use and is surplus to the needs of the Federal Government. After receiving this determination, Executive agencies, upon approval from GSA, must expeditiously make the surplus property available for acquisition by State and local governmental units and nonprofit institutions (see § 102-75.55) or for sale by public advertising, negotiation, or other disposal action. Executive agencies must consider the availability of real property for public purposes on a case-by-case basis, based on highest and best use and estimated fair market value. See § 101-47.202-2(b) of this title for the requirements for reporting excess real property. Where hazardous substance activity is identified, see § 101-47.304-14 of this title for required information that the disposal agency must incorporate into Invitation for Bids/Others to Purchase.

§ 102-75.40 When may Executive agencies dispose of surplus real property by exchange for privately owned property?

Executive agencies may dispose of surplus real property by exchange for privately owned property only:

(a) For property management considerations such as boundary realignment or provision of access; or

(b) Where authorized by law, when the requesting Federal agency receives approval from the Office of Management and Budget and the appropriate oversight committees, and where the transaction offers substantial economic or unique program advantages not otherwise obtainable by any other acquisition method.

§ 102-75.45 When may Executive agencies outlease surplus real property for non-Federal interim use?

Executive agencies may outlease surplus real property for non-Federal

interim use, pending its disposition, when both of the following conditions exist:

(a) The lease or permit does not exceed one year and is revocable with not more than a 30-day notice by the disposal agency; and

(b) The use and occupancy will not interfere with, delay, or impede the disposal of the property.

§ 102-75.50 What are Federal agencies' reporting responsibilities under the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411)?

By December 31 of each year, each landholding agency responsible for reporting must notify the Department of Housing and Urban Development (HUD) regarding the current availability status and classification of each property controlled by the agency that:

(a) Was included in a list of suitable properties published that year by HUD; and

(b) Remains available for application for use to assist the homeless, or has become available for application during that year.

§ 102-75.55 What are Executive agencies' responsibilities concerning public benefit conveyances?

Based on a highest and best use analysis, Executive agencies, upon approval from GSA, may make surplus real property available to State and local governments and certain nonprofit institutions at up to 100 percent public benefit discount for public benefit purposes. Some examples of such purposes are education, health, park and recreation, the homeless, historic monuments, public airports, highways, correctional facilities, ports, and wildlife conservation. The implementing regulations are found at § 101-47.308 of this title.

§ 102-75.60 When may Executive agencies conduct negotiated sales?

Executive agencies may conduct negotiated sales only when:

(a) The estimated fair market value of the property does not exceed \$15,000; or

(b) Bid prices after advertising are unreasonable (for all or part of the property) or were not independently arrived at in open competition; or

(c) The character or condition of the property or unusual circumstances make it impractical to advertise for competitive bids and the fair market value of the property and other satisfactory terms of disposal are obtainable by negotiation; or

(d) The disposals will be to States, Commonwealth of Puerto Rico, possessions, political subdivisions thereof, or tax-supported agencies

therein, and the estimated fair market value of the property and other satisfactory terms of disposal are obtainable by negotiations. Such negotiated sales to public bodies must be limited to where a public benefit will result from a negotiated sale which would not be realized from a competitive sale disposal (some examples of such purposes are administrative offices and economic development); or

(e) Negotiation is otherwise authorized by the Federal Property and Administrative Services Act of 1949 or other law, such as disposals of power transmission lines for public or cooperative power projects.

§ 102-75.65 What are Executive agencies' responsibilities concerning negotiated sales?

Executive agencies must:

(a) Obtain such competition as is feasible in all negotiations of disposals and contracts for disposal of surplus property; and

(b) Prepare and transmit an explanatory statement, identifying the circumstances of each disposal by negotiation for any real property specified in 40 U.S.C. 484(e)(6)(A), to the appropriate committees of the Congress in advance of such disposal.

§ 102-75.70 What can Executive agencies do to eliminate the potential for windfall profits to public agencies in negotiated sales?

To eliminate the potential for windfall profits to public agencies, Executive agencies must include in negotiated sales to public agencies an excess profits clause, which usually runs for 3 years. This clause states that, if the purchaser should sell or enter into agreements to sell the property within 3 years from the date of title transfer by the Federal Government, all proceeds in excess of the purchasers costs will be remitted to the Federal Government. (Put the clause found in § 101-47.4908 of this title in the offer to purchase and in the conveyance document.)

§ 102-75.75 What is a negotiated sale for economic development purposes?

A negotiated sale for economic development purposes means that the public body purchasing the property will develop or make substantial improvements to the property with the intention of reselling or leasing the property in parcels to users to advance the community's economic benefit. This type of negotiated sale is acceptable where the expected public benefits to the community are greater than the anticipated proceeds derived from a competitive public sale.

§ 102-75.80 What are Executive agencies' responsibilities concerning public sales?

Executive agencies must make available by competitive public sale any surplus property that is not disposed of by public benefit discount conveyance or by negotiated sale. Awards must be made to the responsible bidder whose bid will be most advantageous to the Government, price and other factors considered.

§ 102-75.85 How can Federal agencies obtain related disposal services?

Federal agencies with independent disposal authority are encouraged to obtain disposal related services from those agencies with expertise in real property disposal, such as GSA, as allowed by 31 U.S.C. 1535 (the Economy Act), so that agencies may remain focused on their core mission.

§ 102-75.90 What type of appraisal value must be obtained for real property disposal transactions?

For all real property transactions requiring appraisals, Executive agencies must in all cases obtain, as appropriate, an appraisal of either the fair market value or the fair annual rental value of property available for disposal.

§ 102-75.95 Are appraisals required for all real property disposal transactions?

Generally, yes, appraisals are required for all real property disposal transactions. However, appraisals are not required when either of the following conditions exist:

(a) An appraisal will serve no useful purpose (*e.g.*, legislation authorizes conveyance without monetary consideration or at a fixed price). This exception does not apply to negotiated sales to public agencies intending to use the property for a public purpose not covered by any of the special disposal provisions in § 101-47.308 of this title.

(b) The estimated fair market value of property to be offered on a competitive sale basis does not exceed \$50,000.

§ 102-75.100 Who must appraise the real property?

Executive agencies must use only experienced and qualified real estate appraisers familiar with types of property to be appraised when conducting the appraisal. When an appraisal is required for the purposes of disposing of surplus property by negotiation under § 102-75.60(c), (d), or (e), contract appraisers that meet this same standard must be used. However, Executive agencies may authorize any other method of obtaining an estimate of the fair market value or the fair annual rental when the cost of obtaining such data from a contract appraiser would be

out of proportion to the expected recoverable value of the property.

PART 102-76—DESIGN AND CONSTRUCTION

Sec.

102-76.5 What is the scope of this part?

102-76.10 What basic design and construction policy governs Federal agencies?

102-76.15 What are design and construction services?

102-76.20 What issues must Federal agencies consider in providing site planning and landscape design services?

102-76.25 What standards must Federal agencies meet in providing architectural and interior design services?

102-76.30 Seismic safety. [Reserved]

102-76.35 Flood plains. [Reserved]

Authority: 40 U.S.C. 486(c) (in furtherance of the Administrator's authorities under 40 U.S.C. 601-619 and elsewhere as included under 40 U.S.C. 490(a) and (c)); E.O. 12411, 48 FR 13391, 3 CFR, 1983 Comp., p. 155; E.O. 12512, 50 FR 18453, 3 CFR, 1985 Comp., p. 340.

§ 102-76.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102-76.10 What basic design and construction policy governs Federal agencies?

Federal agencies, upon approval from GSA, are bound by the following basic design and construction policies:

(a) Provide the highest quality services for designing and constructing new Federal facilities and for repairing and altering existing Federal facilities. These services must be timely, efficient, and cost effective.

(b) Use a distinguished architectural style and form in Federal facilities that reflects the dignity, enterprise, vigor and stability of the Federal Government.

(c) Follow nationally recognized model building codes and other applicable nationally recognized codes that govern Federal construction to the maximum extent feasible and consider local building code requirements. (See 40 U.S.C. 618 and 619.)

(d) Design Federal buildings to have a long life expectancy and accommodate periodic changes due to renovations.

(e) Make buildings cost effective, energy efficient, and accessible to and usable by the physically impaired.

(f) Provide for building service equipment that is accessible for maintenance, repair, or replacement without significantly disturbing occupied space.

(g) Consider ease of operation when selecting mechanical and electrical equipment.

(h) Agencies must follow the prospectus submission and approval policy identified in §§ 102-73.95 and 102-73.100 of this chapter.

§ 102-76.15 What are design and construction services?

Design and construction services are:

- (a) Site planning and landscape design;
- (b) Architectural and interior design; and
- (c) Engineering systems design.

§ 102-76.20 What issues must Federal agencies consider in providing site planning and landscape design services?

In providing site planning and design services, Federal agencies must:

- (a) Make the site planning and landscape design a direct extension of the building design;
- (b) Make a positive contribution to the surrounding landscape;

(c) Consider requirements (other than procedural requirements) of local zoning laws and laws relating to setbacks, height, historic preservation and aesthetic qualities of a building;

(d) Identify areas for future building expansion in the architectural and site design concept for all buildings where an expansion need is identified to exist;

(e) Create a landscape design that is a pleasant, dynamic experience for occupants and visitors to Federal facilities and, where appropriate, encourage public access to and stimulate pedestrian traffic around the facilities. Coordinate the landscape design with the architectural characteristics of the building; and

(f) Comply with the requirements of the National Environmental Policy Act of 1969, as amended, 42 U.S.C. 4321 et seq., and the National Historic Preservation Act, as amended, 16 U.S.C. 470 et seq., for each project.

(g) Consider the vulnerability of the facility as well as the security needs of the occupying agencies.

§ 102-76.25 What standards must Federal agencies meet in providing architectural and interior design services?

Federal agencies must design distinctive and high quality Federal facilities that meet all of the following standards:

(a) Reflect the local architecture in buildings through the use of building form, materials, colors, or detail. Express a quality of permanence in the building interior similar to the building exterior.

(b) For new construction and major renovations, provide full access to and

use of Federally-controlled facilities for physically impaired persons. Follow the Architectural Barriers Act of 1968, 42 U.S.C. 4151–4157 (Uniform Federal Accessibility Standards (UFAS)) or Americans with Disabilities Act of 1990, Public Law 101–336, 104 Stat. 327 (ADA accessibility guidelines), whichever is more stringent. For minor renovations in existing buildings, meet minimum UFAS requirements. A more detailed explanation of these standards can be found in part 101–19, subpart 101–19.6, of this title.

(c) Use metric specifications in construction where the metric system is the accepted industry standard, and to the extent that such usage is economically feasible and practical.

(d) Provide for the design of security systems to protect Federal workers and visitors and to safeguard facilities against criminal activity and/or terrorist activity. Security design must support the continuity of Government operations during civil disturbances, natural disasters and other emergency situations.

(e) Design and construct facilities that meet or exceed the energy performance standards applicable to Federal buildings in 10 CFR part 435.

§ 102–76.30 Seismic safety. [Reserved]

§ 102–76.35 Flood plains. [Reserved]

PART 102–77—ART-IN-ARCHITECTURE

Sec.

102–77.5 What is the scope of this part?

102–77.10 What basic Art-in-architecture policy governs Federal agencies?

102–77.15 Who funds the Art-in-architecture efforts?

102–77.20 Who should Federal agencies collaborate with when commissioning and selecting art for Federal buildings?

102–77.25 Do Federal agencies have responsibilities to provide national visibility for Art-in-architecture?

Authority: 40 U.S.C. 486(c) and 601a.

§ 102–77.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102–77.10 What basic Art-in-architecture policy governs Federal agencies?

Federal agencies must incorporate fine arts as an integral part of the total building concept when designing new Federal buildings, and when making substantial repairs and alterations to existing Federal buildings, as appropriate. The selected fine arts,

including painting, sculpture, and artistic work in other media, must reflect the national cultural heritage and emphasize the work of living American artists.

§ 102–77.15 Who funds the Art-in-architecture efforts?

To the extent not prohibited by law, Federal agencies must fund the Art-in-architecture efforts by allocating a portion of the estimated cost of constructing or purchasing new Federal buildings, or of completing major repairs and alterations of existing buildings. Funding for qualifying projects, including new construction, building purchases, other building acquisition, or prospectus-level repair and alteration projects, must be in a range determined by the Administrator of General Services.

§ 102–77.20 Who should Federal agencies collaborate with when commissioning and selecting art for Federal buildings?

To the maximum extent practicable, Federal agencies should seek the support and involvement of local citizens in selecting appropriate artwork. Federal agencies should collaborate with the artist and community to produce works of art that reflect the cultural, intellectual, and historic interests and values of a community. In addition, Federal agencies should work collaboratively with the architect of the building, art professionals, when commissioning and selecting art for Federal buildings. Federal agencies should commission artwork that is diverse in style and media.

§ 102–77.25 Do Federal agencies have responsibilities to provide national visibility for Art-in-architecture?

Yes, Federal agencies should provide Art-in-architecture that receives appropriate national and local visibility to facilitate participation by a large and diverse group of artists representing a wide variety of types of artwork.

PART 102–78—HISTORIC PRESERVATION

Sec.

102–78.5 What is the scope of this part?

102–78.10 What basic historic preservation policy governs Federal agencies?

102–78.15 What are historic properties?

102–78.20 Are Federal agencies required to identify historic properties?

102–78.25 What is an undertaking?

102–78.30 What are consulting parties?

102–78.35 Are Federal agencies required to involve consulting parties in their historic preservation activities?

102–78.40 What responsibilities do Federal agencies have when an undertaking

adversely affects a historic or cultural property?

102–78.45 What are Federal agencies' responsibilities concerning nomination of properties to the National Register?

102–78.50 What historic preservation services must Federal agencies provide?

102–78.55 For which properties must Federal agencies provide historic preservation services?

102–78.60 What are Federal agencies' historic preservation responsibilities when acquiring leased space?

102–78.65 What are Federal agencies' historic preservation responsibilities when disposing of real property under their control?

102–78.70 What are an agency's historic preservation responsibilities when disposing of another Federal agency's real property?

Authority: 16 U.S.C. 470 h–2; 40 U.S.C. 486(c) and 490(a).

§ 102–78.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services. The policies in this part are in furtherance of GSA's preservation program under section 110 of the National Historic Preservation Act (16 U.S.C. 470) and apply to properties under the jurisdiction or control of the Administrator and to any Federal agencies operating, maintaining or protecting such properties under a delegation of authority from the Administrator.

§ 102–78.10 What basic historic preservation policy governs Federal agencies?

To protect, enhance and preserve historic and cultural property under their control, Federal agencies must consider the effects of their undertakings on historic and cultural properties and give the Advisory Council on Historic Preservation (Advisory Council), the State Historic Preservation Officer (SHPO), and other consulting parties a reasonable opportunity to comment regarding the proposed undertakings.

§ 102–78.15 What are historic properties?

Historic properties are those that are included in, or eligible for inclusion in, the National Register of Historic Places (National Register) as more specifically defined at 36 CFR 800.16.

§ 102–78.20 Are Federal agencies required to identify historic properties?

Yes, Federal agencies must identify all National Register or National

Register-eligible historic properties under their control. In addition, Federal agencies must apply National Register Criteria (36 CFR part 63) to properties that have not been previously evaluated for National Register eligibility and that may be affected by the undertakings of Federally sponsored activities.

§ 102–78.25 What is an undertaking?

The term undertaking means a project, activity, or program under the direct or indirect jurisdiction of a Federal agency, including those:

- (a) Carried out by or on behalf of the agency;
- (b) Carried out with Federal financial assistance;
- (c) Requiring a Federal permit, license, or approval; and
- (d) Subject to State or local regulation administered pursuant to a delegation or approval by a Federal agency.

§ 102–78.30 What are consulting parties?

As more particularly described in 36 CFR 800.2(c), consulting parties are those parties having consultative roles in the Section 106 process (*i.e.*, Section 106 of the National Historic Preservation Act) that requires Federal agencies to take into account the effects of their undertakings on historic properties and afford the Council a reasonable opportunity to comment on such undertakings. Specifically, consulting parties include the State Historic Preservation Officer; Tribal Historic Preservation Officer; Indian tribes and Native Hawaiian organizations; Representatives of local governments; Applicants for Federal assistance, permits, licenses and other approvals; and other individuals and organizations with a demonstrated interest in the undertaking.

§ 102–78.35 Are Federal agencies required to involve consulting parties in their historic preservation activities?

Yes, Federal agencies must solicit information from consulting parties to carry out their responsibilities under historic and cultural preservation laws and regulations. Federal agencies must invite the participation of consulting parties through their normal public notification processes.

§ 102–78.40 What responsibilities do Federal agencies have when an undertaking adversely affects a historic or cultural property?

Federal agencies must not perform an undertaking that could alter, destroy, or modify an historic or cultural property until they have consulted with the SHPO and the Advisory Council. Federal agencies must minimize all adverse impacts of their undertakings

on historic or cultural properties to the extent that is feasible and prudent. Federal agencies must follow the specific guidance on the protection of historic and cultural properties in 36 CFR part 800.

§ 102–78.45 What are Federal agencies' responsibilities concerning nomination of properties to the National Register?

Federal agencies must nominate to the National Register all properties under their control determined eligible for inclusion in the National Register.

§ 102–78.50 What historic preservation services must Federal agencies provide?

Federal agencies must provide the following historic preservation services:

- (a) Prepare a Historic Building Preservation Plan for each National Register or National Register-eligible property under their control. When approved by consulting parties, such plans become a binding management plan for the property; and
- (b) Investigate for historic and cultural factors all proposed sites for direct and leased construction.

§ 102–78.55 For which properties must Federal agencies assume historic preservation responsibilities?

Federal agencies must assume historic preservation responsibilities for real property assets under their custody and control. Federal agencies occupying space in buildings under the custody and control of other Federal agencies must obtain approval from the agency having custody and control of the building.

§ 102–78.60 What are Federal agencies' historic preservation responsibilities when acquiring leased space?

In leasing historic property, Federal agencies must give a preference to such leasing actions in accordance with hierarchy of consideration identified in § 102–79.90 of this chapter.

§ 102–78.65 What are Federal agencies' historic preservation responsibilities when disposing of real property under their control?

Federal agencies must:

- (a) To the extent practicable, establish and implement alternatives for historic properties, including adaptive reuse, that are not needed for current or projected agency purposes. Agencies are required to get the Secretary of Interior's approval of the plans of transferees of surplus Federally-owned historic properties.
- (b) Review all proposed excess actions to identify any properties listed on or eligible for listing on the National Register. Federal agencies must not perform disposal actions that could

result in the alteration, destruction, or modification of an historic or cultural property until Federal agencies have consulted with the SHPO and the Advisory Council.

§ 102–78.70 What are an agency's historic preservation responsibilities when disposing of another Federal agency's real property?

Federal agencies must not accept property declared excess by another Federal agency nor act as an agent for transfer or sale of such properties until the holding agency provides evidence that the Federal agency has met its National Historic Preservation Act responsibilities.

PART 102–79—ASSIGNMENT AND UTILIZATION OF SPACE

Sec.

102–79.5 What is the scope of this part?

102–79.10 What basic assignment and utilization of space policy governs an Executive agency?

102–79.15 What objectives must an Executive agency strive to meet in providing assignment and utilization of space services?

102–79.20 What standard must Executive agencies promote when assigning space?

102–79.25 Can Federal agencies allot space in Federal buildings for the provision of child care services?

102–79.30 Can Federal agencies allot space in Federal buildings for establishing fitness centers?

102–79.35 What elements must Federal agencies address in their planning effort for establishing fitness programs?

102–79.40 Can Federal agencies allot space in Federal buildings to Federal credit unions?

102–79.45 What type of services may Federal agencies provide without charge to Federal credit unions?

102–79.50 What standard must Executive agencies promote in their utilization of space?

102–79.55 Are agencies required to use historic properties available to the agency?

102–79.60 Are Executive agencies required to give first priority to the location of new offices and other facilities in rural areas?

102–79.65 When an agency's mission and program requirements call for the location in an urban area, are Executive agencies required to give first consideration to central business areas?

102–79.70 What is a central business area?

102–79.75 Who is responsible for identifying the delineated area within which a Federal agency wishes to locate specific activities?

102–79.80 Who must approve the final delineated area?

102–79.85 Are Executive agencies required to consider whether the central business area will provide for adequate competition when acquiring leased space?

102-79.90 Are Executive agencies required to give preference to historic properties when acquiring leased space?

102-79.95 Automated external defibrillators. [Reserved]

Authority: 40 U.S.C. 486(c); E.O. 12411, 48 FR 13391, 3 CFR, 1983 Comp., p. 155; and E.O. 12512, 50 FR 18453, 3 CFR, 1985 Comp., p. 340.

§ 102-79.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102-79.10 What basic assignment and utilization of space policy governs an Executive agency?

Executive agencies must provide a quality workplace environment that supports program operations, preserves the value of real property assets, meets the needs of the occupant agencies, and provides child care and physical fitness facilities in the workplace when adequately justified. An Executive agency must promote maximum utilization of Federal workspace, consistent with mission requirements, to maximize its value to the Government.

§ 102-79.15 What objectives must an Executive agency strive to meet in providing assignment and utilization of space services?

Executive agencies must provide assignment and utilization services that will maximize the value of Federal real property resources and improve the productivity of the workers housed therein.

§ 102-79.20 What standard must Executive agencies promote when assigning space?

Executive agencies must promote the optimum use of space for each assignment at the minimum cost to the Government, provide quality workspace that is delivered and occupied in a timely manner, and assign space based on mission requirements.

§ 102-79.25 Can Federal agencies allot space in Federal buildings for the provision of child care services?

Yes, in accordance with 40 U.S.C. 490b, Federal agencies can allot space in Federal buildings to individuals or entities who will provide child care services to Federal employees if:

- (a) Such space is available;
- (b) Such agency determines that such space will be used to provide child care services to children of whom at least 50 percent have one parent or guardian who is a Federal Government employee; and

(c) Such agency determines that such individual or entity will give priority for available child care services in such space to Federal employees.

§ 102-79.30 Can Federal agencies allot space in Federal buildings for establishing fitness centers?

Yes, in accordance with 5 U.S.C. 7901, Federal agencies can allot space in Federal buildings for establishing fitness programs.

§ 102-79.35 What elements must Federal agencies address in their planning effort for establishing fitness programs?

Federal agencies must address the following elements in their planning effort for establishing fitness programs:

- (a) A survey indicating employee interest in the program;
- (b) A three to five year implementation plan demonstrating long-term commitment to physical fitness/health for employees;
- (c) A health related orientation, including screening procedures, individualized exercise programs, identification of high-risk individuals, and appropriate follow-up activities;
- (d) Identification of a person skilled in prescribing exercise to direct the fitness program;
- (e) An approach which will consider key health behavior related to degenerative disease, including smoking and nutrition;
- (f) A modest facility that includes only the essentials necessary to conduct a program involving cardiovascular and muscular endurance, strength activities, and flexibility;
- (g) Provision for equal opportunities for men and women, and all employees, regardless of grade level.

§ 102-79.40 Can Federal agencies allot space in Federal buildings to Federal credit unions?

Yes, in accordance with 12 U.S.C. 1770, Federal agencies may allot space in Federal buildings to Federal credit unions without charge for rent or services if:

- (a) At least 95 percent of the membership of the credit union to be served by the allotment of space is composed of persons who either are presently Federal employees or were Federal employees at the time of admission into the credit union, and members of their families; and
- (b) If space is available.

§ 102-79.45 What type of services may Federal agencies provide without charge to Federal credit unions?

Federal agencies may provide without charge to Federal credit union services such as:

- (a) Lighting;
- (b) Heating and cooling;
- (c) Electricity;
- (d) Office furniture;
- (e) Office machines and equipment;
- (f) Telephone service (including installation of lines and equipment and other expenses associated with telephone service); and
- (g) Security systems (including installation and other expenses associated with security systems).

§ 102-79.50 What standard must Executive agencies promote in their utilization of space?

Executive agencies, acquiring or utilizing Federally owned and leased space under the Federal Property and Administrative Services Act of 1949, as amended, must promote efficient utilization of space according to GSA standards. In order to maximize the use of vacant space, use existing GSA-controlled space to the maximum extent practical. After considering the availability of GSA-controlled space, extend priority consideration to available space in buildings under the custody and control of the U.S. Postal Service before acquiring additional space. Where there is no Federal agency space need, Executive agencies must make every effort to maximize the productive use of vacant space through out-granting (for example, outlease, permit, license) to non-Federal entities to the extent authorized by law.

§ 102-79.55 Are agencies required to use historic properties available to the agency?

Yes, Federal agencies must assume responsibility for the preservation of the historic properties they own or control. Prior to acquiring, constructing or leasing buildings, agencies must use, to the maximum extent feasible, historic properties already owned or leased by the agency (16 U.S.C. 470h-2).

§ 102-79.60 Are Executive agencies required to give first priority to the location of new offices and other facilities in rural areas?

Yes, Executive agencies must give first priority to the location of new offices and other facilities in rural areas (7 U.S.C. 2204b-1), unless their mission or program requirements call for locations in an urban area.

§ 102-79.65 When an agency's mission and program requirements call for the location in an urban area, are Executive agencies required to give first consideration to central business areas?

Yes, when agency mission and program requirements call for location in an urban area and new space must be acquired, constructed or leased,

Executive agencies must give first consideration to central business areas (CBAs) and other areas designated by local officials (Executive Order 12072 (43 FR 36869, 3 CFR, 1978 Comp., p. 213.) and Executive Order 13006 (61 FR 26071, 3 CFR, 1996 Comp., p. 195)).

§ 102-79.70 What is a central business area?

Central business area means the centralized community business area and adjacent areas of similar character, including other specific areas which may be recommended by local officials in accordance with Executive Order 12072.

§ 102-79.75 Who is responsible for identifying the delineated area within which a Federal agency wishes to locate specific activities?

Each Federal agency is responsible for identifying the delineated area within which it wishes to locate specific activities, consistent with its mission and program requirements, and in accordance with all applicable laws, regulations, and Executive orders.

§ 102-79.80 Who must approve the final delineated area?

Federal agencies conducting the procurement must approve the final delineated area for site acquisitions and lease actions and must confirm that the final delineated area complies with the requirements of all applicable laws, regulations, and Executive orders.

§ 102-79.85 Are Executive agencies required to consider whether the central business area will provide for adequate competition when acquiring leased space?

In accordance with the Competition in Contracting Act of 1984 (CICA), as amended, (41 U.S.C. 253(a)) Executive agencies must consider whether restricting the delineated area for obtaining leased space to the central business area will provide for adequate competition when acquiring leased space. Where an Executive agency determines that the delineated area must be expanded beyond the CBA in order to provide adequate competition, the agency may expand the delineated area in consultation with local officials. Executive agencies must continue to include the CBA in such expanded areas.

§ 102-79.90 Are Executive agencies required to give preference to historic properties when acquiring leased space?

Yes, section 110 of the National Historic Preservation Act of 1966, as

amended (16 U.S.C. 470h-2), requires that agencies first consider historic properties already under agency control. However, the Act also provides that prior to acquiring, constructing or leasing new space, and subject to the requirements of Section 601 of Title VI of the Rural Development Act of 1972, as amended (7 U.S.C. 2204b-1), Executive Order 13006 and Executive Order 12072, Executive agencies must first consider historic properties within historic districts when locating Federal facilities. If no such suitable historic property is available, Executive agencies must then consider other developed or undeveloped sites within historic districts. Finally, Executive agencies must consider suitable historic properties outside of historic districts, if no suitable site exists within a historic district.

§ 102-79.95 Automated external defibrillators. [Reserved]

PART 102-80—SAFETY AND ENVIRONMENTAL MANAGEMENT

Sec.

102-80.5 What is the scope of this part?

102-80.10 What are the basic safety and environmental management policies for real property?

102-80.15 What are Federal agencies' responsibilities concerning the assessment and management of asbestos?

102-80.20 What are Federal agencies' responsibilities concerning the abatement of radon?

102-80.25 What are Federal agencies' responsibilities concerning the management of indoor air quality?

102-80.30 What are Federal agencies' responsibilities concerning lead?

102-80.35 What are Federal agencies' responsibilities concerning the monitoring of hazardous materials and wastes?

102-80.40 What are Federal agencies' responsibilities concerning the management of underground storage tanks?

102-80.45 What are Federal agencies' responsibilities concerning fire prevention and fire protection engineering?

102-80.50 Are Federal agencies responsible for identifying/estimating risks and for appropriate reduction strategies?

102-80.55 Are Federal agencies responsible for performing facility assessments?

102-80.60 Are Federal agencies responsible for managing the execution of risk reduction projects?

102-80.65 What are Federal agencies' responsibilities concerning the investigation of incidents, such as fires,

accidents, injuries, and environmental incidents?

102-80.70 Are Federal agencies responsible for informing their tenants of the condition and management of their facility safety and environment?

102-80.75 Who assesses environmental issues in Federal construction and lease construction projects?

Authority: 40 U.S.C. 486(c) and 490.

§ 102-80.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services. The responsibilities for safety and environmental management under this part are intended to apply to GSA or those Federal agencies operating in GSA space pursuant to a GSA delegation of authority.

§ 102-80.10 What are the basic safety and environmental management policies for real property?

The basic safety and environmental management policies for real property are that Federal agencies must:

(a) Provide for a safe and healthful work environment for Federal employees and the visiting public;

(b) Protect Federal real and personal property;

(c) Promote mission continuity;

(d) Provide reasonable safeguards for emergency forces if an incident occurs;

(e) Assess risk;

(f) Make decisionmakers aware of risks; and

(g) Act promptly and appropriately in response to risk.

§ 102-80.15 What are Federal agencies' responsibilities concerning the assessment and management of asbestos?

Federal agencies have the following responsibilities concerning the assessment and management of asbestos:

(a) Inspect and assess buildings for the presence and condition of asbestos-containing materials. Space to be leased must be free of all asbestos containing materials, except undamaged asbestos flooring in the space or undamaged boiler or pipe insulation outside the space, in which case an asbestos

management program conforming to Environmental Protection Agency (EPA) guidance must be implemented;

(b) Manage in-place asbestos that is in good condition and not likely to be disturbed;

(c) Abate damaged asbestos, and asbestos likely to be disturbed. Federal agencies must perform a pre-alteration asbestos assessment for activities that may disturb asbestos;

(d) Not use asbestos in new construction, renovation/modernization or repair of their owned or leased space. Unless approved by GSA, Federal agencies must not obtain space with asbestos through purchase, exchange, transfer, or lease, except as identified in paragraph (a) of this section; and

(e) Communicate all written and oral asbestos information about the leased space to tenants.

§ 102–80.20 What are Federal agencies' responsibilities concerning the abatement of radon?

Federal agencies have the following responsibilities concerning the abatement of radon in space when radon levels exceed current EPA standards:

(a) Retest abated areas and make lessors retest, as required, abated areas to adhere to EPA standards; and

(b) Test non-public water sources (in remote areas for projects such as border stations) for radon according to EPA guidance. Radon levels that exceed current applicable EPA standards must be mitigated. Federal agencies must retest, as required, to adhere to EPA standards.

§ 102–80.25 What are Federal agencies' responsibilities concerning the management of indoor air quality?

Federal agencies must assess indoor air quality of buildings as part of their safety and environmental facility assessments. Federal agencies must respond to tenant complaints on air quality and take appropriate corrective action where air quality does not meet applicable standards.

§ 102–80.30 What are Federal agencies' responsibilities concerning lead?

Federal agencies have the following responsibilities concerning lead in buildings:

(a) Test space for lead-based paint in renovation projects that require sanding, welding or scraping painted surfaces.

(b) Not remove lead based paint from surfaces in good condition.

(c) Test all painted surfaces for lead in proposed or existing child care centers.

(d) Abate lead-based paint found in accordance with Department of Housing and Urban Development (HUD) Lead-

Based Paint Guidelines, available by writing to HUD USER, P.O. Box 6091, Rockville, MD, 20850.

(e) Test potable water for lead in all drinking water outlets in child care centers.

(f) Take corrective action when lead levels exceed the HUD Guidelines.

§ 102–80.35 What are Federal agencies' responsibilities concerning the monitoring of hazardous materials and wastes?

Federal agencies' responsibilities concerning the monitoring of hazardous materials and wastes are to:

(a) Monitor the transport, use, and disposition of hazardous materials and waste in buildings to provide for compliance with GSA, Occupational Safety and Health Administration (OSHA), Department of Transportation, EPA, and applicable State and local requirements. In addition to those operating in GSA space pursuant to a delegation of authority, tenants in GSA space must comply with these requirements.

(b) In leased space, include in all agreements with the lessor requirements that hazardous materials kept in leased space are kept and maintained according to applicable Federal, State, and local environmental regulations.

§ 102–80.40 What are Federal agencies' responsibilities concerning the management of underground storage tanks?

Federal agencies have the following responsibilities concerning the management of underground storage tanks in real property:

(a) Register, manage and close underground storage tanks, including heating oil and fuel oil tanks, in accordance with GSA, EPA, and applicable State and local requirements.

(b) Require the party responsible for tanks they use but don't own to follow these requirements and to be responsible for the cost of compliance.

§ 102–80.45 What are Federal agencies' responsibilities concerning fire prevention and fire protection engineering?

Federal agencies must follow accepted fire prevention practices in operating and managing buildings. Federally-owned buildings are generally exempt from State and local code requirements in fire protection; however, in accordance with 40 U.S.C. 619, each building constructed or altered by a Federal agency must be constructed or altered, to the maximum extent feasible, in compliance with one of the nationally recognized model building codes and with other nationally recognized codes. Leased buildings are subject to local

requirements and inspection. Federal agencies must use the National Fire Protection Association (NFPA) codes and standards (obtained by writing to NFPA, 11 Tracy Drive, Avon, MA 02322.) as a guide for their building operations.

§ 102–80.50 Are Federal agencies responsible for identifying/estimating risks and for appropriate reduction strategies?

Yes, Federal agencies must identify and estimate safety and environmental management risks and appropriate reduction strategies for buildings. Federal agencies occupying as well as operating buildings must identify any safety and environmental management risks and report or correct the situation, as appropriate.

§ 102–80.55 Are Federal agencies responsible for performing facility assessments?

Yes, Federal agencies must evaluate facilities to comply with GSA's safety and environmental program and applicable Federal, State and local environmental laws and regulations. Federal agencies should conduct these evaluations in accordance with schedules that are compatible with repair and alteration and leasing operations.

§ 102–80.60 Are Federal agencies responsible for managing the execution of risk reduction projects?

Yes, Federal agencies must manage the execution of risk reduction projects in buildings they operate. Federal agencies must identify and take appropriate action to eliminate hazards and regulatory noncompliance.

§ 102–80.65 What are Federal agencies' responsibilities concerning the investigation of incidents, such as fires, accidents, injuries, and environmental incidents?

Federal agencies have the following responsibilities concerning the investigation of incidents, such as fires, accidents, injuries, and environmental incidents in buildings they operate:

(a) Investigate all incidents regardless of severity.

(b) Form Boards of Investigation for incidents resulting in serious injury, death, or significant property losses.

§ 102–80.70 Are Federal agencies responsible for informing their tenants of the condition and management of their facility safety and environment?

Yes, Federal agencies must inform their tenants of the condition and management of their facility safety and environment. Agencies operating GSA buildings must report any significant

facility safety or environmental concerns to GSA.

§ 102–80.75 Who assesses environmental issues in Federal construction and lease construction projects?

Federal agencies must assess required environmental issues throughout planning and project development, so that the environmental impacts of a project are considered during the decisionmaking process.

PART 102–81—SECURITY

Sec.

102–81.5 What is the scope of this part?

102–81.10 What basic security policy governs Federal agencies?

102–81.15 Who is responsible for upgrading and maintaining security standards in each Federally-owned facility?

Authority: 40 U.S.C. 318a, 486(c) and 490.

§ 102–81.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102–81.10 What basic security policy governs Federal agencies?

Federal agencies on Federal property under the charge and control of the Administrator and having a security delegation of authority from the Administrator must provide for the security and protection of the real estate they occupy, including the protection of persons within the property.

§ 102–81.15 Who is responsible for upgrading and maintaining security standards in each Federally-owned facility?

In a June 28, 1995, Presidential Policy Memorandum for Executive Departments and Agencies, entitled, “Upgrading Security at Federal Facilities” (see the Weekly Compilation of Presidential Documents, vol. 31, p. 1148), the President directed that Executive agencies must, where feasible,

upgrade and maintain security in facilities they own or lease under their own authority to the minimum standards specified in the Department of Justice’s June 28, 1995 study entitled “Vulnerability Assessment of Federal Facilities.” The study may be obtained by writing to the Superintendent of Documents, P. O. Box 371954, Pittsburgh, PA, 15250–7954.

PART 102–82—UTILITY SERVICES

Sec.

102–82.5 What is the scope of this part?

102–82.10 What basic utility services policy govern Executive agencies?

102–82.15 What utility services must Executive agencies provide?

102–82.20 What are Executive agencies’ rate intervention responsibilities?

102–82.25 What are Executive agencies’ responsibilities concerning the procurement of utility services?

Authority: 40 U.S.C. 481(a) and 486(c).

§ 102–82.5 What is the scope of this part?

The real property policies contained in this part apply to Federal agencies, including the GSA/Public Buildings Service (PBS), operating under, or subject to, the authorities of the Administrator of General Services.

§ 102–82.10 What basic utility services policy govern Executive agencies?

Executive agencies procuring, managing or supplying utility services under the Federal Property and Administrative Services Act of 1949 must provide or procure services that promote economy and efficiency with due regard to the mission responsibilities of the agencies concerned.

§ 102–82.15 What utility services must Executive agencies provide?

Executive agencies must negotiate with public utilities to procure utility services and, where appropriate, provide rate intervention services in proceedings (see § 102–72.100 and 102–72.105 of this chapter) before

Federal and State utility regulatory bodies.

§ 102–82.20 What are Executive agencies’ rate intervention responsibilities?

Where the consumer interests of the Federal Government will be significantly affected and upon receiving a delegation of authority from GSA, Executive agencies must provide representation in proceedings involving utility services before Federal and State regulatory bodies. Specifically, these responsibilities include instituting formal or informal action before Federal and State regulatory bodies to contest the level, structure, or applicability of rates or service terms of utility suppliers. The Secretary of Defense is independently authorized to take such actions without a delegation from GSA when the Secretary determines such actions to be in the best interests of national security.

§ 102–82.25 What are Executive agencies’ responsibilities concerning the procurement of utility services?

Executive agencies, operating under a utility services delegation from GSA, or the Secretary of Defense when the Secretary determines it to be in the best interests of national security, must provide for the procurement of utility services (such as commodities and utility rebate programs), as required, and must procure from sources of supply that are the most advantageous to the Federal Government in terms of economy, efficiency, reliability, or quality of service. Executive agencies, upon receiving a delegation of authority from GSA, may enter into contracts for utility services for periods not exceeding ten years (40 U.S.C. 481).

Dated: December 21, 2000.

Thurman M. Davis, Sr.,

Acting Administrator of General Services.

[FR Doc. 01–180 Filed 1–17–01; 8:45 am]

BILLING CODE 6820–23–P

Federal Register

**Thursday,
January 18, 2001**

Part XIII

**Department of
Housing and Urban
Development**

**Regulatory Waiver Requests Granted for
the Third Quarter of Calendar Year 2000;
Notice**

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-4591-N-03]

Regulatory Waiver Requests Granted for the Third Quarter of Calendar Year 2000

AGENCY: Office of the Secretary, HUD.

ACTION: Public Notice of the Granting of Regulatory Waivers from July 1, 2000 through September 30, 2000.

SUMMARY: Section 106 of the Department of Housing and Urban Development Reform Act of 1989 (the "HUD Reform Act"), requires HUD to publish quarterly **Federal Register** notices of all regulatory waivers that HUD has approved. Each notice must cover the quarterly period since the most recent **Federal Register** notice. The purpose of this notice is to comply with the requirements of section 106 of the HUD Reform Act. This notice contains a list of regulatory waivers granted by HUD during the quarter beginning on July 1, 2000 and ending on September 30, 2000.

FOR FURTHER INFORMATION CONTACT: For general information about this notice, contact Camille E. Acevedo, Associate General Counsel for Legislation and Regulations, Room 10276, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410; telephone (202) 708-3055 (this is not a toll-free number). Hearing or speech-impaired persons may access this number via TTY by calling the toll-free Federal Information Relay Service at 1-800-877-8391.

For information concerning a particular waiver action for which public notice is provided in this document, contact the person whose name and address follows the description of the waiver granted in the accompanying list of waiver-grant actions.

SUPPLEMENTARY INFORMATION: As part of the Housing and Urban Development Reform Act of 1989 (the "HUD Reform Act"), the Congress adopted, at HUD's request, legislation to limit and control the granting of regulatory waivers by HUD. Section 106 of the HUD Reform Act added a new section 7(q) to the Department of Housing and Urban Development Act (42 U.S.C. 3535(q)), which provides that:

1. Any waiver of a regulation must be in writing and must specify the grounds for approving the waiver;

2. Authority to approve a waiver of a regulation may be delegated by the Secretary only to an individual of Assistant Secretary rank or equivalent

rank, and the person to whom authority to waive is delegated must also have authority to issue the particular regulation to be waived;

3. Not less than quarterly, the Secretary must notify the public of all waivers of regulations that HUD has approved, by publishing a notice in the **Federal Register**. These notices (each covering the period since the most recent previous notification) shall:

- a. Identify the project, activity, or undertaking involved;
- b. Describe the nature of the provision waived, and the designation of the provision;
- c. Indicate the name and title of the person who granted the waiver request;
- d. Describe briefly the grounds for approval of the request;
- e. State how additional information about a particular waiver grant action may be obtained.

Section 106 of the HUD Reform Act also contains requirements applicable to waivers of HUD handbook provisions that are not relevant to the purpose of this notice. Today's document follows publication of HUD's Statement of Policy on Waiver of Regulations and Directives issued by HUD on April 22, 1991 (56 FR 16337). This notice covers HUD's waiver-grant activity from July 1, 2000 through September 30, 2000. Additionally, this notice contains one report of a regulatory waiver granted from March 1, 2000 through June 30, 2000 that was inadvertently omitted from the last notice. The report can be found in Section IV of this notice with respect to a waiver granted in connection with 24 CFR 950.980.

For ease of reference, the waivers granted by HUD are listed by HUD program office (for example, the Office of Community Planning and Development, the Office of Housing, the Office of Public and Indian Housing, etc.). Within each program office grouping, the waivers are listed sequentially by the section of title 24 being waived. For example, a waiver-grant action involving the waiver of a provision in 24 CFR part 58 would come before a waiver of a provision in 24 CFR part 570.

Where more than one regulatory provision is involved in the grant of a particular waiver request, the action is listed under the section number of the first regulatory requirement in title 24 that is being waived as part of the waiver-grant action. For example, a waiver of both § 58.73 and § 58.74 would appear sequentially in the listing under § 58.73.

Waiver-grant actions involving the same initial regulatory citation are in

time sequence beginning with the earliest-dated waiver grant action.

Should HUD receive additional reports of waiver actions taken during the period covered by this report before the next report is published, the next updated report will include these earlier actions, as well as those that occurred between October 1, 2000 through December 31, 2000.

Accordingly, information about approved waiver requests pertaining to HUD regulations is provided in the Appendix that follows this notice.

Dated: January 10, 2001.

Andrew Cuomo,
Secretary.

Appendix—Listing of Waivers of Regulatory Requirements Granted by Offices of the Department of Housing and Urban Development July 1, 2000 Through September 30, 2000

Note to Reader: More information about the granting of these waivers, including a copy of the waiver request and approval, may be obtained by contacting the person whose name is listed as the contact person directly before each set of waivers granted.

The regulatory waivers granted appear in the following order:

- I. Regulatory Waivers granted by the Office of Community Planning and Development.
- II. Regulatory Waivers granted by the Office of Community Planning and Development and the Office of Public and Indian Housing.
- III. Regulatory Waivers granted by the Office of Housing.
- IV. Regulatory Waivers granted by the Office of Multifamily Housing Assistance Restructuring.
- V. Regulatory Waivers granted by the Office of Public and Indian Housing.

I. Regulatory Waivers Granted by the Office of Community Planning and Development:

For further information about the following waiver actions, please see the name of the person which immediately follows the description of the waiver granted.

- *Regulation:* 24 CFR 58.34(b) and 24 CFR 58.38.

Project/Activity: Housing rehabilitation and housing acquisition projects, Ohkay Owingeh Housing Authority and the San Juan Pueblo Tribe, San Juan Pueblo, New Mexico.

Nature of Requirement: HUD's regulation at 24 CFR 58.34(b) states that a recipient does not have to submit a Request for Release of Funds and certification, and that no further approval from HUD will be needed to carry out exempt activities and projects, provided the responsible entity documents its determination that each activity or project is exempt.

Additionally, 24 CFR 58.38 requires the responsible entity to maintain a written record of the environmental review for each project. This document will be designated the Environmental Review Record, which shall contain all environmental review documents, public notices and written determinations or environmental findings required by part 58, decision making and actions pertaining to a particular project.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: July 28, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The Ohkay Owingeh Housing Authority made several errors during the environmental review and clearance process required by 24 CFR part 58 that resulted in the Housing Authority obligating and expending grant funds for the project before a determination by the San Juan Pueblo that the activities were exempt. HUD made a determination that there was no statutory or regulatory provision that would have prevented conversion of these activities to exempt. Therefore, this waiver was needed in order to permit the San Juan Pueblo to complete the environmental review process by documenting that the activities are exempt under 24 CFR part 58, after the obligation of HUD funds. HUD also determined that no environmental degradation resulted from the regulatory noncompliance and that no mitigation activities would be necessary since no environmental damage or potential problems were identified. Considering the above, HUD determined that a waiver of the regulatory requirements would maintain the integrity of HUD's environmental review process and was consistent with Executive Order 12084 that encourages flexibility in the consideration of waiver requests from tribal governments.

Contact: Bruce Knott, Director, Office of Grants Evaluation, National Office of Native American Programs (ONAP), Department of Housing and Urban Development, 1999 Broadway—Suite 3390, Denver, Colorado 80202, Telephone: (303) 675-1600.

• *Regulation:* 24 CFR 91.520.

Project/Activity: The County of Essex, New Jersey requested a waiver of the submission deadline for the County's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 25, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The County requested the waiver because of difficulties resulting from medical emergencies experienced by the Acting Director and staff responsible for Consolidated Annual Performance Evaluation Report (CAPER) preparation.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

• *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Cumberland, Maryland requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 25, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested the waiver because the lead person responsible for completing the CAPER, as well as inputting data in IDIS, has been summoned for jury duty in Federal District Court for the next four months.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

• *Regulation:* 24 CFR 91.520.

Project/Activity: The State of Nebraska requested a waiver of the submission deadline for the State's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 31, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The State requested the waiver because of staff turnover and IDIS development delays that impacted the ability to comply with beneficiary reporting requirements.

Contact: Cornelia Robertson-Terry, Office of Community Planning and

Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

• *Regulation:* 24 CFR 91.520.

Project/Activity: The County of Los Angeles, California requested a waiver of the submission deadline for the County's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 13, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The County requested the waiver because of technical problems with the Community Development Commission's financial management system.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

• *Regulation:* 24 CFR 91.520.

Project/Activity: Baltimore County, Maryland requested a waiver of the submission deadline for the County's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 13, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The County requested the waiver because of staff turnover and the need for additional time to allow new staff to become familiar with the CAPER submission process.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

• *Regulation:* 24 CFR 91.520.

Project/Activity: The City of San Angelo, Texas requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 13, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested the waiver because of staffing problems due to the resignation of one staff member and need for surgery by another staff member.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Hamden, Connecticut requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 14, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested the waiver because the City is rebuilding records to eliminate inconsistencies in its 1998 CAPER. This effort has not allowed the staff to focus on preparing the current 1999 CAPER.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Nashua, New Hampshire requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested the waiver because of staff turnover and the delay in receiving audited financial figures necessary for reconciliation.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Portland, Oregon requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested the waiver as a result of recent staff turnover in the Portland Development Commission's CDBG staff. This did not provide sufficient time for the staff to review the CAPER reporting information and reconcile it with the City's records before the submission deadline.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Vancouver, Washington requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested the waiver due to delays caused by changes in key personnel and the need to reprogram funds and correct data in IDIS to ensure accurate information.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Norwalk, California requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time for preparing the CAPER due to resignation of staff and unfilled vacancies.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Moreno Valley, California requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because its newly installed financial management system caused delays in the availability of the City's final expenditure data for reconciliation with data in IDIS.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Tulare, California requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because of the office's recent move to a new facility that included relocating and upgrading the computer mainframe, the network, and personal computers. This move delayed computer operations needed to produce accurate IDIS data for the CAPER.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Modesto, California requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time due to vacancies and changes in key staff positions that are responsible for preparing the CAPER.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Napa, California requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because staff resources were diverted to cope with the aftermath of a serious earthquake that damaged many city businesses and residences.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Elizabeth, New Jersey requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver.

The City requested additional time because of the delay in submitting its Consolidated Plan and to ensure that the required public comment period for the CAPER will be satisfied.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Camden, New Jersey requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time due to staff shortages.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of East Orange, New Jersey requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because of staff difficulties resulting from the downsizing of the Planning Department, which is responsible for the preparation of the CAPER.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Stamford, Connecticut requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires

each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because of a staff turnover, which resulted in a delay in generating IDIS reports.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

Regulation: 24 CFR 91.520.

Project/Activity: The City of New Britain, Connecticut requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because of renovation of the City's Office of Municipal Development and the reorganization of its staff. Office files have been moved and displaced making it difficult for the staff to have efficient access to information on grantee activities.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of New London, Connecticut requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because of the loss of two key finance staff. The two individuals provided the critical information required to

complete the reconciliation of programmatic and financial records.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Weirton, West Virginia requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time due to staff turnover.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Petersburg, Virginia requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because of staff turnover.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Virginia Beach, Virginia requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time for key staff to review the report and allow for public comment.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Charlottesville, Virginia requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time due to staff turnover.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Bristol, Virginia requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because of internal delays in obtaining accounting information.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Portsmouth, Virginia requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance

report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time due to recent staff turnover.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: Chesterfield County, Virginia requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The County requested additional time due to recent staff turnover.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Philadelphia, Pennsylvania requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because the City's fiscal year closing adjustments will not be released in sufficient time to allow the office responsible for report preparation to obtain information needed to complete the CAPER before the deadline.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Scranton, Pennsylvania requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time due to computer system failure.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Dover, Delaware requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City requested additional time because the staff person directly responsible for preparing the CAPER has been on sick leave.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 91.520.

Project/Activity: The City of Baltimore, Maryland requested a waiver of the submission deadline for the City's 1999 CAPER.

Nature of Requirement: HUD's regulation at 24 CFR 91.520 requires each grantee to submit a performance report to HUD within 90 days after the close of the grantee's program year.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reasons Waived: HUD determined that there was good cause for the waiver. The City requested additional time because the accounting records are not released in sufficient time to allow the City to complete the CAPER.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 92.205.

Project/Activity: The Kentucky Housing Corporation requested a waiver of the provision to permit less than a \$1,000 minimum HOME investment per unit.

Nature of Requirement: HUD's regulation at 24 CFR 92.205 requires that the minimum of HOME funds that may be invested in a project is an average of \$1,000 per unit.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 7, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. KHC provided justification that less than \$1,000 was needed to assist homebuyers. Without a waiver these recipients would be either disqualified from becoming homebuyers or they would be over-subsidized in order to receive the HOME assistance.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulations:* 24 CFR 92.205, 92.503(b)(2).

Project/Activity: The Kentucky Housing Corporation requested a waiver of provisions regarding termination of a project prior to completion and the subsequent repayment requirement.

Nature of Requirement: HUD's regulations at 24 CFR 92.205 and 92.503(b)(2) require that a HOME unit that is terminated before completion, either voluntarily or otherwise, constitutes an ineligible activity and any HOME funds invested must be repaid.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: July 20, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The homeowner died prior to completion of construction and no further work on the home was done.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 92.214(a)(8).

Project/Activity: The City of Taylorsville, Utah requested permission to use HOME funds for acquisition of a

parcel of land located within its boundaries, but owned by Salt Lake County. The City plans to move an existing home on the subject site which will be sold to a low income family.

Nature of Requirement: HUD's regulation at 24 CFR 92.214(a)(8) prohibits grantees from using HOME funds to pay for the acquisition of property owned by the participating jurisdiction, except for property acquired by the PJ with HOME funds, or property acquired in anticipation of carrying out a HOME project.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 31, 2000.

Reason Waived: HUD determined that there was good cause for the waiver since the transaction would assist the City in its effort to provide an affordable unit for a low income family.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 92.251.

Project/Activity: North Dakota counties and Indian reservation communities requested a waiver of the HOME provision which requires HOME-assisted housing to meet the applicable codes, standards, and ordinances specified.

Nature of Requirement: HUD's regulation at 24 CFR 92.251 requires that housing that is constructed or rehabilitated with HOME funds must meet all applicable local codes, rehabilitation standards, ordinances, and zoning ordinances at the time of project completion.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 31, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The State of North Dakota requested this waiver in order to allow for the use of HOME funds for emergency repairs on damaged housing within the disaster area. Funding sources are inadequate to address the housing needs that exist within the disaster area. The State would like to use HOME funds to assist in addressing this need. HUD therefore determined that this provision creates undue hardship for the communities and families in need of disaster-related assistance.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh

Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 570.200(h)(1).

Project/Activity: The City of Coral Springs, Florida requested a waiver to allow the City to use CDBG funds to reimburse administrative costs incurred for the planning and preparation of its first Consolidated Plan as a new Entitlement community.

Nature of Requirement: HUD's regulation at 24 CFR 570.200(h)(1) states that a grantee may only use CDBG funds to pay pre-award costs if, among other things, the activity for which the costs are being incurred is included in a Consolidated Plan or an amended Consolidated Plan prior to the costs being incurred.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: July 28, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City is a new Entitlement community. Failure to grant the waiver would result in undue hardship and affect the benefits to the low- and moderate-income population of the City. Further, the authorization for new grantees to pay for planning and administrative start-up costs with CDBG funds was inadvertently omitted during the November 1995 revision to the CDBG regulations.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 570.200(h)(1).

Project/Activity: The City of Deerfield Beach, Florida requested a waiver to allow the City to use CDBG funds to reimburse administrative costs incurred for the planning and preparation of its first Consolidated Plan as a new Entitlement community.

Nature of Requirement: HUD's regulation at 24 CFR 570.200(h)(1) states that a grantee may only use CDBG funds to pay pre-award costs if, among other things, the activity for which the costs are being incurred is included in a Consolidated Plan or an amended Consolidated Plan prior to the costs being incurred.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 27, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City is a new Entitlement community. Failure to grant the waiver would result in undue hardship and affect the benefits to the low- and

moderate-income population of the City. Further, the authorization for new grantees to pay for planning and administrative start-up costs with CDBG funds was inadvertently omitted during the November 1995 revision to the CDBG regulations.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 576.21(b)(2).

Project/Activity: Hennepin County, Minnesota requested a waiver of the 30 percent limitation on essential services in its ESG program.

Nature of Requirement: HUD's regulation at 24 CFR 576.21(b)(2) implements the statutory requirement that no more than thirty percent of the Emergency Shelter Grant funds be expended for essential services. This regulatory section also notes that the statute (42 U.S.C. 11374) also permits waiver of this requirement if the grantee demonstrates that other eligible activities are already being carried out in the locality with other resources.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: July 10, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Hennepin County provided documentation to support its claim that alternative funding for rehabilitation, operating costs and other eligible activities is available. The waiver allows Hennepin County to spend up to 100 percent of its FY 1999 and FY 2000 grants on essential services.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 576.21(b)(2).

Project/Activity: The Municipality of Caguas, Puerto Rico requested a waiver of the 30 percent limitation on essential services in its ESG program.

Nature of Requirement: HUD's regulation at 24 CFR 576.21(b)(2) implements the statutory requirement that no more than thirty percent of the Emergency Shelter Grant funds be expended for essential services. This regulatory section also notes that the statute (42 U.S.C. 11374) also permits waiver of this requirement if the grantee demonstrates that other eligible activities are already being carried out in the locality with other resources.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 25, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Caguas provided documentation to HUD to support the Municipality's claim that it is meeting its demand for other activities through funding from the United Way, the Department of Health, and local funds.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 576.21(b)(2).

Project/Activity: Onondago County, New York requested a waiver of the 30 percent limitation on essential services in its ESG program.

Nature of Requirement: HUD's regulation at 24 CFR 576.21(b)(2) requires that no more than 30 percent of ESG grant funds be expended for essential services.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 31, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Onondago County provided documentation to HUD to support its claim of that other present needs for the County's ESG funds exist. The County may spend up to 58.67 percent of its funds for essential services.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 576.35(b).

Project/Activity: The City of Minneapolis, Minnesota requested a waiver regarding the time frame for expenditure of its FY 1998 Emergency Shelter Grant (ESG) funds.

Nature of Requirement: HUD's regulation at 24 CFR 576.35(b) requires recipients to expend ESG funds within two years of HUD's award.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: July 28, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City experienced unexpected delays in several rehabilitation projects. Failure to grant the waiver would adversely affect the City's ability to serve the homeless. HUD extended the date for the City to expend its 1998 funds to on or about July 15, 2000.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 882.408(b).

Project/Activity: The Metro Dade, Florida Housing Agency requested a waiver of the limitation on the initial Gross Rent for a Single Room Occupancy (SRO) property. The proposed rent would exceed the current Moderate Rehabilitation SRO Fair Market Rent (FMR) by more than 10%.

Nature of Requirement: HUD's regulation at 24 CFR 882.408(b) allows a housing agency to approve initial gross rents which exceed the applicable FMR by up to 10 percent for all units of a given size in specified areas.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: September 5, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Higher rents were necessitated by development obstacles such as change in sites, change in owner/developer and delay in obtaining financial resources.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

- *Regulation:* 24 CFR 882.805(d)(1)(ii)(B).

Project/Activity: The San Francisco, California Housing Authority requested a waiver of the Single Room Occupancy (SRO) requirement on the maximum amount allowed per unit for rehabilitation.

Nature of Requirement: HUD's regulation at 24 CFR 882.805(d)(1)(ii)(B) allows an SRO recipient to multiply the maximum per unit rehabilitation amount by 2.4 in areas where the Housing Authority has demonstrated to HUD's satisfaction that the increase is reasonable to accommodate special local conditions, including high construction costs. In the case of San Francisco, this would allow a maximum rehabilitation costs of \$42,840.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development.

Date Granted: August 30, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City documented the high cost of the project and the difficulty in finding and acquiring suitable properties for the SRO program. The City further stated that the property is almost 90 years old and needs extensive rehabilitation to

meet current building and accessibility code standards. The final per unit rehabilitation cost for this project is projected to be \$69,311, well above the maximum approvable cost.

Contact: Cornelia Robertson-Terry, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7152, Washington, DC 20410; telephone (202) 708-2565.

II. Regulatory Waivers Granted by the Office of Community Planning and Development and the Office of Public and Indian Housing

For further information about the following waiver actions, please see the name of the person which immediately follows the description of the waiver granted.

- *Regulation:* 24 CFR 50.3(h)(3) and 1000.20(a).

Project/Activity: Acquisition of 10 Operation Walking Shield housing units, Flandreau Santee Sioux Tribe and Flandreau Santee Sioux Housing Authority, Flandreau, South Dakota.

Nature of Requirement: HUD's regulation at § 50.3(h) requires that for HUD grant programs in which funding approval for an applicant's program must occur before the applicant's selection of properties an applicant must agree to not acquire, rehabilitate, convert, lease, repair or construct property, nor commit or expend HUD or local funds until HUD approval of the property is obtained. HUD's regulation at § 1000.20(a) requires an environmental review be completed for any Native American Housing Assistance and Self-Determination Act project not excluded from review before a recipient may acquire, rehabilitate, convert, lease, repair or construct property, or commit HUD or local funds.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development and Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: July 31, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The Flandreau Santee Sioux Housing Authority used NAHASDA funds to acquire, rehabilitate and lease the subject Walking Shield units before receiving HUD approval of the property as required by 24 CFR 50.3(h)(3) and before HUD completed an environmental review. HUD has since completed the environmental review for the project. In order to satisfactorily resolve the issue, waivers of the provisions of 24 CFR 50.3(h)(3) and 1000.20(a) are necessary. HUD also determined that no environmental

degradation resulted from the regulatory noncompliance and that no mitigation activities would be necessary since no environmental damage or potential problems were identified. Considering the above, HUD determined that a waiver of the regulatory requirements would maintain the integrity of HUD's environmental review process and was consistent with Executive Order 12084 that encourages flexibility in the consideration of waiver requests from tribal governments.

Contact: Bruce Knott, Director, Office of Grants Evaluation, National Office of Native American Programs (ONAP), Department of Housing and Urban Development, 1999 Broadway—Suite 3390, Denver, Colorado 80202, Telephone: (303) 675-1600.

Regulation: 24 CFR 50.17 and 1000.20(a).

Project/Activity: Construction of 15 housing units with residual 1937 Housing Act funds under the Native American Housing Assistance and Self-Determination Act (NAHASDA), Upper Sioux Tribe, Granite Falls, Minnesota.

Nature of Requirement: HUD's regulation at § 50.17 requires that an environmental assessment and finding of no significant impact or an environmental impact statement be completed before the applicable decision points for projects not exempt or categorically excluded from environmental review requirements. HUD's regulation at § 1000.20(a) requires that an environmental review be completed for any NAHASDA project not excluded from review before a recipient may acquire, rehabilitate, convert, lease, repair or construct property, or commit HUD or local funds.

Granted By: Cardell Cooper, Assistant Secretary for Community Planning and Development and Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: Granted by Mr. Cooper on July 27, 2000 and by Mr. Lucas on July 28, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The Upper Sioux Tribe made several errors during the environmental review and clearance process required by 24 CFR part 58 that resulted in the tribe obligating and expending grant funds for the project before HUD's approval of the Request for Release of Funds and Certification, form HUD 7015.15. HUD made a determination based upon these actions to conduct an environmental review according to 24 CFR part 50. A HUD environmental review at this point would be after the execution of the Indian Housing Block Grant Agreement for this project. Therefore, a waiver is

necessary to allow HUD to conduct the review and resolve the issue. HUD also determined that no environmental degradation resulted from the regulatory noncompliance and that no mitigation activities would be necessary since no environmental damage or potential problems were identified. Considering the above, HUD determined that a waiver of the regulatory requirements would maintain the integrity of HUD's environmental review process and was consistent with Executive Order 12084 that encourages flexibility in the consideration of waiver requests from tribal governments.

Contact: Bruce Knott, Director, Office of Grants Evaluation, National Office of Native American Programs (ONAP), Department of Housing and Urban Development, 1999 Broadway—Suite 3390, Denver, Colorado 80202, Telephone: (303) 675-1600.

III. Regulatory Waivers Granted by the Office of Housing

For further information about the following waiver actions, please see the name of the person which immediately follows the description of the waiver granted.

- *Regulation:* 24 CFR 202.3(c)(2)(iii).

Project/Activity: Credit Watch/Termination Threshold.

Nature Of Requirement: HUD's regulation at 24 CFR 202.3(c)(2)(iii) establishes a default and claim rate threshold for HUD/FHA approved mortgagees on credit watch status.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner

Date Granted: August 21, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Waiving the regulation permits HUD/FHA to initially focus on those lenders originating the worst performing loans. The waiver will adjust the Credit Watch threshold from being between 150% and 200.9% of the HUD field office default and claim rate to being between 200% and 300.9% of that rate. This waiver is limited to Credit Watch reviews conducted in the third quarter of FY 2000.

Contact: Joy Hadley, Director, Quality Assurance Division, Department of Housing and Urban Development, 451 Seventh Street SW., Room B133-P3214, Washington, DC 20410, telephone (202) 708-2830.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Lakeview Senior Apartments, Carmel, New York, Project Number: 012-EE245/NY36-S981-001.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital

advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: July 25, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The sponsor had exhausted all efforts to secure secondary funding from outside sources, and the project was economically designed and comparable to similar projects developed in the area.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Good Shepherd, Blair, Nebraska, Project Number: 103-E018/NE26-S981-001.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 4, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The owner had received a \$65,000 grant from the Federal Housing Finance Board, the project was comparable in cost to similar projects, and the sponsor could not contribute any additional funds.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Centerplace III, New Albany, Indiana, Project Number: 073-HD048/IN36-Q981-002.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 8, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The development costs were comparable to other similar projects recently developed in Indiana and the project was of modest design.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing

and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Castleton Homes, Lanham, Maryland, Project Number: 000-HD041/MD39-Q981-003.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 11, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project required replacement of the HVAC systems in all three houses which had significantly increased costs.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Bishop Daly Gardens, Uniondale, New York, Project Number: 012-EE249/NY36-S981-005.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 16, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project was economically designed and comparable in cost to similar projects, and the sponsor could not contribute any additional funds.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Turlock Silvercrest, Turlock, California, Project Number: 121-EE112/CA39-S981-005.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 21, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The contractor could not build the project within the fund reservation amount.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone:(202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: VOA Riverside 10, Fort Worth, Texas, Project Number: 113-HD015/TX1-Q971-001.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 21, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project was modestly designed and comparable to similar projects in the area, and the sponsor had exhausted all means of obtaining additional funds for the is project.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone:(202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Saint Paul the Apostle Senior Housing, Corona, New York, Project Number: 012-EE254/NY36-S981-010.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 21, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project was modest in design, comparable to similar projects in the area, and the sponsor had made every attempt to secure additional funding from outside sources.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone:(202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Cambridge Apartments, Rutledge, Tennessee, Project Number: 087-EE036/TN37-S981-004.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 22, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The owner had contributed the required minimum capital investment and purchased the site, the project was comparable in cost to similar projects, and the sponsor could not contribute any additional funds.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone:(202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: St. Peter's Place II, Phoenixville, Pennsylvania, Project Number: 034-EE070/PA26-S971-002.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 25, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project was modest in design, comparable to similar projects in the area and the owner had secured \$230,000 from the Federal Home Loan Bank Board and \$100,000 from the Chester County Office of Housing and Community Development.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone:(202) 708-3000.

- *Regulation:* 24 CFR 891.100(d).

Project/Activity: Homes With Hope, Westport, Connecticut, Project Number: 017-HD015/CT26-Q961-001.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: September 26, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project was modest in design, comparable to similar projects in the area and the sponsor/owner had exhausted attempts in obtaining funds from other sources.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing

and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone:(202) 708-3000.

- *Regulations:* 24 CFR 891.100(d) and 891.165.

Project/Activity: Alice Williams Towers II, Atlanta, Georgia, Project Number: 061-EE065/GA06-S971-009.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing. HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 4, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project was delayed to allow the sponsor and contractor time to prepare a new construction cost estimate and to obtain zoning approval. The project was also modest in design, comparable to similar projects developed in the area, the sponsor/owner had made every attempt to secure additional funding from outside sources, and the sponsor/owner had exhausted their resources.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulations:* 24 CFR 891.100(d) and 891.165.

Project/Activity: HIS/Elois McCoy Village Apartments, Chicago, Illinois, Project Number: 071-EE115/IL06-S961-006.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing. HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 11, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The contractor increased his prices and the sponsor had exhausted all efforts to find additional funds from other sources. Additional time was needed to reprocess the firm commitment due to

the increase in construction costs and to initially endorse the project.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulations:* 24 CFR 891.100(d) and 891.165.

Project/Activity: Selfhelp/United Help Kissena Apartments, Flushing, New York, Project Number: 012-EE224/NY36-S971-011.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing. HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 11, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project encountered delays in securing zoning approvals, the project was economically designed, comparable to similar projects developed in the area, and the sponsor/owner had exhausted their resources.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulations:* 24 CFR 891.100(d) and 891.165.

Project/Activity: ASI-Missoula, Missoula, Montana, Project Number: 93-HD013/MY99-Q961-001.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing. HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 21, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The owner encountered delays due to the loss of two sites for the project and the death of the specialist who had been working very diligently on the project.

The project was economically designed, comparable to other similar projects developed in the jurisdiction, and the owner had exhausted all possible efforts to obtain additional funds.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulations:* 24 CFR 891.100(d) and 891.165.

Project/Activity: Pomperaug Senior Housing, Southbury Twp., Connecticut, Project Number: 017-EE040/CT26-S971-008.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing. HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: September 26, 2000.

Reason Waived: HUD determined that there was good cause for the waivers. Delays were due to the owner obtaining design approval from the town of Southbury Planning and Zoning Commission. In addition, the project was modest in design, comparable to similar projects developed in the area, and the owner had made every attempt to secure additional funding from other sources.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulations:* 24 CFR 891.100(d) and 891.165.

Project/Activity: Cold Spring House, Forstburgh, New York, Project Number: 012-HD075/NY36-Q971-004.

Nature Of Requirement: HUD's regulation at 24 CFR 891.100(d) prohibits amendment of the capital advance fund reservation prior to initial closing. HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: September 26, 2000.

Reason Waived: HUD determined that there was good cause for the waiver.

The owner was unable to obtain additional funds, and the project would receive complete property tax exemption from the locality as well as support service funding from the state. Additionally, a delay of over one year was encountered due to issues associated with the incorporation of the owner.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.105 and 891.410(c).

Project Activity: Sugarloaf Village, Diamond City, Arkansas, Project Number 082-EE091.

Nature of Requirement: HUD regulations at 24 CFR Part 891 require that occupancy be limited to Very Low Income (VLI) elderly persons (*i.e.*, households composed of one or more persons at least one of whom is 62 years of age at time of initial occupancy).

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: September 12, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The Little Rock Multifamily Program Center requested an age and income waiver for this Section 202/PRAC project. The project is only 4.3 percent occupied after 11 months of occupancy and is unable to attract sufficient elderly tenants because of insufficient local demand. These waivers will allow project management flexibility in attempting to rent up vacant units, thereby maintaining project viability and preventing foreclosure of the project. The waivers will allow elderly and near-elderly families and individuals who are at or over the age of 55 and low income to apply for admission to the project in addition to very low elderly families who will continue to receive an admissions preference.

Contact: Frank M. Malone, Director, Office of Asset Management, Department of Housing and Urban Development, 451 Seventh Street SW., Room 6160, Washington, DC 20410; telephone (202) 708-3730.

- *Regulation:* 24 CFR 891.120(b), 891.310(b)(1) and (b)(2).

Project/Activity: Options Supported Housing Project V, Scattered Site: Huntington, Huntington Sta., Centereach and Selden, New York, Project Number: 012-HD085/NY36-Q981-006.

Nature Of Requirement: HUD's regulations at 24 CFR 891.120(b), 891.310(b)(1) and (b)(2) govern accessibility standards for the Section 811 program.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 11, 2000.

Reason Waived: HUD determined there was good cause for the waiver. The project consisted of acquisition with rehabilitation of four group homes for persons with chronic mental illness. One of the sites was designed to be accessible for persons with mobility impairments. To make all units fully accessible for persons with mobility impairments would make the project, as a whole, financially unfeasible. The consumers served under the sponsor's existing programs did not generally require accessible housing, therefore accessibility of the one site was more than adequate for potential residents.

Contact: Willie Spearmon, Director, Office Of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410-7000, telephone: (202) 708-3000.

• *Regulation:* 24 CFR 891.165.

Project/Activity: Abraham Lincoln Center, Chicago, Illinois, Project Number: 071-HD095/IL06-Q961-010.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: July 13, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The City had required the sponsor to obtain the approval of each alderman and the alderman had, in turn, required the approval of each of the communities involved.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

• *Regulation:* 24 CFR 891.165.

Project/Activity: Eaton Knolls, Town of Islip, New York, Project Number: 012-HD076/NY36-Q971-005.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions

up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: July 25, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Problems were discovered with the title policy which have subsequently been resolved to the satisfaction of all parties.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

• *Regulation:* 24 CFR 891.165.

Project/Activity: Accessible Space, Inc., Birmingham, Alabama, Project Number: 062-HD041/AL09-Q981-004.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 3, 2000.

Reason Waived: HUD determined that there was good cause to grant this waiver. The project had been delayed due to neighborhood opposition.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

• *Regulation:* 24 CFR 891.165.

Project/Activity: Ryder Assisted Care II, Humacao, Puerto Rico, Project Number: 065-HD010/RQ46-Q961-003.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 3, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Time delays were directly attributable to third parties since required local government endorsements took more than a year to be approved.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

• *Regulation:* 24 CFR 891.165.

Project/Activity: St. Anthony Homes, Baltimore, Maryland, Project Number: 052-HD029/MD06-Q971-003.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 4, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Additional time was needed to prepare and submit the initial closing package.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

• *Regulation:* 24 CFR 891.165.

Project/Activity: Moorestown Consumer Home, Philadelphia, Pennsylvania, Project Number: 035-HD038/NJ39-Q971-077.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 10, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The sponsor could not secure control of the site identified, had to secure bridge financing. Additionally, HUD required the sponsor to hire an architect due to the nature and amount of work involved.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

• *Regulation:* 24 CFR 891.165.

Project/Activity: Royale Gardens, Chicago, Illinois, Project Number: 071-EE125/IL06-S961-016.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 11, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project had been delayed due to the City of Chicago imposing new requirements regarding detailed breakdowns for landscaping costs.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.165.

Project/Activity: Hogar Aurora, Aibonito, Puerto Rico, Project Number: 056-HD015/RQ46-Q971-002.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 11, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The delay in initial closing was directly attributable to the high cost of construction on the island and the lack of an available contractor to develop the project within the cost limits.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.165.

Project/Activity: Three Bridges, Philadelphia, Pennsylvania, Project Number: 031-EE042/NJ39-S961-008.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 16, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project was pending a judicial decision concerning settlement of a dispute regarding site control.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.165.

Project/Activity: ARC Housing, Wauwatosa, Wisconsin, Project Number: 075-HD053/WI39-Q971-004.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 16, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The sponsor needed additional time to work out the completion and submission of the closing documents. Additionally, the sponsor experienced problems with lead based paint removal, underground storage tanks, an elevator and relocation.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.165.

Project/Activity: Absecon Consumer Home, Philadelphia, Pennsylvania, Project Number: 031-HD084/NJ39-Q971-009.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 16, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The sponsor had to locate a new site for the project and this was the sponsor's first experience with modular units (which it was using to replace the existing facility on the site and hoped to replicate in the future).

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.165.

Project/Activity: Ft. Washington Adventist Apartments—New Life Homes, Albuquerque, New Mexico, Project Number: 116-HD015/NM16-Q001-001.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the

date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 30, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project had been delayed due to zoning issues and the need for local government approval of its water/sewer classification.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

Project/Activity: Ray Rawson Villa, Las Vegas, Nevada, Project Number: 125-HD064/NV25-Q971-001.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 30, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project experienced delays while the sponsor raised funds to meet the increased construction costs.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.165.

Project/Activity: Timothy Place, Plum Borough, Allegheny County, Pennsylvania, Project Number: 033-HD048/PA28-Q971-010.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: August 30, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The first two approved sites were abandoned due to the sponsor's inability to secure additional sewer taps through the Department of Environmental Protection and to obtain a zoning variance from the local government.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

Granted By: William C. Apgar, Assistant Secretary For Housing-Federal Housing Commissioner.

Date Granted: September 12, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Additional time was needed by the sponsor to secure control of two of the four sites.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.165.

Project/Activity: Nashville Supportive Housing Development, Nashville, Tennessee, Project Number: 086-HD016/TN43-Q971-001.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions

up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary For Housing-Federal Housing Commissioner.

Date Granted: September 25, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The sponsor was unable to secure proper zoning on the original site and had to locate an alternate site.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.525.

Project/Activity: Brooklyn Home for Aged People, New York, New York, Project Number: 012-EH059/NY36-T781-032.

Nature Of Requirement: HUD's regulation at 24 CFR 891.165 provides that the duration of a capital advance fund reservation is 18 months from the date of issuance with limited exceptions up to 24 months as approved by HUD on a case-by-case basis.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: September 8, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The project was beset with problems, including the fact that the contractor took the project to arbitration over the slow rate of progress. The project was scheduled for completion on or before June 1984. In order to complete construction, the original mortgage was increased and the borrower arranged in 1988 for a second general contractor to complete construction. In an attempt to avoid any liability, the borrower filed for bankruptcy in 1989. The bankruptcy agreement stipulated that the supplemental loan be at 0 percent interest and this agreement was binding.

Contact: Willie Spearmon, Director, Office of Housing Assistance and Grant Administration, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410, telephone: (202) 708-3000.

- *Regulation:* 24 CFR 891.575 and 891.610(c).

Project/Activity: Northview Apartments, Okemah, Oklahoma, Project Number 117-EH089.

Nature Of Requirement: HUD's regulations at 24 CFR part 891 limit occupancy to very low income (VLI) elderly households where one or more persons is at least 62 years of age at the time of initial occupancy.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: July 20, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The Kansas City multifamily HUB requested waiver of this regulation due to the limited market of elderly individuals and families. This project is located in a small rural community and has historically been unable to attract elderly families to fill vacancies. This waiver will expand the number of eligible households who can be admitted to the property allowing the owner additional, necessary flexibility in renting up units.

Contact: Frank M. Malone, Director, Office of Asset Management, Department of Housing and Urban Development, 451 Seventh Street SW., Room 6160, Washington, DC 20410; telephone: (202) 708-3730.

- *Regulations:* 24 CFR 891.575 and 891.610(c).

Project/Activity: IOOF Tower, Salt Lake City, Utah, Project No: 105-EH050.

Nature Of Requirement: HUD's regulations at 24 CFR part 891 limit occupancy to very low income households composed of two or more persons at least one of whom is 62 years of age or older at the time of initial occupancy.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Granted: September 12, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The Denver multifamily HUB requested an age waiver because the project had been unable to sustain occupancy due to the somewhat depressed surrounding neighborhood and declining demand for very low income elderly housing. The waiver allowed property management to rent up vacant units.

Contact: Frank M. Malone, Director, Office of Asset Management, Department of Housing and Urban Development, 451 Seventh Street SW., Room 6160, Washington, DC 20410; telephone: (202) 708-3730.

- *Regulation:* 24 CFR 891.575 and 610(c).

Project/Activity: Calvary Tower, Salt Lake City, Utah, Project Number: 105-EH048.

Nature Of Requirement: HUD's regulations at 24 CFR part 891 limit occupancy to very low income households composed of two or more persons at least one of whom is 62 years of age or older at the time of initial occupancy.

Granted By: William C. Apgar, Assistant Secretary for Housing-Federal Housing Commissioner.

Date Waived: September 20, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The Denver Multifamily Hub requested an age waiver for the project due to the soft market for elderly properties in the Salt Lake City area. The surrounding neighborhood of Calvary Tower is somewhat depressed which also contributes to vacancy problems. Even though the property is currently full,

any long term vacancies would pose a financial strain on this property and there is only one applicant on the waiting list. Lowering the age requirement from 62 to 55 and older will allow project management flexibility in attempting to alleviate vacancy problems.

Contact: Frank M. Malone, Director, Office of Asset Management, Department of Housing and Urban Development, 451 Seventh Street SW., Room 6160, Washington, DC 20410; telephone: (202) 708-3730.

IV. Regulatory Waivers Granted by the Office of Multifamily Housing Assistance Restructuring (OHMAR)

For further information about the following waiver actions, please see the name of the person which immediately follows the description of the waiver granted.

FHA No.	Project name	State
10935035	Westgate Apartments	WY

Nature of Requirement: HUD's regulation at 24 CFR 401.600 requires that projects be marked down to market rents within 12 months of their first expiration date after January 1, 1998. The intent of this provision is to ensure timely processing of requests for restructuring, and that the properties will not default on their FHA insured mortgages during the restructuring process.

Granted By: Ira Peppercorn, Director of OMHAR.

Date Granted: July 11, 2000.

Reasons Waived: HUD determined that there was good cause for the waivers. The attached list of projects were not assigned to the PAEs in a timely manner or for which the restructuring analysis was unavoidably delayed due to no fault of the owner.

Contact: Dan Sullivan, Office of Multifamily Housing Assistance

Restructuring, Department of Housing and Urban Development, Portals Building, Suite 400, 1280 Maryland Avenue SW., Washington, DC 20410; telephone (202) 708-0001.

V. Regulatory Waivers Granted by the Office of Public and Indian Housing

For further information about the following waiver actions, please see the name of the person which immediately follows the description of the waiver granted.

• *Regulation:* 24 CFR 950.980 as in effect at the time of grant award.

Project/Activity: A request was made by the Cheyenne River Housing Authority (CRHA), Eagle Butte, South Dakota, for a one-year extension of their FY 1994 FIC grant to continue support and funding for their Single Mother's Self-Sufficiency Program.

Nature of Requirement: While no longer in effect, HUD's regulations at 24 CFR 950.980 governed the Family Investment Center (FIC) program at the time of the initial grant award. The FIC program does not have current regulations and the NOFA does not provide guidance on grant term extensions. The application kit states that the grant term will be of three to five years duration, depending upon the activities undertaken.

Granted By: Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: June 19, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The FIC grant awarded to the CRHA has funded the Single Mother's Self-Sufficiency Program which has provided basic life skills, training and transitional housing for many homeless single mothers, as well as educational opportunities to seventy-four young women, thirty-three of which have completed their entire educational plan; forty-one of the participating that have not completed their goals will be able to achieve them during this additional year of operating the program; the success of the program has prompted the Board of Directors to approve a pilot program for single fathers, providing the same services to men in the area; and the CRHA has been highly competent in submitting their annual reports and financial status reports to the Northern Plains ONAP in a timely manner.

Contact: Tracy C. Outlaw, National Office of Native American Programs (ONAP), Department of Housing and Urban Development, 1999 Broadway—Suite 3390, Denver, Colorado 80202, telephone: (303) 675-1600.

• *Regulation:* 24 CFR 963.10(d).

Project/Activity: Tampa Housing Authority, Florida, Public Housing Program.

Nature of Requirement: HUD's regulation at 24 CFR 963.10(d) restricts a public housing agency (PHA) from contracting with a resident-owned business in excess of \$1,000,000.

Granted By: Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: July 26, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Approval of the waiver permitted the PHA to exceed the limit for contracting with resident-owned businesses and closed two Regional Inspector General Audit findings against the PHA.

Contact: Gerald Benoit, Director, Real Estate and Housing Performance Division, Office of Public and Indian Housing, Department of Housing and

Urban Development, 451 Seventh St. SW., Washington, DC 20410, telephone: (202) 708-0477.

• *Regulation:* 24 CFR 982.306(d).

Project/Activity: Vermont State Housing Authority, Vermont, Housing Choice Voucher Program.

Nature of Requirement: HUD's regulation at 24 CFR 982.306(d) limits the circumstances under which a public housing agency may approve the leasing of a unit if the owner of the unit is a close relative of the family.

Granted By: Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: August 2, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Approval of the waiver permitted a voucher holder to lease a unit from a relative because of the unavailability of suitable vacant rental housing in the PHA's jurisdiction.

Contact: Gerald Benoit, Director, Real Estate and Housing Performance Division, Office of Public and Indian Housing, Department of Housing and Urban Development, 451 Seventh St. SW., Washington, DC 20410, telephone: (202) 708-0477.

• *Regulation:* 24 CFR 982.306(d).

Project/Activity: Saint Paul Public Housing Agency, Minnesota, Housing Choice Voucher Program.

Nature of Requirement: HUD's regulation at 24 CFR 982.306(d) limits the circumstances under which a public housing agency may approve the leasing of a unit if the owner of the unit is a close relative of the family.

Granted By: Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: August 7, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Approval of the waiver permitted a large family to find suitable housing to lease under the housing choice voucher program. The availability of vacant units with three or more bedrooms in the PHA's jurisdiction was extremely low. The market area vacancy rate was less than one percent.

Contact: Gerald Benoit, Director, Real Estate and Housing Performance Division, Office of Public and Indian Housing, Department of Housing and Urban Development, 451 Seventh St. SW., Washington, DC 20410, telephone: (202) 708-0477.

• *Regulation:* 24 CFR 982.306(d).

Project/Activity: Northeast Nebraska Joint Housing Authority, Nebraska, Housing Choice Voucher Program

Nature of Requirement: HUD's regulation at 24 CFR 982.306(d) limits the circumstances under which a public

housing agency (PHA) may approve the leasing of a unit if the owner of the unit is a close relative of the family.

Granted By: Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: August 11, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Approval of the waiver permitted a voucher holder to lease a unit from a relative in a small rural area where there was limited availability of eligible housing units to lease under the program.

Contact: Gerald Benoit, Director, Real Estate and Housing Performance Division, Office of Public and Indian Housing, Department of Housing and Urban Development, 451 Seventh St. SW., Washington, DC 20410, telephone: (202) 708-0477.

• *Regulation:* 24 CFR 983.4(a)(3).

Project/Activity: Burlington Housing Authority (BHA), Vermont, Project-Based Certificate Program.

Nature of Requirement: HUD's regulation at 24 CFR 983.4(a)(3) governs HUD approval of PHA submissions of intent to attach Project based assistance to units. Project-based units proposed for attachment may not be under a tenant-based or Project-based HAP contract or otherwise committed through issuance of certificates or under agreements to enter into HAP contract.

Granted By: Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: July 20, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. Approval of the waiver permitted applicants on the BHA waiting list to be assisted sooner, since BHA will not be required to hold voucher assistance as long for future Project-based use, and the waiver also permitted improved utilization of BHA voucher funding during the ACC terms of voucher increments consistent with HUD policy to fully use units reserved under the ACC and allocated budget authority.

Contact: Gerald Benoit, Director, Real Estate and Housing Performance Division, Office of Public and Indian Housing, Department of Housing and Urban Development, 451 Seventh St. SW., Washington, DC 20410, telephone: (202) 708-0477.

• *Regulation:* 24 CFR 1000.214.

Project/Activity: A request was made by the Match-E-Be-Nash-Shw-Wish band of Pottawatomi Indians (MBPI), Door, Michigan, to submit their Indian Housing Plan (IHP) to the Eastern Woodlands beyond the due date of July 1, 1999.

Nature of Requirement: HUD's regulation at 24 CFR 1000.214 states that IHPs must be initially sent by the recipient to the Area ONAP no later than July 1. Section 1000.216 states that if the IHP is not initially sent by July 1, the recipient will not be eligible for IHBG funds for that fiscal year.

Granted By: Harold Lucas, Assistant Secretary for Public and Indian Housing.

Date Granted: August 7, 2000.

Reason Waived: HUD determined that there was good cause for the waiver. The MBPI was unable to meet the submission date for the FY 2000 IHP due to circumstances beyond their control. The MBPI was federally recognized on August 23, 1999, and has spent most of the last year working to establish the basic elements for the MBPI's government and organization. Healthcare was the MBPI's first priority, so a health program was established.

The small staff was unable to work on housing issues in addition to all other activities. The MBPI can now address the housing issues.

Contact: Tracy C. Outlaw, National Office of Native American Programs (ONAP), Department of Housing and Urban Development, 1999 Broadway—Suite 3390, Denver, Colorado 80202, Telephone: (303) 675-1600.

Department of Justice

**Executive Order 13160 Guidance
Document: Ensuring Equal Opportunity
in Federally Conducted Education and
Training Programs; Notice**

DEPARTMENT OF JUSTICE**Executive Order 13160 Guidance Document: Ensuring Equal Opportunity in Federally Conducted Education and Training Programs**

AGENCY: Department of Justice.

ACTION: Notice: Guidance document.

SUMMARY: This Guidance Document entitled "Executive Order 13160 Guidance Document" is being issued pursuant to Executive Order 13160, which was issued on June 23, 2000. Executive Order 13160 prohibits discrimination on the basis of race, sex, color, national origin, disability, religion, age, sexual orientation, and status as a parent in federally conducted education and training programs. The Executive Order was issued in order to achieve equal opportunity in all federally conducted education and training programs and is premised upon the notion that the federal government should hold itself to at least the same principles of nondiscrimination in educational opportunities as it applies to the educational programs and activities of recipients of federal financial assistance. Toward that end, the Executive Order is intended to supplement existing laws and regulations that already prohibit many forms of discrimination in both federally conducted and federally assisted educational programs. The purpose of this Guidance Document is to assist all federal agencies in complying with the nondiscrimination mandates of Executive Order 13160 by providing a basic framework for implementation of the Executive Order. Among the topics addressed in this Guidance Document are the scope of covered educational programs, applicable legal principles, examples of discriminatory conduct, enforcement procedures, remedies, and agency reporting requirements. The text of the Guidance Document appears at the end of this Notice.

DATES: Effective January 18, 2001.

ADDRESSES: Coordination and Review Section, Civil Rights Division, P.O. Box 66560, Washington, D.C., 20035-6560.

FOR FURTHER INFORMATION CONTACT: Merrily A. Friedlander, Chief, Coordination and Review Section, Civil Rights Division, (202) 307-2222.

Dated: January 11, 2001.

Janet Reno,

Attorney General, Department of Justice.

Executive Order 13160 Guidance Document**I. Introduction**

On June 23, 2000, the President of the United States issued Executive Order 13160 in order to achieve equal opportunity in all federally conducted education and training programs. More specifically, Executive Order 13160 was designed to ensure nondiscrimination on the basis of race, sex, color, national origin, disability, religion, age, sexual orientation, and status as a parent in federally conducted education and training programs and activities.

Executive Order 13160 is premised upon the notion that the federal government should hold itself to at least the same principles of nondiscrimination in educational opportunities as it applies to the educational programs and activities of recipients of federal financial assistance. Toward that end, the Executive Order is intended to supplement existing laws and regulations that already prohibit many forms of discrimination in both federally conducted and federally assisted educational programs. Among the most significant of these nondiscrimination laws are the Rehabilitation Act of 1973, 29 U.S.C. 701 *et seq.*, as amended; the Age Discrimination in Employment Act of 1967, 29 U.S.C. 621, *et seq.*; Titles VI and VII of the Civil Rights Act of 1964, 42 U.S.C. 2000d, as amended; 42 U.S.C. 2000e-17, as amended; and Title IX of the Education Amendments of 1972, 20 U.S.C. 1681 *et seq.*

In order to achieve equal opportunity in all federally conducted education programs, Section 1-102 of Executive Order 13160 provides that:

No individual, on the basis of race, sex, color, national origin, disability, religion, age, sexual orientation, or status as a parent, shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination in, a federally conducted education or training program or activity.

All federal agencies that conduct education and training programs must therefore commit themselves to providing educational environments that are entirely free from discrimination based on race, sex, color, national origin, disability, religion, age, sexual orientation, and status as a parent.

Pursuant to section 5-501 of Executive Order 13160, this Guidance Document has been developed to assist all federal agencies in complying with

the nondiscrimination mandates of the Executive Order. Among the topics addressed herein are the scope of covered educational programs, applicable legal principles, examples of discriminatory conduct, enforcement procedures, remedies, and agency reporting requirements.

This Guidance Document is intended only to provide a basic framework for implementation of Executive Order 13160. This Guidance Document is not intended to be a comprehensive guide for compliance. Rather, this Guidance Document is designed only to provide a starting point for agency implementation, and this Document's failure to address a particular issue should in no way be interpreted to mean that such an issue falls outside the scope of the nondiscrimination protections established by the Executive Order or this Guidance.

In order to supplement the basic principles established in this Guidance Document, it is anticipated that, from time to time, the Department of Justice will publish additional policies or guidance documents to assist with the enforcement of this Executive Order. In addition, section 5-505 of the Executive Order provides that, "[u]pon request and to the extent practicable, the Attorney General shall provide advice and assistance to executive departments and agencies to assist in full compliance with this order." Responsibility for providing such advice and technical assistance is delegated to the Assistant Attorney General for Civil Rights, who shall conduct, handle, or supervise the performance of these functions.

II. Covered Education Programs and Activities

Executive Order 13160 applies to all federally conducted education and training programs and activities. Pursuant to section 2-201, "federally conducted education and training programs" include those that are "conducted, operated, or undertaken by" an executive department or agency.

Section 2-202 of the Executive Order provides that federally conducted "education and training programs and activities" may include, but are not limited to, the following:

- (1) formal schools,
- (2) extracurricular activities,
- (3) academic programs,
- (4) occupational training,
- (5) scholarships and fellowships,
- (6) student internships,
- (7) training for industry members,
- (8) summer enrichment camps, and
- (9) teacher training programs.

As this definition makes clear, education programs covered by

Executive Order 13160 may include both long-term, formal academic institutions (such as Department of Defense Dependents Schools, Department of Defense Domestic Dependent Elementary and Secondary Schools, and elementary or secondary schools operated by the Department of Interior, Bureau of Indian Affairs), as well as short-term job training programs (such as computer training courses for federal employees).

Some examples¹ of the types of education and training programs and activities that might be covered by Executive Order 13160 are discussed below:

Ex. 1. The Office of Government Ethics runs an agency ethics training course for federal employees from other agencies.

Ex. 2. The Federal Deposit Insurance Corporation operates a small computer school which teaches state examiners to analyze the weaknesses in the supervision of a small bank data processing operation.

Ex. 3. The Department of Veteran Affairs (VA) runs the VA Home Loan Training Program, which offers information and training to numerous private sector enterprises that cooperate in providing VA home loan benefits.

Ex. 4. The Nuclear Regulatory Commission provides radiation control training for state and local government personnel under the State Agreements Program.

Ex. 5. The Federal Bureau of Investigation (FBI) runs the FBI National Academy, an 11-week multi-disciplinary program in Quantico, Virginia, for federal, state, local, and foreign officers who are considered to have potential for further advancement in their careers.

Ex. 6. The Department of Housing and Urban Development operates the Community First Leadership Program, which provides in-depth training for representatives from state and local governments and non-profit organizations involved in housing and community development programs.

Ex. 7. The Maritime Administration conducts a Firefighting Training Program for private, licensed and unlicensed U.S. seafarers, who pay a fee for instruction in fire-fighting safety.

Ex. 8. The United States Department of Agriculture (USDA) operates the Graduate School, USDA, which provides career-related continuing education courses primarily designed to meet the educational needs of government employees.

Ex. 9. The Bureau of Alcohol, Tobacco, and Firearms operates the Anacostia Neighborhood Prevention Initiative, which provides crime prevention training to the public.

Ex. 10. The Peace Corps offers a World Wise Schools program to students interested

in broadening their geographic and cultural horizons.

Ex. 11. The National Aeronautics and Space Administration conducts a tour of its facilities to educate the public about the Space Shuttle Program.

Ex. 12. The Department of Justice conducts computer training courses to regularly update its employees on new software.

Ex. 13. The Federal Bureau of Prisons conducts an inmate boot camp to prepare inmates for reintegration into society.

Ex. 14. The U.S. Department of Agriculture conducts an annual Summer Intern Program for roughly 150 college students, who are hired to work with professional staff on projects related to the students' majors and career plans.

Ex. 15. The General Counsel's Office at the Federal Emergency Management Agency hires law students to work as unpaid student interns during the school year.

III. Exemptions From Coverage

Although Executive Order 13160 is intended to provide broad-based coverage for federally conducted education and training programs, section 3 of the Executive Order does provide some exemptions from coverage. As discussed below, there are several circumstances under which the nondiscrimination prohibitions of the Executive Order do not apply to certain federally conducted education and training programs.

Military Programs

Section 3–301 explicitly states that the Executive Order does not apply to “members of the armed forces, military education or training programs, or authorized intelligence activities.” Military education or training programs are defined as education programs conducted by the Department of Defense (or, where the Coast Guard is concerned, by the Department of Transportation) for the “primary purpose” of training members of the armed forces or meeting a statutory requirement to educate or train federal, state, or local civilian law enforcement officials pursuant to 10 U.S.C. chapter 18. This includes military academies, military programs that provide drug traffic prevention training to non-military law enforcement agencies, Department of Defense foreign language training and survival schools for non-military law enforcement agencies, and military training to non-military law enforcement agencies in the operation and maintenance of equipment used in the detection, monitoring, aerial reconnaissance, and communication intercepts of illegal drug trafficking.

Members of the armed forces, including students at military academies, are, however, protected from certain forms of discrimination pursuant

to regulations currently enforced by the Department of Defense and individual service branches. See, e.g., 32 CFR part 51, “Department of Defense Military Equal Opportunity Program,” and 32 CFR part 56, “Nondiscrimination on the basis of Handicap in Programs and Activities Assisted or Conducted by Department of Defense.” In addition, section 3–301 of Executive Order 13160 specifically provides that the Department of Defense shall develop procedures to protect the rights of, and to provide redress to, civilians involved in Department of Defense federally conducted military education and training programs if such civilians are not otherwise protected by existing federal law from discrimination on the basis of race, sex, color, national origin, disability, religion, age, sexual orientation, or status as a parent.

Finally, it is important to emphasize that this exemption does not apply to the Department of Defense Dependent Schools and Department of Defense Domestic Dependent Elementary and Secondary Schools. These schools must comply with the Executive Order and with all applicable legal principles set forth in this Guidance Document.

Affirmative Action

Any otherwise lawful affirmative action plan or program is exempt from coverage under the Executive Order. Pursuant to section 3–302, the Executive Order “does not apply to, affect, interfere with, or modify the operation of any otherwise lawful affirmative action plan or program.”

Programs Established Consistent With Federal Law

Section 3–303 of the Executive Order provides that an individual shall not be deemed subject to discrimination by virtue of his or her “exclusion from the benefits of a program established consistent with federal law or limited by federal law to individuals of a particular race, sex, color, disability, national origin, age, religion, sexual orientation, or status as a parent different from his or her own.” For example, pursuant to 25 CFR §§ 31.1 and 31.3, education or training programs or activities conducted by the Department of Interior's Bureau of Indian Affairs are, subject to a few exceptions, limited to Native American students “of one-fourth or more degree of Indian blood.”

Bureau of Indian Affairs Programs

Section 3–304 of the Executive Order exempts from coverage any ceremonial or similar education or training program or activity of a school conducted by the Department of Interior's Bureau of

¹ These examples were drawn from data provided by various federal agencies during the development of Executive Order 13160. The programs enumerated above, however, are not necessarily still in existence and, in some cases, are merely hypothetical examples.

Indian Affairs, provided such program is "culturally relevant" to the children represented in the school. The Executive Order defines "culturally relevant" as any class, program, or activity that is "fundamental" to a tribe's "culture, customs, traditions, heritage, or religion." For example, certain educational classes involving traditional Native American dance instruction may be "culturally relevant" to the children represented in the school and therefore exempt from coverage under the Executive Order. In making determinations as to whether classes, programs, or activities are "culturally relevant," substantial deference shall be given to the views of the relevant tribes.

Selections of Foreign Nationals and Selections Made Outside the Executive Branch

Section 3-305 provides an exemption for selections of foreign nationals based on national origin if the selections pertain to participation in covered education programs or activities that "primarily concern national security or foreign policy matters." Thus, for example, the Executive Order would not cover the selection of participants, on the basis of national origin, for the Department of State's Antiterrorism Assistance training programs if the primary mission of these programs is to train foreign nationals in deterring and managing terrorist threats.

Section 3-305 further provides an exemption for "selections or other decisions made by entities outside the executive branch." For example, if a local school district selects students to participate in a federally conducted education program, the selection decisions of the local school district would not be subject to Executive Order 13160 as they represent selection decisions made by an entity outside the executive branch.² However, the students selected for participation in the federally conducted education program would be protected from discrimination under Executive Order 13160 during the duration of their participation in the federally education conducted program.

In addition, section 3-305 provides that it "shall be the policy of the executive branch that education or training programs or activities shall not be available to entities that select persons for participation in violation of Federal or State law." Thus, if a company responsible for selecting employees to participate in a federally

conducted education program were to refuse to consider selecting members of a particular race in violation of Title VII of the Civil Rights Act of 1964, as amended, executive departments should, as a matter of policy, refrain from making their educational programs available to such a company.

Age-Based Admissions

Section 3-306 provides an exemption for age-based admissions to federally conducted education and training programs if such programs have "traditionally been age-specific" or "must be age-limited for reasons related to health or national security." See Section XI of this Guidance Document for further information regarding these age-related exemptions.

Final Determinations Regarding Coverage and Exemptions

As a general matter, Executive Order 13160 will apply to all federally conducted education and training programs or activities not subject to a specific exemption set forth in Section 3 of the Executive Order. Executive departments or agencies and individuals with questions regarding whether a particular program or activity is subject to Executive Order 13160 should contact the Department of Justice's Civil Rights Division.

Pursuant to section 2-203 of the Executive Order, the Attorney General is authorized to make final determinations as to whether a given program falls within the scope of covered education and training programs under section 2-202 or is excluded from coverage under section 3. See Section XIV(C), "Administrative Enforcement," for further information pertaining to applicable procedures for requesting a final determination from the Attorney General regarding coverage of a particular program.

IV. Applicable Legal Principles

Executive Order 13160 requires executive departments and agencies to ensure nondiscrimination on the basis of race, sex, color, national origin, disability, religion, age, sexual orientation, and status as a parent in all federally conducted education and training programs. In order to comply with the antidiscrimination mandates of this Executive Order, agencies must ensure that individuals involved in federally conducted education and training programs and activities are not subjected to discrimination on the basis of any one of these protected characteristics. The most common forms of discrimination prohibited by the Executive Order are discussed below.

Disparate Treatment

Under Executive Order 13160, all individuals involved in federally conducted education or training programs or activities must be treated equally and not be subjected to discrimination on the basis of race, sex, color, national origin, disability, religion, age, sexual orientation, or status as a parent. In order to comply with the Executive Order, all federal agencies that provide education or training programs or activities must ensure that individuals are not subjected to unjustified disparate treatment based on a protected status.³ Examples of disparate treatment may include, but are not limited to:

- Selecting or failing to select an individual because of his or her protected status.
- Denying an individual any aid, benefit, or service offered in connection with a federally conducted education program because of his or her protected status.
- Failing to provide or allocate aid, benefits, or services as a result of an individual's protected status.
- Promoting or failing to promote an individual because of his or her protected status.
- Giving a positive or negative performance evaluation to an individual because of his or her protected status.
- Segregating an individual because of his or her protected status.
- Assigning an individual to a particular education or training program or activity, or a particular project, because of his or her protected status.
- Treating an individual less favorably with respect to the terms, conditions, or privileges of an education or training program or activity because of his or her protected status.

In addition to prohibiting individual instances of unjustified disparate treatment, the Executive Order also prohibits federal agencies from engaging in a "pattern or practice" of unlawful discrimination. Moreover, federal agencies may not rely on policies or practices that explicitly classify individuals on the basis of a protected characteristic absent a lawful justification for the use of such a classification.

It is important to note, however, that, under certain circumstances, compliance with the Executive Order may permit federal agencies to treat

² Such selection decisions might, however, be covered by other civil rights statutes, including Title VI of the Civil Rights Act of 1964, as amended, and Title IX of the Education Amendments of 1972, as amended.

³ Throughout the remainder of this document, the term "protected status" may be used to refer generally to the nine protected characteristics which are the subject of this Executive Order: race, sex, color, national origin, disability, religion, age, sexual orientation, and status as a parent.

individuals differently on the basis of a protected characteristic. For example, under certain limited circumstances, agencies may legitimately treat individuals differently on the basis of sex if sex is a bona fide occupational qualification (BFOQ). Similarly, remedial situations may justify differential treatment. Moreover, in educational environments, narrowly-tailored measures designed to promote the educational benefits of diversity may lawfully treat individuals differently on the basis of a protected characteristic.

In some cases, the Executive Order may even require federal agencies to treat individuals differently in order to avoid discriminating against an individual on the basis of a protected characteristic. For example, the prohibition on religious discrimination may require an agency to provide an individual with a reasonable accommodation for religious practices as discussed in section X of this Guidance Document. Similarly, under many circumstances, federal agencies have an obligation to provide reasonable accommodations for individuals with disabilities. See Section IX of this Guidance Document. As such, the examples of disparate treatment enumerated above are designed merely to illustrate the types of conduct generally prohibited by this Executive Order and agencies must, of course, evaluate individual claims of disparate treatment on a case-by-case basis.

Hostile Environment

Pursuant to Executive Order 13160, a federal agency that provides education or training programs or activities must maintain a learning environment that is free of discrimination on the basis of race, sex, color, national origin, disability, religion, age, sexual orientation, and status as a parent.

- Federal agencies must ensure that the learning environment is free of harassment that is so severe, persistent, or pervasive that it alters the conditions of the federally conducted education or training program or activity for a participant on the basis of a protected status. Federal agencies should ensure that no individual is subject to a hostile environment that effectively denies or limits equal access to (e.g., negatively affects an individual's participation or performance in) educational or training opportunities and benefits based on his or her protected status.

- Federal agencies should be aware that the sort of harassment that can create a hostile environment, when it is sufficiently severe, persistent, or pervasive, may take many forms

including: slurs, epithets, jokes, cartoons, unwelcome advances, and other verbal or physical derogatory conduct that targets individuals on the basis of a protected status. Federal agencies should further be aware that hostile environments may be created by supervisors, instructors, administrators, other officials, or peers.

Disparate Impact

As a general matter, federally conducted education and training programs and activities may not utilize policies, procedures, criteria, or other methods of administration which, although facially neutral, have a disproportionate and adverse effect on certain individuals on the basis of a protected characteristic, unless:

- (1) There is an educational or business necessity for the policy, procedure, criteria, or method of administration; and
- (2) There are no equally effective alternative practices that would result in less adverse impact.

Retaliation

Federal agencies that operate education and training programs may not retaliate against any individual because he or she has raised concerns, reported claims, or filed complaints alleging discrimination. Federal agencies are similarly prohibited from retaliating against any individual who has testified, assisted, or participated in any manner in an investigation or other proceeding raising claims of discrimination.

Prohibited retaliation may take many forms including, but not limited to, intimidation, threats, coercion, harassment, discrimination, and adverse actions (e.g., poor grades or performance evaluations) motivated by retaliatory purpose. Federal agencies must ensure that no individual is subject to any form of retaliation regardless of the merits (or lack thereof) of any underlying claim.

Specific Principles and Examples

The following sections address more specific applicable legal principles and examples of discriminatory conduct related to each of the nine protected bases covered by the Executive Order. It is important to note, however, that each of the following sections is intended merely to highlight certain specific forms of prohibited discrimination. The failure to include a particular legal principle (or a particular example of prohibited conduct) in one section of this Guidance Document should in no way be interpreted to mean that the legal principle (or prohibited conduct) is not covered with respect to another

protected basis. Rather, all sections of this Guidance Document should be read in conjunction with each other to provide a fuller picture of the breadth and application of the Executive Order's antidiscrimination prohibitions.⁴

V. Discrimination on the Basis of Race

Federal agencies must ensure that no individual is discriminated against on the basis of his or her race in any federally conducted education or training program or activity.

- Federal agencies must ensure that all individuals are treated equally without regard to race in any federally conducted education or training program or activity.

- Federal agencies may not utilize policies, procedures, or methods of administration which, although facially neutral, have a disproportionate and adverse effect on participants or applicants on the basis of their race, unless there is an educational or business necessity for the use of such policies and there are no equally effective alternative practices that would result in less of a disproportionate impact.

- Federal agencies may not base any decisions regarding individuals in federally conducted education or training programs on race-based stereotypes or assumptions regarding interests, competency levels, or expectations of success.

- Federal agencies must take steps to ensure that no federally conducted education or training program takes place in an environment that is intimidating, abusive, offensive, or hostile on the basis of race.

Examples⁵ of Prohibited Conduct:

- A federal law enforcement agency conducts an anti-terrorist training program in which it groups participants in various teams. Although the instructor generally makes random assignments for this exercise, he states that he has decided to assign all of the African-American participants to a single team because he believes that African-Americans work most effectively with members of their own race. The instructor's conduct violates the Executive Order.

- The Department of Justice offers an advanced prosecutorial course for its

⁴ Of course, it is also true that not every principle will be applicable to every protected basis. For example, only certain protected characteristics trigger a reasonable accommodation requirement. Individuals or agencies with specific questions regarding the Executive Order's antidiscrimination provisions should contact the Department of Justice's civil Rights Division.

⁵ All of the examples of discriminatory conduct set forth in this Guidance Document are hypothetical and are not intended to suggest that any federal agency actually engages in such discriminatory practices or necessarily even operates such an educational program.

attorneys at the Department's National Advocacy Center in Columbia, South Carolina. Due to the high demand for this course, the limited number of openings available, and the difficulty the Department has had in determining which candidates should be selected, the Department decides to require candidates to take an aptitude test and to select candidates in descending rank order of their test scores. However, the test results in disparate impact upon members of a particular race. Further, the Department lacks evidence that the test is valid; namely, that it predicts success in the course or even that it is necessary to pass the test in order to satisfactorily complete the course. Accordingly, the Department's use of this test violates the Executive Order.

VI. Discrimination on the Basis of Sex

Federal agencies must ensure that no individual is discriminated against on the basis of sex in any federally conducted education or training program or activity.

- No executive agency may admit, refuse to admit, promote, refuse to promote, or otherwise favor or disfavor, a participant or prospective participant in a federally conducted education program on the basis of sex.
- An agency may not impose, explicitly or implicitly, stricter admission or completion requirements for one sex as compared to the other.
- Federal agencies operating education or training programs may not utilize policies, procedures, or methods of administration which, although facially neutral, have a disproportionate and adverse effect on participants or applicants on the basis of sex unless there is an educational or business necessity for the use of such policies and there are no equally effective alternative practices that would result in less of an impact on the basis of sex.
- Federal agencies should ensure that no individual is subjected to gender-based harassment, which may include harassment based on sex or sex-stereotyping, in any federally conducted education or training program. Gender-based harassment may be based upon stereotypical notions regarding how persons of each gender should act or look.
- Discrimination on the basis of sex includes discrimination on the basis of pregnancy. Federal agencies must ensure that no woman is discriminated against on the basis of pregnancy, childbirth, false pregnancy, termination of pregnancy, or recovery therefrom, in any education or training program or activity.

Examples of prohibited conduct:

- The Director of Athletics at a Department of Defense School for dependent children of military personnel decides to allocate all of his annual athletics budget to male sports because he does not believe that female students need or want the same quality and variety of athletic services as males. Despite repeated requests from female students for a variety of programs and services, the Director refuses to consider the provision of any funding for co-ed or female sports. The Director's conduct would violate the Executive Order.⁶
- The Federal Bureau of Investigation conducts a firearms training program for state and local officials. The admissions director refuses to admit women because he believes that only men should be permitted to train for dangerous jobs. The director's refusal to consider women for participation in the program would violate the Executive Order.
- The Department of Health and Human Services conducts a nurses' training program on childhood vaccinations. One of the instructors requires the male participants to attend a seminar on infant care, but does not require the female students to attend the same seminar because she assumes that female students already possess such skills. The instructor's conduct would violate the Executive Order.
- A physical fitness instructor at the Federal Bureau of Prisons refuses to allow a pregnant inmate to participate in the physical fitness training program because he believes that pregnant women should not be physically active. Although the prison has a policy of permitting inmates with temporary disabilities to participate in physical fitness programs upon receipt of approval from a physician, the instructor refuses to consider a letter from the inmate's doctor explaining that physical activities pose no health risk to her. The instructor's decision to exclude the woman would violate the Executive Order.
- The Department of Labor conducts a week-long training seminar during which participants are evaluated for their approaches to management. Future promotion decisions are based on these evaluations. One of the evaluators gives high ratings to men who exhibit an aggressive interpersonal style, but deducts points for women who exhibit the same characteristics. The evaluator's judgments are based on sex-stereotypes and thus violate the Executive Order.

⁶ Further information on the application of these nondiscrimination principles to athletic programs in educational institutions may be obtained by consulting Guidance Documents developed by the Department of Education's Office for Civil Rights, including *Policy Interpretation—Title IX and Intercollegiate Athletics*, 45 CFR part 26 (1979); *Equal Opportunity in Intercollegiate Athletics: Requirements under Title IX of the Education Amendments of 1972*, 34 CFR part 106; *Clarification of Intercollegiate Athletics Policy Guidance: The Three-Part Test* (January 16, 1996); and various other pamphlets, memoranda, and documents that may be found on the Department of Education's website at www.ed.gov/offices/OCR/ocrprod.html.

- The Department of Justice operates an advanced law enforcement training course on an annual basis for ten individuals. During one session of the course, nine of the ten participants are male. The only woman enrolled in the course is continually taunted and hazed by her male peers who do not believe that women are capable of serving as law enforcement officers. The male instructor not only fails to take appropriate corrective action, but joins the male students in subjecting the woman to a barrage of derogatory epithets. The gender-based harassment to which the woman is subjected violates the Executive Order.

Sexual Harassment

The Executive Order's prohibition on sex discrimination requires federal agencies to ensure that no individual is subjected to sexual harassment in any federally conducted education or training program.

- Sexual harassment entails unwanted or unwelcome sexual conduct including sexual advances, requests for sexual favors, or other verbal, nonverbal, or physical conduct of a sexual nature.
- Federal agencies must ensure that no individual involved in a federally conducted education or training program is subjected to any form of sexual harassment.
- No instructor, supervisor, administrator, or other official involved in a federally conducted education program may (1) Explicitly or implicitly make submission to sexual conduct a term or condition of an individual's participation in an education program, or (2) use submission to or rejection of such conduct as the basis for any decision affecting an individual. Sexual harassment of this type violates the Executive Order whether an individual resists and suffers the threatened harm or submits and thus avoids the threatened harm.
- Federal agencies must ensure that no individual involved in a federally conducted education or training program is subjected to a hostile environment on the basis of sex. An impermissible hostile environment may consist of unwelcome sexual conduct that is sufficiently severe, persistent, or pervasive so as to (1) Limit an individual's ability to participate in, or benefit from, an education or training program or activity, or (2) create a hostile or abusive educational environment. Hostile environments may be created by supervisors, instructors, administrators, other officials, or peers.

Examples of prohibited conduct:

- A male student attending a high school operated by the Bureau of Indian Affairs is told by a female teacher that he will fail algebra if he does not accompany her on a date. The student refuses the teacher's request and receives a failing grade as a result. The teacher's conduct violates the Executive Order.
- The Federal Emergency Management Agency conducts emergency preparedness training for local firefighters. A training supervisor refuses to certify that a trainee has completed the program until she accompanies him on a date. Fearing that she will lose her job if she is not certified, the trainee acquiesces to the supervisor's demand. The supervisor's behavior constitutes sexual harassment and violates the Executive Order.
- A volunteer student intern at the Department of Veterans Affairs has made repeated unwelcome sexual gestures of a graphic and physical nature toward a fellow intern. On several occasions, the intern has made such gestures while following the victim and threatening to "get her alone." The victim no longer feels that she can be by herself at the office. This conduct has been both severe and pervasive and has created a hostile educational environment. The intern tells her supervisor and the Senior Managers who oversee the program, but they refuse to investigate or otherwise stop or prevent the conduct. The failure to investigate and/or take appropriate corrective action violates the Executive Order.

VII. Discrimination on the Basis of Color

Federal agencies must ensure that no individual is discriminated against on the basis of color in any education or training program or activity.

- Discrimination on the basis of color may include, but is not limited to, discrimination on the basis of the appearance of an individual's skin tone, racial complexion, pigmentation, or hue.
- A federal agency may not, on the basis of color, admit, refuse to admit, promote, refuse to promote, or otherwise favor or disfavor, a participant or prospective participant in an education or training program or activity.
- A federal agency may not use color as a proxy for determining an individual's race or national origin.
- Federal agencies must ensure that participants in education or training programs or activities are not subjected to harassment, in the form of color-based animus, bias, hostility, stereotype, ridicule or insult, whether by instructors or fellow participants, that is sufficiently severe, persistent, or pervasive to create a hostile environment.
- Federal agencies may not utilize policies, procedures, criteria or methods

of administration which, although facially neutral, have a disproportionate and adverse impact on the basis of color, unless there is an educational or business necessity for the use of such policies and there are no equally effective alternative practices that would result in less of an impact on the basis of color.

Examples of prohibited conduct:

- An executive agency conducts a vocational training program that includes an advanced course in media and broadcast education. The only criteria for admission is that the individual demonstrate a long-term interest in the field. After conducting interviews, however, a member of the admissions committee rejects an applicant with dark skin solely because she has seen statistical data that demonstrates that individuals with dark skin experience greater difficulty in finding permanent employment in these fields. The admissions committee member's conduct violates the Executive Order.
- A federal agency is planning an education seminar to address the Native American experience during the 20th Century. The program coordinator receives applications from numerous Native Americans who wish to participate as panelists. The program coordinator refuses to select any light-skinned applicants because he believes that such individuals do not appear to be "Native American" and thus cannot effectively address this topic. The coordinator's conduct violates the Executive Order.

VIII. Discrimination on the Basis of National Origin

Federal agencies must ensure that no individual is discriminated against on the basis of national origin in any federally conducted education or training program or activity.

- Discrimination on the basis of national origin may include discrimination based upon an individual's country of birth, ancestry, or accent.
- Federal agencies must ensure that individuals are not subjected to disparate treatment on the basis of national origin.
- Federal agencies may not utilize policies, procedures, criteria or methods of administration which, although facially neutral, have a disproportionate and adverse impact on the basis of national origin unless there is an educational or business necessity for the use of such policies and there are no equally effective alternative practices that would result in less of an impact on the basis of national origin.
- Participants in a federally conducted education or training program or activity must not be

subjected to a hostile environment based upon national origin.

- Exempt from coverage under this Executive Order are selections based on national origin of foreign nationals to participate in covered education or training programs which primarily concern national security or foreign policy matters.

Examples of Prohibited Conduct:

- The Department of Health and Human Services decides to hold a conference focused on training community groups on Latino health issues. A non-Latino representative from one of these community groups wishes to attend the conference, but the Conference Coordinator denies the request because the individual is not Latino. The Conference Coordinator's conduct would violate the Executive Order.
- An agency plans to hold a training session in a large city. The conference is designed to help low-income and minority individuals across the city start their own small businesses. The agency decides to advertise the training session by posting announcements in all low-income areas of the city. An agency coordinator, however, decides not to post announcements in the Chinatown section, even though the area has a high population of low income and minority individuals, because the coordinator does not think people from that area will be interested and/or will understand the English-language training. The coordinator's decision would violate the Executive Order.
- A federal agency is conducting an educational program regarding citizenship and civic duty. An employee applies to be a member of the speakers' panel during the program, but her supervisor refuses to select her because he believes that she has a foreign accent which would undermine her credibility with the audience. The supervisor's conduct violates the Executive Order.

Limited English Proficiency

Under certain circumstances, a federal agency's failure to provide language assistance to an individual whose primary language is not English and who has a limited ability to read, write, speak, or understand English may constitute national origin discrimination. Agency obligations with respect to such individuals who are limited English proficient (LEP) are discussed below.⁷

- Agencies have an obligation to take reasonable steps to ensure that LEP

⁷ Further guidance on these principles and agency obligations with respect to LEP issues may be found by consulting Executive Order 13166, "Improving Access to Services for Persons with Limited English Proficiency," 65 FR 50121 (August 16, 2000), and the Department of Justice's Policy Document, "Enforcement of Title VI of the Civil Rights Act of 1964—National Origin Discrimination Against Persons with Limited English Proficiency." 65 FR 50123 (August 16, 2000).

individuals have meaningful access to federally conducted education and training programs and activities.

- Agencies must determine what constitutes "reasonable steps" by considering a number of factors including: (1) the number or proportion of LEP persons in the eligible population to be served by the education or training program or activity; (2) the frequency with which LEP individuals come into contact with the program or activity; (3) the importance of the service provided by the program or activity; and (4) the resources available to the agency.

- If the federally conducted education program is an elementary or secondary school (*e.g.*, Department of Defense Dependent Schools or schools operated by the Department of Interior, Bureau of Indian Affairs), the executive department or agency should comply with the Department of Education's guidance on the provision of language services to elementary and secondary education LEP students.⁸

Examples of Prohibited Conduct:

- A prison operated by the Bureau of Prisons has a very large proportion of adult LEP inmates who speak the same native language. The prison has a drug and alcohol rehabilitation program for inmates who have drug or alcohol addictions. Due to the size of this single-language speaking LEP population, the fact that this population of inmates has the same percentage of drug and alcohol addictions as the rest of the inmate population, and the importance of the program, the prison's failure to provide this group of LEP inmates with access to the program (such as a separate class in their native language or a competent interpreter) would violate the Executive Order.

- Military parents have adopted a child who is limited English proficient. They decide to enroll her in the federally conducted K-12 school for children of military personnel. The school's refusal to consider providing the LEP child with any services to overcome language barriers would constitute a violation of the Executive Order.

IX. Discrimination on the Basis of Disability

Federal agencies must ensure that no individual is discriminated against on the basis of disability in any federally conducted education or training program or activity.

- Section 504 of the Rehabilitation Act already prohibits discrimination on

the basis of disability in all federally conducted education and training programs as Section 504 applies to all federally conducted activities. Accordingly, executive departments and agencies may comply with the Executive Order by ensuring that all of their education and training programs are operated in accordance with their Section 504 regulations governing federally conducted activities.

- An individual with a disability refers to any person who has a physical or mental impairment that substantially limits one or more major life activities, has a record of such an impairment, or is regarded as having such an impairment. Major life activities include walking, seeing, hearing, speaking, breathing, learning, performing manual tasks, caring for oneself, working, sitting, standing, lifting, and reading.

- Federal agencies must ensure that no otherwise qualified individual, on the basis of disability, is excluded from participation in, denied the benefits of, or subjected to discrimination in any federally conducted education or training program or activity.

- A qualified individual with a disability is any person who, with or without reasonable accommodation, can meet the essential eligibility requirements for involvement in the education or training program.

- Agencies must ensure that federally conducted education or training programs are readily accessible to qualified individuals with disabilities. In order to ensure accessibility, an agency may:

- (i) Relocate the education or training program or activity to an accessible facility;

- (ii) Provide the aid, benefit, or service in another manner; or

- (iii) Make modifications to the building or facility itself.

- In determining how to achieve accessibility, agencies should attempt to provide aid, benefits, or services in the most integrated setting possible.

Examples of prohibited conduct:

- The National Endowment for the Arts conducts an education program on art history. The instructor has a limited number of tickets to a new movie regarding French impressionist works and decides to draw names randomly to decide which students can attend. When the instructor draws the name of a visually impaired participant, he reassigns the ticket because he believes that the visually impaired individual would not be able to enjoy the movie as much as a non-visually impaired participant. The instructor's conduct would violate the Executive Order.

- The Office of Government Ethics holds an ethics briefing for another agency's ethics officials in a building that has three stairs

leading up the main entrance. There is no ramp, lift, or alternative accessible entrance. Several participants use wheelchairs and, thus, cannot get into the building. The instructor tells the participants that they will not be able to attend and refuses to relocate the briefing to an available and accessible facility, despite the fact that to do so would not constitute an undue burden. The instructor's refusal to relocate the briefing would violate the Executive Order.

Reasonable Accommodation

Agencies have an obligation to provide reasonable accommodation to the known physical or mental limitations of an otherwise qualified individual with a disability, unless the agency can demonstrate that the accommodation would impose an undue hardship.

- Agencies must furnish appropriate auxiliary aids and services when necessary to afford a qualified individual with a disability an equal opportunity to participate in a federally conducted education or training program or activity.

- Agencies must afford an individual with a disability an opportunity to request the auxiliary aid or service of his or her choice, and should honor that choice unless another effective aid or service is available.

- An agency may not charge an individual with a disability for the use of an auxiliary aid or service.

- The obligation to provide reasonable accommodations extends only to individuals with disabilities; an agency's failure to provide similar accommodations for individuals without disabilities does not constitute unlawful discrimination.

Examples of prohibited conduct:

- The Department of Justice conducts training seminars on compliance with civil rights laws for employees from other agencies. A prospective participant who is hearing impaired requests a sign language interpreter for an upcoming seminar. Although the agency employs a full-time sign language interpreter who is available to attend the seminar in question, the training coordinator refuses to enlist the interpreter's services and informs the participant that the agency will provide a video with closed-captioning that will be available ten days after the seminar is over. The coordinator's conduct would violate the Executive Order.

- A visually impaired student attending a high school operated by the Bureau of Indian Affairs requests that his class handouts be provided in Braille or on audio cassette. The principal refuses to translate any materials and urges that the student transfer to a private high school where such materials are more readily available. The principal's conduct would violate the Executive Order.

⁸ See, for example, *Identification of Discrimination and Denial of Services on the Basis of National Origin* (May 1970), 35 FR 11595; "The Office for Civil Rights Title VI Language Minority Compliance Procedures" (Dec. 3, 1985); and *Policy Updates on Schools' Obligations Toward National Origin Minority Students with Limited-English Proficiency (LEP)* (Sept. 27, 1991).

X. Discrimination on the Basis of Religion

Federal agencies must ensure that no individual is discriminated against on the basis of religion in any education or training program or activity.

- Discrimination on the basis of religion may include discrimination on the basis of an individual's religion (or lack thereof), religious beliefs, religious expression, or religious practices. Religious practices may include moral or ethical beliefs as to what is right and wrong which are sincerely held with the strength of traditional religious views.⁹

- Discrimination on the basis of religion also may include discrimination on the basis of an individual's relationship with a person of a particular religion or an individual's affiliation with a group, including an employee or student organization, that is associated with religious issues or whose membership is composed largely of people of a particular religion.

- No executive agency may admit, refuse to admit, promote, refuse to promote, or otherwise favor or disfavor, a participant or prospective participant in a federally conducted education program because of his or her religion (or lack thereof), religious beliefs, religious expression, or religious practices.

- An agency may not impose, explicitly or implicitly, stricter admission or completion requirements for a particular religious group or an individual who espouses particular religious beliefs.

- Individuals involved in a federally conducted education program may not be subjected to a hostile environment in the form of religiously-based discriminatory intimidation, or pervasive or severe religious abuse, ridicule or insult, whether by instructors or fellow participants. A hostile environment is not created, however, simply by virtue of religious expression with which some participants might disagree.

Examples of prohibited conduct:

- An instructor in a Department of Justice computer training course requires a participant who is an atheist to complete five extra hours of training because that participant does not share the instructor's religious beliefs. The instructor's conduct would violate the Executive Order.

- A group of participants, attending a federally conducted training course, share a common faith. This group engages in a pattern of verbal attacks on other participants

who do not share their religious views. These attacks occur repeatedly and are both severe and pervasive, creating a hostile educational environment. The agency is aware of this situation but fails to take effective corrective action. The agency's failure to take effective corrective action would violate the Executive Order.

Reasonable Accommodation of Religious Practices

The Executive Order's prohibition on religious discrimination also includes an obligation on the part of federal agencies to provide reasonable accommodation for religious practices. If an individual notifies an executive department or agency of his or her need for a religious accommodation with respect to a federally conducted education program, the agency has an obligation to reasonably accommodate the individual's religious observances or practices.

- Reasonable accommodations for religious observances or practices are those that do not impose an undue hardship. Though an agency need not make an accommodation that will result in more than a *de minimis* burden to the agency, the cost or other hardship nevertheless must be real rather than speculative or hypothetical. An accommodation should be made unless: (1) It would create an actual cost for the agency or other participants, (2) it would cause an actual disruption in the conduct of the education program, or (3) such accommodation is otherwise barred by law.

- Individuals involved in federally conducted education programs must be permitted to wear religious clothing, jewelry, or other accessories, if wearing such attire is part of an individual's religious practice or expression, so long as the wearing of such attire does not unduly interfere with the conduct of the education program.

- Agencies should be flexible in the scheduling of education and training courses when participants request scheduling changes in order to observe religious traditions, such as the Sabbath or particular holidays, unless to do so would result in more than a *de minimis* burden.

- Agencies should attempt to honor requests for alternative work assignments when completion of a particular work assignment would contravene an individual's religious practices or beliefs.

Examples of prohibited conduct:

- The National Aeronautics and Space Administration conducts a space camp program every Saturday and Sunday morning, and participants are randomly assigned to each session. The agency refuses

to even consider a Catholic youth group's request to be placed in the Saturday morning program so that the group can participate without missing Mass. The agency's failure to even consider providing this religious accommodation would violate the Executive Order.

- The Department of Interior requires its national park service employees to wear uniforms during public instruction, and imposes sanctions for deviation from specific guidelines. A Muslim employee wishes to wear a head scarf or hijab during instruction, but her supervisor refuses to consider her request. The supervisor's refusal to consider the employee's request would violate the Executive Order.

XI. Discrimination on the Basis of Age

Federal agencies must ensure that no individual is discriminated against on the basis of age in any federally conducted education or training program or activity.

As a general matter, age may not be used as a basis upon which to condition the allocation of benefits within, or qualification for, or participation in, a federally conducted education or training program or activity. More specifically:

- Age distinctions may not be used to exclude individuals from a program or activity unless age is a bona fide qualification for participation in the program or activity, that is necessary to the achievement of a programmatic objective or necessary to the normal operation of the program or activity.

- Although agencies may, under certain circumstances, rely on age-based distinctions because it is impracticable to measure characteristics that are necessary to the achievement of an essential programmatic objective on an individualized basis, age may *not* be used as a proxy if it is not a substantially accurate measure of those characteristics.

- Age-based classifications may not be used to achieve any objective that is not essential to the achievement of a statutory objective or the normal operation of a program or activity.

Under certain circumstances, however, agencies may legitimately use age distinctions with respect to the operation of federally conducted education or training programs. For example:

- Agencies may use age-based admissions policies for education or training programs that have traditionally been age-specific.

- Agencies may use age-based admissions policies for education or training programs that must be age-limited for reasons related to health or national security.

- Agencies may rely on age when acting in accordance with laws designed

⁹ See Equal Employment Opportunity Commission "Guidelines On Discrimination Because Of Religion," 29 CFR 1605.1.

to provide special benefits or assistance to members of a particular age group, such as children or the elderly.

Examples of Prohibited Conduct:

- An executive agency conducts an education program through which it provides computer science training for high school graduates. The agency permits only individuals under the age of 30 to apply for, and participate in, the program. The agency's policy is based upon the belief that age can be used as an acceptable proxy for measuring an individual's likely long-term commitment to a career in computer science. The agency's policy would violate the Executive Order because age is not an accurate or acceptable measure of an individual's likely commitment to a long-term career in computer science.
- An executive agency operates a business development training program to train entrepreneurs starting new and novel businesses. The training program is only available to individuals under the age of 50. The agency claims that it uses this age requirement to measure characteristics, such as entrepreneurial ingenuity, that are essential to an individual's ability to start a novel business. The agency's conduct violates the Executive Order because age is not an accurate measure of entrepreneurial ingenuity—a characteristic which may be necessary to the achievement of an essential programmatic objective, but which is properly assessed on an individualized basis, such as by reviewing applicant business plans.

XII. Discrimination on the Basis of Sexual Orientation

Federal agencies must ensure that no individual is subjected to discrimination on the basis of his or her sexual orientation in any federally conducted education or training program or activity.

- "Sexual orientation" refers to heterosexuality, homosexuality, or bisexuality.
- Discrimination on the basis of sexual orientation includes discrimination on the basis of an individual's:
 - (i) Sexual orientation or perceived sexual orientation;
 - (ii) Relationship with an individual of a particular sexual orientation;
 - (iii) Affiliation with a group, including an employee or student organization, that is associated with sexual orientation issues or whose membership is composed largely of people of a particular sexual orientation.
- Federal agencies must ensure that all individuals involved in federally conducted education or training programs are treated without regard to sexual orientation.
- Federal agencies must ensure that no individual involved in a federally conducted education program is

subjected to harassment based on his or her sexual orientation. Sexual orientation harassment may include slurs, epithets, unwelcome sexual advances, jokes, cartoons, or other derogatory behaviors that target individuals on the basis of sexual orientation and that are sufficiently severe, persistent, or pervasive to create a hostile educational environment.

Examples of Prohibited Conduct:

- A teacher in a Bureau of Indian Affairs federally conducted school is discharged on the basis of her sexual orientation. The discharge would violate the Executive Order.
- A student in a federally conducted school is harassed by his fellow students as a result of his perceived sexual orientation. The harassment causes him severe emotional distress and, as a result, his grades drop and he is often absent from school. The harassment creates a hostile educational environment, and the student notifies his teachers and the school principal. The failure of his teachers and the principal to investigate his claims and/or take appropriate corrective action would violate the Executive Order.
- A guidance counselor at a Department of Defense high school for the dependent children of military personnel refuses to permit a homosexual student to attend a training session on developing a career in business. The guidance counselor advises the student to consider a career as an interior decorator or a chef because she believes these professions are among the most suitable for gay men. The guidance counselor's conduct would violate the Executive Order.
- The internship coordinator at a federal agency refuses to select a heterosexual student as a summer intern because the student is being raised by two homosexual men. The coordinator's decision would violate the Executive Order.
- A federal agency holds an annual training retreat and invites the spouses or significant others of participating employees to accompany the group. However, when a homosexual employee arrives at the retreat with his partner, the retreat coordinator refuses to allow his partner to attend. The retreat coordinator's conduct violates the Executive Order.

XIII. Discrimination on the Basis of Status as a Parent

Federal agencies must ensure that no individual is discriminated against on the basis of his or her status as a parent in any federally conducted education or training program or activity.

- "Status as a Parent" refers to the status of any individual who, with respect to an individual who is under the age of 18 or who is 18 or older but is incapable of self-care because of a physical or mental disability, is:
 - (i) A biological parent;
 - (ii) An adoptive parent;
 - (iii) A foster parent;
 - (iv) A stepparent;

- (v) A custodian of a legal ward;
- (vi) In loco parentis over such an individual; or
- (vii) Actively seeking legal custody or adoption of such an individual.
- The prohibition on discrimination based on status as a parent is designed to protect both men and women who become fathers and mothers through childbirth, foster parentage, adoption, legal guardianship, or marriage.
- Federal agencies may not rely on an individual's status as a parent in determining whether a person satisfies any policy or criterion for selection or admission to a federally conducted education program.
- Federal agencies may not rely on an individual's status as a parent in recruiting and/or selecting participants and instructors for federally conducted education programs.
- An individual may not be excluded from, denied the benefits of, or subjected to discrimination in any federally conducted education program as result of his or her perceived parental responsibilities.

Examples of prohibited conduct:

- The Admissions Committee for a summer training program operated by the Department of Health and Human Services refuses to admit mothers of young children because the committee members believe mothers should stay home and take care of their children. The Admissions Committee's conduct violates the Executive Order.
- The head of the French Department at the Department of Agriculture's Graduate Language Program twice passed over a single father with custody of two young children for promotion to a Senior Instructor position because she believed that the father would not be interested in a position with evening and weekend obligations due to his parental responsibilities. The failure to consider the father for promotion based upon his status as a parent violates the Executive Order.
- The Nuclear Regulatory Commission does not recruit graduate students with children for their Graduate Fellowship Program because the agency believes that the Graduate Fellowship Program is too rigorous for students with parental responsibilities. This recruitment practice constitutes discrimination on the basis of status as a parent and violates the Executive Order.
- An instructor for the VA Home Loan Training Program at the Department of Veterans Affairs is told by his supervisor that, if he proceeds to become a foster parent, he will not be eligible for a promotion to Senior Instructor because the new position will require too much travel. The instructor becomes a foster parent and is passed over for promotion as a result. The failure to consider the instructor for promotion based on his status as a foster parent violates the Executive Order.
- The Department of Justice is conducting a day-long training seminar for its employees and is planning to offer the course on three consecutive dates. Employees are assigned to

dates alphabetically on the basis of their last names. One of the employees requests to take the training course on a different date as she is scheduled to attend a parent-teacher conference at her child's school. Although the training coordinator has honored other employee requests to switch dates, he refuses to grant the mother's request because he believes that she should prioritize work over her parental responsibilities. The training coordinator's conduct violates the Executive Order.

XIV. Administrative Enforcement

Section 4 provides for administrative enforcement of the antidiscrimination provisions of Executive Order 13160. General guidelines for administrative enforcement are discussed below. Before turning to these guidelines, however, it is important to address three preliminary matters.

First, Executive Order 13160 covers all individuals involved in federally conducted education and training programs. Although many such individuals are likely to be members of the general public, rather than federal employees, there will, of course, be many federal employees covered by the Executive Order by virtue of their employment-related participation in federally conducted educational programs. Such individuals, however, are already protected under a number of existing Equal Employment Opportunity (EEO) laws, regulations, and Executive Orders, including Title VII of the Civil Rights Act of 1964 (Title VII) (race, color, religion, sex, and national origin), sections 501 and 504 of the Rehabilitation Act (Sections 501 and 504) (disability), the Age Discrimination in Employment Act (ADEA) (age), the Equal Employment Opportunity Commission's Federal Sector Equal Employment Opportunity Regulations, 29 CFR 1614, and Executive Order 11478, as amended, (race, color, religion, sex, national origin, disability, age, sexual orientation, and status as a parent). Therefore, in order to promote the consistent and effective enforcement of equal employment opportunity mandates for all federal employees, and to preserve the integrity of statutorily protected equal employment opportunity rights, complaints filed under both this Executive Order and existing equal employment opportunity laws should be consolidated and adjudicated under the relevant equal employment opportunity statutes (*i.e.*, Title VII, sections 501/504, and/or the ADEA).¹⁰ This approach will not only

provide a streamlined procedure for resolving complaints, but will also protect an aggrieved employee's opportunity to recover any monetary damages that are available under the EEO statutes but not under this Executive Order.

As a practical matter, this means that a federal employee seeking to file a complaint under this Executive Order must indicate whether the complaint is related to his or her employment¹¹ and, if so, whether he or she has filed any other EEO claims arising out of the same circumstances. If so, the complaint filed under this Executive Order should be transferred to the office handling the related claim and the enforcement procedures set forth below will be deemed inapplicable. If a federal employee chooses to proceed solely under this Executive Order, the enforcement procedures set forth below will govern the disposition of his or her complaint.¹²

If a federal employee indicates that he or she has not filed any other EEO claims at the time of filing a complaint under this Executive Order, the employee may nevertheless subsequently elect to file a related claim under Title VII, section 504, the ADEA, or Executive Order 11478, provided the employee follows the appropriate EEO filing procedures and contacts an EEO counselor and files a complaint within the relevant statutory time limit. In such

depend upon whether the federal agency conducting the education program has an existing complaint process for handling claims filed under Executive Order 11478. If a federal agency has complaint procedures for claims filed under Executive Order 11478, claims filed under both Executive Order 13160 and Executive Order 11478 may be consolidated and adjudicated under Executive Order 11478. If a federal agency does not have a complaint procedure for claims arising under Executive Order 11478, and a complaint alleges a violation of Executive Order 13160 and Executive Order 11478 (but does not raise any statutory claims), the complaint should be processed in accordance with the procedures for Executive Order 13160 set forth below. If a complainant raises claims under Executive Order 13160, Executive Order 11478, and an EEO statute, the complaint should be consolidated and adjudicated under the relevant EEO processes.

¹¹ Federal employees participating as members of the general public in a federally conducted education program will, of course, be subject to the same enforcement procedures as outside participants.

¹² For instance, the enforcement procedures set forth in this Guidance Document may govern the resolution of a complaint filed by an employee involved in a training program conducted by a federal agency other than the federal agency for whom the employee works. For example, if an employee of the Department of Justice participates in a training course conducted by the Department of Education, the employee may choose to file an Executive Order 13160 claim directly against the Department of Education if he or she chooses not to, or is not able to, invoke existing EEO laws and regulations at the Department of Justice.

cases, the employee should notify the investigating office that he or she has decided to contact an EEO counselor and file a related EEO claim so that the Executive Order 13160 complaint may be transferred to the appropriate office as provided for above. Federal agencies must ensure that all federal employees filing Executive Order 13160 complaints have adequate notice that they should advise the investigating office handling the Executive Order 13160 complaint if they decide to pursue their claims through the EEO process.

Second, the enforcement procedures set forth below are designed solely to provide general guidance. Under Section 5–502 of the Executive Order, all executive departments and agencies must establish procedures to receive and review complaints within 90 days of January 18, 2001. As all executive departments and agencies already have procedures in place for adjudicating claims regarding federally conducted programs under Section 504 of the Rehabilitation Act, it is recommended that agencies consider utilizing the same investigative and adjudicative offices for handling complaints under Executive Order 13160. However, agencies are of course free to develop different procedures and to supplement or modify the following enforcement procedures as appropriate.

Third, after developing individual procedures to receive and review complaints, each executive department and agency should prepare some sort of outreach materials to ensure that all individuals involved in federally conducted education and training programs are aware of Executive Order 13160 and are advised as to the proper procedures for filing complaints. These outreach materials should provide individuals with specific information, including, but not limited to, the general antidiscrimination mandates of Executive Order 13160, details regarding how to obtain copies of this Guidance Document, timelines for filing complaints, the name(s) and address(es) of the office(s) to which such complaints should be sent, and specific procedures established by the relevant federal agency regarding the processing of complaints.

All executive departments and agencies should further ensure that these outreach materials provide clear instructions to federal employees regarding their respective rights under Executive Order 13160 and Title VII, sections 501/504, the ADEA, and Executive Order 11478. Specifically, these outreach materials should clearly state the differing timelines for filing claims under the Executive Order and

¹⁰ In cases where a complaint raises claims under both Executive Order 13160 and Executive Order 11478 (but does not raise statutory claims), the appropriate complaint processing procedures will

these three statutes, as well as the availability (or unavailability) of different remedies. As discussed above, federal employees should also be clearly advised that claims filed under both the Executive Order and an equal employment opportunity statute will be adjudicated only under the relevant statute (or under Executive Order 11478, if an agency has existing procedures for receiving such complaints).

The development of these outreach materials should ensure that all individuals receive adequate notice of their rights under Executive Order 13160. These materials will also serve to ensure that individuals participating in federally conducted education and training programs are properly advised as to the appropriate procedures for filing complaints. Finally, these materials should assist in clarifying questions federal employees may have regarding the ramifications of filing a complaint under Executive Order 13160 versus filing a complaint under Title VII, sections 501/504, the ADEA, or Executive Order 11478.

A. Definitions

For purposes of this Guidance Document, the term—

Appropriate agency official means the officer or officers within an executive department or agency designated to determine what, if any, disciplinary action, remedial action, or corrective action should be taken as a result of a violation of the Executive Order.

Complete complaint means a written statement that contains the complainant's name, address, and phone number, describes the agency's alleged discriminatory action in sufficient detail to inform the agency of the nature and approximate date of the alleged violation, and identifies whether the complainant is an employee of the agency alleged to have committed the discrimination and whether the complainant's involvement in the relevant education or training program was related to his or her employment. A complete complaint must be signed by the complainant or by someone authorized by the complainant to sign on his or her behalf.

Investigating office means the office or offices within an executive department or agency that are designated to investigate complaints regarding violations of this Order or its implementing rules, regulations, policies, or guidance.

Respondent means the organizational unit in which the alleged discrimination occurred.

B. Filing a Complaint

Any individual who believes himself or herself to be aggrieved by a violation of Executive Order 13160 or its implementing regulations, rules, policies or guidance, including this Guidance Document, may, personally or through a representative, file a written complaint with the agency that he or she believes is in violation of this Order or any of its implementing regulations, rules, policies, or guidance. All written complaints should be filed with the appropriate Investigating Office as designated by the relevant agency.

1. Complete Complaints

In order to be accepted by an agency's Investigating Office, all written complaints must be "complete complaints." As defined above, a complete complaint must include the name, address, and phone number of the complainant, must identify whether the complainant is a federal employee and whether the complainant's involvement in the relevant education program was related to his or her employment, and must describe the alleged discriminatory conduct in sufficient detail to inform the agency as to the nature and approximate date of the alleged violation. A complete complaint also must be signed by the complainant or by someone authorized by the complainant to sign on his or her behalf.

2. Time Limits for Filing Complaints

As a general matter, all complaints must be filed within 180 days of the alleged discrimination. However, the appropriate Investigating Office may extend this time limit:

(a) If the complainant can demonstrate that he or she had no notice of the time limit and was not otherwise aware of it; or

(b) If the complainant can demonstrate that he or she was prevented by circumstances beyond his or her control from submitting the complaint in a timely fashion; or

(c) For other reasons, or under other circumstances, considered sufficient by the agency.

For purposes of determining when a complaint is timely filed, a complaint mailed to the agency will be deemed filed on the date that it is postmarked. Any other complaint will be deemed filed on the date that it is received by the appropriate Investigative Office, by any agency supervisor, or by any other agency employee designated by the agency to receive such complaints.

If a complaint is filed within 180 days of the alleged discrimination, but the agency subsequently determines that the complaint is not a "complete complaint," the complainant's claims

shall nevertheless be deemed filed in a timely manner, and the complainant shall be given an appropriate opportunity to amend his or her original complaint. See Section C below for further information regarding the process for requesting additional information from a complainant in order to supplement an incomplete complaint.

3. Class Complaints

Any individual who believes that any specific class of persons has been subjected to discrimination prohibited by Executive Order 13160 or any of its implementing regulations, rules, policies, or guidance, including this Guidance Document, may file a class complaint with the appropriate Investigative Office, provided that individual is either a member of the allegedly aggrieved class of persons or a representative of a member of the allegedly aggrieved class of persons. Each executive department or agency should develop specific procedures to deal with the resolution of class complaints.

4. Legal Representation

Any individual filing a complaint under Executive Order 13160 or any of its implementing regulations, rules, policies, or guidance may be represented and assisted in all stages of these proceedings by an attorney or representative of his or her own choosing. An individual has a responsibility to promptly inform the agency if legal counsel is retained. In addition, an individual has an obligation to notify the appropriate Investigating Office if he or she wishes to have any other representative included in these proceedings. It is the responsibility of the complainant to provide the appropriate Investigating Office with the name, address, and phone number of any attorney or other representative. In addition, it is an ongoing responsibility of the complainant to advise the appropriate Investigating Office as to any changes with respect to the status of his or her legal and/or non-legal representation in any proceeding under this Executive Order or any of its implementing regulations, rules, policies, or guidance. Each federal agency has a duty to ensure that all complainants have adequate notice of these obligations.

C. Initial Review by the Investigating Office

Upon receipt of a complaint filed under this Executive Order, the investigating office must assess the complaint and determine how to proceed. The investigating office should

specifically consider whether the complaint is a complete complaint, whether it was filed in a timely manner, and, in the case of a federal employee, whether the complaint should be consolidated with another complaint and transferred, if necessary.

After reviewing the complaint, the investigating office may need to obtain additional information from the complainant. For example, the investigating office may ask the complainant to supply additional information if the complaint is not complete. Additional information also may be required by the investigating office to determine whether to waive the time limits for filing a complaint or whether to consolidate and transfer a federal employee's claim. If a complainant fails to provide additional information, or otherwise respond to the investigating office's request, within 30 days, without good cause shown, the investigating office may dismiss the complaint.

In certain instances, the investigating office may determine that a complaint should be dismissed because the alleged discriminatory conduct did not occur in a federally conducted education or training program. In such cases, the investigating office should issue a brief written determination setting forth the basis for the dismissal and advising the complainant of his or her right to appeal this decision to the Attorney General for a final determination regarding coverage pursuant to Section 2-203 of the Executive Order. Responsibility for issuing such final determinations regarding coverage is delegated to the Assistant Attorney General for Civil Rights, who shall conduct, handle, or supervise the performance of this function.

D. Informal Resolution or Formal Investigation

Before undertaking a formal investigation, agencies are strongly encouraged to pursue resolution of all complaints filed under this Executive Order through efforts to achieve voluntary compliance. Toward this end, agencies should make use of alternative dispute resolution techniques whenever appropriate.

If an informal resolution of a complaint between a complainant and respondent cannot be reached within a reasonable period of time (generally 45 days), or if efforts to achieve an informal resolution appear to become futile, the investigating office should initiate a formal investigation. However, efforts to achieve voluntary compliance should be undertaken whenever possible and should continue throughout the course

of a formal investigation if and when appropriate opportunities arise.

If a decision is made to initiate a formal investigation, the investigating office must notify the complainant in writing. The investigating office should attempt to complete the investigation within 180 days of the agency's receipt of a complete complaint. The investigation should include a thorough review of the circumstances under which the alleged discrimination occurred and any other circumstances which may constitute, or appear to constitute, discrimination against the complainant.

A formal investigation may require the cooperation and participation of other agency employees. Employees who are required by the investigating office to participate in any investigation concerning violations of this Executive Order will do so as part of their official duties and during the course of regular working hours.

Upon completion of a formal investigation, the investigating office must prepare a written report setting forth the results of the investigation. If a determination is made that any agency employee has not complied with the Executive Order or any of its implementing rules, regulations, policies, or guidance, Section 4-402 requires the investigating office to complete a report and refer a copy of the report and any relevant findings or supporting evidence to the appropriate agency official. The investigating office also may make recommendations for any corrective and/or remedial action. A copy of the investigative report should be sent to both the complainant and the respondent, including the employee who is the subject of the report.

If a determination is made that there has been no violation of the Executive Order or any of its implementing rules, regulations, policies, or guidance, a copy of the report also shall be sent to both the complainant and the respondent. In such cases, although no action is required, a copy of the report should nevertheless be sent to the appropriate agency official.

E. Referral to the Appropriate Agency Official

Upon receipt of a report from an investigating office that indicates there has been a violation of the Executive Order or its implementing rules, regulations, policies, or guidance, the appropriate agency official shall review the report and all relevant supporting material in order to determine what, if any, disciplinary action is appropriate. Any action taken to discipline an employee, including removal, must be

taken in compliance with otherwise applicable procedures, including the Civil Service Reform Act of 1978, Public Law No. 95-454, 92 Stat. 1111.

The appropriate agency official also shall review the report of the investigating office in order to determine whether any corrective or remedial action should be initiated. Pursuant to Section 4-402(b), however, nothing in the Executive Order authorizes monetary relief to the complainant as a form of remedial or corrective action. If the appropriate agency official does determine that the complainant is entitled to some form of remedial or corrective action, the appropriate agency official shall so notify the complainant in writing. The appropriate agency official also shall take all necessary steps to ensure that the corrective or remedial action ordered is implemented. If a determination is made that the complainant is not entitled to any corrective or remedial action, the appropriate agency official shall notify the complainant of this decision and the reasons for this determination.

Although agencies are free to designate any employee as the appropriate agency official, agencies should bear in mind that section 5-503 provides that the head of each executive department or agency shall be responsible for ensuring compliance with the Executive Order. As such, agencies should consider designating a senior level official for this important post.

XV. Remedies

As discussed above, in addition to making final decisions regarding disciplinary measures, the appropriate agency official shall have the authority to order corrective and/or remedial action, where appropriate. As a general matter, if there has been a violation of the Executive Order, the complainant shall be entitled to all appropriate, non-monetary, equitable relief. The appropriate agency official should attempt to ensure that the aggrieved individual ends up in the same position he or she would have occupied absent discrimination, or a substantially equivalent position. In the context of violations of this Executive Order, specific remedies are likely to include placement in the next available education or training program of a comparable nature; the development of an individualized training opportunity; the cancellation of an unwarranted personnel action or the expungement of adverse materials from agency records; the awarding of a diploma, other certificate, or specific grade; and the

provision of reasonable accommodations.

Federal agencies must ensure that appropriate agency officials are accorded sufficient authority to provide all appropriate forms of relief. Complainants should be aware, though, that Section 8 of the Executive Order specifically provides that the Order “is not intended, and should not be construed, to create any right or benefit, substantive or procedural, enforceable at law by a party against the United States, its agencies, its officers, or its employees.” Section 8 further provides, however, that the Order is not intended “to preclude judicial review of final decisions in accordance with the Administrative Procedures Act, 5 U.S.C. 701, *et seq.*”

XVI. Reporting Requirements

Section 6 of the Executive Order establishes reporting requirements for federal agencies. For the first three years following issuance of this Executive

Order, all federal agencies shall file annual reports with the Attorney General that summarize the number, nature, and disposition of complaints filed under the Executive Order. Such reports are to be submitted to the Assistant Attorney General for Civil Rights within 90 days of the end of the preceding year’s activities. Subsequent reports are to be submitted every three years and within 90 days of the end of each three year period.

XVII. Conclusion

As discussed above, this Guidance Document is intended to provide executive departments and agencies with a basic framework for ensuring compliance with Executive Order 13160. Pursuant to Section 5–502 of the Executive Order, each agency has 90 days from January 18, 2001 to establish procedures for receiving and addressing complaints. Each agency also shall take “all necessary steps” to effectuate any

subsequent rules, regulations, policies, or guidance issued by the Attorney General or the Assistant Attorney General for Civil Rights in connection with this Executive Order within 90 days of issuance.

The mandate of Executive Order 13160 is clear: to ensure that all individuals, on the basis of race, sex, color, national origin, disability, religion, age, sexual orientation, and status as a parent, have an equal opportunity to participate in, enjoy the benefits of, and be free from discrimination in, federally conducted education and training programs. Federal agencies should strive to achieve these objectives to the fullest extent possible and are encouraged to use this Guidance Document as a starting point for achieving these important goals.

Part XV

**Department of
Justice**

**Guidance Concerning Redistricting and
Retrogression Under Section 5 of the
Voting Rights Act, 42 U.S.C. 1973c; Notice**

DEPARTMENT OF JUSTICE

Office of the Assistant Attorney General, Civil Rights Division; Guidance Concerning Redistricting and Retrogression Under Section 5 of the Voting Rights Act, 42 U.S.C. 1973c

AGENCY: Department of Justice.

ACTION: Notice.

SUMMARY: The Attorney General has delegated responsibility and authority for determinations under Section 5 of the Voting Rights Act to the Assistant Attorney General, Civil Rights Division, who finds that, in view of recent judicial decisions, it is appropriate to issue guidance concerning the review of redistricting plans submitted to the Attorney General for preclearance pursuant to Section 5 of the Voting Rights Act.

FOR FURTHER INFORMATION CONTACT: Joseph D. Rich, Acting Chief, Voting Section, Civil Rights Division, United States Department of Justice, Washington, D.C. 20530, (202) 514-6018.

SUPPLEMENTARY INFORMATION: Section 5 of the Voting Rights Act of 1965, 42 U.S.C. 1973c, requires jurisdictions covered by the Act's special provisions to obtain a determination from either the Attorney General or the United States District Court for the District of Columbia that any change affecting voting, which they seek to enforce, does not have a discriminatory purpose and will not have a discriminatory effect.

Beginning in April 2001, these jurisdictions will begin to seek preclearance of redistricting plans based on the 2000 Census. Based on past experience, the overwhelming majority of the covered jurisdiction will submit their redistricting plan to the Attorney General. As part of the Department's preparation for the upcoming redistricting cycle, Departmental representatives conducted a nation-wide outreach campaign to inform as many of the interested parties as possible of the manner in which it will analyze redistricting plans under section 5. Many of the contacts, both governmental entities and interested private citizens and groups, expressed the view that, in view of recent judicial decisions, it would be helpful for the Department to issue some general guidance in this area. These requests coincided with the Attorney General's view that, by identifying, in general terms, the Department's analytical approach, such guidance would serve a useful law enforcement purpose. This guidance is not legally binding; rather, it is intended only to provide assistance

to entities and persons affected by the preclearance requirements of section 5. Approved OMB No. 1190-001 (expires December 31, 2001).

Guidance Concerning Redistricting and Retrogression Under Section 5 of the Voting Rights Act, as Amended, 42 U.S.C. 1973c

Following release of the 2000 Census data, the Department of Justice expects to receive several thousand submissions of redistricting plans pursuant to the preclearance provisions in Section 5 of the Voting Rights Act, 42 U.S.C. 1973c. The Civil Rights Division has received numerous requests for guidance concerning the procedures and standards that will be applied during review of these redistricting plans. Many of the requests relate to the role of the 2000 Census data in the Section 5 review process and to the Supreme Court's decisions in *Shaw v. Reno*, 509 U.S. 630 (1993), and later related cases.

The "Procedures for the Administration of Section 5 of the Voting Rights Act," 28 CFR Part 51, provide detailed information about the Section 5 review process. Copies of these Procedures are available upon request and through the Voting Section Web Site (<http://www.usdoj.gov/crt/voting>). This document is meant to provide additional guidance with regard to current issues of interest. Citations to judicial decisions are provided to assist the reader but are not intended to be comprehensive. The following discussion provides supplemental guidance concerning the following topics:

- The scope of Section 5 review;
- The Section 5 "benchmark";
- how the benchmark plan is compared with the proposed plan;
- The considerations leading to the decision to interpose a Section 5 retrogression objection;
- racially discriminatory purpose under Section 5; and
- The use of 2000 Census data and other information during Section 5 review.

The Scope of Section 5

The Supreme Court has held that under Section 5, a covered jurisdiction has the burden of establishing that a proposed redistricting plan does not have the purpose or effect of worsening the position of minority voters when compared to that jurisdiction's "benchmark" plan. *Reno v. Bossier Parish School Board*, 120 S. Ct. 866, 871-72 (2000). If the jurisdiction fails to show the absence of such purpose or effect, then Section 5 preclearance will be denied by the Department of Justice

or the District Court for the District of Columbia.

The decision in the *Bossier Parish School Board* case addressed the scope of Section 5 review. Redistricting plans that are not retrogressive in purpose or effect must be precleared, even if they violate other provisions of the Voting Rights Act or the Constitution. The Department of Justice may not deny Section 5 preclearance on the grounds that a redistricting plan violates the one-person one-vote principle, on the grounds that it violates *Shaw v. Reno*, or on the grounds that it violates Section 2 of the Voting Rights Act. Therefore, jurisdictions should not regard Section 5 preclearance of a redistricting plan as preventing subsequent legal challenges to that plan by the Department of Justice. In addition, private plaintiffs may initiate litigation, claiming either constitutional or statutory violations.

Benchmark Plans

The last legally enforceable redistricting plan in force for a Section 5 covered jurisdiction is the "benchmark" against which a new plan is compared. See 28 CFR 51.54(b)(1). Generally, the most recent plan to have received Section 5 preclearance (or have been drawn by a federal court) is the last legally enforceable redistricting plan for Section 5 purposes. When a jurisdiction has received Section 5 preclearance for a new redistricting plan, or a federal court has drawn a new plan and ordered it into effect, that plan replaces the last legally enforceable plan as the Section 5 benchmark. See *McDaniel v. Sanchez*, 452 U.S. 130 (1981); *Texas v. United States*, 785 F. Supp. 201 (D.D.C. 1992); *Mississippi v. Smith*, 541 F. Supp. 1329, 1333 (D.D.C. 1982), appeal dismissed, 461 U.S. 912 (1983).

In *Abrams v. Johnson*, 521 U.S. 74 (1997), the Supreme Court held that a redistricting plan found to be unconstitutional under the principles of *Shaw v. Reno* and its progeny could not serve as the Section 5 benchmark. Therefore, a redistricting plan drawn to replace a plan found by a federal court to violate *Shaw v. Reno* will be compared with the last legally enforceable plan predating the unconstitutional plan. Absent such a finding of unconstitutionality under *Shaw* by a federal court, the last legally enforceable plan will serve as the benchmark for Section 5 review. Therefore, a jurisdiction is not required to address the constitutionality of its benchmark plan when submitting a redistricting plan and the question of whether the benchmark plan is constitutional will not be considered

during the Department's Section 5 review.

Comparison of Plans

When the Department of Justice receives a Section 5 redistricting submission, several basic steps are taken to ensure a complete review. After the "benchmark" districting plan is identified, the staff inputs the boundaries of the benchmark and proposed plans into the Civil Rights Division's geographic information system. Then, using the most recent decennial census data, population data are calculated for each of the districts in the benchmark and proposed plans.

Division staff then analyzes the proposed plan to determine whether it will reduce minority voting strength when compared to the benchmark plan, considering all of the relevant, available information. Although comparison of the census population of districts in the benchmark and proposed plans is the important starting point of any retrogression analysis, our review and analysis will be greatly facilitated by inclusion of additional demographic and election data in the submission. See 28 CFR 51.28(a). For example, census population data may not reflect significant differences in group voting behavior.¹ Therefore, election history and voting patterns within the jurisdiction, voter registration and turnout information, and other similar information are very important to an assessment of the actual effect of a redistricting plan. This information is used to compare minority voting strength in the benchmark plan as a whole with minority voting strength in the proposed plan as a whole.

The Section 5 Procedures identify a number of factors that are considered in deciding whether or not a redistricting plan has a retrogressive purpose or effect. These factors include whether minority voting strength is reduced by the proposed redistricting; whether minority concentrations are fragmented among different districts; whether minorities are overconcentrated in one or more districts; whether available alternative plans satisfying the jurisdiction's legitimate governmental

interests were considered; whether the proposed plan departs from objective redistricting criteria set by the submitting jurisdiction, ignores other relevant factors such as compactness and contiguity, or displays a configuration that inexplicably disregards available natural or artificial boundaries; and, whether the plan is inconsistent with the jurisdiction's stated redistricting standards. See 28 CFR 51.59; see also 28 CFR 51.56–51.58.

A proposed plan is retrogressive under the Section 5 "effect" prong if its net effect would be to reduce minority voters' "effective exercise of the electoral franchise" when compared to the benchmark plan. See *Beer v. United States*, 425 U.S. 130, 141 (1976). The effective exercise of the electoral franchise usually is assessed in redistricting submissions in terms of the opportunity for minority voters to elect candidates of their choice. The presence of racially polarized voting is an important factor considered by the Department of Justice in assessing minority voting strength. A proposed redistricting plan ordinarily will occasion an objection by the Department of Justice if the plan reduces minority voting strength relative to the benchmark plan and a fairly-drawn alternative plan could ameliorate or prevent that retrogression.

Alternatives to Retrogressive Plans

If a retrogressive redistricting plan is submitted, the jurisdiction seeking preclearance of such a plan bears the burden of demonstrating that a less-retrogressive plan cannot reasonably be drawn. In analyzing this issue, the Department takes into account constitutional principles as discussed below, the residential segregation and distribution of the minority population within the jurisdiction, demographic changes since the previous redistricting, the physical geography of the jurisdiction, the jurisdiction's historical redistricting practices, political boundaries such as cities and counties, and state redistricting requirements.

In considering whether less-retrogressive alternative plans are available, the Department of Justice looks to plans that were actually considered or drawn by the submitting jurisdiction, as well as alternative plans presented or made known to the submitting jurisdiction by interested citizens or others. In addition, the Department may develop illustrative alternative plans for use in its analysis, taking into consideration the jurisdiction's redistricting principles. If it is determined that a reasonable alternative plan exists that is non-

retrogressive or less retrogressive than the submitted plan, the Department will interpose an objection.

Preventing retrogression under Section 5 does not require jurisdictions to violate the one-person one-vote principle. See 52 FR 488 (Jan. 6, 1987). Similarly, preventing retrogression under Section 5 does not require jurisdictions to violate *Shaw v. Reno* and related cases.

The one-person one-vote issue arises most commonly where substantial demographic changes have occurred in some, but not all, parts of a jurisdiction. Generally, a plan for congressional redistricting that would require a greater overall population deviation than the submitted plan is not considered a reasonable alternative by the Department. For state legislative and local redistricting, a plan that would require overall population deviations greater than 10 percent is not considered a reasonable alternative.

In assessing whether a less retrogressive alternative plan can reasonably be drawn, the geographic compactness of a jurisdiction's minority population will be a factor in the Department's analysis. This analysis will include a review of the submitting jurisdiction's historical redistricting practices and district configurations to determine whether the alternative plan would (a) abandon those practices and (b) require highly unusual features to link together widely separated minority concentrations.

At the same time, compliance with Section 5 of the Voting Rights Act may require the jurisdiction to depart from strict adherence to certain of its redistricting criteria. For example, criteria which require the jurisdiction to make the least change to existing district boundaries, follow county, city, or precinct boundaries, protect incumbents, preserve partisan balance, or in some cases, require a certain level of compactness of district boundaries may need to give way to some degree to avoid retrogression. In evaluating alternative plans, the Department of Justice relies upon plans that make the least departure from a jurisdiction's stated redistricting criteria needed to prevent retrogression.

Prohibited Purpose

In those instances in which a plan is found to have a retrogressive effect, as well as in those cases in which a proposed plan is alleged to have a retrogressive effect but a functional analysis does not yield clear conclusions about the plan's effect, the Department of Justice will closely examine the process by which the plan

¹ For example, within a particular jurisdiction there may be large differences between the rates of turnout among minority populations in different areas. Thus, a redistricting plan may result in a significant, objectionable reduction of effective minority voting strength if it changes district boundaries to substitute poorly-participating minority populations (for example, migrant worker housing or institutional populations) for active minority voters, even though the minority percentages for the benchmark and proposed plans are similar when measured by Census population data.

was adopted to ascertain whether the plan was intended to reduce minority voting strength. This examination may include consideration of whether there is a purpose to retrogress in the future even though there is no retrogression at the time of the submission. If the jurisdiction has not provided sufficient evidence to demonstrate that the plan was not intended to reduce minority voting strength, either now or in the future, the proposed redistricting plan is subject to a Section 5 objection.

The 2000 Census

The most current population data are used to measure both the benchmark plan and the proposed redistricting plan. See 28 CFR 51.54(b)(2) (Department of Justice considers "the conditions existing at the time of the submission."); *City of Rome v. United States*, 446 U.S. 156, 186 (1980) ("most current available population data" to be used for measuring effect of annexations); *Reno v. Bossier Parish School Board*, 120 S. Ct. at 874 ("In § 5 preclearance proceedings * * * the baseline is the status quo that is proposed to be changed: If the change

'abridges the right to vote' relative to the status quo, preclearance is denied * * *').

For redistricting after the 2000 Census, the Department of Justice will, consistent with past practice, evaluate redistricting submissions using the 2000 Census population data released by the Bureau of the Census for redistricting pursuant to Public Law 94-171, 13 U.S.C. 141(c). Thus, our analysis of the effect of proposed redistricting plans includes a review and assessment of the Public Law 94-171 population data, even if those data are not included in the submission or were not used by the jurisdiction in drawing the plan. The failure to use the Public Law 94-171 population data in redistricting does not, by itself, constitute a reason for denial of preclearance. However, unless other population data can be shown to be more accurate and reliable than the Public Law 94-171 data, the Department of Justice will consider the Public Law 94-171 data to measure the total population and voting age population within a jurisdiction for purposes of its Section 5 analysis.

The 2000 Census Public Law 94-171 data for the first time will include counts of persons who have identified themselves as members of more than one racial category. This decision reflects the October 30, 1997 decision by the Office of Management and Budget [OMB] to incorporate multiple-race reporting into the federal statistical system. See 62 FR 58782-58790. On March 9, 2000, OMB issued Bulletin No. 00-02 addressing "Guidance on Aggregation and Allocation of Data on Race for Use in Civil Rights Enforcement." Part II of that Bulletin describes how such responses will be allocated for use in civil rights monitoring and enforcement.

For voting rights enforcement purposes, the Department of Justice will be guided by Part II of the Bulletin in its use of Census data. The following is an example, based on the data from the 1998 Dress Rehearsal Census in Columbia, South Carolina, of how such data will be allocated by the Department when analyzing redistricting submissions.

Total population	662,140
Non-Hispanic	649,413 (98.1%)
White	374,291 (56.5%)
Black or African American	262,384 (39.6%)
Asian	6,161 (0.9%)
American Indian/Alaska Native	2,995 (0.5%)
Native Hawaiian or Other Pacific Islander	375 (0.0%)
Some other race	882 (0.1%)
Other Multiple-Race (where more than one minority race is listed)	2,330 (0.4%)
Hispanic	12,727 (1.9%)

Pursuant to Part II of OMB Bulletin 00-02, any multiple-race response that included white and one of the five other race categories was allocated to the minority race listed in the response. Thus, the numbers above for Black/African American, Asian, American Indian/Alaska Native, Native Hawaiian or Other Pacific Islander and Some other race reflect the total of the single race responses and the multiple-race responses in which the minority race and white race were listed. For example, for the Black/African American category, there were 261,142 single race responses and 1,242 multiple-race responses in which the races listed were White and Black/African American. This adds up to the total calculated above of 262,384.

The Other Multiple-Race category is comprised of all multiple-race responses where there is more than one minority race listed. The number above (2,330) reflects the total number of responses of

forty two such categories in the Columbia data where at least one response was indicated. In our analysis, we will examine this multiple-race data and if it appears that any one of these categories has significant numbers of responses (for example, if the Black/African American and American Indian/Alaska Native category, alone, indicates a significant number of responses), those responses will be allocated alternatively to each of the component single-race categories for analysis, as indicated in Part II of the OMB Bulletin. It is important to note that current research indicates that multiple-race responses are expected to be small. This is especially true with respect to multiple-race categories with two or more minority races. For example, in the Columbia data, the largest such groups are only 0.1 percent (American Indian/Alaska Native and Black/African American; and Asian and Black/African American). In light of

this, the impact of such multiple-race responses on the Department of Justice's analysis of census data pursuant to its responsibilities under the Voting Rights Act is expected to be minimal.

As in the past, the Department will analyze Hispanic voters as a separate group for purposes of enforcement of the Voting Rights Act. If there are significant numbers of responses which report Hispanics and one or more minority races (for example, Hispanics who list their race as Black/African-American), those responses will be allocated alternatively to the Hispanic category and the minority race category.

Dated: January 11, 2001.

Bill Lann Lee,

Assistant Attorney General, Civil Rights Division.

Presidential Documents

Title 3—

Proclamation 7390 of January 12, 2001

The President

Martin Luther King, Jr., Federal Holiday, 2001

By the President of the United States of America

A Proclamation

Seventy-two years ago, Martin Luther King, Jr., was born into a sharply divided Nation, a place where the color of a child's skin too often determined that child's destiny. America was a place where segregation and discrimination put limits on a black child's dreams, opportunities, and future.

Dr. King led America to a better place. With eloquence, he articulated the struggles and hopes of generations of African Americans. With the power of his leadership, he rallied Americans of every race and creed to join together in the march for justice. With courage, conviction, and faith in God, he sought to make real in everyday practice—in schools, in the workplace, in public accommodations, and in the hearts and minds of his fellow citizens—the civil rights victories that had been won in the courts.

Although his life was cruelly cut short before his mission was complete, he helped put our Nation firmly on the right path, where the ideals of liberty, equality, brotherhood, and justice are not merely words on a page, but values honored by all. "Our freedom was not won a century ago," he said in 1968, "it is not won today; but some small part of it is in our hands, and we are marching no longer by ones and twos but in legions of thousands, convinced now it cannot be denied by any human force."

It is up to each of us to continue that march. The gallant freedom riders and freedom fighters of the civil rights era are growing older, and many, like Martin Luther King, Jr., are no longer among us. But their work must go on. There are still too many in our Nation who do not share equally in America's prosperity; minority unemployment and poverty rates, while decreasing, are still far above the national average; and the technical skills and resources needed for success in the global economy are still out of reach for hundreds of thousands of young Americans growing up in disadvantaged communities.

I encourage my fellow Americans to use this holiday, dedicated to the memory of Dr. Martin Luther King, Jr., and to his spirit of service, not as a day off, but rather as a day to make a difference in the lives of others—an opportunity to recognize where we have fallen short, to reach out to those who have been left behind, and to remove the barriers that keep us from becoming the promised land that Dr. King envisioned.

NOW, THEREFORE, I, WILLIAM J. CLINTON, President of the United States of America, by virtue of the authority vested in me by the Constitution and laws of the United States, do hereby proclaim Monday, January 15, 2001, as the Martin Luther King, Jr., Federal Holiday. I call upon all Americans to observe this occasion with appropriate programs, ceremonies, and activities in honor of Dr. King's life and achievements and in response to his call to service.

IN WITNESS WHEREOF, I have hereunto set my hand this twelfth day of January, in the year of our Lord two thousand one, and of the Independence of the United States of America the two hundred and twenty-fifth.

William J. Clinton

Executive Order 13188 of January 12, 2001

Amendment to Executive Order 13111, Extension of the Advisory Committee on Expanding Training Opportunities

By the authority vested in me as President by the Constitution and the laws of the United States, including the Federal Advisory Committee Act, as amended (5 U.S.C. App.), and in order to extend the Advisory Committee on Expanding Training Opportunities for 2 years, it is hereby ordered that section 7(f) of Executive Order 13111 of January 12, 1999, is amended by deleting “2 years from the date of this order” and inserting “on January 11, 2003” in lieu thereof.

THE WHITE HOUSE,
January 12, 2001.
