SUPPLEMENTARY INFORMATION:

Background on the Draft Information Strategy and Request for Input

Information is critical to the management of national programs and shapes responses to rapidly changing events in the public health arena. Sound science and the best available data are the foundation of decisions that the EPA's Office of Ground Water and Drinking Water (OGWDW) make to protect public health and the environment. Information technology has improved, and the process for developing drinking water standards has changed significantly since OGWDW developed its most recent Information Strategic Plan in 1992. EPA must implement a strategy that responds to new technology and regulatory needs, maximizes efficiency and minimizes cost of data transactions, meets national water program needs, and links efficiently to relevant data sources. The strategy must be business-driven, incorporating the needs of stakeholders both inside and outside of EPA.

EPA encourages public input into questions that will allow OGWDW to make more informed decisions regarding its information systems and processes. Once implemented, the strategy will help OGWDW to better focus on essential business data, minimize reporting burden, obtain early involvement in information requirements for regulators, streamline the federal Safe Drinking Water Information System (SDWIS-FED) to reduce reporting errors, continue to support the state Safe Drinking Water Information System (SDWIS-STATE), and provide an information framework

for source water protection. Questions for discussion include:

1. How will OGWDW ensure that it has the data it needs to implement its programs, address gaps (e.g., source water protection and underground injection control), and coordinate with other EPA programs?
2. What essential data does the primary enforcement authority need to track?
3. How should EPA obtain parametric (sampling) drinking water data to address future information requirements?
4. What changes should EPA make to minimize reporting burden for existing and upcoming rules?
5. What improvements to SDWIS should EPA make to allow for easier data entry by states?
6. How can OGWDW improve the performance of its information systems, given that any improvements would require states to make near-term adjustments to achieve long-term reporting benefits?
7. What steps should EPA take to improve data quality?
8. EPA primarily uses data for program tracking, policy development, rulemaking and enforcement, and public access. Are there other priority uses EPA should consider?
9. How will public access to drinking water data be improved?

10. What steps should be taken to make OGWDW information systems more economically efficient?

The public is invited to provide comments on the issues listed above or other issues related to the draft Information Strategy during the March 8-9, 2001 meeting.

Dated: February 9, 2001.

Cynthia Dougherty,

Director, Office of Ground Water and Drinking Water.
