Department of the Interior
Office of Surface Mining Reclamation and Enforcement

30 CFR Part 944
[SPATS No. UT–037–FOR]

Utah Regulatory Program

Agency: Office of Surface Mining Reclamation and Enforcement, Interior.

Action: Proposed rule; reopening and extension of public comment period on proposed amendment.

Summary: The Office of Surface Mining Reclamation and Enforcement (OSM) is announcing receipt of revisions and additional explanations pertaining to a previously proposed amendment to the Utah regulatory program (hereinafter, the “Utah program”) under the Surface Mining Control and Reclamation Act of 1977 (SMCRA). Utah proposes to revise its amendment to change proposed rules concerning pre-subsidence surveys and the contents of subsidence control plans. The State also provided additional explanation of the term “State-appropriated water,” the proposed definitions of “State-appropriated water supply” and “replacement of water supply,” and of the proposed scope of water replacement. Utah intends to revise its program to be consistent with the corresponding Federal regulations and SMCRA.

Dates: We will accept written comments on this amendment until 4 p.m., mountain standard time, March 7, 2001.

Addresses: You should mail, hand deliver or e-mail your written comments to James F. Fulton, Denver Field Division Chief, at the address listed below.

You may review copies of the Utah program, this amendment, and all written comments received in response to this document at the addresses listed below during normal business hours, Monday through Friday, excluding holidays. You may receive one free copy of the amendment by contacting OSM’s Denver Field Division.

James F. Fulton, Denver Field Division Chief, Office of Surface Mining, Western Regional Coordinating Center, 1999 Broadway, Suite 3320, Denver, Colorado 80202–5733, telephone (303) 844–1400, extension 1424.

Lowell P. Braxton, Director, Division of Oil, Gas and Mining, 1594 West North Temple, Suite 1210, P.O. Box 145801, Salt Lake City, Utah 84114–5801, telephone (801) 538–5370.

For further information contact:

James F. Fulton, Denver Field Division Chief, telephone (303) 844–1400, extension 1424; e-mail address: jfulton@osmre.gov.

Supplementary Information:

I. Background on the Utah Program

On January 21, 1981, the Secretary of the Interior conditionally approved the Utah program. You can find background information on the Utah program, including the Secretary’s findings, the disposition of comments, and the conditions of approval of the Utah program in the January 21, 1981, Federal Register (46 FR 5899). You can also find later actions concerning Utah’s program and program amendments at 30 CFR 944.15 and 944.30.

II. Description of the Proposed Amendment

By letter dated March 20, 1998 (administrative record No. 1103), Utah sent to us a proposed amendment (UT–037–FOR) to its program under SMCRA (30 U.S.C. 1201 et seq.). It sent the proposed amendment in response to a June 5, 1996, letter (administrative record No. UT–1086), we sent to the State under 30 CFR 732.17(c) and at its own initiative.

Changes to the Utah Administrative Rules (Utah Admin. R.) that the State originally proposed included: Adding definitions for “material damage,” “non-commercial building,” “occupied residential dwelling and structures related thereto,” “replacement of water supply,” and “State-appropriated water supply” at Utah Admin. R. 645–100–200; adding requirements at Utah Admin. R. 645–301–525.100 through 525.130 for pre-subsidence surveys; removing existing requirements for subsidence control plans at Utah Admin. R. 645–301–525.130 through 525.170; recodifying rules at Utah Admin. R. 645–301–525.200 through 525.240 pertaining to protected areas; removing existing requirements for subsidence control at Utah Admin. R. 645–301–525.200 through 525.232; adding requirements at Utah Admin. R. 645–301–525.300 through 525.490 for subsidence control and subsidence control plans; adding requirements for subsidence damage repair at Utah Admin. R. 645–301–525.500 through 525.530; adding a rebuttable presumption of causation by subsidence at Utah Admin. R. 645–301–525.540 through 525.543; adding provisions at Utah Admin. R. 645–301–525.550 for adjusting bond amounts for subsidence damage; recodifying rules at Utah Admin. R. 645–301–525.600 and 645–301–525.700 that require compliance with approved subsidence control plans and public notice of proposed mining, respectively; removing existing provisions for surveys of renewable resource lands at Utah Admin. R. 645–301–724.600; adding a provision at Utah Admin. R. 645–301–728.350 for finding whether underground coal mining and reclamation activities might contaminate, diminish or interrupt State-appropriated water; and adding a requirement at Utah Admin. R. 645–301–731.530 for replacing State-appropriated water supplies that are contaminated, diminished, or interrupted by underground coal mining activities.

We announced receipt of the proposed amendment in the April 8, 1998, Federal Register (63 FR 17138; administrative record No. UT–1108), provided an opportunity for a public hearing or meeting, and invited public comment on its adequacy. We did not hold a public hearing or meeting because nobody requested either one. The public comment period ended on May 8, 1998.

During our review of the amendment, we identified concerns relating to the provisions for pre-subsidence surveys at Utah Admin. R. 645–301–525.300 and for the content of subsidence control plans at Utah Admin. R. 645–301–525.490. We also asked Utah to provide additional clarification on: The scope of the terms “State-appropriated water” and the proposed definition of “State-appropriated water supply” as used in the amendment; the scope of water replacement with respect to “developed” water supplies; and clarification of Utah’s proposed definition of the term “replacement of water supply.” We notified Utah of our concerns and the need for additional clarification by letter dated October 1, 1998 (administrative record No. UT–1125). Utah responded in a letter dated
October 31, 2000 (administrative record No. 1145).
Utah now proposes two specific changes in its amendment. First, it proposes to change Utah Admin. R. 645–301–525.130 to cross-reference Utah Admin. R. R645–301–525.543. That referenced rule specifically states that there will be no presumption that subsidence caused damage to structures if the owners deny applicants access to perform pre-subsidence surveys.
Second, at Utah Admin. R. 645–301–525.490, the State proposes to add references to Utah Admin. R. 645–301–525.200, −525.500, and −525.600. Those rules cover the range of information Utah requires to be included in subsidence control plans to demonstrate that an operation will be conducted in accordance with all applicable provisions for subsidence control.
Utah’s response also provided additional explanation of the scope of the term “State-appropriated water” and the definition of “State-appropriated water supply.” the scope of water replacement under its proposed rules with respect to “developed” water supplies, and its proposed definition of the term “replacement of water supply.”

III. Public Comment Procedures

Written Comments
Send your written comments to OSM at the address given above. Your written comments should be specific, certain only to the issues proposed in this rulemaking, and include explanations in support of your recommendations. In the final rulemaking, we will not necessarily consider or include in the administrative record any comments received after the time indicated under DATES or at locations other than the Denver Field Division.

Electronic Comments
Please submit Internet comments as an ASCII file and do not use special characters or any form of encryption. Please also include “Attn: SPATS No. UT–037–FOR” and your name and return address in your Internet message. If you do not receive a confirmation that we have received your Internet message, contact the Denver Field Division at telephone number (303) 844–1400, extension 1424.

Availability of Comments
We will make comments, including names and addresses of respondents, available for public review during normal business hours. We will not consider unsigned comments. If individual respondents request confidentiality, we will honor their request to the extent allowable by law. Individual respondents who wish to withhold their name or address from public review, except for the city or town, must state this prominently at the beginning of their comments. We will make all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, available for public review in their entirety.

IV. Procedural Determinations

Executive Order 12630—Takings
This rule does not have takings implications. This determination is based on the analysis performed for the counterpart Federal regulations.

Executive Order 12866—Regulatory Planning and Review
This rule is exempted from review by the Office of Management and Budget (OMB) under Executive Order 12866.

Executive Order 12988—Civil Justice Reform
The Department of the Interior conducted the reviews required by section 3 of Executive Order 12988 and determined that, to the extent allowable by law, this rule meets the applicable standards of subsections (a) and (b) of that section. However, these standards are not applicable to the actual language of State regulatory programs and program amendments since each such program is drafted and promulgated by a specific State, not by OSM. Under sections 503 and 505 of SMCRA (30 U.S.C. 1253 and 1255) and the Federal regulations at 30 CFR 730.11, 732.15, and 732.17(h)(10), decisions on proposed State regulatory programs and program amendments submitted by the States must be based solely on a determination of whether the submittal is consistent with SMCRA and its implementing Federal regulations and whether the other requirements of 30 CFR parts 730, 731, and 732 have been met.

Executive Order 13132—Federalism
This rule does not have Federalism implications. SMCRA delineates the roles of the Federal and State governments with regard to the regulation of surface coal mining and reclamation operations. One of the purposes of SMCRA is to “establish a nationwide program to protect society and the environment from the adverse effects of surface coal mining operations.” Section 503(a)(1) of SMCRA requires that State laws regulating surface coal mining and reclamation operations be “in accordance with” the requirements of SMCRA. Section 503(a)(7) requires that State programs contain rules and regulations “consistent with” regulations issued by the Secretary pursuant to SMCRA.

National Environmental Policy Act
Section 702(d) of SMCRA (30 U.S.C. 1292(d)) provides that a decision on a proposed State regulatory program provision does not constitute a major Federal action within the meaning of section 102(2)(C) of the National Environmental Policy Act (42 U.S.C. 4332(2)(C)). A determination has been made that such decisions are categorically excluded from the NEPA process (516 DM 8.4.A).

Paperwork Reduction Act
This rule does not contain information collection requirements that require approval by OMB under the Paperwork Reduction Act (44 U.S.C. 3507 et seq.).

Regulatory Flexibility Act
The Department of the Interior has determined that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.). The State submittal that is the subject of this rule is based on counterpart Federal regulations for which an economic analysis was prepared and certification made that such regulations would not have a significant economic effect on a substantial number of small entities. Accordingly, this rule will ensure that existing requirements previously promulgated by OSM will be implemented by the State. In making the determination as to where this rule would have a significant economic impact, the Department relied upon the data and assumptions for the counterpart Federal regulations.

Small Business Regulatory Enforcement Fairness Act
This rule is not a major rule under 5 U.S.C. 804(2), the Small Business Regulatory Enforcement Fairness Act. This rule: (a) Does not have an annual effect on the economy of $100 million; (b) will not cause a major increase in costs or prices for consumers, individual industries, geographic regions, or Federal, State or local governmental agencies; and (c) does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S. based enterprises to compete with foreign-based enterprises. This determination is based on the fact that
the State submittal which is the subject of this rule is based on counterpart Federal regulations for which an analysis was prepared and a determination made that the Federal regulation was not considered a major rule.

Unfunded Mandates

This rule will not impose a cost of $100 million or more in any given year on any governmental entity or the private sector.

List of Subjects in 30 CFR Part 944

Intergovernmental relations, Surface mining. Underground mining.

Brent Wahlquist,
Regional Director, Western Regional Coordinating Center.

POSTAL SERVICE

39 CFR Part 111

Preparation Changes for Securing Packages of Mail

AGENCY: Postal Service.

ACTION: Proposed rule.

SUMMARY: The Postal Service is proposing to amend the packaging standards in Domestic Mail Manual (DMM) M020 to help ensure that packages maintain their integrity during transportation and postal processing. DMM M020 will prescribe general standards for preparing and securing all packages and will incorporate standards that pertain individually to packages on pallets, packages in sacks, and packages in trays.

DATES: Comments must be received on or before March 22, 2001.

ADDRESSES: Mail or deliver written comments to the Manager, Operational Requirements, United States Postal Service, 475 L’Enfant Plaza SW., Room 7301, Washington, DC 20260–7031. Copies of all written comments (available for $0.15 per copy per page) will be available for inspection and photocopying between 9 a.m. and 4 p.m., Monday through Friday, at the following address: Library, United States Postal Service, 475 L’Enfant Plaza SW, Room 11800, Washington, DC 20260–1540. Copies of comments may also be requested via fax or e-mail.

FOR FURTHER INFORMATION CONTACT: Cherey Beller, 202–268–5166, cheller1@e-mail.usps.gov.

SUPPLEMENTARY INFORMATION: Many packages of Periodicals and Standard Mail tendered to the Postal Service on pallets or in sacks do not maintain their integrity during transportation to postal facilities and during postal processing. The Postal Service must redirect the resulting loose packages or broken packages (individual pieces) to higher-cost operations. If packages lose their integrity while being processed on small parcel and bundle sorters (SPBSSs), the result can be machine slowdowns and stoppages as well as postal employees manually processing these packages. The increased costs of labor to process loose or broken packages is reflected in higher rates paid by mailers. In addition to rate implications, package breakage also damages mailpieces and has a negative impact on service, results that the mailing industry and the Postal Service would like to avoid.

Data collected by the Mailers’ Technical Advisory Committee (MTAC) Package Integrity Work Group, comprising Postal Service and mailing industry representatives, revealed that, during the first handling, packages of Periodicals and Standard Mail in sacks break at a much greater rate than packages on pallets. This data also disclosed that packages of pieces with glossy (coated) cover stock break at higher rates than packages of pieces with covers of uncoated stock. An analysis of the data indicates that additional standards are necessary to improve the integrity of Periodicals and Standard Mail packages prepared in sacks and that some current standards for packages in sacks and on pallets also require clarification to improve packaging in general. Currently, with the exception of Standard Mail and Package Services Mail placed on bulk mail center (BMC) pallets, DMM M020 does not differentiate between packaging standards for mail placed on pallets and mail placed in sacks. Unlike palletized packages, which have maximum weight limits prescribed in DMM M045, there are no existing standards for Periodicals and Standard Mail that limit the size or weight of packages in sacks. Consequently, mailers of Periodicals and Standard Mail may prepare packages that weigh more than 20 pounds and are, as a result, incompatible with processing on SPBSSs. Heavier packages are also subject to more breakage if not properly secured. This is particularly true of sacked mail due to the additional handling it receives compared with palleitized mail. Under the proposed rules, DMM M020 prescribes general standards for preparing and securing packages of all classes of mail and revises and incorporates standards that pertain individually to packages on pallets and packages in sacks.

Proposed new standards limit the weight of sacked packages of Periodicals and Standard Mail to a maximum of 20 pounds and the height of these packages to a maximum of 8 inches for pieces of uncoated stock and to maximums ranging from 3 inches to 6 inches, depending on the securing method, for pieces with coated cover stock. As information, new mail preparation standards for Bound Printed Matter flats implemented January 7, 2001, limit the weight of packages in sacks and on pallets to 20 pounds, except that packages placed in 5-digit sacks or on 5-digit/scheme pallets may weigh up to 40 pounds. It is also proposed that the standards for all classes be amended to clarify when pieces should be counter-stacked to create packages of uniform thickness and to provide more emphasis on the standard that requires packages over 1 inch high to be secured with at least two bands or shrinkwrap.

It is also proposed that the current requirement to secure double-banded packages of all classes of mail first around the length and then around the girth be revised to eliminate a required banding sequence. Automated production lines in large printing plants are not designed to secure packages around the length first, and exceptions to the current standard must continually be granted to address this issue. Magazines and flyers are typically bound with stitches or glue and then stacked for packaging in accordance with the applicable presort, generally in groups ranging from 6 to 100 pieces. The stack is ejected and travels directly into a binder that secures the girth first, and then the length if a second band is required. If the first band was placed around the length of the stack, the stack would not be held securely enough to allow the second band to go around the girth because the backbone or spine is thicker than the face or side cut (length). This thickness variation would cause the bundle to fall apart, also affecting transport into another securing operation such as shrinkwrapping.

Data Collection To Determine Package Breakage Rates for Live Mail

The Postal Service and the mailing industry have been working together to better understand the implications of package breakage and to identify opportunities to quantify and improve the current situation. In October and November 1998, the MTAC Package Integrity Work Group collected and analyzed data regarding the condition of packages of nonletter-size Periodicals and Standard Mail flats at the locations
