Procedural Background

This rule is limited to the changes contained in Amendment No. 1 to CoC No. 1026 and does not include other aspects of the FuelSolutions™ cask system design. The NRC is using the direct final rule procedure to promulgate this amendment because it represents a limited and routine change to an existing CoC that is expected to be noncontroversial. Adequate protection of public health and safety continues to be ensured. The NRC staff does not consider this amendment to be significant.

Because NRC considers this action noncontroversial and routine, we are publishing this proposed rule concurrently as a direct final rule. The direct final rule will become effective on May 14, 2001. However, if the NRC receives significant adverse comments on the direct final rule by March 29, 2001, then the NRC will publish a document to withdraw the direct final rule. A significant adverse comment is a comment where the commenter explains why the rule would be

inappropriate, including challenges to the rule's underlying premise or approach, or would be ineffective or unacceptable without change. If the direct final rule is withdrawn, the NRC will address the comments received in response to the proposed revisions in a subsequent final rule. Absent significant modifications to the proposed revisions requiring republication, the NRC will not initiate a second comment period for this action.

RIN 2120-AA64

Airworthiness Directives; Pratt & Whitney JT9D-7R4 Series Turbofan Engines

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This document proposes the adoption of a new airworthiness directive (AD) that is applicable to Pratt & Whitney (PW) JT9D-7R4 series turbofan engines. This proposal would require initial and repetitive fluorescent penetrant inspection (FPI) of the high pressure turbine (HPT) 1st stage disk aft lugs, and if the aft lug(s) are cracked, replacement of the HPT 1st stage disk and HPT 1st stage airseals. Also, for certain configuration HPT disk assemblies, this proposal would require replacement of the HPT 1st stage airseals with newly designed airseals at the next accessibility. This proposal is prompted by reports of cracks in HPT 1st stage disk firtree and failure of firtree lugs. The actions specified by the proposed AD are intended to prevent 1st stage HPT disk firtree fracture, which could result in an uncontained engine failure, and damage to the airplane.
