¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

² Due to an inadvertent error, the "Annual Frequency per Response" column was omitted from the notice issued in the FEDERAL REGISTER of December 5, 2000 (65 FR 75940). Table 1 of this document contains the inserted column.

The proposed modification of the rules for the declaration of the amount of calories and the proposed change of the label serving size on the nutrition facts panel would result in a one-time burden created by the need for firms to revise their labels. In addition to changing the statement of calories and the serving sizes, firms would have to recalculate the number of servings per container and any nutrient amounts and daily values affected by the change in serving size. Of those breath mints for which FDA has information regarding the size of the product, there are 4 firms producing 5 brands of small breath mints, or approximately 30 distinct small breath mint labels. These are the only firms that would be affected by this proposed rule. FDA estimates that these firms would require an average of 1 hour per label to comply with the requirements of a final rule based on this proposal. For breath mint products, the average administrative, redesign, and inventory disposal costs for a labeling change of this type, with a 1-year compliance period, would result in a one-time operating cost of \$500 per label, or a total estimated operating cost of \$15,000.
