#### SUPPLEMENTARY INFORMATION:

##### I. Abstract

The purpose of this data collection would be to provide information on the value of coral reef habitats to specific segments of the U.S. population. The study will measure nonmarket economic values for coral reefs. This effort is designed to provide defensible information for both resource managers and damage assessments on the value of coral reef habitats and alternative management actions. The project is designed as a phased three-year effort to ensure effective use of all the available information. This effort will involve development of extensive knowledge

about how reef habitats are perceived, implication of alternative management actions, designing original survey instruments, interviewing of a large number of respondents, conducting formal statistical analysis of the data, and developing a decision-support system for resource managers to use.

For active users of coral reefs, separate surveys of residents and visitors will be conducted to estimate the amount of use (measured in person-days) of the coral reefs, spending in the local economies while undertaking the activities on the reefs, and information that will support estimation of nonmarket economic use values using travel cost demand models, and discrete choice contingent valuation methods. For nonuse or passive use, a nationally-oriented survey will be conducted using stated preferences methods.

##### II. Method of Collection

Interviews will be conducted. The survey instruments will be formulated with the use of focus groups and a pretest of the instrument will be conducted.
