TENNESSEE VALLEY AUTHORITY

Addition of Electric Generation Peaking Capacity at Greenfield Sites, Mississippi

AGENCY: Tennessee Valley Authority.

ACTION: Issuance of Record of Decision.

SUMMARY: This notice is provided in accordance with the Council on Environmental Quality's regulations (40 CFR parts 1500 to 1508) and TVA's procedures implementing the National

Environmental Policy Act. TVA has decided to adopt the preferred alternative identified in its *Final Environmental Impact Statement for the Addition of Electric Generation Peaking Capacity at Greenfield Sites, Mississippi*.

The Final Environmental Impact Statement (FEIS) was made available to the public in March 2001. A Notice of Availability (NOA) of the Final EIS was published by the Environmental Protection Agency in the **Federal Register** on March 16, 2001. Under the preferred alternative, TVA has decided to construct a natural gas-fired simple cycle combustion turbine (CT) plant with up to 340 Megawatts (MW) of new peaking capacity at a site in Kemper County Mississippi as early as May 2002.

SUPPLEMENTAL INFORMATION:

Background

In December 1995, TVA completed and published *Energy Vision 2020—Integrated Resource Plan/ Programmatic Environmental Impact Statement*. *Energy Vision 2020* projected demands for electricity in the TVA power service area through 2020 and evaluated and recommended ways of meeting the projected increases. *Energy Vision 2020* evaluated an array of power supply technologies, both supply-side and demand-side. A portfolio of options drawn from several effective strategies was chosen as TVA's preferred alternative. In this preferred alternative, three supply-side options were selected to meet peak capacity needs:

- Addition of CTs to TVA's generation system,
- Purchase of market peaking capacity, and
- Call alternatives on peaking capacity.

The short-term action plan of *Energy Vision 2020* identified a need for 3,000 MWs of baseload and peaking additions through the year 2002. Since *Energy Vision 2020* was completed in 1995, TVA has continued to evaluate and select the best resource alternatives based on the latest proposals and TVA's forecast of power needs. TVA's projections show expected peak demands growing at 2.4% from 2000 to 2005 and beyond. The net capacity
