Are there any improvements in either of the last two categories that have been completed and that resulted in a significant change in a plant's ability to withstand potential external events? If so, what are the improvements and the related changes to the plant's capability?

SUPPLEMENTARY INFORMATION: This notice announces the availability of and request for comment on the Draft

Addenda to NUREG-0654/FEMA-REP-1, Rev. 1, "Criteria for Preparation and Evaluation of Radiological Emergency Response Plans and Preparedness in Support of Nuclear Power Plants." NUREG-0654/FEMA-REP-1, Rev. 1, was issued in November 1980 and is the basic emergency planning guidance document for radiological emergency planning and preparedness for commercial nuclear power plants.

NUREG-0654/FEMA-REP-1, Rev. 1, is used by licensees and by State and local government emergency response agencies to develop and maintain radiological emergency plans for nuclear power plants. NUREG-0654/FEMA-REP-1, Rev. 1, is also used by staff of the NRC and FEMA to review, respectively, licensee and State and local government radiological emergency plans and preparedness, and to make findings and determinations regarding the adequacy of these plans. As part of FEMA's strategic review of its radiological emergency preparedness program, FEMA and NRC staff determined that it was not necessary to revise NUREG-0654/FEMA-REP-1, Rev. 1, but that to enhance its usefulness, the outdated citations in the document should be replaced with updated citations through means of an addenda. An initial version of the addenda was posted on the FEMA web site and provided to the member agencies of the Federal Radiological Preparedness Coordinating Committee for comment.

Dated at Rockville, Maryland, this 26th day of March 2001.
