SUPPLEMENTARY INFORMATION:

1. Description of the Proposed System of Records

The Spinal Cord Dysfunction (SCD)—Registry provides a registry of veterans with spinal cord injury and disorders (SCI&D). This registry contains pertinent information on veterans with SCI&D and enables better coordination of care among VHA staff. The purpose of the registry is to assist clinicians, administrators, and researchers in identifying and tracking services for veterans with spinal cord dysfunction resulting from trauma or diseases. The SCD—Registry can also facilitate clinical, administrative, and research reports for medical center use. Local Veterans Health Information System and Technology Architecture (VistA) SCD—Registries provide aggregate data to the National SCD—Registry database at the Austin Automation Center (AAC). This centralized AAC registry is used to provide a VA-wide review of veteran demographics and clinical aspects of injury and disorders for administrative and research purposes.

These records contain identifying information including name, social security number (SSN), date of birth, unique record identifiers, and registration date. SCD—Registry registration information may include registration status, neurologic level of injury, etiology, date of onset, type of cause, completeness of injury, and annual evaluation dates offered and received. Each local medical center facility has a VistA based SCD—Registry software package that interactively functions with other clinical VistA based software. The SCD—Registry program and other programs at the respective facilities automatically flag records or events for transmission based upon functionality requirements. Data transmissions between VA health care facilities and the VA databases housed at the AAC are accomplished using the
