

threshold effects to account for prenatal and postnatal toxicity and the completeness of the data base. Based on the current toxicological data requirements, the data base for spinosad relative to prenatal and postnatal effects for children is complete. Further, for spinosad, the NOAELs in the dog chronic feeding study which was used to calculate the RfD (0.027 mg/kg/day) are considerably lower than the NOAELs from the developmental studies in rats and rabbits by a factor of more than 10-fold.

Concerning the reproduction study in rats, the pup effects shown at the HDT were attributed to maternal toxicity. Therefore, it is concluded that an additional uncertainty factor is not needed and that the RfD at 0.027 mg/kg/day is appropriate for assessing risk to infants and children.

In addition, the EPA has determined that the 10X factor to account for enhanced sensitivity of infants and children is not needed because: (1) The data provided no indication of increased susceptibility of rats or rabbits to *in utero* and/or postnatal exposure to spinosad; (2) no neurotoxic signs have been observed in any of the standard required studies conducted; (3) the toxicology data base is complete and there are no data gaps; and (4) exposure data are complete or are estimated based on data that reasonably account for potential exposure.

Using the exposure assumptions, the percent dietary RfD utilized by the aggregate exposure to residues of spinosad on existing crop utilizes 15% of the chronic population adjusted dose (cPAD) for children 1 to 6 years old, the most sensitive population subgroup. The new crop uses have been included in this assessment. Thus, based on the completeness and reliability of the toxicity data and the exposure assessment, it is concluded that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to spinosad residues on the proposed uses including existing crop uses.

F. International Tolerances

There is no Codex maximum residue levels established for residues of spinosad at this time.
