A. Public hearing on shark finning action

In December 2000, Congress enacted and the President signed the "Shark Finning Prohibition Act" (Public Law 106-557). The Act amended the Magnuson-Stevens Act to prohibit any person subject to U.S. jurisdiction from (a) engaging in shark-finning (shark-finning means the taking of a shark, removing the fin or fins (whether or not including the tail) of a shark, and returning the remainder of the shark to the sea); (b) possessing shark fins aboard a fishing vessel without the corresponding carcass; and (c) landing shark fins without the corresponding carcass. The rule that is being proposed by NMFS to implement the prohibitions specified in the Act applies to U.S. and foreign fishing vessels and associated businesses that engage in finning or in the buying and selling of fins or providing goods and services to vessels engaged in finning.

14. Ecosystems and Habitat

B. Other issues, including status of Northwestern Hawaiian Island Coral Reef Reserve and Advisory Council, and status of request for fisheries disaster relief

C. Public hearing on CREFMP/DEIS

The DEIS was prepared to examine the impacts of implementing the proposed CREFMP. The DEIS also addresses potential problems due to human interactions with coral reefs in the Western Pacific exclusive economic zone (EEZ). Although local regulations control many of the impacts of harvesting nearshore coral reef resources in settled areas, exploitation of the coral reef ecosystem remains relatively uncontrolled in Federal waters of the EEZ. Although these areas have been minimally exploited to date, industry has expressed an interest in expanding fisheries in these areas. In addition, the DEIS was prepared to provide for better understanding of impacts due to natural environmental changes, other FMP-managed fisheries, and non-fishing related impacts such as dredging. To address these problems, four alternatives were examined: (1) No action or status quo; (2) minimal additional protection for coral reef resources; (3) substantial additional protection to coral reef resources (preferred alternative); and (4) maximum additional protection for coral reef resources. The environmental effects of each of the alternatives, management measures, components, and options have been analyzed in the DEIS. In June 2000, the Council adopted a preferred alternative and management options. Management measures proposed in the FMP represent a combination of choices made by the Council based on a comparison of alternatives.

Alternatives were a product of numerous public meetings and meetings of the Council's various advisory bodies. The proposed management measures include: (a) Designating marine protected areas (MPAs), including no-take marine reserves and areas zoned for specific fishing activities allowed only with a special permit; (b) establishing fishing permit and reporting requirements for fishing for coral reef resources in the EEZ; (c) specifying the use of selective, non-destructive gears and methods for harvesting management-unit species; and (d) establishing a framework process to allow for future regulatory adjustments to the coral reef ecosystem management program. In addition, the Council recommends that a formal procedure be established for assessing and controlling ecosystem effects of reef-related fisheries managed under the Fishery

Management Plan for the Bottomfish and Seamount Groundfish Fisheries of the Western Pacific Region, the Fishery Management Plan for the Crustacean Fisheries of the Western Pacific Region, and the Fishery Management Plan for the Precious Corals Fisheries of the Western Pacific Region.
