

different margin of safety will be safe for infants and children. EPA has added an additional 3-fold factor to the acute dietary risk assessment for infants and children due to the lack of a NOAEL in the critical study. An additional 3-fold factor is also needed due to the uncertainty resulting from the data gap for the developmental neurotoxicity study in rats. This latter safety factor is applicable to the following subgroup populations: Females 13–50; infants, children (1–6 years old), and children (7–12 years old) for all risk assessment scenarios for acute and chronic dietary and residential scenarios. No greater additional factor is needed because, using the exposure assumptions described above, the percent of the pymetrozine chronic PAD that will be utilized by the most exposed sub-population (children, 1–6 years old) is 2.5%. Therefore, based on the completeness and reliability of the toxicity database, Syngenta concludes that there is reasonable certainty that no harm will result to infants and children from exposure to pymetrozine residues.

F. International Tolerances

There are no established European (CODEX), Canadian, or Mexican Maximum Residue Limits (MRLs) for pymetrozine. There are provisional MRLs in Germany for hops (10 ppm) and potatoes (0.02 ppm). The European Union is currently evaluating a proposed tolerance of 5 ppm on hops. At this time, international harmonization of residue levels is not an issue.
