Follow-On Actions: Repetitive Inspections and Replacement

(b) For airplanes that have a control rod barrel for the aileron tabs having part number 69-60083-1 or a control rod barrel on which the color or part number cannot be determined: Within 3,200 flight hours after the effective date of this AD, do a detailed visual inspection for cracking of the affected control rod barrels according to Boeing Special Attention Service Bulletin 737-27-1223, dated October 21, 1999.

Note 3: For the purposes of this AD, a detailed visual inspection is defined as: “An intensive visual examination of a specific structural area, system, installation, or assembly to detect damage, failure, or irregularity. Available lighting is normally supplemented with a direct source of good lighting at intensity deemed appropriate by the inspector. Inspection aids such as mirror, magnifying lenses, etc., may be used. Surface cleaning and elaborate access procedures may be required.”

(1) If no cracking is found, repeat the inspection for cracking at least every 3,200 flight cycles, AND, within 20,000 flight cycles after the effective date of this AD, replace all affected control rod barrels for the aileron tabs with new or reworked control rod barrels, according to the service bulletin. Such replacement terminates the repetitive inspections.

(2) If any cracking is found, before further flight, replace all control rod barrels with new or reworked control rod barrels, according to the service bulletin.

Note 4: If any control rod barrel for the aileron tab is cracked, all affected control rod barrels on the airplane must be replaced at the same time because the discrepancy may exist in the entire lot of parts.
