VI. Submission to Congress and the Comptroller General

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of this final rule in the **Federal Register**. This final rule is not a "major rule" as defined by 5 U.S.C. 804(2).

Software Defined Radios

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document we amend the Commission's rules to create a new

class of equipment for software defined radios (SDRs) with streamlined equipment authorization procedures. We anticipate that software defined radio technology will allow manufacturers to develop reconfigurable transmitters or transceivers that can be multi-service, multi-standard, multi-mode, and multi-band. Specifically, we are amending our equipment authorization rules to permit equipment manufacturers to make changes in the frequency, power and modulation parameters of such radios without the need to file a new equipment authorization application with the Commission. We will also permit electronic labeling so that a third party may modify a radio's technical parameters without having to return it to the manufacturer for re-labeling. These changes will facilitate the deployment and use of this promising new technology, which we believe will facilitate more efficient use of the spectrum.

DATES: Effective February 4, 2002.

FOR FURTHER INFORMATION CONTACT: Hugh Van Tuyl, Office of Engineering and Technology, (202) 418-7506.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's *First Report and Order* in ET Docket No. 00-47, FCC 01-264, adopted September 13, 2001, and released September 14, 2001. The full text of this Commission decision is available on the Commission's Internet site at www.fcc.gov. It is available for inspection and copying during normal business hours in the FCC Reference Information Center, Room CY-A257, 445 12th Street, SW., Washington, DC, and also may be purchased from the Commission's duplication contractor, Qualex International (202) 863-2893, Room CY-B402, 445 12th Street, S.W. Washington, D.C. 20554.

Summary of the First Report and Order

1. In this *First Report and Order* (FR&O), the Commission amends part 2 of its rules to create a new class of equipment for software defined radios (SDRs) with streamlined equipment authorization procedures. We anticipate that software defined radio technology will allow manufacturers to develop reconfigurable transmitters or transceivers that can be multi-service, multi-standard, multi-mode, and multi-band. Specifically, we are amending our equipment authorization rules to permit equipment manufacturers to make changes in the frequency, power and modulation parameters of such radios without the need to file a new equipment authorization application

with the Commission. We will also permit electronic labeling so that a third party may modify a radio's technical parameters without having to return it to the manufacturer for re-labeling. These changes will facilitate the deployment and use of this promising new technology, which we believe will facilitate more efficient use of the spectrum.

2. In March 2000, the Commission issued a *Notice of Inquiry*, 65 FR 17246, March 31, 2000, seeking information from the public on a number of issues raised by the development of software defined radios. Subsequently, in December 2000, the Commission issued a *Notice of Proposed Rule Making* (NPRM), 66 FR 341, January 3, 2001, that proposed to define software defined radios as a new class of equipment and to simplify the authorization requirements for such equipment.

3. Upon reviewing the record, we conclude that it is desirable to revise our equipment authorization rules to accommodate the flexibility offered by software defined radios. The ability of software defined radios to be reprogrammed to new operating parameters in the field could have far reaching implications for the way the Commission allocates and licenses spectrum and authorizes radio equipment. Software defined radios could allow more efficient use of spectrum by facilitating spectrum sharing and by allowing equipment to be reprogrammed to more efficient modulation types. Their ability to be programmed could also enhance interoperability between different radio services. We find that it is possible to provide this flexibility in a manner that will ensure that software defined radios operate in compliance with the rules for the service in which they will operate. We therefore are adopting a definition of software defined radio and a streamlined procedure for making changes to the operating parameters of software defined radios. We are also adopting rules to permit electronic labeling of software defined radios and to require manufacturers to take steps to prevent unauthorized software modifications. These changes will provide greater flexibility to manufacturers to facilitate the deployment of software defined radios while fulfilling our statutory requirement to protect the public from harmful interference. We will consider additional rule changes in the future as software defined radio technology advances.
