The applicant proposes to test the hypothesis that relatively few local California sea lions break through bait receiver walls and damage bait fish at various California harbors. To test this, the applicant proposes to radio tag and track sea lions that exhibit territorial behavior near bait receivers and document interaction patterns at bait receivers. The results of this study will help institute measures to eliminate intentional or accidental feeding of sea lions at selected bait receivers.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.
