

meetings from FY 95 through FY 01 on issues associated with the characterization of risk resulting from the dermal exposure pathway. RAGS Part E updates recommendations presented in the DEA, and incorporates additional information from the *Exposure Factors Handbook* (U.S. EPA, 1997a) and scientific literature, as cited. Users of this guidance are strongly encouraged to review and understand the material presented in the DEA. This guidance is considered interim, pending release of any update to the DEA from ORD. As more data become available, RAGS Part E may be updated.

This Supplemental Guidance for Dermal Risk Assessment (RAGS Part E) has undergone external peer review in January 1998 and in February 2000. Also, EPA's Risk Assessment Forum conducted a Peer Consultation Workshop on this document in December 1998.

Elements of the RAGS Part E Approach

Risk Assessment Guidance for Superfund: Volume I—Human Health Evaluation Manual (Part E, Supplemental Guidance for Dermal Risk Assessment) (RAGS Part E) is structured to be consistent with the four steps of the Superfund risk assessment process: hazard identification, exposure assessment, toxicity assessment, and risk characterization. RAGS Part E is organized into six chapters and four appendices. To provide an indication of the scope of the document, we have included the Table of Contents below:

- RAGS Part E focuses on dermal contact with soil and water, and it does not provide guidance on quantifying dermal absorption of chemicals resulting from exposure to vapors. The Superfund RAGS Part E Workgroup agreed with the finding in the DEA report that many chemicals, with low vapor pressure and low environmental concentrations, cannot achieve adequate vapor concentration to pose a dermal exposure hazard. For chemicals with the potential to achieve adequate vapor concentrations, this guidance assumes that they are primarily absorbed through the respiratory tract.

Goals

EPA welcomes feedback on this draft RAGS Part E document. EPA is seeking public comment at this time in order to ensure hearing the widest range of views and obtaining all information relevant to the development of policy. In addition, EPA is soliciting data pertinent to reducing uncertainty and variability in assessing risks from dermal exposure. EPA will review public comments received on the draft RAGS Part E document and will make appropriate changes in the document. EPA expects to respond in a summarized manner to the principal comments received on the draft RAGS Part E document as a matter of public information.
