

needs of these organizations to adequately evaluate the implementation, progress and process of the National Family Caregiver Support Program, Title III-E of the Older Americans Act (42 U.S.C. 3001 *et seq.*), as amended by the Older Americans Act Amendments of 2000 (Pub.L. 106-501). AoA and Generations United will use this data to plan technical assistance to these organizations in the forthcoming year. The data will also be used by the AoA to evaluate and describe all projects funded by this initiative and address the program's evaluation and Government Performance and Results Act (GPRA) requirements. Findings will be used to manage the program and better target future activities.

Frequency: One-time survey administered by Generations United.

Respondents: State Units on Aging, Area Agencies on Aging, Tribal and Native Organizations, Primary Health Care Centers.

Estimated Number of Responses: 1600.

Total Estimated Burden Hours: 10 minutes/organization × 1600 organizations = 267 hours.

Additional Information or Comments: The Administration on Aging plans to submit to the Office of Management and Budget for approval a one-time survey to identify organizations providing services to grandparents and other relative caregivers of children to design technical assistance to those organizations. Written comments and recommendations for the proposed information collection should be sent within 60 days of the publication of this Notice directly to the following address: Office of Program Development, Administration on Aging, Attention: Rick Greene, 330 Independence Avenue, SW., Rm 4748, Washington, DC 20201.

Dated: December 17, 2001.

Josefina G. Carbonell,

Assistant Secretary for Aging.

Agency Forms Undergoing Paperwork Reduction Act Review

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and

Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 639-7090. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503. Written comments should be received within 30 days of this notice.

Proposed Project

Hanford Birth Cohort Study—New—The Agency for Toxic Substances and Disease Registry (ATSDR) is mandated pursuant to the 1980 Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and its 1986 Amendments, the Superfund Amendments and Reauthorization Act (SARA), to prevent or mitigate adverse human health effects and diminished quality of life resulting from the exposure to hazardous substances into the environment. This legislation was, in part, in response to the lack of scientific information about potential adverse health effects resulting from exposure of a general population to hazardous substances. Although environmental exposures have been documented at many hazardous waste sites in the United States, most existing data are for occupational exposures. However, environmental exposure of a general population is more likely to include exposure of vulnerable subpopulations (e.g., pregnant women, children, elderly, and the infirm). ATSDR plans activities to address these issues which include conducting health studies at sites on the Environmental Protection Agency's (EPA) National Priorities List (NPL) to determine whether and to what degree exposure to hazardous substances at these sites are harmful to human health.

The Hanford Nuclear Reservation, in south central Washington State, is on EPA's National Priorities List. Between 1944 when it opened until its closing in 1972, radioactive Iodine was released to the air from chemical separation facilities funded to produce plutonium for atomic weapons. The Hanford Environmental Dose Reconstruction Project (HEDR) estimates that the majority of releases of Iodine-131 occurred between 1944 and 1951. Broad-based scientific studies indicate that exposure to radioactive materials (including Iodine-131), may be associated with an increased risk of developing autoimmune or cardiovascular diseases. Children up to five years of age may be at higher risk than the general population of

developing these diseases after exposure.

The objective of the Hanford Birth Cohort Study is to compare information on the rates of autoimmune and cardiovascular disease among a population exposed to radioactive contaminants during 1945-1951 and the rates of a less-exposed comparison population. This study may have applicability to other sites where exposure to radioactive contaminants has occurred.

ATSDR currently has underway an information collection at the Hanford Nuclear Reservation to develop educational materials and interventions related to thyroid disease for individuals exposed to I-131 as young children—the Hanford Community Health Project (OMB No. 0923-0031). This Hanford Birth Cohort Study is a separate project which will collect information on rates of autoimmune and cardiovascular disease among the selected population. Integral to designing this project, ATSDR reviewed the work of the National Cancer Institute's (NCI) Committee on Exposure of the American People to I-131 from the Nevada Atomic Bomb Tests as well as the NCI's report titled "Exposure of the American People to IODINE-131 from Nevada Nuclear-Bomb Tests."

In another ATSDR project (OMB No. 0923-0006), approximately 6,000 people were located who were born between 1940 and 1951 in three high-exposed counties nearest the Hanford site (Benton, Franklin, and Adams). For the currently proposed study, ATSDR will randomly select and interview up to 1,000 individuals from this entire birth cohort of 15,001 (including the 6,000 people who were previously located). The comparison population will include a random selection of 1,000 persons born in three low-exposed counties located farther away from the Hanford site (San Juan, Whatcom, and Mason).

To reduce the amount of time required by the respondents, Computer Assisted Telephone Interviews (CATI) will be conducted. Following completion of all respondent interviews, the data will be tabulated and analyzed (the high exposed group will be compared with the low exposed group). The information collected in this proposed study will provide reliable baseline information on the incidence of autoimmune and cardiovascular diseases as related to exposure to releases from the Hanford facility and will also provide the information needed to generate appropriate and valid hypotheses for future activities, such as other epidemiologic studies.

The total estimated annualized burden hours are 1025.

Type of respondents	Number of respondents	Number of responses per respondent	Avg. burden per response (in hrs.)
High Exposed Population	1,000	1	25/60
Screening	1,150	1	5/60
Low Exposed Population	1,000	1	25/60
Screening	1,150	1	5/60

Dated: December 14, 2001.
Nancy E. Cheal,
Acting Associate Director for Policy, Planning, and Evaluation, Centers for Disease Control, and Prevention.

Centers for Disease Control and Prevention

Advisory Committee to the Director, Centers for Disease Control and Prevention: Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), the Centers for Disease Control and Prevention (CDC) announces the following Advisory Committee meeting.

Name: Advisory Committee to the Director, CDC.

Time and Date: 8:30 a.m.-4 p.m., January 18, 2002.

Place: Centers for Disease Control and Prevention Headquarters, 1600 Clifton Road, Building 2, Auditorium B, Atlanta, Georgia 30333.

Status: Open to the public, limited only by the space available. The meeting room accommodates approximately 50 people.

Purpose: The committee will anticipate, identify, and propose solutions to strategic and broad issues facing CDC.

Matters to be Discussed: Agenda items will include updates from Dr. Jeffrey P. Koplan, M.D., M.P.H., Director, CDC, regarding CDC's building and facility master plan and the current CDC Director's priorities with discussions of program activities including updates from Advisory Committee workgroups and updates on CDC scientific and programmatic activities.

Agenda items are subject to change as priorities dictate.

CONTACT PERSON FOR MORE

INFORMATION: Kathy Cahill, Executive Secretary, Advisory Committee to the Director, CDC, 1600 Clifton Road, NE, M/S D-24, Atlanta, Georgia 30333. Telephone 404/639-7060.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and

Prevention and the Agency for Toxic Substances and Disease Registry.

Dated: December 17, 2001.
John Burckhardt,
Acting Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.

Centers for Disease Control and Prevention

Advisory Board on Radiation and Worker Health: Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), the Centers for Disease Control and Prevention (CDC) announces the following committee meeting.

Name: Advisory Board on Radiation and Worker Health (ABRWH).

Times and Dates: 8:30 a.m.-5:30 p.m., January 22, 2002.

8 a.m.-4:30 p.m., January 23, 2002.

Place: Holiday Inn on the Hill, 415 New Jersey Avenue, NW., Washington, DC 20001, telephone 202/638-1616, fax 202/347-1813.

Status: Open to the public, limited only by the space available. The meeting room accommodates approximately 50 people.

Background: The Advisory Board on Radiation and Worker Health (the Board) was established under the Energy Employees Occupational Illness Compensation Program Act of 2000 to advise the President on a variety of policy and technical functions required to implement and effectively manage the new compensation program. Key functions of the Board include providing advice on the development of probability of causation guidelines which are being promulgated by Department of Health and Human Services (HHS), advice on methods of dose reconstruction which have been promulgated as an interim final rule, evaluation of the validity and quality of dose reconstructions conducted by the National Institute for Occupational Safety and Health (NIOSH) for qualified cancer claimants, and advice on the addition of classes of workers to the Special Exposure Cohort.

In December 2000, the President delegated responsibility for funding, staffing, and

operating the Board to HHS, which subsequently delegated this authority to the Centers for Disease Control and Prevention (CDC). NIOSH implements this responsibility for CDC. The charter was signed on August 3, 2001, and in November 2001, the President completed the appointment of an initial roster of 10 Board members. The initial tasks of the Board will be to review and provide advice on the proposed and interim rules of HHS.

Purpose: This board is charged with (a) providing advice to the Secretary, HHS, on the development of guidelines under Executive Order 13179; (b) providing advice to the Secretary, HHS, on the scientific validity and quality of dose reconstruction efforts performed for this Program; and (c) upon request by the Secretary, HHS, advise the Secretary on whether there is a class of employees at any Department of Energy facility who were exposed to radiation but for whom it is not feasible to estimate their radiation dose, and on whether there is reasonable likelihood that such radiation doses may have endangered the health of members of this class.

Matters to be Discussed: Agenda for this meeting will focus on member orientation and include briefings by NIOSH, CDC Committee Management Office, Office of the General Counsel and/or Office of Government Ethics. The Board will also review, evaluate, and comment on the rule on probability of causation.

Agenda items are subject to change as priorities dictate.
