

homogenates (SGH). A DNA vaccine containing the cDNA for the same protein provided this same protection. Protection lasted at least 3 months after immunization. The vaccine produced both intense humoral and delayed-type hypersensitivity (DTH) reactions. B cell-deficient mice immunized with the plasmid vaccine successfully controlled *Leishmania* infection when injected with *Leishmania* plus SGH. The invention is further described in Valenzuela JG et al., "Toward a defined anti-*Leishmania* vaccine targeting vector antigens: characterization of a protective salivary protein," *J. Exp. Med.* 2001 Aug 6; 194(3):331-42.

Dated: January 28, 2002.
