**SUPPLEMENTARY INFORMATION:** ATSDR is required by CERCLA to conduct public health assessments at all sites on, or proposed for inclusion on, the National Priorities List [42 U.S.C. 9604(i)(6)(A)] and may also conduct public health assessments in response to a request from the public [42 U.S.C. 9604(i)(6)(B)]. In addition, the U.S. Environmental Protection Agency (EPA) may request the conduct of a public health assessment under RCRA [42 U.S.C. 6939a(b)].

The ATSDR public health assessment is the evaluation of data and information on the release of hazardous substances into the environment in order to assess any past, current or future impact on public health and develop or recommend appropriate public health actions which could include health studies or actions needed to evaluate and mitigate or prevent human health effects.

The ATSDR public health assessment includes an analysis and statement of the public health implications posed by the site under consideration. This analysis generally involves an evaluation of relevant environmental data, the potential for exposures to substances related to the site, available toxicologic, epidemiologic and health outcome data, and community concerns associated with a site where hazardous substances have been released. The

public health assessment also identifies populations living or working on or near hazardous waste sites for which more extensive public health actions or studies are indicated.

This notice announces the projected availability of the draft Public Health Assessment Guidance Manual (Update). The manual has undergone extensive internal review and will be subjected to scientific and technical review by the ATSDR Board of Scientific Counselors. ATSDR encourages the public's participation and comment on the further development of this manual.
