k. *Description of Request:* Article 42 states that, except as the Commission may otherwise order on its own motion or at the request of the Virginia State Water Control Board and the Virginia Department of Game and Inland Fisheries or the U.S. Fish and Wildlife Service, after notice and opportunity for hearing, the licensee is to release a combined minimum discharge of 15 cubic feet per second (cfs), including seepage flows, from the upper and lower reservoirs. The minimum discharge

from the upper reservoir shall be 2 cfs and the minimum discharge from the lower reservoir shall be 10 cfs, including seepage flows in each case. However, the minimum discharges may be temporarily modified if they are limited by natural inflows and the depletion of conservation storage or if a modification is required by operating emergencies beyond the licensee's control.

The licensee proposes to change the language of article 42 to parallel the release strategy under its Virginia Department of Environmental Quality's Virginia Water Protection Permit. The proposed change would be as follows:

Article 42. Under normal operating conditions, with full conservation storage of 3,200 acre-feet, the licensee shall release a combined minimum daily average discharge from the upper and lower reservoirs of 15 cubic feet per second (cfs), including seepage flows. The minimum discharge from the upper reservoir will always be 2 cfs or greater and the minimum discharge from the lower reservoir will always be 10 cfs or greater, including seepage flows in each case.

When low inflow to the project reservoirs results in 50 percent or greater depletion of the 3,200 acre-feet of conservation storage, the licensee may reduce the releases to a daily average of 7.5 cfs from the lower reservoir (at no time to be below 6 cfs) and 2.0 cfs from the upper reservoir.

If conditions persist and the 3,200 acre-feet of conservation pool is depleted by 80 percent or greater, the daily average discharge from the lower reservoir may be reduced to 5.0 cfs (at no time to be below 4 cfs) and the discharge from the upper reservoir may be reduced to 1.5 cfs.

These requirements may also be temporarily modified if required by operating emergencies beyond the control of the licensee. If drought conditions deplete the entire 3,200 acre-feet of conservation pool, the licensee may, upon mutual agreement with the Virginia Department of Environmental Quality (VDEQ) and Virginia Department of Game and Inland Fisheries, and following public input as determined by the VDEQ, reduce flows further. If the flows are so modified, the licensee shall notify the Commission no later than ten days after each such incident.

l. *Locations of the Application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE, Room 2A, Washington, D.C. 20426, or by calling (202) 208-1371. This filing may
