NUCLEAR REGULATORY COMMISSION

[Docket No. 50-285]

Omaha Public Power District (OPPD), Fort Calhoun Station, Unit 1; Notice of Receipt of Application for Renewal of Facility Operating License No. DPR-40 for an Additional 20-Year Period

The U.S. Nuclear Regulatory Commission (NRC or Commission) is considering an application for the renewal of Operating License No. DPR-40, which authorizes the Omaha Public Power District to operate Fort Calhoun Station, Unit 1 (FCS), at 1500 megawatts thermal. The renewed license would authorize the applicant to operate FCS for an additional 20 years beyond the

period specified in the current license or forty years from the date of issuance of the new license, whichever occurs first. The current operating license for FCS expires on August 9, 2013.

The Omaha Public Power District submitted an application to renew the operating license for FCS, on January 11, 2002. A Notice of Receipt of Application, "Omaha Public Power District (OPPD), Fort Calhoun Station, Unit 1; Notice of Receipt of Application for Renewal of Facility Operating License Nos. DPR-40 for an Additional 20-Year Period," was published in the **Federal Register** on February 12, 2002 (67 FR 6551).

The NRC staff has determined that the Omaha Public Power District has submitted information in accordance with 10 CFR 54.19, 54.21, 54.22, 54.23, and 51.53(c) that is complete and acceptable for docketing. The current Docket No. 50-285 for Operating License No. DPR-40, will be retained. The docketing of the renewal application does not preclude requesting additional information as the review proceeds, nor does it predict whether the Commission will grant or deny the application.

Before issuance of each requested renewed license, the NRC will have made the findings required by the Atomic Energy Act of 1954, as amended (the Act), and the NRC's rules and regulations. In accordance with 10 CFR 54.29, the NRC will issue a renewed license on the basis of its review if it finds that actions have been identified and have been or will be taken with respect to (1) managing the effects of aging during the period of extended operation on the functionality of structures and components that have been identified as requiring aging management review, and (2) time-limited aging analyses that have been identified as requiring review, such that there is reasonable assurance that the activities authorized by the renewed license will continue to be conducted in accordance with the current licensing basis (CLB) and that any changes made to the plant's CLB comply with the Act and the Commission's regulations.

Additionally, in accordance with 10 CFR 51.95(c), the NRC will prepare an environmental impact statement that is a supplement to the Commission's NUREG-1437, "Generic Environmental Impact Statement for License Renewal of Nuclear Power Plants" (May 1996). Pursuant to 10 CFR 51.26, and as part of the environmental scoping process, the staff intends to hold a public scoping meeting. Detailed information regarding this meeting will be included in a future **Federal Register** notice. The
