SUPPLEMENTARY INFORMATION:

I. Abstract

Social science data for selected Alaska fisheries will be collected for communities and individual participants involved in the following sectors: commercial harvesting and

processing, sport-fishing, and subsistence. In general, the questions asked will be about the social aspects of fisheries and impacts on individuals and communities. The data collected will include information on topics such as fishery participation and impacts, life histories, community structure and dynamics, knowledge and perceptions, decision-making criteria, and geographical distribution. This information will be used to (1) describe and analyze the social aspects of fisheries, (2) monitor the social impacts of fisheries, (3) analyze the social impacts of current management measures; and (4) analyze the social impacts of alternative management measures.

The large scale and wide geographic area relevant to Alaska fisheries will not permit fieldwork in every fishing community. However, a goal of the research over a five-year period will be to conduct fieldwork in each general region and in representative communities.

II. Method of Collection

The data will be collected principally by the National Marine Fisheries Service (NMFS) social scientists and contractors, and will include interviews, surveys, and focus groups. In-depth interviews and focus groups generally will be administered in person and on-site in the fishing community, or by telephone. Surveys may be administered in person on-site, or may additionally be conducted by mail, telephone, or Internet.
