Subject: Microsoft Settlement

To Whom It May Concern:  
I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Joshua Rochester

Subject: Microsoft Settlement

Hello,  
I understand from various news sources that your office is gathering Tunney Act-related responses to the proposed Microsoft settlement. I am writing to express my strong opinion that the settlement, as it stands, is a very bad idea.

I am a computer engineer, and I work for an ISP. As such, I have a better idea than most of the damage that Microsoft has done at a purely technical level.

The problem is that Microsoft is very good at marketing, and unfortunately, many of its competitors are not. Moreover, the opportunity cost of allowing Microsoft to continue have been HUGE—but they are not really visible unless one has the technical background to appreciate the superior alternatives that have been driven out of the market by Microsoft's anticompetitive behavior. These costs have never been widely acknowledged.

The damage Microsoft has done includes:  
1. Undocumented, or poorly documented file formats. Primary among these are the file formats for the various Office applications. Microsoft's specifications on these formats are so complex and vague that no competitor—anywhere—has been able to reverse-engineer 100% compatibility. Further, whenever any competitor gets close, Microsoft releases a new update that once again breaks compatibility. Microsoft also uses these incompatibilities to force customers to upgrade.

2. "Embraced and Extended" standards. Frequently, Microsoft has taken a widely accepted standard (DCE, Kerberos, SMTP auth, html, java) and changed it just enough that interoperating with anything other than a Microsoft product is partially or fully broken. They can do this because their desktop monopoly enables them to widely deploy their mutated standard. This is a deliberate attempt to fence off the commons, and make it proprietary to Microsoft. (For more information, search for "Halloween Documents" on the web, the section on Embracing and Extending Standards)

3. Multiboot license restrictions. Not widely known are the boot-time restrictions that Microsoft places on its "partners". These prohibit the display of multiple operating system choices at boot-up. For example, Be, Inc offered its widely acclaimed operating system for FREE to anyone who was willing to preload it on a computer in a dual-boot configuration. Those who took them up on that offer were quickly contacted by Microsoft legal, who prevented the display of the competing system. As a result, those who bought the computer had to go through a lengthy procedure to uncover the software that was provided to them for free—just because that software competed with Microsoft. For a more recent example, witness the "relaxing" of desktop icon restrictions by Microsoft: OEMs could put

AOL's icon on the desktop only if it was accompanied by multiple icons advertising equivalent Microsoft services.

4. Anti-competitive bundling. In the newest version of Windows, Windows XP, several applications are bundled and uninstalleable which, by any definition of the term, are not operating system services. Examples include the XP's passport integration, and Microsoft instant messenger integration. Read any of the many reviews on the web which talk about how heavy-handed XP is in pushing users to subscribe to Microsoft services.

This last point gets to the heart of the matter. Microsoft uses its desktop monopoly to leverage itself into other spaces in a unique and anticompetitive fashion. Permitting this to continue with just a consent decree and judicial oversight is no remedy at all. Remember that the current lawsuit was started because the previous consent decree did not restrain Microsoft's anticompetitive leanings in any significant fashion. Please don't repeat the same mistake!

As a citizen, voter, engineer, and consumer, please require that the conviction against Microsoft mean something! Please use all your efforts to require competition in the software marketplace. I know it may seem risky in this slow economy, but long-term, the best thing for the economy and the consumer is sufficient competition in the market.

Thank you,  
Van Lindberg

From: Ameesh Patel  
To: Microsoft ATR  
Date: 1/23/02 7:49pm  
Subject: MSFT Settlement  
Subject: Microsoft Settlement

The proposed Microsoft settlement is a bad idea. Please do not allow it to move forward in its current form.

Microsoft is once again using the terms of an agreement to wipe out competition. Specifically, because Microsoft maintains an operating system monopoly, Section III(J)(2) will leave Open Source projects such as Apache, Samba, and Sendmail very vulnerable to Microsoft's predatory practices. Because under the terms of this agreement, Microsoft would not be forced to describe or license protocols that affect companies that don't meet Microsoft's criteria as businesses. This would effectively allow Microsoft to write code in such a way as to make it impossible to use with Open Source code, thereby forcing users of Microsoft operating systems to use only software that Microsoft creates itself or allows non-competitors to create.

Microsoft is doing what it has done many times in the past. It has squashed competitors through tactics of intimidation, buyout, and outright theft. Now it is attempting to reverse the initial verdict which declared unequivocally that they were a monopoly, back to their advantage.

As a taxpayer, I find it disgusting that Microsoft is allowed to act in such a cavalier manner toward the US justice system. They

continually display an arrogance that shows they have no regard for the law.

Please, do not allow them to remap the playing field to their advantage. It is not in the interests of the United States for one company to exert so much control over the electronic infrastructure of our country—as ongoing and extremely alarming security problems with Microsoft products demonstrate.

Sincerely,

Subject: Microsoft Settlement  
To Whom It May Concern (or Renata B. Hesse):

I would like to submit my comments regarding the Microsoft Settlement in the United States of America vs. Microsoft case as per the Tunney Act. I believe that in its current state, the Stipulation and Revised Proposal Final Judgement of the United States of America vs. Microsoft Corporation is designed to prevent Microsoft from engaging in the very behavior which led to its being found guilty, and in that regard, is fine. However, there are several problems with the entire settlement that in my opinion, should lead to scrapping most of, if not all of the judgement. In its current state, the document does not properly punish Microsoft for its guilty actions, nor does it completely prevent Microsoft from doing the same things again in a Monopoly fashion. Instead, if this Stipulation and Revised Proposal Final Judgement is accepted, Microsoft will simply use its monopoly position to change the methods by which it prevents competition from gaining a foothold in the market and taking away any of Microsoft's current market share.

I want to focus on one particular section, which I believe undermines the entire settlement and judgement agreement. In regards to section III-J of the Stipulation and Revised Proposal Final Judgement, I believe that this section will result in additional civil trials. Specifically, Microsoft will argue it cannot open its source code as it is protected by section III-J, and therefore, they cannot fulfill the other obligations of allowing "Non-Microsoft Middleware" to be freely operated

as they would have to open source their computer code that would affect their operations, copyrights, and intellectual assets as protected in Section III-J. Section III-J.2. tries to address this point, but it becomes a very circular argument, as Microsoft can argue it knows its software best and opening it up would indeed violate Section III-J. 1., even though they are partially required to do by Section III-J. 1. While the three person Technical Committee (TC) in Section IV-B is designed to assist in determining which Microsoft source code is open for use and which isn't, it is very likely that Microsoft will argue in court against every single request of the TC. Further, it is likely that since Microsoft code is designed to be thoroughly intermingled, such that any Microsoft application works smoothly with any other Microsoft application, that opening ANY source code given to "Non-Microsoft Middleware" companies would violate Section III-J. 1. Even if it is possible to separate out aspects of the code covered under Section III-J. 1., such that source code could be given to "Non-Microsoft Middleware" companies, it is likely that this new software would not work as well as Microsoft "Middleware" products which have full access to the source code. Therefore, since this new non-Microsoft "Middleware" does not work as well as it should, it would quickly fall out of use among consumers because it didn't work. However, it would have failed directly by being set up for failure by Microsoft, and indirectly from consumer choice/market forces because the product could never work properly on a Microsoft-based operating platform. This final point is the most crucial because of the fact that Microsoft does indeed have an operating system majority (monopoly) on operating systems for most of the desktop computers in the U.S.A. If the new non-Microsoft Middleware cannot properly work on the majority of US computers since most of them have Microsoft Windows on it, how can the Middleware producers compete at all?

I now want to address the whole decision, and share my thoughts on the logic under the judgement, which I believe is partially flawed under the logic of laws, punishment, and justice. As I mentioned above, while I do believe that the judgement will prevent Microsoft from doing most of the actions it did before, it is not receiving any punishment for those actions. The actions prohibited in the document were illegal to begin with, and this judgement merely states that Microsoft will stop doing illegal actions, which by law, they should not be doing in the first place. Further, if they do these illegal actions, they should be expected to be punished under the law if found guilty. They were found guilty of monopolistic acts outlined in the Sherman Act, and therefore, should be punished. Since Microsoft's practices have hurt certain non-Microsoft "Middleware" companies, certain US states covered in this case, and possibly the US consumer due to lack of product choice, it stands to reason that a punishment against Microsoft, perhaps leading to compensation of the plaintiffs, should be part of this settlement. As I looked through the settlement, I did not see this

covered at all. However, this sort of compensation, and attaching a monetary value to it, will likely result in unending greed and even more lawsuits which ultimately will not result in a proper handling of justice in this case. Unfortunately, any punishment against Microsoft will most likely result in hurting its base employees, which may not have been guilty of the actions that led to this settlement. Therefore, monetary actions should be taken out against Microsoft management and leadership, since they approved the actions that led to their guilt in this case. I believe this is important, otherwise the guilty upper leadership will simply take the monetary damages out on others in its company, resulting in unemployment of solid lower-level workers who were not guilty.

If monetary compensation will result in more injustice, then another solution makes more sense. Since most everyone (US and worldwide) uses Microsoft's base operating system (Windows) for its computers, it suggests that Microsoft's Windows OS has become the de facto standard of operating system for computer users. Therefore, to ensure they cannot exploit this monopoly further, (which they were proven guilty of) their source code, which enabled their monopoly, must be opened for EVERYONE to use. Microsoft should not be allowed to collect royalties on it, and all copyrights must be removed allowing all computer programmers, who desire to make products for commercial use, to work with the base source code free of charge. What this does is that it completely levels the playing field for all computer "Middleware" producers, such that no one has an advantage due to proprietary source code which everyone has a working copy of, but only one company (Microsoft in this case) has full access to. Now Microsoft will be forced to compete with everyone else on level footing, and any market share they gain will be due to hard work and product acceptance, not from unfair market advantages imposed by monopolistic practices. Therefore, Microsoft is effectively punished by removing the monopoly that it currently enjoys and uses to make profits at the expense of others.

If this were the proposed punishment and settlement for this case, I suspect Microsoft would oppose it violently, but it would indeed end the monopoly and force Microsoft to work just as hard as everyone else to get a product accepted by the market. Microsoft would not be at a complete disadvantage in this environment, as they still produce updates to the operating system that everyone buys, so they still maintain huge market share in operating systems. Under my suggestion mentioned above, the operating system would be open for all to use, and Microsoft would be forced to use its extensive wealth to develop new products and innovations to compete with all the new players in the market of "Middleware". Therefore, the consumers, states, and US all win due to all the new choices and the loss of the previous monopoly. If you desire more clarification on what I've written here, or need additional information, please feel free to contact me. Thank you for your time and

for reading my comments regarding this decision and settlement.

After reviewing the points in the Proposed Final Judgement ( from here on referred as pfj ) I'm afraid that I would like to go on record as opposed to the pfj. I feel that the pfj allows Microsoft a way to get around every one of the points made. Some by just renaming software, others by not giving out information in a timely manner. To top it off there seems to be no real effective way to enforce the ruling, leaving it up to the legal system. The government has spent millions on this case and should not; in my opinion, throw in the towel in the final round.

From: Charles Welsh  
To: Microsoft ATR  
Date: 1/23/02 7:59pm  
Subject: Microsoft settlement....

Over the last decade, I have known executives at two different companies (Neither of whom were mentioned in the antitrust trial) who lost their businesses solely because Microsoft decided that they should not continue to exist.

I also continue to work with companies who cannot conceive of choosing other than a Microsoft solution to base their products on. They simply assume that Microsoft will use its monopoly power to kill all competitors in any product area that it enters. Therefore, it is efficient to base their businesses solely on Microsoft technology and therefore risky to use any other technology.

I am hopeful that you will assess a meaningful remedy and a punitive sanction against Microsoft. In doing so, I hope that you will choose to take action that allow real competition in the industry again. The market power that Microsoft commands is truly astonishing. The current remedies proposed do not correct this situation.

From: Richard Jetton  
To: Microsoft ATR  
Date: 1/23/02 8:00pm  
Subject: Microsoft Settlement

Greetings,

I write you to voice my disapproval of the proposed settlement in the Microsoft antitrust case. There are many reasons for my opinion, but the most pressing are quite simple. There is nothing in this proposed settlement that returns competition to the markets where Microsoft has illegally gained an unfair advantage.

To rectify the past illegal actions of Microsoft, a fair settlement should include these points.

1. Microsoft must freely and publically publish the complete source code for all software and firmware products it currently sells, and for all future products it offers during the next ten years. All software must include checksums of the resulting compiled images, and instructions on how to reproduce those images. This is the only way to allow third-party vendors to compete in areas where Microsoft has become the only player.

2. Microsoft must forever stop the practice of "free bundling" of its software (including operating systems) with PCs and other products. This practice hides the true cost of software from the consumer, and reduces the options available to consumers from retailers. This is especially true of the PC market. All Microsoft software add-ons to hardware purchases (including operating systems) must have a line item price that accurately reflects the prevailing retail price for Microsoft software. Also, Microsoft must charge the same to all of its customers, regardless of their purchase volume. Therefore, the consumer cost of a Microsoft product will be nearly the same regardless of when or where it is purchased.

I appreciate the opportunity to be heard in this important matter.

From: Truman Phillips  
To: Microsoft ATR  
Date: 1/23/02 7:54pm  
Subject: Microsoft Settlement

To Whom it may Concern:

Dear Sir/Madam, My Name is Truman Phillips, and I work as a network administrator for my employer. I have been active in computers for the last 10 years or so, and in this time, I have seen many things come and go, and unfortunately, many products that were very good in quality/reliability have fallen to the wayside due to Microsoft's continued Monopoly status. Many software developers have been either run out of business by Microsoft's "benevolent to consumers" bundling practices, or Microsoft just outright purchased the companies. Stacker Technologies (Maker of Data Compression software, Microsoft was found guilty of backward engineering Stack's technology) Netscape's Navigator/Communicator web

Browsers, back in 1995 William Gates, acting as a spokesman for Microsoft had at times told people that Microsoft was not interested in the Internet, and shortly after they changed directions, and started to incorporate a web Browser in Windows so that they could leverage their current Monopoly to gain Market share.

I personally feel that the solutions presented as a settlement in the ongoing legal proceedings are by and far inadequate to restrain Microsoft's Monopoly on Operating Systems, or to nurture honest competition in the marketplace. I also do not think that a breakup of Microsoft as was previously attempted would accomplish anything more than to make two/three smaller monopoly companies. I do feel that a market wide solution could be attempted. Microsoft has managed to maintain its Monopoly through preloading of software as the Computer Manufacturer.

I would propose a marketwide solution of a software package preconfigured and imaged to a CD-Rom disk(s) and sold as a separate package. In this way, true Market choices could determine if there will be a monopoly.

In any event, I am not a lawyer, and this may not be feasible from a legal standing. But please take to heart my opinion that as the current agreement stands is a bad deal for the consumers of America.

Sincerely,  
Truman P Phillips

Date: 1/23/02 7:59pm  
Subject: Microsoft Settlement

To whom it may concern:

I am very displeased with the proposed settlement the United States Justice Department wants to reward the predatory company Microsoft with its flagrant monopolistic practices. There desire to stifle competing software in any venue is directly hurting the consumer. The proposal I saw did virtually nothing to protect the common person from this company. Some suggestions for things that need to be done to help other software companies. Certain aspects of the various Microsoft operating systems should be made open, particularly the API's and any file types. There is no reason for file types to remain closed, other than to hurt competition so multiple programs cannot coexists and work with the same files.

Internet explorer should be made an option, with a way of removing it. This is one buggy program which if you have a windows product leaves port 80 susceptible, not to mention the general assumption of webmasters to take shortcuts and ignore the other browser types. I use Opera 6.0 and Netscape 6.2 which don't work in certain instances not as a fault of they're own but more a result of Microsofts domination through uncompetative means.

 Subject: Microsoft Settlement

My name is Joel Garringer and I would like to comment on the proposed Microsoft settlement. I do not believe that the proposed final judgment what appear to me to be the two core areas wherein Microsoft has abused their monopoly power. I do not believe that the proposed remediation does an effective job of forcing Microsoft to allow other software developers the ability to fully support interoperability with Microsoft applications and operating systems.

Because Microsoft produces both an OS and the applications that run on it, they have the ability to conceal from competing developers the API's that the windows OS exposes. The remedy does not do a good job of defining what portions of the Windows API should be released to the public.

If competition and innovation are really concepts that all of the parties involved with this case value, then I believe that it is perfectly reasonable to expect Microsoft to release the full windows API, and to release these API's as soon as they become available within Microsoft.

Additionally I do not believe that there should be any restrictions on the types of development programmers who refer to Microsoft's API documentation are allowed to participate in. To give a developer access to the Windows API but not allow them the freedom to work on applications that may-or-may not run on Windows undermines the effectiveness of the settlement. I my mind this issue is the biggest, but not the only fault in the Proposed Final Judgment.

Thanks.

 Dear Department of Justice,

Following are my comments in support of the recommendations put forth by the nine non settling states.

Microsoft's predatory, monopolistic, and anti-competitive practices are well documented. They are under legal fire in the United States, China, Brazil and Europe. And yet, with their enormous monopoly gained resources they manage to buy a settlements i.e. with nine states, to buy endless legal delays (that promote a denial of justice) while their products and associated proprietary training become ubiquitous, capture the marketplace and eliminate innovation and competition.

All this at a time when Americans are making sacrifices and responding with unprecedented patriotism to threats against our country and its beautiful inherited legal system which is the envy of the world. Microsoft, Enron—the global investment community is watching. America's business practices are on trial.

**THIS IS THE TIME FOR OUR LEGAL SYSTEM TO UPHOLD THE LAW FOR THE BENEFIT ALL BUSINESSES, CONSUMERS, INVESTORS, INNOVATION, COMPETITION AND INTERNATIONAL TRADE.**

 Subject: "Microsoft Settlement"

To whom it may concern,

I believe that the Microsoft settlement does not at all address the monopolistic practices of Microsoft. Perhaps the best solution to all, is the requirement of open file format standards allowing other programs to read and write Microsoft files. This would allow competing operating systems to convert Microsoft infrastructure while at the same time allowing Microsoft to maintain the secrecy of their source code.

I think the settlements being considered inadequate and furthering the monopoly of Microsoft.

Sincerely,  
 Dan Anderson

Subject: Microsoft Settlement

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior.

Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Thank you for your time,  
 Theresa Peterson

From: ftg@wt6.usdoj.gov@inetgw  
 To: Microsoft ATR  
 Date: 1/23/02 7:57pm  
 Subject: Microsoft Settlement

Having reviewed the available material, I do not agree that the proposed settlement will be at all effective in any of the areas of punishing Microsoft for the offenses of which it has been found guilty, preventing future violations, or making any realistic restitution to those harmed to date.

Microsoft maintains its monopoly almost solely through punitive contracts with OEMs which discourage them from offering alternatives to Windows. It is only their monopoly that gives these contracts "teeth". If OEMs believed that they could obtain equal treatment from Microsoft in spite of offering competing products, they would offer those products if the market wanted them. As it is, OEMs are too scared to offer

even Windows-based products that are seen to threaten Microsoft's monopoly. A perfect example is the Sun Java Runtime for Windows. This product is free, yet when Microsoft decided to remove their own Java Runtime from Windows XP, no OEM dared to bundle the Sun Java Runtime with their Windows-preloaded PCs for fear of retribution from Microsoft. The only effective throttle on Microsoft will be to force it to deal equally and fairly with OEMs. OEM deals should be in the public domain, and any OEM who has been the victim of discrimination ought to be able to recoup extreme punitive damages. These are not conditions to which an arbitrary software company should ordinarily submit, but in the case of Microsoft, they constitute a "punishment which fits the crime". Microsoft has abused its monopoly position by wielding this weapon against OEMs in order to maintain its monopoly, and it is only just that any punishment demand damages from Microsoft in this area. The proposed settlement will be, in my opinion, absolutely ineffective in controlling such abuses in the future.

Sincerely,  
Francis T. Griffin  
Biddeford, ME

From: Brian Trosko  
To: Microsoft ATR  
Date: 1/23/02 7:59pm  
Subject: Microsoft Settlement

I am writing to express my extreme dissatisfaction with the proposed settlement between Microsoft and the Department of Justice. The proposed remedy amounts to nothing more than another consent decree, the same sort of thing that Microsoft has simply ignored and violated many times in the past; the proposed regulations seek to regulate Microsoft's behavior, but have no teeth as far as enforcement of that regulation, and so will have very little ability to prevent Microsoft from extending its monopoly power and engaging in more anticompetitive, anti-consumer behavior. Microsoft was found to be acting illegally as a monopoly; any remedy to this crime needs to end that monopoly power, and the proposed settlement completely fails to do that.

Sincerely,  
Brian Trosko

Subject: Microsoft Settlement

Please do not buy into the settlement with any contingency on Microsoft services or software being provided directly. This settlement must be platform agnostic. I view the Microsoft offer as a thinly veiled attempt to get the remaining 5% of the desktop (Apple1s) to increase their monopoly further. The settlement must in fines/money into a fund without Microsoft being able to declare retail or even heavily discounted values of their products/services against the fund. After all, what is the true incremental cost to Microsoft for burning an extra Windows XP

or Office XP CD. Let the schools have complete discretion (and perhaps encouragement to act contrary to the Monopolist) and Microsoft offerings against the fund must be at their largest discount to ANY of their customers.

Sincerely,  
Eric Jungemann

Date: 1/23/02 8:04pm  
Subject: Microsoft Settlement

The Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Billies latest vow is to Kill Linux. Now a little monkey and good to be a large gurilla. He has teams visiting the enterprise companies offering incentives not to employ linux and us Microsoft products. They have permission to sell these products cheap or actually give them away to keep them out of their networks.

Please, reconsider the final judgement.

Subject: MICROSOFT SETTLEMENT

ROBERT B. JORDON  
33 BEAUVOIR COURT  
DERWOOD, MD 20855  
301-963-4084  
January 16, 2002  
Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530  
Dear Attorney General Ashcroft:

I am writing to express my thoughts on the Microsoft case. I am very glad to see that there has been a settlement reached. This case has dragged on for nearly three years and in my view has hindered the countries economic development. Accepting this settlement will allow both Microsoft and the U.S. Government to apply their resources to endeavors more pressing and of greater benefit to the public than the pursuit of prolonged legal battles.

I use Microsoft products on a daily basis. I feel the company has built an excellent array of products and applications which

have greatly facilitated the interchange of information and ideas throughout the world. I applaud the concept of free and open competition as well as recognize the need for business to aggressively pursue growth. Microsoft has become a leader in the market through bringing to the public the product that best suits the consumers' needs. I believe that the settlement will aid other companies in developing competing and complementary products—whether this advantage is warranted, or not, seems to be a decision that your organization has reached a decision upon which I would like to see brought to rest. This appears to me to be a sufficient step in responding to the claims of monopolistic practices.

For the sake of all concerned please settle this suit and allow Microsoft to concentrate on their business and contribution to the U.S. economy.

Sincerely,  
Robert B. Jordon

From: Sheila Medd  
To: Microsoft ATR  
Date: 1/23/02 8:10pm  
Subject: Microsoft Settlement

As a taxpayer I would especially like to see this matter settled as agreed to by most of the parties in November. As a consumer, I would prefer to have no more government regulation than we already have as it tends to increase the price I pay for items. I believe that the settlement should remain as decided in November in the interest of hopefully an aid to the ailing economy especially since the events of September 11th.

It is my hope therefore that the the Microsoft settlement will be approved without change.

Sincerely,  
Sheila G. Medd

From: Velocity Channel  
To: Microsoft ATR  
Date: 1/23/02 8:00pm  
Subject: Microsoft Settlement

As an IT professional, Microsoft's tactics have made my job increasingly more stressful. As a consumer, Microsoft has taken away choice. They would like you to believe that their only concern is the end user, but the fact of that matter is they strengthen their monopoly everyday using illegal means to shove their software and services down our throats.

Windows needs to be restrained. Let MS make their operating system. But please keep them from filling it up with their own versions of software like web browsers, instant messaging clients, email clients and internet access. MS has the advantage and continues to shove their products down our throats by incorporating these programs into Windows. This leaves competitor's applications to suffer. It is not fair to these companies, and to the users. We want choice. Don't let MS tell you what they think we want. Let us tell you what we want, so that you can make the proper decision.

Please make Microsoft accountable for their actions. Keep them in line by watching

and questioning their every move. If this isn't done, I am afraid that the term Federal Government may be preceded by the word Microsoft very soon.

I don't think that the current settlement is enough and I don't support it. Impose stronger restrictions on this company. I think you had the right idea when you originally decided to break them up.

Subject: Microsoft Settlement

Let's just get it over. This case, from the outset, has been about those who are not inclined to compete. They are lazy, slovenly, and just plain whiners. They just think "it's not fair! They have more than I do and I want some. Guess I'll go to court for my share." I for one say more power to Microsoft. It's called CAPITALISM! If you can't stand the heat, get out of the market-place. If you truly have a product that is worthwhile, people will buy it. Just get it out there.

Netscape used to be a good browser. As a matter of fact, I used to use it. Then AOL bought it and the only thing they seemed to be interested in was hemming me in to ONLY their content. I now use Internet Explorer. AOL ruined the internet. THEY are the ones who should be outlawed.

So, again, just end it. You have wasted enough of our TAXPAYER dollars on an issue the CONSUMER will settle with his DISPOSABLE INCOME!

Harry G. Hudak

From: Thomas Lyon Gideon  
To: Microsoft ATR  
Date: 1/23/02 8:05pm  
Subject: Microsoft Settlement

I am appalled at the mere suggestion, in the proposed settlement, that Microsoft be "forced" to donate software, to a set limit, to schools. Aside from the, arguably invalid, implication that Microsoft sets their pricing so directing them to give away \$XXX worth of software means they could conceivably set their prices to give away one \$XXX copy of Windows. What the DoJ must realize is that much path dependency when it comes to software is developed while users are in the educational system. If students learn Microsoft software, what are they going to be encouraged to buy when they matriculate and become good little consumers? If anything, this aspect of the proposed settlement practically gives Microsoft a stronger hold on a potential enlarged consumer base than they already have. Rather than allowing them to propagate their software further, the proposed remedies for open up the ISVs and OEMs should have more teeth, especially the smaller, regional "white box" providers. Letting Microsoft donate their product to a captive audience is more like spraying gasoline on a fire than spraying foam.

To: Microsoft ATR  
Date: 1/23/02 8:05pm  
Subject: Microsoft Settlement

Dear Sir or Madam,

As a software professional (Senior Software Developer) I have serious concerns with the proposed settlement with Microsoft. The biggest problem is that the consent decree is in many ways like the 1995 decree, it doesn't really stop Microsoft from doing anything. The definitions that the decree are based on are overly restrictive and narrow.

This proposed decree appears to be written solely by the Microsoft lawyers as it doesn't offer any protections to individuals like me in either my personal or professional life. I'm also concerned that the decree doesn't have any protection for tools that provide inter operability between operating systems and platforms. The decree appears to give Microsoft the ability to change their SDKs, interfaces and protocols with little effort. This would allow Microsoft to kill tools that exist to provide cross platform communications, such as SAMBA and Wine.

From: Trevor Goodyear  
To: Microsoft ATR  
Date: 1/23/02 8:02pm  
Subject: Microsoft Settlement

To whom it may concern,

I would like to add my vote to those who are not satisfied with the current terms of the settlement with Microsoft. Those penalties which it does impart on the company will likely prove ineffectual in their attempts to stop Microsoft from continuing its practices of leveraging other companies out of business.

As an example, forcing Microsoft to donate software to schools is preposterous. The academic world is one of the few realms in which non-Windows machines have a foothold. Such donations would only work in Microsoft's favor.

If you believe at least part of your responsibility is to make sure such behavior is not repeated, you will not accept the current proposed settlement.

Sincerely,  
Trevor Goodyear

From: Gregg Bloom as Colz Grigor  
To: Microsoft ATR  
Date: 1/23/02 8:03pm  
Subject: Microsoft Settlement

Hello. My name is Gregg Bloom. I am a voting citizen of the United States and a resident of Santa Cruz, California.

I do not find the current proposal between Microsoft and the Department of Justice to be satisfactory. Microsoft has been found guilty of manipulating its monopoly to the

detriment of the computer-using community for over a decade. It has had very bad business practices including taking advantage of much smaller companies in order to use the smaller company's superior technology and, in effect, put the smaller company out of business.

I do not think the proposed judgment successfully addresses the companies that are no longer on-going concerns as a result of Microsoft's bad practices.

I believe that the best way to address this issue has several components.

First, I would like to see Microsoft forced to redesign its operating system so that any individual component that has been included with a distribution of Microsoft Operating Systems (95, 98, me, XP, and .net) can be replaced with a third-party's version of software that performs the same function. In order to do this, Microsoft will need to provide detailed specifications for all of its existing and future components of their operating system for a period of time (I believe ten years is satisfactory), and a very easy process for a user of Windows to select the components of the operating system that they would like to interchange with software that they have received from a third party.

Second, I would like a small government agency established. This agency will receive money from Microsoft (a set amount per year for the term of this judgment (ten years at 500 million a year?)) and will fund smaller companies attempting to improve on the individual components of the operating system. This agency will be responsible for evaluating business plans for the proposed improvements, and will be able to withhold payment if it is apparent that the small company is not performing as anticipated.

::Gregg Bloom

From: David McCuskey  
To: Microsoft ATR  
Date: 1/23/02 8:05pm  
Subject: Microsoft Settlement—needs to be stronger!

hello,

just wanted to say that the Microsoft settlement is a **BAD** idea. it essentially rewards them for their monopolistic behavior by giving them a tax write-off ( not paying full price for software/machines via inflated prices )and entering in an area ( education ) for which they haven't been able to grab.

== Quality

Microsoft products are sub-standard by any means and are expensive, but MS can afford to continue this practice because they are a

monopoly. they purposefully withhold information regarding their products ( protocol specifications, etc ) so that their software will be preferred on their system ( even over other windows-based software ).

Their previous operating systems: ( esp Win95, Win98 ) were some of the buggiest OS's around ( this is documented ). i have first hand experience - i run Win98 because i need to use Internet Explorer on a PC to check websites that i create.

Microsoft software has been shown to be extremely insecure ( even by MS themselves )—just search for the various security holes and viruses from this past year alone—and is running on a majority of the computers in the world. this is scary. they do not act quickly enough for their position of responsibility. ( to handle this, they usually come out with another version of an OS, name it something different, and charge people again for a fix to the problems that were in the original software ).

== File formats

MS has purposefully safeguarded file formats and changed them ( notably, MS Word ) so that their software 1. is constantly re-purchased by the users ( though most people don't need any new "features" ) 2. other software manufacturers cannot create competing software ( due to file format incompatibility issues ).

==Open Source their stance against Open Source software is totally unfounded. with OS, they have found an opponent that they cannot fight or buy so have resorted to their Fear, Uncertainty and Doubt ( FUD ) tactics, and have barred OS software from their systems.

OS software is some of the best written AND SUPPORTED software on the planet because there are many people who can look at and change the code. it has been proven that this model works—and practically all Universities, and many companies, etc use OS software on a daily basis ( Perl, Python, MySQL, PostgreSQL, Apache, emacs, Linux, GCC ( software compiler ), etc ). all of these are highly regarded as the best tools. and a majority of the Internet is created and run with these tools. it is the end-users that are suffering for these practices. development and innovation have been stifled ( R&D isn't necessary if you're the "Only Kid on the Block" ) and their computing experiences are rife with frustration ( ask me, my parents and friends ).

Push for a harder settlement:

i don't think the settlement is enough—the amount they should have to pay should be 10 times more... they have gained their position of power and wealth via monopolistic practices.

Subject: Microsoft Settlement

Department—

As a user of Microsoft products, I favor the settlement that the Department and several of the State Attorneys General have negotiated with Microsoft, and urge that you finalize that settlement on its existing terms. I believe that this settlement is in the public interest and should be submitted to the court with the recommendation that it be approved in its present form.

I have followed the litigation closely. It appears to me that too little weight is being given to the fact that Microsoft's success in the market was based on merit, not market share. The sooner that this protracted litigation can be finally resolved, the sooner that Microsoft will be able to return its full attention to its first priority—the consumer, innovation, and improved products at lower prices.

Thank you.

Gordon Appleman

From: ARobertWSimmons@cs.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 8:04pm  
Subject: AOL-Netscape vs Microsoft

Netscape became netscrap due to their inability to innovate and update to KEEP there customers. Customers especially happy customers keep you motivated to do better, Netscape was not able or capable of listening to their consumers. Microsoft a newcomer to the browser market had what I would call a lousy product in the beginning. With their consumer follow up and product hotline they took the heat made product changes and today they have a great product that works well with just about any program. Netscape via AOL today will kick you from programs and you have to reboot to get back into that program.

AOL knew or at least I hoped they knew that what they were buying was a oversize peice of software that needed alot of work to make it a streamlined player iun the game of Browsers. Don't use the feable excuse that Microsoft bundle the product with Windows that caused Netscapes problems that just not true. You still had to buy the Windows program and you paid alot of money for that software. I was glad to get anything and everthing they had for that purchase. It works great then and it works great today. I've bought Netscape Gold, Netscape Premium, and Netscape programs to assist me in other online programs in the past, and after a month trying to work anyone of the programs I deleted the programs and went on with another program. If AOL is so hot on Netscape I have three different programs that Netscape came out with I'll be more than happy to send them back for credit.

Microsoft products and Internet Explorer works well, with ease, and does not take up alot of memory.

Tell AOL to market their product the right way and listen to the consumers whobuy the products, and maybe they may have a chance in getting back market share they have given upon hoping that the DOJ would help them with. Let the consumer be the judge of what products are good, and what product systems they wish to buy.

Thank you, I was just going to say a few words but I got on a consumer roll.

RW Simmons

Subject: Microsoft Settlement

This settlement is unacceptable. I am a computer consultant mainly handling the end users. Microsoft makes my job possible. There poor software provides endless hours of work for me and my company. If it were not for Microsoft I would have one tenth of the revenue. Yet, I am taking time out of my day to request that Microsoft be split into three perhaps 4 companies. This would provide for some competition and finally some better software. I see the splits happening as follows.

1. Office products (MS Office, MS Money)
2. Internet Services (MSN...)
3. Server Software (Exchange, SQL)
4. Operating Software (Windows)

This configuration would hopefully over time dilute the force that is Microsoft and eventually bring stable reliable software to the small business end user.

From: Chris Lawrence  
To: Microsoft ATR  
Date: 1/23/02 8:05pm  
Subject: Microsoft Settlement

I am writing in opposition to the proposed settlement of the U.S. case against Microsoft Corporation. In particular, I request that the following, or something substantially similar, be made a condition of any settlement with Microsoft:

Microsoft shall be required to disclose all application programming interfaces (APIs) that are used by any software sold or given away by Microsoft that is not included with Windows 98, Windows 2000 Professional, Windows XP Home, Windows XP Professional, Windows CE, Windows XP Tablet PC Edition, or any subsequent Microsoft operating system implementing portions of the Win32 API, as well as any Microsoft Middleware component that is offered for free download by Microsoft, including Internet Explorer ("add-on code"). Microsoft shall further be required to provide public documentation of these application programming interfaces, available to software developers at a reasonable cost, at a similar level of detail to Microsoft's existing documentation of public APIs, not to exceed the per-page cost of said documentation. Microsoft shall further be obligated to fully disclose the effects of API calls made by its add-on code, including the side-effects of

specifying particular arguments to these API calls.

The technical committee or any third party shall have the authority to inspect Microsoft's add-on code, in binary form, and documentation to verify compliance with this provision.

Nothing in this section shall compel Microsoft to provide any such add-on code for free for use with non-Microsoft operating systems; however, no add-on code sold for any monetary cost (including "Microsoft Office") shall require the use of a Microsoft operating system for execution of said code. Further, nothing in this section shall limit the technical committee's rights to examine source code as set forth in the agreement.

I also fully support the position of Dan Kegel, et al, in their forthcoming letter regarding the settlement.

From: Dennis  
To: Microsoft ATR  
Date: 1/23/02 8:14pm  
Subject: Microsoft Settlement

I am sending this e-mail to protest the proposed settlement between Microsoft and the government of the United States. I have been a software developer for over 18 years. I have seen the birth of the PC and watched as it has become a vital part of our everyday lives. The computer has been both my livelihood and hobby for a long time. I have used Microsoft products in the past and I do now. I use the best tools for the current job.

Sometimes that's Microsoft, sometimes it's not. Over the years I have watched Microsoft

grow from basically a garage operation to a massive global company that has unbelievable say in the direction of the computer industry. Apparently, Microsoft has forgotten, or never knew, that with that immense power comes great responsibility. I believe that Microsoft has damaged the computer industry. Due to their incredible marketing and legal might, they have forced PC manufacturers to include only their software and no other. They have tried to prohibit manufacturers from selling PC's without an operating system. They charged manufacturers for a copy of the Windows OS even if they did not ship it. Even today, it's virtually impossible to buy a PC with no operating system from a major manufacturer.

I am aware of the false error messages planted in the Windows 3.x beta product that were produced when running on DR DOS which killed that software. They gave away an inferior web browser simply to crush a technically superior product just because they could. They have operated under and ignored a previous consent decree designed to reign in their behavior. They have lied in court, produced false evidence, faked ignorance of e-mails. They had a "Contest" among PC manufacturers to report people who buy PC's with no operating system installed.

Following are some of the remedies that I would like to see. I believe that they would go a long way towards opening up competition in the software industry.

1. Force Microsoft to open up their complete API's. That's every one of them.
2. Prohibit Microsoft from changing any API's unless published first.
3. Force Microsoft to open Windows source code to companies that make competing software.

Also, Microsoft should pay a fine based on the severity of their monopoly conviction. I believe that this fine should be large and be based on the profits that were gained from their monopolistic behavior. I am aware that some of my points may seem trivial and not connected to the anti-trust trial. The trial points are clear and well known. I wanted to present some other points that may or may not be so well known as reasons for my sending this e-mail.

Thank you for your time.

From: Rich Griswold  
To: Microsoft ATR  
Date: 1/23/02 8:01pm  
Subject: Microsoft Settlement

I am writing today out of concern over the Proposed Final Judgment in the Microsoft antitrust case. I have several years of computer experience, and am currently working towards my Master's Degree in Computer Science, so the settlement of the Microsoft antitrust case will have a large impact on my future.

I have read documents covering the Proposed Final Judgment, and I have several concerns. These concerns are summarized nicely by Dan Kegel at <http://www.kegel.com/remedy/remedy2.html>:

The problems identified above with the Proposed Final Judgment (PFJ) can be summarized as follows:

\* The PFJ doesn't take into account Windows-compatible competing operating systems

\* Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

\* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

\* The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

\* The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

\* The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

\* The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

\* The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

\* The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

\* The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

\* The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

\* The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

\* The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

\* Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

\* Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

\* Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

\* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

\* Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

\* The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

\* The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

\* The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

\* The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

\* The PFJ as currently written appears to lack an effective enforcement mechanism. Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

I am troubled by the possibility that all of the time and money spend on the Microsoft antitrust case could end up wasted, and that we could have a repeat of the 1994 consent decree. Allowing Microsoft to maintain, and even expand, their monopoly will stifle competition, innovation, and growth in the computer industry as well as other high-tech industries.

As someone who is very concerned about the future of the computer industry, I do not want to see this happen. Please consider these arguments against the Proposed Final Judgment.

Thank you. —

I am writing to voice my support for the Microsoft Position regarding the settlement you are considering.

It is my feeling that Microsoft has achieved its success by focusing on the services it

could supply to "the user". Its' commitment to excellence and to the consuming public has brought great value to everyone and a modicum of standardization upon which even its' competitors have been able to build their products and their own success stories. Its' competitive spirit has, also, stimulated and enriched others within its' industry. This should not be misinterpreted as "abuse" but, rather, applauded for its' contribution to the growth of our economy and "others" within industries of all kinds. This is the time for us to focus on market competition and technical achievement as well as cooperation within the industry. It is my opinion that that will make the consumers' computing experience easier, more valuable, and contribute to the economy during these most trying times. Continued litigation is, at the least, a waste of financial resources and, at the worst, consuming vital time from Microsoft, a very hard working, consumer orientated, and competent Company.

From: achaney@mac.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 8:12pm  
Subject: Microsoft Settlement

Dear DOJ,

I think Microsoft should be disbanded, it's assets sold off (no microsoft employees allowed to buy) and the money be given back to the share holders and it's customers. Their 33 billion dollars in cash in the bank should be paid back to everyone who was over charged and any company that was put out of business by Microsoft FUD and strong arm tactics. Myself included.

I have since switched to apple computers for my personal computer needs and have never looked back. With Mac OS X I can DO ANYTHING I want, on the internet, with music, video, writing software weather it be Java, Perl, HTML, C++ or Objective C. I have the tools to do thing fast and with style without the MS baggage and the cost associated with over priced bloatware. I do not like being rip off by Microsoft with their constant forced upgrades that give you no real benefit, and over priced bug ridden software was just too much and not even worth it anymore at stay with the "standard". Which is why I left them forever. The same things can be done in Win 98 or the Mac OS that you can do with Win XP there is real no functional difference or advantage to XP over 98 or the Mac. But MS says that XP is so much better than win 98 you need to buy this or be left behind. But in reality most people do not need to. MS just wants more of your money with nothing given back other than flash and no substance. Microsoft is not the standard. It's the exception to the rule. They take standards like Java, Kerberos, HTTP, TCP/IP, etc... and change them in such a way that it makes it incompatible with everyone else just enough so that it makes difficult or impossible to use. What was once a easy to use system is corrupted to make it work only on windows. They tired this with java by putting windows OS hooks in their java compiler so that if you made a java application or a java applet on a windows machine it would not work on the Macintosh or Linux OSs, and when they were called on it they dropped java altogether calling it a virus. That's no joke.

They have done this time and time again. They violate NDAs when it suites them with no more than a "We're Microsoft, suck it up and deal" I know of friends who have experienced this first hand. Microsoft knows NO ONE is going to take them to court because no one can outspend MS, and it seems not even the federal government can either.

They copy what they want, they steal what they want, they do what they want and there is no one to stop them. They have no fear of being sued, with the exception is really big

companies. I hope AOL gets somewhere with their lawsuit concerning Netscape I believe they will not in the end, Not because AOL does not have a case but because they are Microsoft and just dazzle the judge with a lot of hard to understand "facts" and then MS wins. And the status quo is maintained.

I finish with a quote. "A market-crushing company can no more be called CAPITALIST than an abortion-clinic killer can be called Christian." ? Sue Doanim

Thank you for your time,  
Adam Chaney, Programmer

PS. I'm writing this on a Powerbook G4 Titanium using apple's Mail program on Mac OS X 10.1.2.

Subject: Microsoft Settlement

People of the Department of Justice, I am just a U. S. Citizen and not a lawyer. But I think the settlement is just a slap on the wrist. It does not remedy the continuing pattern of abuse. If we had real competition in desktop OSes and office software we would not see Microsoft do the following:

A) Treat the customer with contempt. The product activation feature means I have to ask permission to use what I have paid for. They would not be able to do this in a competitive environment.

B) Prohibit OEMs from shipping machines that boot to both Windows and another OS such as Linux, BSD or BeOS. You can not buy a dual boot computer from an OEM. The market craves this. Something is wrong.

C) Reward workers at OEMs for telling Microsoft who has ordered "Naked Computers" without an OS installed. Microsoft thinks it is entitled to collect money for every computer even if it does not have a Microsoft OS on it.

D) Have dead people write letters of support to state Attorneys General. Microsoft was not even apologetic when they were caught on this one!

Thank you for reading my rant!!

From: Alan Mortensen  
To: Microsoft ATR  
Date: 1/23/02 8:10pm  
Subject: Microsoft Settlement

There are many that know the law and government proceedings more than I, so I will refrain from commenting on them directly. What I experienced is the damage that Microsoft has done first hand. I've been a Java developer and Macintosh user for many years now and the actions I have witnessed are a travesty. They cast a shadow over the entire industry where the executives always ask, what will Microsoft do? Will they care enough to take us out or buy us? What I value as a developer is innovation and Microsoft has done everything in it's power to crush innovation in other companies and therefore in the industry as a whole. They have exhibited not only incidents of monopoly behavior but a consistent and pervasive pattern of abuse of power.

On the subject of the decision, I don't see how this decision will change any of their techniques and it will take up considerable manpower to try to enforce. Trying to solve Microsoft via a bureaucracy is not a reasonable solution, there will always be too many vulnerabilities, either from loopholes or corruption. I'm no expert on punitive practices, but I do know a fair amount about business practices and I don't think this decision will slow them in the least. They will just adapt around it. They are a monopoly and they need to be handled specially for it. My primary suggestion is exposure (source code) and extreme fines. A

break up sounds unlikely but I would prefer it, a horizontal break up, consisting of multiple OS/Office/Database/etc. vendors that could compete.

Alan Mortensen

Comments on settlement of Microsoft Antitrust case

I support the proposed settlement reached between Microsoft, the DOJ, and nine states. The legal process has run its course and it is time to conclude this matter. It is difficult to see what harm has come to consumers from the "browser battles" that were the crux of the case. The settlement focuses on changes to Microsoft's business practices which seems reasonable in light of the ruling by the Court of Appeals. Continued litigation is in the interest of only two groups: (1) Microsoft's competitors, and (2) the lawyers working on the case. The purpose of antitrust laws is to protect consumers, not competitors.

Subject: Microsoft Settlement

The PFJ as currently written appears to lack an effective enforcement mechanism. It does provide for the creation of a Technical Committee with investigative powers, but appears to leave all actual enforcement to the legal system. What information needs to be released to ISVs to encourage competition, and under what terms? The PFJ provides for increased disclosure of technical information to ISVs, but these provisions are flawed in several ways: 1. The PFJ fails to require advance notice of technical requirements Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

2. API documentation is released too late to help ISVs Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

3. Many important APIs would remain undocumented The PFJ's overly narrow

definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces.

4. Unreasonable Restrictions are Placed on the Use of the Released Documentation ISVs writing competing operating systems as outlined in Findings of Fact (?52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems.

5. File Formats Remain Undocumented No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ? 39).

6. Patents covering the Windows APIs remain undisclosed Section III.I of the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs (perhaps in the style proposed by the W3C; see <http://www.w3.org/TR/2001/WD-patent-policy-20010816/#sec-disclosure>). This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users, as illustrated by this report from Codeweavers, Inc.: When selecting a method of porting a major application to Linux, one prospect of mine was comparing Wine [a competing implementation of some of the Windows APIs] and a toolkit called "MainWin". MainWin is made by Mainssoft, and Mainssoft licenses its software from Microsoft. However, this customer elected to go with the Mainssoft option instead. I was told that one of the key decision making factors was that Mainssoft representatives had stated that Microsoft had certain critical patents that Wine was violating. My customer could not risk crossing Microsoft, and declined to use Wine. I didn't even have a chance to determine which patents were supposedly violated; nor to disprove the validity of this claim.

The PFJ, by allowing this unclear legal situation to continue, is inhibiting the market acceptance of competing operating systems. Which practices towards OEMs should be prohibited? The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published

prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas. Which practices towards ISVs should be prohibited? Sections III.F. and III.G. of the PFJ prohibit certain exclusionary licensing practices by Microsoft towards ISVs.

However, Microsoft uses other exclusionary licensing practices, none of which are mentioned in the PFJ. Several of Microsoft's products' licenses prohibit the products' use with popular non-Microsoft middleware and operating systems. Two examples are given below.

1. Microsoft discriminates against ISVs who ship Open Source applications The Microsoft Windows Media Encoder 7.1 SDK EULA states ... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); ...

Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the add-on API installed, which is often not the case.

Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing

middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems.

2. Microsoft discriminates against ISVs who target Windows-compatible competing Operating Systems The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by ISVs to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..."

This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems. By allowing these exclusionary behaviors, the PFJ is contributing to the Applications Barrier to Entry faced by competing operating systems. Which practices towards large users should be prohibited?

The PFJ places restrictions on how Microsoft licenses its products to OEMs, but not on how it licenses products to large users such as corporations, universities, or state and local governments, collectively referred to as "enterprises". Yet enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier *US v. Microsoft* antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software. Which practices towards end users should be prohibited?

Microsoft has used both restrictive licenses and intentional incompatibilities to discourage users from running Windows applications on Windows-compatible competing operating systems. Two examples are given below.

1. Microsoft uses license terms which prohibit the use of Windows-compatible competing operating systems MSNBC (a subsidiary of Microsoft) offers software called NewsAlert. Its EULA states "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.] .... "

Only the Windows version appears to be available for download. Users who run competing operating systems (such as Linux) which can run some Windows programs might wish to run the Windows version of NewsAlert, but the EULA prohibits this. MSNBC has a valid interest in prohibiting use of pirated copies of operating systems, but much narrower language could achieve the same protective effect with less

anticompetitive impact. For instance, "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system."

2. Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems An episode from the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively. Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS. Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. (See the original complaint, and Caldera's consolidated response to Microsoft's motions for partial summary judgment.) The judge in the case ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft."

That case was settled out of court in 1999, and no court has fully explored the alleged conduct. The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1. The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software.

Is the Proposed Final Judgment in the public interest?

The problems identified above with the Proposed Final Judgment can be summarized as follows: The PFJ doesn't take into account Windows-compatible competing operating systems Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines

"Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft .NET with competing middleware. The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents. The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software. The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other

areas. The PFJ as currently written appears to lack an effective enforcement mechanism. Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

Thank You For Your Time,  
Theresa Peterson

Subject: Microsoft Settlement

To Whom It May Concern:

I am writing in opposition to the proposed settlement in the Microsoft antitrust trial. I feel that any settlement in this case needs to do more to curtail Microsoft from continuing its illegal practices. If justice is to be served, a new settlement needs to be drafted which is less favorable toward Microsoft. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. The current settlement must be thrown out and a new one must be drafted if the court is truly to have served its purpose in this case.

Sincerely,  
Joseph Naccarato

From: John Callaway  
To: Microsoft ATR  
Date: 1/23/02 8:19pm  
Subject: Microsoft Settlement

I am writing to express my strong displeasure with the Department of Justice's proposed settlement with Microsoft in the antitrust case. Enumerating all the flaws with this settlement would take too much of my and your time, so I will restrict my comments to the aspects of the proposed settlement relating to Microsoft's licensing contracts with personal computer original equipment manufacturers (OEMs).

As I understand it, the settlement does little to prevent Microsoft from continuing its anticompetitive practices that prevent OEMs from offering rival operating systems, such as Linux and BSD, preinstalled on their systems. For example, section III.A.2 specifically allows Microsoft to retaliate against OEMs that sell a computer with a rival operating system but without a Microsoft operating system. This is essentially a legally sanctioned tax collected by Microsoft, especially considering that the open-source operating systems I mentioned are free. The settlement also appears to specifically allow Microsoft to set any contract terms they like with smaller OEM vendors (any other than the 20 largest), which is clearly anticompetitive.

I will recount a personal experience of mine that illustrates the costs imposed on the consumer by Microsoft's restrictive OEM licenses, even those consumers who choose a Microsoft operating system. About a year ago, I helped my parents choose a computer at a Gateway 2000 store in Overland Park, Kansas. We selected the system that met our price and performance criteria, which was part of Gateway's "home" line of systems. We then asked to have Windows 2000 preinstalled on the machine instead of Windows ME, because of the superior stability and performance of the former operating system. Our sales representative informed us that this would be impossible, since Microsoft's license with Gateway stipulated that their home line of computers MUST be shipped with Windows ME (at that time, in December 2000). We therefore had to settle for one of their "small business" computers, which was not as feature-rich as the home computer we selected and cost several hundred dollars more.

Thank you very much for reading my comments, and I hope that this harmful settlement is discarded and appropriate remedies imposed on Microsoft instead.

From: Timothy A. Seufert  
To: Microsoft ATR  
Date: 1/23/02 8:19pm  
Subject: Microsoft Settlement

Dear Sirs and Madams, I write as a citizen concerned with the Proposed Final Judgement in United States v. Microsoft.

There are numerous problems with the proposed settlement plan. For example, it appears that looseness in definitions will allow Microsoft to change the names of products mentioned in the settlement plan to avoid obeying the proposed behavioral restrictions. The plan must be very cautiously reworded to prevent Microsoft from exploiting loopholes.

More importantly, I feel there are basic deficiencies in the plan's coverage of the numerous ways in which Microsoft enforces its monopolies. One which seems obvious to me is the lack of a remedy for Microsoft's use of closed file formats.

Microsoft uses closed file formats to help sustain their monopoly on office productivity software. Microsoft's office productivity suite owns most of the market; most organizations have standardized on it and own no other software covering its functionality. As a user of alternate operating systems (MacOS X and Linux) I often find that such organizations cannot generate or accept anything but Word documents, even when I try to use a more open and crossplatform format like Adobe's PDF. For example, I am presently looking for a job, and so far as I can tell all the HR departments and job placement firms who deal with my profession (electrical engineering) more or less require electronic resume submissions to be in Word format. This is in Silicon Valley, the heart of anti-Microsoft sentiment! Microsoft's lock on this kind of software is that strong.

The result of such social pressure is that I must either expend continual effort educating people about how to use formats other than Word (not a good idea to annoy people this way when I'm in the position of looking for a job, I might add!), or I must buy a copy of Word so that I can read and write the de facto standard file format. In practice, few people are willing to take on the personal cost of the first option.

From another point of view, an organization which wishes to convert from Microsoft's office package to somebody else's faces a huge migration issue. Organizations become locked in to using Microsoft's software because there is no easy way for them to convert their document archives.

If Microsoft's file formats were open, it would be easier for alternative productivity software to gain entry to the market. It is routine for those who do try to compete with Microsoft in this area to reverse engineer Microsoft's formats, but Microsoft is always playing a game of changing the formats with each new Office release so that everybody with the latest version of Word/Excel/etc. is generating documents incompatible with other software. Furthermore, the quality of support is never as good as it could be were Microsoft's file formats open.

To summarize, competitive office products must read and write Microsoft's file formats with a high degree of compatibility. Through obscurity and constant change of these formats, Microsoft has created an artificial barrier to entry. In order to break down that barrier, Microsoft should be required to fully document its file formats in a timely fashion. Ideally they would have to keep the public informed of future changes, rather than just documenting what happened after the fact.

Similar concerns probably apply to areas other than office productivity software, but I wanted to comment on something that has impacted me personally.

In closing, I'd like to thank you for your consideration in reading my comments.

Tim Seufert

Subject: Microsoft Settlement

To whom it may concern:

The proposed settlement between the U.S. and Microsoft does not go far enough to ensure that the un-competitive practices that the company has been found guilty of doing will not continue. As a company, they have proven that court orders are irrelevant to the way that they conduct business and it is extremely doubtful that any new court order or external oversight will dampen the negative impact that Microsoft's illegal monopoly has had on the computing industry. Unless serious and drastic changes are made to the structure and operations of the company, they will continue to stifle innovation and fair competition throughout the IT world and any other industry they leverage their way into.

Thank you,  
Kate Conner

Subject: Microsoft Settlement

Dear Department of Justice,

The current judgment, as written, does nothing to prevent Microsoft from introducing intentional incompatibilities into new versions of its operating system as an anticompetitive measure. Microsoft has used such strategies in the past, (ref: the private suite brought up by Caldera, Inc. that was settled by Microsoft in 1999). This is a key concern for end users on non-Microsoft platforms, and I believe the judgment should be revised to address this issue.

Date: 1/23/02 8:15pm  
Subject: Microsoft Settlement

Dear Sirs:

I have read that AOL has filed suit against Microsoft for its methods of marketing of the browser. This foolishness should be stopped.

1. Netscape captured market share using give-away techniques.

2. It should always be a company's option to giveaway product in order to achieve other strategic objectives—consider razors & blades, and printers & cartridges.

3. It should always be a company's option to make deals with its customers and its distributors. I believe that a quantity discount can be legitimately combined with a preferential status. I'll give you top billing if you'll give me X discount. I'll place your name on the cover if you'll commit to a fixed number of units at a fixed price per unit. Etc.

4. I chose the Internet Explorer from Microsoft because it is superior, and presented a path that was more compatible with where I want to go.

5. I have both Netscape Communicator 4.74 and Internet Explorer 6.0 on my workstation.

6. I use IE almost exclusively because it works best for me in my environment, and I have faith that Microsoft best understands what is required to fill the needs of the future—and I am confident that they will perform.

Those who do not wish to compete should stay out of the commercial world. Microsoft should be encouraged, not discouraged from making the innovations needed to exploit opportunities for increased productivity. It is wrong of the States to gang up on Microsoft. It is wrong of AOL to attempt to use our government and justice systems to cause harm to Microsoft.

In my opinion, Microsoft is a model competitor. They have created an enormous "cottage industry" for hundreds of thousands of non-Microsoft employees. And they have created a platform that is sufficiently open, and has enough users to entice product developers to produce high quality low cost applications.

I ask that DOJ disregard AOL's whining and that DOJ reexamine the merits of the case. In my opinion, we need more producers in our economy like Microsoft.

To: Microsoft ATR  
Date: 1/23/02 8:20pm  
Subject: Microsoft Settlement

I must register my opposition to the proposed settlement in United States v. Microsoft in its current form. The proposed judgement fails to address the required issues of 'deny[ing] the defendant the fruits of its statutory violation', nor does it 'ensure that there remain no practices likely to result in monopolization in the future'. (section V.D., p. 99).

Adoption of the proposed settlement will be a betrayal of the public trust and a waste of the public monies invested in correcting the excesses of a convited monopoly. Without a strong punitive as well as corrective settlement, acceptance of this proposal will further erode the public trust in our legal system.

Michael Kellen, Ph. D.

Comments about US v. Microsoft proposed settlement

Dear Sirs,

I feel the proposed settlement does very little to remedy the situations where Microsoft abused it's monopoly status as a software vendor.

It is a very noble act to propose donating hardware and software to the nation's schools, however, this only serves to promote Microsoft's software and increase it's ubiquity and familiarity to our nation's children and teachers.

Section J also raises concern regarding security best practices and methods Microsoft may use to avoid complying with whatever settlement is reached.

I exhort Microsoft and the US Government to return to the bargaining table and arrive at another settlement.

Sincerely,  
Chris Cothrun

From: bhaller@mac.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 8:18pm  
Subject: Microsoft Settlement

I will try to be brief, as I imagine you have many e-mails like this to read.

I would like to urge you to reject the proposed settlement in the Microsoft anti-trust case. It amounts to a slap on the wrist, and will not result in real changes for consumers.

To me the litmus test of a reasonable settlement is this. Right now, in the current anti-competitive climate, a company like Apple is unable to even stop its slow but steady loss of market share, despite offerings of both hardware and software that are markedly superior to those offered by the Wintel world (dominated by Microsoft). It is difficult to imagine what Apple could do to make inroads in the market, given the stranglehold Microsoft has. A reasonable settlement would restore the possibility of effective competition by other companies such as Apple, Sun, and AOL Time Warner (Netscape). No more, but no less.

The proposed settlement simply does not do that. Microsoft's anti-competitive practices will continue virtually unabated (as they have in all the time since this suit began), everybody else's market share will continue to decrease, and the situation will be even more difficult to remedy further down the road than it is now.

In my opinion, the original judgment (that Microsoft ought to be split into two companies) was reasonable and just. There may be other measures that will achieve the desired end of restoring competition to the market, but I doubt that they would be any less extreme.

Thank you for your time.

Date: 1/23/02 8:19pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

I do not think any settlement that does not guarantee good behavior on Microsoft's part in the future is reckless and irresponsible. The "Settle for the Children" campaign was a joke, and any decision that does not alter the structure of microsoft in some drastic way will be ineffective. Please do not let Microsoft get away with their anticompetitive practices, doing so would be a disaster.

From my standpoint, Microsoft should be broken up. Any other practice would Microsoft-code specific optimizations, and integrations that do not make sense. Nearly every virus and worm on the internet targets outlook or outlook express, due to the widespread use (because of monopolistic practices) of these products, and the inherent vulnerabilities they contain. Honestly, why would you want your email client to affect every aspect of your system through scripting, and why would you want a seemingly innocent email to destroy valuable data? Problems like this will occur in the future if something is not done. The public has been forced into using inferior products for a long time, and anyone who says otherwise is a fool. Windows is unstable and insecure, and the general populous only upgrades to new versions in the hope that this new version of windows will be everything the last version was supposed to be. Why should anyone be forced to accept their operating system crashing on a daily

basis, partially due to a nonsensible integration of an insecure web browser? There is no reason. Something drastic must be done.

Drew Colthorp

I would just like to say that the proposed Microsoft Settlement is a really bad idea. I have read the entire thing and have come to the conclusion that not only does this proposed settlement do NOTHING to curb the Microsoft abuses, but it may even give them more power. One example: the proposed settlement says it will allow a vendor to ship a competing product in place of a Microsoft product. So, for example, a vendor would be allowed to ship Netscape instead of Internet Explorer. However, the proposed settlement goes on to say that Microsoft, and Microsoft alone, gets to dictate the requirements for the replacement component. This means two things: 1) Microsoft can stall a competitor indefinitely as it changes feature requirements or adds new ones and 2) Microsoft indirectly changes the competitors product. So if Microsoft says there must be a large ad at the top of every browser window that displays a Microsoft ad for their Internet Explorer, then it must be there. Or even worse, if Microsoft says that Active X (or something similar) has to be included, and it happens to be one of the things that is insecure, then that leaves every competitor's product insecure. Then there is the matter of Microsoft denying features in final products. They are already excluding Java because Sun would not let them sabotage it. Now, with this "Settlement", they could force Java out even among competitors. Microsoft was found GUILTY. They committed a crime. They were bad. They lied and are still lying. What do you do with children that behave this way? You send them to their room without dessert. You ground them for a month. You spank them. You make them perform chores. What does this settlement propose we do with Microsoft? It suggests we thank them, give them more money, and say, "Sure Bill Gates. Its fine for you to break the law, ruin the competition, ruin the economy, ruin people's lives, lie, cheat, and steal. We don't punish the rich, especially those that line our pocket books." This is wrong. Punish them.

To: The Dept. of Justice  
From: Mrs. Carol ThorneCassady, 4057 SW Concord St., Seattle, WA 98136 (206/938-0246)

I am a second generation American. My paternal grandparents, who came from Europe, maintained a truck farm and passed away by the time I was six years old. My maternal grandfather, who left a yam farm in Louisiana with his family who had emigrated from Europe as possibly indentured workers, learned the trade of a shoemaker. I grew up in an extended close knit family. We lived in a home behind my grandparents. I saw, lived, and reaped the rich blessings/benefits from GOD-Believing/GOD-Fearing, hard-working, family devoted and AMERICA loving people—my Parents and my Grandparents. My Grandfather owned his own business and for a year of so my father ran a small car repair business, a second job he did in the evenings and weekends. Now and then, my Grandfather would say that "America is God's country. You can keep the fruit of your labor." I haven't really thought about what he'd said, till recently.

It's been just recently that I've been able to spend time reflecting on what's contributed to the greatness of AMERICA and my passionate love for my country. I know the origin is, my Family.

Upon the death of my dear husband in June 1990, I received some money in a settlement from his employer. I had to start learning/reading about investments. By 1994-95, I liked what I'd studied and read about Microsoft. So I bought some shares of stock. What was really impressive was the fact that Bill Gates "shared" his wealth with all his employees by vesting them with his stock. I'd never heard nor read about another business that operated like Microsoft. Mr. Gates shared his wealth—he didn't hoard it. More importantly for today, he's donated

millions for education, children and global health concerns.

How dare these evil trial attorneys attempt to rob and destroy Microsoft! These attorneys have all ready robbed and terrified how many other American companies?

I'm not talking about the huge multi-national companies that have engaged in unfriendly takeovers—these are the corporations that should never have been allowed to become the giant monopolies they are, like AOL Time Warner. How many browser companies have they gobbled up and they're attacking Microsoft which has only about 12% of this market. This is in America's interest?

Microsoft has provided the United States of AMERICA and the world with constant, consistent, innovative computer technology. Email anyone??? They opened up the field—the prices dropped. They're still dropping. This is a monopoly?

Thank God for Microsoft! It's been an amazing decade, the nineties. Imagine, ten years ago I used a small electric typewriter, a big improvement from my college days in the 1960's-70's and my basic typewriter. Today, I use a laptop computer and I send most of my mail through it. It's incredible! Thank you, Microsoft!

All litigating attorneys in AMERICA must be stopped. They're corrupting and bleeding AMERICA. They must be stopped!!!

No one has the right in AMERICA to steal the fruit of someone's labor. If you don't earn it, you don't get it. GOD has clearly stated "Thou shalt not steal."

I hope and pray our Justice Department will end this diabolical charade being perpetrated on AMERICA, AMERICANS and all AMERICAN businesses.

Please settle this larcenous suit against Microsoft now. As for the corrupters of the Common Good, the trial attorneys, prison is too good for them.

God Bless our Justice Dept. and God Bless America!

January 23, 2002

Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing to express my support of the antitrust case settlement between the US Department of Justice and Microsoft. I think that the lawsuit has been lengthy and partially unjustified. I am a MAC user, but Microsoft has done wonderful things for our nation's IT sector and economy. Yes, their marketing tactics at times are a bit heavy handed, but three years of litigation is entirely too much to resolve this problem. Under the terms of the settlement, I do not think it is fair that Microsoft is being forced to document and disclose for use by its competitors interfaces

and protocols that are internal to their Windows operating system products. This is technological information that Microsoft has spent lots of time and money to develop and it is a violation of their intellectual property rights to force them to give away their secrets. It also undermines any motivation to be innovative in a free market. I do agree with the concession that allows competitors to promote their own products. For instance, granting computer makers broad new rights to configure Windows so that software developers can more easily promote their own products will serve to give competition the chance to succeed.

Although the settlement is not perfect, it needs to become reality because our nation cannot afford further litigation. The IT sector and the economy need Microsoft at full strength. I urge your office to take a firm stance against the opposition to the settlement and make it a reality. Thank you for your time.

Sincerely,  
John Osborn

From: Robert Dodier  
To: Microsoft ATR  
Date: 1/23/02 8:27pm  
Subject: Microsoft Settlement

Hello, The proposed Microsoft settlement does nothing to resolve an extremely important problem: MS is not required to disclose the file formats for any of its applications. Lack of information about these file formats (e.g., the MS Word format) leaves developers of MS-compatible applications always playing "catch up" with MS; MS can, at will, break compatible software by changing the file formats. This puts developers of compatible software at a very great disadvantage compared to MS. The settlement should address this issue by requiring MS to disclose the file format used by each application, and to keep these disclosed formats up-to-date, by disclosing the file format used by any new product or new version of an existing product.

I can't believe you're softballing Microsoft the way you are. The way they default Windows 2000 etc. to REFUSE to allow people to install software if it's not "OK'd by Microsoft" is shameful. Oh, sure, you can "get around it" if you want to pay someone 5 times what it's worth to configure the stuff, but why bother? And that's just one example out of hundreds. If the U.S. Government doesn't get some "real users" of computers to see what Microsoft is doing first hand, and make their judgements from that perspective, then God help us all, because we're getting in deeper by the day.

**MTC-00019440**

From: Gabriel Sechan  
To: Microsoft ATR

Date: 1/23/02 8:25pm  
Subject: Microsoft Settlement

I am a professional programmer, and as such have serious concerns about the proposed settlement and its effect upon my life and the future of the industry. To put it bluntly, letting Microsoft off with such a minor slap on the wrist is beyond bad and into the realm of gross negligence. Microsoft is a proven monopoly. The findings of fact show that they used their monopoly illegally to extend it to other areas. They have a history of doing this- they proudly call it "embrace and extend". Their illegal business tactics have destroyed the OS market, the browser market, the office software market, decimated the compiler market, and threaten many others.

The only real solution is to force competition in the OS marketplace. Either force Microsoft to open source Windows and all APIs, or split Microsoft into pieces with contending OSes. If any other option is selected, we will only see these practices extended until Microsoft has crushed all the software markets.

Subject: Microsoft Settlement

I do not agree about the settlement. Microsoft is a destroyer of those who wish to provide a unique solution to programming that does not rely on a MS only provided API. They (MS) stifle those who have the veracity to show insight and vision for new and better applications.

From: Hershberger, Doug (CD)  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 7:43pm  
Subject: Microsoft Settlement

I wish to register my objection to the proposed settlement in the Microsoft anti-trust lawsuit.

First, I believe that the settlement is too lenient. It does not adequately address the issue of leveling the playing field for other companies who do not have the benefit of Microsoft's monopoly. It is a slap on the wrist and a rather tepid one at that.

Second, I would like to specifically take issue with one point raised by the proposed settlement. Quoting Robert Cringely's article on the subject: <http://www.pbs.org/cringely/pulpit/pulpit20011206.html> Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "\* \* \* (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, \* \* \*

This is strictly unacceptable. access to APIs, documentation and communication

protocols are essential for open source programmers, many of whom would not qualify as a business. There is no legitimate reason for this information to remain hidden. It only extends Microsoft's already stifling monopolizing stranglehold on the industry.

Thank you for your time.

Subject: Microsoft Settlement

Dear Sir or Madam,

Hello. I'm writing to oppose the proposed settlement between Microsoft and the U.S. Justice Department. My thoughts are best summed up by Dan Gillmor, business columnist for the San Jose Mercury News: "The settlement not only doesn't doesn't even force the company to stop doing what eight federal judges found illegal, but it provides no penalty for the illegal acts. Locking in the ill-gained profits of crime—bank robbers wish they could get such dispensation."

Microsoft Settlement U.S. Department of Justice  
Dear Microsoft Settlement U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,  
Robert C. Miller

From: Audrey Trevino  
To: Microsoft ATR  
Date: 1/23/02 8:27pm  
Subject: Oppose Microsoft Settlement

I am against the proposed settlement with Microsoft corp. The judgment does not

address the serious anti-competitive practices that Microsoft continues to employ.

I believe Microsoft should be forced to allow other html rendering engines (browsers) to be integrated with all Windows operating environments. Microsoft can continue to assure the (albeit questionable) quality of their customer's experience by making available the Application Programming Interface (API) used to integrate Internet Explorer into Windows. In addition, I believe Microsoft's exclusive licensing practices with OEM computer manufacturers limits customer choice and has been the main limiting factor in the lack of further competition in the Operating System market.

In conclusion, I believe that unless substantial revisions are made to the final judgment, Microsoft will continue to exercise its monopoly power to the detriment of the computer industry and consumers.

Thank you.

Dear Sir,

I would like to record my opinion of the proposed final settlement in the DOJ v. Microsoft case. I disagree with the proposed final settlement, feeling it is too lenient on Microsoft. In particular, I feel that section E which says that Microsoft must disclose information to ISVs, IHVs, IAPs, ICPs, and OEMs, "for the sole purpose of interoperating with a Windows Operating System Product", should be changed so that Microsoft must also be required to disclose informatino to them so they can create competing products. Competition is good.

United States District Court for the District of Columbia  
333 Constitution Avenue, NW Washington, DC 20001

RE: US v. Microsoft proposed final order  
Dear Judge Kollar-Kotelly,

I wish to make some comments on the proposed final judgment for USA versus Microsoft. I feel it does not provide enough open disclosure of Microsoft Windows and middleware APIs and File Formats, and also fails to provide any real penalty to Microsoft. I believe that requiring full public disclosure without any licensing terms of Microsoft Windows and middleware API and file formats would satisfy both of these concerns.

Disclosure of APIs and File Formats should be with the intent to allow all software

developers, private, public, and hobbyist, to interface to and create alternative code for the APIs. This should not just include the syntax specifications of the APIs and File Formats but should include semantic information about them. In order to ensure proper disclosure this document should be released with all internal and external beta software releases. Internal beta releases should allow comments from an internal Microsoft panel and external beta releases should allow for public comment. Both comment periods should be within the time frame for submitting bug reports for the beta software.

I believe as punishment Microsoft should give up all intellectual property claims to these APIs and File formats. This would punish Microsoft by disallowing any revenues from licensing its intellectual property claims to these APIs and File Formats. Further I believe this form punishment is market neutral not taking or giving away market share to or from others.

From: Warren Jones  
To: Microsoft ATR  
Date: 1/23/02 8:30pm  
Subject: Microsoft Settlement

I think the proposed settlement with Microsoft as it stands is totally wrong. The company has been found guilty, even on appeal, of very serious crimes that have seriously affected the industry for many years. It's been found guilty in similar trials for similar behavior. It's punishment must now fit the crime or its past record shows it will continue it's practice of abusing market power to maintain its monopoly of the computer industry. Now it appears to be trying to dominate other industries. It's time to truly show Microsoft that it has acted outside the law and severely punish the company. Don't let them "buy their way out of jail".

I have no connection with Microsoft or its competitors.

January 19, 2002  
Attorney General Ashcroft  
US Department of Justice, 950 Pennsylvania Ave.

Washington, DC 20530-0001

Dear Mr. Ashcroft:

We are writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. The suit dragged out long enough and it is time to allow Microsoft and the industry to move forward.

The settlement was arrived at after extensive negotiations with a court-appointed mediator. The terms are fair: Microsoft actually agreed to terms that extend will beyond the products and procedures that were at issue in the suit, even going so far as to divulge some of its software code to other companies that will use it against Microsoft. It is time that the government accepts the settlement and allows Microsoft to return to concentrating on business.

Microsoft has dealt with the government threatening to break up the company for over three years now. It is unfortunate that companies have to deal with such government over regulation. It is time for business to return to normal. Please accept the Microsoft antitrust settlement.

I would like to add that my wife and I were so pleased with your appointment as Attorney General and let you know, we hold you in our prayers as you face all the decisions which are placed before you that God will give you continued direction and wisdom.

We do not know of Bill Gates religious standing, but we do believe that God has blessed him, because of his generosity around the world and here in America, to help various organizations and the education system and encourage you to take this into consideration when you make your decision.

Sincerely,  
Milton Haner

The proposed settlement is a bad idea

**MTC-00019460**

From: Pat O'Brien  
To: Microsoft ATR  
Date: 1/23/02 8:32pm  
Subject: Microsoft Settlement

Please rethink this settlement. Gate's defense is that Microsoft has allowed every aspect of the computer industry to substantially improve at reduced prices for everything from software to hardware. Yet Gate's fails to mention that while everything else improves at reduced prices, Microsoft gets bigger, slower, less secure and more expensive with every upgrade. (And an upgrade isn't even a new product!) That tells me that while every other area of the industry is in healthy competition, Microsoft can increase their prices and behave tyrannical unaffected without real competition. This settlement is a good "deal" for Microsoft, and a bad one for the consumer...

From: Jeff Sickel  
To: Microsoft ATR  
Date: 1/23/02 8:35pm  
Subject: Microsoft Settlement

Dear Sir or Madam:

I just wanted it on record that as a business owner of a small software consulting firm in the state of Illinois, I disagree with the current Proposed Final Judgment of THE UNITED STATES OF AMERICA v. MICROSOFT CORPORATION and believe that the judgment is too weak to truly be enforced or effective.

Sadly the Attorney General of Illinois has also shown too eager an attempt to settle in a case where clearly the plaintiff would have been able to enforce a more ridged judgment against a corporation that has proven time and again that it will ignore or blatantly rebuff legal actions against it while still using its monopoly to eliminate any true competition. This is a bad precedent to set for large and small businesses in this country. Especially in a time of economic crises. Please pursue corrections to the final judgment that will make this case just instead of just blessing Microsoft's monopolistic practices.

From: Steven Snover  
To: Microsoft ATR  
Date: 1/23/02 8:33pm  
Subject: Microsoft Settlement

I have been reading over the proposed settlement documentation concerning the Microsoft anti-trust case. There are still FAR TOO MANY LOOPHOLES for Microsoft to continue business as usual. THIS SETTLEMENT MUST BE REWORKED or

Microsoft will simply be able to continue in its activities. There licensing agreements for one, scream monopoly. You can't seriously let them continue to tell end users what other software types are not allowed to be used in conjunction with Microsoft software. There are licenses written by Microsoft that prohibit use and distribution of their software with any other type of software based solely on license alone. There is NO GOOD REASON for denying an entire license to an end user.

**MTC-00019465**

From: Albert Ren  
To: Microsoft ATR  
Date: 1/23/02 8:34pm  
Subject: Antitrust

Please do not allow the antitrust settlement to pass, this settlement does not help the consumers, Microsoft's competitors, or anyone else other than Microsoft. Consumers get continued lack of choice because Microsoft gets off the hook easily, and is then allowed to continue the same practices that it has been doing for a long time now. Competitors do not get any assistance because this is only a slap on the wrist for Microsoft so they will continue to be hurt by anticompetitive practices. In addition, the settlement allows Microsoft to provide software to education in terms of its "value" not its actual cost to Microsoft. So Microsoft gets to count a \$499 Windows XP Professional full disk as its retail value and not the pennies it costs to actually make; this is not hard for Microsoft to do.

The settlement does not address the original problem: Will Microsoft stop commingling of software? Originally, with Internet Explorer, Microsoft managed to crush the competition by merging it with Windows 98 and subsequent versions, and then manipulating manufacturers to prevent the competitor from getting desktop access. In Windows XP Microsoft has gone farther, by integrating components from all sorts of uses, the most prominent being Windows Messenger, which Microsoft again claims, is not removable from the system. But when they said the same thing about IE, they produced a fabricated video of attempts to remove it. Can this company really be trusted?

About the education component of the settlement, where Microsoft will provide free software, this is nothing more than a blatant effort to try and monopolize the education industry, one where Apple currently dominates. As discussed before, Microsoft's retail value of software is much higher than its actual cost, so about a \$1 billion of software probably only cost them \$100,000. Microsoft has been looking to get in the education market for a while, and this is nothing more than government sanctioned monopolizing.

The settlement is too weak and too loose to prevent Microsoft from doing anything ever again. In fact, Microsoft has stepped up its efforts by commingling Windows Messenger to attack AOL's IM solutions and .NET to dominate the Internet itself. We cannot allow this to happen.

Albert

**MTC-00019466**

From: Dominic Eldridge  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 8:38pm  
Subject: Microsoft Settlement

To whom it may concern,

I am writing to encourage the Department of Justice to take a tougher stance towards Microsoft's attempts to avoid any meaningful punishment. The settlement ordered by Judge Kollar-Kelly after the court ruled against Microsoft was an aberration within the United States Judicial System. Microsoft has been declared an illegal monopoly and to this day continues its ruthless and predatory practices. Yet nine States of The Union have crumbled to Microsoft's demands on how the company feels it should be "punished". The few concessions Microsoft has made are riddled with loopholes, some of which may actually help the company increase the viciousness of its licensing schemes. The three member panel designated to watch over Microsoft is in part composed of one person Microsoft has appointed. This panelist will co-decide who the third panelist will be. This is clearly no different than protecting sheep by placing wolves at the fence gate. And if Microsoft violates these meager restrictions? The penalty will be extended for another two years. That is to say, they will be allowed to continue to break the rules for another two years with no repercussions.

Please put an end to this sham of a solution. Call for Judge Kollar-Kelly to reinstate Judge Jackson's ruling that the company should be broken into two parts. If at all possible, single out those figureheads responsible for Microsoft's illegal behavior and ask the court to hold those individuals responsible for their actions. It's a shame that upper management of these companies are never punished directly. By permanently removing them from the company and replacing them with employees from below, the courts could avoid having to slap the company on the wrist many times over, as it has already done with Microsoft. Nothing changed then. Nothing will change now if harsh penalties are not enacted-and the world will have been shown once more that in America, laws are only limits for those with shallow pockets.

**MTC-00019469**

From: David Santin  
 To: Microsoft ATR  
 Date: 1/23/02 8:37pm  
 Subject: Microsoft Settlement

To Whom This May Concern—

My name is David Santin. I am a sophomore Computer Science major at Rutgers University, and have been compelled to participate in the public response to the Microsoft/Department of Justice antitrust settlement because I see it failing in its intended purpose. An antitrust settlement should be designed to censure a corporation for its anticompetitive actions while preventing those actions from occurring in the future. I believe that the settlement, as it stands, fulfills neither of those points satisfactorily.

As a future programmer and IT specialist, the stranglehold that Microsoft exerts on the computer industry as a whole is frightening. It is currently unfeasible for a corporation to market an operating system to directly compete with Microsoft's Windows line of operating systems. The closest competitors, Apple Computer and the open-source Linux operating systems, are still a minuscule fraction of the share Microsoft commands. The issue is that Microsoft has been allowed to crush competition repeatedly during its history, and has taken every advantage to do so. But if Microsoft made a superior product, then possibly an argument could be made for allowing this antitrust settlement to stand. But the simple fact is that Microsoft's operating system has many deep-seated flaws contained within, the most telling and dangerous of which is its utter lack of security.

Almost every week an advisory is released which documents a flaw or security weakness in a Microsoft-related product. Microsoft's operating system market share has increased in the past few years, but correspondingly, so have the amount of virii and security bulletins. Is this a coincidence? Not at all. Microsoft's complete and total disregard for safeguarding its users has been shown time and time again. The most

frightening part about this is that Microsoft, if allowed to continually strangle the computer industry, will control more and more computers, but make them less secure in the process. Even the US government has been advised not to use Microsoft's operating system, because of its inherent security weaknesses. I believe that only a full disclosure of ALL software APIs will make Windows a more secure operating system. Microsoft has shown time and time again that, if left to their own devices, they do not care about security.

Sirs and madams, I hope you see how deleterious Microsoft has been to computer security and competition, and how this can only get worse in the future. I urge you to reject this settlement for one which forces Microsoft to both loosen its grip on the computer industry and make its flagship product, Windows, more secure. Anything less will expose this country to far worse security problems than we have seen to date. Thank you very much for your time.

Sincerely,  
 David Santin

Count this one against the settlement "411. Many of the tactics that Microsoft has employed have also harmed consumers indirectly by unjustifiably distorting competition." from finding of Facts.

Not only has Microsoft behaved this way in the past, they have not changed. Their current business practices continue to cause harm on a daily basis. Microsoft continues to expose the market to unreasonable risk (look at the holes in the most recent version XP). As a web developer utilizing linux as a server I see this first hand. My servers get hit every day by infected Microsoft servers attempting to infect them. Without real competition you must pity the casual user that sits at home with his/her computer fully vulnerable to attack with basically no other choice. Not only, that the lost caused by this (billions in the case of the Code Red Virus) is not the responsibility of MicroSoft.

So, if you let them be, hold them responsible for their actions and products. Let them have same level of responsibility for their product that Ford has.

Sincerely,  
 Michael J. Lunn

 Subject: Microsoft Settlement

Dear Ms. Hesse,

I am writing to inform you of my strong opposition to the current terms of the Proposed Final Judgement against Microsoft. It lacks the necessary clarity of language and completeness of remedy to prevent Microsoft from continuing to abuse its monopoly.

Of particular concern to me are the following:

—Language permitting Microsoft to retaliate against OEMs who include other operating systems, and do or do not choose to license Windows. This kind of retaliation would be meaningless unless Microsoft controlled the OS market, and is an abuse of MS' monopoly. Such retaliation should be forbidden explicitly in the judgement.

—The settlement includes no remedy for Microsoft's practice of partially publishing APIs. As these APIs are undocumented, or worse classified as trade secrets, Microsoft leverages its position as the OS maker to modify APIs, frequently making it impossible for competitors to bring a competing product to market. In order to have any semblance of a competitive market, the APIs must be clearly documented. This requires direct oversight, rather than continued promises of good behavior. The settlement fails to require Microsoft to fully and comprehensibly disclose ALL its APIs to other software vendors, including those for .Net software, and thus is extremely limited.

As computers are becoming an increasingly important way the American citizenry gets information and conducts its business, it is vital that the market for software and services remain competitive.

Please do not accept the settlement as it stands, for it does not address Microsoft's abuse of its monopoly.

Sincerely,  
 Eric Ellsworth

From: Max Phillips  
 To: Microsoft ATR  
 Date: 1/23/02 8:33pm  
 Subject: Microsoft Settlement

To whom it may concern,

I am opposed to the settlement with Microsoft. As they have been found guilty of illegal behaviour in the past, and it is quite clear that this behaviour is continuing to this day, I believe that a remedy and punishment should be imposed on the company, NOT negotiated. I am worried that Microsoft's slick lawyers will get them a position where they can continue to abuse their monopoly position and stifle innovation.

The year is 2002. Yet we still have to put up with crashes and freezes every day and

we have holes all over the place which risk our security and privacy. Microsoft have NEVER innovated. They merely copy other people's innovation from which it stalls. Windows was not invented by MS, Instant messaging wasn't invented by MS, web browsing, streaming audio/video etc all weren't invented by MS, yet through its monopoly position it now controls and owns these technologies, and they stall.

It is 2002, we should be doing amazing things with our software, yet we are stuck with buggy, bloated, software which treats us as if we are all stupid. Hardware, where the market is more competitive has improved out of site, yet software stagnates as soon as Microsoft illegally closes the market down! The DoJ must stop this.

I don't really care much that MS has stolen profits from other companies. What I DO Care deeply about is the fact that through their greed the possibilities for technological advancement, and the social and cultural advancement which it may provide, is severely stunted. The few millions of dollars that MS might contribute to political campaigns or lobbyists PALES in comparison to the damage done to the possibilities for human advancement. We sent people to the moon in 1969, yet my computer can't stay stable for one work day! There is clearly something wrong.

I would like the DoJ to break up microsoft into separate pieces.

- 1) O/S business
- 2) Business application business
- 3) Web related business (browser, media player)
- 4) Server etc business

Further more I would like truly independent monitors to watch these baby MS to make sure they aren't colluding or conspiring.

A massive fine should be imposed on MS, and especially the directors who were personally in charge of making the decisions to act illegally. The money from this massive fine (I'm thinking many billions) should be used for the following activities:

- 1) set up free servers and bandwidth for Free software, Open Source software and public domain projects, to colloborate and distribute their products.
- 2) a fund should be set up to provide grants to interesting software projects (which won't necessarily make money) and distributed by an independent government authority.
- 3) computers, bandwidth, and training should be given to those in the poorest areas and to less developed countries overseas.

I would also like to see William Gates and fellow senior managers to some serious jail time. Too often small time crooks, or drug users are sent to jail for awfully long periods, while the white collar corporate crooks who waste and steal billions of dollars and destroy redundant workers lives (e.g. ENRON) get off with a slap on the wrist. So lets get it right and ensure the perpetrators of these illegal acts are sent to jail.

Thank You for reading my submission,  
Max Phillips

Ms is using their leverage to prevent OEMs from putting BeOS, a promising new technology OS, into store-bought computers by controlling the boot process. Consumers were not able to even see it operate. They created a high barrier to entry for the new OS.

Open the boot record to allow OEMs to offer dual boot computers. I mean windows / OS2, or windows / BeOS, Windows Linux, or any other combination. Anything else is monopolistic discrimination. It is bad business to go single-source for a product!

Subject: Microsoft Settlement

Sirs,

As the target of much well-reasoned (and much poorly-reasoned) commentary on the DoJ's antitrust settlement with Microsoft, I'm sure you've heard a great deal about the technical merits of the settlement and its specific language. I'd like to reiterate a couple of those key points again, and state my support for the viewpoint that the proposed settlement neither fully addresses Microsoft's criminal behavior nor discourages them from continuing it.

First point: lack of requirement of action. The settlement says a number of things which Microsoft "must" reveal, any of which may be easily slipped around by claiming that those protocols must stay secret for the integrity of Windows, and none of which must be revealed to anyone other than competing corporations—not, for instance, hobbyist programmers like myself who write Open Source software nor to the public at large.

Second point: lack of penalties. Penalties for MS's failure to respect this settlement are not spelled out. Given MS's long history of ignoring such court mandates, the lack of such penalties (other than extending the period for which they ignore them) is ludicrously negligent. We all know they'll break the agreement if they feel it's in their best interests, so the question is "what will happen to them when they do?" That question remains unanswered.

Third point: lack of scope. The settlement addresses some (but not all) of the points addressed by Judge Thomas Penfield Jackson's original judgement, but leaves out a number of them that he didn't cover properly. The simplest one, the one that proves their maintenance of monopoly and badly hurts OEMs and consumers, is their contract clauses preventing OEMs from shipping machines with multiple operating systems preinstalled and bootable ("dual-boot" or "multi-boot" machines). This is active maintenance of their monopoly, and prevents consumers from being able to buy machines with non-MS operating systems—even if they are willing to buy an MS OS as well—. If there is any question of whether the OEMs can simply find no other operating system to include, look at operating systems

like Linux or BeOS which were offered to them freely. In the current market, given OEMs incredible pressure to differentiate themselves in any way, why have essentially no dual-boot systems come to market? Why does no major OEM offer, for instance, a machine preloaded with Linux? Why does no major manufacturer offer a machine with no operating system at all, allowing consumers not to pay MS? MS's licensing practices support their monopoly most directly, and have gone essentially unaddressed. As a consumer, I feel both deeply disappointed and betrayed that the US Government initiated and concluded these proceedings without a very serious look into these deplorable practices.

Until Microsoft is restricted from controlling standards, killing those it does not control, true innovation will remain shackled. Until Microsoft has competitors, Operating Systems in current use will always be insecure, as Microsoft's internal processes guarantee. While Microsoft can leverage its Operating System monopoly to kill products in competing fields (handheld computers, web browsers, application software, home entertainment, video game consoles) this contagion will spread. We have seen the results of Microsoft working without competition, as Microsoft Office in modern days demonstrates, or Windows 3.1, NT, 95 and 98—prior to the rise of Linux. It is too early to give up on the information revolution, and so it is too early to let Microsoft run unfettered, destroying the technology industry that gave birth to it, as it has demonstrated every intention to do.

To whom it may concern,

I would like to state my opinion that the "penalties" that Microsoft faces currently are hardly a slap on the wrist. Microsoft should be split into two different companies. By not doing this they will still have the inside design advantage for their software. Hopefully this would keep them from executing their past illegal practices in play. They go to a computer maker or software distributor and say "Sell only my products or you don't get the discount". The loss of a discount could make a company uncompetitive price wise or make them operate at a loss which makes their long term operations harder to manage. This type of behavior is extortion. Sell my products only or we'll destroy your company. If this type of thing happened on the docks, we would call it racketeering and Microsoft the Mafia.

Do not allow this phony penalties to stand. Don't fall for the "what's good for Microsoft is good for the country" talk. Predatory monopolies that behave the way Microsoft does is not good for anyone except Microsoft.

These opinions are mine alone and are not associated with my employer in any way.

1) Microsoft DOES NOT provide value for money in it's operating system products. It charges way too much for a product that is not stable enough to be reliable.

I have to use Windows for such products as Photoshop and Acrobat. If the operating system was free like Linux and open source—it would be made much more stable by the world full of developers who like windows and want to use it. Then Microsoft could sell their products (Word, Excel etc) which would run just as well on Windows but would be stable and reliable (and a whole lot more secure and speedier once the "dodgy" code was eliminated.

Don't get me wrong, I don't "hate" Microsoft and "love" Linux—I "dislike" Microsoft because I cannot depend on Windows as an operating system whereas I

can depend on Linux—unfortunately because of the Microsoft monopoly many manufacturers do not want to port their products to Linux. So I am stuck with Windows whether I like it or not—and I don't.

Until MS can be slapped into shape this situation will continue unless MS is slapped so hard that manufacturers decide to port to Linux—if that happens MS will die.

Microsoft Settlement U.S. Department of  
Justice,

Dear Microsoft Settlement U.S. Department of  
Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high

time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views. This frivolous lawsuit probably cost investors millions more than the Enron fiasco caused, and there was no government intervention there. Keep the government out of private business.

Sincerely,  
John R. McDermott

From: Paul Gabriele  
 To: Microsoft ATR  
 Date: 1/23/02 8:40pm  
 Subject: Microsoft Settlement

[Reprinted with permission of the original author: Brian Koppe, Buffalo Grove, IL]

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. It is my understanding that the purpose of the Proposed Final Judgement should be to reduce, as much as possible, the Applications Barrier to Entry. In other words, make the market more open to competition from other products. After reading the Proposed Final Judgement and multiple essays on its problems and benefits, I have noticed many things that I take issue with. However, I'd like to focus on one in particular. This problem is in the issue of Microsoft End User License Agreements (EULA).

It has been shown that Microsoft creates EULA's that place anticompetitive restrictions on the user, and that Microsoft has intentionally created incompatibilities to keep users from using Windows applications on compatible operating systems that are not Windows. One example of this is in the license agreement for the Microsoft software, NewsAlert— offered by MSNBC. In that license it says, "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.]. ..." Users of competing operating systems, such as Linux, which are capable of running some Windows applications are not legally capable, under this restrictive license, to use this program. One suggestion as to how restrictive licenses such as this should be

forced to be changed is for the excerpt above to be re-written as follows:

"MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system."

In the past, it has been shown that Microsoft places technical barriers on competition as well. The 1996 Caldera v. Microsoft case shows how Microsoft added code to its product so that, when run on a competing operating system (DR-DOS in this case), it would give the user an error. As I'm sure you can easily look up, the judge ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft."

Unfortunately, with the Proposed Final Judgement as it stands, there is no language to prohibit these restrictive licenses nor is there language to prohibit future intentional incompatibilities. Therefore, in its current state, the Proposed Final Judgement assists Microsoft in continuing these actions and does not succeed in opening the Applications Barrier to Entry.

In closing, I would like to add my support for Dan Kegel's essay, "On the Proposed Final Judgement in United States v Microsoft," located at <http://www.kegel.com/remedy/remedy2.html>, which is the source of the facts I have included in this letter. I would also like to add my support for his suggested amendments to the Proposed Final Judgement, which are described near the end of his essay, and to the alternate settlement proposed by some of the plaintiff states and located on the website for the National Association of Attorneys General at <http://www.naag.org/features/microsoft/ms-remedy-filing.pdf>.

I am writing this message in response to the latest boondoggle by AOL, Netscape and other parties involved in the latest filing of a lawsuit against Microsoft. While I am not the biggest fan of the Redman bunch, I believe in giving credit where it is due. Microsoft is largely responsible for the technology growth in this nation and the world. As the Technology Director for a small school district in East Texas, I find these continued attacks disturbing. It will do nothing but drive up the cost of software, and delay developments that education could

find useful. Netscape and AOL should be publicly chastened for continued attacks. AOL has little room to talk as they have systematically wiped out other ISP's of there kind (thankfully). AOL's product is flawed, full of viruses, and their business practices are less than desirable. In my opinion, the DOJ and Microsoft need to settle this fiasco, tell AOL and others to quit crying and develop a better mousetrap and get on with the business at hand.

Werner Burwood

**MTC-00019490**

From: Patrick Greenwell  
 To: Microsoft ATR  
 Date: 1/23/02 8:39pm  
 Subject: Microsoft Settlement

As a long-time technologist and small business owner, I am adamantly opposed to the proposed final judgment in United States v. Microsoft. The first glaring problem with the proposed judgment is that there are no punitive penalties related to Microsoft's "past illegal, and anti-competitive behavior. Rather it attempts to simply modify their behavior in the future. Microsoft is directly and indirectly responsible for putting countless businesses and individuals out of work through their illegal actions. They should be made to pay for their past misdeeds rather than simply promising "not to do it again."

Second, as someone with over 15 years in the computer industry, the proposal as written is rife with countless examples of conditions, loopholes, and exceptions that aid Microsoft to the point of rendering this agreement as written nearly worthless.

These include:

III.c.3 forces organizations wishing to run a post-boot middle-ware product to either display no user interface, or one that is consistent with Microsoft's own interface. This clause significantly hinders other parties ability to determine look, feel, and to provide additional functionality which requires a different interface.

The unwritten requirements in III.D "Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of inter-operating with a Windows Operating System Product via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middle-ware to inter-operate with a Windows Operating System Product." What this language illustrates is that in order to gain access to interoperability information, one would have to have a business relationship with Microsoft as an ISV, IHV, IAP, ICP or OEM which would undoubtedly be tied to a separate lengthy and restrictive licensing agreement.

Interoperability information should be freely available to anyone who wishes it. A business relationship with Microsoft should not be required in order to determine how to make ones software work with their software.

Section III.G.1 states that "Microsoft shall not enter into any agreement with any IAP, ICP, ISV, IHV or OEM that grants Consideration on the condition that such entity distributes, promotes, uses, or supports, exclusively or in a fixed percentage, any Microsoft Platform Software,

except that Microsoft may enter into agreements in which such an entity agrees to distribute, promote, use or support Microsoft Platform Software in a fixed percentage whenever Microsoft in good faith obtains a representation that it is commercially practicable for the entity to provide equal or greater distribution, promotion, use or support for software that competes with Microsoft Platform Software.”

This clause does absolutely nothing to aid anyone other than Microsoft. It allows Microsoft to contravene the intent of earlier sections which were aimed at preventing Microsoft from punishing their partners who chose to use other parties software. Instead of being punished, Microsoft is simply enabled to “reward” those who “distributes, promotes, uses, or support” Microsoft Platform Software at any fixed percentage they wish (100% is a percentage for example.) By “rewarding” partners that use all Microsoft products Microsoft can continue to make it financially unrealistic for manufacturers in the highly-competitive industry to not use Microsoft products and forego the “rewards” that Microsoft provides.

III.H.2 allows Microsoft to require confirmation for installation of Non-Microsoft middle-ware. What it does not do is state the nature of the confirmation (is it a one step process, a ten step process, etc.) nor does it offer any guidance as to the language to be used. As written, this clause would allow Microsoft to require a twenty-step process with language that reads “WARNING replacing this software could seriously damage your operating system or machine” throughout in order to replace Microsoft middle-ware.

III.J.1 offers an exemption from disclosure of any APIs or documentation that would “compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria”

One of the ways in which Microsoft could avoid disclosure of large amounts of data would be to simply make the claim that disclosure would “compromise security” any time they did not wish to disclose something and then utilize their innumerable resources to press those claims. Further, there are already products that exist which require knowledge of Microsoft authentication mechanisms, namely SAMBA (<http://www.samba.org>). This clause as written would actually allow Microsoft to put this project out of business by denying them access to information.

Third, Section IV.B borders on the ludicrous. What is being agreed to is that Microsoft, convicted of multiple illegal acts, gets a 50% say in choosing who is appointed to determine if they are perpetrating additional crimes from a technical perspective.

Microsoft should have absolutely zero say in who is appointed to judge their compliance, just as I would not be able to choose a particular judge if I were accused of committing a crime.

Were this not bad enough, IV.B.d renders the Technical Compliance Committee

worthless by prohibiting the admission of their work or finding in enforcement proceeding for any reason, and forbidding them to testify on any matter related to the judgment.

As written this proposed cure does nothing to address Microsoft’s” past misdeeds, offer little if any protection to consumers, and allows Microsoft to continue to perpetrate many of the crimes it has been found guilty of.

For all of the reasons outlined above, I urge you to reject this proposal outright, or at a minimum require significant modification.

Sincerely,  
Patrick Greenwell

From: Peter Brumblay  
To: Microsoft ATR  
Date: 1/23/02 8:37pm  
Subject: Microsoft Settlement

To whomever it may concern,

A recent post on slashdot.org alerted me to the fact that I have a small ability to complain about the Microsoft Settlement. I have been an employed software developer for the past two and a half years, and have been an avid computer user for the past sixteen. Throughout this time, I have had first-hand experience with many of Microsoft’s software products, including their operating systems.

A very interesting comparison has been made by Scott Rosenberg in an article at Salon.com (text here: <http://www.salon.com/tech/col/rose/2002/01/16/competition/index.html>) to the PC CPU market. In short, AMD’s relatively recent entrance into the higher-end PC market has fueled a fiery competition between Intel and AMD. This competition has allowed consumers to purchase excellent products at much lower prices than comparable products in the mid-90s. I am particularly pleased with this competition, as I upgrade my computer about once every two years. The article then describes the horrible lack of competition in the operating system market, and how Microsoft’s partially disclosed APIs prevent other operating systems from being competitive. If the majority of quality commercial software only runs on Microsoft operating systems, then how are other operating systems supposed to compete?

The secret to the competitiveness in the chip market is the fully disclosed machine language that the chips understand. AMD chips and Intel chips can read the same computer code at the hardware level and are therefore able to run the same software. If Microsoft were required to fully disclose the Win32 API, and the APIs (and file formats) of the products that it uses to retain its monopolistic leverage in the market (Microsoft Office, for example), other operating systems (Linux, FreeBSD, MacOSX) would be able to compete much more readily, because they would be able to run the same applications that the Microsoft applications can.

As outlined in Dan Kegel’s essay, the provisions in the settlement do not require Microsoft to fully disclose their APIs and offer them many loopholes to remain anti-competitive. (Essay’s text here: [http://](http://www.kegel.com/remedy/remedy2.html)

[www.kegel.com/remedy/remedy2.html](http://www.kegel.com/remedy/remedy2.html)), thus dooming Linux, FreeBSD, et. al. developers to the laborious task of catch-up through reverse-engineering.

I sincerely hope that a change can be made to this Settlement to give me a choice in the future as to which operating system I run, and which operating system I develop for. The current Settlement is grossly inadequate, and currently I foresee a future where I will be forced to write code for Microsoft products, lest I move to a different profession.

I want a choice.

I feel that Microsoft is not being properly punished or limited in the future from continuing its unlawful activities. What must stop is the bullying of PC vendors into selling exclusively Windows PCs with a certain desktop setup, or no Windows at all. It unlawfully hurts the consumer and the economy, when nobody is allowed to buy an alternative product until after Windows and its browser have already been forced upon them.

Subject: Microsoft Settlement

I oppose the settlement. I’ve been in the personal computer market since the beginning; first as a consumer, later as a developer and independent contractor.

A few points:

It is an outright lie that Internet Explorer (“MSIE”) can’t, as a matter of principle, be removed from Windows. It does not take a software expert to appreciate this: consider only that MSIE also runs on the Macintosh. Or, remember that MSIE is derived from a browser originally developed by Spyglass. Or, that MSIE was a separate product for Windows until Windows95. Of course it is possible to construct MSIE and Windows

such that removing the former will break the latter, but that's no different than using glue instead of a nut & bolt to hold a pair of items together.

Microsoft is NOT an innovator. They have invented almost nothing, and purchased or copied nearly everything. If Microsoft's behavior had been even a little less rapacious, the following outcome would have been likely:

- more competition, since companies (and investors) would not avoid markets that Microsoft targets
- higher growth in the computer industry
- more innovation
- lower prices

Microsoft has lowered the market price of some high-end items, though vigorous non-Microsoft competition is likely to have achieved the same result.

Microsoft has RAISED the price of their monopoly items, e.g. look at the relative cost of Windows and Microsoft Office vs. PC hardware.

Microsoft's products are, in general, poorly designed and have many serious bugs. Open competition would have yielded higher quality products, ultimately leading to higher productivity and therefore a higher standard of living. Again, this point is easy for those who are not software experts to understand.

Just consider how much time they and colleagues waste due to software crashes, features that are difficult to use or don't accomplish the expected result, etc.

Review the Findings of Fact. It is clear that Microsoft has not, in general, been willing to compete on the basis of offering better products and services. Instead, it's just been ruthless. An essential component of the free market is the rule of law. Microsoft's lawless behavior has harmed consumers by reducing innovation, lowering overall product quality, raising overall prices, and ultimately reducing national productivity.

Microsoft's behavior was not reigned in by past settlements, and they remain unrepentant about the clear violations listed in the Findings of Fact. The current settlement appears to be both token and toothless, and will have very little effect.

From: Sean Simpson  
To: Microsoft ATR  
Date: 1/23/02 8:42pm  
Subject: Microsoft Settlement

I have a great many issues with the proposed Microsoft settlement, and as an aware, informed, and concerned consumer, I want to highlight the one of most concern to me: encouraging competition among ISVs.

1) Require advanced notice of technical requirements. Section III.H.3 of the Proposed Final Judgment requires competing ISVs of middleware to meet "reasonable" technical requirements seven (7) months before new releases of Windows, yet does not require Microsoft to disclose those requirements. This allows Microsoft to maintain their monopoly by changing the requirements after the seven (7) month deadline has passed.

2) API documentation. On a related note, Section III.D of the Proposed Final Judgment specifies that release of the APIs to ISVs is not required until final beta of the

middleware, yet this does not provide nearly enough time in the beta cycle to allow the ISVs to bring their middleware in line with Windows APIs. And it allows Microsoft another loophole, building on the one mentioned above. And many important APIs would remain undocumented, such as Microsoft.NET. Furthermore, there are unreasonable restrictions placed on the use of said documentation, especially as relating to writing for a competing operating system, by not allowing those who write applications for a competing operating system along with Windows versions of said applications to see this documentation.

3) File formats At no part in the Proposed Final Judgment is Microsoft required to disclose any information about the file formats, even though those undocumented Microsoft formats, such as Microsoft Word (commonly called ".doc") and Microsoft Excel (commonly called ".xls"), are part of the Applications Barrier to Entry ("Findings of Fact" paragraphs 20 and 39).

4) Patents covering Windows API remain undisclosed Section III.I of the Proposed Final Judgment requires Microsoft to license certain of their intellectual property rights, but not to clearly announce which software patents protect the Windows API, creating a barrier to Windows-compatible operating systems, as they are unable to determine whether or not they may be violating Microsoft software patents. This will inhibit market acceptance of those competing operating systems, further maintaining Microsoft's monopoly.

5) Definition of "Windows" The definition of Windows in the Proposed Final Judgment is excessively narrow; it does not apply to Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box, all of which use the Win32 API, and are advertise as "Windows Powered." In fact, Microsoft themselves have stated that Windows XP Tablet PC Edition is an API-compatible operating system, and will run Windows software. Any Microsoft operating system software which is even source-compatible, such as Pocket PC, with Windows 2000, Windows XP Home Edition, Windows XP Professional, and their successors, should be covered by the Proposed Final Judgment, as the Windows operating system—in all its forms—is the linchpin of the Microsoft monopoly. It is my considered opinion that this Proposed Final Judgment is utterly inadequate to the stated purpose of ending Microsoft's illegally maintained monopoly. The existence of this monopoly has led to stagnation on the desktop, and cost Americans untold billions of dollars, both directly through Microsoft's damaging practices, and indirectly through causing the industry to standardize around programs rather than protocols, allowing for the spread of viruses such as SirCam and Nimda that exploit weaknesses in Microsoft software. To that extent, I support a much harsher penalty against Microsoft, that will allow the playing field to be leveled, and for ISVs to create truly competing products, and return the desktop computer software market to a healthy state.

I am opposed to the Microsoft settlement. I believe Microsoft has behaved in an anti-competitive way and continues as I write to behave in an anti-competitive way by making Windows XP not work as part of a multi-boot environment (as with LILO, which Windows used to work with) Therefore Microsoft's own actions prove they can not be trusted to restrain themselves from anti-competitive action, and they should be broken up. Punitive damages are appropriate here, for those companies that were harmed by Microsoft (e.g. Netscape, GNU Software Foundation)

From: Doug Masson  
To: Microsoft ATR  
Date: 1/23/02 8:46pm  
Subject: Microsoft Settlement

Dear Sir or Madam:  
I would like to write to register my objection to the proposed Microsoft Settlement. Individuals more scholarly than myself will have already informed your opinion, so I will keep it brief. In light of Microsoft's past history with conduct remedies, any future conduct remedy (as opposed to a structural remedy) would have to have swift, vigorous, and transparent

oversight. The proposed remedy does not provide for this.

Do not allow Microsoft the ability to hide behind ambiguous provisions ostensibly designed to protect their "security". In the past, Microsoft has been indifferent to security concerns (note the constant problems with Outlook). There is no reason to believe the company won't hide behind security as a pretense for not allowing interoperability.

Finally, the proposed settlement contains numerous provisions that could undermine the free software movement. Ultimately the free software movement contains the best hope for a competitive software environment. Anyone dependent on a profit to survive will ultimately be smothered by Microsoft as were the makers of Lotus, WordPerfect, and Netscape to name three.

Thank you for your consideration.  
/s/Douglas J. Masson

From: Chris Cooney  
To: Microsoft ATR  
Date: 1/23/02 8:40pm  
Subject: Microsoft Settlement

I have to say that the proposed segment is a joke in poor taste, and we are all the butt of it. First of all, the proposed amount is staggering low for Microsoft—they made \$770M in interest in 1999 (give or take), so if this were a straight fine, it would amount to a year and a half worth of interest. To put that in perspective, a year and a half of interest on my accounts runs about \$20.

It gets worse. Microsoft gets to use that money to flood public schools—one of the last bastions of Apple, their only credible direct competitor. Further, it looks like they can count the retail price of their software in the 1.1 billion. This means that they spend \$200M on hardware and about \$100M on software (retail value \$900M), take a hefty deduction on taxes and possibly make money on the deal. Never mind that this does nothing to even slow their rapacious assault on the industry; note the common fate of a Microsoft competitor is to be buried under piles of cash, find their lead developers are suddenly working for Bill Gates, or find that Microsoft is making something equivalent to their product and giving it away. Ask a venture capitalist how many companies they ever funded that competed with Microsoft. You won't find many.

I'm not exactly sure what needs to be done, but it needs to be far closer to Jackson's breakup order than this. Microsoft is killing the industry and stifling innovation.

-chris

Subject: Microsoft Settlement

To whom it may concern:

I work in the computer field, and while I do not directly work with Microsoft products, I am familiar with the programs from office work. I have several years experience in both computer programming, and computer system administration on multiple operating systems

I strongly feel that the proposed settlement is inadequate. Not only does it offer little or no restitution to the parties harmed by the anti competitive behavior, but it also does effectively nothing to prevent Microsoft from continuing the behavior in the future.

In particular, in section III.J.1, Microsoft is allowed to keep APIs closed under certain conditions. The conditions specified are so broad they could easily be taken to mean every piece of software written by Microsoft. This would enable Microsoft to develop internal APIs, which would give all competitive programs a significant disadvantage in performance and interoperability.

Additionally, in section II.J.2, Microsoft is allowed to not share its "open" APIs with individuals. The hobby software development community is very large, and produces a great deal of code. This provision allows Microsoft to only share its APIs with companies, thus excluding the hobby software developer. The provision also gives Microsoft the discretion to refuse a legitimate company if, in Microsoft's opinion, the company does not have a viable business plan. It is not a large stretch to image that any potential competitor would be classified as not being a viable company.

Finally, given Microsoft's past actions concerning the earlier anti-trust suit, the provision for effective enforcement of the terms falls far short. The company has shown in the past it will ignore court orders and will selectively interpret provisions to its favor. I urge the settlement to be rejected on all points.

Subject: Microsoft Settlement

I have been using alternate OS's (not windows) for years now, but there is always something "missing" in the mid 1990's I used OS/2 Warp 3, until about 1996 when there were a few key applications that required Windows 95 to run. In 1998 I switched to Linux and run it as my Primary OS to date at home. I Also have a MacOS X laptop for road work. However i am unable to use linux reliably at work because of the difficulties of interacting with Windows. While it is possible to interact with windows, the closed nature of windows does not make it possible for me to Administer Windows effectively from a Linux workstation.

This cause me to occupy 2 computers at work, because another core part of my job requires the use of an Operating system with many Text editing feature and programming language. Unix, in my case linux, is the best choice. However every time I receive a computer upgrade it costs my employer twice as much money because My job requires me to use 2 computers.

If windows had a more open architecture it would be possible to develop tools like Damerware (www.dameware.com) which allow complete control over the network that i am responsible for maintaining. I do not ask that Microsoft Open Source the window operating system or Microsoft internet explorer. They are entitled to keeping their source code closed and locked away. I do however Ask that microsoft release everything required to program tools that would allow myself and other professionals that need to use alternate Operating Systems the ability to administrator and maintain, fully, a computer running windows over a network to the same ability that Windows Administrators can.

Subject: AOL Netscape Is Trying To Sway Justice

To Whom It May Concern:

The news that AOL Netscape has filed suite against Microsoft just as the Dept. of Justice is in the final, punishment phase of it's suite against Microsoft has but one intended outcome...which is to try to sway the D of J into thinking that MSFT was guilty of doing harm to competition. The facts about the so called "browser wars" between MSFT and Netscape could not be more clear. Remember, please, that AOL bought Netscape in the midst of the D of J case against MSFT...Remember also that all browser users, including the majority of the public as well as the so called "high techies", agreed that the MSFT browser was just plain better, easier and more user friendly than was Netscape. That is why Netscape lost the "war". I am a shareholder in AOL/Time Warner...I have owner the stock as a very early owner of Turner Broadcasting Company shares. As you know, Turner merged with Time Warner, then Time Warner merged with AOL. Since the AOL merger, I have been disappointed with many corporate decisions, each giving me less and less

confidence in the business ability of AOL. AOL is either looking for a "quick fix", I fear, to a very real money problem, or a "quick fix", I fear, to a competition problem. But, please know that the "fix" will come as a part of your present findings/punishment of MSFT. Don't let them use this cheap trick to influence your current decisions. Let another court take up their issue. But, above all, please let the technology sector of this country get back on tract inovating new and needed resources. We have so many really important issues before us and we need leaders, in industry as well as government, that can connect with the people. MSFT creates real instruments that help streamline the future in lieu of just re-newing a monthly subscription for a service.

Please don't be influenced by this cheap shot!

Thanks. Polly Woodress

Subject: Microsoft Settlement lets them off too easy

As a long time member of the computer industry and someone who has worked with Microsoft products and those of other companies I would like to say that I think the settlement as proposed is a slap in the wrist to a company that has over charged consumers millions of dollars, and killed competition in the computer industry, I urge you to reject the settlement and seek sanctions that will actually punish Microsoft for their illegal actions.

**MTC-00019507**

From: Craig Miller  
To: Microsoft ATR  
Date: 1/23/02 8:45pm  
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I think that under the Proposed Final Judgment as written, allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

An example of this is the PFJ fails to Prohibit Anticompetitive License Terms currently used by Microsoft eg Microsoft has used both restrictive licenses and intentional incompatibilities to discourage users from running Windows applications on Windows-compatible competing operating systems.

**MTC-00019508**

From: Jack Sutton  
To: Microsoft ATR  
Date: 1/23/02 8:45pm  
Subject: To Whom It May Concern

To Whom It May Concern

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo.

Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Jack Sutton

**MTC-00019510**

From: Michael  
To: Microsoft ATR  
Date: 1/23/02 8:46pm  
Subject: Microsoft Settlement "We were supposed to fight for people who couldn't fight for themselves. We were supposed to fight for Willie."—PFC Lowden Downey in the motion picture "A Few Good Men"

For years the corporation known as Microsoft has run roughshod over anyone and everyone who would dare to compete with them. The term "innovator" was bandied about quite often during the anti-trust trial and I find the excessive use of that word to be the only aspect of the proceedings which was more ludicrous than the testimony of Bill Gates. Microsoft has done nothing to earn the term "innovator". To date they have either stolen any advanced features incorporated into their software or have bought another company which already had developed technology they wished to add to their stable.

As someone who has been deeply involved in the world of microcomputer technology and use for over twelve years I am appalled by the fashion which the Department of Justice has shirked its solemn duty to the American people. This is a company which blatantly leverages its monopoly power to vanquish any worthy competitor. They continue to tie every product they can deep into the Windows operating system. Internet Explorer virtually wiped out any viability of the Netscape browser simply by virtue of

being included with the Windows distributions. Internet Explorer at the time was widely acknowledged to be an inferior application however as it was available at no additional cost to the end user it easily wrested market share from Netscape.

The fact of the matter is that Microsoft has been found guilty of violating FEDERAL LAW. No response other than the most severe of penalties is appropriate. Bear in mind that the fruits of their monopolistic behavior exist in the form of billions of dollars of cash reserves. These cash reserves, ill-gotten gains, to say the least, should be heavily fined. The company, to date, remains totally and completely unrepentant and should be broken into no less than three entities which would be allowed to have no direct dealings with one another. While you're at it, you should file charges against Bill Gates for perjury. For his so-called testimony was nothing less than misleading. Finally, the source code of the Windows operating system should be opened to the public and published as open sourced code.

Make no mistake. Your failure to fully and properly prosecute these remedies will result in an even bolder company. One which you are obviously becoming impotent to control.

IT IS YOUR RESPONSIBILITY! You're supposed to fight for those of us who are not powerful enough to fight this behemoth. If you do not act, and act wisely, Microsoft will gain more and more control over more and more business sectors. Even now they are attempting to wipe out competition in the console game market by selling their X-box at a lower cost than required for them to assemble them in the first place.

They have dipped deeply into online banking and travel. How much farther must they go before the segments of our government which act now as special interests are stopped from national, or even global, domination?

Date: 1/23/02 8:50pm  
Subject: Microsoft Settlement

I would like it known that I am opposed to the tentative settlement in the Microsoft case.

As it stands the terms are too narrowly defined and will allow Microsoft to continue with their illegal and immoral practices in the very near future.

In addition, the government should have already learned that "slapping Microsoft on the wrist" did not accomplish anything. They continued with their shady business practices right away, and even now, in the middle of all this they are attempting to corner markets. Their .net strategy is an attempt to gain control of the internet. If the

government can't see this then they better get experts who can.

I suggest getting back issues of PC Magazine and reading John C. Dvork's columns. He tells it like it is and often has commentary's about Microsofts business practices.

The only thing that might get Bill Gates to stop trying to kill all competition is to hit him where it hurts. A really big fine would help and having him step down from any involvement with Microsoft would be even better.

What I really think should be done is to split Microsoft in several pieces: Internet software, Operating Systems, and Other Applications. This is the only way you'll ever get Microsoft to stop their "destroy all" practices.

Subject: Microsoft Settlement

I am writing to express my opposition to the proposed Microsoft settlement. As I am a software developer, I have paid very close attention to this case since its inception and am amazed that we have the current proposal before us. Even though Microsoft was found guilty on key points, the proposed settlement does so little to prevent future occurrences, its as good as no settlement at all. it will lead to Microsoft continuing the very things they were found guilty of! Once more, companies will be denied a fair shot at the marketplace, since MS will use their monopolies to short-circuit the decisions of the market. How can small companies get funding for innovative new ideas and products if the likely result will be that MS steals the market segment without really competing? Will venture capitalists be likely to fund companies if this is the possible result? Obviously no, and the result will be a decrease in innovation, and a decrease in consumer choice. The question I have to ask is, does our DOJ and the courts actually believe in enforcing the laws that are on our books? Is this the type of legacy that the current DOJ and the courts want to leave, that of a DOJ soft on business (even with a guilty verdict handed to it by the previous

administration), and a court more interested in moving the case along than finding a proper remedy?

Subject: Microsoft Settlement

Dir Sirs... I am a television director who directs a show about the computer industry. The Computer Chronicles is the longest running show about the technology, we are currently in the 19th season. I have been involved in the show for almost it's entire life. My position gives me a unique perspective on the tech sector.

One point of interest about Microsoft that I would like to share with you as you make your decisions about what to do with Microsoft is this. For the past 2 decades Microsoft has acted one way and one way only. The prevailing attitude from Microsoft has been this, "We are right, everyone else is wrong, and if we stand our ground because we can afford too, everyone else will fall in line behind us." In other words, "if we say it is so, they will believe us."

Now on first glance, this seems like corporate america at it's best. Believe it is so, be confident and achieve your dream. However, this is not the tone that Microsoft has taken. I realize that this case is about specifics BUT everything should be taken into account when determining what the PUNISHMENT should be. This is about a PUNISHMENT, not a slap on the wrist. We have NO idea how many companies have been put out of business because of the unfair practices of Microsoft. Look at how Microsoft has tried to TELL the government what it's punishment should be... that is just like the arrogance of Microsoft. Microsofts punishment must be deep and just. Do not be lulled into the spell that this company has caste on so many people. Deliver a punishment that will make a difference and send a message to everyone.  
Thank you for your time.

To whom it may concern, I am opposed to the settlement set forth. Most importantly, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people. VERY IMPORTANT — One remedy in particular I would like to see included: Microsoft should be required to use ONLY standard file formats (like those adopted by the W3C) for all documents generated by its software. This would allow an even playing field for competitors large and small, and not lock consumers in to using Microsoft products due to legacy data. Only then will it truly be, "may the BEST software win", and that benefits everyone. My views on other aspects are congruent with the December 7, 2001 document provided by Brendan V. Sullivan, Jr. (Bar No. 12757), et al., "Plaintiff Litigating States" Remedy Proposals", and I ask that you consider taking action which is more similar to this in spirit and effect.

Sincerely,  
Mark Rivera

From: David C. Fox  
 To: Microsoft ATR  
 Date: 1/23/02 8:55pm  
 Subject: Microsoft Settlement

Section IV.B of the proposed settlement agreement creates a three member Technical Committee "to assist in enforcement of and compliance with this Final Judgment". One member of the committee is to be chosen by Microsoft, one by the plaintiffs, and a third by the first two members. Microsoft is not allowed to object to the third member except on grounds specified in IV.B.2. However, there is no restriction placed on the grounds on which the Microsoft-appointee might object to a candidate for the third position. This gives Microsoft indirect veto power over the choice of the third member, and therefore the power to appoint or veto two-thirds of the membership of the Technical Committee. If the Department of Justice proposed giving a convicted felon the power to appoint or veto two-thirds of the members of his parole board, that would be an outrage.

To give Microsoft the analogous power is outrageous and should by itself be sufficient reason to make the proposed settlement unacceptable.

 Subject: Microsoft settlement

Dear Sirs,

I've followed the Microsoft trial from its beginning. It is clear from the testimony even to a layman that Microsoft does not respect the law or the judicial system. The proposed settlement leaves enough room for them to continue protecting their desktop monopoly through predatory practices, and to use it to try to extend it to the server and communications fields as well.

I work as a consultant, and have over the years seen many technically superior products fall by the wayside after Microsoft entered the field. The consumers ultimately pay for this—even the small minority who run on other platforms.

The quickly dwindling individuals and businesses that still rely on "alternative" operating systems need to spend increasing amounts of energy to maintain compatibility with the "mainstream." New Microsoft products use data formats that differ enough from previous versions to make it difficult for existing applications to exchange data with them. Since Microsoft frowns on the use of its development tools and information for non-Windows products, and since this information is necessary to make the products work on Windows, it becomes increasingly difficult for developers to build or maintain products for any other platforms—especially since the Windows market is the most profitable.

At this stage, excluding specialty fields, the "alternative" platforms have become small enough that mere removal of artificial barriers is no longer sufficient to resuscitate

choice in the marketplace. The number of commercial OS/2 developers has declined to a handful, and BeOS, and Amiga, for example, are no longer available. I sincerely hope for the future of the industry that the current proposal for settlement will be rejected, and effective measures will be taken to ensure that open competition, innovation and development will once again become possible.

Yours,  
 Teijo Kaakinen

 Subject: Microsoft Settlement

I believe that microsoft has had their day in court. the unfair standards they set have all but bankrupted a few OS upstarts and forced computer manu. not to allow them. I am a stock holder of Be, Inc. which made(makes) an incredible os that was 5 yrs ahead of anything they have now, and this was in 96..Be struck a deal with a few computer makers, but Microsoft forced them, compaq, HP, and Dell, into not using the alternative OS. Now Be is all but gone, the major part of the co. has been bought by Palm, inc. and who knows if we'll ever see it again.

As for MS idea of settlement, that would only hurt my other stocks, which are Apple. Be done with MS already.. they had enough time in the spotlight.

Marc

From: James Walton  
 To: Microsoft ATR  
 Date: 1/23/02 8:50pm  
 Subject: Protest of current Microsoft Settlement under the Tunney Act

Being American I have little time for my own activities etc... such as I have has only marginally followed this case as it convolutedly floundered through the wrangling of countless legal issues and needs. This complaint thus will be grounded more in concepts than in hard nosed legal study of the PFJ. It is just a blurb and only icing on the cake of issues which I find so disturbing in Microsoft's business practices and it's skillful use of legal gray areas.

Concept 1. Anything which protects, must protect all. If it protect only a few then it must do so because by protecting the few it better promotes the protection of all. This is Insurance folks. Statistics says that you get better control over variance by looking at an entire population. By giving a small cost to all you can provide for the large losses of the few. It is simple it is conceptual and thus almost poetic. thus by definition it will not work that way in the real world with competition and snake oil salesmen and such. Enter the regulator.

Insurance is not so fair or simple as it's concept. So how does a regulator insure the protection/benefit of the many and encourage their greatest benefit can be received for the cost? Standards, requirements, rules and laws. A mortgage lender must give an APR to all clients and show them how much

interest they will pay over the life of a loan. Fairness to inform but the final choice to move forward is still in the hands of the many. Take this requirement out and we are getting slighted for 10% loans that claim 4% interest with insane upfront fees that may just be added to the principle to lengthen the payoff and increase the APR.

You must regulate to prevent abuse in many aspects of competition. competitor is not moral left to it's own virtues. It does what get's it the greatest profits. You must regulate to insure it does not take profit at the price of people.

The largest conceptual issue in the Microsoft monopoly trust is that no one can get their APR from Microsoft. We don't know the terms we can't see the amortization's behind the facade of our loan. Or the final payout of our insurance benefit and what clauses may negate us even getting that benefit in the first place.

Microsoft uses the law like any company to make it's own corporate iron curtain about it's software in which it holds the copyright and patent and control of any would be viewer. The only standards are those that Microsoft creates for it's own products and interests. The only "openness" is the legalese you are expected to read before using any of this software as a licensee.

The OS is the bedrock of it all. Every thing that Microsoft has become it has grown from the control of that OS in the hands of a huge captive audience. And like any company a captive audience is good, the best, it's a varitable goldmine. One does not let them cross the picket lines into other pastures if one can prevent it. And so we have the windows API's and the source code itself which are company products none may view. thus those who know the OS better work for the company and can best design products to work with it. This is claimed to be their legal patent copyright cost of research and mindshare. But this is an unlevel playing field. How can your app compete against an app designed for that OS with all the OS's secrets plumbed. How can you fight such a battle if the software product you compete against can be given away for free while you must charge 20 dollars just to stay afloat? This they call survival of the fittest? Not in my backyard. This is feeding chaos your children. An OS must have known methods within it it for use, equal to all open to all and unrestricted to any. The API's at least should be available to the software industry and the Microsoft settlement does not go far enough in this. A Goliath can live long but it can stumble and it can spawn many David's. WordPerfect cannot compete, Netscape cannot compete, Linux is yet new and already Microsoft has honed in on the many threats this suite of David's brings forth.

I care not about monetary fines or structural breakup of Microsoft. THESE ISSUES DO NOTHING TO ADDRESS THE BASIC FLAW THAT MICROSOFT SHOWS AGAIN AND AGAIN.

Microsoft in many ways is like the water which all other software plant's must grow from. They are the medium. But they cast their own seeds on that medium and their seeds grow quickest as they know the soils

composition and are designed to use it most effectively. The only true breakup that will be affective is to change long term protectionism in patents and copyright for software which is a rapidly changing creature dependent on the sharing of information for greatest creative use. Everytime we invent another stale wheel of code we have failed to use someone's talent to truly innovate and the spirit and purpose of patent or copyright law is lost. There must be no obstruction to mindshare. I am yet poorly skilled with items such as Linux but the concepts which allowed such things to flower are so similar to my own and to the ideals of the constitution's founder's. Let those who create get there due, but not too long and not at horrid control of all others. Let there creation breed new uses and creations as swiftly as possible and this is the golden ring of innovation.

You will never force Microsoft to open source. But you could force ALL API's open for the use and learning of all programmer's and thus provide more rapid development and innovation.

Openness, freedom of use without legal restraint or restriction. True fair use true ownership not a license to lease. Freedom to take apart and put together in different ways and forms. Freedom to think for ones self how best to get to a goal without legal restraint or black boxes of code in between.

The real world is doubtless impossible to simplify in such a way. It is ever changing and complex. But this country is not changing with it's technology and it's status quo is now like a field of icebergs adrift about a foolish Titanic. The law is vast and cumbersome thus requiring ever more lawyers. Much like the IRS and it's ever increasing rules of accounting. The system no longer does what it was meant to. I protest the current Microsoft Settlement on the grounds that it does not give programmers the knowledge they need nor the freedom to use that knowledge to build their own software products on the competitive level of Microsoft who know's it's products and can even develop those products to NOT work with an opponents products. Standards, openness free use of API at least.

Innovation requires freedom. This is the basis of our constitution. That constitution was also corrupt and it's flaw's are still seen today in the poverty of the minority. Our law is binding it can provide freedom to some and cage other's. How many decades went by with such flaws allowed. How many such flaws still remain empowering some minorities while potentially enslaving the very masses.

Make Microsoft share. Throw down their curtain's and let us see the machine's beneath and learn how to better use them for the good of all.

Subject: Microsoft Settlement

Sections IIID and IIIE should explicitly require said APIs and Communications Protocol to be made available to the public, without restrictions on disclosure or fair use.

I am afraid that with the current wording of these sections, Microsoft will have too much power to limit access to said APIs and Communications Protocol, and thus inhibit interoperability. Interoperability is essential for fair competition, but Microsoft has been deliberately trying to inhibit interoperability by having proprietary standards. I am otherwise satisfied with the proposed final judgment.

Thank you for inviting my comments on this issue. I am not affiliated with Microsoft, Sun, AOL or any of the big guns in the computing world. I am just an end user, computer instructor and an interested party. I am VERY UNHAPPY with the proposed settlement of the DOJ lawsuit. MS is a convicted monopolist. They have flagrantly defied and lied at every turn to protect their monopoly. I have seen the quality of their software decline as their power and market share grew. They continue to produce inferior products and squeeze out competetors with their constant "bundling" of extra software with their OS's. This does not produce a better product. It reduces competition and lowers the quality for everyone. Please. Go back to the table. Come up with a settlement which does more than a slap on the wrist. The public already believes the Bush Whitehouse will try to make this go away quickly, but please prove us wrong. Show MS and other would-be anti-trust violators that being big doesn't make you above the law.

Thanks for listening.

 Subject: Proposed Microsoft Settlement

Greetings,

I would like to voice my concern over the Justice Department's proposed settlement with Microsoft, a found monopoly. I would like to relate my personal experience with Microsoft Licensing. I work as a Software Engineer for a small company. One afternoon my boss came in with a new computer for me. An Emachine's PC with a DVD drive, CD-R, 1.5 ghz Intel Pentium IV processor and 256 MB of RAM. This computer was to replace my current machine which was obsolete (300 mhz). I was so excited. The first thing I noticed is the new machine had Microsoft Windows XP pre-installed. Since I use Linux, I wanted to return Windows XP and get the company's money back. I had already called Emachine's to see if I could transfer the license for Windows XP to another machine to use for testing our software, but I was told "you can't do that sir ... I guess we're saving Microsoft.". I was also told that Windows XP added no value to the computer I had anyway. Microsoft must be giving away Windows XP for free? Next, my co-worker called Microsoft directly, to see if we could get our money back or transfer the license to another computer, and instead of being helped he was immediately transferred to the Anti-Piracy division. I installed Linux anyway and now I have a copy of Windows XP that I don't use. My company had to pay for it even though we didn't want to use it and will not use it.

The proposed settlement will do nothing to prohibit Microsoft from continuing this licensing behavior and will still allow the monopoly to punish computer manufactures who would give me a choice of operating systems and software.

Thank you for your attention,

From: William Nau  
 To: microsoft.atr(a)usdoj.gov  
 Date: 1/23/02 8:57pm  
 Subject: Microsoft Settlement

I was informed that this e-mail address is inviting opinion on the proposed Microsoft settlement. If that is not the case, I apologize. You may consider me to be an extremist and Microsoft hater. I won't call you wrong. I am baffled as to how the proposed settlement is any form of punishment for deeds done.

From my understanding, the proposed settlement helps Microsoft further strengthen their existing monopoly by allowing (forcing?) them to further inject their software into our schools. If I interpret the settlement correctly, Microsoft will be monitored for anti-monopolistic practices for a given period of time. If they conduct monopolistic practices during that period, the monitoring will be extended. How is that punishment?

I've watched Microsoft destroy, through their monopoly, products much more important the web browsers. They've used their monopoly to destroy word processors, spreadsheets, network diagram software, presentation software, and even operating systems. As I watch Microsoft take over other markets (embedded operating systems, embedded software, internet services, etc) with inferior products, I'm troubled. I fear the future, and lack of potential progress, if Microsoft doesn't receive discouragement for their past, present, and future acts.

Internet Explorer vs. Netscape Navigator (and tons of other, now dead, browsers) is just scratching the surface. It is their illegally obtained (my opinion) monopoly on the operating system that must be addressed. It disturbs me to try and comprehend all of the companies that have gone out of business and people that have lost their jobs, not to mention innovation lost, due to destruction of competition. In a capitalistic society, competitiveness provides innovation. That's not happening here. The monolith needs to be stopped, if not destroyed. If you're still reading, I truly thank you for your time.

Hello,

I just want to add my 2 cents. Please do not settle with MS as proposed. I resent the fact that MS was found guilty of operating a monopoly and your settlement agreement appears as less than a deterrent than an endorsement of those actions. If Microsoft spent more time/money on building secure and stable software they may have won the "browser wars" on their own merits (at least before the breakup of the Bell phone monopoly we could at least claim we had the best damn phone service in the entire world).

Lets not reward them by giving them the last 10% of the operating system market share to them with the obscene offer to provide software to our public schools! How much does a few thousand copies of cd's cost them to manufacture! The R and D has already been paid for and profits returned using their illegal methods! And has anyone checked the price of used computers lately!!! Please wake up and represent yourselves as the Winner, Not Loser, in the settlement process. My Tax dollars are willing to be used in a Fair settlement. Don't allow this travesty to continue.

I would like to take this opportunity to voice my opinion on the Microsoft Anti-trust case. I feel that Microsoft's actions have harmed not only competitors but more so, consumers. It is a tragedy that the pro-business stance of many in this country allows consumers to be hurt by high prices, less competition, and in my opinion, inferior products. In addition I feel that the proposed settlements do almost nothing to end Microsoft's predatory practices by allowing Microsoft to side step any attempt at regulation. The proposed settlements also do nothing to punish Microsoft for its past misdeeds and repeated law breaking. Personally I feel that the only effective solutions would be those that are able to neutralize Microsoft's monopolies to foster competition and true innovation in the computer industry. If not, I fear that the current economic state of the computer

industry and the lack of innovative products will continue for a long, long time. Please don't let my fears become reality by giving Microsoft yet another slap on the wrist. Joe Howard Puyallup, WA Student Programmer—University of Puget Sound

From: James Glidewell  
To: Microsoft ATR

Date: 1/23/02 9:04pm  
Subject: Microsoft Settlement  
As a computing professional, with 20 years experience as a programmer and system administrator, I believe that the proposed settlement is completely inadequate in that it fails to adequately address a number of factors which the findings of fact listed.

A single example will have to suffice: there is no requirement for Microsoft to publish the file format specification for data files generated by their Office products.

Microsoft has long used the proprietary nature of these file formats to force large enterprises to choose MS Word or Excel, rather than other competitors, since it was deemed essential that any word processor or spreadsheet be able to read Word or Excel files, which other software vendors were forced to painstaking reverse-engineer, a process which could take months to years.

This is but one of the potent tools Microsoft has used over the years to leverage a dominant position into a truly monopolistic one.

I do not believe that the proposed settlement meets the letter of the law—that a proposed settlement will \*ensure\* that the monopoly will be \*unable\* to again exert its monopoly. By such a standard, the proposed settlement is completely inadequate.

Thank you.

To: Microsoft ATR  
Date: 1/23/02 9:03pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Remember that these transgressions took place while already under a previous DOJ compliance order. All new measures must have "teeth" to have a chance of being effective against the monopoly-exploiting long-term strategic policy of Microsoft Corporation. Microsoft will only comply with any sanctions that are absolutely explicit with serious penalties.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not

justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Catherine Gramze

Subject: Microsoft Settlement

I don't agree with the proposed settlement. It would, effectively, reward Microsoft by seeding one of the few markets they don't already own with their own software. This is not a punishment to them for their illegal practices. It is something they would dearly love to do on their own. The concept of funding underprivileged schools is a good one, but only if Microsoft's contribution is in hardware only. The software should come from the open source community. This would insure that future upgrades to the software could be made at a minimal cost, and would not lock the schools into the current costly Microsoft upgrade treadmill. Having had to pay for unwanted MS operating systems preloaded on PCs, only to have to wipe it out to install my preferred software, I think it's wrong to reward MS for what has been found in a court of law to be illegal practices.

Subject: Microsoft Settlement  
To whom it may concern,

If someone steals my wallet, and is brought to trial, I get my wallet back regardless of the verdict. If that person is convicted, they are subject to some sort of penalty. It punishes them for the past misdeed, and hopefully deters them from committing the same crime again.

Microsoft is GUILTY, and all you propose is to try to give me my wallet back. Microsoft entered into a conduct remedy agreement before. They broke it without hesitation, without regret, and most importantly—without consequence.

Your current settlement proposal will do nothing to address Microsoft's past violations of the law, and will not provide any significant deterrence against future antitrust violations. They are a monopoly, and they remain a monopoly.

Are you serving the interests of the people of this country, or simply paying back a promise made by President Bush when he visited Microsoft's headquarters in the summer of 1999?

Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Subject: Microsoft Settlement

To whom it may concern:

As I understand it, I can submit comments on the proposed settlement of the Microsoft Anti Trust case. I am certainly no lawyer, but I want to tell you how I see things as a software professional. I find the proposed settlement next to useless, and the government should pursue much stiffer penalties including fines and breaking the company up.

I used to be a VP at Broderbund, which at the time was the largest consumer software company. During my tenure, there were two occasions where people approached me, about new product ideas. The ideas were original and creative. Our analysis revealed if the products were successful Microsoft would release a similar product either into Windows or Microsoft Office. At that stage the market would wither and make the product uneconomical. Needless to say we dropped the ideas fast. I am sure this happened many more times, as I was not the official channel through which product ideas passed.

Microsoft's reaction to bundling the feature into an existing product is not rational from a shareholder point of view if the market is competitive. Why "give" away a feature that

users are prepared to buy? They are not adding new users, as the product requires Windows or Office to run in the first place. The only reasonable explanation is they want to strongly discourage any company from challenging their core monopoly status which generates amazing profits. They use these profits to attack new markets.

IE is a good example. Microsoft probably spent \$50-100 million a year on developing it. Innovation came fast as it competed with Netscape. But they apparently did this with no intention to make revenue? The only explanation is they were worried that Windows might be challenged. Now the browser market is dead. No one will pay for a browser, because even if a new clever one comes along, Microsoft will respond and provide it for free sooner or later.

As a result to the sad list of companies that have been smashed by Microsoft, (DrDOS, Stacker, ...) they have intimidated other companies from even launching new products in their core space. The argument that consumers are winning is false. They have lost because the innovation and quality a competitive market space would bring in operating systems, word processors, and spreadsheets is now gone. No rational company will challenge Microsoft there. So the consumer won for a few years, but must now pay a heavy price.

The software industry is different from traditional service and manufacturing companies. These companies tend to lose efficiency after reaching a certain size. This helps keep the market in balance, and allows mid-tier companies to challenge the leaders as markets shift. Software suffers few negative side effects from scale, and has the added advantage of having "network" effects built in.

In short Microsoft holds a unique position. Companies fear to challenge it in the revenue generation areas (Windows and Office) and likewise they give away products like IE to dominate new markets. Once challengers have been stamped out, they raise prices (such as the new 1 year licensing scheme) and use the massive profits to attack new markets. Market forces seem incapable of stopping this.

I believe a breakup, while drastic, would be beneficial to both the industry and Microsoft shareholders. Both entities would struggle to generate revenue, with Office frantically trying to push people off Windows, and the Windows group struggling to pull people from Office. Consumers would win as a burst of innovation floods the shrink wrap market space (when was the last time you saw a really new software product for your PC at CompUSA). Shareholders would gain as both companies would see revenues rise as they move to a more a la cart pricing structure.

It is obvious to me that the decision by AOL to sue Microsoft for damages on its competitive loss in the browser market, is an attempt to regain revenue that it could not achieve in the marketplace. The Netscape model was based on an assumption that it could charge \$50.00 a year, in perpetuity, to everyone in the world who needed a tool to browse to Internet.

Most people don't know that the Mosaic browser was developed at public expense, and is the software that both Netscape and the Microsoft Internet Explorer are based.

I have no sympathy with complaints of the old Netscape company, and even less with the current suit by AOL.

Subject: Microsoft Settlement

I am writing to object to the proposed Microsoft settlement. As a practicing software engineer with approximately 20 years of experience, I feel confident in saying that the proposed settlement will do little to weaken Microsoft's illegal stranglehold on the desktop computer operating system and office suite market. Indeed, it appears that it will allow them to extend this monopoly to the developing "Web Services" market. As long as Microsoft has the right to change APIs and publish them in full at the same time that they are changed, they will always be able to build proprietary systems which can not be emulated by competitors. By narrowly defining the terms "API" and "Microsoft Middleware", the proposed settlement leaves Microsoft clear to change these APIs and keep them proprietary. No wonder the company is so strongly in favor of the proposed settlement!

Subject: Microsoft Settlement

Having read of the proposed punitive phase of the Microsoft Antitrust Case, I find it totally inadequate. What is proposed is little more than another advertising venue for Microsoft. It is woefully inadequate.

Brokered by the Bush Administration, this deal is a typical example of the depths to which modern conservatism has sunk. The regime is well-known for selling out to corporate contributors, so it comes as no surprise that they would not just let Microsoft off with a slap on the wrist, but actually come up with a "punishment" that actually helps the company in question to INCREASE its monopoly.

Give us a REAL settlement.  
Jeff Mullen

From: Darrell Rudmann  
To: Microsoft ATR  
Date: 1/23/02 9:15pm  
Subject: Microsoft Settlement

Dear Judge Colleen Kollar-Kotelly,  
Thank you for the opportunity to write to you about the proposed Microsoft settlement; I see this as a good opportunity for ordinary folks, like myself, to have some input about a federal process such as this one. The events of the past year remind me that the uniqueness of this offer is very American in nature.

In much the same manner, this ongoing court battle between Microsoft and others seems to cast light on what it is to be a business in America. What values do we Americans place, via our laws, on how businesses can behave, and when they have been shown to not behave properly, what measures do we take to make corrective action?

I am not an expert on law or on the computer industry. I rely on my desktop computer to carry out jobs related to my professional life as graduate student becoming a social science researcher, such as making statistical analyses, writing papers, and some light programming for running experiments. I can only speak to the proposed settlement by stating some observations I have seen in my personal experience with computers: First, all of my fellow students and my professors use Microsoft Word by default. This overwhelmingly implies that they are using Microsoft Windows as well. When I exchange documents with other people, they assume it will be in a Word format. Second, the university I study at, the community college I part-time teach for, and most social science journals accept and prefer to accept Microsoft Word files for online paper submission. This wasn't once the case. Only about six years ago, whenever people arrange to exchange a file, there was some discussion about what format would work and what wouldn't. But not now. While this sounds like an improvement, like a kind of standardization that would help people work more easily, there have been two clear downsides. The Word format is proprietary; that is, only employees of Microsoft knows what makes up the format for a Word document. So as a standard proprietary format, Microsoft now has a level of control over both the document format and the applications that can be used to access it reliably, at least in the social sciences and likely most of academia. This seems to be the pattern in many computing corners.

Committing what has been found to be illegal activity, Microsoft's behavior is a serious violation of American values and business ethics. This violation was so large in scale and pervasive, that the legal response cannot be simple or it will be ineffective as a result.

I believe the settlement offer to be too weak. I don't have the expertise to say what would constitute more appropriate restitution, but I suspect that a settlement that would

encourage a freedom of choice for consumers would go a long way.

Best regards with your ruling,

I am not a lawyer so you'll have to explain to me how forcing Microsoft to donate \$1 billion in Windows computers, Windows operating systems and Windows applications, to schools (historically an Apple stronghold) is any kind of a punishment. What will happen is that cash strapped schools will look at this \$1 billion windfall and forgo even a look at Microsofts only legit rival, Apple computers. This settlement actually does the exact opposite of what it is intended to do. It doesn't punish Microsofts monopolistic and unfair trade practices, it rewards it by giving it market share that it traditionally never had. Good job DOJ! You guys are geniuses. It just goes to show that if you have enough cash anything, including justice, is for sale in America.

From: Gary W. Shawver  
To: Microsoft ATR  
Date: 1/23/02 9:08pm  
Subject: Microsoft Settlement

Dear Department of Justice,  
I want you to know that the settlement proposed by DOJ in the Microsoft anti-trust case is completely inadequate. It does not punish Microsoft for its past bad behavior, nor does it ensure that Microsoft will not misbehave in the future. My two suggestions for improving a rather weak settlement is that no Microsoft employee should be part of the three-member enforcement committee and that non-profit, open-source software makers should get the same protections under the settlement as commercial software manufacturers.

Sincerely,  
Gary W. Shawver

To: Microsoft ATR  
Date: 1/23/02 9:08pm  
Subject: Microsoft Settlement

To whom it may concern,  
As a citizen and a knowledgeable computer professional, is both my right and responsibility to comment on the proposed settlement in the Microsoft antitrust case. The proposed settlement is wholly unsatisfying.

First, the settlement's contents fail to punish or repair the damages, if that were even possible, caused by Microsofts years of abuse and illegal conduct. It seems not to even attempt any punitive or reparative measures. This is unacceptable.

Second, the settlement's attempts to prevent further abuses, while laudable in purpose, are woefully inadequate. First of all, it essentially lists a prohibition of specific future actions. These prohibited future actions are at best too limited, and at worst very ill defined. Microsoft has proved deft in the past at slipping along the narrow edge of legality, often finding loopholes in laws that were constructed too weakly or find themselves too out of date to really fit the regulation of a software company.

Many of the loopholes are so obvious that it is clear even now how Microsoft will navigate them. The combination of these factors leads to one inevitable conclusion. Microsoft WILL continue to act anticompetitively. It is obvious first of all because no serious impediments have been placed in their way.

Second of all, even if serious steps were taken to limit Microsoft's ability to act anticompetitively, they would disregard the law, as they have in the past. By failing to adequately punish Microsoft's prior transgressions, the justice system has delivered them the message that they can act in blatant disregard to the law and the public interest without reprisal.

It is also important to consider how this affects the national public good. The arguments to the affect that Microsoft's stranglehold on various sectors of the software market impede general progress have been stated so many times that may seem to lose meaning, but they are nonetheless valid and important.

It also goes without saying that it is in the public interest for the justice system to present the image of dealing justice. It is necessary to be seen punishing wrong-doers and helping the victimized. Any time that the justice system is seen publicly failing to deal fair justice, it damages the nation.

One other point of extremely important note is the impact of this settlement on the nation's critical infrastructure. For obvious reasons, the nation has taken an interest in protecting such vital technological infrastructure as the roads, the railroads, seaports and airports, the electric power grid, the phone system, and, recently, the internet. One of the most frightening abilities that Microsoft possesses, and has demonstrated, is the ability to use its influence over one market to gain control of another only loosely related market. Currently many of Microsoft's very flawed technologies are spreading like a

cancer into the internet. Recent events have showed an alarming potential for damage to the internet by such a trend. One rogue computer could never hope to bring the internet to its knees, to do such a thing would require a massive coordinated attack from such a large number of computers as to represent a significant fraction of the internet as a whole. Microsoft's software is and always has been weak and insecure. The potential damage that could be caused by a massive attack from countless compromised Microsoft Windows computers is horrifying.

Take, for example, the recent CodeRed2 virus. This virus was designed to attack a weakness in Microsoft web servers and, after siezing control of the host computer, launch the attack again from the victimized computer.

Fortunately, any computer not running a microsoft webserver was immune to such an attack. Imagine, however, that the virus had been made not to only re-attack Microsoft web servers, but rather to have halted the internet as a whole. As I stated before, it is possible for an extremely large number of computers working in concert to effectively hold the internet hostage. Can you imagine if a relatively simple but malignant virus, using every windows computer on the internet as its base of attack, litteraly stopped the internet? Allowing Microsoft to leverage control of the pc market to gain market control of the internet as a whole would be a disaster to our nation's critical infrastructure. It is also one of Microsoft's current strategic goals. We cannot allow them to achieve it.

In summary, the judgement must be more punitive, and the judgement must do a better job of preventing Microsoft's continued trampling of fair business tactics.

From: Czeekh  
To: Microsoft ATR  
Date: 1/23/02 9:09pm  
Subject: Microsoft Settlement  
Greetings,

I realize that you must be getting many e-mails on the subject of the MS settlement, but please read this. Unlike many that have likely e-mailed you, I not a professional. I am instead part of America's youth. You may think that the MS decision will only affect the Computer Industry, but it will also affect the future of everyone who uses a PC. I have some experience with Linux (an open source alternative to the Windows operating system) and I have found it to be equal to Windows, if not better. If you allow MS to get off with a "slap on the wrist" they may very well demolish such operating systems as Linux. If you really want to stop MS's monopoly, you won't let them get off so easily. This is because if they do they will have more money and resources to drive competitors such as Apple, Linux, and UNIX. The future of the world may be sealed in your decision. Everyone could end up having to use Windows, for everything. The reason that I don't care for Windows is that it is incredibly "buggy" and in many cases technically inferior to competitors.

Let me give you an example of what MS's Windows ME (Millennium Edition) did to one of my teachers: My teacher was at home, using MS Word (note that it was an MS program) and suddenly his computer locked up for unknown reasons. He tried everything that he knew to do and couldn't get the computer to return to normal. As a result, he restarted his computer. When he did, his computer said that it needed to run a Scandisk (I am sure you have seen that). He let it run. It took two hours to run the Scandisk, it normally takes between one and two minutes. Windows had reformatted his hard disk drive. All of his data was lost, everything. He had done nothing wrong, and the program that he was running when it locked up was a program made by MS itself. This is why I say Windows is inferior.

Now, do you want this program to be what people are suck with FOREVER. I know that MS will always have competitors, but letting them "off the hook" will simply allow them more money to destroy their competitors. Is that the American Way? Are we so dependent on "Social Darwinism" that we can allow this to happen? Are you? Remember that people like me and others of America's future will be deeply affected by your decision. Computer's are the future, but one single operating system is not. Thank you very much for taking time to read this.

Sincerely,  
Eric Fisher  
Manilla, Indiana

To: Microsoft ATR  
Date: 1/23/02 9:10pm  
Subject: Microsoft Settlement  
To Whom It may concern, I object to the proposed settlement in 4 primary areas.  
1) The agreement provides to little in the way of punishment for past misdeeds.  
2) The oversight of Microsoft's future behavior is weak in enforcement powers and too limited in scope.  
3) Microsoft is given broad discretion in asserting intellectual property claims to exclude information about file formats and communication interfaces.

4) The agreement appears to be specific drafted to allow Microsoft many opportunities to exclude members of the free software movement. To quote Ralph Nades open letter "under J.1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of its business " Microsoft has repeatedly stated that it considers programers like the SAMBA and LINUX kernel programers "a cancer" Which I belive they intend to include as a "non-viable business" Microsoft is still practicing exclusionary tactics.

Thank You  
Dennis Thompson

I think the proposed settlement is a bad idea. It gives Microsoft too much liberty to continue its current tactics and practices. Also the enforcement body is weak and I know Microsoft will get its way like it has in the past. I have been looking to buy a laptop and none of the big companies sell one without a version of Windows. I assume that this is because of the bully tactics it plays with OEM's. Microsoft needs restrictions on it to cultivate a healthy software business environment. I am tired of paying premium prices for mediocre software. Open source exceeds Microsoft in many instances. The sad thing is security is one of them.

From: Michael Wharton  
To: Microsoft ATR  
Date: 1/23/02 9:10pm  
Subject: Microsoft Settlement  
To whom this may concern,

It is a serious concern of mine when it becomes apparent that the government, in its ever-vigilant quest to abrogate individual rights, targets the good for being the good. Whatever the flaws in Microsoft's Windows operating system, it has given me the tools to enrich my life beyond what I could have conceived without it. I have seen it demonstrated time and time again as being the superior product on the market, superior in terms of user-friendliness and ease of adaptability.

I shall like to say that I utterly resent the idea that I am being characterized as some kind of victim, in the sense of being exploited by Microsoft. I refuse to accept that you are speaking for me. I am the public that you are portraying as helpless. I am the consumer that you portray as not sufficiently intelligent enough to decide how to spend the money I have earned. I do not believe it is the government's place to tell me on what products to spend my money. That is exactly what the government is doing in its persecution of Microsoft.

For the sake of honesty, please do not continue your disingenuous rant that by assaulting Microsoft you are protecting me, the consumer. You are not. This whole thing started because some of Microsoft's weaker competitors saw that they could not match Microsoft's quality and decided they could only flourish if Microsoft was put under the gun. The Antitrust Division has filled that request remarkably. As a matter of principle I do not believe that failed business ventures such as the above mentioned competitors should determine the rules by which markets are run. I hold that the idea of a successful business being a threat in any context to me personally or to the marketplace in general is a ludicrous assertion that could only come from some dusty Marx-infected professor or intellectual. It is a matter of historical fact that when a government intervenes in the economy, the eventual downfall of that economy is the result. In no state, past or present, can there be seen an exception to this. When that intervention takes the shape of an axe poised to cut down the ultra-successful, I ask you, what could possibly be the desired result?

There is a disturbing trend in this country, one that's been present for most of the last century. That trend is the abrogation of property rights. The products and services produced by Microsoft are their property. They have the right to make and distribute it as they see fit. In no proper sense of the concept "property" is there an iota of justification for the government to be interfering here; in a wider context, that goes for every area of economic endeavor.

Please stop your persecution of Microsoft. It is a totally unjustified and unjustifiable act of treason against the founding principles of this great nation.

Sincerely,  
Michael S. Wharton

From: E Manes  
To: Microsoft ATR  
Date: 1/23/02 9:11 pm  
Subject: Microsoft Settlement

To whom it may concern,

I'm writing to you as I was informed that I could express my feelings about the Microsoft (MS) anti-trust suit. I have been a user of MS products all of my computing life which means since 1992. I have seen the development of Windows 2, Windows 3.0, Windows 3.1, Windows 3.11, Windows 95, Windows 95 SR-2, Windows 98, Windows 98 SR-1, Windows 98 Second Edition, Windows Millenium, Windows 2000, and now Windows XP. There is one common theme that I have seen over the many years of development.

Microsoft will incorporate the features of a popularly used existing product into their future operating system. I have seen this behavior occurring increasingly more now than in previous years and it is incredibly obvious that those that founded the technologies are left to struggle in a hostile environment. I will list examples:

Netscape: Enough said !! Actually, no it wasn't. MS developed a decent browser in Internet Explorer (IE) when they adhered to the world wide web consortium's outlines. They packed IE with their OS and people no longer needed to download Netscape (an inconvenience but proper since they were the ones that fathered the idea and developed it). It wasn't until they integrated it with their OS and then lied about the OS's dependence that it became obvious that there was something wrong about the way that they did business. They then created software packages that created webpages in such a manner that they would not be viewed properly to those using Netscape so people are forced into using IE. The VERY SAD part with all this is that Netscape continues to develop with the ideals of the world wide web consortium ideals and have lost any chance of making a comeback. They continue to develop a software package that adhere's strictly to the publicly available consortium outlines. Their web-page creation program continues to create web pages that can be read and interpreted properly by ANY browser unlike Microsoft Frontpage.

MSN Messenger: AOL created a great program that allowed people to communicate with each other over the internet. Microsoft decided to create their own version that conflicted with AOL buddies. This left people in either camp stranded. It got to the point where they were hacking each others code to enable functionality. Microsoft then added this software to Windows Millenium as an option where the user could disable it easily enough. Windows XP throws MSN Messenger in your face every chance it gets and won't stop nagging no matter how many times it is told to buzz off. I'm not sympathetic to either of the software

packages but I have noticed the frustrations of users of either software package. It is easy enough to download AOL IM and install it but I'm sure that there will be conflicts with MSN Messenger while it continues to pop up uninvited. This will leave people with a frustrated view of AOL's IM and I'm sure over time they will switch to MSN Messenger. I strongly believe that this is NOT a necessity of the OS and should be left out. The user should be allowed to install the software of their choice. ZIP Utility: Microsoft has now (as of Windows XP) included a zipping utility as part of their OS. In the past users would typically download a shareware software package to perform these same operations. This will limit the number of people that download a developed piece of software. It is unfortunate that Microsoft is allowed to incorporate whatever piece of software that they would like and package it with their OS. I feel for these software developers that poured countless hours of programming time into their software just to see the technology incorporated into MS's OS. This does not create a competitive environment and limits the creativity of programmers.

Media Player: Real Player was the dominant player in streaming media and really developed this area. Microsoft then created their version of streaming video and at first it would not play Real media streams. I'm not so sure these days but you can bet that if it does now that it will be dropped later once MS takes a majority share of the market. There was a point where Real Audio was the definitive answer to video streaming and no longer is. This is very similar to what happened to Netscape.

MS is currently up to their old tricks with MP3 files. MP3 files have been popularly used for about 7 years and MS saw this and created their own compression algorithm and I'll argue that although their compression size IS smaller, the quality is not their. Anyhow, MS then decided that their most recent Media Player would NOT play or create MP3s. They claimed that this was due to legal concerns but I don't believe it for a minute as there is technology available to prevent this from occurring. Fortunately, the market demanded that they incorporate MP3s and so they did BUT the algorithm is crippled and thus creates very poor MP3 files. This will force people to add another piece of software to their computer OR choose the simpler route which is just use MS's WMA format. Video Editing: Since video editing has become so popular, MS has incorporated a video editing package into their software suite when there are a variety of inexpensive suites that come with any video recorder purchased. I can't see a reason why MS has to include their own as a default. Their editor is basic and there is still currently reason to purchase a professional suite but it will only be a matter of time until MS improves their offering resulting in another market of software disappearing. It already eclipses the market for those that created an entry level package, which were included with the video recorders. That market has all but disappeared. CD-Burning: Microsoft has included with Windows XP their own CD burning software algorithm.

Again, there are 4 big companies that provide this availability at a nominal cost but most users won't bother due to convenience and so these companies will eventually reduce in number.

Interesting Note: Microsoft sells their Office Suite for over \$450 which includes MS Word, MS Excel, MS Access, MS Outlook Express, MS Powerpoint. They also sell a suite to the home user for \$100 that includes MS Word, a watered down version of MS Excel, a watered down version of MS Access, Microsoft Money, Microsoft Picture it Publishing, Microsoft Encarta, and Microsoft Trips & Streets. The home version of the suite is valued well over \$350 if purchased separately. Why do you think that this might be? This gives the home user no reason to investigate a financial management package, a photo-editing package, an encyclopedia package, or a trip planning package. This is further proof of their improper business tactics. They are selling the software at a sub-market prices to increase market share. This will get people to continue purchasing MS software as they will run into file compatibility problems if they try to use another package.

The file compatibility problems are due to the fact that MS does not release the details of how their software works to the programming community. They have the consumer any which way that you look at it.

I could continue to list other occurrences but I must get back to my studies. I really hope that someone looks at this note and reads it in its entirety.

Summary: Microsoft's strategy seems to be that they will incorporate (copy) a technology to the point where users are comfortable with using it but then they make it proprietary such that you are forced to continue using only their package. I have seen this with their media player, zipping utility, Internet Explorer, Outlook Express, MSN Messenger. I find it incredibly hard to believe that these smaller software companies manage to adhere to some standard and that their files are properly read and used by other problems but that MS cannot. I believe that this is intentional as I have seen it work flawlessly with other software packages. Microsoft claims that they are doing this to give the user a greater out-of-box experience. Don't believe it!! Nine times out of ten their technology is subpar but people use it because it is convenient.

My solution would be to either, 1) Force MS to remove all of their incorporated programs and make them available for installing ALONG with the available packages. Let the user choose which software package they prefer. It's difficult to fathom that this would be more costly to MS than their current package. I also believe that this should be overshadowed by a 3rd party committee and that MS should be fined grossly for each violation of the INTENTION of the organization.

2) Release their source code to the programming community so that they have a chance to promote their products without already being crippled by the compatibility issues due to the MS closed-nature of their code. I would expect that about 85% of users are concerned about file compatibility when considering an alternative software package.

For the life of me, I can't possibly believe that those that are responsible for coming to a decision on this matter could see it any other way. Microsoft has and continues (more than ever now) to stifle creativity and development of programs with their prominence. As a user of their products for many years I can recognize the trend. I'm not sure that those involved in the case have the same lengthy experience with MS software or have been able to work with the MS OS offerings through the years, such as I have.

Microsoft is doing the OPPOSITE of reducing their shady business practices. I see a marked increase in their Windows XP and this is WITH an anti-trust trial under way. Warning: MS has been known to unethically influence polls and e-mails by creating a software program that votes FOR MS so please examine your PRO MS e-mails along with your ANTI MS e-mails to ensure reliability.

Antitrust Division, U.S. Department of Justice  
601 D Street NW, Suite 1200  
Washington, DC 20530-0001

I type this on a system using Windows 2000 and in the Microsoft Word processing program. I have just picked up my e-mail and shopped via the Internet using Microsoft's Internet Explorer and Outlook Express. Why Microsoft? Because they are for my money the best products I can buy. Microsoft products save me time and money. I was not forced to use Microsoft's products. There were and are other choices. I looked at other competing brands. I chose Microsoft for value.

Microsoft is a shining example of the "American" success story. A self-made man makes brilliant products and becomes wealthy IS the American way. It is only possible under a free American system where government protects the fundamental right to private property.

The suit against Microsoft reverses that by attempting to forcibly seize Microsoft's property. This suit seeks to allow failing businesses that could not compete in the marketplace to use "pull" bought under the guise of campaign contributions to bring down a more successful business. The antitrust laws are nothing more than means for poor competitors to seek the ruin of their betters and as such are an ever present threat to freedom. Antitrust laws are the result of corruption and bring economic ruin. There are examples of this around the world. The suit against IBM is a classic example of

woeful wrong that was a tremendous waste of the taxpayers money and an enormous drain on the resources of a great company which could have been put to better use.

What would we have now if Microsoft had not had to waste hundreds of millions of dollars on this wrongful suit? Quite simply—ever more and even better products and services. Great businesses and those who found them are the very heart and soul of the United States. They must be protected, not attacked. They should be praised not damned. They must be free to compete then we, the American consumer wins.

Sincerely,  
Dixon Teter, Ph.D.

Subject: Microsoft Settlement

Dear Department of Justice,  
I have read the Proposed Final Judgment for the Microsoft Antitrust trial, and I believe that it is best characterized by the phrase "too little too late". I am not a legal expert, but all this proposal seems to be saying to Microsoft is "Hey, don't do this again." Where is the "justice" in this? What of all the damage Microsoft has done to the competition? Please don't let Microsoft get away with a slap on the wrist! It is not simply a matter of punishment, but rather a matter of assurance that Microsoft will not continue to threaten freedom in the industry and dominate the market through illegal, unethical and uncompetitive ways.

I favor a split up of Microsoft, as proposed earlier. Only splitting up Microsoft into at least three or four companies could assure the breakup of this illegal monopoly. But, I do not believe that the current proposal is sufficient and as a concerned citizen, I am not happy with it and I am asking you to reconsider.

Gabriel Morales

## Subject: Microsoft Settlement

I am a software developer with 20 years' experience, currently supporting a product which operates in several environments, including Microsoft and Unix operating systems.

The proposed Final Judgment (PFJ) is unsatisfactory in a number of ways. Particularly troubling are the large number of exceptions to its enforcement provisions, which appear likely to block needed remedies. Given Microsoft's existing monopoly, aggressive business tactics, and past violation of antitrust laws, a proper remedy would provide more than enforcement of just the provisions which Microsoft was found to violate in the past. Yet part III (Prohibited Conduct) deals primarily with those past practices, in an industry which is steadily changing in ways shaped by Microsoft itself. In this context, I note the provisions of IV.A.3 and IV.B.9 which hobble the Plaintiffs and the TC so that, should the Plaintiffs receive information as a result of the PFJ of further violations of antitrust laws which happen to be beyond the scope part III, the information cannot be disclosed.

This appears to lend Microsoft some real protection from prosecution by the U.S. DOJ for future antitrust violations. The open standards which lubricate the software industry (for example, HTML) have been increasingly usurped by the tactics of powerful corporations such as Microsoft. This is the environment in which I work, and seek to develop useful products. The case against Microsoft held the hope of cleaning up this business environment, but the proposed Final Judgment is not up to the task.

Subject: Microsoft Settlement Comments

I am writing to voice my objections to the proposed settlement. I do not think that this settlement in any way punishes Microsoft for having blatantly abused monopoly power, or for disregarding the provisions of the previous agreement with the federal government. I have several issues with the currently proposed settlement:

The agreement fails to provide any penalty for Microsoft's past actions. This appears to show that Microsoft is beyond punishment because of its extraordinary political and economic power. What antitrust? With over 90 percent of the desktop operating system share they have the single largest market share held by any company in any significant industry in the last 50+ years. Microsoft used many unethical procedures to extend their monopoly. Most involved ways of punishing

other companies should those companies dare to not comply with the Microsoft system. Microsoft should not be able to keep all the fruits of their illegal behavior. The penalties need to be a deterrent to future misbehavior of both Microsoft and other companies in their quest for market dominance. The lack of penalty for the financial windfall they've accrued is analogous to the court telling a bank robber that he shouldn't rob any more banks but that he can keep the proceeds for all previous successful heists. The proposed oversight or compliance mechanism is virtually powerless. Microsoft's failure to abide by the spirit or the letter of the previous agreement shows that the proposed weak oversight system is inadequate. Indeed, the proposed mechanism for dispute resolution and/or compliance with the agreement embraces many of the worst features of such systems, operating in secrecy, lacking independence, and open to undue influence from Microsoft.

This is especially troublesome when Microsoft's current actions extend to other areas, especially their effort to dominate the Internet. They have entered into many agreements with other cable/telecom/internet firms to become a powerful force in this area. They can easily use secrecy of protocols for their software to force others to adopt their products. One requirement should be that any Microsoft networking protocols must be published in full and approved by an independent network protocol body. This would prevent Microsoft from seizing de facto control of the Internet. Another requirement should be that the specifications of Microsoft's present and future document file formats must be made public, so that documents created in Microsoft applications may be read by programs from other makers, on Microsoft's or other operating systems. This is in addition to opening the Windows application program interface (API, the set of "hooks" that allow other parties to write applications for Windows operating systems), which is already part of the proposed settlement. Some of the provisions in the settlement give Microsoft too much leeway to claim a security concern while in essence hiding some of the technical information needed for others to provide a competing alternative (Sections J.1 and J.2).

With regard to secrecy of protocols and APIs, the openly published letter from Ralph Nader listing his objections to the settlement includes specifically noted the objections to such secrecy. He specifically noted the detrimental effects on the "Free Software" movement, and discussed Microsoft's current and continuing offensive against the "Free Software" movement. I would like to support the objections raised in that open letter. Microsoft is moving against Linux and other competing software and will use any excuse for secrecy of protocols to undermine any competition. The well reported efforts of senior Microsoft executive, esp. Gates, Allchin, and Ballmer, to undercut any potential for other people and firms to move to Linux is indicative of the concern about the availability of free access to what must be public protocols.

It is important to note that Microsoft has been found guilty of abusing monopoly

power. Some changes proposed in the settlement are acceptable. Microsoft should not be allowed to differentiate price to different customers, period. They have abused this particular mechanism repeatedly to "punish" those firms that didn't fall in line with their wishes. Also all vendors should be permitted to include any competing software, including alternative operating systems in a dual or multiboot configuration.

This will increase the potential for market penetration of Linux and other systems, and may eventuate in viable operating system alternatives. I need to run engineering programs that are available under a variety of "free" licenses. When I looked to buy a new computer recently I could not get a dual boot computer from any low cost vendor. They repeatedly noted that they could not provide dual boot machines under their current Microsoft license. This means that I must buy a machine from a custom vendor. While I support these vendors in principle, this does mean that the cost to me is several hundred dollars incremental cost over the equivalent from one of the low cost vendors. This differential is entirely due the restrictive Microsoft license.

Subject: Microsoft Settlement

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

US Department of Justice:

I am a US citizen who wishes to register an objection to the more microsoft-friendly settlement plan in the MICROSOFT(R)-vs-doj antitrust proceeding. I have some further comments regarding the proceeding. First, am not professionally associated with any computing or advertising firm, and have not received any compensation for sending this message. I am an avid computer user and hobbyist program developer. I read technical articles related to computer operating systems, software and microsoft, and have formed an opinion regarding them, which I would like to share with you. This is a time of great upheaval in the computing industry. Many, if not most, companies in the industry are suffering financial trouble. A major reason for this is that the desktop computer market is nearing saturation, and development of the most prevalent operating system (ms-windows, by far) provided with new computers has reached the point where its functionality can not be greatly improved. It already does almost everything home and corporate desktop users want their computer to do. Because computers can have a life span of at least ten years, the standard industry practice has and still involves using a variety of means to deliberately degrade and/or destroy the usefulness of existing systems and products in order to sell new ones, regardless of whose property is being

degraded or destroyed. That practice is likely to continue if microsoft remains the major force in the industry, and may continue anyway. It probably has been a useful policy for national security and other reasons, but has been expensive for computer users. For many users, the cumulative personal cost of that policy is enough for them to say "That's enough. I don't need to buy another computer."

In the mid to long term, use of microsoft's computer software products will diminish. Microsoft may become little more than a massive marketing machine attempting to sell the equivalent of flint arrowheads to modern soldiers. That time is almost here. Thousands of (mostly professional) software developers from all around the world have been working together to create a new and much improved software system that they hope will be allowed to take the place of microsoft products. Unless world governments band together to do the unthinkable and unconscionable, the new system will eventually displace microsoft and its products regardless of any new laws created or court decisions rendered. The new system is called "open-source" or "Free Software\*", which includes the Linux / GNU operating system, and other products. Before microsoft is finally displaced, it will use every tactic it can to destroy (if attempts at control fail) products, companies, and organizations before they can become truly competitive. In my opinion, if microsoft's behavior is not effectively changed (by government or court—it will not change itself), it will make all-out use of monopolistic practices (legal or not) to the detriment of many other companies and persons in the computing industry, and to end users.

#### National Security Concerns

In my opinion, microsoft's software products are unfit and unsafe for use on any internet-connected computer containing sensitive information, or any laptop or notebook computer containing sensitive information that can be carried into unsecured areas. Its products have been a continuing security nightmare, and there can never be any reasonable assurance that hidden problems have been corrected. In closed-source operating systems such as microsoft's, no law or authority can prevent hidden flaws from being exploited by enemies.

#### The Importance of a Free Market

The authorities currently controlling national policy claim to promote free market conditions, but they are doing the opposite in this case. A "free market" is just that—free. If any entity, whether a government or a business, moves into a marketplace and takes control to the extent that microsoft has, then that market can no longer be called free. To use an analogy, suppose a local flea market has been operating freely, with individual vendors bringing their own tables to set up to sell goods from wherever there is space. Along comes a monopolistic organization that tells all the vendors that they will now have to rent space and tables from the monopolist; that they can only sell the monopolist's shiny and popular but overpriced, identical, and unpredictably

dangerous wares; and that they must agree to publically support the system. The vendors, and especially the monopolist, would profit (for a while) from the lack of freedom, but to the buying public, the value of the marketplace would be greatly decreased.

#### Organized Crime

Microsoft exhibits many of the characteristics of an organized crime gang. It continually involved its organization in illegal activity, as determined by the US justice system, which only examined a tiny portion of microsoft's questionable actions. To me, microsoft appears to have recently escalated its illegal (monopolistic) activities. "Settle"?? with Microsoft??

Should a common bank-robber be allowed to determine how much of the loot he gets to keep? The DOJ needs to show some responsibility in this case. By that I mean responsibility to humanity or at least US citizens, not responsibility to those few who contributed to a presidential campaign.

Microsoft illegally (as determined by the court) and very obviously (as determined by me) holds a monopoly on operating systems as used in desktop computers. It also appears to be frantically seeking to extend its monopoly into other areas of computing. I strongly feel that microsoft needs to be stopped, and stopped immediately. The Proposed "Settlement" The proposed settlement is like giving your future to someone who stole your past. It will promote microsoft's monopoly, not provide a remedy.

#### A More Proper "Settlement":

1. End microsoft's corporate status. Microsoft's corporate officers have been allowed to hide behind laws that protect them, grinning like cheshire cats, while MS is allowed to conduct illegal activities as a corporation. A proper remedy would see to it that microsoft loses or gives up its Certificate of Incorporation, and that they do not re-incorporate.

2. Order that ms-windows can be resold, regardless of license. Let end-users remove unwanted microsoft products from their computer and sell them if a buyer can be found.

3. Order microsoft to distribute free alternatives to its products. Prevent microsoft from offering any of its products for sale as disks, for download, or installation on new computers unless the end-user is provided with a free set of disks for any current official version of any open-source non-microsoft-affiliated operating system, and a free license to use and copy them for redistribution. Make this retroactive for any installation of ms-windows where microsoft promoted it as a means to store sensitive information while connected to the internet, or any laptop/notebook computer that was originally sold as being suitable for carrying into unsecured areas while containing both sensitive information and microsoft products.

4. Force microsoft "sponsored" comments to be identified as such. Microsoft is actively attempting to destroy Linux, and is fairly open about its intent, but not its tactics. One of its more offensive tactics appears to be "sponsoring" the mass posting of anti-Linux comments on popular internet discussion sites. The common name for the practice is "astroturfing" (phony grass roots), and is

usually carded out by public relations companies for paying clients. It is the equivalent of hidden, undisclosed advertising and must be stopped. Microsoft has also been found (by state Attorneys General) to create fraudulent "comments" which they have sent to government agencies, and which are obviously meant to obstruct justice in some way. Due to the recent escalation of commissioned pro-microsoft posting on internet discussion sites, I suspect that the DOJ address I'm sending this to is being inundated with similarly commissioned pro-microsoft messages. The intent of those commissioning the messages would be to obstruct justice. The practice must be ended, and not just in this case.

5. Bar microsoft from being involved in the technical training of Judges. Obviously, Judges need to be minimally competent in the details of the case they are hearing. I am not very familiar with this issue, but my assumption is that professional technical training would be provided to a Judge that requires it. If during the training program the Judge is deliberately misled by being fed incorrect technical information, it could easily lead to a misjudgment at the bench, which may be taken as bias by observers.

6. Assist open-source Free Software development. Open-source free software will become the foundation of computing in the future. At some point, the commercial software industry will have to find a new role or it will disappear. A forward-thinking policy would be to assist the transition whenever possible, rather than contribute to protracted chaos by fighting it. Since microsoft has been found to be taking economic advantage through monopolistic practices, a proper "settlement" would include microsoft being required to provide funding for Linux (its current target for destruction) development through a prominent noncommercial organization that supports the ideals of the open-source Free Software movement.

With diminished expectations and too little reason for respect, Joe Piolunek

Subject: Microsoft Settlement

I urge the US government team pursuing the DOJ-Microsoft anti-trust case to work towards appropriate penalties towards a

convicted monopolist for their criminal and unethical behavior. The current penalties and remedies currently proposed by the DOJ are not enough to ensure competition and prevent future abuses of monopoly power by Microsoft. The actions of the company since Judge Jackson's ruling was overturned clearly shows their arrogance—Internet Explorer is now even more deeply integrated into Windows XP, smaller companies have been purchased to prevent competitive products from being brought to market, and their .NET and Passport technologies have placed the future of the Internet in jeopardy.

Not once has Microsoft made any concessions nor shown any willingness to self-police themselves to even partially address DOJ concerns. Their actions in the related civil case is further proof of their continued attempts to extend their monopoly to other fields, including the Internet, the game industry, mobile communications, education, and security.

Those of us in the computer community know that the damages caused by Microsoft's monopoly has far surpassed that of any other company in history. Enron's collapse is small compared to the consequences of an ongoing and potentially permanent Microsoft monopoly.

I don't want a bleak digital future dominated and controlled by Microsoft. As a web site administrator, I have seen the problems caused by that company in their quest for monopoly power. The legal system moves slowly compared to Internet time, but a strong remedy and decision against Microsoft would open up the doors to competition and innovation. Those are two qualities that have never been exhibited by Microsoft, despite their press releases and advertising campaigns. Please encourage the competition and innovation that make our free enterprise system great—ensure that a predatory company like Microsoft can do no more harm nor threaten our future. You have my support.

Sincerely,  
Alex Morando

I want you to know how much I object to the proposed settlement regarding Microsoft being a monopoly and using that monopoly to unfairly eliminate competition. I'll just quote Russell Pavlicek's article from InfoWorld.com, as he's summed it as well or better than I can. I hope you will read it and understand how this is not only NOT punishment, and NOT just a slap on the wrist for MS, but actually a boon to them.

Thanks for your time,  
Robert Forgey  
Valley Center, CA 92082  
RUSSELL PAVLICEK: "The Open Source"  
from InfoWorld.com, Wednesday, January 23, 2002

I'VE RECEIVED A number of requests to address the pending (as of this writing)

settlement of the civil anti-trust lawsuit against Microsoft. Under the pending agreement, Microsoft will be obligated to provide hardware and software to thousands of underfunded school districts across the country. The logic, if you can call it that, is that such schools could benefit greatly from receiving the technology they lack.

Undeniably, there is an emotionally compelling case for this. A gigantic company, found guilty of doing wrong, is ordered to help the underprivileged. "We need to do it for the children," cry the politicians. "Think of the children!"

"For the children." That's the phrase politicians in Washington use to justify an action so irrational that it cannot be justified any other way. How can I properly characterize this solution? It is like a court ordering a convicted drug dealer to give out more free samples of heroin to underprivileged children to ensure that their poverty does not deprive them of the opportunity to become addicted. Sure, public classrooms need more technology. And it is especially important that children who don't have as many opportunities in life get assistance. But that is not adequate justification for assigning the fox to guard the hen house.

Personally, I like the counterproposal put forward by Red Hat: Let Microsoft donate money for computing resources for underfunded schools, but let those donations go toward hardware only; then populate those machines with open-source software. Why open source? Consider the future: What will the schools do when they need to upgrade? If you give schools Microsoft software, they will be caught in the endless upgrade cycle that has characterized life in the Microsoft world. Those upgrades will cost money, money that these targeted school districts, by definition, cannot spare. Instead, arming schools with open-source software will have two benefits. First, it will set schools down a long-term path that they can afford. The cost of obtaining open-source upgrades is trivial. Without low-cost software upgrades, all those nice shiny computers run the risk of becoming boat anchors in short order. I'm sure someone is saying, "But open source is too difficult to administer!" Such does not have to be the case, but I'll deal with that issue in a future column.

Also, the Red Hat proposal does not reward Microsoft in the long term. If a company is convicted of overpowering markets, why would you reward them by putting one of the few markets they don't lead under their control? This sounds a lot like a seed-unit program for education, not the penalty imposed from losing a trial. Corporate misdeeds are supposed to earn punishment, not long-term investment opportunities. I believe we would all be better off if the courts acknowledged the difference between the two.

#### MTC-00019582

From: Mike Schiller  
To: Microsoft ATR  
Date: 1/23/02 9:21pm  
Subject: Microsoft Settlement

I would like to take issue with the proposed Microsoft Settlement on three points.

1. I am an embedded programmer. What that means is that I write code for microprocessors that control many of the electronic devices used in every day life. For example, embedded programmers are responsible for writing software that makes your TV, car, microwave, etc. work and perform properly. The last few years have seen the introduction of many "real time operating systems" for embedded devices. These operating systems include proprietary operating systems such as QNX, VxWorks, and ThreadX. They also include open source operating systems such as uCLinux, eCos, and Red Hat Embedded Linux. The introduction of these operating systems, the competition between operating system vendors, and the availability of open source code add-ons for all of the operating systems has allowed embedded programmers to continually improve the performance and features of the products they create, decrease the time to market of such products, and reduced the cost of such products. The proposed settlement threatens the health of the embedded programming market. The threat results from three elements of the proposed settlement. First, the definition of "Windows Operating System Product" is limited (under Definition U) to include "software code (as opposed to source code) distributed commercially by Microsoft for use with Personal Computers [such] as Windows 2000 Professional, Windows XP Home, Windows XP Professional, and successors to the foregoing, including the Personal Computer versions of the products currently code named "Longhorn" and "Blackcomb" and their successors." It makes no mention of Embedded Windows Operating Systems such as Windows XP Embedded, Windows CE, and Windows XP Tablet PC Edition. Second, "Communications Protocol" is defined as a set of rules for

information exchange to accomplish predefined tasks between a Windows Operating System Product and a server operating system product" (under Definition B). It makes no mention of the interfaces between different "Windows Operating Systems." Third, Definition Q can be read to mean servers are not personal computers and personal computers are not servers. Thus, as embedded Windows is not mentioned, Windows desktop machines are not servers, and Microsoft communication protocols are defined to include only desktop-server relationships, it seems that Microsoft will not be required to release documentation regarding the interface and communication protocols between Embedded Windows Operating Systems, and desktop Windows Operating Systems (or even for those protocols used to communicate between Desktop Windows Operating Systems). Since desktop computer interoperability is a desired feature of many embedded operating system products, the introduction of closed interfaces between the embedded and desktop versions of Windows will allow Microsoft to use its monopoly power in the desktop market to unfairly leverage its position in the embedded operating system market. Additionally, the settlement will not require Microsoft to release communications protocols between Desktop Windows Operating Systems. This will allow Microsoft to continue to deter competition in the desktop market by discouraging the development and sale of different and interoperable desktop operating systems.

2. The second point that I wish to take issue with is the "Appointment of a Microsoft Internal Compliance Officer." The settlement states: "Microsoft shall designate, within 30 days of entry of this Final Judgment, an internal Compliance Officer who shall be an employee of Microsoft with responsibility for administering Microsoft's antitrust compliance program and helping to ensure compliance with this Final Judgment." As the paycheck of any employee of any corporation is dependent on the income of that corporation, and as violations of this settlement could lead to higher Microsoft profits, it is unreasonable to expect an employee of Microsoft to be able to perform this task without being subjected to a conflict of interest.

3. The third point that I question is the line of the settlement that states that Microsoft may determine what entities meet "reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business." With the uncertainty inherent in a free market economy, only the market itself can determine which business models are viable. Thus, it is unreasonable to expect that Microsoft is capable of defining any standard, reasonable or unreasonable, objective or subjective, that is capable of determining with any precision or accuracy the viability of a business. Additionally, this would preclude academic institutions entirely, as such entities are not businesses. I hope that these points are taken into consideration, and that the proposed settlement will not be accepted.

Sincerely,

Mike Schiller

Subject: Microsoft Proposed Final Judgement  
22 January, 2002  
Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
Suite 1200  
601 D Street NW  
Washington, DC 20530-0001

Ms. Hesse,

I am writing to add my name to the list of people opposed to the Proposed Final Judgment in the United States v. Microsoft antitrust case.

As a software developer with 11 years of business experience, I have watched Microsoft's rise to dominance in several markets and been dismayed by many of the techniques it has used to attain and maintain dominance at the expense of other companies, competing software platforms and consumers such as myself. Still, while I have often found Microsoft's techniques distasteful and unethical, I am far less concerned about remedies for its past behavior than I am about ensuring that the same types of behavior are prevented in the future. From my reading of the Proposed Judgment those remedies that actually work against Microsoft would be ineffective against a company determined to bypass them and would not even constitute significant obstacles in that bypassing process, further in many cases the remedies and definitions seem to have been specifically crafted to make them effectively nonexistent or to actually strengthen Microsoft's position in current or potential future markets. That Microsoft will work to bypass the original intent of the Judgment is clear for both technical and business practices—even during the course of the trial and settlement negotiations it continued to use tactics that should be blocked by a solid agreement.

As an example, the future direction of Microsoft's focus has just this month been declared to be security, while under the Proposed Judgment anything related to security need not be disclosed even if such would otherwise be mandatory. Under a strict reading, if Microsoft adds even rudimentary security interfaces to its APIs then none of those APIs need be disclosed and there is no penalty for not disclosing them -a requirement for receiving documentation for those APIs is that any

business needing it must meet Microsoft-developed standards of business viability; non-businesses need not apply at all because access will simply not be available.

Overall, I feel that the Proposed Final Judgement is deeply flawed and should be substantially revised to remove these flaws before being accepted. A software and content monoculture such as Microsoft clearly wishes to have in place harms all of us in the long term, even Microsoft and its investors.

Sincerely,  
Alan J. Miller

Subject: Microsoft Settlement

The proposed settlement is very bad. And Microsoft knows that, except that for Microsoft, it is very good. They are not only getting away with very sneaky and unethical marketing ploys, but in the terms of the agreement, they will actually get to practice MORE sneaky and unethical marketing ploys.

How would you like if you never had a computer before, but you really wanted to get on the internet, so you went and bought one, took it home, hooked it all up, turned it on, found an icon on the MAIN screen that says "Connect to the Internet" so you double click on it thinking how easy that was..... Next thing you know, Microsoft has tricked you into signing up for \*their\* internet service (here comes the par that infuriates me) and never once stopped along the way and advised you that there are alternatives, some of them decidedly better or for less money. Take note of the following statement: This happens EVERY DAY. Consumers need someone who has a sense of FAIRness to watch over every marketing move Microsoft makes and approve it, or at worst, an unbiased peer-based panel can approve or disapprove.

I digress.

Dear Mr. Ashcroft, Please find enclosed copy of my letter concerning Microsoft.

Thank you very much.

William T. Pearl  
Attorney General John Ashcroft  
US Department of Justice, 950  
Pennsylvania Avenue, NW  
Washington, DC 20530-0001

Dear Mr. Ashcroft: I appreciate the chance to comment on the proposed settlement reached between the Department of Justice and Microsoft in the antitrust litigation. Microsoft was alleged to have violated the antitrust laws by engaging in business practices and predatory pricing. The settlement agreement requires Microsoft to open its Windows operating system to competition from non-Microsoft software.

It also requires Microsoft to establish a uniform pricing structure in licensing its

Windows operating systems. I believe that the settlement agreement provides adequate remedies to Microsoft's alleged violations. Please move forward with the Microsoft litigation by accepting the proposed settlement agreement at the close of the public comment period.

Thank you for your attention.  
Sincerely,  
William T. Pearl

As per the Tunney Act, I wish to comment on the Microsoft settlement.

General Comment: "We didn't do it... and promise never to do it again!" While somewhat cheeky, the above is still at least minimally respectful of the laws of the land. Microsoft's actions indicate that its officers do not have even that limited respect. I believe they will simply ignore the settlement's strictures, and the whole, expensive and slow process will have to start again.

Specific Comment: "Ignorance is no protector of virtue." The settlement apparently allows Microsoft to avoid documenting any portion of the software merely by claiming that the particular software elements are involved in "security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems" (section J). There seems to be no requirement that Microsoft prove that the code is involved in security or that its documentation would indeed compromise security. Additionally, refusal to document interfaces could (and will) be used to stonewall attempts to determine whether the company has illegally appropriated non-Microsoft software. In particular, I refer to the so-called "Open Source" software which is often accompanied by a license restricting its incorporation into for-profit products.

Thank you.

Subject: Comments on recent Anti-trust decisions

To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Under the Tunney Act, I wish to make the following comments on the proposed Microsoft settlement:

- 1: There has been previous anti-trust decisions against Microsoft with respect to their management of OEM deals forcing hardware dealers to exclude other vendor's products. These decisions had little effect on opening up markets to other vendors.
- 2: Microsoft has continued to act in a manner showing that they completely missed the concepts of Anti-trust, continuing to act in ways that missed the spirit, if not the actual wording of previous judgements against them.

3: Microsoft has actively lobbied at all different levels of government to manipulate further decisions by the Department of Justice, rather than to handle the issue directly through lawyers and existing law. Indeed, Microsoft has manipulated the environment in which the DOJ acts with respect to these Anti-trust decisions. The effectiveness of their manipulation (and the quantity of money spent by them) is indeed more evidence of the total power of their monopoly. As a citizen, I am appalled that such blatantly cynical and money driven manipulation is so obviously being ignored. I wonder how this proposed settlement compares to previous DOJ decisions with other companies in the past. How does this settlement compare to the break-up of the AT&T, etc? As an engineer watching people forced to use inferior Microsoft products because business demands force them to, I am appalled that the definitions of products, APIs, etc within the settlement are so tightly defined as to make the settlement

meaningless one rev of the OS later. It is as if much of the wording was designated by Microsoft lawyers to protect the company from being inhibited by this settlement in the future. Isn't that what the settlement proposed is supposed to do? Isn't it supposed to prevent Microsoft from abusing United States businesses and economies by preventing future bad acts?

The previous decision to break up Microsoft into two pieces didn't go far enough. Leaving them intact with a management structure that shows every inclination to continue skirting the law and abusing businesses by their pure size is a failure to act in the best interests of the country. Is there any punitive nature to this settlement? It doesn't appear so. As a result, you are leaving a regime of lawyers and managers in place with every intent on weeding around the exact wording of the proposed settlement. The effect of this settlement will be to cause Microsoft to hire more lawyers so that they don't violate anything explicitly prohibited in the settlement, but it will not change their actual methods of dealing with the industry in any appreciable fashion. I believe the DOJ should separate the operating system development team from the applications development team, in addition to separating business and home applications. Indeed, Microsoft's attempts to penetrate the service industries (MSN) should also become separate businesses. The credibility of the DOJ is clearly in question when the majority of people in the industries effected by this decision believe that this settlement will have no noticable effect on how Microsoft does business.

Respectfully,  
Christopher M. Caldwell

Subject: Microsoft Settlement

In view of many of the items outlined in the proposed settlement of the antitrust action against Microsoft, I must register an opinion that the settlement is a bad idea, that it addresses little to none of the damage done by Microsoft to the industry, and that it does little to discourage a continuation of these practices, while enhancing Microsoft's footing in education—one area where other products and vendors have been able to move more freely of Microsoft's influence.

Subject: Microsoft Settlement

Your Honor:

I am writing to convey to you my sense of disappointment over the recent DOJ settlement of the antitrust case against Microsoft Corp. I am a software engineer working in the silicon valley in California. I was formerly a researcher with AT&T Labs Research in Florham Park, NJ. There are many reasons why I believe that Microsoft is a monopolist. They are the following:

1. Microsoft has effectively prevented PC manufacturers from shipping PCs with any

other operating system other than Windows. They have done this by negotiating contracts with PC manufacturers that requires them to pay for a Windows license even if a PC ships with a different operating system.

2. Widely used Microsoft applications such as Word and Power Point use a secret format to store the content (such as documents and presentations) created by users. In addition, Microsoft gratuitously changes these formats with every new release forcing every user to pay to upgrade to the new version. The secrecy issue exacerbates the problem of Microsoft's near monopoly on the PC operating system. If the file formats were shared freely, then these applications could be easily ported by other companies to different operating systems thereby encouraging users to choose an operating system other than Windows and interwork with Windows users.

3. Companies hesitate from building applications for the Microsoft operating system because of the threat of Microsoft being able to cause these applications to "break" in future Windows releases. In addition, Microsoft subsumes the function of third party applications into their proprietary operating system with each release. This not only violates all principles of good software and system design but also has the side effect of putting other application companies out of business.

Because of their monopoly position, Microsoft is not motivated to add useful features into their operating system that save time and money for users. For example, the X window system that allows multiple users to share a single server has been around since the mid 80's and is supported by all Unix systems. However Microsoft chooses not to provide this since more than one user could share a PC thus reducing the number of units sold.

In short, Microsoft has consumers at their mercy. They are only interested in getting more revenue at the cost of user convenience and ease of use. In view of the above, I humbly and earnestly beg you to reconsider the recent settlement that would encourage Microsoft to continue their abusive practices.

Regards

To: Microsoft ATR  
Date: 1/23/02 9:27pm  
Subject: Microsoft Settlement

I believe the settlement is no punishment to Microsoft at all and would be to its advantage even without the incentive of getting the trial stopped. The proposal to give software free for 5 years to schools that could not afford it in the first place is no punishment at all—the cost of a CD is about 25c apiece. It's probably no coincidence at all that the agreement is for 5 years when the IT world is used to a 3 year upgrade cycle. The schools concerned get one upgrade free and then Microsoft gets a new set of customers next time !! During the 5 year period the only competitor, Apple, is locked out, again to MS advantage. Opinions expressed are of the writer and not my employer.

**MTC-00019597**

From: Will Ganz  
To: Microsoft ATR  
Date: 1/23/02 9:28pm  
Subject: Microsoft Settlement

The proposed "Settlement" is sellout of the highest proportions and is more of a "reward" rather than a "remedy" for Microsoft's behavior. To have an order with realistic chance of being enforced and to allow diversity in the market the following is required:

1.. An oversight group that can stop Microsoft's behavior for violations of this agreement with monetary penalties available. The present proposed group is a toothless tiger.

2.. Revelation of all software patents that they hold so that they cannot threaten with FUD (Fear, Uncertainty, & Doubt) on any vendor.

3.. Revelation of all API's for Windows. A 6 month notification of the change in the API's should be required so that Microsoft cannot change them at will to break competing products. Borland's Delphi compiler is the best example of this corporate harassment with Microsoft continually changing the underlying API's to destroy any advantage that Borland may gain through technological advancements.

4.. Allow end users to keep their licenses for Windows should their computer fail. This would allow consumers to upgrade their computers without continually having to buy yet another license for the new computer.

5.. Require Microsoft to directly refund consumers for licences of Windows when

they do not agree to the End User License Agreement. This is typically done when consumers install a competing operating system. Presently, Microsoft refuses to refund consumers their money for the licences that they do not agree with and the OEMs do not refund the consumer's money because they are afraid of dealing with Microsoft and jeopardizing their contract for Windows. This circular logic deliberately frustrates consumers in getting the refund they are entitled. This raises the cost of competing operating systems by requiring consumers to buy, first the computer with Windows, and then pay again for a copy of the alternative operating system.

Sincerely,  
Will Ganz

Subject: Microsoft Settlement  
Dear DOJ:

I feel as a computer user and thus a consumer that the current proposed settlement of the Justice Department against Microsoft is a fair one and will promote competition. In fact, the capability of competing companies to compete has always been there: all they have to do is invent an OS. (That Linux exists is proof of this.) The provisions outlined in the Settlement would seem to take care of any unfair "bundling" problems and make any version of Windows available to other competing software.

This has really gone on long enough. The public is no longer being served by continuing the DOJ's case any further. It may, in fact, be substantially harmed if more millions are spent prosecuting this case. As a writer, I do believe in copyright laws, patents, and protection of what one creates.

Subject: Microsoft Settlement

To Whom it May Concern,  
I am an Information Technology Professional with experience in both programming and systems administration

with various technology platforms, including the Microsoft Windows operating system. I am also a Microsoft Certified Systems Engineer.

I have closely followed the recent Microsoft antitrust trial, and have thoroughly reviewed the Proposed Final Judgment. I strongly feel that the remedies put forth in the Proposed Final Judgment are INSUFFICIENT. The following are some reasons supporting this conclusion.

The Proposed Final Judgment does not give protection to competing operating systems and products that implement or emulate the Windows API's, allowing them to run software written for Windows. In fact, the Proposed Final Judgment restricts information on Windows API's to be released for the purpose of writing competing operating systems that interoperate with Windows.

One of the main problems of interoperation with the Windows operating system is the use of proprietary, undocumented file formats and communications protocols. A critical component of the success of competing products is interoperability with Microsoft products. Disclosure of file formats and protocols, as well as a competitors ability to read, write, and emulate these formats and protocols is necessary. The Proposed Final Judgment does not take any steps to break this barrier to entry.

Microsoft denies competing operating systems entry into the market by using overly restrictive licensing terms and by building intentional incompatibilities into software. The Proposed Final Judgment does not prohibit these activities. Microsoft currently has licensing terms which restrict Open Source software from running on Windows. Microsoft also has licensing terms which restrict Microsoft applications from running on Open Source operating systems. These issues NEED to be addressed for the Proposed Final Judgment to be effective. The Proposed Final Judgment WILL NOT work to unfetter the market from Microsoft's anticompetitive conduct, WILL NOT prevent Microsoft from denying competitive products entry into the market, WILL NOT deny Microsoft the benefits of their illegal activities, and WILL NOT prevent Microsoft from furthering their illegal monopoly into other markets in the future.

Subject: Microsoft Settlement

To Whom It May Concern:

I am writing to express my opposition to the proposed settlement of the Microsoft antitrust case. I feel that the proposed settlement is riddled with loopholes that will allow—and in some cases even sanction—Microsoft's unfair, illegal and economically disruptive business practices.

I believe that the best way to ensure a healthy and competitive technology industry, and to promote competition by Microsoft and

its competitors, would be a structural remedy that splits Microsoft in such a way as to prevent them from leveraging their monopoly products to gain unfair advantages in other markets, and to enjoin them from enforcing unreasonable policies that prevent the development of competitive operating systems and other software products. Although I do not consider myself a conservative, I support the recommendation presented to the court by the Progress and Freedom Foundation which advocates splitting the operating systems from the other software and Internet services, but also would create three operating system companies that would have to offer innovations and alternative features in order to compete with each other, thereby increasing consumer choice and stimulating the economic performance of the technology sector. A remedy such as this would allow market forces to stimulate innovation and consumer responsiveness without the need for expensive and ineffectual regulation and enforcement.

Sincerely,  
David A. Livesay, Ph.D.

To whom it may concern:

The proposed settlement of the Microsoft antitrust trial is an outrage. How can the Department of Justice let Microsoft off the hook with a slap on the wrist after proving that Microsoft was in clear and egregious violation of antitrust law and common ethics?

The Bush administration seems to think that we owe Microsoft free reign to practice whatever underhanded tactics they please because Microsoft is important to the economy. The truth is that Microsoft has consistently abused their monopoly power to squash innovation in the computer industry whenever it has had the slightest potential to threaten the tiniest percentage of that vast monopoly. I'm weary from paying exorbitant prices for the temporary and restricted privilege of licensing Microsoft's bug-ridden, security-challenged bloatware. Why don't I buy something else? There aren't any other mainstream alternatives for Intel-compatible PCs. Microsoft has made sure of that. In most cases, I haven't even had the opportunity to buy a computer without Microsoft dipping their hands into my pockets - if you buy the computer, you pay Microsoft even if you don't want their software. I'm all for competition, but Microsoft has leveraged their monopoly to make sure that there is no possibility of competition. Microsoft has held America back in order to further the interests of Microsoft and will continue to do so if the policies of the current administration do not change.

Subject: Microsoft Settlement

It is ironic that AOL-Time Warner should be going to court alleging anti-competitive practices by Microsoft. AOL is famous in the industry for its own lack of cooperation with instant messaging standards and its exclusionary, proprietary software that does not interoperate well with the rest of the internet. As a citizen-user of internet software, it is my view that AOL's actions against Microsoft could result in even more wasted capital and energy than have previous efforts of other Microsoft competitors to compete in the courts and in politics instead of technically with good software and standards. AOL is a pot calling the Microsoft kettle black. The AOL legal filing is a cynical manipulation of the legal process and political setting by the most powerful media group in the country. These are both extremely large and powerful companies. Get them out of the court room to compete on their technical and business merits.

Respectfully,

Subject: Microsoft Settlement

I feel that the proposed settlement does little to help deal with Microsoft's use of its products to leverage it self in the market. A "settlement" that requires it to give its software to education, does not hurt but in fact helps them leverage the market. The settlement as a whole is only a very limited response to a company has shown a history of being uncooperative with the fair trade laws of the US. In light of the fact that this case is the result of a second action against Microsoft because of their unwillingness to follow the restrictions set down by a US court calls for a stronger response. If this was a criminal case a second offense would count strongly in the outcome.

 To: Microsoft ATR  
 Date: 1/23/02 9:27pm  
 Subject: Microsoft Settlement

I think the proposed settlement is bad idea and will do nothing to prevent Microsoft from continuing their anticompetitive practices. Microsoft should be fined heavily. I think it is safe to say that in a competitive market no single player will have a market share greater than 50%. That would then imply that any market share that Microsoft held over the first 50% was a result of their anticompetitive practices and any profit that resulted from that excess market share was acquired illegally. I feel that the only effective remedy for this is to fine them for the entire amount of the illegally acquired profits over the last 10 years. The funds from the fines should be used to develop a public domain operating system and office suite that is compatible with the Microsoft offerings. Another option, since the fines would not doubt be huge and require liquidation of some of Microsoft's holdings, would be to seize intellectual property of an equivalent value, perhaps the source code to Office or Windows, and release it into the public domain. Questionable OEM bundling practices forced the American people to fund the development of those products every time we bought a computer, isn't it time we were given what we have been paying for?

Dear Sirs:  
 I would only hope that this suit would settle and soon. As an entrepreneur I believe

that Microsoft should be able to compete without restraint. I do not find they're giving away their browser any different than AOL sending out hundreds of thousands of discs promoting their online services. As a business person that is not computer literate and savvy I find that if I stick to Microsoft programs on all of my systems everything seems to run and perform without problems and I always receive the result I was looking for. However, there have been occasions in the past, when different programs have been installed on our systems and the labor and time required to keep them running and to keep them compatible is very expensive. The labor to keep non Microsoft programs running is not the biggest expense item. It's the non-productive time and lost opportunity. some years ago I made a decision that whenever I bought computers, Servers and software that they would always have the Intel chip and motherboard, and they would be loaded with Microsoft programs. I do not and have never felt like I was being taken advantage of by Microsoft. As an entrepreneur I find all the things said about Microsoft to be just so much crying on the part of their competitors. Their competitors either can't build or sustain a product or take it to market yet they want me to suffer by having the government make it more difficult for me to get Microsoft products. Can you imagine trying to keep all your systems up and running with some little known off brand of program that only has a handful of people around the country that know what is going on with the program. I'm sorry but I only see the government action as making everything more expensive and difficult for me to do business. I also think that the action on the part of the individual states is more political than anything else. Who are they trying to protect? Could it be Kodak, Sun Micro Systems, AOL etc.

Yours truly,  
 Jerald E. Chretien

 Subject: Monopoly/Microsoft/Fortune100 Companies

I am a consultant to some major Fortune 100 companies and have seen the anti

competitive aspects of Microsoft's operating system firsthand. In general MS 'Windows' almost seems purposely written not be able to interact with other operating systems by other manufacturers. This makes it very difficult, if not impossible, for a company to use alternate computers with different operating systems (i.e., Macintosh). Whether this is true must be analyzed in the way the Windows code is written. Unfortunately one would need to be a computer programmer to truly evaluate this. I think it is crucial that Microsoft's de facto monopoly be stopped as it is, in my professional opinion, dangerous to destroy competition in the area of computing.

It is an unsound practice to have only one operating system controlled by only one company. At best this situation squelches innovation and leads to a stagnant computer market. At worst it is a danger to our national security, as we (as a nation) are then at the mercy of how securely that system is written. Again, in my professional opinion, it is a badly written operating system and is riddled with many serious security holes. We have already seen the cost of computer worms and virus that have cost companies billions of dollars. The damage has been on par, cost wise, with floods, hurricanes, and other natural disasters. It is not an acceptable situation for this country to find ourselves at the mercy of this obvious monopoly called Microsoft. It is imperative that free and open competition be allowed back into the operating system marketplace.

 Subject: Microsoft Settlement

To Whom it May Concern:

I think the proposed settlement "against" Microsoft is ridiculous. The purpose of the antitrust trial was to force Microsoft to allow competition from the likes of Linux and Apple. The settlement does very little to further this. Here's what I'd like to see:

1. Well-documented, freely released APIs and file formats. No exceptions for companies or groups that "don't have [what Microsoft considers] a valid business model."
2. A substantial fine—something that would make Microsoft think a little. \$25 million dollars at least.
3. Reduced OEM licensing restrictions. Does Gateway want to sell a machine with both Windows and Linux (ie. dual-booting)? Fine, more power to them. Netscape instead of Internet Explorer? Go ahead. And Open Office.org over Microsoft Office? Bring it on!
4. The OEM shouldn't be required to place icons for installed Microsoft products on the Desktop, either.
5. Some legal definition of "Operating System" should be established, and it should be fairly conservative. A definition of "Computing Package" should be established as well; this would include everything you need to do basic work on a computer (operating system, productivity/office suite, Web browser, e-mail application, etc.) Right now, Microsoft is selling a computing

package passing for an operating system. There's nothing wrong with selling a computing package, but no one should be forced to pay for and use it when all they want is the operating system.

6. Microsoft must release any information made known to it regarding computer security. "Security through obscurity" is a really bad idea, because someone else will invariably independently hit upon the same security flaw and exploit it. Remember when servers running Microsoft Internet Information Server (IIS) went down with Code Red and its variants, costing companies billions? What if Microsoft knew about the hole weeks before the virus hit, and didn't bother to patch it? The Information Technology industry desperately needs some measure of accountability from Microsoft.

7. Tying in to number 5, some form of oversight committee should be established, and it should be staffed with people who have computer knowledge. —PC Magazine—columnist John C. Dvorak has announced his "candidacy," and he wouldn't be a bad choice. Granted, you don't want people who are vehemently anti-Microsoft, but you don't want yes-men (or -women) either. The committee's job should be to ensure that Microsoft doesn't violate the settlement, and to resolve disputes without resorting to litigation. Thank you for taking the time to read these comments. No matter what the final decision is, it is good to make one's voice heard.

Sincerely,  
Kevin Riggle

From: William Meyer  
To: Microsoft ATR  
Date: 1/23/02 9:32pm  
Subject: Microsoft Settlement

I use Microsoft products, both in my work, and in my life. I am a software designer who has created three generations of video servers based on Microsoft Windows. These are among the most cost-effective of such products on the market today, and they empower broadcasters in small market stations, and educational and religious stations, which would otherwise be unable to afford such technology. I strenuously resent the government's characterization of me and my colleagues as "victims" of Microsoft. I am by no means helpless, and I do have alternatives to Microsoft products; I use Microsoft products because they serve my needs well. No one has the right to dictate to me what software I will use, least of all my own government. This country, and at times, the government and courts, seem entirely irrational in their view of business. Productive employment is created by private business (such as Microsoft), not by government, which is more properly viewed as the administrative overhead of running the country. I urge you to bear in mind that the original complaint against Microsoft was voiced, not by any consumer, but by Microsoft's wealthy and large competitors. Competition is healthy, but these companies seemed to prefer that the government do what they could not: to overpower Microsoft. That their own business plans failed does not justify having the government damage a

highly successful company. We are guaranteed by the Constitution the right to the "pursuit of happiness", not to happiness unearned. The politicians who have sided with detractors of Microsoft in this are in danger of supporting unequal treatment of companies under the law. As a corporation is a legal fiction which conveniently equates to a person, so it must be viewed that any corporation is as entitled to equal treatment as is any other citizen. The alternative only fosters increased corruption in government. I am tired of hearing the phrase "rule of law" bandied about by those who would apply it selectively. I am tired of the seemingly ceaseless attempts of our politicians to tax or legislate out of existence companies which provide many thousands of jobs for citizens. I want to see America the most successful and capitalist economy in the world—not see it throttled and abused by politicians (and even courts) whose own efforts create no part of the gross domestic product. Microsoft has a fundamental right to its corporate property, just as I have a fundamental right to my own property. These rights are assured by the Constitution. They are also jeopardized by uneven application of ill-conceived law. I call upon the Court, and upon the Department of Justice to preserve and protect these rights, not to dismantle them. This is, after all, the proper duty of the government, to protect and defend the rights of citizens, from whom their power obtains.

Best regards,  
William Meyer

To Whom It May Concern,  
As a software developer, I am concerned that the Proposed Final Judgment in the DOJ v Microsoft case has many technical loopholes that, based upon previous actions, will be exploited by Microsoft to retain their monopoly. Many of the End User License Agreements that must be accepted to produce software compatible with the Microsoft windows operating system regulate and limit what one can do with the program. There are many API's that Microsoft does not

document publicly, but which are used internally to increase the performance of their own products. Publication of all, not just middleware, API's should be a requirement. The timetable for publication of the API's is probably sufficient, but the requirement that any software pass an undefined compatibility test is leaving the door wide open for abuse. The most grievous omission from the proposed settlement is allowing their proprietary file formats and communications protocols to be kept undocumented. This is what allows Microsoft to maintain its monopoly in the desktop market. It will modify/produce a protocol or format and write applications that work with the protocol/format. This new protocol and application base will be forced onto End Users using their monopoly. Microsoft will then protect said protocols/formats with EULAs, creating a major barrier to entry. These are just some of the issues that plague the Proposed Settlement. I urge you to close some of these loopholes and restore competition to the operating system market.

Thanks for your time.  
Sincerely,  
Lorin Hattrup

Subject: Microsoft Settlement

I think it's a shame that the DoJ has decided to show the world that companies are not allowed to fight to be number one. Perhaps worse than that, the DoJ has neglected to look in to other examples of monopolies, such as AOL's purchasing of all other bulletin board services aside from MSN. And of course the DoJ will be helping AOL by hurting it's competitor in that way. I have to say it's legal loopholes and unfair litigation like this that has caused me and many of my peers to lose faith in the legal system. It is my fervent wish that these charges against Microsoft be dropped, and I can only pray that thousands if not millions of other citizens are taking the time to cry out as I have.

I thank you for your time.  
Joseph McBride

 To: Microsoft ATR  
 Date: 1/23/02 9:40pm  
 Subject: Microsoft Settlement

To whom it may concern,  
 I am opposed to the proposed settlement for in Microsoft antitrust trial. I feel the proposed settlement does not go far enough to redress Microsoft's abuse of it's monopoly status. I am a software developer with over seven years experience in developing software for UNIX, Linux, Windows, and DOS. My chief complaint with the proposed settlement is that it does not stop Microsoft from it's monopoly abuses that most affect me. Microsoft requires in the end user license agreement (EULA) for many of the products released and marketed from them that the user of the software not use the software on any competing operating system and in some products requires that the user not use the software to create software for competing operating systems.

Though I can run many programs designed for Microsoft Windows in my chosen operating system (Linux), the EULA included with those programs prevents me from doing so. To use the programs I am then forced to use a Microsoft operating system not for any technical reason but solely because of the anti-competitive incense agreement. In addition, when I develop software, if I wish to use a Microsoft product to develop that software, the EULA prevents me from releasing that software for competing operating systems because the EULA contains a requirement to not distribute the "REDISTRIBUTABLES" required to run the software to competing operating systems. Requirements like these are clearly anti-competitive. Therefore, any settlement or judgment in the Microsoft antitrust must strictly and expressly prohibit any requirements Microsoft may place in license agreements that affect how a user may use any Microsoft product.

Thank you for your consideration.

From: Marcus Lauer

To: Microsoft ATR  
 Date: 1/23/02 9:42pm  
 Subject: Concerns About Microsoft Settlement

I was not at all surprised by the results of DOJ vs. Microsoft. What surprises me is that the proposed settlement does not address the issues of the case in the least! Requiring Microsoft to buy computers for schools is simply a monetary punishment: a fine. Microsoft was not found guilty of failing to give enough money to charity! They were found guilty of abusing their monopoly in the desktop computer operating system market. Only a settlement which directly addresses this behavior is acceptable. We punish crimes because we do not want them to reoccur. A punishment which prevents the crime from reoccurring, or at least attempts to, should be the preferred solution.

It is impossible to calculate a dollar value for the damage which Microsoft has done to other companies, and to the World-Wide Web, through abusing its monopoly. Instead, let's try matching the punishment to the crime.

Marcus

**MTC-00019623**

From: wdn5@attbi.com@inetgw  
 To: Microsoft ATR  
 Date: 1/23/02 9:43pm  
 Subject: Microsoft Settlement

Personally my opinion is that the settlement does not address any settlement for the people who were effected by Microsoft's actions. Would each person who ran Microsoft for the years the settlement covers have to sue them individually to recover any financial losses they might be able to show?

The products listed as effected in the decree could be "discontinued and renamed" causing new legal action. The listing of specific products instead of a blanket statement saying: "all interaction between programs residing on the same computer or different computers must be documented and presented, whether written by Microsoft or another company. . ."

They could get rid of Internet Explorer and have Microsoft 'Web Viewer' released in the next version of windows. Will this cover a release of Windows 2002? Which would probably be a bug fix of Windows 2000? But then the same API that they had to release for Win 2000 they would not for Win 2002?

Finally Windows Security information is exempt. Their Security APIs need to be released so they can be tested and their strength determined in non-biased labs. There is no good reason for these to be exempt.

Thank you,  
 dean norris

 Subject: Microsoft Settlement

I am deeply concerned with the proposed settlement regarding Microsoft. It does nothing to effectively deter its current predatory behavior and fails to punish for past offenses. Microsoft's malfeasance

extends back to it's earliest days as shown in books such as "Undocumented DOS, 2nd edition" and "Undocumented Windows" by Andrew Schulman et al, Addison-Wesley where Schulman describes how Microsoft deliberately introduced code designed to break competitors products. The same pattern of behavior continues in its products today, fueled by a marketing machine that spews Fear, Uncertainty and Doubt (FUD) about competitors designed to intimidate those attempting to use alternative products. I am extensively involved with the software industry and am intimately familiar with many of its products. I have a Masters Degree in Software Engineering enabling me to understand the complex technical issues involved. I have been employed as an Information Systems Manager for many years, suffering the effects of Microsoft's stifling of effective competition. I am also on the Board of Directors of the San Diego Computer Society <<http://www.sdcs.org>>, representing over 1000 regular and Special Interest Group (SIG) members. Every meeting I attend brings up a recurring question: "What has Microsoft done to me today?"

January 23, 2002  
 Attorney General John Ashcroft  
 US Department of Justice  
 950 Pennsylvania Avenue, NW  
 Washington, DC 20530  
 Dear Mr. Ashcroft:

I am writing to express my support for settling the Microsoft antitrust lawsuit according to the agreement reached in November. I feel that whenever the government gets its hands into something, it gets ruined, and the Microsoft case is a serious example.

I am a Microsoft stockholder, though I do not use Windows as my primary operating system. Because of that, I recognize the

freedom of choice that already exists in the marketplace. The changes Microsoft is agreeing to in how it distributes Windows, and in giving computer users new abilities to better use non-Microsoft programs with the Windows operating system, will further promote freedom of choice. Let the product speak for itself. If Microsoft sells good products, they will be successful. If they don't (or their competitors don't), they will fail. I urge you to settle the antitrust case with no further delay.

Sincerely,  
Margaret Southwell

Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Nor does it prevent future abuses by Microsoft. Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level. This must be true for all Microsoft product lines before regulation is lifted. Furthermore, Microsoft should be separated into three or more independent entities that have no hidden relationships. Every other competitor must have equal access to the interfaces between these entities. —

Jeff Hurst

From: Robert Sanders  
To: Microsoft ATR  
Date: 1/23/02 9:40pm  
Subject: Microsoft Settlement

A fair settlement would require Microsoft to open up the Windows APIs to all comers. That just about says it all. The currently proposed settlement is so full of loop holes that it is not even a slap on the wrist, it is more like a pat on the back. While I believe any company should have the rights that Microsoft is currently attempting to hide behind, those rights must have limits, and in this case those limits are clear and repeated illegal practices by Microsoft. Only with strong action can the harm that has been done to the OS and Office Suite market be rectified.

Robert r. Sanders

From: David (038) Vangie Gardner  
To: Microsoft ATR  
Date: 1/23/02 9:37pm  
Subject: Microsoft Settlement

To whom it may concern,  
I am writing to you on a matter of great concern to myself and other professionals in the IT field. As you well know, a proposed settlement between the Department of Justice and Microsoft is before the courts. This settlement would hopefully end the anti-competitive and monopolistic practices of Microsoft Corporation. However, as currently written, I do not believe that this settlement will sufficiently dissuade Microsoft from illegal practices well established by precedent. While there are many areas with which I take issue, I am particularly troubled by the lack of provisions to stop Microsoft from intentionally disabling competing operating systems (OS) and applications. In a private antitrust suit brought against Microsoft by Caldera in 1986, a judge found that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." In that case, a company later acquired by Caldera, Digital Research, created a product called DR-DOS. DR-DOS, a competing OS, used the DOS API underlying Microsoft's MS-DOS OS to run programs written for MS-DOS. Windows 3.1, which also used the DOS API, intentionally included code to lead users to falsely believe Windows 3.1 and DR-DOS were incompatible.

As written, the proposed settlement does nothing to stop this practice. Given its past behavior, there is no reason to believe Microsoft will not react similarly if faced with another competitor. Any settlement should lower—not raise—the barriers to competition. Otherwise, Microsoft can continue their monopolistic practices. For this reason and many others, I strongly encourage you to reject the proposed settlement. America is built on the premise of capitalism. But capitalism cannot function properly if companies such as Microsoft are allowed to stifle innovation with anti-competitive practices.

Sincerely,  
David Gardner

To: The Department of Justice Members  
Once again I must sit and write respectfully to the Department of Justice about an injustice that AOL is doing to the Microsoft Company. At a time when Microsoft has done everything in its power to settle these law suits placed against them by those who could not compete adequately, namely AOL who has certainly demonstrated their incompetence in the Internet World. This company will not be satisfied until they make every attempt to ruin the reputation of a person who has done more for America than ever will be accomplished by other C.E.O.'s or Presidents. If they (AOL) can expend ten billion dollars and be connected to Warner Enterprises they certainly can not be in dire trouble. No, they just have to continue to use the political position because they truly can not compete with any computer source. I respectfully request that serious consideration be given, once again, to Microsoft to end this fiasco that they have been put through. I am an ordinary citizen (senior) who is tired of the waste of these monies to the courts for no good reason at all. Mr. Case, in my opinion is not a business man and should take his stock and retire from the race. Please, for once, give Microsoft a break. If AOL thinks they are getting shafted let me assure you that I use Microsoft and Netscape so Mr. Case isn't losing anything from many millions who use his product. And I might add that Microsoft has never turned anyone off from using their product with their own.

Very truly yours,  
C. R. Rizzuto  
Seattle, WA.

 Subject: Microsoft Settlement

It isn't necessary to recount the ways in which Microsoft has stifled competition or used its market penetration to gain a foothold in other markets. The DOJ lawyers did that quite well. Nor is it necessary to point out that Microsoft has a history of ignoring its agreements and doing what it pleases. History speaks for itself there as well and it would only insult your intelligence to do so.

Throughout the proceedings both in and out of court we heard Microsoft officials claim that they were being punished for being successful. We also heard them claim that their ability to innovate would be harmed by a judgment against them. But two facts stand out. First, Microsoft wasn't put on trial for being successful but rather for how it achieved that success. It did it illegally. Second, as an early adopter of computer technology, I cannot think of a single substantial Microsoft innovation. What the company has achieved, it has achieved by standing on the shoulders of others. Of course, this has little to do with the case at hand. The questions are these. Will the proposed settlement cause Microsoft to change its business practices and will the settlement be good for the people of this country. To me, the obvious answer is a resounding no. Microsoft today is acting no differently than it was before the trial. The company doesn't act like a penitent but rather as a victor. The leaders of the company act as if they have done nothing wrong. How then can we expect them to change their behavior? Indeed, Microsoft can only lead one to believe that no behavioral changes will occur. More than one computer insider has stated that even before the ink is dry on a contract Microsoft is already thinking of ways to break it. Such a mindset demands structural changes in the company and the settlement does not provide them. The settlement is weak. It may as well have been written by Microsoft itself. It needs more teeth. Breaking the company into several pieces wasn't the answer—but neither is this settlement.

 Subject: Microsoft Settlement

Dear U.S. Department of Justice, I am writing to express my opinions over the settlement with Microsoft. I feel that Microsoft's anti-competitive practices have caused great harm to our country. I believe that without a stern correction, these practices will continue and cause even more damage. Developers need access to critical APIs in order to create software that can compete with Microsoft's own. Microsoft must be kept from making deals that force resellers from including competitor's software on their computers. Finally, the settlement must not give Microsoft a stronghold on the education market. I believe in our free enterprise system. I believe companies should flourish and innovate, but not with unfair, anti-competitive practices. Please correct this injustice that has affected every single American.

I would like to take this opportunity to express the disfavor with which I hold the current tentative remedy for the Microsoft antitrust case. In my opinion, the major flaw in the agreement involves the rather vague description/definition of various terms and concepts. An example is "middleware". It must be kept in mind that many if not all of the technical terms used in the "PFJ" can and will be reinterpreted/redefined as technology advances. Not to mention the tendency to use those ambiguities to circumvent the intentions of the agreement. Many times metaphors are used as convenient tools to explain technical aspects to the non technically inclined. If metaphors are codified into an agreement, so are the opportunities to exploit situations where the metaphor breaks down. Please be warned; references to seemingly concrete things are often not so concrete. The example of "middleware" above, is but one of many references to something that may only exist when viewed from a very specific viewpoint. One man's application is another man's operating system component, databases become middleware, middleware becomes OS services and the lines between layers of OS's, applications, and networking are arbitrary in many cases. It's very easy to turn the whole interpretation upside-down if it's in someone's best interest to do so. —

Regards,  
 -Joe

I disagree with the terms of the Microsoft Settlement. Anybody who remembers having a computer before Windows. would disagree also. Microsoft should simply be put out of business by the government or have management replaced, including Bill Gates. If this does not happen, they will always be looking for ways to demolish anyone who doesn't see things the Microsoft Way. These people are criminals, plain and simple. And the only reason they aren't in jail is because they are rich.

Dear Sirs,  
 I believe that Microsoft must be severely sanctioned for its monopolistic actions, and that the Department of Justice's proposed remedy is inadequate. I have been a computer scientist since before Microsoft was formed, and I have watched the company carefully. The actions which were judged monopolistic were in fact entirely typical and normal for this company, and far from the worst of their actions. The pretrial depositions for the "Digital DOS" case describe much more egregious actions. (Microsoft settled out of court, so those actions have never been judged.) Any expectation that Microsoft will willingly change its behavior are wrong. The loopholes in the DOJ's proposed consent degree will be fully exploited.

I propose that Microsoft Office be split off into a separate company, and that the remainder of Microsoft be required to publish the actual source for all of its system interfaces.

 Date: 1/23/02 9:44pm  
 Subject: Microsoft Settlement

I am writing to comment on the proposed settlement in the Microsoft anti-trust case. I have serious concerns over both the effectiveness and basic fairness of the proposed remedies. My principal concern is that the proposed settlement does not adequately restrain Microsoft from using substantially the same monopolistic tactics in the future that they have used in the case at issue: The practice of using their position to drive smaller companies out of business by giving away equivalents to their product, then incorporating them as a bundle with their operating system, retroactively declaring the new functions as integral to the base product, deliberately intertwining them to make separation difficult, and finally using the "improvements" to justify raising the price on the operating system, is not prevented. True, the specific question of this

sort of practice in regards to their web browser is addressed, but that is already a fait accompli, and nothing in the settlement truly stops them from doing the same thing again and again, to others, which they are quite obviously in the process of doing. Nor is the practice of using their unique power over the operating system to make changes designed solely or primarily to render other companies' products less useful prevented by the proposed settlement. Part and parcel of this is their use of the same unique knowledge and power to make their own products more effective. Secondly, I am concerned that the settlement does nothing whatsoever to penalize the company for its prior bad acts—the very ones detailed at length in the findings of fact. Allowing a monopoly defendant to keep all of its ill-gotten gain, and simply putting weak discouragements against repetition in place goes against the basic principles of justice. This is particularly true with a defendant as determined and contemptuous of the process as Microsoft.

I strongly urge that the proposed settlement be rejected.

From: Ed Griggs / Lynn Griffin  
To: Microsoft ATR  
Date: 1/23/02 9:47pm  
Subject: Microsoft Settlement

I am writing to express my opinion regarding the Antitrust Case that the U.S. has against Microsoft. I have been a user of Microsoft products and an admirer of Microsoft for many years. It amazes me when I think of how Microsoft has helped increase my productivity at work and my personal enjoyment at home. The amount of work that I can get done now (and how much easier and enjoyable the work is) is significantly greater than 10 years ago, before I had a computer, running Windows, Office, Outlook and many other Microsoft products. And the fun that my family and I have playing computer games and accessing the Internet is tremendous. Without Microsoft and the standards that they developed, much of this would not be possible, or would be much more difficult.

It disturbs me very much that the government has brought this case against Microsoft. These days it appears that success qualifies a company to be a target not only of their bitter competitors who have lost in the marketplace, but the U.S. Government, which is supposed to uphold free enterprise and capitalism.

The public has spoken through the money that they spend on Microsoft products. They recognize the excellent products and excellent deals that Microsoft offers. They have reaped enormous benefits from Microsoft. I resent the government characterizing the public (myself included) as victims of Microsoft and as not knowing what is best for ourselves. The more free companies are to do their work and sell their products, the better off the public is. The public does not benefit from government interference, which stifles company's

productivity. I encourage the government to cease these Antitrust cases against companies such as Microsoft. Companies should have the ability to run their business as they see fit and to sell their property in any manner that they desire. This freedom is what the United States of America was founded upon. This freedom must be upheld if our country is to the ideals of the founding fathers.

Subject: Microsoft Settlement

I am writing this email as part of the Tunney Act comment process on the Microsoft Settlement. I am a computer user of primarily Microsoft products because of their monopoly, and I find the current settlement ridiculous. It will do little to nothing to fix the problems with their corporate behavior. In general, its provisions are too narrow and specific, in many cases so specific that it could conceivably fail to cover the next version of Microsoft's Windows Operating System. Even worse, I see no effective enforcement mechanisms in the settlement. The proposed final settlement should not be adopted without serious and substantial revision.

Sincerely,  
John Cocking, Greensboro, NC.

Subject: Microsoft Settlement

As per the Tunney Act, I would like to comment on the proposed Microsoft settlement. I find the Proposed Final Judgement (PFJ) rather weak when compared to the legal agility Microsoft has already displayed inside and out of the court room. A number of overly broad definitions in the PFJ would give Microsoft more than ample room to evade most if not all of the important restrictions on their anti-competitive practices. The most obvious definitions problems can be seen over the terms "API", "Microsoft Middleware", and "Windows". For a more detailed list of problems with the PFJ I would recommend reading Dan Keigel's analysis (on the Web at <http://www.keigel.com/remedy/remedy2.html>).

From: John Beveridge  
To: Microsoft ATR  
Date: 1/23/02 9:51pm  
Subject: Microsoft Settlement

As a home user, I have found over the last several years an increasing trend by Microsoft to eliminate the usability of non-microsoft software, notably Netscape, QuickTime, and AOL. Whatever the reason given by the company, there is no doubt that I have increasingly seen Microsoft try to lock out anything that represented a threat to them or an area where they felt they could establish dominance. That trend is currently evident with the development of their proprietary Windows Media File. The standard for audio encoding is MP3, yet they will force people to adopt a standard that is not based out of merit but rather because their market share allows them to make decisions for consumers. Because the company has a world wide market share of nearly 96% of all consumer desktops there is no possible way for real competition or development to take place that is not sanctioned by the company and as such does not represent the protection of my rights as a consumer. The failure to address the issue only emboldens them to continue. If it is the intent to create a competitive and viable community where the consumer has the advantage of technology and pricing as a result of competition among various vendors than it is clear that the issue must not be addressed in a manner that is not punitive toward the Microsoft Corporation. There is no way to restrict a monopoly without damaging it in some way and any action that does not eliminate the monopolistic power of Microsoft is punitive action taken instead toward the consumer.

John Beveridge

Subject: Microsoft Settlement

To whom it may concern:

I am writing to express my concerns over the Proposed Final Judgement (PFJ) in the Microsoft Anti-Trust case. The PFJ fails to

address many technical issues and marketplace realities, leaving Microsoft free to continue its malfeasance, different in method only, if at all. The PFJ fails to protect the interests of the public. Of all the many issues I have with the PFJ, I object most strongly to the failure to provide a method of enforcement, which means the courts become by default the method of enforcement. This is unsatisfactory as it permits Microsoft to employ anti-competitive practices (and the vague terms of the PFJ allow for many such opportunities) until such time as the matter may be resolved in court. If the delay caused by litigation forces a would-be competitor out of business (rather likely in the rapidly evolving world of commercial software) Microsoft wins, regardless of the court verdict.

In short, any settlement must provide for a quick method to address violations of that settlement. The Technical Committee is a good start, but they must be given power to sanction.

Sincerely yours,  
Jim Gamble

From: Nathaniel Smith  
To: Microsoft ATR  
Date: 1/23/02 9:48pm  
Subject: Microsoft Settlement  
Dear Sir/Madam:

I am a US Citizen currently resident in Piedmont, California, and am writing to state my displeasure with the proposed Microsoft settlement. While there are many problems with it currently (e.g., I agree with all of the points made by Dan Kegel in his "On the Proposed Final Judgment in United States v. Microsoft", <http://www.kegel.com/remedy/remedy2.html>), I would like to highlight one in particular.

That is the way the proposal neglects to include any remedy with regards to Microsoft Office, or to say anything about document formats. As an academic, consumer, and programmer, I have been increasingly frustrated by the practical necessity to use Microsoft products in order to read papers, view presentations, and generally exchange information with those around me—Microsoft's monopoly implies that many documents are only viewable using Microsoft's software. There are other programs which attempt to make the content of these files available, but they are extremely hampered (generally to the point of uselessness) by Microsoft's refusal to document the file formats. The settlement should include Microsoft Office in its definition of Middleware (as the definition used by the Finding of Fact does), and apply all the concomitant remedies. Moreover, Microsoft should be required to document its file formats, as otherwise consumers and organizations are forced to continue to use Microsoft Office to maintain compatibility with anyone they wish to exchange documents with, and no competition is introduced into the marketplace. In my personal experience, the use of Microsoft software is frighteningly often a prerequisite to entry in the marketplace of ideas, and the proposal does nothing to remedy this. There

are many problems with the current proposal; as it stands it will not bring relief. I support any changes which favor Microsoft's competitors, and in particular any changes which will increase competition in the office product market—keeping in mind that in this area, interoperability is a prerequisite to competition.

Thank you for your time.

Subject: Microsoft Settlement

The current settlement before the court in the Microsoft anti-trust trial is an atrocity to the computing industry and to consumer choice. When Microsoft appealed District Judge Thomas Pennfield Jackson's ruling, the Court of Appeals upheld his judgement that Microsoft violated anti-trust laws and is holding an illegal monopoly with their Windows operating systems.

Such a ruling by the Appeals Court cannot go unpunished, but the current settlement made between the US Department of Justice and Microsoft Corp. will utterly fail to punish Microsoft for their illegal monopoly practices. I cannot count the times I have heard Windows users complain about instability and insecurity in Windows and comment that they want something better. However Microsoft's stanglehold on the market and their proven illegal tactics have consistently crushed all quality competition (IBM's OS/2, Be Inc's BeOS, Apple's MacOS which despite three years of growing popularity still holds less than 10% of the home and business PC market and which, believe it or not, includes a number of Microsoft programs such as Internet Explorer and Outlook Express). Not only is Microsoft monopolizing the IBM-compatible PC market but they are also stifling innovation and competition in the Macintosh PC market by cutting off system preload deals for other web browser and email developers.

The American people are sick and tired of Microsoft and Windows but virtually powerless to do anything to change the situation because the US Department of Justice refuses to punish Microsoft for their proven illegal business practices. The US Department of Justice has sold out to big business.

Theodore Roosevelt must be turning over in his grave.

Subject: Microsoft Settlement

I am a concerned citizen and a concerned consumer who wants to speak out about the potential settlement with Microsoft. I believe that it would be irresponsible of the government to allow Microsoft to continue doing business as it has done over the last decade. Unfortunately, the proposed settlement does not do enough to encourage

Microsoft to alter those practices. Microsoft is well-known for its predatory practices against rival companies and its aggressive maneuvering against start-up companies who bring innovation into the market place. Microsoft has overstated its role as an innovator in the technology sector; many of their "innovations" are actually adaptations of other technologies. Two primary examples that illustrate this point are Microsoft's copying of the "look and feel" of the Macintosh operating system in their implementation of Windows 95-Windows ME, and Microsoft's copying of the basic Internet browser and destroying of a viable business model of their competitor, Netscape. Microsoft has done considerable harm to innovation by the use of their aggressive tactics. I understand Microsoft's importance in the modern economy. Microsoft is a widely held stock and many Americans rely on this stock for security in their portfolios or retirement plans. Unfortunately, the costs that the consumers face in the future has much greater down-side for Americans and world consumers. For instance, In January 2002, an internal Microsoft memo was leaked to the public in which it was made clear that Linux is now a clear target for the use of aggressive business tactics. This indicates that Microsoft has no serious interest in modifying their past behaviors. If the Department of Justice allows a precedent to be set now that is as lenient on Microsoft as this settlement is, Microsoft will be less fearful of any actions in the future. This should concern us all. Please remember the opinion of this concerned, voting citizen during your deliberations about the best method to ensure security for the consumers and protection for the values of a market system where competition is encouraged, not suffocated.

Dear Sirs,

I am writing to express my distaste with the proposed US vs. Microsoft settlement. The area that I am most concerned about is the lack of provisions to correct the anti-trust violations that were determined by the U.S. Circuit court in DC. The provisions do not allow third-party developers the same access to the Windows API as currently enjoyed by the Microsoft developers, nor do they restrict Microsoft from unilaterally changing those same API's in such a way that causes other applications to break (such as Samba, Netscape, etc.).

Subject: MICROSOFT SETTLEMENT

I did not write the following letter, but it summarizes my concerns:

"I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded."

From: Tim  
To: Microsoft ATR  
Date: 1/23/02 9:52pm  
Subject: Microsoft Settlement

I am offended and very angry with the proposed final settlement. This settlement does not have any significant affect on Microsoft monopolies. Note that I spelled monopolies plural because Microsoft has a much larger range than most seem to notice. Microsoft has unrestricted and illegal monopolies in the following and other categories: Operating Systems, Desktops, Internet Software (Primarily Browsers), Development Tools (Primarily Microsoft Visual C++), Office Software, Development API's, and Game Development Tools and API's. Most Microsoft products have been PROVEN to be inferior to competition, but because of Microsoft's monopoly (or more accurately: stranglehold) over the the areas of competition. Most consumers do not truly have a choice of products. Because of Microsoft's dictator position most people respect and believe Microsoft without much doubt. Microsoft can easily spread lies about competition. Microsoft's existance has succeeded in damaging the software industry and lowering and destroying standards. Competitors do not have a equal chance for a customer because of Microsoft's marketing power and size. Much of Microsoft's sales in operating systems are in Windows pre-loaded systems. Microsoft has ABSOLUTE and COMPLETE control over pre-loaded operating systems. All stores selling PCs with pre-loaded Operating Systems, offer ONLY PCs with Microsoft Windows pre-loaded, offering a superior competitor NO chance in this area. By loosening Microsoft's control over icons and short-cuts on their OWN operating system, you do not affect their position at all! Microsoft's monopolistic practices include keeping Windows software from existing on other operating systems. One of which is a Game API/SDK called DirectX. This is of a large concern to me being a game developer (Programmer and Designer). Microsoft establishes DirectX (Which is a inferior API) as the only available core API for games and since it is property of Microsoft, Microsoft has control over the games.

Microsoft uses the fact that it has established enough control over the game industry to force DirectX to be used in most games so that they can keep the games from possibly being ran on another operating system. A good addition to a final settlement would be to port DirectX to Linux and possibly other operating systems. It is important that Linux be the primary OS because it is the only fit competitor and the most widely used (except for Windows of course).

A harsh settlement must be purposed for this case!! This current settlement allows Microsoft to continue its monopoly without many problems. If this settlement is not replaced or admented by a harsher settlement, Microsoft could further damage or even destroy the software industry! I am

outraged by the court's failure to care about a proper punishment for such a company/ empire!

Subject: Microsoft Settlement

I have been agahst that the Department of Justice would basically bow to Microsoft yet again in another premature settlement against Federal antitrust law violations. Microsoft is not just another competitor, they are a sledgehammer tightening the vise around the sensitive parts of everybody in the Intel-compatible PC business. It is not possible to punish Microsoft with a "conduct watch" on past findings of this case, because the dynamic and hyper-speed technology has already moved on. Limiting their plugins and browser distribution will not make a difference.

Right now, Microsoft is trying to hijack the Internet. Through their usual use of non-standard "standards" and bogus polls, like the ZDnet England poll on use of Java versus "dot-net" technology preferences in software development, Microsoft is trying to direct businesses to put their order, service, procurement, and customer support standards on "dot-net" proprietary technologies. Technologies that Microsoft will only permit full support on in their own Windows operating systems. Which will kill all trusted transaction systems in Unix and other solid, secure real-time capable operating systems. Only extreme niche products, like the stock industry clearance system with its unique and desperately-real-time crashingly-heavy transaction load will have any traction against Microsoft. In addition to which, Microsoft has finally admitted in a Bill Gates strategy letter in the past week, that they have a wide-open system that is not safe or secure at all, and the company needs to change its primary focus to nailing the barn doors shut to slow down the hacker parade through MS-powered sites.

I believe the only possibility of effective remedy against Microsoft is a structural remedy, and as a resident of Minnesota, I prefer something along the lines of the nine dissident States requiring a breakup of the Microsoft cartel along business lines. If that is not done, as one Tom Toles cartoon had it, Microsoft will have integrated the US government, and it will be an icon in the corner of the startup window.

From: Dan Lowe  
To: Microsoft ATR  
Date: 1/23/02 9:46pm  
Subject: Microsoft Settlement

I'm writing to express my concern about this settlement. It seems to me that under the proposed plan, Microsoft will be given a convenient way into the low-income education market, a market it currently does not control.

Why does the settlement work to actually extend their territory? Isn't part of the problem the existing scope of Microsoft's power? I don't feel it makes sense to reward Microsoft for their behavior. This is sort of like handing a bag full of money to a convicted thief and then handing him the keys to your car. What is going to happen in a few years when the operating system and applications on the computers that these schools are given are hopelessly out of date? Microsoft will have a guaranteed source of income, because these schools will be forced to pay Microsoft's upgrade fees. These schools, by definition, can not afford to do so. This settlement puts money in the hands of Microsoft at the expense of the school districts. If you are not familiar with the proposal that Redhat Software has made, you can read about it before continuing with my letter: <http://www.redhat.com/about/presscenter/2001/press—usschools.html>

I support Redhat's proposal, simply because:

A) it means that more computers can be purchased overall, which is a good thing all around.

B) it means that when it comes time to upgrade the operating systems and applications on these computers, the schools will not be forced to pay Microsoft's upgrade fees. They will be able to upgrade at no cost (other than the cost of having some human being perform the work of upgrading—a cost that would be entailed in the original proposal anyway). Permitting Microsoft to push its way into yet another market, extending the very monopoly power that we seek to control, is an unacceptable solution. (I am not affiliated in any way with Redhat Software, nor do I own any stock in their company or any related company).

Thank you for your attention.

Subject: Microsoft Settlement

To Whom it may concern:

I urge you to take specific action against Microsoft for the laws it has broken and most importantly for the laws it will break if it is not handed a stiff penalty. The proposed settlement is a slap in the face to consumers, the law and Microsoft's competitors by allowing Microsoft to gain further market share in the education market, the one area it does NOT have a monopoly. They should be forced to give their money to a fund that buys Apple or other non-Windows products.

This company has proven it will do whatever it takes to gain market share and sell more products, even if it means taking steps that are anti-competitive and hurtful to the consumer.

Please stop Microsoft's unfair practices ASAP. —

Subject: Microsoft Settlement

I am against the Microsoft settlement. It does not do nearly enough to correct the wrongs that Microsoft has done in the past. Microsoft has benefitted in both earnings and market share from activities that are simply illegal. Much of Microsoft's money was

earned at the direct expense of other companies, many of which are now bankrupt. Any settlement that allows Microsoft to keep the illegally earned portion of its money, and does little to strengthen the other companies that are struggling under the unfair burden of an overly-funded overly-competitive monopoly, cannot be in the public interest.

Sincerely,

Chris Phoenix

From: C Lovejoy

To: Microsoft ATR

Date: 1/23/02 10:00pm

Subject: Microsoft Settlement

Regarding the Microsoft Settlement: As a long time user and early adopter of personal computers, I believe that the Microsoft settlement is fair and we the people, including the US Government should move on to more productive use of tax dollars. Microsoft has clearly demonstrated actions and willingness to do more than required to ensure a competitive environment. The reason Microsoft products have done well is through hard work and constant improvement to win out! For example, let's remember the early spreadsheet "war": First there was VisiCalc—an instant hit in the market Then there was Lotus 123, which took the lead through improved features. Later there was Borland's product that had great graphics and could emulate 123 to make a switch easy (I think Lotus tried the legal means to stop Borland from using 123 menus.) Microsoft tried to beat out Lotus 123 with Excel, but lost on the first try because the product was not attractive to users It took a lot of R&D, and 4 versions before Excel from Microsoft could offer better features. I was a devoted 123 user and thought I would never consider Excel. Eventually the features of Excel got so good I gave it a try and finally converted as it could help me more at work and home projects.

I went through the same experience with the Netscape browser. It took a lot of convincing and product revisions, but I finally found the features in Microsoft Explorer and continued improvements to Explorer better. My decision was based on features, not price (both were free). If Netscape and later AOL/Netscape had put more R&D into the product, it would still be on the top of my list! So please, put all this to one side and move on. Perhaps in the future some other product will win my respect... Until then, I go for the best featured product, regardless of the creator!

From: Kevin Smith

To: Microsoft ATR

Date: 1/23/02 10:01pm

Subject: Microsoft settlement comments

I have been following this case against Microsoft, and have followed various other legal actions against that same company. The proposed settlement is certainly not fair or helpful.

Microsoft has proven repeatedly that they are able and willing to disregard rules and laws. They have broken their own past agreements with the government. They will exploit any loophole, and have nearly infinite money to battle in court. This settlement does nothing to punish Microsoft for their illegal behavior. It does little if anything to prevent future transgressions. It won't really help competitors, nor will it make much difference for consumers. I urge you to go back and create a stronger and more enforceable solution.

Thanks,

#### MTC-00019673

From: (Paul Hounsell)

To: Microsoft ATR

Date: 1/23/02 10:00pm

Subject: Microsoft Settlement

To Whom It May Concern;

While I am not an American citizen I would like to respectfully submit the following for your consideration. Since Microsoft has proprietary file formats for its office documents I am forced to buy a computer with Microsoft products on it if I want to share documents with other businesses. I have no choice really and to make matters worse, once any company upgrades its Microsoft office products, then everybody is forced to do the same just so businesses can continue to share documents. If Microsoft was the Ford motor company, then everybody would have to drive Fords on a Ford-only highway. No other choice allowed. If you choose to drive a GM then it may or may not work on the Ford highway, but none of your cargo would fit inside right, if at all. Also you would not be able to share your cargo with a Ford.

I would like to propose a punishment on Microsoft that would totally open the Windows market for other companies to offer a wide variety of products. The issue is; how are Word, Excel, Power Point, etc documents formatted. If Microsoft were forced to make public the file format structure of its office products then any company would, for example, be able to write a word processor that could read and write Word documents properly and customers would have a choice as to what word processor they use. The same is true for all Microsoft office products.

To be fair the law should be such that any software company that own more than 70% of a market segment should have to do the same. Of course if the software is ONLY used in a national security application then that software should be kept secret.

Thank you for your time

To whom it may concern,  
I have followed this subject with interest from the beginning. Except for Judge Jackson's public statements which were less than jurist prudent his findings are consistent with the evidence presented. Is there no Anti-Trust law enforcement anymore? Heck even a second Federal Judge has struck down part of the settlement agreement which would require Microsoft to "supply" (read low cost advertising) computers to Public schools.

Just remember that while —you— have to take the political heat now. You will also have to —live— in the Society that is saddled with the outcome of this case. Chose carefully, choose wisely. Microsoft has —clearly— conducted business in a predatory fashion and should be required to pay the price.

The price we —all— will pay is only —higher— the longer justice is delayed.

From: Jacob Dorsett Miller  
To: Microsoft ATR  
Date: 1/23/02 10:04pm  
Subject: Dear Sirs;

Dear Sirs;

I am continually dismayed by the lack of consideration for the consumer which is shown by the Microsoft Corporation, while at the same time they blatantly disregard laws of the united states which were designed to protect competition and innovation. In the past when corporations formed monopolies and used them to stifle creative advancement in their industries the Government has stepped in to make sure that the greed of individual corporations does not harm the process of technological progress. However in this case it seems that the greed and disregard of the corporation in question is reflected in the greed and disregard of the administration which has insisted upon supporting the corporation because they themselves are businessmen who wish they were in the position of Microsoft. I fear that this is the beginning of a new period of corporate oppression of the populace. But if my fears come true, unlike the previous centuries, this time the corporations will not only enslave the people through corrupt control of the government and the economy, they will control information and stifle free speech and expression to serve their own greed and ambition. It seems that it may already be too late, and that corporate influence on the government may have already reached the point where the good of the people is never considered at all. I have been forced to use microsoft products before, but I have never installed any of them on my personal machines, nor will I ever if I can help it. Their inferior nature puts at jeopardy national security and the security of everyone's data. They use their position of monopoly to force inferior products down the throats of manufacturers and consumers alike, and yet the government backs down from its challenge to these practices. Apparently money is all that matters to this administration.

Thank you for your time,  
Jacob Miller

From: Monterey Gardiner  
To: Microsoft ATR  
Date: 1/23/02 10:03pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the

operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Monterey Gardiner

Subject: "Microsoft Settlement"

Greetings,

As a user of both Netscape (including the gold edition) and Explorer (I tried 3 revisions of both before deciding which software to use), I experienced more performance to my needs and better service from Microsoft at a much cheaper cost. This in itself makes me believe that Microsoft has a very competitive mentality that has an advantage over their competition. That is a good thing, however, will that help this countries growth/economy through reduction of employment (Netscape's employee's) and/or less competition? The other question that comes to mind is the consumers interest in upgrading if costs increase especially at a time of uncertainties in the economical conditions (iExploer is separated?), hence impacting a larger employment pool. Well, this tells me that compromises are needed to insure the pain of the economic downturn and upsides are equally available, and competition is needed to progress the stress of drive to continue development needed in this country. With those thoughts, I have a hard time buying that AOL/Netscape has right to sue Microsoft for the amount their asking on laws that were not in USA's law or records. Why should Microsoft be punished for Netscape's failure to develop employee commitment to compete (Values)? At the same time, I do have to question whether Microsoft's delay's added to the damage of competition. to increase their own

gains. What a tough decision. Well, I think that there is a compromise somewhere in there. I do hope Netscape gets some compromises (but no advantages over iExplorer, but equal) to software integration into Windows OS agreements and maybe some \$ damages for prolonging this courts development at their competitions costs, but no where near what they're asking. I'm not associated with either Microsoft or AOL/ Netscape. I am not a Lawyer or educated in law, other then common public knowledge. I did feel that maybe my opinion would count. Thanks for reading this far! :-)

Regards,  
Jorge

Subject: comments on MS

Hello-  
I've been around computers for 22 years now, growing up in the days when Microsoft wasn't the giant monopoly it is today. I'm very upset at how little has been done to Microsoft because of it's bullying tactics. It's unfair that a company that claims to innovate, only does it when it's being threatened, and then the monopoly just buys out the competition, then crushes the remains and removes the ideas then claims it as it's own. A perfect example of this is Microsoft buying the SGI code for Open GL. If something isn't done, the way that Microsoft will deal with this is by getting rid of it's Direct X competition (Open GL). This hasn't been the first time this has been done.

I guess what I'm trying to get at here is that Microsoft is a monopoly in the worst way. They are buying their way out of paying the price for breaking the law. It's unfair to other companies trying to make the PC industry the wide, free, and innovated space it was years ago. Not to be so sarcastic, but here is how most people see the way things are going, you can apply this to almost any company:

- 1) It finally goes to court after a year
- 2) Microsoft appeals and tries to delay every court date
- 3) Microsoft is found guilty
- 4) They appeal
- 5) Two years have passed
- 6) More Microsoft products dominate the market
- 7) Microsoft settles with an arbitrator for \$10 million
- 8) company is pissed
- 9) Microsoft wins

Please do something about this. I don't want my future to be dominated by Microsoft. I can live with them, but not with the strangle hold they have currently. I think a firm judgment would be just. It's the right thing to do.

Thank you for allowing our comments to be heard

Anthony Spadaro

To: Microsoft ATR  
Date: 1/23/02 10:04pm  
Subject: Why are we punishing Microsoft for doing a good job?

Why do we want to punish Microsoft for doing a better job than the rest of the competition? Is there no one out there that can compete with better quality products and services? If the government wants to help, don't punish Microsoft. If anything, help out Microsoft's competion. In the long run, the competition will then be better off, which is pretty much all that they want isn't it? Microsoft will get that much better and still beat the competition. How we can criticize Mircsoft making deals with PC manufacturers to sell PC's packaged with Windows. Should we also criticize Coke and Pepsi for making similar deals with fast food chains? I'd like a Coke. Sorry... is Pepsi OK? Isn't this just all cold, hard business competition? I have been using a Microsoft operating system since DOS 2.0, but never felt pressured or forced into it. Until they got a lot of the Windows bugs worked out, I kept using DOS. And I used to wonder why MS-DOS was the main operating system available in stores. It became obvious to me that Microsoft made better business moves than the rest of the competion, plus they supplied an acceptable quality software product that was being continuously improved.

When I began browsing the internet, I started by using Mosaic on Unix, then Netscape on Unix, then Netscape on Windows 3.1. I was a Netscape holdout for a long time, through Windows 95 and then Windows NT 4.0, until Explorer simply got better than Netscape. I didn't feel pressured or forced into making the switch from Netscape to Explorer.

Subject: Microsoft Settlement  
Dear DOJ,

I am writing to express my deep concern with the Microsoft anti-trust case. I am a teacher and academic, with a concentration in internet technology. I wish to add my comment to the great body of criticism already compiled against Microsoft and its practices. Their behavior has been consistent and utter disregard of the welfare of the computer and IT industry, and the consuming public. The US DOJ must not back down from the more aggressive stance it held only 2 years ago. The most recent offers from the DOJ have been spineless, and seemingly politically motivated (with the shift in approach with the entrance of G. Bush).

Again, I recommend that the DOJ pursue the anti-trust issue to the limits of the law and demand that Microsoft be restructured to eliminate the risk of the business exerting its domineering monopoly presence on the rest of the industry. It is bad practice for the market, bad for the consumer, and bad for the development of technology. Monopolies are inherently anti-competitive, and anti-democratic. Technology, once forced under monopoly driven development, will always stunt technological progress. Please push towards a complete punishment and prevention program, allowing even for the break up of Microsoft. Do not accept any settlement from Microsoft, I wouldn't trust them as far as I could throw them.

Your Honor:

I have been a computer user since 1985 and using the Internet since 1993 for both business and pleasure. I have generally been satisfied with Microsoft products as far as operating systems go, beginning with 3.1 through Windows 2000. However, when Windows 95 did not give you an option on whether-or-not you wanted to load the Microsoft Browser and eMail, I was rather upset because I was already very pleased with Netscape Navigator and Communicator. What upset me was that I did not have a choice and had to waste hard disk space on a program that I was never going to use. I searched the Web and found a shareware programs that would allow one to remove most of Microsoft Explorer from my hard disk, saving around 30Mb of hard disk space (Windows 95 and 98 only to the best of my knowlege).

It also seemed that with many other software packages I wanted to use, it was a requirement that I be running Microsoft Explorer. Needless to say, I went with out those programs because I did not want to load up my hard disk with Explorer. Today, I use Window 2000 Professional as my operating system. I have Explorer and Outlook Express loaded only because I had no choice if I wanted to use 2000 as my OS. I am still using Netscape as my browser and email system. (an added feature to using Netscape is that no one seems to target Netscape with virus's—no VBE running in the background). As a person who is in the electronics industry and believes that competition makes products better and more affordable to the masses, I urge you to uphold the AOL suit against Microsoft for their Marketing tactics—that is, eliminating competition by not giving people the opportunity to make a choice of which Internet Browser to use. Thank you for your time in considering this very important decision concerning free trade.

Respectively,  
Bill N.

Subject: Microsoft Settlement

I am not a US citizen, so you may choose to throw this letter out. However, in the case of global countries like Microsoft, decisions the US makes can affect us all. I am not a US citizen, but I am a citizen of the world, and a regular denizen of the Internet. I and my husband are among the people who keep it working—people who really understand the underlying technical issues. People who care about it, and who do the equivalent of repairing the roads and keeping them clean. If the Internet is to remain a truly global entity, and if it is to remain as inexpensively accessible as it currently is, those of us who work on it in our spare time, for free, need to continue to be able to do that.

Our work is against the commercial interests of larger computer software companies, such as Microsoft. As it currently stands, much of the work of maintaining the Internet can be done by people who have never paid for proprietary certification—we have simply gone to our local university and studied computer science. We don't need to have their particular operating system—we can use any operating system we like. We don't need to use their software—we can use any software we like. This freedom makes it possible for us to do our work, without having paid a "tax" to the major companies. And THAT makes it possible for us to do it for free—for ourselves, for charities, for programs that give computers to schools in poor districts. For whatever we wish. Having studied the proposed settlement, and the essays and articles the settlement has inspired, I feel that the settlement does not go far enough. It seems as if Microsoft is being allowed "wiggle room"—that it can squirm out of the prohibitions simply by making extremely minor adjustments—adjustments that make no technical difference, or that make a technical

difference that can be coded around. The major fault appears—from my reading, and I have not studied law—to be in the definitions. It seems that many aspects of the judgement are being defined too narrowly.

As an example:

\* In industry terms an "API"—applications programming interface—is any code library which allows or helps a programmer to interact with any other program. The other program is usually an operating system, but not necessarily. The programmer can be working on anything—an application, a piece of "middleware", or even another aspect of the operating system. \* In the judgement, an "API" is defined as a code library between the Windows operating system and Microsoft middleware. That is a major difference, and it allows Microsoft to decide that code as basic as an installation library is not an API. (By industry definitions, it is.) If Microsoft can limit access to the installation library, it can choose who may and who may not write code for Windows— or at least, who can write code that is automatically installed by a nice, user-friendly system. This is a very significant barrier to entry in the application market. There are many other too-narrow definitions in the currently proposed settlement. A more complete—but not complete—list is available at <http://www.kegel.com/remedy/remedy2.html>

Thank you for listening.  
Jenn V.

Subject: Microsoft Settlement

As an IT professional for the past fifteen years I would like to say that I am opposed to the Proposed Final Judgement (PFJ). The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. As anecdotal evidence of Microsoft's past anti-competitive behavior against a small OS competitor, Be Inc., I present a quote from an article <<http://www.byte.com/documents/s=1115/byt20010824s0001/0827-hacker.html>> by Byte Magazine's Scot Hacker: "so little profit margin in the computer retail business, and with so little to set one brand of computer apart from another, it would seem that out-of-the-box dual-boot capabilities would be a tremendous differentiating factor for hardware vendors. It would seem that there would be financial incentives for computer vendors to be asking Be for 10,000-license deals. These bundling arrangements would be good for Be, good for

OEMs, and good for consumers. In his own column, Gassie has written several times about Microsoft's Windows OEM License and the ways in which it limits the freedoms of PC OEMs. In July 2001, I spoke with Gassie to find out why no dual-boot computers with BeOS or Linux installed alongside Windows can be purchased today. In the 1998–1999 timeframe, ready to prime the pump with its desktop offering, Be offered BeOS for free to any major computer manufacturer willing to preinstall BeOS on machines alongside Windows. Although few in the Be community ever knew about the discussions, Gassie says that Be was engaged in enthusiastic discussions with Dell, Compaq, Micron, and Hitachi. Taken together, preinstallation arrangements with vendors of this magnitude could have had a major impact on the future of Be and BeOS. But of the four, only Hitachi actually shipped a machine with BeOS pre-installed. The rest apparently backed off after a closer reading of the fine print in their Microsoft Windows License agreements. Hitachi did ship a line of machines (the Flora Prius) with BeOS preinstalled, but made changes to the bootloader rendering BeOS invisible to the consumer before shipping. Apparently, Hitachi received a little visit from Microsoft just before shipping the Flora Prius, and were reminded of the terms of the license.

Be was forced to post detailed instructions on their web site explaining to customers how to unhide their hidden BeOS partitions. It is likely that most Flora Prius owners never even saw the BeOS installations to which they were entitled. “Unsurprisingly, Be Inc. has since gone out of business and Microsoft has succeeded in crushing another competitor. If a small company like Be Inc. cannot succeed by giving away its OS for free to OEMs, what chance is there for any future competitors to Microsoft?”

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional “white box” OEMs, if they offer competing products. Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software, ARM-compatible operating systems, game consoles and home entertainment systems. By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

Some of the remedies that various observers, including me, have thought appropriate are for Microsoft's preload agreements to be vacated and new ones prohibited, the opening of Microsoft's office suite data file formats, and the submission of present and future Microsoft networking protocols to an independent open standards

body. Since I cannot address the whole PFJ as I want to be brief and time does not permit, I will state that the PFJ is riddled with loop holes in Microsoft's favor and does nothing to remedy Microsoft's illegal monopolist behavior. As it stands now, the PFJ would not be a slap on the wrist but would grant full permission to Microsoft to do what it's been doing, and more. Furthermore and curiously, the PFJ does not address the ill-gotten gains of Microsoft's past illegal monopolistic activities. How is that possible? Certainly bank robbers would not be given such generosity!

Sincerely concerned,  
Jerold Ponko

From: Mr. Alcourt  
To: Microsoft ATR  
Date: 1/23/02 10:07pm  
Subject: Microsoft Settlement

As a systems administrator I have followed the news on the anti-trust lawsuit against Microsoft with interest. I have been quite dismayed over the proposed settlement which amounts to little more than a political surrender. Microsoft is not having any remedy placed upon it that will have any real impact to prevent further monopoly abuses or even help remedy the abuse that they were found to have committed.

Despite the fact that the breakup of Microsoft was overturned on appeal, the basic findings of fact were upheld, that Microsoft did illegally use their monopoly power to dominate the web browser market. Historically, Microsoft has a long history of monopoly abuses. They are known as the “800 pound gorilla” in the IT world, not by strength of their software, but by strength of their monopoly. The proposed settlement is even more troubling because Microsoft is one of the worst examples of software quality in the market today. They have helped lower the standard in software quality to the point that it is now expected that commercial software be delivered at best only partially usable, and completely unable to be used for even 24 hours without significant problems (similarly to how Windows 3.1 could not be used for such a period of time without problems.) This settlement does nothing to discourage Microsoft from abusing their

monopoly power, and in fact, encourages them to be even more aggressive, knowing that what bears all appearance of a politically ordered settlement will be the dominant rule for dealings with Microsoft for at least the next five years.

I urge you to abandon this proposed settlement and instead seek a solution to the problem of the Microsoft monopoly that does not involve giving Microsoft everything they offered months ago prior to them being found a monopoly that violated anti-trust law.

Mr. Alcourt

Dear Sirs,

I am writing to express my concern at the weakness and inefficacy of the proposed settlement of the government's antitrust lawsuit against Microsoft. As a user both of Microsoft's products and those of its erstwhile competitors like Be and Netscape Communications, I feel strongly that stiff and harsh measures need to be taken against this monopolistic company whose primary business strategy is maintenance of a stranglehold on the American information infrastructure. Remedial action against Microsoft will benefit not just the economy, but clearly our national security requires quality, secure alternatives to Microsoft's shoddy enterprise products. Short of breaking the company apart, which would be the most efficacious solution, strong limitations need to be enacted and enforced to keep other currently viable companies alive against the onslaught of Microsoft's anticompetitive tactics—I am thinking of Sun, Apple, Oracle and others. The DOJ need not worry about disruption of the economy or the information systems of this country. Better technology exists and needs only breathing room to show itself. You have seen the findings of fact—don't make a joke of technology jurisprudence. Put the justice in DOJ, please.

I agree with all of the statements found at: <http://www.kegel.com/remedy/letter.html> Competition is good. Period. Competition should be fostered. Period. Innovation will not be stifled by competition. Period. Anti-trust legislation exists to ensure that there is competition. Period. At a minimum, complete and full disclosure to the public, available without signing or consenting to any restriction on activities enabled as a consequence of, of all Microsoft APIs and source code of any sort for a period of time (I'd recommend 5 years) for all products being sold (including pre-orders), would ensure competition for Microsoft. They're a big company, they can handle it. They may need to refocus on mice and keyboards and

the x-box hardware and technical support contracts as primary sources of revenue, but quite frankly, that's what the a substantial portion of the desktop PC industry has to do (either they're a hardware vendor, or, like Linux based companies, make money off of selling technical support contracts—Microsoft dominates too much of the software industry for any other software companies to be seriously considered as a significant part of the desktop PC industry, when looked at in terms of total revenue generated). Why should Microsoft be treated any different? Certainly not because of it's past crimes (it should suffer some form of punitive damage). Encourage competition. Period.

That's your job as enforcers of Anti-Trust law. Period.

Andrew Chen

Subject: Microsoft Settlement  
Here's my comment:

The proposed settlement is unacceptable. I feel it's proof positive that qthe DOJ has totally caved in to the force of a scurrilous monopoly. The most overt example of this is in Section J 1 of the Prohibited Conduct notes. You know the part, where you explicitly state that Microsoft's conduct regarding authentication and Digital Rights Management will never be subjected to oversight. Security is used as an excuse. There are ways to ensure security while providing oversight; in fact the onus should be on Microsoft to stay secure as their practices are scrutinized. If they aren't willing to come up with an acceptable secure oversight plan, there are thousands of incredibly bright people who can help you establish one, just ask around. Authentication and DRM are going to be the next digital battlegrounds in the endless cockfight we call the Free Market Economy. If this proposed settlement goes through, the world will suffer in ways you simply cannot imagine.

And the rest of the settlement is also unacceptable, though I don't have the time to go into it right now. In closing, do not settle with Microsoft on the currently proposed terms. Either come up with a settlement which fixes the problems or drag them back in court and get a judge to impose a decent remedy. If you do anything less, history will remember your names, and not fondly. KeMpKeS

"The 22 babies born in New York City while the World Trade Center burned will never know what they missed. The last half of the 20th century will seem like a wild party for rich kids, compared to what's coming now. The party's over, folks. The time has come for loyal Americans to Sacrifice. ... Sacrifice. ... Sacrifice."

Subject: Microsoft Settlement

I oppose the Microsoft Settlement because it is unfair to consumers and harms many Microsoft competitors. Please, there are many loopholes that make the proposed final judgment hardly even a slap on the wrist.

As a computer professional, I have seen the diminishing of choice, computer security and quality of software during Microsoft's monopoly. It is time to seriously reign them in.

I suggest forbidding the tying of hardware and software operating systems so a person is not forced to take an unwanted software package when a computer is purchased.

If an information file is produced on a Microsoft product, (spreadsheet, word processor or database) I am almost forced to buy a Microsoft product in order to be able to read this information file. This is fair neither to consumers nor other software vendors. I therefore suggest opening the data interface descriptions so Microsoft software will interoperate with other software vendor's packages. I feel I own information and stories I have written and produced. I feel that that information is being hijacked if it cannot be easily and freely read by others who do not own specific Microsoft programs. Only a monopoly can enforce this situation against my will and the will of my readers. I am afraid that the computer industry will be set back many years if this inadequacy in the proposed settlement is not corrected.

From: Alex Alegado  
To: Microsoft ATR  
Date: 1/23/02 10:09pm  
Subject: Microsoft Settlement

I think the Microsoft settlement is a bad idea and an underhanded way for Microsoft gain marketshare without proper competition. The idea of Microsoft giving away software licenses that are of little real value and old hardware to schools pulls our heart strings but it has, at its core, a cynical motivation: In time these "beneficiaries" will have to upgrade their hardware and their software. Who will be there to sell licenses for new software? Who will reap financial reward far in excess of the financial penalty this settlement represents? Microsoft.

Any settlement must be made to increase competition, not stymie it. A mere \$1 billion dollar "gift" now will turn into a lucrative investment for Microsoft and it will be handed to them on a silver plate. Microsoft needs to suffer some penalty as a monopolist. That penalty should be significant—\$10 billion, not \$1 billion, lifetime licenses on software for all schools—something that really helps schools and hurts Microsoft. A \$1 billion settlement is nothing to a company that make more than that in profit each month and has \$30+ billion in the bank.

Thank you for your attention.

Dear Sirs,

If comments from people outside of the United States carry any weight at all then I would like to register my protest at the slap on the wrist that is being proposed for Microsoft. This company has the most high handed attitude and is, in my opinion, the greatest hinderence to innovation and development of new products in the world today. I have worked in electronics and the computer industry for over 30 years and during that time have seen Microsoft effectivel strangle or take over companies that have any opportunity to oppose them.

In Australia, where I live, the United States is viewed from the perspective of television and news, most of which comes across as extremely negative, probably due in part to not seeing the publicity campaigns that are run within the US, allowing us hopefully, a more subjective view of companies such as Microsoft. We have only the results of using the products and seeing alternatives disappear to judge the effectiveness of this organisation.

Hopefully this may carry some small weight but I seriously doubt it.

Yours Faithfully  
Clive Myers

From: Daryl Nash  
To: Microsoft ATR  
Date: 1/23/02 10:11pm  
Subject: Microsoft settlement

Department of Justice,

I wish to voice my displeasure with the recent settlement proposal in the US v. Microsoft case. Microsoft has been found guilty of monopolistic practices and as such, should have serious penalties imposed upon them in order to discourage such behavior, especially as they expand into other markets such as cable, telecom, ISP, and home entertainment.

Unfortunately, I don't have the solution. Splitting Microsoft into two companies

appears to have been taken off the table as an option, but the punishment given to Microsoft should be sufficient to impede their monopolistic practices, and perhaps monitor the company to help ensure that other companies and the free market are not endangered in the future.

Sincerely,  
Daryl Nash

From: achurch@achurch.org@inetgw  
To: Microsoft ATR  
Date: 1/24/02 12:10pm  
Subject: Microsoft Settlement

To whom it may concern:  
I am a United States citizen, and I am submitting a comment in response to the proposed settlement in the U.S. vs. Microsoft antitrust case in accordance with 15 U.S.C. section 16 (the Tunney Act).

I am strongly opposed to the proposed settlement in the Microsoft antitrust case. The proposed settlement fails to either appropriately redress Microsoft's past illegal acts or prevent Microsoft from repeating or continuing such acts in the future. The majority of the restrictions placed on Microsoft's conduct by Section III, "Prohibited Conduct," are in fact no more restrictive than practices Microsoft has voluntarily adopted recently in response to this case or to public outcry, and are certainly no stronger than one would ordinarily expect a law-abiding company to obey. For example, paragraph III.A.2 of the proposed settlement requires Microsoft to not retaliate against an OEM for "shipping a

Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System"; yet this is behavior expected from any company in a monopoly position, and in fact required by antitrust law—so why is such a clause stated in the proposed settlement?

Furthermore, the proposed settlement allows Microsoft extraordinary latitude in its implementation. For example, section VI subsection U, which defines "Windows Operating System Product", states that "[t]he software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion." Microsoft could—and its past actions suggest that it likely would—use this clause to arbitrarily declare certain software to be part of or not be part of a particular Windows product, to its own benefit; and even if claims of improper behavior were raised, they would only start another long round of litigation, and the proposed settlement could well expire before the claims were finally resolved. Another section which merits concerns is section III subsection J, which allows Microsoft to (1) avoid disclosure of any information it arbitrarily claims "would compromise the security of . . . encryption or authentication systems" and (2) effectively avoid disclosure of—any—information on such systems to individual researchers or other groups which do not meet Microsoft's "standards . . . for certifying the authenticity and viability of [their] business[es]". Especially with respect to (1), Microsoft could easily claim that any information it does not want to release would "compromise the security" of such systems, and third parties would have no way to verify the truth of the claim because they would not have access to the information.

Most importantly, however, I am appalled at the lack of any punitive action in the settlement. One of the prime tenets of any judicial system, or indeed any system with rules, is that a violation of the rules (laws) results in punishment: a punitive action, above and beyond a simple requirement to obey the rules in the future, which costs the transgressor more than any benefit they may have gained from their violations. In the system of rules which is United States law, such punishment may take the form of monetary fines, imprisonment, or other penalties; however, the proposed settlement inexplicably fails to include any penalties or even restraints on conduct other than requiring Microsoft to obey the law—which it should be doing in the first place! At most, the imposition of a Technical Committee and Microsoft Internal Compliance Officer could be considered "penalties" in the sense that law-abiding companies are not subject to such oversight, but as the remainder of the settlement does not impose any additional penalties, this could hardly be considered "punishment" in the ordinary sense. Since Microsoft has already been found to have broken the law, any final judgement in this case must include some form of actual punishment greater in degree than Microsoft's gains from its illegal activities, whether that punishment be fines, loss of intellectual property (for example, requiring Microsoft to place the source code to its

Windows operating system or other products in the public domain), or some other action. The lack of such a punishment should by itself be sufficient reason to reject the proposed settlement.

While an amicable settlement between both parties is a desirable resolution to any court case, the simple fact that a settlement was reached should not—*ipso facto*—override concerns about the efficacy of that settlement, particularly in a case such as this which concerns the entire American people. The proposed settlement is completely ineffective at either providing redress for Microsoft's past illegal acts or preventing a repetition of such acts in the future, and on those grounds I believe it should be rejected by the Court.

Sincerely,  
Andrew M. Church

Will this even be read? Does The Tunney Act matter anymore? Each day that this case lingers on, I lose more and more faith in my government. I work hard, and I'm a contributing member in my community. I'm a good citizen. I have no words, other than please do the right thing. Please punish Microsoft. They've hurt many people over the years. They've hurt a lot of companies that had great technological advances to share with us. But we'll never see what those companies could've offered, and we'll never know what could've been. Who knows what great technological advancement could've helped others and contributed to our great nation. Not us. Microsoft crushed anyone who got in their way. Oh well, I know this does no good. Thanks for letting me vent. Enjoy all the money that microsoft is giving ya while you can. The lawyers, judges, press; everyone is getting something from them except the people they hurt. Please note that all great empires do eventually come to an end.

Thanks,  
Pete Aven  
510-409-2656

(I realize you probably don't care, but in case you do, I just thought my full name and a phone number makes me seem more real. Your probably getting all sorts of complaints from spunkbuster429@aol.com and all. Good luck sorting through this drama. How much are you getting paid? Remember to thank microsoft at the end of the day. Without the case you wouldn't have to read this...

From: Michael P. Conlon  
 To: Microsoft ATR  
 Date: 1/23/02 10:12pm  
 Subject: Opposition to proposed settlement  
 Sirs/Madams:

I wish to add my personal objection to the proposed settlement in the Microsoft antitrust case. Please note that, while I am a professor of computer science at Slippery Rock University of Pennsylvania, I speak for only myself.

I hold a Ph.D. degree in computer engineering. I started activity in the computing field before there was a Microsoft. I have been involved in the personal computer field since the time when Microsoft itself started, when the only personal computers were ones you had to build yourself. I have seen Microsoft's hegemony grow, and I have seen several good, innovative companies crushed under Microsoft's monopoly.

I also have been active on the Internet since 1985, well before Microsoft discovered it. I have seen it continually grow, and with it I have seen the growth of the institutions and individuals who have used it. Unlike Microsoft and the software and protocols it has promoted, the protocols of the Internet are open and public, and this openness has been the key to its success. I am particularly concerned that an unpunished, unleashed Microsoft might be able to "proprietaryize" the Internet, destroying the wonderful engine of creative economic, educational, civic, and entertainment activity that it is. The basic problem I see with the proposed settlement is that it fixes few of the real problems. It does not punish Microsoft for the evil they have done. It does not create a competitive market for operating systems. It does not create a competitive market for office applications. It allows for Microsoft to hide virtually any protocol from public knowledge on the basis of "security." (Any real security expert will tell you that the effectiveness of a security scheme must reside, not in the secrecy of the method, but in its effectiveness, so allowing Microsoft to keep these kinds of things secret will not add measurably to the security of Microsoft's systems. It will merely make it harder for others to compete.) It attempts to give some rights to specifications of network protocols to commercial enterprises, but fails to give the same rights to the public, and particularly to the people who are developing software out of love, e.g., the people developing the Linux operating system and other "open source" projects.

Here are some remedies I would suggest: 1) a large fine, (50% of their monopoly-gained cash reserves would be appropriate) payable in cash, not software, which would serve to further extend the monopoly. Give the money to schools and charities. 2) Prohibit Microsoft from restricting the installation of MS software on OEM computers in any way. Require that consumers be provided with full-featured installation disks. 3) It is now virtually impossible to purchase a computer without paying for a Microsoft operating system. This promotes monopoly. Microsoft must be prohibited from engaging in contracts with OEM's that encourage this

practice. 4) Require that all network protocols and file formats, particularly Word's .doc format and Excel's .xls format, and Windows Networking authentication protocols, be published and submitted to a recognized standards body such as ANSI, IEEE, or IETF. 5) Prohibit Microsoft from buying other software companies for ten years. 6) In lieu of the previous, since some of them might be difficult to enforce, break Microsoft into at least three operating systems companies and three applications companies, each with rights to the source code of, at least, the major products in their area. Minor products (e.g., Visio, Flight Simulator) may be parceled out.

Respectfully submitted,  
 Michael P. Conlon, Ph.D. Closed Source Software

I highly oppose the proposed Microsoft-DOJ settlement. It is my right, according to the Tunney Act, to voice my opinion that the proposed settlement does a very poor job to the consumers, as well as businesses, of the American economy. If you don't see this injustice.....HOW ARE YOU A TRUE ATTORNEY?!!

Subject: I believe the proposed settlement in the Microsoft vs DOJ anti-trust case

I believe the proposed settlement in the Microsoft vs DOJ anti-trust case is impotent in the disintegration of Microsoft's festering monopoly of the consumer operating system market.

Specifically, the proposed settlement offers weak measures ensuring that Microsoft does not continue to use practices that act as a barrier of entry to competitors. Please review these arguments for further proofs: <http://www.kegel.com/remedy/remedy2.html>

Thank you for listening,  
 Andrew Spencer

A devoted, concerned U.S. citizen and computer user.

I write to provide you with some commentary as permitted under the Tunney Act on the proposed Microsoft settlement. I will keep it short. The proposed settlement is totally unacceptable.

Microsoft has been found guilty of operating an illegal monopoly. This has been upheld upon appeal. And yet, the proposed settlement does remarkably little to impact the way Microsoft does business. And it does even less (zero) in assessing penalties for past wrongdoing. The settlement is little more than a "go and sin no more" response.

The proposed remedies are inadequate and will not adversely impact Microsoft's monopoly. For example, judgment remedies are specific to companies in commerce; that is, companies that operate for a profit. Ironically, the biggest threat to Microsoft on the PC platform today is Linux. Linux is a non-commercial product. As such, Linux developers have no rights under the proposed settlement.

Section III(J)(2) is actually against not-for-profits. Specifically, Microsoft need not describe nor license API, documentation, or communications protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "...(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..." That Microsoft is able to set such criteria is remarkable...and remarkably bad.

Similarly, Section III(D) speaks to disclosure of the APIs for non-Microsoft middleware. The parties to which Microsoft agrees to disclose these APIs—APIs which are necessary to allow a program to interoperate with Windows—are explicitly commercial entities.

My suggestions:

1) APIs enabling non-Microsoft programs and operating systems to properly interact with the Windows operating system and middleware products should be made available to any and all parties that create such programs. Microsoft should have no veto power in this.

2) Microsoft should release the specifications of its applications' file formats. Microsoft should not be able to constrain a consumer to using its products in order for that consumer to get to his own data. File specifications should be public. Microsoft would have to compete on the quality of its products (e.g., Word, Excel) rather than on the ability to hide the documents behind proprietary file formats.

3) Microsoft's tendency to "embrace and extend" should be forcefully curbed. Microsoft has, many times in the past, modified industry standards in order to make proprietary versions for its products that, due to Microsoft's monopoly power, end up locking out competition. They have done so in computer languages such as Java (see "Microsoft's holy war on Java" <http://news.com.com/2009-1001-215854.html?legacy=cnet>). They have done so with open security protocols such as Kerberos (see "Kerberos made to heel" <http://zdnet.com.com/2100-11-502019.html?legacy=zdnm>). And they do so with internet protocols and HTML extensions.

As recently as October 2001, Microsoft's web portal, MSN.com, went so far as to disallow non-Microsoft browsers such as Opera, Mozilla, Amaya, Konqueror, and some version of Netscape from even viewing the site. Instead, visitors were greeted with a message that recommended that people "upgrade to Internet Explorer" (see "MSN.com shuts out non-Microsoft browsers" <http://news.com.com/2100-1023-274944.html?legacy=cnet>).

Microsoft seeks out promising or threatening technologies, incorporates them, and claims to make them better. But "better" ultimately means they only work on the Microsoft Windows platform. When we are dealing with standards that impact computer-to-computer communication and interaction—most notably, the internet, itself—Microsoft must not be allowed to redefine and own those standards.

4) Allow computer buyers to return Windows for a refund. Windows is included with nearly every desktop PC sold today, whether a user needs or wants it. It should be possible for a person to buy the computer but opt out of the operating system. Microsoft should institute a rebate mechanism so that a person who needs a new computer to run Linux or BSD or other operating system is not forced to pay a "Microsoft tax." And, in these days of low computer prices, the contribution of this tax to the total cost of the system is not insignificant. An alternative would be to say that manufacturers should offer PCs without operating systems; however, Microsoft is the party under the jurisdiction of the court.

5) Assess a cash penalty on Microsoft in correct proportion to the damages that resulted out of its illegal monopoly. Microsoft has benefited handsomely from its wrongdoing. The proposed settlement does not speak to this at all. The court should.

Thank you for my opportunity to comment.

Subject: Microsoft Settlement

I regard the Microsoft Corporation to be the single greatest threat to the future of personal computing and to the freedom to use the Internet as one sees fit. In my opinion, Microsoft deliberately engineers their

software to be incompatible with existing and proposed standards in order to create and maintain a "Microsoft world", in which one is forced to use Microsoft products and methodologies when working with computers. If one seeks alternatives, one finds few of them because companies are unwilling to invest in providing support for alternatives, given Microsoft's current domination of the PC OS (operating system) market.

The newspapers reported some time ago the demand that Microsoft be required to support alternative platforms as part of the separate settlement with the nine states that did not settle along with the government. I agree with this requirement—I think every piece of application software provided by Microsoft should be made available to run on the Unix platform as well. This is to include Apple's OS X operating system, Linux and FreeBSD, if not also Sun's Solaris, HP's HP/UX and others. Microsoft perceives Linux as the single largest threat to its absolute domination of the PC market, as well it should, inasmuch as Linux is more stable and secure than Microsoft Windows.

Microsoft wants absolutely everyone to use its products to do useful work. Microsoft, however, is not competent to produce adequate-quality software for use on the Internet. Consider the issue of computer viruses. Recall the "Melissa" virus and numbers of other viruses that have arrived on the Internet as of late. For "Melissa" I recall a figure of \$11 billion in damages due to lost productivity and data worldwide. The fact is that Microsoft allowed this to occur due to negligence—Unix systems were not affected, and in fact Unix systems are not subject to "viruses" as people commonly think of them—these viruses are targeted at security holes and design flaws in the Microsoft operating systems and application software. Microsoft never offered any compensation for these losses, never apologized, and never admitted that encouraging people to continue to use their software puts people at risk for further such damage. The entire "antivirus" software industry was developed around the susceptibility of Microsoft software to problems of this kind. I think if any entity can force people to use its products and methods, it is equally responsible to insure that people not only are not harmed, but are actively benefitted through that use.

Microsoft's Public Relations strategy appears to depend on the perception many people have that there is no viable alternative to Microsoft software, and that only Microsoft knows how to produce software to perform useful work on computers. I believe it has been thoroughly established in the concluded antitrust case that Microsoft expends a great deal of attention and effort in ensuring that people are NOT afforded alternatives—competitors are bought out or threatened with lethal market tactics if they try to proceed independently from Microsoft. It is Microsoft's stated goal to replace Unix with Windows wherever possible, as quickly as possible, despite the fact that the Unix operating system is superior in every respect. Unix made the Internet possible in the first place; Microsoft was years late in recognizing the value of the Internet and was years late

in providing a means for people to use their computers to access it. Microsoft is willing to work to destroy a work of great and recognized value because it is a threat to Microsoft's "profits", wherein presumably Microsoft was always entitled to make money from anyone's use of a PC for any reason and these "other" systems are "interfering" with that goal and the public at large is expected to acquiesce to Microsoft's self-assumed prerogatives even if the public is then deprived of access to superior products. I have heard, though I find it difficult to believe, that Microsoft announced intentions to "modify TCP/IP to No one man or corporation is entitled to arrogate unto itself the power and authority to dictate standards and practices in the personal computing or Internet arenas. This is, however, Microsoft's goal.

The Microsoft Corporation could completely and totally vanish tomorrow, and while there would certainly be disruptions in the PC and software industries, in fact nothing much would change and dozens of companies would have replacement products in the market within six months. In fact, development monies would be freed up and people could enter the market to produce non-Microsoft-based software for profit without fear of being crushed by a large malevolent corporation which operates as if it is the only valid player in the software market.

Microsoft's claims that their design requires the bundling of portions of application package features into the operating system are false. (e.g. the claim that Internet Explorer is an integral portion of the operating system and cannot be removed.) I completed coursework for a Master's degree in Computer Science at Rensselaer Polytechnic Institute in 1980. Microsoft's claims are justified only to the extent that they have deliberately engineered their operating systems to support those claims. A graduate student who produced operating system designs similar to Microsoft's would have failed their courses in 1980 and thereafter after. The poor security and performance of Microsoft's operating systems are direct consequences of their poor design "methodologies", if Microsoft even thinks in such terms.

I have no doubt that if Linux were something Microsoft could "buy", it would buy it to put it out of business, or it would be stripped and hobbled and be sold for hundreds of dollars, in contrast to Linux's open-source origins.

I think AOL Time Warner has done an awful job of maintaining Netscape versus Internet Explorer—AOL could have done much more with Netscape and should have. But in my job as the operator of a computer store and ISP since 1995, I have witnessed the rise of Netscape and watched it replaced by Internet Explorer step-by-step in exactly the same fashion as other common software—word processors (Word), spreadsheets (Excel), presentation software (Powerpoint) who can name competing products in these areas? Fewer and fewer people as time goes by. I am convinced that Microsoft engineers their websites to cause problems for non-Microsoft browsers, or

perhaps specifically for Netscape. I try to access a Microsoft or Microsoft-driven website with the Netscape browser only to have the access fail on the first attempt but SUCCEED on the next attempt. How many people would DISbelieve the first failure and try again? How many people would blame the Netscape browser for the problem and switch to Internet Explorer instead?

The HTTP protocol is an international standard produced by a standards body. Yet I encounter numbers of websites driven by Microsoft software that CAN ONLY BE ACCESSED USING INTERNET EXPLORER because site designers are using Microsoft "standard features" that are not "standards" at all, but proprietary extensions introduced by Microsoft explicitly to raise barriers to the use of non-Microsoft products. Microsoft encourages people to use Microsoft "methodologies" without warning people that to do so makes their work unusable by users of non-Microsoft products. Complaints to companies about their implicit forcing of the use of the Internet Explorer browser often go ignored on the notion that "everybody uses Internet Explorer" (so why should we rewrite our website to suit an open international STANDARD when it is so easy to use what Microsoft gives us to use to write our website?)

Any corporation so damaging of whole industries and so bent on domination and control should be punished and put in its place. If the order to split the company into an operating systems company and an applications software company had gone through, presumably the applications company would begin producing software for Linux and FreeBSD, and the operating systems company would go out of business in several years as the alternatives were seen to be superior, as they are. Nobody would want to support an operating system (Windows) that is so poorly designed and which crashes and hangs and behaves so oddly and poorly and which is as expensive to maintain as Windows. Nobody would, but they are forced to do so as things stand now.

If we can't have that, I do certainly agree that Microsoft should be required to make its application software available to run on Linux and FreeBSD, and I agree that the Internet Explorer application should be disintegrated from Windows and spun off into a separate company. Microsoft should be forced to compete on a level playing field and to earn its money honestly. No offers of cash grants or "free software to schools" should be accepted whatsoever—the Microsoft corporation must be structurally modified as much as possible to prevent it from further abusing its current dominance in the industry. Microsoft should not be allowed to bundle applications with its operating system—the applications should be offered for sale on the open market, just as all Microsoft's competitors have to do with their products.

It's worth noting, in closing, that Judge Jackson wrote as part of his opinion that Microsoft was charging TWICE as much for its operating system software as was warranted. No wonder Microsoft can afford to bundle "free" software with the OS—it was already paid for by the consumer

without their consent! And we have of course never heard that Microsoft was considering rebates or refunds based on its overcharges.

No judgement could be too harsh for Microsoft. Tens of millions of virus-infected PCs and millions of hours and dollars of wasted time and lost productivity testify to that. I will not think the world is safe for my industry as long as Microsoft can unilaterally engineer any part of it. I would as soon see Microsoft out of business entirely, but short of that it should be reduced to what it does reasonably well writing office software, and that's all. Its highly-paid staff of intelligent software professionals should be returned to the labor pool to start doing something truly useful with open-source technologies.

Considering the vast amounts of money that was made by Microsoft while using these illegal tactics, I believe that the settlement offer is unreasonable. It should be much higher than the proposed amount, perhaps even 10 times that amount, and a good portion of it should go back to those whom Microsoft hurt with these tactics, namely the consumers.

Date: 1/23/02 10:16pm  
Subject: Microsoft Settlement

To whom it may concern,

The proposed settlement with Microsoft provides no credible relief from Microsoft's anti-competitive practices. The newest release of the Windows operating system violates the terms of earlier agreements with the Department of Justice, also.

Microsoft and its allies have damaged and defeated any credible attempt at competition in the desktop operating system market. Through other unfair practices progress and growth of the computer software industry has been severely stunted with significant negative effects on the US economy. Microsoft has become too powerful and is clearly too unscrupulous to be rendered harmless as long as it stays a single company. Not only would a broken up Microsoft relieve the problem to our industry, it would probably reward Microsoft stockholders with increased value. It could be a win-win. The current proposed settlement is at best win-lose—a win for Bill Gates and a loss to the American people whose rights are entrusted to the care of the US Department of Justice.

Sincerely,

From: Trent Larson  
To: Microsoft ATR  
Date: 1/23/02 10:17pm  
Subject: Microsoft Settlement

I would just like to say that Microsoft has put way too much control into their new Operating system windows XP. First, many of the multimedia utilities like Media player and internet explorer cannot be uninstalled by the user if they wish to use another program. Furthermore, MS bugs customers to open up a passport account numerous times when installing the OS that the individual almost feels like they have to sign up. Microsoft can clearly be shown that they are using their unfair monopoly position to further move into other software applications. Without action against Microsoft, we will have even less software companies in other areas other than Operating systems. Our choices for good performing software will go down and we will be forced to pay more for software that is already being shown to have many security flaws. Way back when Bill Gates said that Microsoft would never charge for internet explorer and then proceeded to build it into the operating system with no uninstal, it became very apparent that MS had become a abusive monopoly. It can be also pointed out that Microsoft is guilty of pressuring oem vendors to always bundle MS operating systems with new computers or face higher prices etc...

Currently, AOL is suing MS for what they did to Netscape. I strongly agree that Netscape never got justice for what happened. I do support AOL in its fight for the abuses against Netscape and I feel that at the very least, every MS operating system should have a complete uninstal for internet explorer.

Further, I feel that IE should not even be installed by default and that Netscape should also be bundled with windows as part of a punishment for the settlement against Microsoft.

It is not that I am against monopolies. AT&T the old Ma Bell was a good monopoly and I feel that current phone companies provide us with service far less then the old Ma Bell. However, it was a monopoly and had to be broken up. Ma bell was not abusive. Microsoft is abusive with its powers. They did not learn anything from the lawsuits against them. They are more arrogant then ever and show no respect for the courts or justice. It is obvious that Mr. Gates and MS feel they can beat anybody or any court with their lawyers and money. Remember, in the original case MS even was shown to lie to try to protect their monopoly position so there really needs to be strong actions taken. Already the lack of

competition is bringing us weak products with poor security. MS products are the most memory intensive and processor hungry programs with numerous security holes. Fair competition would no doubt bring us better, faster and more secure programs. I support fully any action against Microsoft's unfair monopoly position to allow fair competition to generate better software for everyone to enjoy. Thank you for reading this comment..

Subject: Microsoft Settlement

I am opposed to the proposed antitrust settlement against Microsoft. I believe the proposed settlement will allow Microsoft to continue practices which have been proven anticompetitive, and likely give them an even stronger hold on the desktop PC software market. This is unfair for competition. More than that, it is unfair for consumers who are left with no reasonable choice but to purchase Microsoft products. Please modify this settlement in a way that will benefit consumers more than it will benefit Microsoft.

From: Joshua Smith  
To: Microsoft ATR  
Date: 1/23/02 10:18pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I thought it would be appropriate for me to comment on the Microsoft Settlement that has been proposed. I disagree on many points with the Settlement. I have seen many holes pointed out in it, and understand what harm Microsoft has done to competition in many software products, from Operating Systems to Internet browsers to media players.

I am a computer science student (Junior) at Michigan State University. I understand many of the technical details (at least on the surface), and I have used many of Microsoft's competitors' products, including Netscape (6.2 & Mozilla 9.x), Winamp, RealPlayer, DivX's "the Playa", and even the Linux operating system.

I understand that Microsoft uses many secret APIs, and that the PFJ doesn't force Microsoft to publish these APIs, other than the ones that allow interaction between the Microsoft Windows OS and it's "middleware". It would be more appropriate to ensure that Microsoft shared all of the APIs, including the ones that allowed interaction between Windows and it's non-middleware products. I understand how hard it is to make a program like WINE work, an emulator designed to run Windows programs in Linux, and it would be much easier if all of the Windows APIs were published.

Microsoft Middleware must be allowed to be replaced under any installation of a Microsoft Windows product. I don't like the

idea of a great program being lost on the wayside because companies are punished for including it alongside microsoft products. I know that Microsoft purposely bundles its Internet browser with its operating system so that it could gain a monopoly in the browser market. It is not hard to imagine a future where Microsoft media player, instant messenger, mail program, and office software are the default standard, because they come pre-packaged, while other, better, more secure alternatives waste and fail because they are unable to compete with the defaults forced on companies by MS. I know quite a few people who know no other web browser, mail program, or office suite but Microsoft's.

That isn't competition, that is domination, monopoly, and suffocation. Are there better mail programs, that could be included by OEM's? Given the tremendous growth in mailing viruses, I think so. Are there better web browsers? Perhaps, but it may only be a matter of personal preference. Better office suites? Again, it may only be preference, but by price/usefulness there are many superior competitors that are unpopular merely because they are pushed away by microsoft, or because Microsoft's programs are the default standard. Is Office a middleware product? The answer is yes, many programs run on top of Outlook, Word, and Access.

There are too many more problems to list here. A rewrite is in order, in my opinion, and a miscarriage of justice is possible. The PFJ is not even as strong at definitions as the Finding of Fact, the DOJ seems to have lessened its punishment of Microsoft, perhaps because of trying economic times. I say, do the right thing, punish the lawbreaker, and create competition. Good things might happen.

Subject: Microsoft case  
Hi

I wish this case to be settled fair. You see Microsoft can see on your harddrive and can tell what programs you have, so they can tell what programs still have part of the market under Windows and that is bad. They can put man power to target them. I could go on for hours but your job is stop letting them looking on peoples harddrive. Let third party companys have a chance to put their product out there. AOL needs to be given even footing with Microsoft. Windows must be put basically in to a position not to be able to read the programs installed on your computer. Xp could be the end of lots of companies if it isn't limited. I hope Microsoft practices will be stoped or we will be paying large prices for operating systems and companies like SUN , AOL and other will fade away. Thank you for your time.

Subject: Microsoft Settlement

I do not think the "Microsoft settlement" goes far enough to prevent Microsoft from

continuing and extending its monopolistic practices. Too much is left up to Microsoft's discretion, interpretation, and definition. The settlement needs to more specifically and rigorously define what it covers. The law generally does not allow convicted bank robbers to define what is a bank, or convicted rapists to define what constitutes rape; why should Microsoft, a convicted monopolistic company, be allowed to act in certain ways based upon definitions that the settlement says they alone may create, such as what constitutes Microsoft middleware or what is part of the Microsoft Windows operating system? What this settlement basically says is "Microsoft is prohibited from acting in ways that Microsoft deems monopolistic and unfair." Correct me if I'm wrong, but wasn't the company convicted because of actions it claimed were NOT monopolistic and unfair? In my opinion, this settlement gives Microsoft carte blanche to continue business as usual, and therefore does not serve the cause of justice.

**MTC-00019726**

From: Fred Hamilton  
To: Microsoft ATR  
Date: 1/23/02 10:17pm  
Subject: Microsoft Settlement

Hello,  
Fir the record, I'm extremely disappointed with the Microsoft settlement. I feel like the DOJ has caved in, for whatever reasons, to a monopolist. Microsoft's unchallenged strength and domination of computing has caused the following business and societal ills:

Loss of Innovation: Innovative companies with products far superior to Microsoft's have been driven out of business by Microsoft's deep pockets and uncompetitive practices. For example, Be. The BeOS was better in almost every way to Windows, but Microsoft used their clout to prevent any PC manufacturer from even offering it as an OPTION. Needless to say, Netscape is a shell of its former self because Microsoft could spend millions (or billions) developing Internet Explorer and giving it away until Netscape lost.

Privatization of Open Standards: Microsoft is trying to co-opt the internet by not being compatible with open standards (HTML, SHTML, Java, etc.) and using its enormous clout to force people to move to Microsoft-flavored versions of these standards. Web sites must support the Microsoft-flavored versions, since Microsoft's Internet explorer is used by something like 90% of the Internet. This means anyone trying to compete with Microsoft in web browsing or

similar tools is chasing a moving target. Since NO COMPANY ON EARTH has enough money to chase Microsoft, the competition dies or never starts in the first place. The internet is based on open standards—allowing Microsoft to continue to do this means giving them almost complete control over the most important communication and data transfer technology in history. Talk about monopolies...

Security Vulnerabilities: I don't have the exact number, but apparently computer viruses have cost businesses around the world (but primarily in the US) BILLIONS of dollars. Now, if you look at the big viruses that have made the news and cost the most money, they were all spread by Microsoft products! Ah, but if Microsoft has 90% market share, that's too be expected, right? Perhaps Microsoft can be forgiven for the first few, but Microsoft has consistently NOT fixed or changed code in Microsoft Outlook and Internet Explorer and IIS that is easily exploited by any hacker with a mind to.

There are a lot of other issues, but these are the three big ones and I don't want to make a career out of writing this email. But to summarize: You are letting a monopolist responsible for uncompetitively and illegally killing competition, stifling innovation, co-opting the most important technology on Earth, and being (mostly) directly responsible for BILLIONS of dollars lost due to viruses and security attacks, off the hook with a little slap on the cheek.

Even a very pro-business administration such as yours should be able to see the danger of letting this monster grow unchecked. Please reconsider how you are handling this case.

Best regards,

Fred

Subject: Microsoft Settlement

I believe that the currently "Proposed Final Judgment in United States v. Microsoft" is inadequate to end Microsoft's abusive monopoly on desktop computing. I am AGAINST it.

When I was a young boy I was taught that the US justice system was fair and sure. If you were caught doing something wrong, you could expect to be punished. Well, Microsoft has done something wrong, and they continue to do so. This is in the courts own finding of facts. They have created a situation

where competition is bought up or ruthlessly destroyed. The settlement proposed allows many exclusionary practices, and thus the monopoly, to continue.

Also, I am deeply concerned that if this monopoly is allowed to continue that America's security is at risk. This is because there is only one target now on the desktop, Microsoft. And they have little incentive to improve their products (witness the many viruses successfully designed and deployed against Microsoft products).

I have 30 years of experience as an engineer, 20 of these are in software engineering. I routinely use Linux and Windows (NT, 98, 95) on desktop computers. Linux and it's applications are stable, and excellent. Windows and its applications fail on a regular basis. Something is badly out of balance if software that is free (\$0 acquisition cost) and of far better quality can't achieve widespread distribution (compete in the industry).

The root of Microsoft's monopoly is their ability to hold your data hostage via proprietary formats. These formats are changed as new software versions are brought out in ways which (greatly) encourage upgrading to the latest Microsoft software.

I would end the monopoly by liberating the world's data. Require that Microsoft publish their file formats, and live by them. This will allow other companies, and the free software world, to compete with Microsoft by creating more reliable and secure software which can read and write so called "standard" Microsoft formats.

Thank you for your consideration in this matter...

Subject: Microsoft attack by AOL

As an investor in AOL I can only say that I am utterly disgusted with AOL/Netscape concerning this obscene lawsuit. If the AOL people have nothing better to do with their management time, then I see not much of a future for them.

As you must know the Microsoft Explorer software is so much superior to the abortions dreamed up by Netscape that one would not touch the Netscape product with a ten foot pole. Procomp should be equally ashamed.

Subject: Microsoft Settlement

I would like to voice my opposition to the proposed Microsoft settlement. The proposed settlement does not penalize Microsoft for its history of \*punishing\* computer manufacturers for selling PCs containing software or Operating Systems made by competitors of Microsoft. Such actions by Microsoft are the antithesis of free trade. The proposed settlement also does not prevent Microsoft from partaking in this type of cutthroat behavior in the future. It also does not prevent Microsoft from—intentionally—building into its applications incompatibilities in order to keep them from running on competing operating systems, and intentionally inserting incompatibilities into user files created in Microsoft applications so that such files cannot be used in applications created by competing software companies.

A. Walter

From: James Powell  
To: Microsoft ATR  
Date: 1/23/02 10:25pm  
Subject: Re: U.S. v. Microsoft: Settlement Information

Dear D.O.J.,

I would like to submit my comments about the Proposed Final Judgment. As recommended by the D.O.J., I have read the original Complaint (5/18/1998), the Stipulation and Revised Proposed Final Judgment (11/06/2001) and the Competitive

Impact Statement (11/15/2001). I am unable to believe that the remedies in the PFJ will prevent Microsoft from maintaining its operating system monopoly. The PFJ appears to me to have no teeth. To me, the heart of the issue is Microsoft's ability to determine de-facto standards. These standards include word processing and spreadsheet file formats, which Microsoft, under the PFJ, retains the ability to manipulate in secrecy in order to block competition. These standards also include the interfaces used by Microsoft products such as Word and Excel to carry out their functions. As shown in the courts proceedings, Microsoft has repeatedly and secretly changed these APIs in order to disable or cause malfunctions in competing software. The PFJ does require that Microsoft make some APIs public, but the definition of API in the PFJ is so limited that there can be no expectation that Microsoft will not continue to cripple competitors using this dirty trick.

I think that it's unfortunate that patents covering the Windows API are allowed to remain undocumented. This prevents potential competitors from implementing products which are compatible with the de-facto standard PC operating system API without risking patent infringement. The patents are especially a problem because it is well documented that the U.S. Patent and Trademark Office has issued many software patents without adequately determining the novelty of the proposed invention. Please read "Intellectual Improprieties" in Scientific American magazine's February 2002 issue, p. 34 for more information about this problem.

Besides the issue of standards, there is the question of Microsoft's practice of using OEM licensing agreements to suppress competition. This section of the PFJ is apparently very weak by design. It contains language that actually encourages Microsoft to increase its market share by allowing the company, which is guilty of engaging in illegal practices to suppress competition, to go ahead and dictate different licensing terms to smaller OEMs—precisely the OEMs who are most likely to encourage competition with Microsoft (Section III.B), and by permitting Microsoft to retaliate against any OEM who ships computers containing no Microsoft operating system (Section III.A.2). Considering these problems, I feel that the the Proposed Final Judgement as written will have very little effect on Microsoft and I am certain that significant anticompetitive practices will continue at the company. The Proposed Final Judgement is not in the public interest, and it should not be adopted without addressing these issues. As a personal amendment, I am a software developer. I started developing software in 1982 at the age of 13. I worked in computer stores for four years, from 1984 to 1987, and I have been a professional software developer since 1988 starting as a student in college where I worked for the University of Chicago's Graduate School of Business. The computer industry in the 1980s was a wonderful market, full of innovation. Spreadsheets, word processors, desktop publishing programs, games, and operating systems all enjoyed significant competition and the consumer benefited from a bounty of

choice and variety. Standards such as SGML (the basis of HTML), ANSI C, and POSIX were refined and adopted and the end user benefited from consistent implementation of these standards. Products improved in functionality and reliability and prices were kept low by market forces.

I enjoyed using Microsoft products, purchasing Multiplan, Word, and MS-BASIC for the Macintosh. The first sign of trouble that I noticed was when Apple was developing a really good BASIC development environment for the Mac, called MacBasic, in 1985. Preview versions of this software were available and it was obviously much better than the MS-BASIC product. Apple had poured a lot of resources into MacBasic and was poised to release the product when Microsoft stepped in. This is the first application of Microsoft's famous and frequently used "Apple—submit or we will no longer make products which run on the Macintosh" tactic that I know of. Apple submitted and sold MacBasic to Microsoft for \$1. MacBasic was buried and Microsoft continued to sell its inferior product, without updating it or addressing its limitations at all for years.

Finally, even MS-BASIC disappeared from the market and consumers were left without a useful BASIC programming environment on the Macintosh. There are so many stories like this that I know that Microsoft has significantly and intentionally damaged the personal computer market. Microsoft continues to do so today by shipping broken products to so many people that massive security flaws and unstable systems are now considered the norm by many. Programmers know that this perception is dangerous and untrue. Better practices and better operating systems have existed since the 1970s, but they are unable to gain a foothold in the PC market because Microsoft uses unfair practices to maintain the Microsoft monopoly on that market. The other reason I feel strongly about this issue is that it is clear to anyone who has been involved with the industry since the early eighties that the software market has collapsed into an uninteresting, low quality blob. Strong companies shipping strong products, such as Word Perfect, Harvard Graphics, Borland, Netscape, Corel, Digital, Ashton-Tate, Lotus, Eudora, and IBM have all attempted to sell products which compete with Microsoft applications and they all now lie strewn in the dust, crushed by monopoly power.

Apple, Sun, and free software are the only hope I have today for freedom of choice in desktop computing. I feel that Microsoft will eventually fall, because end users still have freedom of choice and free software will replace Microsoft products on the desktop. This may take decades to accomplish and many millions of computer users will be deprived of choice until that day.

I believe that the PFJ as written will not accelerate this process, nor will it significantly improve the situation for commercial competition to Microsoft. As a computer professional and as a citizen of the United States, I urge the D.O.J. NOT to adopt the proposed final judgement without amendment.

Thank you,

James E. Powell

**MTC-00019736**

From: J. Kanowitz  
To: Microsoft ATR  
Date: 1/23/02 10:20pm  
Subject: Microsoft Settlement

I'll try to keep this brief. As an end user and small-office administrator, there is little or nothing in the proposed settlement that reduces Microsoft's monopoly influence on my daily personal computer usage.

I have never been a fan of Microsoft products, as I feel they are without technical merit. I've used Commodore Amigas, IBM's OS/2, and the open-source Berkeley Software Distribution-based UNIXes. In all cases, Microsoft's sheer popularity has forced me to own and operate at least one Windows system, and in the case of the small-business environment, a network of Windows machines.

In particular, if I may quote from <http://www.kegel.com/remedy/remedy2.html#info.formats> 's criticism of the proposal:

"5. File Formats Remain Undocumented

No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ? 39)." As an average user, I can say that it is "impossible" for a small business to migrate away from Microsoft solutions as long as the popularity of Windows and Office maintains the proprietary Word format as a de-facto document interchange standard. The average end-user does not have enough familiarity with Office to understand how to save a document in an open format, and Microsoft relies on this lack of user skill to maintain their dominance in that software space. Frankly, the judgement should set a precedent in demanding the specifications of proprietary formats such as Word .DOC be opened—should a company profit from their ability to obscure their data formats to only interoperate with their own products [thus forcing adoption], or by providing innovative software with the features the market demands?

Telephone companies used to require rental/purchase of approved telephones direct from the company. With that requirement removed, other vendors have been free to offer telephones, some with innovative features (speed dial buttons, speakerphones, etc). This did not unduly restrict the telephone companies, nor did it adversely effect the integrity of their networks. Microsoft has a "network" of sorts—users and businesses who have been convinced to use their products, and currently, their closed standards and anticompetitive practices force users to purchase software from them (Office, Windows) when it should be trivial for any word processor to read documents produced by another.

This is the essential difference between the original (1980s) PC marketplace and the

“digital millennium”—today, there are certain standards in place that enable the Internet, and these standards should be taken as a given, not unlike the standards of the American interstate network.

Much of the proposal seems to presume that Microsoft is a monopoly in personal computing, and rather than attempting remedy that would open the operating systems market to competition, focuses on ways to make it easier for other businesses to produce and sell to the installed Microsoft userbase without undue restriction by Microsoft licensing. This in no way assists the consumer who is “not” running a Microsoft system, and has no interest in running a Microsoft system, but finds it necessary to conduct communications with Microsoft users! I wish I’d taken the time to make this a more founded argument, but hopefully it is food for thought. Please consider the fate of direct competitors in the OS marketplace, and their end-users, in drafting the final settlement. Respect that handheld devices, game systems, and other products are equally personal computing devices. Allow direct competitors—WINE, Lindows, etc—the rights to reverse engineer Windows in the same way that Compaq was allowed to reverse-engineer the IBM PC BIOS to make the x86/MS-DOS/Windows world to happen. Don’t allow MS to charge licensing fees for systems not running Windows, and do not allow them to restrict the sale of dual-booting systems (as occurred when MS licensing blocked Windows/BeOS dual-boot machines from including a bootloader that could allow access to the BeOS installation!)

Again, though I’m restating myself all over the place—don’t assume that since MS “has” attained a monopoly, that competition can’t occur, and that all remedies must focus on making the Windows monopoly more livable for OEMs, developers, and users. Consider mechanisms to actually allow for increased competition in the entire personal-computing space. Setting a precedent for industry-wide open data file formats would be one such mechanism, as it would level the playing field and allow for a proscribed level of interoperation between competing products—necessary, in today’s networked “digital millennium” world.

Communications protocols should be treated similarly, and information should not be restricted on the basis of security concerns. A security issue in a file format or protocol is a “failure to innovate,” as a better-designed format/protocol would not be victim to the problem.

To whoever’s bothered to slog all the way through this, I thank you profusely for your consideration!

Joseph Kanowitz

Subject: Microsoft Settlement

Dear Sirs:

I consider the proposed settlement to be a total abrogation of responsibility on the part of the US Government. In the annals of anti-trust, the best analog that I can find is that this settlement is as if the Government had not only not broken up Standard Oil, but had also given them the railroads. It is an open invitation for companies in the future to flout the law with the knowledge that even if they are finally convicted in a court of law, the remedy applied will be weak at worst and more likely totally impotent. Microsoft has shown repeated disdain for the rule of law and may be expected to not act in an honorable fashion under any remedy. At a time in which we are attempting to demonstrate the nature of America, I suggest that Honor is value to be preserved not discarded.

The ubiquitous nature of the Windows operating system due to its monopoly status has cost both its users and its non-users a tremendous amount of time and treasure due to its basic philosophy of construction. It is hard to know what the current situation might have been if competition had been allowed to exist, but I dare say we are better off with a number of different operating systems rather than a single omnipresent one.

I suggest that the proposed settlement be discarded and the earlier action by he Honorable Judge Jackson be reinstated.

The only thing microsoft would understand as a penalty, is a financial one. The deal their lawyers dreamed up was one that didn't really hit them financially, it only means they will lose a billion in sales, not actually pay out a billion in cash. it's obscene! There is a huge difference!

**MTC-00019746**

From: hersh@ri.cmu.edu@inetgw  
To: Microsoft ATR  
Date: 1/23/02 10:30pm  
Subject: Microsoft Settlement

The current Microsoft settlement does not address the problem of a monopolistic company. Microsoft has a huge illegal monopoly, and the punishment/solution handed out by the US Government should be correspondingly drastic. Microsoft should be broken into at least 3 companies:

—operating systems  
—application software  
—networks

Bell Telephone was broken up, and so should Microsoft be. Look at the explosion of new products and services and the reductions in price which resulted from the Bell breakup. The same things would happen from a true Microsoft breakup.

PLEASE DO NOT LET THEM BUY THEIR WAY OUT OF THIS.

Thank you.

From: Barton Grantham  
To: Microsoft ATR  
Date: 1/23/02 10:30pm  
Subject: Microsoft Settlement

Seeing as how the future of human civilization hangs on our ability to create, communicate, store, and freely exchange information, I'd say that any settlement that doesn't fully address Microsoft's unethical attempts to monopolize for great profit the ability to do the above is inadequate. While I appreciate that Microsoft's products enable many companies to streamline their information infrastructure and that to the technology outsider, they may have been seen as the engine of the Information Revolution, this is actually just a subjective observation. The driving force behind the Information Revolution has been, and continues to be, semiconductor manufacturing. Due to advances in semiconductor manufacturing our computers are now tens of thousands of times faster than they were a mere 2 decades ago. I don't believe it is a stretch to say that the miracles of modern software that MS products make possible could have been achieved by ANY company. In fact, many groups have achieved more than MS with less resources, all by riding this wave of exponential hardware upgrades. This is all to say that they are not the cutting edge technology company that many believe them to be. In fact, most industry insiders consider them to be VERY conservative with regards to research and development, always erring on the side of profitability at the expense of technological progress and customer benefit.

There is no mistaking that there have been many competitors to MS who simply failed to take advantage of a situation where they had a strategic advantage. There have been books written about how Apple, IBM, Commodore, DEC, Atari, Netscape, etc. all "dropped the ball" when they ere competing head to head with MS in the marketplace. HOWEVER, for every instance of misjudgement on the part of MS's competitors, there is at least one instance of unethical and often illegal business practices that gave MS not just an advantage, but exclusivity to a market. Many of these have been touched upon by the trial, but most in not enough detail. In particular, their "bootloader" policy combined with their licensing policy has been extraordinarily harsh:

- They insist that if a hardware vendor sells even one machine with a copy of windows, that they must pay a license for windows for EVERY machine they sell. Agree to this and you get a 90% reduction in license cost. Disagree and you pay retail cost per machine.
- They insist that if you install windows on a machine, it can be the ONLY operating system natively bootable on that machine.

These two policies combine to make a marketplace where now literally NOBODY can compete in the "Installed Operating System" market. With regards to the proposed settlement where MS provides schools with free hardware and software . . . This is not a settlement at all! The education market is one market that MS has always found it difficult to compete due to Apple's being entrenched there. This settlement is effectively a way for MS to gain a foothold into a market where they could EASILY recoup their "billion lost dollars" within a single software upgrade cycle. On top of this, there are two additional problems. MS claims that they would provide a billion dollars worth of their own product, but it must be understood that their product is infinitely producible for very little money. What would cost them a million dollars in CD duplication fees could pay a billion dollar court fine. The second problem is that, combined with the fact that these schools would likely not have purchased MS software in the first place, this would actually be a positive market movement for the company, not a punishment. Finally, to make clear: Microsoft has been "dumping" in the market for decades, banking on it's one day becoming a monopoly and being able to recoup costs by price gouging. The mechanism that has made this possible is stockholder capital. —Right now—is when it will begin this price gouging because their stockholders are chomping at the bit for a dividend. Microsoft has to either suffer the consequences of a stock crash or squeeze as much money from their customer base as possible. The .NET initiative and their model of 'software as service' is part of their plan to entrench themselves as an infrastructure company. If this is not stopped, then the technology industry can expect the 20 years to belong to Microsoft and the average US consumer can expect their participation in digital technology to be accompanied by a "Microsoft Tax".

As a technologist and computer programmer for more than 20 years, I must insist that there be NO settlement and NO easy path for this unethical, irresponsible, and destructive company. Our future literally depends on this company being stopped.

From: wfdeller@wilbur.dhs.org@inetgw  
To: Microsoft ATR  
Date: 1/23/02 10:32pm  
Subject: Microsoft Settlement

To whom it may concern,  
I am writing this letter regarding the Microsoft anti-trust matter out of personal concern for the harm that has occurred and continues to occur in the computer software marketplace and consumers.

Based on the information that has been provided on the proposed settlement, I feel, very strongly, that it will provide absolutely no relief from Microsoft's illegal business practices. I think that the most blatant point that the settlement fails to correct is Microsoft's continued hindrance of competing products. Microsoft is in a position to bully any competitor into submission because of its near 100% dominance of the desktop market. In this position, no company will be able to compete, even if it provides its software for free.

In my opinion, the only way to correct the Microsoft monopoly and somewhat level the playing field is to force Microsoft to openly publish the programing interface to its Windows Operating Systems (and that includes Internet Explorer—Microsoft says that it is now a core part of its Operating System) and its applications file formats (i.e., MS Office). This provision is included in the current proposed settlement, but only provides this information for companies that are somehow "certified" by Microsoft. The information should be public to all companies and individuals, including security related API's (excluding API's that involve security will essentially exclude all API's. All programming interfaces have some form of security included). Providing this information, to everyone, will allow companies and private individuals to create applications that extend, inter operate and compete with the Microsoft Windows platform.

Thank you for the opportunity to provide feedback on the settlement case. I am truly hopeful that some benefit is realized in the software marketplace as a result of this case. Unfortunately though, unless significant changes are made to the settlement, absolutely no improvement to the competitive landscape will be realized and consumers will continue to be harmed.

Subject: Microsoft Settlement

To Whom It May Concern,  
I do not think that the Microsoft Settlement is harsh enough. This is another case of "He who has the most money wins". Microsoft is receiving a slap on the wrist and is being asked nicely to please play fair. They will continue to have a monopoly of the operating system market and will continue their unfair business practices under this ruling.

Windows remains popular not because of stability and security, but because it is the only operation system that Microsoft will allow OEM's to put on their computers. If they want to sell Microsoft, they must not sell anything else.

This is like one company manufacturing the engines for every automobile sold on every lot in the country. Most people don't build their own cars, so they wouldn't know that another kind of engine existed. Just like most people won't remove the engine that came with the automobile, most won't remove windows and install another operation system.

If windows is as good as Microsoft claims, let's let consumers make the decision. Give them a choice of buying a computer from the local department store running windows, linux, unix, etc.

If there is only one name on the ballot, voters have no freedom.

From: Tim Malone  
To: Microsoft ATR  
Date: 1/23/02 10:31pm  
Subject: Microsoft Settlement

I believe that the proposed settlement in the Microsoft Anti-trust case, does not go far enough to restrict Microsoft's anti-competitive activities.

For instance, Section III.B allows them to offer discounts on Windows to OEMs based on the number of copies of other Microsoft products they buy. This allows them to leverage their intel-compatible operating system monopoly to gain dominance in other markets, like the the embedded OS market.

Also, the restrictions placed on the use of the documentation released to the competition by Microsoft, nullify the effects of having the documentation. To truly open up the field of competition, the API documentation should be released to the public domain, and no longer locked down under patents and copyrights.

Tim Malone

I have watched the Microsoft anti-trust trial closely. Being a firm believer that Microsoft has mis-used its monopoly, I was very dismayed when the Justice Department settled the case so lamely. I do not think this is in the public interest. Already, Microsoft is trying to stretch its monopoly with Windows XP, .NET technologies, Web services etc. If you look at all these products, it is clear that Microsoft is intent on pursuing its dominating practices. There is much innovation that can happen in the Web services and other arenas ... but only if Microsoft is forced to allow it.

Yours sincerely  
Arvind Kannan

From: Eric Hill  
To: Microsoft ATR  
Date: 1/23/02 10:35pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

As a citizen of the United States and a user and developer of Microsoft Windows-based software, I am writing in strong support of the settlement reached by the US Department of Justice, the nine settling states (including, proudly, my state of residence, North Carolina), and Microsoft to end the antitrust case against Microsoft. I have worked in the computer industry for 15 years. During that time, I have watched how Microsoft's vision has moved the PC industry from toy computers running MS-DOS to powerful workstations running mission critical applications. Microsoft has earned their large market share in the desktop operating system market, by delivering consistently improving products to the marketplace that solve people's problems at very reasonable prices.

During a time in the late 1980's, I worked for a company that, like many others, was undertaking office automation—converting from manual methods of document preparation to computer-based methods. This company had both UNIX-based and Windows-based computers in-house. At the time, Windows-based computers were notoriously unstable, so we tried desperately to find an office automation solution on UNIX-based computers. Unfortunately, it did not exist. Microsoft, on the other hand, had a suite of applications that worked better together than any suite of office applications running on any platform at the time. We went with Microsoft and lived with the instability. This is the stuff of which Microsoft's market share is made. Microsoft delivered products, and their competitors failed to execute.

For the past seven years, I have worked as a developer of software that runs on Microsoft Windows. It is a pleasure to develop software for Microsoft Windows. The documentation that Microsoft provides through the Microsoft Developer's Network is phenomenal, and unmatched by any other company in the industry. Their new software development tool, Visual Studio.NET, is the best tool for developing software that has ever been created. When you combine the ease of developing for Microsoft with the suite of excellent applications that Microsoft also produces, you end up with a platform that is the most successfully competitive and innovative in the marketplace.

The problem with monopolies is supposed to be that they charge high prices and stagnate. Microsoft's competitors, who are urging the judge in this case to throw out the settlement, could only wish that Microsoft had stagnated and charged high prices. That is the real problem for Microsoft's competitors: Microsoft competes incredibly well. This demonstrates what members of the Austrian School of Economics pointed out 100 years ago: Monopolies that do not have "legal" barriers to entry protecting them are no threat to anyone, because they are powerless to stop competitors from entering. There is, of course, no guarantee that "worthy" competitors will in fact appear, but that is not the dominant company's fault.

In looking through the opinion from the US Court of Appeals, there is exactly one offense committed by Microsoft that should be illegal—the breach of contract and fraud in the Sun Java matter. But breach of contract

and fraud are illegal for companies regardless of market share, and Sun took appropriate action to remedy the matter by suing Microsoft. The appearance of the Java matter in the antitrust case is merely double jeopardy.

Other accusations made against Microsoft are for actions that should not be illegal for any company, regardless of market share. In the case of Intel, the relationship that Intel enjoyed with Microsoft was responsible for much of its profit. For Intel to use that profit to develop software that would potentially compete with Microsoft's products is absolutely something that Microsoft should have a right to respond to. All Microsoft did was threaten to take some of their business elsewhere. The right to take one's business elsewhere is a fundamental right that all individuals and corporations, regardless of market share, must enjoy if we are to call this a free society. The fact that the antitrust laws enjoin such conduct for a company with large market share is merely another reason that the antitrust laws must be repealed. Similarly, Microsoft's actions in developing and promoting Internet Explorer through innovative marketing agreements should also be their absolute right. There can be no doubt that Microsoft's dominance in desktop operating systems gave them an advantage for getting Internet Explorer into the hands of users. But it was an advantage that they earned. Microsoft's push of Windows into people's homes also created a huge market for Netscape to sell into.

The most absurd concept in court filings that I have read is the concept of the "applications barrier to entry", and the notion that the court must take action to reduce or eliminate it. The so-called "applications barrier to entry" actually represents what an incredible job Microsoft has done creating software that works well together to solve the problems of their customers, and the great job Microsoft has done making it easy for third parties to develop software for Windows (Visual Basic being one shining example). Those who are calling for a reduction in the "applications barrier to entry" are asking Microsoft to be punished for the great things they have done, not for those things they have (allegedly) done wrong.

The antitrust case against Microsoft has been an embarrassment for the United States. It is time to bring it to a close in a way that prevents the most egregious (in the opinion of some) conduct, while leaving Microsoft free to innovate and enjoy the advantages that their 20-year history of developing great software that is accessible to the masses. Microsoft's competitors have had ample opportunity to get their act together over the last 20 years and put forward a platform that would compete seriously with Windows. Those competitors have failed miserably at every turn, and now seek to use the fact that everyone wants Microsoft's products against Microsoft to gain an advantage that they were unable to earn in the marketplace. The settlement is a punishment that fits the crime. Please accept it and let us move on.

Sincerely,  
Eric W. Hill

Subject: MS anti trust

It blows my mind how there is any doubt as to whether MS should be broken up. Look at what the break up of AT&T, and the telecommunications act of 1996, did for the telco industry. If that had not happened, we would probably still be using rotary phones and would have never heard of DSL or T1's. While MS has produced a product that has helped spawn the digital age and the growth of the internet, they have become a fat cat company who decides to play by their own rules. Imagine the innovation that would result if everyone had their chance to produce their own version of Windows. Not only would consumers enjoy more choices and most likely lower prices, but the fact that anyone can tweak the Windows platform to their own ideas would mean new uses for the PC in the home and office that no one today could even imagine. Or, we could let MS decide the future of the PC, which, without a doubt would be a future friendly to MS and their stock prices.

From: Hector Arroyo  
To: Microsoft ATR  
Date: 1/23/02 10:35pm  
Subject: Microsoft Settlement

You'll be getting a lot of these so I'll keep it brief.

The remedies are far too lenient in regards to Microsoft. The remedy it's suggested for itself would actually have the effect of increasing its market share in school while simultaneously decreasing the primary computer platform's (it's competitor Mac) presence in the classroom additionally they would have us allow them to inculcate our nation's youth into their software while they're still in school. The notion that this company is willing to offer such a remedy on its behalf ostensibly to correct its behavior but ultimately to increase its mindshare is a slap in the face of the justice you should be upholding as its care taker for our nation.

As to what remedies should be imposed I'm no expert but it seems to me that they should be closely watched by government representatives at their own expense. They should be required to submit to free agents whose salaries are paid for by Microsoft to have complete free roam of their facilities/practices/contracts etc for a period of not less than 10 years. Such free agents would be required to make monthly reports, as well as a comprehensive yearly report, to the appropriate agency.

They should be required to eliminate their surplus revenue as profit to their shareholders. Part of Microsoft's problem is that they tend to utilize their enormous bank account to threaten competition. Microsoft should be made to make financial restitution to any and all individuals and corporations that have been harmed by its acts. Microsoft should be banned from creating or

conducting any new businesses outside the software for pc platforms and support and development of its subsidiary business already created such as Xbox.

Failing that. Separate Microsoft into component companies each to have free government agents reporting on its behavior.

**MTC-00019770**

From: Frederic W. Brehm  
To: Microsoft ATR  
Date: 1/23/02 10:35pm  
Subject: Microsoft Settlement

The proposed settlement is inadequate. If I violated Federal law, I would be punished. Just saying "I promise not to do that again" would not be acceptable to the court. A violation of Federal law requires punishment AND some way of assuring that the violation will not be repeated. Microsoft has managed to dodge both the punishment and the assurance in the past. It's time to make sure that it does not happen again.

I am a software engineer who specializes in real-time embedded systems. I know something about the architecture, design, and implementation of computer systems. A modern operating system divides responsibilities among programs that run in separate "address spaces" or in separate computers communicating through some communication channel.

Microsoft should publish the details of the programming interface that allows programs in separate address spaces or on separate computers to interact, and how they store persistent information in files or other storage media. This is not the same as the implementation of the programs; source code does not have to be disclosed. The information is only how to talk to the programs. This will prevent Microsoft from using proprietary interfaces to drain the "oxygen" from potential competitors.

This information should be disclosed for any program, operating system, hardware, or other object that Microsoft sells at retail, or delivers to distributors, OEM's or special partners to be sold as part of a bundle of hardware, software, or services. This information must be disclosed in a reasonable time frame and errors corrected in a reasonable time frame. This time frame should be short enough that Microsoft does not gain competitive advantage over others who wish to make use of the interfaces. (This is part of the punishment.) The information should be free of any encumbrances or restrictions on its use. An independent auditor should be appointed to judge the timeliness of the publication of the information, and nobody should be enjoined from suing to gain timely access to the information. If the auditor or a judicial proceeding finds that Microsoft has illegally restricted the information, then the full source code for the affected program must be published with no restrictions on its use.

Another method that Microsoft has used to extend its monopoly is to provide special pricing in exchange for special favors. While this is not, in general, a bad thing for a business to engage in, it is very bad for a monopoly to use this method to leverage its market dominance. As a punishment, Microsoft should be prevented (perhaps for

some limited time like five or ten years) from using differential pricing in all markets. Microsoft should use a uniform pricing schedule for all customers. The pricing can vary by volume, and perhaps by gross market segment (OEM, government, education), but should not vary by combinations of products ordered nor should the schedule dissect the market into tiny segments that change over the time the restriction is in effect. Judicial oversight must be exercised, perhaps by allowing lawsuits by plaintiffs that believe that they were classified incorrectly.

This is an outline of what I think would be a fair and equitable arrangement with a company that has never played fair, nor has understood their relationship to the government that protects them. If the company cannot abide by these restrictions, then it must be broken into separate pieces that do not command a monopoly power over their respective markets.

Dick Ort

Attorney General John Ashcroft  
 US Department of Justice, 950 Pennsylvania Avenue, NW  
 Washington, DC 20530-0001  
 January 11, 2002

Dear Mr. Ashcroft:

I would like to express my thoughts regarding the settlement of the Microsoft case. To begin with, this case was ludicrous from its inception. It is way past time that this case is settled and I certainly hope that there will be no further delay in the process.

I worked in the computer industry for many years, building computer systems for the telephone industry. I have used various products and dealt with Microsoft as well as many of its competitors. Microsoft may have perhaps used their position unfairly, but that only happened because of their wise business decisions and exceptional products. As part of the settlement, Microsoft is giving away interface design information, protocol for their server systems and they are allowing competitors' software on their Windows platform. They have also agreed to make several changes in their unsavory business practices to restore fair competition to the computer industry. Combined, all of this addresses the problems that were accused of Microsoft and adequately represents the public interest.

This whole issue has been a farce that selfish politicians have used to gain attention and popularity. Despite their supposed problems, Microsoft has set a standard for the entire computer industry. The computer industry and the entire economy would be much better off if Microsoft is allowed to get back to business.

Sincerely,  
 Richard Ort

I am utterly dismayed with the Department of Justice's proposed Microsoft settlement, because it is so full of loopholes that Microsoft will have no legal fetters to curb their predatory behavior. Just as happened with the first antitrust decree, of February 14, 1995, wherein Federal Judge Stanley Sporkin refused to approve the consent decree negotiated between the U.S. Government and Microsoft to settle the antitrust complaint filed against Microsoft by the Government at that time, Microsoft will be able to skirt around the terms of the present settlement offered by the Department of Justice, because it is just too full of holes. Stop Microsoft's predatory behavior NOW, by throwing out the Department of Justice's proposed settlement and demanding a settlement that will have strong controls over Microsoft's behavior. The present Department of Justice proposed settlement is an atrocious miscarriage of justice.

From: Devon Stephens  
 To: Microsoft ATR  
 Date: 1/23/02 10:37pm  
 Subject: Microsoft Settlement

As a computer user, and IT professional, I feel very strongly that the proposed Microsoft Settlement will do nothing to punish past monopolistic practices, or to prevent future violations of anti-trust law. Most importantly, what the settlement fails to address is that

Microsoft is already entrenched in a dominant, monopolistic position, achieved in large part through unfair business practices. Creating a Technical Committee may (or may not) help with future problems, but does nothing to fix what has already transpired.

Lastly (for this letter; I do not pretend that I am addressing a majority of the problems with the settlement), I would point out that much of Microsoft's monopoly is maintained through mechanisms not mentioned in the settlement. For example, Microsoft Word is the dominant word processing software mainly because it's file format is proprietary and controlled by Microsoft—and changed frequently, so that no other program can reliably use it. If a standard file format were enforced, competing products would have a chance to co-exist and interoperate with Word; something that just cannot happen today. I urge you in the strongest possible terms to reject this settlement and seek stronger action against Microsoft.

Devon Stephens

Suite 1200  
Washington, DC 20530-0001

[Reprinted with permission of the original author: Brian Koppe, Buffalo Grove, IL]

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. It is my understanding that the purpose of the Proposed Final Judgement should be to reduce, as much as possible, the Applications Barrier to Entry. In other words, make the market more open to competition from other products. After reading the Proposed Final Judgement and multiple essays on its problems and benefits, I have noticed many things that I take issue with. However, I'd like to focus on one in particular. This problem is in the issue of Microsoft End User License Agreements (EULA).

It has been shown that Microsoft creates EULA's that place anticompetitive restrictions on the user, and that Microsoft has intentionally created incompatibilities to keep users from using Windows applications

on compatible operating systems that are not Windows. One example of this is in the license agreement for the Microsoft software, NewsAlert—offered by MSNBC. In that license it says,

“MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.]. ...”

Users of competing operating systems, such as Linux, which are capable of running some Windows applications are not legally capable, under this restrictive license, to use this program. One suggestion as to how restrictive licenses such as this should be forced to be changed is for the excerpt above to be re-written as follows:

“MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system.”

In the past, it has been shown that Microsoft places technical barriers on competition as well. The 1996 Caldera v. Microsoft case shows how Microsoft added code to its product so that, when run on a competing operating system (DR- DOS in this case), it would give the user an error. As I'm sure you can easily look up, the judge ruled that “Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft.”

Unfortunately, with the Proposed Final Judgement as it stands, there is no language to prohibit these restrictive licenses nor is there language to prohibit future intentional incompatibilities. Therefore, in its current state, the Proposed Final Judgement assists Microsoft in continuing these actions and does not succeed in opening the Applications Barrier to Entry. In closing, I would like to add my support for Dan Kegel's essay, “On the Proposed Final Judgement in United States v Microsoft,” located at <http://www.kegel.com/remedy/remedy2.html>, which is the source of the facts I have included in this letter. I would also like to add my support for his suggested amendments to the Proposed Final Judgement, which are described near the end of his essay, and to the alternate settlement proposed by some of the plaintiff states and located on the website for the National Association of Attorneys General at [http://www.naag.org/features/microsoft/msremedy\\_filing.pdf](http://www.naag.org/features/microsoft/msremedy_filing.pdf).

Sincerely,

Ryan Worth Chicago, Illinois

From: bill  
To: Microsoft ATR  
Date: 1/23/02 10:39pm  
Subject: Microsoft Settlement

It is with the utmost respect and confidence that I address you with my grievances. It is without question that Microsoft has practiced monopolistic business practices. They have grossly hindered innovation by dismantling the

machine of progress. Buying out competitors, and using an army of lawyers to protect their actions. While the army of lawyers and publicists have sold us a tale of a company that encourages competition by providing us software. They no longer sell us software they rent it to us behind EULA that forces us to surrender the fair use of the products they offer. They have taken drastic steps to prevent pc manufactures from selling pc without windows at the same time claiming to support innovation and diversity. They have eliminated the consumer's ability to choose other products. Consumers are the worse for the monopolies actions. The economy is dependant on innovation to create and maintain new industries and new technologies and in turn those innovations create new industries that they create. It is this injustice to the economy of the United States of America that is the true injustice. This is precisely why the Anti-Trust Laws exist to protect small businesses, major corporations and the innovations that make this nation great. The illegal and destructive damage caused by Microsoft have gone unpunished because they have a well funded army to hide behind. The money earned for the products forced upon a society without choice is used to further entrench the position of power by removing competitors. The list of companies and technologies they have assimilated include the likes of Novell, Sun, and IBM along with numbers of smaller ones. Netscape Navigator is a product from the top of the list.

I hope you will repay the injustice of this giant monopoly Microsoft Corporation by breaking the stranglehold they have on our country. Every empire is built at a cost. Microsoft has paid with the innovations of an industry. They're plunder is at the expense of our way of life and our liberty.

Open Source the technologies they have hindered. Break their hold on the industry. Prevent them from making deals with OEM's and forcing their product on a us. Provide the ability for others to create similar products that will promote competition.

Separate the Browser from the operating system. Divide Microsoft into separate corporations: Operating Systems, Office Applications, and Business Class Servers.

Bill Brinkley

To: Microsoft ATR  
Date: 1/23/02 10:40pm  
Subject: Settlement is unfair to consumers

The proposed settlement by Microsoft does nothing to address or remedy the monopolistic practices that Microsoft continues to employ daily. Please do not allow this to continue as the entire tech industry is destined to be rolled over by the money roll that Microsoft is using against smaller competitors.

Thanks to Microsofts practices, there are extremely high barriers to entry into the market for entire sectors of software, since they are using their predominance in the OS market to extend into other segments ie: WebBrowsers.

 Subject: Microsoft Settlement

I think that this settlement is absolutely shameful!

This is the last opportunity to stop a runaway corporate monster from buying Justice.

No computer in the world has been sold without a Microsoft operating system, and if that isn't a monopoly, I don't know what isn't!! Yes, EVERY computer, as MS owns a part of Apple.

No other company can hope to offer competition if this settlement goes through.

I'm an American, working for an American company, and would find it difficult to hold my head up, knowing that my own government cares less about me, than an aberration that has taken business ethics to new lows.

Hopeful,

Subject: AOL COMMENTS

Dear Department of Justice,  
 I can't say that I was surprised at the filing by AOL against Microsoft, there are however several things I would like to comment on. AOL uses a proprietary version of the TCP/IP protocol that is the language of the internet so to speak. By doing so make their communications protocol proprietary and when someone decides to switch to another ISP they find out their computer either crashes or locks up. These persons have no trouble in going back to AOL but can't leave, and they don't get much help from AOL, what they have to do is replace files modified on their computers to make the switch away from AOL. I speak on this as someone working in the computer field and I get calls from people as to what to do. Often, I have to download the files they need and install them on their systems for them. AOL through some rather shabby accounting is also taking a loss this quarter to the tune of \$60B, this is good that they are restating their shareholders equity, but a decrease of 33% in one quarter smells a lot more like Enron than anything else. If the DOJ wanted to do something they could along with the SEC and FASB straighten out this sort of thing. Finally, it would appear that they would have to be pretty dumb in the first place since they bought Netscape's browser after an earlier court ruled there was no law violation in Microsoft adding the browser. AOL also interestingly had a relationship with Microsoft that placed their service on the Desktop via the OS software installation. Even though they owned Netscape they found using Microsoft for customer acquisition, and installing their Internet Explorer browser a better way to go. Product reviews in the WSJ gave the lead to Microsoft as well. Since AOL owned Netscape, and since they didn't deem it a priority to push their browser, it seems they are responsible even more so for its market share. One of the reasons that I upgrade computers is because of the software that is bundled with them. It is also of course for the newer hardware as well, but there is no comparing the value of a system that has the OS software you want, and the productivity software as well. Since the DOJ started their antitrust actions against Microsoft I don't think that I have had the same value as I used to.

The Europeans seem to be following your precedent of litigation as well, if you are successful in disciplining Microsoft in the ways that Scott McNeally and Steve Case would like, you will undermine innovation and value both. Only corporate purchasers will have the ability to leverage the software combinations they want, the small business and consumer will have been screwed. This is not the way Microsoft's antagonists would view it however, to them it would be a victory. So much of the software I have bought comes with one year support, and nothing after that without paying each year. This is not unlike Microsoft's way of doing business, but they put so much free help on their web site I don't mind having a problem. Programs from Intuit, Corel and others have failed in some aspect or another and their answers are buy the new version. When Enron collapsed, there was a big loss to

peoples retirements both in the case of State run funds and individuals. The amount of loss to the consumer was of course significant, clearly to me as a result of the antitrust suit against Microsoft much more was lost to investors in the roughly \$300B decline in the capitalization of Microsoft. Microsoft has made software that was hard to use, easier to use, more versatile, more desirable, less likely to need a continuing support from the source, and moved specialized software to commodity product status. To witness, Oracle was the king of data base software, now you can buy it at Wal-Mart. If diversity is so great why are their eight versions of UNIX, none of which are compatible with one another? Take the example of Sun Microsystems, if they used someone else's version they would have to pay licensing fees, so they customized their own. Now they can collect maintenance fees duh. Not a thing that the antagonist want is for the consumer, it is against the consumer and for each of their bottom lines. And in the case of the State's AGs, it is for their political gain. I can't see how you are ever going to go anywhere trying to develop a formula that simultaneously solves an equation with twenty variables that keeps changing all the time. I am glad that my AG in Montana is not a part of this fiasco, and I made a point of telling them so. The people who signed on to this action against Microsoft have made it easy for me to decide who not to vote for. I believe they have degraded the standards of justice, and the continuation of this continues that course.

From: Richard Herrell  
To: Microsoft ATR  
Date: 1/23/02 10:41pm  
Subject: Microsoft Settlement

The Microsoft Settlement is not in the public interest because its terms allow Microsoft to exclude open source software projects such as SAMBA, Apahe, and OpenOffice.org from technical details of Microsoft implementations, allowing Microsoft to continue to benefit from it's illegally obtained and maintained monopoly on both client operating systems as well as web browsers. (Section J. 2. Paragraph c "meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business". A fair settlement would ensure that open source projects have resonable access to Microsoft protocols.

SAMBA, the most significant competing implementation of Microsoft's file sharing and authentication protocol.

Open Office (the basis for Star Office, the most vigorous competitor to Microsoft Office) will likely face significant hurdles in obtaining data on newer Microsoft file formats.

The settlement has been characterized as full of large holes, confusing, subject to manipulation,

Sirs:

I am writing to express my strong disagreement with the proposed Microsoft anti-trust settlement.

I am a computer systems specialist with almost 30 years in the field. I have work with virtually every major system including Microsoft's. While there are many points I disagree with, the most glaring is the proposed oversight group. This proposed group would have no binding powers, legal or otherwise, over any of Microsoft's actions. It seems unthinkable to me that anyone would believe that this oversight group is an appropriate remedy. Microsoft will not heed the groups recommendations, Microsoft does not heed the mandates of congress! I see this proposed remedy as vacuous and no remedy at all. While Microsoft damaging the computer industry is one thing, I worry that Microsoft will enter into other industries and continue its strong handed tactics. I fear a financial industry dominated by Microsoft.

From: Chris Beelby  
To: Microsoft ATR  
Date: 1/23/02 10:46pm  
Subject: Microsoft Settlement

As I look over the details of the Microsoft Anti-trust case I am amazed at what Microsoft has been able to get away with over the years. I must admit that at first I thought the whole idea of Microsoft having a monopoly was ludicrous but the more I have read and thought about it the clearer it has become that Microsoft does not only have a monopoly but has used that monopoly to further the monopoly. One of the tactics that Microsoft uses (and many companies use) to perpetuate this monopoly is through the use of "secret", "proprietary" or "copyrighted" software, file formats, protocols, and the like. To better understand this think of how the Internet has grown so exponentially over the past few years. A major reason that the Internet was able to grow was because of its openness (in software, file formats, protocols and the like). Standards for communicating between nodes and in published documentation on how to use technologies such as HTML and Email. Email protocol (and all related protocols which allow me to send and receive messages to someone like you) are all open to everyone. By that I mean that anyone who wants to know how something like email works can know how by looking up information on it. They can use that information to develop their own software to send a receive messages so that they are not forced to use the software of any one company. Their program will work with other email programs because they are all using open, accepted, standardized protocols and rules. At an even more basic level the TCP/ IP (Transmission Control Protocol / Internet Protocol ) which is what allows all the millions of computers connected to the internet to locate and send data between each other is an open standard. If any one company had complete control over something like TCP/IP they would control the entire internet as we know it. Not only that but they could then use that control (through things like copyright and patent) to make it so that anyone else trying to

implement the same standard or communicate with them would not be able to.

Having open documentation on how things work allows different people or companies to all use those methods equally and does not lock them into any one companies proprietary software or methods of doing things. For example this message is sent to you in plain-text. You can read it using any program that understands the American Standard Code for Information Interchange. Since ASCII is open anyone can exchange information using it and no one can prevent someone else from using it. This is basically what I am meaning by openness in this letter (the ability of anyone to find information on how to use a technology and the inability of anyone else to prevent someone else from using that information however they like). If I were to send you a message in a Microsoft format such as Microsoft Word (.DOC) you would be forced to use a Microsoft product to read that message because it is encoded using a proprietary format. No other company can make a product that can read a DOC file because it is Microsoft's proprietary format and it is protected by Microsoft's copyrights and patents (which is unethical). If

Microsoft were forced to make open things like it's proprietary word DOC format it would allow others to read their documents and thus not force Microsoft's own software on people. Software developers (other than those employed by Microsoft) could write an email client that could read email messages sent in the Microsoft DOC format. This is just one small example of how using "proprietary", "undocumented", "secret" formats and protocols helps to perpetuate a monopoly.

Open source software is a buzz word that has come up recently and is gaining much popularity. Open source developed software has been proven to work just as well if not better than proprietary "secret" software (despite what Microsoft would like us to think). The key to "openness" is preventing any one entity from being able to completely control a resource, technology, or protocol. Microsoft should be forced to take action which will make all their "proprietary", "secret" information open to everyone so that anyone can develop software to effectively work with Microsoft products. Once people are no longer forced to use Microsoft products they can begin to make more free choices as to things like which operating system software they really want to use.

Subject: Microsoft Settlement  
Sirs,

I am a computer professional and citizen of the United States of America. I must comment on this settlement. In a word it is "Unsound". Why do I say this, because as most of my colleagues can attest too, we have grown up under the "Microsoft Era" and where as they did initially a lot of good for the computer industry (must give the devil his due) They, for the past 10 or so year, have used their financial position and any other means at their disposal to kill any and all competition. this remedy will not stop this. They have a culture (since they live and work in campuses) that is soaked up by each employee and will not be very easy to change. This mirrors the culture that the military has and that has proven to be almost impossible to change, as seen by the repeated abuses of women and other minorities with in the military. The consequences for Microsofts actions must be much more severe, or nothing will be changed in their business practices.

Yours,  
Ted Killmeyer

From: Matt Fago  
To: Microsoft ATR  
Date: 1/23/02 10:39pm  
Subject: Microsoft Antitrust Case

I hope that the DOJ starts to take this case seriously again and assign punishment commensurate with the crime. A crime WAS committed here, but too many lawmakers own MS stock to do anything about the case. The proposed "settlement" was little more than a party-invitation to Bill Gates. A free market is one thing, criminal sales and licensing practices are another.

If you cannot split MS up, find an alternative punishment that will have some effect on the company. Like forcing them to release the source code under the BSD license.

Matt Fago

From: Richard Namon  
To: Microsoft ATR  
Date: 1/23/02 10:46pm  
Subject: Microsoft Settlement

Dear US Dept. of Justice:

I cannot understand how the remedies in proposed Final Judgement will fully offset or cure those Findings Of Fact by Judge Jackson confirmed by the Appellate Court. I think that many of current Microsoft product flaws are the result of complacency resulting from Microsoft's monopolistic operation. Without actually reducing the strength of this already too large monopoly, the punishment will fall short of the crime. There are alternatives to splitting up Microsoft in the fashion of AT&T, but they would have to significantly weaken Microsoft's market dominance for the settlement to be fair to the public. Anything, it appears, that Microsoft will agree to out of court, will not accomplish that goal. I hope an impartial Judge will do better than the proposed Final Judgement.

Thank you for your consideration in this matter,

Richard Namon

#### MTC-00019803

From: Linda Laubenheimer  
To: Microsoft ATR  
Date: 1/23/02 10:47pm  
Subject: Microsoft Settlement

Comments:

The proposed final judgment is inadequate, and contains loopholes big enough to drive a monopoly through. I urge you to demand stricter penalties and broaden the scope of the limitations on Microsoft's predatory pricing, FUD, and non-disclosure of technical interoperability requirements. Any and all APIs, ActiveX, and other OS "hooks" and interoperability features should be disclosed to the public on the first beta release of any version of their OS, and then the disclosure should be maintained accurately for the duration of the product life cycle. Specific Criticisms:

"AND WHEREAS, this Final Judgment does not constitute any admission by any party regarding any issue of fact or law;"

The findings of fact concluded that Microsoft is a monopoly. The settlement should not allow them to wriggle out of it.

"2.that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement (e.g., a requirement to be able to host a particular ActiveX control) that is necessary for valid technical reasons to supply the end user with functionality consistent with a Windows Operating System Product, provided that the technical reasons are described in a reasonably prompt manner to any ISV that requests them."

This clause allows Microsoft to re-engineer and change their products so that third party software will no longer interoperate, thus forcing the user back to the Microsoft "fold". This is a bad idea. Also, it apparently only applies to "ISV"s, which leaves out the rest of the software developing business. Very bad.

"c.Microsoft shall have 30 days after receiving a complaint to attempt to resolve it or reject it, and will then promptly advise the TC of the nature of the complaint and its disposition."

:=This is rather toothless and vague, allowing Microsoft to simply reject complaints and tell the TC to buzz off.

"d.No work product, findings or recommendations by the TC may be admitted in any enforcement proceeding before the Court for any purpose, and no member of the TC shall testify by deposition, in court or before any other tribunal regarding any matter related to this Final Judgment.

":== This reads like 'if it goes before the TC, it can be buried there by Microsoft'

Subject: Microsoft Settlement

Dear Department of Justice,

I have been stewing over this matter for some time now, and feel I need to speak out. I am a computer user (obviously) who in fact

resides in the same State as the microsoft corporation. While I realize that microsoft does well for the economy of Washington, it disgusts me in the way that they have accomplished this. Perhaps even accomplished this to the detriment of the Nation as a whole.

The fact is; that the Court of Appeals has indeed held that microsoft is a monopoly, and did violate antitrust laws. Without strenuous recourse they will continue to do so, and in doing so will stifle anything that they see as a threat to their continued monopoly.

The agreement between the Department of Justice and 9 of the States that filed suit seems woefully inadequate to address the crimes that microsoft has committed, and as such, I feel it should be nullified. In fact, there should be an immediate start of a penalty phase, with no further delays.

I dare anyone involved in this case to go out and purchase the latest copy of microsoft winxp, load it onto their home machine, and see if your blood does not start to boil as a result of the arrogance that microsoft thinks I should let my machine become basically a piece of spyware! <note> I removed this from my system, and will no longer run anything at all microsoft related, it is none of their business what hardware I own!

Thank you for your time and consideration in this matter.

Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530  
Dear Mr. Ashcroft:

I want to express my appreciation to both the Department of Justice and Microsoft for reaching a settlement of the antitrust lawsuit. Throughout the three years that this suit has been pending, the complaint I heard most frequently voiced by consumers was their lack of choice in Internet providers when they used Microsoft's Windows operating systems in their computers. As I understand the settlement, Microsoft has agreed to allow its Windows systems to be reconfigured so as to allow competition from non-Microsoft products, including the Internet access software. This is very much a pro-consumer settlement.

Obviously many of Microsoft's competitors will continue to push for further concessions from and punishment of Microsoft, but I hope that you continue to remember that it is the consumers that you are obligated to protect.

Thank you for considering my comments.

#### MTC-00019809-0001

Judge Kollar-Kotally,  
I ask you to vote against the proposed settlement in the Microsoft suit. This proposed final judgement is harmful to the American public as it allows a monopolist to continue his illegal activities. Every court has found Microsoft to have violated antitrust laws, thereby reaping many billions of dollars of profits. However, this settlement allows the company to keep virtually all of that!

Please reject the proposed final judgement which only serves to benefit Microsoft.  
Sincerely,  
Kasi M. Greene

Talk about bowing to Microsoft.  
So what exactly was the point of the court case in the first place? And exactly how does this weak, Pro-Microsoft settlement reduce their predatory monopolistic practices ???  
This settlement gives the green light to Microsoft to go ahead and carry on intimidating anyone who attempts to compete with them. The American people should be ashamed.

Hi,  
While I cannot claim to be a legal expert I do claim to be an expert consumer (proof sent upon request). As an expert consumer I know that a) more choice is preferred over less choice. I also know that b) competition improves the breed. Given these facts let's apply them to the current state of the desktop operating system marketplace.

1) A walk through any retail store which even pretends to offer anything remotely related to a home computer reveals that whatever it is they're selling is only offered for Windows. This stands in direct opposition to fact a) above.

2) A current look at any of the security notices (www.cert.org, for example) shows a disproportionately large number of security alerts for Windows relative to other systems. This is brought about (I contend) by b) above. There is absolutely NO incentive for Microsoft to improve their product. What is their risk? The DOJ will provide job security for their legal staff? Solution: crank out some more junk code and sell it to their monopoly as an upgrade.

Therefore, my recommendation is that the Antitrust Division of the Department of Justice simply do what is right...deliver justice by punishing a convicted monopolist in such a way as to improve a) and b) above.

Thank you,

Subject: MicrosoftSettlement-dont sell out

I dont run window, yet every laptop i have ever bought required me to pay the microsoft tax. No refund available nor do we have a choice in the matter, absolutely criminal behavior they embrace a standard, extend it, and destroy it. If microsoft had been around when darpa was funding the building of the internet, nothing would work because of what they do to standards. this alone is almost criminal behavior. If you bought a new stereo for your car and sold the car the new owner would have full rights to do whatever he wanted with it. with microsoft many people are forced by buy a duplicate license. cant do office upgrades without having the disks at hand, cant update the OS unless your using Internet Exploder, once its damaged you cant update your system any longer. They care more about profits than quality, they sell software that out of the box requires almost 50 meg of updates. again, criminal behavior, intentionally selling known defective goods. bust them up or open up the source code to the OS, its the only way to to level the playing field. they SHOULD definetly be required to build/ license/ or port Office to other OS's suchs as Linux and Solaris. Dont you dare sell out the public and settle by letting Microsoft "give away their crappy software" to poor schools. require them to provide the funds for the schools to chose how they spend the money/ Schools and students shouldnt have to pay for software at all, it should be completely free to every school if they should want to run it. they sell windows 2000 professional for \$300, yet it costs them mere dollars to package, probably less than 10 bucks.

Dont sell us out!!!!  
Tnt

Subject: Comments on proposed settlement  
Hello Justice Department,

I strongly oppose your proposed anti-trust settlement with Microsoft.

First: On the face of it, it would further extend their monopoly into a tiny niche of the market where Microsoft has traditionally been outsold (by Apple Computer): the nation's public school system. This prospect alone must bring cheer to Microsoft.

Second: It does nothing to compensate consumers who have been harmed over the years by Microsoft's unlawful maintenance of their monopoly through the suppression of competition. The monetary amount of the

proposed settlement is a pittance compared to the disproportionately high prices consumers have had to pay for operating system software.

Third: It fails to foster competition by allowing Microsoft to continue the practice of bundling applications to the exclusion of alternative consumer choices.

Fourth and final: It fails to prevent Microsoft from subverting both competing software applications and industry-standard protocols through proprietary "extensions", for example the Java programming language, the XML Internet language, and through Microsoft's .Net and Passport initiatives.

In conclusion, I hope the proposed settlement is discarded, and is instead replaced by a settlement that:

- 1) significantly and materially recompenses past consumers, as through a free upgrade to an improved (stable, secure) operating system version,
- 2) places strict and enforceable controls on Microsoft's monopoly power, as if it were an "essential utility"; for example by making Microsoft's Application Program Interface (API) source code public, and
- 3) separates Microsoft into a competitive "Operating System" business, and an "Applications Program" business.

Your office is supposed to work for the public good! Don't do what would prompt the monopolists to raise champagne glasses in a toast to their good fortune. —

Very truly yours,

Good Evening,

I have always supported the US DOJ case against Microsoft Corporation.

I've been a user of computers since 1984, and it is my belief that Microsoft has done more to stall progress that to help it. Please modify the settlement, it is too lax on Microsoft. Make Microsoft document their APIs to EVERY interested developer, and to document their proprietary file formats in Excel and the rest of Microsoft Office.

The US computer industry stands to lose if the settlement stays the way it is.

Thank you,  
Gabriel Freund

January 14, 2002  
Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530-0001  
Dear Attorney General Ashcroft:

I am writing this letter to show my support for the settlement that has been reached between Microsoft and the Department of Justice. The antitrust suit was filed three

years ago, and it has cost the government and Microsoft millions of dollars. Considering the fact that we are suffering through a recession, the settlement is the best thing that could have happened in the antitrust dispute.

Although the lawsuit is now almost over, Microsoft did not get off easy. This settlement has teeth, and it looks like the biggest benefactor of the agreement will be a Microsoft's competitor. Microsoft has had to agree to document and disclose for use by its competitors various interfaces that are internal to Windows" operating system products. That move is a first in an antitrust settlement.

I support the settlement since it puts an end to the litigation that has been hampering American innovation for the past three years.

Sincerely,  
George Salem

To whom it may concern,

I am opposed to the tentative settlement of the United States vs. Microsoft antitrust lawsuit. I don't see how Microsoft is being punished for abusing monopoly power. In my view, the company claims to be inovative by adding features to it's operating systems; in reality it is a way to crush the competition (or what little remains of it) into oblivion, since the applications and utilities that Microsoft bundles are typically the first that a user encounters. It doesn't prohibit the user from choosing a competitors software, but if it comes bundled with the operating system, chances are that the user will use it because it is already there. The tentative settlement would give Microsoft more leverage in which to force out the competition. The tentative settlement proposes that Microsoft provide schools with "low-cost" software. By providing the schools with the software and an exclusionary licensing agreement, Microsoft further builds it's user base. "But Microsoft did have one other carrot to dangle: the Enterprise Agreement, which gives discounts on licensing-as much as 50 percent-and automatically enrolls customers in SA (Software Assurance). But joining means CIOs must also sign a contract that bars them from using any competitive products." What better way of killing off the competition by preventing the schools from using any competitors software! This is, without a doubt the most devious attempt to undermine competition in this country. I again state my opposition to the tentative settlement of the United States vs. Microsoft antitrust lawsuit. I believe that a better settlement would be as follows (found at <http://www.gnu.org/philosophy/microsoft-antitrust.html>):

"Require Microsoft to publish complete documentation of all interfaces between

software components, all communications protocols, and all file formats. This would block one of Microsoft's favorite tactics: secret and incompatible interfaces.

1. To make this requirement really stick, Microsoft should not be allowed to use a nondisclosure agreement with some other organization to excuse implementing a secret interface. The rule must be: if they cannot publish the interface, they cannot release an implementation of it.

It would, however, be acceptable to permit Microsoft to begin implementation of an interface before the publication of the interface specifications, provided that they release the specifications simultaneously with the implementation.

Enforcement of this requirement would not be difficult. If other software developers complain that the published documentation fails to describe some aspect of the interface, or how to do a certain job, the court would direct Microsoft to answer questions about it. Any questions about interfaces (as distinguished from implementation techniques) would have to be answered. Similar terms were included in an agreement between IBM and the European Community in 1984, settling another antitrust dispute. See <http://www.cptech.org/at/ibm/ibm1984ec.html>.

2. Require Microsoft to use its patents for defense only, in the field of software. (If they happen to own patents that apply to other fields, those other fields could be included in this requirement, or they could be exempt.) This would block the other tactic Microsoft mentioned in the Halloween documents: using patents to block development of free software. We should give Microsoft the option of using either self-defense or mutual defense. Self defense means offering to cross-license all patents at no charge with anyone who wishes to do so. Mutual defense means licensing all patents to a pool which anyone can join—even people who have no patents of their own. The pool would license all members' patents to all members.

It is crucial to address the issue of patents, because it does no good to have Microsoft publish an interface, if they have managed to work some patented wrinkle into it (or into the functionality it gives access to), such that the rest of us are not allowed to implement it.

3. Require Microsoft not to certify any hardware as working with Microsoft software, unless the hardware's complete specifications have been published, so that any programmer can implement software to support the same hardware.

Secret hardware specifications are not in general Microsoft's doing, but they are a significant obstacle for the development of the free operating systems that can provide competition for Windows. To remove this obstacle would be a great help. If a settlement is negotiated with Microsoft, including this sort of provision in it is not impossible—it would be a matter of negotiation."

I am a customer of both Microsoft and America Online, though for as long as I have used products from both, Microsoft's performance has far outweighed that of AOL.

Considering browsers specifically, something that is very important because I deal with computer networking, security, and web design as a hobby I have found Internet Explorer to be a better product in every way. Not only does it support all of the latest features and innovations, but it is more stable and reliable. My pages are always rendered correctly by Internet Explorer, and are rarely tolerable in Navigator even when they strictly follow the latest W3C specifications.

Navigator lacks decent support for style sheets, scripting, dynamic and extensible HTML documents and every web developer I know is beginning to turn away from any Netscape Navigator support at all.

This is not an issue of Microsoft pushing a product simply because it is their own. This is an issue of Microsoft looking out for consumers and providing a service that any web savvy person should appreciate. Anti-Microsoft sentiments are at an all-time high, but we can't let those feelings block common sense or something that is apparent from brief observation.

Thank you for taking the time and allowing me to share my views on this issue.

Washington, DC 20530  
Dear Mr. Ashcroft:

I am writing today to encourage the Department of Justice to accept the Microsoft antitrust settlement. It is very irritating that the government has drug out this issue for over three years. The suit was not warranted in the first place; now that a settlement has been reached it is time to put the issue to rest.

Microsoft and the government have reached compromises on all of the major issues involved in this case.

Microsoft has agreed to give computer makers the flexibility to install and promote any software that they see fit. They have also agreed to disclose to their competitors various interfaces that are internal to Window's operating system products, to make it easier for other software developers to make more compatible software. The issues have been settled and it is time for Microsoft, the industry and the government to all move on. The settlement is fair and should be accepted. It is time to end this government over regulation. Please accept the Microsoft antitrust settlement.

Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Subject: Microsoft Settlement

The proposed settlement of the Microsoft judgment is a bad idea. Among the many oversights of the proposed final judgment against Microsoft, I must state that Definition U of the proposed final judgment against Microsoft must be amended to read:

U. "Windows Operating System Product" means any software or firmware code distributed commercially by Microsoft that is

capable of executing any subset of the Win32 APIs, including without exclusion Windows 2000 Professional, Windows XP Home, Windows XP Professional, Windows XP Tablet PC Edition, Windows CE, PocketPC 2002, and successors to the foregoing, including the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. This would close a loop-hole by which Microsoft could merely rename a future product, continuing its current practices (as ruled by the court) of unfair competition.

Microsoft may expend a great deal of time, expense, and effort to the contrary, but justice must prevail.

Dear Ms. Hesse,

I am writing to object to the settlement proposed by the government to settle the Microsoft case. The order does no more than to repeat in specific detail the general prohibitions contained in the laws that Microsoft has already broken. There is no reason to have confidence that Microsoft will comply with this order any more than it has complied in the past with the law that the order merely restates with greater specificity. The listing of certain illegal practices from which the company "shall" now refrain is not necessary for the court to put its name to if Microsoft intends to obey the law, and is of no use if Microsoft does not.

Microsoft has repeatedly, publicly, and in the strongest terms defended its past conduct as legal, moral, and even beneficial. It has not been punished in any significant way for previous violations of court orders or of the law. This settlement does not impose any penalty on Microsoft either. So Microsoft has neither an internal motivation to obey the order, nor has it any reason to associate such a violation with significant costs to itself. This order in essence tells Microsoft that it can violate the law with impunity. The settlement is feeble. The mechanism suggested to accomplish (I will not say "enforce") the putative aim of the settlement—to wit, a small board of overseers—would be largely if not wholly ineffective. While I do not believe that Microsoft's management team has any great claim to be excellent creators of software, there is little doubt that they are highly capable and effective business managers and strategists. The company will be able to outfox the overseers with ease, if indeed the overseers are not co-opted before the game even begins. It will be like taking candy from a baby. The settlement is unworkable.

I was prompted to contribute this comment when I noticed an appeal posted by a contributor to the Slashdot internet site, a gathering place for the digitally gifted younger set (especially those who have a liking for Linux, a freely distributed alternative operating system). I'm not a Linux fan myself, or even a computer freak; I'm a writer who mostly uses the Mac. However, I spend time occasionally browsing the Slashdot site, if only to keep myself humble by noticing the depth of my own ignorance. It's the same curiosity that leads me to read medical journals and other technical matter. Now, unlike most Americans, or (as Microsoft has been fond of pointing out) most law enforcement personnel and most federal judges, the population that posts to Slashdot is very, very, very computer-savvy. These are people who customize their operating systems, or even create operating systems, and who manage large complex networks of computers. My casual reading of the site indicates to me that the vast majority of that highly technical subculture believes implicitly that Microsoft is a monopoly, that Microsoft abuses its monopoly power, and that the abuse by Microsoft of its monopoly power is damaging to those with less power, a category of victims that includes computer users as well as companies unfortunate enough to be recognized by Microsoft as potential competitors. This population also

dismisses as unworthy of consideration the notion that a panel of overseers will be able to significantly alter Microsoft's behavior, and would laugh if it didn't hurt at the notion that Microsoft might moderate its anticompetitive practices of the company's own volition. That group of computer users—that highly knowledgeable community, whose opinions are representative of the many citizens who would benefit directly from a fair chance for the competitors of Microsoft—mostly believes that the government's proposed settlement is a politically motivated sellout. The court may or may not care whether its decision in this case is accepted as fair by the populations of technical computer users most affected by the outcome of the Microsoft case. But many distinguished judges have, I gather, felt that achieving a perception of fairness among the public is an important aspect of the jurist's craft. I urge the court to consider the implications of endorsing a settlement that is perceived on its face by the computer software community as a cave-in by the government and a free walk for the violator. The settlement lacks legitimacy.

I will tell you what I favor. I favor the breaking up of Microsoft. It worked with the oil trusts, with the steel monopolies, with the railroad trusts, and with the telephone monopoly. I am sure that in fact, judges do not understand software. Nor should they have to, nor do I believe that judges are deeply knowledgeable about drilling, refining, and distributing oil, or mining, smelting and fabricating steel, or building and managing a telephone network or a railroad. (Computers, after all, are not the only tough technical terrain on the planet.) But judges have broken up companies in all those industries. Heck, my wife is a doctor; she has spent years and years training for it. But if she's sued for malpractice, the case will be heard by a judge who may have never sprayed Bactine on a blister. And that's okay. Microsoft, for their part, does not understand the law; somebody needs to handle that bit for them.

Look, if I had been married five times, and I had killed the first four wives with an axe, you might not lock me up; you might even leave me living with the fifth wife. But would you let me keep the axe? Microsoft is an unrepentant violator of the law. You can't explain to them nicely what the law means, get them to promise scout's honor, and then drop by twice a week to make sure everything's going fine. They are not going to stop doing what they do until they are unable to do it. And the only way to make that happen is to take away the monopoly power. Then they can do what they love to do—go for the throat—and not have to take any guff about it.

Microsoft likes to talk about how competitive the software market is, what a rough world it is, and how they have to be constantly on their toes. And it's true. But Microsoft has never had one experience the rest of the software world has had. Microsoft has never gotten to compete against Microsoft. The court should give them the chance.

Sincerely,  
Theodore T. Cushman

Subject: Microsoft Settlement

Please reconsider the acceptance of the proposed judgement. The states' solution, while not perfect, is much closer to a fair and effective solution. I do not feel that any particular piece of software from Microsoft should be singled out, with the possible exception of the Office file formats. If these formats were made public and made to stay that way, competing products could (and would) emerge, enabling the more widespread use of competing operating systems. Currently, businesses are forced into one of the two monopolies (Operating System or Office Suite) by the other. If you want to correspond with your customers, you must use MS Office to read the documents. In order to run MS Office, you must run MS Windows. This should not be allowed to continue. At the very minimum, the determination of who should and should not be granted access to the Windows APIs must not be left to the owner of those APIs. For the most benefit to the public, those APIs should be made public and alternative implementations encouraged.

Thank you,

I don't think that anyone should be penalized for wanting to be number one. If that was the case you need to put AOL (America Online) on your chopping block next. AOL is more of a monopoly than Microsoft is. Microsoft has been a good corporate citizen and I think the original penalty is more than enough punishment. In economic times like we are facing would it be wise to try to break an American company to the point they will need to follow the same path as many other American companies and start laying off people, buying fewer and fewer services from smaller companies causing them to go out of business completely? I say stick with the original penalties and lets let everyone get back on track.

Thank You,  
Louis

Subject: Microsoft Settlement

I have, just now, personally reviewed the documents related to the settlement available from <http://www.usdoj.gov/atr/cases/ms-settle.htm> and am sufficiently concerned to comment (it's not clear how I can convey how significant that is).

I deeply concerned about the proposed settlement of the antitrust litigation between the US and Microsoft (Civil Action No. 98-1232). I must rely on the attorneys general to negotiate this in my best interest (as a consumer who's never, in my 10 years as a consumer of computing hardware, had a choice of operating system from a PC vendor) yet I'm convinced the settlement will do very little to improve competition.

In just a few minutes of perusing the proposed settlement I found the following paragraph in section VI Definitions subsection J: "Software code described as part of, and distributed separately to update, a Microsoft Middleware Product shall not be deemed Microsoft Middleware unless identified as a new major version of that Microsoft Middleware Product. A major version shall be identified by a whole number or by a number with just a single digit to the right of the decimal point."

Does that mean that IE5.0.0 is different from IE5.0? "Functionality that Microsoft describes or markets as being part of a Microsoft Middleware Product (such as a service pack, upgrade, or bug fix for Internet Explorer), or that is a version of a Microsoft Middleware Product (such as Internet Explorer 5.5), shall be considered to be part of that Microsoft Middleware Product."

The way I read that, is that anything not explicitly labeled as a MMP in the settlement is not an MMP unless Microsoft wants it to be. I suspect there are other things that Microsoft doesn't want to be labeled MMPs. Poking around the web, I found what I feel is some very insightful and constructive commentary at <http://www.kegel.com/remedy/remedy2.html>. It offers suggestions, whereas all I've had time to do is criticize :( Please give my thanks to those who are working the case on behalf of the consumers. I realize there must be enormous pressures.

thank you for your time,  
Jeff Warrington

Subject: Microsoft Settlement

I am another taxpaying, US Citizen who thinks the proposed Microsoft settlement is a scandal, a deal purchased with campaign contributions, and another demonstration that enough money can make the justice system dance like a puppet. I'm just sending this to be counted—all the arguments have been made in detail by much better analysts than myself and I'm sure you have no difficulty finding them. I'll stop there.

Subject: Microsoft Settlement

I am appalled that the proposed settlement even exists. It fails to provide any adequate safeguard for consumers and competitors. Microsoft has, as has been shown by their history, ignored any and all rules or regulations that they felt infringed on their strategic plans. The 1985 agreement was ineffective, and something much more stringent and specific is necessary. Along with this, there must be a mechanism to check and enforce it.

Microsoft has put all of its legal, political, and monetary might behind its current efforts to derail any efforts to level the playing field. The number of telephone and email solicitations from Microsoft supported groups has been tremendous, and shows just how much Microsoft is trying to manipulate the system.

Please don't allow Microsoft to corrupt the process. Their practices have been deemed illegal, and it is now time to ensure that those practices stop, and that those who have been harmed are given reparations.

Subject: The Tunney Act. Microsoft Settlement Rejection Notice

Monday, January 28, 2002

This is the deadline for comments on the Microsoft Settlement from the public

Now as some of you know I am not one for "chain letters" but this time I can't think of a better way of getting a good volume of mail generated in a short period of time.

The Proposed Microsoft settlement is a failure. This is according to nearly all the analysis by lawyers, industry advocates, and anyone involved in the case. The DOJ needs to hear from the people in the public comment period to let them know that it is not enough, and time is almost out. Let your voice be heard.

Remember it is the number of email the DOJ gets that counts, so lets generate some traffic on their mail servers. Just follow the instructions below.

1) Please forward this to microsoft.atr@usdoj.gov

2) Forward this to everyone you know and get them to do the same.

Thank you for your time

Stephen Berens

Founder of the Western Alliance

Form letter follows

Open Letter DoD Re: Microsoft Settlement

If you'd like to co-sign this open letter, please email me at petitionOkegel.com, and please give your city, state, title, and affiliation.

Subject: Microsoft Settlement

To: Renata B. Hesse

Antitrust Division

U.S. Department of Justice

Suite 1200

Washington, DC 20530-0001

Under the Tunney Act, we wish to comment on the proposed Microsoft settlement. We agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

\*The PFJ doesn't take into account Windows-compatible competing operating systems

—Microsoft increases the Applications Barrier to Entry. by using restrictive license terms and intentional incompatibilities.

Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

—The PFJ Contains Misleading and Overly Narrow Definitions and Provisions o The PFJ supposedly makes Microsoft publish its secret APIs. but it defines "API" so narrowly that many important APIs are not covered.

—The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

—The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft .NET with competing middleware.

—The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box— operating systems that all use the Win32 API and are advertized as being "Windows Powered".

—The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

—The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

—The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

—The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

—The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

—The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft P—Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

—Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

—Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system— even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

—Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

—The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

—The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

—The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems— who ship competing software.

—The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible

operating systems to increase its market share in other areas.

—The PFJ as currently written appears to lack an effective enforcement mechanism.

We also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest.

It should not be adopted without substantial revision to address these problems.

Sincerely,

**MTC-00019834**

Subject: Microsoft Settlement

Gentlemen and Gentlewomen,

Concerning the proposed settlement for Microsoft, I wish to express that the intended remedies seem to only address past and current technologies and do not truly deplete nor deter the monopolistic policies that Microsoft has engaged in over the last several years. The language within the document references specific software titles and technologies, many of which are no longer supported. Terminology (such as "ActiveX") is frequently changing and to expressly mention such items seems unduly restrictive for the settlement and easy to avoid by Microsoft.

Also, the remedies for exposing existing and proposed interfaces and APIs is expressed in terms of a delivery mechanism that Microsoft owns (the Microsoft Developers Network). This requires third party developers to set up a relationship (joining the developers network) to be able to access this information in a timely fashion. This requirement seems to create greater dependency upon Microsoft, in fact enhancing their monopoly position, rather than depleting it. This information should be available in a publicly (non-Microsoft controlled or owned) available facility.

Lastly, there is no mention of any form of restitution for the activities that Microsoft has engaged in. Microsoft's activities have destroyed many small companies, and worse, the people's dreams and livelihood who made up those companies. This is, in a true sense, the destruction of what most of us consider to be "The American Way and Dream" where we all have the right to compete without fear of the unfair destruction by a monopoly. This activity by Microsoft should be considered an extreme offense and the punishment should be commensurate with that offense. I was actually quite offended by the several references to provisions to protect Microsoft's existing licenses, without any mention of restitution for Microsoft's victims.

Thank you for your attention.

D. Gene Bland, Jr.

From: Emily A. Carl

To: Microsoft ATR  
 Date: 1/23/02 10:39pm  
 Subject: Concern about Microsoft Settlement  
 To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
 Emily Carl.

From: Daniel Rodney  
 To: Microsoft ATR  
 Date: 1/23/02 11:04pm  
 Subject: Microsoft Settlement

Dear DOJ,

I am a concerned computer user. I teach computer graphics software in fact. I am very familiar with Macs and Windows and want to express my concern about the strength of the decision about Microsoft. I feel that they have severely hurt and continue to hurt the computer industry. I think that their practices continue to hurt users and only are chosen because they can expand MS's monopoly. Take the WindowXP activation system. Users are not helped by this... their computers can be rendered useless if activation can't properly take place. Also, that Windows XP leaves out Java support, unless the user downloads it, is purely a MS tactic to edge out Java because it's not theirs. Sure it doesn't specifically attack it since it's POSSIBLE to use Java, but the problem is that many users don't know they should, or how to, so in the end, the ignorant user is hurt and for what good? So that MS can better push their own solution? The user is hurt because Java is a great platform INDEPENDENT choice. While I don't know that much about the settlement, please understand that it could not be too harsh on MS in my opinion. MS needs to be penalized for their past practices and current. They need to be stopped or I fear for how computers are heading because of their self serving choices.

Ultimately this is a decision that affects everyone's daily life in some way. Computers run our life... and when a moralless self serving computer company that will do ANYTHING is can get away with is running the show... it's a scary thing. Please do the right thing and STOP them once and for all. Prevent them from continuing to do it and make sure they pay for their past bad practices.

From: Noah L. Waller  
 To: Microsoft ATR  
 Date: 1/23/02 11:04pm  
 Subject: The Microsoft Settlement

In my reading of the information available on this case, I believe it would be a terrible injustice to our justice system and the ethics of our country if the Microsoft vs. DOJ case was settled in this currently proposed way. My reasons are simple:

1. For a company to be found as guilty as Microsoft has been found, based on the initial proposed sentence, and whose actions since have been nothing short of arrogant, it would make a mockery of DOJ to accept such a pathetically weak settlement.

2. More important, past history has shown this company will push the envelope of any reached settlement, it's expected it would continue to do so. The large number of anti-trust cases brought against this company cost tax dollars, not finding an ultimate solution is a bad investment, and it would not be long

until we could find ourselves, as consumers and tax payers, footing the bill for a job left unfinished. More information can be found here: <http://www.kegel.com/remedy/>

I am not in the legal field, I'm in health care. I do not have a solution to offer other than saying the one we have now is not enough, not by far.

Thank you for your time. —

#### MTC-00019841

From: David  
 To: Microsoft ATR  
 Date: 1/23/02 11:06pm  
 Subject: MicroSoft Settlement  
 Dear Sir or Madam:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully make reparations for the actions committed by Microsoft in the past, nor make it difficult for them to commit similar actions in the future.

None of the settlement provisions will keep Microsoft from abusing its current monopoly position in the operating system market. This is important in view of the seriousness of Microsoft's track record.

Most importantly, the proposed settlement doesn't correct Microsoft's previous actions. There are no provisions that redress their previous monopolistic abuses. Why is this? They only (attempt to) prohibit the future repetition of those abuses, which is puzzling in itself.

The MicroSoft antitrust settlement goes against everything the law stands for. If a person or organization is able to commit crimes, benefit from those crimes, and then receive, as a "punishment", merely instructions that they cannot commit those crimes again, they have still benefited from them. That is not justice, not for the victims of their abuses nor for Americans in general, and I find it personally appalling that no substantial monetary penalty has been considered.

While the Court's desire that a settlement be reached is honorable, it is wrong to reach a settlement, just for settlement's sake, especially with a company that still refuses to admit wrongdoing.

Thank you for considering my opinion.  
 Sincerely,  
 David Barbara Jr.  
 Chico, California

From: Michael Roberts  
 To: Microsoft ATR  
 Date: 1/23/02 11:08pm  
 Subject: Microsoft Settlement

I've just recently taken the time to research the proposed settlement with Microsoft, after hearing a great deal of negative comment, and I am quite sorry to say that the settlement is even more flawed than I had imagined possible. I realize that Mr. Ashcroft may even \*believe\* his statement that this settlement is not a sell-out, but to give him the benefit of that doubt, I am forced to assume that Mr. Ashcroft has no conception whatsoever of the actual problems involved in this case. Last time the DoJ tangled with Microsoft, you

brought out a settlement which was far too restricted, in the sense that it enumerated specific activities from which Microsoft was prohibited, and allowed Microsoft to pursue any number of closely related but legally separate anti-competitive behaviors—which, of course, they did. It was my hope that you had learned from that mistake, and yet I see that you have not.

Let's take a quick example: you define Microsoft's duties to publish APIs in such a way that they do not exclude competitive activity, which sounds great—yet you define APIs in such a restrictive way that it is frankly incredible from a technical standpoint. You limit the term "API" to mean interaction between \*specific\* operating systems (the list of which already excludes two of Microsoft's newly planned products) with \*specific\* middleware products—the list of which excludes Microsoft's most significant middleware: SQL Server and Outlook are not in the list. Windows \*Media\* Player is in the list, but Office products are not. Forgive my bluntness, but I simply cannot believe that this is an oversight. No-one could possibly be this stupid. As the settlement is written, this clause will hinder Microsoft's anti-competitive behavior for about six months; by the end of 2002 they will be as free to quash all competition as they have been since riding roughshod over the 1994 consent decree.

I'm sorry, I'm trying to be polite here, but this proposed settlement is so hopelessly flawed that it should by all rights be a public laughingstock. Unfortunately the public doesn't seem to have the technical knowledge required to understand the flaws—but I do. And this settlement, if accepted as it stands, will constitute a direct threat to my business.

From: Mark W. Alexander  
To: Microsoft ATR  
Date: 1/23/02 11:06pm  
Subject: Microsoft Settlement  
Renata B. Hesse  
AntiTrust Division  
U.S. Department of Justice

Reviewing the proposed final judgment against Microsoft I find a glaring problem regarding the current state of the software industry. There are a variety of proscribed actions against OEM's, ISV's, and IHV's, yet what exactly constitutes a member of any of those groups, and what information they may have access to, is apparently left to Microsoft's discretion.

Due to Microsoft's prolonged maintenance of their monopoly power, most corporations that would reasonably be classified in those groups have been severely weakened. The strongest realistic competitor to Microsoft's

products today come from the world of "open source" software.

The open source software community functions on a completely different economic model than Microsoft's traditional competitors. They develop and distribute software at no cost, operating instead on a model of service and support. Absolutely key to this model is inter-operability with Microsoft's line of operating systems. While open source based software organizations have produced products with strong feature sets and security, due to the open nature of their product they simply cannot benefit from any judgment that allows Microsoft to not disclose inter-operability information for any reason.

In particular, Section III, paragraph J. item 1, allows Microsoft to restrict access to compatibility information that "would compromise the security" of certain information. Microsoft would have the public believe that security information must be secret in order to be secure. This is patently false and has been proven in the security community. As an example, Microsoft's IIS web server software has had a long history of regular security breaches, despite the complete unavailability of its security information outside of Microsoft. In contrast, the Apache web server, the full source code of which is publicly available, has not had a major security breach in 4 years. Open inspection of Microsoft's security information is key not only for inter-operability, but for consumer protection as well. Of greater concern is section 2(c) in the following section, precluding those who do not "meet(s) reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business". Microsoft has stated clearly that it does not believe open source software development has a role in the software industry. On the contrary, several companies have been established on open source software. Further, said software was in development several years before these companies even attempted to become "viable" businesses. Microsoft would not have acknowledged software such as sendmail, apache, or Linux as authentic and viable business at the time of their development. Today, Sendmail, Inc., The Apache Group, and Linux companies such as Red Hat, Caldera, Suse, and Mandrake are in business based on that software. Apple Computer and Hewlett-Packard are testaments to the fact that two people in a garage is a "viable business" in this industry. I doubt if Microsoft would certify the authenticity and viability of today's origins of tomorrow's corporations.

I have more concerns about the other specifics of this judgment, but the final summary is this: It provides for too much control over the interpretation and application of the judgment to the convicted perpetrator itself, Microsoft. This judgment provides little realistic relief for traditional competitors, no relief for open source competitors, and no hope for either home or corporate consumers wishing to extricate themselves from Microsoft's history of oppression.

The entire software industry is poised for a drastic change in market economics. Open

source software is proving to be a disruptive technology that offers an enormous opportunity for independent software developers to thrive if, and only if, Microsoft is not allowed to hold them at bay with continued anti-competitive practices.—

From: Brian Hochhalter  
To: Microsoft ATR  
Date: 1/23/02 11:10pm  
Subject: Microsoft Settlement

To whom it may concern:  
After reviewing the proposed final judgment, I find I do not agree with its provisions to control Microsoft's well documented anticompetitive practices. The PFJ as it now stands does not provide adequate definitions of many terms such as "Microsoft middleware" and "Windows". It also fails to require Microsoft to disclose which of its software patents cover which APIs. In this condition those attempting to create Microsoft-compatible products must work in ignorance as to whether they are infringing upon patents held by Microsoft. It does not address anticompetitive license terms to which users of Microsoft products must subject themselves in order to use Microsoft products. Additionally, while seeking to protect commercial competitors to Microsoft, it provides no provisions for those that create products which are available free of charge (such as Linux and various other open source operating systems and application programs) which compete with Microsoft products.

Many people in the tech industry have examined the current PFJ and find it lacking. A number of them have developed alternatives that deserve consideration. That being the case, I request that the Department of Justice withdraw its consent from the current proposed final judgment before it is accepted by the court. Additionally I request that the Department of Justice and applicable

agencies examine the recommendations of computer professionals who have sent comments on the PFJ and build upon those suggestions to develop a judgment that will better protect Microsoft's competitors and the American public from the results of Microsoft's anticompetitive practices.

From: David Alderman (Earthlink)  
To: Microsoft ATR  
Date: 1/23/02 11:12pm  
Subject: Microsoft Settlement

Thank you for hearing me.  
Microsoft has engaged in anticompetitive practices that have harmed the public. Their proprietary document formats preclude any real competition since competitors products can't be fully compatible. They have consistently signed exclusive agreements with OEM's to prevent consumer's from having a choice. This practice goes all the way back to DOS. They have deliberately inserted code in their products to prevent competitors from working. Andrew Shulmann's "Undocumented Windows" covers much of this. In the Windows 3.1 era, Microsoft distributed a faulty DLL to their competitors that prevented their products from sharing files in a networked environment. Microsoft Word had the working version of the DLL.

I am not familiar with law, but I believe Microsoft is guilty of abusing its monopoly position, and they will continue to do so unless someone actually punishes them in a punitive manner.

As a final note, I would like to ask the question, "who owns your data?" If you do not have Microsoft Word, Microsoft Excel, and Microsoft Powerpoint, can you read your documents, spreadsheets, and presentations? If Microsoft asked you to return their software, even for a full refund, how would you gain access to your documents?

**MTC-00019851**

From: Michael Portuesi  
To: Microsoft ATR  
Date: 1/23/02 11:10pm  
Subject: Microsoft Settlement

I am writing concerning the proposed settlement between the Department of Justice and Microsoft corporation.

I believe the settlement to be very inadequate. It contains many loopholes that would enable Microsoft to continue their current predatory business practices, and to extend their monopoly to new markets.

To me, the most troubling aspect of the settlement concerns the rules for Microsoft's disclosure of specifications of its API's, middleware, file formats and protocols to third parties for interoperability. The provisions apply only to other commercial entities; nowhere does it require Microsoft to make these specifications public for access and use by individuals and non-profit developers. Unless we have true open access to the Microsoft specifications, interoperability with their products will never be achieved.

This settlement goes against the spirit of the trial before it, and in many ways devalues the effort that went into the unanimous monopoly ruling.

I urge you to reject this proposed settlement, and to urge a settlement that truly addresses the very important issues at the heart of this case.

As a computing professional, I have a vested interest in seeing a healthy computing industry. We will never have that with one company driving all the standards, and hence all the progress in the field. Consumers are the ones who lose the most in the end, through lack of choice and stifling of innovation. — Michael Portuesi 400 Mississippi Street San Francisco, CA 94107–2928 mailto:portuesi@jotabout.com

From: Vijay Ramasubramanian  
To: Microsoft ATR  
Date: 1/23/02 11:13pm  
Subject: Microsoft Settlement

As a United States Citizen and Taxpayer, I would like to make it clear that I am vehemently opposed to the current Proposed Settlement against Microsoft.

The proposed remedies are weak at best and ineffectual at worst. Since large amounts of taxpayer money have been expended by the Department of Justice in pursuing the case, it does not make sense to impose such flawed remedies on Microsoft, thereby undermining the best interests of the taxpayers. The scope and severity of any Department of Justice settlement with Microsoft should be commensurate with the crimes of which Microsoft was found guilty by the Court of Appeals. The current proposed settlement does not meet this criterion.

Many scholarly documents have been written which address the legitimate shortfalls and ample inadequacies of the Proposed Settlement. Among these, I am in agreement with the views and evidence expressed by the Computer & Communications Industry Association in: <http://www.ccianet.org/papers/ms/sellout.php3>

Thank you for this opportunity to present my comments.

Attorney General John Ashcroft  
US Department of Justice

950 Pennsylvania Avenue, NW  
Washington, DC 20530-0001

Dear Mr. Ashcroft:

I am writing today as a member of the technology industry to encourage the Department of Justice to accept the Microsoft antitrust settlement. The settlement is fair and should be accepted by the government.

Microsoft has agreed to many tough terms. Many of the terms extend to products and procedures that were not even mentioned in the original suit. Microsoft has agreed to give

computer makers the flexibility to install and promote any software that it sees fit. Microsoft has also agreed not to enter into any agreement that would obligate computer makers to promote Microsoft software.

The terms of the settlement are fair and the government should accept the settlement. The technology industry needs to move forward, the only way to move forward is to put the issue in the past. Please accept the settlement.

Sincerely,  
Matthew Conners

Subject: Microsoft Settlement

I am writing to oppose the settlement the US Attorney General seeks to make with Microsoft. It does not define many terms; it does not protect all manufacturers, only the twenty largest; and it does not force Microsoft to make its file formats available. In addition, the API documentation it would be forced to disclose is incomplete, and Microsoft is given no requirements as to how soon before the release of new software the APIs must be disclosed.

as a US citizen i feel that the proposed microsoft settlement poses a grave danger to the future of not only the software and computing industry in this country but also to the wellbeing of the consumer public which are, and will continue to be victimized by the monopolistic hold this company currently has over the general market. I have seen the boom of the internet from an eccentric cluster of interconnected "geek" experiments to the current global interface of billions upon billions of individual webpages. throughout this period i have also witnessed the breadth, influence, and power of the microsoft corporation expand to engulf virtually every facet of our lives, extending amoral market practices into niches opening far more avenues of venue than our current legal system was, or is currently capable of keeping pace with. the current proposal for settlement of this issue does little to hinder microsoft's ruthless ingenuity in circumventing imposed limitations to its illegitimate market ethics. i am not an expert in the field, nor am i a legal analyst, but rather a concerned denizen, and consumer. i see the future of the computing industry one of almost hopeless promise as empowerment has continually been taken away from the consumer over products (both hardware and software) he/she has purchased, yet has a right to utilize via the fair use doctrine. as a proof of microsoft's continual discriminatory practices, as well as corporate mindset i will quote a section of the EULA for "The

Microsoft Windows Media Encoder 7.1 SDK:" ... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); ... as i stated before i am not an expert in the field, and as such this e mail should not be weighed by my evidence, but rather by the concern of an "average citizen" that feels the proposed settlement will do little to change microsoft's influence on my life.

that is all.

I believe that the proposed Microsoft antitrust settlement does little to advance the cause of justice. My primary concern is that the remedy of requiring Microsoft to donate computers and software to schools will damage the competitiveness of one of the few markets Microsoft does not currently dominate. From which company will these schools purchase software once the donated software becomes obsolete (next year)?  
Microsoft.

Subject: Microsoft Settlement

To whom it may concern,  
As long as it is not signed into law that I will HAVE to pay Microsoft for buying computer hardware or for signing onto a public network I will find work-arounds, I will abuse rules and break every marketing scheme to be able to use Linux and Mozzilla for my needs, and I will regret this outrageous settlement that was brought upon the U.S. people.

I will not purchase or use Microsoft products unless someone sticks a shotgun into my ribs—which will certainly happen more sooner than later. At the same token, I will never again buy a GM, or buy pizza from the guy on the corner—unless I'll have no other choice.

Taking my business elsewhere used to be my greatest privilege as a consumer in a free marketplace—until Microsoft came along and ensured that I CAN NOT take my business anywhere else!

This settlement will prove it once again that ruthless, unlawful business pays huge, and that the punishment in this country will never match the crime.

One last thing: Microsoft is not an Innovator... \*WE ARE\* innovators, those who learned and worked to be able to do WITHOUT Microsoft in all these years, and we will keep doing so!

With no particular regards (due to the lousy job you did)

Subject: Microsoft Settlement

Although I am a Canadian citizen, it is with great concern that I have watched this trial, the findings, and now the resolution.

It is a difficult problem, but it is clear that Microsoft will continue to exercise what it believes are its rights by violating the rights of other companies to compete in markets that Microsoft chooses to dominate.

The existing settlement is unacceptable, it does not serve the communities or the markets that Microsoft has impacted by their actions. There are several possibilities, but any solution should benefit education, reinventorize the technology markets to

compete, and punish Microsoft by forcing a change in their business practices. \$1 billion dollars is a paltry sum to Microsoft. At 5% interest they can earn that back in a year on the \$35 billion they would have left. I would propose a \$10 billion fine. \$5 billion set up as an education fund to be administered by a neutral 3rd party, and \$5 billion to set up a fund to reinvigorate the technology market and give new companies the opportunity to compete in the market place.

I also believe that Microsoft should open source their browser, and if they bundle middleware (IE, Windows Media Player, MSN) competitors should have the same access to customers and rights to bundle as well. The difficulty is in trying to ensure that companies can compete on the OS platform in areas where Microsoft wants dominance. The only way to determine if any remedy is successful is to see if business can compete effectively and reach consumers fairly to compete for their business. Consumers have been summarily brainwashed to a large degree due to Microsoft's actions, they need to know that it doesn't have to be Microsoft if they don't want it.

Microsoft Office's file formats should be opened as well. Although they were not part of the case, this could be a key part of opening competition in markets where Microsoft has a stronghold. Office is a ubiquitous standard. There are no serious competitors because no other company is able to ensure compatibility with the Microsoft Office file format. This market has stagnated as well. There aren't many choices for consumers or businesses due to the file format issue. Opening the format up would create an even playing field. Companies could release their software and compete based on features and price.

Currently Apple is the only other choice that consumers have. Microsoft's practices on Apple's platform are much different than their practices on their own platform. Its the control of the OS, control of the middleware, and control of standard file formats that are suffocating the industry. If Microsoft claims they want freedom to innovate, then level the playing field and let the consumers decide.

Thank you.

From: Jesse Becker  
To: Microsoft ATR  
Date: 1/23/02 11:18pm  
Subject: Microsoft Settlement

I have a number of concerns about the proposed settlement between the US Department of Justice, and the Microsoft Corporation.

(1) The (proposed) settlement is not sufficiently strong to prevent Microsoft from pursuing similar activities in the future. The proposed restrictions apply to narrow ranges of activity, most of which can be circumvented easily by changing product names (as the settlement specifies product names instead of classes of products), or developing new products that perform similar purposes.

(2) There is no clear enforcement mechanism for this settlement. While there is the creation of an oversight committee, it has no obvious powers to give punishment for any breaches of the terms of the settlement.

(3) The group responsible for implementing many of the points listed in the settlement, namely OEMs, are tied directly to Microsoft for their revenue by selling Microsoft Products. This, I believe, does not constitute an unbiased group for carrying out the points of the settlement.

(4) Finally, Microsoft has used its monopoly standing to directly hurt some consumers, myself included, by forcing them to purchase their products from OEM companies. In my case specifically, I have purchased two systems from Dell Computers, and have had to pay approximately \$100 in each case (a total of about \$200) for a copy of Windows 98 and Windows Millennium that I did not wish to buy.

Thank you,

From: John  
To: Microsoft ATR  
Date: 1/23/02 11:17pm  
Subject: Microsoft Settlement

My personal opinion is that the DoJ just gave Microsoft a very gentle slap on the wrist and is missing the whole point of the lawsuit.

If you look at Microsoft's .Net program, we will all be renting software from Microsoft forever and this will guarantee Microsoft's monopoly position in the operating system market instead of allowing true competition, which would make all computer software better instead of putting out truly defective software as is now the case. This just touches the surface of my position and argument against the current settlement.

Thank you,  
John Russell

Subject: Settlement in Microsoft Case

I have studied much of the proposed microsoft settlement, and as CEO of an independant software/internet company, I find the settlement severely lacking. Frankly, I do not believe it will do any good. I fully expect that Microsoft will simply "redefine

the problem", leaving the justice department to enforce a remedy that is no longer relevant or helpful to those harmed by Microsoft's illegal actions.

The fact that it is agreed upon by everyone (except MS) that they vigorously broke the law, yet have managed to escape serious penalty, denies any meaning to judge Jackson's verdict. The current settlement will also deny justice to those hurt and ruined by Microsoft's practices.

From: Paul Murray  
To: Microsoft ATR  
Date: 1/23/02 11:19pm  
Subject: Microsoft settlement

I would like to comment on the proposed antitrust settlement with Microsoft. In two words, it stinks.

From what I have read, it is riddled with loopholes for Microsoft to exploit—and their past behavior has demonstrated that if there is a loophole, they will use it.

An example of this is that I have read the settlement applies only to personal computers, which are defined as having keyboards. No keyboard, the settlement doesn't apply. So MS can do whatever they want with their X-box game player, and a tablet PC that reads the user's handwriting. When voice recognition systems are perfected, they can do whatever they want with that, as well.

Here's an article from a respected industry news organization that discusses some of the potential loopholes:

<http://news.com.com/2100-1001-275375.html?legacy=cnet>

The "concessions" that MS has made are meaningless, and they are paying no penalty for their "crimes", as noted by respected columnist Dan Gillmor: <http://web.siliconvalley.com/content/sv/2001/11/02/opinion/dgillmor/weblog/index.htm>

Columnist Bob Lewis of InfoWorld wonders why MS gets to negotiate as an equal party when they have been convicted of criminal behavior:

<http://www.infoworld.com/articles/op/xml/02/01/07/020107opsurvival.xml>

I also think it is shameful that the Bush Administration is proposing such a weak settlement to a case that required several years and many millions of dollars to win.

I believe that the settlement proposed by the nine holdout states is a more appropriate resolution.

From: Jenny Ellsworth  
To: Microsoft ATR  
Date: 1/23/02 11:21pm  
Subject: Microsoft Comments

As a remedy for Microsoft's abuse of monopolistic power, it would be better to forbid them to give their products to schools than to require it. I am an IT professional for the City of Newport Beach, and an important part of my job is computer training. I know, from observing users in our Microsoft-dominated environment, that exposure and training are the determining factors for a user's choice of software. Allowing Microsoft to monopolize the schoolchildren and future computer professionals of this country will only serve to ensure that they continue to monopolize the software industry in years to come.

In addition to serving Microsoft's business needs of the future, such so-called "charity" would cost them pennies to provide software to schools, and offer Microsoft both tax benefits and good public relations. Microsoft has in the past regarded the DOJ as giving them a mandate to monopolize the software industry, and this would be no different. Were they to provide cash, rather than software, to be used as the schools need to use it, that would be a great aid.

Allowing PC makers to install non-Microsoft software is not sufficient to enable competition. Microsoft must be made to separate the operating system from their other applications. Many users I know are at least somewhat confused about the difference between Windows, Office, and the Internet. This is the result of Microsoft's deliberately ambiguous naming conventions and the interaction between Microsoft products that cannot be matched by any other software manufacturer. I realize that dissociating their OS and other software is a tall order, but without such a move, competitors will not succeed.

Microsoft clearly believes that the DOJ and the State Attorneys General will not act against them. This has made them arrogant. They feel safe to act in a non-competitive manner, bullying companies and extorting money from them. When Newport Beach's IT department invited their representative to help us be in compliance with their license agreements, the person from Microsoft spent most of his time threatening to audit us, telling us why piracy was bad, and often insulting us. To quote their representative

when we produced our evidence of legitimate purchases, "That and a dollar will buy you a cup of coffee," and, "You know, we audit cities like you, and we win. Ask your city attorney; he will tell you it isn't worth it to fight us."

Remember, we invited them to visit us. We asked for their help. They acted like bullies. Coercion through legal action is distasteful in a major corporation, but is illegal in a clear monopoly.

Microsoft must be made to clarify their licensing. Although we had paid for every single copy of Microsoft software, we, as intelligent computer professionals, couldn't understand the requirements well enough to comply with them. The licensing requirements are deliberately confusing and hard to comply with, and Microsoft knows that most companies will simply pay for more licenses, rather than try to fight them on an audit.

Please, do not allow Microsoft to infiltrate schools to increase their monopolistic power. Please, demand that Microsoft separate their OS from their other software. Please, require that Microsoft establish clear licensing that doesn't lead to entrapping customers.

These opinions represent my observations as an IT professional in an organization of over 400 people. The views do not necessarily represent those of the City of Newport Beach.

Hello,

I would like to say that the proposed settlement seems to be lacking in many areas. See Dan Keigel's analysis of said (<http://www.keigel.com/remedy/letter.html>).

Additionally and possibly more unsettling are the ramifications that Cringely brings up in his December 6th column (<http://www.pbs.org/cringely/pulpit/pulpit20011206.html>), specifically it is not guaranteed that free software organizations will have access to the necessary APIs for interoperability. Others have suggested that Microsoft may resort to bundling third party software or placing patents at key points to restrict access to important APIs.

Basically, I trust Microsoft less than I trust a floppy disk to keep my data safe, which is to say not at all. Throughout the proceedings and settlement they have exhibited not only a willingness to lie and cheat, but an arrogance and nastiness flaunted in the face of the laws and system. Microsoft needs to be taught a lesson they will not soon forget (certainly not as quickly as they forgot the last "lesson"). It should be example to the companies that seek to follow in their footsteps, an example that our monopoly laws are here for the public good and we will not allow the public good to be harmed for any amount of lobbying and campaign contributions.

Subject: Microsoft Settlement

I would like to point out some problems with the Proposed Final Judgment concerning United States vs. Microsoft as allowed by the Tunney Act.

I have had great difficulty avoiding the Microsoft monopoly. The court should try to remedy the monopoly, as well as assess real punitive damages, and encourage real competition. This will ultimately benefit the entire computer industry and all users.

The PFJ falls short in several areas, the following are the ones that continue to hamper my attempt at avoiding the Microsoft monopoly.

The "Findings of Fact" (paragraphs 20 and 39) found that Microsoft's UNDOCUMENTED file formats form an Applications Barrier to Entry. I have trouble finding compatible competitive software that will read Microsoft documents because Microsoft does not have to publish their file formats. This inhibits competition and encourages Microsoft's continuing monopoly.

Microsoft discriminates against ISVs who work with Open Source. The "Microsoft Windows Media Encoder 7.1 SDK EULA" prohibits the distribution of the redistributable component if it is in conjunction with Publicly Available Software. This discourages the use and growth of the Open Source community.

The PFJ does not place restrictions on how Microsoft licenses products to large users known as "enterprises". I work for a large corporation, but do not run Microsoft on my

PC. However due to the licensing practices my department is still required to pay Microsoft licensing fees because my PC "could potentially" run a Microsoft OS. This gives no incentive for individuals or my department to run non-Microsoft software, since we would still have to pay the licensing fees.

I would suggest the court seriously consider Red Hat's offer to give an OS (Linux) and applications to schools for free forever if Microsoft provides the hardware. This appears to be a win for everyone who should benefit.

Thank you for your consideration.

From: William Day  
To: Microsoft ATR  
Date: 1/23/02 11:24pm  
Subject: Microsoft remedy should NOT have them giving to primary schools.

Dear DOJ,

The Microsoft remedy should NOT have them giving software to primary schools.

I'm happy if Microsoft give as much hardware as it wants to schools, just as long as there is no Microsoft software bundled with it.

Otherwise, if microsoft gives software to schools, this is just a trojan horse and the tip of the iceberg if you look at the total cost of ownership. The maintenance of microsoft software has yet to automated, unlike Apple Macintosh and Linux, and all it's other competitors.

A person still has to weekly click on Windows update on every box in order to keep secure any version of Microsoft windows. Don't foist insecure hardware on our schools, the folks least able to afford it.

— Hope this helps,

Bill Day

From: Sam Mankiewicz  
To: Microsoft ATR  
Date: 1/23/02 11:24pm  
Subject: Microsoft Settlement

I believe the Proposed Final Judgement in its curret form does not do enough to remedy Microsoft's anti-competitive practices. First, the definition of what API's Microsoft must make public is incomplete, and excludes certain API's that Microsoft can use in the future to leverage its monopoly. Second, the provision that would allow Microsoft to retaliate against OEMs who ship PCs without a Microsoft OS installed is essentially condoning this anti-competitive practice instead of remedying it. Lastly, Microsoft has shown in the past that it has no intention of upholding the spirit of its agreements with the DOJ; therefore, stronger enforcement mechanisms ar needed. At the very least, a Technical Committee will be able to publicize Microsoft's transgressions more quickly, even if it can't do anything about them. Remember, this is a repeat offender you're dealing with—they've demonstrated

before they are willing to behave illegally and I'm sure they'll do it again.

From: David Union  
To: Microsoft ATR  
Date: 1/23/02 11:24pm  
Subject: Microsoft Settlement

I am one of the voices that is for stopping the case against microsoft as it's currently being carried on.

What microsoft \*DID\* do wrong is trying to force vendors to not carry other Operating Systems by offering them decreased prices for not offering options, sometimes disguising this as making them pay by the PC's they sold, not by the ones they sold with a MS Operating system.

This should be addressed as anti-competitive and the judge should let the companies effected by this, that had an alternate for the relevant hardware, perhaps sue for damages.

The bundling issue is completely bogus, and fabricated by competitors hoping to use the case to aid them in their business rivalry against a more well run competitor.

Microsoft is \*not\* known for innovation. Most of the stuff they "bundled" they in fact did so in response to their competition doing it first.

I can do this case by case  
—Disk Compression: DR Dos added it, Microsoft Followed  
—Networking: Novel DOS added it, Microsoft Followed. Most UNIX operating systems had this first, including some by SUN, one of the people trying to testify against MS  
—Internet Browsers: Many people had this before Microsoft  
—Mice—Xerox had this first  
—GUI—Xerox had this first, and GEOS had it first on the PC.  
—CD Burning Software—MAC OS "bundled" this first  
—Video Editing—MAC OS "bundled" this first  
—Built in graphics printer drivers—this was also an "add-on", but the "MAC" OS bundled this first.  
—Multiple Monitor Support—MAC OS "Bundled" this first.  
—Encryption/Security—SUN OS "Bundled" that first  
—Clustering—Many people "bundled" that first

—FTP—All UNIX OS's "bundled" this first  
 —Telnet—All UNIX OS's bundled this first  
 I could go on for pages.

In all cases there were "stand-alone" products that had these features that were "bundled" by the other OS before microsoft thought of it. They did it because their competitors did, to keep up with them.

All of this is also just the natural extension of an OS (operating system). First you talk to some types of hardware, and as more becomes "cheap" you arrange to talk to it, including network drivers, cards, wireless stuff, etc. You keep adding features to give people reasons to buy the new version, otherwise they won't—just like with cars or any other consumer product.

Also, Microsoft helped the industry in other ways, basically democratizing it. In the 80's, before Microsoft, just a word processor (Word Perfect, #1 at the time) was nearly \$500. Adjust that for inflation, and see what you get for the same money today. Compare the cost of "Lotus 123" in real dollars then and a whole office suite now. Microsoft's strong place has led to a huge upswell in the market. If there wasn't one really big market that developers could write for they never would have gotten the volume up to get the prices down, in real dollars, to where they are today. Especially when at the time folks like Novell, IBM, SUN, DEC, and all the folks winning now were charging thousands of dollars (sometimes hundreds of thousands of dollars) for the "privilege" of getting the tools to develop for their proprietary platform.

Look Microsoft is no saint. They decide all issues based on how much money it will cost or make. I've worked with projects and been told by SUN that they won't give us any information on their products because we (at the time I was a contractor working for another storage company) were a potential competitor. Is this not worse than Microsoft?

I was on another project—we were building a server. Intel was one of the main competitors. They bought out in a single month the chipset provider and memory provider, then jacked the prices up of the parts we'd need (and put delivery schedules on hold) killing the whole idea of competing with them. Is that not worse than Microsoft? I could go on and on, but all the folks complaining against Microsoft are the pot calling the kettle black. Let people on a case-by-case sue for damages on the bundling issue and drop the rest of the case and save we tax-payers all the expense of the case.

Hurting Microsoft hurts the Software industry as a whole, which is not something we need right now.

David Union  
 Software Engineer

Currently: Vibren Technology, Inc. Former employee of of EMC Corp., and before that of Data General Corporation. Long before Microsoft, IBM came to Data General, who had a DOS operating system, and asked to license it for use on their "IBM PC". Some "brilliant" marketing guy at the time said that "Data General wasn't a software company." I'll bet he regrets that one

 Subject: Microsoft Settlement

Dear Sir/Madam,

I am writing by appeal to the Tunney Act to protest the proposed settlement of the Microsoft case. It is very clear that this settlement is an inadequate remedy. I draw your attention to the following issues that must be properly resolved to restore fair competition in this industry.

1. The court must abolish licensing terms which prevent microsoft software from being used on competing operating systems (such as Wine) capable of running Windows software.

2. The court must prevent microsoft from building into its software code which detects and runs aberrantly under competing operating systems.

3. The court should directly encourage the building of microsoft alternative operating systems by offering aid to open-source groups currently engaged in building microsoft compatible operating systems.

I further believe that the continued existence of a corporate entity providing both operating system, all major software and browser for personal computers is a barrier to the development of software that is in the public's interest. Microsoft should be forced to divest itself of Internet Explorer and separately of the Microsoft Office suite of programs.

I think it is ridiculous the way everyone is treating Microsoft.

I am a software developer, and a linux user, but I think Microsoft should be left alone.

Don't let the whines of unsuccessful companies lead you to bring down one who pays attention to people and does things right.

Microsoft created the very industry that breeds the people who are currently whining about them. It is because of Microsoft that they exist, and that they continue to exist.

Microsoft is not at all a permanent fixture. The volatility of the market has shown that even the biggest, most successful companies

can be put of business rather fast by industry changes.

If someone wants to compete with Microsoft, let them make better software. But, please, don't force us to use second-rate operating systems just because some people whine because no one uses their software.

On the same note, I don't think anti-trust cases should even be pursued in the same manner they once were.

It seems like all we're doing is fighting amongst ourselves & letting the foreign companies dominate.

We should learn something from the Japanese regarding large companies.

Foreign companies will, and have been providing all of the competition the people need. Stop taking jobs away from Americans by crippling our companies and allowing foreign companies to take over.

The End.  
 Mike Venzke,  
 US Citizen.

 Subject: Microsoft Settlement  
 To Whom It May Concern:

I am writing to protest the proposed settlement agreement relating to the antitrust action against Microsoft Corporation. It effectively maintains the status quo, and does not do anything to deter Microsoft from future anticompetitive practices or do anything substantive to remedy the its past abuses of its OS monopoly. The company has shown no indication that it plans to change its practices. This settlement does not serve as a deterrent, nor does it directly prevent future monopolistic abuses.

There are many shortcomings to the proposed settlement, and others have pointed them out more ably than I can. I will just add two more suggestions:

(1) Microsoft should be required to fully and accurately document all the file formats that its OS and application products use. This is a major, and artificial, barrier to interoperation between Microsoft products and other products.

(2) As the equivalent of a "common carrier" in the OS world, Microsoft should be required to give access in a

nondiscriminatory manner to all organizations, individuals, or companies who wish to create software to interoperate with their OSs and applications. A neutral regulatory body should review their licences, present and future, to ensure that they meet this standard. The body should have veto power over all such licences.

Dear Ms. Hesse:

I am strongly opposed to the proposed settlement being offered to Microsoft. I am dismayed by the lack of remedy this settlement offers to U.S. citizens for Microsoft's anti competitive practices. Specifically, I have been personally damaged from Microsoft's policy of leveraging out of business any OEM that ships personal computers which do not contain a Microsoft Operating System. Microsoft should have no right to force their Operating System and any other bound software, such as Internet Explorer, onto a consumer's personal computer. This is clearly anti competitive, and a blatant misuse of the monopoly power of Microsoft Corp.

Section III.A.2. of the settlement allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. This is unfair and wrong, and should be illegal based on the judgment against Microsoft.

Thank you for considering my comments.  
Sincerely,  
Kenneth Galle

Subject: Microsoft Settlement

1. They broke a previous court order, blithely and openly. They must face harsh penalties to ensure respect for the law.

2. Opening up the education market to MS, a feat which they have not had great penetration is nonsensical in and of itself and will hurt legitimate software companies.

3. The operating system does not include writing programs, photo-editing programs, internet-surfing programs or email programs. It is simply the software which allows other software to run on the hardware. MS must offer this "stripped-down" or more accurately, proper system to all purchasers of MS software—wholesalers, retailers and others.

4. They be forbidden to "implant" secret APIs. If they are building an operating system then they must allow fair competition by completely opening up tall their commands, sub-commands, API's, hardware and software calls, IO, etc to licensed developpers. Theses developers must all have identical terms, with reductions for block purchases only.

RE: comment on the proposed settlement between the DOJ and Microsoft

I would like to express my adamant opposition to the proposed settlement. The proposed settlement does not effectively punish Microsoft for proven illegal behavior. The proposed settlement does not effectively prevent Microsoft from continuing to abuse its monopoly. The proposed settlement sends the wrong message about the rule of law to would be violators and to the public.

The proposed settlement fails to prohibit many of the abuses that were revealed in the trial, including punitive pricing and coercive contracts. But even within the few and inadequate restrictions it does establish, the settlement lacks a serious enforcing mechanism. It leaves Microsoft free to interpret the agreement and requires a new trial in order to establish violations. That would be unsound in any case, let alone in this case, in which the offender has a track record of bad faith in dealing with the law.

The weakness of the proposed settlement stands in stark contrast to the strong findings of fact against Microsoft. The finding that Microsoft's abused its monopoly withstood appeal. That the DOJ would agree to such a week deal from such a strong position suggests either incompetence or corruption.

Microsoft has been bound by a consent decree even before the latest trial. That consent decree was poorly observed. In the trial, disturbing evidence emerged regarding

the complete contempt in which key Microsoft executives held the federal government and the judicial system. Here is a company that not only broke the law, but did it repeatedly and brazenly, and never showed an ounce of contrition and never accepted responsibility, even after the appeals court sustained most of the case against it. For such a company to come out of this case basically unscathed, is to invite a general contempt for anti-trust law and federal oversight of commerce in general. Especially now, after the massive failure of regulation that was revealed in the Enron collapse, this is the wrong message for the court to send to the nation.

America needs to hear from this court a n affirmation of the integrity of the law and of the role of the government in overseeing and enforcing the rules of commercial competition. Accepting this settlement will not acheive this goal.

respectfully

Subject: Microsoft Settlement

Dear Sirs/Madams,

Regarding the proposed settlement between the Department of Justice and Microsoft Corporation, I have to say I am grievously disappointed in the "supposed" remedy. Like many other Americans I am beside myself in disbelief after reading the settlement. I've listed my concerns below.

1. The settlement proposes nothing to effectively address the possible recurrence of anti-competitive behavior from Microsoft Corporation. The definition concerning "Windows Operating System Product" among others leaves much to be desired. A simple name change or new "Operating System Product" allows Microsoft to wriggle out from underneath this one.

2. The settlement proposes nothing to address punitive and reparative measures on behalf of companies such as Netscape Communications, Caldera and others which clearly fell victim to Microsofts' anti-competitive nature.

3. The settlement does not punish Microsoft for a single violation of the Sherman act. The proposed settlement continually points out that Microsoft violated anti-competitive laws, yet there is not even a whisper of any consequence.

I sincerely hope that the final draft of the Proposed Final Judgement against Microsoft Corporation addresses these issues (and the many others I did not mention) and does not merely mention the fact that the law was broken. Although this may not be the most opportune moment to make an example out of another "monopoly" (I remember AT&T's divestiture), I believe it is necessary and I believe it is the right thing to do.

"The only thing necessary for the triumph of evil is for good men to do nothing."

I have watched the proceedings of the Microsoft trial for years. Its obvious to myself and many others in the computer industry that Microsoft just bullies its way around, or uses stall tactics to get it's way.

Microsoft has made a laughing stock out of the government and the legal system. The legal system has no balls. The message to everyone is if you have enough money and lawyers you can do what you want. I personally want to see Microsoft held accountable for their wrongdoing and suffer the consequences. Thankfully the attempt to contribute their software on the schools was thwarted. Don't let this case keep dragging on, give Microsoft their medicine.

**MTC-00019892**

From: Kevin Dickson  
To: Microsoft ATR  
Date: 1/23/02 11:35pm  
Subject: Microsoft Settlement

Dear Sir or Madam,

I have reviewed the Final Judgment for the Microsoft antitrust case dated November 6, 2001. I, as a United States Citizen, would like to provide my comments on this proposed settlement.

I am a software engineer by trade, and have been working in such a position for 2 years. Beyond this, I am have been using computers for many years having experience with and programming in Unix, Linux, Windows, and MacOS.

Overall, I do not feel that this settlement does enough to keep Microsoft from retaining a strange hold of the operating system space, the home user's choices and the computer industry in general, especially for the long term. Also, I do not feel that this settlement provides enough of an umbrella to prevent Microsoft from gaining monopolies in additional areas. In paragraph D of section III. Prohibited Conduct, I first read this as a good start, releasing APIs and other documentation to certain areas of the computer industry. I believe that this should be extended, that everyone should be able to view and use these APIs and documentation easily and license free. Doing so, I believe, would allow others create a competing operating systems that would be able to run current Windows applications, and also to allow more application which can compete with Microsoft middleware application. Later on, in paragraph J of the same section, it would seem that paragraph D could be voided out by Microsoft claiming and this API and that documentation cannot be released as it would constitute a security violation or anti-piracy/anti-virus workaround. We know that Microsoft agrees with the security through obscurity idea. One only needs to look at Unix and Linux to see that this is not the case with their relative lack of wide spread viruses and worms infections.

I also feel that the releasing of APIs and documentation should be extended from just Microsoft operating systems. Microsoft is currently working on their .NET project. This is not itself an operating system as I

understand it, but it is a large platform for another level of applications. It this area it could again put a strangle on competing applications.

My final point is one of this settlement's length of enforcement. In section V. Termination, this settlement is only enforceable for 5 years (barring an extension). My thought is that this is far too short. But I do not have experience in writing out final judgments and do not know how this compares to other settlements of the past.

These are a few of my views of the Final Judgment. I hope they will be taken into consideration. Microsoft was found guilty by the US courts and should be punished to the fullest extent. They have done much for the computer industry and for the general user, but I would argue that more and greater innovations would have come about in the absence of Microsoft's monopolistic actions.

Thank you for your time.

From: root@wt6.usdoj.gov@inetgw  
To: Microsoft ATR  
Date: 1/23/02 11:08pm  
Subject: Microsoft Settlement

I believe that an important part of the settlement should include a provision for oems and retailers to be able to include a dual boot or multi-boot environment on the computers they sell. Current microsoft oem agreements do not allow computers sold with microsoft windows to include a different or competing operating system on the same computer in a configuration that would allow the user to pick which operating system to use when they turned the machine on. This would be a very simple setup for most computer makers, and a most effective way to introduce some competition in the market. Many computer producers would love to put multiple operating systems on their computers without a penalty from microsoft, but they cannot.

Please be very specific when issuing orders to microsoft. They do not believe they have done anything wrong, and with fight and cheat every inch of the way. They will do whatever they want, and just argue in court that they have not violated the agreement. Please reword the any agreement in a way that will be very easy to prove whether or not microsoft has violated the terms or not, because they will violate them, and we need to be able to enforce whatever settlement there is.

Hello,

I'd just like to voice my opinion against the current Microsoft settlement. Any action that does not significantly impair Microsoft from crushing further competition in the computer software and hardware markets will fail to encourage healthy competition and lead to the stagnation of said markets. Microsoft has engaged in exceedingly anti-competitive action and threatens to undercut development. Recently, they purchased a good portion of the intellectual property of their only competitor in the 3D graphics field, SGI, and continue to flaunt there disregard for the US legal process and anti-monopoly laws.

The settlement, as it stands, is bad for every business in America except Microsoft, and bad for the American people.

Thanks for your time,  
Chris Bergeron

Subject: Microsoft Settlement

To whom it may concern:

I would like to voice my opinion regarding the Proposed Settlement with Microsoft. It would appear that this settlement will do more to encourage the practices that Microsoft has already been convicted. One of the problems that I find is that if I wanted to distribute any of the software that I have written, it will not be legal to run that software on any Window product because of their restrictions against using any software covered by many of the Open Source license. While Microsoft would lead you to believe that this software (Open Source) is "Viral Software" (a term used in their own literature), there are many machines running such software without any problems as described by Microsoft. This tactic is nothing more than Microsoft trying to instill FUD (or Fear, Uncertainty, and Doubt).

Hello

As a tech manager for a school system, I object to the proposed settlement of the Microsoft anti-trust case. It would seem to me that this settlement benefits Microsoft and harms its competitors. It would be better if Microsoft simply gave money or credits to schools that could be spent on any company's products. Schools could then decide what is best for them. If Microsoft gives the schools Microsoft products, the schools are then more likely to continue to buy Microsoft products. How does this help limit the power of Microsoft?

Thank you for not helping Microsoft continue its monopolistic practices.

Dear Microsoft Settlement U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers.

With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,  
Zane Thomas

**MTC-00019902**

From: Nicolas Sterling  
To: Microsoft ATR  
Date: 1/23/02 11:35pm  
Subject: Microsoft Settlement

First, I must thank the DOJ for directing their energy toward Microsoft. I know it has been a hard battle. I am a software developer. I believe that Microsoft has seriously damaged the industry through its practices. What they did to undermine the Netscape browser and the Java platform are clear examples, but there are others. I understand that Microsoft deliberately changed OS APIs to break applications which competed with their own. And the NT operating system would have died on the vine for lack of applications, except that Microsoft threatened to withhold its Windows seal from Windows application vendors that did not also make the applications work on NT. As a result, NT does exist and is now beginning to compete with various Unix flavors primarily because of those very apps which were made to work on both operating systems.

It is difficult for me to imagine what Microsoft would look like today without the accumulated benefits of their monopolistic practices, but I firmly believe that they would have a far smaller share of their markets, if any share at all. Other companies and products—perhaps whole new classes of products—would exist. Competition would have driven the market to produce better products, services, and prices for consumers. I suspect that the total damage done to consumers is far greater than the value of Microsoft itself.

The settlement seems to be primarily about placing and enforcing restrictions on Microsoft to bring it into line—that is, not very punitive. Yet I think that Microsoft, through its practices, has committed an intellectual terrorism of huge proportions. I believe that harsh punishment is warranted, and that without such punishment they are in effect encouraged to carry out whatever monopolistic practices they can get away with, and accrue the benefits in terms of revenue, market share, and weakened competition until such time as they are forced to stop.

I am concerned about Linux, which I believe to be a new target for Microsoft. I am also concerned about the emerging digital wallet arena. How can we expect Microsoft to behave, and how much damage with that cause?

It is clearly impossible to completely undo the damage done by Microsoft. But they should be discouraged from repeating their abuses.

Thank you for your time.

My name is Don Oliver. I have been an independent software developer since 1995. My business has suffered tremendously due to Microsoft's systematic anti-competitive destruction of the Java(tm) market due its purposeful introduction of incompatibilities and illegal restrictive contracts with OEMs to prevent the distribution of the Netscape(tm) browser. I strongly object to the Proposed Final Judgement in its present form. I am not a lawyer, but within minutes I could see enough loopholes to skirt the intent and consequences of this settlement.

First of all, it contains too much ambiguity, especially in the language describing the future operating system products that are named, and in the definitions of the "middleware".

Secondly, it has no teeth in it. You are dealing with a company that has lied and used deception during the trial and has consistently ignored all previous orders in past consent decrees.

I recommend that you consider at a minimum adopting the changes recommended by Dan Kegel, et. al. in their correspondence.

To Whom it May Concern,

I would like to simply voice my strong objection to the current settlement on the table in the Microsoft antitrust suit. As a technology professional working at the company Microsoft made every effort to make disappear (with an exceedingly unfortunate level of success), I must say that I have witnessed firsthand the anti-competitive efforts of the company.

As the Product Manager for Netscape Navigator (although I have only been with the company a year and a half) I am constantly reminded of Microsoft's monopoly power in the way our current market share has declined and in the barriers we have to get our product in front of consumers. Ours is the quintessential case of how Microsoft squashes competition, and of course it laid the groundwork for the antitrust suit. Every day that we develop strategy and our products, we do so knowing that we are up against a competitor that simply doesn't play by the rules established by the law. Doesn't, hasn't, and with the current plan on the table, never will.

Frankly Microsoft's monopolistic practices and its stranglehold on the operating system of 90%+ of the PCs delivered to consumers has become a bit of a joke in the technology industry. People simply joke about it, laugh it off, make sarcastic comments about it, and of course decide to try and do anything that Microsoft isn't doing or wouldn't be interested in. The tragedy of this is no joke however. The fact that some of the brightest, most innovative minds in the world have decided to capitulate—not compete, not innovate—speaks volumes about the negative effects of Microsoft's business practices. Those that do attempt to compete, such as us, simply bang our heads against the wall that is Microsoft's monopoly every day. This, I can assure you, is not fun. And it is most certainly not fair competition.

I won't detail the list of anti competitive actions Microsoft has taken here, as you most

certainly are more familiar with them than I by now. I will say that people, technology professionals in particular, have simply lost faith that the government will remedy the situation in any meaningful way. I urge you to prove otherwise.

Thank you,  
Todd Pringle

Subject: Microsoft Settlement

I write to express my opposition to the Proposed settlement of the Microsoft anti-trust case. There are a number of excellent reasons to fault the proposal, but chief amongst them to my mind is the narrow definition of both API and middleware in the proposed settlement. As written, trivial changes in application names and/or version numbers could permit Microsoft to continue thier exploitive practices without violating the letter of the settlement. Indeed, whole new applications and extensions of extant applications (such as MS Office) could be developed with the specific intnet of dodging the provisions of the settlement.

The proposal as written will not impeded anticompetitive behavior by Microsoft, and thus does not serve the public good.

Sincerely-  
Patrick J. Santucci

I think the proposed Microsoft settlement is bad idea. The Proposed Final Judgment allows many exclusionary practices to continue, and does not take any direct measures to reduce the Applications Barrier to Entry faced by new entrants to the market.

Subject: Microsoft Settlement

As a computer professional and a consumer, I can't believe the DOJ is so willing to let Microsoft off with such a minimal punishment. Has anyone at Justice been watching how Microsoft has conducted business since the lawsuit began. There business practices are status quo at best and I think worse. They always seem to be "thumbing their nose" at fair business practices. I think they should get the harshest possible punishment for their past and current actions.

Subject: Microsoft Settlement

Dear Gentlemen:

As a Software Engineer with 27 years of experience, I abhor the proposed government settlement with Microsoft corporation. Microsoft has been unequivocally convicted of anti-trust operations in a U.S. court of law and should therefore should be punished in such a way as to discourage a repetition of its criminal behaviour. Instead, the DOJ is giving the company what amounts to a slap on the wrist and allowing it to continue (to this very moment) the unethical, immoral and ILLEGAL practices of which it has been convicted.

In my opinion the proposed settlement does almost nothing to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future". This settlement is a sham and a disgrace and I urge you to reject it.

To: microsoft.atr(a)usdoj.gov  
Date: 1/23/02 11:39pm  
Subject: Microsoft Antitrust Settlement comment

May it please the Court:

I write in the matter of Microsoft v. US, the most visible Antitrust and Anti-Monopoly case that has been before the Courts and the Public since the actions against American Telephone and Telegraph (AT&T). I feel that the case is closer in importance to the Standard Oil Antitrust Case, in the similarities of economic and business influence, and the resistance of the Defendant to admit any form of wrongdoing in their aquisition and maintenance of Monopoly. "The Federal Government is not bound by the Laws of the State of New Jersey" might be redrafted as "The Federal Government is not bound by a Shrink-Wrapped License".

I have been working with Hobby computing since 1975—I like to say since before Bill Gates had his first Million. I've watched as Microsoft began as an innovative company that worked in the fledgling industry to stay alive, then stayed at the forefront of cooperative growth by working with other companies to aid the spread of Personal computers.

Microsoft, prior to the introduction of the IBM PC, cooperated with other companies in the nascent PC software and hardware industries to develop and apply standards in an evenhanded and equal fashion. Since no two hardware companies produced the exact same hardware, the task of creating a working system was difficult—and would have been impossible if the hardware and software companies had not been willing to "reveal all" to anyone who asked. System integrators; whether as commercial entities or as private hobbyists; refused to use products, whether

Hardware or Software, that were "Black Boxes"—sold with only the most trivial interfacing information.

Things were primitive, to be sure, but the cooperation required, and provided between manufacturers and users, meant that the market leaders led due to the quality of their product, not the quality of their legal department. Bill Gates, Paul Allen, and the other founders and employees of Microsoft did "Bet the Company" with the IBM PC. It was a completely new hardware and software combination—and since IBM provided very detailed plans for the hardware and software in the PC, no company had any initial advantage over any other except based on when the IBM specifications became available.

Microsoft, however, was not so forthcoming about the details of their contribution to the PC Platform; While they were willing to sell MS-DOS for (comparative) pennies, they refused to provide any internal details of the inner operations and structure of MS-DOS (this also applies to IBMs' PC-DOS, which was a simple relabeling and repackaging of the Microsoft code). Microsoft used its total control of the MS-DOS platform to conceal what MS-DOS could do—keeping surprises hidden to allow "amazing" improvements to establish or maintain market share.

qBorland upstaged Microsoft by creating "Sidekick", the very popular accessory program that used "undocumented" methods of using MS-DOS's internal capabilities to make Sidekick not a "trespassor" program, but an active part of MS-DOS itself. Borland, by the news stories of the day, had discovered how to link Sidekick into MS-DOS by private (very private) reverse engineering efforts to discover—how—MS-DOS worked internally. Microsoft had not revealed all of the link points (API Calls) of MS-DOS, and Borland's efforts surprised everyone—and (from the journalism of the day) enraged Microsoft. Borland was a notable competitor to Microsoft, since it offered several of the major programming languages of the day (Turbo Pascal, Turbo Basic, Turbo Assembler). Microsoft had to grin and be quiet.

Other companies followed Borland's lead, sneaking looks into the guts of MS-DOS to provide all sorts of accessory tools and features, upstaging Microsoft's own offerings. Microsoft had learned an important lesson—Control of the API set meant control of the market.

Later anecdotal stories demonstrate the way that Microsoft took the lessons of Sidekick to heart— "Win3.1 isn't done till Lotus won't run" being the most lyrical of the anecdotes. Lotus 123 was the main competitor to Microsoft's own Spreadsheet, and the popular view was that Microsoft wanted to provide its own product with the competitive advantage of working better with windows 3.1 than Lotus's product.

The old tradition of cooperative assistance between software and hardware vendors had ceased, especially since Microsoft provided both the Operating system (MS-DOS and Windows 3.x) and Commodity software (Microsoft Word, Excel, Money, Flight Simulator, Games, etc.). When MS Word for

Windows 95 was introduced it had many special features that no other competitors had—float-on-top hints, special mouse options, and others. Lotus and Borland both groused in the media that Microsoft hadn't told them about any of the extra API's in Windows 95 that would allow such extras; Microsoft had used the secrecy that was natural to internal corporation communication to gain an advantage on its competitors.

Had Microsoft not been both a Operating Systems and Commodity Software company it would have never been able to hide such extra capabilities from the competition—if it was a OS company only, it would have sold the knowledge to any customer, if it was a commodity company only it would have had to create those additions by its own research into the private workings of the Operating System.

Like Standard Oil, which had control of both the Pipelines and the Refineries, Microsoft can use its control of OS functions and commodity software functions to block the advancements of its competitors and leverage the secrecy of its internal communications to spring surprises on the world.

Standard Oil could and did demand kickbacks from the Railroads based on the total oil shipments, and could manufacture shortages in a region by refusing to either send petroleum products to a market, or refusing to refine types of petroleum, keeping the strategies secret until the market was at its mercy.

Microsoft can do the same—if it won't reveal what the OS can do, then no other company has a chance to bring extra capabilities to the market, and it can hide those extra functions in the OS to spring those extra features on the market at any time in its own products.

Standard Oil created a Monopoly in the Petroleum industry; whipsawing the market between its control of distribution and production, controlling a slice of the economic world as it wished, for its profit, heedless of the damage to the consumers. Standard Oil decided who got what grade of oil, grade of grease, grade of Gasoline, grade of anything petroleum-based. It could charge what it wanted, and the public be damned!

Microsoft has similar powers; it allows the public—both the end users and the other software companies—to do only what it sees as proper, restricts the best and fanciest to its own products, can demand that its customers do as it sees fit (cf. the Compaq reversal on offering Netscape as the default browser), and having no real competitors in the 80x86 PC OS market, can charge what it wants to "guide" the market.

I am not any sort of expert in the law nor learned in the ways of legal argument; but I can see that the actions of Microsoft have limited the growth of the computer marketplace—It has such a control of the features and functions of the OS that it can start or stop developments in the software industry by "announcing" or "denying" upcoming features of the Windows Operating system. It has used its control the ownership of the OS to replace third party commodity software (WordPerfect, Lotus 123, Quattro

Pro, Dbase, Netscape) with its own products, shielding them from full force of competitive pressure and scrutiny by handcuffing its products (Word, Excel, Internet Explorer, Access) to the sale of the Operating system.

Microsoft, like Standard Oil, is so large that it can withstand any normal corrective force from the marketplace, short of a relevatory act of the size and style that has destroyed Enron, Microsoft has no real competitors; it is a 800 pound gorilla.

However, Microsoft, like Standard Oil, is subject to the Law of the Land—and the Wagner and Sherman acts are written with a clear intent to make the Federal Government a 2000 Pound Gorilla—capable of rending any other beast into tiny pieces. The Legislators who wrote those acts lived in a business environment that was much more corrupt—openly and blatantly corrupt—than we live in now. They wrote with a broadness and a bluntness that was powered by their anger and disgust—intending to give the government a blunt-edged weapon that was never to be use with delicacy, but with a savage vigor to place eternal fear into the minds and hearts of businessmen or women who wished to create an Trust or Monopoly. I like many in the computer and Software Industry, have been alarmed by the delicate action of the Courts and the Prosecution; Having been bled by Microsoft in the past we desire its blood to splash in the gutters, running red on the paving stones.

The USA benefited from the breakup of the Standard Oil Monopoly, Benefited from the breakup of the AT&T Monopoly (indeed, this message would not have been reaching this Court had the AT&T Monopoly not been broken), and will benefit from the dissolution of the Microsoft Monopoly. The secrets that Microsoft has hidden within Windows for its sole profit will be available to all the software world, the competitors of Microsoft will be empowered, the market will be freed of a limiting boundary—one set by the desires of Microsoft.

Microsoft can be divided into four separate entities—Operating Systems, Commodity Software, Computer Hardware, and Internet Services. An additional entity—to contain the research and theoretical efforts that Microsoft funds; much as Bell Labs was maintained as an entity when AT&T was divided; would be appropriate.

Operating Systems would contain all the resources to maintain and expand the Windows operating system—but no Commodity, or Internet software. A benchmark for deciding what belongs in this company would be to examine what was included in the initial release of Windows 95—no Internet Explorer, no Microsoft Word, no Microsoft Works, no Microsoft Media Player. If Microsoft sells a piece of software as a separate item, or offers some form of extra-cost add-on "expansion" to "improve" the capabilities of a "integral part of the operating system" then recognise that item for what it is—not an integral function of the OS but as a tacked-on piece of Commodity Software.

Commodity Software would cover all the "Office Software", "Back Office", "Middleware", "Multimedia Support", "Entertainment" or "Pig in the Pokesack"

software that Microsoft produces or sells. Whether it be the Encarta Library, Microsoft Streets mapping software, or Microsoft Word itself, Commodity Software gets the lot.

Computer Hardware would be responsible for such things as the Microsoft Mouse, Keyboard,.

Multimedia hardware—anything not software with the Microsoft name. The Microsoft Press, which published guide books and texts about Microsoft products would also belong in this entity.

Internet Services would get MSNBC, the Microsoft Network, Internet Explorer, Hotmail, anything that will not work without the use of a TCP/IP stack. Microsofts new .NET efforts would belong to this entity.

I ask that this Court order the separation of Microsoft into several separate components—each a fully separate company, free to succeed or fail based on the quality of it's product, not guaranteed life because of a monopoly or corruption of the marketplace.

I thank the court for its time and attention.

Subject: Microsoft Settlement

Good day,

After having read the proposed settlement against Microsoft, I would like to voice my comments. I am not in favor of the proposed settlement as it stands and am strongly opposed to the current course of action.

I have been a computer user and enthusiast for a number of years and have increasingly grown frustrated with the practices of Microsoft that I seem to keep running into. I feel cheated by the acceptance of the proposed settlement terms. I have listened to an explanation of the reasoning behind some of the proposals as well as read through them myself and there are many potentially good points that have been proposed, but the problem that I see the most is that a great damage has already been done by Microsoft.

Even if their wrong doings are addressed for future practices, they still have unfairly dominated the software and operating system markets, and I don't see how companies they've engaged with will be compelled to alter their practices.

As a computer user, every time I purchase a new computer I am forced by the manufacturer to pay for a Windows operating system, even though I already have multiple copies of the software that I have paid for and I don't want to install Microsoft Windows. I want to install the free Linux operating system.

Even if Microsoft is prevented from forcing this practice on computer manufacturers in the future, what incentive is there for manufacturers to offer either no operating system or an alternative operating system. The manufacturers are so entrenched with Microsoft products that even hardware is becoming more arbitrary to Microsoft software and incompatible with anything else. This is a clear example of hurting consumers and the advancement of computing in the United States. Even if I am

able to buy a computer without an operating system, or the operating system of my choice, I am not able to use a modem because nearly all computer manufacturers ship Winmodems, or software based modems that are controlled by Microsoft drivers and software. Even if you could buy a non-winmodem, you still couldn't use it because manufacturers have altered the slot architecture to only allow for PCI devices, which traditional modems cannot be installed in. I spent \$100.00 for a modem in a new computer only to find that it will only work under Windows. If the source code were released then maybe someone could develop drivers to support these modems and other software, but as long as Microsoft continues to produce closed-source software the advancement of computing suffers. Even the advancement of Microsoft during fair practices suffers.

I am currently a member of USENIX, the Advanced Computing Systems Association, and a member of SAGE, the System Administrators Guild.

As such I am constantly involved in working with more powerful and reliable computer systems and software and become more and more hampered in my learning efforts by facing what seems like an army of software vendors, service providers, and businesses in the job market that pose roadblocks to universal computing standards because of Microsoft practices.

I feel that Microsoft must not only refrain from future misconduct, but needs to repair the damage that it has already done to so many competitors. Giving away their software to children in schools is not a reparation but further promotion of a monopoly, and further indication of Microsoft's monopolistic intents.

One operating system vendor offered to supply free software and support for as many computers as Microsoft could donate to schools and thereby substantially increase the number of computers schools would receive. This is exactly the type of remedy Microsoft should be engaged in to repair the market competition they have curtailed. If the telecommunications act of 1996 required incumbent local exchange carriers to open their networks and rights of way to competitive carriers, why shouldn't Microsoft be required to open the source code to its software and operating systems. I also think that Microsoft needs to be accountable for the software it does produce. You need a Department of Justice to read through all the disclaimers and legalese that comes with every Microsoft product.

I have much more to say about these matters, but in appreciation of your time and consideration of my comments I'll end here. Thank you for your help and continued perseverance to protect the consumer and fair competition in this matter.

Sincerely,

Dain G. Oswald

Subject: Microsoft Settlement

I believe that the proposed settlement of the case against Microsoft is far too weak. I do not believe that this settlement would have any substantial effect on their behavior. Time and again they have shown their disregard for the government and the court and the law: they circumvented a previous settlement by agreeing to limits on a product which they knew would soon be obsolete, they mocked court orders by releasing a non-functional product, they provided falsified video tape as evidence during their trial, etc.

I believe that this proposed settlement relies far too much on Microsoft policing themselves and it is therefore seriously flawed. It does nothing to punish them for breaking the law, it does nothing to deprive them of their ill-gotten gains, it does nothing to end their monopoly of the desktop operating system, and it does nothing to prevent them from extending their monopoly into other areas, such as content. I find the later point quite disturbing.

I do not believe that the operating system, the applications, and content should be controlled by the same company. I fear that, in the future, Microsoft will be able to continue to use their desktop operating system monopoly to prevent other applications from effectively competing against theirs, and they will then extend this new monopoly into content. I believe that this would be a serious threat to our freedom of the press. I believe that Bill Gates' "Corbis" purchase of the Bettman Archive of most of the 20th century's historically important photojournalism is proof that they intend to take this direction. I also believe that their newer licensing terms which try to prevent people from using their products to criticize them is more proof of this threat to our freedom.

In fact, I believe that the break-up of DuPont into DuPont, Hercules, and Atlas several decades ago is a good precedent and should be followed in this case. The explosives and chemical industry became much stronger and more innovative because of it. DuPont's monopoly of the gunpowder market had been both an economic burden on the government and a threat to national security since a single company controlled a resource critical to national defense.

Microsoft's monopoly provides exactly the same threats to the government and the nation, for exactly the same reasons. The US Navy ship which had to be towed back to port because of a Windows/NT crash is enough proof to me of this threat.

Therefore, I strongly urge you to reject the proposed settlement and impose a meaningful punishment and remedy, breaking Microsoft up into 3 independent companies: operating systems, applications, and content. Nothing less is an adequate punishment and can be as effectively implemented.

Sincerely,

Aron K. Insinga

 Date: 1/23/02 11:40pm  
 Subject: Microsoft Settlement  
 To Whom It May Concern:

I'm writing to voice my disapproval of the proposed settlement in the Microsoft AntiTrust case. I feel that the proposed settlement does not adequately address their previous anticompetitive behavior nor will it in any serious way prevent such actions in the future. This company's management has shown that it will not act responsibly when holding a monopoly position in a market but will rather use that position to gain dominance over other market segments whenever possible.

Microsoft fears that any substantial remedy will hinder their ability to innovate. This may be true, but you must keep in mind that Microsoft has caused far worse hinderance to legions of other software companies through its past illegal actions; innovation is not the exclusive domain of Microsoft. By implementing an adequate remedy, you allow true innovation to flourish.

From: Uri Guttman  
 To: Microsoft ATR  
 Date: 1/23/02 11:40pm  
 Subject: Microsoft Settlement

I am not in favor of the current settlement with Microsoft. As someone who has long term experience in the computing field (28 years), I would like to point out the famous BUNCH suit against IBM in the mid-1960's. IBM would announce a new system 2 years before it would be delivered and that would dry up sales for all the other computer vendors. Microsoft (among its many monopolistic actions) has used this vaporware technique many times.

Also I have direct experience with their managerial duplicity. I was a senior software developer with a startup and Microsoft asked us for a proposal of a variant of our product. They even said it didn't have to use any of their software in it. We worked hard and delivered it to them. Two months later we finally got a convergence call with them and they first asked us what they could do to make their software (which wasn't good to begin with) usable for our product. But even worse was their statement that they didn't buy paper proposals/projects even though they asked us for it. This came from senior group managers and was obviously the way they did business. They only did this to pick our brains and had no intention of doing business with us.

This is the kind of ingrained lack of ethics in this corporation. Any consent decree without serious teeth will be laughed at and skirted. Just look at the way they ignored the earlier decree about integrating their browser with their OS. By the way, the whole browser issue is a red herring. It is the way they purposely try to destroy other companies

with vaporware announcements, lack of API documentation, changing their code to not work with accepted public standards, etc. that should be the crux of this case. I have nothing against strong competition but that implies a level field of some sort. Microsoft owns the playing field and has no business or ethical interest in leveling it. This is antitrust at its deepest fundamentals. This is what Teddy Roosevelt was fighting when he trust busted the robber barons of his day. The railroads and steel companies were also monopolies and use that power to control markets. This is what Microsoft wants and is always trying to do. It is up to the Justice Department and the state AG's to stop this now. Please do not accept this slap on the wrist agreement. Force them to make drastic changes in how they deal with the computing world and other businesses. They must not be allowed to abuse their monopoly power and ruin more companies, the internet and the computing industry in general.

Thank you,

 Subject: Microsoft Settlement

I am writing to register as someone objecting to the proposed settlement of the US DOJ case against Microsoft. I spend too many hours dealing with software problems related to Microsoft products. I would like the range of alternatives I experienced 10 years ago. There are no alternatives now, there is only Microsoft's monopoly power. They have abused that power. The produce

some good products and some miserable products; the course of the monopoly is that there's no alternative to their bad products. The remedies that have been suggested will not substantially alter Microsoft's capability to stifle competition.

I would advocate:

1. All Microsoft file formats must be published and made widely available. Changes will require agreement from the courts.

2. A portion of Microsoft's revenue stream will be diverted to fund the development of alternative products that can use Microsoft file formats.

 To: Microsoft ATR  
 Date: 1/23/02 11:42pm  
 Subject: Microsoft Settlement

Dear Sirs:

Please register my opposition to the Proposed Final Judgment (PFJ) in United States vs. Microsoft. I believe that the PFJ in its current form is not strong enough to prevent Microsoft from still dominating the computer software and operating system business by anti-competitive business practices. We need a strong Final Judgment which causes Microsoft to compete fairly in an open marketplace where the best software (most stable, secure and featureful at a given price point) wins on merit.

Problems with the current PFJ include:

\*The PFJ doesn't take into account Windows-compatible competing operating systems

\*The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

\*The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

\*The PFJ allows users to replace Microsoft Java with a competitor's product — but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

\*The PFJ supposedly applies to "Windows", but it defines that term so cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box — operating systems that all use the Win32 API and are advertised as being "Windows Powered".

\*The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

\*The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

\*The PFJ requires Microsoft to release API documentation—but prohibits competitors

from using this documentation to help make their operating systems compatible with Windows.

\*The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents (which are arguably a document interchange standard today.)

\*The PFJ does not require Microsoft to list which software patents protect the Windows APIs.

\*The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft (Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows, and Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.)

\*Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

\*The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft (Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.)

\*The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

\*The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

\*The PFJ as currently written appears to lack an effective enforcement mechanism.

Microsoft needs to be restrained from continuing its "anti-competitive practices it enjoys via its abuse of its" monopoly position in the current marketplace. A stronger Proposed Final Judgment needs to be crafted to guard against Microsoft taking advantage of the weaknesses in the PFJ, and continuing "business as usual." Let Microsoft compete on a level playing field that would be established with a strong but fair Final Judgment, and let the free market decide their market share without Microsoft's "hand on the scale."

From: Tom Brown  
To: Microsoft ATR  
Date: 1/23/02 11:42pm  
Subject: Microsoft Settlement

I STRONGLY object to the Proposed Final Judgment in the Microsoft Antitrust case. Mr. Gates and his attorneys must be deliriously happy with the current PFJ.

I urge you to SERIOUSLY CONSIDER revising the PFJ to provide additional protection to American and worldwide users

and businesses in this case. Users, both corporate and individual, of Microsoft products must have their freedom of choice protected. They must realistically be able to choose between products from Microsoft and other vendors and be reasonably certain that products they choose will run without artificial impediments placed in their path by Microsoft. Competing vendors, as well, must be protected against such artificial impediments to their software running under various incarnations of Windows operating systems or Windows environments on other operating systems. Each product should be able to stand on its own without having Microsoft's artificial barriers in its way. The manufacturer of any operating system should be required to publish the specifications to all of its interfaces so that other software can be written to adhere to those specifications and successfully operate under control of that operating system.

Please consider that the American Legal System is our only defense against Microsoft's goal of total control of the computer marketplace by whatever means. Do NOT abandon your duty to the American public and to the rest of the world as well, since Microsoft is an American company.

Sincerely,  
Tom Brown

Subject: Microsoft Settlement

I am writing you, the United States Department of Justice, to express my extreme dissatisfaction at the "settlement" that the Department of Justice has reached with Microsoft. I feel that, as a registered voter and American, my voice should be heard. I have sent this E-mail before to you, the Department of Justice, and I send it again (albeit revised) for emphasis on how I feel about this subject.

Microsoft was ruled to be an illegal monopoly. Its settlement with the Department of Justice does not take even the smallest amount of what are, in my opinion, requisite actions against Microsoft to ensure that it does not tighten its stranglehold of the computing industry. The new settlement, unlike the one proposed by Judge Jackson, does not require Microsoft to disclose its APIs to third parties anymore. Section J1:

No provision of this Final Judgment shall:  
1. Require Microsoft to document, disclose or license to third parties:

(a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or (b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction. Section a allows Microsoft to get around disclosing APIs and other information by claiming that its security is threatened. This allows

Microsoft to continue its closed, monopolistic way of setting new "standards" in the computing industry. This settlement will not change anything at all.

Section b offers Microsoft government protection for its monopolistic acts. It allows for Microsoft's non-disclosure to be enforced by the government. This is totally unacceptable. Microsoft has been ruled a monopoly, and these terms seem more like the government wants to protect Microsoft's monopoly, rather than doing what it should and break it up.

In spite of the fact that it has been ruled a monopoly, Microsoft continues monopolistic and domination-like actions. I shall list some recent actions taken by Microsoft that belie its monopolistic nature:

1: Upon opening the new MSN website, users of the Opera web browser were unable to view the site. Users of Opera were directed to "upgrade" to Microsoft's own Internet Explorer web browser to properly view the content. Microsoft, when questioned about the incompatibility, accused Opera of being non-compliant with the XML standard specifications. Opera immediately shot back that they prided their web browser on standards compliancy, and submitted an XML standard test of MSN that showed it to not be compliant with the XML standard specifications, thus identifying MSN as the culprit. Microsoft then fixes the problem so that MSN could be viewed by other browsers. Had Opera not made public MSN's non-compliance to the XML standard, Microsoft's attempt to coerce users of Opera into using Internet Explorer would have gone unnoticed. Microsoft has no shame in continuing its attempts to dominate the internet.

2: Windows XP and the latest version of Internet Explorer do not ship with Java support. Java is one of the key components for the internet, because it works with every operating system that can run a Java Virtual Machine. Why would Microsoft not want to support this standard? Because it is a roadblock in Microsoft's attempts to saturate the internet with Microsoft-only standards and products. Java works with every operating system, and Microsoft is attempting to replace it with a Windows-only standard that would force any desiring to be on the internet to buy a Windows PC, rather than a Macintosh or Linux machine.

3: Microsoft's proposed security procedures are based on "security through obscurity." Microsoft disallows the publication of any security holes than may be found in its operating systems or applications for at least 30 days after the said hole was found. Even then, security companies are only allowed to release very general information that is not helpful to system administrators wishing to develop a temporary work-around for the problem while Microsoft works on a patch that fixes the hole. The fundamental problem with this approach is that it leaves the security hole completely open and unguarded for a period of one month. Microsoft is essentially taking the chance that no rogue hackers will discover the flaw and exploit it in 30 days. After making the public aware of the problem after 30 days, system administrators must

wait for Microsoft to release a patch. The public release of information cannot contain the information required to exploit the security hole, so system administrators cannot test the problem on their own networks, nor can they isolate and deactivate the part of the network that is flawed. For most companies, this means an indeterminate time of over one month in which their network is vulnerable if it is running Microsoft software as its backbone. Taking the network offline is simply not an option in today's e-commerce-based industry. Microsoft is willing to take the risk that no one else will discover the security whole within at least 30 days and figure out how to exploit it while system administrators sit helplessly, devoid of the requisite knowledge to protect against a security breach. This is not Microsoft's chance to take. They want this new "security" method because it involves the least disclosure of how the Windows OS works.

Of course, many may say that the alternative is to simply use Linux or UNIX in place of Microsoft's software. However, Microsoft already has enough of a presence in business networks that a transition to Linux would cost a great deal in the short-term in the purchase of new servers and the training or hiring of certified and UNIX-knowledgeable network administrators to replace

MCSE-certified ones. While a large company like IBM can (and has) make this transition without worrying about cost in the short term, the large number of startup companies that have sprung up that are using Microsoft's products do not have this option due to lack of revenue and sales. They must use the money they have to maintain their existing network and pay Microsoft outrageous licensing fees.

4: Microsoft is now beginning to try and extend its influence and power to every aspect of the technology market. The recent release of the X-Box to the game console market, coupled with the development of Windows Media Video and the desired presence of the Windows Media Audio format on copy-protected Compact Discs, should be enough to show that Microsoft is not satisfied with mere domination of the computer operating system market. Microsoft has made certain that the Windows Media formats work acceptably only on Windows machines. Windows Media Player for the Mac OS is slow and virtually useless, and there is no Linux version. What point would there be in using valuable resources on writing video and audio programs and codecs that don't work well on any other platform? To extend their influence into all areas of the internet. Microsoft wants to make sure that, in order to experience the internet, one must have Windows on his or her machine. Java, a multi-platform technology, is a part of the internet, and they would like to supplant that. QuickTime and Real Media, both multi-platform video formats, are integral parts of internet media that Microsoft wants to replace with the single-platform Windows Media. Apache, a multi-platform web server, they wish to replace with IIS, which only runs on Windows. If Microsoft were truly only interested in innovating and making a

better product, these technologies would not be single-platform. They wish to impose their closed-standard and secretive approach on any technology market that they can.

5: Microsoft continues to write new "standards" for the computing industry that conveniently only work with its operating systems, instead of embracing real standards. Real standards are written by committees which openly-publish their work so that anyone can use it. The Motion Picture Experts Group (MPEG) writes the MPEG standard for the industry, and any wishing to comply with this standard can obtain a license and make it work with any operating system or media player. Microsoft's standards are not available to the public, and they can only be used by Microsoft products. Instead of the open Apache web server, they use their proprietary Internet Information Services product. It is impossible to set up a terminal server on a Windows machine without purchasing an add-on package that uses a closed standard instead of telnet or ssh. All Linux distributions and Mac OS X come with built-in support for these open and accepted standards.

Microsoft is a monopoly and should receive harsher penalties, such as a break-up or forced-disclosure of the source code for Windows. Private organizations should not be able to bully the government into protecting their monopolies and have the government passively approve of such bullying tactics against other companies that offer even the smallest bit of competition.

Please know I desire harsher penalties for Microsoft, and I support any reasonable action taken in seeking these penalties.

Damien Sorresso

Please end the Microsoft case!  
I worked for a competitor to Microsoft for many years and I still think the case was completely inappropriate. Note that:

\* Microsoft has already agreed to hide its Internet Explorer icon from the desktop.

\* Microsoft has been critical to the growth of the High Tech industry and this case is terrible precedent for the future, not only in terms of computer technology, but all sorts of innovations in the most dynamic industry the world has ever seen

The case against Microsoft is just "welfare" for Netscape and other Microsoft competitors, with not a nickel going to those supposedly harmed by Microsoft: the computer user Please close the case and let Microsoft continue their work and let the Justice Department focus on more important issues like prosecuting terrorists and investigating Enron.

Thank you for your consideration!

Subject: Microsoft settlement

I don't agree to the proposed settlement of Microsoft Corporation business practices. Vehemently so.

Microsoft Corporation, like an unruly child, must be punished for its actions were fully pre-meditated and planned. To leave Microsoft Corporation without having suffered proper discipline leaves them, again like an unruly child, without any form of censor or control upon further actions in the same vein. Common sense dictates not a draconian but a just discipline so that Microsoft Corporation will learn the error of its ways. Further justice will have been served, the people will have been served and computerization will be allowed to advance freely in an open marketplace to the benefit of us all.

From: David Bushnell  
To: Microsoft ATR  
Date: 1/23/02 11:48pm  
Subject: Microsoft Settlement

To Whom It May Concern:

The US Department of Justice's proposed settlement in the Microsoft anti-trust case does not adequately address the illegal

practices which Microsoft has been found guilty of. It does not punish past violations. It does little to prevent reoccurrence of Microsoft's past patterns of illegal behavior. It does not provide for effective enforcement of decisions preventing future violations. It excludes not-for-profit organizations from some of its remedies. And it does not provide any effective encouragement of competition in the markets for operating system and applications software. I am therefore opposed to the agreement as it now stands and believe that an effective remedy would require additional elements, as described below.

(1) Any solution should be available to both for-profit and not-for-profit organizations or groups. For example, SAMBA is a piece of software that is widely used to share files between Microsoft Windows and other operating systems, such as UNIX.

Its existence is completely dependent on knowledge of the Microsoft's APIs and protocols. But it has not been developed by a for-profit business—it is freely available to anyone using the Internet. If the final solution in this case applies only to for-profit businesses, SAMBA's continued existence would be in jeopardy. The same situation applies to most other not-for-profit software.

(2) Any solution should apply not just to illegal behavior with regard to existing products and categories of products, but to future ones as well. For example, an effective remedy should prevent Microsoft from extending its past illegal behavior to new products such as its ".NET" proposal for Internet services.

(3) All APIs, file formats, and communication mechanisms (for example, network protocols) should be made public in ways and times that allow other companies or not-for-profit groups to effectively compete.

(4) The information made available in (3) above must include information about authorization and authentication APIs and protocols. Any Microsoft product involving the Internet will require outside programs to identify themselves as valid users of the system. Those programs will not be able to do this if they do not have access to the appropriate security APIs. (Since this disclosure requirement refers to the APIs and protocols, not their implementations, it preserves the ability to compete without sacrificing security requirements.)

(5) Competitors' use of published APIs, file formats, communication protocols must not be restricted by patents, copyrights, trade secrets, etc.

(6) Any solution should allow effective enforcement in a timely manner. In particular, it will be completely ineffective if disagreements between Microsoft and the proposed "Technical Committee" must be resolved by court cases similar to this one. Microsoft's illegal behavior will not be prevented by court cases that last for years and are only resolved after the competitors involved have been marginalized or driven out of business.

To: Microsoft ATR  
Date: 1/23/02 11:50pm  
Subject: Microsoft Settlement

The proposed Microsoft antitrust case settlement does little to remedy Microsoft's continuing abuses of monopoly power, and what remedies it does have are specific in scope and have several loopholes. Its enforcement mechanism is also quite weak, giving Microsoft a strong say in the makeup of its own watchdog body. In addition to inadequately addressing past abuses, the settlement does little to prevent current or future abuses. The software industry is a rapidly changing environment, and new software and strategies such as Windows XP and .NET do now or seem likely to in the future employ practices abusing Microsoft's monopoly which are not covered in the terms of the proposed settlement. The settlement as it is would constitute a small slap on the wrist, and some curbs on illegal practices, leaving Microsoft free to continue its illegal pattern of behavior in other areas of business, while it can use loopholes and lax

enforcement to continue doing what it has done in the past to a large extent.

I strongly recommend that the proposed settlement be rejected.

Subject: Microsoft Judgement

To whom it may concern:

I am writing regarding my concern that the current Microsoft settlement is ineffective against a corporation that has been abusive of its monopolistic power. This settlement does not do enough to encourage Microsoft to change behavior and it does in fact show the company that there are virtually no consequences to the many wrongs they have been found guilty of.

The Proposed Final Judgment allows many exclusionary practices to continue. I see no reason this will discourage this company from continuing in these practices. If there is no consequence for a company with this much power, behavior will not change. Also, no direct measures to reduce the Applications Barrier to Entry faced by new entrants to the market. This is not allowed in other industries across this great country, why should Microsoft be immune? America is about competition.

Subject: Microsoft Settlement  
Dear Sir or Madam,

I truly believe that the settlement talked about in the Microsoft vs. Department of Justice case will not only fail to achieve the goal for which this case began (namely the introduction of competition into a market where Microsoft has successfully extinguished any competitor through the use of its monopoly power). The settlement agreed to and posted for United States citizens to view is severely lacking in ability to complete the task for which it was created. After reading the document it would appear as though not only has the Department of Justice failed to apply any relevant changes to Microsoft's behavior, but through the wording it seems as though the US government will legalize Microsoft's behavior allowing them to legally monopolize the computing industry where as before they were doing it illegally. This settlement should not stand, simply dropping the case would be more beneficial to the industry than agreeing to this settlement. Please don't settle with this, continue on in your case. Information Technology workers like myself are willing to wait to see fairness in this industry put into place. Thank You.

Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: Lindsay Pallickal  
To: Microsoft ATR  
Date: 1/23/02 11:52pm  
Subject: Microsoft Settlement

I am strongly against the current proposed settlement for this case. There are good ideas in the settlement, particularly the requirement for Microsoft to open up their standards to the world—but in other parts, as most people full well know, there are loopholes that would make it trivial for them to avoid doing this. Below are my thoughts on what needs to be done.

As earlier judgements have shown, Microsoft has had a history of bullying out competitors with nasty business practices and when that fails, playing dirty with software compatibility. An few examples are the open Kerberos specification Microsoft recently picked up, the unix Samba service and Caldera's Dr. DOS. Dr. DOS took a thorough assault from intentional incompatibilities Microsoft introduced into Windows 3.1 and Samba is a major unix->windows interoperability tool that is finding it increasing difficult to keep up with changing secret Microsoft specifications. It is clear that Microsoft is taking full advantage of the monopoly position the proprietary Windows system has to extend it's way into new marketplaces and lock users into Microsoft products. Their primary tool to do this is secret standards that prevent other sources from creating products that are compatible with Windows. What I propose is an \*enforceable\*— \*enforceable\* - \*enforceable\* penalty that forces Microsoft to open up the internals of it's operating system. Not the source code, but information on how the different parts of Windows communicates internally and the protocols with which Windows machines communicate across networks. Microsoft should also make it possible for independent developers to communicate with Windows in the same way Microsoft's own code does. This would prevent any more casualties in what many call Microsoft's "embrace and extend" war and would offer the benefit of new competition by destroying the unbearable artificial costs of entry and survival in this market that Microsoft has kept off-limits through incompatibility. They

should have to produce this information in a timely manner—say one month for existing specifications and also provide advanced release of new specifications before a Microsoft product update. This way, when they do make changes to try and subvert a competitor's product, that competitor will be able to update and remain compatible. This is key to any effective judgement, especially the enforceability part!

Sincerely,  
Lindsay K. Pallickal

Washington, DC 20530-0001

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. While I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), I choose to focus on only a specific problem, and to present my objections in my own words.

My primary objection with the proposed settlement is that, despite the finding that Microsoft had engaged in monopolistic practices, the proposed settlement offers no relief to those affected—either other corporations or individual consumers. Additionally, in my professional opinion, the proposed settlement contains no measures that would provide a realistic deterrent against Microsoft engaging in the same sorts of anti-competitive, monopolistic behavior in the future. Indeed, I believe that several features in their new "Windows XP" operating system are designed with specific anti-competitive goals in mind.

Thank you for your attention.  
Respectfully,  
John S J Anderson, Ph. D.

Subject: Microsoft Settlement Force MS to release Competing OS Apps before their Own Outlook 2001 is require for Macs to coexist w/ PC's in company that base their communication on Exchange Server.

The current version of Outlook 2001 for Mac OS 9 is buggy. Apple is attempting to transition customers to OS X. By delaying or canceling the release of an OS X native version of Mac Exchange client, MS serves a blow against the adoption of Apple's Mac OS X (Unix) operating system.

Here is yet another way MS jerks around the competition... <http://www.thinksecret.com/features/outlookx.html>  
Mac OS X-compatible release of Microsoft Outlook unlikely By Nick dePlume, Publisher and Editor in Chief The release of Mac Outlook 2001 last year was a milestone for both Apple and Microsoft, bringing the Mac version of the corporate messaging/PIM application up to par and improving Apple's push in business environments using Exchange servers.

Last July, as the company was rushing to carbonize Office for Mac, Think Secret learned from Microsoft insiders that an OS X-native release of Outlook was very unlikely, largely because of the amount of time and resources it would require. A source on the show floor of Macworld Expo/San Francisco earlier this month confirmed those reports, saying that the company will rely on the Entourage component of Office to satisfy the corporate email gap, even though Entourage cannot work as an Exchange client like Outlook.

The initial release of Outlook 2001 included full compatibility with Exchange servers and a Mac-like interface.

Subject: Microsoft Settlement

The "proposed settlement" does little to nothing to correct Microsoft's ability to abuse their monopoly position, specifically their desktop operating system and productivity software monopoly. It does not prevent them from running competitors out of business by bundling software into the OS, or (more importantly) do anything to encourage

competition. Microsoft's product quality is, to put it mildly, abysmal—and without serious competition in many areas, there is no motivation for them to improve. Even in areas where they lack market dominance (such as large network servers), they are able to leverage monopoly power from other areas and achieve similar effects as if they were dominant in these areas too. As for counter-arguments, the most common one is that "Microsoft's monopoly is good for consumers because it gives them product compatibility". The largest flaws in this argument are that product compatibility can easily be achieved \*by\* competition (just look at the PC hardware industry, which has maintained compatibility without monopoly meddling), and that Microsoft does not use their power to provide compatibility, but rather harms consumers through planned incompatibility (by breaking older software to force upgrades).

Whatever Judge Jackson's actions, his initial remedy fit much better—at the very least, the "settlement" should follow the lines of what the 9 non-settling states are proposing! That at least has a chance!

Subject: Microsoft Settlement

As a consumer, I have been opposed to the case brought against Microsoft from the beginning. The case has not been about what's best for consumers, but how companies that failed completely to innovate and meet consumer demands can now make money off Microsoft's absolute success.

The Proposed Settlement in this case reaches far beyond any limits that should be placed on Microsoft (and by proxy all innovative and competitive companies). Given that it's unlikely for the government to seek dismissal of the complaint and apologize to the American consumers and tax payers for wasting our money in this pursuit, I feel that I must voice my support for the Proposed Settlement as it at least limits the further harm that comes to me as a consumer.

Subject: Microsoft Settlement

Dear Sir or Madam:

I am submitting this e-mail in response to your solicitation of public comment on the proposed settlement with Microsoft.

I believe that the settlement, as currently drafted, is wholly inadequate, and would not serve the public interest.

Given Microsoft's position as a monopoly provider of operating systems, it is critical that all external communications protocols be documented, and available for implementation in any competing operating system, INCLUDING especially "freely licensed" software such as Linux or FreeBSD.

One way that Microsoft maintains its monopoly is by tying its product suite together via proprietary external communications protocols. For example, a

Microsoft desktop operating system may only work, or only work well, when communicating with a Microsoft server operating system, and vice-versa. A Microsoft web browser may only work, or only work well, when communicating with a Microsoft web server.

A Microsoft mail client may only work well when communicating with a Microsoft mail server. And further, Microsoft might choose to withhold components such as a web browser or a mail client from competing (e.g., freely licensed) operating systems. If the external communications protocols remain proprietary, then it is impossible, or at best impractical, for third parties to create compatible applications that run on competing operating systems.

I believe that any settlement must include the following two protections:

1. Microsoft must document any and all external communications protocols, including those between client and server operating systems, and also those between client and server applications, and make this documentation publicly available.

2. Microsoft must allow these protocols to be implemented by third parties, without threat of litigation or assertion of intellectual property rights. Without these protections, it will be impossible for freely licensed operating systems such as Linux and FreeBSD (or anyone else) to have a chance of competing with the Microsoft monopoly. I would suggest a third protection as a means to ensure ongoing compliance:

3. Microsoft or a third-party must create a reference implementation based on the documented communications protocols, and make the resulting source code freely and publicly available. If this reference implementation is shown to be incompatible with the documented communications protocols, Microsoft shall be required to either: a. identify the programming errors in the reference implementation that are causing the incompatibility. b. OR if the documentation is in error, Microsoft must publish corrected documentation.

This compliance process would iterate, until it was eventually shown possible to create a third-party implementation that interoperates with the monopoly Microsoft products. Of course, the documentation, and thence the reference implementation, would need to be updated as Microsoft releases new products, and new versions of existing products.

Thank you for taking the time to read my comments.

Sincerely,  
Mitchell Tasman, Ph.D.

From: Garrett McWilliams  
To: Microsoft ATR  
Date: 1/23/02 11:54pm  
Subject: Microsoft Settlement  
U.S. Department of Justice, Antitrust  
Division:

I appreciate the opportunity to comment on the proposed settlement of the Microsoft antitrust case. There are several reasons why I do not support the proposal:

Firstly, the punishment is inadequate. By not pursuing a modification of the corporate

structure, and by leaving gaping loopholes in the requirements for opening the Windows API, the Department of Justice effectively slaps Microsoft's wrist. Because of Microsoft's position in our society as the monopoly provider of the basis for most of our personal and business computing, it is gravely important that they not be considered above the anti-trust laws or deserving of softened treatment. The situation we find ourselves in now is almost exactly why these laws were enacted, the only difference being the industries in question. It has been proven that Microsoft has intentionally broken some of the laws that regulate our capitalist system. These laws exist for important reasons, and their power, as a deterrent if nothing else, is undermined by this proposed settlement.

Secondly, the expectation of Microsoft to practice good-faith self-restraint is unreasonable. They have been found guilty of breaking the law, and, referring back to my first statement, are being shown that the penalties for such actions are mild. Would it really be reasonable to expect their behavior to change under such circumstances? It is clear from the features of the newly released operating system, Windows XP, and the .NET initiative, that this expectation is in fact not reasonable. I hope that the Department of Justice will reconsider the proposed settlement in light of these points, and the many objections raised by others. Effective changes would include changing the API disclosure requirements so as not to allow Microsoft to discriminate against Open Source developers, closing loopholes in the interoperability requirements, and requiring divestiture of technology developed as a result of past illegal monopolistic business practices. It would be a shame for Microsoft's wealth and power to enable it to escape appropriate punishment for its misbehavior and an effective deterrent for future illegal actions.

Sincerely,  
James Garrett McWilliams,  
College Park, MD;  
Electrical Engineer

Subject: Microsoft Settlement

The proposed settlement is a bad idea. It gives the monopoly of Microsoft free reign to continue to do whatever it wants through (now) governmentally sanctioned anti-competitive behaviour.

The settlement needs to go far further to disrupt and control the Microsoft monopoly. The Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest.

It should not be adopted without substantial revision to address these problems.

From: chris cobb

To: Microsoft ATR  
Date: 1/23/02 11:56pm  
Subject: Microsoft Settlement  
DOJ:

The proposed settlement between Microsoft and the Government clearly demonstrates what Microsoft says behind your backs and justifies the pompous attitudes of its executives.

Namely, that the people at Microsoft are dramatically smarter and more capable than the government and you in particular. However it has happened (the behind the scenes details are probably a joke), the Government has proposed/accepted/been-duped into a pathetic excuse for an agreement which will do nothing to either punish or prevent the actions that got Microsoft this far and destroyed so many of its competitors. Microsoft has gotten everything they wanted and they have swallowed it whole. If this settlement goes through then you deserve Microsoft's ridicule. In its present form, this settlement is a \*LONC\* way from accomplishing anything useful towards improving the computer industry. Some problems with this settlement (which I feel almost ashamed to point out because you should know them and this "settlement" should not even exist) are that:

1) There is no significant punishment to MS for their past actions.

2) The loopholes and various qualifying sections of the settlement are \*huge\* and have been specifically crafted by MS to ultimately nullify any controls you think you will have on their future business.

3) There are no terms in the settlement which will significantly help those who are trying to compete with MS and break their hold on the market. I could go on and on, but there are numerous other articles written with sound advice on the problems I have mentioned and ways to correct them. I/We are only hoping that you read them and do the right thing instead of allowing this joke of a settlement to become fixed into history. To do so would reduce the sum total of your contribution to this country, the companies who so injuriously were harmed by Microsoft, and the people who spent years of their lives bringing the case to this level.

Basically, I ask that you care and do the right thing: Reject this settlement, dismiss the people who brought it about, forget about settling (Microsoft will NEVER settle this with any terms that truly hurt them), and take it to a decision of the court.

#### MTC-00019954

From: Heather and Erik Anderson  
To: Microsoft ATR  
Date: 1/23/02 11:56pm  
Subject: Microsoft Settlement

To Whom it May Concern:

Please keep in mind with respect to Microsoft's Windows operating systems that we are really not talking about an "operating system" anymore. Windows has become an application bundle. Time and time again Microsoft has incorporated applications into Windows to edge out or crush their competition. An operating system is designed to operate your computer, i.e. to let the peripherals communicate with the CPU to perform desired tasks. It does not consist of a media player, a web browser, an e-mail client, an instant messaging application, etc. Those services are applications. Currently, what is stopping Microsoft from incorporating Word, Excel, and Powerpoint into Windows and simply calling those applications "new features?"

Any settlement which allows Microsoft to increase their market share or not hinder their ability to bundle applications in to Windows will ultimately hurt many businesses which make fine software that complements Windows. And when business loses, the economy and the consumer lose too.

I am not asking that Microsoft be destroyed, just that they operate on a level playing field.

Subject: Microsoft Settlement

Microsoft must NOT be let off easy. While I don't see any reason to break up the company, I do think what the nine dissenting states are trying to do will at least compel Microsoft to work out more meaningful measures to insure fairness. There must be constant pressure on Microsoft in order to impress upon the company that they will not be able to engage in anti-competitive practices with impunity. But

THESE larger issues with companies like Microsoft must be addressed as well:

1) End User License Agreements must come into line with the 21st Century—make that the 20th Century. The prospect that private individuals do not own the software they pay for is outrageous. The telephone companies were reigned in long ago over the issue of private individuals installing their own multiple phone extensions in their own homes. It should be the same for software: The license should go to the user, not the machine. Likewise, businesses should purchase the a number of licenses equal to the number of people who use the software.

2) ANY software company that sells to the public should be required by law to a) sell a product that WORKS the way it is intended and continue to support it until it can be said to be "complete", and b) continue to make the product available for as long as anyone wants to use it OR sell the code to another

party who will continue to make it available OR release the code to the public. Software is a set of instructions geared to a particular generation of machines and should therefore be at least as maintainable as the machines themselves.

The nature of technological change in the present day is beyond the ability of a governing body to keep up with, UNLESS we can draw decisive parallels with other, past arrangements.

Date: 1/23/02 11:56pm  
Subject: Microsoft Settlement

Hello,

As part of the public comment period on the Microsoft settlement, may I add my thoughts:

—I use both Macintosh and Windows software. I love using the Macintosh, I loathe using Windows. Windows has succeeded with poor or downright awful products, due to its anticompetitive practices. The situation with Explorer and Netscape is the tip of the iceberg.

—The proposed settlement is entirely inappropriate; as in attempting to punish Microsoft's monopoly power it promotes more monopoly power in one area in which Microsoft currently lags, education.

—Microsoft should be forced to pay a settlement in cash. This could be used any way the justice dept or administering agency sees fit EXCEPT TO PURCHASE MICROSOFT PRODUCTS!!!

—I believe Microsoft should be split up, at the very least to an operating systems division and an applications division; and that any communications between the two divisions should be open to public scrutiny. Finally,

—Microsoft deserves to be punished for stealing the Macintosh operating system look and feel, nearly outright, from Apple. This may never happen but it's a glaring example of the massive product theft and anticompetitive practices of Microsoft.

Thanks for your efforts to remedy this situation.

Subject: Microsoft Settlement

Hello,

I would just like to put in my 2 cents to this settlement idea. I am deeply opposed to this as this settlement seems to be a compromise of justice. Microsoft's business practices have already proven to be damaging to AT LEAST one business, ie., Netscape, but also threaten to reduce a fledgling industry to nothing.

By bundling applications into their operating system and not releasing documentation for their API's to the software development community, they make it impossible for application software companies to develop products for their platform. The result of this is that Microsoft can be the sole provider and charge whatever they wish for their services, most of which they appropriated from other software vendors as well as the open source community (Their TCP/IP stack was taken from the FreeBSD operating system). This not only stifles competition in the applications market, but innovation as well.

Best regards,

Alistair Helfer

From: Nuitari  
To: Microsoft ATR  
Date: 1/24/02 12:03am  
Subject: Microsoft Settlement

I really disagree with the term of the proposed Settlement in the Doj vs Microsoft case as they mostly will help Microsoft boost and maintain it's current predatory tactics by locking everyone out of their API pretending security or DRM issues. Microsoft should be forced to publish all of their APIs interface to even out the application market.

Don't forget that by repeatedly buying out competitors and stealing other's technology, Microsoft did not innovate anything that occurred in the computer world. It even deliberately sunk many innovatives attempts made by other companies. Just an example their buyout of UltraCorps. The game was immediately made Internet Explorer only (though it worked very well with Netscape) and soon after they just close it down.

You can find many other examples by consulting this website: <http://www.vcnet.com/bms> I would greatly appreciate it if the settlement is refused and tougher sanctions and penalties are administered to Microsoft.

Regards,

Stephane Bakhos

This unjustified attack on Microsoft was the catalyst that brought on the collapse of the dot come. It is indeed ironic that the stock of many of the enemies of Microsoft was hurt worse than that of Microsoft.

There is much to hate about Windows, but its function as a de-facto standard has made possible the remarkable growth in both hardware and software. Netscape and Sun

were the people who tried to win by giving stuff away. They complain that Microsoft overcharges the customer, but that the prices are so low that they unfairly hurt the competition.

How can the expect to have it both ways.

From: gkoch@tampabay.rr.com@inetgw  
To: Microsoft ATR  
Date: 1/24/02 12:04am  
Subject: Microsoft Settlement

I would like to send a short note on my disappointment in the settlement with microsoft. I don't use their products any more and could care less what happens to them as a company. But I still have customers who do still use their operating systems and other products. What I see with every next generation of the operating system is less control by the user.

One of the problems is you no longer can choose which programs you want to run on your computer. They all run by default and there is no way to turn them off without intimate knowledge of the operating system. mainly I'm talking about internet explorer and outlook express. You can install your own browser and email program but internet explorer and outlook are linked to all of the operating system help files and file browser and such so you are forced to use it. It will reset itself as the default browser as well.

Another problem is the "standards" microsoft sets for file types. This includes documents, music and video files, and other types of files. Microsoft proposes these as the standard yet they don't release key information on their format so others and read them easily. I have been using linux with various word processors for 5 years and everytime someone reverse engineers the format of the .doc file, microsoft changes it in the next version of word. With the install base of word at offices, users are forced to also use the latest version of word at home if they take work home with them. They can't use another word processor or even an older version of word.

Finally, I am worried microsoft is trying to take over the internet. I realize it would be hard for them to own it. But they have taken steps to use they power and influence to set standards for the Internet. Standards that would favor their products and exclude others. They took Java and transformed it into J++ which became windows specific. Then invented active-x which is not only windows specific but internet explorer specific. Their web page creation software, front page, produces code which is specific to IE and windows. And lately they have

tried to block all browsers except IE from their microsoft.net and msn.net domains. That kept me from downloading security updates to IE for my customers who are on slow connections. I use opera which is a standards compliant browser and I also tried mozilla and netscape which are also standards compliant. IE is the least compliant out of the 4 yet their explanation for doing that was that the other browsers weren't up to standards. The Proposed Final Judgment settlement does nothing to stop Microsoft in their subtle and not so subtle attempts to force everyone to use their products and theirs alone. As written, the PFJ allows and encourages significant anticompetitive practices to continue. It would hinder competing products from reaching and surviving in the market place. It would give Microsoft an advantage in the one market where they still do have competition, in the schools. I'm still in favor of splitting them up, anything short of that does nothing to stop them. One more note. I still have hundreds of unused copies of windows 95 because at one time you could not buy a computer without microsoft windows. Those days will return with this settlement.

Thank you for your time.

Greg Koch

From: Louis Zirkel III  
To: Microsoft ATR  
Date: 1/24/02 12:04am  
Subject: Microsoft Settlement

Dear Sirs,

I oppose the proposed settlement of the Microsoft anti-trust trial. I am of the opinion that the current proposed settlement does not do justice those actions which were committed by Microsoft. It also does not justly block their ability to commit similar actions from now on.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,

Louis D. Zirkel III

From: Brian Souder  
To: Microsoft ATR  
Date: 1/24/02 12:03am  
Subject: Settlement Thoughts

The proposed settlement does not go far enough. I was relieved to hear that the school equipment portion of the settlement was rejected. It was a mockery of the judicial system. In fact, Microsoft is a monopoly, so therefore their products should be EXCLUDED from the equipment purchase list. The money from Microsoft should go

into a fund that can be drawn on against a list of specific vendors. IE: Linux, Macintosh, etc. Non-Microsoft related. PC Vendors like Dell, Gateway, HP, and Compaq could have their products purchased with a Linux operating system (ONLY) installed. No Microsoft products may be present at the point of sale. Schools that purchase the equipment must keep the systems as is or upgrade to new versions of Linux. they must also institute Linux training programs for students and teachers. In addition, they need to teach students how to program in the environment to help it expand further. Some of the fund should also be used for the encouragement of Open Source projects in the form of grants and research projects. If they have caused damages, why would you ever reward them with additional sales? That would be like stealing a bunch of cars—I get caught— proven guilty—but you reward me with a car instead of sending me to jail. Any settlement which is passed now is a complete joke. Microsoft knows this applies to Windows 98 only. They are already taking advantage of consumers and vendors with Windows xp. The settlement should be included to have Windows XP, and an other operating system needs to be installed as well. (Red Hat Linux or a derivative) The company really should have been broken into 3 parts. Internet which includes their net products, Internet Explorer, and all online services (Hotmail, and MSN), Applications (like Office, and other programming languages), and finally the core OS which would exclude Internet Explorer as being part of the OS. It could be included on the drive, but not integrated with the operating system. Microsoft is already getting additional funding based on their new pricing strategy for Windows XP. Any monetary loss is going to be passed on to the general public. They should have set pricing for 10 years for all vendors at about \$60 per licence, and \$99 for the full version for consumers. The upgrade would be \$75. FIXED! Why should the consumer—whom Microsoft hurt in the first place—have to pay for their legal problems? Microsoft has been given entirely too much latitude in this case. They are pushing the DOJ and the legal system around. They are using money and political contributions to change the outcome of this settlement. It is obvious to the american public, and all other nations of the world. You are sending the message that it is ok to rip consumers off if you have enough money.

In addition, the settlement should include the open release of all rights to OpenGL which they bought from SGI. Here is another example of Microsoft trying to kill off open source projects. They are trying to force everyone to use direct 3D and the MS platform since it is not available on other platforms.

All Microsoft transactions must be a matter of open discussion from now on. There must be full disclosure of all purchases of assets, investments, and intellectual agreements to the general public for the next 10 years. All transactions must pass the scrutiny of the general public as well as a judge and the SEC.

Microsoft needs to be forced to compete at the OS level again. They need to be forced

to make their product better—not just purchase another company. There need to be strict guideline put in place for the acquisition of other companies.

The entire API must be published, and changes to the API need to be documented for 10 years. Any changes made without prior notice to third party vendors is a violation of the settlement agreement. This would prevent Microsoft from randomly changing the API and not telling anyone but their close vendors about the changes. It would prevent Microsoft from “Breaking” other companies products strictly because they did not want to compete or were ahead in technology.

Microsoft must be forced to port office to the Macintosh and Linux platforms for the next 10 years. They must remain parallel with the PC version with release dates within 30 days of the PC version. If the Macintosh and Linux version are not updated, Microsoft must remove all of their Office products from the shelves within 3 days or be fined \$500,000 a day until compliance is met. Microsoft uses their office products as a tool to manipulate other companies and platforms. All investments in other companies and/or platforms must be sold off with the proceeds from the sale of stock or ownership shares being contributed to the educational fund outlined in the current settlement. This money would be in addition to the current settlement amount that excludes Microsoft property from being sold.

To whom it may concern:

I'm writing this to express my disapproval of the proposed settlement in the federal antitrust suit against Microsoft. First, the settlement will allow Microsoft to “donate” their products to poorer school districts under licensing terms that will force the districts to pay millions of dollars in fees if they wish to continue using the software after 5 years—in effect, allowing Microsoft to make a profit from this settlement. Second, and more importantly, this settlement will

not make any material difference in Microsoft's blatant abuse of its operating system monopoly. It will completely nullify years of work on the part of the Department of Justice's dedicated attorneys, and it will allow one of the greatest threats to our nation's economy to exist unchecked. No government that truly serves the interests of its people could allow such a travesty of justice to occur.

Please find below my personal opinion regarding the proposed settlement of the USDOJ vs. Microsoft.  
1-23-2002

The proposed settlement to allow as punishment the distribution of Microsoft software is not punishment in any measure. It does not deter Microsoft, but is a reward to Microsoft by increasing its market share. The actual cost to Microsoft is not real money damages. The settlement would damage competitors as it does not remove Microsoft's competitive advantage. A settlement would absolve Microsoft of the responsibility and damage found in a determination by the court. The settlement does nothing to remove the complete and monopolistic control Microsoft has over a resource on which our businesses and government are dependent. The settlement would result in continued and further damage to consumers, small and large businesses and governmental agencies.

As the proposed settlement stands now, only consumers and Microsoft's competitors are damaged. The proposal rewards Microsoft by letting them buy their way out of being a responsible competitor. As with previous cases brought against Microsoft, the outcome is not admissible to future cases because most or all have been settled out of court and out of the public eye. If this happens with this case, the appearance, or view of the courts is that Microsoft has done nothing wrong. While in reality, Microsoft's consistent approach is to take advantage of any and all competitors until they are absorbed, defeated, or driven out of the market.

For Microsoft, the “settlement amount” is only an appearance of cost; the actual cost would be but a fraction of the “settlement amount”. As with any donation, a business can only deduct the costs of the materials required to produce a product and not the retail price of this product. If Microsoft provides their “available” products at “retail

prices”, Microsoft's actual cost would be minimal and loss of actual sales would also be low. If Microsoft provided products at an actual cost basis equal to the proposed settlement, the market would truly be overwhelmed with Microsoft's products further diminishing any competitors chances of earning market share. The proposal increases Microsoft's market share by dumping “free” software into the market without the market choosing the best or preferred product. This directly displaces any competitors product since any competitive manufacture could only compete by giving away free it's software. The proposal does not address the funding of competitive and alternative software directly opposed to Microsoft's own interest.

The consumer is the most damaged party in this settlement. There is no monetary relief to the consumer. There would be no growth of a competitive market that would bring lower prices and innovative products to the consumer. The scope of innovation continues to move away from a collective process as was the case with UNIX Operating System of 30 years ago and moves closer toward control by one company—(Microsoft). Microsoft has no regulatory oversight body, yet its operating system is virtually mandatory for more than 90% of consumers, business or government agencies to participate and communicate through our computerized world. By the nature of the license agreement to use Microsoft products, the computerized world is at risk to Microsoft's decisions and whims. What would happen if Microsoft chose to remove itself from the market? While unlikely, it is important to ask the question to realize the scope and impact the Microsoft monopoly has upon our lives.

The proposed settlement is just that, a settlement without any resolution, a settlement with no direction to create competition and innovation, a settlement that begs the question, “What good is a settlement if it provides no resolution”?

In my opinion, what needs to happen is:

1. For Microsoft to open its architecture to public control.
2. That architecture should be moved in a direction that allows new and existing operating systems to share and compete in the OS market.
3. That Microsoft funds the research in this direction, funding for new and existing competitive operating systems.
4. That all proprietary advantage Microsoft has between its OS and other Microsoft software products be removed or opened to allow competitors equal programming advantage.
5. That Microsoft shall be overseen in its contracting and licensing so as to provide no strong arm tactics in its negotiations and sales of its products.
6. That the license of all previously sold Microsoft operating systems be rewritten to give ownership of the usage to the consumer while allowing copyright to be maintained by Microsoft unless it can be shown that copyright previously belonged to a competitor.
7. That Microsoft should make available for sale, but without support, all previous Microsoft operating systems at a fair market

price so that upgrades are not mandatory to expand your system of computers. Microsoft has far too much influence on our lives and our businesses and our world's security. The proposed settlement is of no benefit and should not be considered.

Sincerely,  
Donovan R. McKinney

"Don't go too soft on Microsoft" is my sentiment. As a Macintosh user since 1989, I have paid far higher prices for software and hardware than I otherwise would have due to the unfair and predatory dominance of the PC market by Microsoft. A normal distribution of market share, with everyone playing by the rules, did not occur, and as a consumer I have paid a high price for it because of my preference for a different operating system.

Isn't it time to really make Microsoft pay for their anti-competitive actions? Something that will have real meaning to them. From what I've read, and going by Microsofts past behaviors in various actions, the proposed settlement is completely inadequate. One might even call it a reward. I especially liked the class action suit where they were proposing giving software and machines to the schools. Oh my, what a terrible punishment, to be legally forced to break into the schools venue and start to displace Macs. Again and again, they have circumvented court orders and continued to proliferate by using illegal anti-competitive action. Please do something to stop them, not reward them. I personally believe that the only way is to split them. If it was good enough for old Ma Bell, it should be good enough for Microsoft. Look at all the competition/business opportunities that created. All the new businesses and opportunities created. The same could hold true here. Isn't it time to help boost the economy?

Dear DOJ,

I am opposed to the proposed settlement in the Microsoft antitrust trial. The settlement as proposed does not prohibit Microsoft from extending and licensing extensions to common open protocols. As a result, Microsoft is able to prevent or prohibit non-Microsoft products from running with with Microsoft operating systems and browsers.

My company has an online internet application that was developed using common open protocols and non-Microsoft

software. Microsoft could extend the open protocols, license the extensions, and prohibit our application from running with Microsoft operating systems and browser. The Microsoft solution would be for our company to jettison our significant investment in the existing system and reinvest in a Microsoft homogeneous server. Microsoft has a history of embracing and extending incompatible open protocols. A current example is Microsoft's incompatible version of MIT's kerberos security system that prevented non-Microsoft kerberos servers from participating even though the kerberos architecture and protocols were openly defined and created by MIT and successfully deployed for Microsoft and non-Microsoft systems. After an uproar from MIT and the kerberos community, Microsoft relented and removed the artificial technical barriers to heterogenous kerberos servers. I'm afraid that our company may not be able to generate such a loud uproar to right the obvious wrongs.

Sincerely yours,

Good Morning,

I am writing, as a personal computer user, to complain about the proposed Microsoft settlement. I think that it is all about letting Microsoft off the hook, as has been done in the past, and has nothing to do with providing consumers, both commercial and home, with competition in the internet browser and operating system markets.

If you intend to punish Microsoft, you must punish them. Not just take cash out of them which they will recoup quickly from their established monopoly. You must break their monopoly. Consumers must be given a choice. For example you could legislate that all computers must be purchasable without a Microsoft product installed.

This is just a thought.

Thank you for taking the time to read my ideas.

Regards,  
Ian Cameron

Subject: Microsoft Settlement

I am a consumer, an end user of personal computers and I have been harmed by Microsoft's unethical business practices. For example, because I use Netscape for my browser, I have been blocked for a time from some sites at Microsoft's domain. Even now, when I visit certain pages at Microsoft domains, the pages are not rendered properly and/or functionality is lost. There is nothing wrong with my browser, it works fine on other websites. What is happening at Microsoft domains is a browser version of what has already occurred with regard to competition in the Operating System market and certain software applications. Key Application User Interfaces were withheld from companies that were in competition with Microsoft so that their software would not run right on Windows (think WordPerfect). And way back when DR DOS still had a chance at market share, MS put in code to scare developers with false error messages. They're using similar tactics now. They are trying to make rival applications lose functionality on platforms they control. They completely control the operating system and now they're trying to control the web and how it is accessed. Hence, they've made rival web browsers lose functionality on their web domains. If their .Net strategy succeeds, believe me, they will exercise control to the fullest extent possible until domination results.

For those few of us who have refused to use Microsoft's Internet Explorer that comes bundled with our PCs (consumers have no choice about that-they've forced IE upon us), MS is now trying to force us to use their bundled browser by making Microsoft download sites (these sites are necessary to install patches, etc.) cumbersome and difficult if accessed with a non-MS browser. They seek total control of the web just as they now dominate the operating system market for personal computers and I find that prospect very scary. I think you should too. The current remedies sought by the Justice Department are impotent at best and innocuous at worst. They do not go far enough; Microsoft has already demonstrated to the world, to those with an honest and fair mind, that they are corrupt, unethicalX-Mozilla-Status: 0009hing to achieve their goals. Please be fair and think of the little people and the little companies that don't have voices as loud as Microsoft's with their \$35 billion of monopoly derived revenue. Our future is in your hands. Please keep real choice alive.

Sincerely,  
Marina Krefft

Subject: Microsoft Settlement

To whomever this concerns,

I understand that I have the ability to comment on the proposed settlement between the Justice Department and Microsoft. In that case, I would like to register my objection to the proposed settlement in the United States vs. Microsoft case.

The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

This settlement is essentially a slap on the wrist for Microsoft, and further restrictions need to be enforced to end its anti-competitive practices.

To: Renata B. Hesse

Antitrust Division

U.S. Department of Justice

601 D Street NW

Suite 1200

Washington, DC 20530-0001

I wish to add my comments on the proposed Microsoft antitrust remedy, within the auspices of the Tunney Act. I am a citizen of the United States and a resident of Cincinnati, Ohio. The current proposed settlement for the Microsoft antitrust trial is an insufficient remedy. I work in the information technology field and have direct exposure to the negative impact of the Microsoft monopoly on a daily basis. Microsoft has created a cycle:

1) The dominance of Microsoft operating systems and unfair practices have created a dependency on Microsoft applications, specifically Microsoft Office.

2) The predominance of Microsoft applications, which are insufficiently available for non-Microsoft operating systems, compels the purchase of additional Microsoft operating systems. In fact, companies which provide applications with similar functionality to Microsoft products are purchased or unfairly driven out of business. This was seen in the trial, in the form of the attacks on Java and the Netscape browser.

Currently, economic attacks against companies such as Corel have forced the cessation of development of a competitive operating system and restricted the availability of a competitive office suite.

Any remedy must approach the need for competitive applications for Microsoft operating systems, as well as the need for Microsoft applications to support non-Microsoft operating systems. Here are additional ideas for preventing Microsoft from exercising monopoly power in the Intel-compatible PC arena:

1) Microsoft is currently holding its monopoly through unfair OEM licensing practices and limiting most Microsoft applications to its own operating systems. A solution to the operating system issue: Each Microsoft application must be developed for at least two non-Microsoft operating systems, at Microsoft's expense. The non-Microsoft operating systems should hold at least 2% of the Intel-PC desktop operating system market share or a similar requirement to increase the acceptance of non-Microsoft operating system which have already carved an initial foothold. If an operating system developer/provider wishes, at the developer's expense, to modify and enhance Microsoft applications so that they will run on the provider's operating system, complete source code will be provided to the operating system developer to create. Microsoft may collect royalties no greater than the sum charged to OEMs for the Microsoft developed version of the application.

2) Investigate and restrict the subscription based licensing, which Microsoft currently proposes. In this model, customers are economically compelled to keep the costly subscriptions, possibly owning no product at the end of the subscription.

I also agree with these suggestions at <http://www.gnu.org/philosophy/microsoft-antitrust.html>: "1. Require Microsoft to publish complete documentation of all interfaces between software components, all communications protocols, and all file formats. This would block one of Microsoft's favorite tactics: secret and incompatible interfaces.

To make this requirement really stick, Microsoft should not be allowed to use a nondisclosure agreement with some other organization to excuse implementing a secret interface. The rule must be: if they cannot publish the interface, they cannot release an implementation of it. It would, however, be acceptable to permit Microsoft to begin implementation of an interface before the publication of the interface specifications, provided that they release the specifications simultaneously with the implementation.

Enforcement of this requirement would not be difficult. If other software developers complain that the published documentation fails to describe some aspect of the interface, or how to do a certain job, the court would direct Microsoft to answer questions about it. Any questions about interfaces (as distinguished from implementation techniques) would have to be answered.

Similar terms were included in an agreement between IBM and the European Community in 1984, settling another antitrust dispute. See <http://www.cptech.org/at/ibm/ibm1984ec.html>.

2. Require Microsoft to use its patents for defense only, in the field of software. (If they happen to own patents that apply to other fields, those other fields could be included in this requirement, or they could be exempt.) This would block the other tactic Microsoft mentioned in the Halloween documents: using patents to block development of free software.

We should give Microsoft the option of using either self-defense or mutual defense. Self defense means offering to cross-license all patents at no charge with anyone who wishes to do so. Mutual defense means licensing all patents to a pool which anyone can join—even people who have no patents of their own. The pool would license all members' patents to all members.

It is crucial to address the issue of patents, because it does no good to have Microsoft publish an interface, if they have managed to work some patented wrinkle into it (or into the functionality it gives access to), such that the rest of us are not allowed to implement it.

3. Require Microsoft not to certify any hardware as working with Microsoft software, unless the hardware's complete specifications have been published, so that any programmer can implement software to support the same hardware.

Secret hardware specifications are not in general Microsoft's doing, but they are a significant obstacle for the development of the free operating systems that can provide competition for Windows. To remove this obstacle would be a great help. If a settlement is negotiated with Microsoft, including this sort of provision in it is not impossible—it would be a matter of negotiation."

From: Bob Doran  
 To: Microsoft ATR  
 Date: 1/24/02 12:09am  
 Subject: Microsoft Settlement

The predatory practices of Microsoft have effectively eliminated a number of choices I would otherwise have in personal computer operating system software, and caused the limited choices that remain to cost much more than they otherwise would, had

Microsoft not constrained and eliminated competition and operated to establish a monopoly of the desktop software industry.

This isn't about competition, or the best product winning. Microsoft has destroyed hundreds if not thousands of better products and ideas simply to perpetuate a stranglehold on consumer choices, and to be able to charge more for Microsoft products.

I and millions of consumers like me too have been damaged by the practices of Microsoft. I ask you to institute permanent changes to the behavior of Microsoft in such a manner that I and all consumers are protected from future anti-competitive Microsoft practices. Further, I ask that the settlement of the Antitrust litigation between the United States and Microsoft contain provisions for the repair of damages I and other Microsoft product purchasers have suffered.

From: Jason Holt  
 To: Microsoft ATR  
 Date: 1/24/02 12:12am  
 Subject: Microsoft Settlement

As a US citizen and software developer of many years, I wish to express my disappointment with the proposed final judgement in "United States vs. Microsoft".

I have been hindered on many occasions by Microsoft's anticompetitive practices, and the proposed settlement does little to curb further abuse nor make reparation to their damage to the computer industry. For example, their tight integration of the Internet Explorer (IE) browser with the operating system has made it quite difficult for me to effectively create web pages without purchasing Windows. Their illegal actions allowed them to quickly dominate the market with a product widely considered (at the time) inferior to Netscape Navigator, it's main competition. Navigator was available for Linux and Irix as well as Microsoft and Apple OSes, allowing me to test web pages in my preferred environment. But now with IE's market share I have to have access to a Windows or Macintosh computer in order to verify that web pages will look acceptable to clients who also have been forced into use of the Windows environment. The proposed settlement leaves me in this predicament, forced to contribute unwillingly to Microsoft's market share.

Secondly, although the settlement (dubiously) requires Microsoft to publish its APIs, it still leaves me in many cases unable to write competing software. I choose to release all software I write using the Free Software Foundation's General Public License (GPL), which allows anyone to freely examine, modify and redistribute my code. But the settlement allows Microsoft to charge royalties for use of methods protected by its software patents— impossible for me to pay if I release under the GPL, since I don't know how many copies of my code are distributed.

Others have commented on the many specifics of the proposed final judgement

which are weak and incomplete; my statement only highlights a few ways in which the settlement fails for me specifically. The settlement is wholly unacceptable and insufficient for the needs of myself and many others, and I urge the court to provide real relief.

-Jason Holt

**MTC-00019992**

From: Daniel S. Wilkerson  
To: Microsoft ATR  
Date: 1/24/02 12:15am  
Subject: Microsoft Settlement

To whom it may concern,

The proposed settlement with Microsoft fails to do anything useful and allows Microsoft to simply continue their illegal practices. Specifically, the Court of Appeals ruling states on p.99 as follows.

"The Supreme Court has explained that a remedies decree in an anti-trust case must seek to "unfetter a market from anticompetitive conduct" to "terminate the illegal monopoly, deny the defendant the fruits of its statutory violation and ensure that there remain no practices likely to result in monopolization in the future."

As far as I understand the decree, it does not do anything resembling this. Allowing the same company, Microsoft, to continue to provide such interlocking services such as 1—Operating Systems, 2—Applications, and 3—Internet services which could and often are provided by different companies in the rest of the industry, is just asking for the monopoly to not only continue, but to be extended from one field (operating systems) into others through leveraging of the already existing monopoly Microsoft has on the desktop. It is absolutely clear that this kind of illegal tying between the operating system and the browser is going on now. Should Microsoft also gain control of the server, and thus be able to control the protocols for the web and email, Microsoft would quite literally own the Internet. Imagine one company controlling the postal system or television completely. With the Internet replacing all other modes of communication, it is not an overstatement to suggest this could be the end of free speech. There is historical precedent for monopolies with enough power attempting control as unimaginable as this: The United States owes its first settlers to the attempt by the then Catholic English monarchy to prevent people from reading the Bible by burning to death anyone found with an English copy of it.

What eventually broke the monarchy's grip was that printing technology was simple

enough that people could and did simply duplicate it in their own homes: eventually there were just too many English bibles. The major problem here is that the Internet situation is really \*not\* like these previous historical situations with other media that seem similar, and yet people are content to think of it as if it is. It is a problem with computers, but not with television or telephones or newspapers, or any other mass communication medium, because software is fundamentally different than these other technologies: it is maximally complicated. The communications protocols in these historical examples are very simple. Anyone can also build a TV, not just Sony. Anyone can print a newspaper. Telephones are similarly simple. However, I can attest from first hand knowledge that the fact that software protocols can be arbitrarily complex and constantly changing very effectively locks others out of competing with Microsoft. I can't write a competitor to Microsoft Office because the file formats for the documents are too nasty and change too often. At my last job we have tried deciphering them. This is not idle speculation. You may laugh, but think of it this way: The signal of a TV means an image and the encoding for it does not change very often (every few decades, and only with huge resistance. We still don't have HDTV.) The words you write in a newspaper may change, but the language they are written in does not: We can still read what was written 500 years ago. However, computers are \*universal\* machines that can be have \*arbitrarily\* complexly. The signal that comes over the Internet can be interpreted as data, say text or image, or as a new program, changing the very \*language\* of the (subsequent) signal itself. Imagine that after reading one newspaper article, you knew a new language and the publisher then published all subsequent articles in this new language. If they prevent you from reading that first article, you can no longer read \*any\* more! This is how computers work. This is the danger of Microsoft's control over so many aspects of computing.

I support breaking the company into three parts providing the three services offered above: operating system, applications, and Internet services. I also support an idea from the Free Software Foundation which I have quoted below .

Sincerely,

Daniel Wilkerson, Software Engineer  
Quoted suggestion of the Free Software Foundation: <http://www.gnu.org/philosophy/microsoft-antitrust.html>

Require Microsoft to publish complete documentation of all interfaces between software components, all communications protocols, and all file formats. This would block one of Microsoft's favorite tactics: secret and incompatible interfaces.

To make this requirement really stick, Microsoft should not be allowed to use a nondisclosure agreement with some other organization to excuse implementing a secret interface. The rule must be: if they cannot publish the interface, they cannot release an implementation of it.

It would, however, be acceptable to permit Microsoft to begin implementation of an interface before the publication of the

interface specifications, provided that they release the specifications simultaneously with the implementation. Enforcement of this requirement would not be difficult. If other software developers complain that the published documentation fails to describe some aspect of the interface, or how to do a certain job, the court would direct Microsoft to answer questions about it. Any questions about interfaces (as distinguished from implementation techniques) would have to be answered. Similar terms were included in an agreement between IBM and the European Community in 1984, settling another antitrust dispute. See <http://www.cptech.org/at/ibm/ibm1984ec.html>.

To Whom It May Concern: I am opposed to the current state of affairs concerning the anti-trust case against Microsoft. Forcing them to remove their browser from the core of their operating system is a step in the right direction, it is not enough.

Although some people are for making them release the source code for thier products, I think that this would also be the wrong decsion. They have invested millions, if not billions in the code that makes up Windows and Office. Forcing them to give it away is wrong and un-American. However it is a well known fact that they have used their dominance in the PC market to illegally force competiors out of the market. Look at Netscape and OS/2 for examples.

Although radical as it might be, I believe that the best way to handle this monopoly is to break it up into two seperate corporations. One for the OS, one for applications such as Office, Internet Explorer, various games, and the X-Box. That way it ensures that the applications cannot be integrated into the OS any more than a competiors might be. People say that doing so would damage our economy. I say it would help more than hurt. With IE and Office no longer so tightly bound to the OS, it would get competiors a level playing field. With a level playing field comes a much better, stabler economy. Look that the economy of the United States. It is based on the one simple fact that everyone starts out on a level playing field. Without that, where would we be today?

Look back to AT&T. Sure, when they were split up it was rough for a while, but look now. Look at Sprint and MCI. With true competition comes the ability to offer the best services to the most people at the best price.

Everyone wins. Please, don't let Microsoft remain a monopoly.  
Nathan Mace

Subject: Microsoft Settlement  
To Whom It May Concern,

This letter is in support of the principles outlined in Dan Kegel's Open Letter to the DOJ, concerning the Microsoft Settlement. By way of providing a specific reason behind my support, I would argue that there are a number of applications in the realm of image processing and Geographic Information Systems that are being hurt by Microsoft's refusal to release its API's in a manner consistent with other software developers. This secrecy results in applications that, though powerful overall, are given to instability, resulting in lost time and work.

Sincerely,

Subject: Microsoft Settlement

[I read in the San Jose Mercury that I could send public comments about the antitrust trial to this address.]

There are those that believe Windows to be a wonderful product, and that Microsoft has not diminished competition thru their monopolistic actions. Those people have not seen the incredible advances of software products in other industries during the past 20 years, most notably in the areas of stability and security, where Windows is so weak.

In many ways Microsoft is to the software industry as the US is to global politics: the 800-pound gorilla with incredible resources.

While US leadership (and our democratic process) usually recognizes that abusing this position has long-term negative repercussions with foreign states, Microsoft leadership takes full advantage of their position to vanquish companies with competitive (and sometimes superior) products.

This must not be allowed to continue, and I believe the only way to prevent it is to (1) enforce a change in leadership at Microsoft, or (2) to split the OS division out of the rest of the company.

Subject: Microsoft Settlement  
I am opposed to the proposed settlement. As a minimum, Microsoft should be disallowed from publishing Internet Explorer and from ever charging customers for products they give away as an enticement (example: Entourage for Mac was free, now they charge 499.00 to purchase. There should be regulations against Microsoft's predatory practices of selling products and dropping support (Project for Mac) or charging exorbitant upgrade fees (Office X for Mac).

Date: 1/24/02 12:15am  
Subject: Microsoft Settlement  
To whom it may concern,  
I feel that the Proposed Final Judgment is against the public interest. I oppose this settlement.

Here are some of the specific areas that I am concerned with.

The proposed final judgment doesn't take into account Windows-compatible competing operating systems.

The proposed final judgment contains misleading and overly narrow definitions and provisions. The proposed final judgment fails to prohibit anticompetitive license terms currently used by Microsoft.

The proposed final judgment fails to prohibit intentional incompatibilities historically used by Microsoft.

The proposed final judgment fails to prohibit anticompetitive practices towards OEMs. The proposed final judgment as currently written appears to lack an effective enforcement mechanism.

sincerely,

Re: The Microsoft settlement—I am opposed.

I do not believe the Settlement with Microsoft goes nearly far enough in restricting Microsoft's monopoly power. I felt that the company should have been split into two parts: one for applications development, and one for operating systems development, with no possibility for private communications between the two. This way applications developers would not be disadvantaged when attempting to compete with Microsoft on application programs.

Thank you. —

To: Microsoft ATR  
Date: 1/24/02 12:16am  
Subject: Microsoft Settlement

Sirs:  
The proposed Final Judgment is insufficient to prohibit future monopolistic practices by Microsoft for several reasons:

It defines Windows API's too narrowly, i.e. as only API's between middleware and Windows. The PFJ should expand this definition to include all Windows API's.

Section III A 2 does not restrain Microsoft from retaliating against OEM's who ship computers containing only a competing operating system and not Windows.

The powers of the Technical Committee include investigation, but not enforcement. Enforcement of any violations uncovered by the Technical Committee would require lengthy and expensive legal action.

No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats have been found to form part of the Applications Barrier to Entry.

Thank you for your consideration to these comments.

From: Philip Flip Kromer  
To: Microsoft ATR  
Date: 1/24/02 12:23am  
Subject: Microsoft Settlement

The Microsoft Settlement is deeply flawed. My primary objection is that Microsoft is not required to keep even a pro forma separation between Operating Systems

Development and Applications development. Any reasonable settlement should include a provision enforcing a "Chinese Wall" between these divisions, so that other companies play on a level field with Microsoft. This will also help ensure that Microsoft does not leverage loopholes in the settlement (as it has so often in the past) to obfuscate their APIs—there own applications divisions will be just as encumbered.

Thank you for your time, and I hope that a significantly stronger solution may be found.

Philip Kromer

Subject: Microsoft Settlement

Hello, I am writing to voice my disagreement with the Microsoft antitrust settlement. Now that Microsoft has been declared a monopoly, it appears that once again, the USDOJ will be behaving in the same milksop manner they did when trying to take Microsoft to task over the MS Office product some years ago. Much money and time was wasted in the effort (which had many valid points) only to welsh on truly punishing Microsoft. I mean, if Microsoft is really a monopoly, and if the government has spent so much of my tax dollars, and of their time in proving it, shouldn't there actually be a punishment?

For argument, if I have a son who can't play fair with others, should I just always say "No, No, Johnny", and eventually teach him that disobedience is okay because his punishment is nothing more than hearing someone tell him "No"? Perhaps I should take away Johnny's favorite toy for awhile, and teach him that not doing the right thing has a consequence he doesn't like, giving him a chance to learn. I demand, as someone whose tax dollars went into this process, that you handle this matter in a matter that actually teaches Microsoft that anticompetitive practices get punished. Should you fail to do so, you not only allow their company to behave like the allegorical little Johnny, but once again, the public sees you as a toothless tiger that has no hope of bringing down the prey it chases.

From: Karen Igla  
To: Microsoft ATR  
Date: 1/24/02 12:23am  
Subject: In Support Of Resolving Microsoft Lawsuit

I would like to join those urging a speedy settlement of the Microsoft lawsuit. I understand the current proposal is fair regarding these elements in the agreement:

—Computer manufacturers will be able to include non-Microsoft software in their products.

—Microsoft will alter its products, including the new Windows XP, to make it easier for consumers to substitute non-Microsoft programs in the Windows operating system.

—Microsoft will be required to share its programming code with competitors so their software for video streaming, digital photography and other features will be compatible with Windows.

—A three-member Technical Committee will be established to monitor Microsoft's behavior and enforce the settlement for the next five years. Should the company be found in violation of the terms of the settlement, it can be extended for another two years.

Thank you for ending this costly suit.  
Sincerely,  
Karen Igla

Subject: Microsoft Settlement

Hello, Sir and/or Madam.

I have some genuine concern over the proposed settlement of the Microsoft Antitrust case. As is, the proposed settlement isn't going to remedy the problem with Microsoft's past and future actions. In the past they have had very anticompetitive actions against their competitors and even with the restrictions that would be placed upon Microsoft by the settlement, it wouldn't stop them from behaving the same way.

In your settlement you tell Microsoft that they are to open up their APIs to other companies. But you don't require them to do it free of charge. Microsoft could potentially open up the APIs to anyone willing to pay a million dollars for a very restrictive licensed version of the documents. Microsoft should be required to publish ALL their APIs and Data Structures in a media format that is free of charge and free to be used in any manner without restriction.

I would also make a requirement that future APIs should be treated the same way for the next 15 years.

Thanks,

From: Matt Atkins  
To: Microsoft ATR  
Date: 1/24/02 12:22am  
Subject: Microsoft Settlement

Synopsis: The settlement is grossly insufficient. Do something that will allow Free Software to at least protect itself against Microsoft.

I feel that the judgement being reached in this case is not curative of the problems that it addresses. I feel that Microsoft will not be sufficiently restrained in their business practices to stop them from using their monopolistic desktop share to force others out of business.

I feel that Microsoft has actually used this case and it's remedy to arm itself to use the law against it's current existing competitors. Honestly, folks—it seems like there are holes in this large enough to toss a truck through, and I'm not alone.

I've gotten sick and tired of my friend bringing me computers with buggy, flawed Windows installs. I'm tired of trying to tell them that Yes, there were alternatives once, before Microsoft drove most of them out of business—Not by being good, or by being right, but by good marketing, and use of strongarm anticompetitive techniques that would make rail barons blush.

I've also gotten tired of big business buying their way out of trouble. They're guilty as sin, dammit, and they ought to pay.

This is a joke. Take this sentence back and put out something with some teeth in it. It's a sad damned world where people can steal this much money, and be this crooked, and get off this easy.

Subject: from a concerned citizen

I find this lawsuit very upsetting. Time-Warner is trying to tell us that they are being hurt by Microsoft when they totally control their cable and cable modem in our area. I can't even log on to high speed service without going thru Time-Warner DSL to get to MSN.com. Microsoft has been held back so that TW could monopolize this market, even over some of the more expensive services. Where is leading us except that T/W has used my fees to support a lawsuit over the very service they supply!!! A Monopoly!!!

Microsoft has enriched my personal life. Not monetarily, but just as a person who likes to read current events and put a more organized life together. I use it as a "very dependable service" to communicate with my son in the Army serving our country at Ft Hood, TX.

I've used ALL the other services including AOL and frankly I was tired of all the Spam advertising and Kiddy Porn that the site encourages.

Now as I see this if you rule against Microsoft your Making AOL/Time-Warner THE MONOPOLY of

1. Cable Television
2. Affordable Internet access
3. Free access News Media
4. Affordable High-Speed Internet and who knows what in the future!!!!

Just remember the commercial on Radio and Television: "AOL no wonder it's #1 —Talk about a Monopoly!!!!!!"

**MTC-00020019**

From: Matt Wahlin  
To: Microsoft ATR  
Date: 1/24/02 12:25am  
Subject: Microsoft Settlement

Dear Sirs,

I am writing this in response to an article I saw in the San Jose, California Mercury News which stated that public comments regarding the proposed Microsoft antitrust settlement are still welcome at this email address. If this is not the case, I apologize in advance for any inconvenience this message may cause.

Regarding this proposed antitrust settlement- I heartily disagree with the position taken by the current administration in pursuing this settlement. As a professional with almost 25 years' experience in the software field and with software products (and product development) in general, I feel that this settlement is bad for the American public and bad for the competitive business environment in our country (and the world).

Over the years, I have seen Microsoft's anti-competitive business practices squash competition from small companies trying to develop new ideas and technology without the benefit of the resources that a monopolistic company, such as Microsoft, can bring to bear. In addition, I have frequently seen examples of Microsoft taking advantage of their Operating System monopoly for personal computers to crush competition by effectively locking out users from using other, better products with their System. Although Netscape, and their browser, is one of the more highly visible examples of Microsoft using a number of different aspects of their Operating System monopoly to create an unfair advantage for Microsoft's own product in the marketplace, this is FAR from the only example.

I feel that the original remedy recommended by the judge in the first

Microsoft antitrust trial was a good remedy and an appropriate example of the kind of actions required to curb Microsoft's monopolistic power in the marketplace. Creating separate businesses from some of Microsoft's more profitable product lines, and forcing them to compete fairly with all other businesses (including the other pieces split off from Microsoft) would create an environment far more conducive to creativity and productivity, and would benefit the consumers enormously. The current, proposed settlement would do little toward this end— in fact it would validate Microsoft's monopolistic business strategies and stifle innovation in software development. The arrogant attitude displayed by Microsoft executives during the trial is more than enough evidence to show that they have every intention of continuing these anti-competitive practices. This would make my job harder and the lives of all consumers less than they could be.

Please reconsider the current, ill-advised settlement proposal, for the sake of all software developers and all consumers.

Thank you,  
Matthew W. Wahlin

The proposed settlement is bad idea.

#### MTC-00020021

From: Charles Sutton  
To: Microsoft ATR  
Date: 1/24/02 12:24am  
Subject: Microsoft Settlement

I am commenting on the proposed Final Judgment in the Microsoft antitrust case, pursuant to the Tunney Act. I am a graduate student in computer science, I have worked as a software engineer (never for a competitor of Microsoft's), and I have used Microsoft products for almost 15 years. I do not believe that the proposed Final Judgment is in the public interest.

In particular, I am concerned about the definition middleware product in the settlement. As a software engineer, I know that Microsoft places much of its business Internet strategy in what it calls the .NET suite of applications, and the programming language C#. Microsoft CEO Steve Ballmer says as much an interview with ComputerWorld magazine (By Carol Sliwa, January 14, 2002): "From my perspective, the theme over the next year is Web services, XML and .Net." Since many of Microsoft's anticompetitive practices involved the Internet (specifically, World Web Browsers), it seems that this is an oversight in the settlement. Because Microsoft produces the dominant Web browser—a dominance which was achieved illegally—Microsoft stands to gain if such services become popular. I believe that the Final Judgement should address this.

In general, it seems to me that the settlement attempts more to prevent

Microsoft from breaking the law in the future than it will do to restore competition in any of Microsoft's markets: Web browsers, office software, or operating systems. I do not believe that it will punish Microsoft for having broken the law.

Sincerely,  
Charles Sutton

#### MTC-00020022

From: Benjamin Chadwick  
To: Microsoft ATR  
Date: 1/24/02 12:28am  
Subject: No to current Microsoft Settlement To Whom It May Concern:

I would like to register dissent with the current proposed settlement with Microsoft. I work in artistic fields: magazine writing and design, fiction writing, and journalism, but have also extensive training in hardware repair and computer programming. Since most workers in the arts have little computer training, I think it is especially important to register just how frustrating Microsoft products have been in these areas. Working with Microsoft products is always a challenge: trying to force the computer to do what I want, and then praying it doesn't crash in the process. However, few projects are solo projects; most must be written in a format everyone uses, and Microsoft's anticompetitive practices have made positioned its software with such formats to an audience unaware of their other options. Given the choice, I'll happily take free software, open, public, accountable for its failures, and written to higher standards with a philosophy of public benefit.

It is important to me that the government not succumb to the wishes of Microsoft. The government is intended to serve the people as a whole. Allowing a corporation to dominate software, and crush its opposition through monopolistic market practices, hurts the public. It's quite simple and only differs from previous monopoly situations (and thus has fostered) through the relatively arcane nature of computers—just as a driver doesn't need to know chemistry to operate a car. Microsoft Word's tendency to crash during automatic backups (for example) has cost me pages and pages of my writing; while I have happily shifted to its rival Wordperfect, and to Linux as my OS, I can't say I've convinced many others to do so—even as they complain of Microsoft's irritations and crashes. Even if Linux had the same problems, the public would still benefit from the programmers' (on both teams) drive to alleviate them; monopoly allows problems to grow like weeds through pavement, without remedy. In this way, the Microsoft monopoly has effectively had quite a chilling effect on the arts, and I honestly feel the arts have suffered from it. Though the options exist, there has been no effort by government, and obviously little from the industry itself, to promote their use.

Specifically, I object to several aspects of the settlement:

- Failure to open the barriers of entry for rival applications like WINE, a system for executing Windows APIs under Linux
- Narrowly defining the scope of the provisions (for example, it fails to cover all Windows APIs).

–Failure to prohibit anticompetitive License Terms currently used by Microsoft

–Failure to prohibit intentional incompatibilities historically used by Microsoft (this was extremely irritating to those already disappointed by MS-DOS in the early 1990s, when Windows 3.1 became the standard and required Microsoft's DOS over its competitors').

–Failure to prohibit anticompetitive practices towards OEMs

Taken in sum, I feel the proposed settlement will be insufficient to curtail Microsoft's stranglehold on the software business, the public, and the arts.

Sincerely,  
Benjamin Chadwick

#### MTC-00020024

From: Phil Barnett  
To: Microsoft ATR  
Date: 1/24/02 12:32am  
Subject: Microsoft Settlement

I feel that the currently proposed settlement is inadequate and an embarrassment to justice and law abiding taxpayers everywhere. Ordering Microsoft to buy their way into another monopoly by having them donate proprietary operating systems to needy schools is not punishment. It is simply telling them that it's ok to monopolize yet another venue.

Will this billion dollars worth of "charity" displace real business in the commercial operating system world? Will sales that would have gone to Microsoft's competitors be lost because school districts around the U.S. will be waiting in line for their free handout? Will this billion dollar fine actually strengthen Microsoft? I believe it will if it is carried out as currently proposed.

If you want to actually punish Microsoft for their illegal activities, you should not do it by giving them a new market to take over. Instead, you should punish them by strengthening the competition that they have illegally gained monopolistic power over and plundered.

I propose that any new Microsoft settlement to needy schools include: 50% of

the settlement into computer hardware only. 20% of the settlement into network infrastructure. All computers purchased with this settlement money be installed with non-proprietary Linux Open Source operating systems and software.

30% of the settlement will be used for education of the support personnel and teachers using these new open source operating systems. Linux is an excellent choice in Open Source operating systems. It is stable, capable, powerful, consistent and as easy to administer as any operating system that training is available for. There are many good mainstream Linux distributions available at low or no cost. Training and certification are available and should be encouraged in the support and educational infrastructure.

Open Source operating systems have the benefit of being upgradable at little or no cost for the foreseeable future. If the schools to be helped are those with limited budgets, low upgrade costs will be very important over the life of the hardware. Also, Linux is more efficient with hardware and does not require the rigorous hardware upgrade schedule that Microsoft operating system upgrades require. This means the hardware purchased with this settlement money will be viable years longer with Linux than it would be with Microsoft's proprietary operating systems.

If the current settlement is carried out, in a few years the schools with limited budgets will have obsolete operating system software needing to be replaced with billions of dollars of public money. And, to whom will this upgrade money go? Microsoft. That is not punishment. That is opportunity. If you want to punish Microsoft and at the same time remove the proprietary handcuffs that Microsoft has put on every Windows user, teach our children how to use Linux.

Subject: Microsoft Settlement

Dear Sirs:

As a computer enthusiast and the wife of a professional software engineer, I am writing to provide input on the proposed Microsoft antitrust settlement. I believe that the settlement as proposed is not in the best interests of the American public. I further believe that the settlement would be harmful to the American economy, and is completely inadequate given the findings of fact in the trial—findings of fact which have been upheld by the Court of Appeals.

Microsoft's anti-competitive practices run counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public—including the Federal Government itself—to bear increased costs, and deny them the products of the innovation which would otherwise be stimulated through competition. The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have

engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. This was a serious problem in the 1995 consent decree, and is even more serious of a problem with this settlement. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function. Not only that, but the proposed settlement has NO provision for punitive damages against Microsoft for its actions in the past. An illegal monopoly should not be allowed to retain its ill-gotten gains while merely being warned against such conduct in the future. Due to Microsoft's size and large amount of cash reserves, any fine levied against them should be in the billions of dollars, else it will merely be "shrugged off" and the message will remain unheard.

I urge the plaintiffs in this lawsuit to stand fast and not accept this settlement, which amounts to a slap on the wrist for Microsoft and a punch in the nose for the American public. Thank you.

Sincerely yours,

Pamela Boulais, Denver, Colorado

Subject: Microsoft Settlement

The Proposed Final Judgment is inadequate to protect consumers from Microsoft's continued predatory, illegal practices. It is not "within the reaches of the public interest." (Bechtel Corp., 648 F.2d at 666) As a consumer my choices have been unfairly manipulated, usually without my knowledge, causing me to pay more for products that I desired (e.g. Microsoft Office for Mac), eliminating choices (e.g. forcing IE as default browser on Macs) or by forcing me to upgrade software in order to be able to share information with other computer users. I pray that the Department of Justice will enact a Judgment capable of stopping Microsoft's illegal practices, rather than a weak injunction that they consider mere nuisance.

Subject: Microsoft Settlement

I would like to go on record as opposing the proposed settlement in the anti-trust case of Microsoft v. United States. I have been a computer professional for 24 years. I don't

believe that the proposed settlement is in the public's best interest. The proposed settlement is not even a slap on the wrist for Microsoft. The proposed settlement is too complex. The most effective remedy would be one that is very simple and straightforward. Just as in software or systems design, the less complex the agreement, the easier it will be to "debug." Microsoft was very innovative in finding loopholes in the 1995 Consent Decree, and it is my belief that they will be just as innovative in finding loopholes in this proposed agreement should it be accepted as is. To have come so far as to find Microsoft guilty of illegally maintaining its Operating System monopoly, to have the Court of Appeals uphold this finding, and then to propose a settlement that does not include any provisions to punish Microsoft for its past behavior is irresponsible at best. The fact is Microsoft profited from an illegal act. As a taxpayer I find it a shame that public tax dollars should be squandered in such a manner.

As far as the future is concerned, I see no relief in this proposed settlement. When I purchase another computer, I must pay for a Microsoft Operating system, as well as an application bundle. There is no incentive for the Original Equipment Manufacturers to not preload the Microsoft Operating System and the application bundle. I would propose that a fitting punishment for Microsoft would be a stipulation that Microsoft pay for any added expense that Original Equipment Manufacturers incur to preload a non-Microsoft Operating System, for customers that request it. This stipulation would remain in effect until Microsoft no longer has an Operating System monopoly or for ten years, whichever comes first. It would provide an incentive to Original Equipment Manufacturers to offer alternatives to customers. If Microsoft truly has superior software, then they should have nothing to worry about, no one would want an alternative. On the other hand, if Microsoft software cannot compete with the alternatives, it won't be long until they no longer have a monopoly and competition is truly restored.

Thanks for considering my opinions.

Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001  
Dear Ms. Hesse:

I would like to comment on the proposed Final Judgment in *United States v. Microsoft*, as provided in the Tunney Act.

I find that the proposed judgment is insufficient by a large margin to restore healthy competition in the computer operating systems and software application markets, so it is not in the public interest and should not be affirmed by the court.

The proposed Final Judgment attempts to remedy Microsoft's established illegal anticompetitive practices by prohibiting particular forms of conduct involving overly restrictive licensing terms, terms that vary in order to reward those who accept and punish those who contest a Microsoft monopoly, and terms that make switching to competing products more difficult or more costly. It also prohibits certain forms of retaliation against OEMs who support products competing with Microsoft's products. It also requires Microsoft to disclose APIs and communication protocols for its products under certain circumstances and for certain purposes.

It is inherently difficult, and perhaps impossible, to remedy Microsoft's particular forms of illegal anticompetitive behavior through conduct remedies. Both the underlying concepts in which conduct remedies are defined, and the particular anticompetitive techniques used by Microsoft change far too rapidly, and Microsoft itself has far too much influence on those changes, for them to serve in the foundation of effective conduct remedies.

The remedies in the proposed judgment refer to concepts of "API," "operating system," "middleware," "application," "platform software," "top-level window," "interface elements," "icons," "shortcuts," "menu entries." The definitions of these concepts are not robust and timeless. Compared to concepts in other branches of business and engineering they are relatively ephemeral, controversial, dependent on rapidly changing technological context, and subject to deliberate manipulation by Microsoft. For example, an "operating system" in the 1960s was a software system to organize the basic functionality of a computer, and it contained little or no user interface code. In the 1970s "operating systems" often contained substantial collections of utility applications and rudimentary interactive user interfaces called "shells." In the 1980s, the X Window system was created as a form of what is now called "middleware" to provide a graphical interactive user interface, used widely in conjunction with Unix operating systems. Apple and Microsoft created similar graphical interactive user interfaces, but defined them to be parts of their operating systems, rather than additional middleware. In the near future, distributed and network computing are likely to make it quite difficult to determine the boundaries of a single operating system. In the past, Microsoft appears to have deliberately manipulated the boundaries of such conceptual categories to create and preserve a monopoly position, and I expect it to continue such practices in the future. The proposed judgment provides definitions that narrow these already problematic concepts even further, making

them even more vulnerable to deterioration due to technological change and to manipulation by Microsoft.

Furthermore, the particular conduct requirements in the proposed judgment are far too narrow. Every one of the requirements is weak in some way. For example, consider the requirement to "disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product, ... the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product." Microsoft and other software vendors like to treat their Applications Product Interfaces (API) as intellectual property. But in good engineering practice these are key parts of the warrantable specifications of a product. This holds in particular for operating systems and middleware, which by their nature are especially intended for, suitable for, and often useless without interaction with other software products. APIs define the quality of that interaction, but they do not provide it. The implementation of an API in program code (which is naturally protected by trade secret, copyright, and patent law) provides the quality of interaction defined by an API. Without access to the complete API, the licensor of an operating system cannot employ the system freely in the way that good software engineering practice suggests. With complete public access to an API, a software company may still protect its implementation of the API, which contains the real value that it has created. Keeping an API secret does not correspond to keeping the inner workings of a product secret. Rather, it corresponds to keeping the precise function accomplished by that product secret.

So the public interest calls for the widest possible dissemination of API documentation. But the proposed judgment explicitly calls for disclosure of APIs "for the sole purpose of interoperating with a Windows Operating System Product," and only the "APIS and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product." This excludes the use of information about the API to provide competitive platforms for running Windows-compatible software. Keep in mind that Windows-compatible software does not necessarily come from Microsoft. Microsoft benefits from the value added to its operating system products by a large number of less powerful software houses that create Windows-compatible software. By holding the Windows operating system API secret, Microsoft in effect keeps crucial information about other companies' software applications secret, denying those applications the value added by competing operating systems on which they may run. Compare the Windows market (and the preceding DOS market) to the Unix/Linux/Posix market. Microsoft uses secret and changeable APIs to effectively eliminate competition to provide alternative operating systems running Windows applications. A competing operating system must use different APIs, and therefore cannot support all of the same applications. By contrast, the

Posix standard is a completely public API for Unix/Linux. Various companies, such as Sun Microsystems, compete to provide different implementations of the Posix API. Consumers may run Unix/Linux applications on any of these operating systems.

Similarly, in the hardware market for processors, the specification of the x86 instruction set architecture (the hardware analog to a software API), is public. As a result, AMD competes with Intel to implement that architecture, with immense benefit to the public interest. Similar publication of standards in the overall functionality of personal computers led to the immensely beneficial competition among makers of IBM-compatible PCs. The failure to disclose Windows operating system APIs destroys the possibility of similarly beneficial competition among vendors of operating systems. Very similar considerations to those raised above for APIs apply to communication protocols (for which the proposed judgment provides limited disclosure) and to file formats (not covered in the proposed judgment). Note that Adobe made full public disclosure of its PostScript and PDF formats, compared to Microsoft's secrecy regarding Word formats, and that this disclosure served the public interest immensely by promoting the wide availability of PostScript and PDF printers and viewers.

There are many other detailed shortcomings of the proposed Final Judgment, including the remaining conduct restrictions and the enforcement methods. I expect that other correspondents will treat some of them.

To whom it may concern:  
 Though I use Microsoft's products, I understand the importance of competition. This has been the driving engine behind this country's incredible progress over the past 225 years by encouraging innovators and creators to build that better mouse trap. I'm concerned, though, that Microsoft's dominance in the area of operating systems and some applications may be starting to impede on other companies ability to compete in these areas. Though I certainly believe Microsoft has every right to compete in these areas, I'm hoping that a creative and/or innovative solution can be found that allows for healthy competition so that this country's driving engine can continue to flourish to the benefit of all Americans. Thank you for letting me voice my small opinion in this very large room.

Sincerely;  
Dave Basler

Subject: U.S. v. Microsoft DOJ,

A couple of ideas to consider regarding the Microsoft Antitrust case: 1) in the early 1990's MS released Windows 3.0. Shortly afterwards it released MS Office 4.x for Windows. This was the driving reason behind the popularity of Windows. However, it should be noted that the major word processor at the time was Word Perfect and the major spreadsheet was Lotus 123. Within two years of the release of MS Office 4.x, Word Perfect and Lotus 123 had dropped from their number one spots to 2nd place and were losing ground rapidly. The major reasons behind their fall was their "late" support of MS Windows platform (which MS had illegally forced most of the major computer vendors to ship with the new PCs.). The reasons for their slow creation of a windows version was MS's reluctance to provide sufficient information about the Windows API to 3rd party vendors with whom it competes. MS was essentially done with MS Office 4.x when Windows 3.0 was released. It took almost two years for Word Perfect and Lotus-123 to get fully functioning Windows versions. This is example of why the operating system part of the company and the application part need to be separate. Now MS control 95% of the Office suite market and their software only runs on Windows and MacOS. Lotus and WordPerfect (now owned by Corel) have less than 10% however their products run on most major operating systems including DOS, Unix, Solaris, Linux, MacOS, and Windows. The only office suite that is growing in use is the StarOffice (OpenOffice) suite from Sun Microsystems and they have had to make it open source and give it away free in order to compete with MS Office. Now how can this be good for competition when a company has to give software away in order to compete against a monopoly. How is maintaining this monopoly good for consumers? I like to have choice. If MS's had its way, there wouldn't be any choice.

2) Look what MS did to Borland Corp. By not releasing APIs to its Windows operating until after it was released, MS gave its own products (esp Visual Basic and Visual C++) a significant leg up over the competition. Why buy Borland's product when MS's product was available when the operating system was released and was built with cooperation of the access to the operating systems' developers. Borland had to reverse engineer parts of Windows to achieve the same functionality that Visual Basic/C++, a time consuming and costly process. Now Borland has switch almost entirely to Java and Delphi environments on Solaris, Linux, and Windows. At least in this realm they can complete since Microsoft application programmers don't have advantage of having the operating system developers in the next building. This country has always prided itself on competition and an open market economy. However, we as a country realized early on that a totally free market degenerates into a bunch of monopolies if allowed to grow unchecked. We created antitrust law to prevent monopolies from growing and reducing consumer choice and increasing prices. Please reconsider the MS settlement and proceed with proceeding to break up the company into four parts:

- 1) Operating Systems
- 2) Applications (Exchange, Office, Internet Explorer, SQL Server, Visual Studio, etc..)
- 3) Entertainment and Education software (Games, Xbox, etc...)
- 4) Media (MSN, MSNBC, MSN Broadband, etc...)

One last example, in the late seventies/early eighties Sprint and MCI were successful in bringing litigation that lead to the break up of AT&T. In the 20 years since the AT&T breakup U.S. has seen a tremendous growth in Telecommunications including the largest fiber optic infrastructure in the world, the world's cheapest phone rates, the world's fastest and cheapest data lines (broadband) rates, thousands of different phones are available from hundreds of vendors, more functionality (like caller-id, call-waiting, voice mail etc...) and more competition that in any other country in the world. This has been huge benefit to the consumer and the country. The government should use the AT&T breakup as an excellent example of when and why to breakup monopolies and Microsoft has been ruled a monopoly..

thanks,

Hello,

Its no secret that any company (esp one protecting a monopoly) will try to crush alternatives. A legal route is one way to guarantee lawyers will respond best to those with the deepest pockets. Rather, the US govt spends billions on desktop software. Why not require document formats that encourage and leverage portability? This would provide

ways for other software technologies to compete so we all win. The lynchpin of Microsofts domination has always been word and excel. While they are pretty good apps, their doc formats make it downright IMPOSSIBLE to interoperate with any other platform or doc formatting package. So, instead of beating them legally, the next rfg might include a riser of interoperability which would promote competition rather than just going with what MS thinks they need.

The solution proposed by RedHat is a little nutty, but, its less ludicrous than MS's solution where they only seek to strength their grip on the academics. The more we all use Linux, the better we are all off. The internet was spawned outside the walls of MS, and the whole PLANET is now networked because TCP/IP is a terrific standard that we all leverage. Why shouldnt doc formats also have similar opportunity for standardization.

The US Govt has the perfect oppty to leverage itself as a giant customer and it would help us all out. We all want to compete, but can't due to the leveraging of the Desktop OS against the Desktop application suite that enslaves us all to Mr Gates. Please choose your remedy very carefully.

Thanks very much  
Sincerely,  
John Westerdale

From: Shane Kuntz  
 To: Microsoft ATR  
 Date: 1/24/02 12:35am  
 Subject: Microsoft Settlement  
 To whom it may concern,  
 Microsoft must be forced to INCLUDE competitors in it's operating system distribution whenever they put any application software preloaded/bundled/ alongside/near the Operating system. They must be forced to give up the browser market share they gained illegally. Put their Browser on the auction slab and prohibit them from creating any internet browsing software that in any way displays HTML or it's variants.

Flat pricing for it's OS for all PC manufacturers/customers.

No restrictions on what the PC manufacturer/customer has to include or not include on their PC.

Any Microsoft application must be made available to third party developers to port to ANY operating system given that a share of the profits from such a port go back to Microsoft. This way, Microsoft operating systems will not have an application advantage over other OS entries or existing OS's. The third party must price the port within 20% (or within \$20) of the Microsoft offering. Microsoft Office for Linux, Office for Solaris are two such examples.

Any division of Microsoft that has more than 35% market share is to be spun off into it's own separate corporation. The software division that develops Office, namely. Any other division whether it is in existence today or not to be spun off if it retains >=35% market share for longer than 3 years. The OS monopoly is enough for one company to have that has proven they can't play fairly, no other monopoly or significant market share should be allowed to Microsoft. They will support java (in a form acceptable to Sun Microsystems) in every Operating system release. They will also support NFS and any other widely used open protocol instead of creating their own closed protocol to be used exclusively.

Any possible application that promotes services, software or hardware in the Microsoft OS or Microsoft applications or a partner, a competitor will be included in the options in an equal position on the desktop or list of choices. For example Internet connection wizards including ALL ISP's. Lastly, I believe Microsoft owes restitution to Netscape and also should pay for the research and development of open standards for the benefit of all computer users.

Violations of the rules should also be enforced swiftly and completely and accompanied by a large fine and restitution for their actions.

Thank you for reading my suggestions,  
 Shane Kuntz

From: Stephen Krauth  
 To: Microsoft ATR  
 Date: 1/23/02 11:39pm  
 Subject: Microsoft Settlement  
 The Proposed Final Judgement fails to prevent Microsoft from creating proprietary versions of internationally standard protocols. In other words, Microsoft has in the past taken a known standard and changed it so that companies and individuals would be forced to use Microsoft products to communicate with the large installed base of other Microsoft users.

Examples:

—Windows 2000 came out with a modified version of Kerberos, a standard network authentication protocol. They refused to release the changes to Kerberos to the public. Machines using the original version of the protocol were unable to communicate with the Microsoft version.  
 —Same thing with DHCP, a network configuration protocol. Other non-Microsoft machines can communicate with Microsoft DHCP, but it is known to cause severe disruption on a mixed network (network of machines with Microsoft and non-Microsoft machines).

Analysts have coined the term "embrace and extend" to describe this practice. Microsoft has also modified standards in an attempt to destroy the standard; this practice has been deemed 'embrace, extend and extinguish'.

Example:

—Java. Java was meant to work across many computer platforms. Microsoft created a Windows only version, defeating this original purpose. Microsoft then encouraged web content creators to use Microsoft-only tools such as Active-X by failing to keep the Microsoft version of Java up-to-date with the original.

Thank you for considering this information in your decision.

Steve K.

From: Joseph Duffy  
 To: Microsoft ATR  
 Date: 1/24/02 12:46am  
 Subject: Microsoft Settlement

Hello.

My name is Joseph Duffy. I am a professional programmer who uses Microsoft software, and especially Microsoft development tools every day. These tools experienced a renaissance while there was viable competition from companies like Borland. But since Microsoft head-hunted Borland's staff and weakened other potential competitors like Java and the Netscape browser, the work has stagnated. There hasn't been a major new feature since 96.

I am opposed to the settlement because we've already tried to restrict Microsoft's conduct with restrictions and it failed. The taxpayers would have been saved a great deal of money on this trial if that original settlement had been more foresighted, to say nothing of the innovations that might have

come from the different ideas of more small and nimble competitors. If conduct measures are used, the penalty for misconduct must be powerful enough to act as a deterrent, like opening of source code or company breakup.

I am a real person and this is the only letter I will send to you. I say this because Microsoft has several times in the past has been found to use the dishonest tactic of "stuffing ballot boxes" in order to create the illusion of "grassroots" support for its position.

Thank you for listening.

Joseph Duffy

Subject: Microsoft Settlement

The short version of my opinion is as follows.....

Based on the collective readings that I have done on the subject, the proposed settlement sounds like Charles Manson getting to pick his own punishment. Microsoft has so little respect for the law that during the original trial it presented obviously falsified evidence, claimed no knowledge on subjects very near and dear to their business, and made ludicrous claims of technical impossibilities. The proposed settlement in its current form has so many loopholes that there will be no way to enforce it. Where will we be if claims of manipulation are made against Microsoft months or years later? We'll be forced to pay for another multi-year trial, after which MS will be found guilty, and just like the consent decree and this procedure, we will end up doing so little that it really won't matter.

I say we make the restrictions and monitoring procedures fit the violations proven. Also, it would be wise to not limit such penalties to specific titles, as this makes it too easy to get around the law by creating new titles that are somewhat different in functionality (hence a new "type" of software), that is not covered in the anti-trust ruling.

If this settlement is accepted, the people who have been wronged will continue to be wronged...just in a slightly different way.

From: Marc Visconte  
To: Microsoft ATR  
Date: 1/24/02 12:39am  
Subject: Microsoft is a monopoly.

As a staunch Libertarian, my normal views are that there is too much government interference in both business and the lives of individuals. In the case of Microsoft, I may have to reverse my normal stance and concede that:

a) sometimes there is such a thing as a corporation that is too large and/ or uncontrolled, and

b) in spite of my belief in the free market, no matter how beneficial to the consumer a business' actions are, some business practices are abusive. If a business' way of doing business is unfair and monopolistic, it should be punished by the legal system.

I believe that Microsoft has operated in an unfair manner, and that other companies (and consumers) suffered because of it.

For the government to take MS to court, and then IGNORE MS' actions, grants a tacit approval to unfair business practices. For the fairness to consumers and to other businesses, the government should step in and punish Microsoft.

Marc Visconte

Dear DOJ,

It seems that about once a month I see the Attorney General of CT. on television announcing his newest victim. And of course he is the biggest opponent to the remaining states settling with Microsoft. It really appears that our judicial system anymore mostly serves the trial lawyers and politicians.

Microsoft beat its competition and serves its customers very well.

Thank you.

Subject: Microsoft Settlement

the proposed settlement for the Microsoft Anit-trust case is bad idea. It will basically allow Microsoft to buy its way out of the situation without forcing any substantive change.

Microsoft is currently giving away free preview copies of XP in the U.S. Post Office and several shipping companies as I understand. This seems like they are using the U.S. govt as a way to promote their monopoly even as the case is being resolved. please consider working out a different settlement. thank you for your time.

Subject: Microsoft Settlement

I am NOT in favor of the proposed settlement in the Microsoft Anti-trust case.

Firstly, when in the history of jurisprudence has society allowed criminals to set the terms of their own punishment? The settlement proposed by the DOJ does not substantively differ from the settlement that

Microsoft proposed. They have been found guilty. Why then are they allowed to set the terms of their punishment?

Secondly the States dissenting from the DOJ make many cogent arguments in their proposal. Overall it seems to have much more emphasis on the spirit and intentions of anti-trust laws as they exist. This focus is on the protection of the consuming public and the promotion of fair competition.

I would like to pay particular attention to section L of the States proposal, in which the States pay attention to a particularly nasty method that Microsoft has been developing to deal with the threat of technology that is not linked to companies that can be bought or forced out of business. Microsoft adopts standards, then proceeds to "extend" them at will until the Microsoft version is incompatible with the open standard, which they use as leverage to keep consumers locked into a "Windows Only" environment. This is one of their most disastrous strategies for consumers and competition.

==Quoted from the States Proposal==

L. Adherence to Industry Standards

A common tactic in Microsoft's unlawful monopoly maintenance was the limitation on interoperability with potential competitors. This has been accomplished, on occasion, by co-opting and/or undermining the industry standards for software developers. Microsoft also purposely deceived software developers into believing that the Microsoft Java programming tools had cross-platform capability with Sun-based Java:

16. Adherence to Industry Standards.

a. Compliance With Standards. If Microsoft publicly claims that any of its products are compliant with any technical standard ("Standard") that has been approved by, or has been submitted to and is under consideration by, any organization or group that sets standards (a "Standard-Setting Body"), it shall comply with that Standard. If Microsoft chooses to extend or modify the implementation of that Standard, Microsoft shall continue fully to implement the Standard (as that Standard may be modified from time to time by the Standard-Setting Body). Microsoft shall continue to implement the Standard until: (i) Microsoft publicly disclaims that it implements that Standard; or (ii) the Standard expires or is rescinded by the standard-setting body. However, Microsoft shall not be permitted to require third parties to use or adopt Microsoft's version of the Standard. To the extent Microsoft develops a proprietary version of a Standard, Microsoft's Operating Systems must continue to support non-proprietary, industry versions of such Standard.

b. Compliance With De Facto Standards.

As to any Standard with which Microsoft is required to comply under the preceding paragraph, to the extent that industry custom and practice recognizes compliance with the Standard to include variations from the formal definition of that Standard (a "De Facto Standard"), Microsoft may discharge its obligations under this provision by complying with the de facto Standard provided that: (i) before doing so, Microsoft notifies Plaintiffs and the Special Master in writing of its intention to do so, and describes with reasonable particularity the

variations included in the De Facto Standard; and (ii) Plaintiffs do not, within 30 days of receipt of such notice, object to Microsoft's intention to comply with the De Facto Standard. == end quote ==

Please think carefully before unleashing a brazen and emboldened (since there is no punishment here) Microsoft on the citizens of this country. That is what will happen if Microsoft is allowed to get off with their own definition of a punishment.

Subject: Microsoft antitrust case

To whom this e-mail may concern,  
I believe that the settlement made with Microsoft is unfair. I feel that Microsoft has been portrayed as something it is not. Microsoft is not monopoly they just make a good product. The reason that a company like Netscape who makes a browser that competes with Microsoft's Internet Explorer is losing market share is not due to monopolistic practices by Microsoft, but due to the fact that they have created a inferior product to that of Microsoft's. I believe that most of these companies instead of producing a good product they are attempting to take down Microsoft by underhanded means of claiming they are a monopoly. I believe the whole case brought against Microsoft is wrong and I hope you use your great wisdom to rectify this situation.

Sincerely,  
Daniel Grm

OPPOSED !!!! Its toothless. How much did they pay lobbyist to get this settlement?

As an owner of a small software company I can tell you we are in constant fear of Microsoft's monopoly power. Cannot say anything they do not like or cannot do anything they do not like or they put you out of business by taking away your licenses (one you already paid for). We just search for a niche in the market and hope MS does not copy our good ideas and then give the product away to put us out of business.

How is it a foreign company gets tariffs for selling things below the cost of product, but MS does not?

They just do it and call it innovation, its part of the OS. The DoJ went to the trouble of proving MS guilty of monopolistic practices and then as punishment you give them a toothless "punishment". One that is actually a MS marketing plan in disguise.

Under the Tunney Act, we wish to comment on the proposed Microsoft settlement. We agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry— by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

?? The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

?? The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

?? The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft .NET with competing middleware.

?? The PFJ supposedly applies to "Windows", but it defines that term so

narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

?? The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

?? The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

?? The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

?? The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

?? The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft  
?? Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

?? Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

?? Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system— even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

?? Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

?? The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

?? The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

?? The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism. We also agree with the conclusion reached by that document, namely that the Proposed

Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,

From: Robert A. Klahn  
To: Microsoft ATR  
Date: 1/24/02 12:43am  
Subject: Microsoft Settlement

Greetings Department of Justice:  
I am writing this short note to voice my comments on the proposed Microsoft Settlement. My views can be summed up in short as this: It does not go anywhere near far enough, and should be abandoned in favor of a stronger settlement which would result in the Operating System and Application Development portions of Microsoft being split into two different companies.

There are a few specific points of concern that I would like to address on top of this summary, in the likely event that you do not adopt my larger views on the Settlement expressed above.

\* The section which reads "Microsoft may restrict an OEM from displaying icons, shortcuts or menu entries specified in the Windows documentation as being limited to products that provide particular types of functionality, provided that the restrictions are non-discriminatory with respect to non-Microsoft and Microsoft products. ...provided that any such non-Microsoft Middleware displays on the desktop no user interface or a user interface of similar size and shape to the user interface displayed by the corresponding Microsoft Middleware." would seem to provide Microsoft with sole determining power as to look and feel on the desktop of competing products, at least among those products in direct competition with Microsoft —Application— products. Given Microsoft's past illegal behavior in regards to competing Hypertext browsers, I am leery to extend such an anti-competitive power to the company that controls the look and feel of the —Operating System—.

\* There is a section which would appear to permits the removal of Microsoft Middleware software, but permits the retention of such software on the computer in question as long as: "1. that Microsoft Middleware Product would be invoked solely for use in interoperating with a server maintained by Microsoft (outside the context of general Web browsing), or 2. that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement (e.g. a requirement to be able to host a particular ActiveX control) that is necessary for valid technical reasons to supply the end user with functionality consistent with a Windows Operating System Product, provided that the technical reasons are described in a reasonably prompt manner to any ISV that requests them." As a computer security professional, I find the

implications of this stunning, in that, the Settlement permits Microsoft to hide the non-removal of software components to the end user. How is any system to be determined to be secure if the possibility of determining the software installed on said system is not possible? In this age of virus, worms, etc. in the Internet world, this is becoming a more and more important topic.

I could go on, but these are, to me, the major points. In short, I urge you to abandon this Settlement, and retry for something stronger. Former Attorney General Robert Kennedy once said "Too much power scares me, whether we find it in a trade union or in a corporation." This should be the guiding principle of this or any other anti-trust Settlement, and I am afraid that I must conclude that this Settlement leaves too much power in the hands of the Microsoft Corporation.

Thank you for your kind attention.

From: Bob Jarmak  
To: Microsoft ATR  
Date: 1/24/02 12:48am  
Subject: Microsoft Settlement

The proposed settlement does not address any of the important issues of the case. Microsoft corp. has established a long history of predatory and anti-competitive behavior.

It seems logical that the best solution would be to estimate the economic impact of these actions and fine the company an appropriate amount. In addition, the importance of computers dictates that Microsoft be regulated closely, much like a public utility company.

States should have to authority to approve any pricing, and the company should be limited to a return commensurate with a monopolistic corporation, 6-9% per year.

The proposed settlement is a poor one in every way, and unacceptable in any rational analysis. If approved, they will continue their illegal predatory practices.

Bob Jarmak

**MTC-00020058**

From: David Smith  
To: Microsoft ATR  
Date: 1/24/02 12:44am  
Subject: Microsoft Settlement

The current proposal for the Microsoft settlement does not go far enough as a remedy that will curtail similar practices in the company's future. In every logical sense it rewards Microsoft's behaviors by expanding it's reach.

Many within that circle are refer to the proposal as "a victory over the government." Sadly this may be recorded as a failing of our system to follow through.

A settlement for the sake of settlement alone is not justice, but criminal. The finding of fact which confirms that Microsoft functions as a monopoly should not be a ignored out of convenience.

It is my belief that the penalty should reflect the findings of the court. The proposed settlement is slipshod and not strong enough to levy any real penalty at all.

As an concerned citizen, I'm against the current settlement Microsoft is pushing for.

Sincerely,  
David Smith

From: Trimurti  
To: Microsoft ATR  
Date: 1/24/02 12:43am  
Subject: Microsoft Settlement

The proposed settlement is so devoid of the original intentions that it is ridiculous. First we were to decide if Microsoft was a monopoly, then take appropriate actions. So, Microsoft should be split up and monitored. Then it was down to let's leave them together but still monitor them. Next came letting them monitor themselves. Now, in addition to monitoring themselves, they have rewritten the entire proposal to sound like a Microsoft EULA. There is nothing but work-arounds in there. All Microsoft has to do is to holler there may be a security breach and all deals are null and void. This isn't any kind of proposal.

This is just the government's way of encouraging monopolies and discouraging small business. I'm very ashamed that my entire Department of Justice and United States Government can be so readily defeated and humiliated by Microsoft. I'm so ashamed of you.

Dave

Subject: Microsoft settlement

To whom it may concern,

I'm writing to express my concern for the federal government's proposed settlement with Microsoft. From what I can understand, I see little in the settlement that would discourage this company from continuing to engage in anti-competitive practices in the future. Contrary to Microsoft's claim, this company has done little to advance computer products and software. In particular, their product design seems to be more oriented towards trapping users into their formats and protocols than offering consumers something useful and effective.

I urge you to reconsider the current settlement and consider a remedy that really would discourage practices that have already been demonstrated as being unfair and anti-competitive.

From: Nathan Medbery  
To: Microsoft ATR  
Date: 1/24/02 12:50am  
Subject: Microsoft Settlement  
Hello,

I am writing to voice my concern over what I consider a weak final judgment in the government case against Microsoft. Your own findings show that Microsoft has indeed acted as a monopoly in many cases, and has acted improperly in further dealings with many companies and technologies in the market.

They have squashed entire companies and technologies (some by perfectly legal and acceptable means, others by unfair/monopolistic advantages), and used their legal clout to block further development of various products, even when they had little or not legal ground to stand on. Because they have deep pockets and can fund as many legal proceedings as necessary (indefinitely I might add), they can indirectly ruin smaller companies that do not have the funding to defend themselves, regardless of who is right or wrong.

Your proposal is nothing more than a mild slap on the wrist, and a forced re-posturing of their products as they come to market (especially via OEM distribution outlets). What is to stop Microsoft from continuing its bullying of companies and of the market in general? There is nothing in your proposal that punishes them for what they have already done, other than making them change how they go about some things. Well, not to the extent that I believe they should be punished at least. And what about Microsoft's habit of bringing more and more technology into their products (especially their Windows Operating System) that would normally (and should) be left to other parties to produce? If nothing else, they should have to distribute certain technologies separately from their OS, even if it's free. You found that they unfairly distributed their web browser. The same is happening in many other cases, and will not be hindered by your judgment.

All in all, I just don't believe you are truly punishing Microsoft enough for their blatant use of monopolistic power, nor do I believe you proposed limitations would change how Microsoft behaves in the end. That is simply my opinion.

-Nathan Medbery

**MTC-00020065**

From: Prosser, Ryan R.  
To: Microsoft ATR  
Date: 1/24/02 12:47am  
Subject: Microsoft Settlement

I do not believe that the settlement that has been proposed will fix or even Address all of the problems of "Microsoft Anti-competitive" Practices. Microsoft is the only OS choice for 90-95% of computers bought. And with there market share they then are able to push their products On to the consumer by having them integrated into the Operating System. From MSN messenger to Internet Explorer. Since computers are Hard for most people to learn, people only use what is installed on their Computer when they buy it. I understand that Microsoft states they are Helping the end user, but they are destroying the rest of the industry. Microsoft will use it's shady business practices to force computer Manufactures to only install Microsoft OS and Microsoft Office. Until the end consumer is educated, on computers and the industry, they will not understand truly how Microsoft is hindering the entire Computer industry.

Microsoft try's not to use standards but develop there own products That are then non-compatible with other companies products. But why Would they do this? Because They have the desktop market and can freely Push there new "non standard" software to everyone when they by a new Computer or update Windows.

I urge you to look at the true impact that Microsoft is causing on the Industry.

Ryan Prosser

Subject: PFJ must be altered

To whom it may concern,  
The PFJ as it stands is flawed in a number of ways, to my thinking.

Below is an excerpt from Dan Kegel's comprehensive essay on the subject that highlights one of the most important oversights in my opinion:

"The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces. The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces." The PFJ must be altered in order to be affective, and the above is but one of a number of ways in which this should take place. I strongly urge those who are able to reconsider the PFJ, taking the comments of those most familiar with the subject into consideration; for they are truly relevant and necessary lest the judgement be ineffective.

Sincerely,  
Justin Whitney

Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530

Dear Mr. Ashcroft,

Thank you for the opportunity to express my support for the proposed settlement of the antitrust lawsuit between the federal government and Microsoft. I know that you are not responsible for bringing this lawsuit and that you are somewhat constrained in your options in disposing of the case given its history. I applaud you for reaching the settlement and making the best of a bad situation.

From what I heard about the settlement agreement, Microsoft has agreed to significant changes in the way it does business. Consumers will certainly benefit from Microsoft's agreement to allow competition from non-Microsoft programs within Windows. I think consumers and computer makers will also benefit from the new pricing practices established by the settlement.

All in all, I think the settlement agreement is a good thing for our economy. I hope that you allow it to remain in place in its present form. Thank you for considering my point of view.

Sincerely,  
Angela Pearce

From: Archon de Gaul

To: Microsoft ATR  
Date: 1/24/02 12:50am  
Subject: Microsoft Settlement

I would like to point out that Microsoft has entered into "consent decrees" in the past and has been proven to have broken its" agreement(s) on a number of occasions. I refer to the preceding Microsoft/Caldera case, the Microsoft/Netscape case, the Microsoft/Sun case, the Microsoft/IBM case, et. al. I am unhappy with the way the current DOJ staff have, in my opinion, dropped the ball in this case. I specifically refer to the fact that, when the appeals court remanded the case and struck the verdicts of Judge Penfield, some issues that, in my opinion, should have been re-addressed include: the potentially-illegal tying of browser software, the equally-potentially-illegal (hijacking) extension of standards (re: Sun/Java) and the strong-arming of potential competition. (Dell, Gateway, IBM, etc's complaints that MS won't allow them to customize the desktop with certain icons, browsers or operating systems.) There has been an incredible amount of written material generated by these cases, so I won't spend the time regurgitating it here, but I would simply like to ask that the DOJ do what it originally set out to do under another, admittedly less pro-big-business, administration and represent "JUSTICE". What Microsoft does to competition and the free market is not justice, it is bullying. Represent the people and protect the free market.

As a small business owner, I need the barriers to entry lowered in a number of areas just to have a chance to survive in the waters with the other big fish. I believe businesses like mine have something to offer the people of the world and I believe just as fervently that enormous monopolies like Microsoft squelch any chance people like me have to innovate. Without giving up my patents and ideas to bigger fish to market and develop for me, I can't hope to penetrate even a regional market.. but any potential "big fish" I might ally myself with are afraid of repercussions with Microsoft. This sort of Mafia-style business practice can't be tolerated in this day and age. Please do the right thing; don't throw in the towel.

Thank you in advance,  
Stewart Davis

Thank you in advance for reading this. The settlement that microsoft agrees to would only solidify their market share. Tendancy to believe that something given is actually free, turns a blind eye from Microsoft's real intentions. Microsoft only wishes to stifle any real choice of future consumers by creating false trust and familiarity with Microsoft product.

Have Microsoft give the money ,otherwise spent in their own interests,to schools, who may then buy what the schools would benefit from, not Microsoft.

Please don't let Microsoft use this as an opportunity to their own gain.

My Opinion, Tim Conley

I live in a country where I am free to make many different choices as to how I choose to spend my money, use my time, and choose the lifestyle that fits me best, EXCEPT when it comes to spending my money on my choice of computer operating system, or spending my time using my choice of computer operating system, or choosing a computer operating system that reflects my preferences.

If I am not going to be able to have a choice, my other option is to not spend ANY money, or spend ANY time using ANY computer. Microsoft HAS hurt the computer industry by preventing people from having ANY choice of product and ideas.

If the rest of the US culture had the same history as the computer operating system, we would all be driving the same vehicle (even if it wasn't appropriate), eating at the only restaraunt (McDonalds, no Thai, no Chinese, no Steakhouses, no Italian, etc...), shopping at the only store in town (Walmart), and having to suffer with a cable TV monopoly (see, it's already starting...). I am infuriated by the ignorance of the American public towards the DANGER of the Microsoft monopoly.

I would like to take this opportunity to comment on a few of the ways the Proposed Final Judgement (PFJ) in USA vs. Microsoft fails to meet the requirement under the law of curbing future anitcompetitive behavior. In specifying to whom Microsoft must disclose documentation of APIs and protocols, the PFJ contains so many loopholes that Microsoft could deny access to this information at will. These restrictions are unnecessary: Microsoft should be required to make these disclosures publicly, not to selected third parties. Restricting this information only serves anticompetitive purposes.

The description of which APIs and protocols must be disclosed is quite narrow and full of loopholes. In particular, the exclusion from disclosure of "anti-piracy, anti-virus, software licensing, digital rights management, and authentication systems" must be lifted, as almost any API will contain

these elements, and interoperability will be impossible without knowledge of these aspects of the system.

The Technical Committee as described in the PFJ will be powerless to verify compliance. All members of this committee should be appointed by the court, not by Microsoft; they should be paid by the government, not Microsoft; they should have real investigative powers; and so far from being barred from disclosing compliance violations, the committee should be required to publicly report them.

Please consider modifying the PFJ to make it effective. This is not the first time Microsoft has been through the courts on antitrust violations; it would be to the benefit of the American people to fix the problem this time.

Sincerely,  
Dave Cottingham

Subject: Microsoft Settlement

Since we the public are allowed to put in our "2 cents worth" so to speak I thought I would interject my thoughts on the matter. I think the bundling of internet explorer with the microsoft operating system is quite within their right as a software developer. much as in the same way some of the complaining parties (IE: AOL/Time Warner) bundle the very same explorer into their software. funny that AOL who OWNS Netscape but continues to still bundle Internet Explorer with their software. There was a point when they included both Netscape and Internet Explorer versions but due to PUBLIC opinion they havn't bundled it for some time. Continually I have read about how IE (Internet explorer) has been bundled "unfairly" and how you couldn't install any competitive browser on a windows machine? As a computer technician I would have to ask has anyone looking at this case actually used a computer before????? as a computer user from almost the first computer available I have used internet software since there was an internet. First came Mosaic, which was developed and was supposed to be free. though there were many "flavors" of it out there and most charged for the better versions. all of which really sucked.... then came Netscape. They were the first company to give away their browser, which is interesting since they are one of the prime companies complaining about Microsoft giving away their browser! At first Microsoft sold their browser and it wasn't very good at all in the beginning. But as they began to develop their code it became quite good and then they started giving it away. A practice that is continued to today. I read about the decline of Netscape's market share and how it was leveraged away by Microsoft. Well I suppose that's probably what they would love people to think, however the reality is that their super buggy software became the focal point of discussion all over the net. New releases yielded a new level of horrors each time. constant crashing and problems almost from the start. Then started the Number war between the two

companies having similar number schemes so as to confuse the average computer user I suppose. Well it never worked, the reason people started to use Internet Explorer over Netscape (myself included) was that after paying for their software in the "retail" version, which was essentially the same version packaged with more bookmarks.....what a ripoff. Was that IE jumped on the standards bandwagon and pushed the envelope of standards for the web. Like the puzzling fact that JavaScript while being developed by Netscape currently does not even RUN on a Netscape browser properly, or at all in most cases. Or more puzzling that even their own Homepage cannot be properly displayed using their own software? It would be funny if it wasn't sad. So rather than coding a better software package that would compete with Microsoft on an even keel or blow their doors off. They have resorted to petty lawsuits that seem to have interesting timing relating to decreases in their stock value. An interesting correlation. I also find several holes in the validity of the internet supremacy as well since AOL is the largest ISP in the US as has been since way before this lawsuit. Part of the government agreement in the whole AOL/TimeWarner merger was to open up their instant messaging service. Funny that this still hasn't happened and nothing has happened to them.... But i'm sure if Microsoft was in their shoes it would be a big deal! And gee, why can't microsoft automatically download and install updates to their software but AOL can and has for years? Netscape has the whining power of AOL behind them and has coded one of the crappiest browsers in years, their current version 6.21. which is coded in java. Ahhh Java, one of the suckiest technologies to come down the programming pike in years. And why exactly should microsoft be forced to include a Java compiler into their Operating system anyway. Under their agreement settlement with SUN they have removed the capability from their software to rely on SUN for the components. and if you have ever ran a java program then you would have seen the advantage of using the microsoft optimized JRE engine compared to the crummy SUN version that takes a million years to run. It's quite easy to think of the "beauty" of having computer code that runs the same on every platform. Looks great on paper but in actual use it doesn't work that way. You end up with non optimized code that runs crappy on every platform universally. Of course it runs great on SUN systems, conveniently. And if you truly think that "making" Microsoft unbundle Internet Explorer is going to be the solution for your smoking gun you are sadly mistaken. Gee, then the average consumer will just have to spend even MORE money to purchase the operating system and have all the goodies. It seems to me the last fiasco the government made regarding Microsoft was forcing them to unbundle the "Plus Pack" from windows. So that we the users of it could pay more yet again! And then of course there was checking into the pricing of Windows.....and how Microsoft was charging consumers too much for their product when it was in fact the same price as Apple was selling their operating system for as well.

DOI. But then there is never much thought as to what the average user has to due with it, it's always pressured by money and big business. It certainly doesn't mean that Microsoft codes the best software in the world because they don't, far from it. But it's also not like they are others jumping at the chance to create a new operating system for the Intel platform. Linux is out there but frankly isn't catching on very well at all. and certainly the government has a TON of responsibility as well, since it is the largest purchaser of computer software in the world. As the largest purchaser you certainly could have chosen a different platform had you wanted too, be it Macintosh OS or Unix but chose not too. well my rambling is over now. just wanted to share my thoughts. Bill

Subject: Against Microsoft Settlement

I am unhappy with the proposed Microsoft settlement as it does little to protect the companies that were harmed, which is necessary to restore competition to the software industry. I am a Mac user, which is one of the last realistic choices if one does not want to use Windows. Problem is Microsoft has a history of forcing Apple to stop competing in exchange for software or services that Apple needs to stay in business. One example is Microsoft Office. People will not switch to Macs (or continue to use them) if they know that they will have problems communicating with Windows users. Microsoft has made Apple give up technology, and stop using software such as Netscape's to as a condition to continue making Office. This is even though Office on the Mac is profitable for Microsoft. If Apple does not have Office, Apple will eventually die as a company. I will then be forced to use a platform I really do not like. Office started on a Mac, please keep it there.

Microsoft should be forced to make Office for the Mac, as it is a sword over Apple's head. Furthermore, Microsoft should be forced to make feature for feature versions of software such as Internet Explorer for the Mac. This is important because Microsoft effectively killed Netscape (a company that did make matching version of its software for multiple platforms), and is making browsers for the Mac that many websites will not recognize. In other words Microsoft is not giving Mac users the same features that

Windows users have. Some of these features are necessary to use some sites. Netscape never did this. If people cannot rely on the Mac platform to access the internet, people will abandon it even though they do not want to. If Apple did not have to worry about these threats it could concentrate on technology which would compete with Microsoft's without the fear of being forced out of business.

Keep in mind that Microsoft is making money off Mac products. I also think that any settlement should force Microsoft to unbundle competing software that other companies made popular and at one point were making a profit from. Two examples of these types of products would be Explorer (as Netscape made the browser popular), and Windows Media player (as Real Networks and Apple's Quicktime were the popular choices). It should be made clear that in the future such products should be unbundled, and Microsoft should charge people for the software if other companies invented the original software that Microsoft was competing with and these companies had to charge for it. Microsoft should also be forced to support Java, as doing so would enable programs to write programs that could be used on multiple platforms (Linux, the Mac, Windows, Unix, etc.). Finally Microsoft should be supervised by a panel of people or a single person who had the direct power to enforce any settlement without having to jump through hoops to force compliance. Basically I agree with many of the suggestions that the dissenting states have provided, even though in some areas I think they need to even go a little further.

Thank you for your time.

Sincerely,  
Thomas Paluchniak

Hello.

I don't agree with the settlement.

Microsoft have ruined the software industry using their monopoly power. They now get away with overcharging for their mediocre software using their monopoly power.

They keep changing their propriety document formats to prevent any sort of open compatibility or standards.

They maintain their vice like grip on new PCs being sold, using their unfair contracts with hardware vendors and their monopoly power, to ensure that their products are the only ones to be pre-loaded, preventing any sort of competition.

They should be required to open their document formats to release their grip on the wordprocessing and spreadsheet markets, and they should be required to release hardware vendors and allow them to optionally pre-load their, or their customer's, choice of operating system and application software. Microsoft are an overpricing predatory monopoly and they are holding back the entire software industry.

Regards,  
Craig

Hello,

I have worked in the technology arena for over thirty years. I believe that Microsoft has

abused its monopoly position much worse than IBM or AT&T ever did. I think that it is a travesty that they are not being severely punished for their excesses. They need to be forced to open their APIs at a minimum. It would return competition to the market if they were broken up into OS and Software pieces. If they are not separated and/or forced to open the APIs between the OS and all associated software they will continue to inhibit the evolution of good technology.

Please do the right thing. We don't need to increase the jaded national and international opinion of our "justice" system.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. In specific, Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Why should Microsoft care what operating system ships on a PC, as long as they get their license fees on the copies that do ship. They are just trying to maintain their cash flow at the expense of consumers. Why should I have to pay for a copy of software (Windows) that I will never use. If OEMs were free of the threat of retaliation from Microsoft, I could purchase only the hardware and software that I need/want on my PC. Thus saving me money and frustration over the long term. By allowing this practice, the Proposed Final Judgement (PFJ) is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

I feel this should be prohibited by the PFJ.

From: Ted Estes  
To: Microsoft ATR  
Date: 1/24/02 1:10am  
Subject: Microsoft Settlement To whom it may concern,

I think the settlement, as currently designed, will not slow down Microsoft from continuing to abuse its monopoly. Furthermore, it does little to rectify the current ecology in the marketplace that is out of balance do to their abuse of their monopoly. There appears to be no punishment for their crime, just some chaperones to make sure they follow the letter of the settlement. There are also the concessions they have to make for VAR's and such, but that just brings them level with the law. All the way through this case, Microsoft has refused to accept any wrong doing, they have shown No remorse—No shame. How can you expect them to follow any law without respect for that law. There has to be punishment; which, unfortunately, is woefully lacking in this settlement. They cannot be allowed to behave like the predator that they are, while they are a monopoly. They need to be de-clawed, de-fanged and have their wings clipped until they are no longer considered to be a monopoly. At which point, they should be free to fend for themselves in the marketplace with whatever fierceness they want. To be clear, I do not believe they should be punished for being a monopoly. I believe they should be punished for abusing that monopoly; as was shown in the Court's "Findings of Fact". They cannot be trusted with monopoly status.

Respectfully,  
Ted Estes

Gentlemen and ladies, may I say, that as I've found Microsoft business practices so outrageous and intolerable that there is no longer the hint of trust required for me to continue using their products (even though I

have a difficult time switching to their competitors due to lack of experience with the competition's product), it is a moot point for me what you do to Microsoft. I have used their products since approximately the late 1980s, at work and at home, starting with the first version of DOS, and have recently tried Windows xp. Do you realize they have purposely disabled XP (home edition, the one they make exclusively available on new PCs) so it won't connect to a Windows 2000 network? This operating system is slow and hogs resources—with little if any user advantage and mostly to enhance Microsoft's market position while requiring consumers to invest in more RAM and hard drive space and faster CPU, simply to make it easier to track every hardware change, force the user to waste time jumping through registration and re-registration hoops. It appears to provide no benefit to the purchaser, which unlucky folks Microsoft means to force into unwanted and unneeded extra payments and upgrades(?) with its supposed new business practices which are the most abusive yet. If you do not provide relief for the abused consumer, it is a real shame and a missed opportunity to show what is meant by abolishing abusive business practices. As for me, it's moot, I'm going to open source operating systems, where there is still consideration for functional software and regard for the user of same.

From: Dan Schmeidler  
To: Microsoft ATR  
Date: 1/24/02 1:09am  
Subject: Microsoft

I appreciate the opportunity to make a few comments that have been on my mind for quite some time. Let me first start off by saying that I have been a Macintosh user since their inception and I made that choice simply because after much research and investigation I concluded that (dos) was simply too complicated and confusing. So I invested what I considered to be a substantial sum of money in Macintosh hardware and software to run my small business. If that were the end of the story I probably wouldn't complain because that system ran our business flawlessly without a hitch and was very user friendly. However as technology progressed so did my interest in using the computer for other purposes other than running the business. Unfortunately I started to see software titles for Macintosh disappear, and software titles for Windows increase substantially. As time went on Microsoft's monopoly was apparent to me long before the complaint was filed by the DOJ. Software developers who originally developed software for the Macintosh began

to withdraw their support for the older versions of software that I had and they discontinued any new future versions. But the last straw for me was while I was at the local CompUSA store. I asked the salesman who worked there why most of the software developers had stopped developing for the Mac. This particular gentleman happened to work part time at this computer store but his full time job was teaching computer classes on both Mac and Windows machines at the local high school. Although he admitted that he preferred the Mac OS over Windows, he simply said that a lot of the software developers have a no lose situation with Microsoft because they pay them to write exclusively for Windows. In other words he said, what would you do if I were to guarantee you a profit regardless of whether your software sells or not? I have personally talked to some of these software companies tech support personnel who pretty much confirmed what I had been told and quite frankly they were unapologetic as they dismissed my argument of fundamental fairness. My constant thought has always been that this can't be legal. I'm just one person who has endured the frustration of the Microsoft strangle hold on the entire tech industry. I cannot say that I suffered the damage that some of these other companies have but I can say that I spent almost 2 decades at considerable expense and with constant frustration just to be able to exercise my freedom to use the OS platform that I choose.

Contrary to Microsoft's claims that innovation will be stifled if strong remedies are imposed, they are not and have not been an innovative force in the industry and in fact for the most part have pirated the innovations of others and used their monopoly power to crush those who dare challenge them.

I believe the complaint filed by the DOJ against Microsoft was necessary and legitimate. I believe the courts have ruled correctly when they concluded that they engaged in illegal anticompetitive practices. I also believe that the penalty should be strict and substantial not only to punish Microsoft for the damage inflicted upon would be competitors, but to send a strong and clear message that Microsoft will not be allowed to dictate their will on the consumer, the technology industry, or the justice system from this time forth. I hope that the court will administer justice by placing maximum emphasis on doing what's right and fair to the minority consumer and companies whom the antitrust laws were supposedly designed to protect, rather than on Microsoft stockholders or others who may have a vested interest in Microsoft's success. From what I have read in some of the transcripts it is clear to me that Microsoft has proven to be untrustworthy and has seemingly attempted to use its monopoly power to impose its will on the courts by defying and ignoring the orders of the court. In my view a strong penalty imposed against Microsoft will ensure that if software developers desire to develop for multiple platforms they will have an equal financial incentive. It will also ensure that the different software titles for multiple platforms will be for the most part

technologically equal and compatible, competitively priced, and released within a similar time frame.

Innovation and affordable pricing come from competition not monopolies. It is in the best interest of the consumer, the tech industry, and of the justice system.

Thank You,

To whom it may concern,

I am opposed to the proposed settlement. It does nothing to redress the harm done by a convicted monopolist. They (Microsoft) were convicted on eight separate counts and the "settlement" arrived at was "go and sin no more". This rewards illegal behavior. Under the law a corporation is a person, if a person was convicted of eight separate violations they would be facing a much greater penalty than the proposed settlement. When you add in the egregious behavior at the trial this settlement shows that if you are big enough the law does not apply.

Dear sir/madam,

I would like to express my concern about MS/DOJ settlement.

I do not hate Microsoft, but I want to see good product will be able to go into the market and compete with Microsoft product. If the Microsoft should fail it should be because some other people created better product and Microsoft cannot do anything with its influence to crush it.

Microsoft said that their bundled app (browser, CD burner, instant messenger) are free, while actually the cost has been paid with the price of OS itself, regardless the customer wants it or not.

Sincerely,  
Erwin.

**MTC-00020095**

From: Gregg Berkholtz  
To: Microsoft ATR  
Date: 1/24/02 1:14am  
Subject: Microsoft Settlement

Dear Renata B. Hesse,

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

As a full-time Senior Systems Administrator for a medium sized private company based in the Portland Oregon area, and a part-time small business owner, it is a painfully clear and daily reminder the extent

to which Microsoft has abused the public trust with its monopoly power. Please, reject this proposal in favor of a much stronger remedy. Today's information based society is particularly hard hit by Microsoft's crimes. The most cursory review of my day finds several obvious examples of the price that we all must pay for Microsoft's monopolistic actions. For example;

\*Websites often display properly only under Microsoft's Internet Explorer. My opinion is that this is mostly due to the market dominance that Internet Explorer gained after Microsoft began to force the installation of Internet Explorer on all new computers, while simultaneously prohibiting the installation of other web browsers.

\*My email accounts are regularly bombarded with unwanted and large emails containing the latest Microsoft Outlook virus. Microsoft has gone far in requiring the Outlook email client on new computers: In the Windows 95/98 world, Outlook can be uninstalled by someone who is proficient in computers. In the Windows 2000 world, Microsoft has a mandatory program/process that runs in the background that monitors files pertaining to Outlook, and forces it's installation (or re-installation)!; If you attempt to uninstall Outlook, Windows 2000 will either reinstall Outlook automatically, or you will be repeatedly prompted to reinstall it.

My opinion is that Outlook is more prolific because of the apparent requirement that it must be installed on all computers (irregardless of whether or not its' components are being used), and that the lack of opportunity for competition in the marketplace has caused this generally forced acceptance.

\*When I recommend to my friends, family, co-workers and customers that they buy a prebuilt computer from a major hardware vendor I must explain that it can only be bought bundled with Microsoft Windows. These problems exist, not because of a lack of consumer demand for a solution, or lack of a willingness to pay, but because Microsoft does not allow it. In-fact, in the computer industry, the requirement of the Microsoft OS on a new computer is frequently referred to as the Microsoft Tax.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. That the fact that even today they still continue to perform similar acts of deception. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only attempt to prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and

not for the American people in general. The proposed settlement does not come close to recouping the illegal gains which Microsoft has made off American consumers much less come close to penalizing Microsoft for the illegal abuses. While it is doubtful that the true losses can ever be recovered from Microsoft in any settlement. The beginnings of a fair settlement should include the preeminent opening of all Windows and Office API's and file formats as well as large cash payments to open source programming efforts which compete with Microsoft products. In this way, Microsoft's ill gotten gains can be used for the public good.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Gregory James Berkholtz

A real proverbial "slap on the wrist". It is very sad to see our once proud government pander to the interests of mega-corporations, especially on as blatantly abusive as Microsoft. Don't fool yourself into believing that you have done anything to protect the interests of the people. I make my living off of Microsoft products exclusively, and I hate the way Microsoft conducts business. In the last few years, I have begun to hate their products. Microsoft's paranoia about maintaining it's monopoly has not made their products any better (especially their server products). The more they integrate "features" into their software, the more difficult it is to configure and maintain.

It is probably too much to hope that the DoJ will take a second look at the "settlement" and realize just how weak it is. I suppose I can only hope that the DoJ staff will hang their heads in shame for their unwillingness or inability (take your pick) to protect the people of the United States.

I am appalled at the current status of this antitrust issue. I pay taxes to a government that I thought would look out for the little guy and ensure that all innovators have an even playing field. This is apparently not the case. Microsoft has systematically destroyed any competitor that would challenge it's global dominance in the software industry. Their next goal once Unix is dead and Linux has been corrupted by their persistent methods of debunking it's benefits, will be to charge everyone rent for a piece of S/W that will never live up to the the grandiose claims that are bundled with it. Imagine having to pay a monthly fee to access your files and your personal items. If you allow MS to force third party innovators to disclose their technology in order to certify it as MS compatible; then you might just as well tell everyone writing any code that they will have to allow MS to "examine" hence "steal" any code they develop. This company is notorious for stealing others good ideas. They haven't developed anything on their own merits. Your job as prosecutors is to see that MS stops their monopolistic business practices and punish them for past misdeeds. Do you actually think all the plaintiff testimony was created by a group of sour grape losers that just could not compete? This is bullshit! They were setup to loose by heavy handed and illegal business practices. I will get to the point! You have wasted my money and every other tax payers. Your

restrictions have no teeth and the piece of paper it is written on is no better than toilette paper. MS will continue stifling innovation and the only one who will pay in the future will be all of us. This great country was founded on innovation and invention. If there are no more innovators to challenge the status quo and hold them to high standards, then we will be left with a fat overgrown monopolist who can not comprehend the term. Make the people of this great country believe that you have a backbone. A strict judgment will only serve to make MS a better company by forcing them to fairly compete. If you fail to produce a fair judgment then you might as well be in Bill Gates' pocket for life.

The proposed settlement is a bad idea for consumers because it does not address any of the basic issues with Microsoft's corporate behavior which led to the lawsuit in the first place. What the settlement does do is to reinforce in the minds of the common citizen and corporate leadership, the idea that corporations (if they are big enough) are above the law, do not have responsibility to society, and any means necessary justifies the ends of making money.

Subject: Microsoft Settlement

I am completely, entirely AGAINST the proposed settlement. Certainly consumers, developers, AND IT professionals are ALL hurt by the proposed settlement. In addition, the Open Source movement is dealt a particularly harsh blow: most of the settlement language only applies to "businesses"—and for others (not-for-profits, etc), things will be worse than they were before!

Also... I hate to say it, but "the children" will be hurt, as well: the whole thing about Microsoft donating —er, pushing— their products (and/or training) onto schools is ludicrous and offensive. I can't believe that's part of the "settlement" (even considering the so-called "revised" settlement changes.) I've worked in both the for-profit and the non-profit software industry (schools, unfortunately, are very similar to the non-profit industry) for the past decade, and have seen the damage of Microsoft's monopolistic influence on productivity, technology, and in general on people's lives.

I'm rooting for the states who are fighting the settlement—they are the only ones who seem to have any idea about what this proposed settlement means.

Reject the proposed settlement.

Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Dear Ms. Hesse:  
I am writing to register my stand in the Microsoft Settlement as a citizen of the United States of America. I am a currently a third-year at the University of Chicago, studying mathematics and computer science.

I have used many Microsoft products for over ten years; currently I use both Windows XP and Office XP, as well as Microsoft Money. Because I use these products, Microsoft has taken thousands of dollars from me, and it has been worth every penny. In fact, I would have been willing to pay double the price (and I do not have a lot of money.) Simply put, their products have greatly simplified my life, and I am very thankful. Their products are the best, both in terms of value and features. Windows (of various flavors) has always been easier to use than anything else out there, from MacOS to Linux to Solaris to HP-UX. I have used WordPerfect, Lotus Notes, and even the horrible Star Office. Microsoft Office is even more obviously superior among office products than Windows is among operating systems.

Every time I buy a product, I vote with my hard-earned dollars on a company. Like most other consumers, my overwhelming favorite is Microsoft. Our society is founded on the idea that each individual is capable of voting for a candidate to represent his political ideas. However, the Proposed Settlement characterizes US citizens as a helpless victims, unable to choose which products are best. How can I be considered worthy of electing people who can decide to fire nuclear weapons towards Afghanistan, and yet not be considered capable of deciding that Netscape is inferior to Internet Explorer? By what right does the Settlement propose to shackle me? Incidentally, I've noticed that Apple's Mac OS X ships with IE. Why is Microsoft's competitor allowed to use Microsoft's technology more freely than Microsoft is?

I've followed this case from the beginning, and from the very outset, it was neither consumers nor Microsoft's partners who brought suit: it was Microsoft's failing and failed competitors. To let failed businesses set the rules for successful ones in any market is wrong, but to let them set the rules in a sector that changes as fast as technology does is disastrous. For years IBM dealt with antitrust regulators who did incalculable damage to IBM, its shareholders, and the general public. Ms. Hesse, don't make Microsoft, its shareholders, and customers like me suffer the same unjust fate.

Moreover, a suit of this kind will only encourage companies of all kinds to court government favors, both to protect what they have earned (in the case of the most honest) and to take what they want from those less well-connected than they are (in the case of the shadier). This is a dangerous game, and only the most dishonest and politically wired

companies can possibly win it. The Department of Justice should not be helping such people in any way.

Finally, I wish to inform the court that I am outraged that it is attacking Microsoft's property rights, not defending them. The proposed settlement is unjust: Microsoft's products have helped millions of people around the world, and the only proper course of action is to say, "Thank you" and let it go. Ms. Hesse, please let justice be served. Give Microsoft the thank you they have earned and let them continue doing what they do best.

Yours,  
Aquinas Hobor

From: Stephen Magill  
To: Microsoft ATR  
Date: 1/24/02 1:18am  
Subject: Microsoft Settlement

To whom it may concern,

I am of the opinion that the proposed settlement in the Microsoft anti-trust case fails to address several methods that Microsoft is using to lock out competition in the computer software industry. In particular, Microsoft's refusal to disclose file formats for Microsoft Office documents presents a significant barrier-to-entry in the business software sector. The secrecy of these file formats ensures that Microsoft's dominance in this area will be maintained, as it prevents competing products from working with the significant volume of documents created using Microsoft Word, Excel, and PowerPoint. Furthermore, disclosure of these formats does not harm Microsoft in any way. An examination of current open formats such as HTML, PDF, and MPEG verifies this. The critical piece of intellectual property is the authoring software, not the document format itself. All that releasing the details of file formats enables is additional competition and compatibility. Thus, any final judgment

should include the requirement that Microsoft make publicly available the format for files produced with their Office suite of products.

Sincerely,  
Stephen Magill

From: Norman Siu  
To: Microsoft ATR  
Date: 1/24/02 1:21am  
Subject: Microsoft Settlement  
To Whom It May Concern:

I wish to voice my complaint in regards to the pending settlement of this current lawsuit against Microsoft. In short, I believe that you are not punishing Microsoft at all. In fact, you are punishing all computer users in general. By allowing Microsoft into an area that it has no domination and little influence in, you are thereby opening the door of opportunity for Microsoft to monopolize another area of public interest.

Also, you are, in simple terms, telling people that Microsoft has the right to monopolize any area it wishes with little regard to everyone else and anything else such as innovation and creativity.

But looking at it another way, if you legitimize this settlement, you will also, potentially destroy that which drives Microsoft to compete. By letting Microsoft monopolize and reduce competition, there would be little for them to compare or compete against. Thereby causing Microsoft to no longer compete properly.

So, on one hand, you could destroy competition, innovation, and creativity by allowing this settlement. On the other hand, you could weaken Microsoft by having them destroy that which they compete against. But in the end, the settlement would not benefit anyone, but mostly it will hurt everyone.

Do not allow this settlement to go through. It would be in the best interest of everyone.

Thank you.  
N.K.Siu

From: The Art of Pottery  
To: Microsoft ATR  
Date: 1/24/02 1:24am  
Subject: Microsoft Settlement  
Sir,

I believe that Microsoft is abusing its position of dominance in several ways. It dictates what a person can do with it's Operating system once they have paid for it.

As a Family man, I am being denied the right to use the operating system as I please on my own personnel computers.

I am also being denied the right to reload my computers after the system crashes (usually due to a flaw in the operating system) without pleading with Microsoft for permission and a new key-number.

Also I am denied the right to make a copy of the operating system to use when reloading for the umpteenth time,

Thus keeping the original in good condition.

This dictatorial attitude would not exist where it not for Microsoft's dominant market position or the existence of cartels similar to the Petro-chemical and Music industry's.

I believe I should own the right to use the product as I see fit within a legal framework that forbids my profiting by resale or gifting copies to third parties.

I understand the need for Microsoft to guard it's intellectual property but it is going beyond what is reasonable in a free democratic society and should be made to curb it's dictatorial ways.

David Doney.

From: Scott Kazimour  
To: Microsoft ATR  
Date: 1/24/02 1:22am  
Subject: Microsoft Settlement

To Whom It May Concern:

I'd like to express my opposition to the proposed settlement with Microsoft. I believe it does far too little to redress the past actions of Microsoft, and doesn't do enough to allow future competition. Microsoft has achieved its position of market dominance not through superior products, but rather through predatory business practices. Microsoft has stifled innovation in the computer industry, and consumers have suffered harm as a result. I've been in meetings with venture capitalists where new business ideas are rejected out of hand, simply because of the hint of a rumor that Microsoft might someday be interested in pursuing something similar, and creating a successful business would therefore be impossible.

I feel that more drastic action is required in order to restore an environment in which companies succeed through the traditional means of producing higher quality products at a lower price.

**MTC-00020117**

From: Danny Hong  
 To: Microsoft ATR  
 Date: 1/24/02 1:22am  
 Subject: Microsoft Settlement

To Whom this Concerns:  
 I am a highly concerned Computer Science graduate who has been following the actions of Microsoft for many years. I have found nothing but greed, deceit, thievery, and blatant usage of their monopoly to ruin any and ALL innovation in the software industry. Unlike their utter lie about freedom to innovation, Microsoft's chief goal is to keep and extend their monopoly by ANY means possible. That includes buying out good companies, killing off other good companies (Ex. Netscape, Lotus, Dos-Clones, Linux, etc), or doing deals that give Microsoft their own upper hand. If you allow them to continue their actions, one day the computer industry will come to a standstill and the US economy WILL suffer. It's already very disgusting that a company can get away with 100% profit margins without running into many legal problems. It's even more disgusting that Microsoft has named our last best hope for survival in the form of open source as it's target of demise. Linux is one of the few last remaining hopes to let people be free to create software without a monopoly controlling what we can do. I'm also highly disturbed by Microsoft's latest action to block off games from being made on an open platform. They have acquired intellectual property of SGI that could be used to prevent OpenGL from being used or supported. It seems to be another attempt to force every game developer in the world to use ONLY microsoft products. I remember capitalism being about competition, the word competition is the opposite of anything happening in the influence of Microsoft.

Sincerely,  
 Daniel Hong

From: Alan De Smet  
 To: Microsoft ATR  
 Date: 1/24/02 1:24am  
 Subject: Microsoft Settlement

I am writing I am writing to comment on the proposed settlement in the case of United States v. Microsoft Corp, as allowed by the

Tunney Act. The Proposed Final Judgment will not change Microsoft's use of monopoly power to illegally engage in anti-competitive behavior.

I am a software engineer. I have professionally developed software for four years. As a result of Microsoft's overwhelming market force, I have primarily developed applications for Microsoft operating systems and middleware.

The Proposed Final Judgment has several significant flaws. Most importantly, section III.J allows Microsoft to hide documentation on APIs and Communications Protocols if the documentation would compromise the security of one of more systems. This exception is unnecessary. A well designed and implemented system is in no way compromised by the release of documentation on it. If a system's security could be compromised by the release of documentation on the system, the system is insecure. Microsoft is capable of developing secure systems, however historical evidence indicates that Microsoft has chosen not to do so. By providing this exception, Microsoft is free to conceal essential documentation from OEMs and ISVs by using insecure systems whose security would be weakened by the release of the documentation. Relatedly, the definitions which define which APIs and Communications Protocols are covered fail to cover the most essential APIs and Communication protocols which are part of the Barrier to Entry competitors face. To be truly effective, all APIs, Communications Protocols, and File Formats used by Microsoft Office products (including Word, Excel, Access, PowerPoint, and Outlook) must be made available to all ISVs. Without this information, ISVs will be unable to compete in the areas of operating systems or office productivity applications. Because of Microsoft's monopoly position, competing ISVs must provide extremely high levels of compatibility with Microsoft's Windows operating systems and Microsoft's Office application. If Microsoft is allowed to keep these interfaces secret for any reason, Microsoft will continue to manipulate them to produce incompatibilities with competing software.

The Proposed Final Judgment significantly fails to limit Microsoft's use of monopoly power to stifle competition. Without significant changes, Microsoft will continue to use its monopoly position to crush competition and illegally maintain its monopoly position.

From: Matthew Bass  
 To: Microsoft ATR  
 Date: 1/24/02 1:22am  
 Subject: Microsoft Settlement

To whom it may concern,  
 I would like to express a deep seated concern over the pending Microsoft Settlement.

While I would be delighted to elaborate on several points—I think the best summary I've found so far can be located here: <http://www.kegel.com/remedy/remedy2.html> I would highly encourage everyone involved with the case to review said documentation—for it does an excellent job outlining the problems associated with the pending settlement.

Microsoft has done an excellent job positioning itself as the "core" of the "Information Technology" universe. For that they certainly deserve credit. However, their business practices can be likened to those of Rockefeller's Standard Oil empire.

Microsoft does not "compete" with others. They either incorporate the competition into their empire—or they crush it (e.g. Netscape, DR-DOS, etc). There is no competition.

Beyond the lack of competition—Microsoft goes out of their way to prevent their applications (word/excel/etc) from running on NON Microsoft Operating Systems—even if the OS is "compatible"—and the application would work. The EULA (end user licensing agreement) specifically prohibits an end-user from running a Microsoft application (like Word) on a NON windows based PC. Please see the following link for more detail: <http://www.kegel.com/remedy/remedy2.html#isv.atl>

Furthermore, Microsoft actually goes out of it's way to incorporate INTENTIONAL incompatibilities in it's products to thwart competition. Many years back there was a product called DR-DOS—which by all accounts was as good (if not better) than the Microsoft product (MS-DOS). When Microsoft moved into the realm of "Windows"—they incorporated INTENTIONAL incompatibilities into their product—so Windows would ONLY run on MS-DOS. Needless to say DR-DOS was short lived thereafter. For more information click the link below: <http://www.kegel.com/remedy/remedy2.html#caldera>

Need I even mention Netscape?  
 It is imperative that something be done about the present situation— certainly more than is proposed in the pending settlement. Information Technology is becoming an increasingly important part of everyday life. It would be a greivous mistake to allow a single entity to wield such broad control.

I thank you for your time and patience—it is sincerely appreciated.

Matthew Bass

From: Tanya Red  
To: Microsoft ATR  
Date: 1/24/02 1:24am  
Subject: Harshness for the Microsoft Monopoly

As someone who uses computers casually, but frequently.. As someone who is not a part of the business world, but is surrounded by, and fervently watches the events around her, with this case, and is thusly intimately affected by it.. I must state my utter disappointment in the ability of Microsoft to squeeze by our justice system with its money and lobbying.

This is a company which fixes polls (See ZDNet), and lies whenever it can to further its own means. This is a company with such a hold on the desktop market that it can dictate what tools the masses use to do every computer related function of the average business world, from what programs they use to make spreadsheets, view the Internet, and even what games they play, increasingly so.

What's good for Microsoft is not what's good for America, contrary to the similar view regarding GM in the not so distant past.

I implore those who read this one E-Mail to hear my voice, and ensure that Microsoft not only plays by the rules, period, but that the rules are truly deserving for a company which so blatantly violated the computer industry, and the trust of millions, without most people—even knowing it—. A company so disgustingly adept at snov jobbing the world, whether its through fixed polls or outright lying denials, that its fooling us into selling control of more and more of our own lives to it.

A corporation should never hold this much sway over the lives of our fair nation, period. That should be in the realm of our

government, our justice department, and I hope that its stronger than this!

Please, do your best to make Microsoft fair, before the Europeans prove we can be bought out corruption, money, and lies. We all win when we have a choice. We all win when have freedom beyond the will of one vicious corporation. Please, hear my words, and take them into account, as a loyal citizen of our nation, that I have been injured by Microsoft, and demand that they be accordingly treated as the criminals they've been proven to be!

Tanya Ruppell, New Jersey Resident.

Subject: Microsoft Settlement

To whom it may concern;

I wish to register my opposition to the proposed settlement in the Microsoft antitrust trial.

I do not believe this settlement provides adequate redress for Microsoft's past actions, nor does it sufficiently restrict it from committing similar acts in future. Some clauses in the proposal may even serve to legitimize some its activities which have been found to be anticompetitive. Microsoft has already demonstrated its willingness to flaunt a settlement agreement related to antitrust actions. Any future settlement it enters into will need to be absolutely watertight to prevent exploitation of loopholes, and I do not believe this agreement meets such standards even for the terms it does seek to enforce. Microsoft's happiness with the current proposal—and its apparent eagerness for it to be adopted—should serve as further indication that it is an insufficient solution.

I urge you not to accept this proposal, and to seek an alternative remedy. I can understand the court's preference to reach a settlement, but if the parties cannot agree on terms that will provide appropriate redress for past actions and restriction for future actions, then the court must impose more stringent remedies itself.

Sincerely,  
Andrew Carpenter

Subject: Microsoft Settlement

Hi

My opinion on the Microsoft Settlement:

This is a small person in a big world speaking out against a wrong that will(or could) one day bring the world as a whole to its knees(read FBI security report). In that world you and your country will be controlled, as are those who are in control of you. Microsoft is gaining power everyday, one day, NO ONE will be able to do what NEEDS to be done. Before it's to late, stop them! Don't settle until you and your government are in control. If you don't do it now, later may be to late. If you think I'm wrong, try surfing the internet with the "Options" that are out there. "Opera" is a great browser available for "all" systems to use, but "many" sites don't load... "Microsoft

Enterprise" server run sites. So you get forced back to "Internet Explorer". So what, I can hear you say, well one day, if you "piss-off" "Bill" maybe your internet tax returns will all go missing... what are you going to do then? Say bad Bill? Naughty boy! Think it can't happen, ask "Steve Jobs" he'll tell you what "Bill" can do for you. "Make Our Browser Default Or You Don't Get Office." What could he do? Nothing! Now it's default on all Apple computers. As far as I can see, BILL GATES paid "someone" off BIG TIME to make this all go away, man it must be great to be the RICHEST MAN IN THE WORLD you can BUY your way out of ANYTHING! What did he do buy the election (or fix it, it was WINDOWS machines counting those ballots... right)? The Democrats lost, so the bosses would get changed, so the case would go away. LAND OF THE FREE alright... anything can happen for the right price \$\$\$\$.

MICROSOFT SUCKS!!!!

Thank you for your time(although I know I've wasted mine) Brad Harrison(Apple user)

Subject: disagreement

Madam, Sir,

I do not agree to the settlement that is currently going to be discussed between the States of the USA and Microsoft. With this settlement, Microsoft's market position would be further strengthened, alternatives would be removed from the market, and eventually we would be depending only on this one company in executing all the tasks for which we use computers. It's the freedom of choice that is at stake. So please, consider the facts carefully and decide for the good of the people whom you represent, and not for the good of a company which becomes increasingly dangerous.

Thank you,  
Dr. Martin Senftleben

From: maxwell@nodots-daemon@inetgw  
To: Microsoft ATR  
Date: 1/24/02 1:16am  
Subject: Microsoft Settlement

I'm writing to express my vehement objection to the proposed Microsoft antitrust settlement. Both as a citizen and as a professional computer programmer, I respectfully insist that Microsoft face a meaningful punishment for its unlawful actions. The proposed settlement doesn't even come close.

In large measure, the settlement merely restates the existing law or the earlier settlement agreement—this does not punish Microsoft in any way.

The remaining portions of the settlement contain loopholes big enough to drive a monopoly through. For example, Microsoft gets to choose to whom they will disclose API and protocol documentation. Microsoft has already made it clear that its most serious competition, open source software, does not meet its criteria for an "authentic and viable" business (to use language from the settlement). In any event, if their past behavior proves anything, it's that they will

not make such decisions in good faith. (Indeed, their bad-faith actions led to the current trial: absurdly, Microsoft claimed they were "integrating" their Web browser but not "bundling" it. A distinction without a difference if I ever saw one, but it enabled Microsoft to unlawfully crush yet another competitor.)

Adding insult to injury, Microsoft can entirely sidestep those already limited and ineffectual disclosure requirements by claiming that they must do so for security reasons. This provision is a complete absurdity: it may be counterintuitive, but true security is achieved by using open standards, which can be inspected for flaws by the broader security community. You may be sure that Microsoft knows this, so it's worth contemplating why this measure is in the agreement at all. There is only one answer: to enable Microsoft to emasculate the agreement whenever its provisions are inconvenient.

The proposed oversight committee cannot usefully address these concerns, or the dozens of others like them, for two main reasons. First, Microsoft itself will have considerable control over the committee, as Microsoft chooses one member directly and one of the other two members indirectly. (I hope that if I ever break the law, I get to choose my own parole officer.) Second, the committee would generally operate in secret, so serious objections on the part of the committee's only truly independent member may never reach the public. This mandated secrecy, coupled with the committee's guaranteed ineffectiveness, must inevitably erode any public confidence in the committee's trustworthiness—and, by extension, in the justice system itself.

Finally, I object to the settlement on philosophical grounds. I believe that the law should apply to the rich and powerful—including rich and powerful corporations—just as it would apply to you or me. If I robbed a bank, I'd expect more punishment than a stern warning not to do it again. At the very least, I imagine I'd be required to forfeit my ill-gotten gains (which, in Microsoft's case, amounts to tens of billions of dollars), in addition to harsh punitive measures. If Microsoft's punishment is any less severe—well, then I guess I'll know what the law is worth.

Thank you for your kind consideration.

To: Microsoft ATR  
Date: 1/24/02 1:30am  
Subject: MicroSoft Settlement

I have read about the proposed settlement and I am not in favor of it in its current state. Please consider this a vote against the current settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors and to consumers in general.

It is my belief, as a computer user and as a professional in the computer industry for more than 20 years, that MicroSoft has caused as much harm as they have good in the

software industry. As a minimum I say that the DOJ and US government should be putting a stop to Microsoft's monopoly by forcing them to;

A) keep their file formats non proprietary, documented and open

B) unbundle applications from the operating system

C) release the source code for the operating system

D) ensure that they include and adhere to industry standards and protocols that allow communication and data sharing between MicroSoft and non MicroSoft products alike. i.e. no more embracing and extending a standard.

E) stop using its position to prevent suppliers of computer hardware products from offering or installing alternative non MicroSoft software products in addition too or instead of MicroSoft software on their products.

As it is proposed the current settlement simply appears that the government is unable to negotiate the necessary settlement to protect and act in its citizens best interest.

Thank you for this opportunity express my opinion about this matter.

#### MTC-00020131

From: Steffen Hulegaard  
To: Microsoft ATR  
Date: 1/24/02 1:26am  
Subject: Microsoft Settlement is horribly unfair to everyone but Microsoft

Microsoft is an unmistakable monopoly. Microsoft systematically exploits both economies of scale and economies of scope (so-called network economies) to force free

market failure. The marginal cost of software production is zero. That is a novelty for a item of commerce. The strong synergy between one "software" product and the next is a new and uniquely powerful economy of scope (network economy). These economies induce a massive free market failure (for software) and promote the formation of a nasty monopoly. Microsoft is that monopoly. Even worse, consumers of software products labor under severe informational constraints. They are often not able to rationally judge some of the critical claims made for or against software products. Fear, uncertainty and doubt (FUD) have become incredibly powerful factors in the software markets. Microsoft systematically exploits these information externalities to further restrain the free markets (i.e. to solidify it's monopoly). As if this weren't enough, Microsoft also engages in a wide variety of specifically illegal business practices. Microsoft has been tried and convicted.

The damage to the U.S. economy is huge. As we speak, our leadership in the software industry dissipates as the world moves to open-source software like Linux. Microsoft's monopoly is triple strong ... but the world's consumers are retaliating. Slowly. Steadily. Inexorably. Microsoft can no longer hold back innovation while foisting layers of increasingly expensive, utterly proprietary (addictive), fat, slow, bloated, insecure and buggy software on the world. It is hard to imagine that the basic operating system technology of the 1960's is still missing from the likes of MS-Windows ME. Microsoft's big lies about "innovation" don't fool everyone. The terms of trade are being redressed. Microsoft's shackles on software innovation will be broken.

Much of the software industry might be torn down to get rid of Microsoft. The U.S.A. will regret this unnecessary price. Rather than let Microsoft buy the proposed wrist slap of a penalty, we should all insist that Microsoft be broken up into at least as many pieces as the pre-breakup AT&T. The proposed "settlement" is a farce. It does nothing to the Microsoft monopoly.

It even allows them to extend and strengthen their unfair monopoly. It shakes my confidence in the justice system itself. Is justice for sale?

Please consider that Microsoft is demanding that employees and relatives of employees send in comments supporting of the proposed settlement. The world sees that Microsoft is making a complete mockery of U.S. Law. Microsoft spends freely on transparent and egregious tricks to arrogantly "buy" justice. Please re-read Thomas Penfield Jackson's findings in this case. The truth matters. A real remedy is required. The proposed remedy is a despicable joke.

Subject: Microsoft Settlement

Although I am a Canadian citizen, I feel the effects of the massive influence Microsoft has

over the computer industry overall, and witness every day its dominance of end-user computing. If I could suggest any one thing that might make either a settlement or punishment for Microsoft's abuse of its monopoly status, it would be this: for as long as Microsoft continues to practice predatory, illegal tactics as standard business, bar the use of their operating systems and software products from use within any governmental organization, including all educational and health care institutions.

While "suffering" through the alternatives available would be a difficult transition, supporting transgressions only provides further opportunities to transgress. Supporting what little competition remains for Microsoft would serve to provide a means to stimulate real competition once again within the computer industry.

Subject: Microsoft Settlement

I have been in the software industry for 18 years. I have watched Microsoft grow to become the monopoly it is today. It has clearly done this not through technical innovation, as they would like people to think, but by making business agreements which destroy competition. This is clear looking at past court cases, as well as the recent antitrust case.

The settlement is clealy political, and will not do a thing to change Microsoft's monopolistic behavior. Please reconsider this settlement agreement.

The other monopoly that has not been looked at is Office file formats. These have been forced onto consumers in a way that ensures Microsoft will get lots of upgrade business.

The setteleme is much too narrow, as it limits itself to products that already exists, NOT future ones.

I am very disappointed in the antritrust division, and feel let down.

From: Kenneth Frost  
To: Microsoft ATR  
Date: 1/23/02 11:41pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am writing to let you know that I am against the current Microsoft antitrust settlement that was reached by the DOJ and Microsoft. This does not go far enough to stop the continued abuse of the public trust through illegal monopolistic practices. The abuse consists of Microsoft's use of proprietary formats and protocols that have the intent of locking me into using their operating systems and software products.

With most people, through ignorance, buying into Microsoft's solutions, the end result is no choice and no competition. It is only a matter of time, where I will be forced to use Microsoft services to gain access to the internet or for that matter to do anything with a computer. This to me is no choice at all and hurts me and other consumers like me. I currently cannot purchase a system that comes with a dual boot hard drive where I can either boot into Redhat linux or boot into Microsoft windows. This is a product of Microsoft's restrictive licensing practices with OEM's.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

From: Geoffrey Prewett  
To: Microsoft ATR  
Date: 1/24/02 1:36am  
Subject: Microsoft Settlement

To whom it may concern,

I am writing this letter to express my opinions of the Justice Department's proposed settlement of the Microsoft case. The proposed settlement attempts to prevent the specific abuses of monopoly power that were used against Netscape. However, the proposed settlement has two major flaws: it does not provide for a punishment for the abuses and it does not effectively prevent further abuses.

When a person is found guilty of breaking a law, a punishment is demanded for breaking the law. The punishment is payment for breaking the law; atonement, as far as it is possible. The punishment also limits the dishonest gain that the guilty party can realize from the breaking of the law. The proposed settlement does not appear to contain any punishment for Microsoft, only remedies aimed at preventing future

trespasses. The 1994 consent agreement was designed to prevent future trespasses; it failed. Twice Microsoft has been guilty and a punishment needs to be required. The proposed settlement includes no such punishment.

Not only does the proposed settlement contain only prevention for the future, and no punishment, but the prevention is not effective. First, Microsoft has repeatedly and flagrantly violated the spirit, if not letter, of the law. During the trial its officers and employees have shown a contempt for the court by, among other things, allegedly rigging demos. The company has shown no contriteness since then, but has continued business as usual. There is nothing to suggest that Microsoft is going to obey the spirit of the proposed settlement any more than the 1994 agreement. Second, the proposed settlement addresses the specific complaints at the time of the trial but does not address the fundamental problems which caused the complaints. For instance, the proposed settlement address the licensing of certain, specific desktop icons. It does not prohibit the principle that caused the licensing problem: the selling of discounted versions of Windows provided that OEMs engage in certain behavior with respect to \*non Microsoft\* products. Under the proposed settlement, the only provision is that Microsoft cannot place restrictions on browser icons. It may still provide discounts if computer manufacturers do not ship computers with competing operating systems, for example.

I conclusion, I oppose the proposed settlement because it provides no punishment for Microsoft's actions and because the prevention remedies will not be effective in promoting competition in areas other than the browser.

Sincerely,  
Geoff Prewett  
Software Engineer

**MTC-00020149**

From: Joseph "Jofish" Kaye  
To: Microsoft ATR  
Date: 1/24/02 1:36am  
Subject: Microsoft Settlement

To Whom It May Concern:

I am strongly opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that

they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded. Microsoft's behavior during the trial and during this comment period has shown an almost total lack of respect for justice; I encourage you to rethink the settlement.

From: Stephen Friedman  
To: Microsoft ATR  
Date: 1/24/02 1:35am  
Subject: Microsoft Settlement

Dear USDOJ,

Because this is something of a new issue in the courts, it seems the proposed is too vague to adequately protect the software developers from Microsofts restrictive licensing practices. In several cases, it allows Microsoft to include provisions in its licenses that could potentially prevent the distribution of software that competes with other Microsoft products based on the use of one Microsoft product in the competing software's development or distribution. This is harmful to the free development of software and the improvement of the software market as a whole, and is restrictive and somewhat incapacitating for future software developers such as myself. Please revise the final judgment to protect hard working Americans from the restrictive and debilitating licensing practices of Microsoft, so that the electronic community can continue to grow and flourish in the United States.

**MTC-00020151**

From: Michael Casteel  
To: Microsoft ATR  
Date: 1/24/02 1:34am  
Subject: Microsoft Settlement

I am a software professional who owned a sizable software company (not a competitor to Microsoft) for 20 years, giving me considerable exposure to and experience in the software market. I agree with the editor of eWeek, a computer trade periodical, that "...the proposed settlement of the United States of America and nine states vs. Microsoft is as toothless as the consent decree of 1995. Microsoft again must make only nominal behavior changes. In return, it gains legal protection for many practices that landed it in court." From the viewpoint of this software professional, the proposed settlement is an unfunny joke, and it should be rejected as counter to the public interest.

1. This agreement seems to permit Microsoft to continue to impede third-party products that sold less than 1-million units the year before. This simply permits Microsoft to impede innovation. New,

innovative products often sell fewer than 1-million units in their early years.

2. The agreement appears to permit Microsoft to keep secret APIs that "compromise the security of ... anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems". This means that competition and innovation will continue to be stifled in areas such as multimedia, e-commerce, messaging and file sharing, while Microsoft's monopoly power will continue to be enhanced.

3. The agreement specifically excludes servers, PDAs and handhelds, and maybe tablet PCs. This leaves Microsoft free to continue to leverage its desktop monopoly in order to impede competition and innovation in these areas, which are not yet monopolized by Microsoft.

4. The agreement seems to give Microsoft legal protection to add whatever it wishes to its operating systems. These terms will unbridle Microsoft to freely use its monopoly power to crush any future innovative competition in the same way it crushed Netscape. This would entitle them to bundle a clone of any innovative technology which becomes popular with the "operating system" for "free" and thus cut off the innovator's revenue stream. In Mr. Gates' words, their "air supply". Then, Microsoft can continue to sell upgrades to the new, expanded "operating system" in order to capture that revenue.

5. Finally, where is the penalty for their past illegal behavior?

Microsoft's monopoly abuse has in the past impeded innovation by crushing (and thus making examples of) innovators such as Netscape. The industry, and the public interest, benefit from \*more\* innovators in software, not fewer. Please, even if you do not extract a penalty for past abuses, do something to prevent Microsoft from continuing to abuse its monopoly position by stifling competition. Most of the innovation in our industry comes from outside Microsoft. Failing to restrain Microsoft will cause our industry, and the public interest, to suffer.

Mike Casteel

To whom it may concern,  
It sickens me to see Microsoft get away with corporate murder "for the good of the people"

It sickens me to read a verdict from a judge that finds guilty with Microsoft practices and no "real" punishment is given.

It sickens me to see Microsoft continue its backstabbing tactics, unfairly squeezing out competition all while putting on a sham in the courtroom and public media purporting thier innocence.

It sickens me that as "punishment" Microsoft gets to give away "free" software which in reality gains them new customers and benefits them.

It sickens me to know that no matter what happens, the punishment will be inconsequential to Microsoft and will not discourage continued illegal behaviour.

It sickens me to know that our Justice Department is teaching future business leaders that the "Microsoft way" is the best way to do buisness in America.

Shame on you all.

Craig Mitchell

Microsoft's antitrust practices are far-reaching and of substantial negative impact to essentially every single market that they feel it is their place to enter. Something has to be done before there are Microsoft-brand cars and Microsoft-brand cereals.

Their stagnation in those markets that they have managed to completely monopolize vividly represents the exact fears of those who initially composed the various laws against anti-competitive practices. As a user of Macintosh computers, the only truly viable alternative to Windows-PCs for consumers, and as a 4-year veteran of MacOS/Windows phone technical support for Boston University, I can honestly say that Microsoft's products are objectively inferior yet painfully ubiquitous.

Simply put, they must be stopped.

They have managed to destroy competition in one genre after another, and they only keep expanding. They are a plague upon the entire tech industry. A more drastic perspective demonstrates that they are even quite dangerous for national security; by forcing the military and the federal government to use their utterly flawed software due to a complete lack of viable alternatives, they put the entire country at great risk. In this information age where terrorists turn to computer hacking, having America's most valuable secrets protected by the spit and gum that is Windows XP is blatantly detrimental to the entire nation, and potentially the entire world.

Fining them is pointless. As is giving them babysitters to watch their every move. The only solution is to split the company into several different divisions and force competition between them. Please act quickly, for the good of every person exposed to modern technology.

Subject: Microsoft Settlement

Dear sir or madam:

The proposed settlement with Microsoft is a bad idea.

It is not even remotely sufficient to ensure that they do not continue to use their monopoly in computer operating systems to destroy competition in other areas.

Microsoft has a long and well-documented history of abuse of their monopoly position to gain advantage in other areas, and, moreover, a flagrantly unrepentant stance on all their previous actions, deemed illegal in the courts. Implementing a solution which is simply expeditious, but has no true or lasting effect, will mean that Microsoft will continue to use their dominance in computer operating systems to extend their dominance into new areas.

In addition the deleterious effect of allowing Microsoft to continue stifling innovation, this settlement seems to say that a company can engage persistently in patently illegal behavior, if it is big enough, rich enough, and important enough. This is not the kind of foundation we want to lay for future businesses— particularly in the vital area of information technology.

Subject: Microsoft Settlement

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. I feel that the open letter composed by Dan Kegeel (<http://www.kegeel.com/remedy/letter.html>) does a good job of describing some of the problems with the settlement.

As a programmer, I am particularly concerned about the ability of software produced by other companies to interact with the Microsoft's operating systems (not just the ones listed in definition U but all Microsoft operating systems). I am also concerned that the restrictions against competing products that Microsoft has included in their licenses and the punitive behavior that Microsoft has displayed toward companies selling computers using competing operating systems are not stopped.

These would seem to be the heart of any settlement of an antitrust case. As a programmer I would encourage that in addition to the cessation of the above mentioned monopoly behavior that Microsoft be required to publish all API's (including those for their application software) and file formats (which are needed for creating interoperative programs).

Sincerely,  
Eric Howland

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I feel that the proposed settlement is seriously flawed on a number of grounds, including the fact that Microsoft discriminates against ISVs who ship Open Source applications. The proposed settlement does not address this problem. To demonstrate my point, read the Microsoft Windows Media Encoder 7.1 SDK EULA, which states: ... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); ... Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications.

This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the add-on API installed, which is often not the case. Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems.

Please take this into consideration when finalizing the settlement.

Sincerely,  
 Scott Morningstar

From: James M. Frisby  
 To: Microsoft ATR  
 Date: 1/24/02 1:45am  
 Subject: Microsoft Settlement  
 To Whom It May Concern:

As a professional software developer and a concerned citizen, I wish to state my opposition to the Revised Proposed Final Judgement (RPFJ) in the Microsoft anti-trust case. While I believe it has several deficiencies, one I find particularly

disconcerting is within the "multi-boot" provisions (RPFJ, III(A)(2) and III(C)(4)). Certainly, I applaud the efforts of the Department of Justice to craft these provisions, since allowing multi-boot machines would help to restore competition in the operating system (OS) market. I nevertheless believe they suffer from a fatal flaw (and possibly two) which will render them toothless.

The multi-boot provisions state only that Microsoft must not "retaliate against" OEMs who wish to sell a multi-boot system; or contractually prohibit an OEM from selling a multi-boot system. There is no provision forbidding Microsoft from altering its OS in such a way that it can detect and disable non-Microsoft OSes, or to disable itself until either the OEM or the user removes any non-Microsoft OSes.\* Given the District Court's findings and conclusions that Microsoft has created such deliberate technical incompatibilities in the past (Findings of Fact, VI(A); Conclusions of Law, I(A)(2)(b)), any settlement which does not prohibit such means of subverting competition necessarily fails to secure for the public a choice in OSes.

Also, on December 11, 2001, Microsoft was granted U.S. Patent number 6,300,670, for a "Digital Rights Management Operating System" (DRMOS). Any PC created by an OEM which implements this patent\*\* will, by design, refuse to boot an OS that is not a DRMOS. Since Microsoft holds this patent, it will be in the position of deciding which non-Microsoft OSes it will permit to multi-boot on a PC implementing DRMOS.

While I realize there is a provision requiring Microsoft to license intellectual property on "reasonable and non-discriminatory" terms (RPFJ, III(I)(1)), there is also an explicit exemption with regard to DRM (RPFJ, III(J)(1) and possibly III(J)(2); "anti-piracy systems" and "license enforcement mechanisms" might be construed to mean the same thing as "digital rights management"). Since the DRMOS patent was not awarded until over a month after the RPFJ was submitted to the Court, it seems reasonable that these provisions should be, at a minimum, re-examined to determine the effect of the patent upon them.

For the foregoing reasons, I request that the Revised Proposed Final Judgement be withdrawn by the Department of Justice; or failing that, rejected by the Court.

Sincerely,  
 James M. Frisby  
 5615 Beverly Hills Dr. Apt. C  
 Columbus, OH 43213

\* From a technical perspective, doing this would require either that Microsoft's OS is installed after the non-Microsoft OS; or failing that, that the Microsoft OS is booted at least once. Currently, Microsoft's OSes already "hide" access to alternative OSes in the former case (by over-writing any pre-existing boot-loader). In the latter, Microsoft is free to contractually oblige the OEM to make its OS the "default" OS on any multi-boot system, virtually guaranteeing that it will boot at least once. Further, it is my lay opinion that RPFJ III(H)(3) will not prevent this behavior since it only covers OEMs' rights in III(C) (and not III(A)), and even then, only refers to "icons, shortcuts or menu

entries", not boot-loaders. \*\* In the wake of Napster, there is ample evidence of growing pressure on OEMs to do just this from the private sector (in the form of the Recording Industry Association of America (RIAA) and the Motion Picture Association of America (MPAA)), as well as the public sector. In the former case, the MPAA and RIAA are looking to DVD and DVD-Audio, respectively, as a means of implementing hardware-based DRM, and are actively exploring software-based solutions. Some members of the RIAA have gone so far as to alter their compact discs in such a way that PCs can no longer play them. Since this devalues a PC for some users, it sends a clear signal to OEMs that DRM should become standard on all PCs.

On the public side, there is draft legislation in the Senate that would essentially mandate DRM in all consumer electronic devices. While draft legislation is a far cry from the full force of law, it sends a signal to the private sector that DRM is a topic of increasing importance within Congress, and not to be taken lightly. (Yes, hearings on the "Security Systems Standards and Certifications Act" (SSSCA) were indefinitely postponed after the events of September 11, 2001, but relatively mundane issues such as copyright infringement will eventually get Congress' attention again.)

#### MTC-00020165

From: Steve Fink  
To: Microsoft ATR  
Date: 1/24/02 1:46am  
Subject: Microsoft settlement

Microsoft's presence has an absolutely chilling effect on innovation in the computer industry. No startup's business plan is complete without a section on "what if we're actually successful enough that Microsoft notices and squashes us like a bug?" Today, only the largest companies can afford to take any speculative steps towards areas covered by Microsoft's monopoly, because anybody

smaller simply cannot afford the risk. This is not simply fair competition; if it were fair competition, a company with a superior product could have a clear chance to gain significant market share. As it is, a company must be careful not to be too superior too soon. The source of Microsoft's threat is not the quality of its products, but the influence it exerts due to its near-total ownership of many aspects of computing.

The proposed settlement is clearly insufficient to remedy this situation. The settlement forbids some, but not all, of the—existing—practices that Microsoft engages in. Once Microsoft is barred from those, it will quite naturally intensify the remaining monopolistic practices and develop others in areas that the settlement does not cover. In effect, Microsoft's claim of massive innovation will at last be realized!

The whole settlement seems too flawed for me to go through piece by piece to discuss why I disagree with it, but consider for example its attempt to allow companies to develop products that interoperate with Microsoft's OS and middleware platforms. Microsoft still has the ability to change document formats, fail to adequately document the new or existing formats, and can easily change protocols or APIs without notifying ISVs until too late.

Fundamentally, I believe the situation needs to be looked at from an entrepreneur's point of view. The entrepreneur has an idea for a superior product that is similar to something Microsoft sells. Today, he'd have to be utterly insane to risk his time and money in pursuing his idea. If this settlement is accepted, he will only need to be irrational. A quantitative improvement, but not a qualitative one—the conclusion for a rational person is the same.

—Steve Fink, a concerned computer professional

From: John Murphy  
To: Microsoft ATR  
Date: 1/23/02 11:34pm  
Subject: Microsoft Settlement

I am writing to express my hopes that the court will reject the proposed settlement in Microsoft's current anti-trust case. I believe that the nature of Microsoft's management will make it difficult for any in-company overseer to do his job properly and without the appearance of a conflict of interest.

But my chief concern is that Microsoft's current software offerings, chiefly WindowsXP, are themselves extremely questionable considering what has been found in court about Microsoft's anti-competitive behavior. In short, I believe that Microsoft's current behavior is not addressed by the settlement and that unless the settlement is modified, it will only lead to further anti-trust litigation.

There is also the matter that as far as I can tell, Microsoft is being allowed to keep the fruits of its unlawful conduct. Without court-ordered access to Microsoft's sales records, OEMs who may have a legitimate right to sue Microsoft over its pricing practices will not have the grounds to do so. Further, I don't believe that the settlement effectively addresses the potential of retaliation by Microsoft against these OEMs.

These and other concerns prompt me to ask that the court please reject the proposed settlement.

Subject: Microsoft Settlement

I find the DOJ's proposed final settlement on the Microsoft matter a step in the right direction, but lacking in many key areas. I am writing as provided under the Tunney act that you might consider my opinion as one computer-using citizen of these United States of America. The DOJ's proposed final resolution should include specific measures which insure that Microsoft raises no artificial barriers against non-Microsoft operating systems which implement the APIs needed to run application programs written for Windows. This will allow non-Microsoft programmers to write alternative middleware for other operating systems that will operate Windows-based applications. An example of this is WINE for Linux.

By not providing some protection for software vendors engaged in making Windows-compatible operating systems, the DOJ is missing a key opportunity to encourage competition in the Intel-compatible operating system market.

Additionally, file-formats (e.g. Microsoft Word) should be publicly documented so to allow easier exchanging of documents and content between platforms. This is one measure that can only serve to help the end user by allowing more applications to interoperate on the same documents.

A host of other helpful and pro-competition suggestions can be found at the following URL: <http://www.kegel.com/remedy/remedy2.html>

cheers

Subject: Microsoft settlement  
Gentlemen:

It is an ideal objective in an ideal world to be able to control all the "giants" in the industry, thus the ruling that Microsoft was a monopolist and has broken the law. That ruling, I believe, was intended to rein in Microsoft. However, that same ruling did

produce an unintended result, i.e., it opened up a lot of grounds for uncalled for lawsuits. As I have always stated, there should be a clear signpost on when a developing company has passed the stage wherein they are not anymore considered a developing company. Then, apply the rules of anti-competitive ruling to the fullest extent of the law. This is for control purposes, as far as the State is concerned. Without this clear "signpost", we will always be penalizing highly successful companies, like Microsoft, when we deem them to be too successful to be feared. This method being applied to Microsoft now will only hurt all of us further. What we should be doing instead is setting up a clear groundwork for technological development, encouraging and rewarding market leadership and promoting healthy competition. I fear that if this is not resolved quickly, no company now will dare to become too successful for fear of being the next Microsoft, in terms of litigation.

Hope we can undo some of the harm already done.

Thank you,  
Julius T. Abadilla

Subject: Microsoft Settlement

Microsoft should not be allowed to continue to proliferate it's products at the expense of competitors. It seems that every PC comes with Windows pre-installed and Windows comes with pre-installed software such as Microsoft's Web browser Internet Explorer. This has put a huge dent in Netscape's market share of the Communicator web browser.

And then recently, I read about a recent court decision that ordered Microsoft to give hundreds of millions of dollars of free software to certain financially strapped

schools. That would not be a penalty at all. It was an golden opportunity for Microsoft to further entrench itself in the school system at the expense of Apple Computer and their Macintosh platform. In that case, Microsoft should give money to these schools to buy software and hardware from whomever they choose, giving Apple computer a chance.

Thank you for your consideration of my comments.

Sincerely,  
Derek Pluchinski

Subject: Microsoft Settlement

I'm a disgruntled pc user who has found it increasingly problematic and frustrating to use Microsoft products, including its popular windows operating system and web browser.

Furthermore, I've found the problems especially troubling because I'm aware of the alternatives that do exist, but which are difficult to purchase on new pc systems. This is a direct result I believe, of the monopoly power that microsoft has in the industry. I feel the actions of Microsoft continue, perhaps even at an accelerated pace, to reduce the quality and quantity of choices for pc users. Clearly, the settlement for the crimes committed by Microsoft is not enough. I would favor a much more aggressive discipline of the company. As it stands now, the settlement amounts to little more than a slap on the wrist, and judging from Microsoft's behavior since the end of the trial, it's actually made things worse for consumers. Thank-you.
