 Subject: Microsoft Settlement

Hello  
 I am a software engineer in San Diego California. And as such I am very much involved with computers. What I have recently heard about the Governments choice to settle the Anti trust case against Microsoft is disheartening. I expected that the government would take put the consumers who have been harmed by Microsoft first. In the last 5 years I have purchased 8 new computers, each one came with a Microsoft operating system, of those 8 I still use 3, but only 1 is running a Microsoft OS, OS as part of their bundling requirements I effectively purchased 8 copies of the same software to run on one computer. I believe that as part of their settlement Microsoft should be required to follow open standards prevented by law from extending those standards in a closed fashion. For example, the Keberos spec, which they embraced then changed so that their OS'' would not inter operate properly with other operating systems such as Solaris and Linux. They should also be required to open their standards for many of their products such as the networking so that SAMBA can be made to work properly with windows.

Also I feel that Microsoft should be required to open the source of the operating systems they are no longer supporting, thus allowing anyone to fix the problems that Microsoft will no longer fix, I am not suggesting that they give away their current or previous OS (XP and 2000/ME) but rather that they open windows 95, 98 and NT which they no longer support.

Respectfully

 Subject: Microsoft Settlement

I believe that what is going on is shameful. I do not see the place for politics in legal matters.

Fact: Microsoft has hurt people. They have hurt you and have hurt me. Was this law suit brought forth on legit reasons? Or was it just to find a temporary source of revenue?

I get the feeling it is like the lawsuit brought against the tobacco companies. We now have a legal to sell class 1 carcinogen, which requires no licensing to purchase. Why because people do not matter even when the issue is cancer and death. What matters is money (note 1). So given that Microsoft only hurt people and no one actually died... I expect this to end up just the same.

I want Justice. Will I get some???  
 I can guess the answer...No.  
 Microsoft owns you.

Keith Hudson  
 (Registered Voter)  
 note1: Some people have referred that the ill effects of lost economy/jobs to certain areas are reason enough to maintain the tobacco industry. I stand affirmed that the people and economy of tobacco is smaller then the population dying from it.

From: Chris Vargas  
 To: Microsoft ATR  
 Date: 1/23/02 10:40am  
 Subject: Microsoft Settlement

I'm writing to express my strong concern that the proposed settlement with Microsoft does not go far enough to punish Microsoft for proven monopolistic activities. Not only that, it actually includes wording that could threaten other operating systems'' existences, thereby strengthening Microsoft's monopoly.

In a recent column, industry expert Robert Cringely points out that Microsoft will not have to open its APIs to non-commercial entities; that could easily be seen as allowing Microsoft to lock out Linux and FreeBSD developers from allowing access to Microsoft servers via a tool called Samba. This same tool allows my Macintosh to access Microsoft servers; it could easily be locked out if this settlement goes through. Everyone in the computer industry knows that Microsoft takes advantage of its monopolistic position on a daily basis. We hoped that the remedies would try to reign Microsoft in. These remedies do not do so, and in fact set up the possibility of killing off one of the best non-Microsoft Oses currently available.

From: Miles Pickering  
 To: Microsoft ATR  
 Date: 1/23/02 10:41am  
 Subject: Microsoft Settlement

I am opposed to the proposed Microsoft settlement. My main objection is that the settlement lacks sufficient enforcement provisions and is an invitation to further legal proceedings that could take decades to resolve. A three person team is hardly sufficient to monitor the activities of a multi thousand person organization.

There are many other objections that I have, but that is the simplest.

Thank you,

From: Robert L. Scala  
 To: Microsoft ATR  
 Date: 1/23/02 10:41am  
 Subject: Microsoft Settlement

Dear Justice Department,  
 I believe that the proposed Microsoft Settlement falls short of its goal of restoring competition to the operating systems and middleware markets. I have been a software engineer for 22 years, and have watched this nascent industry go through many changes. One of the distressing developments is software vendors'' use of their products as

agents to influence customers'' future purchases. This is similar but not identical to electric razors working better with ''compatible'' razor blades, thus influencing future purchases. The difference is that while other companies can easily produce competing razor blades, software is so complex that producing a compatible product can be impossible.

I have been frustrated by the proprietary protocols of many software products produced by many companies over the years, not just Microsoft. But those products were all vulnerable to competing products that sold both razor and blade. But with Microsoft's monopoly on operating systems and office software, effective competition is impossible. If microsoft makes a better razor, that's fine, as long as others can compete to make a better blade.

The problem I see with the proposed settlement is that in some ways it also acts as an agent to ensure that customers purchase more Microsoft products. This may sound like a bit of a stretch, but the fine print may grant Microsoft broad powers, such as certifying the authenticity and vitality of a competitor (III.J.2.c) before providing that competitor with information required in other sections of the agreement.

This settlement stinks. Like the Trojan Horse, it looks good on the outside, but the details make it ineffective, and give Microsoft some powers it did not have in the first place. It's time that the software I buy stops working against me. That's what I hoped from this agreement. The whole agreement needs to be tightened up. In particular: P.III.A This section should include a prohibition against retaliation against OEMs that supply a single non-Microsoft operating system on their products. As a customer, I would like the option to purchase a computer from a major vendor with a non-Microsoft operating system, without also purchasing Windows.

I believe that this section misses the mark because dual-boot machines are niche-market items and not a threat to Microsoft's operating systems monopoly. It is the single-boot, non-Microsoft machines that challenge this monopoly. P.III.J.1.a These exceptions should be eliminated, as true security does not depend on the obscurity of the protocols. Secure systems, and the trust of the general public, are better served by using only published and well documented encryption systems. P.III.J.2 This is the big one. This provides Microsoft the vehicle to withhold APIs and interoperability protocols from, for example, vendors of free software. Since recently Microsoft has declared Linux the single biggest threat to Windows, it is strange that Microsoft will be allowed to shut out this important segment of the competitive landscape.

I don't see any added burden to Microsoft if they are required to put the APIs and interoperability protocols in the public domain. That way their main rivals will be able to compete fairly in their effort to provide customers better software. And isn't this what the whole Settlement Agreement is all about? I know little about antitrust law, so I can't comment on the details of this antitrust case or the appropriateness of the

proposed remedy. But I know software, and I'm sure that if the goal of the proposed remedy is to restore competition to the software industry, it will fail.

Sincerely yours,

From: Mark Shepard  
 To: Microsoft ATR  
 Date: 1/23/02 10:42am  
 Subject: Microsoft Settlement

To whom it may concern:  
 As a software engineer with over 10 years experience, I believe the Proposed Final Judgement should —NOT— be approved, for the following reason: The PFJ too narrowly defines “API”. Undocumented APIs allow Microsoft to prevent third-parties from creating software for Windows. Instead, the PFJ should require this: Each time and in every case where Microsoft releases ANY “object code” to anyone or any group, Microsoft should also be required to release ANY AND ALL source-code which defines the INTERFACES the aforementioned “object code” depends on, requires and/or optionally is able to use. Further, this “interface source-code” (a.k.a. “header files”) should be released under a license which allows unrestricted copying, re-publishing in any form, and use of the information by anyone, whether part of the original group to which Microsoft released it or not.

I believe the current definition of API is such a serious defect in the PFJ that it alone will negate the value of the entire PFJ.

Thank you.

 To: “microsoft.atr(a)usdoj.gov”  
 Date: 1/23/02 10:43am  
 Subject: Microsoft Settlement

Problems with the Proposed Final Judgment in summary:

\* The PFJ doesn't take into account Windows-compatible competing operating systems

\* Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

\* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

\* The PFJ supposedly makes Microsoft publish its secret APIs, but it defines “API” so narrowly that many important APIs are not covered.

\* The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines

“Microsoft Middleware” so narrowly that the next version of Windows might not be covered at all.

\* The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

\* The PFJ supposedly applies to “Windows”, but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being “Windows Powered”.

\* The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

\* The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

\* The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

\* The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

\* The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

\* The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

\* Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

\* Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

\* Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux.

(Similar licenses to OEMs were once banned by the 1994 consent decree.)

\* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

\* Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

\* The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

\* The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

\* The PFJ allows Microsoft to discriminate against small OEMs— including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

\* The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs

based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

\* The PFJ as currently written appears to lack an effective enforcement mechanism.

Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

sincerely,  
 -Damon A. Schmidt

From: Thomas Hays  
 To: Microsoft ATR  
 Date: 1/23/02 10:42am  
 Subject: Microsoft Settlement

Six word summary: The settlement is a bad idea.

Details:

I work for as a network administrator for a company that predominately uses Microsoft software for our business. We recently purchased Office XP and Windows XP Pro with some new Dell computers. The problem that I have with this is that resellers are calling me constantly (most recently to say the BSA is doing an audit in our area, and asking if I'm sure my company is legal?) and “advising” us to discard our OEM license and buy the “real” open license. Of course they want to sell us upgrade-assurance which is the first step in subscription based software.

Want another problem area? Look at the security mess we have to deal with concerning Outlook. It may look nice and be intuitive, but is it secure? Even after what 5 or 6 years of development, it's still not secure. Yet Outlook is the predominant email software in business because it comes “bundled” with several versions of Office. I believe it could be successfully argued that Netscape/Mozilla, Eudora, or Pegasus mail are all more secure, yet how many people use them. How many people even know there are other email software packages besides Outlook.

A final complaint, the push of passport. With Microsoft's terrific security record I'm really thrilled with the idea of all my logins and a considerable portion of my personal information being stored by them so I can access common financial packages like

Microsoft Money (the newest version nags you to set up a passport account) or Ebay and other web sites which are offering Passport logins.

What would help the consumer the most would be competition. Competition would drive us towards more affordable and better written software.

Thank you.

**MTC-00016185**

From: Timothy Miller  
To: Microsoft ATR  
Date: 1/23/02 10:42am  
Subject: Microsoft Settlement  
Dear Department of Justice:

I wish to register my objection to the proposed settlement between Microsoft and the DOJ.

As capitalists, we recognize how vital it is that there be vigorous competition in every marketplace. Consider the competition between Intel and AMD. I suspect that without AMD, Intel would be putting more energy into maintaining its already huge market share, rather than putting that energy into improving their products. The result of the competition has been that Intel and AMD have been fighting tooth-and-nail to compete based on the QUALITY of their products, and everybody wins. Microsoft has no such competitor. There is no one who directly competes with Microsoft in the same market, so Microsoft gets comfortable and lazy and takes action only to maintain their position by precluding any other company from entering their market. Consider the recent events involving LindowsOS. Microsoft's primary concern is that since LindowsOS can run Windows software, it might compete with them, so they will find any excuse they can to tie their would-be competitor up in court so they can't function.

And that is the crux of the matter. Microsoft has been declared a monopoly, and they have been found to have acted anticompetitively. Despite this, they continue to act as they always have.

The objective of the DOJ and the Court should be to protect competition, because competition is what benefits consumers and the economy. I have read the Proposed Settlement, and I, like everyone else I know, have found it to be filled with loopholes. It does nothing to repair any of the past damage that Microsoft has caused, and it does very little to prevent them from acting inappropriately in the future. In fact, it has wording that implicitly protects Microsoft from revealing trade secrets to Open Source developers. The Open Source movement is the one of the few things that has been able to survive and grow against Microsoft in recent years, mostly because there's no one specific that can be sued into oblivion. I was very sad the day I read that the break-up order had been taken off the table by the Bush administration.

Honestly, I think the Proposed Settlement does more harm than good because it gives Microsoft license to continue their past behaviors with government sanction. The Settlement is not helpful to consumers and should be rejected.

Thank you.

Timothy Miller

From: Aaron Patterson  
To: Microsoft ATR  
Date: 1/23/02 10:43am  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. Microsoft was found guilty of antitrust violations for using monopoly power to extend their influence into other markets. Leaving Microsoft intact with windows, office, internet explorer, and the ability to continue bundling, continue unfair pricing, and continue creating

undocumented APIs in the name of security will not bring competition into these markets. Creating a settlement that relies on further protracted litigation to correct future transgressions will not provide just, expedient results.

If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,

Aaron Patterson

**MTC-00016188**

From: kiez@speakeasy.net@inetgw  
To: Microsoft ATR  
Date: 1/23/02 10:28am  
Subject: Microsoft Settlement  
To Whom It May Concern...

I'm wondering when the law stopped being about doing right and achieving justice and instead turned to "settling". Especially settling with —Microsoft—, a known and repeat offender which has shown nothing but contempt (when it has cared at all) for the ongoing litigation against it. Since when do law-breakers have to agree to their punishment?

Microsoft corp is guilty of the premeditated bludgeoning Netscape corp to a bloody pulp (with a killer app). Or, from another point of view, the Mafia is guilty of "anti-competitive behavior". The remedy for this Microsoft situation and the ongoing situation (try uninstalling Windows Media Player or Windows Movie Maker from Windows XP—I certainly can't figure out how) shouldn't involve Microsoft agreeing to it [I've not seen them admit any guilt] or rely on Microsoft changing internal behavior to abide by it [see also "consent decree"].

But also consider:

1) All current Microsoft sales contracts to OEMs are null and void. Microsoft must write a new, open contract that anybody can take advantage of to purchase any software that Microsoft makes available in an OEM fashion. Volume discounts not allowed according to them—there are no barriers to entry in the software market, ergo minimal distribution costs in the OEM channel, therefore nothing to discount. (Dell will be charged the same amount for a Windows license as the corner parts shop down the road.)

2) Prior to releasing a version of Windows, Microsoft must submit its entire source code to a government compliance committee. If

said committee cannot make the code compile in a way that makes it look the same as the "gold" Windows code, the Windows product cannot be released. Further, committee will be allowed to freely redistribute their findings about the current state of Windows interfaces (APIs) as a standard to allow other people to adopt the Windows standard. (Or is it "embrace and extend" the Windows standard? Anyway, the difference with this suggestion is that Microsoft isn't allowed to sell a new version of Windows until the APIs are in the public domain so compliance will be rather less of an issue.)

3) Just as a side suggestion, the fees Microsoft charges for support can never be more expensive than what Microsoft charged for a specific application. For example, if Outlook Express (free, bundled with Windows, haven't figured out how to uninstall it—but the splash screen says Outlook Express, not Windows XP) is giving you problems, you can get support for it for free. Windows is giving you problems? Support costs are maxxed out at the OEM price of Windows. This would give Microsoft an incentive to deal quickly and directly with consumers in a manner that rapidly resolves the consumers' problems—as opposed to telling them to ask their hardware vendor. (Really, what does Dell know about Outlook Express?)

Anyway, the first two points would be the most important: Microsoft cannot do business as usual anymore because their usual business is —illegal—. Point 3 is just a remedy for my personal frustration with Microsoft products.

The point is is that this is a real remedy, not something that Microsoft can say "no" to because they don't feel like it, not something that they can look back on in a few years and say "see how nice we are?"

Quite frankly, if wrongdoing is found in the Enron case, we're not going to fine Mr. Lay \$50 and send him out to be a motivational speaker at high schools. ("Hi Kids! Creative accounting more or less worked for me, and it can work for you too! Oh, and stay of drugs—they're expensive." It just wouldn't happen.)

So why should we consider giving such treatment to a company that won't even admit it's bad behavior?

Sincerely,  
Jason Miller  
e-Business Application Developer  
Portland, Oregon

Date: 1/23/02 10:43am  
Subject: Microsoft Settlement

To whom it may concern:

I am opposed to the Proposed Final Judgment to the United States v. Microsoft Corp. As a software engineer, and a computer enthusiast, I have followed the Microsoft antitrust trial closely, and have been aware of the impact of Microsoft Corporation's anti-competitive practices for much longer. In my opinion, the Proposed Final Judgment does not go far enough to prevent Microsoft from continuing these anticompetitive practices.

In particular, the Proposed Final Judgment too narrowly defines the "Microsoft Middleware Product", and eliminates from definition U: "Windows Operating System Product" several important Microsoft operating systems. In order to effectively limit Microsoft's ability to stifle competition, the definition of "API" should probably be expanded to include many other APIs that a conservative interpretation of the existing definition might exclude. I believe that, in addition, Microsoft's overly restrictive licensing that discriminates against Independent Software Vendors who develop solutions for open source operating systems, or ship open source software must be effectively remedied in any acceptable Final Judgment.

From: Troy  
To: Microsoft ATR  
Date: 1/23/02 10:41am  
Subject: Microsoft Settlement

I think the proposed settlement is a bad idea. Microsoft has long been a thorn in the side of independent achievement. While I use their products regularly, I find that I use them because no other company can produce an equivalent or better product without being pounded into the ground by MS or bought out. I would like to see their practices change, it would be better for us and better for them in the long run.

Troy Daley

#### MTC-00016191

From: Randy Walton  
To: Microsoft ATR  
Date: 1/23/02 10:43am  
Subject: Comments regarding the Microsoft Settlement

To reviewers of public comments regarding the Microsoft Settlement, I understand that I have the ability to comment on the proposed settlement between the Justice Department and Microsoft. I have been using computers daily since the mid-eighties, when my father brought home an early portable IBM computer. I hope to earn my livelihood by working in the computing industry. Consequently, this issue is centrally relevant to my life.

It is widely believed by those familiar with the case that the proposed settlement is completely inadequate. It will do little to punish Microsoft for its plainly illegal conduct in the past, and virtually nothing whatsoever to prevent future violations of antitrust law. As a consumer, it infuriates me to be forced to pay for increasingly expensive software that diminishes in quality with each release. I applauded the Clinton administration's investigation of Microsoft. Their case was an effort to protect consumers and promote economic growth by restoring fairness and competition to the computer industry.

Now that the DOJ is under new management, it has essentially abandoned its pursuit of Microsoft, suggesting that the DOJ no longer has any concern for either economic growth or the public good.

The United States is a successful nation because its free markets encourage firms to compete for customers by producing high-quality, low-cost goods. This system needs to be protected from monopolists who gain so much power that they can destroy the competitive nature of the markets in which they participate.

I urge all parties involved to reconsider the proposed settlement. Microsoft deserves more than a slap on the wrist for its destructive abuse of its monopoly power. More importantly, American consumers need to be protected against future abuses.

Thank you for your time,  
Randall Walton

**MTC-00016200**

From: felix@crowfix.com@inetgw  
 To: Microsoft ATR  
 Date: 1/23/02 10:43am  
 Subject: Microsoft Settlement

This Proposed Final Judgement is a travesty of injustice. Have you learned nothing from the previous settlement? Look at Microsoft's behavior since all the verdicts. They have changed their attitude not a whit. They have no remorse, they still deny their guilt, they stall the legal process at every opportunity, they still step on competitors, they still accumulate an incredible cash reserve ("What? A monopoly? Nonsense, we earn this incredible gross margin through innovation!"), they are, in short, as bad a monopoly as the country has ever seen. And this settlement might well have been written by Microsoft. It is full of weasel words and loopholes. Nothing is pinned down. There are far too many vaguely defined adjectives. This was written with the sole intent of providing grounds for any and all interpretations. Microsoft will argue and debate and stall and obfuscate just as they have always done.

The oversight committee is a joke. They have no powers, and Microsoft gets to appoint one of their own choosing. Pardon me, can I go commit a major crime and appoint my own parole board? Better yet, let me write the terms of my own parole. And O By The Way, let this parole board have no power whatsoever. As far as actually serving any hard time, ha ha ha, fooled you!

From: James Risner  
 To: Microsoft ATR  
 Date: 1/23/02 10:43am  
 Subject: Microsoft Settlement

I am writing to you about the Microsoft settlement.

I am James Risner from 1600 Woodspring Court, Lexington KY. I have owned an ISP since 1995 in Kentucky. The 1995 Consent Decree is nearly identical to the settlement. It is my belief that they will violate the settlement just as they did they decree. Microsoft destroyed Netscape because it was a threat to their OS system.

Microsoft put code in that would post an error and fail to run Windows 3.1 when ran with a DOS other than MSDOS or IBMDOS at the time. This prevented the use of Dr DOS at the time.

Microsoft copied Stac compression for their own compressed filesystem code. Stac sued and won \$120 million settlement, but by the time the money was delivered Stac no longer had a product since Microsoft produced a clean room version of the code.

The settlement requires "secret" API to be published but defines it narrowly so that not all API would be required to be published. Many other narrow provisions allow Microsoft to place independent software vendors in the position of not being able to keep their product supported in newer

Windows version since they do not get advance warning of significant operating system changes. The 1995 consent decree prohibited anticompetitive license terms, but did so narrowly such that these type of terms continued in Microsoft's Internet products, media players, software development products, and enterprise purchasing license agreements. The same action considered bad and anticompetitive in one situation, should be consider bad in all instances.

It is my belief that Microsoft has no intention of obeying this command and will continue to attempt to interpret loopholes they can use to continue their actions using their \$40 billion in cash to defend against any action the government attempts to curtail their illegal behaviour.

Microsoft has done more hard to the economy that healing. I wish I could say there was a viable alternative to their product that I use daily, but I would be lying. This is certainly not due to any effort of the part of their competitors.

Risner  
 $(\cos(\Theta-r)\sin\Theta)(r-4-2\cos(2\Theta+2.4)r-2+0.9)+(2.46428\times 10^{-208})r-1000 < 0$

Dear Sirs or Maam,

I am a US citizen and I wanted to exercise my rights under the Tunney Act in regards to the Microsoft Trial. Here is my feelings, I believe that Microsoft was let of easily. While I believe that it is necessary to maintain the stability of a company within the bounds of the US. ie Keep the company reasonably happy and not drive it away. I think it is necessary to set specific standards and laws that help the average US citizen. Not the company. I believe that this ruling did the best thing for Microsoft. It was too leanant and needs to be more firm. Microsoft is slowly killing it only reasonable competitor. And it's competitor is free. In my humble opinion it is also killing off other competitors. Nullsoft was bought by AOL.

Their product is free. Netscape is gone. All these products are continuing to disappear.

Hello,

As a concerned citizen and professional software developer, I wish to comment on the proposed Microsoft settlement. I do not feel the Proposed Final Judgement (PFJ) would prevent Microsoft from continuing anticompetitive practices, and I do not believe it would level the playing field for competing Windows-compatible operating systems. Specifically, although the PFJ forbids retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows, it does not ensure that Microsoft could raise no artificial barriers against non-Windows operating systems which implement the APIs needed to run application programs written for Windows. Therefore it should not be adopted without considerable revision.

Sincerely,

From: Dave Newcum  
 To: Microsoft ATR  
 Date: 1/23/02 10:41am  
 Subject: Microsoft Settlement

Microsoft deserves more than a slap on the wrist for its destructive abuse of its monopoly power. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation that would otherwise be stimulated through competition. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Sincerely,  
 David Newcum

Date: 1/23/02 10:44am  
 Subject: Microsoft Settlement  
 Dear Department of Justice,

I'm writing to comment on my negative opinion of the Proposed Final Judgement to the Microsoft Anit-trust case. Specifically, the judgement seems to be completely oriented towards Microsoft's licensing practices with third party (OEM and the like) vendors, and does nothing to prevent Microsoft from completely circumventing the judgement by their licencing practices with the end users. Specifically current Microsoft volume licensing policies, require that once subscribed to their new licensing structure that no contracts may be entered into that allow an end user to install or use competing software from what Microsoft offers. Now I may not be taking the language straight from the horses mouth, but according to many sources, including CIO magazine (see attached link below), this is their current licensing practice. In my opinion, this is in response to the DOJ settlement, and appears to be done by Microsoft to continue their unfair and monopolistic practices. As a software developer, systems designer and integrator, my business will be under significant additional stress from this kind of monopolistic practices, if Microsoft is allowed to continue to put undue, and in my opinion, illegal pressure on it's end users to use no products which compete with their own. Clearly, in my mind, Microsoft wishes to work in an environment where the only choices are Microsoft, or nothing at all. I would like to see a settlement which specifically addresses this kind of anit-competitive practice, and which does something more tangible that what the current proposed settlement offers, to enforce fair competitive practices, and penalize Microsoft for failing to comply with these terms.

Thank you for your consideration.

From: Eric Busboom  
 To: Microsoft ATR  
 Date: 1/23/02 10:45am  
 Subject: Comments on Microsoft Settlement

The PJF is disastrously weak, as many commentators have already noted over the last few months. As a programmer who has suffered with the poor quality operating systems that Microsoft has distributed for the last 20 years, I am disgusted that my government would allow Microsoft to continue to strangle the software industry. Many of the key restrictions in the PJF relate to Microsoft middleware, but the definition of "middleware" is weak and the the restrictions are easy to avoid. Specifically,

\* Because a software unit will cease to be defined a middleware a year after it is

incorporated into the Operating System, the PJF encourages Microsoft to integrate more functions into the OS. I had hoped the PJF would discourage this, not promote it.

\* Programmers need the APIs in the OS published more than the APIs to middleware. Without documented OS APIs and program document formats, Microsoft can continue to stifle development from ISVs.

The PJF was clearly constructed so that Microsoft could avoid any hindrance to its predatory business practices, and if it becomes final, it will only serve to maintain status quo.

Eric Busboom.

#### MTC-00016215

From: Eric Butler Evans  
 To: Microsoft ATR  
 Date: 1/23/02 10:44am  
 Subject: Microsoft Settlement  
 Tunney Act comment:

My comments concern the enforcement provisions of the Proposed Final Settlement. The provisions seem to assume that Microsoft will make a good faith effort to comply with the provisions of the PFS. This assumption is not justified. Microsoft has demonstrated contempt for the Court in all of its interactions with the Court; there is no reason to believe that it will comply more effectively with the PFS than it did with the 1994 consent decree.

The enforcement provisions provided in IV, B of the Proposed Final Settlement are inadequate for the following reasons:

1) The enforcement provisions rely on ongoing monitoring efforts by the states acting as a committee. (IV, B, 1); this system of governance will result in a reduction in the efficiency of the monitoring process as the states have already demonstrated that their interests are not identical by splitting in their acceptance of the Proposed Final Settlement.

2) The enforcement provisions prevent the states from disclosing information revealed by Microsoft in the process of enforcement (IV, A, 2, b).

3) Microsoft is given a role in the selection of the Technical Committee (IV, B, 3). Given Microsoft's previous history of disregard for consent decrees and other legal sanctions, the likelihood that Microsoft will use its appointment power to undercut the effectiveness of the TC is high.

4) Given the powers of the TC (IV, B, 8), it will require an extremely large staff. The expense of monitoring Microsoft's compliance, especially given the company's past history of grudging and incomplete compliance with the 1994 consent decree, will be very substantial.

5) Microsoft is given the power of appointing the Compliance Officer (IV, C, 1). Given the company's past history of grudging and incomplete compliance with the 1994 consent decree, it is unlikely that the company will appoint a CO who will attempt to comply with the present settlement in good faith.

6) The powers to the TC and CO do not extend beyond acceptance of complaints from 3rd parties which can be forwarded to Microsoft to "accept or reject" (IV, D, 3, c) or proposing cures (IV, D, 4, c). Without the

authority to mandate cures, the enforcement authority will be ineffective, given Microsoft's history of evading consent decrees.

Microsoft's crimes demand a structural remedy, not the establishment of a powerless "compliance" authority.

Sincerely,  
 Eric  
 Eric Evans

#### MTC-00016217

From: Chris Parrinello  
 To: Microsoft ATR  
 Date: 1/23/02 10:46am  
 Subject: Microsoft Settlement

To Whom It May Concern,  
 I am writing with regards to the proposed settlement between Microsoft and the Department of Justice. I believe that the settlement in light of the fact that the courts have decided and upheld the fact that Microsoft has violated the law, is not a punishment at all nor it is strong enough to modify the illegal and anti-competitive behavior of Microsoft. The proposed final judgement (PJF) has the following flaws:

The PJF doesn't take into account Windows-compatible competing operating systems

\* Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PJF fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PJF Contains Misleading and Overly Narrow Definitions and Provisions

\* The PJF supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

\* The PJF supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

\* The PJF allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PJF should therefore allow users to replace Microsoft.NET with competing middleware.

\* The PJF supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered". The PJF fails to require advance notice of technical requirements,

allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

\* The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

\* The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

\* The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

\* The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

\* Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

\* Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

\* Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

\* Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

\* The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

\* The PFJ allows Microsoft to discriminate against small OEMs—including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

\* The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism.

With these flaws taken in part or in whole, the PFJ does not serve justice nor does it address the damage that has been done in the high-tech industry with respect to the innovation that Microsoft has PREVENTED because of its anti-competitive behavior.

I think the Microsoft Anti-trust settlement is a bad idea. While it may help to deter them from further violations, it doesn't do enough to restore competition to the market. I suggest either breaking them up into at least 4 companies (OS Core, OS GUI, Applications, and hardware), or force them to expose all OS, and application APIs—including Microsoft Office file formats. They should also not be allowed to break the cross-platform nature of the Internet by implementing platform specific “plug-ins” (ActiveX components) in their web browser.

I am submitting this comment, as permitted by the Tunney act, regarding the remedies proposed as the outcome of the Microsoft Antitrust trial. As a scientist in training, I must work with non-Microsoft operating systems and products every day. The proprietary and ever-changing FILE FORMATS used by Microsoft, however, make even the exchange of simple text files between Microsoft and non-Microsoft programs incredibly cumbersome. Any proposed Microsoft remedy which does not include the absolute requirement for openly published data file formats falls far short of the required public benefit.

On the day-to-day office work level, it is this intentional file format incompatibility which forces purchase of Microsoft products, and further, it is the artificial incompatibility BETWEEN VERSIONS OF THE SAME MICROSOFT PRODUCT which forces purchase of ever newer Microsoft products, EVEN THOUGH THEY FREQUENTLY ADD

NO RELEVANT FUNCTIONALITY OVER THE OLDER PRODUCTS.

Publicly available Microsoft file format specifications would allow third-party developers to produce file conversion tools which completely obviate this unfair Microsoft practice.

Thank you for the opportunity to respond to this judgment.

DOJ's “NEVERMIND” WAFFLE

The proposed settlement with Microsoft is completely unconscionable. After having won the case on nearly all accounts, the DoJ has handed out a resounding “nevermind”. What a complete waste of public funds. Highly suspicious, as well, considering the amount of influence big business in general has had over the past few elections. Something here just doesn't add up.

MICROSOFT FRAGMENTS AND DERAILS THE WEB

As a freelance Web site designer I suffer daily from the lack of choice in operating systems and Web browsers available today. Microsoft continues to short-circuit and preempt efforts by the World Wide Web Consortium (W3C) to standardize Web technologies that would make interoperability between different operating systems and Web browsers very simple. Instead, I need to code my pages (scripting and Document Object Model, specifically) at least three redundant ways so they work in MSIE and Netscape 4, as well as the new standards-compliant browsers such as Netscape 6 and Opera. Netscape has done the right thing; Microsoft needs to be forced to adhere to Web standards, rather than continue to slyly compel Web designers to continuing to use proprietary coding which only serves to maintain Microsoft's monopoly.

OPERATING SYSTEM CHOICE

The settlement does nothing to protect other operating systems which might

compete with Microsoft, specifically Open Source OSes like Linux.

#### SECURITY

The continued lack of security in Microsoft products creates horrendous situations regarding national security, business security and personal data security. If there were diverse OSes and Web browsers, virii could not take out such large portions of the world's tech infrastructure in one fell swoop.

I hope the DoJ will reconsider this joke of a settlement and rein in Microsoft. Reneging on the judgment sends an unsavory message to other tech businesses—that it's okay to misbehave, the DoJ doesn't care.

From: Glenn Patterson  
To: Microsoft ATR  
Date: 1/23/02 10:45am  
Subject: Microsoft Settlement

As a software developer I believe this settlement is a bad idea. It has been shown time and again that MS will do anything to keep it's monopoly. It is obvious to anyone involved in software/hardware that MS uses it's monopoly to drive companies to buy their products and then locks them. Once a company begins developing with MS products they are forced to continue because of the high cost they would face to switch to other solutions. Further, MS will then upgrade it's products, forcing anyone using them to buy the next release or their lose support for the version they are on.

There are many issues with regard to this settlement and I refer you to <http://www.kegel.com/remedy/letter.html> for more information. If this settlement is allowed to go through it will have been a waste of time, money, and great energy on the part of the government and all involved.

Subject: Microsoft Settlement

To Whom It May Concern,

As a consumer of Microsoft products for over 15 years and a citizen of the United States, I've got a few opinions I would like to share with the Department of Justice, The Federal Court and the general public.

The progression of the Microsoft Anti-Trust trial over the past couple of years has filled me with hope that we were after all a nation ruled by laws rather than by money. The decision of the Department of Justice to conclude the proceedings with a hastily negotiated settlement after they had all but won the day has been a sad realization for me that we still have a long way to go.

Any person with sense can see consumer choice is limited when the same company that produces the operating system used by 80% of the desktops in the country also produces software to run on that operating system. Name any competitive Word Processing Program on the market. There are none. Is that because Word Processing Programs are so tough to write? Is that because Microsoft's Word Processing Program is so good? It's because Microsoft is constantly making efforts towards it's prime goal—the creation of a unified, monolithic Desktop under their control. Whether by coding practices, marketing practices or by manipulation of the legal system, they have been more successful than not in achieving their prime directive.

Regardless of the lack of acceptability of the current situation, it appears that the current administration is less than ardent in pursuing justice at the risk of their campaign and whatever other contributions they can expect from Microsoft.

Given that situation, the current structure of the initial agreement between the Department of Justice and Microsoft should be modified to expand the portions on interoperability. A strong emphasis in the resolution on this one area will yield the greatest longterm benefits to the industry and the consumer. If Microsoft's standards and interfaces were well known natural competition will follow. To state that such information is a security risk is merely covering the weaknesses of an insecure platform.

Second, any penalties that should be levied on Microsoft need to be recompensed in Cash! Anything but goods and services! The very nature of Microsoft's business model seeks deployment of the maximum amount of software to obtain dependency among the greatest number of people. By exacting payment in goods and services you will

simply be helping them to achieve their prime objective. Simply put, your settlement should try harder to make the bad guys work with the rest of us in a fair manner and your penalties should not let the bad guys do more bad.

Scott Pepple

#### MTC-00016229

From: Jack Park  
To: Microsoft ATR  
Date: 1/23/02 10:46am  
Subject: Microsoft Settlement

May I please offer a comment, one that I think addresses the primary issue in relation to Microsoft's ability to remain a monopoly. If is this: If competitors have the ability to create and offer for sale truly compatible products, I believe that the capability to maintain a monopoly position in the market will be greatly reduced.

Of greatest importance is the Microsoft Office product. I strongly believe that the Microsoft Office file format specification should be completely documented and those documents kept completely in synch with any version changes Microsoft makes. Those documents must be made public domain, usable without any restrictions. This, I believe, will make it much easier for competitors to guarantee file compatibility with Microsoft products.

I am certain that there are other issues at stake here. I have chosen to focus on the particular issue I think most important.

#### MTC-00016231

From: David  
To: Microsoft ATR  
Date: 1/23/02 10:46am  
Subject: Microsoft Settlement

Dear Sir or Madam,

I am writing in regards to the proposed settlement of the Microsoft Anti-trust case.

In my considered opinion as a Computing Systems Manager I must disagree with the proposed settlement as it is currently written. While I agree with the decision that Microsoft is in violation of anti-trust laws, I feel that the current proposed settlement

needs additional work and review before it will effectively curtail these monopolistic practices. In broad strokes, my primary objections are as follows.

1. The wording of restrictions need further examination for loopholes and easy methods of circumvention. I suggest that the attorney's involved seek additional technical/computing advisement in understanding the details and ramifications of these issues. Example: The Definition of Microsoft Middleware is overly exclusive and appears to be avoidable by changing version numbering or distribution methods.

2. API and Protocol sharing are too limited to insure that other developers and operating systems can compete with MS products. The limits placed on what must be shared/revealed does not address the issue of "porting" software designed to run on the Windows line of MS operating systems to other OS's or support for software designed to run Windows based applications on systems running a non-Microsoft Operating system.

Example—This would not reduce the application barrier to entry for such software as the WINE project that endeavors to allow the use of software written for Windows on a computer running the Linux OS.

3. Enforcement of the decision and the watchdogging of MS's compliance needs further review and strengthening. The specifications for who can serve in this role need greater definition and the position needs more ability to enforce the settlement and curtail further monopolistic practices.

4. The settlement does not address proprietary digital document formats. This is a very specific issue but very important. One of the greatest barriers to competition with MS Software is the proprietary nature of documents created using the MS Office Suite software. The MS Word document format has become the de facto standard in business. Due to the proprietary nature of its encoding no other developer of word processor software can gain significant entry into the market due to the inaccessibility of this format. In practice a business MUST use MS Office to do business with other companies. This also has the effect of effectively reducing the choice of operating systems to be used by businesses to those OS's that run Microsoft Office, thus reducing competition in the OS market as well.

There are many other issues that seem to make the current settlement less than effective. Please consider researching some of the excellent commentaries and essay's available by other concerned parties as they far exceed my modest research.

To restate, I can not advice acceptance of the current proposal and strongly suggest continued revision and strengthening of the measures taken to rectify the damage already done by Microsoft's anti-competitive practices and prevent their use in the future. Please feel free to contact me if I may be of help in any way.

Thank you,  
Sincerely,  
David Ehle

From: Nothingface  
To: Microsoft ATR  
Date: 1/23/02 10:46am  
Subject: Microsoft Settlement

I would like to express my concern that the Proposed Final Judgement is not adequate to solve the problems it attempts to address. I think in many cases, the Proposed Final Judgement is structured in such a way as to encourage and support Microsoft continuing business practices that are harmful to the economy and society.

I agree with Dan Kegel's analysis and proposed solutions; his comments can be found here: <http://www.kegel.com/remedy/letter.html>

From: wayne barker  
To: Microsoft ATR  
Date: 1/23/02 10:46am  
Subject: Microsoft Settlement

To whom it may concern,

This email is being written to express my deep disappointment with the proposed settlement of the Microsoft Antitrust case.

I am a systems administrator at a design firm. As a computer professional, I have used Microsoft products for years—I am typing this email on one now. Over the 10+ years that I have used computers professionally, I have often been amazed at the unfair and inhibiting practices that Microsoft engages in. Their reputation as the "Evil Empire" is not a title lightly given nor is it undeserved. There have been an inconceivable number of times that I have had to patch a system/server/application due to shoddy programming by Microsoft, or worse yet to try to work around an intentional disabling of a feature that made a competitors product unusable.

Microsoft is certainly capable of producing a quality product—I use several, in fact the majority of the computers I personally own run legally purchased copies of Microsoft operating systems and applications. However, I strongly support a the use of penalty, forced restructuring, and individual user remuneration, in order to convince Microsoft, in a definitive way, that they will no longer be allowed to manipulate and (more often than not) impede technological and social advancement in this country solely in order to maximize their profits.

There is an attitude, from Bill Gates down, that we work for them, that they will give us what they want to give us, and damn America if they don't like it. As has been suggested in a recent initiative to expand broadband access throughout this country as a means to enhance economic rejuvenation, the technological health and robustness of this country IS a national security interest. I do not believe for one second that Microsoft would fail to take advantage of any opportunity to further their market dominance, at the expense of ANY other concern, including and specifically those that

threaten the reliability and independence of the computers users of this world. Indeed, the cynical nature of their proposed settlement, given that it would seriously degrade one of their few competitors small niche markets (Apple in education, where Apple is a much better suited product) is just one example of a DAILY litany of abuse, neglect, and misinformation.

Our society, more than almost any other on this planet, has embraced the Technological and Computer revolutions. Our future is CLEARLY tied to these areas, as our dominance in other resources and arenas wanes in an ever-more free-market world.

Given this, we as a country simply cannot afford a behemoth of this stature and hubris to define and manipulate our progress. Standard Oil was a ubiquitous force which controlled vast stretches of our countries energy supplies, but was dethroned in a move that strengthened our nations health and enhanced progress. AT&T WAS the "phone company", but their breakup, in allowing and encouraging competition and innovation in the communications infrastructure, was a significant force in encouraging our current technological revolution.

It is now the time to restructure, penalize, and otherwise mollify Microsoft's ambitions, so that the health, wealth, and opportunity of our future is that much more realizable. We have enough threats and issues to deal with outside of this country, please deal effectively with this internal one, and place us on a firmer more secure footing for the trials that lie ahead.

And thank you very much for allowing a member of the public to express their concerns over this issue—I am honored.

Sincerely,  
Wayne Barker

From: Michael McCafferty  
To: Microsoft ATR  
Date: 1/23/02 10:48am  
Subject: Microsoft Settlement

I wish to comment on the proposed settlement in the case of US vs. Microsoft.

While I believe that there are several shortcomings of the proposed settlement, I feel the greatest oversight is the weak provisions for enforcement of future conduct. The settlement as written provides many loopholes, and Microsoft's management have demonstrated their willingness to exploit any such loopholes in pursuing the letter of the law, at the expense of the spirit. Any company whose leadership would introduce false evidence into court, get caught, and replace it with other false evidence, cannot be counted on to abide by laws or codes of conduct which permit any ambiguity.

The current proposed settlement is tantamount to the DOJ walking away from a case that they've already won. Microsoft

gained its current monopoly status illegally, and must be forced to behave like a monopolist. This proposed settlement will not significantly influence the behavior of Microsoft's executives. A new remedy should be sought.

Sincerely,  
Michael McCafferty

I support Microsoft on the case of AOL Vs. MS. I am not an Microsoft employee, but after seeing the way AOL operates, I support Microsoft. I also develop my own web browser, 404Browser, 404Browser.com. One of the arguments that I heard that AOL used against Microsoft is that they underpriced their web browser (free). On the internet it is a joke if someone charged money for there web browser. AOL is even a bigger monopoly that Microsoft is. AOL's software will not even allow you to run alternative internet applications outside their program.

From: Dylan Tack  
To: Microsoft ATR  
Date: 1/23/02 10:48am  
Subject: Microsoft settlement  
To Whom It May Concern:

I have read, and am opposed to, the proposed settlement in the Microsoft Antitrust trial. Please consider a vote against it.

In particular, I am opposed to the overly narrow definition of "API" in the proposed final judgment. Microsoft should be required to document ALL Windows interfaces, so that competing vendors (such as Codeweavers, makers of WINE) can compete fairly in the market.

Also, the proposal does little to redress Microsoft's past actions, and only places (inadequate) restraints on future behavior. Heavy fines should be assessed, with the proceeds used to support Open Source development of alternatives to Microsoft products.

From: Lucas Marshall  
To: Microsoft ATR  
Date: 1/23/02 10:47am  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: Zachary D. Noffsinger Erbaugh  
To: Microsoft ATR

Date: 1/23/02 10:49am  
Subject: Microsoft Settlement  
To Whom it may Concern,

I am a professional in Information Technology, and am writing to you as part of the Tunney Act comment process about the proposed settlement of the antitrust case against Microsoft.

I am severely concerned about the proposed settlement. One of the most striking problems is the lack of any provision for disclosure of Microsoft protocols to not-for-profit organizations (as determined by Microsoft—cf. Section III(J)(2), Section III(D).) This would allow Microsoft to deny access to the most important competitors to Windows, including Linux (operating system), Apache (web server), and SAMBA (network server.) These systems provide consumers with options that are less expensive (both in terms of purchase price and Total Cost of Ownership) and more secure than the software Microsoft produces.

The current settlement would allow Microsoft to effectively destroy some or all of the above systems by denying them access to Windows standards, simply because they are not "businesses" in the traditional sense. It is ironic that such organizations are not being recognized by the U.S. government in this settlement, since they are more democratic and egalitarian than their for-profit counterparts. Furthermore, free and "Open Source" (www.opensource.org) software has been repeatedly shown to be more secure than Microsoft's (often flagrantly) insecure products, and provide the impetus for increased security and reliability, which are important considerations in the world in which we now find ourselves.

I urge you to not let the proposed settlement stand. Seek further technical counsel on the implications of any proposed settlement. With appropriate advice from within the industry, the settlement can be written in such a way that the options of computer users, the viability of non-profit innovators, and the security of computer networks in this country are protected.

**MTC-00016247**

From: Jim Rankin  
To: Microsoft ATR  
Date: 1/23/02 10:50am

Subject: Microsoft Settlement

I am a consulting engineer at Apple Computer, concerned about how Microsoft's anticompetitive behavior could hinder my company's ability to reach customers with the creative and innovative products for which Apple is known. I also speak as one who wants a future where technology innovation cannot be held back by a single corporation's anticompetitive behavior. This message does not necessarily reflect Apple's views.

I am concerned that the proposed final judgment in the Microsoft antitrust proceeding does not accomplish what it claims to accomplish. The language is drafted loosely enough to allow Microsoft to avoid following the intent of the judgment in many points. Specifically, see the issues raised at <http://www.kegel.com/remedy/letter.html>.

The stated intent of the proposed final judgment is an appropriate response to Microsoft's crimes. But if this intent cannot be enforced and allows Microsoft alternative ways to engage in anticompetitive behavior, it is worthless. Please revise the proposed final judgment to truly prohibit and appropriately punish any future anticompetitive acts by Microsoft.

Mistakes made now may never be undone. The proposed final judgment seems to require bringing entirely new proceedings to address any future anticompetitive actions by Microsoft. There may never again be the political will or opportunity to correct flaws in this proposed final judgment later if they are not corrected now.

Sincerely,  
Jim Rankin

Subject: Microsoft Settlement

I am upset with the way that the PFJ fails to punish Microsoft for its historical pattern of illegal action and monopoly driven dominance of the computing industry.

In particular, the Proposed Final Judgment seems to do very little to actually "punish" Microsoft. The entire agreement is vague, punishment is easily evaded, and the "punishment" does very little to strike at the heart of their core business (which, unfortunately, seems to be the maintenance of their monopoly).

Those with more than five years of experience in the industry are fully conversant with MS's poor behavior and tendency to slide toward proprietary lock-in; I, as well as others, would be happy to comment upon their past indiscretions if need be.

Thanks so much for your time.

From: Joe Bowers  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 10:51am  
Subject: Microsoft Settlement

I would like to register my objections to the Proposed Final Judgement of the United States vs. Microsoft.

As a professional software developer with experience working in Microsoft Windows and non-Windows environments, it is my opinion that by adopting very narrow definitions of "API", "Microsoft Middleware", "Microsoft Middleware Product", and "Windows Operating System Product", the proposed settlement offers ample opportunity for the Microsoft corporation to continue, and continue to profit from, anticompetitive conduct at the expense of software developers like myself, the distributors of computer hardware, and ultimately end users. Microsoft has illustrated great ingenuity and a true flair for "innovation" when it comes to discovering and perpetrating new damaging and illegal practices by which it can leverage its monopoly in one market into a monopoly in another market. Only by adopting much broader definitions that can include presently unforeseen technologies, development patterns, and release strategies, can we as a nation prevent Microsoft from continually throwing stumbling blocks in the way of competitive commerce and the advance of the state of the art of computing.

In addition, the amount of information the proposed settlement requires Microsoft to reveal and the required timeframes for revealing that information are respectively too little and too late. The various practices explicitly allowed by the settlement including limitations on the use of published APIs, the withholding of patent information by Microsoft, the ability for Microsoft to legally discriminate against OEMs not in the "top twenty" for distributing non-Microsoft products, and continued tolerance of limitations on the development of publicly available software in Microsoft's licensing all contribute to my belief that the proposed judgement will do nothing but block further legal recourse with respect to Microsoft's illegal and damaging practices.

Please, consider the state of the art and the state of the business of software and software development before committing to such and ineffective settlement with a criminal organization.

Thank You,  
Joseph Bowers

Subject: Microsoft Settlement

To whom it may concern,

I am 25 year old software developer. I feel that the outcome of the proposed Microsoft Settlement will directly impact my career for many years to come, and therefore I have a responsibility to voice my concerns about the settlement.

I do not like the terms of the settlement. I do not think that as they are written, that the terms will preclude Microsoft from behaving in a monopolistic manner or benefit the end consumer. The most glaring problems I see with the settlement are in the terms that are designed to help remove the barriers to entry in the marketplace by providing additional information about the way Windows works. A more stringent standard than is being proposed by the final judgment will be necessary to meet the goal of having ISV successfully utilize the Windows APIs. Microsoft should be required to update documentation to ISVs whenever the API requirements change. Currently, the final judgment says that Microsoft has to notify ISVs seven months in advance of a new release, but not keep them up to date about changes. Additionally, many APIs

under the current final judgment will remain undocumented because of the narrow Microsoft Middleware Product" and "API" definitions.

By making the APIs more accessible to ISVs, consumers will benefit with more choice of platforms which to run their software and more software to choose from. I sincerely hope that the problems with the current final judgment, specifically the Windows API portions are addressed.

From: Jeff Dutkofski  
To: Microsoft ATR  
Date: 1/23/02 10:50am  
Subject: Microsoft Settlement

I wanted to voice my concerns with the proposed settlement agreement in the Microsoft case.

It appears that efforts have been made in Sections III.F. and III.G. of the PFJ to prohibit certain exclusionary licensing practices by Microsoft towards ISVs.

These Sections are as not strong as they could be. In its present wording, Microsoft's End User License Agreement (EULA) uses restrictive terms that stops Open Source/GPL/Artistic License/SCSL derived software and applications from running on Windows. These licensing terms also prohibit Windows applications from running on competing operating systems. In the interest of fairness and an open market, Sections III.F. and III.G. of the PFJ should be worded to allow "open source" applications to run on Windows, and allow Windows applications to run on competing operating systems. Open up the market and allow the end users more choices and more options.

Respectfully submitted,  
Jeffrey J. Dutkofski

**MTC-00016255**

From: Joel Martin  
To: Microsoft ATR  
Date: 1/23/02 10:49am  
Subject: Microsoft Settlement  
To: United States Department of Justice  
From: Joel Martin

I would like to comment on the Proposed Final Judgement in the United States vs. Microsoft according to the terms of the Tunney Act.

**INTRODUCTION:**

The Proposed Final Judgement (PFJ) does almost nothing to limit Microsoft's illegal practices. In fact, many aspects of the PFJ encourage Microsoft to continue in their long history of limiting competition and harming the public good. The problems with the PFJ are so numerous that the entire PFJ should be scrapped and re-written. In this document I will enumerate a subset of the many problems with the PFJ.

**DEFINITIONS (PFJ section IV):**

API—API is so narrowly defined that Microsoft will simply change their naming

scheme to evade the remedies. API should be defined in the industry accepted manner to include all interfaces to all software products that Microsoft distributes.

Microsoft Middleware Product—at the very least this list should include all of Microsoft's .NET family of products. A more reasonable change would be to actually define this so that new middleware products that Microsoft introduces are covered by this definition.

Windows Operating System Product—again, the definition in the PFJ is a list of specific products. First of all, this term should be changed to “Operating System Product”. A proper definition should be developed that covers all Windows XP versions, all Windows 2000 versions, all portable versions of Windows such as Windows XP tablet PC and the X-Box Operating System. All of these products need to be covered so that the judgement protects and corrects now and into the future.

#### ACTIONS TOWARDS THIRD PARTIES:

The remedies outlined in the PFJ that apply to Microsoft's actions towards other parties need to be expanded and strengthened. In the current form it is impotent and narrow. Microsoft should not be able to punish any OEM or third party for the way they customize their systems with or without Microsoft software. Microsoft should be required to publish their prices for all OEM's and third parties, NOT just the largest 20 OEMs as stated in the PFJ. Also, Microsoft should be prohibited from retaliating against OEMs and third parties in other ways than just price gouging. For example, Microsoft should not be allowed to give discounts on other products to OEMs that do not sell pre-configured systems with alternate operating systems. One particularly glaring problem in the PFJ is Section III.A.2 which allows Microsoft to retaliate against an OEM that sells systems with a competing Operating System but no Microsoft Operating System. This hole in the PFJ is subtle but pernicious and is reason enough to nullify this version of the PFJ.

#### EULAS (End User Licenses):

Microsoft has a history of using EULAs to create fear and uncertainty for competitors. These agreements regularly prohibit interoperability, exclude Open Source products, and the prohibit the development of certain types of competing and interoperating products. The PFJ does not address this issue of Microsoft's anti-competitive EULAs.

#### PROPOSED CHANGES:

The list of problems goes on and on but I will conclude with some recommendation for some additions to the PFJ that may help get this document to a state that will actually contribute to the public good.

- Microsoft must fully document all their APIs including the following: all OS APIs and OS utility APIs including the Windows Installer, Internet Explorer APIs, Outlook APIs, all Office APIs, the DirectX suite of APIs, etc.

- Microsoft must document all document formats fully. This includes the following document formats: MS Word, MS

Powerpoint, MS Excel, MS Visio, MS Publisher, MS Project, etc.

- Microsoft must fully document their network protocols including: Outlook to Exchange, SMB/CIFS protocol, Advanced Directory services, etc.

- Microsoft must provide the above documentation on APIs in a reasonable time frame. This means that the documentation must be available to competitors as soon as it is available to other product groups within Microsoft to do development. This will prevent other product groups within Microsoft from having an unfair lead time on product development compared to Microsoft competitors.

- Microsoft must port all their major desktop applications to non-Microsoft Operating Products that hold the three largest desktop market shares. The versions of the applications on those Operating Products shall not be released more than two months after the release on Microsoft Operating Products. This would mean that the MS Office suite, MS Visio, MS Publisher, MS Project, MS Internet Explorer, MS Outlook, MS Outlook Express, etc. would be ported and up to date on the Macintosh, and probably Linux, etc. They must be available for similar pricing as on Microsoft Operating Products.

- Microsoft must port all their major server applications to non-Microsoft Operating Products that hold the four largest server market shares. The versions of the applications on those Operating Products shall not be released more than two months after the release on Microsoft Operating Products. This would mean that the MS Exchange, MS IIS, MS Enterprise Server, MS Small Business Server, MS SQL Server, MS Systems Management Server, MS Content Management Server, MS Commerce Server, MS Proxy Server, MS SharePoint Portal Server, MS BizTalk Server, MS Host Intergration Server, etc. would be ported and up to date on Linux, Sun Solaris, HP HP/UX, etc.

Subject: No to the Settlement

As part of my duty as a citizen, I respond to your request for public comment regarding the proposed settlement to the US v Microsoft, as well as the assorted state cases v. Microsoft.

I call for the US Government to stand firm in its resolution against an illegally maintained monopoly. Do not settle without firm—and severe—consequences for

Microsoft should it violate any other law. Microsoft has shown repeatedly its disdain for United States Law, as well as that of many states. It is likely and expected that if Microsoft emerges from these Anti-trust proceedings relatively unscathed, then it will violate the law again, it will cost US taxpayers and consumers, and it will stagnate innovation in the PC platform.

Instead of allowing Microsoft to have a wonderful outcome to this case, force them instead to open their API's, force them to open their source code. Even if the source is open, they may still compete. Let the best software development companies win. It opens the marketplace, and it is NOTHING close to corporate communism as recent Microsoft-sponsored ads and lobbying have suggested.

Regardless of what you do after this, I urge you in the strongest possible way to reject the proposed settlement and try again, this time, acting in the best interest of consumers, not business.

Thanks so much for your time and attention in this very crucial matter to the whole technology industry.

Yours,  
William Andrew Foy

From: John Kroll  
To: Microsoft ATR  
Date: 1/23/02 10:50am  
Subject: Microsoft Settlement

Having reviewed the proposed settlement for the Microsoft, I am appalled on how it fails to address many of the illegal business practices listed in the findings of fact. Additionally, the wording of the proposed settlement is so soft, that allows many potential avenues for Microsoft to exploit to evade the spirit of the proposed settlement. Given Microsoft's past behavior regarding consent decree's, it can be safely assumed that they are aware of this and caused the wording to be structured in this manner for exactly this reason.

One specific example of this is the Technical Committee. Since Microsoft gets to select one committee member who essentially has veto power over the third member of the committee, this review committee is unlikely to actually accomplish anything. Since essentially this committee is supposed to serve as a parole board to monitor Microsoft's future behavior, why are they permitted to have any input into the committee composition at all? Certainly they

should be permitted to submit evidence or other material to the committee for review, but why are they allowed to have input into the selection of a majority of the board members?

Another example is the limitation that "No provisions of this Final Judgment shall:

1. Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or (b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction." This limitation would permit Microsoft to hide many APIs needed for a competitor to build a product by claiming the API or protocol specification is restricted due to security considerations. Since the proposed agreement makes no attempt to define or limit what material would be subject to this restriction, it is apparently left to Microsoft to make this determination.

Contrary to Microsoft's advertising, they have not produced much in the way of actual "innovation" to the computer industry. In fact, they have significantly stifled innovations by other companies where those innovations would threaten Microsoft products.

The Findings of Fact in this case clearly show that Microsoft has abused its monopoly position in the software market. The proposed settlement does little to address these past abuses or prevent future abuses. In my opinion, the settlement in its current form is definitely not in the public interest.

Very respectfully,  
John Kröll

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. The current proposed settlement does not redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to address Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This goes against the very foundation of law.

If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Drew Kime

I wanted to register my opinion about the Microsoft settlement. Just for the record, I am an Apple user. I have known for a long time that Microsoft has had a defacto monopoly and has exercised unfair practices to remain dominant. Until the trial, no windows user that I knew had any idea that there were other operating systems available for Intel machines. In fact, they still are unaware of IBM's OS 2, although Linux has been getting more air play. And since the trial I have listened to venture capitalists and startup owners who have been complaining that money will not be invested in a company if they investors think that MS would not like the software that would be produced, due to its competitiveness. I think more and more, the world are coming to rely on computers, just as they were doing with oil during the Standard oil trial. And I think that any remedy short of breaking the company up is grossly unfair and uncompetitive. (By the way, Microsoft has never been innovative. They buy other, innovative, company's products finish them, poorly by the way.) I think the company should be broken up into a application company, an OS company and a networking (or enterprise) company. It should not remain intact. To do other that break the company up is to encourage its stranglehold on the marketplace.

Subject: Proposed Settlement is a bad idea...

Dear Sirs and Madams:

I am a network security engineer and US citizen. I've been working with computer networking for 13 years. During that time, I've seen Microsoft's ascendancy to power. During that time, I've seen innumerable potential competitors get swallowed up by Microsoft's anti-competitive practices. But most importantly, during that time, I've seen friends and co-workers forced into using software, not because it best met their needs, but because they had no other practical choice. I've seen Netscape be the have the highest demand amongst users, only to see that option precluded when they tried to buy new computers.

Consumers have been directly harmed by Microsoft's anticompetitive business practices. So I was very encouraged when the Department of Justice filed suit, won the case, and prevailed on appeal.

I am, however, disappointed that my government has decided not to seriously consider the harm that this company has done to the US economy through the maintenance of their illegal monopoly. The proposed final judgement is woefully inadequate. It will do nothing to increase competition in the computer software marketplace, and in some cases will help to preserve Microsoft's monopoly.

I believe that the current proposal is grossly inadequate given the findings of fact. I urge you to throw it out and replace it with one that will effectively restore competition to the computer software marketplace.

Sincerely,  
Mark J. Horn

Subject: Microsoft Settlement  
To Whom It May Concern:

I have read the proposed Microsoft settlement and am astonished that it addresses only future conduct, including no meaningful punishment for Microsoft's past illegal conduct proven during the trial phase of this case. Microsoft has effectively driven a steamroller at 100mph through a 30mph zone, leaving crushed businesses and the bloody remains of its competitors in its wake, and the facts of that case have been proven in court.

What sane Court would let such a perpetrator go free without severe punishment, warning them only to keep to the rules of the road in the future, utterly disregarding that Microsoft accomplished its goal of clearing its competitors off the road?

Punishment must be levied on Microsoft so the competition can get back on the road—and—back in position to succeed in the race. Microsoft must not only play fair (which it should have been doing anyway!), but must be competitively handicapped for a significant period to compensate for its illegal gains.

Gravely concerned,

Subject: Microsoft Settlement

I am writing in regards to the Tunney Act public comment period on the proposed Microsoft antitrust settlement.

The proposed settlement will not prevent Microsoft from maintaining its monopoly in the computer industry. The findings of fact

clearly described a pattern of corporate behavior that evidenced little respect for antitrust law or public sentiment. Though the proposed remedies themselves may be adequate, the enforcement measures will not provide enough incentive for Microsoft to fundamentally alter its behavior. History demonstrates that Microsoft will not alter its behavior unless it is clearly in its competitive interests to do so. The proposed remedies attempt to force Microsoft to change its behavior in order to reduce its power in the market place. This will not succeed.

The only measures that can be effective are those that immediately change the competitive landscape, and then free Microsoft to struggle for power in this new, more level playing field. I agree with the court that a structural remedy is cumbersome and not likely to be effective. A technological remedy, with objective, quantifiable measures, is the only remedy that can be both effective and in the public's interest.

The competitive advantages of an operating system monopoly are twofold. First, Microsoft negotiates from a very powerful position with OEMs and ISPs. Second, their application software can be developed with special knowledge of the operating system and (optionally) delivered with the operating system to gain better market penetration. Any remedy must address both of these monopolistic advantages.

While I do not claim to be able to construct a better remedy myself, I think it is clear that any remedy must involve forcing Microsoft to open all of its APIs and file formats. Any time two pieces of MS software communicate out-of-process, the protocol for their communication must be public.

Enforcement could come in the form of a court-appointed authority that had the right to demand to see the source code of any MS-published software and compare the documented APIs to the source code. If they were not the same or if the source code is not delivered within a few days, MS should be fined 1/356th of it's profit (this can be calculated after the fact at the end of each quarter) per-day until it satisfies the requirements. This would ensure that the applications of Microsoft's competitors have the same opportunity to succeed on the Windows platform as those of Microsoft itself. Microsoft may maintain its operating systems monopoly, but it will not be able to use to establish new monopolies in other market segments.

Thank you very much for reading and considering my comments.

Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Dear Renata Hesse,  
I am deeply concerned that the current proposed settlement fails to move the United States toward a competitive desktop OS and middleware regime.

As we have seen the current lack of competition poses major risks to national security, as well as imposing major unnecessary burdens on software innovators, businesses, and consumers.

Many analyses have shown clearly that the current proposed judgement fails to constrain Microsoft's current abuses of its monopoly power and permits tactics that will allow Microsoft to maintain and extend this power.

Unfortunately, Microsoft has already demonstrated that it will interpret such settlements in ways that make a mockery of their intent. Any agreement reached must clearly and enforceably redefine the playing field. Otherwise this process will only undermine and call into contempt the effectiveness of our legal and regulatory institutions.

Without an effective agreement we will not meet our needs for a reliable software infrastructure, essential to national security. We will not sustain a competitive and innovative software marketplace, essential for economic vitality and our international competitive position. We will not enable businesses and consumers to make the most effective, and most cost-effective, use of computers. For all these reasons I wish to register my disagreement with the proposed settlement in the strongest possible terms.

Sincerely,  
Jed Harris

Subject: Microsoft Settlement  
To Renata B. Hesse:

I am e mailing you to express my support of Microsoft in the current anti trust case against it. I believe that the only thing Microsoft has done wrong is to be "too" successful, and also to neglect contributing to Congressmen's re-election campaigns.

As a user of Microsoft software, I have found the power and convenience and ease of use of their products to be exemplary. Their prices are low. Example: A simple product like Microsoft Publisher, which cost me \$60 several years ago, has revolutionized my business, making it possible for me to design all my advertisement, web sites, order forms, brochures, etc. Microsoft was good at running it's business, while it's browser competitor, Netscape, was good at running to Washington. I don't think Netscape should be rewarded for that.

And I don't think government has any business punishing businessmen who are "arrogant" enough to believe that they have a right to run their businesses as they see fit, as long as they don't forcibly interfere with anyone else's right to do likewise.

If you want to prosecute a true monopoly, then go after a coercive monopoly like the Post Office. Now THERE is an institution which harms consumers and forcibly excludes competitors from the market. Ignoring the Postal Monopoly while persecuting Microsoft reflects a concern about political power and authority, not about protecting "consumers".

Subject: Microsoft Settlement

Just to add my two cents on the settlement ideas being discussed: I feel that every "remedy" that has yet been suggested has been not a penalty but at best a delay for Microsoft's monopolistic methods. The whole "give software to schools" thing is ridiculous. Making copies of their own software costs Microsoft maybe a penny per CD and makes a whole new generation of computer users learn things the Microsoft way. If anything this is an added bonus.

The remedy should not so much focus on a payment or compensation of some kind as it should a restraint on Microsoft's business practices. While this case has been going on, Microsoft has released a new Operating System that integrates like no other before it a slew of Microsoft programs like the Internet Explorer browser and the Windows Media Player. In addition, built into the system are hooks that tie into Microsoft's new push called .Net which aims to remake the world wide web in the image of Microsoft. Any remedy should in some way monitor .Net and assure fair business practices. .Net will succeed (if it succeeds) because the whole model is based on the idea that the normal person's operating system is Windows and Microsoft leverages that fact to make it easier for other businesses to implement .Net instead of competing platforms. In the past Microsoft has bundled their own programs. Now they will effectively be bundling the "Microsoft Internet" in the operating system itself. That is wrong and must be dealt with in the settlement.

To whom it may concern,

I am greatly saddened by the so-called "slap on the wrist" remedy being offered in the Microsoft anti-trust case. What has been proposed is not even a slap on the wrist, it is a release into the public sector of an unrepentant criminal corporation. Criminal? Yes, having been found guilty implies having broken the law, i.e., having committed criminal acts. I suggest that the court make the strongest possible review of the proposed settlement in light of the court decisions already made, and in light of the damage done to parts of the computer industry over a period of many years by Microsoft.

The proposed settlement should be rejected, and Microsoft be made to pay for their breaking of the law—both financially and in very strong conduct restrictions placed on their business practices.

Greetings,

I am disappointed that your court has not adopted a structural remedy in the Microsoft case, which I believe is the only long term solution to addressing Microsoft's past, and sure to be future abuses. I have personally been affected by Microsoft's actions. Previous laptop computer purchases have forced me to purchase Microsoft operating systems with the systems, which I neither want nor need. Typically, Microsoft operating systems installed with new PC's are "tied" to the BIOS, making it impossible to sell the unwanted operating system to recoup my additional costs. In addition, Microsoft's EULA prohibits secondary license transfers of unwanted operating systems that users are forced to purchase.

Last year I purchased an intel server from the second largest intel computer vendor, which "builds to order", with the intention of running a custom written security application on OpenBSD. I requested a machine without a Microsoft operating system license to lower the cost, as normally the systems were preloaded with Windows 2000 and IIS. I was told that my only option was to have it loaded with Linux, at an extra cost of \$1,000 over the cost of the system with Windows 2000! I found it incredible that by eliminating a Microsoft server license, and replacing it with something free, would raise the cost by \$1,000. I was told that the extra cost was due to the extra "integration costs" of linux. Since I had no intention of running Linux on the system anyway, and intended on running OpenBSD, I insisted that it be shipped with no operating system for a cost less than the Windows 2000 preload. I was told that their agreement with Microsoft prohibited sending any system without a Microsoft operating system, for less than the cost of a Microsoft preloaded system.

In addition, Microsoft also currently is limiting computer makers from installing other operating systems in "dual boot" configurations, due to restrictions on the boot

loader. This effectively removes customer choice, and insures further customer "lock in". I realize your language tries to address this practice, but without an enforcement mechanism with more power, vendors will simply cave in to Microsoft demands. Your proposed pricing and technical disclosure language is riddled with loopholes which will accomplish nothing to address future abuse by Microsoft.

Thank you for your consideration

Subject: Microsoft Settlement

My name is Hal Black, I am a resident of Columbia, MD, and am the Director of Software for a small internet security company. I think the proposed settlement for the Microsoft anti-trust suit is insufficient and will not break Microsoft's trust. Rather than reiterate what has already been written, I have included excerpts from Dan Kegel's excellent essay on the problems with the settlement which outlines some of the major flaws with the settlement.

How should terms like "API", "Middleware, and "Windows OS" be defined? The definitions of various terms in Part VI of the PFJ differ from the definitions in the Findings of Fact and in common usage, apparently to Microsoft's benefit. Here are some examples: Definition A: "API" The Findings of Fact (§ 2 define "API" to mean the interfaces between application programs and the operating system. However, the PFJ's Definition A defines it to mean only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs. For instance, the PFJ's definition of API might omit important APIs such as the Microsoft Installer APIs which are used by installer programs to install software on Windows. Definition J: "Microsoft Middleware" The Findings of Fact (§ 28) define "middleware" to mean application software that itself presents a set of APIs which allow users to write new applications without reference to the underlying operating system. Definition J defines it in a much more restrictive way, and allows Microsoft to exclude any software from being covered by the definition in two ways:

By changing product version numbers. For example, if the next version of Internet

Explorer were named "7.0.0" instead of "7" or "7.0" it would not be deemed Microsoft Middleware by the PFJ. By changing how Microsoft distributes Windows or its middleware. For example, if Microsoft introduced a version of Windows which was only available via the Windows Update service, then nothing in that version of Windows would be considered Microsoft Middleware, regardless of whether Microsoft added it initially or in a later update. This is analogous to the loophole in the 1995 consent decree that allowed Microsoft to bundle its browser by integrating it into the operating system. Definition K: "Microsoft Middleware Product" Definition K defines "Microsoft Middleware Product" to mean essentially Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), and Outlook Express (OE). The inclusion of Microsoft Java and not Microsoft.NET is questionable; Microsoft has essentially designated

Microsoft.NET and C# as the successors to Java, so on that basis one would expect Microsoft.NET to be included in the definition.

The inclusion of Outlook Express and not Outlook is questionable, as Outlook (different and more powerful than Outlook Express) is a more important product in business, and fits the definition of middleware better than Outlook Express. The exclusion of Microsoft Office is questionable, as many components of Microsoft Office fit the Finding of Fact's definition of middleware. For instance, there is an active market in software written to run on top of Microsoft Outlook and Microsoft Word, and many applications are developed for Microsoft Access by people who have no knowledge of Windows APIs. Definition U: "Windows Operating System Product" Microsoft's monopoly is on Intel-compatible operating systems. Yet the PFJ in definition U defines a "Windows Operating System Product" to mean only Windows 2000 Professional, Windows XP Home, Windows XP Professional, and their successors. This purposely excludes the Intel-compatible operating systems Windows XP Tablet PC Edition and Windows CE; many applications written to the Win32 APIs can run unchanged on Windows 2000, Windows XP Tablet PC Edition, and Windows CE, and with minor recompilation, can also be run on Pocket PC. Microsoft even proclaims at [www.microsoft.com/windowsxp/tabletpc/tabletpcqanda.asp](http://www.microsoft.com/windowsxp/tabletpc/tabletpcqanda.asp): "The Tablet PC is the next-generation mobile business PC, and it will be available from leading computer makers in the second half of 2002. The Tablet PC runs the Microsoft Windows XP Tablet PC Edition and features the capabilities of current business laptops, including attached or detachable keyboards and the ability to run Windows-based applications." and Pocket PC: Powered by Windows Microsoft is clearly pushing Windows XP Tablet PC Edition and Pocket PC in places (e.g. portable computers used by businessmen) currently served by Windows XP Home Edition, and thus appears to be trying to evade the Final Judgment's provisions. This is but one example of how Microsoft can evade the provisions of the Final Judgment by shifting its efforts away

from the Operating Systems listed in Definition U and towards Windows XP Tablet Edition, Windows CE, Pocket PC, X-Box, or some other Microsoft Operating System that can run Windows applications. How should the Final Judgment erode the Applications Barrier to Entry? The PFJ tries to erode the Applications Barrier to Entry in two ways: By forbidding retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows.

By taking various measures to ensure that Windows allows the use of non-Microsoft middleware. A third option not provided by the PFJ would be to make sure that Microsoft raises no artificial barriers against non-Microsoft operating systems which implement the APIs needed to run application programs written for Windows. The Findings of Fact (¶52) considered the possibility that competing operating systems could implement the Windows APIs and thereby directly run software written for Windows as a way of circumventing the Applications Barrier to Entry. This is in fact the route being taken by the Linux operating system, which includes middleware (named WINE) that can run many Windows programs.

By not providing some aid for ISVs engaged in making Windows-compatible operating systems, the PFJ is missing a key opportunity to encourage competition in the Intel-compatible operating system market. Worse yet, the PFJ itself, in sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". This prohibits ISVs from using the information for the purpose of writing operating systems that interoperate with Windows programs. How should the Final Judgment be enforced? The PFJ as currently written appears to lack an effective enforcement mechanism. It does provide for the creation of a Technical Committee with investigative powers, but appears to leave all actual enforcement to the legal system. What information needs to be released to ISVs to encourage competition, and under what terms? The PFJ provides for increased disclosure of technical information to ISVs, but these provisions are flawed in several ways: 1. The PFJ fails to require advance notice of technical requirements Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. 2. API documentation is released too late to help ISVs Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in

time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows. 3. Many important APIs would remain undocumented The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces. 4.

Unreasonable Restrictions are Placed on the Use of the Released Documentation ISVs writing competing operating systems as outlined in Findings of Fact (¶ 52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems. 5. File Formats Remain Undocumented No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ¶20 and ¶ 39). 6. Patents covering the Windows APIs remain undisclosed Section III.I of the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs (perhaps in the style proposed by the W3C;

see <http://www.w3.org/TR/2001/WD-patent-policy-20010816/#sec-disclosure>). This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users, as illustrated by this report from Codeweavers, Inc.: When selecting a method of porting a major application to Linux, one prospect of mine was comparing Wine [a competing implementation of some of the Windows APIs] and a toolkit called "MainWin". MainWin is made by Mainssoft, and Mainssoft licenses its software from Microsoft. However, this customer elected to go with the Mainssoft option instead. I was told that one of the key decision making factors was that Mainssoft representatives had stated that Microsoft had certain critical patents that Wine was violating. My customer could not risk crossing Microsoft, and declined to use Wine. I didn't even have a chance to determine which patents were supposedly violated; nor to disprove the validity of this claim. The PFJ, by allowing this unclear legal situation to continue, is inhibiting the market acceptance of competing operating systems. Which practices towards OEMs should be prohibited? The PFJ prohibits certain

behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products. Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas. Which practices towards ISVs should be prohibited? Sections III.F. and III.G. of the PFJ prohibit certain exclusionary licensing practices by Microsoft towards ISVs. However, Microsoft uses other exclusionary licensing practices, none of which are mentioned in the PFJ. Several of Microsoft's products "license prohibit the products" use with popular non-Microsoft middleware and operating systems. Two examples are given below. 1. Microsoft discriminates against ISVs who ship Open Source applications. The Microsoft Windows Media Encoder 7.1 SDK EULA states "... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); ... Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the end user has a sufficiently up-to-date version of the add-on API installed, which is

often not the case. Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems. 2. Microsoft discriminates against ISVs who target Windows-compatible competing Operating Systems. The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by ISVs to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..." This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems. By allowing these exclusionary behaviors, the PFJ is contributing to the Applications Barrier to Entry faced by competing operating systems. Which practices towards large users should be prohibited? The PFJ places restrictions on how Microsoft licenses its products to OEMs, but not on how it licenses products to large users such as corporations, universities, or state and local governments, collectively referred to as "enterprises".

Yet enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier US v. Microsoft antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software. Which practices towards end users should be prohibited? Microsoft has used both restrictive licenses and intentional incompatibilities to discourage users from running Windows applications on Windows-compatible competing operating systems. Two examples are given below. 1. Microsoft uses license terms which prohibit the use of Windows-compatible competing operating systems. MSNBC (a subsidiary of Microsoft) offers software called NewsAlert. Its EULA states "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3. x, Macintosh, etc.]. ..." Only the Windows version appears to be available for download. Users who run competing operating systems (such as Linux) which can run some Windows programs might wish to run the Windows version of NewsAlert, but the EULA prohibits this.

MSNBC has a valid interest in prohibiting use of pirated copies of operating systems, but much narrower language could achieve the same protective effect with less anticompetitive impact. For instance, "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system." 2. Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems. An episode from the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively. Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS.

Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. (See the original complaint, and Caldera's consolidated response to Microsoft's motions for partial summary judgment.) The judge in the case ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." That case was settled out of court in 1999, and no court has fully explored the alleged conduct. The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1. The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software. Is the Proposed Final Judgment in the public interest? The problems identified above with the Proposed Final Judgment can be summarized as follows:

The PFJ doesn't take into account Windows-compatible competing operating systems. Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions. The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft. Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft. Microsoft has in the past inserted intentional incompatibilities into applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs. The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on

criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism. Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues. Strengthening the PFJ. The above discussion shows that the PFJ does not satisfy the Court of Appeals' mandate.

Some of the plaintiff States have proposed an alternate settlement which fixes many of the problems identified above. The States' proposal is quite different from the PFJ as a whole, but it contains many elements which are similar to elements of the PFJ, with small yet crucial changes. In the sections below, I suggest amendments to the PFJ that attempt to resolve some of the demonstrated problems (time pressure has prevented a more complete list of amendments). When discussing amendments, PFJ text is shown indented; removed text is shown in [bracketed strikeout], and new text in bold italics. Correcting the PFJ's definitions. Definition U should be amended to read U. "Windows Operating System Product" means [the software code (as opposed to source code) distributed commercially by Microsoft for use with Personal Computers as Windows 2000 Professional, Windows XP Home, Windows XP Professional, and successors to the foregoing, including the Personal Computer versions of the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.] any software or firmware code distributed commercially by Microsoft that is capable of executing any subset of the Win32 APIs, including without exclusion Windows 2000 Professional, Windows XP Home, Windows XP Professional, Windows XP Tablet PC Edition, Windows CE, Pocket PC 2002, and successors to the foregoing, including the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. Release of information to ISVs. TBD Section E should be amended to read... Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, [for the sole purpose of interoperating with a Windows Operating System Product,] for the purpose of interoperating with a Windows Operating System Product with application software written for Windows, via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. ...

To: Renata B. Hesse Antitrust Division U.S. Department of Justice 601 D Street NW Suite 1200 Washington, DC 20530-0001  
Dear Ms. Hesse:

I believe that the proposed Microsoft antitrust settlement is not a powerful enough remedy for the personal computer market or U.S. consumers in general. The proposal, as written, is technically flawed, and does not provide enough mechanisms to penalize Microsoft for violating the spirit, if not the letter, of the law.

In particular, I believe that Microsoft must provide significant technical details, a minimum of 6 months in advance, to all software vendors regarding changes to the Windows APIs. Without this, Microsoft will be able to make changes to the APIs, effectively disabling non-Microsoft products, while introducing their own competing products that work. I strongly urge the Justice Department and federal courts to instead use the proposed remedy from the nine dissenting states (<http://www.naag.org/features/microsoft/ms-remedy-filing.pdf>) as a more reasonable, robust remedy that will truly help promote competition and innovation in the marketplace. Otherwise, Microsoft will continue to use its monopoly power to stifle progress, something we cannot afford in today's society and economy.

Sincerely,  
Robert Leary

Subject: Microsoft Settlement

I am opposed to the current MS settlement agreement. The current settlement does nothing to remedy to current situation which only seems to be getting worse as time goes on. The language of the current settlement is much too weak and allows infinite loopholes for Microsoft run through.

I also find the naming of specific products in section III to be counterproductive. If Microsoft merely comes out with a new version with a different name and a slightly

changed API the entire section becomes pointless. Section VI suffers from a similar problem. By the time this settlement goes into effect none of the "Windows Operating System Products" (definition U) will be relevant to the market anymore. Microsoft has scheduled 2 more OS upgrades in the next 2 years, merely giving them a different name will remove them from this judgment.

From: Marshall Reeves  
To: Microsoft ATR  
Date: 1/23/02 10:54am  
Subject: Microsoft Settlement

Dear Sir or Madam,

I am upset about the Microsoft settlement and the appearance that the company can get away with a minor hand slap after running many competing software development companies out of business. I feel that as long as Microsoft is allowed to, they will continue to incorporate software functionality that was previously a feature of a commercial non-operating system product, into their operating system. Since the various versions of Windows are pervasive on the desktop, consumers will not buy competing software products when their functionality has been bundled into Windows, apparently for free. Microsoft has had a habit of doing this as evidenced by disk compression software when MSDOS was the pervasive operating system and with browsers and multimedia software in Windows. This practice will continue to cause smaller software companies to evaporate or be swallowed whole by Microsoft.

I feel that a much better remedy would be to define what an operating system is and place restrictions on moving other software content into it. This would force Microsoft to sell products in a fair and competitive market rather than disguising them as components of operating system that is purchased by virtually all pc users.

Sincerely,  
Paul M. Reeves

Subject: Microsoft Settlement

I am writing in response to the Proposed Final Judgement in the anti-trust case against Microsoft Corporation. I am opposed to this judgement and feel that it does little, if anything, to deter the sorts of practices that Microsoft has used to maintain the monopoly it has obtained through anti-competitive practices.

By way of background I am currently a Systems Administrator who has began working with computers in college in 1977. I have worked on a variety of systems, both with and without Microsoft Operating Systems or applications, from micros to minis to mainframes. One of the things the Proposed Final Judgement fails to address is the proprietary, undocumented file formats that Microsoft uses to hold a users data hostage. An office which creates all their

documents in Word and Excel for a year, but decides to change operating systems or even applications, immediately discovers that those proprietary secret file formats are holding their data hostage. Microsoft file formats are notoriously difficult to reverse-engineer and no application currently shipping on any computing platform can reliably open and save to (without losing any features or formatting) a Microsoft file format, other than a Microsoft application.

Companies with thousands of documents find they must continue to use Microsoft applications, at whatever price Microsoft chooses to charge, in order to have access to their own data. The alternative is to rekey everything, a tremendous burden both financially and in terms of productivity.

In fact, many purchases of Microsoft Office upgrades are forced on end users because someone they deal with sends them a file from a new version that their old version can't open.

Microsoft should be forced to make publicly available their file formats, and adhere to them. There is nothing special about a file format and it will not harm Microsoft to have these available, except in that it prevents vendor lock-in and people would have the freedom to choose their application based on price, performance and support. Adobe maintains it's position atop the graphics industry and the Photoshop file format and the Portable Document Format (PDF) are widely known and used in their competitors applications. In fact, the graphics industry uses almost exclusively open formats, so that files can be viewed and edited on any platform by any application.

Subject: Microsoft Settlement

The settlement as proposed is a bad idea. It does provide for the creation of a Technical Committee with investigative powers, but appears to leave all actual enforcement to the legal system. Microsoft has proven that it can keep the legal system tied up for years. It has poor definitions for key terms like "API", "Middleware", and "Windows OS".

It does not provide for advanced notice of changes in API. This is bad because it allows competing middleware to be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows, but the changes to the api do not have to be documented until the final beta test. There are many places where the specific section sounds fine, but when definitions and requirements from other sections are taken into account, the final results is an agreement that does little to change the way Microsoft does bussiness.

Date: 1/23/02 10:54am  
Subject: Microsoft Settlement

I am mailing you to cite my view that the settlement proposed for Microsoft is not

enough. I have been informed and encouraged to send this because of the reasons laid out on this site <http://www.kegel.com/remedy/letter.html>

I feel that this settlement is worded very weakly, and that the punishments for disobeying the settlement have no force at all. If Microsoft does not follow the rules in the first place, nothing will make me think they will start to follow them if the rules against them last longer. I feel it's like convincing a child to not do something by telling them not to do it. Then when they do it, they are just told not to do it again.

Please take the time to do this right. Look at the ideas put forth on the webpage I mentioned, and make a better judgment that will not potentially benefit Microsoft.

thank you

From: Alan B. Heirich  
To: Microsoft ATR  
Date: 1/23/02 10:55am  
Subject: Microsoft settlement  
Dear Department of Justice,

I am writing to you under the Tunney act to express my concerns about the proposed settlement of the Microsoft Antitrust case. As a software engineer with 20 years experience, PhD trained computer scientist, and senior architect for a major computer manufacturer, I have first-hand experience with Microsoft executives and the business practices that govern the PC and enterprise computing industries. It is my opinion that the proposed settlement will have no effect on Microsoft conduct and will lead to a continuation of the status quo monopoly in the market for

desktop operating systems and applications. This belief is based on several observations:

1. Microsoft is deceitful—in the past Microsoft has shown its willingness to evade governmental restrictions. Any proposed settlement should acknowledge that the company behaves in ways that fail to meet high ethical standards, and remedies should be designed in anticipation of attempts at evasion.

2. Linux faces unreasonable barriers to entry—I am writing this note as a private citizen and am not speaking for my employer, a major computer vendor. My experience in developing products for the industry has taught me that at the present time it is impossible to ship computers containing Linux without paying Microsoft for a Windows license. This is not explicitly due to retaliation, but instead is a result of the status quo of installing Windows on every computer to be shipped. The cost for labor to remove Windows and replace it with Linux is higher than the cost of a Windows license. Since Linux is a free operating systems users do not expect to pay for it, and in particular do not expect to pay for the cost of a Windows license plus the cost of the labor to install Linux. As a result Linux faces a de facto barrier to entry in desktop and server markets that is not addressed by the proposed antitrust settlement. This barrier is a result of the monopolistic practices that the courts have held to be in violation of antitrust provisions. As a result I feel the settlement should explicitly address this barrier.

3. The proposed settlement does not adequately require Microsoft to disclose APIs, and gives the company too much latitude in defining what it will disclose. In light of the past history of evasion by this company this can only be described as a loophole big enough to drive a truck through, and we should assume that Microsoft will exploit this loophole in ways that are inconsistent with the spirit of the settlement.

4. The settlement focusses on too narrow a range of products, specifically recent and current products, and fails to account for future products that are intellectual derivatives of current products. In software all that is necessary to create a “new” product is to develop a new source code base. This source code base may simply be a rewrite of an existing product, and this is in fact the case with the ongoing evolution of the Windows operating system. Microsoft can circumvent many of the important restrictions in the course of their normal practice of upgrading their products. I feel the settlement should be written to cover all present and future Microsoft operating systems.

Thank you. I hope that the department of justice will understand the importance of a competition in the computer industry, and will take effective steps to permanently change the behavior of this convicted monopolist.

Subject: Microsoft Settlement

I do not believe that the Proposed Final Judgement in the Microsoft Anti-trust case will affect their current monopoly in the software industry.

The DOJ's settlement was brokered by Bush administration appointee Assistant Attorney General Charles A. James, head of the DOJ's antitrust division. But career officials at the Justice Department, who had pursued the case since the beginning, displayed their apparent displeasure with the agreement by not signing it.

This is just one example of many things that I believe are wrong in this case.

Sincerely,  
Donald D Hugo III

Subject: Microsoft Settlement

To Whom It May Concern,

I find the proposed Microsoft settlement unsatisfactory. For instance:

—The definitions of “API” and “Microsoft Middleware Product” are overly narrow, not covering many important interfaces. This would allow Microsoft to obscure key information and thereby render that information that was released useless.

—No part of the PFJ obligates Microsoft to release file format information, even though undocumented file formats form part of the Applications Barrier to Entry.

Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties

for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition. Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Subject: Proposed Microsoft Settlement

As a person who's livelihood is testing software, I have to let you know that the recently proposed settlement with Microsoft is a bad idea.

Microsoft is a monoculture. We would not plant the same strain of corn, or culture all the same trees or husband only one breed of cows across the country for fear of a devastating disease wiping out the entire group. Anything that allowing the expansion of one system (to the degree Microsoft currently holds) guarantees contraction of all other systems and this ruling smacks of that. In this case, one of the side issues here is national security which needs to be aggressively addressed.

This is potentially bad, bad management.

Sincerely,  
Pam Seals

From: Perry, Philip

To: “microsoft.atr(a)usdoj.gov”

Date: 1/23/02 10:56am

Subject: Microsoft Settlement

To whom it may concern:

I'm a computer programmer who works with Microsoft technology at work, and Linux at home. As one who works with both technologies, I think I'm somewhat familiar with Microsoft and how it affects other companies and competition in my industry. And, I'm writing to tell you that settling the case with Microsoft is a bad idea. A really bad idea.

First of all, Microsoft wants above all else to put this case behind it and get back to its main business—squelching innovation by other companies. I've been following this field for years now, since at least 1991, and this company is absolutely without scruple. Whenever they think even a tiny bit of profit may be squeezed out of a potential business, they move in, buy up any companies they can and destroy any companies they can't buy, and seize control of it. This destroys competition, and consumers like me have to settle for Microsoft's inferior version of whatever technology is being seized. It's happened again and again, and now with XP it's happening with media players and plugins. If you look over the situation, you'll see that this company isn't going to stop its behavior unless you, in the DOJ, force it to. They're even breaking into the market for appliances—their Xbox is only a first step, the end result of which will be Microsoft products throughout a person's home, and the destruction of competition in a number of other industries like the appliance industry (do you really want to end up with a Microsoft refrigerator? Do you want a

Microsoft television? What will Microsoft be able to do to competitors when it is able to levy that much reach into a users home? And, don't kid yourself about this being a natural result of their current efforts—their manufacturing facilities are able to tool up for any product at all rather quickly, primarily because they outsource everything instead of trying to build it themselves). The sooner you realize that the Xbox's radically new manufacturing approach (outsourcing the manufacturing and design, etc) is almost certainly a pilot program for future plans. If it succeeds, there's no telling how far they can take this. I for one don't want to be stuck with only one manufacturer for computers and appliances, and I don't think you want to be either. But if Microsoft isn't dealt with now, that's exactly what's going to happen in a few years.

Consider this: if Microsoft really thought your settlement would hamper their anticompetitive efforts, would they be willing to sign it in the first place? Of course not—they think they've negotiated a way out, and you're going to give it to them if you go through with this settlement. And, remember what happened the last time a conduct remedy was levied. It was broadly ignored.

Please, for the sake of the industry, IT workers, and end users in general, don't agree to a settlement. Pursue this case. Let history remember you as a DOJ that had grit, and followed through on your work, rather than as the DOJ that accepted a settlement with no teeth, allowing Microsoft to further hurt the U.S. IT industry.

Thank you for your time,  
Philip Perry.

Subject: Microsoft Settlement

Florida Should Support Free Enterprise and Settle with Microsoft.

By Edwin H. Moore

Participation in the Microsoft case by Florida's government has always seemed a bit out of character for a state governed by conservative principles favoring free markets. Now when the prospects of settling this antitrust market case are readily available, the attorney general of Florida appears unwilling to join the settlement agreed to by the U.S. Department of Justice. Florida should be a state that encourages innovation, exploitation, and progress, not one that acts as a hindrance to these ideals.

Slightly fewer than 200,000 Floridians are Microsoft shareholders. Millions more have benefited from the innovative line of products offered by this creative company. Microsoft has gained a dominant share of the software market because it is very good at what it does. Consumers enjoy their products and willingly buy them. Their products are user-friendly because Microsoft spends almost \$4 billion annually in research and development. Instead of standing in opposition to Microsoft, Florida should be seeking partnerships with a forward looking company, trying to attract it to spend some of its research and development funds in the state.

Attorney General Bob Butterworth has been recognized as a man of trust and respect. He has accomplished this by staying the course on issues that are of great importance to Florida. In the Microsoft situation, it is hard to see where the greater interests of Florida are served by continuing to contest the case. Frankly, it could be easily argued that the settlement places too many restrictions by government on a company that seeks to expand into new markets, create jobs, develop new products, and serve the public. Moreover, Microsoft contributed about \$7 million in charitable contributions to Florida in 2000. The other states that are also resisting settlement here seem to be seeking radical remedies designed to be destructive.

One has to wonder if the intent is to destroy success.

Some states are served by attorneys general who seek to use this case to improve their public position, posing for cameras at every opportunity and doing more posing than policymaking in their approach to this issues. This has not been Butterworth's style. He has never pandered to the media and never appeared to grandstand. Even in this case he has remained low-key and studious. Now is the time for his reflection to determine that this case should be placed on the dust pile of history as a bad idea.

The greatest threat of this case in the first place was that an overzealous, antitrust market federal government under the former administration would go too far and force a major breakup of what many consider as one of the most innovative organizations in history.

This scheme was rejected by the appellate court and, with a change in administrations, by the federal plaintiffs as well. The current agreement is acceptable because it serves the public's best interest. Microsoft is forced to disclose part of its code, is limited on how it relates to computer makers, and is forced to fund a technology oversight committee to oversee the settlement, respond to complaints, and report to the court. The head of the antitrust division of the U.S. Department of Justice has agreed that the public is well served by this agreement stating, "The goals of the government were to obtain relief that stops Microsoft from engaging in unlawful conduct, prevent any recurrence of that conduct in the future, and restore competition in the software market. We have achieved these goals."

It is time for Florida to agree.

Edwin H. Moore is president and CEO of the James Madison Institute in Tallahassee, a Florida based non partisan, nonprofit research and educational organization.

Subject: Microsoft Settlement

I am sending this email in reference to the US Gov't settlement of the Microsoft Antitrust case. My name is Daniel Juliano, and I live in Urbandale, Iowa. I am a Visual Basic programmer for an Insurance company here, which means I spend the bulk of my time programming computer application for various Microsoft environments.

I am not happy with the settlement. It was proven that Microsoft is indeed a monopoly. It is my belief that the settlement will be unable to prevent Microsoft from continuing it's unfair business practices. Have a look at section "IV. Compliance and Enforcement Procedures" subsection "A. Enforcement Authority" in the final ruling. The first part reads:

"The Plaintiffs shall have exclusive responsibility for enforcing this Final Judgment. Without in any way limiting the sovereign enforcement authority of each of the plaintiff States, the plaintiff States shall form a committee to coordinate their enforcement of this Final Judgment. A plaintiff State shall take no action to enforce this Final Judgment without first consulting with the United States and with the plaintiff States' enforcement committee."

And so on and so forth. The problem with enforcement is it all come down to the courts again. Which means Microsoft has the ability to dispute all claims of infraction, as well as drag out the punishment process. Microsoft loves the fact that it can take years in a courtroom to resolve an issue. By that time, the companies they've mauled have long since gone bankrupt. Can't you see that this is the reason the original antitrust lawsuit took so long in the first place?

The only way to enforce the ruling against a monopoly is to break up the monopoly. The longer you wait, the more Microsoft will claim all of its parts are too closely knit with its operating system. Now is the US Gov't chance to strike, please don't let the taxpaying citizens (remember us, the ones who are paying for the trial?) down.

Thanks,

Daniel Juliano  
Programmer II

From: Michael O'Connell

To: Microsoft ATR

Date: 1/23/02 10:56am

Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this

settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Sincerely,

Michael O'Connell

Subject: Microsoft Settlement

I am writing to comment upon the proposed Microsoft settlement. I am disappointed at the proposed settlement and believe that it does not provide sufficient remedies to restore meaningful competition to the marketplace.

I am an Assistant Professor of Engineering at Grand Valley State University in Grand Rapids, Michigan. In the field of engineering, there are several important software tools that define the state-of-the-art in engineering practice. The majority of these tools require the Microsoft Windows operating system. In effect, the future of American engineering depends upon Microsoft. This places the U.S.A. in a very precarious position.

When our engineering department buys a new computer, we have no choice but to buy it pre-installed with the latest Microsoft operating system. By charging computer manufacturers for an operating system license for each computer sold, regardless of

whether the computer actually has the operating system installed, the computer manufacturer faces extreme pressure to do as Microsoft says and pre-load the computer with the most recent release of the Microsoft Windows operating system. Previous versions of the operating system are simply not available. This is the cause of the "upgrade treadmill." Engineering software developers must spend considerable resources to upgrade their software for compatibility with the newest release of the Microsoft Windows operating system. Engineering departments and students must pay for the newest operating system version and for new versions of the software.

This "upgrade treadmill" benefits no-one except Microsoft. The software developers must run fast just to keep up, purchasers of the software must upgrade to the latest version in order to maintain compatibility with the latest Microsoft operating system, and our higher education system, both the universities and the students, must pay for both the new operating system and the new version of the engineering software. There are simply no other options as long as Microsoft continues to force its upgrades on us.

The proposed Microsoft settlement does nothing to break this cycle. Until engineering software developers have a choice of whether or not they must support the latest Microsoft operating system, this costly treadmill will continue, and the engineering skill and talent of Americans will become vulnerable to foreign competition and to the whims of Microsoft.

Sincerely,

Andrew Sterian

As an advanced computer user and United States Citizen, I must dissent in the Microsoft AntiTrust Settlement. The terms of the settlement are both too narrow (only citing 5 middleware components without regard to future implementations) and too short-sighted (addressing specific incarnations of the software and not the underlying practices of the Microsoft dynasty that makes fair competition nearly impossible). This country has had the wool pulled over its eyes by so-called antitrust legislation before, in what amounted to pats on the head to the rabble-rousers who saw the corporations' unfair practices for what they were. But in this information age, do not be fooled into thinking that we, the masses, can be placated by token gestures and empty, unenforced policies. Your responsibility lies not in satisfying the corporations, but in upholding the standards of the people of this country. We're watching- do not let us down.

Subject: Microsoft Settlement

I am severely disappointed with the "Proposed Final Judgement" (PFJ) in United States vs. Microsoft. I feel that Microsoft has had nearly complete control in crafting a document that is highly favorable to their position, and that it allows them nearly unrestrained activity as a penalty for their behavior.

I would really like to see something that directly addresses Microsoft's monopolistic behavior against OEM's and other vendors. I would like to see that the document allows (interesting use of the word in a free society) OEM's who sell computer systems the unrestrained ability to sell them in any configuration the buying public should choose. As it stands now, OEMs are still afraid to sell a computer system unless it meets with Microsoft's approval, that approval being the ability to sell their operating system at all.

Please address this, and a host of other issues as you substantially revise the PFJ so that it is not a Microsoft-favorable document, but a document that favors the whole computer industry, and indeed, our whole society. Punish Microsoft appropriately (which, sadly, the PFJ does not do), and allow the rest of the computer industry to move ahead unrestrained. This is the most American thing we can do, to encourage freedom of choice, and allow our whole economy to progress, free of the stain of monopolistic restraint.

Thank you for allowing me to express my feelings on the issue. —

No one is completely useless. They can always serve as a bad example. — Dale L. Handy, P.E.

Turk@learningtree.com@inetgw

To: Microsoft ATR

Date: 1/23/02 10:56am

Subject: Microsoft settlement

Having examined the proposed consent final judgment for USA versus Microsoft, we offer the following initial comments. We note at the outset that the decision to push for a rapid negotiation appears to have placed the Department of Justice at a disadvantage, given Microsoft's apparently willingness to let this matter drag on for years, through different USDOJ antitrust chiefs, Presidents and judges. The proposal is obviously limited in terms of effectiveness by the desire to obtain a final order that is agreeable to Microsoft.

We are disappointed of course that the court has moved away from a structural remedy, which we believe would require less dependence upon future enforcement efforts and good faith by Microsoft, and which would jump start a more competitive market for applications. Within the limits of a conduct-only remedy, we make the following observations.

On the positive side, we find the proposed final order addresses important areas where Microsoft has abused its monopoly power, particularly in terms of its OEM licensing practices and on the issue of using interoperability as a weapon against consumers of non-Microsoft products. There are, however, important areas where the interoperability remedies should be stronger. For example, there is a need to have broader disclosure of file formats for popular office productivity and multimedia applications. Moreover, where Microsoft appears to be given broad discretion to deploy intellectual property claims to avoid opening up its monopoly operating system where it will be needed the most, in terms of new interfaces and technologies. Moreover, the agreement appears to give Microsoft too many opportunities to undermine the free software movement.

We also find the agreement wanting in several other areas. It is astonishing that the agreement fails to provide any penalty for Microsoft's past misdeeds, creating both the sense that Microsoft is escaping punishment because of its extraordinary political and economic power, and undermining the value of antitrust penalties as a deterrent. Second, the agreement does not adequately address the concerns about Microsoft's failure to abide by the spirit or the letter of previous agreements, offering a weak oversight regime that suffers in several specific areas. Indeed, the proposed alternative dispute resolution for compliance with the agreement embraces many of the worst features of such systems, operating in secrecy, lacking independence, and open to undue influence from Microsoft.

#### OEM Licensing Remedies

We were pleased that the proposed final order provides for non-discriminatory licensing of Windows to OEMs, and that these remedies include multiple boot PCs, substitution of non-Microsoft middleware, changes in the management of visible icons and other issues. These remedies would have been more effective if they would have been extended to Microsoft Office, the other key component of Microsoft's monopoly power in the PC client software market, and if they permitted the removal of Microsoft products. But nonetheless, they are pro-competitive, and do represent real benefits to consumers.

#### Interoperability Remedies

Microsoft regularly punishes consumers who buy non-Microsoft products, or who fail to upgrade and repurchase newer versions of Microsoft products, by designing Microsoft Windows or Office products to be incompatible or non-interoperable with competitor software, or even older versions of its own software. It is therefore good that the proposed final order would require Microsoft to address a wide range of interoperability remedies, including for example the disclosures of APIs for windows and Microsoft middleware products, non-discriminatory access to communications protocols used for services, and nondiscriminatory licensing of certain intellectual property rights for Microsoft middleware products. There are, however, many areas where these remedies may be limited by Microsoft, and as is indicated by

the record in this case, Microsoft can and does take advantage of any loopholes in contracts to create barriers to competition and enhance and extend its monopoly power. Special Concerns for Free Software Movement

The provisions in J.1 and J.2. appear to give Microsoft too much flexibility in withholding information on security grounds, and to provide Microsoft with the power to set unrealistic burdens on a rival's legitimate rights to obtain interoperability data. More generally, the provisions in D. regarding the sharing of technical information permit Microsoft to choose secrecy and limited disclosures over more openness. In particular, these clauses and others in the agreement do not reflect an appreciation for the importance of new software development models, including those "open source" or "free" software development models which are now widely recognized as providing an important safeguard against Microsoft monopoly power, and upon which the Internet depends.

The overall acceptance of Microsoft's limits on the sharing of technical information to the broader public is an important and in our view core flaw in the proposed agreement. The agreement should require that this information be as freely available as possible, with a high burden on Microsoft to justify secrecy. Indeed, there is ample evidence that Microsoft is focused on strategies to cripple the free software movement, which it publicly considers an important competitive threat. This is particularly true for software developed under the GNU Public License (GPL), which is used in GNU/Linux, the most important rival to Microsoft in the server market. Consider, for example, comments earlier this year by Microsoft executive Jim Allchin: <http://news.cnet.com/news/0-1003-200-4833927.html> "Microsoft exec calls open source a threat to innovation," Bloomberg News, February 15, 2001, 11:00 a.m. PT One of Microsoft's high-level executives says that freely distributed software code such as Linux could stifle innovation and that legislators need to understand the threat. The result will be the demise of both intellectual property rights and the incentive to spend on research and development, Microsoft Windows operating-system chief Jim Allchin said this week.

Microsoft has told U.S. lawmakers of its concern while discussing protection of intellectual property rights ...

"Open source is an intellectual-property destroyer," Allchin said. "I can't imagine something that could be worse than this for the software business and the intellectual-property business." ... In a June 1, 2001 interview with the Chicago Sun Times, Microsoft CEO Steve Ballmer again complained about the GNU/Linux business model, saying "Linux is a cancer that attaches itself in an intellectual property sense to everything it touches. That's the way that the license works," 1 leading to a round of new stories, including for example this account in CNET.Com: <http://news.cnet.com/news/0-1003-200-6291224.html>

"Why Microsoft is wary of open source: Joe Wilcox and Stephen Shankland in CNET.com, June 18, 2001.

There's more to Microsoft's recent attacks on the open-source movement than mere rhetoric:

Linux's popularity could hinder the software giant in its quest to gain control of a server market that's crucial to its long-term goals

Recent public statements by Microsoft executives have cast Linux and the open-source philosophy that underlies it as, at the minimum, bad for competition, and, at worst, a "cancer" to everything it touches.

Behind the war of words, analysts say, is evidence that Microsoft is increasingly concerned about Linux and its growing popularity. The Unix-like operating system "has clearly emerged as the spoiler that will prevent Microsoft from achieving a dominant position" in the worldwide server operating-system market, IDC analyst A1 Gillen concludes in a forthcoming report.

... While Linux hasn't displaced Windows, it has made serious inroads... ] .. In attacking Linux and open source, Microsoft finds itself competing "not against another company, but against a grassroots movement," said Paul Dain, director of application development at Emeryville, Calif.-based Wirestone, a technology services company.

... Microsoft has also criticized the General Public License (GPL) that governs the heart of Linux. Under this license, changes to the Linux core, or kernel, must also be governed by the GPL. The license means that if a company changes the kernel, it must publish the changes and can't keep them proprietary if it plans to distribute the code externally...

Microsoft's open-source attacks come at a time when the company has been putting the pricing squeeze on customers. In early May, Microsoft revamped software licensing, raising upgrades between 33 percent and 107 percent, according to Gartner. A large percentage of Microsoft business customers could in fact be compelled to upgrade to Office XP before Oct. 1 or pay a heftier purchase price later on.

The action "will encourage—'force' may be a more accurate term—customers to upgrade much sooner than they had otherwise planned," Gillen noted in the IDC report. "Once the honeymoon period runs out in October 2001, the only way to 'upgrade' from a product that is not considered to be current technology is to buy a brand-new full license."

This could make open-source Linux's GPL more attractive to some customers feeling trapped by the price hike, Gillen said. "Offering this form of 'upgrade protection' may motivate some users to seriously consider alternatives to Microsoft technology." . . .

What is surprising is that the US Department of Justice allowed Microsoft to place so many provisions in the agreement that can be used to undermine the free software movement. Note for example that under J.1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of its business," while at the

same time it is describing the licensing system for Linux as a "cancer" that threatens the demise of both the intellectual property rights system and the future of research and development.

The agreement provides Microsoft with a rich set of strategies to undermine the development of free software, which depends upon the free sharing of technical information with the general public, taking advantage of the collective intelligence of users of software, who share ideas on improvements in the code. If Microsoft can tightly control access to technical information under a court approved plan, or charge fees, and use its monopoly power over the client space to migrate users to proprietary interfaces, it will harm the development of key alternatives, and lead to a less contestable and less competitive platform, with more consumer lock-in, and more consumer harm, as Microsoft continues to hike up its prices for its monopoly products.

Problems with the term and the enforcement mechanism

Another core concern with the proposed final order concerns the term of the agreement and the enforcement mechanisms. We believe a five-to-seven year term is artificially brief, considering that this case has already been litigated in one form or another since 1994, and the fact that Microsoft's dominance in the client OS market is stronger today than it has ever been, and it has yet to face a significant competitive threat in the client OS market. An artificial end will give Microsoft yet another incentive to delay, meeting each new problem with an endless round of evasions and creative methods of circumventing the pro-competitive aspects of the agreement. Only if Microsoft believes it will have to come to terms with its obligations will it modify its strategy of anticompetitive abuses.

Even within the brief period of the term of the agreement, Microsoft has too much room to co-opt the enforcement effort. Microsoft, despite having been found to be a law breaker by the courts, is given the right to select one member of the three members of the Technical Committee, who in turn gets a voice in selecting the third member. The committee is gagged, and sworn to secrecy, denying the public any information on Microsoft's compliance with the agreement, and will be paid by Microsoft, working inside Microsoft's headquarters. The public won't know if this committee spends its time playing golf with Microsoft executives, or investigating Microsoft's anticompetitive activities. Its ability to interview Microsoft employees will be extremely limited by the provisions that give Microsoft the opportunity to insist on having its lawyers present. One would be hard pressed to imagine an enforcement mechanism that would do less to make Microsoft accountable, which is probably why Microsoft has accepted its terms of reference.

In its 1984 agreement with the European Commission, IBM was required to affirmatively resolve compatibility issues raised by its competitors, and the EC staff had annual meetings with IBM to review its progress in resolve disputes. The EC reserved

the right to revisit its enforcement action on IBM if it was not satisfied with IBM's conduct.

The court could require that the Department of Justice itself or some truly independent parties appoint the members of the TC, and give the TC real investigative powers, take them off Microsoft's payroll, and give them staff and the authority to inform the public of progress in resolving compliance problems, including for example an annual report that could include information on past complaints, as well as suggestions for modifications of the order that may be warranted by Microsoft's conduct. The TC could be given real enforcement powers, such as the power to levy fines on Microsoft. The level of fines that would serve as a deterrent for cash rich Microsoft would be difficult to fathom, but one might make these fines deter more by directing the money to be paid into trust funds that would fund the development of free software, an endeavor that Microsoft has indicated it strongly opposes as a threat to its own monopoly. This would give Microsoft a much greater incentive to abide by the agreement.

Failure to address Ill Gotten Gains

Completely missing from the proposed final order is anything that would make Microsoft pay for its past misdeeds, and this is an omission that must be remedied. Microsoft is hardly a first time offender, and has never shown remorse for its conduct, choosing instead to repeatedly attack the motives and character of officers of the government and members of the judiciary. Microsoft has profited richly from the maintenance of its monopoly. On September 30, 2001, Microsoft reported cash and short-term investments of \$36.2 billion, up from \$31.6 billion the previous quarter—an accumulation of more than \$1.5 billion per month.

It is astounding that Microsoft would face only a "sin no more" edict from a court, after its long and tortured history of evasion of antitrust enforcement and its extraordinary embrace of anticompetitive practices—practices recognized as illegal by all members of the DC Circuit court. The court has a wide range of options that would address the most egregious of Microsoft's past misdeeds. For example, even if the court decided to forgo the break-up of the Windows and Office parts of the company, it could require more targeted divestitures, such as divestitures of its browser technology and media player technologies, denying Microsoft the fruits of its illegal conduct, and it could require affirmative support for rival middleware products that it illegally acted to sabotage. Instead the proposed order permits Microsoft to consolidate the benefits from past misdeeds, while preparing for a weak oversight body tasked with monitoring future misdeeds only. What kind of a signal does this send to the public and to other large corporate law breakers? That economic crimes pay!

Please consider these and other criticisms of the settlement proposal, and avoid if possible yet another weak ending to a Microsoft antitrust case. Better to send this

unchastened monopoly juggernaut a sterner message.

Subject: Microsoft Settlement

Dear Sirs:

I am writing to give comment on the Microsoft Settlement as per the Tunney Act. I am a systems manager at a publishing company, and I use and recommend software on a daily basis.

I do not feel that the proposed Microsoft settlement will have a positive effect on the American economy, because the settlement leaves many areas where Microsoft can get around the restrictions. I feel that the settlement, in its current form, will actually more deeply entrench Microsoft as a monopoly that cannot be shaken, because they will know exactly how to get around the proposed restrictions. As shown with the collapse of Enron, a monopoly does not only hurt competition but can have disastrous effects on the economy as a whole.

Particularly, Microsoft needs to release information pertaining to the Application Programming Interfaces (APIs) used in all Microsoft products, including any operating system that can execute Windows-based code (this includes Microsoft Windows 95, 98, 2000, XP, CE, XP Tablet Edition, X-Box and Pocket PC) with sufficient time for competitors to re-engineer their programs to be interoperable with those Microsoft products.

Microsoft's monopolistic practices cause everyone to suffer, by hindering growth and innovation in the rapidly changing (and generally very competitive) technology industry. The findings of fact, which confirmed Microsoft is a monopoly, need strict measures to remedy their past abuses and prevent those practices from continuing into the future.

Subject: Microsoft Settlement is BAD

Microsoft broke the law and continues to break the law, as has been ruled. The current settlement does NOT force Microsoft to open its API to any and all comers. This is unacceptable and a mere slap on the wrist, versus the full punishment that an aggressive monopoly company that flaunts the law deserves.

Erich Bratton

From: David Haas  
 To: Microsoft ATR  
 Date: 1/23/02 10:56am  
 Subject: Microsoft Settlement

Hello. I would like to comment on a problem I see with the proposed Microsoft settlement.

The remedies of the proposed settlement are specifically geared to protect commercial organizations—companies in business to make a profit. However, Microsoft has stated that their biggest threats come not from competing companies, but from Open Source initiatives such as the Apache web server or the Samba file & print sharing server.

This proposed settlement provides no protection whatsoever to these initiatives. In fact, Section III(J)(2) specifically states that Microsoft need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business. Section III(D) of the settlement also limits knowledge of API's for incorporating non-Microsoft "middleware" (such as web or file servers) to only commercial entities—not open, non-profit initiatives such as Apache or Samba. Any settlement which doesn't prevent Microsoft from arbitrarily changing protocols or API's on its Windows platform to shut out such open initiatives would be a terrible mistake. Microsoft has been found guilty of unfairly using its monopoly in operating systems to extend into other areas and lock competition out. Any settlement with the company should ensure this practice doesn't continue.

Thank you.

 Subject: Microsoft settlement

To whom it may concern:  
 Under the provisions of the Tunney Act, public opinion on proposed settlements can be considered by the court. Therefore, again

under the provisions of the Tunney Act, I am sending the following comments to be considered by the court.

I feel that the current proposed settlement against Microsoft is not in the public's interest. Among my issues with the Revised Proposed Settlement are the following:

1) Section IV: Compliance and Settlement Practices, Part C: Appointment of a Microsoft Internal Compliance Officer. I feel that the Microsoft Compliance Officer should not be a person designated by Microsoft, and not an employee. Microsoft has shown a pattern of action that has demonstrated that they will lie when it is their best interest. The testimony during the initial trial by Microsoft corporate officers, especially regarding the supposed interdependency of the Windows OS and the Internet Explorer web browser was shown to be falsified. Because of this, and other reasons, I personally feel that Microsoft will not hold to the proposed settlement with regards to this position.

2) Section V: Termination, Part A: The length of the settlement, at five years, prior to any extension ordered by the court, in my opinion, is too short. Given the position that Microsoft is in, as regards the desktop OS market share, five years is not long enough, in my opinion, to be enough of a timespan in order to ensure Microsoft complies fully with the ordered settlement.

3) Section III: Prohibited Conduct, Part J: The proposed settlement does not require Microsoft to document, disclose, or license any of their APIs, Documentation, or portions or layers of communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria.

This portion allows Microsoft to continue to "cut out the middle-man" by continuing to obfuscate their code, make it more difficult for other software makers to create programs that work with the Windows OS, and hide security flaws with their OS software, as they have already done in the past. It is not in the public's best interest for this to continue, and I believe that a harsher punishment is required in order to effectively curtail Microsoft's previous behavior.

 To: Microsoft ATR  
 Date: 1/23/02 10:58am  
 Subject: Microsoft Settlement

Greetings,

I find it distributing that the settlement makes no mention of file format problems. Microsoft continually changes it's file formats causing incompatibility within it's own products and other's products. They do not publish specifications of their file format so that others can write software which can work with them. This forces users to buy Microsoft products even though they may not want to, or cannot afford to buy a modern computer or all of the Microsoft software they will have to buy. Simple releasing specifications of their file formats would allow others to write competing software which would encourage innovation, and improve the computing experience for many people.

Thank you for your time.

**MTC-00016323**

From: Mark Histed  
 To: Microsoft ATR  
 Date: 1/23/02 10:44am  
 Subject: Microsoft Settlement

The settlement proposed by the US Department of Justice in the civil anti-trust action they have brought against Microsoft is badly flawed. This remedy does nothing to prevent Microsoft from leveraging its monopoly on operating system software to give the company's other software a (large) advantage over its competitors.

The Department of Justice has an obligation to enforce effective remedies with respect to Judge Jackson's findings of fact as affirmed by the US Court of Appeals for the DC Circuit. At the very least, they should:

a) allow OEM's to bundle whichever software they like with Windows and b) prevent Microsoft from changing features of Windows to promote their own application software or middleware to extend their illegal monopoly.

Let me draw an analogy. Imagine that the government left the building of the interstate highway system up to private enterprise. For a while, many different companies built different kinds of roads and different kinds of cars that could run on those roads.

(Imagine that some roads had different kinds of grooves that only certain tires could fit into.) Over time, a dominant kind of road emerged. Many companies built cars that would run on those roads and not others. Therefore, one type of road, built by one type of company, became dominant.

This is analogous to what happened in the computer industry in the 80s and early 90s. Many OS's existed, but eventually Microsoft's OS became dominant. There is one key difference, however. Microsoft could roll out a new version of its OS every two or three years, and people would quickly upgrade! This is equivalent to the road company being able to build roads so quickly that they could replace all the roads in the US every two or three years. Now imagine this road-building company started building cars. Of course, it would design the roads so that they would work best with its cars, and so that they would make other competitors' cars run more slowly. Their cars would enjoy a huge competitive advantage.

This is roughly equivalent to the situation in the desktop computer software market today. Except things are even worse! (This is due to the speed and ease with which software can be distributed.) Netscape once made the best "browser" cars, for free, but you had to pick them up at its store (by downloading it). Microsoft starting parking free browser cars all over the roads right up in front of people's driveways. Why would anyone want to go pick up a "browser" from Netscape when another one from Microsoft was right there at hand? Netscape tried to park its "browser cars" on to the roads, too, but Microsoft prevented them from doing that. (By preventing OEM's from bundling Netscape with Windows.)

Was that a huge advantage? Yes.

Will Microsoft be prevented from doing that in the future by the proposed remedy? No.

For example, Microsoft is still allowed to prohibit OEMs from changing Windows at all—they can still park their free cars right in front of every house. Why would anyone use any other car?

The best remedy in this case would be a market-based one—a capitalistic remedy that separates two different companies from each other so that they can compete rather than collude. In short, that would be Judge Jackson's proposed remedy.

Thanks for reading this.

Date: 1/23/02 10:58am  
Subject: Microsoft Settlement

To Whom It May Concern,

I wanted to give my opinion to the court about the proposed Microsoft settlement, under the Tunney Act.

I do not believe the settlement to be a good resolution of the case. I do not think it will

act as a deterrent for Microsoft to not abuse its power again. I think that if Microsoft knew this would be the punishment for its crime of abusing its monopoly position, that they would not hesitate to do it again, because they gained much more by doing so than they will lose in this settlement. I think that in order to allow competitors to compete, Microsoft should be required to open and document all of the APIs used to communicate between their programs as well as the document formats those programs use. This would allow there to be competing programs which would interoperate with Microsoft programs and provide a fair mechanism for competition. I would be disappointed with anything short of this.

From: Steve Damer  
To: Microsoft ATR  
Date: 1/23/02 10:59am  
Subject: Microsoft Settlement

I think the proposed settlement is ridiculous. Microsoft abused their monopoly, and it paid off for them. The only way to stop them from doing it again is to either make them incapable of doing it again (and I don't mean just make them promise to stop), or to punish them so severely that they regret having done it. The proposed settlement doesn't make it impossible for them to do it again (all they have to do is break their promise, and we know they're willing to do that), and it doesn't punish them particularly harshly. I think a much more appropriate punishment would be to require them to publish the Windows API (with further sanctions if someone discovers a discrepancy between what they publish and what the API does). This would strongly reduce their ability to use their operating system monopoly to gain an unfair edge in the sale of other types of software.

Steve

From: Thomas Dyar  
To: Microsoft ATR  
Date: 1/23/02 10:40am  
Subject: Microsoft Settlement

To Whom It May Concern:

As a concerned citizen, university student, and professional software engineer, I believe the proposed settlement between the collective states and Microsoft, Inc. is a bad idea. Although it does seem to address some issues effectively, more emphasis needs to be placed on counterweights that will likely ensure Microsoft's future behavior abides by legal norms and that the goals of a "healthy" software market are achieved.

For example, Microsoft is known for its strategy of "embrace and extend", very recently exhibited in its employment of the industry-standard kerberos open source authentication protocol within its products. Rather than just "playing along" with established standards which have only solidified through many years of work by a

wide range of volunteers, university researchers, and individuals at private corporations, Microsoft "extended" the kerberos protocol so that Microsoft-kerberos is slightly different from everybody else's kerberos. Just so nobody is confused about the likely ultimate goal Microsoft was pursuing with this modification, the changes made were kept under Microsoft-held copyright, and make interoperability without Microsoft approval impossible.

In order to prevent this "tinkering" to inhibit ongoing open source work, the settlement should require that Microsoft publish and license ALL API's on a non-discriminatory basis so free access to these API's and standards is available to both Microsoft employees and the open source community. Currently, the settlement only specifies these API's be "disclosed". Compulsory licensing will allow the open source community to implement alternative versions of the published Microsoft API's and go much farther towards a "level playing field".

Thank you for your consideration of my remarks,

Thomas Dyar

Date: 1/23/02 10:58am  
Subject: Microsoft Settlement

Hello,

As both a US citizen and a Software Engineer, I feel it important to express my concern over the proposed settlement in the Microsoft case. I have so many problems with and concerns about it that I don't know where to begin.

Let me just say that, if this settlement is accepted, Microsoft, which has been shown in court to be guilty of illegally maintaining a monopoly, will neither be punished for its past behavior nor will it be realistically kept from similar behavior in the future. The proposed remedy will at best perpetuate the status quo, and at worst actually enhance some of Microsoft's tactics.

In short, the proposed settlement is little more than a travesty of justice and I find it disagreeable in the strongest of terms. I expect more from my government.

Thank you for your time. —

From: Ed Starback  
To: Microsoft ATR  
Date: 1/23/02 10:58am  
Subject: Microsoft Settlement

I am writing in regards to the Microsoft anti-trust settlement. It is ineffective at best.

The process of litigation did more to deter there monopolistic practices than this settlement will. Stronger measures need to be put in place to ensure a competitive environment. The fact that they are a repeat offender should also be taken into account. They will see the current settlement as just the price of doing business, and they will continue in their monopolistic ways. Since it will be harder to sue them after this settlement goes into effect, they will probably become even more predatory. A more effective settlement will increase competition, resulting in lower prices and better software, which is to the benefit of everyone.

Thank You  
Edward Starback

From: revery@mindspring.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 11:00am  
Subject: Microsoft Settlement

I am not satisfied with the current settlement. I have read multiple essays, both for and against the current proposal and I have read the proposal. I appreciate the government's desire to regulate unfair business practices, and typically I am one to favor minimal governmental involvement. However, I do not believe that the current settlement adequately addresses the situation. Primarily, Microsoft is left with too much power to keep its competitors from competing. Not as much in the OS department, but specifically in the middleware (components for the OS) department. By having the freedom to change critical API's and not disclose them until the last major beta release, and not having to release some API's that their own products have full access to, creates an environment that would competition difficult, and in some circumstances untenable.

I appreciate your consideration of this matter.

**MTC-00016335**

From: Lightning  
To: Microsoft ATR  
Date: 1/23/02 11:09am  
Subject: Microsoft Settlement

The DOJ and the US government should put a stop to Microsoft's monopolistic actions. The current proposal is not sufficient to stop Microsoft's actions and is being sent around as a victory due to many loopholes.

Microsoft has not changed their actions much since the trial started. They have continued their actions, even being allowed to release XP which contains so many things built into XP that they can effectively wipe out their competition due to no one needing to go search the net for a movie player, chat program, or other applications that are much better than Microsoft's version. Normal computer users use what the computer comes with. This means that Microsoft can continue being a monopoly until someone else grows larger but Microsoft makes that impossible by making it extremely difficult for anyone, other than

Microsoft, to talk and interface with the OS from another OS. The same is true for their applications. Microsoft needs to be forced to release all protocols and file formats. There is no reason for them not to release a protocol due to security. Such an entry in the proposal means that they can implement security into all protocols then not release any. If an operating system is designed well, then at least the protocols and file formats it uses can be released without worry about security as it will still exist. Microsoft is continuing to be a monopoly and has so many loopholes in the current proposal that they don't have to change at all. Proposals do not have to be complicated. The more complicated, the easier to find and use a loophole. If the government can not stop Microsoft from what they are doing, who will?

From: Jason M. Felice  
To: Microsoft ATR  
Date: 1/23/02 11:03am  
Subject: Microsoft Settlement As a consultant and business owner in Cronosys, LLC (<http://www.cronosys.com/>),

I have taken a keen interest in the Microsoft Anti-trust case. As well as reading most of the news reporting of the subject, I've read most of the court transcripts.

As consultants, our business is multi-faceted, one of the things that we do is install Linux Internet servers. Over the years we have had numerous problems with clients' forced upgrades suddenly preventing communications from the client machine to one of our servers (I'm speaking of all different kinds of servers, not just one particular package—mail servers, file servers, web servers, LDAP servers). A lot of times this is because Microsoft has bent or broken the open standards on which the Internet was built for its own short-sighted gains.

The current settlement does nothing to remedy this. In fact, most of the restrictions mentioned in the settlement, in my personal opinion, will be obsolete shortly after such a settlement agreement is signed—Microsoft is already poised to make it so. With .NET Microsoft can move all of the offending APIs out of the operating system and into a pay-per-use service provider. With the XBox (which the settlement as I interpret it seems to ignore) poised to invade the living room, and then replace set-top boxes, then replace most families' Internet access—couple this with .NET and they have technologically completely avoided any anti-trust remedy but still avoided any competition.

The best proposal I have heard comes from Richard Stallman, summarized here, but the full text is available at:

<http://www.gnu.org/philosophy/microsoft-antitrust.html>

1. Require Microsoft to publish complete documentation of all interfaces between software componenets, all communications protocols, and all file formats. 1a) Prevent Microsoft from using non-disclosure agreements.

2. Require Microsoft to use its patents for defense only.

3. Require Microsoft to not certify any hardware as working with Microsoft

software, unless the hardware's complete specifications have been published.

Subject: Microsoft Settlement

Hello,  
I am writing as a concerned citizen and will copy this email to paper and US mail as appropriate.

I would like to see Microsoft admit to understanding of the letter of the law, or at least pay some damages. Their size may well have contributed to current economic issues, and here in Austin, TX, it sure would be nice to have the software market opened up again. That is, it would be most beneficial to have Microsoft held to open more of its resources to other software creators, working more cooperatively with open-source developers.

Rather than make a comprehensive answer in this message, I will hope that others add other details, and simply use this message as a "vote" to be cast in favor of requiring Microsoft to work more cooperatively with other companies.

thanks,  
Sheilagh O'Hare

Subject: Microsoft Settlement (against)

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the

American public, deleterious to the American economy, and FAR from adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of structures AND punishments must be placed on convicted monopolists to insure that 1) they are unable to continue their illegal activities and pay for past transgressions to the full extent of the law. I do not think that the proposed settlement is strong enough to serve either of these functions.

Thank you for your patience  
Francisco

Subject: This Microsoft Settlement Is Bad

The Microsoft settlement is bad for consumers, bad for business, and bad for government.

The slap on the wrist so far extracted from Microsoft in no way compensates for the many and serious harms this company has caused to companies such as Netscape, Apple, innumerable others, and consumers all over the United States and beyond.

Also, any settlement by which Microsoft simply has to distribute MORE of its products in the marketplace ... one of the very problems that occasioned this entire legal battle ... is simply too ludicrous to credit. A proper settlement would be paying for installations of competing products such

as Linux servers and Macintosh computers. Microsoft argues that the US economy would suffer if it was restrained.

The opposite is true. Rid the marketplace of Microsoft's stranglehold, and you will see a flowering of creativity, investment, start-ups, and ideas the like of which we haven't seen since the glory days of the dot-coms. This renaissance, however, would have a chance to take root and flower.

The proposed settlement does very little to prevent Microsoft from future infractions of antitrust law. Additionally, MS has benefitted monetarily as a result of their practices and this settlement does little to enforce any sort of compensation to those companies and individuals that have suffered as a result (Netscape, for example has been all but stifled out of the market—they have received no compensation for MS's anticompetitive practices).

The settlement is unfair. Microsoft has used its monopoly power to destroy competitors and has set back the field of computing years.

I am on a project that used XML. We have found that integrating with Wordperfect and all other wordprocessing programs has only taken a fourth of the time that integrating with Microsoft's word product. The product is built to make it deliberately difficult to integrate with it. This makes it difficult for competing products to provide Word compatibility.

I believe that Windows should be put in the public domain and that Microsoft should be barred from further purchases.

Robb Greathouse.

Subject: Microsoft Settlement

Ladies and gentlemen,

I followed the Microsoft anti-trust case in newspaper accounts as it wound its way through the legal system. I thought that Judge Penfield did a good job of arbitrating the interests of justice in this case—to me it was clear that Microsoft is a predatory monopoly, always pushing to find the absolute maximum line of profit, regardless of ethics or the interest of the public. They have sought to achieve dominance in every aspect of the high-tech world, and their sheer size guarantees that other more innovative players get coerced or shoved aside.

I believe that the only just resolution to this case would have been to break Microsoft into two companies— an operating system company, and an applications company. I am also particularly outraged that one of the “remedys” proposed is to have Microsoft donate a large chunk of product to the school system. That comes from the school of “Well, if you gotta pay, you might as well pay in a way that hurts your competitors more.” I urge the Department of Justice to take a hard line on

Microsoft.

Subject: Microsoft Settlement

Department of Justice,

I have used computers since 1961 and owned them since 1978. It is with great frustration that I watched excellent software and innovations be destroyed by Microsoft's strongarm tactics.

Their forcing of IBM to stop supporting OS/2 was especially painful as I had been using OS/2 for 6 years and had written a Japanese-English Electronic Dictionary program for OS/2. OS/2 was an excellent operating system, far superior to any offering from Microsoft at the time.

I now teach computer programming languages and the Linux operating system at Los Angeles City College Community Services. Much effort is expended working around Microsoft's secret or deviant protocols.

The greatest exercise of their monopoly position, however, is with computer hardware manufacturers. It is extremely

difficult for competing operating systems to gain market share when the manufacturers are strong armed by Microsoft licenses.

Capitalism does not work when there are monopolies and Microsoft is most certainly a monopoly that must be broken up. It must be forced to obey published industry standard interfaces. It must be prevented from using its monopoly power against hardware manufacturers. It must be prevented from selling both an operating system and the applications that interface with it. A monopoly in the computer industry moves too fast to be treated with the same process as Standard Oil a century ago.

Subject: Microsoft Settlement

I write today to express my concern for the proposed settlement in the Microsoft/DOJ anti-trust case. The settlement reached by the DOJ and Microsoft is FAR short of the goal of addressing Microsoft's abuses in the marketplace.

Please readdress this matter and include not only tougher sanctions against Microsoft, but actually punish them for their abuses against this nations consumers and other companies.

Until Microsoft is brought under control, we consumers will see continuing reduction in choice and steady increases in price for Windows based software. I also write from the unique viewpoint of a Linux user. Because of Microsoft's dominant monopoly position in the market, I find it incredibly hard to use my chosen system in a productive manner. Without government intervention I will find myself facing a steady barrage of Microsoft's proprietary file formats (.doc, .xls, polluted java, C#, MS XML, etc) that require the use of Microsoft products. As well, in the hardware arena it becomes increasingly difficult to find devices that have device drivers that work in my chosen operating system, even though my OS runs on exactly the same .x86 platform.

This settlement should require the following of Microsoft:

1. Force them to open their proprietary file formats used in MS Office, Internet Explorer, and Outlook, Outlook Express and Exchange.

2. Create a watchdog group that keep track of Microsoft's attempts at further efforts to “lock” the consumer into future proprietary file formats.

3. Fine Microsoft for all of their past illegal activities and make sure it goes back to all of the parties, consumers AND companies, wronged by their unscrupulous deeds.

4. Take a hard look at their activities in the “boot sector” and “dual boot” arena, such as their actions against BeOS and attempts to block computer manufacturers from selling multiboot systems. By “boot sector”, I mean the fact that Microsoft has designed their operating systems to overwrite any previously loaded operating system entries in the boot sector thereby attempting to restrict consumer choice.

5. I am also a computer tech. Microsoft claimed their introduction of Internet Explorer into Win98 was for the consumers benefit and caused no harm to the consumer. This is completely untrue! Any technician who had the misfortune to have to work on Windows 98's first version can attest to how often the system failed BECAUSE of Microsoft's shoddy attempt to include Internet Explorer in the operating system. This cost consumers an immense amount of money, probably into the billions of dollars in repair costs, data loss, and lost productivity.

6. Microsoft also claimed that Internet Explorer was not a separate application and could not be removed. You simply have to go to <http://www.98lite.net> to find the truth. Yes it can be removed and once it is removed the problems I mentioned in number 5 are greatly reduced.

7. There is an open source project called Wine. This project is an attempt by open source programmers to recreate an environment in Linux and other operating systems to be able to run Windows applications without the use of any of Microsoft's intellectual property. They have made great progress but without help from Microsoft, may never have the ability to run applications with the same quality as they run in Windows. Please consider forcing Microsoft to give up this much needed information so that Wine can run Windows apps. Doing this will allow consumers and developers a choice in the marketplace.

In closing let me say that the current settlement reached by the DOJ and Microsoft stops far short of stopping their monopolistic efforts. I can think of NO other sector of our economy where a single company has so much control. I can think of NO other product where there is not at least ONE other competitor on the store shelf next to it. The computer and software industry in this country is ill and Microsoft is the disease. Please, for the good of the consumer and this nations economy, STOP MICROSOFT ONCE AND FOR ALL!

Subject: I oppose the proposed settlement

I am a citizen of the United States, and a computer professional with 22 years of experience in the field.

Having read the proposed remedy, I am deeply concerned that it will not address the pattern of misbehavior that Microsoft has been engaged in consistently for the past decade. I also believe that the proposed remedy does not address the concerns of one of the major potential and actual competitors that Microsoft has: the free software/open-source software communities.

While I am not in full agreement with some of the rhetoric, I agree with the first two of the three remedies proposed by the Free Software Foundation (which can be found at <http://www.gnu.org/philosophy/microsoft-antitrust.html>).

A summary of these is:

1) Microsoft would be required to publish complete documentation for all programming interfaces and file formats, and would be prohibited from using any interface or file format which is not fully-documented.

2) Microsoft would be required to use any patents in the field of software for defensive purposes only.

In addition to providing a level playing field for \*all\* Microsoft competitors, the two proposed remedies above would be far less administratively burdensome, involve much less involvement by the government in Microsoft's management, and would go a long way in preserving Microsoft's "freedom to innovate".

Thank you for your consideration of my views in this matter.

To: Microsoft ATR  
Date: 1/23/02 11:04am  
Subject: Microsoft Settlement

Hello,

I am writing to express my dissatisfaction with the Microsoft Settlement reached by the DOJ and Microsoft. This settlement inadequately addresses the overly broad market power wielded by Microsoft while simply establishing another bureaucracy that is supposed to police Microsoft's behavior.

Recent history has demonstrated the inability of the courts to address the anticompetitive practices of Microsoft in a time frame suitable to the pace at which Microsoft and other so-called tech companies conduct business. By the time any action has been taken, some companies no longer exist and Microsoft has effectively won the battle. It is doubtful that any other group would be able to act more rapidly when faced with the overwhelming legal resources of a company like Microsoft.

I encourage you to implement a more effective remedy.

Sincerely,

From: Martin Euerle  
To: Microsoft ATR  
Date: 1/23/02 11:03am  
Subject: Microsoft Settlement

I think the proposed settlement is a bad idea for number of reasons, some of which are:

1) It provides to many loopholes for Microsoft to continue their previously court proven illegal behavior.

2) Their previously court proven illegal behavior prevents many companies from developing new products because they know that they can not fairly compete against Microsoft, this lack of a level playing field hurts our economy and our country's future.

3) The proposed settlement makes our government look weak, susceptible to improper influence or at best incompetent. All of these undermine our citizens belief in our governing system which is far worse in the long run for our country than having 1 company strictly dealt with for a decade of illegal behavior.

Thank you for your time,  
Martin Euerle

From: dunbar@cyberspace.org@inetgw  
To: Microsoft ATR  
Date: 1/23/02 11:05am  
Subject: Microsoft Settlement

I am already leaving Microsoft products behind, and turning to Linux; beware that the decision made regarding this settlement will have great significance to Linux's future: beware that DOJ does not create precedent whereby Microsoft can manufacture issues with Linux. That would take on the appearance of scandal, to consumers such as myself. Somewhere, DOJ hasn't seen the issue from my perspective, I hope now you will:

Try to uninstall Macromedia Flash from Internet Explorer 5 thru 6. Cannot use traditional uninstall, results of non traditional removal results in a different irritation in place of the Flash upgrade messages.

Microsoft excludes whatever it wishes to exclude; and as any other entity would also act, Microsoft buys whatever functionality it wishes to incorporate. Internet Explorer is based on Mosaic, from University of Indiana, Urbana-Champlain campus; not developed by Microsoft—what browser development costs are invoiced when college students

created the core? Rhetorically speaking, What

development efforts have been expended by Microsoft? I'll answer that: efforts to embed Mosaic, under a new name, into Windows. Consider also that the mechanisms whereby new software is created has been a stronghold of Microsoft: most programming languages which are in widespread use are Microsoft owned. Yet information is not exchange in a timely fashion unless the destination is a Microsoft entity—then the information flows freely.

Consider the licensing issues regarding new PCs, the company manufacturing the PC must suffer if they do not install Microsoft products?

Is any of the activity regarding Microsoft's .net activity regarding exclusion of Opera Browser considered fair and open by the people using Opera?

Consider the generosity of corporations who donate older PCs: Microsoft placed a new retroactive license restriction on the software, but without any licensee agreeing to it! What kind of contract is Microsoft drawing up?

Really—the perception of benevolence has already slipped from association with the Microsoft name; the multibillion dollar status of the founder is clearly caused by overdone profit margins: divide a percentage of those billions by the number of licensed Microsoft products, then deduct that amount from each license.

Personal Reply is not expected—definitive DOJ suppression of Microsoft—I mean action—is expected. Currently, the computing public sees difficult times ahead of them, Windows XP (eXtra Profitable) places people further into Microsofts enslavement. Because people cannot tell Microsoft how to develop a product (the homeowner surveys are few and acceptable responses are predefined), because the people fear the learning curve associated with the only other operating system which will work on their hardware (x86 architecture), they will not seek a change. Was the south much different before Lincoln freed those slaves??

From: John D. Ballentine III  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:03am  
Subject: Microsoft Settlement—do not agree that it goes far enough

I believe that the proposed settlement in the Microsoft anti-trust proceeding does not go far enough to prevent future monopolistic behavior. The part that concerns me is that there are no mechanisms in place to prevent a repeat of the actions described in Caldera vs. Microsoft. In that case, they added code to Windows 3.1 specifically designed to make it appear to fail when run on top of DR-Dos, an alternative to MS-Dos. They have never apologized for this behavior, and still show tendencies to do this again. Unless outside intervention happens, they will have no incentive to stop this. As currently written, I see no mechanisms in place to stop this in the proposed settlement.

Thank you.

From: Kelly Byrd  
To: Microsoft ATR  
Date: 1/23/02 11:02am  
Subject: Microsoft Settlement

The proposed settlement is bad idea. There are many problems with the settlement, I'll focus only on one here.

Under the proposed settlement, Section III.A.2 Microsoft is not prevented from taking action against an OEM who ships Personal Computers that includes a non-Microsoft Operating System. A proposed change to the section is:

2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System, or (c) includes a non-Microsoft Operating System but no Windows Operating System Product; or ... The Personal Computer market flourishes when OEMs can offer a variety of products to customers.

These OEM should not be punished for offering choices. If the OEM choose to sell Personal Computers with a Microsoft Operating System and also Personal computers with a non-Microsoft Operating System.

The market should determine whether or not they are successful. Section III.B. requires Microsoft to offer unspecified Market Development Allowances to the top 20 OEMs. Why not all OEMs? Historically the Personal Computer market has been full of players and this extreme competition has benefited the consumer in many ways.

To: Microsoft ATR  
Date: 1/23/02 11:07am

Subject: Microsoft Settlement

Hello—I'd like to voice my feelings on the proposed Microsoft anti-trust settlement.

To truly open up competition in the operating systems arena, I feel that ALL of Microsoft's existing and future APIs should be publicly published, that their license agreements should be rewritten to eliminate any restrictions on redistributing components critical for the operation of competing products on all existing and future Microsoft operating systems, and that an independent, non-Microsoft affiliated enforcement body should be appointed to ensure that Microsoft remains compliant with revised terms of its settlement.

Diversity and competition are crucial elements of a successful ecosystem. Monocultures do not encourage robustness in the face of disease or predation. I urge you to encourage innovation, and discourage ethically questionable business practices.

Sincerely,

Aaron Charlwood

Subject: Microsoft Settlement

To whom it may concern.

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The settlement does not solve the problem. Microsoft would be allowed to keep the profits it gained through actions the court has shown to be illegal. Competitors who were unfairly treated would not be compensated. The monopoly that Microsoft illegally created would be allowed to continue unchecked. Microsoft has broken the law. That has been shown clearly in the courts. The response here is essentially to create new laws to restrict Microsoft's actions. If the only punishment for breaking a law is to have new laws enacted, then what dis-incentive is there for breaking the new laws? Microsoft has made it clear that it will do anything it can to increase its monopoly. It has taken virtually every legal action available, and has taken several illegal actions as well. This was demonstrated clearly in the court case. It is not appropriate to trust them to change their actions. They must be forced into compliance with the law.

The problem is that Microsoft will do anything that it feels it will make a profit from. If it sees that it will make a profit from taking actions that happen to be illegal, it will do so. This corporation has demonstrated repeatedly for several years that the only issue driving it is profit. Therefore, it is vital that the government make it clear to Microsoft that violating the law is not profitable. This settlement does not do that. It leaves Microsoft with a hefty profit, and it leaves Microsoft's competitors crippled by Microsoft's illegal actions. This in no way

presents a disincentive to Microsoft to continue their illegal activities.

Thank you,  
Ken Kelley

The opinions expressed here are my own personal opinions and do not necessarily represent those of anyone else at this or any other corporation.

From: jwwerpy@mmm.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 11:05am  
Subject: Microsoft Settlement

I feel compelled to write about the Microsoft Settlement because I feel that the settlement reached between the Justice Department and Microsoft wholly and completely fails to address the issues of the case. The settlement will be ineffective and unable to stop any future illegal monopoly practices undertaken by Microsoft.

I feel the Justice Department has been fooled by Microsoft into accepting an agreement that has been crafted by Microsoft to be extremely vague and almost completely unenforceable. I also foresee that if certain actions that may be called for in the settlement occur, that Microsoft will take exception and head back to court to stall any type of enforcement against their business practices. I believe that the court should decide Microsoft's punishment because over time they have shown no desire nor any ethics or fairness in any negotiations. Only a severe court mandated punishment will be enough to force Microsoft to stop its anti-competitive practices. Only the court will be able to stand toe to toe with Microsoft and force them to obey. I believe that given any opportunity to skirt any responsibility Microsoft will. The decision of the court should be firm and binding on Microsoft from now on for all current and future products they may release.

Microsoft's practices have irreparably harmed the IT industry in ways that may never be known. They have continually destroyed or subverted competitors who if they had survived and/or thrived could have generated truly great innovations for IT.

The only fair punishment is to make them play fair. Microsoft should be forced by the court to release the full API (application programming interface) to all of it operating systems. A independent group should be formed to monitor their performance in this area, any undocumented interface found by the group should subject Microsoft to very large fines for every day the API specifications are not complete. This action would truly unbind the entire IT industry from what has been the core of Microsoft's strategy, making their software incompatible with everything except their software and subverting open standards within the IT industry.

Subject: Microsoft Settlement

To Whom it may concern,

I am writing to express my opposition to the proposed settlement in the Microsoft antitrust case. Microsoft's anti competitive practices have not changed, and past actions show that Microsoft has no intention on changing it's practices. The proposed settlement does nothing to insure that this will change.

Microsoft said that they'd behave themselves when it was discovered that they were using undocumented Application Programming Interfaces (APIs) to speed up their own programs while not disclosing those APIs to competitors. They said that they would behave when it was discovered that they had threatened original equipment manufacturers (OEMs) that tried to sell competing office suites.

Microsoft has continued it's anti competitive behaviors in a long list of "strange coincidences" that were conveniently timed to help Microsoft while hurting its competition. When installing Windows 95, America Online (AOL) ceased to work properly at the same time that Microsoft started pushing their competing Microsoft Network. Palm's hot-sync stopped working properly under Windows 98 when Microsoft was pushing Windows CE, their

palmtop operating system. MS Java was found incompatible with the Java standard when MS realized that this technology would allow applications to be independent of a specific operating system.

I have repeatedly heard the question, "When has Microsoft hurt the consumer?" They have cost companies billions in security problems. Consumers were, in effect, not allowed to use a competitive Office suite because of MS's illegal tactics to expand its monopoly. Many consumers were forced to spend hours with tech support to solve problems with their internet connection (AOL) or Palm device or cave in and switch to the corresponding Microsoft product.

Most importantly, the proposed settlement does not punish Microsoft for repeated prior offenses. Under the current proposed settlement, Microsoft merely gets a stern warning to not repeat the crime in the future.

Sincerely,  
Gergely Fejer  
Software Engineer Cary, IL

Subject: Microsoft Settlement

I believe the proposed settlement will do little to curb Microsoft's monopolistic domination of desktop computer software. There is much in the proposed settlement that is ambiguous and would allow Microsoft to define terms, e.g., "API" and "Microsoft Middleware", and then state they are in compliance based on their definitions. I also believe the proposed settlement will be harmful to Open Source software. Since Open Source applications tend to be on non-Microsoft operating systems, any resulting loss of market share by Open Source software indirectly harms competing operating systems.

Sincerely,  
Henry A. Geer

Subject: Microsoft Settlement

Call me old fashioned but shouldn't the punishment fit the crime? From a consumer perspective, I've been forced to pay for dozens of Microsoft licenses that I've never used and couldn't sell (OEM bundled) without challenging Microsoft lawyers. This is not a consumer friendly policy of Microsoft's and I couldn't blame Dell either because they were force fed that agreement in order to install a Microsoft OS on any of their systems. They further abused their monopoly with the bundling of IE with the OS that consumers were forced to purchase with their PC hardware. Microsoft has been found guilty of abusing their monopolistic powers. In such a case the ideal sentence is one that will:

a) compensate those affected by the abuse of power.

b) prevent the occurrence of such abuse in the future.

c) satisfy the general publics insistence that justice be served.

With these concerns in mind, I propose a two tiered solution. The first is compensation to those already affected by the abuse. It would be nearly impossible to determine a specific dollar amount to distribute to each abused consumer and then identify each consumer to compensate. Such a process would also require so much beauracracy that it would negate the consumers benefit. Instead, a dollar amount (\$x) should be determined that represents the amount of money Microsoft received from consumers through less than legal business practices. Since direct distribution of that sum to consumers is impractical, the money should be distributed in a fashion that will directly benefit consumers. There are several possibilities here but the ones I would prefer would not just punish Microsoft but enhance competition in the OS market.

1. My first suggestion is using (\$x) to fund alternate OS development. In the desktop OS market, Microsoft only has one real competitor and that's Apple Computer. Some fans of other OS's (myself included) would be quick to champion other OS's like Linux or FreeBSD but the facts are simple. Consumers can't walk into CompUSA and buy a machine running anything but a version of Windows or Mac OS. However, making Apple the sole benefactor of a Microsoft punishment would only benefit a small number of those affected by Microsoft's ill behavior. We have to keep in mind that our primary goal is not to simply punish Microsoft but actually encourage competition in the computer software industry and thus benefit consumers. With that goal in mind, I would recommend taking (\$x) and placing into a trust. The trust's charter should be drawn up with the sole objective of encouraging the development of alternate operating systems for consumer desktops.

There are currently quite a few organizations that could benefit from having a big brother with deep pockets to assist them in their OS development work. A few examples of such organizations would be:

Open Software Foundation for their work on the Mach microkernel. (portable OS bootstrapping code)

Central Michigan Univ.: Contributions to Mach and kernel portability

Apple Computer: Sponsors of Darwin and Authors of Mac OS

RedHat: Sponsors and distributors of Linux

FreeBSD foundation: Sponsors of FreeBSD

There are quite a few other "stub" projects out there that have promise but these are the only projects that have had any impact at all on consumers. Each of the aforementioned companies has an OS that a consumer can install and use. Apple is the only one with a polished OS product the masses can use. RedHat and FreeBSD have stable OS platforms but their primary focus is on the server side. They would have an attractive alternative to Windows if they were financially enticed to do so.

2. The next issue to address is keeping Microsoft from abusing their monopoly in the future. There's a lot of potential for different ideas here but lets adopt a Keep It Simple S approach. One of the main advantages

Microsoft has in the software marketplace is their OS monopoly status. A simple way to help negate this is mandate that all their software releases (for programs like Internet Explorer, Office, etc.) ship concurrently on each of the three most popular OS platforms. An example of this would be their next version of Microsoft Office or Windows Media Player would have to ship simultaneously for Windows, Mac OS, and Linux and include full interoperability between the OS platforms. This mandate would accomplish a lot for the consumers. Microsoft has a knack for inventing or altering standards when they make something for Windows. If their software applications had to support other OS's, they'd have to either adopt the communities standards (a win for everyone) or make their alterations common across all platforms (and thus a new standard that the community can choose or ignore). I think those two measures would impose a fair penalty upon Microsoft, allow them plenty of room to innovate and stripping them of their Monopolistic advantages. It will also leave the community with more choices.

Subject: Microsoft Settlement

The proposed Microsoft Settlement is unfortunately, far too weak and will not resolve any of the problems created by the MS monopoly. In fact, the settlement may well act as a tool for further anticompetitive practices: for example, the provisions for disclosing technical specifications are only for commercial interests—this would exclude many nonprofit and free software projects, especially the Samba group, which makes software critical for interoperation with MS windows.

Check out <http://samba.org> for more information on their critical work. This is software I and many other people use every—

if MS could use the proposed settlement to deny requests for specifications (and perhaps even fight efforts at reverse-engineering under the DMCA) then this settlement would be doing real damage instead of helping to fix the MS problem.

Microsoft must be heavily restructured, or have the source code of its operating system forcibly opened. The prevalence of their software has made them unprecedentedly powerful—this company, which has a history of ruthlessly misusing its influence, cannot be allowed to continue along its course towards total monopoly. This settlement will allow MS to do exactly that. I hope for all of our sake that an effective solution can be found. We will all regret a mistake in this case.

Subject: Microsoft Settlement

To Whom It May Concern:

I am strongly opposed to the proposed settlement in the Microsoft antitrust case. The software industry is young and a competitive marketplace will re-emerge if companies are willing to compete fairly. I feel that the only way to ensure that companies will compete fairly is to make it clear that they will not profit from illegally manipulating the marketplace. Microsoft should not be allowed to profit from its illegal actions, or else others will try to follow in Microsoft's footsteps. The proposed settlement is a slap on Microsoft's wrist and will encourage others to use similar illegal business practices.

From: Robert C. Ramsdell III  
To: Microsoft ATR  
Date: 1/23/02 11:06am  
Subject: Microsoft Settlement

Dear Sir or Madame,

As a business user of Microsoft operating systems and software products, I am very concerned that the proposed final judgment

in the United States vs. Microsoft antitrust lawsuit is not in the public interest. I am writing to express my concern over this judgment. The ways that the final agreement fails to restore a competitive software and operating system marketplace include, but are not limited to, the following:

1) The Judgment defines too narrowly the applications and APIs the terms of the settlement apply to. As defined, only listed Microsoft middleware programs are considered to have APIs of interest. This means that Microsoft is free to obstruct the development of competing products by changing the APIs of important programs that are not listed as "Microsoft Middleware". The list of applications that the Judgment refers to is similarly narrow, and leaves out important programs such as Microsoft Outlook, Microsoft installer programs, etc. In addition, it appears that Microsoft can avoid even the restrictions on listed products by simply renaming or replacing the programs.

2) Microsoft is not required to release API information in a timely manner. Microsoft is only required to consider the interests of competing software vendors whose products meet "reasonable technical requirements" seven months before new releases of Windows. However, Microsoft is not required to disclose the API information these vendors need in anything like enough time to meet those requirements (whatever they may be). Indeed, since Microsoft is only required to release information at the time of the final beta release of it's software, these requirements can be evaded by simply scheduling the beta release less than seven months before the final release!

3) Microsoft is not required to document file formats. These formats are a crucial interface to Microsoft software that the Judgment fails to address at all. As it stands, Microsoft can use undocumented file formats to "lock up" not only the software customers use, but the customers' own data in the files. Moreover, under the DMCA, Microsoft can write it's licenses in such a way that customers are not even allowed to "reverse-engineer" the file formats to retrieve their data.

4) Microsoft is not required to disclose any patents it holds, thus exposing competing vendors to uncertainty about any patents they may be infringing, even when they use information provided by Microsoft under the Judgment.

5) The enforcement provisions are too soft. As it stands, a Technical Committee is set up with investigative powers. However, the committee has no power to enforce any of it's findings. Thus if Microsoft decides to ignore, evade or obstruct the Committee, the only remedy would be to return to court. In the past, Microsoft has shown both the willingness and the capacity to subvert court decrees against it. Unless strong enforcement powers are built into the Judgment, Microsoft has every incentive to subvert this Judgment as well, and take it's chances in court while continuing any anti-competitive practices.

Please take these comments into consideration and strengthen the Judgment to truly restore a competitive operating system and application software market.

Sincerely,

Subject: My Opinion on Proposed Microsoft Settlement

Under the provisions of the Tunney Act I wish to make my concerns over the proposed Microsoft settlement known to you. I am a Canadian citizen who travels and does business in the U.S.A. frequently. I consider the proposed Microsoft settlement to be insufficient to redress the harm done by Microsoft to consumers and competitors in the past, and unsatisfactory to prevent future harm by Microsoft. Specifically but briefly, the proposed settlement fails to acknowledge or take into account competing operating systems such as Linux. This is an astonishing oversight, causing provisions of the proposed settlement to act as barriers of entry to such Microsoft competitors. Essentially, the proposed settlement guarantees Microsoft the capability to thwart the success of competitors' operating systems by withholding critical inter-operability information.

I am absolutely opposed to the proposed Microsoft settlement.  
jon.leblanc@mybc.com

**MTC-00016380**

From: Dharm Kapadia  
To: Microsoft ATR  
Date: 1/23/02 11:09am  
Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice

I am vigorously opposed to the proposed settlement in the Microsoft antitrust trial. The proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. Also, the proposal provides inadequate reparations to those injured by Microsoft's anti-competitive behavior. Hundreds, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

I applauded the Clinton administration's courage to prosecute Microsoft for their anti-competitive behavior and was disgusted by

the Bush administration's decision to acquiesce when the government had the superior position by rule of the full bench of the U.S. Court of Appeals. The Department of Justice's (DOJ) settlement was brokered by Bush administration appointee Assistant Attorney General Charles A. James, head of the DOJ's antitrust division. But career officials at the Justice Department, who had pursued the case since the beginning, displayed their displeasure with the agreement by not signing it. Also, the Attorneys General of 9 states and the District of Columbia found the proposed settlement to be substantially inadequate.

The market must be able to return to a state of healthy competition. One can look at the market for PC microprocessors to see the value of true competition. Intel Corp. had a large market lead in microprocessors, but Advanced Micro Devices (AMD) was able to gain market share with superior products at a lower price. Both of which were in the public's interest. There were no anti-competitive moves by Intel. In fact, Intel was pushed buy the quality and public acceptance of AMD's products to make a better microprocessor at a lower price. At no time was the consumer public ever harmed by this healthy competition.

Microsoft is another story. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. They use predatory business practices, restrictive licenses, and threats to OEM's, ISV's and their customers to maintain their monopoly. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions, their lack of remorse, and their arrogance towards the law and the general public.

More importantly, the proposed settlement does nothing to correct or punish Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" only the instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust and speedy settlement just for settlement's sake. A wrong that is not corrected is compounded and magnified. The proposed settlement it is obviously a sham, a Bush administration sanctioned gift. Not even a slap-on-the-wrist, this proposed settlement does not address past wrongs nor does it prevent future anti-competitive behavior. The finding of fact which

confirmed that Microsoft is a monopoly requires strict measures which address and punish the practices they have engaged in the past while at the same time prevent them from engaging in other monopolistic practices in the future.

Thank you for your time,

From: Jim Begley  
To: Microsoft ATR  
Date: 1/23/02 11:08am  
Subject: Microsoft Settlement

I'd like to register my comments on the proposed settlement in the Microsoft antitrust case. I'm a software developer with 18 years of professional experience in the industry. Simply put, I'm strongly opposed to the proposed settlement. There are a number of specific problems that I see, but a couple of the biggest are: the proposed settlement's enforcement mechanism is inadequate; the mechanism for release of information to independent software vendors is flawed; and the definitions used in the proposed settlement are too narrow or too misleading to be effective. In general, I feel the proposed settlement does not go far enough to punish Microsoft for its past anti-competitive practices, nor does it go far enough to prevent Microsoft from repeating the behavior. Today, Microsoft is again attempting to use its monopoly in desktop operating systems to establish monopolies in other areas, areas in which there are better third-party products available, just like it did with web browser software. Some examples include audio and video media players (Windows Media Player), online authentication (Microsoft Passport), and instant messaging (MSN Messenger). If these Microsoft products obtain dominant market positions in the next

few years, it will NOT be because of technical superiority, more features, or better customer support. It will simply be the result of Microsoft's bundling of these applications with each operating system sold and limiting access to competing applications through aggressive licensing tactics.

Thank you for your time.  
Sincerely,  
Jim Begley

Subject: Microsoft Settlement

Thank you for this moment to be an active citizen, I'll be brief. Here I sit, working for a Fortune 500 company, using Microsoft's Outlook email client, the number one propagator of modern computer worms, viral or not. I am, by trade, a UNIX Administrator, but am forced to use the very product that causes myself and my company's resources so much energy to clean up after, time and time again.

When, in computer's short history, did we become subservient to the software? I believe it was when it left the hands of researchers, academia, and hobbyist, and left the "courts" of peer review. Not that our company doesn't generate a large portion of its revenues from developing closed source software, but our products are designed by engineers according to procedures of peer review and built upon accepted standards that were borne of the purpose of interoperability between computing efforts. Microsoft, with it's constant onslaught of Embrace and Extend, and/or simply annihilation of its competition via acquisition, and its understandable position of subservience to it's shareholders to ever maximize its shareholder value, expose themselves to no such review.

Indeed, they mustn't, for to do so is to open themselves to litigation by those shareholders. In this capitalistic republic, what investment firm doesn't own a piece of Microsoft, and in that light, what Market participating American? Microsoft is forced to continuously break the law for the purpose of self-preservation unless a stronger motivator ( government regulation ) suppresses the ability of its shareholders to litigate.

The proposed settlement does nothing to curb Microsoft's future actions, certainly does nothing to reprimand past actions, and the proof of both is that even in light of Judge Jackson's findings, and the proposed settlement, it hasn't changed any of it's illegal monopolistic leveraging. That alone should be proof that the proposed settlement is entirely un-enforceable, and in-effectual.

From: Kalanga@aol.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 11:06am  
Subject: Microsoft Settlement

Dear Sir-

I have read the proposed settlement, and have the following comments:

1. J.1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of its business. This seems like letting the fox guard the hen house and will allow Microsoft to effectively get around this sanction. I believe either the court or some non-microsoft entity be allowed to make the necessary findings

2. Microsoft is given the right to select one member of the three members of the Technical Committee, who in turn gets a voice in selecting the third member. The committee is gagged, and sworn to secrecy, denying the public any information on Microsoft's compliance with the agreement, and will be paid by Microsoft, working inside Microsoft's headquarters.

Again this seems like letting the fox guard the hen house. Microsoft should have no ability to influence the membership of the technical committee. The court should appoint independent members and should pay for the committee from a fund established for the purpose. Microsoft should pay for this fund but it is the court that should determine its disbursement.

Sincerely,  
Larry Galka

I am an American citizen by birth, a tax payer by virtue of that citizenship, and a taxpaying citizen who feels that I am about to be betrayed by the very agency that was established to provide me justice as defined by the Constitution and the laws of the land.

The courts found Microsoft to be a monopoly and to have illegally used that monopoly power. As that is the findings of the court your job is to remedy that finding. The proposed settlement by the Department

of Justice does not even begin to address the issues of contractual bundling, middleware bundling, restoring competition to the operating systems market or deal with Microsoft's latest assault on the free market of the United States, Windows XP.

I call upon you today as a US citizen to act in the best interest of myself, my children, and my fellow citizens and hold Microsoft accountable for their illegal activities. Turn away from the modus operandi of the Clinton era that fails to punish criminals and actually encourages criminal activity. Do not reward Microsoft for their illegal activities as the current settlement does.

Even if you fail to compensate the legions of companies and people who's livelihood was destroyed in the wake of the illegal ramagings of the 2-ton gorilla that is Microsoft, at least protect us from further assault on our free market and Microsoft's attempts to undermine the infrastructure of capitalism as we know it. Let us be frank and realistic. Microsoft's tentacles are quickly extending into and engulfing various other markets fueled by their illegal manipulation of the operating system market.

The future of capitalism itself is now in YOUR hands. Do yourselves, your department, and your country proud, hold Microsoft accountable.

Subject: Microsoft Settlement

The Proposed Final Judgement contains misleading and overly-narrow definitions and provisions, as illustrated by the following points. The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET.

The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC,

or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered". The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents. The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

Thank you for your consideration.

Subject: Microsoft Settlement

I wish to express my dissatisfaction with the proposed Microsoft settlement. In particular, my complaint is this: No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ? 39). I use Open Source software exclusively at home, yet Microsoft still does indirectly pressure me to use their products, due to their proprietary and undocumented file formats, used by others. Microsoft makes it clear: Either use their products, or be cut off from the rest of the computing world. This ties many to the Microsoft monopoly. If neither the open source community nor other commercial software vendors have access to documentation of Microsoft's CURRENT file formats, the barrier of entry is huge. The proposed settlement will do little to increase competition. It must be reworked to force Microsoft to open file formats, to both commercial and non-commercial entities.

Sincerely,  
Charles Coffing

Subject: Microsoft Settlement

Greetings,

I am writing concerning the current proposed Settlement with Microsoft for its flagrant anti trust violations. The current settlement is completely unacceptable. Not only are they not being held responsible for enough money in damages they have caused to the many companies they have hurt or destroyed wielding there monopolistic

powers. There is nothing put in place to prevent them from doing it again. Since the swearing in of President Bush they have already relaxed and gone back to there old ways. I have been in the computer industry since I was 14 years old (now 25) and seen there damage over the years. I truly believe they need something as strict as the AT&T breakup to really open up competition in the operating system and software industries. This will be the only way a computer maker could put a OS on there machine other than Windows without fear of repercussions from Microsoft. I urge you do not settle like this. Do something that will actually make a difference. If you don't in another 5-10 years it will just be back again to haunt you.

Sincerely,

Subject: Settlement is barely a slap on the wrist!

Hi,

I'm working on a more detailed response, but just in case it has problems getting in before your deadline, I wanted to make sure at least this comment got in.

The proposed settlement, and even to a large degree the amended version proposed by states including California, is too weak. It does not provide effective redress, penalty, or prevention. Rather than deterring an illegal monopoly, it is taking legal steps to institutionalize it.

Rather significantly from my perspective, it is also strongly biased against non-commercial software development, such as Free Software initiatives. Its rules on disclosure of interface material make it possible to hide information from organizations that are organized for the public interest rather than for money-making. And the lack of requirement for Microsoft to meet conformance tests for their specifications means that the true standard will need to include a buglist from Microsoft—where that buglist is under stronger controls against disclosure (to those that most need it) than even the original specifications.

This proposed settlement is flawed, anti-competitive, and anti-consumer.

**MTC-00016399**

From: Bailey, Jason (NBA)  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 10:55am  
Subject: Microsoft Settlement

The currently proposed settlement with the Microsoft corporation is a travesty of justice for consumers worldwide. Microsoft's constant maneuvering and anticompetitive practices must be stopped if we are to ever have alternatives in the software market. Attorney General John Ashcroft could not be farther from wrong in stating that this decision will end "Microsoft's unlawful conduct." This decision will have little to no impact on Microsoft's damaging and illegal business practices.

The settlement, most significantly, fails to restrict Microsoft from including anticompetitive terms in its licensing agreements. Microsoft would still be permitted to restrict what types of applications run on Windows, as well as making it illegal to run Microsoft applications on any other operating system. This convenient non-restriction of licensing directly goes against the nature of this settlement: it does not stop Microsoft from continuing anticompetitive business practices. It has been shown in court that Microsoft has purposely induced software incompatibilities in order to harm a competitor's product. Why does this settlement take no stance in forbidding these intentional attacks on Microsoft's competing software providers?

This settlement fails to protect Original Equipment Manufacturers (OEMs) from retaliation by Microsoft that would negatively affect their businesses. The settlement would allow for Microsoft's continued persecution of OEMs that choose to ship computer systems that are not re-installed with a Microsoft operating system. If there is to be any change in the consumer market, OEMs must be allowed to offer consumers viable choices without fear of retribution from Microsoft. This settlement needs to contain provisions to that effect.

Also, the settlement does very little to extend the provisions of this settlement to Microsoft products developed in the future, allowing illegal anticompetitive practices to continue with new versions of Windows and

Windows-based products, such as Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered."

The proposed settlement allows and encourages significant anticompetitive practices to continue, allows for Microsoft to continue to delay the emergence of competing Windows-compatible operating systems and software. This settlement should not be adopted without substantial revision.

Sincerely,  
Jason Bailey

Subject: Microsoft Settlement

Dear Sirs,

I'm writing this to express my opposition to the proposed Microsoft Settlement. Microsoft in my view and in the courts view is an illegal monopolist who has seriously damaged many companies and the software/computing industry in general.

Microsoft Word and Excel are the defacto standards for document exchange. You cannot be in business without owning these applications. Most people get these apps when they buy their computer. Generally Word and Excel are included if you are buying Microsofts operating system on a new system.

However, if you do not buy windows, you have to purchase Office through retail and the cost is \$500.00. This is an outrageous price and proves the lie that the MS monopoly has been benign for the consumer. A similar application called Apple Works that provides 80% of the functionality sells for \$79.00. MS is able to maintain it's price point for Office because they control the document format and you have to be able to read and write in that format to do business.

Any settlement of the MS monopoly should force MS to make the complete document format for WORD and EXCEL public domain—they should also be forced to provide translator code for all competing platforms.

I think there are also serious problems with MS's active suppression of JAVA and it's .Net initiatives.

Recently it has been reported that many of the patents for Open GL ( a competitor to MS directX 2D/3D imaging model ) have been transferred to MS by SGI for the purpose of damaging Open GL. Much of the vulnerability of the internet is directly

related to the unnatural dominance of MS products on desktop and servers. Any settlement must recognize the huge costs that have been indirectly inflicted on people through their negligent attitude toward security. It is their monopoly status that permits them to ignore the poor quality of their products without suffering in the market place.

The proposed remedy is no remedy at all and in fact will further damage competitors, consumers and the computing industry in general

Subject: Microsoft Settlement  
Hi,

I am writing to let you know that I strongly desire that the settlement with Microsoft should go through. I believe that the resources applied to this effort should be refocused in other areas.

Monopolies are all about restricting choice. In my non-legal view, it's silly to say that Microsoft is a monopoly as long as there is choice. If I want a better operating system, I can choose Apple's. I'll pay more, but it is better. If I want to pay less, I'll choose Linux. It's not as good, but it's free. It would seem that Microsoft has successfully found the sweet spot of not-too-expensive and good-enough. I don't think they should be punished any further than what you have negotiated.

Thank you for considering my views.  
Sincerely,  
William K. North

Date: 1/23/02 11:11am  
Subject: Microsoft Settlement  
My name is David Gabler,

I am writing you to tell you my disappointment with the proposed Microsoft settlement.

There are many loop holes written into the agreement that allow Microsoft ways to not abide by the intent of the agreement. Some examples are:

- Enforcement. There is no method/means of enforcement. What is to keep Microsoft from breaking the rules. There need to be stiff penalties.
- Microsoft is trying to shift their market to next generation products however this agreement does not cover those products, e.g. tablet pc's.
- The definition of API omits many useful and necessary API's In addition to this a very large barrier to entry remains, file formats. No file formats are required to be disclosed.

Please do not agree to this proposal with out taking into consideration the comments on Dan Kegel's webpage, <http://www.kegel.com/remedy/letter.html>.

From: Elias Lutfallah  
To: Microsoft ATR  
Date: 1/23/02 11:13am  
Subject: Microsoft Settlement  
Hello,

If the goal of the settlement is to end the Microsoft monopoly, then the proposed settlement is inadequate for the task.

One of the proposed items as I understand is to require Microsoft to open their code to allow handheld devices, servers, and networks so that smaller companies have a chance to compete. Initially this may help companies get a foothold in the industry, but ultimately this will only reinforce the Microsoft stranglehold on the world as it relies on the existence of Microsoft.

One practice of Microsoft has been to "embrace and extend" publicly accepted protocols. For instance they may take the publicly discussed and agreed upon protocol for wireless networking, and add their own features. While the features may or may not be worthwhile, by disregarding the RFC for the given protocol, they now have their own proprietary protocol that undermines the rest of the industry.

I suggest that any changes to a standard set by the RFC process that they wish to implement must be proposed and accepted into the RFC standard before acting on the change. At least this way people would have a chance to react and influence the desires of Microsoft, as well as be prepared for changes.

This is just one aspect of the settlement that I have chosen to respond to, hoping that my contemporaries will address the other issues.

Thank you for your time,  
Elias Lutfallah  
Chicago, IL

From: Kevin Butler  
To: Microsoft ATR  
Date: 1/23/02 11:12am  
Subject: Microsoft Settlement

I am writing in opposition to the proposed final judgment in United States v. Microsoft. As a professional software engineer, I have repeatedly seen Microsoft abuse its market position to extend its monopoly into new markets and to destroy upcoming competitors. Microsoft has used various means to do this, including:

- hiding technical information (delaying or not publishing APIs, protocols, and file formats)
- introducing technical incompatibilities (introducing artificial limitations in compatibility and extending standards in incompatible ways)
- restrictive license agreements (requiring use of products only on Microsoft operating systems)
- restrictions in contracts with resellers (preventing modifications to Microsoft operating systems or inclusion of 3rd-party products)

The proposed final judgment does not include sufficient penalties or restrictions to either reduce the gains Microsoft has received from these illegal actions, or to prevent Microsoft from performing similar abuses in the future.

From: Dennis Roberts  
To: Microsoft ATR  
Date: 1/23/02 11:12am  
Subject: Microsoft Settlement

Hi, my name is Dennis Roberts. I do not agree with the proposed settlement. I do not think Microsoft should be broken up or fined. My view is so other companies and properly complete that all of the Microsoft file formats (i.e. Word, Excel, Powerpoint, etc.) must be made publicly available. In my opinion the operating system doesn't matter. Microsoft Office matters. People use Microsoft's operating system so they can use Microsoft Office. They do this because everyone uses Microsoft Office. If the file formats are open

then other products that not only run on Microsoft Windows but other operating systems as well (i.e. Linux) will be able to interoperate with Microsoft Office thus allowing competition from products like Sun's StarOffice suite.

Thank you for your time.

Date: 1/23/02 11:12am  
Subject: Microsoft Settlement

To Whom It May Concern,  
I am a software engineer and entrepreneur with 15 years' experience in the field of personal computer software development, including the cofounding of a successful Internet company that was sold to Electronic Arts for more than \$40 million.

I read the news of the Microsoft settlement with great dismay. It appears certain that under this settlement, Microsoft's predatory and criminal behavior will continue unabated. I believe that the continued existence of the Microsoft Windows monopoly is a direct personal threat to my earning power. That is because venture capitalists are extremely reluctant to fund any company that might compete in a market that Microsoft enters. Since Microsoft enters practically every revenue-generating software market, there are a greatly reduced number of opportunities for entrepreneurs like myself.

I believe that Microsoft has already leveraged its operating system monopoly into a monopoly in Internet browsers. This is an extremely dangerous development because despite the collapse of the dot.coms, the Internet will continue to grow in importance to American businesses and consumers, becoming a fundamental utility like water and electricity. I urge that the settlement terms be amended to mandate that Microsoft make the following inclusions in its Windows distributions:

- include the second most popular Internet browser, in a manner where it is as prominently displayed and as easy to use as the Microsoft browser.
  - include the latest version of the Java Runtime Engine, again in a manner where it is as prominently displayed and as easy to use as any comparable Microsoft technology.
- Sincerely,  
William Lipa

Subject: Proposed Settlement is a bad idea  
Dear DOJ;

I have been following the microsoft case since the beginning, and recently it has come to my attention that I can voice my opinion about how badly you are handling the punishment that is due to microsoft for their unethical practices.

Please do something, this company was proved to use monopolistic practices to keep their company on top. In my own humble opinion this is a form of terrorism, a company takes illegal measures to help fulfill its goals, stepping on everyone and everything that gets in its way. Including the American Government.

You, my goverment, are the only ones that can stop this, now would you please help me to put some faith back into the system!

Sincerely,  
Bryce Verdier

**MTC-00016414**

From: Dan Rozinsky  
To: Microsoft ATR  
Date: 1/23/02 11:12am  
Subject: Microsoft Settlement

To whom it may concern:  
I feel that the settlement reached in the Microsoft anti-trust lawsuit does not address the true issue. Microsoft seems to be punished for their behavior, in a limited sort of way, while avoiding the creation of a competitive marketplace.

For this lawsuit to be truly successful in breaking the Microsoft monopoly it must insure that competitive and compatible operating systems be allowed to exist. At this time microsoft is taking legal action against lindows.com, a project which aims to create a compatible, competitive operating system to windows.

The steps I would recommend are as follows.

- 1) Take direct and immediate action to protect Lindows, WINE and other windows emulators from Microsoft lawsuits and interference.
- 2) Force Microsoft (and ANY Operating Systems manufacturer) to make the complete specifications of their operating systems available so competing projects can create compatible and competitive products in the future. This does not mean that source code must be released. That is copywriteable and can be confidential. What is important is to realease the details of WHAT the OS does, not HOW the code does it.
- 3) Prohibit ANY Operating Systems manufacturer from producing brand specific software. IE: if it runs on Microsoft Windows, it should also run on Lindows, WINE, or any other OS built to the Microsoft Standard. The final consideration is where to draw the line between Operating System and application. It seems to me to be a bad idea to prevent the manufacturer from packaging applications (word processors, web browsers, games, etc) with the operating system. This is one method of offering the consumer added value. Quality of support would be another.

It comes down to this: No Operating System developer can be allowed to keep the specification of any part, module, or element of their OS secret. No operating system manufacturer can be allowed to inseparably integrate the Operating Sytem with the Application. The Operating System will be known as the code which controls the computer's hardware, volatile memory, non-volatile memory, inputs, outputs, and provides a code interface for the development of applications.

If these rules are implemented MOST of Microsoft's product would be legal, requiring only small adjustments and some release of documentation. Elements of windows, such as the graphical interface, Internet Explorer, Wordpad, notepad, Paint, the phone dialer, would be protected as Microsoft's property, available only in Microsoft products. However, Internet Explorer would be removable and replaceable. The Office suite of products would be available to run on any competing OS. The Windows GUI could be replaced by competing products.

Perhaps a fourth and final consideration, that no software be available exclusively with the operating system should be considered. As I read your decision I see that some of this has been addressed, though the OS market does not seem to be opened to competition. Please reconsider this.

Yours in competitive practices,

From: Tom Malone  
To: Microsoft ATR  
Date: 1/23/02 11:12am  
Subject: Microsoft Settlement

To Whom It May Concern:

The proposed settlement in the Microsoft antitrust trial does not even attempt to address all of the anti-competitive practices that Microsoft is engaged in. Nor does it force Microsoft to correct its actions. Microsoft as a company is built on the credo "All computers everywhere running Microsoft software and only Microsoft software. And they have done a good job of reaching that goal.

Most of the "settlement" only helps to keep the Microsoft monopoly alive. While the rest of the "settlement" does nothing to prohibit Microsoft from abusing its current position in the operating system market. These are important oversights given the seriousness of Microsoft's past practices.

Microsoft was and is an extremely big player in the operating system/software market. As such they should be forced to open up and allow people to take full advantage of their innovations. By intentionally disabling and crippling other companies software any hope for innovation is lost. US citizens deserve more. They deserve the right to choose how and what they do with their computers. By allowing Microsoft to continue in its current manner that choice is lost.

Subject: I disapprove of the proposed Microsoft settlement

The proposed Microsoft settlement, which is up for public review, does not do nearly enough to open up the playing field for software competition. With the entrenched monopoly that Microsoft now holds, I don't think anything short of requiring Microsoft to fully expose it's software API will be successful in encouraging important competition in OS and software markets.

Thank you for considering my opinion. I hope that you'll continue to work with Microsoft in dismantling the most extensive and dangerous monopoly of our time.

Respectfully,  
Frank Shotwell

Subject: Microsoft Settlement

I have reviewed the documents related to the settlement of the Microsoft antitrust case and have to comment.

I am deeply disturbed that the revised "Proposed Final Judgement" will be completely ineffective as it currently exists. The definitions therein are often so restrictive that the judgement would eliminate any benefit to those it harmed the most. It currently ignores the most significant opponent Microsoft has which is the not-for-profit organizations, which include the Linux development coalitions. It also contains several loopholes that Microsoft is already planning to use. But most of all it is too narrow that it only restricts anti-competitive activities dealing with the operating system, browser, and middleware thereby allowing them to assert their illegal monopolistic influence in several other emerging markets. If I could enact a remedy, I would invalidate all their patents and have them publish the source code for every product they have produced. I realize this is a bit draconian and would never happen, but it would be much more effective in reducing the entry into Microsoft dominated fields by competing interests.

Please do give Microsoft additional opportunities to abuse their monopoly under the guise of a settlement to "unfetter a market from anticompetitive conduct".

Thank you for your efforts in doing what is best for all concerned.

Sincerely,  
Boyce Fullmer  
Systems Architect

From: Joshua Gruber  
To: Microsoft ATR  
Date: 1/23/02 11:13am  
Subject: Concerns about the proposed Microsoft settlement

I am very concerned about the proposed settlement with Microsoft. We have seen that Microsoft is more than willing to use dirty tactics to subvert or avoid restrictions imposed by the court or in written agreements. Microsoft has broken the law and a clear and unavoidable consequence of

their actions must be a punishment that will actually force Microsoft to consider changing their contempt for the law. In addition to ignoring Microsoft's history of contempt for the law, the proposed settlement contains as one of its conditions a huge boon to Microsoft: penetration of a new market. In effect this settlement allows Microsoft to dictate that the fines it should rightfully be paying for its criminal actions must be used to purchase Microsoft products for use in schools. Instead of allowing schools to purchase the software and hardware that best suits their needs, Microsoft is pulling off a coup. Microsoft is forcing schools to spend money in a way that aids Microsoft. This is money that Microsoft should legally have forfeited all control over because of Microsoft's criminal actions.

Please do not allow Microsoft to get out of this situation so easily.

Sincerely,  
Joshua Gruber  
Partner  
i-Xplosion.com, Inc.

Subject: Microsoft Settlement

I am opposed to the proposed settlement. I am a programmer with over 22 years in the field. I have watched Microsoft rise from being a small, fiercely competitive company in a crowded operating systems market to being the sole survivor who is willing to either absorb or exterminate any potential competitors. While I may not have liked their tactics in the early years, I had a choice of using them or using CP/M, Dr. DOS, or any of half a dozen other products. Over time, Microsoft's licensing agreements with hardware vendors have worked to systematically deny me the right to choose any operating system than Microsoft. If I do choose a different operating system, I still have to pay the price to license a copy of Windows, as the licensing agreements often prohibit the hardware being shipped without any operating system. This means that I have to pay twice to get the operating system of my choice, and Microsoft wins regardless. This is not competition on merit.

I have worked for companies that are scared stiff of competing with Microsoft. I've worked on projects that were canceled on the mere rumor of a competing product from Microsoft. I've seen products that were commercially successful, but were then

crushed by the free release of a technically inferior product that came bundled with the Microsoft operating system. Again, this is not competition on merit. It is using the position as the only vendor allowed to be installed on many computers, along with the absolute control of how that operating system and its components are presented to the end user, to take choice away from the consumer. I believe that Microsoft should be broken up into at least two units, and preferably more. The most important task is the separation of the operating system business from the other products. The process for including products in an operating system release should be competitive and unbiased. This should include everything from the Internet browser to simple things like Notepad and the Solitaire. If Microsoft is forced to account fully for the development, marketing, and support of each component, other companies would have the opportunity to compete on a level playing field.

Operating systems are nothing more than the way applications interact with the hardware. They have nothing to do with end user applications like Graphical User Interfaces, Internet browsers, scratch pads, or games. Contending that the user interface is an integral part of the operating system is nonsense. Contending that the Internet browser is part of the operating system in ludicrous. Allowing one company to redefine terms for an entire industry is criminal.

From: Richard Wolfe  
To: Microsoft ATR  
Date: 1/23/02 11:06am  
Subject: Microsoft Settlement

As a minority in the computing world, a Macintosh user, I feel the direct power that Microsoft has over the computing world everyday. The Macintosh platform only survives in the eyes of the consumer as long as Microsoft continues to supply the Office productivity suite. Microsoft supplies the Office productivity suite but ensures that key apps [Access, Outlook, FrontPage, Publisher, Project, Visio, MapPoint, Data Analyzer, and PhotoDraw] are not available to the Macintosh audience. This lets the consumer know that if you really want the power of office then you had better use the Windows OS. Note: Outlook for the Mac is available as a separate download, but it still lags in feature/interoperability parity with the Windows version.

PC Office  
<http://www.microsoft.com/office/programs/default.htm>  
Mac Office  
<http://www.microsoft.com/mac/officex/default.asp?navindex=s16>

The recent shift in Internet Explorer's reliance on ActiveX as opposed to the Netscape PlugIn architecture to display rich media within the browser benefits only Microsoft, and has far reaching future consequences in its platform specific nature. See the effects of this direction in the link below:

<http://developer.apple.com/quicktime/compatibility.html>  
<http://www.mayim.com/wdk/docs/whatsnew.html>

Also the tying of ActiveX and the new .Net initiatives to both Internet Explorer and the Windows OS, is leading to the demise of "Internet for Everyone." The internet by it's sheer nature was platform agnostic. Microsoft is on the road to change that, if not by making certain sites work only under Internet Explorer and Windows OS, but by also giving the appearance that sites "work better" if you use Windows OS. This appearance issue weighs in heavy with the average consumer when it comes down to platform of choice. Sites where this is of great concern are the online banking/billpayment/financial management systems. [the links below are old but illustrate the point]

<http://www.heidsite.com/macshame/default.html>  
[http://www.google.com/search?q=cache:vHGblQbPmbgC:www.latimes.com/technology/consumer/macfocus/la-000011724jun30\\_story%3Fcoll%3Dla-business-mac-focus+web+sites+that+don%3Bt+work+with+macs&hl=en](http://www.google.com/search?q=cache:vHGblQbPmbgC:www.latimes.com/technology/consumer/macfocus/la-000011724jun30_story%3Fcoll%3Dla-business-mac-focus+web+sites+that+don%3Bt+work+with+macs&hl=en)

Microsoft's behavior in the past suggests that the Macintosh platform is allowed to survive so as to give the appearance of OS competition. Sure there are the "nix's but only Macintosh directly competes on the desktop. One wonders how much longer the Macintosh platform will be around given that Microsoft has been proven to be a monopolist but the remedy, thus far provided, lacks no real bite and seems to give the company the right to continue business as usual—or as Microsoft would put it "continue to innovate."

The remedy that I would prefer to see put in place is one that places Microsoft back on playing field, let alone a level one. Other people have come up with remedies that I agree with, so I'll quote them rather than claim them to be my own:

"With Microsoft's APIs and file formats fully standardized, documented and published, other software vendors could compete fairly—which, after all, is what antitrust laws are supposed to promote. We might then be faced with a welcome but long unfamiliar sight: a healthy software market, driven, as today's processor market is, by genuine competition. "Scott Rosenberg <http://www.salon.com/tech/col/rose/2002/01/16/competition/index.html> and the comments of Robert X. Cringely <http://www.pbs.org/cringely/pulpit/pulpit20011206.html> <http://www.pbs.org/cringely/pulpit/pulpit20011108.html> and finally the comments of Mr Nader <http://www.cptech.org/at/ms/njl2kollarkotellynov501.html>

I'm sorry if this has gone on too long, but I just wish to have a say in what will be our future... a future that will probably be controlled by Windows.

Thank you  
Richard Wolfe

From: Sean Hertzsch  
To: "microsoft.atr(a)usdoj.gov"

Date: 1/23/02 11:04am  
Subject: Microsoft Settlement

Not being completely legal savvy, you will have to forgive my, perhaps brutish, interpretation of this case.

To my understanding, Microsoft(R) is being sued with an Anti-Trust suit because they are not allowing competition into the market. That, I can see quite readily. The proposed settlement looks to be more in Microsoft's(R) favor than the people of this country that want to ensure a choice. From what I can interpret, (again, not being legal savvy) this settlement only accounts for allowing shortcuts on the desktop of the Windows(R) OS, releasing the adaptability code for software to be run on the Windows(R) OS, and not allowing Windows(R) to punish OEM's for not selling exclusively Microsoft(R) OS.

None of this addresses the issue of Microsoft(R) software that runs exclusively on the Windows(R) OS (to my understanding, part of the reason for this case) nor does it address the inability of other operating systems to obtain, even a minor foot hold in the market, even as a free OS. I truly believe that there are several ways to resolve these issues without denegrating the Windows(R) OS.

First, allow portability for all Microsoft(R) software to other Operating Systems. This includes Microsoft Office(C), VISIO(C), or any other Microsoft(R) product. Right now there are several projects working on this functionality but are being done under duress. I know that the Lindows(R) project has just fallen under legal scrutiny from Microsoft(R). Granted this is for the name (which I can't see anyone mistaking) but, this will siphon financing from the development process to the legal suit. Possibly causing inability to push forward with the project.

Second, I believe an optimum solution was granted from Red Hat Inc(R). for the settlement.

<http://www.redhat.com/about/presscenter/2001/press—usschools.html>

This will allow children, in their formative years to be introduced to a different operating system than Windows(R). Also, this will provide support for a much longer duration without causing excessive duress on the schools to provide the money for upgrading the software and updating licensing. This also allows students to become more aware of a real life, business situation, as the computers will be inherently networked.

(As I said, I am not the most legal savvy and I hope I got all of the copyright and trademark etc.. in their appropriate place. If I failed to do so, I trust you understand that their position was intended.)

Thank you!!

The proposed settlement is ridiculously lenient. It seems like people keep forgetting that Microsoft was found GUILTY, GUILTY, GUILTY, and that the verdict was AFFIRMED by the appeals court. All that is at issue now is their punishment. Letting them off with the proposed slap on the wrist would be a travesty, and would irreparably harm the entire computer industry.

Microsoft must be punished severely. Their monopolistic and predatory practices must be slapped down HARD so that this time they won't come back in a few years and start pulling the same tricks. Please don't cave in. Make this criminal corporation feel the pain of justice.

To Whom it May Concern,  
The proposed Microsoft settlement, as it stands, is a disgrace. To allow Microsoft to continue as a monopoly with a mere slap on the face is downright ridiculous.

The fact that I can buy a car from any manufacturer and drive it on any road is indicative of a healthy, competitive environment. A more applicable example would be that the purchase of any car allows me to have any type of sound system from any manufacturer—I am not FORCED to purchase a specific sound system in order for me to receive FM radio. This is not true in the desktop computing world. I am forced to rely on Microsoft products if I am to continue interoperating with my fellow colleagues or associates.

How did we get here? Microsoft has BECOME a monopoly, as determined by the courts, and will continue to be a monopoly if the current settlement proceeds. Furthermore, Microsoft will continue to use it's (now government-sanctioned) monopoly to leverage itself into handhelds, game consoles, cable tv, etc, until we are all FORCED to live in a Microsoft-enabled world, or else, go live in a cave.

Hello, my name is Jon Ellch and I am a u.s. citizen residing in Naperville, IL. I just wanted to point out my biggest problem with the current settlement, although I dont know how to fix it exactly. The EULA on MS-Visual C++ specifically prohibits redistributing any program developed with it for use on an MS operating system. While this may not be a huge problem currently since there are no functioning implementations of the windows api other than MS's that situation could change fairly quickly.

I also do not understand how MS could have the right to stop you from distributing your own product. To me it seems perfectly reasonable to write code on one os but sell it for however many it will execute on. Not allowing this seems to me like a steel company selling to a distributor, but only as long as the distributor resold to GM or one of its subsidiaries. I dont think that is legal..is it? Thank you for your time

Jon Ellch

 November 5, 2001  
 Judge Colleen Kollar-Kotelly  
 United States District Court for the District of Columbia  
 333 Constitution Avenue, NW

Washington, DC 20001  
 RE: US v. Microsoft proposed final order  
 Dear Judge Kollar-Kotelly,

## Introduction

Having examined the proposed consent final judgment for USA versus Microsoft, we offer the following initial comments. We note at the outset that the decision to push for a rapid negotiation appears to have placed the Department of Justice at a disadvantage, given Microsoft's apparently willingness to let this matter drag on for years, through different USDOJ antitrust chiefs, Presidents and judges. The proposal is obviously limited in terms of effectiveness by the desire to obtain a final order that is agreeable to Microsoft.

We are disappointed of course that the court has moved away from a structural remedy, which we believe would require less dependence upon future enforcement efforts and good faith by Microsoft, and which would jump start a more competitive market for applications. Within the limits of a conduct-only remedy, we make the following observations.

On the positive side, we find the proposed final order addresses important areas where Microsoft has abused its monopoly power, particularly in terms of its OEM licensing practices and on the issue of using interoperability as a weapon against consumers of non-Microsoft products. There are, however, important areas where the interoperability remedies should be stronger. For example, there is a need to have broader disclosure of file formats for popular office productivity and multimedia applications. Moreover, where Microsoft appears to be given broad discretion to deploy intellectual property claims to avoid opening up its monopoly operating system where it will be needed the most, in terms of new interfaces and technologies. Moreover, the agreement appears to give Microsoft too many opportunities to undermine the free software movement. We also find the agreement wanting in several other areas. It is astonishing that the agreement fails to provide any penalty for Microsoft's past misdeeds, creating both the sense that Microsoft is escaping punishment because of its extraordinary political and economic power, and undermining the value of antitrust penalties as a deterrent. Second, the agreement does not adequately address the concerns about Microsoft's failure to abide by the spirit or the letter of previous agreements, offering a weak oversight regime that suffers in several specific areas. Indeed, the proposed alternative dispute resolution for compliance with the agreement embraces many of the worst features of such systems, operating in secrecy, lacking independence, and open to undue influence from Microsoft.

## OEM Licensing Remedies

We were pleased that the proposed final order provides for non-discriminatory licensing of Windows to OEMs, and that these remedies include multiple boot PCs, substitution of non-Microsoft middleware, changes in the management of visible icons and other issues. These remedies would have been more effective if they would have been extended to Microsoft Office, the other key

component of Microsoft's monopoly power in the PC client software market, and if they permitted the removal of Microsoft products. But nonetheless, they are pro-competitive, and do represent real benefits to consumers.

## Interoperability Remedies

Microsoft regularly punishes consumers who buy non-Microsoft products, or who fail to upgrade and repurchase newer versions of Microsoft products, by designing Microsoft Windows or Office products to be incompatible or non-interoperable with competitor software, or even older versions of its own software. It is therefore good that the proposed final order would require Microsoft to address a wide range of interoperability remedies, including for example the disclosures of APIs for Windows and Microsoft middleware products, non-discriminatory access to communications protocols used for services, and nondiscriminatory licensing of certain intellectual property rights for Microsoft middleware products. There are, however, many areas where these remedies may be limited by Microsoft, and as is indicated by the record in this case, Microsoft can and does take advantage of any loopholes in contracts to create barriers to competition and enhance and extend its monopoly power.

## Special Concerns for Free Software Movement

The provisions in J.1 and J.2. appear to give Microsoft too much flexibility in withholding information on security grounds, and to provide Microsoft with the power to set unrealistic burdens on a rival's legitimate rights to obtain interoperability data. More generally, the provisions in D. regarding the sharing of technical information permit Microsoft to choose secrecy and limited disclosures over more openness. In particular, these clauses and others in the agreement do not reflect an appreciation for the importance of new software development models, including those "open source" or "free" software development models which are now widely recognized as providing an important safeguard against Microsoft monopoly power, and upon which the Internet depends.

The overall acceptance of Microsoft's limits on the sharing of technical information to the broader public is an important and in our view core flaw in the proposed agreement. The agreement should require that this information be as freely available as possible, with a high burden on Microsoft to justify secrecy. Indeed, there is ample evidence that Microsoft is focused on strategies to cripple the free software movement, which it publicly considers an important competitive threat. This is particularly true for software developed under the GNU Public License (GPL), which is used in GNU/Linux, the most important rival to Microsoft in the server market.

Consider, for example, comments earlier this year by Microsoft executive Jim Allchin: <http://news.cnet.com/news/0-1003-200-4833927.html>

"Microsoft exec calls open source a threat to innovation," Bloomberg News, February 15, 2001, 11:00 a.m. PT One of Microsoft's high-level executives says that freely

distributed software code such as Linux could stifle innovation and that legislators need to understand the threat. The result will be the demise of both intellectual property rights and the incentive to spend on research and development, Microsoft Windows operating-system chief Jim Allchin said this week.

Microsoft has told U.S. lawmakers of its concern while discussing protection of intellectual property rights ...

"Open source is an intellectual-property destroyer," Allchin said. "I can't imagine something that could be worse than this for the software business and the intellectual-property business." ... In a June 1, 2001 interview with the Chicago Sun Times, Microsoft CEO Steve Ballmer again complained about the GNU/Linux business model, saying "Linux is a cancer that attaches itself in an intellectual property sense to everything it touches. That's the way that the license works, "1 leading to a round of new stories, including for example this account in CNET.Com: <http://news.cnet.com/news/0-1003-200-6291224.html>

"Why Microsoft is wary of open source: Joe Wilcox and Stephen Shankland in CNET.com, June 18, 2001.

There's more to Microsoft's recent attacks on the open-source movement than mere rhetoric: Linux's popularity could hinder the software giant in its quest to gain control of a server market that's crucial to its long-term goals. Recent public statements by Microsoft executives have cast Linux and the open-source philosophy that underlies it as, at the minimum, bad for competition, and, at worst, a "cancer" to everything it touches. Behind the war of words, analysts say, is evidence that Microsoft is increasingly concerned about

Linux and its growing popularity. The Unix-like operating system "has clearly emerged as the spoiler that will prevent Microsoft from achieving a dominant position" in the worldwide server operating-system market, IDC analyst A1 Gillen concludes in a forthcoming report.

... While Linux hasn't displaced Windows, it has made serious inroads...]. In attacking Linux and open source, Microsoft finds itself competing "not against another company, but against a grassroots movement," said Paul Dain, director of application development at Emeryville, Calif.-based Wirestone, a technology services company.

... Microsoft has also criticized the General Public License (GPL) that governs the heart of Linux. Under this license, changes to the Linux core, or kernel, must also be governed by the GPL. The license means that if a company changes the kernel, it must publish the changes and can't keep them proprietary if it plans to distribute the code externally.

Microsoft's open-source attacks come at a time when the company has been putting the pricing squeeze on customers. In early May, Microsoft revamped software licensing, raising upgrades between 33 percent and 107 percent, according to Gartner. A large percentage of Microsoft business customers could in fact be compelled to upgrade to Office XP before Oct. 1 or pay a heftier purchase price later on. The action "will encourage—force" may be a more accurate

term—customers to upgrade much sooner than they had otherwise planned," Gillen noted in the IDC report. "Once the honeymoon period runs out in October 2001, the only way to 'upgrade' from a product that is not considered to be current technology is to buy a brand-new full license."

This could make open-source Linux's GPL more attractive to some customers feeling trapped by the price hike, Gillen said. "Offering this form of 'upgrade protection' may motivate some users to seriously consider alternatives to Microsoft technology." ...

What is surprising is that the US Department of Justice allowed Microsoft to place so many provisions in the agreement that can be used to undermine the free software movement. Note for example that under J.1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of its business," while at the same time it is describing the licensing system for Linux as a "cancer" that threatens the demise of both the intellectual property rights system and the future of research and development.

The agreement provides Microsoft with a rich set of strategies to undermine the development of free software, which depends upon the free sharing of technical information with the general public, taking advantage of the collective intelligence of users of software, who share ideas on improvements in the code. If Microsoft can tightly control access to technical information under a court approved plan, or charge fees, and use its monopoly power over the client space to migrate users to proprietary interfaces, it will harm the development of key alternatives, and lead to a less contestable and less competitive platform, with more consumer lock-in, and more consumer harm, as Microsoft continues to hike up its prices for its monopoly products.

Problems with the term and the enforcement mechanism

Another core concern with the proposed final order concerns the term of the agreement and the enforcement mechanisms. We believe a five-to-seven year term is artificially brief, considering that this case has already been litigated in one form or another since 1994, and the fact that Microsoft's dominance in the client OS market is stronger today than it has ever been, and it has yet to face a significant competitive threat in the client OS market. An artificial end will give Microsoft yet another incentive to delay, meeting each new problem with an endless round of evasions and creative methods of circumventing the pro-competitive aspects of the agreement. Only if Microsoft believes it will have to come to terms with its obligations will it modify its strategy of anticompetitive abuses.

Even within the brief period of the term of the agreement, Microsoft has too much room to co-opt the enforcement effort. Microsoft, despite having been found to be a law breaker by the courts, is given the right to select one member of the three members of

the Technical Committee, who in turn gets a voice in selecting the third member. The committee is gagged, and sworn to secrecy, denying the public any information on Microsoft's compliance with the agreement, and will be paid by Microsoft, working inside Microsoft's headquarters. The public won't know if this committee spends its time playing golf with Microsoft executives, or investigating Microsoft's anticompetitive activities. Its ability to interview Microsoft employees will be extremely limited by the provisions that give Microsoft the opportunity to insist on having its lawyers present. One would be hard pressed to imagine an enforcement mechanism that would do less to make Microsoft accountable, which is probably why Microsoft has accepted its terms of reference. In its 1984 agreement with the European Commission, IBM was required to affirmatively resolve compatibility issues raised by its competitors, and the EC staff had annual meetings with IBM to review its progress in resolve disputes. The EC reserved the right to revisit its enforcement action on IBM if it was not satisfied with IBM's conduct.

The court could require that the Department of Justice itself or some truly independent parties appoint the members of the TC, and give the TC real investigative powers, take them off Microsoft's payroll, and give them staff and the authority to inform the public of progress in resolving compliance problems, including for example an annual report that could include information on past complaints, as well as suggestions for modifications of the order that may be warranted by Microsoft's conduct. The TC could be given real enforcement powers, such as the power to levy fines on Microsoft. The level of fines that would serve as a deterrent for cash rich Microsoft would be difficult to fathom, but one might make these fines deter more by directing the money to be paid into trust funds that would fund the development of free software, an endeavor that Microsoft has indicated it strongly opposes as a threat to its own monopoly. This would give Microsoft a much greater incentive to abide by the agreement.

Failure to address Ill Gotten Gains  
Completely missing from the proposed final order is anything that would make Microsoft pay for its past misdeeds, and this is an omission that must be remedied. Microsoft is hardly a first time offender, and has never shown remorse for its conduct, choosing instead to repeatedly attack the motives and character of officers of the government and members of the judiciary. Microsoft has profited richly from the maintenance of its monopoly. On September 30, 2001, Microsoft reported cash and short-term investments of \$36.2 billion, up from \$31.6 billion the previous quarter—an accumulation of more than \$1.5 billion per month.

It is astounding that Microsoft would face only a "sin no more" edict from a court, after its long and tortured history of evasion of antitrust enforcement and its extraordinary embrace of anticompetitive practices—practices recognized as illegal by all members of the DC Circuit court. The court

has a wide range of options that would address the most egregious of Microsoft's past misdeeds. For example, even if the court decided to forgo the break-up of the Windows and Office parts of the company, it could require more targeted divestitures, such as divestitures of its browser technology and media player technologies, denying Microsoft the fruits of its illegal conduct, and it could require affirmative support for rival middleware products that it illegally acted to sabotage. Instead the proposed order permits Microsoft to consolidate the benefits from past misdeeds, while preparing for a weak oversight body tasked with monitoring future misdeeds only. What kind of a signal does this send to the public and to other large corporate law breakers? That economic crimes pay!

Please consider these and other criticisms of the settlement proposal, and avoid if possible yet another weak ending to a Microsoft antitrust case. Better to send this unchastened monopoly juggernaut a sterner message.

Sincerely,  
Ralph Nader  
James Love

Subject: Microsoft Settlement

I would like to comment on the Microsoft settlement as provided in the Tunney Act. Microsoft's products need to be made as transparent as possible so that developers can create software that works just as well with any Windows OS as any other Microsoft product. This means opening the API to all middleware developers and allowing them to see how best to interface with OS.

Also, API must be defined so that it is open to all to see and use. Without complete access to the Windows API outside developers will be at a disadvantage and Microsoft will be able to maintain its monopoly. Finally there does not seem to be any effective enforcement of the judgment. Microsoft has been found guilty of destroying competition and harming the market place. This has resulted in inferior products to consumers and the stunting of innovation in the market place. Was a product like Netscape better than Internet Explorer, we will never know because of Microsoft's actions. What other ideas and innovations that could have revolutionized the market place were stopped dead because of Microsoft's actions. An excellent example of competition has been the chip wars between Intel and AMD. They have pushed each other to create better and better processors at lower costs. The result has been that today we have processors that perform at speeds unthinkable a few years ago. What would the market be like if other OS's and software developers had a level playing field?

Microsoft must open its API's and be forced to conduct their business in the most transparent way possible. If others cannot compete fairly it is Capitalism, Consumers, and the Marketplace that lose.

Thank you for your time,  
Jeffrey C. DuDeVoire

To whom it may concern,

The government's proposed settlement with Microsoft is much too lenient, to the point of being almost criminal. Microsoft had its day in court and was found guilty of anti-competitive behavior. There is no telling how many people were hurt because of its actions, not just the people who worked for the companies that were bullied out of the marketplace, but consumers as well. Microsoft could be the poster-boy for why there is government oversight and regulation. It has proven itself to be one of the most rapacious of American corporations, the embodiment of profit over ethics, time and time again. It is remorseless in its mission of wiping out fair competition.

The punishment must fit the crime, if we the public are to have any confidence in our institutions, especially in these times when a Republican administration is seen, rightly or wrongly, as being soft on corporate ethics. The public is well aware that Microsoft attorneys stalled the case until a new administration was installed.

I've lived in countries where the public had no confidence in their governmental and judicial systems—those are sad and scary places.

Subject: Microsoft Settlement

I feel that the proposed settlement with Microsoft does not go far enough to solve a chronic problem in the software industry—that it is too vague in some areas, and too narrow in others.

Microsoft has shown time and time again that they will exploit any legal loophole, anything they believe they can make appear to be a loophole, or anything that they believe they can claim in court that they thought appeared to be a loophole in order

to maintain and expand their monopoly powers. They have also shown that they would like to expand their domination to cover a wider range of products.

While it is, of course, not a crime to expand one's business into new areas nor to be the market leader, I fear that unless the settlement either provides clear, watertight, quick remedies in the event that Microsoft attempts to continue their old ways in both the markets where they currently compete, or in markets new to them; or creates barriers to keep Microsoft from even being able to use illegal means to expand their control; that the time and resources spent on this case thus far will have been largely wasted, and that many more businesses and consumers will be injured by Microsoft's actions in the future.

Perhaps I'm being hypocritical by not being more specific in this letter, but I have seen plenty of comments by other individuals which point out issues that concern me. One in particular that I will mention is Dan Kegel's comments, which may be found at <http://www.kegel.com/remedy/remedy2.html>. I agree with the comments in that document, and have asked to be listed as a co-signer there.

Please take the time to consider the objections that are being raised and to fine tune the settlement to ensure the time and resources already expended in this effort result in the meeting of the goals for which they were undertaken.

Subject: Comment on the Microsoft Antitrust Settlement

My comment on the Microsoft Antitrust Settlement:

Microsoft should be broken up into a Desktop OS and Server OS Company. Neither should own an interest in the other. All API should be published and sold for the same price or given away free. Desktop OS Peer to Peer Networking should be limited to file and print. This would create two companies that will have to really innovate and will have to encourage outside 3rd party involvement to survive. If the two new companies are really as good as they claim, they should have no problem continuing to innovate. Presently, everyone else has the same access to the two OSs as they do.

To: Microsoft ATR  
Date: 1/23/02 11:17am  
Subject: Microsoft Settlement  
To whomever this concerns,

I understand that I have the ability to comment on the proposed settlement between the Justice Department and Microsoft.

I have been using computers daily since the mid-eighties, when my father brought

home an early IBM-compatible computer. I hope to earn my livelihood by working in the computing industry. Consequently, this issue is centrally relevant to my life.

It is widely believed by those familiar with the case that the proposed settlement is completely inadequate. It will do little to punish Microsoft for its plainly illegal conduct in the past, and virtually nothing whatsoever to prevent future violations of antitrust law. As a consumer, it infuriates me to be forced to pay for increasingly expensive software that diminishes in quality with each release. I applauded the Clinton administration's investigation of Microsoft. Their case was an effort to protect consumers and promote economic growth by restoring fairness and competition to the computer industry. Now that the DOJ is under new management, it has essentially abandoned its pursuit of Microsoft, suggesting that the DOJ no longer has any concern for either economic growth or the public good.

The United States is a successful nation because its free markets encourage firms to compete for customers by producing high-quality, low-cost goods. This system needs to be protected from monopolists who gain so much power that they can destroy the competitive nature of the markets in which they participate.

I urge all parties involved to reconsider the proposed settlement. Microsoft deserves more than a slap on the wrist for its destructive abuse of its monopoly power. More importantly, American consumers need to be protected against future abuses.

Thank you for your time,

From: Big Endian  
To: Microsoft ATR  
Date: 1/23/02 6:05am  
Subject: Microsoft Settlement

This settlement is merely a slap on the wrist and is no more than a reissue of the settlement for the previous case over IE integration into Windows 98. Microsoft needs to be limited in such a way that they cannot use their monopoly in any one market to gain monopoly power in a second market. The markets involved include but are not limited to: Operating Systems, Productivity (MS Office), Internet (IE, MSN, MSN Messenger). These are separate, distinct markets that Microsoft has employed its monopoly power in one to leverage the other. Their monopoly with DOS allowed them to make Windows 3.1 not work with Digital Research DOS (DrDOS). Their monopoly with Office has allowed them to force users to upgrade their OS and hardware in order to be compatible with files from users of a newer version of the software. Microsoft believes it is above the law and routinely abuses the legal system to stifle competition (see microsoft vs lindowsos.com)

From: Benjamin Watkins  
To: Microsoft ATR  
Date: 1/23/02 11:16am  
Subject: Microsoft Settlement

I am very concerned about the proposed settlement with Microsoft Corporation

regarding a remedy to their gross violations of antitrust law. I do not believe that this remedy comes close to the legal requirements set forth by the Court of Appeals ruling: "a remedies decree in an antitrust case must seek to "unfetter a market from anticompetitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99). The proposed settlement will allow Microsoft Corporation to continue many of the same practices that put it in violation of antitrust law in the first place, this time with the blessing of the US Department of Justice. In effect, the Department of Justice would be sanctioning further monopolistic practices and consequently causing a stronger lock-in of the market, the exact opposite of the requirements of any remedy. I believe that Microsoft Corporations's past deceptive and anti-competitive practices warrant a much harsher and more thorough remedy that addresses these concerns, and truly represents the protection of consumers that is at the heart of antitrust law.

From: Jason King  
To: Microsoft ATR  
Date: 1/23/02 11:17am  
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundreds, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to

comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Thank you for your time.

From: Jeremy Ellington  
To: Microsoft ATR  
Date: 1/23/02 11:18am  
Subject: Microsoft Settlement

I am writing to express my opposition to the proposed Microsoft settlement. Specifically, I find the settlement lacking in its address of Microsoft's behavior towards not-for-profit organizations. Some of Microsoft's biggest competitors in the software world (Apache, SAMBA, Sendmail, etc) are maintained by non-profit organizations. The language of the settlement makes it clear that Microsoft would not have to provide documentation or license APIs or communication protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business. See Section III(J)(2). Of course, the non-profit organizations competing with Microsoft will not meet this criteria. This is entirely unreasonable. These organizations are the biggest threats to Microsoft's monopoly, and they should be given the opportunity to compete. This is just one example of how the Microsoft settlement does not go far enough to address the stranglehold Microsoft has on the entire software community.

Sincerely,  
Jeremy Ellington

Kansas City, MO 64114

To Whom it May Concern,

The proposed settlement between the Microsoft Corporation and the Department of Justice in the antitrust case against Microsoft does not adequately punish Microsoft. The settlement also appears to do little to put in place controls to prohibit Microsoft from continuing to act to harm consumers and competition in the United States and global economies. Microsoft has held the personal computer industry in a stranglehold for far too long. Despite claims to the contrary made by their marketing machine, Microsoft has stifled innovation and strongly curtailed one of the vital economies of today and the future. Please throw out this settlement and draft one that puts in place serious controls on Microsoft. An effective settlement would at very least require that they release only products that conform to the technology standards set forth by such bodies as the World Wide Web Consortium and the Internet Engineering Task Force, that they offer a version of their operating system that is free of such integrated applications as Internet Explorer, MSN Messenger and

Windows Media player, and that they open the file format specifications and possibly the source code of their Office suite to allow for competitors to better interoperate with these products. Microsoft has approximately 97% of the personal desktop computer operating systems market. With this overwhelming majority comes tremendous power to influence the direction of technology and our economy simply by default. Microsoft has recently been able to drive tremendous traffic to their MSN search engine by simply modifying the way that Internet Explorer behaves when it receives an error page from a web server. This demonstrates the power of their defaults perfectly. Behaviors such as this cannot be allowed by a company with as much sway over the market as Microsoft. Competition breeds innovation and advancement. Microsoft has squashed competition in one of our vital present and future markets. As such, they have hindered our advancement. Should we as a country choose to ignore their past anticompetitive actions and let them settle this case without severe penalties and constraints, we can very likely look forward to losing our position of economic strength in the global market as those in other countries move forward unhindered by the shackles of Microsoft's monopoly. Please do not let this case come to a close with this settlement. Microsoft has hurt us and our economy and will continue to do so should we choose to allow it. I do not choose to allow it and you should not allow it either. Stand firm and punish them, then put in place restrictions that will actually keep them from harming us further in the future. Thank you for your time. Please do the right thing.

Greetings,

Please don't allow Microsoft to settle the antitrust case with this kind of "penalty". Donating refurbished computers and MS Software to schools while a laudable action, isn't what needs to be done with this issue. The software basically costs MS nothing, and

allows MS a toehold into one of their competitors last remaining competitive areas.

Microsoft needs to be penalized in a severe and uncompromising manner. They must not be allowed to continue their software monopoly and anticompetitive practices.

1. MS code needs to be opened up to EVERYONE, not just who MS specifies or allows with very narrow language.

2. MS needs to be fined.

3. MS needs to be broken into separate companies.

4. MS's deals with hardware vendors with respect to licensing and only allowing windows to be installed on new PC's needs to be nullified. People must be allowed to choose their OS, or not buy one at all when they buy a computer.

5. Internet Explorer needs to be removed from the OS, there isn't any need for it to be so tightly integrated.

6. MS needs to be financially responsible for serious bugs/security problems in their software. Outlook/Exchange and IIS is a nightmare, there have been several high profile incidents in the past year alone. MS's culpability in these is very apparent. They need to design their software with security in mind.

MS is working very hard to expand their monopoly into the hardware and services area, please stop them now! There needs to be competition and fairness in the software/hardware market.

Thanks!

Subject: Microsoft Settlement

Greetings,

I'm just writing to let you know that the proposed settlement is a total cave-in on the part of the DOJ. It's not going to do much of anything to stop Microsoft from continuing their illegal monopolistic practices.

What we really need is totally open, free and unencumbered standards for information interchange. It's Microsoft's de-facto, proprietary "standards," like the Word format for documents, HTML that only works with Microsoft's Internet Explorer, and the SMB protocol that keep other players from competing.

Microsoft must be made to release either the API's or enough source code so that competing products can interoperate and exchange data with Microsoft products. Then these competing products can compete on their own merit. The exceptions for "security" in the proposed settlement is totally contrary to interoperability.

We do not need a break-up of Microsoft, we just need them to be forced to release enough information so that others can make products that can work and compete.

Thank you.

Subject: Microsoft Settlement

Renata B. Hesse:

I have recently read the revised final judgement in the case of United States of America vs. Microsoft Corporation dated November 6, 2001 and I have concerns regarding the proposed resolution of this case. The monopolistic behaviors found as fact in the case cannot be curtailed by an oversight committee that does not have authority to stop product shipments or impose significant monetary fines for infractions against the terms of the settlement. To say that a business with predatory practices should be curtailed simply by this committee's access into its day-to-day business, is to say that a lion will stop killing because we watch the lion's every move. In this case, as in the situation of the hunting lion, direct and forceful action must be taken against the offender.

Metaphors aside, the historical and effective work that the United States has done against monopolies within its borders has been carried out via the breaking apart of the monopolistic entities into smaller, less-powerful entities. This remedy should be applied in United States of America vs. Microsoft Corporation as well. It has been proven effective over time and such a solution would show evenhandedness of the government rather than favoritism.

A note on appearances—without necessary regard to fact. As it is now, it appears that Microsoft has purchased the opinions of the opposition and has nearly escaped with barely a hand-slap. Even the technical committee will not be immune to the enticements of the billions at the disposal of Microsoft Corporation.

I hope that this short commentary can be of assistance in redressing justice.

Under the Tunney Act, I'd like to comment on the proposed Microsoft settlement. Since I'm sure you have plenty of these to go through, I will keep my comments short.

As a software developer of many years, who has programmed on Unix, Linux,

Windows, and Mac platforms, I feel the proposed settlement does little to remedy the situation. If the proposed settlement is followed, it will go a small way towards improving the situation. However, some areas will not be aided at all because the proposed settlement terms are too narrow (no opening of file formats, no stop of intentional incompatibilities). These issues have been well addressed by other people.

My goal is to point out that the proposed settlement seems to do nothing as a penalty to Microsoft. It kindly asks them to behave better in the future, places difficult to properly enforce measures on them, and then, in the end, allows them or even encourages them to keep the monopoly that they illegally built! Is this justice? I'm afraid the only way to make headway against their illegal gained monopoly is indeed to break up the company—but not as originally proposed. It should be broken into three companies, each one with the same set of source code and products. Then there will be competition!

Just my comments that the proposed settlement does not go far enough and does not address all the issues that it should. The proposed settlement is not in the public interest, and needs significant revisions.

From: Wieland, Alexis P.  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:22am  
Subject: Opposed to the Proposed Microsoft Settlement

Dear Judge Kollar-Kotelly,  
Having read and considered the the proposed consent final judgment for USA versus Microsoft and feel compelled to voice my opinion that it is inadequate. It appears to neither adequately redress past wrongs by Microsoft nor put in place significant barriers to future abuses.

My personal passion is in reducing the detrimental effect that Microsoft's monopolistic practices have on on the computer industry. It is my conviction that the proposed judgement is woefully inadequate in this regard. While attempts were made to open product API's, provisions J.1 and J.2 appear to allow Microsoft great latitude in withholding information on security grounds.

Further, the bundling practices that are so central to this case continue to stifle innovation by removing the financial incentives and rewards of innovation. A remedy along the lines of making Microsoft products as explicit extra-cost options in the purchase of new computers would seem necessary to remove this barrier. This would both allow consumers meaningful choices and make competition feasible.

It would still seem that the simplest and fairest solution is the structural remedy. In the absence of that it seems necessary to carefully craft a much tighter and much more comprehensive response to Microsoft abuses.

Sincerely,  
Alexis Paul Wieland, Ph.D.

Subject: Microsoft Settlement

I believe the proposed settlement with Microsoft is an extremely weak punishment for a company that has acted with such arrogance and unabashed indifference to previous attempts to reform its behavior. Microsoft is a monopoly and has continued to leverage its market position to drive out competition, even during the trial, knowing nothing would ever come from the case against it. The proposed settlement is a waste of all the time and money that has gone into the case. Microsoft was found guilty and as a repeat offender a more serious punishment should be considered.

Matthew H. Ray  
Software Developer

It is fairly obvious that Microsoft has used its monopoly to destroy competition in both its existing markets as well as anticipated future markets. The damage to all of these destroyed potential new companies exceeds billions of dollars. Why then is the DOJ backing off from its job of prosecuting criminals? You even considered helping Microsoft with a judgement that extended its monopoly by giving its products to children. I can't help but wonder who might be issuing your paychecks, Microsoft or Enron?

Break up Microsoft!  
Norman Strampach

 Date: 1/23/02 11:20am  
 Subject: Microsoft Settlement

Esteemed seekers of justice:  
 I am opposed to the proposed settlement with Microsoft. The findings of fact indicate they have behaved unlawfully, and experience and common sense tell me they will continue to do so until effective measures are taken to prevent them from doing so. Other software companies must be given the opportunity to compete on an equal footing for the OS market and the applications market, without having to contend with Microsoft's anti-competitive agreements with computer manufacturers and unlawful bundling of applications into their OS.

I support the original order to break Microsoft up into separate companies that will then be truly free to compete on their merits.

Thank you for your consideration.

From: Ian Penney  
 To: Microsoft ATR  
 Date: 1/23/02 10:50am  
 Subject: Microsoft Settlement

I feel the recent Microsoft Antitrust settlement is seriously flawed, mainly because the Proposed Final Judgement Fails to Prohibit Anticompetitive License Terms currently used by Microsoft. Particularly, Microsoft discriminates against ISVs who ship Open Source applications.

The Microsoft Windows Media Encoder 7.1 SDK EULA <<http://www.kegel.com/remedy/wmenco.txt>> states ". . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); . . ."

Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for,

and discourage the use of, competing middleware and office suites.

As a systems administrator this directly effects the quality of software I can expect and the integration levels they can achieve with Microsoft Products. This cripples them in several ways.

Thank you for your consideration.

 To: "microsoft.atr(a)usdoj.gov"  
 Date: 1/23/02 11:19am  
 Subject: Microsoft Settlement

I have been very disappointed by the way the Microsoft settlement is being handled. The entire purpose of anti-trust cases to keep a single entity from welding to much power over the citizenry and to render "Equal Justice for All". A corporation should not be immune from having to obey the laws of the land, and when that corporation breaks those laws they should be punished in accordance to the laws they broke. I a corporation then proves that it has no intention of obeying laws it finds inconvenient to its business practices, that corporation should be dissolved.

I do not think that it is necessary at this time to dissolve MS. (Despite their apparent complete disdain for the judicial process, and willingness to perjure themselves.) However the ramification of their misdeeds need to have some substance to them. They MUST not be allowed to continue to disregard the laws of the land. MS is swift and harsh with software pirates (including government agencies that exceed license counts) I see no reason that the judgment against them be any different.

From: John Reyst  
 To: Microsoft ATR  
 Date: 1/23/02 11:21am  
 Subject: Microsoft Settlement

Per the Tunney Act, I would like to add my comments re: the Microsoft Trial. These are reasons I am against the settlement as written:

—Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

—Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

—Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system— even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. The PFJ as currently written appears to lack an effective enforcement mechanism. Thank you for your time,

 Subject: Microsoft Settlement

To whom it may concern,

I am a software developer with 15 years experience in Windows and Unix-related systems development. I also pride myself as being an early adopter of more than a few Microsoft technologies back in the early 1990's when they (Microsoft) were the outsider with better technology. The arguments to the proposed settlement are many. I don't feel that these need to be detailed yet again here. The following URL <http://www.kegel.com/remedy/remedy2.html> details my arguments quite well. I will say simply that Microsoft has broken antitrust law, and deserves remedies that effectively place their entire business back under competitive pressure.

Let us remember also that competitive pressure didn't begin as a concept in a free-market system. It began as the foundation of

an effective government—democracy. Please address the Microsoft antitrust issue for what it truly is—the antithesis to our way of life.

Sincerely,  
Wade Hought

From: Todd Fritz  
To: Microsoft ATR  
Date: 1/23/02 11:22am  
Subject: A Vote against the proposed settlement

After reading the proposed settlement, I am NOT in favor of it in its current state. Therefore, please consider this a vote against the proposed settlement. I suggest a settlement that is more favorable for Microsoft's competitors, and unfavorable for Microsoft. The proposed settlement contains only flimsy and lightweight mechanisms for addressing competitive issues which will not significantly impact Microsoft's methods of conducting business. The settlement also lacks sufficient penalties for Microsoft's harmful and anti-competitive behaviors. I suggest the following rule as a starting point: No settlement shall include any product, service or good, provided either from or of, Microsoft.

I am also strongly of the opinion that Microsoft should be divided into at least two (ideally three) separate and independent companies.

Sincerely,

Date: 1/23/02 11:20am  
Subject: Microsoft Settlement

I am writing to voice my opinion that the Proposed Final Judgement for the United States vs. Microsoft is not an effective remedy for the harm caused by their predatory use of their monopoly. There are several key holes that it leaves for Microsoft to keep the Applications Barrier to Entry as insurmountable as it stands today. I agree with the assessments made by Dan Kegel at <http://www.kegel.com/remedy/remedy2.html>. Some of them that I feel are worth highlighting are the poor definitions used in the Proposed Final Judgement. If definitions are going to be changed from the courts Findings of Fact, they should be altered to cover more in the remedy not less. The changing to the scope of things like API and Middleware to include only a specific list of APIs and applications covered by the remedy, explicitly excludes all others, as well as any changes to the existing ones if they are rebranded and marketed as a "new" product. The second point that I felt should be considered is insuring that all necessary APIs are available so that non-Microsoft operating systems can implement them for interoperability. That should be ALL APIs. The exclusion of the software that deals with Security and Copy Protection is ridiculous. Years of open source software has shown that public review of security interfaces leads to a more secure piece of software. Likewise any

use of the knowledge gained by published Copy Protection documentation, if implemented would be in direct violation of the Digital Millennium Copyright act, among other applicable laws. The main effect of keeping these secret is to prevent interoperability on both an application level and a networking level. Since arguably, any interface involves some security implications, this clause alone is an umbrella for obscuring any number of key pieces of protocols specifically marked in the remedy for publication. Another key bit of information that should be disclosed to ensure a fair marketplace for non-Microsoft products is file formats. Keeping these formats incompatible prevents users from switching to a competing product if they wish to continue to use their existing data. Microsoft should also be required to disclose implementation specific information to any public API that they modify to insure interoperability. Some examples of this would be the MS implementations of Kerberos, Java, and many W3C approved web standards. These are some of the weaknesses in the Proposed Final Judgement that I feel need to be addressed if the remedy is truly to be in the public interest.

Microsoft Settlement U.S. Department of Justice,

Dear Microsoft Settlement U.S. Department of Justice:

The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation. Competition means creating better goods and offering superior services to consumers. With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies. I would like to add a word about the new AOL Time Warner

lawsuit. I was a Netscape user and was determined to use Netscape. But I found that it was awkward and when I had the opportunity to use Internet Explorer, I found that it was very easy to use. My Mother currently uses Netscape and is constantly thwarted in her efforts to use the Internet. Thank you for this opportunity to share my views.

Sincerely,  
Dennis G. Feuerbacher

From: Andrew S. Zbikowski

To: Microsoft ATR  
Date: 1/23/02 11:21am  
Subject: Microsoft Settlement

To whomever this concerns,  
I understand that I have the ability to comment on the proposed settlement between the Justice Department and Microsoft. I have been using computers daily since the mid-eighties, when my father brought home an early portable IBM computer. I hope to earn my livelihood by working in the computing industry. Consequently, this issue is centrally relevant to my life.

It is widely believed by those familiar with the case that the proposed settlement is completely inadequate. It will do little to punish Microsoft for its plainly illegal conduct in the past, and virtually nothing whatsoever to prevent future violations of antitrust law. As a consumer, it infuriates me to be forced to pay for increasingly expensive software that diminishes in quality with each release. I applauded the Clinton administration's investigation of Microsoft. Their case was an effort to protect consumers and promote economic growth by restoring fairness and competition to the computer industry. Now that the DOJ is under new management, it has essentially abandoned its pursuit of Microsoft, suggesting that the DOJ no longer has any concern for either economic growth or the public good.

The United States is a successful nation because its free markets encourage firms to compete for customers by producing high-quality, low-cost goods. This system needs to be protected from monopolists who gain so much power that they can destroy the competitive nature of the markets in which they participate.

I urge all parties involved to reconsider the proposed settlement. Microsoft deserves more than a slap on the wrist for its destructive abuse of its monopoly power. More importantly, American consumers need to be protected against future abuses.

Thank you for your time,

Washington, DC 20530-0001

I am submitting this comment, as permitted by the Tunney act, regarding the remedies proposed as the outcome of the Microsoft Antitrust trial. As a scientist in training, I must work with non-Microsoft operating systems and products every day. The proprietary and ever-changing FILE FORMATS used by Microsoft, however, make even the exchange of simple text files between Microsoft and non-Microsoft programs incredibly cumbersome. Any proposed Microsoft remedy which does not include the absolute requirement for openly published data file formats falls far short of the required public benefit.

On the day-to-day office work level, it is this intentional file format incompatibility which forces purchase of Microsoft products, and further, it is the artificial incompatibility BETWEEN VERSIONS OF THE SAME MICROSOFT PRODUCT which forces purchase of ever newer Microsoft products, EVEN THOUGH THEY FREQUENTLY ADD NO RELEVANT FUNCTIONALITY OVER THE OLDER PRODUCTS. Publicly available Microsoft file format specifications would allow third-party developers to produce file conversion tools which completely obviate this unfair Microsoft practice.

Thank you for the opportunity to respond to this judgment.

Subject: Microsoft Settlement

To whom it may concern,  
I am a concerned citizen asking that a reasonable judgment be found against Microsoft. I think a reasonable settlement of this affair should include the open sourcing of Windows code. It's too late for the competition to take hold now. Everyone is used to used Windows as an operating system. Every new system out there ships with it, and Microsoft is reported to even track companies who DON'T ship with it.

To put an end to their predatory practices and for security reasons, it is clear that Windows needs to be opened up so others may design competing operating systems. After years of delay and legal maneuverings, this is your chance to finally do something to punish Microsoft and throw open the doors to true operating system competition.

Sincerely,

Subject: Microsoft Settlement

As a computer user, and supervisor of a computer department at our university, I see

the microsoft settlement as VERY harmful to consumers. They have been declared a monopoly, and have been shown to use monopolistic practices. Worse, in our dealing with their company, they have treated us as if they were a monopoly. Most damaging is that most people treat them as if they were a monopoly, saying "We have to accept their policies on software licenses because what else can we do". If nothing is done now, when are we going to do it. Their policies on Windows XP prove that they are never going to fix their problems without a big hammer hanging over their heads. If we let them off now, we will be forced to take even more drastic actions later.

Please reject the current settlement.

From: David Wheeler

To: "microsoft.atr(a)usdoj.gov"

Date: 1/23/02 11:17am

Subject: Microsoft Settlement

Regarding the proposed Settlement of DOJ vs. Microsoft,

I would like to place these comments on the record in accordance with the Tunney Act.

I believe the proposed settlement is a bad one. As a professional software engineer I understand the Microsoft's monopoly position is sustained through the use of private standards only available to Microsoft. These private standards include aspects of the Windows API and the file formats of the popular Microsoft Office software suites. Competition to the Windows OS will not be possible unless either the Office Suite is made to run on any competing OS or a competitor to the Office Suite can be created. Neither is possible as long as the information required to create this compatibility remains proprietary to Microsoft. The private API's in the Windows OS are the tools Microsoft used to extend its monopoly from the OS market into the software applications market. Since this settlement does nothing to open those private standards. Therefore, Microsoft will remain in control of its monopoly and competing ventures will be at a distinct disadvantage in emerging markets. For these reasons I believe this settlement should be rejected so that a more satisfactory conclusion can be reached. Thank you.

Respectfully,

David Wheeler

Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely: The PFJ doesn't take into account Windows-compatible competing operating systems:

—Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

—The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

—The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

—The PFJ allows users to replace Microsoft Java with a competitor's product— but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

—The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

—The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

—The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

—The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

—The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

—The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft :

—Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

—Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

—Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.) The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft:

—Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

—The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

—The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

—The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

—The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. The PFJ as currently written appears to lack an effective enforcement mechanism. I also agree with the conclusion reached by the Kegel document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems. Sincerely,

J. Scott Hofmann

Subject: Microsoft Settlement

The settlement currently proposed to resolve the Microsoft antitrust case is not any where near severe enough for the unlawful actions and disruption of normal commerce that Microsoft has caused. I would urge that the settlement be revamped and strengthened to insure that Microsoft is not put in a position where they can't be trusted again. They've proven to us as a people that time and time again they'll abuse the strength they have at any point they see fit.

Thank you.

Subject: Microsoft Settlement

The proposed settlement is BAD for two reasons: It will not affect that fact that it is almost impossible to buy a pre-built PC

without a Microsoft Operating System on it. It will not affect Microsoft's use of licensing to restrain choice in the marketplace for software.

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. Microsoft's actions since being declared an illegal monopolist have not changed. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,

Andrew Zimmerman

Subject: Microsoft Settlement

I still support the breakup of Microsoft along the lines of Judge Jackson's original ruling. At the least, I support the alternative settlement proposed by the states who have not agreed to the wrist-slap agreed to by the current administration. Microsoft continues to abuse their monopoly position in the computer market and have stalled all computer innovations that have any future chance of success that don't increase the Microsoft monopoly.

Venture capital money has completely dried up for anything that might be interesting enough to get Microsoft's attention (and that is almost everything). They have leveraged their OS monopoly to gain monopolies in word processing and general "office" productivity applications as

well as browsers. Their stated interest in "speech recognition" has stalled development of this critical technology by the few firms that have pushed it to the current state of the art. Breaking up Microsoft so that the Operating System business cannot be leveraged with the Applications businesses is the right remedy. Forcing Microsoft to ship a stripped version of the OS (for a significantly reduced price) is a poor substitute but better than nothing. Microsoft was found guilty of serious crimes. The appropriate remedy should both return competition to a fair level plus strip them of their ill-gotten gains. Find a remedy that does this. The current settlement does not.

Subject: Microsoft Settlement

Per the following link: <http://www.kegel.com/remedy/>, I believe the the proposed settlement is not in the best interests of the public. As a software developer for more than 15 years, would like to see an open API for the Windows operating system. This would allow software to be developed in a truly competitive environment (both operating systems and applications).

My favorite computer book of all time is the "Advanced Programming in the Unix Environment" by Stevens. This book enumerated the Unix APIs and allowed many developers to see into the API and develop their own applications. It is a shame that a similar book does not exist for the Windows Operating system. The Java programming language is predicated on a "virtual machine". Having an open API for all machines would make the need for JAVA less (and that is a huge segment of the software development community).

Sincerely,

Russell Ritenour

Subject: Microsoft Settlement

I will not attempt a point-by-point refute of the agreement, as people much more articulate than I am have already submitted detailed comments such as:

<http://www.kegel.com/remedy/letter.html>

I would, however, like to say that I don't believe the settlement penalizes Microsoft in any SIGNIFICANT way, and more importantly does nothing to restore competition. Yes, there are penalties and inconveniences in the agreement, but none force Microsoft to behave in a way more appropriate to a corporate leader and "innovator" in the field of computing. Instead they are still allowed to buy out, undersell, or basically destroy anyone who tries to compete. Without competition they still hold too much power over their customers and the market as a whole. In this situation everyone but Microsoft suffers. Most applications are written for Windows—it is a popular and very usable operating system. However, because it is exclusively available through Microsoft, anyone that wishes to run Windows software MUST by a Microsoft operating system. It is difficult at best to run more than one operating system on a computer, so competitive software is nudged out of the market. With less competition, they gain more power; with more power they overpower more competitors, and the cycle continues.

Are there better solutions? Many, but I think two major changes in Microsoft's business practices need to be mandated:

(1) They need to be restricted from charging customers and resellers as though Windows is installed on any machine that can run Windows— why would people run a competing product if they have to pay for the Microsoft product anyway? Also, this way if they do run a competing product, and it gains popularity, Microsoft still makes money on a product it had nothing to do with developing.

(2) They need to be forced to provide all Application Programming Interfaces and patent rights needed to allow other operating systems to build their own emulators of Microsoft software. The idea is that the companies and organizations (including Linux, FreeBSD, and other free projects) would be able to develop API translators, so they, too, can run Windows software.

Microsoft wouldn't have to provide an implementation, simply a document that says "here are all the calls programs can make, and here is the expected behavior". Each competitor would be responsible for their own implementation. This way Microsoft could legitimately maintain their market position by being the best implementation—the fastest, easiest to use, most secure, etc.—without making it impossible for other competitors to do a better job than Microsoft.

I think Microsoft was, many years ago, quite an innovative company. I used to be thrilled at each new release of every Microsoft product because they included many new features that I needed and would use. Over the last decade they have lost that innovative spirit.

Each revision of their products looks nicer, but appearance is more art and advertising than innovation. They add many new features to their products each revision, but how many of these were original ideas on the part of Microsoft? I can't think of a feature Microsoft has developed and actually released in a product in the last five years that they didn't buy, license, or borrow from a competitor or partner.

They have gotten lazy because they don't need to work hard anymore. They can buy any idea, code, or company they like. If the creator or innovator won't sell the idea or their company, Microsoft can throw literally billions of dollars and making the idea theirs or nobody's through litigation, reverse engineering, or marketing practices.

In summary, Microsoft controls such a vast portion of the market, and has such enormous cash reserves and revenues it can survive and maintain its power through little technical effort of its own. Without government-mandated restrictions on their predatory behavior, they will never be forced to innovate on their own again. They can continue to be lazy, and keep others from releasing their own innovations, and in that market, no one but Microsoft (and their lawyers) benefit.

From: Andre Ervin  
To: Microsoft ATR  
Date: 1/23/02 11:22am  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am a Macintosh user since 1986. (I also use Windows on a regular basis at work.) I feel that my computing experience (on both platforms) has been severely impacted numerous times by Microsoft's anti-competitiveness. I think the current settlement as it stands is toothless, gutless, and most importantly, ineffective as a solution. Since so much of the taxpayers' money has been tied up in pursuing this case, I would think that anything less than major sanctions on Microsoft similar to the AT&T solution would be a waste of said money. As a guideline to a more effective settlement, I would suggest using the following documents as a guideline:

\* <http://www.kegel.com/remedy/remedy2.html>

\* <http://www.salon.com/tech/col/rose/2002/01/16/competition/index.html>

\* [http://linuxtoday.com/news\\_story.php3?ltsn=2002-01-02-002-20-OP-MS](http://linuxtoday.com/news_story.php3?ltsn=2002-01-02-002-20-OP-MS)

As a Mac user, I would be remiss if I did not also suggest the following:

Microsoft should be required to continue developing current and future applications for the Macintosh platform. These applications \*must\* have \*feature parity\* and \*same-time availability\* with the Windows versions. Features that require proprietary solutions should use an approximate equivalent already on the Macintosh platform. Microsoft should also be required to prominently display the cross-platform interoperability of these apps on their website, any ads, and on shrink-wrapped boxes. It would be a start.

Thank you for your time,  
Andre Ervin

From: Andy Richardson  
To: Microsoft ATR  
Date: 1/23/02 11:11am  
Subject: Microsoft Settlement

I am opposed to the Microsoft settlement. I have been a shareholder of Microsoft stock, and I support their desire to integrate additional functions into Windows (web browser and other internet-aware apps), but their business practices are unethical.

Specifically, I feel that MS should not be able to require computer manufacturers to bundle a copy of Windows on all their computers. For instance, if I want to purchase a Dell PC and run Linux rather than Windows, I basically have to buy Windows and pay for software that I never use. The argument is that a computer sold without a copy of Windows is simply going to have a pirated copy of Windows installed, but a significant number of people would prefer to run Linux. Their choice is voided by Microsoft's force of will. Dell would be in serious trouble with MS if they sold me a computer with no operating system installed, and MS would also oppose any effort by Dell to sell me a computer with Linux preinstalled.

I also feel that data file formats in apps like word processors and spreadsheets are arbitrarily changed from version to version. This is a form of planned obsolescence that forces users to upgrade their software every 18-24 months. You can't even choose an older version and stick with it because the older version is typically not available for purchase when the new version comes out. That is especially true if you purchase a new computer and attempt to buy software preinstalled by the manufacturer.

Lastly, MS frequently adopts industry standards and proceeds to change them to the point that they are proprietary to MS. For instance, Java, Kerberos authentication, web browser standards for viewing HTML, and the list goes on.

Please take considerations like the above into account before settling this case. A settlement is preferable to a court-ordered breakup, but the settlement has to advance the interests of the typical consumer, business owner, and it has to level the playing field within the software business.

I am submitting this comment, as permitted by the Tunney act, regarding the remedies proposed as the outcome of the Microsoft Antitrust trial. As an engineer in training, I must work with non-Microsoft operating systems and products every day. The proprietary and ever-changing FILE FORMATS used by Microsoft, however, make even the exchange of simple text files between Microsoft and non-Microsoft programs incredibly cumbersome. Any proposed Microsoft remedy which does not include the absolute requirement for openly published data file formats falls far short of the required public benefit.

On the day-to-day office work level, it is this intentional file format incompatibility which forces purchase of Microsoft products, and further, it is the artificial incompatibility BETWEEN VERSIONS OF THE SAME MICROSOFT PRODUCT which forces purchase of ever newer Microsoft products, even though they frequently ADD NO RELEVANT FUNCTIONALITY over the older product. Publicly available Microsoft file format specifications would allow third-party developers to produce file conversion tools which completely obviate this unfair Microsoft practice.

Thank you for the opportunity to respond to this judgment.

Subject: Microsoft Settlement

To whom it may concern, I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for

settlement's sake. A wrong that is not corrected is compounded. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition. The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Sincerely yours,  
Robert J. Elshire

Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Under the Tunney Act, I would like to comment on the proposed Microsoft settlement. There are several faults with the proposed Microsoft settlement. I will list these faults as well as a brief discussion of why the fault is important to me as an independent software developer (I speak here both for myself, my company, and my staff).

1. The settlement requires Microsoft to publish its secret APIs, but it does not provide a definition of API that Microsoft must disclose all APIs. As a software developer we use the APIs on our target operating systems to make our software compatible. Our software runs on Windows, Linux, and Mac OS. The performance of our software on Windows is severely limited because of limited access to certain APIs. These secret APIs allow competing Microsoft software to outperform our offering on their platform.

2. The settlement requires Microsoft to publish information, but allows Microsoft to determine to whom it distributes that

information. Microsoft is given the ability to only publish information to viable companies as defined by Microsoft. Previous Microsoft activities would show they will limit the definition of a viable company as much as possible. My company, which provides Internet education tools, has a limited, but profitable, operating history. Because of our limited history we would most likely be excluded from any Microsoft defined list of viable companies.

3. The settlement applies to Windows, but it defines Windows in such a way that Windows XP, Windows CE, Pocket PC, and the X-Box (all of which use the Win32 API and are advertized as being "Windows Powered") are not included. It is important that Microsoft is not able to continue their monopolistic abuses on other platforms. Under the proposed settlement all Microsoft must do is migrate users to a new platform. This new platform does not represent a substantial change from the previous Windows platforms except that they are not included in the settlement.

4. The settlement fails to prohibit anticompetitive license terms currently used by Microsoft.

Many Microsoft tools are provided to developers in such a way that restricts use of those tools with Open Source Software. Our products rely on Open Source middleware. In order to provide a good user experience on Windows certain Microsoft tools are required. Microsoft's licensing structure for those tools prohibits us from distributing them solely because of our association with Open Source Software. The core platform for our application is Linux. Microsoft's enterprise license agreements (which are used by large companies, state governments, and universities) charge by the number of computers that could run a Microsoft operating system, not by the number of computers actually running a Microsoft operating system. This means that our larger clients must pay a Microsoft license on a computer running the Linux operating system for our software. This type of license was banned for OEMs by the 1994 consent decree, however it remains in place for Microsoft enterprise licensing.

5. The settlement as written appears to lack any type of enforcement mechanism. The settlement calls for the creation of a Technical Committee, yet this committee seems to have no real power over Microsoft activities. The core enforcement of the settlement is left to the judicial system. As Microsoft has proven in the past (the 1994 consent decree), they are unwilling to behave in a manner that does not abuse their monopoly position. The current enforcement mechanism allows Microsoft to behave as it sees fit until further judicial intervention is taken. While this list of shortcomings in the proposed Microsoft settlement is in no way complete, it does clearly illustrate areas where the settlement is not in the public interest. The settlement continues to allow Microsoft to define the terms under which it operates, terms that will allow it to continually abuse its monopoly status. We cannot allow a confirmed, abusive monopolist to dictate its own terms for this settlement. These practices will not be

resolved by the proposed settlement and as such leave software vendors, OEMs, and our customers to fend for ourselves against Microsoft. The proposed settlement allows Microsoft to receive a slap on the wrist as the judicial system looks the other way.

Date: 1/23/02 11:24am  
Subject: Proposed Microsoft Settlement

Unacceptable

The proposed settlement between the Department of Justice and Microsoft does not adequately address the anti-competitive behavior outlined in the findings of fact. In particular, it does not effectively remove barriers to competing operating systems and software products, nor does it deny Microsoft the benefits of its monopolistic activity. I believe that several fundamental changes must be made to the proposed settlement before it would be effective. Below I have attempted to capture a minimum set of behavioral requirements that would prohibit offending anti-competitive behavior, remove barriers to entry, and encourage competition in the operating system, middleware, and applications software markets. <start>

Definitions: A Dominant Software Product is any Microsoft software product with 25% or more market share. An Applications

Programming Interface (API) shall be the function names, addresses, parameter lists, storage, communications formats, timings and all other details necessary to for one software component to interact with another.

#### Settlement or Ruling Conditions

##### 1. API's

Requirement: —All— API's used to communicate between or with any Microsoft operating system, middleware product, or Dominant Software Product must be fully and completely disclosed without restrictions on use 6 months —prior— to the final beta release of the product. If a product becomes a Dominant Software Product, said documentation must be provided within 6 months of gaining 25% or more market share.

Remedy: Any product with APIs that are not documented in this way shall be prohibited from (further) general distribution and from sale.

##### 2. File Formats

Requirement: All file formats for Microsoft Dominant Software Products must be fully and completely disclosed without restrictions on use 6 months —prior— to the final beta release of the product. If a product becomes a Dominant Software Product, said documentation must be provided within 6 months of gaining 25% or more market share.

Remedy: Any product with APIs that are not documented in this way shall be prohibited from (further) general distribution and from sale.

##### #3: Patents

Requirements: Any and all patents (regardless of filing status) required to use, interact with, emulate, or implement a competing operating system, middleware product, or Dominant Software Product must be fully disclosed and documented by providing the specific services, APIs, file formats, or features effected 6 months —prior— to the final beta release of the product.

Remedy: A perpetual royalty free license to any requesting organization shall be granted for any and all patents that are not documented in this way.

##### #4: Licensing Fees

Requirement: A uniform license pricing scheme for operating systems, middleware, and Dominant Software Products, based solely on the number of licenses and sales location (country, state, etc) should be applied to all purchasers, whether OEM, corporate, or individual. Discounting schemes based on customer behavior, including but not limited to bundling of other Microsoft products and supporting non-microsoft products, are be explicitly forbidden. Further, the exact licensing terms shall be made publicly available at least 6 weeks prior to the date when they may be applied and once applied must remain fixed for a term of not less than 6 weeks.

Remedy: All sales of software products without a published license pricing scheme meeting these requirements shall be prohibited from general distribution and from sale.

From: Rick Mason  
To: Microsoft ATR  
Date: 1/23/02 11:25am  
Subject: Microsoft Settlement  
To Whom It May Concern;

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

In addition, the remedies in the Proposed Final Judgement specifically protect only companies in commerce, that is, organizations in business for profit. However, Microsoft's greatest single competitor on the operating system front comes from Linux, a non-commercial product. The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, another not-for-profit. Yet not-for-profit organizations have no rights at all under the proposed settlement. According to Section III(J)(2), Microsoft is not compelled to disclose or license API, documentation, or communications protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business. Therefore Microsoft has the ability under this settlement to deny information to any non-profit competitor, and thus the settlement will actually increase Microsoft's unlawful monopoly.

Thank you for your time.

#### MTC-00016507

From: Kevin Fitch  
To: Microsoft ATR  
Date: 1/23/02 11:24am  
Subject: Microsoft Settlement

I feel that the proposed settlement does not go nearly far enough to remedy the immense irreparable damage done to the computer industry by Microsoft. In particular I feel that the settlement does not go nearly far enough at allowing independent software companies to produce products that can compete fairly with those made by Microsoft.

In order for independent software companies to compete they must be able to interoperate (with —both— the OS and other software) as well as Microsoft produced products can. This requires full upfront knowledge of numerous API's —AND— file formats. In particular the settlement makes no mention of documenting such things as Microsoft Office file formats. It is an unfortunate reality that the Microsoft Word format has become a defacto standard for exchanging documents electronically. As a result every office needs at least one copy of Microsoft Word (in order to deal with .doc files they receive), and since for most offices it is unreasonable to purchase/upgrade/maintain multiple office suites Microsoft operating systems become a near necessity to run an office in today's society. There other file formats that are vendor neutral (Postscript, PDF, RTF, HTML), but of course all of these are either poorly supported on Microsoft Operating Systems or have been

currupted (with "Extensions") by Microsoft in order to be less vendor neutral, and so they again will only be guaranteed to work on Microsoft Products.

Also the settlement very narrowly defines which APIs need to be disclosed and when they need to be disclosed. Microsoft only needs to disclose APIs used by the products currently defined as middleware. This would allow Microsoft to expand into a new area creating an expansion of their monopoly without having to disclose any of the APIs involved.

To: "microsoft.atr(ajusdoj.gov)"  
Date: 1/23/02 11:25am  
Subject: Microsoft Settlement

The Microsoft settlement is ineffective. The punitive portions are virtually non-existent—Microsoft is being rewarded for it's bad behavior by getting in-roads at the primary and secondary school level. This is historically not their market. Giving it to them is a reward, not a punishment. The other aspect of the settlement, on-site observers, is not an effective deterrent. No one, no three, no twenty people would be sufficient to monitor software development and business tactics in a corporation the size of Microsoft. I'm not sure "observation" is a good plan. Why not rely on external businesses, conscientious Microsoft employees, and the press to identify any violations of the terms of the agreement. A "whistle blower" type of approach (both internally and externally) would be a better solution.

Another option, apparently thrown out by the Justice Department and the current administration, would be to break up Microsoft. This would certainly serve as an example, punitive, and also a preventative for at least a portion of the newly created companies.

From: Dan Nuffer  
 To: Microsoft ATR  
 Date: 1/23/02 11:25am  
 Subject: Microsoft Settlement  
 To whom it may concern:

I am a software engineer and am familiar with computing and the computer industry, and the adverse effects of Microsoft's monopolies in these areas. I cannot see how the proposed settlement to the antitrust case even pretends to remedy the antitrust violations for which Microsoft has been found culpable.

The company has already been found guilty. This is the penalty phase of the case, but the settlement contains no penalties and actually advances Microsoft's operating system monopoly. I think that a just penalty would enforce the following:

- Microsoft must sell their products for the same price to all OEM customers. They must not be allowed to punish OEMs who sell or bundle competitive microsoft software. Microsoft must sell their products to any OEM who wants to purchase their products.
- Microsoft must allow OEMs to install non-Microsoft software such as Netscape Navigator or Red Hat Linux on computer systems.
- The specifications of Microsoft's present and future document file formats must be made public, so that documents created in Microsoft applications may be read by programs from other makers, on any operating system.
- Microsoft must completely document the Windows application program interface (API, the set of "hooks" that allow other parties to write applications for Windows operating systems), which is already part of the proposed settlement.
- Any Microsoft networking protocols must be published in full and approved by an independent network protocol body. This would prevent Microsoft from seizing de facto control of the Internet.
- Microsoft must sell their products at a fair price. As is obvious by the amount of money they have in reserve, they have been severely overcharging consumers. Their prices are greatly inflated in relation to their competitors. For example, Microsoft Office costs many time more than WordPerfect Office does, and Windows XP costs much more than Red Hat Linux does. This is only possible because they are taking advantage of their monopoly status. If Microsoft products were not the de-facto standard, no one would buy them, because they are so expensive.

- As much as possible, Microsoft must send refunds to all customers who have been overcharged because of Microsoft's exploitation of their monopoly.

Respectfully yours,  
 Daniel C. Nuffer

From: Scott Ricketts  
 To: Microsoft ATR  
 Date: 1/23/02 11:25am  
 Subject: Microsoft Settlement  
 To Whom It May Concern:

My name is Scott Ricketts, I am a 13-year veteran of the United States Air Force, now a civilian, and I would like to comment on the ongoing proceedings in the United States vs. Microsoft remedy phase now underway.

I would like to begin, by saying that I have a Bachelor of Science degree in Information Systems Technology, I have been a computer user since 1982, and a personal computer enthusiast since 1992. I am currently employed as computer professional, and the majority of my work involves using and designing programs for use on Microsoft operating systems and development platforms.

I would first like to comment on, what I believe, the good that Microsoft has done for the personal computing industry. Microsoft has successfully created standard Application Programming Interfaces that have allows software and hardware makers alike to create devices and programs that can easily and successfully interface with devices created by other programmers and designers without ever seeing or touching the other persons work. I feel this standardization is what helped the personal computing industry become the giant economic and social force that it is today.

However, in creating these standards, I believe that Microsoft has overreached the bounds of common decency and abused the defacto standards they helped create. Previously, the United States settled with Microsoft in regards to their practice of Original Equipment Manufacturer licensing fees and contracts and the bundling of Internet browsing software designed to increase the market share and adoption of Microsoft proprietary technology. This was to prevent what the United States government

saw as Microsofts abusing of its monopoly among personal computer operating systems and productivity software.

The years since that settlement have seen Microsoft grow in its demands towards Original Equipment Manufacturer and the recent exclusion of non-Microsoft Internet browsers from Microsoft websites. In my opinion, this does not reflect the behavior of a company that understands its duty to not abuse its position as a monopoly. In reading both proposed settlements from the Department of Justice and the remaining states, I feel that while neither goes to the lengths that I would recommend, the states proposal goes much father in the right direction in reaching a state whereby Microsofts position cannot be leveraged against any potential competitors again. The Department of Justice settlement has, to my mind, a major flaw that prevents it from being considered as an acceptable remedy. Microsoft has shown, by its conduct regarding the previous settlement, and its behavior that was upheld by the appeals court which branded Microsoft an illegal monopoly, that it will, whenever possible, circumvent rules, laws, and any barriers that prevent it from controlling its areas of interest. There are no provisions for actually punishing past or future infractions of the law by Microsoft. If Microsoft continues to abuse its position as an illegal monopoly, the Justice Departments remedy merely lengthens the term of surveillance. The states settlement, however, provides a very exacting and appropriate punishment: disclosure of computer source code for the offending program. This would be an extremely painful measure for Microsoft, as they view their copyrighted and closely guarded computer source code as their crown jewels: very simply this is how they generate revenue. If that revenue stream is blocked, or they are forced to reveal how their programs work, that opens a new area for competition.

Microsoft has shown repeated contempt for legal agreements, hiring armies of legal minds to comb over documents trying to find potential weak areas. In 1996, when Netscape Navigator was the number one Internet browser, Microsoft signed a licensing agreement with a company called Spyglass. In exchange for a small sum of money upfront and a portion of each sale, Microsoft would receive the computer source code for Spyglass Internet browser. This would allow Microsoft to quickly get a functional and full-featured browser into the marketplace without a lengthy development delay. However, the anticipated revenue stream Spyglass expected never arrived. Why? Because Microsoft chose not to sell their Internet browser, they gave it away for free. This allowed them to not pay further royalties to Spyglass, achieve quick market penetration for their product, which they could then use to leverage their proprietary technologies (such as ActiveX) into defacto standards. This deal, I think, creates a very compelling picture of Microsofts corporate character. In an interview regarding past dealings with Utah-based software company Novell, Microsoft CEO Steve Ballmer smugly commented They made a mistake, they trusted us. I am writing this letter in the

hopes that my government does not make the same mistake that Novell did. Any settlement must contain explicit, detailed language that leaves no room for ambiguity, and exacting, painful punishment for future and past infractions.

Thank you for time.

From: Christopher Blake  
To: Microsoft ATR  
Date: 1/23/02 11:25am  
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.  
Christopher M. Blake, New Jersey

Subject: Microsoft Settlement

I wish to comment on the proposed settlement with Microsoft (under the Tunney Act).

As a computer professional and entrepreneur, I have been involved directly with Microsoft as a partner, party to non-disclosure agreements, and competitor. I've seen first-hand the ways the company abuses its monopoly position in the Operating System market. In general, the proposed settlement does a few things wrong:

1. Remedies are insufficient
2. Prohibitions on future behavior are insufficient
3. Mistakes of the past are repeated

In one section of the proposed settlement, Section III.B., there are a number of "loopholes" that remove the teeth from the agreement. Specifically, Microsoft must license Windows on uniform and published terms to the top 20 OEMs, but smaller OEMs can be punished at Microsoft's sole option. In view of Microsoft's history of doing just this, it would seem that this section is flawed, insufficient, and toothless. Further, III.B. allows Microsoft to continue its blatantly illegal "tying" of other products to its monopoly! By allowing Market Development Allowances, the settlement provides exactly the tool Microsoft needs to tie future products to the Operating System.

One last OEM-related comment: Section III.A.2. allows retaliation against OEMs that sell Personal Computers that do not include a Microsoft operating system. Clearly, this is intended to prevent lower-priced operating systems like Linux from gaining a foothold in the US the way they are in Europe and Asia.

Subject: Microsoft Settlement

I'm writing to log my opinion about the Proposed Final Judgement (PFJ) in the United States v. Microsoft antitrust trial. My name is Mario D. Santana. I have been writing software for Windows, Unix, Macintosh and other operating systems for 18 years. I am a US citizen registered to vote in Florida.

I believe that many provisions in the PFJ would be ineffective in achieving the stated goals of the PFJ. In my opinion, the main flaw is the lack of provisions guarding against predatory license practices. These practices leverage Microsoft's monopolies to force other businesses such as OEMs and ISVs to use Microsoft products and enhance Microsoft's monopolies still further. There are other flaws, such as the very narrow definitions of various key terms.

Time constraints prevent me from restating all the relevant technical and historical facts. These are available all over the internet, see for example Dan Kegel's excellent collection of resources at <http://www.kegel.com/remedy/>

Microsoft has abused rights protected by the Constitution and statutes of the United States, rights meant to benefit the public by protecting innovation. I hope changes are made to the PFJ to give back to the public the

fruits of that abuse, and to keep such abuses from happening in the future.

Yours,

Subject: Microsoft Settlement

Please add my voice to those who are dissatisfied with the proposed government settlement with Microsoft.

In my mind it is bad because:  
—It allows Microsoft to continue its practice to consume software technologies into the ever increasing maw known as Windows. Browsers, performance utilities, now firewalls and virus scanner companies are all at risk of extinction because of Microsoft's activities. Remember, this will lead to less incentive to innovate and less diversity in the software environment.

—The "education" settlement is a major slap against the one small market place Apple computer has a nontrivial market share. By encouraging the cost sensitive education market to take huge numbers of "free" Microsoft based computing systems, Apple will quickly lose what tiny market share they have been able to garner in education. Perhaps an alternative would be to require Microsoft to purchase Apple computers for education.

—Microsoft's legal strategy is to delay, obfuscate and then when public attention has diminished, negotiate a favorable settlement. With the billions they have invested in their legal department, they have far more resources than any competitor could hope to have. The Justice department is the last hope at re-establishing a fair playing field. Please reverse this terrible settlement and break Microsoft up into smaller companies that can give the software industry the competitive spirit it needs to jumpstart the stalled Internet revolution.

 Subject: Microsoft Settlement  
 Dear fellow American,

I am writing this to voice my absolute amazement that my government is planning to settle this lawsuit with Microsoft. I have been a member of the community affected by Microsoft's draconian practices for 15 years. I have watched them illegally destroy technologies which would have benefited myself and millions of others. The most notable of these being the Netscape web browser (believe me it is dead. It would take an act of god to bring it's market share back to where it was when what mattered was quality). If you need a simple current example just examine the way they are hamstringing their "windows media player" into windows XP in such a way that makes it highly cumbersome to use any of their competitors products. Thank you for your attention.

Attentively;  
 Marc Allen

**MTC-00016522**

From: Alan Hecker  
 To: Microsoft ATR  
 Date: 1/23/02 11:28am  
 Subject: Microsoft Settlement  
 To Whom It May Concern,

I am writing to inform you of my opinion re: the pending Microsoft settlement. The historical—as well as antitrust—history with Microsoft is glaring clear: they have used every tactic at their disposal to gain an unfair advantage in their market space; indeed, through dominance in the computer software marketplace, they have begun to expand out of their initial space and take on other markets (media (MSNBC, video game consoles, etc.). They have also flagrantly delayed and dragged their feet against the federal government \*during the antitrust proceedings\*; to expect that they will suddenly come into compliance with any verdict that they do not deem meets their liking without a significant amount of oversight and strict, severe (read: large monetary) penalties for violation of any infractions is naive in the extreme.

In addition, the inability of the federal government to bring any entity under its governance into compliance with laws, statutes and verdicts handed to said entity will be perceived by all astute entities (be they individuals, corporations, other governments, etc.) as a weakness and an opportunity to take advantage of the United States the way that Microsoft has done. The setting of such a precedent, especially in the current social, economic and political climate of today's world, could do inestimable damage to the United States. I realize that Microsoft is a corporate entity like none other in history; it has shown the largest profit, the largest growth and the largest abuse of its position and power of any corporation in history. However, it is still a corporation like any other in the country. The antitrust laws, as they are on the books today, still apply to it. Microsoft has unfairly gained advantage over competition and, in turn, used this edge it created to further its dominance over the market. As it gains speed, as it expands further and further out from the base of

software development and Operating Systems, it threatens to bring its strong-arm tactics to other areas. The threats to innovation—and to say that innovation, in a capital economy, must perish because those who innovate can't compete with a barrelling juggernaut is a specious argument at best—and competition are real and large. Ultimately, the consumer pays the highest price: expensive, single-source software (and now hardware and media options) that only allow for what Microsoft decides is good for itself. This kind of future is specifically what the antitrust laws were put in place to prevent. If there was innovation, fair competition and a variety of choice in the software industry, there would be no need of antitrust proceedings or a judgement against Microsoft; market forces and competitor vying for consumers would shape the outcome. This is how it was in the 1980s, but that was about the last time there was that level of real capital competition.

In closing, I believe that only by forcing Microsoft to submit to stringent, rigorous monitoring and being subject to real, stiff and enforced penalties will fair market forces be able to once again reign in the software industry. Microsoft must be made to fully describe and open its Windows API and fully disclose the format of its Office suite of products. This would foster faster and stiffer competition than would splitting the company into parts. The Findings of Fact have not been disputed. Microsoft is a monopoly, possibly the largest and fiercest one this country has ever encountered. To treat it as anything but such is folly and is folly that ultimately plays itself out on the United States government as a whole and the consumer, who is ultimately the benefactor of antitrust protection.

- Alan Hecker

From: Bill Hay  
 To: Microsoft ATR  
 Date: 1/23/02 11:26am  
 Subject: Microsoft Settlement

Dear Sir, I am writing to you with regard to the Proposed Settlement in the Microsoft Antitrust case. Although I am a US Citizen I live in Britain and as such I am rarely concerned with the details of the US government and justice system. However the outcome of this action affects me here in Britain as Microsoft's monopoly is extant throughout most of the free world.

As a computer professional I am familiar with the practical means by which Microsoft has abused its monopoly power to crush the competition. Having examined the proposed judgement I do not think it will provide sufficient restraint on Microsoft's Conduct to prevent it from abusing its position.

In order to allow other companies, groups or individuals to compete fairly against Microsoft they need access to details of the currently undocumented APIs, network protocols and file formats that Microsoft uses. Companies that are not monopolies do not benefit from concealing this information as evidenced by the far more liberal distribution of such information by Microsoft

when its monopoly was less complete. With the advent of the internet and print-on-demand technologies providing this information without restriction to all who might want it can be done cheaply and efficiently.

The proposed judgement:

- i) Does not require disclosure of file formats.
- ii) Greatly restricts the APIs which must be disclosed and the purposes for which this information can be used.
- iii) Leaves the disclosure of network protocols subject to an unspecified license on "reasonable terms". There are few bodies other than the US government with the resources to litigate whether a Microsoft license is reasonable. The proposed judgement should be revised to ensure that details of all APIs, file formats and network protocols are available for use by competitors, both commercial and non-commercial, both open-source and closed source.

Yours Sincerely  
 William S Hay

From: Nicholas Perez  
 To: Microsoft ATR  
 Date: 1/23/02 11:27am  
 Subject: Why I think the Proposed Settlement is Wrong.

Perhaps I am going out on a limb here, but with a convicted monopolist why are you even considering listening to their "proposal" for a "settlement". Would you listen to a murderer talk about restrictions on his daily life in the hopes of not getting the chair? It is painfully clear that the judge should simply ignore anything that comes from the convicted monopolist, and develop her own remedies that seek to punish Microsoft for its ill gotten gains. Suppose the Microsoft settlement is accepted, does Microsoft lose any of the —billions— of dollars it has gained from breaking the law?? Does Microsoft retain its market position as a monopoly that has stifled innovation and bullied other competing businesses? A convicted criminal would say or do anything to get his sentence reduced, even lie, cheat, or threaten the court. I simply do not see the "proposed remedy" being a remedy any more than one inch bandaid being a proper dressing for a deep bleeding gash. As a law abiding, tax paying citizen, I strongly oppose my tax dollars being —wasted— on such an endeavor as this proposed settlement. That is all.

From:

jonathan.cole@mindspring.com@inetgw

To: Microsoft ATR

Date: 1/23/02 11:26am

I wish to raise my objections to the Proposed Final Judgement in United States v. Microsoft. There are many areas that the proposal fails to protect the public and the computer hardware and software industry from the deliberate monopolistic practices of Microsoft. I wish to call the department's attention to <http://www.kegel.com/remedy/letter.html> for a comprehensive analysis of the Proposed Final Judgement and its inadequacies. For the sake of brevity, I shall make a statement to the necessity of a fair and open software market. To achieve a market that offers robust, secure, and innovative computer systems, both for the public at large and private industry, it is imperative that any agreements force Microsoft to cease practices that create artificial barriers for Independent Software Vendors. Microsoft should be prohibited from placing overly restrictive terms in licenses. For example, such terms should not disallow the distribution of Redistributable Components with applications targeted for Windows-compatible competing operating systems. The Microsoft Platform SDK EULA states, "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..." This is an anti-competitive practice and limits the public's choices when choosing an operating system to run on computer hardware they have purchased. Unless such restrictions are removed from Microsoft licensing, Microsoft will not find it necessary to compete in the operating system market on criteria of quality. The public will have no real choice, because of limited application software availability, but to continue to purchase Microsoft operating systems which for many years have been known for their instability and general poor quality. Such licensing terms restrict entry into the market and constitute an anti-competitive, monopolistic practice. It is only because of their monopoly that Microsoft can place such terms in their licenses without limiting the sales of their own products. Finally, I would alert the Department of Justice to the inadequacy of the definitions within the Proposed Final Judgement. I am concerned that many of the definitions, eg the definitions of "API" and "middle ware," create loopholes in the agreement that will allow Microsoft to avoid even the limited prohibitions.

Best regards,  
Jonathan Cole

Subject: Microsoft Settlement

Microsoft has done untold amounts of damage to the IT industry. They have driven many software companies out of business, and prevented many others from even starting due to fear of being attacked. This company was rightly convicted of being an illegal monopoly and if our industry is ever expected to grow in a secure and stable manner, something must be done. The settlement proposed does nothing to rectify this situation. There are many points that the proposed settlement falls short, but the most important is granting Microsoft the right to choose who should have access to their API set. The language in the settlement is so vague that Microsoft will more than likely continue to do business exactly as they are doing it now. Please consider that one company can not employ every technical worker out there. One company can not secure our nations most important infrastructure. Microsoft needs to have a settlement that will allow other companies to grow.

**MTC-00016534**

From: Ken Baker

To: Microsoft ATR

Date: 1/23/02 11:28am

Subject: Microsoft Settlement

I am strongly against the proposed settlement between the DoJ and Microsoft. I am an IT professional who has, over the past several years, watched as Microsoft has bullied, coerced, and generally forced their products on the public. They have also bullied, coerced, and generally forced their products on the various OEM computer manufacturers. I have watched as Microsoft, using the huge financial resources available to them, bundled and given away their products as a method of effectively removing competition from the marketplace.

I have watched as Microsoft has gobbled up competing companies, thereby destroying that company's product(s). I have watched as Microsoft has taken Public Domain standards and modified the technology of those standards, effectively making them proprietary. This can, and has, damaged interoperability between Microsoft systems and systems from competing vendors. I have cleaned up damage done to Microsoft products because the products are not, by design, secure. This has cost my customers large sums in my labor charges, as well as the cost of downtime during the cleanup.

Finally, and in yet another example of monopolistic behavior, Microsoft appears to be trying to slowly take control of the Internet (a public resource) and the public's dollars through its .NET initiative and Microsoft Passport.

I strongly urge the court to reject the proposed settlement and take the necessary steps to break the stranglehold that Microsoft has on this industry.

Ken Baker

**MTC-00016535**

From: Scott Milliken  
To: Microsoft ATR  
Date: 1/23/02 11:27am  
Subject: Microsoft Settlement

I would like to register my disagreement with the proposed settlement of the Microsoft Anti-Trust case. With the new licensing model that Microsoft has adopted with Windows XP, it is quite clear that their settlement proposal is merely an investment in future license renewals. What would seem like a windfall to the poorly financed school districts throughout the United States will turn into a recurring nightmare of license renewals for what was originally pitched as free software.

Security is also of major concern here. It is a well documented fact that the majority of viruses are written specifically for Microsoft Windows operating systems and the bundled features within those operating systems. The settlement proposal does not address the need for a full time administrator to handle the constant virus scans and system updates that are part of the daily care and feeding of a Windows system.

Sincerely,  
Scott Milliken

**MTC-00016536**

From: David Brickner  
To: Microsoft ATR  
Date: 1/23/02 11:24am  
Subject: Microsoft Settlement

As allowed by the Tunney Act I am commenting upon the proposed settlement to the Microsoft Anti-Trust trial. I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. It has been ruled that Microsoft has an abusive monopoly and has performed anti-competitive behavior to the detriment of US corporations, US citizens and customers, and, by extension, the world market. These abuses drove such companies or products as Stac Compression, DR DOS, Netscape, WordPerfect, and Lotus SmartSuite out of business or to bare existence levels. There is nothing in the ruling that compensates these companies, or their customers, for the price gouging and loss of innovation that Microsoft's actions have caused. Specifically, why is it that the cost of Microsoft Windows and Microsoft Office Suite are rising at the same time that hardware prices have dropped to commodity levels? Dell, Gateway, Compaq, HP, and IBM are all competitors for our hardware dollar and they get that dollar with quality products, low prices, and

excellent service. Microsoft, in their monopoly position, uses proprietary formats that do not allow for direct competition on the aforementioned quality, low price, and service. They are able to charge high prices (thus protecting their fantastic profit margins) without fear of strong retribution from the customers or loss of revenue. WordPerfect, as an example, cannot compete with Microsoft, because their product cannot read and write to Microsoft document formats without loss of information or formatting. They cannot compete on a level playing field, and customers cannot switch because their data, their business, is tied to Microsoft formats. Microsoft has cried foul when the Department of Justice has sought to curtail it's "innovations" and prevent additional software from being added to the Windows Operating System. But, innovation has suffered more because of Microsoft's abusive monopoly. Nearly everytime a truly new, or innovative idea has emerged in the computer market Microsoft has either attempted to buy the technology or subvert it to their own ends. In many cases, they do both, they buy the technology and push it under the rug, then introduce their own proprietary version that they then foist upon the unsuspecting world. In all cases Microsoft is not the innovator they are the deep pocketed megacorporation who is seeking to extend their monopoly.

Examples of this abound:

(1) Stac created a disk compression technology that was incredibly useful because hard disk sizes were so small. Microsoft created a competing product that came bundled with DOS and Windows that was actually based upon the Stac technology. They stole from Stac and used it to increase their own Windows market. A trial and settlement later ensued, but Stac was never a viable company or technology again.

(2) MP3 files are all the rage for music sharing. Regardless of the possibly illegal implications of sharing such files, it is a viable technology in widespread use in the world, a de-facto standard. Microsoft will have none of this and has introduced it's own compressed media playing format that you can only get from Microsoft. In it's latest incarnation you cannot play it on Windows 95 because Microsoft has decided that they want to force users of that operating system to upgrade to later editions. MP3 files can play on nearly any OS in existence, encouraging diversity and giving people what they want on the operating system they prefer to use. Windows Media Format does not allow for this. Microsoft is also pushing their format onto hardware vendors to replace popular MP3 players, and onto home stereo equipment. Who, other than Microsoft, is really served by this?

(3) Real practically created the online media streaming content, and briefly their future was bright. Then Microsoft decided that they also wanted this market. How is a small unknown company to compete with the monopoly that owns the platform the access?

(4) Microsoft decided to get into the game market and is now one of the #1 vendors of video games on the PC (they are also seeking dominance in the game console market). By

owning the platform, Windows, they are able to modify the very code of the operating system to support their own gaming efforts, no other vendor can compete with that. Competing game companies, barely surviving between game titles, are an easy purchased by the exceeding wealthy Microsoft.

(5) Hardware vendors who might have been encouraged to use competing operating systems such as BeOS, Linux, GeoWorks, OS/2, and such were not allowed to by exclusive contract deals with Microsoft that they were practically forced to agree to. Without these deals they could not have been competitive with those vendors who signed them. Dell, without such a deal, would have always had hardware prices consistently higher than Compaq with the deal because they would not have gotten the same price levels for the Windows Operating System or Microsoft Office despite ordering the same volume. This controlling of the "boot sector" is a major reason for the continued dominance of the Windows Operating System.

(6) By virtue of tie-ins to their operating system (the platform) Microsoft gains an automatic advantage over competitors. Who is to say that Microsoft doesn't do things that inhibits competition? They have already had a lawsuit that they had to settle with relation to DR DOS. DR DOS was an operating system that competed with MS DOS. Microsoft deliberately put code into its Windows 3.0 system, that ran on top of DOS products, to make it less stable when the DOS version was DR not MS. That is akin to AT&T owning all the telephone lines and creating switches that automatically put static on the lines with a customer uses Sprint or MCI.

In fact, that is how Microsoft Windows, and possibly Microsoft Office should be considered. Ubiquitous products that should have fair use laws placed on them. If Windows is to be the dominant desktop system, then all competitors should have fair access to it, just like competitors have access to telephone lines, highways, airlines, and railroads. My preference though is to not see Windows in this role, but an operating better suited for such a task, such as Linux, or the technology innovative BeOS.

Microsoft must be punished with both monetary charges and structural changes that will force it to not be able to use it's ownership of the platform (Windows) to push its other product offerings. Monetary charges must be severe, and reflect the overcharging they have been able to do for the past 12 years at least. Structural changes must be sweeping and create immediate entry for competitors to either compete on the Windows platform, or against the Windows Operating System. Anything less that changes such as these means that US government has not performed the necessary actions in protecting free commerce in this nation.

Thank you.

Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. Firstly, I would like to note that I believe that all of the problems noted in Dan Kegele's analysis, which can be found at <<http://www.kegele.com/remedy/remedy2.html>>, are flaws so severe as to make the proposed settlement unacceptable. Particularly, I would like to object to the practices which would still be allowed toward OEMs. The proposed settlement allows Microsoft to penalize OEMs who ship a Personal Computer with no operating system or one competing operating system. That is, under section III.A of the proposed settlement, Microsoft is prohibited from penalizing OEMs who ship a PC with a Microsoft operating system and another operating system, or who ship a PC with multiple non-Microsoft operating systems but does not prohibit Microsoft from penalizing OEMs who ship a PC with one competing OS or no OS at all. This has the indirect effect of penalizing consumers like me, who obtain install media for other OSes from other sources who would like to buy a PC without paying for an OS that I will not use.

It also penalizes consumers like my employer who purchase Intel based

computers with one non-Microsoft operating system pre-installed. I do not object to Microsoft rewarding those OEMs who sell a lot of Microsoft products, but I do object to Microsoft being allowed to penalize OEMs who choose to also sell hardware without a Microsoft product installed.

Until this and the other flaws noted by Dan Kegele are corrected, I oppose the settlement.

Sincerely,  
Craig Pennington

The purpose of the trial is because Microsoft has a stranglehold on the market with its monopoly. The "settlement" in NO way changes that. The settlement is ridiculous. In fact, the settlement furthers the problem by engraining Microsoft more into the society. What we need is not more copies of Microsoft operating systems out there, we need to stop the unethical practices of Microsoft. They do not lose anything by giving away copies of their software, they gain.

From: Nick Aubert  
To: Microsoft ATR  
Date: 1/23/02 11:28am  
Subject: Microsoft Settlement

Hi,

I am writing to express my disagreement with the current terms of the Microsoft settlement. Intellectual property and copyright laws applied to the technology industry should foster healthy competition and encourage development, which benefits consumers and business.

Microsoft uses intellectual property laws and its virtual monopoly over the desktop operating system market to crush competition at every opportunity. If Microsoft is allowed to have its way, it may very well succeed in its efforts to deny consumers the right to choose from among competing products. This would be bad for U.S. interests, as well as bad for the world at large.

The IT industry is too important for any single company to be allowed to dominate it, the way Microsoft currently dominates the desktop. Microsoft must be made to fully disclose its Windows applications programming interface ("API") set, as well as opening its file formats to competing companies and operating systems.

Thanks for your attention.

From: John Cartin  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 11:25am  
Subject: Microsoft Settlement

I do NOT agree with the current settlement agreement between the DOJ and Microsoft. The reasons below are my primary concern. . .

1. The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

2. The PFJ allows Microsoft to discriminate against small OEMs—including regional 'white box' OEMs which are historically the most willing to install competing operating systems—who ship competing software.

3. The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

If these practices are allowed to continue, I believe that the anti-competitive behavior of Microsoft will most certainly continue to increase the barriers of entry to the market and will eventually strengthen its place in the computer market.

Thank You,  
John B. Cartin

From: Chris Corayer  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 11:28am  
Subject: Microsoft Settlement

I am writing to oppose the current settlement proposed. In my opinion it will change little, if anything.

What I would rather see happen is the following:

1) ALL file formats should be documented and open. This will allow FULL compatibility with competing office suites such as Sun's Staroffice. Full compatibility will by it's very nature force competition into the marketplace. The MS product suite will have to prove to its userbase that it is worth spending the money to buy said product when there are other products out there that can read/write their format. This should apply to file formats other than just the office products.

2) Full disclosure/documentation of protocols. This would allow such things as the SAMBA group to allow full windows features on UNIX/BSD/LINUX machines and allow simple integration of those machines into a windows based network.

3) In the rare case where Microsoft may claim security risks, I would respectfully point out that many of the other UNICES, like FreeBSD and the different Linuxes, do not seem to have many problems with full disclosure. In any event, it should not be sufficient for Microsoft to claim security and not furnish information. They should be forced to PROVE that something would be completely rendered vulnerable if certain protocols were fully documented. This process should be overseen by at least half of Microsoft's competitors who should be able to determine if this were the case.

4) Microsoft API's should also be fully documented. This will prevent such things as company A being put out of business should Microsoft decide to implement a similar program that uses "undocumented features" to make the Microsoft product run better or more stable.

5) No bundling should be allowed in a default install. There SHOULD be an option to install additional software during the install process, but this should not be the default option. Most other OS's allow a simple base install. This will not generally include web browsers, multimedia, or instant messaging clients.

6) No exclusive licensing on the boot loader. Microsoft should not be allowed to require that only Windows be installed or that the only option shown upon booting be Windows. There should also be safeguards in place to prevent retaliation by Microsoft on this point.

The first two points I consider absolutely critical. The internet was based on fully documented, and freely available protocols. Microsoft's Active Directory is a minor modification of LDAP and Kerberos. Both of these are widely used protocols, but they will NOT work with the Microsoft versions.

This prevents competition. The Office Suite is so engrained in the corporate sector that there will not be any competition until competitors can make a fully compatible product. This will not happen until the file formats are fully documented.

The remaining points are optional. I include the third just in case exceptions for security are allowed. I am however willing to make allowances if there is some property that Microsoft licensed from another party and the license does not allow use in another product or similar situations. The fourth

point I made is much like the browser issue. For a while Netscape would crash often. Certain instant messaging clients were very unstable.

The fifth point is simply to promote users to try non MS software. The option to install Internet Explorer would be available during the install, but it would no longer be mandatory. I include this due to recent events where Microsoft's website was made inaccessible to users who used the competing Opera web browser. Behavior such as this makes me extremely suspect of any guarantees by Microsoft regarding their behavior without outside oversight.

The final point is one that was already in the proposed settlement. I feel that this requirement be kept in any future proposal.

Thank you for your time.

#### MTC-00016545

From: Dale Carlson  
To: Microsoft ATR  
Date: 1/23/02 11:29am  
Subject: Microsoft Settlement

I see a 3 part solution:

1. Force Microsoft to open their APIs to anyone who wants them.  
2. Prohibit Microsoft from requiring every PC manufacturer who ships a Microsoft-based OS compatible PC to purchase a licence for EVERY machine they make. For example, if someone wishes to purchase a Dell PC to run Linux, they should not be forced to pay for a copy of Windows that they will never use.

Most importantly:

3. Limit the number of technologies Microsoft can purchase every month/year. Since they do not innovate, but rather swallow up other companies and technologies, they destroy competition. This is a fundamental part of their business strategy. Instead of developing a better competing product, simply buy out the competition. It is impossible to eliminate Microsoft's existing monopoly. Preventing it from continuing is the key. Financial penalties only drive up costs for those who are forced to use the entrenched MS products, and fail to serve any purpose. Requiring Microsoft to donate their technologies to schools does nothing but strengthen their monopoly. The settlement must prevent the continued spread of Microsoft's stronghold on the industry. It can be summed up very simply. In the case of Apple computer, potential Macintosh computer customers are often most concerned about whether or not the Mac runs Microsoft Office. In fact, some people don't purchase Macs because they believe they can't run Office (Word, Excel, etc). The fact that they can run Office, yet this fact is poorly advertised is irrelevant. What is relevant is that people are so dependant on Microsoft technology that it influences multi-thousand dollar decisions.

This dependancy on software from a company whose track record on security is

not exactly excellent is a scary thought indeed. Support diversity in the industry.

Dale Carlson

Date: 1/23/02 11:29am  
Subject: Microsoft Settlement

I would like to make some comments concerning the Microsoft settlement.

I believe that the proposed settlement between the Department of Justice and Microsoft should NOT be accepted in its current form. Reasons for this are:

- Microsoft has been proved in court to be a monopolist
  - Nothing in the settlement will prevent Microsoft from erecting further barriers to entry to compete in the operating system market
  - Microsoft has sufficiently large "mind share" amongst customers that no company can effectively compete against Microsoft unless they have the same amount of financial resources to bring to bear to compete. Microsoft has \$30 billion dollars in cash to create competing products in any marketplace they choose. They are adding to that hoard at the rate of about \$1 billion per month. A good deal of this cash hoard was accumulated due to their monopolistic practices. Suggested solutions to help correct the problem:
    - A large cash fine should be applied to Microsoft. Some sources suggest that Microsoft has accumulated this large a cash hoard illegally by not giving out dividends which are taxed by the receivers. To my understanding, Microsoft has not paid taxes on this level of retained earnings. A large fine would reduce the resources that Microsoft has to erect more barriers to entry.
    - Require changes to all Microsoft licenses that currently prevent their tools from creating executable programs that run on other operating systems and prevent their applications from executing on other operating systems. All licenses for all Microsoft products should allow usage on any operating system. Microsoft uses the current license terms to help prevent the growth of competing operating systems.
    - Require that Microsoft provide timely (within 1 month of their release into any publicly available product, including beta products) any additions or changes to operating system interfaces. This includes ALL interfaces, including security interfaces. The language in the current settlement document allows great leeway to Microsoft to withhold information for certain APIs. This act of withholding does not level the playing field.
    - Remember that with Microsoft's large cash hoard, it is only a matter of time before they are able to create a monopoly in other areas of computer hardware and software. This kind of legal action will quite likely be required in the future unless appropriate action is taken now to prevent the inherent behavior that brings rise to the problem.
- Thank for listening.

Subject: Microsoft Settlement

I am disheartened by the news that the case against microsoft will be settled shortly. It is clear that justice is not being done, and that once more microsoft will get away with committing corporate murder.

Microsoft cannot be trusted. The only solution to microsoft's abuses is to divide the company into at least two new companies, one part owning the OS, and the other owning everything else. Also microsoft must be required to compensate the many companies it has already either harmed significantly or destroyed completely.

I urge the DOJ to reconsider ending this case now without any real penalties imposed against microsoft. Better to cure the cancer that is microsoft now, rather than lull ourselves into a false sense of security.

Sincerely,  
David Ashley

From: Vincent Keunen  
To: Microsoft ATR  
Date: 1/23/02 11:31am  
Subject: Microsoft Settlement

Dear Sir,

Please excuse any language errors, I am not a native English speaker. I am the manager of a small company in Belgium, Europe. I am strongly against the proposed settlement. I am really and honestly convinced that it will not do much to prevent Microsoft from conducting its aggressive and illegal business (let alone unethical). There has been several very clear demonstrations in the past that Microsoft does not hesitate to have such behaviours. It is also very clear to me that, already now, they are seriously preparing other kinds of such "competitors eliminations". What Microsoft has done in the browser market to Netscape, it is also doing it with its Windows Media Player to Real Player and Apple's quicktime; with its Instant Messenger to AOL's Instant Messenger; with its MSN network to other News networks on Internet; with Outlook to all other email and agenda systems; etc... Not as visible but also important is that all those "client" applications need server software. If Microsoft illegally controls all those client software, it will also very easily promote its server software (like IIS, Exchange, Media server, IM server,...), preventing others from developing such server software. This is also true, although to a lesser extent, for development tools.

Our company is betting on Java to develop faster, easier and in a more portable way various software systems. Microsoft is trying as hard as they can to kill the Java platform (not to be confused with Java, the language). So Microsoft is, again, going against our own interests, our clients interests and the good health of the software industry in illegal ways.

Please do consider real solutions to this several years long problem. Time is in favor of Microsoft. They know it. They do all they can, as fast as they can, to quickly capture the various new markets I mentioned above and kill competition as they did with the browser.

I can't help but feeling pretty insecure that the tool (the internet browser) used to access the vast amount of information, data and entertainment of the Internet is today belonging to a unique, monopolist, abusive, private, commercial company. This gives them an enormous power and ability to control so much of the information society. I really fear for my kids: they will live in a world controlled by a small number of private, commercial companies known to do many illegal things to get more power.

Please keep my testimony as anonymous as possible, because currently, the software world being so dependant on Windows and Microsoft that if it were known widely that we are against Microsoft, we would probably lose a significant part of our business.

Thank you.

!try; do()

From: John T. Shaw  
To: Microsoft ATR  
Date: 1/23/02 11:31am  
Subject: Microsoft Settlement  
Dr. Sirs,

The current idea for settlement with Microsoft over there anti-trust violations is a very disturbing one.

Nothing in the settlement either 1) discourages Microsoft from increasing there monopoly or 2) forces Microsoft to give up market share.

What you will get from this settlement is more of a monopoly in the education sector from Microsoft and little else. The education sector is one of the few left that Microsoft doesn't have almost complete control over so such a penalty could be devastating to competitors.

What needs to be done is the following:

- 1) Microsoft must be forced to open the important standards and libraries so it is possible for competitors to be on a level playing field. This is not to say they must make there operating system open source, but they should open the libraries that allow such products as Office or Internet Explorer to be integrated so well with Windows.
- 2) Microsoft must no longer be allowed to bundle more and more programs into Windows forcing 3rd party vendors out.
- 3) All OEM contracts with Microsoft that do not allow OEM's to install multiple OS's on a machine that contains Windows should be modified such that OEM's have this freedom.

- 4) Microsoft should be forced to give 1 Billion dollars in hardware to schools. The hardware should be delivered in working condition running with only competitors software and hardware. No Microsoft products should be allowed in this penalty.

I am sure you will consider these thoughts, and those thoughts of all others and see that Justice and the best interests of the people are served here. Thank you for your time.

**MTC-00016553**

From: Bruce Timberlake  
To: Microsoft ATR  
Date: 1/23/02 11:31am  
Subject: Microsoft Settlement

I am writing to voice my concern, in accordance with the Tunney Act, over the proposed Microsoft settlement. I am a user and supporter of free and open source operating systems like Linux, FreeBSD, and OpenBSD, and of open source applications like OpenOffice, KDE, and Gnome.

I am convinced that not enough effort is being spent really ensuring that Microsoft is

(1) punished for their outrageous and damaging monopolistic practices in the computer industry, and (2) prevented by airtight legal terms from being able to stray down that path again. It is tough to do given the nature of the computer industry: rapidly changing, and not necessarily easily understood by the average person.

Nor, possibly, by those who must make the final decisions. I hope that once the key elements of an acceptable settlement are repeated over and over by those of us in the industry, they will be incorporated. I am all for capitalism, and the best company/product/idea becoming successful in the marketplace on its own merits. But when the playing field isn't equal, due to marketing, "backroom" negotiations, unequal licensing terms for manufacturers who may not "toe the line," etc, then the best company isn't necessarily the one that wins. The best company might have never had a chance from the beginning.

I don't want to pretend that I have all the answers, or even many of them. But as a part-time programmer, I think a few key ideas have to be part of the settlement, and they must be written in straightforward, airtight language, so that Microsoft cannot "figure out a way around them" at any point in the future:

1. All file formats—past and present (as of the date of the settlement)—ever used by any Microsoft operating system or program, and specifically any member of the Office suite (Word, Excel, Powerpoint, Outlook), must be made completely and immediately available as "public knowledge" in a way that does not require any money or identifying information to be given to Microsoft by any person, company, or organization that wants the information.

2. All file formats created and used after the date of the settlement by any Microsoft or subsidiary company's operating system or program, and specifically any member of the Office suite (Word, Excel, Powerpoint, Outlook), must be made completely available as "public knowledge" no later than the date the product is available to manufacturers for bundling onto computers, and in a way that does not require any money or identifying information to be given to Microsoft by any person, company, or organization that wants the information.

3. All APIs used to communicate between any Microsoft products (operating systems and/or applications) shall be completely divulged to enable the complete and unrestrained interaction of non-Microsoft operating systems and/or applications, or replacement of Microsoft operating systems. This shall specifically include the Exchange and SMB protocols. This information will be made available as "public knowledhe" in a way that does not require any money or identifying information to be given to Microsoft by any person, company, or organization that wants the information.

4. No computer manufacturer who offers Microsoft operating systems pre-installed on their computers can be penalized in any way (through fee increases, contractual obligations, etc) if they wish to offer alternative operating systems for customers who desire one either in place of, or in addition to, a Microsoft operating system.

There are many other issues that I don't feel competent to suggest a remedy for, but which I would like to state as a concern anyway: The oversight committee needs to have the staffing and authority to report to the public what Microsoft is doing to "make good" on the terms, and the ability to truly punish Microsoft in some fashion if it does not comply with both the letter and the spirit of the settlement.

One idea proposed by Ralph Nader seems especially appropriate: "The level of fines that would serve as a deterrent for cash rich Microsoft would be difficult to fathom, but one might make these fines deter more by directing the money to be paid into trust funds that would fund the development of free software, an endeavor that Microsoft has indicated it strongly opposes as a threat to its own monopoly. This would give Microsoft a much greater incentive to abide by the agreement."

I also heartily agree with and endorse the GNU Foundation's suggestions, some of which mirrors my own ideas at the opening of this letter:

1. Require Microsoft to publish complete documentation of all interfaces between software components, all communications protocols, and all file formats. This would block one of Microsoft's favorite tactics: secret and incompatible interfaces. The rule must be: if they cannot publish the interface, they cannot release an implementation of it.

2. Require Microsoft to use its patents for defense only, in the field of software. It is crucial to address the issue of patents, because it does no good to have Microsoft publish an interface, if they have managed to work some patented wrinkle into it (or into the functionality it gives access to), such that the rest of us are not allowed to implement it.

3. Require Microsoft not to certify any hardware as working with Microsoft software, unless the hardware's complete specifications have been published, so that any programmer can implement software to support the same hardware.

To close, I would like to quote the summary by the Computer and Communications Industry Association of the DOJ settlement compared to that ordered by the DC Circuit Court of Appeals: "The settlement being prepared by Charles James (1) would not prevent the central ways Microsoft was found to have illegally maintained its Windows monopoly, (2) does nothing to restore competition in the OS market, an express Court of Appeals requirement for a Microsoft remedy, and (3) has no provisions directed to Windows XP and other new endeavors of Microsoft to extend and protect its monopoly to new markets in the future, another express Court of Appeals requirement for a Microsoft remedy. The proposal is so far outside the mainstream of antitrust law, and so completely contradicts the DC Circuit's unanimous opinion affirming Microsoft's guilt, that the only explanation must be political pressure. Whether or not the public learns of the backroom activities will be the responsibility of Judge Kollar-Kotelly under the Tunney Act public hearings that are required before approval of anti-trust settlements."

Thank you for taking the time to read this.

From: Benjamin Smith  
To: Microsoft ATR  
Date: 1/23/02 11:31am  
Subject: Microsoft Settlement

This is to make my voice heard:

I oppose the current form of settlement in the Microsoft anti-trust trial. While there are glimmers of remedy in there, it does virtually nothing to remedy the actual anti-competitive nature of Microsoft's past actions. Having won the case, having proven Microsoft's illegal conduct, and obtained a judgement that has withstood significant legal challenge, I just don't understand the logic in a "slap on the wrist" and letting Microsoft free to resume their activities.

Since no justice has been served, this agreement amounts to nothing more than "don't do it again" (again), this is a settlement for the sake of settlement.

This only compounds the problem, as this sets a social and legal precedence to allow vicious acts of this nature to continue unchecked!

Please reconsider this settlement!  
-Benjamin Smith

From: Dominic Giampaolo  
To: Microsoft ATR  
Date: 1/23/02 11:31am  
Subject: Microsoft Settlement

Hello,

I would like to voice my opinion on the Microsoft Settlement. I am encouraged by many of the restraints the settlement imposes on Microsoft's behaviour. As a software developer however, it is clear that a few additions and modification need to be made for the settlement to offer a viable development path for third parties.

The biggest stumbling block to developing competing products is that Microsoft does not document their file formats well enough (or in a timely fashion) nor do they always document all of their API's completely. Without this critical information developers can not make products that work well with Microsoft tools nor can they do it in a reasonable time frame.

Consider the case of a Microsoft Word document (a ".doc" file). If you want to develop software to read or write that file format you must reverse-engineer the format or use Microsoft's woefully inadequate documentation of the format. This insures that your products will be perceived as inferior to Microsoft's. Further their published documentation often does not match what their applications write out in practice since they regularly change the file format and do not document the changes. This is a costly area of development for a third party and one that is a never-ending battle. Unless the file format information is accurate and complete you can never develop a product that the market will perceive as anything other than a second class citizen to Microsoft's products.

In the area of Windows API's, the same thing happens. Microsoft applications will use undocumented API's, lending them features that require external developers considerable more time to implement.

I feel that the settlement proposal should include provisions to ensure that Microsoft releases complete, correct file format and API documentation in a timely fashion \*before\* the commercial release of a product. Without this, third party developers will never be able to compete on a level playing field with Microsoft.

I hope that my opinions echo those of others and that you'll consider my remarks carefully.

thank you,  
—dominic giampaolo

I think settling is a really bad idea. It doesn't attempt to fix the problem, that Microsoft has an almost complete monopoly on computer operating systems. They are still using that monopoly to crush software makers and other operating systems. So what if they have to pay billions? They'll just make it back in a year or so, and in that same year will increase their profits and their stranglehold even more. Any remedy that does not increase competition for Microsoft is a joke.

Thanks,

From: Michael Meckler  
To: Microsoft ATR  
Date: 1/23/02 11:31am  
Subject: Microsoft Settlement

I would like to comment on the currently proposed Microsoft settlement. I write software for a living. Much of my time is wasted working around flaws in Microsoft's code and operating systems.

Microsoft is a monopoly, and they abuse their monopoly power to gain and retain market share. People who write software know how difficult it truly is to work with Microsoft. If Microsoft truly cared about innovation, if they designed APIs and tools that truly advanced the state of the art, then

the vast cloud of animosity directed towards Microsoft would dissipate.

But that's not the case. Microsoft directs the vast majority of its resources towards simply increasing revenue, at the cost of the quality of its product. But we, the technology workers, are forced to deal with it. It costs us time, and money. The entire American economy suffers. Microsoft must be forced to allow true competition on the desktop.

American consumers and software developers need true choice, not the anemic alternatives offered by Macintosh and Linux. The current settlement does nothing to address these concerns; in fact, the proposal seems almost ludicrous.

Subject: Microsoft Settlement

Hello. I am writing to express my discontent with the Microsoft settlement. I am especially concerned with the inability to read, edit, or otherwise interact with various Microsoft document formats without the use of Microsoft's proprietary tools. This effectively limits the ability of myself and other consumers to choose an alternative computing platform. In effect, people are "locked-in" because of the vast amounts of personal data which is only available through their continued use of Microsoft products. Furthermore, with the "creative" licensing proposed with Microsoft's latest operating systems, the customer is at an even greater risk of his or her data becoming inaccessible without renewing various licenses on a regular basis.

In essence, forcing a disclosure of the various document formats seems to be one of the few alternatives to countering the current monopoly status of the Microsoft corporation.

Date: 1/23/02 11:32am  
Subject: Microsoft Settlement

Dear Sirs—  
I am very concerned with the proposed judgement in the Microsoft anti-trust case. There seem to be a great number of problems with the "solution" that has been put forth, and I fear unless new action is taken MS will only become more entrenched as a solo power in the field.

One of the specific problems I have with the judgement is the fact that, although vendors of competing software packages are required to meet "reasonable technical requirements" seven months before a new release of a Microsoft-OS, MS is not required to disclose what those requirements will be. It is certainly not inconceivable that

Microsoft would change those requirements close to a release date, considering it's track record to date.

There are numerous other problems with the judgement, and I sincerely urge you to reconsider your current stance on the issue. Thank you for your time and consideration.

From: Johnson, Robin  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:31am  
Subject: Microsoft Settlement

I have been following this action quite closely and I am very disturbed by the proposed settlement. It fails to address one of the most damaging behaviors of Microsoft—the lack of an Open API to a monopoly operating system critical to a large majority of private and public daily operations.

Since the source for the API is not open, Microsoft can make hidden changes in the source to "break" competitors products in the area of Office Applications, Browsers, etc. Worse, Microsoft often delivers these changes in the form of "necessary" security patches. This happens on a frequent basis and even if it is entirely "accidental" it seems to be routine for Microsoft and clearly harmful.

The routine problems with Microsoft products in the area of security is also related to their lack of transparency in their API. Independent experts cannot find the problems before the crackers do. The crackers simply decompile the source code to find the security holes. Computer professionals

cannot do the same thing because it is illegal and unethical to decompile the API source code without permission. Making the API source open for review to at least independent security engineers is vital for reasons of national security. Cyberterrorists are not deterred by copyright laws. We shouldn't cripple the computer community's ability to defend our vital computer systems from attack because Microsoft would rather hide the problem for PR purposes.

Thank you.

Subject: Microsoft Settlement comments

Dear Judge Kollar-Kotelly,

I write to express my dissatisfaction with the Proposed Final Judgment (PFJ) for USA vs. Microsoft.

While time limitations prevent me from conducting an exhaustive review of all the aspects of the provisions of the Final Judgment that I find to fail the public interest, allow me to focus on two particular issues that are of crucial importance:

(1) The exclusion of Microsoft's handheld version of Windows (i.e. Windows CE and variants, Windows for Automotive, Windows NT Embedded, and Windows XP Embedded from the definition of "Windows Operating System Product" delineated in Section VI, Item U of the PFJ;

(2) Provisions of Section III, Item J which give Microsoft broad discretion on determining which parties are eligible to receive API, Documentation or Communications Protocol information.

(1) Handheld and embedded operating systems

I have been working as a user of handheld devices for almost ten years and have been an applications developer for three of those ten. It has been very clear to me that portable devices will be a fundamental domain of computing technology, perhaps even replacing the desktop computer as a central unit of processing, in the near term. While there are various players in the handheld and mobile marketplace, Microsoft is a competitor that has historically used its weight to stifle innovation in this marketplace until it was ready to embrace it.

In terms of its APIs, the embedded versions of Microsoft's operating systems are modeled closely—sometimes even ported directly—on its Win32 API for desktop operating system development.

These versions of the operating system, designed to be stored in quickly-accessible RAM or ROM rather than on disk, and with an apparently closer connection to the hardware in which they're operating, are not significantly technically different from the existing desktop Windows technology, save for their portability. Microsoft itself, when advocating for the Embedded version of its operating system, argues that this close tie provides one of the main reasons why

developers should adopt its solution:

"Windows XP Embedded is the componentized version of the leading desktop operating system, enabling rapid development of the most reliable and full-featured connected devices. Based on the same binaries as Windows XP Professional, Windows XP Embedded enables embedded developers to individually select only the rich features they need for customized, reduced-footprint embedded devices."

[<http://www.microsoft.com/windows/embedded/xp/evaluation/overview/default.asp>—accessed Jan 23, 2002]

The versions of the Microsoft OS for handheld and mobile devices, (Windows CE and derivatives including Windows CE for Handheld PC, Windows CE for Palm-size PC, Windows CE for Desktop PC) are tied equally closely in Microsoft's eyes:

"The Windows CE operating system is based on the Microsoft Win32(R) application programming interface. Therefore, you can enhance your applications by using exposed APIs from bundled applications."

[<http://www.microsoft.com/mobile/developer/downloads/ppcsdk2002.asp>—accessed January 23, 2002]

Microsoft's own behavior in the handheld and mobile marketplace reflects similar actions to those presented in the Court's Findings of Fact, including concerted action to protect applications barrier to entry by performing ongoing modifications to its handheld data storage methodologies, by modifying established connectivity protocols (including the infrared communications protocols between competitors' handheld devices), and by maintaining its own data transfer protocols closed, thus thwarting the efforts of middleware vendors and non-Windows handheld device manufacturers to provide connectivity solutions that make full use of the capabilities of users' desktop computer hardware to connect with mobile devices.

Because of the rising capabilities and reduction in size of microprocessors, along with the quickly falling cost of flashable (rewritable) ROM and high-capacity RAM, it is very likely indeed that what we call embedded or mobile systems today will come to replace wholly desktop-based solutions for everyday users in the near and mid-range future. Embedded systems will (and do) reside in automobiles, household appliances, communications devices, and just about every other type of device that uses electronics to perform complex functions.

Allowing Microsoft to extend its monopoly into the embedded and mobile marketplace while remaining unfettered by the consequences of its previous anti-competitive behavior in the desktop operating systems marketplace is detrimental to the public interest.

(2) This point is much more brief, but equally important. In giving Microsoft the power to determine that a company "meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business" before receiving API and Documentation, or Communication Protocol information, it effectively gives Microsoft the power to exclude open source and free software developers from building

systems that are fully interoperable with existing solutions provided by Microsoft, mostly because these developers are not engaging in "viable business". Indeed, many of these companies are not engaged in business at all, but are working through the concepts of sharing and widely disseminating usable code and applications. Powerful and open public goods such as the Internet and Linux grew through this kind of non-business activity. This item effectively shuts out the public interest in interoperability and standards compliance by giving Microsoft the power! to define what is authentic and viable. Microsoft CEO Steve Ballmer's rhetoric regarding Linux as a cancer demonstrates their predisposition to exclude open source systems from any and all consideration for interoperability and access:

"The only thing we have a problem with is when the government funds open-source work. Government funding should be for work that is available to everybody. Open source is not available to commercial companies. The way the license is written, if you use any open-source software, you have to make the rest of your software open source. If the government wants to put something in the public domain, it should. Linux is not in the public domain."

[<http://www.linuxmax.net/maxnews.php?ArticleID=26>—Accessed January 23, 2002]

Aside from Mr. Ballmer's odd reasoning that an operating system for which the source is open and available to anyone is not in the public domain, his reasoning that open source licenses are not commercially viable makes a statement of predisposition that I have no doubt would be used as legally acceptable parameters, under the PFJ, to thwart public efforts at building an interoperable, free operating system.

I sincerely hope that Microsoft will have to atone for its extensive history of anticompetitive behavior.

However, it is clear to me, and to those of us in the technology industry who have seen Microsoft as a company uninterested in cooperating, that this PFJ would do little to force that atonement and would do much to provide Microsoft a legal platform from which to continue its anticompetitive behavior.

Sincerely,  
Juan Felipe Rinc'n  
Arlington, Virginia

Tunney Act comment  
Folks,

Microsoft must be made to cease its monopolistic behavior with regard to the use of its Software development kits, compilers and Integrated Development environments. In the License Agreement, a purchaser of Microsoft Visual C++ is forced to agree that they will \*only\* use this compiler to build code to run on a "Microsoft Operating System Product." Why? There is absolutely NO technical excuse for this sort of behavior.

Code compiled under this compile can easily run under other operating systems. Microsoft is attempting to use their dominant position in the Compilers marketplace to effectively remove all other Operating Systems from the market. This is wrong. Please make this change.

Thanks,  
Neil

To: Microsoft ATR  
Date: 1/23/02 11:33am  
Subject: Microsoft Settlement

I would like to express my strong opposition to the proposed Microsoft settlement.

I urge you to support the alternative settlement proposed by those states that refused to sign on to the proposed settlement. The proposed settlement will not appreciably curtail the illegal actions through which Microsoft has maintained its monopoly over desktop computing. The single most important item needed is that all API's and file formats, both of Windows and of applications such as Word, be available openly to the world of programmers at the same time and in the same detail as it is available to Microsoft programmers.

This is the only way that competition has a chance to thrive. The proposed settlement falls far short of this goal, allowing Microsoft to pick and choose who will have access to this technical information, to restrict which things will be documented, and to provide documentation only at the last minute (if then), and furthermore has no effective enforcement procedures even for these very limited measures. There are many many other failings of the settlement as well, as is made clear by a comparison to the settlement proposed by the dissenting states.

Sincerely,

#### MTC-00016573

From: Clark Christensen  
To: Microsoft ATR  
Date: 1/23/02 11:34am  
Subject: Microsoft Settlement

I do not support the current settlement to the Microsoft Anti-Trust suit.

The current settlement does not guarantee interoperability or published protocols, nor does it prohibit Microsoft from violating the Anti-Trust tenet that an existing monopoly cannot be leveraged to create another monopoly in an adjacent market. Under the current settlement Microsoft is protected from divulging Intellectual Property. This will protect them from having to reveal protocols and interfaces to services that use their technology. Anyone who wants access will have to license the technology, and effectively allowing Microsoft to determine the type of competition it will have to face. Since Open Source alternatives, which Microsoft fears as its greatest competitor, have no budget for licenses they can essentially eliminate this competition through exclusive/expensive licenses. Furthermore, any ability by Microsoft to require such licenses will preclude any Open Source alternatives since the licensee will not be permitted to divulge any of the Intellectual Property (i.e. the code)—the very anti-thesis of Open Source.

The new MSN browser and passport services shipped with Windows XP (a separate browser from Explorer) illustrates exactly how Microsoft hopes to create a new vertical monopoly by leveraging their current operating system monopoly. With .NET, users will be forced to Microsoft's software or proprietary software that licenses Microsoft's technologies to access any of their services. Vendors may thus be bullied into using Microsoft technologies for fear of losing market share, and desktop users who use any of these tied in services will have little choice but to continue with Windows on the desktop.

These issues must be addressed in order to keep the computing market competitive. The internet thrived because of openness, lets keep it thriving.

Sincerely,  
Clark Christensen

Subject: Microsoft Settlement

Excerpts from: <http://web.siliconvalley.com/content/sv/2001/11/02/opinion/dgillmor/weblog/index.htm>

The next step is a Tunney Act hearing, where the judge is supposed to determine if the settlement is in the public interest.

The last judge who held a Tunney Act hearing on a Microsoft antitrust settlement

was so incensed by what he saw that he, like the judge in the trial, shot off his mouth and got tossed off the case.

Will the states fold, too? Many will, no doubt.

Mere state governments don't have the money to fight a monopolist that generates more than \$1 billion in extra cash every month, just a portion of the profits that even in an economic downturn keep rolling into the coffers.

Some states will probably keep fighting. Despite having won a case that showed Microsoft to be a sneering, brutal lawbreaker—with no intention of reforming—they're now total underdogs.

There needs to be some feedback. To many companies are looking at M\$ as the business strategy of the century. We don't want this. I can't even fathom 1 billion a year, let alone a month.

Don't be a sham. If this was your last case what would you want people to say. Yea, he bent. That is what everyone is saying now. Don't lose your cool.

You will only be tossed from the case. Let them know that Justice is blind. You have your scales and you have the sword. Do what you know is right.

Not right for you and your family, but what is right in the big picture. I think you know what the big picture is.... the future. Let them know they can line lawyers and politicians pockets with money, but not the judge.

In support: Excerpts. <http://www.cptech.org/at/ms/mjl2kollarkotellynov501.html>

Failure to address Ill Gotten Gains

Completely missing from the proposed final order is anything that would make Microsoft pay for its past misdeeds, and this is an omission that must be remedied. Microsoft is hardly a first time offender, and has never shown remorse for its conduct, choosing instead to repeatedly attack the motives and character of officers of the government and members of the judiciary.

Microsoft has profited richly from the maintenance of its monopoly. On September 30, 2001, Microsoft reported cash and short-term investments of \$36.2 billion, up from \$31.6 billion the previous quarter—an accumulation of more than \$1.5 billion per month.

This is astounding. It isn't a matter of if they can pay, because we know they can, it is a matter of penalty.

The penalty should make them stop and think about what they are doing. They are getting rich from it. It has already been shown what they did was wrong. 8 Judges have said so.

Don't let Politics get under the Lady Justices' blind fold. None of that should matter.

It is all in your hands now.

Subject: Microsoft Settlement

To whom it may concern:

The "settlement" is a total surrender on your side. The main reason: you leave untouched the many provisions in the Microsoft-OEM contracts that were from the very beginning the basis for building a monopoly and later to abuse of the same.

Judge Jackson had copies of such contracts in his hands, but utterly failed to understand the role they have played. Not even their status as "trade secret" was questioned; of course, the only secret protected by such status, is the arm-twisting methods that MS uses to force their low-quality products on OEMs and consumers.

Bottom line: due to the contracts, no OEM installs other operating systems besides Windows in the same computer, and very few offer computers \*without\* Windows, because the have to pay for the OEM-licence anyway.

This is just another botched, alibi settlement.

THE CONSUMER STILL HAS NO CHOICE  
My best regards, Aquiles Luna

#### MTC-00016576

From: Matt Heinzen  
To: Microsoft ATR  
Date: 1/23/02 11:34am  
Subject: Microsoft Settlement

I believe that the proposed antitrust settlement with Microsoft is not in the best interests of consumers or the software industry. Reasons why the settlement is bad for consumers

1. Microsoft has been shown to break compatibility of 3rd party products running on MS operating systems (DR-DOS and Lotus 1-2-3). This discourages consumers from buying third party software when MS products are available because the 3rd software will not run as effectively as the MS software even if whether the MS is of lower or equal quality.

2. "Monoculture" software means that vulnerabilities are widely deployed. Internet worms such as "Code Red", "Sircam", "Melissa", and "I Love You" were specifically designed to target flaws in MS applications many people were unaware were even running on their computers (the IIS server program automatically enables on some versions of Windows) or in programs that are capable of running untrusted code without the users consent or knowledge (Visual Basic scripting enabled by default in MS Outlook). The exploits for these inherent vulnerabilities were so widespread largely because of the MS monopoly.

3. Forced upgrades. MS has not introduced features that are really critical to most consumers in its latest home versions of Windows, yet consumers are forced to upgrade Windows to be able to get technical support. This also usually means upgrading their computer hardware because each version of Windows requires more powerful resources than previous versions. Alternative free operating systems such as Linux and BSD support modern software but also can be run "stripped down" on systems five or even ten years old, meaning that it is possible to produce systems that do not require constant hardware upgrades. This model is just not in the best interests of MS, because it would not generate as much revenue.

Reasons why the settlement is bad for the software industry

1. MS has been found to, and will likely continue to, leverage their monopoly against computer manufacturers. Most people buy their computer and install very little software on it after the fact. Very few people install new operating systems. MS has used these facts to work exclusive licensing deals with computer manufacturers that virtually guarantees that any non-Macintosh PC purchased from any big name vendor will come with a version of MS Windows installed, regardless of what the consumer wants. Although installing a different operating system is a viable alternative, this would mean that the consumer has already payed money for a product they will never use. Manufacturers would like to provide alternatives, but MS could stop licensing Windows to these manufacturers. Although this would clearly be illegal given MS is a monopoly, the PC manufacturer would go bankrupt by the time the matter could be resolved legally.

2. Lack of competition causes stagnation. MS has very little reason to improve their products with no viable competitors available for typical consumers. Most of the changes in recent additions of Windows have been visual improvements and application improvements not specifically requiring a new operating system, such as improved multimedia applications. There is little incentive for competitors to create new operating system alternative as long as MS is allowed to continue their monopolistic business practices, meaning that true technological innovation is being stifled.

For these reasons I believe that stronger actions are needed against MS. Alternative operating systems and application software must be allowed to compete on an even level with MS products, and PC manufacturers must be allowed to sell alternative that customers really want.

Date: 1/23/02 11:33am  
Subject: Microsoft Settlement

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system— even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

I would like to take just a moment to comment on the pending Microsoft judgement. Having worked in the computer industry in many different capacities over the last 10 years I have come to understand how strong Microsoft's monopoly on the desktop really is. I must say that the current judgement and penalty being considered is far from adequate.

I have seen several companies with strong and viable products pushed out of their market space by Microsoft's use of their monopolistic position. These include more recent examples such as Netscape and Apple, to older examples such as Wordperfect and Lotus 1-2-3. By using undocumented features in their Windows operating system in their products, Microsoft was able to produce spreadsheet and wordprocessing products, that ran faster and were more readily available than their competitor's. By bundling software with their operating system, and calling it "free" they managed to gain significant market share over other web browsers.

Despite a consent decree in the mid 90s that was aimed at changing their predatory behavior in relation to their OEM contracts and the desktop Microsoft has consistently shown that they are unwilling to change their behavior. I feel that the solution currently being considered is far from a viable tool to ensure compliance with current anti-trust statutes. Leaving the company intact with some "oversight safeguards" is akin to leaving Iraq intact and its leader in power, and trusting that they follow the agreements they made. We know where the situation in Iraq has gone, and judging by the actions of the past, I can determine where the future will go with Microsoft. Let me put it another way, it is being suggested that we give a habitual offender a slap on the wrist and probation. A criminal act is a criminal act regardless of who commits it. We should treat it as such.

Two additional points.

First, I find it highly interesting that Microsoft is almost eager to pursue the judgement being considered. That would hardly allow it to be defined as punishment. Second, I also find it highly interesting that the DOJ's position on the case changed after a change in the leadership of the executive branch. Justice is supposed to be blind, following the dictates of some greater definition of right and wrong, not holding its finger in the wind to figure out which it should go.

Thank you,

 Subject: Microsoft Settlement

I am a US citizen with over 10 years of software engineering experience living in Austin, Texas. I have read the Proposed Final Settlement in the case of US v. Microsoft.

I am very much opposed to it, as it:  
 1) Allows Microsoft to continue harming consumers by retaining the advantages they have illegally gained through anticompetitive business practices  
 2) Does not go far enough to ensure that Microsoft will compete fairly in the future  
 3) Is worded in language such that Microsoft will be able to continue their monopolistic behavior by technically complying with the settlement, but violating its spirit  
 4) Lacks adequate enforcement provisions  
 I urge the court to reject this proposed final settlement.

Sincerely,  
 Sean C. Malloy

From: Andy Lubbers  
 To: Microsoft ATR  
 Date: 1/23/02 11:35am  
 Subject: Microsoft Settlement

The PFJ contains misleading and overly narrow definitions and provisions, such as the following:

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET.

The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are

they, or are they not infringing on Microsoft software patents?

This can scare away potential users.

From: Stephen Peters  
 To: Microsoft ATR  
 Date: 1/23/02 11:35am  
 Subject: Microsoft Settlement

I am writing to express my concerns (under the Tunney Act) on the Proposed Final Judgement (PFJ) in the Microsoft settlement.

I feel that the PFJ does not go far enough, either in punishing Microsoft for its previous anticompetitive behavior or in preventing such behavior in the future. Among the problems:

\* The definition of Microsoft Middleware Products seems to be overly limiting, since it doesn't mention (for example) the very popular Microsoft Office suite or Microsoft's new .NET platform. It seems clear to me that these are platforms that Microsoft is hoping to leverage for new development, and could use these loopholes to prevent competitors from interoperating with these technologies.

\* Although the APIs for some products will be opened, the issue of file formats is unaddressed. This is one of the issues that forms part of the barrier to entry for competitors, as touched on by the court's Findings of Fact (paragraphs 20 and 39). As long as it's difficult to, for example, read a Word document in another word processor, Microsoft will maintain a substantial advantage over its competitors.

\* Although the licensing agreements for OEMs are improved, no mention is made of the licensing agreements for large customers of Microsoft. For example, Microsoft often charges "enterprise" customers licensing fees based on the number of machines that are capable of running their software, rather than on those that actually do.

In short, I feel the PFJ is currently not in the public interest, and needs to be revised before acceptance.

Thank you,  
 Stephen Peters

To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:42am  
Subject: Microsoft Settlement

Any proposed settlement that doesn't compel Microsoft to actually change its business practice is a waste of time and another victory for the overbearing company. A Very Large Fine would get their attention, but actual enforcement and action that prohibits Microsoft from squeezing out competitors is important. Competition based on quality of product is one thing, but based on illegal business practices should not be rewarded with a wrist-slap.

Any settlement involving free software, like the recently rejected proposal, should not be considered as it just gives Microsoft an inexpensive foothold into additional markets.

Thank you.

Subject: Microsoft Settlement  
To Whom it may concern:

I have a Bachelor of Science in Computer Science and have been a software developer for over 10 years. My main objection to the proposed Final Judgement in the United States v. Microsoft is that it does nothing to stop Microsoft from continuing its "Slash and Burn" method of growing its business. Presently, in my opinion Microsoft has three ways to squash, "Slash and Burn", a competitor:

1. Buys the competitor's technology or company and uses it as its own.
2. Buys the competitor's technology and then don't support it in the future. If it's not supported by Microsoft then nobody uses it.
3. Duplicates the technology and offers it free.

A most recent example of this is Microsoft's recent acquisition of SGI's technology. SGI created an OpenGL technology that most Video card manufactures adhere to. Microsoft has their own DirectX technology. The DirectX technology is only supported on Windows operating system. OpenGL technology is supported on almost all Desktop Operating Systems. Since Microsoft has purchased this technology all they have to do is "slash" support for it. If there is no support for it, video card manufacturers don't need to build support for it. If Video card manufacturers don't have support for it then non-Microsoft operating systems will have no hardware 3D support. Thus making Microsoft the only Operating system that PC games can run on. Theoretically, Microsoft can then close the API for DirectX and be the only creator of 3D software games.

In my opinion, the one way to stop this activity is to make ALL of the source code for the kernel of its operating systems open to the public. If the source to the kernel of the operating systems is open, then any company, or person, can create API's to that source. Another way to stop this activity is to separate the core operating system business from the other software business.

Sincerely,  
Terence W. Grantges

From: Mac Michaels  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:36am  
Subject: Microsoft Settlement

I am a software developer. I know from first hand experience that Microsoft makes changes to its operating system just to make it incompatible with the previous version. This requires me to make my own product more complicated and expensive to the customer. This additional cost provides no improvement. Changes must be made since all new systems ship with the latest version of Microsoft's software.

Microsoft fails to fully disclose the Application Programming Interface (API). This hurts software developers since we do not have all the information required to build an efficient interface with Microsoft products. Microsoft further obfuscates this interface by errors in the documentation and errors in their implementation of the API. Microsoft creates undocumented interfaces and file formats only in house Microsoft developers know about.

It might be inappropriate to require new operating systems to support all APIs. There should be some limitation on API changes that provide no real benefit. Requiring Microsoft to make all the source code available to developers is a reasonable solution to this problem. Developers can easily figure out what API documentation and implementation is in error. Undocumented APIs are clearly visible in the source code. This solution will provide a level playing field for all software developers. This will not give anyone a license to change the Microsoft product and deliver an altered product. It does give developers an opportunity to determine exactly what happens when they use a Microsoft API so that they can use it correctly.

From: Russell Valentine  
To: Microsoft ATR  
Date: 1/23/02 11:37am  
Subject: Microsoft Settlement

I believe the proposed settlement for Microsoft has several holes in it that will

allow Microsoft to act just as they are today. One of the most important aspects that I think the settlement is missing is the Microsoft file formats still remains undocumented. Now that a large majority of the United States population is using Microsoft applications for everyday work (which happened because of Microsofts illegal monopolistic practices), Microsofts file formats stop people from changing to other software because they can not read other peoples documents. I think this and many other aspects need to be relooked at.

Russell Valentine

The proposed settlement changes NOTHING. Perhaps even exacerbates the problem by forcing MS into the education market. There will never be a "good" time to reign in Microsoft, but the longer we wait the harder it will be when finally, everyone realizes what is at stake here.

A good start would be to wean the government off of MS products. Then, maybe start with education. Proprietary file formats are used as a means to force upgrades and lock consumers into a single product.

Please—reconsider the settlement.

Washington, DC 20530-0001

I am submitting this comment, as permitted by the Tunney act, regarding the remedies proposed as the outcome of the Microsoft Antitrust trial. As a professional in the software development and computer graphics fields, I must work with non-Microsoft development tools and products every day. The proprietary and ever-changing FILE FORMATS used by Microsoft, however, make even the exchange of simple text files between Microsoft and non-Microsoft programs incredibly cumbersome.

Any proposed Microsoft remedy which does not include the absolute requirement for openly published data file formats falls far short of the required public benefit. On the day-to-day office work level, it is this intentional file format incompatibility which forces purchase of Microsoft products, and further, it is the artificial incompatibility BETWEEN VERSIONS OF THE SAME MICROSOFT PRODUCT which forces

purchase of ever newer Microsoft products, EVEN THOUGH THEY FREQUENTLY ADD NO RELEVANT FUNCTIONALITY OVER THE OLDER PRODUCTS.

Publicly available Microsoft file format specifications would allow third-party developers to produce file conversion tools which completely obviate this unfair Microsoft practice.

Thank you for the opportunity to respond to this judgment.

Subject: Microsoft Settlement

Hello,

I am a professional computer programmer who has been negatively affected in the past by Microsoft's predatory and illegal business practices. I wish to comment on the Proposed Final Judgement (PFJ) regarding the U.S. vs. Microsoft case.

Although the PFJ is filled with problems that will allow Microsoft to avoid most of its intended effects, I wish to point out one of the very worst problems: Microsoft is currently able to offer different prices for Windows to different customers. This allows Microsoft to use a variety of monopoly tactics to reward OEMs and distributors who support the Microsoft monopoly and to retaliate against those who don't (i.e. by raising prices only for those who don't).

One possible solution to this problem is simple and elegant: require Microsoft to sell Windows at a uniform price to any and all interested customers. Microsoft could still offer discounts for volume buyers but would have to offer the exact same price to all customers desiring to buy any given number of copies of Windows. Of course "hidden discounts" such as rebates or other financial incentives (especially discounts on other Microsoft products) would have to be disallowed.

This is only one example of something that is wrong with the PFJ. There are (at least) dozens of other major problems. Because of this, I oppose the current PFJ and I sincerely hope that a better settlement will be proposed. Microsoft deserves no leniency in this case.

Thanks for your time,

Shawn Yarbrough

re: United States v. Microsoft Corp., Civil No. 98-1232

I do not feel that the Stipulation and Revised Proposed Final Judgment, in the current form, is in the public interest.

Microsoft has consistently used and continues to use strong-arm tactics to maintain their monopoly in desktop

operating systems and applications. The Prohibited Conduct section enumerates many detailed restrictions on Microsoft behavior but it appears to leave excessive maneuvering room for the Microsoft.

I fear that the Judgment underestimates the power that Microsoft holds with its monopoly position. The Users of Software and Developers of Software must have Freedoms which are enumerated. We depend too much upon Software Applications to allow one company to control the functionality and deployment of the Operating Systems and Software Applications.

From: James Riordan  
To: Microsoft ATR  
Date: 1/23/02 11:38am  
Subject: Microsoft Settlement  
To Whom It May Concern-

I am writing to comment upon the Microsoft antitrust settlement. I write to you both as an American and as a computer security expert.

In the latter capacity, I am currently employed by IBM Research but have also worked for Counterpane Systems and for The Secure Computing Corporation. The opinions herein are mine, and should not be taken as representing IBM as a whole.

I believe the proposed settlement runs strongly against the interests of the American public. It does so both from a short term economic standpoint and from longer term standpoint of promoting a stable and secure information infrastructure. Microsoft's predatory business practices have consistently stifled innovation and superior technologies in favor of a business plan that abuses the Windows monopoly as to lock consumers and business into interminable upgrade cycle.

In this system, Microsoft has no business interest in creating stable, secure, well-debugged and tested software. The bugs force users and businesses to upgrade; the upgrades, in addition to producing revenue, help maintain and expand the monopoly.

Having been found guilty, Microsoft's practices have actually gotten worse. This is evidenced by the release of Windows XP, Passport, and the .NET architecture. Should these technologies succeed, Microsoft's strangling grip will be extended to the entirety of the information based consumer economy (all of e-commerce, music, movies, literature, computer games, et cetera).

Allowing such a monopoly-abusive company effective control over such a large domain is extremely dangerous and, quite simply, unconscionable.

The most effective solution to the current problem would include:

1. Disallowing operating system (Windows) sales agreements to hardware vendors that either preclude the addition of an alternate operating system or force Windows to be installed on all machines.

2. Force the strong separation between fundamentally different layers: operating systems (Windows), middle-ware (.NET), services (Passport, msnbc and hotmail) and applications.

3. Disallow the forced bundling of components and services from different these layers.

If anything in this message has been unclear, I invite you to contact me via either of the included addresses.

**MTC-00016604**

From: Edward Hagen  
To: Microsoft ATR  
Date: 1/23/02 11:39am  
Subject: Microsoft Settlement  
To whom it may concern  
(Please forward these comments to the court as well)

It is obvious to everyone that Microsoft illegally used its monopoly power to crush a competitor (Netscape), that the proposed settlement does nothing to punish this and the other crimes that Microsoft was found to have committed, that Microsoft will continue to use its monopoly power to crush or disadvantage competitors, and that the proposed settlement does little to prevent such future abuses. The settlement also contains clauses that appear to specifically preserve Microsoft's ability to discriminate against the open source software community.

It is also obvious that Microsoft's monopoly power is extraordinarily intimidating to other companies (for example, Microsoft could destroy Apple by

simply refusing to release their Office software for the Mac), and that this intimidation inhibits the competition that has driven the development of the software industry since its inception.

The lack of competition in the software industry will soon have a deleterious impact on consumers, if it hasn't already (why must EVERY business and institution purchase MS Word for \$\$\$? Because there isn't any competitive product due to Microsoft's illegal, monopolistic behavior).

The proposed settlement should be rejected by the court.

Sincerely,  
Dr. Edward Hagen (US citizen)

Please don't let Microsoft buy their way out of this. You must think of the long term effects of what we are doing now. Microsoft is not a monopoly because they have the best product, they are a monopoly because legislators don't yet understand the field of computer science.

Thank You  
Bob Davis

To whom it may concern,  
As a 30 year old Electrical Engineer, I have been a part of the "computer revolution" all of my life. I would like to comment on the current state of the Microsoft trial and my experiences during my career.

Microsoft has been a spectacular business and an amazing example of the american dream, but has stifled innovation and creativity in the computer industry for as long as I remember. Every day I think that Microsoft has pushed the industry to its limits, and every day I am surprised and disappointed at what Microsoft gets away with.

I have seen Mirosoft develop from a computer OS monopoly, into a power that is greater than most governments (maybe our own). I do not know of everything that Microsoft has influenced, but I do know that they are spreading their sphere of influence dramatically to include TV stations, news media, Radio stations, control of computer applications (every successful game/application seems to shortly get a Microsoft clone or be incorporated into Windows), control of the Internet, console game systems, set top boxes, computer peripherals, PDA, schools, ... (and the list continues).

I was elated when Microsoft was deemed a monopoly. I have worked for companies and been told horror stories about how Microsoft has used thier product to make other companies "bend to thier will." This influence has sometimes been indirect (but intentional) and sometimes shockingly direct. I also know about the frustration of

being passionate about the computer industry and revolution but having no choice as a consumer except to choose an inferior product because of a powerhouse of a monopoly.

I was very disappointed with the proposed final judgement against Microsoft. I can see no hope that the innovation and creativity will be allowed to flourish if the proposed judgement is accepted.

Please reconsider the final judgement to strengthen some of the known issues so that Microsoft can become a beneficial competitor in a healthy market instead of the sole occupant in that market. I consider such matters when I vote (and I vote regularly). I will consider a light sentence for Microsoft a sign of a weakening government and a need to strengthen the oversight of corporations for the good of the American public.

Concerned,  
Steven K. Watkins

Date: 1/23/02 11:39am  
Subject: Microsoft Settlement

Hello,

My name is Marshall Lewis and I am an avid computer tech and end-user. I think the Settlement is a very bad idea. Microsoft has their way with the market, the product, (in many cases) the competitors product, and very much so the end-users whole grasp on the way computing should be. How about if Ford bought out every other car manufacturer, made it illegal to drive one without paying out a fortune per year in extras. Then when Toyota moves in to try

and relieve some of the end-users who already know what a crock the Ford operation is and how another manufacturer may very well be a cheaper and most likely more desirable product. But when Toyota does this they are shut down by the governments lack of authority towards a monopoly. They keep showing how they have exposed Microsoft as a monopoly but what has been changed that has actually made an impact on their market share.

Anyway back to work and I hope my opinion counts.

Marshall Lewis

Dear DoJ,

I am adamantly opposed to the proposed settlement with Microsoft. I believe that the remedy found by the trial judge was, in fact, appropriate. The conduct remedies will not punish Microsoft, nor will they adequately stop the pattern of illegal predatory behaviour proven at trial. The previous history of antitrust litigation with Microsoft shows that without a structural change, Microsoft will find ways to evade conduct restrictions. The limits and wording in the settlement are not narrow enough to begin to control this corporation.

thank you

From: Todd Kusterer  
To: Microsoft ATR  
Date: 1/23/02 11:41am  
Subject: Microsoft Settlement

The proposed Settlement is Bad.

\* The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

\* The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

\* The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

\* The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

\* The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

\* The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

\* Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

\* Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

\* Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

\* The PFJ as currently written appears to lack an effective enforcement mechanism.

The last two taken together leads me to believe that there will be no change to Microsofts illegal use of its monopoly.

Subject: Microsoft Settlement

To whom it may concern:

I am writing to oppose the currently proposed settlement of United States v. Microsoft. As a 10 year veteran of application development for the Intel platform, I have personal experience with the anticompetitive practices brought to light in the case, both blatant and subtle. After a careful reading of the proposed settlement, it is my conclusion that it does not meet the goal of preventing further anticompetitive practices by Microsoft.

I am in substantive agreement with the points raised by Dan Kegel (<http://www.kegel.com/remedy/letter.html>) and therefore will not repeat them here.

On a personal note, my company, despite not competing with any current or proposed Microsoft product, still faces integration and interoperability issues—constantly—due to the current state of affairs, namely the exclusive binding of MS applications to and with the operating system. A simple example of this is that anyone whose office uses Microsoft Proxy to control access to the Internet cannot use our product, as the authentication method Microsoft has chosen is undocumented, and is changed with each new version to prevent Netscape and others such as ourselves from reverse-engineering it. Which in any sane world would cause MS Proxy to fail as a product. That it does not is due to it being bundled with the operating system, and working successfully with all Microsoft net-based applications. This situation is a clear case of anti-competitive behavior which will not be resolved by the current settlement proposal (as it excludes “security” API disclosures, and does nothing to prevent giving away integrated applications).

In short, while the proposed settlement is a step in the right direction, it will not prevent future monopolistic behavior, merely make it less visible and somewhat less egregious.

To Whom it May Concern,

I am currently employed as a Systems Administrator. I have been working with computer systems for almost fifteen years. I would like to comment on the proposed settlement

The proposed settlement would have almost no effect upon the business practices of Microsoft. If adopted in its current form then the result will be negligible change in Microsoft's behavior, and yet another protracted court case in the not too distant future.

Any effective settlement must concentrate on opening up the markets that Microsoft has effectively closed by its use of proprietary interfaces, file formats and protocols.

I hereby respectfully submit these comments for your consideration.

From: Richard Bretschneider  
To: Microsoft ATR  
Date: 1/23/02 11:41am  
Subject: Microsoft Settlement

I'll try to be brief.

I've used every product listed in the DOJ case against Microsoft. I feel fairly expert in

the field, and was an active audience in the browser wars. I'm convinced that although aggressive, Microsoft's dominance was due to providing superior products, on better schedules, that met more customers needs.

It seems tragic that political forces, driven by industries in their constituency, would manipulate the system to fight a competitor when they failed to do so by producing better products.

I believe that the case so far has harmed Microsoft and the industry in ways we won't know for years to come. I point towards Europe's growing eagerness to attack American companies as evidence that our government is not working in our best interests here. They sense that our government will not only refrain from protecting its business assets, but will in fact paradoxically and masochistically set its own citizenry up for the fall.

I don't know what the settlement should be. The one proposed sounded fine to me. Amending it such that schools would have equal access to Apple software would be interesting, but from my experience with helping out at local schools most of them consider Apple products unmerited luxury items. Please consider that Microsoft has already been damaged from the proceedings so far. Recognize that superior products win out over inferior products and inferior products should not be protected from that. Be wise.

From: Skip Egdorf  
To: Microsoft ATR  
Date: 1/23/02 11:42am  
Subject: Microsoft Settlement

I have many objections to the proposed Microsoft/DOJ antitrust settlement. Foremost among these is the issue of allowing open-source development efforts access to Microsoft Application Programming Interfaces (APIs). The proposal only allows access to “business” parties where Microsoft gets to determine the “business” status. Microsoft has already stated that it considers open source systems such as the Linux operating system to not be valid “business” entities.

Open source development efforts MUST be acknowledged in the settlement as a valid recipient of Microsoft information.

If Microsoft is allowed to remain intact as a monopoly, all of its programming interfaces, file formats, and network protocols MUST be considered to be freely available published standards. I am not a lawyer, but I believe that the guiding principle would be the notion of a critical facility controlled by a monopoly as described in the early 20th century supreme court decision where a single railroad controlled all bridge traffic over the Mississippi river and that the monopoly must make such a critical resource available to all on an equal basis.

The critical facility in this case is the published interface specifications to Microsoft's APIs, file formats, and network protocols.

Thank you for your consideration of these comments.

Date: 1/23/02 12:45pm  
Subject: Microsoft Settlement

To Whom It May Concern,

This email is to note my objection to the government-proposed settlement. I feel it does not adequately restore competition to the PC world. In fact, I think it legitimizes some very anticompetitive practices, such as their constantly-changing closed office formats that prevent any non-Microsoft office packages from reading Word, Excel, and Powerpoint files.

I feel that the settlement does nothing to actually punish Microsoft for their past abuses. Microsoft has been found guilty of violating a law in specific instances and the punishment is being told “never do that again”. Allowing a criminal to benefit from violations of the law is an insult to any notion of “justice” and a slap in the face to the American public.

I feel this settlement is woefully inadequate. Any fair settlement will punish them for past abuses and help level the playing field for competition to begin. I do not feel this settlement accomplishes either of these goals.

I would like to complain about the proposed settlement in the Microsoft Antitrust case. Although the settlement has several good points, I feel that it does not go far enough. Microsoft have been proven to use unfair marketing tactics, and of leveraging their monopoly, and I don't believe this solution will prevent this happening again, this time into the digital media and streaming arena.

I am very anxious that problems such as the incompatibility with their Office file formats which have for a long time kept other software out of that market, due to the necessity of interoperability with other companies. It has been suggested by many people knowledgeable in the field that all that is necessary for competing programs to have a fair chance, would be the requirement that Microsoft release the details of their file formats, enough to make it easy to produce a program that can read the files with equal reliability to their own products. I strongly support this view, and would urge that you consider it before making a decision

Thank you

Matthew Johnson. <mjj29@cam.ac.uk>

From: Jeremy Van Veelen  
To: Microsoft ATR  
Date: 1/23/02 11:41am  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses.

This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a “punishment” instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Subject: Microsoft Settlement

There are a number of problems others have discovered and brought to my attention about the Proposed Final Judgement in the Microsoft Antitrust suit.

I expect you, as officials representing the best interest of the citizens of the United States, to reconsider said judgement in light of these points:

a.. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

a.. The PFJ supposedly makes Microsoft publish its secret APIs, but it defines “API” so narrowly that many important APIs are not covered.

b.. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines “Microsoft Middleware” so narrowly that the next version of Windows might not be covered at all.

c.. The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

d.. The PFJ supposedly applies to “Windows”, but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being “Windows Powered”.

e.. The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

f.. The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

g.. The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

h.. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

i.. The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

b.. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

a.. Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

b.. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

c.. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system— even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

From: Kirk  
To: Microsoft ATR  
Date: 1/23/02 11:43am  
Subject: Microsoft Settlement

Greetings;

I've been a long time Microsoft developer as well as Java developer. I just don't understand how the settlement in the Microsoft case could have come about in the way that it did to become such an ineffective judgement. It is obvious that Microsoft wields monopoly power over so many areas, and though I do personally benefit from some of their practises, I really think as a whole the population is not. I wholeheartedly do NOT agree with the current settlement in the case against Microsoft. It is too broad, provides no real penalties for their past and present actions and in the long run will be quite ineffective. So please, i ask you to get a different settlement, one that makes microsoft answer for this practises that are harmful to it's own industry and in the long run to the population at large. I don't think we want our tax dollars to have been spent for so many years proving Microsoft's predatory practises, just to have Microsoft continue on with these same practises that they were found of guilty of. Otherwise we have wasted the DOJ's time and the taxpayer's (people like me) money.

Thanks

From: Dyas, Greg  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:43am  
Subject: Microsoft Settlement

Dear Sirs,

The purpose of this letter is to express my opinion during the comment period mandated under the Tunney Act, which requires the court to consider public opinion before ruling on any settlement.

The settlement proposed is entirely unacceptable and represents a giveaway by the government when it stood in an advantageous position in the case, but I'd like to focus specifically on the fact that Microsoft would be permitted to keep its Windows and Windows API source code private. To allow

Microsoft to keep hidden the code behind the instrument it's used to bludgeon Netscape Navigator is akin to letting a murderer get off with a warning, then choosing to give him his gun back because, after all, it is his gun. The code used at the operating system level of a computer determines how any other program is permitted to interact with it. Microsoft has been proven before, not only with Netscape but previously with Caldera's DR-DOS, to have no ethical problems using this OS-level control to "break" other programs. To prevent this from occurring again, Microsoft must somehow be forced to open its code, or failing that, to separate its Windows business from its other software & hardware concerns.

Opening up the code would also allow increased competition with the Windows platform and reduce Microsoft's abused monopoly position. Such projects as the volunteer-driven WINE software project, that seeks to allow Windows programs to run on machines running the Linux operating system, would be able to thrive and would provide a non-Windows arena for Windows programs to run in.

Lastly, there's the simple fact of security. Many sensitive projects, run by individuals, companies, and the government itself, are driven by Windows operating systems. Simply by seeing the code, computer programmers for businesses and the government would be able to close for themselves the numerous holes constantly discovered in the Windows OS. Let's diminish their ability to use the weapon they've used again & again to inhibit competition. Let's introduce a true level playing field to the Operating System market. Let's look at the code. Any settlement that doesn't allow the people to see what's been used against them is incomplete.

Thank you for your attention to this comment.

Yours,

Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Dear Ms Hesse,

I am writing to you to exercise my right as an American citizen to comment on the proposed final judgment in the United States vs. Microsoft during this period of public comment, and I would like to thank you personally for the opportunity to do so. My concern with the proposed final judgment is the way it fails to present a remedy to the strong-arm tactics Microsoft has used in the past against OEM's who would sell computers that include operating systems other than Microsoft's. While the proposed final judgment does make an attempt at a

remedy (note: I am not a lawyer, so I may be using the term "remedy" in a vernacular sense that is its a legal sense) it seems to me that some blaring loopholes remain.

Section III.A.2. Seems to allow Microsoft to retaliate against an OEM who sells a computer with only a non-Microsoft operating system.

Section III.B.3. Seems to allow Microsoft to provide a discount to an OEM who "plays along" with Microsoft's wishes, which amounts to punishing those who do not. My other concern is that the proposed final judgment fails to disallow Microsoft's licensing agreements that prohibit interoperability with non Microsoft products. Currently the Microsoft Visual C++ end user license agreement prevents me from using their supposedly ANSI standards compliant development system and compiling my program for a non Microsoft Operating System.(!) Microsoft also currently prohibits users from using non Microsoft tools to develop for their .NET platform. Many web sites use the PERL and Python and Java (and others) languages to script the user's experience, but Microsoft wants to put an end to this practice as soon as they start to deploy their .NET web servers. I believe the Proposed Final Judgment fails to address this clearly anti-competitive practice. This is something like GM requiring that you buy their tools to work on their cars and if you use some other vendor's tools your car will be confiscated.

Finally, I believe Microsoft should be compelled to publish the file formats used by Microsoft Office. Microsoft Office is in general a great suite of programs that can compete successfully with any other offerings and those who use it do not need to be shackled to it by its proprietary formats. (What I really believe is that the United States Government should refuse to buy any office applications that do not have an open and published file format, but that is beyond the scope of the proposed final judgment.)

In general, the proposed final judgment is pretty good, and I hope the comments gathered during this public period will be used to craft a final judgment that levels the playing field for everyone and genuinely prevents Microsoft from unfairly leveraging their monopoly any further.

thank you again for this opportunity to participate in this public comment period.

Sincerely,

Subject: Microsoft Settlement

Dear Sirs:

I believe this settlement is a bad idea. Think about the already-frightening ramifications: I am writing this on a

computer running MS Windows, emailing you using Internet Explorer, using MSN Hotmail as my conduit. In fact, I'm not even sure that this will arrive, considering how Microsoft has bullied things in the past. I am a research chemist, and I shudder to think that a corporate behemoth could bring to a halt much of the research in the world if they deemed it would be better for their business.

Sincerely,  
Dr. Buford Lemon

The proposed Microsoft settlement is a bad idea, it does not do enough. More must be done to keep Microsoft from using the obfuscation of software to introduce incompatibilities into competing products. They have a position in the software market which allows them to crush any competition that they wish. Microsoft's practices discourage innovation and often take the fun out of being a computer professional.

Subject: Microsoft Settlement

Microsoft steals business opportunities from (ANY sized) potential competitor by brute force. Flooding the market with a usually inferior product for free.

Thus making most people if they know better of not just use the free replacement product that is right at hand.

Examples are: Windows ME has built in Picture viewers and software for digital camera functionality. (a nice addition to the OS but a stolen opportunity from a software company) Microsoft Media player, a stolen opportunity from real player or many other Software Companies. Netmeeting—no place in a real OS IE a well documented case of MS stealing business from another company with monopoly power.

These are just a small collection of examples the full list is well documented from previous cases against MS. The real tragedy is that MS spends all of the resources to make these (non-inovative and usually inferior) products that are made possible by and strengthen their monopoly instead of making a sound secure OS. If this was a tobacco company they would be putting ammonia in the kernel.

Microsoft is hurting the world economy more than you can imagine, holding us all back, please stop them.

Chris Marckel

The settlement is a very bad idea. Please don't let big business (Microsoft) buy our government. It is bad enough that they have

put many competing businesses out of business. The scary thing about Microsoft is that if we don't have the courage to level the playing field right now, it will be too expensive to level the playing field later.

From: Friedrich, Robin K  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:45am  
Subject: Microsoft Settlement

The settlement represents no solution to the long standing problem of anti-competitive policies and actions taken by Microsoft over the years. Microsoft have not added much at all to the general technology base of the industry. They have only accomplished the reduction in choices I and my business have. The settlement is a rotten idea as it does little to keep Microsoft from continuing to benefit from their monopoly.

Robin Friedrich

From: Chris Hendrickson  
To: Microsoft ATR  
Date: 1/23/02 11:43am  
Subject: Microsoft Settlement

I am writing to discuss my displeasure in the current proposed final settlement is a case of "too little too late".

It is my opinion that the current proposed settlement does little to truly address the two major problems with Microsoft's current monopoly, or rather how they are capable to maintain that monopoly, despite the public perception of low quality.

Those two major issues are the Windows API (Application Programming Interfaces), and the Microsoft Office Document formats. Several years ago, A company by the name of IBM created the "IBM PC", this, just like all other computers of the era was a proprietary architecture unique to IBM. It is

because of Compaq's reverse engineering of the IBM BIOS and the subsequent opening of the architecture that computers are the way they are today. I can get a Motherboard from one of many companies (Gigabyte, Asus, Epox, etc.), CPU from one of another (Intel or AMID), Disk Drives from yet another (Seagate, Maxtor, Western Digital, etc.) Memory from others, Video Sound and other expansion cards from a plethora of other providers, put it all together and get a working machine. In fact, from the hardware standpoint, the only thing that is interdependent is the CPU (since AMD and Intel use different Processor interfaces). It does not matter whether I use a Gigabyte or Asus Motherboard, as long as the board supports the processor, and supports the standard interfaces such as AGP (Video), DIMM (RAM), IDE (Hard Disk and CD-ROM Drives), PCI (Misc. expansion cards). These are open standards that are fully documented and that any company can create a product that can fully interface with them. The specifications for these interfaces are often not controlled by one company, but often, by groups of companies, and the specifications are open and available for access and comment. It is this openness and standards that make the PC hardware what it is today.

Software is a different story. The "standard" is the Microsoft Windows Operating System, the Application interfaces are not open for all to see, many are closed and only available internally in Microsoft. The majority of users use Windows because they have no choice, because Windows is the only system that runs the applications they want, yet since Windows is the most commonly used Operating System, most companies will develop exclusively for it. This is the "Application barrier to entry" that was mentioned in Judge Jackson's finding of fact. The problem is the same for the Microsoft Office suite, businesses will use distribute documents in the MS Office format because it's what almost everyone uses, and almost everyone uses that format because almost everyone uses MS Office.

The Resolution to the problem mentioned above is simple. Opening the IBM PC architecture went a long way in encouraging competition in hardware (not only in manufacturers of individual components but also on the level of System integration such as Gateway, Dell, Compaq, etc.). The resulting competition in turn also reduced costs and prices (costs because the providers of the fabrication and raw materials were better able to compete, and price because of the competition between the manufacturers). Likewise, the opening of the Microsoft Windows API's (all of them, including but not limited to Microsoft's JAVA, DirectX, "Win32" and "Win16" WinG, and any other such interfaces that are available to applications, either third party or Microsoft's that are available on any standard Windows computer), and of the Microsoft Office formats, would encourage and stimulate competition in the Operating System and Office Suite arenas. First, there is currently a project called "WINE" (<http://www.winehq.org/>—an application wrapper to run Windows applications on UNIX-like Operating Systems, most notably Linux) that

is synonymous with Compaq's effort to reverse engineer the IBM BIOS, however, this project is far from complete, and still continues to have major problems in developing a system that will run anything more complicated than solitaire without problems. The opening of the Windows API will go a long way in not only improving the compatibility of projects such as wine, but it would allow them to run Windows applications almost identically as windows would natively. This would allow Operating Systems such as Linux and BSD (and the ill-fated BeOS and OS/2) to incorporate those API's into the System itself. This would have the effect of almost overnight, allowing many systems to run Windows applications as well as Windows itself does (if not better). This would allow for much greater competition in the Operating System market, such as users today do not have to worry about getting the video card that works with Epox, or Gigabyte motherboards, but rather only have to be sure that it uses the standard AGP interface. In the same way, a user would not have to worry about whether an application would work on Windows, or Linux, or perhaps even MacOS, but would only need to be sure that it uses the standard Universal Application Interface.

The same reasoning applies to the Microsoft Office, if the Office formats were made open, then any application could integrate those formats into its own file handling routines and be able to read and write Microsoft Word or Excel documents as well as Word or Excel itself. When that happens, just as with Windows, users will no longer have to get Microsoft Office to communicate with the rest of the business community, but rather only need to find an Office Suite that meets their needs and is capable of dealing with the standard Universal Document Formats.

A one time opening however would not be enough to ensure further competition, Microsoft could easily circumvent the API's in the next version of Office and Windows, by making older API's continue to work, but with the stipulation that if a developer wants to use the new features of the latest versions of Windows and/or Office, then that developer would have to access the new closed proprietary API's (this is commonly referred to as Microsoft's embrace and extend strategy, by embracing a standard, then adding Microsoft Proprietary extensions to it so that Microsoft's implementation will work partially with other implementations, but only fully be able to work with other Microsoft implementations.) Therefore, it would be my suggestion that a standards committee be appointed to oversee the opening of the Windows API, and Office Document format, and then continue to oversee the further development of the new standards. Such a body, while could contain Microsoft representation, should also include other companies with an interest in those protocols. Companies such as Apple Computer, RedHat, IBM, Sun Microsystems, and other companies that would have an interest in a Universal Application Interface would have equal vote in the committee, similarly, companies such as Sun Microsystems (StarOffice), Corel, IBM (Lotus), and other companies that would

have an interest in a common Document format, would have positions on the Universal Document Format committee. Additionally, it is my opinion that if such a remedy were to be put in place, that Microsoft should then be required, for a period of perhaps five to fifteen or more years, to adhere to these standards and not be allowed to incorporate proprietary extensions. This period would allow competing Operating Systems to adhere to the standards, and allow for the market to adjust itself accordingly.

It is my opinion, that any remedy short of the forced opening of the Application and Document interfaces and formats will not be adequate to fully address the lack of competition in the Operating system and Office suite markets. While this same remedy might also be applied to other areas of Microsoft's monopoly as well, such as their Internet Explorer browser, the primary area of concern for is currently the Windows Application Interface, and the Office Document Formats.

From: Jim Rucker  
To: Microsoft ATR  
Date: 1/23/02 11:44am  
Subject: Microsoft Settlement

I think that the proposed settlement with Microsoft is a terrible idea. It will not only NOT curb their anti-competitive practices, but will actually further them. For example, the proposed solution of Microsoft donating computers and software to schools will eliminate one of the last places in America where Apple still has some marketshare. How will Apple compete with a company that is giving away what they are trying to sell?! Had Microsoft done this outside of this settlement I would consider it to be an act of unfair business practice worthy of investigation, but to make it a part of an anti-trust settlement is ludicrous!

As a software developer I know that if I have an idea for an incredible application that will change the world I won't make a penny on it. The reason why is that if I develop the product for Windows and Microsoft sees what a great idea it is they will make their own version. Then they will integrate it into the operating system and give it away for free. Their teams of lawyers will prevent me from receiving any settlement from them and Microsoft in the past has all but ignored judicial decisions, amazingly without recourse. Their marketing department will make it appear as though they invented the idea and that my product is a blatant rip-off. Knowing this has caused me to cancel several projects that I have started since without a financial reward I would not be able to entice any investors to fund the creation of this software. There is no doubt in my mind that Microsoft has

shown little innovation in their entire company history, but has instead acted in a predatory and destructive manner. This antitrust lawsuit is the chance to finally slow Microsoft's anti-competitive behavior but unfortunately I read day after day of Microsofts undermining the whole process through proposed settlement that cause more harm than good being given the nod by people that either dont understand the issue or have been unduely influenced by Microsoft (such as the lawyers who have received floods of mail and email that has its origin from Microsoft).

I hope this email is used to help influence those involved in the Microsoft antitrust suit into imposing more effective legislation.

Sincerely  
James D Rucker

Subject: Microsoft Settlement

Good Day,

Here are my main complaints about the proposed final judgement. I will keep it brief. IT prohibits certain behaviors by Microsoft towards OEMs, but allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products. I have worked for these smaller OEMs in the past. They are no longer in business because of practices like this.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the settlement is encouraging Microsoft to extend its monopoly, and to leverage it into new areas. This settlement is of no use to those it is supposed to protect, the people of the United States. I support measures defined in the state alternative settlement, but it also needs further review.

Thank you for your time,

Subject: Microsoft Settlement  
I am deeply concerned with the proposed settlement in the Microsoft Antitrust case. I was very enthused to discover the Proposed Final Judgment requires Microsoft to finally open its APIs to Windows but after further investigation I discovered that the PFJ does not in fact require Microsoft to open the Windows APIs. It merely requires them to open the interfaces between Microsoft Middleware and Microsoft Windows. Opening the APIs should be opening the door all the way open and not just letting someone get their foot through the door only to find that's as far as they can go. The wording in the PFJ does not solve the problem. It helps but it's more of a dong and a dance than a real solution.

Thank you for hearing my voice.

From: Jaron Abbott  
To: Microsoft ATR  
Date: 1/23/02 11:44am  
Subject: Microsoft Settlement  
To Whom It May Concern:  
I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not provide adequate reparations to the hundreds of companies injured by Microsoft's anti-competitive practices, nor does it limit its ability to commit similar actions in the future. Microsoft is still allowed to benefit from all their illegal acts, so long as they don't commit those acts again. This is not justice for their victims or the American people as a whole.

Microsoft should become a government-regulated monopoly, at least until its market share drops below an acceptable level (e.g. the level of one of its competitors). This is the only way they will curtail their practices. Even when found guilty, they did not change

their behavior. Microsoft's practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. The United States is a successful country because a free market has encouraged firms to compete by producing high-quality, low-cost goods. This system needs to be protected from monopolists who gain sufficient power to destroy the competitive nature of the market in which they participate. One possible solution would be forcing them to release source code, protocols, or something similar, so that other companies could compete. The current settlement shows that the government no longer has the power to enforce the laws that control our capitalistic country.

Sincerely,  
Jaron Abbott

From: Dave Grogan  
To: Microsoft ATR  
Date: 1/23/02 11:43am  
Subject: Microsoft Settlement

This is not enough to punish Microsoft. The last few months the internet has been overwhelmed by the code red and nimda worms, which are directly related to sloppy code. We don't even want to talk about the outlook "features." No one would use MS's products because there are much better alternatives out there, except that they have no choice.

My opinion on a sufficient remedy:

Break them up, so that each piece produces the same as the other pieces. Each pice would produce applications, operating systems, web browsers, etc. This will cause some healthy competition.

OR

Make them release all of their code under the GNU General Public License. This will at least let the entire programming population help secure their products.

Microsoft's current state is unacceptable and needs major, major modification. This settlement is not enough.

David Grogan

From: Hodgers, James  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:45am  
Subject: The proposed Microsoft settlement

The proposed settlement is definitely poor and unworkable. The restraints on Microsoft (MS) are meaningless, especially when you consider the lack of conformance by MS in preceding actions.

They have proved again and again that they consider themselves to be above the law. The flaws in the safeguards proposed in the settlement give MS ample room to negate any sanction in the settlement. Also I believe this settlement does nothing to redress the losses to the community suffered as a result of MS's blatant use of their monopoly to gouge the consumer. In the period after the judgement they have continued to act in an illegal fashion to move their monopoly into other areas, using the monopoly in operating systems to force these new thrusts into the monopoly.

From: Patrum, Frank  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 11:43am  
Subject: Microsoft Settlement  
To Whom It May Concern,

I am writing this letter to protest the proposed settlement in the Microsoft antitrust case. This settlement proposal does not address the previous actions Microsoft has taken, but rather, tries to prevent them from committing these same illegal acts in the future. Microsoft has held little regard for the law in the past, and it is my belief that they will continue this attitude in the future. The settlement needs to be harsher towards Microsoft and actually punish them for their actions. The settlement also needs to set forth strict guidelines on Microsoft's future business practices, to allow their competitors fair and legal opportunities to produce their own products without fear of repercussions from Microsoft.

I use several operating systems from Microsoft as well as Linux, and Solaris so I do not feel that Microsoft is an evil empire. I do believe, however, that their business practices are corrupt and that the Department of Justice (DOJ) needs to stand fast against the power of the almighty dollar and deal with Microsoft using a firm hand and the full force of the law. This settlement is an unacceptable breach of trust by the DOJ with the citizens of the United States and needs to be amended to hold more weight against Microsoft, else there will be more suits like this in the future. Law suits that will, in the long run, waste government time and tax-payer money.

I sincerely appreciate your time in reading this letter, and hope you take it as some confirmation that citizens of the United States do not believe that Microsoft should be spared harsh punishment for their breach of the law. Thank you.

To: microsoft.atr(a)usdoj.gov  
Date: 1/23/02 11:45am  
Subject: Microsoft Settlement

I am a software developer, have been a network administrator, and have been PC enthusiast since childhood. I will keep my comments on this situation short and to the point. I'm not going to try and list all of Microsoft's transgressions—they have already been found guilty of illegally using monopoly power. What I would like to impress upon you is the effect of their actions on the average computer user. How many times has your computer crashed without warning? How many times have you lost work because of a crash, costing you valuable time and effort? How many times has your computer done things without your knowledge or asking you? Have you ever wanted to just throw your computer out of the window because it's so difficult to work with?

Everyone you and I know would answer yes to all of those questions. I bet everyone at the time was using the Windows operating system of some version or other. My point is, everyone (i.e. consumers) who have had these experiences and wished they could use something else, have not easily been able to, and considering this is America, that's ridiculous. I bought a new laptop a few months ago and could not buy one without Windows already installed (meaning I \*had to pay\* for something I did not want). Where is the choice in that? Why should I have to buy that awful operating system when all I wanted was the computer? I can install my own operating system—I don't need or want theirs. Not only that, I got a bum deal because I didn't even get the disks to reinstall it should it break, which it will, based on all my previous Microsoft Windows experience.

It's not fair on the consumer, and the proposed settlement will only propagate that power. It's quite obvious that Microsoft are using this "settlement" to break into a portion of the market they don't actually dominate. Please do not let Microsoft do this. Punish them properly, and then stop the continuation of use of the monopoly leverage. Do not let them force computer manufacturer's to sell their product. Do not let them cripple software to only work properly with their own products without clearly informing the buyer/user.

Do not let them force the user's of their products register their names, addresses, e-mail addresses and computer hardware with them just to "use" their operating system. Please rectify this intolerable situation so that "average" computer users can make choices without fear of purposeful non-interoperability. If consumers cannot be monetarily compensated, then please compensate them with actually stopping the illegal use of monopoly power, and opening up the barriers to entry so that other companies may compete with them on an even playing field.

Thanks,  
Veesa Norman,  
Washington DC.

Microsoft has been found a monopoly. The DOJ settlement with Microsoft does not go nearly far enough to contain the anti-competitive practices of Microsoft. Microsoft has continued to use its operating system monopoly on the desktop to unfairly compete with other software application and operating system companies by bundling applications. This has resulted in harm to the consumer by reducing competition and choice.

Thank you,  
Mark Holbrook

I am a software developer. I am very concerned that the judgment against Microsoft is not in anyway strict enough. I do not believe it has sufficient power to lower the entry barriers to competing products that Microsoft has created by abusing it's monopoly. Specifically I believe it is very necessary to have 100% disclosure of the windows API. The definition currently being used for API is limited to the API as it relates to middleware products. If it is going to be possible for us to make software the competes reasonably with the software that Microsoft puts in its operating system as middleware it is VERY necessary to have full knowledge of the entire win32 API. ( for instance the installer API).

Failure on this point will make the Judgment against Microsoft almost completely ineffective.

From: H. William Connors II  
To: Microsoft ATR  
Date: 1/23/02 12:30pm  
Subject: Microsoft Settlement

I just wanted to express my opinion on the proposed Microsoft settlement. I do not believe that the proposed settlement will effectively curtail the Microsoft monopoly. Unlike the AT&T monopoly and breakup I don't believe the proposed Microsoft solution doesn't have sufficient provisions for eliminating or even preventing future monopolistic practices.

I feel a better solution would more closely mimic the AT&T solution. I would suggest that breaking the company up and then applying some additional constraints to those individual companies is the right solution. I would therefore break the company into the following 2 or 3 pieces. I would split the company into an Operating Systems company and an Applications company. If the decision is made that Internet Explorer is an integral part of the Operating System, I would create a third company which is comprised of the Microsoft Services such as

MSN and its E-commerce components and technologies such as passport.

Constraints for the Operating Systems company:

I would required that all technical documentation (i.e. API specifications, etc) be licensed in a manner similar to that specified at <http://www.kegel.com/remedy/remedy1.html> "Microsoft shall disclose and license to ISVs, IHVs, IAPs, ICPs, OEMs and Third-Party Licensees, on an ongoing, basis and in a Timely Manner, in whatever media Microsoft customarily disseminates such information to its own personnel, all APIs, Technical Information and Communications Interfaces that Microsoft employs to enable:..." where: "The aforementioned license shall grant a royalty-free, non-exclusive perpetual right on a non-discriminatory basis to use this information to create independent implementations of the APIs so disclosed." and: "ISV" means any entity (including without limitation the Open Source community) other than Microsoft... This documentation should be made available to all interested parties at the same time as it is made available to the Microsoft applications company.

In order to ensure equality for all application developers, I feel that the microsoft development suite (i.e. Visual Studio) should remain with the operating system groups. This creates a level playing field in that all application developers will have access to the same optimizations and development libraries to access core OS resources.

In addition the service aspects of the .NET technologies should be removed from Operating systems group. This technology and its corresponding services are extremely powerful and useful. I fear however that they are the next major area of monopolistic concern. As the internet becomes even more pervasive, these technologies have the potential to lookout other technologies, applications, and platforms from the internet. The fact that microsoft is bundling this technology with the operating system almost guarantees them a monopoly on the internet. The internet has to be kept an open and level playing field.

Constraints for the Applications company: I feel that it is important to offer individuals the ability to run an operating system free of choice and not be limited by application availability. While I would like to see the Office suite available on multiple operating systems, I don't know that that is necessary to be enforced by a court. Instead I think interoperability is more important and thus I feel the file format should be made public. This will allow other application (cross operating systems) to be able to reliably and accurately interchange data. This format should be made available under a license similar to that describe for the operating systems API. In addition the file format should be available to those interested parties atleast by the release date of office.

I also feel it is important that if a process is put in place for the Applications group to request features and/or report bugs in the operating system that that process be made available to those interested parties which licensed the operating system API. In

addition this process should implemented in such a manner as not to biased to the Microsoft applications company.

Constraints for the Services Company:

The more I think about .NET and some of the services it provides, the more I think the right solution is to create a services company. Again this company should be forced to license their API's under a similar agreement to that of the OS APIs.

Subject: Microsoft Settlement

To whom it may concern:

Over the past several years my attention has been drawn to the questionable business and political practices of Microsoft Corporation, the high profile company involved in this case. As an informed consumer, and as a business owner in the technologies industry it has become increasingly apparent that Microsoft is unable to operate in a manner condusive to our free market.

One concern that stands out in particular is the manner in which Microsoft Corp. handles its dealer relations with Original Equipment Manufacturers (OEM's). These OEM companies are responsible for an increasingly large percentage of all North American computer sales and are thus an important and key distribution point for any software makers.

Microsoft has repeatedly shown that it cannot act responsibly in its relations with OEM dealers. The settlements that have been proposed do address this matter, but with very little resolution or restriction and thus very little assurance that anything will change.

Below are a few arguments that have been made in general concerning this matter (quoted): "The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

"Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

"Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

"Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

“By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.”

I agree wholeheartedly with these arguments and would encourage the Departement of Justice to reconsider its actions with Microsoft Corp. Futhermore I would recommend that any action taken should address the above concerns and help restore the market that Microsoft has destroyed.

Thank you for your time in this matter.

From: David Buzz Bryant  
To: Microsoft ATR  
Date: 1/23/02 11:46am  
Subject: Microsoft Settlement

The settlement is a terrible idea. They cannot be allowed to walk away from the damage they've done to the industry.

In the mid-90s I co-owned a small computer graphics company. As a sideline, we also built computers for some of our clients, and had registered with Microsoft as an OEM. We only built about a dozen machines a year, though, and after two years decided it wasn't profitable enough to continue offering this service. As a result, we stopped ordering OEM packs.

Soon we received a letter from Microsoft's lawyers claiming that, since we were no longer ordering copies of Windows 95, we must be pirating their software. (This was completely baseless, by the way. I'm a straight shooter.) They actually stated in their letter that the only way we could avoid legal action by Microsoft was to immediately begin ordering copies of Windows 95 at our former rate.

In other words, Microsoft was going to take us to court because we weren't buying as much of their product as they thought we should. I believe that to be extortion. My partner had a lawyer friend contact them, and they called off the dogs. But it left a sour taste in my mouth, and has turned me into someone no one wants to mention Microsoft around.

These people are arrogant, vicious greedheads that will do anything to win. They think they are above the law. Please don't prove them right. They are criminals that have destroyed a lot of lives in the technology sector, and they must be dealt with harshly.

Anything less than a breakup is capitulation.

Sincerely,  
David Bryant  
P.S. Please don't fall for their P.R. "innovation" nonsense. Ask any good programmer.

Subject: Microsoft Settlement

The current proposed settlement (PS) is flawed. Because of many different legal loopholes in the PS, Microsoft will be able to find ways to easily exploit their customers and OEMs to their advantage. Microsoft has already extended, or tried to extend, their monopoly since the start of the trial, such as:

- \* Microsoft .NET and MS's plans to force everybody to sign for a MS Passport (which has already been proven to be a very insecure system)

- \* The failed attempt to turn an educational lawsuit into a way to inject their software into yet another market

- \* Imposing highly-restrictive EULAs and license agreements in XP to try to milk as much money as possible from the end user and businesses, which has already forced other governments (such as the UK and China) to consider other options besides MS software

- \* Using PR stunts to hide the fact that security was never a major concern of any of their products, and never will be (even though recent developments in Windows XP and Internet Explorer have proven this)

- \* Starting petty lawsuits to snuff out competition, in the hopes of running them out of money (such as the recent Lindows lawsuit)

- \* Rigging web polls and writing fake letters (from people already long dead and buried) to influence business and DoJ decisions

The government's intentions in the PS are in good faith, but the language puts too much faith in MS's interpretation of it. Dan Kegel has a great analysis of the flaws found in the PS here: <http://www.kegel.com/remedy/remedy2.html> In short, I feel that it's the DoJ's duty to revamped the PS and/or return to the drawing board, as its current revision is not enough to stop Microsoft's anti-competitive practices.

To Honorable Judge Kollar-Kotelly,  
As a citizen of the United States, and a worker in the computer software industry for over 20 years, I would like to provide you with my comments on the Federal governments proposed settlement with Microsoft. Please, please, call upon God to provide you the wisdom and the courage to arrive at a moral and just decision in this case. With this prayer, I am sure you will not go wrong. In addition, I must tell you my view: it is plainly obvious to anyone that Microsoft is a monopoly, has abused this position to the detriment of the entire world and especially to it's competitors, that the current remedy proposed by Microsoft and the Federal representatives is woefully inadequate, and that since Microsoft has been given much, much must be expected from it. Please consider these comments in your deliberations. God speed.

From: Rod Smith  
To: Microsoft ATR  
Date: 1/23/02 11:46am  
Subject: Microsoft Settlement

Hello,  
I am writing to express my concern over the proposed settlement in the United States v. Microsoft case. In my opinion, the proposed settlement is an ineffectual "slap on the wrist" for a company that has repeatedly demonstrated a lack of respect for both the law and prevailing free market practices.

As I understand it, the proposed settlement places various minor restrictions on how Microsoft may do business, such as requiring that they offer the same terms to all OEMs who license their OS. In last decade's big Microsoft case, however, similar restrictions were imposed on Microsoft, and the company managed to find loopholes to carry on as it had done before. I see no reason why Microsoft would not do the same this time around, ensuring another 5-10 years of its predatory business tactics.

Indeed, I am very concerned about the growing influence of Microsoft in society as a whole. Microsoft has been releasing proprietary products, tools, and services in so many areas that, if even a tiny fraction of them gain the sort of dominance that Windows and Office have in the general computing field, Microsoft will possess an unacceptable amount of power over society at large. Microsoft has proven by its actions (both legal and illegal) that it is not above using (in fact, I would argue, ABUSING) the power it has to increase its profits and crush all competition, without regard to the needs or rights of its customers.

Finally, I believe that Microsoft's dominance of the computer industry not only stifles innovation but is a threat to the security of all information systems. The past year has seen the release of increasingly powerful viruses and worms, such as Code

Red and Nimda. These worms can do significant damage only in what's known as a "monoculture"—an environment in which a single system dominates the landscape. If Microsoft faced real competition, the security of the Internet would be greatly enhanced, because no one worm or virus could damage more than a few percent of the Internet's computers.

In sum, I believe that the proposed settlement will be ineffectual at correcting Microsoft's behaviors. Microsoft has repeatedly demonstrated a lack of respect for the law, and so the remedy should take much more radical steps to correct Microsoft's past wrongs and ensure that the company doesn't fall into its old behaviors. The states' proposed remedy is better able to meet these goals, but there are also many other proposals from which to choose.

It's not right, and I expect you know it. If most roads were designed to be easily usable by only one make of car, and that manufacturer began to include gasoline with the cars, noone would consider letting him get away with it. For most people, windows is not optional. For instance, even though I have the skills to do without it, i'm forced to use it in my work by my company's choice of applications. It's not better, just unavoidable, and Microsoft has used that position to prevent competition. I can't imagine destroying them, but they should be prevented from cheating in the future. This means actually prevented, not allowed to sign a "consent decree", ignore it, and then be forgiven.

Subject: Microsoft Settlement  
Dear Sirs:

It is my considered opinion as a mathematician and computer scientist of long standing (Ph.D., MIT: 1978) that the combination of Microsoft's software design practices and continued aggressively linking monopolies across software disciplines constitutes a serious risk both to the national security and to the economic interests of the United States as a whole.

Microsoft has aggressively pursued a strategy of tying across its entire product line.

This is evident not only in its sales practices but also in the behavior of its upgrades: for example, it has been all but impossible for ordinary users to upgrade —any— Microsoft product (whether operating system or office software) without both installing Microsoft's "Outlook" email software and also overriding the user's installed email software with "Outlook".

This tying across product lines affects both the national economic interest and the national security because of inherent vulnerabilities in Microsoft's software design practices. This past year has been a bad year for so-called "worms" and "viruses" damaging information systems and causing denial of service all over the Internet. Network consulting guru Jakob Nielsen (see <http://www.useit.com/>) estimates this past year's consequent economic damage as in excess of \$170 Billion.

I have personally experienced two days of complete network outage due to serious Outlook-worm attacks to backbone provider Verozon (who have not admitted it publicly; however, MCNC is responsible for backbone load analysis for the southeast, and the load-signature of these attacks is unmistakable.)

More than 80% of those attacks are "Outlook" specific: they do not affect other email software (such as the previous market-leader "Eudora") at all. More than 98% of the attacks are Microsoft specific. The reason for these vulnerabilities is inherent in Microsoft's "active content" document design, where documents are no longer simply data to be processed or viewed, but are actually programs (written in "Visual Basic" with "ActiveX" controls) that can take over the user's computer and compromise it. This makes it easy for Microsoft to provide "glitz" but at the expense of using an approach which is inherently insecure. (Of the remaining 2% of network attacks, a large majority are due to other—cross-platform—"active content" attacks, specifically employing JavaScript and Java!)

Hundreds of billions of dollars in consequent damages to the national information infrastructure mean that it is in the national interest to prevent this kind of cross-system tying. Furthermore, it is in the national security interest to ensure that Federal Interest Computers are not subject to the kinds of attacks that Microsoft has made possible. I think the following remedies are in order:

1. Microsoft must be made to stop the software-level tying between different kinds of software systems. Specifically, there should not be shared content between:

- (a) operating systems;
- (b) application software;
- (c) network server software.

If achieving this means splitting the company along these lines into three separate entities, then so be it.

2. Microsoft software, with its vulnerable cross-system ties, should not be allowed on Federal Interest Computers. Arguably, it should not be allowed on any system networked to a Federal Interest Computer, but that latter is admittedly a rather drastic step.

3. Microsoft's "patches" and "upgrades" should be required to confine themselves to

the ostensible purpose that they have; they should be forbidden to change other software systems on the user's computer without express notice and consent.

4. Microsoft's upgrade practices, in which the upgrade-system silently replaces the user's email software setup with "Outlook", has had that effect on current Federal Interest Computers that historically used (for example) "Eudora" but have been forced into using "Outlook". Arguably, this upgrade-with-change constitutes felonious unauthorized access to a Federal Interest Computer. This felony should be prosecuted aggressively.

From: Ty Hedrick  
To: Microsoft ATR  
Date: 1/23/02 11:47am  
Subject: Microsoft Settlement

Dear Sirs,

Summary: The proposed settlement is too favorable to Microsoft, much stronger measures are required to keep the company from abusing its monopoly. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial. Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition. The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think

that the proposed settlement is strong enough to serve this function.

Sincerely,  
Ty Hedrick

From: user@domain.invalid@inetgw  
To: Microsoft ATR  
Date: 1/23/02 11:47am  
Subject: Microsoft Settlement—NO

The proposed Microsoft settlement terms are ridiculous. Microsoft still hasn't even admitted any wrongdoing or made any changes to their behavior, despite the courts finding them guilty of illegal monopolistic activities. The settlement would allow Microsoft to not only continue their illegal behavior, but would reward them with increased visibility and market share by letting them "donate" their unsold products to schools, at essentially zero cost to them! Remember, software doesn't cost anything to copy, and any old PCs have already been depreciated to zero. And where are the schools going to purchase software upgrades? The settlement also doesn't require Microsoft to pay any damages to the companies it hurt through its illegal acts.

The whole point of having a court case at all is to make Microsoft stop doing illegal things, not to reward them for it!

Please REJECT this settlement in favor of one that would actually punish Microsoft and make them change their behavior in the future.

Subject: Microsoft Settlement

To whom it may concern:

I am a published scholar on the history and regulation of communication technology.

I am writing to register my objection to the current proposed settlement in the Microsoft case. The Microsoft monopoly—which is a byproduct of network externalities, not the quality of the company's software—stifles innovation, pure and simple; start up companies can not get funded if they will compete with microsoft, innovative programs that conflict with Microsoft policies are marginalized, etc. The current proposed settlement does not get to the cause of the problem nor will it result in any substantial improvement.

There are many different possible remedies, but the current proposal is not one of them. I strongly urge you to reconsider the Justice Department's current stand on the issue.

Thank you for your time and consideration.

Thomas Streeter

**MTC-00016674**

From: Jeffrey Bridge

To: Microsoft ATR  
Date: 1/23/02 11:48am  
Subject: Microsoft Settlement

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Jeffrey Bridge

**MTC-00016675**

From: Evan Coyne Maloney  
To: Microsoft ATR  
Date: 1/23/02 11:48am  
Subject: Microsoft Settlement

Microsoft will continue to be a monopoly as long as Microsoft Office remains a "closed" system. Office is "closed" in that its file formats are known only to Microsoft and are not available to the general public.

This is a barrier to entry because everybody uses Microsoft Office currently. The documents get e-mailed around within companies and between companies. Owning Office is required to read these documents fully, so therefore buying Office is a cost of doing business, like buying phones or a fax machine. (Except that you can get phones or a fax machine from multiple vendors.)

Microsoft's stranglehold on businesses in this regard would be reduced if: 1. In the short run, they were forced to publish the file formats and make them freely available. 2. In the long run, they should be forced to give up control of the file formats to a standards body, much like the W3C is a standards body for HTML and XML. Further, Microsoft should be forced to use the recommendations of the standards body as their file format, with fines levied if it is determined that they are "not fully compatible" with the standard. (Being partially compatible with HTML is a trick that Microsoft used to beat down Netscape.) They should be enjoined from shipping Office until the file formats are opened up.

This would be a reasonable solution, since Microsoft would retain their assets (Office),

but at the same time, other companies could build products that are compatible with Office without having to pay "the Microsoft tax" in the form of licensing fees.

As provided for by the Tunney Act, I wish to add to the public record my comments on the Proposed Final Judgment (PFJ) in the cases of US v Microsoft and State of New York ex. rel. v Microsoft.

As an Economist by training (undergraduate and graduate degrees in economics from Carnegie Mellon University and Columbia University respectively) and an IT professional by career choice, it is clear to me that the provisions supplied by the PFJ will not be sufficient to undo the existing distortions in the market for Intel-compatible operating systems and software, not will they spur the competition necessary to induce the market to reverse the distortions itself. Furthermore, the lack of substantive financial penalties undermines the deterrent effect of future anti-trust action in the future against Microsoft or other companies. Therefore, I urge the court to reject the PFJ as not being in the public's best interest.

The key to Microsoft's market power lies in the fact that it has two interlocking monopolies. First is its monopoly in the market for Intel-compatible operating systems. Second is its monopoly in the market for Office-Productivity Applications. Either of these alone represent substantial distortions in the marketplace. Together, they represent an almost irresistible force for the "lock-in" of consumers. Given that a large measure of the value in Information Technology comes from the positive network externalities of being able to communicate with other computer users. This communication is only feasible when the disparate systems understand the same "language" in addition to being able to just contact each other. The PFJ ignores that fact that while the TCP/IP protocol and the Internet have made it easy for heterogeneous computer systems to contact each other, there are still substantial barriers to the exchange of content-rich communications due to

proprietary file formats. Thus, while it is easy for two users of Microsoft Windows and Office to exchange richly-formatted documents, they are unable to have the same sort of exchange with a user of another system due to the closed nature of Microsoft's file format. It is this network effect that provides the power in Microsoft's interlocking monopoly. In order to exchange documents with the majority of other users in the network, one must use Microsoft Office. Because Microsoft Office only runs on Microsoft Windows on Intel-compatible machines (a version is available for machines using Motorola's PowerPC architecture running MacOS), then the user must use Windows as well. Thus, each monopoly supports the other by forcing a user to adopt both in order to receive the benefit of the network effect.

This problem can and should be addressed by two means: enabling file format compatibility and enabling API compatibility. The PFJ does not address the former and ineffectively addresses the latter. By requiring that Microsoft fully and openly document, in a timely fashion, the file structure used by Microsoft Office applications, competitors could create filters in their applications to read and write Microsoft formats effortlessly. Not only would this spur competition in the Office Productivity application market under Microsoft Windows, but this would allow application developers using other Intel-compatible operating systems to create Office Productivity applications on their respective platforms that could inter-operate with Microsoft Office. Having Microsoft Office-compatible applications would give other operating systems the power to compete with Microsoft Windows in terms of providing positive network effects to its users, thus enhancing competition in the Intel-compatible operating system market. Barring the above solution, competition in the operating system market could be enhanced by ensuring that Microsoft Office is available for multiple Intel-compatible operating systems either by requiring that Microsoft produce the suite for additional platforms, or by requiring that they auction off or license the rights to "port" Microsoft Office to other platforms. Such a move is less desirable than the compatibility route because, while it enhances competition in the Operating System market, it leaves the market for Office productivity applications untouched and still monopolized.

The issue of API compatibility is addressed by the PFJ by requiring Microsoft to disclose its APIs to interested parties with a number of provisos. It is these conditions that make the disclosure of Microsoft's APIs unlikely to have a significant effect on enhancing competition. First, Microsoft will be allowed to withhold the disclosure to APIs where such disclosures would "compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria" (section 3.J.1). The language in the PFJ is broad enough that Microsoft would be able

to shoehorn large portions of the Windows API into the exemption, thus subverting the spirit of the measure. In addition, while the goal of ensuring the security of computer software is laudable, many information security experts agree the open disclosure of security-related APIs generally results in more secure and robust software than does the procedure of "security through obscurity". Microsoft would also be allowed to limit to whom they disclose their APIs based on whether the requester meets "reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business" (section 3.J.2). By allowing Microsoft to choose its competitors based on business model, the PFJ undermines the ability of open-source software developers, the one group that presents a significant competitive challenge to Microsoft, to create software that is competitive but inter-operable with Microsoft products. Such developers are generally either individuals or small groups who are developing such products to suit their own needs, but, in the process of openly releasing their code, provide value to all users. These developers rarely create such software for commercial purposes and those that do tend not to be large operations that would pass Microsoft's scrutiny. To allow Microsoft to exclude such developers based on the fact that they are not producing software as a business would represent a great loss to the ability to enhance competition in the market.

Finally, the lack of financial penalties in the PFJ allows Microsoft to keep all of the "ill-gotten gains" of its monopoly position. While it is vitally important to correct market distortions and restore competition going forward, Microsoft should not be allowed to benefit from the past and its illegal monopoly. An approach similar to environmental regulations, where polluters bear the costs of remediating the environment they spoiled, could be employed here. By using monetary fines from Microsoft to create a development fund, the government, or other trustee, could help fund projects that would create freely-available software that would compete and inter-operate with Microsoft products, while forcing Microsoft, in effect, to remediate the business environment that it spoiled. Such a move would not only bring competition into the market, but would provide a large return to society as a whole in the availability of high-quality, free software to help in reducing the digital divide.

In summary, the PFJ does not represent a viable means of remedying the illegal actions of Microsoft as determined by Judge Jackson and as unanimously approved by the full Court of Appeals. Based on this, I once again urge the court to reject the PFJ and quickly proceed to a new remedy hearing.

Sincerely,

Subject: Microsoft Settlement

Dear sirs,  
I am a US citizen and I would like to respond to the proposed microsoft settlement. In the aftermath of the Enron debacle, we, as citizens, need our justice department more than ever to protect us from the avarice of big business. It's clear to me, that this settlement does extremely little. It appears that the Attorney Generals are either scared of Microsoft or unduly influenced by Microsoft's money.

Microsoft has been found guilty of a crime. Now it's time for the punishment phase. Please punish Microsoft. The settlement as it currently stands does more to encourage Microsoft to continue its monopolistic practices than punish. Hopefully, you've received enough letters by now to provide proper analysis and details to prove that this settlement is laughingly weak. I know my words are inadequate. But, Please understand, this is an emphatic, heartfelt plea to do right by your fellow citizens and punish a wrong doer.

Thank for your time and this public forum,

To Whom It May Concern:  
I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully

redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Roscoe Harris

Hi,  
I believe that the proposed settlement with Microsoft is a bad idea, because while the courts have found real evidence of monopoly action, all that the proposed settlement will do is slap Microsoft on the wrist while doing nothing to actually change or alter their business practices will allow them to remain a monopoly power, and make it that much more difficult for others to stop Microsoft's monopoly activities in the future. Also remember that the axiom "any settlement the opponent likes is probably a bad one" is quite true.

Thank you for allowing me to comment,

To: Microsoft ATR  
Date: 1/23/02 11:49am  
Subject: Microsoft Settlement

I am a resident of the state of New York, and I work as a computer system administrator at the State University of New York at Buffalo. I am writing to you as a private citizen; the University does not review or endorse this e-mail.

I believe the proposed settlement to the Microsoft antitrust case does not usefully lower the applications barrier to entry. It should require the disclosure of file formats; it should require the disclosure of network protocols; and it should forbid Microsoft from prohibiting reverse engineering in license agreements.

**DISCLOSURE OF PROPRIETARY FILE FORMATS**

Proprietary file formats, such as the Microsoft Word .DOC format, or the Excel .XLS format, form a powerful part of the Applications Barrier to Entry. Since their documentation is only available from Microsoft under Non-Disclosure Agreements, it is not possible for third parties to write software to reliably interoperate with Word or Excel.

You can try to write a program that will edit a .DOC file—and many people have—but unless you're working from the Microsoft documentation on the precise format of the file, you must determine the file format through the difficult process of reverse engineering. Microsoft should be required to disclose the file formats for its products, especially Microsoft Office. Such disclosure should be required seven months in advance of the release of any product which relies on such a format.

**DISCLOSURE OF NETWORK PROTOCOLS**

It is not currently possible for another manufacturer to compete directly with the Microsoft Outlook e-mail client product, nor with the Microsoft Exchange e-mail server product, because the protocol by which the Outlook client communicates with the Exchange server is not disclosed.

Were the protocol disclosed, it would be possible to write alternate client implementations for use with the Exchange server; and it would be possible to write alternate server implementations for use with the Outlook client.

Microsoft should be required to disclose the file formats for its products, especially Microsoft Exchange and Microsoft Outlook. Such disclosure should be required seven months in advance of the release of any product which relies on such a protocol.

**PROHIBITION OF REVERSE ENGINEERING**

As the Microsoft Windows product has been shown to have a monopoly share of the market for desktop operating systems, it forms such a large part of the competitive environment for any other product as to be like a force of nature. For meaningful competition to exist, it must be possible for other entities to discover as much information about Windows as is necessary for them to write a competing product; Microsoft prohibits such discovery through the use of clauses in license agreements forbidding reverse engineering.

Microsoft should be enjoined from prohibiting reverse engineering of its Operating Systems, Middleware, and Office Automation products.

Thank you for your attention to this comment.

Sincerely,  
Daniel F. Boyd

Subject: Microsoft Settlement

As a computer professional with over 10 years of experience, I would like to comment on the Proposed Final Judgment in United States v. Microsoft. To be frank, I view the Proposed Final Judgment as a gigantic loophole, ripe and ready to be abused by Microsoft. I'll raise one specific objection: Section III.A.2 ("Prohibited Conduct") prohibits Microsoft from retaliating against an OEM for shipping a computer with Windows and a non-Microsoft operating system. This section does not, however, prohibit Microsoft from retaliating against an OEM who ships a computer without a Microsoft operating system at all.

This is exactly the kind of loophole that Microsoft has exploited in the past and will continue to exploit. If, for instance, Dell shipped a Linux-only computer, Microsoft would be free (under this provision) to retaliate in any way it saw fit. In the regular course of business this behavior is expected; from a predatory monopoly this behavior is illegal.

I urge you to review this settlement with a more critical eye.

Thank you,  
Randall Hansen

Subject: Microsoft Settlement

To Whom It May Concern:

I am writing to give my comments on the Microsoft antitrust settlement.

I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Sincerely,  
Joshua Arnold

**MTC-00016697**

To whom it may concern:

I am a software developer. I must use Microsoft's SDKs and development products on a daily basis. I have watched over the past 4 years as Microsoft furthered its monopolies within the software industry. I think that the proposed settlement is a bad idea as it provides little or no protection from future monopolistic practices by Microsoft. Microsoft has demonstrated, in past, present and projected future actions, that it has little or no regard for the laws and penalties that make up our legal system. This proposed settlement defines its terms so narrowly that future products will easily find loopholes. Even if they don't, Microsoft still enforces its monopoly and strangles competition while the judicial processes drag on for years. Allowing this settlement to go through would undermine our nation's judicial system, making it apparent to the American people that justice is for sale.

This cannot be allowed to happen.

Christopher Nash

From: Jim Kaufman  
 To: Microsoft ATR  
 Date: 1/23/02 11:51am  
 Subject: Microsoft Settlement

My current understanding of the proposed settlement is that it doesn't go far enough. Microsoft has done more than be a successful company. They have crushed competitors using secret clauses in contracts with their OEMs. For example, they forbid system manufacturers from providing alternative operating systems.

They adopt open standards that are essential for wide use of the Internet, and then they co-opt them, changing them so they are no longer standards, but are Microsoft-specific.

They include an Internet browser that uses proprietary extensions. What user is really going to spend the time to download an alternate browser that is 15MB in size to replace a functioning Internet Explorer?

The problem is that those of use who use alternate browsers find that we are getting locked out of more and more Internet sites because the site developers chose to use a Microsoft enhancement, ie a non-standard function.

The settlement as currently conceived is a bad idea.

 To: The United States Department of Justice  
 Re: The Microsoft Settlement Greetings,

As a software professional, it has been with a profound sense of relief that I have watched the U.S. Government discover what we in the computer business have known for years: Microsoft is an illegal monopoly with the power to destroy competitors at a whim. While the proposed settlement shows a broad understanding of the problem, I believe that it does not go far enough to protect consumers, and nowhere near far enough to ensure that developers can produce products which can reasonably expect to succeed on their own merits without encountering legal entanglements. In particular, consider the following points:

Microsoft holds a VERY large number of patents, but they have not been compelled to reveal what patents protect the Windows Application Programming Interfaces (APIs). Without this knowledge, programmers such as myself can create what we believe are original and innovative applications, only to have Microsoft pull out an obscure patent and crush our honest efforts.

The proposed settlement requires Microsoft to release the specifications for its APIs, but then prohibits developers from using this information to give other operating systems the ability run Windows applications and give us all a choice!

Microsoft uses restrictive licensing terms and intentional incompatibilities to reduce or eliminate the ability of developers to produce compatible applications for both Windows and operating systems which could otherwise be made compatible with the large number of existing Windows applications.

The settlement with Microsoft is an historic opportunity to free computer users and developers around the world from the shackles that Microsoft has spent millions of dollars of monopoly profits fitting us with. Please give the settlement the power to make a difference, and speak to the future of computing, which could be very bright indeed.

Sincerely,

From: Ted Kisner  
 To: Microsoft ATR  
 Date: 1/23/02 11:52am  
 Subject: Microsoft Settlement

To whom it may concern,  
 I believe Microsoft should be punished to the full extent of the law (don't settle!) for its blatant monopolistic tactics.

My name is Theodore Kisner, and I am an experimental physicist at the University of California, Santa Barbara.

Every day I encounter problems and setbacks that are a direct result of the monopolistic stranglehold that Microsoft has on the entire computing world.

These problems range from hardware that only comes with "Windows" drivers (I use Linux for everything). To specialized software that only runs on Windows. (Software companies have no reason to make a version that runs on any other operating system, because Microsoft is so dominant).

The only partial competition Microsoft has (and only in the server market) is from Linux. If the only way an operating system can compete with Windows is if it's FREE, then that's a good indication of a monopoly! If Microsoft is continually allowed to get away with Murder, the big losers will be the citizens of the this (supposedly) free country. Right now the only freedom I have is the freedom to buy more Microsoft products...

Thank you for your time,  
 -Theodore Kisner

 Subject: Microsoft Settlement

Dear Sir or Madam,  
 I do not expect that this letter I write to you will make any difference. I have absolutely no faith in the ability or determination of the courts to deal with the Microsoft Corporation. In countries around the world this court battle has made the U.S. justice

system a joke in professional computing and business circles. For 4 long years courts have decided again and again that Microsoft is guilty and then nothing has happened. The only remedy that I can see being effective for dealing with Microsoft is a legally enforced adherence to open standards for all APIs, transfer protocols, file formats, and any other interaction with other software. Anything less will not suffice and will result in another 4 years of lousy, insecure, buggy, and overly expensive software all supplied by the only company you can purchase from if you wish to do business in the computing world today.

I do not expect that this letter I write to you will make any difference, however, because I believe that Microsoft has already bribed and bullied the U.S. courts into submission. It is the only explanation I can see that explains why no one has stopped their ridiculously uncompetitive business practices.

Sincerely,  
-Joseph Rock

**MTC-00016705**

From: William Bishop  
To: Microsoft ATR  
Date: 1/23/02 11:51am  
Subject: Microsoft Settlement

Please reconsider the settlement; there are many loopholes that allow MS to continue their predatory practices.

One simple example: Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. and Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these types of practices, MS is being encouraged to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

MS has destroyed many good small businesses with their practices. Please help American small business!

Thank you,  
William R. Bishop

Subject: Microsoft Settlement

This settlement is weak and slanted towards Microsoft. Recent events have shown that even if corporations have heavy political influence, for the good of the US they must be kept in check. I don't think that Microsoft should be broken up, but I do think that they should pay 10s of billions (their cash assets) back to the US and open source Internet Explorer(IE) using a BSD(see [www.opensource.org](http://www.opensource.org)) like license. Removing IE from Windows now would mean that Microsoft can just push it back on compliant

windows versions by letting/making the user install it with their windows update system.

The only way to rectify the incompatibility and market share Microsoft has caused with its browser is to make it open to all other operating systems to use and restrict how Microsoft can alter it. Forcing Microsoft to release IE and all future changes using a BSD style license can correct most of these problems.

Thank you,  
Chris Hamilton—Ohio

Date: 1/23/02 11:49am  
Subject: Microsoft Settlement

To whom it may concern,  
Greetings. Let me start by stating I feel that Microsoft should be penalized as heavily as possible within the present antitrust proceedings as possible. I feel that the company has shown time and again a lack of respect for both the judicial branch of the american government, and the security/ computing needs of its user base.

I am a technically oriented individual, but I will attempt to keep this email as readable as possible. Over the years I have watched Microsoft take defined and accepted internet standards and craft them to their own ends, to the extent that similar applications using the standard are unable to communicate with the Microsoft application. While this in and of itself is not per se bad, it is when they then begin introducing new applications with this problem and start to push entire product lines out, making it impossible for third party vendors to tie their applications into the given application. This is what creates their monopoly. I dont think that they should be forced to stop creating their software, or even making use of thier closed proprietary protocols and standards, but they should be forced to open communications which define a standard interface to those applications.

I see that the present agreement does call for this, but in such a narrow scope as to be irrelevant. With a few minor changes to the way they do things, and the present settlement does nothing to constrain their disrespectful attitude. If anything I believe that the settlement should be unnecessarily broad as opposed to uselessly narrow.

I mean no disrespect to the Justice Department. The individuals within your

organization do and know things in regards to the laws which I will never have the time to inclination to understand. But by the same note, there are many individuals in this country and abroad, which know about computers and network communications which the Justice Department individuals have neither the inclination or time to learn about. It is these individuals the Justice Dept. should listen to.

It is very easy for a multi billion dollar corporation to "persuade" people and corporations to state in microsoft's favor. While each email like my own is a statement from the peoples of the Tech/IT industry, which no deeper political motivation than simply requesting a fair and even judgement, with appropriate penalties for unacceptable behavior in our industry. We work day in and day out with software produced from this software giant, and must constantly deal with its short commings. If this settlement could be more than a simple slap on the wrist, and a truely enforceable strict judgement, then the software industry and the technical industry in general could and more than likely would see a huge turnaround and improvement. Imagine if Microsoft were forced to have its code reviewed prior to releasing it out to its customer base. Instead of getting a new and improved version "Windows <place next generation here>" with numerous security issues to be found and exploited by malicious users, you could have the same version a few weeks/months later with possibly more robust and secure features. You then wouldnt have ISPs going bankrupt due to Distributed denial of Service attacks by malicious user who spent 30-45 minutes looking for something fun to do. <see <http://www.ispreview.co.uk>> (Granted the ISP in question was located abroad, but the fact remains that the ISP was shut down, and unable to continue business. I would shudder to see this happen within the US itself, where the economy is hurting as bad as it is right now.)

I am aware that Microsoft has not been found guilty of being a monopoly, and while I do not agree with that fact, no software company should be able to basically flip the justice dept. the proverbial bird and be able to just shrug it off. This is probably a major turning point within the tech industry, and should be treated with the utmost scrutiny. If we allow them to simply stomp on the ruling now, drag their feet with complying with the terms for a given period, and pick up at full swing at the far end, then what was the point in the first place of raising the issue?

Please do not allow money to overrule justice in this case.

Sincerely,  
Eric Concepcion

From: Larry Brinley

To: Microsoft ATR  
 Date: 1/23/02 11:53am  
 Subject: Microsoft Settlement  
 Ladies/Gents:

The proposed settlement with Microsoft in this current anti-trust case is, to be brief, egregiously inadequate. These inadequacies include, but are not limited to the following:

1. The definitions of "technical" terms, such as Application Programming Interface (API), Microsoft Middleware, Windows, et. al., are so narrowly targeted that they permit Microsoft's circumvention of the spirit of the proposed settlement at Microsoft's sole discretion. Microsoft must not be allowed to determine what does and does not fall within the scope of the settlement. The continued anti-competitive behavior of Microsoft after the watered-down 1994 Consent Decree is evidence of this fact (see 2. below).

2. The proposed settlement does not address current anti-competitive practices the Microsoft (MS) employs, let alone future practices that they may devise. For example, the enterprise license agreement that MS currently uses for its MS Office applications and operating systems bases pricing for the licenses on the number of computers that could run an MS operating system, rather than the number that actually do run an MS operating system. This practice when used against Own Equipment Manufacturers (OEMs) was specifically prohibited by the 1994 Consent Decree. This pattern of behavior clearly indicates that MS will abide only by the letter of the settlement, while continuing its efforts to quash free competition in contravention of the spirit of the settlement.

3. The question of enforcement of the proposed settlement is completely open-ended. Although the settlement calls for the creation of a "Technical Committee" with investigative powers, I see no provision for enforcement actions of any kind that the "Technical Committee" may take. Remember, Microsoft is guilty of violation of the Tunney Act already as a matter of law. They've already had benefit of due process and have lost the right to the presumption of innocence in this matter. The consumer should not have to wait for independent findings of fact from the courts to address ongoing misconduct. When MS chooses to violate the settlement—and, as history indicates, they certainly WILL choose to do so—the "Technical Committee" should be able to impose severe and immediate fines or other penalties with impunity. Place the fines in escrow and let them accrue interest until such time as Microsoft can substantiate its innocence to a court of law. Further, all costs of enforcement should be born by Microsoft. They broke the law; we should not have to pay a cent to keep them honest in the future.

That's my \$.02. Please put some teeth in the settlement this time. Of course, you could always wait for the next heinous anti-competitive act from Microsoft. My bet is with the way the .NET initiative is shaping up, none of us will have to wait long.

Sincerely,

 Subject: Microsoft Settlement  
 No to Microsoft

I do not believe that the Microsoft Settlement is in the best interest of the citizens of the United States. The settlement is unnecessary, the findings of fact which were upheld support that Microsoft is a monopoly. Why then is a settlement necessary? I find it more and more difficult every day to stand behind the decisions of my country, because of the influence of corporations. Don't let this be another nail in the coffin of democracy.

A corporation is not a citizen. Its decisions do not reflect the needs of the American. They are based on the declared desire to maximize profits. Corporations do not represent citizens. Only a citizen can represent his or her self. Corporations do not reflect the interests of citizens. A citizen declares his interests by casting his or her single vote. If a citizen stands to lose money because of harm done to Microsoft, then he or she needs to call his or representative or send and email to you. It is not a corporation's right to do that for them.

I don't know what the perfect solution to all of this is. I do have a few suggestions though. I believe that Microsoft should be forced to open and keep open all of its file formats and protocols, both internal and external, so that their services and files can be used by competing software. This would give people a huge choice and not affect Microsoft adversely. Second, distribution of Microsoft's software should not be considered part of a solution, but only furthering the problem by expanding their monopoly. Finally, if a fine is issued then it should be substantial enough to put them on a level playing field with their competitors.

 Subject: Microsoft

Good Day. I do not have time to read or understand all the legal language in the files, but from what I understand and have been told about the case there will be no easy answer. The biggest question I have is what happen to the American Dream of being able to create something and have the sole rights to that product for a number of years if they wish. Microsoft has done some things wrong like making hardware companies only offer there product on there machines. I think that has been conceded. The part I don't like is the thought of tearing apart the most advanced and aggressive software company in the world. We have kids and "sick" individuals out there trying to tap into different systems and destroy or steal peoples information. We need to keep a company like Microsoft running at peak performance to help seal up these loopholes. I as a consumer

do not mind paying for a superior product. The old saying usually holds true, "you get what you pay for". When I forget that I usually find out the hard way. In the case of Microsoft they are offering a superior product for a pretty pricey fee when bought individually. Microsoft has so many different areas that it is hard to point them all out. The main areas that I use is the operating system and office software. I have used the competition for the office software and they are still trying to catch up and are cheaper, but personally I would spend the money for the better product.

My only solution to offer is to fine them for their faults like the monopoly with the hardware manufacturers and monitor them so it will not happen again in the future. For the other areas of software like the internet software, if a company can offer it for free how is that bad for consumers. If you look at any other industry there are always options that companies offer for free to entice people to use their product. My only thing would be to set pricing controls on Microsoft explaining that if they offer it now for nothing and the competition does fall out then the software still will remain the same and only able to increase by the standard of inflation for that time period.

I will not feel sorry for the AOL of the world because you look how they got what they have and they did not invent or master their product line, they bought their way into the businesses. They have a monopoly on the cable industry along with there so called competitors but no one has pushed the envelope there. YOU ALSO HAVE TO REMEMBER THAT THE COMPUTER AND INTERNET ARE OPTIONS TO THE CONSUMER AND THE INTERNET WAS INTENDED TO BE FREE, BUT TAKE A SERIOUS LOOK AT WHO REALLY IS TRYING TO CASH IN ON THE TECHNOLOGY WAVE. MICROSOFT WAS A STANDARD LONG BEFORE THIS CRAZE STARTED. AOL IS STILL TRYING TO BUY OR LOBBY THERE WAY IN.

Subject: Microsoft Settlement

To Whom It May Concern:

This email is being written in accordance of the Tunney Act. I am a 35 year-old US citizen residing in Northern Virginia. I have been involved in the computing field since 1980.

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. I also feel that the current settlement would end up giving Microsoft yet another monopoly; this time over the computing environment used by public school systems.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous and continuing actions. There are no provisions that correct, redress or punish their previous abuses. They only prohibit the future repetition of a few specific abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit some of those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded. I find many areas of the settlement highly disturbing:

1. It does not take into account Windows-compatible competing operating systems

2. It does not take into account intentional incompatibilities with well-known APIs (eg, kerebos authentication).

3. The settlement too narrowly defines what an API is, de-fanging the portion of the settlement that supposedly makes Microsoft publish it's APIs.

4. The settlement too narrowly defines what the Windows OS is. Various versions of XP, CE/Pocket PC and even the Xbox are not covered by the settlement's definition. It is likely that Microsoft would work it's way around the definition in ALL future operating systems.

5. The settlement does not force Microsoft to open the file formats used by Office software (such as Word, Excel, etc).

6. The settlement does not go into prevention of future abuse via services, such as .Net.

7. My largest concern with the settlement is that, through noble-sounding intentions, it effectively gives Microsoft total control over the education market (one of the few they do not dominate at this time).

In my opinion, what any settlement needs to do is:

1. Force Microsoft to open all APIs, with a clear and broad-reaching definition of what is an API.

2. Force Microsoft to stop any "extend and extinguish" extensions to well-known standards.

3. Have the settlement apply to any and all Microsoft products and services.

4. Force Microsoft to open any and all file formats for current and future products.

5. Force Microsoft to open and document any and all interfaces to present and future service-type offerings (such as .Net, PassPort, MSN Messenger).

6. Force Microsoft to publish all these APIs, formats, interfaces, et al with a NON-RESTRICTIVE license. Many of Microsoft's current licenses forbid the use of GPL'd libraries, code, etc. These licensing terms must be stopped.

In conclusion; I feel that the settlement, as written, will do nothing to stop Microsoft from continuing the practices that this suit was instigated by and in many ways would have the opposite effect. The settlement allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted in the current form.

Sincerely,

Jeff Barger

Subject: Microsoft Settlement

The Proposed Final Judgement (PFJ) as currently worded is insufficient, and contains too many loopholes to adequately prevent Microsoft from abusing its monopoly position. It contains misleading and narrow definitions, does not address anticompetitive license schemes currently used by Microsoft, and fails to fully prevent Microsoft from punishing OEM's.

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered, and may not even include the next Windows version. Or how about this for a Catch-22? The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. It also requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows, and to prevent Windows apps from running on other Operating Systems. Furthermore, the PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. It also allows Microsoft to discriminate against small OEMs—including regional 'white box' OEMs which are historically the most willing to install competing operating systems—who ship competing software.

Considering these problems, the Proposed Final Judgement as it currently stands is clearly not in the general interest. It should not be adopted without addressing these issues.

Sincerely,

Matthew Davidson

Subject: Microsoft Settlement

To whom it may concern,

RE: The relief is not significant.

I have been a software developer for 11+ years, and I have watched since 1993 as the Justice Department did its probe that culminated in a proposed final judgment. This judgment finds that Microsoft did commit wrongdoings, and states that it will provide prompt, certain and effective remedy

for their violations. I personally have benefitted greatly by selling services on top of Microsoft products, so it is with much grace that I state: I do not believe for a second that the relief provided by this judgment is certain or effective, simply because it is outdated.

Microsoft will comply with the relief without much pain. They are so far down the technology highway that a majority of the relief points are insignificant, or no punishment at all for their wrongdoings. In fact, the worst punishment mentioned are the points that require Microsoft to disclose communications protocols and technical interfaces. Even these points are easily circumvented by "creative packaging", especially with Microsoft's new "software as a service" concept. The only interfaces they will be disclosing is the HTTP or SOAP protocols, as that is sufficient to invoke a service residing on Microsoft servers. If they were monopolizing and creating lock-in scenarios before, just watch them this next decade.

I would urge the court to reconsider the punishment in this case and weigh it against the damage Microsoft has done in the last decade. Many companies have fallen due to their unethical practices, and I trust that you will find the punishment is not on par with the violations. The punishment is based on old technology, and at current technology levels the punishment is worth far less in penalty value than it was when the wrongdoings were committed.

I would also add that, in my opinion, Microsoft treats its products as "products" in the marketplace, but treats them as "intellectual property" or "services" in the legal arena. Perhaps a review of this treatment from a product law perspective would be refreshing. I for one believe it would solve the problem of technology's pace reducing the penalty value of any punishment that is prescribed, but then again, I'm not a lawyer.

To Whom it May Concern:

I am writing under the auspices of the Tunney Act in opposition to the proposed settlement of the US vs. Microsoft case. My vantage point is as a biomedical researcher who has for years been a user of Apple Macintosh computer systems, and more recently as a user of Linux and other open-source software. I am strongly opposed to the features of the proposed settlement that would allow Microsoft to continue to withhold crucial technical information. This technical information (such as file formats and API's) is important to allow the unfettered development of third-party software that can interoperate with Microsoft products, which is essential for the survival of non-Microsoft products given the

predominance of Microsoft in the marketplace. I am also very worried that the lack of significant penalties to Microsoft for their past anticompetitive practices. I have seen these practices in action firsthand as both an Apple user and more recently as a Linux user, and I can personally attest to the degree to which they have handicapped these competitive operating systems. I hope that a revised settlement will address these important issues.

Subject: Microsoft Settlement

I am opposed to any judgment in United States v. Microsoft that allows Microsoft to restrict the ability for computer resellers to include any operating system they choose with any computer they sell, including the option to sell a computer without an OS installed. The price paid for the installation of Windows (or any operating system) should be known to the computer purchaser and be able to have the price paid refunded if the installed OS is not used or wanted.

Microsoft currently restricts what computer makers may install on their systems before shipping them to the customer. This prevents the computer makers from differentiating their computers from the competition's, restricting them from including any value added software, offering dual boot systems, or removing any undesired Microsoft software. Any judgment should address this fact.

Subject: Microsoft Settlement

I wish to express my reservations about the proposed settlement. I am firmly convinced that Microsoft have trampled on my rights and the rights of all consumers and they have no intention to change.

The proposed settlement does not punish Microsoft for the considerable wrongs they have committed, and does not do enough to prevent them from similar behaviors in the future. Microsoft has stifled competition. To redress this, the settlement must proactively foster competition. It must tip the scales farther away from Microsoft's favor. In its current form the settlement, combined with the reality of Microsoft's monopoly position, is so ineffective that the needle barely budges.

My primary objection is that Microsoft is not punished. It is only given weak behavior restrictions, and only for a very short period of time. Microsoft should be fined very heavily. The unlawful gains they have made at the expense of consumers should be confiscated. They should not be allowed to enjoy the fruits of their illegal activities. Also, Microsoft should not be permitted to select the compliance officer or any member of the technical committee.

Where is the punishment? Where is the penalty for non-compliance? Microsoft quite happily found ways to continue their abusive behavior after their last settlement so it is a virtual certainty that they will do so again. The only penalty stated in the agreement is a possible 2 year extension of the settlement! This is maddeningly ineffectual. The settlement should specify severe punishment for any infraction. Make no mistake, Microsoft would be very pleased with this settlement. It leaves them most of their power and all of their money.

Thank you for your time.

#### MTC-00016726

From: Tom Witmer  
To: Microsoft ATR  
Date: 1/23/02 11:55am  
Subject: Microsoft Settlement

My comments about the Microsoft settlement:

The proposed settlement does not appear to prevent any of the discovered problems from being prevented in the future. Also, the fuzzy definitions of so many terms render it

essentially meaningless. Almost every restriction on Microsoft has an "out" that lets Microsoft evade the terms by simply claiming they needed to do whatever they wanted to do out of "security".

As anyone who is familiar with Microsoft's handling of viruses alone over the last few years, Microsoft does not, and never has, cared about security of the consumer.

Further, as one who's been in many disputes over the meaning of well-written and clear software requirements, it's obvious that this poorly worded one will never render satisfaction to either side.

Worst of all, the enforcement provisions are essentially meaningless. Microsoft has repeatedly failed to govern its own behavior in the past. What has changed that provides an impression that Microsoft is suddenly capable of doing this ethically?

Subject: Microsoft Settlement

To the Department of Justice,  
I feel it is necessary to voice my strong opposition to the Proposed Final Judgement in the United States vs.. Microsoft Anti-trust case. I have spent some time reading the judgment and reading some opinions on the judgment. Many issues are debated, but the issue I find most concerning is the lack of enforcement setup in the Proposed Final Judgement. I was unable to find any particular methods of enforcement or how an organization is going to verify that Microsoft is following all the rules setup by the Proposed Final Judgment.

I have worked in the computer industry for 10 years. My first job was doing phone support for a value add reseller, that sold Microsoft products. Over the course of my employment I had opportunity to communicate with several Microsoft support engineers. I heard one story that is a good example of Microsoft's blatant misuse of power. A support engineer once boasted to me how Microsoft specifically, incorrectly documenting windows 3.1 memory usage, such that 3rd party vendor products would crash windows 3.1 while attempting to use certain memory locations. Microsoft would document such areas available, and still use the memory locations, thus causing 3rd party vendors to struggle to release stable software for windows 3.1.

Overall, I feel the Proposed Final Judgment is far to inadequate, and stronger measures need to be taken to correct the unfair practices Microsoft has been implementing over the years. Thank you for your time. I hope the courts ruling will be fair and just.

Mark Merten

From: Partha Narasimhan  
To: Microsoft ATR  
Date: 1/23/02 11:57am  
Subject: Microsoft Settlement

The current proposed settlement is full of loopholes that give Microsoft enough room to

continue operating the way they have been all these years. Except it will now give them the aura of 'legal legitimacy'. Anyone that understands Microsoft's practices, and its effect on the software/computer industry, knows that this is more harmful for the entire industry. Given that the nation's economy is increasingly dependent on the tech industry, this has the potential to impact our economy adversely.

I request the DOJ to re-negotiate the terms of the settlement with terms that will truly help the tech industry and the economy.

Thanks,  
Partha Narasimhan

I believe that the Microsoft settlement was improperly crafted and has several large issues either handled poorly or not at all. Since most of these issues have been commented on by other people. I will not list them here. However sites such as <http://www.kegel.com/remedy/letter.html> do a good job of listing the major issues. I believe this settlement to be totally unacceptable and is just lip service to addressing the improper conduct and monopoly Microsoft carries on. Another settlement needs to be drafted, addressing the shortcomings of this settlement and other facets of this case that were not addressed.

Dear Sirs,  
I am writing to protest about the proposed Microsoft settlement. It is toothless and ill-conceived, apparently written by Microsoft lawyers, and does little to punish Microsoft for past illegal behavior or proscribe future illegal behavior. Indeed, Microsoft is proceeding to do business as they always have, clearly showing no remorse or desire to change its ways. If this settlement is approved, Microsoft will continue to pursue its illegal monopoly, this time with the court's blessing!

Subject: Microsoft Settlement

To whom it may concern:

I would like to express my opposition to the proposed settlement of the Microsoft antitrust trial.

It fails to redress the harm the company has inflicted on the software market as a result of leveraging its monopoly position as demonstrated in the Findings of Fact.

One of the most significant results of this illegal activity is 'vendor lock-in'. Consumers have become tied to Microsoft products because of the lack of alternatives. In order to remedy this situation, I believe that the best solution is to force Microsoft to publish its document formats and programming interfaces, and make these available to the public and competitors 6 months before any proposed changes.

Importantly, the public and competitors must be allowed use of copyrighted and patented interfaces and formats for the purpose of interoperability. This single step would leave Microsoft free to innovate while allowing competition from other software vendors based on the merits of the product, rather than any historical market share earned through illegal means.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake.

Sincerely,  
Marcus Cole

From: Jonathan B. Anglin  
To: Microsoft ATR  
Date: 1/23/02 11:53am  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully

redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Jonathan B. Anglin

**MTC-00016735**

From: Chip Sockwell  
To: Microsoft ATR  
Date: 1/23/02 11:56am  
Subject: Microsoft Settlement

This letter is addressed to the District Court Judge handling the Microsoft Settlement.

Dear Sir or Madam:

The matter of the Microsoft settlement now before your court is something that concerns me deeply. I grew up in a time of emerging computer and technology giants. I followed technology like my peers followed comic books. To me technology had the same great story line: good vs. evil, brainpower vs. brute force, innovation vs. stagnation. Superheroes and villains blinked in and out of existence always to be knocked aside by the next greatest advancement. Reading about these adventures carved my definition of American spirit. With the backdrop of the American free market the spirit of these heroes unprecedented creativity, innovation and efficiency helped opened a new era in history. I still struggle to understand the infinite complexities that took place only a decade ago and I only hope to keep a finger on the countless decisions and maneuvers that take place in today's technology market.

It is an appeal to your American spirit that I write this letter today. From my own experience I have seen a troublesome decline in American spirit and optimism due directly to the Microsoft case and its premise. Before the events in the Microsoft trial unfolded I had been completing my college degree in Information Systems. Looking back at the spirit of my classmates I noticed a palpable and enthusiastic I'm going to show everyone and make a million attitude. This American spirit and enthusiasm for technology bleed through into most every topic the class and

the teachers discussed. The number of technology classes could not meet the demand of philomaths lining up at the business schools doors. That is until the courts decided to entertain the pleas of Microsoft's fallen competitors. By the time the verdict had been read most students knew that the situation would not blow over by graduation.

Technology became the topic of failure and a seat in a technology class was no longer prized possession. Many students were depressed by the subsequent downturn in the economy, but some were left questioning the fundamentals that gave Americans their optimistic spirit: the rights to life, liberty and the pursuit of happiness. The Microsoft case was and is in direct violation to the latter two. The DOJ has sent a clear message: Microsoft, you have had enough liberty and happiness. Microsoft exhibited the same competitive behavior that we were studying in textbooks, yet their troubles seem to stem from one un-American axiom. If you become moderately successful, your business practices will be labeled as competitive; if you become very successful, your practices will become the subject of anti-competitive scrutiny and jealousy.

The anti-trust laws are not being applied fairly in this case and their very nature prevents them from ever being applied objectively. Has it come to pass that we now define the legality business practices by the success of the producer? Will the courts now be a competitive tool for the incompetent? Leaving the puerile comments and verdict of Judge Jackson aside, justice in America cannot be served until every business knows that it is free to produce and compete. The weakness of DOJ's case has only proven that this freedom is subject to whim and jealousy. The American spirit will not be restored until this case removes the limits on liberty and the pursuit of happiness.

Sincerely,

Chip Sockwell (Devoted Microsoft user—  
until the next greatest thing comes along)

From: Simpson, Mike  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 11:47am  
Subject: Microsoft Settlement

Hello,

I would like to express my displeasure with the Microsoft antitrust settlement proposal. I feel that the single biggest issues affecting competition are the facts that 1) Microsoft has an effective monopoly of the "office productivity suite" class of applications, and 2) they make it very difficult for other vendors to interoperate with their product (Microsoft Office). Potential new vendors must support the Office document formats because they are the de facto standard, but they are undocumented, and thus it is almost impossible for any potential new vendors to support them well. As a result, the consumer has no choice but to buy Office, and because it only runs on Windows, he has no choice in operating systems either.

I feel that any effective settlement must include the following conditions: 1) Microsoft must release full documentation for the existing Office file formats; 2) Microsoft must be prohibited from introducing changes to these formats without releasing full documentation of the changes; 3) Microsoft must be release said documentation in advance of their actual support for the changes, to prevent other vendors from having to play catch-up. 4) Microsoft must participate in the development of new, open document formats, preferably based on XML and governed by an independent standards body.

The effect of these conditions would be to allow other vendors to develop a product competitive to Microsoft Office for the first time in years. This in turn would open the door to competition in many other areas.

Renata B. Hesse

Antitrust Division

U.S. Department of Justice

601 D Street NW

Suite 1200

Washington, DC 20530-0001

Dear Mr. Hesse:

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with an analysis provided by Mr. Dan Kegel (available on the Web at <http://www.kegel.com/remedy/remedy2.html>).

- The PFJ doesn't take into account Windows-compatible competing operating systems

- Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

- The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

- The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

- The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

- The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The

PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

- The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being "Windows Powered".

- The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

- The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

- The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

- The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

- The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

- The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

- Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

- Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

- Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

- The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

- Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

- The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

- The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

- The PFJ allows Microsoft to discriminate against small OEMs—including regional 'white box' OEMs which are historically the most willing to install competing operating systems—who ship competing software.

- The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

- The PFJ as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by Mr. Kegel, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,

Garrick James

Subject: Microsoft Proposed Settlement

To: Renata B. Hesse

Antitrust Division

U.S. Department of Justice

601 D Street NW

Suite 1200

Washington, DC 20530-0001

January 23, 2002

Under the Tunney Act, I write to comment on the proposed Microsoft settlement. I will begin by stating my agreement with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), which thoroughly covers a variety of substantial weaknesses in this proposed settlement that would render it largely ineffective for providing remedies to the Microsoft Corporation's illegal anti-competitive practices.

I urge the Department of Justice to consider the technical issues discussed widely in the analysis of Mr. Kegel and others. The proponents and creators of alternative operating systems such as Linux and Windows software compatibility applications such as WINE have a unique perspective to understand the issues of technical barriers that can be exploited by the Microsoft corporation to continue its illegal practices while obeying the technical demands of the proposed settlement.

Finally, I join Mr. Kegel in many others in urging the Department of Justice to more clearly delineate the mechanisms and processes for enforcing this agreement. The Microsoft Corporation has repeatedly demonstrated a notorious disregard and disrespect for the law, and there is every reason to believe that it will take advantage of any opportunity to engage in behaviors that will erode the intent of this judgement.

Without appropriately defined oversights, authorities to lead and oversee remedies for failure to comply, and the insurance of penalties sufficient to force compliance, it is unlikely that the proposed settlement will result in any true creation of greater competitive environments in the markets currently dominated by the Microsoft Corporation's illegal monopolistic business practices.

Thank you for your attention in this matter.

Sincerely,

Jonathan M. Hamlow

From: Andrew B. Peterson  
To: Microsoft ATR  
Date: 1/23/02 11:58am  
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. There are many problems with the proposed settlement, namely: The PFJ doesn't take into account Windows-compatible competing operating systems:

- Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions:

- The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

- The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

- The PFJ allows users to replace Microsoft Java with a competitor's product, but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

- The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

- The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

- The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

- The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

- The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

- The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft:

- Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.
- Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.
- Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft:

- Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs:

- The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

- The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

- The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

- The PFJ as currently written appears to lack an effective enforcement mechanism.

I believe that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sir / Madam;

I simply wish to voice my opinion with regard to the Microsoft anti-trust suit. Clearly Microsoft have already been found guilty. The only thing that remains is restitution, and divergence from previous business tactics.

Allowing Microsoft to flood the educational markets with free rein is clearly a step in the wrong direction. Judgments should be in the form of penalty not reward. This must include the assurance that no further anti-trust activity can continue.

From: Marc Rassbach  
To: Microsoft ATR  
Date: 1/23/02 12:05pm  
Subject: Microsoft Settlement

I do not see how the proposed settlement goes ANY way to redress the past monopolistic actions of Microsoft.

Nor does it stop them in the future.

Late 1980's. I could not buy a machine w/ o MS-DOS (and later windows) I ran Xenix 286 and Xenix 386, and did not need thier product, yet was forced to buy it.

Last year I needed a laptop. I could not buy a new laptop unless I \*ALSO\* paid for some form of windows. That laptop boots FreeBSD, and \*I\* have never booted Windows on it.

As a consultant, I do not need, nor want to be forced to buy their products just so I can have hardware to run FreeBSD. Yet, that is exactly what is happening. And has been happening for years. Microsoft has used the dominance of DOS/Windows to now levelrage the browser market. Next up is they

will use this dominance to leverage payments out of consumers to view content. The windows media player being built into DVD drives is an example. The use of the DMCA to prevent decryption of the specs to thier re-implementation of kerberos (causing breakage with the standard) is another example of "business as usual" for Microsoft. I know that if \*I\* created false evidence in court, I would have been behind bars right now. Judges do not like people lying under oath. Yet, the end result for Microsoft is remains another day in monopoly paradise for Microsoft, with the governments help.

Part of the rhetoric of 0 /bin/ladin is that the US government backs its corporations. The proposed settlement is more business as usual where the US government helps to back corporations. Show some backbone. Do your job. Work to stop the illegal microsoft monopoly.

Linux is for people who hate Microsoft.  
FreeBSD is for people who love UNIX.  
Windows: "Where do you want to go today?"  
Linux: "Where do you want to go tomorrow?"

BSD: "Hey, are you guys coming or what!?"

To whom it may concern;  
I am against the proposed final judgment in US vs. Microsoft. I feel the damage Microsoft has done to the software and OS marketplace is incalculable, and the proposed settlement does little to correct it. I don't feel the settlement levels the playing field for competing operating systems or office software, and would like to see a much stronger penalty imposed. The proposed settlement does not sufficiently relieve Microsoft of the ability to leverage hardware and computer manufacturers unfairly against competing products, nor does it adequately open the Windows API to programmers.

Date: 1/23/02 11:58am  
Subject: Microsoft Settlement

I am a US citizen, and after hearing of the opportunity for the public to comment on the case I felt compelled to do so. In my opinion the settlement isn't good for the US, it's citizens, consumers, the economy, or the computer industry as a whole. It is also my opinion that in fact the settlement does more to help Microsoft than punish it. Microsoft can not, and should not continue on it's current course without dire consequences to the US economy, and more so the global economy. It has already been proven Microsoft is guilty of anti-competitive practices, yet no real form of punishment has been proposed. As a US tax-payer, and computer user, I insist the government I support place much harsher penalties on Microsoft to prevent them from continuing with the business practices they have been found guilty of.

Thank you for your time.

From: John Ousterhout  
To: Microsoft ATR  
Date: 1/23/02 11:58am  
Subject: Microsoft Settlement

I am writing this message as part of the "public comments" on the proposed Microsoft antitrust settlement.

The proposed settlement is not in the public interest and must be rejected. It neither corrects the damage that has resulted from Microsoft's abuse of its monopoly position, nor does it provide effective measures to restrain Microsoft from future abuses.

In considering this proposed settlement, please consider Microsoft's past behavior. Microsoft is a ruthless organization that will exploit every opportunity and loophole, legal or otherwise, to gain advantage. The company is utterly unrepentant about its past illegal behavior and has that behavior wired into its corporate genes; I doubt that the company could change its behavior even if it wanted to (which it doesn't).

Therefore, it will require exceptional measures to prevent abuses in the future; the measures in the proposed settlement are nowhere near strong enough to restrain a company like Microsoft. For example, the technical committee has its no teeth whatsoever; it can't even go public with its findings!

Imagine a similar case in the criminal domain, with a similar settlement. A gang of criminals has robbed a series of banks, making away with millions of dollars before eventually being apprehended. After an extended trial, the criminals are found guilty. Then, before the sentencing hearing, the prosecutor agrees to a settlement: no jail time for the criminals and they get to keep all the money they stole. However, they do promise not to rob any more banks, and they also agree to the formation of a "technical committee", which will follow the gang around to make sure they don't rob any more banks. However, the technical committee is not allowed to say anything in public if they see that the gang has indeed started robbing banks again. Would such a settlement be considered to be in the public interest? No way! And the proposed Microsoft settlement shouldn't be either.

I believe that the proposed settlement would actually encourage Microsoft to engage in unlawful activities in the future,

because the penalty for the unlawful activity is minuscule compared to the business benefits derived from the unlawful behavior.

What has really happened here is that Microsoft has worn down its opponents to the point where they lost their will to proceed (and the Bush administration had no interest in this case anyway). This is exactly the sort of situation where we depend on a strong judiciary to stand up for the public interest and make sure that justice is done. Please do the right thing and reject this appalling settlement.

Attorney General:  
As a private US citizen, and a practicing software engineer, I want to express my disappointment with the proposed Microsoft settlement. Please note my expressed dissatisfaction with Microsoft's rapacious business practices, and the weakness of the remedies outlined in the settlement.

Microsoft, a monopolist, refuses to embrace any meaningful correction, soldiering on in denial without offering the public any apology following their resounding defeat at trial. Microsoft's incredible display of innocence is surprisingly eclipsed by their cynical jab at Apple as outlined in their attempts to settle the Civil Lawsuits from California.

Please send this intransigent defendant one very clear message. They are guilty and they will pay the price for lawbreaking. Respect for the Judiciary and The Rule of Law is a critical factor when calculating remedies for Microsoft.

In my opinion, the only remedy Microsoft will understand will require some "crown jewels" provision like placing Windows Operating Systems in the public domain. Take a page out of the Drug War playbook: "the fruits of illegal activities cease to be private property and become subject to seizure."

Sincerely  
Marc Giannoni

Subject: Microsoft Settlement

I am writing to you under my rights contained in the Tunney act concerning the

proposed settlement in re the United States vs. Microsoft. I believe the proposed settlement does a poor job in reducing Microsoft's monopolistic power and in providing at least a level playing field to competitors.

In brief, I feel Microsoft has and exercises monopolistic power through its operating system and application products in what may be one of this country's most important industries—computer software. It is generally understood that software is what drives hardware development and sales. Information technology in all of its ramifications is crucial to our competitive position in the world. To leave one company with over 95% control of the basic software used by our IT infrastructure is dangerous.

This danger is compounded by virtue of Microsoft's having attained its position by using monopolistic and anti-competitive practices. It is further compounded by Microsoft's products being inferior in design and structure to other alternatives.

How do we rectify this serious problem? I realize this is a complex question, but the simple answer would be to force Microsoft to place its Windows Application Programming Interface and the file formats of its Office programs IN FULL into the public domain. Over time, programmers and other various interested parties would be able to use this information to provide some credible competition to some, but not all, of Microsoft's monopolistic products. This would foster and preserve our country's strength in IT and would offer competitive products.

Therefore, my request is please make the Windows API and Office file formats publicly available.

Yours sincerely,  
Michael C. Bowen

Subject: Microsoft Settlement

To whom it may concern,

I believe that the proposed settlement against Microsoft is too weak. The findings of fact by Judge Jackson clearly find that Microsoft is a monopoly, and the remedy phase of the trial should include some kind of punishment against the company. This is a company that, based on past experience, will have no trouble complying with the letter of the law in the settlement while blatantly violating its spirit. To them, it doesn't really matter. It'll be another 5 or 6 years before the government brings up another antitrust suit for Microsoft's anticompetitive actions in say, 2001.

The proposed final judgement also does not give adequate powers to the oversight committee. First, how will the oversight committee be chosen? There should be a panel of objective industry experts who understand the software industry in detail. Even so-called experts from places such as AOL and Sun Microsystems all have a personal agenda. Second, what powers will the oversight committee have to punish Microsoft if more anticompetitive practices

are found? They should be given powers to levy extremely heavy fines on Microsoft if this is the case. The fines should be based on a percentage of the revenue they derive from the products or services in which the company exhibited the anticompetitive practices. Something needs to be done to keep Microsoft on an even playing field.

Reject the proposed final judgement. It does far too little to have any impact on Microsoft.

Sincerely,  
Brian Elliott

Subject: Re: Microsoft settlement  
Dear Sirs:

Under the provisions of the Tunney Act, I respectfully ask that my comments, outlined below, be considered by the court before finalization of the settlement of the Microsoft Anti-Trust Case.

The proposed settlement is, in my opinion, a travesty. In order for there to be even a semblance of justice, a proper settlement must:

1. Provide redress to the companies whose software innovation has been denied access to markets by the continuing illegal monopolistic practices of the Microsoft corporation. It is actually frightening to consider all the innovations the computing public will never have because these companies have been denied access to the markets. Not only can their existing products not get to us, but they have been denied the resources to develop additional products that probably would be far superior to the Microsoft products so vulnerable to viruses that we use today.

2. Require restructuring of Microsoft Corporation and require restraints on the resulting companies to effectively deny their ability to achieve the same result yet another time, and provide ALL companies equal and open access to all their products' interfaces and formats.

3. Provide severe punitive economic sanctions to discourage and prevent such an outrageous corporate injury to the free market

enterprise in the United States of America from ever happening again.

Sincerely,  
Laura B. Wick

**MTC-00016757**

From: August Zajonc  
To: Microsoft ATR  
Date: 1/23/02 11:59am  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

The fact that nine states despite a natural tendency to work to settle these cases have not joined the settlement speaks volumes.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. This comment period is a part of the process written into law, and I hope the court at least finds a chance to read through some of these comments.

Sincerely,  
August

From: Esben Nielsen  
To: Microsoft ATR  
Date: 1/23/02 12:00pm  
Subject: Microsoft Settlement

I am not an American Citizen and I do presently not live in the USA, although I have stayed there for 16 months in total as a student and as a scientist. But Microsoft's monopoly is worldwide so I feel I too should have a right to comment.

Now I work as a software developer in Denmark and I feel the enormous pressure on companies and employees for using Microsoft products, not because they are better but because of interoperability problems and lack of support of other platforms by third party products. Simple things like browsing the companies intranet with anything but Internet Explorer because the authorization scheme used by the Microsoft server is not compliant with the

HTTP-protocol. Thus deploying other clients into the company is impossible without redoing the whole infrastructure first. At home we use Linux as the platform, although we still keep an Windows 98 around to run programs only available on Windows. It can be done but due to a lot of interoperability problems and lack of support it is a hard -and mostly impossible for a non-technical home user. Not because Linux in itself is that hard to use, but because the homeuser can't get any help with simple things like setting up his internet dialup and stuff like that simply because those companies don't have supporters who know Linux. They are thus locked into using Windows even though other products in itself might be better.

But in itself Linux is a good product. Which is very surprising considered that it is developed in according to communist principles: Linux itself and much of the software usually coming along with it is developed according to the economical model, where people work and share because they want to do so—not for money. And the result can compete with Windows, the frontrunner of the capitalistic system!! How can that be? All experience tells us that free competition is much better than communism and socialism. So what is wrong? The answer is obvious from the previous sentence: Free competition. We don't have free competition. If we had this situation would never have occurred.

Therefore I beg you to do your duty and restore free competition to the software market. As others have said (for instance <http://www.kegel.com/remedy/letter.html>) the settlement is totally inappropriate in doing that. In my view only a split up of Microsoft into into smaller companies—basically one for each product they have. First then will these and other vendors truly start to compete.

Under the Tunney Act, I wish to comment on the Microsoft settlement's inadequacy in improving the competitive environment in the software industry. I would also suggest a reading of the essay posted here: <http://www.kegel.com/remedy/remedy2.html>

Some serious shortcomings relate to:

1) Middleware.—The current language in Section H.3 states "Microsoft Middleware

Product would be invoked solely for use in interoperating with a server maintained by Microsoft (outside the context of general Web browsing)" does nothing to limit the company's ability to tie customers and restrict competition in non Web-based networked services under .NET, as they fall "outside the context of general Web browsing".

Microsoft has already begun abusing its desktop monopoly to tie customers into .NET revenue streams and set up a new monopoly over the network. Part 2 of the same section states "that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement..." essentially gives Microsoft a veto over any competitor's product.

They can simply claim it doesn't meet their "technical requirements."

2) Interoperability.—Under the definition of terms, "Communications Protocol" means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product on a client computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network." This definition explicitly excludes the SMB/CIFS (Samba) protocol and all of the Microsoft RPC calls needed by any SMB/CIFS server to adequately interoperate with Windows 2000. Microsoft could claim these protocols are used by Windows 2000 server for remote administration and as such would not be required to be disclosed. The Samba team have written this up explicitly here: <http://linuxtoday.com/news-story.php3?tsn=2001-11-06-005-20-OP-MS>

3) General veto on interoperability.—In section J., the document specifically protects Microsoft from having to "document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria" Since the .NET architecture being bundled into Windows essentially builds "anti-piracy, anti-virus, software licensing, digital rights management, and authentication systems" into all levels of the operating system, ANY API, documentation, or communication layer can fall into this category. This means that Microsoft never has to disclose any API by claiming it's part of a security or authorization system, giving them a complete veto over ALL disclosure.

4) Veto against Open Source.—Substantial amounts of the software that runs the Internet is "Open Source", which means it's developed on a non-commercial basis by nonprofit groups and volunteers. Examples include Apache, GNU/Linux, Samba, etc. Under section J.2.c., Microsoft does not need to make ANY API available to groups that fail to meet "reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business." This explicitly gives them a veto over sharing

any information with open source development projects as they are usually undertaken on a not-for-profit basis (and therefore would not be considered authentic, or viable businesses).

These concerns can be met in the following ways:

1) Middleware: Extend middleware interoperability with a Microsoft server to ALL contexts (both within general Web browsing as well as other networked services such as are those being included under .NET).

2) Interoperability: Require full disclosure of ALL protocols between client and Microsoft server (including remote administration calls)

3) General veto on interoperability: Require Microsoft to disclose APIs relating to "anti-piracy, anti-virus, software licensing, digital rights management, encryption, or authentication systems" to all.

4) Veto against Open Source: Forbid Microsoft from discriminating between for-profit and nonprofit groups in API disclosure.

Microsoft has CONTINUALLY engaged in monopolistic business practices, and they have become more obvious in the last few years. I think this settlement is a joke! The terminology is not specific enough and only covers a narrow window of products or items. Without more specific terms, do you really want us to believe that ANYTHING with Microsoft is going to change? They have already started implementing .NET, which will essentially give them more control over the Internet. They are already placing restrictions in their EULAs that make it so you cannot run their software legally on anything other than Windows machines, and you cannot run their software with open-source or free software. Where does this leave the competition? Where does this leave the consumer, of all people? As a professional in the industry, I can tell you that Microsoft has the biggest security holes and the worst prices. Why give them even more room to exploit that? Let's shut them down now, while we still can. Even the playing field so that new technologies cannot be crushed by mere purchasing power. Make the computer industry a fair place to do business.

Subject: Microsoft Settlement

Hello; I am a US Citizen living in Massachusetts, and I would like to comment on the proposed Microsoft settlement as per the Tunney act. Regardless of the wisdom of

settling with Microsoft, I see two major problems with the settlement as written:

1) There is no enforcement mechanism within in the settlement—if Microsoft violates the settlement, what recourse does the public have? In particular, what—timely—recourse does the public have, without starting a new multi-year anti-trust suit?

2) The settlement allows Microsoft the latitude of determining who to disclose its APIs to—which allows is to arbitrarily exclude competitors and also makes it possible for Microsoft to use “anticompetitive” practices against Open Source solutions.

As a computer security professional, I can tell you that overly secretive software combined with poor quality control are a significant source of vulnerabilities. Because of how many civilian government and Department of Defense computers rely on Microsoft software, I believe it is critical to the health of the US information infrastructure to require some level of openness and competition from Microsoft.

Microsoft is obviously guilty of breaking the law. As a de facto monopolist, they are not allowed to engage in such predatory practices.

The exclusionary contracts they struck with PC manufacturers have damaged many companies.

MS products are often designed to exclude the use of applications created by competitors, and MS knows that with their market dominance (to the point of monopoly position) will cause users to have to use MS applications in order to have access. They often take advantage of recognized standards for interoperability and modify them so as to interoperate only with MS products, excluding any competitors. They realize that many of their customers are unaware of this interoperability problem, and will assume that it's the competitors' problem; their solution: just use MS products.

The proposed settlement, allowing MS to continue such anti-competitive methods while still maintaining their monopoly position provide no remedy at all. As a result, law-breaking is rewarded by acceptance of the status quo.

Subject: Microsoft Settlement

To whom it may concern:

When Microsoft gets it right their software is great: as a writer I worship Microsoft word and I feel the Microsoft Office Suite is excellent. I also prefer Microsoft's pocket program for the handheld PC's over Palm's. But Microsoft doesn't always produce the best software, and their browser is a great example.

I use Netscape Communicator because I feel it is more intuitive and user friendly than

Internet Explorer. I have twice tried to convert to Internet Explorer—once for a YEAR!—and both times gone back to Netscape as my preferred browser.

Admittedly Internet Explorer is at this point as good a browser as Netscape's, but only because Microsoft has been forced to equal the competition they squashed.

I recently was forced to install Internet Explorer's latest version into my OS in order to install Microsoft Outlook 2000, which is necessary to have installed in order to sync my Journada 520 handheld with my PC. Now how insidious is that? Microsoft Outlook 2000 is a SEPARATE program from Internet Explorer: at least it's sold that way— it is NOT BUNDLED with Internet Explorer. When I installed the upgraded Internet Explorer it converted all my files saved in Netscape to Internet Explorer files! Thanks a lot! Since I downloaded the I.E. upgrade for free, and it looked pretty good, I actually tried it for awhile. Without going into the details of the various frustrations I ran into with it, suffice it to say I went back to Netscape Communicator within a week.

User preference aside, another reason I prefer Netscape is the security issue: because it is NOT integrated with the windows system my OS is less susceptible to attack from viruses transmitted over the internet.

My personal preference would be for there to be a stripped down, and cheaper, Windows OS available to which I, and computer manufacturers, could add the software they liked: Microsoft's OR a competitor's. This is the only way I can imagine innovation sparked by competition can continue in software. If Microsoft wants to offer their “souped up” system with everything bundled in—fine—but I think it would be surprising how many consumers would opt for the “stripped down” alternative if it was available.

Microsoft's monopolistic practices must be stopped, and in my opinion they should pay compensation to Netscape for the business they stole by giving away their inferior product as an alternative in order to kill their competition. Their intent is so transparent it's ridiculous. I wish you the best of luck in trying to craft an equitable solution which will result in the return to true free enterprise competition in the digital world.

From: Jamie Siglar  
To: Microsoft ATR  
Date: 1/23/02 12:01pm  
Subject: Microsoft Settlement

DOJ/Microsoft Anti-Trust case personnel,

As a concerned citizen, voter, and someone who's already been negatively impacted by Microsoft's licensing shenanigans, I'd like to comment on some elements that seem to be missing from the proposed final settlement.

A little over a year ago, I was preparing to buy my new "box" (PC); as my previous PC was a custom-configured box from Dell, I went up to www.dell.com and attempted to configure my new box there. However, Dell was unable to configure my box the way I needed it; specifically, to sell me a shrink-wrapped ("full") copy of Windows2000 instead of a "recovery disk". Said recovery disk would only support the original configuration of the machine, as shipped to me by Dell. And they couldn't sell me a "bare" box that I could install my own Win2K shrink-wrap version onto.

I'd been alerted to this by a Microsoft-published article, describing to OEM's the "danger" of selling bare boxes—which only experienced developers would ever want...

I complained to Microsoft regarding this licensing problem; as a computer multimedia consultant, I have to reconfigure my box on the order of once per month—testing video, audio, and similar specialized boards (game controllers, video-capture, etc.) for compatibility with my clients' software. Their licensing scheme would, in effect, put me out of business, unless I buy 2 copies of their software for each box.

A member of Microsoft's marketing replied to my complaint, reiterating that bare boxes were dangerous because people could pirate Microsoft's software; however, he never addressed the issue of my business, which I described explicitly.

Instead of buying from Dell, I had a "bare" box built locally; it's never worked as well as my old Dell, and it cost several hundred dollars more than the Dell box would have, could I have obtained the configuration I needed.

I've also had to manually remove pieces of Microsoft software from my boxes; specifically, Outlook Express and Exchange, because the security leaks they pose would force my clients to drop me as a vendor. "Manually" in this case includes deleting the relevant .EXE files and going into the Registry via RegEdit and altering the base configuration so Microsoft doesn't attempt to re-install these applications from the Web. I use compatible mail software ("The Bat" from RitLabs) that does not include the various security holes reported for Outlook in the popular and trade media.

The proposed settlement does not prohibit Microsoft from requiring customers who obtain their software from OEM channels from requiring the purchase of a second copy in order to reconfigure the PC.

The proposed settlement does not prohibit Microsoft from requiring OEMs to sell an OS—not necessarily a Microsoft OS, it could easily be a flavor of Unix—with every PC; nor does it prohibit Microsoft from including intrusive "activation" software within it's OS that attempts to notify Microsoft every time the configuration is changed. I've experienced this with my clients' new XP boxes, and decided against using that OS because of this.

The proposed settlement does not address Microsoft's continuing anti-competitive behavior that allows them to product-dump—the inclusion of OutlookExpress and Internet Explorer specifically—by including their own software for "free" as part of the OS. This has already driven Netscape out of business, and with some of the aspects of the Windows Media Player may be targeted at Adobe, Macromedia, and Real.

The proposed settlement does not prohibit Microsoft from using an "upgrade" to included software from crippling third-party software; this past fall, upgrades to the Windows Media Player and Internet Explorer caused failures in old code (produced in Director "Shockwave" and Authorware "WebPlayer" from Macromedia, and "RealAudio" from RealPlayer) when I attempted to view year-old sites I'd created using the brand-spanking-new IE6. They still work perfectly under IE5.5.

In closing, while I believe the intent is good, I don't see that the current proposed final settlement does enough to curb Microsoft's anti-competitive behavior; but I think that the proposal could be adjusted to make it closer to ideal.

Whether Microsoft, the AG's office, and the states can all agree to changes is another story entirely. Obviously. Thanks for your patience and consideration,

Jamie Siglar

Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. As an experienced technical consultant and business owner, I would like to point out the following reasons why I do NOT support the proposed settlement:

I. The PFJ doesn't take into account Windows-compatible competing operating systems

A) Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

II. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

A) The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

B) The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

C) The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET, and subsequent similar products with competing middleware.

D) The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

E) The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

F) The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

G) The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

H) The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents or other similar applications.

I) The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users and non-Microsoft software developers, and opens the doors to potential future lawsuits against Microsoft competitors.

III. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

A) Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

B) Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

C) Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux!

(Similar licenses to OEMs were once banned by the 1994 consent decree.)

IV. The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

A) Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. Modified implementations of Java and the Kerberos authentication protocol immediately come to mind.

V. The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

A) The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

B) The PFJ allows Microsoft to discriminate against small OEMs—including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

C) The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

VI. The PFJ as currently written appears to lack an effective enforcement mechanism.

Thank you for your time.

I do not agree with the proposed final judgement in the Microsoft case. It is true the the proposed judgement will lift some barriers on OEMs, it does not take into account the changing business model of Microsoft. Microsoft, with its new .NET technology, will be starting its subscription service, which will require people to “pay” for a product that is many years old, and could potentially contain very little new material.

Any third party application that is made to run on the OS will be subject to this subscription, whether or not the third party software requires a subscription of its own. So, a third party application that is made to run indefinitely, will be subject to the term limits under Microsofts subscription. This is wrong. Third Party applications that have no term limits, and should be accessible forever, independent of the OS. The final judgement does not even mention this, and hopes to solve the problems of yesterday, with OEM licensing and releasing APIs to the Microsoft OS. Until the judgement takes into account all aspects of the Microsoft business (past and future) it needs to be reworked.

To Whom it may concern:

As a citizen of the United States of America I am writing to voice my opinion and objection to the proposed settlement with Microsoft. Microsoft has been found guilty of the charges brought against them in a court of law. These charges were proven and since that time Microsoft has continued to practice the same disregard for the law that they showed before the Department of Justice found them guilty. Microsoft obviously cannot be trusted to police themselves even after the verdict was handed down and cannot be trusted to do so under a settlement that solely benefits them and grants them massive loopholes to continue their monopolistic practices.

It was shown over and over again in the trial that Microsoft hindered inovations of the other companies in their own interest. They used their monopoly in the operating system market to force computer manufacturers to offer ONLY their products and used their relationships with software developers to develop only for their products under harsh penalties. The Microsoft settlement is a disservice to the people of not only the US but of the world. It will not address the issues in a manner that will prevent or deter Microsoft from continuing their current agendas and will give them license to do so.

As I said above, even after the verdict was handed down against them Microsoft has continued to be caught in the same illegal practices they committed before. Does this not show a deliberate disregard for the law and for the judgement against them? This settlement should not be allowed to hamper the hands of the Justice Department in protecting the citizens of the United States.

Sincerely,

Date: 1/23/02 12:02pm  
Subject: Microsoft Settlement

The proposed Microsoft settlement is a bad idea. Please do not allow it to move forward in its current form. Microsoft is once again using the terms of an agreement to wipe out competition. Specifically, because Microsoft maintains an operating system monopoly, Section III(J)(2) will leave Open Source projects such as Apache, Samba, and Sendmail very vulnerable to Microsoft's predatory practices. Because under the terms of this agreement, Microsoft would not be forced to describe or license protocols that affect companies that don't meet Microsoft's criteria as businesses. This would effectively allow Microsoft to write code in such a way as to make it impossible to use with Open Source code, thereby forcing users of Microsoft operating systems to use only software that Microsoft creates itself or allows non-competitors to create.

Microsoft is doing what it has done many times in the past. It has squashed competitors through tactics of intimidation, buyout, and outright theft. Now it is attempting to reverse the initial verdict which declared unequivocally that they were a monopoly, back to their advantage.

As a taxpayer, I find it disgusting that Microsoft is allowed to act in such a cavalier manner toward the US justice system. They continually display an arrogance that shows they have no regard for the law. Please, do not allow them to remap the playing field to their advantage. It is not in the interests of the United States for one company to exert so much control over the electronic infrastructure of our country—as ongoing and extremely alarming security problems with Microsoft products demonstrate.

From: Alan Eshelman  
To: Microsoft ATR  
Date: 1/20/02 12:03pm  
Subject: Microsoft Settlement

Microsoft calls the open source software movement a threat to innovation and is being given permission to withhold interoperability information from any open source developer if Microsoft deems them lacking in “authenticity and viability of its business,” while at the same time calling Linux (an open source operating system) a “cancer.” This is a huge hole which will be exploited by microsoft, please fix this and make Microsoft accountable for their past actions and prevent future abuses by this monopoly.

Even more disturbing is this from Ralph Nader's letter: “Even within the brief period of the term of the agreement, Microsoft has too much room to co-opt the enforcement effort. Microsoft, despite having been found

to be a law breaker by the courts, is given the right to select one member of the three members of the Technical Committee, who in turn gets a voice in selecting the third member. The committee is gagged, and sworn to secrecy, denying the public any information on Microsoft's compliance with the agreement, and will be paid by Microsoft, working inside Microsoft's headquarters. The public won't know if this committee spends its time playing golf with Microsoft executives, or investigating Microsoft's anticompetitive activities. Its ability to interview Microsoft employees will be extremely limited by the provisions that give Microsoft the opportunity to insist on having its lawyers present. One would be hard pressed to imagine an enforcement mechanism that would do less to make Microsoft accountable, which is probably why Microsoft has accepted its terms of reference."

Please repair these things, Microsoft is not being punished, monitored, or restricted in its illegal practices by the "US v. Microsoft proposed final order."

Subject: Microsoft Settlement

I would like to make my comments on the proposed Microsoft settlement and will try to avoid the normal rhetoric from either side.

The legal decision has been rendered that Microsoft is a monopoly. That creates certain responsibilities that do not apply to a non-monopoly holder. Given Microsoft's position and the critical nature of their software in the current US economy, I believe the most important requirement is publishing and documenting the API for everything. That allows programmers to write programs to connect with and interact with Microsoft's programs and operating systems.

I do not believe giving Microsoft the ability to decide which APIs it will publish is in the best interests of the country or the economy or the consumers. Giving such control away to Microsoft effectively gives them the ability to limit any competition. Lack of competition is bad for the consumer. (If the consumer was not being overcharged, Microsoft would not be increasing its cash by an estimated \$1.5 billion/month). The documentation needs to be sufficient that programmers can write programs that connect with the Microsoft operating systems, "middleware" and

applications products on a level playing field with the Microsoft programmers.

However, I also don't believe that Microsoft should have to publish anything which is behind the API. Such an action would be too much interference with Microsoft's ability to compete itself.

I object to being forced to buy computers with Microsoft software (with a built in price increase) that I have no intention of using. I also object to discovering language in EULA,s that limit my ability to use the software that I have "licensed" to a single computer, that I cannot modify without the permission of Microsoft, that I cannot use for purposes that Microsoft finds objectionable (e.g., using their word processing program to write a letter critical of Microsoft), and that effectively asserts some type of control over hardware that I, not Microsoft, own. (By the way, I do find it incongruous that Microsoft and other "applications software" developers claim property rights based on licensing, not sales, but then want to pay customs and income taxes based on "sales", not "licenses".)

Very truly yours,  
Peter F. Hiltz

Subject: Microsoft Settlement

To whom it may concern;  
Please consider this a vote AGAINST the current Microsoft anti-trust settlement. I feel that the current settlement will do little to stem the rising tide of Microsoft monopoly abuses; in its current form Microsoft can easily pay tremendous fines unfazed; or pay lip service to any well intentioned restrictions while doggedly pursuing (as they are currently with Windows XP) further abusive strategies while "redefining" the market, products, and tactics to make those abuses technically not covered by the settlement. Microsoft has shown itself to be an abusive monopoly, willing to pursue even the most reprehensible courses of action to ensure their dominance. I strongly suspect that only fundamental structural changes to Microsoft (ie, a breakup) will have any lasting benefit for the citizens of the USA.

Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. There are many problems with the proposed settlement, namely:

The PFJ doesn't take into account Windows-compatible competing operating systems:

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions:

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product, but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft:

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft:

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs:

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism.

I believe that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,

Lauren

Subject: Microsoft Settlement

To Sir or Madam:

It is my belief that the proposed Remedy for the Microsoft Anti-trust violation is

insufficient to alleviate the situation. It fails to adequately “unfetter a market from anticompetitive conduct”, terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future” (Court of Appeals ruling, section V.D., p. 99).

Please consider a stronger remedy. Microsoft to date has shown us little to no reason to think it capable of self governance in these areas.

Anti-competitive practices continue unabated.

Thank you for your consideration,

Philip R. Auld, Ph.D.

From: Conder, Daniel

To: 'microsoft.atr(a)usdoj.gov'

Date: 1/23/02 12:03pm

Subject: Microsoft Settlement

Short Answer: I urge to not settle.

Long answer: but very worthy of reading. simply explains A conflict of interest arises if the company writing the operating system (OS) is the same company that writes applications (APPs). The intermingling of OS and APPs gives MS a huge unfair advantage. MS will argue that they are simply making their OS better. Do not be fooled by this. They can still do all of the features they want and include them in their OS.

Solution: These additional functionalities to the OS are offered via the API (application program interface.) This published non-visible interface can then be used by all software application manufactures including MS to write software.

A good place to draw the boundary between OS and APP is where the code has a GUI (graphical user interface) or in laymen's terms if you can see it on the screen.

Any settlement should have a provision to address this problem.

Daniel Conder

#### MTC-00016812

From: Walt

To: Microsoft ATR

Date: 1/23/02 12:03pm

Subject: Microsoft Settlement

This a message to voice my concern and opposition to the revised proposed Final Judgement against Microsoft.

There are many flaws (legal technicalities perhaps) in the proposal. For example, definition U (Windows Operating System Product) is too narrowly defined and leaves much room for Microsoft to maneuver and avoid disclosure of information. Without much effort Microsoft can make sufficient changes to declare that their next WOSP is sufficiently different from its precursors that it is not a successor to any of them. The definition also does not include other products such as its PocketPC and TabletPC operating systems.

I am also concerned that the proposal does not provide any substantive mention of Microsoft.NET. This is a potentially massive market that Microsoft has publically stated is their main focus. The potential for anticompetitive behaviour is great and Microsoft has the capability to create a very high barrier to entry for the market in short order.

I would like to provide more but the major arguments have been well thought out and detailed at <http://www.kegel.com/remedy/remedy2.html>. I would encourage you to visit the link.

From: John (038) Trudy Phillips

To: Microsoft ATR

Date: 1/23/02 12:02pm

Subject: Microsoft Settlement

As a citizen of the US and a long time computer user, I am distressed over the proposed Microsoft Settlement. Most of the settlement allows Microsoft to continue their monopolistic practices.

I will address two issues which are indicative of the greater problems with the proposed settlement. One, all the restrictions

only address commercial competitors. Not for profits, such as Apache, the major competitor in server software, and Linux, an operating system competitor, have no rights as the settlement is written.

Two, the proposal to give schools Microsoft technology or "credit to purchase other products" only allows Microsoft to monopolize the education market. The education system is so grossly underfunded that it would be forced to take the larger number of Microsoft refurbished products rather than purchase a lesser number of non-Microsoft products at retail value. Please consider modifying the settlement to truly solve Microsoft's monopolistic practices.

Sincerely,  
Trudy E. Phillips  
Lynchburg, VA

From: David Kingsbury  
To: Microsoft ATR  
Date: 1/23/02 12:04pm  
Subject: Microsoft Settlement

I am opposed to the proposed Microsoft settlement. The company was found guilty and this finding was upheld. It would be a waste of taxpayer money to let the results of this trial be thrown out by not imposing sanctions that are equal to the crime committed. Microsoft has had similar "wrist-slaps" in the past and both past and current actions indicate they will not change their way of doing business unless more stringent penalties are enacted. I personally have been impacted in harmful ways by Microsoft's past (and current) actions. While I would prefer the market to penalize Microsoft for their actions, the market in this case is so damaged that other remedies are needed. They have been tried and found guilty. Please do not let them off the hook yet again.

David Kingsbury

Subject: Microsoft Settlement

To whom it may concern,

This is my voice on the proposed Microsoft Settlement. I feel that the proposed settlement will have little impact on Microsoft as a Monopoly or the way in which they conduct business. Microsoft has proven to me, from the beginning of this trail, that they care little for consumers best interest, but simply their best interest that all consumers run ONLY their software. They have also shown that they have never cared about the voice of the people who feel that they are not just in their actions, nor do they feel that our government will have any effect to them or their business practices. When I read the proposed settlement, I find that latter could very well be true.

I am not going to begin to bring out specific points in the settlement that I feel need altered, removed, or any that need added simply due to the fact that there are documents that have already adequately described my feelings. These documents I am

in the process of co-signing and they will be delivered to you as well.

I am one voice. A single voice that cries out that justice be served. A single voice that hopes that it can help make a difference. A voice that does not have great material assets to directly challenge the powers that I disagree with. But I am a voice that cries out what I believe, and when joined with the voices of others that feel as I do, I am a voice that hopes that together we are heard. Most important, I am a voice that cries out because our country is founded on the belief that everyone has a right to express their concern on issues, and that their concern can be heard, and considered when decisions are made that will ultimately effect our lives, and the lives of every citizen.

Thank You,  
Brad Myers

Date: 1/23/02 12:04pm  
Subject: Microsoft settlement

Dear Sirs,

Microsoft has done irreparable damage to the computing industry as a whole, and inestimable damage to the American economy. To let them continue to practice their anti-competitive practices is unthinkable, yet this is exactly what they intend to do. Since Microsoft does not have the wisdom and foresight to control itself, it is obvious that other measures must be taken before it is too late. I believe that the proposed settlement is bad. It is nothing more than yet another indulgence to a company that has had far too many. I believe that much stricter and harsher consequences must be levied upon Microsoft to bring them back into line and to help re-open the door to innovation and healthy competition that is the hallmark of American business.

I say this as an expert in technology; I have a Bachelor's of Science in Computer Science and I have been very familiar with technology for nearly a decade. I have seen many better companies and many better products than the ones that Microsoft produces be wiped out of existence merely to sustain Microsoft's profit margin. Please do not let them continue to stand in the way of progress and freedom.

Date: 1/23/02 12:05pm  
Subject: Microsoft Settlement

B. Appointment of a Technical Committee  
8. The TC shall have the following powers and duties:

c. The TC shall have access to Microsoft's source code, subject to the terms of Microsoft's standard source code Confidentiality Agreement ...

This seems unreasonable to me. "subject to the terms of Microsoft's standard source code Confidentiality Agreement".

This lets Microsoft define terms of this agreement via a back door. They could theoretically design multiple agreements and have the TC member(s) essentially denied access to anything of Microsoft's choosing.

They technically could have a separate agreement for each piece of code. Have the confidentiality agreement be a standard military confidentiality agreement or some other recognized unbiased confidentiality agreement. In addition, which ever confidentiality agreement is chosen will be fully reviewed to the extent that it does not compromise the TC member(s) but does protect Microsoft from TC member abuses.

What????? I just finished reading the REVISED PROPOSED FINAL JUDGMENT. What is this a slap on the wrist? What were they found guilty of? A misdemeanor? I believe that the Microsoft Corporation was found to be guilty of egregious violations of the Anti-Trust Laws. As such punishment should be commensurate or example setting as they have been found guilty of being a monopoly and for monopolistic practices.

A proper settlement would include but not be limited to requiring full source code disclosure for all products that are delivered to non-microsoft personnel the moment that they are made available to any group within the Microsoft Corporate other than the group having developed the software. This includes documentation as well. The delivery of source code as well as documentation shall be provided separately and simultaneously at a minimum on the same media as the product.

In addition, all patents held by Microsoft, or any subsidiary, shall become public domain, without the possibility of reinstatement. Further, all applications for patents for software (including hardware encoded software) shall be summarily rejected for the duration of this judgment.

In addition, Microsoft shall warranty all of their software for a term of no less than 10 years, and shall provide full, unhindered support for all of their warrantied software for twice the duration of the warranty on said software. This provision will be in effect in perpetuity for no less than 50 years from the effective date of this final judgment.

In addition, Microsoft shall not retaliate against any OEM that seeks to alter a base installation of any Microsoft Operating System Product. Further Microsoft shall not retaliate nor require in any agreement, verbal, written, or understood the bundling of software. Microsoft shall not retaliate against any OEM for choosing to offer or install non-Microsoft products in a bundle or separately with any Microsoft Operating System Product. Microsoft shall not require payment for any Microsoft software that is not delivered as a part of an OEM offering whether the offering purchased or not. Microsoft shall not enter into exclusive agreements with OEMs. Microsoft shall not enter into agreements with OEMs which restrict OEMs from any type of non-Microsoft agreement(s).

Microsoft shall not discriminate with respect to purchasers of their software, whether it is for development, or use, or any other reason. Microsoft shall retain copyrights and trademarks for their software. Microsoft shall define those programs that constitute the Microsoft Operating System. Those programs cannot be unbundled from the Microsoft Operating System. This will form a baseline. Any programs that are added

above and beyond this base installation shall not be bundled with the Microsoft Operation System(s). They shall be offered separately at a cost greater than the cost of media plus the cost of applying said programs to the media. Additional functionality cannot be added to the baseline at a future time. This is primarily for purposes of new dlls or other executable pieces of code or software.

Changes can be made for purposes of fixing bugs/errors. Additional features shall not be added to the baseline software installation.

Sincerely,  
Richard Burk

From: Greg Hanson  
To: Microsoft ATR  
Date: 1/23/02 11:55am  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am against the proposed settlement for Microsoft. I believe this settlement will not bring any harm to, or even slow down Microsoft. Microsoft has an illegal monopoly that should be punished for what it has done.

Some of Microsoft's biggest competitors are not-for-profit companies. The number one competitor of Microsoft's Internet Information Services is the Apache web server, run by the Apache Foundation, a non-profit organization. A large reason that businesses these days are changing to Linux is because of its interoperability with Microsoft products. Samba interfaces with networked computers running Windows. Wine runs software made for Windows in Linux. If Microsoft is allowed this settlement, they can use their monopolistic powers to crush Samba and Wine, making Linux look much less appealing to businesses. The non-profit companies, such as Samba and Wine, need to be able to access Windows source code in order to be able to interface properly. Without the obligation to publish source code, Microsoft will change enough code with every release too crush these companies.

These free open-source projects are the future of software. This settlement is not enough. All companies, commercial or not, need to have access to Microsoft source code and protocols. Free software is a competitor to Microsoft, but will soon be dead if the proposed settlement goes through.

Subject: Microsoft Settlement

I am vigorously opposed to the proposed settlement in the Microsoft antitrust trial. The proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. Also, the proposal provides inadequate reparations to those injured by Microsoft's anti-competitive behavior. Hundreds, even thousands, of

small companies have ceased to exist over the decades because of Microsoft's business practices. Microsoft seeks to stifle competition, rather than produce a better product.

I applauded the Clinton administration's courage to prosecute Microsoft for their anti-competitive behavior and was disgusted by the Bush administration's decision to acquiesce when the government had the superior position by rule of the full bench of the U.S. Court of Appeals. The Department of Justice's (DOJ) settlement was brokered by Bush administration appointee Assistant Attorney General Charles A. James, head of the DOJ's antitrust division. But career officials at the Justice Department, who had pursued the case since the beginning, displayed their displeasure with the agreement by not signing it. Also, the Attorneys General of 9 states and the District of Columbia found the proposed settlement to be substantially inadequate.

I hope that the results of this settlement will encourage more innovation and competition in the software industry. No one wants Microsoft to disappear, just to allow others to compete with them.

Thank you.

From: Peter Mastren  
To: Microsoft ATR  
Date: 1/23/02 12:05pm  
Subject: Microsoft Settlement

I am concerned about the lack of credible competition in the home PC marketplace. A perfect example of Microsoft's total dominance in this area can be found in the Fry's Electronics advertising supplement to the Houston Chronicle on two successive Fridays, Jan 11, 2002, and Jan 18, 2002. In the January 11 issue there appeared an ad for an "Internet Ready Multimedia PC" complete with "Linux 1.3 Shell with Web Browsing, E-mail and Word Processing capabilities" for \$299.00 with a feature bullet item stating "Upgradable to Windows XP".

In the January 18 issue there appears the very same "Internet Ready Multimedia PC" but now "With Bonus: Windows XP" for \$399.00. The computer is \$100.00 more than it was just a week before and Windows XP is no longer an option but comes included in the "In Store Price".

The computer advertised on January 11 would satisfy the needs of many home computer users but it is no longer available. They must now pay an extra \$100.00 for the same computer and get a copy of Windows XP that they might not need nor even want.

How is this good for the consumer? How is this good for anyone but Microsoft? Where can I, as a consumer, go to find a computer that does not include Microsoft Windows? It's not possible, short of building my own computer from component parts, which is way beyond the abilities of most consumers!

Microsoft must be prohibited from including Windows in the purchase price of a new computer but should be required to offer it as an additional cost, optional upgrade. I demand the right to purchase a computer with the software I want, or no software at all, instead of being forced to pay for something I will not use.

I am concerned that the proposed settlement does nothing to prevent this type of abuse and that it will continue to be business as usual. Thank you for the opportunity to express my opinion.

Subject: Microsoft Settlement

Hello,

I don't like the proposed Microsoft settlement. If the crime is "monopoly", then the punishment can't be "give your monopolistic software to our school kids". What better way to support the propagation of monopolistic software and practices? Also, what would the actual cost be to Microsoft if they give a market value of 1 billion in software to schools? The cost of software without support is very low... because Microsoft has already paid for all the costs associated with creating the software. For every \$300 boxed set of Win2000 they "give away", it probably costs them \$5 to \$10 to produce. This isn't punishment.

Subject: Microsoft Settlement

I would like to voice my objection to the proposed settlement of the Microsoft antitrust case. It is not a fair settlement and it will have no real effect on Microsoft's predatory behavior.

Microsoft has shown a long history of putting other companies out business by using their operating system monopoly. No applications software product stands any chance if Microsoft incorporates similar functionality into the operating system, bundles their own version with the operating system, or can provide deals to OEMs to use their software as part of operating system licensing.

The only remedy that will promote a fair playing field for software vendors is to distinctly separate the operating system from the applications. Microsoft's operating system group must be split off into a separate company from their applications group.

Only when the operating systems group does not have such extreme conflict-of-interest in favoring one group of applications over another can the software market be open to innovation. Without it, the operating system can always be written to favor Microsoft's own software and disadvantage everyone else's. It doesn't matter how many people are watching over them, by the time the damage has been done, it is irreparable. The software market moves too quickly for after-the-fact remedies. You must take steps to pre-empt the predatory behavior from ever starting.

It has happened before, most notably in the web browser, and Microsoft has begun to

usurp system control in favor of its .NET services. Can any other internet services provider compete against an application that is repeatedly offered and re-offered by the operating system itself? That is already a fact in Windows XP. No one would fund a start-up software company that might even approach competing against .NET. The next generation of innovation has already been stifled.

Reject this flawed settlement and do some real good for the economy. Force Microsoft's applications and internet services and every other division to compete on a level playing field. Separate them from the operating system and stop letting them stack the deck in their favor.

Subject: Microsoft Settlement

To whom it may concern,

I am taking the time to add my voice in protest to the proposed settlement of the DOJ's action against Microsoft. Briefly, I am disturbed that no real action is being taken to correct or constrain the monopoly that Microsoft has illegally used to build and maintain its near-total domination of the personal computer industry.

I for one felt that the original judgment breaking Microsoft into two or more separate business entities was a workable solution. So long as sales of the operating systems can be tied to sales of applications and services (eg Office and IIS), Microsoft will continue to dominate this industry.

Microsoft's operating systems must be limited to basic services upon which new products and services can be built. An operating systems provider should not be allowed to develop or market products and services as it has an unfair advantage. The operating system provider has access to the underlying code and developers (special knowledge of the operating system), and it is able to offset the cost of developing new products and services with revenues derived from operating systems sales.

The current solution does not address any of these concerns and permits Microsoft to continue to dominate an important sector of our economy. I feel confident that if Microsoft were properly constrained, they would commit to building a quality operating system that the rest of the world could use to base new ideas and inventions upon. As it stands, the monopoly that Microsoft yields like a club will continue to stifle the innovation that they are so vocal about promoting.

From: Joe Sislow  
To: Microsoft ATR

Date: 1/23/02 12:07pm  
Subject: Microsoft Settlement  
To whom it may concern:

I am writing to express my displeasure with the proposed Microsoft Settlement. The simplest reason is that there is no effective enforcement laid out within the scope of the settlement. Basically, it seems that Microsoft is free to break the rules with nothing but another long court case as a possible repercussion. All the while, Microsoft is free to continue eroding the competition until it is next to impossible to revive.

In addition, the main way that Microsoft has established and maintained its monopoly is by creating an Applications Barrier to Entry. The sections of the settlement do little to prevent Microsoft from continuing this behavior. The key area for this would be to establish that Microsoft not only open its API layer, but also any data formats that it develops. In this way, they cannot prevent rival applications from developing software that is compatible with their system or their applications.

Thank you for your attention.

Subject: Microsoft Settlement  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

To Whom It May Concern;

I have been outraged at the seemingly weak willed and weak minded actions my United States Government Justice Department is taking in the Microsoft antitrust actions. I have personally worked for companies and been exposed to Microsoft both on the business realm and with product related issues as a developer and as a user. I have worked for start-up companies which were damaged by Microsoft's business actions. And now I see my Government throwing in the towel after my fighter has scored a major blow to the opponent.

The current proposed settlement to the Microsoft Antitrust case is a sham. It is amazing that my government would even consider this as a just result.

As an example, the consideration that the implied enforcement of this settlement will be overseen and ensured by a Microsoft employee is ludicrous. This is equivalent to catching a fox eating a chicken in your hen house and then leaving the fox's little brother to insure it does not happen again, WHILE LETTING THE OFFENDING FOX STAY IN THE HEN HOUSE.

What are you thinking at the Justice Department? Have you all given up? Have you sold out? If so then save us taxpayers a lot of money, resign from your posts and go home. The vacuum you leave will be filled, hopefully with someone more interested in working for the good of the citizens.

Kevin O'Mahoney.

From: Tetrick, Scott  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 12:06pm  
Subject: Microsoft Settlement

In my view, the remedies proposed for Microsoft are wholly invalid. The proposal do nothing to punish past behavior, and little to deter future transgressions. In order to remedy the situation, Microsoft should be required to:

\*release publically all APIs, file formats, and compliance tests of the same, without compensation. The public release of information must be prior to the release of a product using those APIs and formats.

\*eliminate bundling of features into the OS. All incremental features must be removable and replace-able, both by OEMs and users.

\*eliminate OEM licenses that require purchase of Windows with each computer, even if this is eventually deleted.

\*eliminate EULAs, retroactively, for all Microsoft products. This will allow Microsoft to benefit from its monopoly status only if it provides quality and service. Failure to provide such service by a monopoly should be punishable.

Respectfully submitted

R. Scott Tetrick

From: Paul Pelzl  
To: Microsoft ATR  
Date: 1/23/02 12:08pm  
Subject: Microsoft Settlement

To whom it may concern:

I am an electrical engineering graduate student who has logged many hours both using and programming computers. I have used Microsoft operating systems as well as several Open Source operating systems, and thus am intimately aware of the difficulties associated with making a transition away from Microsoft software. I feel strongly that the proposed Microsoft settlement will do little to repair the damage of past monopolistic practices, or to prevent future antitrust law violations.

I see many problems with the proposed settlement, but I will bring up just one important issue here. Microsoft Office file formats have become the industry standard. Consequently, it is impossible to correspond with many businesses without the use of MS Word and MS Excel files. I believe that a fair settlement must require Microsoft to open up the specifications for these file formats (both present and future versions), so that competing software products can interact with these files. Without this additional action, I see little hope for fair competition in the office software market.

Thank you for your attention.

Sincerely,

Paul Pelzl

Subject: Microsoft Settlement

I am writing to oppose the proposed final judgement in the Microsoft antitrust case.

This proposal is, at its heart, in no way significantly different from the previous judgement against Microsoft which was all but ignored. A slap out the wrist means nothing to Microsoft; stern admonitions they blithely ignore.

Far more appropriate would be forcing Microsoft to fully disclose, royalty free to the entire world, all information necessary to create products that can read and interpret all Microsoft file formats and communications protocols. That way, anybody would be fully capable of competing with Microsoft on a level playing field. As it stands, Microsoft uses its monopoly power to prevent any meaningful interoperation with its products. Potential competitors can't even get started.

If you should wish to discuss this matter further, please feel free to contact me via email; telephone at +1 (480) 966 9472; or postal mail at Post Office Box 964, Tempe, Arizona 85280-0964.

**MTC-00016836**

From: David Muir Sharnoff  
To: Microsoft ATR  
Date: 1/23/02 12:07pm  
Subject: Microsoft Settlement

I am opposed to the proposed settlement because I do not think it will change Microsoft's behavior.

I believe Microsoft's behavior needs to be changed for a whole bunch of reasons that all stem from one basic truth: Microsoft does not play fair. The Findings of Fact are true. Microsoft has enormous natural advantages because of its resources, and market position. Despite these advantages, they feel that the must leverage their monopoly position in illegal ways to gain further advantage.

The proposed settlement does not make the expected costs of continuing to their behavior high enough for the cost-benefit calculations to shift their point-of-view to a new position where they would not try to get illegal leverage from their monopoly position. It doesn't come close because there is no stick. There are no big fines and there is no breakup. There isn't anything that will make them scared.

Why do I care?

I care because Microsoft technology is bad. Microsoft does well in terms of integration—making many things work together—but it does badly in terms of reliability; flexibility; scalability; and security. This last point is particularly important in this post-911 world we live in. The Internet infrastructure that so much of our economy depends on is vulnerable to many kinds of denial- of-service attacks. Most of these vulnerabilities exist because of one thing: security problems with Microsoft products.

The security problems with Microsoft products do would not be a big deal if there weren't so many computers running Microsoft products. The infrastructure itself is mostly non-Microsoft but because there are so many systems that can be used to attack from at once (compromised Microsoft systems) the sheer volume of attack can overwhelm any part of the Internet.

I avoid using and buying Microsoft products as much as possible. I cannot avoid them altogether because people I interact with create documents that cannot be viewed without using Microsoft products. This is very much unlike the rest of the software that I use. The rest of the software that I use attempts to use standards so different programs can still access the same content.

Microsoft may employ many programmers but Microsoft is not a technology company. Microsoft's primary expertise is in marketing. Much of their technology is purchased. In their recent PR work, Microsoft has asked for the "freedom to innovate". The freedom to innovate that they are asking for is the freedom to innovate in marketing. Technology they can just buy, but a marketing using unfair tactics requires a lot of freedom.

Who am I?

I am a computer programmer; the owner of a Internet Service Provider; and the CTO of

an Internet startup that is attempting to diintermediate the academic publishing process and thus make academic journals more timely and more affordable.

Thank you,  
David Sharnoff

From: Christophe de Dinechin  
To: Microsoft ATR  
Date: 1/23/02 12:06pm  
Subject: Microsoft Settlement

As a software engineer with over 15 years' experience, I would like to comment regarding the Proposed Final Judgment in United States v. Microsoft.

The proposed remedies fail to restore a competitive environment: their weakness actually encourages Microsoft to continue with the anti-competitive practices which have successfully killed or harmed competitive products and companies such as Apple (QuickTime), Be (BeOS), Digital Research (DR-DOS), Geoworks (Ensemble), IBM (OS/2), Netscape (Communicator), Novell (Netware), and many others. All of these products were vastly superior to what Microsoft could offer at the time, and some of them had the backing of large and competent organizations. In all cases, "dirty tactics" from Microsoft have been demonstrated and documented widely.

To help consumers, a settlement must restore competition in such a way that the tactics applied by Microsoft against the products cited above would no longer be possible. The current settlement fails by that measure. As such, I consider it insufficient. I therefore ask you to reconsider the settlement and to take the time to ensure that it is effective.

Regards,  
Christophe de Dinechin

Subject: Microsoft Settlement  
Hello,

I'm writing to express my opinion of the Proposed Final judgement in the United States v. Microsoft case. I feel that the Proposed Final Judgement is too narrow, if not downright misleading, in it's definitions. An example is the way that it requires Microsoft to release API documentation, but competitors that might wish to make their operating systems compatible with Windows are prohibited from doing so, making the release of the API documentation an empty gesture. This is just one of the many problems with the Proposed Final Judgement, which I believe are proof that the Proposed Final Judgement does not satisfy the Court of Appeals' Mandate. As such, I feel that the Proposed Final Judgement is not strong enough and should be reconsidered.

Ross Beyer

**MTC-00016842**

From: Eric Eslinger  
To: Microsoft ATR  
Date: 1/23/02 12:08pm  
Subject: Microsoft Settlement

I feel that the Proposed Final Judgment in the Microsoft Antitrust case will do very little to benefit the people of the United States. The PFJ is essentially a wrist slap that allows Microsoft to continue its predatory business practices.

I feel that the crux of the matter is that third party developers of competing software and "middleware" are not protected at all by the PFJ. The definition of API and Middleware are overly narrow, and the actual disclosure is not sufficient.

Microsoft did a Bad Thing, and was found to be in violation of Antitrust laws. The punishment should be uncomfortable for them. Forcing them to completely open and disclose all of their operating system and application APIs would foster much healthier competition. In this market, where Microsoft

tends to view bugs and security flaws as publicity problems rather than development problems, this kind of openness and the plugability it would foster would tremendously benefit not only the myriad smaller businesses that would better be able to compete; it would also benefit the end users of Microsoft software.

This is a single point about the PFJ that I feel is problematic. I do have other problems with the PFJ, and if you are interested in hearing more, feel free to contact me at any time.

Dear Honorable Justices,

Please support the proposed Microsoft Federal Antitrust Settlement as it mitigates the issues that led to this suit, and allows Microsoft to focus on innovation and not litigation. Providing good relations and flexibility with computer makers, uniform pricing, and disclosure of Windows? interface will allow the necessary competition so that a host of products can be unveiled for the benefit of all consumers. The Three-Person Technical Committee will provide the crucial oversight for compliance more effectively than any judicial reorganization.

Using Californian's money to pay for continuing a costly trial is not prudent at this juncture. Please finalize the Microsoft Settlement so that all concerned parties can move forward with the crucial economic issues.

Thank you.

Subject: Microsoft Settlement

Although these aren't my own words, they sum up my feelings on the settlement so well that I'd like to repeat them here:

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Jeff Bitgood

From: Andy Poggio  
To: Microsoft ATR  
Date: 1/23/02 12:09pm  
Subject: Microsoft Settlement

The settlement currently proposed in the Microsoft case does not restore competition in the computer industry, will not prevent Microsoft from continuing its illegal practices, and is not in the public interest. It should be rejected and replaced with a plan that will accomplish these objectives.

One such plan is the following: divide Microsoft into six companies. Three of the companies have full rights to Microsoft's operating system intellectual property and three of the companies have full rights to Microsoft's application intellectual property. The three operating system companies will have no choice but to compete with each other on price, capabilities, and innovation; similarly, the three application companies will have to compete. None will have a monopoly in their respective areas.

This plan is no more radical than the ATT breakup and such a plan is the only solution to the current situation with Microsoft.

To Whom It May Concern:

I am NOT SATISFIED with the proposed settlement in the Microsoft antitrust trial. I will simply provide you with a link to an essay written which can describe the problems identified with the proposed settlement much more thoroughly and eloquently than I could, but are in perfect alignment with my own thoughts on the subject matter at hand. <http://www.kegel.com/remedy/remedy2.html>

As stated in the essay, the problems are as follows:

1. The PFJ (proposed final judgment) doesn't take into account Windows-compatible competing operating systems.
2. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions
3. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft
4. The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft
5. The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs"— Dan Kegel

DOJ-ers,

I am opposed to the proposed settlement in the Microsoft antitrust trial. I would suggest that the officers of Microsoft be forced to personally spend time in community-improvement programs, just like other criminals do. I further suggest that the time spent be commensurate with the scope of the crimes committed. To my mind, this implies that Bill Gates would spend the rest of his life servicing recalcitrant Windows computers at community shelters around the country (and perhaps at the DOJ).

Sincerely,  
John Koger

From: Dan Zubairi  
To: Microsoft ATR  
Date: 1/23/02 12:29pm  
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. As an experienced technical consultant, I would like to point out the following reasons why I do NOT support the proposed settlement:

I. The PFJ doesn't take into account Windows-compatible competing operating systems

A) Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

II. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

A) The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API"

so narrowly that many important APIs are not covered.

B) The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

C) The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET, and subsequent similar products with competing middleware.

D) The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being "Windows Powered".

E) The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

F) The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

G) The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

H) The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents or other similar applications.

I) The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users and non-Microsoft developers, and opens the doors to potential future lawsuits against Microsoft competitors.

III. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

A) Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

B) Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

C) Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux!

(Similar licenses to OEMs were once banned by the 1994 consent decree.)

IV. The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

A) Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. Modified

implementations of Java and the Kerberos authentication protocol immediately come to mind.

#### V. The PFJ Fails to Prohibit

##### Anticompetitive Practices Towards OEMs

A) The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

B) The PFJ allows Microsoft to discriminate against small OEMs— including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

C) The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

VI. The PFJ as currently written appears to lack an effective enforcement mechanism.

Thank you for your time.

Hello microsoft,

I think that the Justice dept's handling of the MS case borders on incompetence. To have only prosecuted MS on the Browser issue is overlooking a whole host of other violations that MS has committed over the years. MS's treatment of OEM computer manufacturers by requiring them to buy a copy of Windows for every PC they sold regardless of whether the purchaser wanted it or not is certainly criminal.

I think that the proposed settlement is entirely inadequate and toothless. MS needs to be punished in some meaningful significant way and not let off with a slap on the wrist.

Take care,

Richard Sorak

Dear DOJ,

I am against the currently proposed settlement with Microsoft—it has no “teeth” and will not keep Microsoft from repeating their past abuses (which I believe was the whole point of the anti-trust proceedings). At the very least, it should be modified so that Microsoft's future actions will be subject to strict oversight and timely control should they abuse their monopoly again. Better still, the settlement should promote conditions that reduce the nation's dependence on Microsoft, by promoting interoperability and open standards.

Thank you for your time,

To Whom It May Concern-

I would like to express my dis-satisfaction with the proposed Microsoft settlement. In addition to having a number of problems discussed at length in editorials, and the internet (<http://www.kegel.com/remedy/remedy2.html>), I don't believe that the settlement will work to remedy Microsoft's behavior. Their monopoly power has a stranglehold on the industry and will continue to expand into other areas, as it is even now as they leverage their weight to dominate other industries and markets. Their monopoly on the desktop OS allows them to leverage that influence to not only extend that monopoly, but to move their technologies into other industries, which they are doing with their X-box, Windows Media Player, their Desktop Applications, and the .Net strategy— all to the detriment of users and competitors, giving Microsoft the upper hand.

From: Betsy Byrd

To: Microsoft ATR

Date: 1/23/02 12:13pm

Subject: Microsoft Settlement

The current proposed settlement (PS) is flawed. Because of many different legal

loopholes in the PS, Microsoft will be able to find ways to easily exploit their customers and OEMs to their advantage. Microsoft has already extended, or tried to extend, their monopoly since the start of the trial, such as:

\* Microsoft .NET and MS's plans to force everybody to sign for a MS Passport (which has already been proven to be a very insecure system)

\* The failed attempt to turn an educational lawsuit into a way to inject their software into yet another market

\* Imposing highly-restrictive EULAs and license agreements in XP to try to milk as much money as possible from the end user and businesses, which has already forced other governments (such as the UK and China) to consider other options besides MS software

\* Using PR stunts to hide the fact that security was never a major concern of any of their products, and never will be (even though recent developments in Windows XP and Internet Explorer have proven this)

\* Starting petty lawsuits to snuff out competition, in the hopes of running them out of money (such as the recent Lindows lawsuit)

\* Rigging web polls and writing fake letters (from people already long dead and buried) to influence business and DOJ decisions

The government's intentions in the PS are in good faith, but the language puts too much faith in MS's interpretation of it. Dan Kegel has a great analysis of the flaws found in the PS here: <http://www.kegel.com/remedy/remedy2.html> In short, I feel that it's the DOJ's duty to revamped the PS and/or return to the drawing board, as its current revision is not enough to stop Microsoft's anti-competitive practices.

Subject: Microsoft Settlement

I am opposed to the settlement proposed by the US DOJ and nine settling states for several reasons:

A) It lacks an effective enforcement mechanism. Any violation of the settlement by Microsoft would be met with swift... nothing. Only after a long delay and more court time could any violation be addressed. The three-person oversight committee is effectively gagged, disallowing public

knowledge of potential Microsoft wrongdoings.

B) File formats for various Microsoft applications remain secret, disallowing effective interoperability for potential competing software.

C) Microsoft can retaliate against OEMs that provide systems that have been configured with only a non-Microsoft operating system.

D) The settlement contains numerous loopholes that could allow Microsoft to effectively bypass prohibitions on some practices that are intended to be eliminated by the terms of the settlement.

E) The settlement does nothing to deny Microsoft the fruits of the abuse of its monopoly position. Microsoft is a convicted monopolist. The 1995 consent decree against Microsoft was ineffective due to its ineffective enforcement mechanisms, and Microsoft's blatant disregard for its terms. Microsoft has shown that it can, and will, protect its monopoly by stretching and breaking the law.

Subject: Microsoft Settlement: Opposed

To whom it may concern:

I am opposed to the Microsoft settlement as I don't feel that it addresses the problem of Microsoft being a monopoly. If they are allowed to provide their software to the schools as part of the settlement, it only furthers their strangle hold on the market.

I support Redhat's offer to provide the software and have Microsoft provide the hardware.

Any settlement should separate the offering of the operating system from the applications. All of the API's to in the operating system should be public knowledge, at the same time that they are available to the Microsoft application people. Vendors should not be required to bundle any software with the operating system.

Thanks you,

Date: 1/23/02 12:07pm  
Subject: Microsoft Settlement

The Proposed Final Judgment allows many exclusionary practices to continue, and does not take any direct measures to reduce the Applications Barrier to Entry faced by new entrants to the market.

The PFJ as currently written appears to lack an effective enforcement mechanism. It does provide for the creation of a Technical Committee with investigative powers, but appears to leave all actual enforcement to the legal system.

The definitions of various terms in Part VI of the PFJ differ from the definitions in the Findings of Fact and in common usage, apparently to Microsoft's benefit.

For these and many other reasons, the judgement appears slanted sharply in Microsoft's favor, and is an unacceptable remedy to the company's past abuses. In fact, the computing industry as a whole is rallying against this proposed judgement, just take a look at the Computer & Communications Industry Assoc. website: <http://www.ccianet.org/papers/ms/sellout.php3>

The PFJ suffers from a serious problem of ineffectiveness. And even its limited provisions (API disclosure, icon removal, etc.) rely exclusively on OEMs to provide a competitive alternative to Windows.

From: Stephen Bishop  
To: Microsoft ATR  
Date: 1/23/02 12:13pm  
Subject: Microsoft Settlement  
To whom it may concern:

My name is Stephen Bishop, and I am a senior in Computer Engineering at the University of Oklahoma. I am writing to express my dissatisfaction with the proposed Microsoft Settlement. I hope to point out the problems I see in this proposed settlement, and offer my own thoughts as to a possible satisfactory resolution.

(Problem 1) Availability of alternative OS

I am currently in the market for a new laptop computer, based on the x86 architecture. I use the GNU/Linux operating system almost exclusively. Also, because of my concerns about Windows XP's Product Activation feature, I refuse to use it. However, there are no vendors in the US that offer laptop to non-corporate customers without a Windows OS. And it only 1 vendor (IBM) will allow individual sales of anything other than Windows XP. So essentially, I am being forced to pay for a Microsoft product I will never use.

Since the proposed remedy must make requirements upon Microsoft, not independent OEMs, I can see only one satisfactory solution: Microsoft must be willing (and provide a convenient means) to accept returns-for-refund of unused software, particularly when the user will not accept the license terms or refuses to "active" their product. Currently, attempts to return unused software are either redirected to the OEM, or threatened with software license audits.

(Problem 2) Corporate Licensing

Microsoft Licensing version 6.0 has caused a great deal of concern among corporate clients (<http://www.cio.com/archive/011502/meter-content.html>). A satisfactory remedy must require Microsoft to offer a variety of license choices to corporate customers, including ones that allow the customer to set the upgrade pace. Remedies that allow Microsoft to require that customers always adopt the newest software version are completely unacceptable.

Possible Solution:

I am not a lawyer, simply an engineer, so this may not be feasible. Microsoft was granted a copyright for their products "to promote the Progress of Science and useful Arts." It could be argued that by using their copyrights in an illegal manner (maintenance and extension of a monopoly), that Microsoft's patents are no longer enforceable. This punishment could be applied only to those software products which Microsoft had

used in an illegal fashion. Following this approach would level the playing field for competitors, and require no long-term oversight by the government. Additional steps could be proposed (such as the open release of future Windows APIs), but I will reserve comment on them. I am certain that case law exists to support the revocation of copyrights for their use in illegal acts, so it might not be necessary to argue the case on constitutional grounds.

I hope you will consider my comments, and revise the proposed remedy to address the issues I have raised. I will be available at this email address, and would be very willing to further discuss the proposed settlement.

Regards,  
—Stephen Bishop

From: Ben Eavey  
To: Microsoft ATR  
Date: 1/23/02 12:12pm  
Subject: Microsoft Settlement  
My response: NO.

I'm adding my voice to the thousands of people who KNOW that the proposed Microsoft settlement is a bad idea. The settlement does NOT prohibit Microsoft from continuing its anti-competitive practices, and in fact it may actually HELP them to further dominate and control the industry, to the detriment of the general public.

The settlement does not punish Microsoft in any way for past offenses! It simply attempts to prohibit them from abusing their monopoly further in the future. The problem is that the language of the settlement doesn't actually prohibit them from doing anything! With a few simple changes to their licensing policies, and a few minor adjustments to their operating system, they will easily outmaneuver anything laid out here.

How can a company commit illegal acts, benefit greatly both financially and in market-share, and then not be punished for those actions? Break the law, and then be told, "well, just don't do it again?" Ridiculous.

It appears that the court is simply agreeing to a settlement to make the whole thing go away. The settlement is unfair, unjust, and does not accomplish ANYTHING as far as controlling an anti-competitive, illegal monopoly. A settlement that is unjust is simply compounding the wrong that brought Microsoft here in the first place.

I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Sincerely,  
Benjamin Eavey  
Kentwood, MI

**MTC-00016873**

From: Jason Duvel  
To: Microsoft ATR  
Date: 1/23/02 12:13pm  
Subject: Microsoft Settlement  
To Whom it may concern,;

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the

American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Thank you for your time, and please give this issue the time and thought it requires beyond "we must settle soon." As the cliché goes—"haste makes waste" and it'd be a waste of the taxpayers dollars. Thanks.

Subject: Microsoft Settlement

Dear Sir/Madam:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Gregory Kirkendall

Subject: Comments on Microsoft settlement  
To whom it may concern,

I am a computer professional who has worked in the industry for a decade, and who has closely observed Microsoft's practices in the industry since the early 1980's. I am writing to request that the settlement proposed by the DOJ, Microsoft, and the consenting states be rejected as inadequate to the damage done by Microsoft. Microsoft has been so successful in driving out all competition from the market through the power of their control over the PC platform that in many cases the only viable remaining sources of competing innovation has come from so-called free software. Free software, or Open Source, refers to software products like Linux or Apache or Mozilla, or FreeBSD, in which a global community of developers contribute their time and energy to sustaining software projects as a resource to the public.

It is unacceptable, therefore, that the proposed settlement stipulates that Microsoft be obliged to share details of their secret data formats and networking protocols only to those commercial interests that Microsoft deems worthy to receive that information. Such language in the proposed settlement is designed entirely to shield Microsoft from the volunteer workers who can not be bought or put out of business by Microsoft's huge cash reserves and industry leverage.

It is likewise unacceptable that Microsoft be given the ability to withhold any protocol information that might be related to their security mechanisms. It is, of course, true that information that could lead to the compromise of access controls on computer systems running Microsoft software would be damaging to Microsoft and the public. It is not true, however, that any revelation of protocols will have this result. Every web browser that supports encrypted communication with a web server does so through an open, industry standard protocol known as TLS. TLS is an extraordinarily well documented standard, and there are scores of individual programs on many different computer and operating systems that work with TLS. This does not in any way negatively impact the security of the TLS protocol. A security protocol is not secure because it is secret, it is secure because the mathematics of the system make it vastly impractical that anyone could muster enough computer power to decrypt a given communications stream.

Microsoft should be required to document their networking protocols in full, so that others, both commercial interests and volunteer developers, can create products to fully interoperate in a compatible fashion with Microsoft systems.

At the very least, independent technical experts not under Microsoft's pay or control should be consulted so that these two loopholes in the proposed settlement may be properly closed.

Thank you,  
Jonathan Abbey

I have been using computers for about 16 years now, having started on the Commodore line of computers. I have actively watched the computer industry over the years and have seen Microsoft turn into the most predatory and dominant company in the computer industry. I have read the proposed settlement and it does nothing to prevent their predatory and illegal actions nor to penalize them for illegal actions past. I strongly urge that this proposal be rejected and tougher restrictions and penalties for past illegal activities be drafted into a new agreement. Again, I am against this settlement.

Hello,

I would like to comment on the DOJ settlement with Microsoft. I am a software developer and manager. I am writing to say the judgment against Microsoft needs to be strictly enforced, and to punish the company for their past monopolistic acts.

The proposed final judgment allows Microsoft to continue to keep competing operating systems from being sold by OEMs. The specific practice of modifying the computers boot sector when installing all Microsoft operating system makes building a dual boot system very difficult. The Microsoft product will hide the location of other operating systems, like Linux, when the Microsoft operating system is installed.

This is the equivalent of saying, if you use our product, you can use no other. Please be fair and rule for true competition in the future.

Thanks,  
Doug Gibbs

From: Kimura Kalidor  
To: Microsoft ATR  
Date: 1/23/02 12:13pm  
Subject: Microsoft Settlement

First I'd like to state who I am. My name is Krisztian Szabo, a resident of Lewis Center, Ohio. I am not a Microsoft zealot, if anything I advocate open source such as linux. My server infact runs linux as a safegaurd for the

web services and against microsoft virii. For the past four years I have been working at General Electric Lighting and General Electric Superabrasives as a Network Specialist and assistant to the previous CIO.

I write here in response of this website : <http://www.codeweavers.com/jwhite/tunney.html> and many like it produced by Linux zealots, who, sad to say see the entire case as an episode of Star Wars rather than cold hard facts. Microsoft is not a big ruthless empire, it is a business that makes decent to semi-decent software, but more then this, it has been for the past 20-25 years a standard for the computer industry. Already the ramifications of this trial have been felt. Computer manufacturers have dropped the "Made for Windows XXXX" logo, and hardware has started becoming incompatible and expensive as it was in the seventies and even in the early eighties.

Many believe Microsoft is infringing on the rights of other companies by bundling their software with windows. First a majority of the companies that have files complaints make substandard software, and second most of them offer it for free. Case and point is Netscape. I have not know anyone who was only allowed to buy a copy of Netscape and didn't download it claiming they were an educational institution. However many people have expressed these veivs, our senators and representatives, didn't even bother to respond or listen. I am sorry to say even Sen. Voinavich whom I have known since I was in highschool turned a deaf ear.

While my fath in US judicial system had been very weak, especially with the decision of the Microsoft Case, it should have been dismissed, or at least heard by someone who understands modern day technology, of which there is no one presently in the supreme court. I still implore you to use the current settlement. It is the best way of keeping the computer industry from stagnating, it may infact fix the damage done to the economy. In addition it keeps the standards that most computers are built on, and reinforces the idea that Microsoft isn't the only company, the standards it has set on the hardware industry should not be thrown out.

Thank you very much for your time,  
Krisztian Szabo

From: Bob Pendleton  
To: Microsoft ATR  
Date: 1/23/02 12:14pm  
Subject: Microsoft Settlement

I oppose the proposed Microsoft Settlement.

I have read the proposed settlement agreement and I see nothing in it that will actually reverse Microsoft's predatory actions or open the market to non-Microsoft products. I am particularly worried about the way they have chosen to allow businesses limited access to the actual specifications of Windows. That part of the agreement gives a small number of businesses access to the true specifications, but it BARS access to the same specifications by individuals and groups involved in nonprofit activities.

I believe that the only correct course of action is to break Microsoft up into several different companies and to declare the specification of Windows to be an essential facility. Since it is unlikely that Microsoft will be broken up then the specification of all Windows APIs must be declared an essential facility, fully documented and fully disclosed.

With the specifications posted on a public web site with paper copies sent to anyone who requests them. And, Microsoft MUST be required to fully publish changes to the APIs at least 6 months in advance of the release of any products that use or provide those APIs. This would give competitors a chance to take advantage of those APIs to compete with Microsoft.

Date: 1/23/02 12:15pm  
Subject: Microsoft Settlement

To whom it may concern,

As a server engineer, I am constantly faced with the undue burden that Microsoft places on my IT department. According to the terms of their varied licensing agreements, it is difficult, if not impossible in some cases, to be able to perform my professional duties. Although I am not well versed in law, I would like to point out some examples of how their anti-competitive business practices hurt the IT industry, and the population at large:

1) When negotiating with Hardware Vendors, it is often difficult to purchase a server or desktop running a competing operating system. Although I could purchase, for example, a high end server from Sun, in many cases it would make financial sense to purchase a less expensive Intel-based machine with an alternative OS preinstalled on it, or a "blank" machine which I could then install upon the OS of my choice. Since

MS leverages its monopoly power against hardware vendors, I usually have to pay for a license of Windows that I will never use.

2) In cases where it is deemed necessary to utilize a Microsoft operating system or product (for example Microsoft Exchange), IT professionals, are forced to also use Microsoft Outlook, which invariably means that they are also forced to use Microsoft Windows if they choose to use the Intel platform.

3) As a result of Microsoft's lack of attention to the stability and security of their products, an inordinate amount of time (therefore money) is spent patching and repairing their products to minimize downtime and to recover from catastrophic failures, viruses, and unauthorized entry into systems that the IT department is ultimately responsible for. While constant vigilance is required of any IT department regarding the maintenance of any software or hardware product, Microsoft's monopoly in this arena allows them the latitude to be negligent without fear of reprisal from their customers.

4) As a result of Microsoft's monopoly, end users cannot easily mix and match technologies to suit their particular needs. This is especially infuriating when one considers that many people are dissatisfied with the quality of their products and services, but have no choice but to continue using them, due to the fact that their standards prevent people from taking their existing work and moving it to another system. Microsoft Office is an excellent example of this, where I cannot easily use a Word document with a different word processing package, because much of the work I had already done would need to be re-created. As a hypothetical situation, consider the scenario where Ford or General Motors created cars that crashed frequently or were overly easy to steal due to design faults; they would suffer because the car buying public would simply switch to a competitor. The public would be satisfied in this case because their transportation needs would be met, without being forced to still contribute to the offending company. In other words, if we are dissatisfied with Ford, we could buy a GM without having to buy Ford gas, Ford oil, Ford air-fresheners, etc. Free competition would guarantee that any company would ultimately be responsible to ensure that it produces a quality product with the satisfaction of the end user in mind.

5) Upon inspection, the prescribed remedies are too narrow in their focus to prevent this sort of behavior in the future. For example, many of the remedies are in regard to Microsoft software as it is applied to Intel hardware, however it is painfully obvious that they have many interests outside of the Intel marketplace, to which the remedies would not apply. Microsoft could just as easily switch their focus to, let's say, Apple and abandon the Intel platform. Because so many people are dependant on their software, they would have little choice but to follow them and be subjected to the same behavior that they currently employ. Ultimately, anyone who chooses to create a competing product revolving around the Intel platform would find themselves with very few customers. Organizations would find that they now have the added burden of throwing

out their existing hardware for which they will get no return on investment, and be forced to spend additional money to switch to Microsoft's hardware vendor of choice. In closing, I realize that I'm stating the obvious, which countless others have noted before me. However, if my two cents worth can contribute to a positive outcome in this matter, I'll sleep better at night knowing that I still have freedom of choice.

Sincerely,  
Lawrence Gohar

The settlement proposal is unsatisfactory. I don't have time to point out the problems—I'm quite sure others have already done so. I realize it's difficult to do anything more than slap them on the wrist and say "Bad giant megacorporation! Bad!"—but something else really needs to be done. Our entire economy is going down the toilet. You could probably pay for a whole lot of sorely-needed public education out of Microsoft's nearly bottomless coffers. Nothing you can do to them will hurt them - they're like an oil company, only they don't have a non-renewable resource. They have software, which can be copied. Over, and over. And sold for \$100 a box. Takes a lot of oil to make \$100, and look at how powerful the oil companies are.

They won't learn from this. Hit them hard enough that they remember that they can't just hide behind a staff of well paid lawyers and continue to operate their "software mafia" without being much more careful. (When was the last time they were looked over by the IRS..?)

Subject: Microsoft Settlement

The proposed settlement is a very bad idea. I have not recently heard of such a bad deal. Your department must hide in shame that you would agree to such a lopsided agreement. If you want specific points, then here are my objections:

1) Punishing a monopoly abuser by helping them extend that monopoly into schools is dumb. This is hardly a punishment, and that is painfully obvious.

2) Opening up Microsoft to competition is not well addressed by this agreement. To really open them up to competition, make them publish all of their windows APIs or

force them to abide by decided upon standards.

Regards,  
Jeff Garcia

Subject: Microsoft Settlement  
Dear Sir or Madam:

I oppose the Microsoft settlement because it contains no enforcement mechanism and it allows Microsoft to continue some of its anticompetitive, retaliatory practices. Especially repugnant is the way it allows retaliatory practices against small original equipment manufacturers. Also, it does not address the problem of the anti-competitive way Microsoft sells its Microsoft Office software. I especially have a problem with Word. I use Corel WordPerfect because it is a much better product, but Microsoft has a near monopoly on the market by making Word and Excel documents incompatible with other word processor programs. There also may be behind-the-scene practices that I'm not aware of, but people in the Justice Department ought to be.

Thank you very much.

Subject: Microsoft Settlement

I work in the IT industry and feel that the proposed Final Judgement in US vs. Microsoft does not punish the company enough for its monopolistic practices and the remedies proposed do not restore competition. It is my opinion that since any punishment given will need to be enforced and it has been shown in the past that typical methods of enforcement have not worked with Microsoft, that it is clear to me that an irrevocable and unavoidable punishment should be given: All Windows, middleware and browser source code should be released to the public and Microsoft should forfeit all copyrights and patents to this code. They can then compete fairly with any other company in improving this code in the future.

Thanks,

Subject: Microsoft Settlement, comments  
from a US Citizen

Dear Sirs,

The current Proposed Final Judgment is insufficient in thwarting or preventing the unfettered monopoly practices of Microsoft. In its current state it still allows for many exclusionary practices to continue.

- The PFJ doesn't take into account Windows-compatible competing operating systems
- The PFJ Contains Misleading and Overly Narrow Definitions and Provisions
- The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft
- The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft
- The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs
- The PFJ as currently written appears to lack an effective enforcement mechanism.

Please reconsider the PFJ in its current state.

Seon Lee

From: Josh Buermann  
To: Microsoft ATR  
Date: 1/23/02 12:14pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am writing in regards to the Tunney Act public comment period on the proposed Microsoft antitrust settlement. I am a US citizen and an IT professional.

If any true innovation is to occur in the existing market policies must be enacted to foster interoperability through open formats, protocols, and standards. Microsoft stands now as it as stood in the past, in the way of any such possibilities. I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Do not accept this settlement. If Microsoft has agreed to it the is can't be good for the people. A punishment should be just what it says...a punishment.

Microsoft will continue to dominate the Operating System market and not allow competition to develop and grow. Microsoft has already file lawsuits against the Operating manufacturer Lindows, which is Linux based and will directly compete with Microsoft in the operating system market.

The punishment imposed on Microsoft should significantly change the company in a manner that will not allow them to continue to operate in their current capacity.

This settlement does not impose that type of punishment.

From: Greg Copeland  
To: Microsoft ATR  
Date: 1/23/02 12:16pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am greatly opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current settlement on the table does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize and perpetuate the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most importantly, the proposed settlement does nothing to correct Microsoft's previous actions. Actions, I might add, which have repeatedly shown Microsoft does not acknowledge the authority and has no respect for the courts. There are no provisions that correct or redress their previous and willful abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is simply wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Please, I respectfully demand satisfaction be delivered and justice be served. Please allow competition by standing behind the American way of life. Force them to compete and innovate in the market place. Hold them accountable to the highest degree allowed for by law. Only then will justice and the American people of been properly served and protected by the courts.

Sincerely,  
Greg Copeland

Subject: Microsoft Settlement

Dear Sirs,

I cannot endorse the current settlement proposal. Contrary to what knee-jerk antiregulatory business commentators might tell you, Microsoft has a history, detailed exhaustively, of preferring to manipulate markets and consumer options to stifle competition rather than appealing to consumers with better products. They must be deprived of the use of a operating system

—distribution— monopoly to ensure competition.

Thank You for your time.

From: Tim Tate  
To: Microsoft ATR  
Date: 1/23/02 12:20pm  
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement.

I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Tim Tate

From: Rebecca  
To: Microsoft ATR  
Date: 1/23/02 12:17pm  
Subject: Microsoft Settlement concerns

To whom it may concern,

I am a citizen and a voter in this great nation. Additionally, I am an avid computer user. I am gravely concerned about the status of the Microsoft Settlement.

Microsoft Corporation, as shown by he courts, holds an unfair and illegal monopoly. The company pursues business practices that are in antithesis to the competitive spirit of American business. Their business practices, contrary to anything their Public Relations office may say, stifle innovation. Microsoft has successfully foisted upon computer users an operating system that is insecure and unstable. Businesses that dare speak out against their shady business dealings soon find that they are declaring bankruptcy.

The settlement as proposed has no teeth. It is in essence a slap on the wrist. Furthermore there are no concrete provisions for enforcement. As the settlement stands now, an internal compliance officer will be hired. I don't think it takes a psychic to see how effective that would be. If I as a private citizen broke the law, the court would not assign my uncle as the probation officer.

I am opposed to the current settlement. My tax dollars funded the prosecution of the antitrust case, and to see such a paltry settlement angers me greatly. I urge you to rethink the settlement.

Sincerely,

Date: 1/23/02 12:20pm  
Subject: Microsoft Settlement

Hello,

I am strongly opposed to the current Microsoft settlement.

In the past, Microsoft has used its power of monopoly to extend & embrace new technologies. This is not my opinion, its a finding of fact in US courts. Also, Microsoft has made public comments that they intend to continue this practice in the future. And why not? It will make them a lot of money. But the customer will suffer for two reasons, a lack of competition and a lack new technologies.

Competitors are already afraid to develop competing products to MS applications like MS Office and MS Exchange because Microsoft has used their control of the OS to integrate their products better than any competitor. Many of these competitors have quit and their is little financing for any new competitor. Without competition, what will pressure MS to keep their prices and features 'competitive'?

Advancement of technologies will also suffer. Anyone financing any new technology (in a startup or an established company) must contend with the possibility (probability) that MS can "extend and embrace" any technology that they deem profitable and that MS will use it OS to do it. This has created a very high barrier of entry into the market.

I believe MS must publish all of its APIs and file formats for its OS and applications. It must also freely license the use of this API. Unless this is done, I believe MS will eventually become the only profitable desktop software company, and maybe the only server software company. I'm sure thats great for MS, but its bad for the consumer.

From: Douglas M Jennewein  
To: Microsoft ATR  
Date: 1/23/02 12:18pm  
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

#### MTC-00016910

From: Rick Halpert  
To: Microsoft ATR  
Date: 1/23/02 12:18pm  
Subject: Microsoft Settlement

I disagree with the settlement in it's current form. For the following reasons:

Microsoft has used both restrictive licenses and intentional incompatibilities to discourage users from running Windows applications on Windows-compatible competing operating systems. Two examples are given below.

1. Microsoft uses license terms which prohibit the use of Windows-compatible competing operating systems MSNBC (a subsidiary of Microsoft) offers software called NewsAlert. Its EULA states "MSNBC

Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.]. ..."

Only the Windows version appears to be available for download. Users who run competing operating systems (such as Linux) which can run some Windows programs might wish to run the Windows version of NewsAlert, but the EULA prohibits this.

MSNBC has a valid interest in prohibiting use of pirated copies of operating systems, but much narrower language could achieve the same protective effect with less anticompetitive impact. For instance, "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system."

2. Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems. An episode from the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively. Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS. Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. (See the original complaint, and Caldera's consolidated response to Microsoft's motions for partial summary judgment.) The judge in the case ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." That case was settled out of court in 1999, and no court has fully explored the alleged conduct.

The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1. The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software.

To: Microsoft ATR  
Date: 1/23/02 12:17pm  
Subject: Microsoft Settlement

Per the Tunney Act, I am writing to express my disbelief that the proposed settlement is even being considered. Microsoft stands convicted of illegal behavior, and has more than 37 billion dollars of excess profit in the bank gathered during years of illegal conduct, yet the settlement terms include no fine. Crime should not be made profitable.

The other major problem with the settlement is the lack of effective remedies to prevent future illegal product tying behavior that was at the root of the current case. This ineffective settlement should be set aside. I am a Microsoft stockholder, and have a financial stake in the outcome of this case, but the best interests of the citizens of the United States are not served by this misguided settlement. Justice should not be so obviously corrupted by wealth—a fair remedy will include a substantial fine for past behavior as well as an effective constraint on future behavior.

Subject: Microsoft Settlement

I oppose the settlement with Microsoft. Several of my reasons are similar to those listed in this document <http://www.kegel.com/remedy/remedy2.html>. This document contains several good revisions, especially the revisions to Definition U, and section III.A.2.

If Microsoft can punish vendors who ship a computer that uses a non Microsoft OS, what vendor that currently ships computers with a Microsoft product will risk the loss of the Microsoft license? None. Another weakness of the Proposed Final Judgement is the lack of independent oversight of Microsoft. Just as the courts do not allow a convicted felon to monitor his/her own parole, Microsoft should be barred from the

position of monitoring their own parole. Microsoft has shown no reason that it should be it's own parole officer.

From: Brian Olsen  
To: Microsoft ATR  
Date: 1/23/02 12:20pm  
Subject: Microsoft Settlement

Dear Sirs—

I believe Microsoft to be guilty of actively and maliciously abusing its monopoly power in detriment to the market. After reading the proposed judgement, it appears that Microsoft's punishment consists of being told (yet again) that they must play fair and the rules for playing fair are stated in the settlement.

I in NO WAY how this is even appropriate to the crime of abusing their position in the marketplace, and the message that is sent to other companies is that they may act as predatory and illegally as they desire, with the result that they will be taken to court to only be reminded what it means to be a moral player in the marketplace. This is totally outrageous.

Microsoft has deliberately and continually followed this course of abuse of their position in the marketplace. The punishment should be swift and harsh and hit them in the appropriate place, the loss of their ability to continue abusing their position in some fashion or another appropriate to the scope of their violations, so that other players in the marketplace will not continue to be harmed to the detriment of their owners and stockholders.

Thank you,  
Brian Olsen

From: Wesley Fonvergne  
To: Microsoft ATR  
Date: 1/23/02 12:19pm  
Subject: Microsoft Settlement

I would like to place a comment in approval of the Microsoft settlement. Working in the computer industry, I realize Microsoft has abused the power they have. However, in the same sense, I still fail to see any suitable replacement for Microsoft Windows.

As a software engineer, I can appreciate the amount of time that was spent in bringing Windows to its current form. In my opinion, an alternative doesn't exist because there has not been a company yet who is willing to devote the amount of time and dedication required to bring a truly usable alternative operating system to the computer industry. Microsoft's entire API is available, and a compatible operating system could be constructed support most modern applications, if a company were willing to do it.

I feel this settlement would fairly police Microsoft, while still allowing them the corporate freedom they are entitled to.

From: Christopher Weuve  
To: Microsoft ATR  
Date: 1/23/02 12:19pm  
Subject: Microsoft Settlement

Hello,

I am writing today to voice my opposition to the proposed Microsoft settlement.

There are numerous flaws with the settlement as proposed. It doesn't prevent Microsoft from taking anti-competitive action, other than Microsoft "promising" not to do things that it already claims it isn't doing. And the entire idea of Microsoft paying damages by donating free hardware and software to one of the last bastions of non-Microsoft systems is appalling—it's the equivalent of letting the tobacco companies pay off their lawsuits by donating free cigarettes to schoolchildren.

Please, don't go through with this plan. Microsoft for year's has believed that the laws governing fair competition simply do not apply to it. They've consistently lied and manipulated the data and public opinion. Please show that the rule of law still means something in America.

Best regards,

Tucson AZ 85716-3409  
Phone: 520-321-4345  
Email: w7md@arrl.net

I am a physician and a long time licensed user of Microsoft software since 1978. I am an advanced computer user having studied computer programming at Pima Community College and continue to program, build and use computers for my business and personal pleasure.

I am a founding member of the Tucson Free Unix Group (<http://www.tfug.org>) and use Redhat Linux version 7.2 as my OS of choice. My business uses MS Windows 98 SE. My wife uses a Macintosh G3 with OS 9. I wish to point out to you one of the most annoying and typically disruptive practices of Microsoft:

I recently purchase a Dell Latitude CPT laptop computer directly from the manufacturer. I installed my Redhat Linux system on it and was unable to configure the modem to dial out. After many hours of trying to rectify the problem, I called Dell for help. I was informed that the modem chip on the motherboard was a "Winmodem" and not compatible with any other operating system except Microsoft Windows.

The same problem exists with "Winprinters". These dedicated "Win" devices use code from within the Microsoft Windows OS to implement the operation of the printer rather than code that ordinarily would be found in a chip on the motherboard of all the other kinds of printers available to consumers. Microsoft has influenced most of the printer and modem manufacturers to produce these "Win" devices which, when purchased unknowingly by the consumer, render it impossible to tryout or use a non Microsoft OS.

Microsoft will not release the code which drives these "Windevices" nor will they provide a software driver which would allow competing operating systems to use these devices. The potential loss in monetary value, lost time and aggravation to the consumer is staggering when one considers the large number of such devices out there. This is only one illustration of Microsoft's stranglehold on the consumer's options in the OS universe.

Microsoft should be forced to release the code which drives the "Windevices" and manufacturers such as Dell, Canon and HP should be fined for producing and selling these devices without warning the

unsuspecting consumer of the consequences of their purchase. Better still, "Windevices" should be illegal.

Yours truly,

From: Brian Miller  
To: Microsoft ATR  
Date: 1/23/02 12:19pm  
Subject: Microsoft Settlement

I am writing to express my disagreement with the proposed settlement in the case of US (Plaintiff) vs. Microsoft (Defendant) (Civil Action No. 98-1232).

As has been expressed by many others, the proposed settlement does little to discourage Microsoft from continuing the anti-competitive actions for which it has been found guilty. The opportunities for continued abuse by the Defendant under the proposed settlement are many and varied. As an example, I would like to direct your attention to the following:

Revised Proposed Final Conduct, Section III(J)(2)(c): "No provision of this Final Judgment shall...prevent Microsoft from conditioning any license...on the requirement that the licensee...meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business,"

This clause allows for Microsoft to continue to dictate who and on what terms

they will open their API to. All currently shipping versions of Microsoft operating systems (Windows 98/ME, Windows 2000, Windows XP) are Network Operating Systems by design, meaning that authorization and authentication security are designed into most of the APIs.

Allowing Microsoft to make the determination of what constitutes a "business" provides them the opportunity to keep in place market barriers to entry almost arbitrarily. This will have a deleterious impact on numerous commercial and Open Source projects such as SAMBA (SAMBA is an Open Source implementation of Microsoft's network storage protocols, which includes, by necessity, interfaces to Microsoft's User Authentication services). SAMBA is widely used throughout numerous US companies as it allows almost seamless integration with existing IT infrastructure while providing increased reliability compared to Microsoft's own solutions.

I humbly ask that this proposed judgment be deemed faulty and other remedies to conduct be imposed.

Very Respectfully,  
Brian Miller  
Arlington, Virginia

From: Lee Willoughby  
To: Microsoft ATR  
Date: 1/23/02 12:20pm  
Subject: Microsoft Settlement

The PFJ doesn't take into account Windows-compatible competing operating systems

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ as currently written appears to lack an effective enforcement mechanism.

Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

Please refer to <http://www.kegel.com/remedy/remedy2.html#fix> for suggested changes.

From: Michael N. Obenchain  
To: Microsoft ATR  
Date: 1/23/02 12:21pm  
Subject: Microsoft Settlement

Dear Sirs,

I would like to ad my voice in support of imposing real penalties in the Microsoft case. If jail time was an option there might be hope of reform. In this case I have not seen any remorse from Microsoft and the very activities that got them in trouble have only slightly been reined in. Everything up to this point looks like someone trying to buy their

way out of trouble. Personally I feel that a break up of the company would be the only way to really slow Microsoft down. I am particularly disturbed by the arrogance shown by Microsoft in trying to dictate its own punishment. For example:

"The proposed remedies submitted today by the nine holdout states are extreme and not commensurate with what is left of the case," the company said. "The court of appeals decision drastically narrowed the liability issues and provides the best road map as we move forward with these remedy proceedings. The settlement we reached with the Department of Justice and nine of the plaintiff states is a fair and reasonable compromise that is good for consumers and will be good for the economy. We are committed to complying fully with the proposed decree and remain hopeful that we can resolve any outstanding issues as quickly as possible in the interest of consumers and the industry."

As this case will most definitely set future precedent, it is of the utmost importance to get it right. Do not let Microsoft off with a settlement that will play to their advantage. Did not the United States government in District Court and the unanimous seven-member Court of Appeals find them guilty? The proposed settlement would be acceptable only if Microsoft had been found innocent (of course then no penalty is applied). They have been caught and need to be taught that the public will not stand for illegal behavior of any kind. Am I optimistic that this will happen? No.

From: Jeff Smith  
To: Microsoft ATR  
Date: 1/23/02 12:20pm  
Subject: Microsoft Settlement

I am taking this opportunity to comment on the proposed Microsoft settlement. I have many issues with the settlement as it stands. Most importantly, the Proposed Final Judgment:

Does not take into account Windows-compatible operating systems.

Microsoft increases the applications barrier to entry in this market by using restrictive license terms and intentional incompatibilities and yet the Proposed Final Judgment fails to prohibit this, and even contributes to it.

Fails to prohibit anticompetitive licensing terms. Microsoft currently uses excessively restrictive licensing terms to keep competing applications from running on Windows. Similarly, Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. Furthermore, Microsoft's enterprise licensing agreements (used by large companies, state governments, and universities) charge by the number of computers which COULD run a Microsoft operating system, not for the number that actually DO. For universities

especially, assuming that all PCs run Windows is absurd, and a bald attempt to extort money. Similar licenses to outside equipment manufacturers (OEMs) were once banned by the 1994 consent decree, and yet Microsoft continues the practice.

Appears to lack an effective enforcement mechanism. The Proposed Final Judgment fails require advance notice of technical requirements. Fails to force Microsoft to document many of its APIs (the interfaces between application programs and the operating system).

These are not the only problems that I see with the PFJ, but merely the most striking. I believe that the Proposed Final Judgment as written allows, and even encourages, significant anticompetitive practices to continue, delays the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should NOT be adopted without SUBSTANTIAL revision to address these problems.

Yours,  
Jeffrey Smith

Subject: Microsoft Settlement

Please do not complete the Proposed Final Judgment without taking into consideration Microsoft's historic abusive practices of intentional incompatibilities and specifically prohibiting them. Please also consider very severe consequences for future abuses of this nature. You are probably looking at this as a big long project that you have nearly finished. Wouldn't you rather look back upon this project knowing you have actually done something to help the problem? Don't just let it run its course. I strongly urge you to look at it as a way that one company can put another company out of business. Or, look at it the way I do, as a programmer, as one company trying to put me out of a job.

Thank you.

The proposed settlement is a bad idea. Microsoft is a monopoly.

The settlement still leaves Microsoft with the ability to maintain and even extend its monopoly, a fact that only works against

competition, consumers, and the American people in general.

(I am a United States citizen.)

To: Microsoft ATR  
Date: 1/23/02 12:22pm  
Subject: comment on Proposed Final Judgment—U.S. v. Microsoft

Dear Sirs,

I wish to comment on the Proposed Final Judgment in the case of U.S. v. Microsoft. I am a world-wide-web engineer with 6 years' experience. In and before this time, I have spent a great deal of time using computers, running Microsoft's software and others.

Throughout this time I have been appalled beyond measure at Microsoft's practices—particularly its practice of leveraging its monopoly power to ruthlessly destroy any business or technology that threatens it. In this way, Microsoft has reduced—if not eliminated—competition, and prevented the distribution of superior (or at least alternative) technologies. It has generally staked claim to exclusive control of a vast sector of the American economy, to the extent that no other enterprise dare attempt to enter the field.

The proposed settlement is not even a slap on the wrist. Microsoft itself clearly knows this, and continues to behave as though it had not been found guilty in a court of law—engaging in anticompetitive conduct and further entrenching its illegal monopoly. In essence, Microsoft will have been found guilty, and then allowed to walk free with no punishment, and with no real mechanisms to prevent further abuses. Why should the company hesitate to continue to break the law both in letter and spirit in the face of such impotence of the American the justice system?

I am optimistic. I have hope that the United States Department of Justice—at its fundamental level—cannot be bought. If the settlement goes forward as currently proposed, I will have a great deal of trouble maintaining this belief.

Sincerely,  
Ralph Dossier

To Whom It May Concern:

I am strongly opposed to the proposed settlement in the Microsoft antitrust trial as it fails to address the following:

- a.. It does not adequately penalize them for past transgressions
- b.. It does not provide mechanisms to correct their anticompetitive behavior
- c.. It does not inhibit their ability to commit similar actions in the future.
- d.. It does not allow their competition adequate measures to overcome Microsoft's current monopoly.

 To: Microsoft ATR  
 Date: 1/23/02 12:22pm  
 Subject: Microsoft Settlement

I've been amazed while watching the Microsoft vs. DOJ court case. First, I was amazed at how adept the US DOJ's prosecution appeared to be, and then I was amazed by how badly the US DOJ has failed in the penalty phase of the trial. I have studied the proposed settlement in a semithrough manner and I am aware of no clause which will inhibit MS in any significant manner.

I consider the penalty phase to be very important because MS is currently essentially in the position of an unregulated utility monopoly. This is a dangerous enough that I expect the market distortion which

Microsoft generates to affect other industries in significant ways soon. I believe the US experiment with capitalism has been remarkably successful, and I'm alarmed to see the US giving up on it. If a restoration to a real marketplace can not be achieved, please consider at least regulating Microsoft in some semieffective manner.

-John

 Subject: Microsoft Settlement

To: Renata B. Hesse Antitrust Division U.S. Department of Justice 601 D Street NW Suite 1200 Washington, DC 20530-0001  
 Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <<http://www.kegel.com/remedy/remedy2.html>>), namely:

\*The PFJ doesn't take into account Windows-compatible competing operating systems

\*Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

\*The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered". <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ requires Microsoft to release API documentation—but prohibits competitors

from using this documentation to help make their operating systems compatible with Windows. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

\*Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. <<http://www.kegel.com/remedy/remedy2.html>>

\*Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. <<http://www.kegel.com/remedy/remedy2.html>>

\*Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.) <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

\*Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

\*The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ allows Microsoft to discriminate against small OEMs— including regional 'white box' OEMs which are historically the most willing to install competing operating systems—who ship competing software. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. <<http://www.kegel.com/remedy/remedy2.html>>

\*The PFJ as currently written appears to lack an effective enforcement mechanism. <<http://www.kegel.com/remedy/remedy2.html>>

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the

emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,

Mark Wagner, Fremont, California;

Buford, GA 30519-1942

**MTC-00016943**

From: D.A. Mazzella  
To: Microsoft ATR  
Date: 1/23/02 12:24pm  
Subject: Microsoft Settlement

I would like to express my displeasure with the Microsoft antitrust settlement proposal. I feel that the single biggest issues affecting competition are the facts that

1) Microsoft has an effective monopoly of the "office productivity suite" class of applications, web browser application and operating system (Windows)

2) they make it very difficult for other vendors to interoperate with their product (Microsoft Office), and stray from standards in "embracing and extending" them.  
Potential new vendors must support the Office document formats because they are the de facto standard, but they are undocumented, and thus it is almost impossible for any potential new vendors to support them well. As a result, the consumer has little choice but to buy Office, and because it only runs on Windows, he has no choice in operating systems either.

Microsoft has forced all other web browsers into a "nitch market" by bundling the browser with the operating system Microsoft forces PC manufacturers to put Windows on new PC's, without the choice of alternative operating systems like Linux (Redhad, Mandrake, SuSE, etc) Solaris x86 (Sun Microsystems) or BSD (the Open BSD Group).

I feel that any effective settlement must include the following conditions:

\* Microsoft must release full documentation for the existing Office file formats;

\* Microsoft must be prohibited from introducing changes to these formats without releasing full documentation of the changes;

\* Microsoft must be release said documentation in advance of their actual support for the changes, to prevent other vendors from having to play catch-up;

\* Microsoft must participate in the development of new, open document formats, preferably based on XML and governed by an independent standards body.

\* Microsoft must open the source code to their Windows operating system, there by

allowing others access into the internals for better competition.

\* Microsoft must release a fully functional version of Microsoft Office for Linux, Macintosh, Solaris and BSD

\* Microsoft must bundle the Mozilla Web Browser with the operating system

\* Microsoft must stop forcing new PC manufacturers from bundling Windows with a new PC

\* Microsoft must allow the reselling of unwanted software (the website Ebay.com closes all acutions that sell Microsoft products)

The effect of these conditions would be to allow other vendors to develop a product competitive to Microsoft products for the first time in years. This in turn would open the door to competition in many other areas.

Thank you

Subject: Microsoft Settlement

I used the early versions of Netscape and it was a good product. It made accessing the internet easier in the early years of the internet's evolution. I then purchased a new IBM computer with Windows 98 installed. Every time I accessed the internet, Windows would try to change my web browser to Internet Explorer. It was annoying to say the least. It also took extra steps to erase/delete the Explorer from my files. I think many people would just click on the "OK" button and have the browser changed, without thinking about it.

Suppressing competition is a long term project at Microsoft. Just look at Microsoft's history, even the historic operating system MS-DOS was purchased from some other company in Washington state, not developed by the people at Microsoft. The core ideas behind GUI were developed by XEROX, who didn't know how to use it to their advantage.

The government lost interest, for whatever reason, in pursuing this case to a just

resolution. The punishment should be much larger than the proposals reported in the newspapers. This type of illegal activity continues to be pursued by Microsoft. Letting them donate "free" software to the schools is the stupidest idea possible. It'll probable have a security bug in it, just like Windows XP. Here's hoping you find the courage to fix this problem.

Subject: Microsoft Settlement

I've watched Microsoft grow to it's position of supreme dominance in the PC operating system and software over the last 20 years. I have watched Microsoft destroy many innovative companies and products through means that I consider unfair and unethical. I believe that Judge Jackson's findings of fact and his remedy are unprejudiced and warranted. Microsoft "is" a monopoly and must be disassembled. There needs to be fair competition, and Microsoft should not be allowed to continue as it has. Microsoft's proposed settlement of donating software does nothing to remedy it's wrongs. I believe that settlement is a very bad idea.

**MTC-00016947**

From: Dale Luck  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 12:19pm  
Subject: Microsoft Settlement comment

This is my public comment on the proposed antitrust settlement between the DOJ and Microsoft.

I earned a Bachelor of Science Degree in Computer Science from Michigan Technological University in 1979. Have been in the business of creating commercial computer software for more than 20 years.

Since the 1980's I've observed Microsoft success in the computer software area. In the 1990's it became clear to me that their strategy had moved from creating competitive software to restricting others from competing against them.

I believe the proposed settlement is definitely not in the best interest of the public. It does not go far enough to promote the creation of an environment where software programs that are better than microsofts programs will be allowed to compete in a fair marketplace.

Under "Prohibited Conduct", Microsoft is prevented from penalizing an oem, vender, etc. if they choose to include non-microsoft software in their product offering that also includes Microsoft Windows. This is a good start, however this does not address the problem of the implied penalty Microsoft applies to a non-Microsoft product that competes with something that Microsoft has chosen to now include with their base operating system. The penalty being that the OEM is required to pay for Microsoft's version even though the oem does not want to include it.

Why is this a problem? Microsoft, is able to further its monopoly position and even more so its monopolistic pricing by forcing customers to buy things they don't want and then charging what it thinks is its fair market

value. The first example of this was Microsoft's Internet Explorer vs Netscape's Browser.

The latest example of this is Microsoft's audio media player vs RealNetworks Media Player.

It costs money to develop software. Microsoft pays for the development of its software by bundling it with the OS and then forcing the customer to pay for it, regardless of how well it works.

Companies that do not have the fortune of owning the OS for which their application will run must charge money for their software and to pay for development and return a reasonable ROI for its investors. This puts them at a disadvantage and forces almost all software developers to stay away from any products that they fear would compete with a similar product that is, or could ever be bundled with the OS.

How to fix that? The only way to fix that is to level the playing field between Microsoft and all the other software developers and companies.

To level the playing field requires 2 things: First—Microsoft must be required to offer a stripped down Operating System without all the of Microsoft's versions of features that OEMS and customer don't want.

That will level the pricing playfield. Second—Microsoft must publish and make available to the software development community the API's and rules used by these unbundled Microsoft applications when talking to the Basic OS.

And that will level the development playfield.

Why do we want this? Who will benefit? The true beneficiary of the above is the consumer. It is only in a truly competitive software development and market environment will we see better products become available for the consumer. The present environment stifle competition, and leaves it up to Microsoft to dictate the direction of software development. It is because of Microsoft's dominance that we are inundated by viruses, spam, and slow and buggy programs. Microsoft has no incentive to improve its products because it lives in a monopoly, able to sell any halfdone program to the consumer because they can bundle it in with the OS and then charge a little more for the OS.

There are thousands of highly qualified and motivated software developers and companies that can produce better products than Microsoft for email, web browsing, realtime audio, etc. yet they are not allowed to do this for the dominate OS, Microsoft Windows.

So because of this, the American consumer can never enjoy the fruits of those talented programmers.

I agree that the proposed settlement would benefit those disadvantaged schools, but at to great a cost for the American consumer now, and in the long term it is a bad deal for the schools as well. Those schools would get technology dictated by a monopolist that is intended to benefit the monopolist.

If this were such a good deal for the schools, Microsoft should go ahead and make the donations, however those donations should not be considered part of the settlement for this anti-trust issue.

Thanks for listening to me,  
I trust that the right decision will be made. It is really obvious to nearly all the rest of the computer software industry.

As a concerned US Citizen and computer user, I am OPPOSED to the Proposed Final Judgment.

Microsoft has been clearly found guilty of monopolistic practices. However, the PFJ does not impose penalties upon Microsoft for the illegal gains it has obtained. The PFJ takes inadequate steps to restrain Microsoft from the same or similar monopolistic practices. And the PFJ, which expires after only a few years, does nothing to restrain Microsoft from the same monopolistic practices in the future.

The Department of Justice was mistaken to either propose or accept an offer of settlement with Microsoft. The PFJ must be discarded, and adequate measures crafted to penalize Microsoft for their illegal gains and restrain their monopolistic practices. As a minimum, I advocate the breakup of Microsoft into an Operating Systems division, an Applications division, and possibly an "Other" division. In addition, I advocate that Microsoft be required to open ALL its APIs and file formats, allowing genuine competition and innovation.

I am a co-signer of the Dan Kegel petition.

To whom it may concern,  
I am writing to voice my concerns about the Proposed Final Judgment in United States v. Microsoft case.

I am president of Instrumental Software Technologies, Inc. We are a software consulting firm who specializes in writing custom software for the geophysical research community (Many US Universities and the US Geological Survey are our clients.) We

write software that runs under Microsoft OS's (NT, 2000, me, etc) as well as Linux and Solaris. Three quarters of our company works develops software primarily under the Linux operating system.

The Proposed Final Judgment in United States v. Microsoft prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The problem I have with this is as a commercial software development firm, we need to buy our computers from reputable sources. While we prefer to buy from companies like Dell, the effects of the above section may effectively force us to buy an OS from Microsoft for every computer in our office, even though all but 4 of our computers have had their hard disks cleared upon arrival in our offices and have Linux installed on them instead. This section effectively forces us to spend our precious monetary resources on Microsoft products that we have no intension of using.

If you have any questions, please feel free to contact me.

From: Erik Burd  
To: Microsoft ATR  
Date: 1/23/02 12:24pm  
Subject: Microsoft Settlement

The settlement with Microsoft shouldn't be allowed. It will not remedy the core problem

of Microsoft's unethical and anticompetitive business practices. The only thing it will do is extend their monopoly into schools, which the last place any real competition really exists.

Microsoft won't care a bit, as it will do nothing more than get more people using their products, who would most likely be buying their software. I see this as a big bribe offered by someone with a lot of cash burning a hole in their wallet, as they have nothing better to do with a whopping \$35 billion. It's like a police officer accepting a payoff from the mob or crime ring to look the other way.

What really needs to be done is to level the playing field and allow small companies to compete in the marketplace. Many companies have been shut out of the market by Microsoft's product bundling with Windows. These small companies are the real innovators, and they are the companies that must be allowed to exist. Otherwise, we will all lose the innovation that's required for us to make the next big step forward. Microsoft couldn't come up with an original innovation if it's existence depended on it.

I was extremely disappointed with the DOJ, as they snatched defeat from the jaws of victory. I'm happy that the nine states are going ahead on their own lawsuit to set things straight. I hope something does happen, but I have some doubts in the back of my mind. A very strong action must be taken, or Microsoft will only continue with their monopoly.

My thoughts on restoring competition:

- 1) Remove all bundling of Internet Explorer from all versions of Windows. Make it an optional download.
- 2) Additionally, remove any tying in of their other products (Windows Media Player, etc.) to Windows. There was a recent security bug in Internet Explorer which was fixed, ironically, by updating Windows Media Player. Make them optional downloads, too.
- 3) Punish Microsoft for their anticompetitive behavior, and hard
- 4) Ensure that small startup companies are allowed to innovate and create the next generation of software, without being bullied around by Microsoft.
- 5) Create a marketplace that will allow the computer users to determine who has the best product.
- 6) Take strong steps to protect competition.

Thank you for taking the time to read my letter.

Subject: Microsoft Settlement  
To whom it may concern:

I write this as a computer professional who makes a living by consulting in the computing field.

I find it hard to believe that after Microsoft was found guilty of monopolistic practices that the settlement proposed by the DOJ would simply let them off the hook with—NOT—even a slap on the wrist. The settlement only serves to entrench the status quo, basically allowing MS to continue their

current practices while paying lip service to the consumers.

As an avid computer user, and someone who makes his living from providing computer consulting and services to my clients I can see first hand how boxed in we as a nation are by the continuation of the monopoly that is Microsoft. The citizens of this nation deserve better.

Some alternative possible remedies:

Spin off the development tools section of MS, so that the tools and the OS cannot be tightly integrated. This would allow for other software product developers to have a fairer shake at competing with MS.

Force full disclosure of the windows API, both win32 and the native API. Force full disclosure of the various document formats used in Word, Excel, Access, etc. Require that any changes are published in advance.

Without a settlement with some teeth in it we are worse off then we were before the trial started. As you can tell I am very much opposed to the settlement, if you can call it that, in its current form.

Thank you for your time.  
-Sean

Subject: Microsoft Settlement  
January 23, 2002  
Judge Colleen Kollar-Kotelly  
US District Court for the District of Columbia

Comments about US v. Microsoft proposed settlement

I feel the remedies suggested by the proposed settlement do little to deter or punish Microsoft for actions and behaviors proven to be anticompetitive and illegal. Most egregious in my mind, however, is the position Microsoft will be in to stifle and lock out the Open Source movement.

As a developer of Internet solutions, I am quite familiar with the long and brutal conflict between Open Source tools and Microsoft tools and the gulf created between the two camps. Microsoft has been making steady inroads to the server and Internet markets simply by the virtue of their monopolistic position. By breeding ubiquity in the desktop market, they have orchestrated lock-in to the server market using closed and inoperable APIs, proprietary protocols and (even worse) embracing open protocols and modifying them with non-open extensions. All of these tactics are designed to put third party, and specifically, Open Source tools at a disadvantage when used with their desktop systems.

The settlement stipulates that Microsoft open "the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product" (section D) as well as "any Communications Protocol that is, ... (i) implemented in a Windows Operating System Product installed on a client computer, and (ii) used to interoperate natively ... with a Microsoft server operating system product" (section E). Both sections are a step in the right direction and force Microsoft to allow independent developers the ability to interoperate with Microsoft systems freely.

However, section J.2 limits this condition by requiring that for anything related to "anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third party intellectual property protection mechanisms", a third party developer must meet these requirements in order to gain access to said information:

(a) has no history of software counterfeiting or piracy or willful violation of intellectual property rights,

(b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product,

(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business,

(d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification

These conditions are applicable to businesses and for-profit entities, but specifically lock out any Open Source projects or anyone who does not have 'reasonable business needs'. Additionally, with Microsoft focusing on its new '.NET' strategy of distributed application programming, almost EVERY aspect of development will fall under 'authentication/authorization security' since almost EVERY aspect of the protocol, API or documentation will run across public, untrusted networks.

Given Microsoft's record of finding miniscule loopholes in past judgements and

exploiting them to further their control and flout the law, this one strikes me as particularly onerous (not to mention ironic). It wouldn't surprise me to learn that Microsoft's complicity with this proposed settlement is based quite largely on the fact that .NET will make the entire thing moot on this point, and at the same time provide an absolutely crushing blow to the Open Source movement which they deem such a threat.

I sincerely hope that this settlement is rejected or at least amended to address these concerns. Thank you for your time.

Sincerely,  
Keith M. Anderson

Subject: Microsoft Settlement

I strongly oppose any settlement that allows Microsoft to maintain its predatory monopolies in software and Internet access.

Rather than donating Microsoft software and Wintel hardware to schools, the company should be required to donate Unix and Apple software and equipment. Even a very large donation wouldn't dent Microsoft's monopoly position, but it would be more just than Gates's proposal, which merely entrenches it.

Microsoft's arrogance and unconcern for its customers should not be encouraged in any way. Its software is shoddy, full of bugs, vulnerable to hackers, and hopelessly behind its competitors, but its vicious practices have made it supreme in the marketplace.

For the record, my retirement plan owns Microsoft stock. I still strongly oppose the company's practices.

Stop the insanity. Break up Microsoft.

To: Microsoft ATR  
Date: 1/23/02 12:25pm  
Subject: Microsoft Settlement

I am writing to express my dissent with the proposed Microsoft Antitrust settlement. The area I find it most lacking is assurances to the non-commercial developer community (GNU/Linux, Apache, sendmail, etc.) that they will be able to write software that

interoperates with Microsoft products, and likewise Microsoft products will not be written so as to actively interfere with non-commercial software. This has demonstrably happened in the past, the most notorious of which was Windows 95 interference with the LILO boot loader program.

In fact, the whole judgement is geared towards commercial interests, the systems and procedures commercial interests share in common, and the financial redress commercial interests can objectively compute. The non-commercial community has its own unique characteristics and requirements that don't easily follow with those of commercial interests. However, the non-commercial software community is so vital to the high-tech economy and society of modern America that putting in place the special rules required of it is just as important as those required of commercial interests.

Sincerely,  
Allan Folz

As allowed under the Tunney Act, I wish to register my protest to the Proposed Final Judgement in the U.S. vs Microsoft case.

The PFJ will do little to restrain the anti-competitive behavior of Microsoft. This company has shown its disdain of the courts in its non-compliance with previous court orders and in its behavior during this proceeding. The PFJ suffers from many faults; choosing one example would be that the PFJ places restrictions on how Microsoft licenses its products to OEMs, but not on how it licenses products to large users such as corporations, universities, and governments, collectively referred to as "enterprises". Yet enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier US v. Microsoft antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software.

I urge all parties involved to reconsider the proposed settlement. Microsoft deserves more than a slap on the wrist for its destructive abuse of its monopoly power. More importantly, American consumers need to be protected against future abuses.

As an American citizen and computer user, I am opposed to the proposed settlement of the current Federal Microsoft antitrust case.

I am a strong proponent of capitalism. History has proven that capitalism is the most effective way to create a strong industry that provides service for the consumer. History has also shown that capitalism fails if a company gains a monopoly in their industry, and focuses their efforts on crushing competition using methods OTHER than providing superior or more efficient service.

Microsoft is just such a monopoly, and the courts have accepted that they have done exactly such actions. The proposed settlement does nothing to prevent them from continuing such actions. Microsoft's treatment of the 1995 consent decree and their actions in the courtroom show that they have little respect for such settlements. Since the proposed settlement would allow Microsoft to essentially choose their own definitions for certain terms, and has little in the way of enforcement, it will have little to effect in preventing their criminal actions.

I cannot accept the proposed settlement as an effective remedy to the criminal acts that Microsoft has been found guilty of.

 Subject: Microsoft Settlement  
 This settlement is bad.

Force them to open office api's and windows api's to give people a choice. This is asking very little, they open the api's, we will do the hard part of coding replacements.

Also no major distributor (Dell or Gateway), can sell computers that boot into Windows and another os because of their oem agreements. Microsoft's only punishment should be that they must compete—make them open the office and windows api's, and let major distributors sell linux and windows—and let consumers decide if they want to (they don't have a choice now) spend \$400 dollars a year to type a letter.

From: Robert Melton  
 To: Microsoft ATR  
 Date: 1/23/02 12:26pm  
 Subject: Microsoft Settlement

I am an application developer at the DC Metro Police Department. One of the things which the Proposed Final Judgment in United States v. Microsoft does not cover is file formats. This single omission makes the judgment weak.

File formats are one of the driving forces trapping consumers with windows and removing their freedom of choice. It causes a chicken and egg problem. Your workplace can not switch away from Microsoft because it is what you have at home. You can not switch away from Microsoft because it is what you use at work. This cycle leaves consumers feeling trapped; they need Microsoft just to be able to function.

If Microsoft file formats remain undocumented, third party developers will never be able to make a dent in their monopoly, and third party operating systems will never have a chance. Undocumented file formats create a much higher barrier to entry.

From: Trevin Beattie  
 To: Microsoft ATR  
 Date: 1/23/02 12:26pm  
 Subject: Microsoft Settlement

While most of the text under section III, "Prohibited Conduct", looks good; I believe there are problems with some of the definitions listed in section VI. To wit:

A: "Application Programming Interfaces (APIs)" is defined too narrowly by restricting it to those APIs used by Microsoft Middleware. The general definition of API is "the interface (calling conventions) by which an application program accesses operating system and other services." In the context of the PFJ, the definition should apply to interfaces used by Microsoft and non-Microsoft middleware and applications.

D: "Covered OEMs" does not cover all OEMs.

J: The definition of "major version" is easily misconstrued; for example, a version number of 7.0.0 would not be considered a major version under the given definition. The major version number is the part of the number to the left of any decimal point. Therefore, a major version must be identified by a whole number or by the part of the number to the left of any decimal point.

The version numbering of a product should not be used to determine whether that product constitutes Middleware.

**MTC-00016970**

From: Dan Willson  
 To: "microsoft.atr(a)usdoj.gov"  
 Date: 1/23/02 12:27pm  
 Subject: microsoft settlement

Follow Americans at the Department of Justice:

The proposed final judgement (PFJ) in the Microsoft antitrust case fails to prohibit anticompetitive license terms currently used by Microsoft. This is just one of many problems with the proposed settlement—other problems include but are not limited to the PFJ failing to prohibit anticompetitive practices towards OEM manufacturers, failing to prohibit intentional incompatibilities historically used by Microsoft, and the misleading and overly narrow definitions and provisions outlined in the PFJ.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. More importantly, the PFJ does nothing to correct Microsoft's past actions or redress their previous abuses.

Microsoft currently uses restrictive licensing terms to keep Open Source applications from running on the Windows platform. Open source software is the technological equivalent of free speech, so this is an area which must be addressed with regard to the Constitutional liberties of American citizens. All products should be given a fair chance to succeed in the marketplace—licensing terms currently used by Microsoft do not allow this to happen.

EULAs (End User License Agreements) which absolve Microsoft of all liability are a

disgrace to the free enterprise system, as they leave users with no rights for products and/or services they have purchased with their hard earned money. Imagine if Ford and Firestone made computer software—both companies would be free from their responsibility in the rollover deaths attributed to the Ford Explorer incident. Imagine dining at a restaurant and getting food poisoning, only to discover that the establishment can not be penalized because there are no health and safety laws to protect the consumer from gross neglect. Now imagine that your small business has paid a king's ransom for Microsoft software and services, gets hacked and loses data (I.E. loses business) because of a security hole in the Microsoft software, but they can not gain financial restitution for goods and services they have purchased. Clearly there is a double-standard with the computer software industry when it is compared to other service industries. The P/JF should take such matters into consideration and hold corporations like Microsoft accountable for their neglect, as they are providing a service. Microsoft's enterprise license agreements—those used by large corporations, state governments, and educational institutions charge by the number of computers which "could" run a Microsoft operating system—even computers running the open-source Linux or BSD-based operating systems.

Similar licenses to OEMs were once banned by the 1994 consent decree. Clearly these are monopolistic tactics—how else could a corporation force their clients to purchase goods and/or services that are not necessary?

Please take these points into consideration and reconsider how they affect the United States Constitution with regard to personal liberties. Computer software manufacturers should not be allowed to dictate the progress of this nation for the sake of their profit margins, all while hiding behind the facade of progress—allowing such practices to continue not only disregards the essential liberties of the typical American consumer, but disregards volumes of American legislation to curb monopolistic practices. The opinions expressed above are my own—with some assistance from the Web-based community of information-technology professionals—and does not represent the opinions of my employers. To: Microsoft ATR  
Date: 1/23/02 12:27pm  
Subject: Microsoft Settlement

Being a casual observer of the Microsoft antitrust case over the past years, I have found at least one ,what I consider to be, extremely serious flaw in the proposed settlement. The settlement involves giving away micrisift products to schools, one of the very few markets Microsoft still has viable competition in (by apple which they own a part of). Giving their product away in this manner will only serve to increase their monopoly in the operating systems market, by marrying their product to the national education system, by creating more, wider, exposure (and hence proficiency, and dependance) to the Microsoft products. Giving away ones product well below cost is an illegal tactic used by businesses to gain market dominance, and drive competitors out of business. Microsoft has used this tactic in the past to dominate the operating system and office suite market by providing extremely weak copy protection on their products ensuring that they could be easily copied and distributed by casual computer users to their friends. I do not find this a suitable punishment for a corporation convicted of violating antitrust laws. In my opinion, having microsoft purchase, and donate a competing product to the schools, or better yet, providing support for open source software in the public schools would do infinitely more to remedy the monopoly situation.

In addition, due to recent laws making it illegal to reverse engineer a product like microsofts windows operating system (like was done with the IBM PC leading to the "IBM Compatible"), I believe Microsoft should be forced to publish and document ALL of their API's to facilitate the production

of a compatible, competing product that can run the same software applications on the same hardware.

Subject: Microsoft Settlement

I object to the proposed Microsoft settlement for many reasons, but one of the biggest is that Microsoft charges large institutions site-licenses based on the number of machines that \*could\* run Windows, even if they happen to be running other operating systems like Linux. This in turn causes those large institutions to rethink their OS strategy, and in many cases they \*require\* all users to use Windows because "Hey, we're already paying for it". This is inherently anti-competetive.

From: Steve Schiff  
To: Microsoft ATR  
Date: 1/23/02 12:25pm  
Subject: Microsoft Settlement

As a technology professional, I have been following the Microsoft case in the news fairly closely. I am writing to express my deep dissatisfaction with the settlement of the case as it stands today.

I believe that Microsoft wields near monopoly power through the monopoly of the desktop operating system, which they have extended to a monopoly on office applications, the browser, and now, through the .net initiative, to the very infrastructure of the Internet.

Having been a party to many business planning sessions as a technology professional, I can tell you that it is tantamount to career suicide to propose writing end user applications to any platform except Windows. It is becoming increasingly difficult to propose infrastructure alternatives to windows in the data center.

In my view, left intact, Microsoft will eventually own the end to end application environment. This ownership will allow Microsoft to extend it's dominance to services albeit at a slower pace.

While I believe a structural remedy to be the most productive resolution to the case, and one which would unlock the most shareholder value, I believe that an alternative exists, which is quite simple to enforce and to demand:

Microsoft should be required to provide their applications and application services on a minimum of three alternative operating systems.

This would have the effect of increasing acceptance and adoption of alternative operating system and processor options, and would in turn create an environment where alternative server operating system and applications could compete on a more level playing field.

Please focus on this case. It is critical that the government do more than the present settlement to assure a competitive technology environment which will continue to secure the US dominant role in technology innovation.

Regards,  
Steve Schiff

Subject: Microsoft Settlement

It seems to me that there's a lot more than a single anti-trust issue at stake; it's the general faith that people can or should put in their government.

If Microsoft is allowed to walk away with the minimal sanctions and punishment that have been proposed, it will be an injustice on a scale similar to the crimes of Enron against it's employees and stockholders.

Please, look at the facts here, and not the spin generated by people on Microsoft's payroll. They abused their monopoly, and will have every inclination to continue doing so.

I've been a software engineer for 20+ years. I've started two successful software companies. I'm not some young hacker. Microsoft is a wart on our industry. Please take action.

Thank you,

From: Michael Bowen  
To: Microsoft ATR  
Date: 1/23/02 12:19pm  
Subject: the proposed settlement between the Justice Department and Microsoft

Greetings,

I would like to comment on the proposed settlement between the Justice Department and Microsoft.

The proposed settlement does not adequately address the damage that Microsoft has done to the computing industry. For

example, the definition of an API is too narrow. In order for there to be a level playing field, all of APIs of the Windows operating system must be completely documented. This way, Microsoft will not have an unfair advantage over third party vendors who wish to write applications. The settlement also fails to address file formats. It is very important that Microsoft releases information about its currently undocumented file formats (like word documents ".doc"). Microsoft has an unfair advantage over third party vendors when writing office software because these vendors can only guess when it comes to reading or writing word documents, excel spreadsheets, and others.

I feel that the settlement should be reworked, so that it will prevent Microsoft from engaging in any more monopoly practices.

Thank you,  
Michael Bowen  
software engineer at St. Jude Medical

From: Dexter C. Palmer  
To: Microsoft ATR  
Date: 1/23/02 12:23pm  
Subject: Microsoft Settlement  
To Whom It May Concern—

I am a United States citizen, and have been a frequent computer user since 1985. Over time, because of Microsoft's increasing monopoly of the marketplace, I have found it increasingly difficult to conduct my daily necessary business without resorting to Microsoft products (which are often poorly coded and insecure when compared with competing software). This is mostly because of Microsoft's well-documented monopolistic business practices, as well as incompatibilities (intentionally created by Microsoft) between its software and that of most other software and operating systems, as well as earlier versions of Windows. By now, it is literally impossible for me to communicate with anyone else in my workplace, or most others, without using Microsoft products (since Microsoft now has an effective monopoly with the "office suite" class of applications: in the case of Microsoft these include Word, Excel, Outlook, Entourage, and Powerpoint).

I feel that the proposed Justice Department settlement does not adequately redress the wrongs committed by Microsoft, for it does not sufficiently prohibit future abuses, nor does it offer remedy to the end user for previously committed infractions. I respectfully ask that it be reconsidered.

Sincerely,  
Dexter Palmer

From: Tom Termini  
To: Microsoft ATR  
Date: 1/23/02 12:27pm  
Subject: Microsoft Settlement—break up the company

As an Apple developer, I support a settlement that is fair and results in undoing

the damage done by Microsoft's illegal actions in the marketplace. Obviously the impact on the internet by MS's illegal tying of IE has limited choice, stifled innovation, and slowed the spread of the beneficial technological resources engendered by the net.

As far as a critical BROADBAND resource being adversely impacted, Apple's QUICKTIME digital video technology has been shut out by MS's on-going efforts to dominate this niche.

In the area of education users, the proposed (and now rejected) settlement where MS would donate software to schools would have just improved MS's hold on an important market niche.

We struggle every day to educate potential customers about the pitfalls of a MS-only environment. The company has been unfair and used their (derived from illegal monopoly revenues) warchest to lock out open competition and eliminate choice. We can see from the security issues surrounding MS that having no choice doesn't just cost consumers more money—it also opens the door to malicious and potentially huge damage from miscreants.

Ubique,  
Tom Termini

From: nikhil dhruva tilwalli  
To: Microsoft ATR  
Date: 1/23/02 12:27pm  
Subject: On the Proposed Final Judgement To Whom It May Concern:

In accordance with the Tunney Act I am submitting my opinions on the proposed government settlement with Microsoft in regards to the pending anti-trust case.

I am firmly opposed to the current proposed settlement term in the Microsoft case. The terms do not fully redress the actions committed by Microsoft in the past, nor their ability to commit similar or anti-competitive actions in the future.

Many of the provisions in the current settlement will not effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. In view of Microsoft history of anti-competitive practices correcting this is vitally important.

A few issues that have been brought to my attention are:

1) The settlement does not take into account Windows-compatible competing operating systems. Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the settlement fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

2) The settlement Fails to Prohibit Anticompetitive License Terms currently used by Microsoft. Microsoft currently uses restrictive licensing terms to keep Open Source applications from running on Windows.

3) The settlement Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft. Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

4) The settlement Fails to Prohibit Anticompetitive Practices Towards OEMs. The current settlement allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Please refer to <http://www.kegel.com/remedy/remedy2.html> for other issues that must be addressed for the settlement to be fair and equitable to all interested parties.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. I implore you to look into these and the other issues before before pursuing closure on this matter.

Sincerely,  
Nikhil Tilwalli

#### MTC-00016986

From: Tim  
To: Microsoft ATR  
Date: 1/23/02 1:26am  
Subject: Microsoft Settlement—BAD!

The terms of the settlement that the DOJ reached with Microsoft are BAD! MS has proven they will not respect the spirit of any court decree, and will bend and push the letter of that decree until there are enough loopholes to let them continue with business as usual.

MS has built a huge pile of cash reserves, mostly on the back of the consumers who were the victims of the monopoly MS built. If I robbed a bank and invested the money, I wouldn't get to keep the interest when I was caught. Thus, I think extremely heavy fines are needed to show that crime does not pay. Something in the 10, 20,30 billion dollar range would do nicely.

Finally, one of the biggest impediments to anyone competing with MS is the totally hidden nature of file formats for things like Word, Excel, Access, Powerpoint, Windows Media Player, etc. MS continually changes and manipulates these formats, so anyone

attempting to interoperate with MS formats is always behind. Please require MS to completely and totally document \*every\* file format, \*every\* communications protocol and \*every\* API, and divulge to the public that documentation with no licensing requirements, and to publish changes at least 6 months in advance, so that other companies can have a chance to update their products to work with the new format. Do NOT leave any loophole that would allow MS to not disclose something for "security" reasons—if a protocol is insecure because someone knows how it works, then it's not really secure at all. Truly secure protocols are widely reviewed, and withstand public scrutiny without any problems.

As a member of the IT industry, I feel very deeply that MS's illegal tactics have harmed the industry and reduced innovation. The rise of Free Software such as Linux as the only real viable competitors to MS show how MS have poisoned the commercial software industry.

Thank you for your time,

From: Payne Simpson  
To: Microsoft ATR  
Date: 1/23/02 12:28pm  
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement.

I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities.

I do not think that the proposed settlement is strong enough to serve this function.

#### MTC-00016988

From: Andrew James  
To: Microsoft ATR  
Date: 1/23/02 12:28pm  
Subject: Microsoft Settlement To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the

current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: Jake Donham  
To: Microsoft ATR  
Date: 1/23/02 12:29pm  
Subject: comment on proposed Microsoft judgment  
To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Microsoft uses its monopoly power to limit competitors' access to the market, and the consumer software industry is stagnating because of lack of competition.

The proposed judgment against Microsoft fails to redress its past abuse of monopoly power and fails to prevent future abuse. The judgment draws many provisions misleadingly or too narrowly, providing numerous loopholes by which Microsoft can continue its anti-competitive practices.

A fair judgment would open up all aspects of the consumer software market to competition, by forcing Microsoft to publish all APIs and file or document formats of any kind, and allowing users and OEMs to replace any part of the Microsoft software.

Subject: Microsoft Settlement

To whom it may concern,  
As a Systems Programmer for Willamette University in Salem Oregon, I have worked recently to create a Windows 2000/XP login client (or GINA) that would be able to authenticate against our existing LDAP directory. The process, was overly obtuse and time consuming primarily because the API's used by Windows are not available and their example source code (at least with regard to my project) does not work. I think it is clear that Microsoft wants to give the appearance that it allows third party programmers to extend it's operating systems without actually giving them the ability to do so. The final result of my work does not extend Windows 2000 as I had hoped and in fact must add a security risk to our existing Windows systems in order to work at all. Instead my work must necessarily rely on the existing Windows login dll (msgina.dll) to interface with the operating system.

Given that I have first hand experience, I wish to offer my opinion that any remedy which does not give programmers access to the information they need, specifically Windows system APIs, only allows Microsoft to leverage it's operating system to gain monopolies in other areas. In my example they are making it difficult for us to continue to use our existing Unix based servers with

their Windows desktop computers. Moreover it is rumored that they intend to remove SMB file sharing from future Windows operating systems. If this happens, and the APIs are not opened, we will have NO CHOICE but to use Microsoft server software. This is not right. I oppose any settlement which allows Microsoft to force companies and universities to use their software.

To whomsoever it may concern,  
I am against this settlement.  
I am actually against the very idea of settling with the guilty party. The guilty party must be given punishment. I don't why the judge even asked for a forced settlement. The judges job must be to find a remedy, not a settlement.

The judge must do what was done against AT&T. Microsoft must be broken into several parts. At least as many parts as necessary to bring its monopoly to a manageable level.

Or their should be penalty, and criminal liability. They have already breached courts orders.

How can they be let go without giving adequate punishment. The punishment must be severe, some percentage of their revenue must go as fine. They should have a review every year and if found guilty their income should be confiscated. There is no possibility that any settlement can be fair to the public.

thanks,

Subject: Microsoft Settlement

I'm not so sure if the proposed microsoft settlement is such a good idea. I don't think that it will effectively redistribute the gains which microsoft has acquired through it's successful use of unfair monopoly powers. It is apparent from the final judgement and the various pieces of evidence show that it will be difficult for any company or organization to compete against microsoft as long as it's "pushing it's weight around". Additionally, no reference is made to casual groups in the final judgement. The Open Source community is the only group which is currently a major competitor with Microsoft(AIM, Linux, BSD, Netscape/Mozilla), yet they are not mentioned(and apparently given no rights) under the final judgement. Microsoft API's and standards should be open for ALL programmers who want to produce a product that will be compatible with Microsoft programers, not just those who want to make a profit off that product. I was disappointed that the expected term of the final judgement was shorter than the trial which created it. I feel that 10 years(if not indefinitely until microsoft losses it's Operating System Monopoly) is more suiting and would give the industry enough time to recoup from microsofts stranglehold. With opposition and honest,

From: Don Atkinson  
To: Microsoft ATR  
Date: 1/23/02 12:26pm  
Subject: Microsoft Settlement

I believe the settlement is flawed. I don't have the time or fortitude to wade through the entire body of documents related to this case, but in order for the settlement to be meaningful and enforceable, Microsoft must be obligated to fully document all file formats and programming interfaces required to integrate products with any and all present and future versions of all of their software.

I develop software professionally. I know how difficult it is to coordinate with cooperating team members on complicated products. Anything short of full disclosure on Microsoft's part will allow them to maintain the fruits of their anti-competitive practices through delay and obfuscation tactics.

Philosophically, I'm a Libertarian, and question whether this should be in court at all. I am not an anti-Microsoft zealot, but over the past few years, I have become fed up with the restrictions that Microsoft places on the competitive environment, and if we are going to pretend to enforce a competitive market place through legislation and court rulings, let's get to the point.

An anecdote:

Our company recently had a number of laptops stolen. When placing an order with Dell to replace the machines, we made our decision on which model to purchase based on Dell's refusal to ship certain models without a specific Windows OS version. Some of our users are developers who work under Linux and have no need for a Windows operating system at all. Our business is wasting time and energy dealing with restrictions enforced by Microsoft and its weight in the industry. Since much of our development is done under government contract, this amounts to a waste of tax dollars.

Subject: Microsoft Settlement

Hello ladies and gentlemen,

I would like to add my voice to those who are displeased with the current proposed settlement with Microsoft. Microsoft is so large and diversified they can easily assimilate any sector of the software market they want. As it was clearly demonstrated in the Internet Explorer versus Netscape Navigator war, you cant compete against a company that can afford to give away its product longer than you can. Microsoft's pockets are too deep for any new software company to try and assault. Microsoft's interpretation of innovation is buying other companies that have innovative products (ex: Visio) instead of producing their own. They are definately the 300 pound gorilla of the industry.

As far as proposed solutions, I am afraid I dont have the sure-fire solution, but I think forcing them to offer free access to their current and future data structures (Microsoft Office documents, Visio files, etc) would at least prevent them from shutting out other

software companies by hiding behind proprietary file formats. I'm sure this suggestion needs more scrutiny than I have given it. I think software purchases should be judged on how efficeintly and effortlessly it manipulates your data, not what format it saves it in.

Hail!

I am an engineer supporting a US Air Force project. Our group uses MS-DOS on a system for the Air Force and Windows on our main server and desktops. One print server runs Linux and my own desktop dual-boots Windows and Linux.

It is my understanding that the Government is considering a settlement that would compel Microsoft to open it's application interfaces to commercial competitors. Great as it sounds, this leaves out two important entities, the US Government and non-commercial competitors. If the government, or a hospital, requires software that can be reviewed by a large group to ensure that it is defect-free, such as that protecting nuclear materials or keeping people alive, that should be a possibility available to us.

The current plausible threats to Microsoft are Linux and BSD. The Government already contributes to these; most of the network drivers were written by a NASA employee. The government already uses Linux and BSD in many places where Windows is cost prohibitive and the programmers need access to the source code. This access is a very important component. Presumably, Microsoft's source code is going to be protected as a trade secret. It's widely known that little of it was ever Microsoft's, so they need to keep it secret to stay out of jail. Anyhow, the application interfaces have to be open in order for anybody to write a program that communicates with Microsoft's products. Releasing them to a commercial competitor might've been useful 20 years ago,

but today, these have to be available to the U.S. Government and the the Open Source (Linux, BSD) community.

The course before us now is a straight, short path to dictatorship. Already, the licenses for Microsoft Frontpage and Microsoft Internet Information Server (commonly IIS) forbid thier use in disparaging Microsoft. If the alternatives to these are lost, as this settlement offers, Bill Gates could run for president and be unopposed; it would be illegal to suggest that another person could better fill that position. Once in place, any suggestions that Mr. Gates had about changing the way laws are made, interpreted and enforced would immediately become law; it would be illegal to suggest that Democracy is better than dictatorship.

Microsoft's arguments that they had to shut down Netscape, IBM, Borland, etc. as a matter of survival are reminiscent of Hitler's 1924 arguments that if he didn't start eliminating Jews he'd have to compete with them for food, clothing and shelter. Microsoft's arguments that they can't work within any consent decree with the government because they need freedom to innovate ignore the fact that Microsoft's last innovation was to offer the best implementation of BASIC for the CP/M operating system in the late seventies. Everything else that Microsoft has sold since then was invented outside of Microsoft, usually by a company with less than fifty employees. I could agree to Microsoft being free with it's innovations; they can make and sell BASIC interpeters for other people's operating systems forever; I won't begrudge them a nickel that they earned legitimately.

Good luck,  
-Mark

From: David J Brumley  
To: Microsoft ATR  
Date: 1/23/02 12:31pm  
Subject: Microsoft Settlement

I am opposed to the microsoft settlement. Anything that leaves the company in tact will ultimately lead to future illegal activity. Remember, microsoft was found guilty of illegally using a monopoly. This means to me that in fact they have a monopoly and have manipulated it to great profit. Any settlement that does not realize microsoft has made an effort to do things that are illegal and must be curtailed immediately is not acceptable.

For example, here at Stanford we use kerberos for authenticating our computers. MIT does likewise. When we wanted to incorporate Windows 2000 into our domain, we found they had changed the standard subtly so Microsoft software worked with our current infrastructure if we used microsoft servers. Never mind we had unix servers that never crashed and previously worked fine.

Microsoft will push the competitive edge until there are no more competitors. This is american business. American law dictates that these activites be checked, and curtailed when necessary. Please do something to curtail the current activity as well as future anti-trust violations.

Greetings,

I am writing to express my dissatisfaction with the proposed Microsoft AntiTrust settlement. Microsoft is a convicted monopolist who deserves to be punished. They have used their monopoly in certain markets (operating system, web browser, office productivity suite) to extend their grasp into other markets (internet services, video game consoles). Microsoft has demonstrated that they do not intend to stop this behavior. I ask that you reconsider the

proposed settlement for one that better protects the public.

Thank you,  
Kerry Payne

Subject: Microsoft Settlement

The current settlement proposed is a VERY BAD IDEA. Microsoft should not be allowed to integrate anything with their OS unless \*ALL\* of their API's are forced open & other software companies can integrate their products to the same degree as MS's software. OEMs should also be able to package this other software integrated with Windows & the computers they distribute.

From: Andrew Ball  
To: Microsoft ATR  
Date: 1/23/02 12:29pm  
Subject: Microsoft Settlement

I would like to add my voice to the mountain of concern regarding the proposed settlement with Microsoft. While I have significant concerns about all aspects of the proposal, there are two which deeply trouble me. I am the Systems Administrator for a small non-profit arts organisation of 65 employees. Out of necessity, we work in a very mixed environment of Windows and Macintosh computers, with a few Unix boxes thrown in for good measure. We use Open Source and GPL software on our servers because these licenses allow us to be able to afford the tools required to seamlessly pass documents between all our environments using a tool called Samba.

The other day, I read this on the Samba team's development site.

The settlement states:

"E. Starting nine months after the submission of this proposed Final Judgment to the Court, Microsoft shall make available for use by third parties, for the sole purpose of interoperating with a Windows Operating System Product, on reasonable and non-discriminatory terms (consistent with Section III.I), any Communications Protocol that is, on or after the date this Final Judgment is submitted to the Court, (i) implemented in a Windows Operating System Product installed on a client computer, and (ii) used to interoperate natively (i.e., without the addition of software code to the client or server operating system products) with Windows 2000 Server or products marketed as its successors installed on a server computer. " Sounds good for Samba, doesn't it. However, in the "Definition of terms" section it states :

"Communications Protocol" means the set of rules for information exchange to

accomplish predefined tasks between a Windows Operating System Product on a client computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network. These rules govern the format, semantics, timing, sequencing, and error control of messages exchanged over a network.

Communications Protocol shall not include protocols used to remotely administer Windows 2000 Server and products marketed as its successors. " If Microsoft is allowed to be the interpreter of this document, then it could be interpreted in a very broad sense to explicitly exclude the SMB/CIFS protocol and all of the Microsoft RPC calls needed by any SMB/CIFS server to adequately interoperate with Windows 2000. They would claim that these protocols are used by Windows 2000 server for remote administration and as such would not be required to be disclosed. In that case, this settlement would not help interoperability with Microsoft file serving one bit, as it would be explicitly excluded.

We would hope that a more reasonable interpretation would allow Microsoft to ensure the security of its products, whilst still being forced to fully disclose the fundamental protocols that are needed to create interoperable products."

The Samba team's concerns seem well founded to me. Were Samba to be stopped in development, our day to day operations would be significantly hampered. Additionally, there would be a significant impact on our budget as are unable to afford commercial tools that perform as well as Samba does. Indeed, we have yet to find a commercial tool that offers the same quality that Samba does.

My second concern involves those aspects of the proposal that entail Microsoft "giving away" millions in software and hardware to educational institutions. That this proposal isn't seen as simply ludicrous is beyond me. Surely Microsoft's lawyers must be wringing their hands with glee at the prospect of indoctrinating young minds to the "Microsoft way" at so young an age. Simply put, this is akin to allowing Coke to supply free sugar water beverages to kindergarten. It's a cynical attempt to grab mindshare, nothing more.

Additionally, you do the educational institutions no favour. Why? Because those machines as they degrade over 12 months, will eventually become unusable and require maintenance. Without suitably trained staff and available Systems Administrators, the computers and the software are nothing more than time wasters, requiring hours of tinkering by non-technical staff in order to make them actually work. You're dooming the English teacher to trouble shooting the broken WindowsXP box in the corner because few school boards have the Systems Administrator resources to keep the machines up and running all the time.

Surely this aspect of the proposal must be seen for what it is: a hollow advertising scheme, propped up with assets that will cost Microsoft nothing (but which will undoubtedly be written off in the following tax year), assets that will suck the already limited resources of local school boards dry.

Please, reject the proposal.

Subject: Microsoft Settlement -against  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. You have been bamboozled by techno-talk. The definitions are too loose. Microsoft will wiggle free as if there was no "settlement". Why sign a "settlement" when it will settle nothing and achieve no lasting effects? Attorneys may disagree with me, but I am a software developer active in the retail software industry for the last 12 years. I see the effects of predatory behavior, disrespect for other's IP rights, and restrictive OEM agreements that prevent alternatives from seeing a level playing field.

The proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only intend to prohibit the future repetition of those abuses. And poorly at that. Where is the punishment for lying in court? Where is the oversight with teeth? Where are monetary relationships broken? Trimmed and tweaked is what I see, not substantially changed. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. Open my industry!

Sincerely,

From: Bob Miller  
To: Microsoft ATR  
Date: 1/23/02 12:32pm  
Subject: Microsoft Settlement

The proposed final judgement on Microsoft is too lenient. Microsoft has repeatedly engaged in criminally monopolistic activity, and it needs a judgement severe enough that it will be dissuaded from more criminal behavior in the future.

The proposed final judgement is too narrow. It treats specific symptoms, some of which are already obsolete, but it does not attack the root of the problem. It should restrict Microsoft's ability to use its PC monopoly to enter new markets, but it does not. It should restrict Microsoft's ability to shut out competing software vendors in the PC market by requiring Microsoft to release API information well before software using those APIs is released, but it does not. It should specify how it will be enforced, with Microsoft bearing the burden of proving it is not abusing its monopoly powers, but it does not.

Most importantly, Microsoft should be prohibited from discriminating against open

source software. Microsoft should be required to make its APIs available to the public, not just to licensees. Microsoft should be specifically prohibited from licensing any of its products in ways that exclude open source software.

The proposed final judgement is not justice. It's barely a slap on the wrist.

Subject: Microsoft Settlement

In the Proposed Final Judgement Section VI:

Definitions, several definitions allow Microsoft too great a latitude to continue its monopolistic practices.

Definition K: "Microsoft Middleware Product" Definition K defines "Microsoft Middleware Product" to mean essentially Internet Explorer (IE), Microsoft Java (MJ), Windows Media Player (WMP), Windows Messenger (WM), and Outlook Express (OE).

The inclusion of Microsoft Java and not Microsoft.NET is questionable; Microsoft has essentially designated Microsoft.NET and C# as the successors to Java, so on that basis one would expect Microsoft.NET to be included in the definition. The inclusion of Outlook Express and not Outlook is questionable, as Outlook (different and more powerful than Outlook Express) is a more important product in business, and fits the definition of middleware better than Outlook Express.

The exclusion of Microsoft Office is questionable, as many components of Microsoft Office fit the Finding of Fact's definition of middleware. For instance, there is an active market in software written to run on top of Microsoft Outlook and Microsoft Word, and many applications are developed for Microsoft Access by people who have no knowledge of Windows APIs. In total, Definition K is too narrow. The Findings of Fact ( 28) define "middleware" to mean application software that itself presents a set of APIs which allow users to write new applications without reference to the underlying operating system. The definitions used in the Final Judgement should reflect common usage and be consistent with the Findings of Fact.

Subject: Opposition to Microsoft Settlement

In my opinion, anything short of break-up is a slap on the wrist to Microsoft. This company has shown time and time again that it regards agreements with anyone—including the government—to be convenient mechanisms to serve itself while continuing to apply illegal pressure through monopolistic tactics against hardware vendors and engaging in inappropriate and illegal bundling to serve its own ends. Microsoft's agreement to settlement is evidence enough that the settlement is toothless—after all, this is a company that, to this day, has maintained that it has done nothing wrong, disagreeing with the finding of fact that it is a monopoly that has broken the law. I oppose the proposed settlement agreement in its current form, and support the effort of the nine dissenting states. Look at what happened after the 1995 agreement. Microsoft immediately started to brag that it would not change their behavior one bit, and then immediately began to prove it.

Subject: Microsoft Settlement

I don't believe that the proposed antitrust settlement is in the public interest.

Given the fact that the Microsoft has been convicted of monopolistic behavior, with that conviction upheld on appeal, any settlement should effectively control that behavior. Instead, this settlement allows Microsoft to continue to leverage their operating system monopoly into unrelated sectors. It allows most of their anticompetitive behavior to continue unabated. It also ignores Microsoft's behavior with respect to previous scantions.

The settlement is so flawed that I cannot simply suggest changes that would fix it. It's so favorable to Microsoft that they might as well have written it themselves. My suggestion is to throw the entire settlement

out let the court decide the appropriate sanctions.

January 23, 2002

Judge Colleen Kollar-Kotelly

United States District Court for the District of Columbia

333 Constitution Avenue, NW

Washington, DC 20001

RE: US v. Microsoft proposed final order

Dear Judge Kollar-Kotelly,

The proposed consent final judgment for USA versus Microsoft will be an ineffective remedy for the abuse of Microsoft's monopoly power. If a remedy is to be composed to prevent the abuse of Microsoft's monopoly, then the remedy must address Microsoft's means of maintaining their monopoly, extending their monopoly, and abusing their monopoly power. Specifically, Microsoft should be compelled to:

- Open their file formats (an important tool in maintaining and extending their monopoly)
  - Publish communication protocols between objects embedded in office productivity documents
  - Interoperate with other vendors (they punish any of their customers who attempt to use other vendors) This is not a complete list of needed remedies. Also, the proposed consent final judgment doesn't do anything to punish Microsoft for their crime. Please accommodate the American public and punish Microsoft and make a meaningful remedy to their means of extending, maintaining, and abuse of their monopoly.

Subject: Microsoft Settlement

I believe that the current version of the settlement scheme is not in the best interest of the Public. Many Definitions of terms are ambiguous or straightforwardly directly beneficial to Microsoft. I think it should be taken under review further, and clarifications made on certain points. Obviously, if Microsoft has done this in the past (i.e., Caldera in the 90's) they will continue to do it in the future.

Intent should also be looked at. Obviously, their intentions are to go as far as they can "within the law" without actually breaking the law. Well, they broke it, and should pay the consequences. But their outlook on the whole thing has not changed. their intentions are the same. They just have to be even more devious now.

 Subject: proposed microsoft settlement  
 I vote NO! to the proposed Microsoft Settlement.

I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Microsoft is effectively a monopoly which has engaged in a series of anti-competitive practices, often in violation of previous court-ordered remediation. Given this history, it is unlikely in the extreme that Microsoft will cease this behavior in the face of any remediation other than separating the operating system business from the rest of the company. I strongly urge the court to do the right thing in making this monopoly compliant with US law in the one way which can structurally insure compliance—break off the operating system.

From: David Meriwether  
 To: Microsoft ATR  
 Date: 1/23/02 12:34pm  
 Subject: Microsoft Settlement

I believe the settlement is too weak, and does little to restrict Microsoft's leveraging of it's OS monopoly onto other markets areas. What is the purpose of the court's review of the settlement? What is the purpose of the legal proceedings at this point? If it is to ignore the problems leading to the lawsuit and to bury the issue while retaining the veneer of having "solved the problem", perhaps this settlement would come to mind.

If the purpose of the legal action is to restore some possibility of competition in fields threatened by Microsoft's domination of the OS market, I would say that this settlement FAILS. The settlement, with it's peculiar definition of terms seems quite behind the times and focused on the past. The definitions of terms such as API, Middleware, and Windows Operating System are twisted and narrowed to the point of absurdity. Further, as I understand what I have read, the settlement (weak as it is) will be obsolete in little more than a year.

To my understanding, this settlement is so weak and filled with omissions and twists that it is irrelevant to the issues it is intended to address.

Please REJECT the settlement. Thank you for any time you spent reading this.

 To: "microsoft.atr(a)usdoj.gov"  
 Date: 1/23/02 12:37pm  
 Subject: Microsoft Settlement

This letter is a comment on the Microsoft settlement.

While the settlement does implement some needed changes, such as OEM licencing, the overall settlement is far too weak. This is not an opinion I hold on my own; rather, most descriptions of the settlement in the press and other places have remarked on how

lenient it is with Microsoft. A remarkable amount of the settlement is open to broad interpretation, and potential loopholes abound. For example, with the open-source project Wine ( <http://www.winehq.org> ) be able to access Windows API? No one seems to know for sure. Even without the loopholes, the penalties for non-compliance do not seem like penalties at all. There are too many ways for Microsoft, with it's excellent legal team, to get away with basically whatever it wants. This is especially disheartening, since it seems as if Microsoft will soon use it's same tried and true tactics to promote it's .NET platform.

With Microsoft's repeated and widespread abuse of it's monopoly power, drastic remedies are needed. It is not in the interests of the public to deal gently with Microsoft. The trial has been long, and will be the last chance for a while to change Microsoft's anticompetitive business practices.

This trial is simply too important to let an inferior settlement stand.

I strongly urge the court to reject the settlement.

From: Bill Costa  
 To: Microsoft ATR  
 Date: 1/23/02 12:35pm  
 Subject: Microsoft Settlement

Dear Department of Justice,

First off, let me affirm that I am a citizen of the United States and wish to exercise my right to comment on the recent Microsoft settlement as allowed by the Tunney Act comment process. (Please see my signature below for full name, address and contact information.)

I feel it is important that Microsoft be prevented from introducing intentional incompatibilities in their software to discourage the use of non-Microsoft operating systems. In 1996 the operating system vendor Caldera brought a private antitrust suit against Microsoft over this very issue. The judge in this case ruled that:

"Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft."

I have every reason to believe that Microsoft will continue to use such tactics if allowed to, but unfortunately the current settlement does nothing to prevent this. In fact as an e-mail system administrator at the University of New Hampshire, I believe I am already beginning to see efforts by Microsoft to make it difficult to exchange e-mail messages between non-Microsoft e-mail programs and Microsoft's own e-mail clients.

This is an important issue. Without open publication of the the operating system's API and the assurance that Microsoft will not introduce such intentional incompatibilities, it will be impossible for other companies or open source software developers to create software that directly competes against Microsoft's own offerings.

Because of this I feel a provision to explicitly prohibit Microsoft from engaging in such practices is vital in helping to stop such predatory actions in the future.

Thank you for your time and attention.

From: Chris Meyers  
To: Microsoft ATR  
Date: 1/23/02 12:31pm  
Subject: Microsoft Settlement

To whom it may concern,

I am writing to voice my opposition to the proposed settlement in the Microsoft antitrust trial. I think that any settlement between Microsoft and the Department of Justice should do at least 2 things, promote healthy competition in the computer operating system/software market, and impose reasonable punishments on Microsoft for their past abuses of their monopoly status. I do not think that the current proposed settlement will do either of these things.

There are many ways to promote more competition in the os/software market. I believe that one way is to force Microsoft to share their API's with other software companies. If other software vendors could have access to the Windows API's it would quickly be shown how farcical Microsoft's claims of necessary integration are. Users would be able to "integrate" any software that they wanted into their operating system rather than having it just sit on top of Windows.

Another way to promote more competition is to allow other vendors to have their operating systems installed on new pc's along with Windows. True choice in the operating system market would allow me to buy a computer with Windows, Linux, BSD, or any number of other operating systems pre-installed on it.

However Microsoft's contracts with Original Equipment Manufacturing companies prevents anything like this from happening. This must be changed to promote competition. As far as Microsoft's punishment for abuse of their monopoly, I do not have any real answers for that. I do not think that a fine will be enough of a deterrent, but I don't that that drastic measures such as the break-up of the company would be good for either the software industry or the world economy. I believe that the 3 person oversight panel is a good start as long as they have the authority to act quickly and prevent monopoly extending products from being introduced into the market. If it cannot act quickly and pre-emptively, then I don't think that the panel will be effective at all. I thank you for your time and I hope that the current proposed settlement will be modified to allow more competition and punish Microsoft in a way that fits the crimes for which the company has been found guilty.

From: Orlando Echevarria  
To: Microsoft ATR  
Date: 1/23/02 12:33pm  
Subject: Microsoft Settlement

To whom it may concern,

I am web developer for the School of Engineering for the University of Connecticut. I am e-mailing you in regards to the Microsoft Anti-trust trial settlement. As a follower of this case since Netscape and Microsoft were adversaries in the browser market, I am appalled by the settlement that was reached with the nine attorney generals. I am appalled that the interest of the taxpayer and consumer was "waived." I am distressed that with the settlement, Microsoft is literally unscathed by the remedies(settlement). There are three examples that the settlement does not go far enough to punish Microsoft for it's illegal behaviour.

The first example is that Microsoft is allowed to continue it's anti-competitive behaviour through forcing OEM's to sign contracts that forces them to use no other rival browser or software. Microsoft claims that they are for consumer choice and freedom, but yet they will not allow me to choose what operating system or software I choose to run on my PC because they manipulate their contracts to fit their(Microsoft) needs and not the consumer. Am I hurt by this? The answer is yes because I can not go to a store and buy a PC and choose the software I want on it. I am forced to accept and buy something that I am not going to use, but yet it is forced down my throat.

The second example are the API's. I believe in the interest of fairness, Microsoft should make public ALL API's. They have hidden API's that allow them to maintain a leverage over their competitors and as a result, leave the competitors out of a loop. I propose that Microsoft open the source code to their flagship OS, Windows 98, Windows 98 SE, Windows Millenium and Windows NT 4.x series. This remedy will fit the crimes that they have committed against the consumer and competition.

My two cents,  
Orlando Echevarria

Subject: Microsoft Settlement

Hello,

First let me say that I am a Microsoft Certified Systems Engineer (MCSE) and as such work with Microsoft and their products every day. I firmly believe that Microsoft will act immorally and in their own interest until they are stopped (Much as they have done up to this day). At every turn Microsoft work to block independent innovation and force the use of their products. I fear for the future of the computer industry if they are not stopped and I DO NOT believe that the current proposed solution will do anything more than slow them down for a few years. I personally think that now Microsoft have enforced themselves as a standard, that they should be forced to open that standard to other developers and allow competition.

Nick Fisher

Subject: Microsoft Settlement

I am a U.S. professor of Computer Engineering with industry experience in software engineering, and I would like to register my opposition to the proposed settlement in the Microsoft antitrust case. I have examined the proposal, and it fails to address the problems of Microsoft's monopoly position in many important ways. For instance, the settlement contains prohibitions intended to curb some of Microsoft's current anti-competitive practices, but relies on definitions that are too restrictive and provide too many loopholes. As one with experience in software development, I can see many ways to exploit these loopholes in order to circumventing the restrictions. For instance, Section III(j) allows Microsoft to keep security-related APIs secret. It is easy to see that Microsoft will simply declare that every API now includes security features (recent Microsoft announcements that they will focus more on security suggest they are already planning this). Microsoft has a proven track record of creatively exploiting every loophole imaginable. Their integration of Internet Explorer into their OS in order to bypass the "Consent Decree" is one example of how much they can be trusted to follow the "spirit" of an agreement.

The settlement does not punish past behavior already proven illegal in court or

remedy the effects, but merely restricts Microsoft from continuing some of this behavior in the future. This sends the message that illegal behavior is tolerated and profitable until eventually stopped by a court, and will only encourage further lawbreaking by Microsoft and other potential monopolists. Furthermore, the enforcement mechanism is also very weak, and relies on a Technical Committee which is at best prone to chronic deadlock since Microsoft effectively has 50% control. In conclusion, the current proposed settlement is worse than no settlement at all. It is only a fig leaf, which will present the illusion that it is restoring competitiveness to the industry while actually doing very little. Microsoft will continue to use its control of the OS to gain control of other markets, while claiming that competitors and consumers are now duly protected by the law.

Sincerely,  
Dr. Kevin B. Theobald

Subject: Microsoft Settlement

I have been an information systems professional for more than a decade. In my opinion, the proposed judgement is not an adequate remedy to the issues cited in the findings of the case. It is insufficient because: a) it allows Microsoft to charge developers a fee for interoperability information and allows Microsoft to set limits to its dissemination. This immediately disallows any open-source development using Microsoft-supplied data, and open source "free" software is one of the few possible competitors to a monopoly with the power and scope Microsoft wields. b) Microsoft is left completely un-hindered in its ability to leverage existing market dominance in its pursuit of monopolies in other markets using precisely the same business practices cited in the finding.

For these reasons I regard the proposed remedy as inadequate.

Subject: Microsoft Settlement

I feel that the proposed settlement in this case is a very bad idea. It shows just how easily America is controlled by big corporations. Proposing a much more strict settlement would send a message to the corporate community that the people aren't going to sit down and let Large Corporations like Microsoft get away with infringing on our rights as U.S. Citizens.

Thank you

Mr. / Ms. Hesse:

Please accept this letter as a comment on the proposed Microsoft settlement, under the Tunney Act. I oppose the current proposed settlement, for a number of reasons. One that stands out is the fact that the current proposed settlement does not prevent Microsoft from imposing barriers to entry for operating systems which use or replicate Windows API's. I feel that the current proposed settlement is inadequate and does not properly address the issues posed in the initial finding of fact. Again, this letter is a comment opposing the current Microsoft settlement.

Date: 1/23/02 12:35pm  
Subject: Comments regarding the Revised Proposed Final Judgment

Although the Revised Proposed Final Judgment does address some of the tactics Microsoft used to illegally maintain and extend its monopoly position, I am concerned about this portion:

Nothing in this provision shall prohibit Microsoft from enforcing any provision of any license with any OEM or any intellectual property right that is not inconsistent with this Final Judgment.

While this may seem to be standard disclaimer language, I am afraid it will be misused by Microsoft to excuse behavior that they will almost certainly engage in, in an attempt to bypass the intent of the Judgment. One of the OEM licensing practices Microsoft has used to build its operating system monopoly is the prohibition of any "non-Microsoft screens" between the BIOS screen and the launch of the Windows desktop. This prevents hardware manufacturers from shipping machines in a "dual-boot" configuration, which would allow consumers to choose the operating system they wish to use when they turn on their computer, because the operating system selection screen is a "non-Microsoft screen."

With the rapidly increasing size of computer hard disks, and availability of non-royalty operating systems such as Linux, "dual-boot" configurations could be very attractive to OEMs as a means of offering value-added differentiation from other vendors. As the Judgment language stands, I believe that Microsoft would still be able to prohibit this practice through its license, which would be a disservice to consumers.

The Judgment should explicitly prohibit Microsoft from doing anything to prevent OEMs from shipping "dual-boot" configurations.

Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed.

The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Date: 1/23/02 12:38pm  
Subject: Microsoft Settlement

To Whom it May Concern:

Having read the proposed final judgement for USA versus Microsoft, I respectfully submit that the remedies it proposes are not sufficient to stop Microsoft's unlawful anti-competitive practices. The partial opening of Microsoft's APIs, for example, might make it easier for some developers to write some software for Windows (which can only serve to increase Microsoft's operating system market share), but it includes specific restrictions that would make it difficult or impossible for non-commercial and Open Source developers to have access to these APIs. Nor does it address a core issue: the intentional obscurity of Microsoft's constantly changing file formats, which makes it extremely difficult to write applications that operate on Microsoft-generated files, such as Microsoft Word documents.

Additionally, the settlement does not address Microsoft's illegal contractual tying and bundling of middleware to the operating system, even though the Court of Appeals

specifically rejected Microsoft's petition for a rehearing on this issue.

Indeed, the settlement provides no penalty whatsoever for Microsoft's past unlawful behavior.

During the course of the anti-trust trials, Microsoft, far from being repentant, has sought to expand its monopoly positions even further with its .NET, Passport, and Windows XP Activation schemes. It seems clear that Microsoft considers the Department of Justice and the U.S. Government to be paper tigers, and the acceptance of this proposed settlement by the Court would only serve to prove that to them.

I strongly urge you to reject the proposed settlement and to insist on stronger and more effective remedies.

Subject: Microsoft Settlement  
Dear Ms. Hesse:

As an independent software developer and long-time personal computer enthusiast, I am writing to voice my concerns about the Proposed Final Judgement in the case of the United States v. Microsoft.

In particular, I am concerned with Microsoft's practices towards end-users such as restrictive licensing agreements (e.g., inability to use software on non-MS operating systems), intentional incompatibilities with non-Microsoft operating systems (e.g., Caldera), and non-backwards-compatible software upgrades. It is vital to the existence of a free market that no individual company control the marketplace. The law of the United States has determined that, by its business practices, Microsoft has established monopolistic powers over the personal computer industry.

This monopoly injures computer users by stifling innovation and competition. Personal computer users are thus left with unreliable, insecure software (e.g., Outlook) and operating systems (e.g., Windows XP). To make users buy the latest version of their software, Microsoft stops releasing updates whether or not the newer software is better for the user or not.

As currently written, the Proposed Final Judgement does not, in my professional opinion, redress the problems which have established Microsoft's monopoly nor its business practices toward personal computer users who suffer the consequences of a monopolistic company. I refer you to the letter written by Dan Kegel for a more complete review of the problems with the proposed judgement.

I wish you wisdom in finding a solution that better addresses the public interest.

Respectfully yours,

Subject: Microsoft Settlement  
Dear Sirs:

As a professional software engineer, I am writing to provide input on the proposed Microsoft antitrust settlement. I believe that the settlement as proposed is not in the best interests of the American public. I further believe that the settlement would be harmful to the American economy, and is completely inadequate given the findings of fact in the trial—findings of fact which have been upheld by the Court of Appeals.

Microsoft's anti-competitive practices run counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public—including the Federal Government itself—to bear increased costs, and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. This was a serious problem in the 1995 consent decree, and is even more serious of a problem with this settlement.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function. Not only that, but the proposed settlement has \*no\* provision for punitive damages against Microsoft for its actions in the past. An illegal monopoly should not be allowed to retain its ill-gotten gains while merely being warned against such conduct in the future. Due to Microsoft's size and large amount of cash reserves, any fine levied against them should

be in the billions of dollars, else it will merely be "shrugged off" and the message will remain unheard. I urge the plaintiffs in this lawsuit to stand fast and not accept this settlement, which amounts to a slap on the wrist for Microsoft and a kick in the crotch for the American public. Thank you.

Sincerely yours,

Subject: Microsoft settlement

the current 'settlement agreement' is a terrible idea. Under the Tunney Act, we wish to comment on the proposed Microsoft settlement.

The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software. The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems.

This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. The PFJ as currently written appears to lack an effective enforcement mechanism.

Subject: Microsoft settlement: doesn't go far enough

Dear Sir or Madam,

The 1980s were a time of diversity and competition in the computer industry. There were many different computer platforms, each with its own unique strengths. Innovation was strikingly rapid. Sadly, that time has passed because one company dominates the industry: Microsoft.

As a director of technology for a large regional consulting firm, I am forced to spend a considerable amount of money on systems which barely advance over last year's systems, just to stay compatible with my clients. Worse, this money could be used for our firm to develop innovative products.

Today, Microsoft is even getting worse; they are forcing large firms to move away from perpetual licensing of their software to yearly "subscription" licenses. They are doing this because people were not upgrading their Microsoft software because it was not innovative enough to merit spending the money to do so. Hence, Microsoft is now building a system in which they get yearly revenue from their customers, even if they do not sufficiently improve their products.

I urge the Department of Justice and the Court of Appeals to reconsider the settlement and to strongly consider the revised settlement offered by some of the states.

Only then will the software industry be innovative again.

Thank you,

Subject: Microsoft Settlement

I am opposed to the settlement of the Microsoft case. MS has repeatedly abused their monopoly position and great wealth to drive competition out of business. In doing so they have expanded their monopoly time and again. The proposed settlement is far too mild, neither appropriate for the heinous crime, nor a sufficient deterrent to prevent similar actions in the future.

The monopoly has been abused at the cost of citizens and corporations, be they competitors, partners, or customers, on a scale beyond compare—in terms of over charging, forced migrations, forcing the adoption of less-fit solutions, and products that are intentionally faulty. MS is a drag on the entire economy, the primary reason that the productivity increases that we all expected computers to provide has failed to materialize. Specifically, MS' unfair and illegal destruction of competitors is a discouragement to current and future innovators.

From: Mark Lewis  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 12:39pm  
Subject: Microsoft Settlement

My name is Mark Lewis, and I am a software engineer at Business Logic, a small software company in Chicago, Illinois.

I do not believe that the proposed final settlement in the Microsoft anti-trust suit is sufficient to stop Microsoft from continuing its monopolistic practices. Specifically, in order to re-establish competition in the operating systems market, it is necessary to publish and document all APIs between an application program and the host operating system. Without a requirement that ALL such APIs be documented and available, no other operating systems vendor will be able to

provide a third-party implementation of these APIs, and Microsoft will continue to hold a monopoly in the operating systems market much as it does today. The Findings of Fact make it clear (paragraph 2) that Microsoft abuses private API's in a monopolistic fashion. The definition of APIs used in the Findings of Fact is effectively the same as the common definition of the term in the software industry, namely, "... The interfaces between application programs and the operating system."

However, the definition of the term "API" in the proposed final judgement is much more limited. It does not include all interfaces between application programs and the host operating system, and therefore the provisions for reasonable and non-discriminatory disclosure of APIs (section III.D) do not sufficiently address the issue. Since Microsoft would not be obligated to release all API's under the terms of the proposed final judgement (speaking of APIs in the sense commonly understood in the software industry), it will be able to continue to maintain its monopoly by releasing private API's under restrictive licenses to only those vendors it chooses.

—Mark Lewis

From: Geoffrey Costello  
To: Microsoft ATR  
Date: 1/23/02 12:38pm  
Subject: Bad Settlement.

Dear Sir,

I am writing to you to voice my displeasure over the proposed deal with Microsoft. Microsoft is a company that has failed to follow the restrictions set upon it by previous judges and is beyond any doubt, untrustworthy. Microsoft has continued its predatory tactics and the situation is worsening. With XP Microsoft is seeking to shut out competitors from the Desktop arena and to force consumers to upgrade to future Microsoft operating systems, even if no upgrade is desired by the consumer. If this company receives a slap on the hand after their previous behavior—which is exactly what the current remedy is—then they will have no reason not to engage in the same anti-competitive tactics they've used for the last decade. They will then use dominance on the Desktop to monopolize the server arena (with .NET).

Capitalism is a great system, so long as the companies in the economy are playing by the rules. Unfortunately, these rules are broken by some to the detriment of the vast majority of Americans. Phillip Morris, and Enron are extreme cases of bad behavior by US corporations. Microsoft is not in the same category as these companies, but they have broken the law, they are a monopoly, and several of their witnesses (including their founder) have committed perjury in attempting to maintain their monopoly. They must be punished severely.

If this deal goes through, it will significantly lower my opinion of, and confidence in the Justice Department as well as President Bush's administration.

Regards,  
Geoffrey Costello

Subject: Not a complaint about MS.  
Support for MS.

Hi,  
I just wanted to write in and voice my support for Microsoft. Though they may have played unfair and did some stuff people didn't like they did help to unify the industry. To me that is the most important thing they could have done. I don't care if something costs more or doesn't have as many features. What I care about is that I don't have to worry that a web page designed for one browser isn't compatible with another. The best thing that could have happened was someone won the war of the browser. Even better is that the most technologically sophisticated browser one.

Anyway, could you please leave Microsoft alone. I'm tired of my taxes being spent on this crap. I don't mine monopoly practices when they make my life better. (The government is also a monopoly and they make my life better so I don't complain about the government either)

Thank You,  
Anthony Skipper

CC: activism@moraldefense.com@inetgw, letters@capitalis...  
DOJ,

Your fallible and spurious pursuit of Microsoft does my, and many others, hearts, wallets, and American way of life a great disservice. What you have chosen to do is attack a company for perceived improprieties and anti-trust accused—not by consumers—but by competitors. Those who could not make a product affordable, user-friendly, or customizable enough for the market have used you, the DOJ, as a device to focus their enmity and commercial jealousy. They lost; that is one of the side effects of capitalism—simple enough.

I have used Microsoft products for the past nine years; I am now a Microsoft Certified Professional and network securities enthusiast. I began my computer life using Tandy and Apple lie computers. They loaded their entire software suite from a floppy disk; to change a program required the computer to be shut off and restarted...each and every time. Microsoft created a full-fledge graphical user interface that allowed spreadsheets, documents, calculators, and vast panoply of

Microsoft and 3rd-party software followed. Was Microsoft the first with a GUI? No. Was Microsoft the first with spreadsheets, word programs and games? No. What Microsoft created—and still creates—was an affordable easy to use solution for the mainstream public. Most people could neither afford UNIX-based machines nor did they have the inclination to learn to use the vastly complex UNIX operating system. Microsoft changed that.

Cheap machinery; cheap, easy to use software; "double-click and go" ease was what Microsoft brought to the marketplace. I currently run Windows 2000 Advanced Server at home for my Microsoft training and I happen to like it. Click here, click there, from time to time a written command at a DOS prompt and everything falls in line. Contrast that with my Linux machine and that is non-stop reading, non-stop typing, and an intricate and sometimes evil, if you will, operating system to troubleshoot. I appreciate the ease of use that Microsoft has brought me and millions of others.

In my time as a network administrator, I have seen the ease and comfort that Microsoft brings users and administrators alike. After watching my boss of many years Novell training struggle and fight using Novell 5.0 and then watching the ease with which he took to NT server and 2000 server, I cannot make the claim that Microsoft is a superior product; what I can do is claim that it is the superior product for the end-user experience and configuration. With Microsoft, an installed server can be up and running set to use DHCP, NAT, routing, print sharing and the like in under two hours. With others operating systems (IRIX, LINUX, SCO-UNIX), that could take a work day.

When I spent my money on parts for my computer that would go in my home for my personal use and my enjoyment, I did not expect the government to sit back and punish a company that made a great product and attempt to dictate what goes on my computer. They bundle IE...so what? It's free anyway.

If Netscape were so great, people would download it, uninstall IE and use Netscape only. Consumers are driven by excellence and ease of use. The Yugo was an easy to use car but it was a horribly Spartan and an unreliable machine—compare that to Hyundai, a manufacturer of also easy to use machines that happen to be reliable. My point is, the consumer will dictate where the market will go. If television viewers grow weary of reality TV, the executives of the station see that fact in the ratings and simply show something else. If a user does not like a web browser, they will undoubtedly search for another one until they feel they have something that benefits them. The arrogance of the DOJ in dictating to me what I can use, if I find it excellent or not, is overwhelmingly anti-capitalist. I make the decision of what I want to buy; I make the decision as to what I want to use, not the DOJ. If I find it lacking, then that company has simply lost another customer. If enough share my opinion, the company will cease that product or die a free-market death as they should.

One overwhelming flaw in the DOJ's case is that the charges against Microsoft were not brought by the consumer, but by Microsoft's

business rivals. SUN, unarguably, makes fantastic servers and mesmerizing stable operating systems. What they do not do, however, is bring a product to the mainstream consumer level. If they really cared about competing they would make an x86-compatible operating system. They recently decided to scrap that notion. I severely want to learn to use the SUN OS for my future computer work but why would I buy a \$4,000 entry-level workstation to play with when I could enjoy the fruits of an OS for free or some trivial price? There is simply no incentive as an end-user to spend so much money on the hopes of having a satisfying experience with a computer.

Netscape is a company with numerous product failures and encryption flaws. Their software is bloated, unresponsive, and prone to crash. They force users to register an email address and user name to use their latest software. They thusly inundate one with email and sell user names and email addresses to their advertisers. Microsoft does none of these things. To use IE you choose "No" to set up an internet account and you are done.

This next point may seem trivial but after watching end-users for three years on this issue, I have a good idea of what I am writing: people hate Netscape. When they click on the Netscape icon, 9 times out of 10 it will load successfully (and this is on the latest and best from Dell); when Netscape cannot load a page properly, it hangs and does not allow the user to press "stop" or "reload"; it simply holds them in suspense while IE allows you to press "stop" and go on to another page.

Netscape, upon loading, takes a good six seconds on even the fastest machines. IE opens before you realize the mouse button after clicking its icon. Users make note of these things. I watched an entire department bemoan and spew forth mountains of rancor against Netscape because they were forced to use it for its email incorporation. Only for email would they use this product and at every turn they would complain to me about it. Just because a product has a huge market share does not mean the product was put their through illegal avenues. SUN dominates certain sectors of the server market because they make fantastic systems; why not haul them in for anti-trust charges of dominating the market?

A much more important issue evidenced by the DOJ's action against Microsoft is the perception amongst the public that the DOJ is attacking excellence and ingenuity. I'll try not to belabor the point but it is quite evident to anyone who can read or think that this type of action leads to socialist and communist states. If you attack and besmirch those who excel in the name of those who fail, then you punish achievement and laud failure. What example does this set for a capitalist society? The reason for America's success (as opposed to others failures) is its free and open market. With millions of points of ingenuity and creativity, we have secured ourselves in a system that, should one point fail, others will step in and take its place—with the government, there is one, inculpable point of failure and no good can come of that. What the DOJ is doing is saying that no point can ever go out, no flame ever extinguished.

I do not know if this is the product of bleeding-heart liberalism or people who do not even understand their own economy. Take, for example, SGI. SGI used to have a monopoly on high-end graphics for movie special effects. With Moore's Law and the decreasing price of computer hardware (coupled with the increase in graphical power), SGI is a dinosaur. The SGI seems to only exist for massive render farms (e.g., Los Alamos nuclear research) and FAA virtual airports. HP's line of PA-RISC and fx chips; Intel and AMD getting strong floating-point performance; nVidia and 3D Labs with affordable and extremely powerful hardware; and Microsoft and Linux clustering ability have made SGI a thing of the past for most corporations and movie studios. Why spend \$30k for one machine when you could buy four machines, one with graphics card and three to support rendering, that would be geometrically faster than the SGI for a fraction of the price? It's called innovation. SGI failed to adjust for the low-end market and they have rightly suffered. Should you punish the collective of HP, Intel, AMD, nVidia, 3D Labs, Microsoft and Linux, for excelling where SGI fails? I think not. It would be foolish and an instantaneous blockade to our free market. Why then, do you attack Microsoft for excelling where Netscape and other competitors fail? You really believe that bundling software is some brazen act of anti-trust? That would be laughable were it not so arrogant. Realplayer bundles a host of, to me, chintzy and useless software. What do I do with them if happen to need the basic Realplayer? I uninstall them.

While you might make not that IE cannot completely be uninstalled because the registry of Windows is closely coupled with the IE kernel, deleting the icons to IE is, to most people, the same as uninstalling it.

Don't like it, don't Use it. I have some forks and spoons that I don't like; I do not sue them for being in the drawer, I just ignore them.

I used to remember a time when I and others were encouraged to excel. Seems times have changed. In America, with the 'progressive' and politically correct movement, there are no definitive wrongs or absolutes—except that the unapologetically wealthy and anything remotely Western civilization are bad. If I were poor, I would be embraced. If I wrote a book or invented something and became wealthy, I would be repugned and hated by the very people who used to love me because they considered me to be oppressed by America. The DOJ is taking this same stance. By attacking Microsoft for its excellence, you embrace losers, yes "losers", and say to them that you'll take care of them because failure is alright and nothing to ashamed about—and two plus two equals five.

The federal government, other than national defense, does nothing as well or efficiently as the private sector. It is proven over decades and decades of empirical evidence—look at public schools; mountains of failure and no one to hold responsible. Why now then, does the DOJ believe it can put the hand of the government in the private sector and make things better? The

government will only destroy our economy. The private sector is the economy. The government is a tool of the people, to serve our needs, not to mollycoddle and pander to the losers of our free market. There is nothing quite as bad as an untouchable, inculpable government overseer asserting power where it has proven, time and again, its incompetence. When the government fails, there is no one to hold responsible. The knowledge of such has proven to be quite the intoxicant for the DOJ.

Please cease this case against Microsoft. You only do American citizens and the economy harm.

Subject: Microsoft Settlement

I, as a concerned citizen, must express my concerns regarding the proposed Microsoft Settlement or Proposed Final Judgement (PFJ).

The idea of punishing a monopoly by requiring them to extend their monopoly into the US educational system is incomprehensible and distressing.

Furthermore, I do not support the proposed settlement because I do not think it provides sufficient punishment to balance Microsoft's offenses, nor sufficient incentive to prevent them from doing the same in the future.

Also, some of the definitions are too narrow to fulfill their purpose or do not cover all areas in question. For example:

Definition A: "API"

The Findings of Fact ( 2) define "API" to mean the interfaces between application programs and the operating system. However, the PFJ's Definition A defines it to mean only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs. For instance, the PFJ's definition of API might omit important APIs such as the Microsoft Installer APIs which are used by installer programs to install software on Windows.

another example:

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft :

1. Microsoft discriminates against ISVs who ship Open Source applications  
The Microsoft Windows Media Encoder 7.1 SDK EULA states ... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); ... Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on

SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the addon API installed, which is often not the case.

Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing middleware and office suites.

Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems. Additionally, there are sections of the PFJ that effectively encourage, rather than dismay, the monopolistic practices in question:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas. Please give serious consideration to these and similar problems with the current version of the Proposed Final Judgement or Settlement.

Thank you very much,  
guinevere liberty nell

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo.

Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Francois Bradet

To: Microsoft ATR  
Date: 1/23/02 12:40pm  
Subject: Microsoft Settlement

The current proposed settlement through its narrow definitions and its inability to quickly act allows Microsoft to simply side-step the injunctions against it and, by changing very little and relabeling its practices, allows Microsoft to continue anti-competitive practices as well as punish consumers and further business developments in increased costs and tighter licensing requirements.

Please amend the settlement to truly open the standards so that America can truly benefit from fair competition and fair business practices.

Thank You.

From: Stephen Reppucci  
To: Microsoft ATR  
Date: 1/23/02 12:40pm  
Subject: Microsoft Settlement

I'm writing to voice my opposition regarding the proposed settlement of the US Department of Justice's antitrust case against Microsoft. As a professional software developer, with over 20 years of experience in this field, I have watched Microsoft grow from a company which made marginally useful software into a colossus which uses its considerable weight to bully the software industry into making its products the only choice that a non-expert can turn to.

The proposed settlement does nothing to punish Microsoft for its past sins. From my understanding of the settlement, the most serious consequence for Microsoft in this settlement is that they are being asked to promise that they won't act in a non-competitive manner again. As history shows from past agreements from Microsoft, they have no fear of breaking promises such as this one as soon as the media focus shifts

elsewhere and they feel they can again get away with their heavy-handed tactics.

Microsoft has an undeniable monopoly on the operating system market for Intel based PCs, a fact that has been determined by the courts, and one that's painfully obvious to me.

For further proof of this monopoly, I've personally had to pay for copies of Microsoft OSes four times in my life, even though I never use their operating systems. If one were to call Dell, Gateway, Compaq, or any of the other major PC vendors, and ask to buy a computer system without paying for a Microsoft operating system, they'd find that it's impossible to do. That is proof enough of a monopoly in my eyes.

Microsoft uses this operating system monopoly to advance the market share of other software applications it produces. The dominance of MS Office, Internet Explorer, Excel, and other applications, even in the presence of other applications that are at least as good, if not better than the MS products is further proof that Microsoft continues to use its monopoly.

The only reasonable settlement that I can envision breaking this cycle is to force Microsoft to split into two companies, one producing operating systems, and a separate one producing applications.

In addition, I'm in favor of seeing a settlement that punishes Microsoft for its past sins. Allowing them to keep the money they made while behaving in an illegal manner is not a fair settlement to me.

Thank you for considering my opinion on this matter. —

Subject: Microsoft Settlement

About four years ago my wife and I bought an Aptiva PC. We bought it because of the IBM name. It came with the Windows 95 operating system. We had a coupon to upgrade to Win 98 but many articles and talk show interviews said that there were many bugs in the system so we opted out. Later, we bought a scanner. It is a UMax. The software that came with the unit defaults to Microsoft IE when attempting to attach a document to an email. We are using Netscape as a browser and had to get technical support and a couple of books to learn how to attach a document to an email. If we were using IE it required dragging the wanted document to an icon and zip it was done. We replied to an offer by AT&T to subscribe to their Worldnet. It came with Microsoft IE5.5. We refused it. In all of these examples it would be so easy for my wife and I to just accept IE and MSN and all of the Microsoft stuff but then it would eliminate our opportunity to get what we wanted.

Our thoughts are that if Bill Gates made lug nuts we would all be driving a Gatesmobile. The customer should have the opportunity to

select the software that they desire and not be manipulated by technical strategies that are designed to make people conform to one product.

Thank you. Richard & Maya Caudill, 839 Loyalton Dr., Campbell, CA 95008

I believe that the proposed settlement in the U.S. vs. Microsoft anti-trust case is woefully inadequate and will not achieve the desired effect of curbing Microsoft's monopolistic practices.

Certain terms are defined too narrowly in the settlement; unless these definitions are amended to include future products Microsoft will be able to skirt around the spirit of the settlement and continue with its monopolistic and predatory behavior.

Definition K: "Microsoft Middleware Product"

This definition should be amended to include .NET, given that Microsoft is touting C# and .NET as the middleware of the future. Open source implementations of .NET standards have to be able to compete effectively with Microsoft. Definition U: "Windows Operating System Product" This definition should also include Intel-compatible operating systems Windows XP Table PC edition and Windows CE. Given that Microsoft is focusing on the Tablet PC as the future business platform of choice, omitting these operating systems will mean that future court cases about handheld OSs are inevitable.

From: Ron Ralston  
To: Microsoft ATR  
Date: 1/23/02 12:40pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am strongly opposed to the settlement proposed in the Microsoft antitrust trial.

What is contained in that proposal provides neither adequate oversight and review to prevent recurrences of such actions in the future nor adequate penalties for those of the past.

Microsoft has been found to be a monopoly and to have used that position to illegally increase their fortunes at the expense of competitors, their own OEM customers, and the American public.

The proposed settlement seemingly accepts that Microsoft has behaved illegally, requires no meaningful compensation for their

victims, and requires that they behave very slightly differently in the future—and then only on specific and enumerated products. This sort of settlement will do little to discourage Microsoft from similar activities in the future and will do nothing to keep them from using their vast financial resources to circumvent it.

The proposed settlement does not apply to any and all products, of any sort whatsoever, designed, manufactured, or marketed by any company either partially or wholly owned by Microsoft, its heirs, successors, or assignees, past, present, and future—it should. It does not require full and open disclosure of all APIs and file formats to developers of products which might compete with Microsoft products—it should. It does not prohibit the predatory practice of releasing Microsoft products which “cripple” competing products—it should. It does not prohibit software licenses which prohibit (or seriously restrict) packaging of non-Microsoft products by OEMs—it should. It does not prevent them from using their nearly absolute control of the end-user computer interface to sell other Microsoft products and services—it should.

Finally, the proposed settlement seems to allow Microsoft to provide second-hand computers to under-financed school systems and supply them with Microsoft software. This is amazingly inadequate for several reasons:

First, there is absolutely no shortage of used computers in this country. I’ve worked for computer manufacturers and I can assure you that used computers are next to impossible to give away to school districts—they want current models.

Private individuals, corporations, and government agencies scrap thousands of functional two or three year old computers daily and many of them end up in landfills because no home can be found for them.

Second, although the development cost of software is high, the manufacturing cost of the distribution media is negligible.

The out-of-pocket cost to Microsoft for operating system and application software CDs is only a few cents each.

Lastly, the concept of a settlement which requires that Microsoft’s punishment for monopolistic acts be to actually extend the monopoly to include new victims who have escaped it in the past because of lack of funds verges on the surreal.

Find a settlement which protects us from Microsoft and is so painful to them that they never think of acting illegally again.

From: Christopher Flynn  
To: Microsoft ATR  
Date: 1/23/02 12:40pm  
Subject: Microsoft Settlement

I personally feel that microsoft should be forced to open up it’s code so that developers can write emulators and libraries to bring microsoft code to other platforms such as mac and UNIX instead of having to create slow emulators that don’t emulate things 100%, thus restricting the operating system to a user depending on the programs they want to run.

-Christopher Flynn

#### MTC-00017069

From: Tim Butterfield  
To: Microsoft ATR  
Date: 1/23/02 12:42pm  
Subject: Microsoft Settlement

To whom it may concern,

I wanted to add my voice to those who disagree with the proposed judgment against Microsoft. I agree with Dan Kegel’s comments on many points, though I will address just a

few of these here. As a software developer working on Windows, Solaris and Linux, the proposed definitions of API, Middleware, Middleware Product, Windows OS and the non-disclosure of proprietary file formats are troublesome. I define API as an application programming interface. This is not limited to only operating system interfaces. For example, applications, libraries, other development tools and even web services like Passport have interfaces which can be programmed to. These are all APIs, which appear to be excluded under the proposed definition. Middleware should not be defined or limited by a version number, but by how the software is architected. Many web enabled applications I have worked on have a middleware component as do many desktop applications. With development using the new .NET architecture, these portions of the applications will still be considered middleware. As that middleware may use .NET, .NET must therefore be either middleware itself or part of the underlying ! operating system. However, .NET does not appear to be classified this way in the proposal. As for the file formats, they should be open and documented sufficiently to allow the use of those file formats on other operating systems and by other applications. The current proposal is lacking in this requirement.

One other area that I find particularly heinous is the practice of prohibiting the sale of computers without a Microsoft operating system installed. It is impossible or nearly impossible to buy a computer, especially a laptop computer, without it having some variety of Microsoft operating system installed. I would like that option to be available in the marketplace and the current practices make it prohibitive for manufactures to do this.

I hope that a more amenable solution can be arrived at.

Sincerely,  
Tim Butterfield

#### MTC-00017070

From: Stephen Moehle  
To: Microsoft ATR  
Date: 1/23/02 12:42pm  
Subject: Microsoft Settlement

I am opposed to the proposed Microsoft settlement. I believe that it does not do enough to penalize Microsoft for past anticompetitive behavior, nor does it do enough to prevent Microsoft from engaging in such behavior in the future.

In particular the definitions of the terms “API” and “middleware” are much too narrowly defined and would allow Microsoft to withhold a great deal of information necessary for a competitor to fully use the APIs and integrate with Windows.

Further, many Microsoft APIs may be covered by software patents. All APIs must be licensed free of charge to all developers but in particular to open-source developers, and any relevant patents must be licensed royalty-free.

Also, the proposed settlement does nothing to prevent Microsoft from retaliating against OEMs that sell computers with non-Microsoft OSes installed, most notably Linux. OEMs must be free to sell computers with any

operating system they wish and still be able to purchase the Microsoft OSES at the same prices as any other OEM.

Stephen Moehle

From: Danny Calegari  
To: Microsoft ATR  
Date: 1/23/02 12:44pm  
Subject: Microsoft Settlement

As a consumer of computer software, and a person who uses computers and computational tools in essential ways in my work (I am a professor of mathematics at Harvard), I would like to strongly suggest that the proposed Microsoft Settlement is a bad idea. My specific objections are numerous, but I will restrict myself to just one: the PFJ does \*not\* go far enough in prohibiting exclusionary licensing practices by Microsoft towards ISV's. For example, programs developed with Microsoft Visual C++ may not be distributed with windows-compatible operating systems; in particular, the Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..." This is only one of many examples; in order for the PFJ to have substance to it, it must comprehensively uphold the abilities of consumers to pick and choose combinations of free, open-source, and proprietary software to use with each other in whatever manner they see fit.

I hope you find this opinion useful.

Yours sincerely,  
Danny Calegari PhD

**MTC-00017073**

From: Ed Silva  
To: Microsoft ATR  
Date: 1/23/02 12:43pm  
Subject: Microsoft Settlement  
To whom it may concern:

The proposed settlement of the Microsoft anti-trust case is simply unacceptable. It would reward them, not punish them, and allow them to further expand their monopoly to a market which is not completely controlled by them. How can expanding their monopoly be punishment?

Please, go back to the drawing board on this one. The future of the computing world is at stake here, and there are many who dread the thought that Microsoft will have a strangle hold on it.

Yours,  
Ed Silva

**MTC-00017074**

From: Waterman, Bryan  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 12:40pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am completely opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not come even close to redressing the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

Microsoft has been convicted of anti-trust violations. The proposed settlement provides no punishment that will convince Microsoft to change their corporate behavior, or does it provide adequate relief for the injured party: namely myself and millions of other computer users that are literally forced to use Microsoft products.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded. This fact must be evident, given the huge public outcry against the proposed settlement, as well as the fact that many of the States Attorneys General have publically said that the proposed settlement does not provide any measure of justice. The follow is a list of minimum remedies that court should consider. Remember, Microsoft is guilty, do not let them buy their way out.

Proposed remedies \$4 billion in fines, payable to the US government  
Microsoft Windows, 2000, XP source code must become government property.

Rights to license this code will be auctioned off just as the FCC auctions off spectrum rights. Microsoft will be allowed to keep the applications as copyrighted works, with the copy-right expiration date to be 2006.

All EULA agreements with Microsoft are declared void.

All licensing contracts with Microsoft are to be voided, and new contracts must be made publicly available. No more secret discounts.

Any prohibition against "dual boot" computers must be declared void and immediately removed from any contracts

with Microsoft. This provision should be implemented immediately, irrespective of the time line of other penalties.

If Microsoft violates the terms of the above remedies, they are to be broken up as a company

Sincerely,  
Bryan Waterman

From: Shawn Grant  
To: Microsoft ATR  
Date: 1/23/02 12:42pm  
Subject: Microsoft Settlement

I believe that the proposed settlement with Microsoft is insufficient. Microsoft has been found guilty yet it does not seem as though they are going to be punished at all. The settlement only attempts to force Microsoft to act a fair manner without punishment for its transgressions, and still fails to do that. I feel one of the main problems with the settlement is the lack of protection afforded to the Open Source community. At this point, Linux and other Open Source projects appear to be the only viable competition to Microsoft, yet the settlement allows Microsoft to decide on their viability as a business and withhold access to Microsoft APIs, documentation, and communications protocols.

I call for further restrictions and punishment in the settlement with Microsoft. Thank you for your consideration.

 Subject: Microsoft Settlement

In the settlement proposal in the case of US Department Of Justice v. Microsoft Corp. there are many weaknesses. Below is a list of some of the more glaring misgivings I have concerning the case:

I. How should terms like "API", "Middleware, and "Windows OS" be defined?

The Findings of Fact (? 2) define "API" to mean the interfaces between application programs and the operating system. However, the PFJ's Definition A defines it to mean only the interfaces between Microsoft Middleware and Microsoft Windows, excluding Windows APIs used by other application programs. For instance, the PFJ's definition of API might omit important APIs such as the Microsoft Installer APIs which are used by installer programs to install software on Windows.

The Findings of Fact (? 28) define "middleware" to mean application software that itself presents a set of APIs which allow users to write new applications without reference to the underlying operating system. Definition J defines it in a much more restrictive way, and allows Microsoft to exclude any software from being covered by the definition in two ways:

1. By changing product version numbers. For example, if the next version of Internet Explorer were named "7.0.0" instead of "7" or "7.0", it would not be deemed Microsoft Middleware by the PFJ.

2. By changing how Microsoft distributes Windows or its middleware. For example, if Microsoft introduced a version of Windows Update service, then nothing in that version of Windows would be considered Microsoft Middleware, regardless of whether Microsoft added it initially or in a later update. This is analogous to the loophole in the 1995 consent decree that allowed Microsoft to bundle its browser by integrating it into the operating system.

Definition K defines "Microsoft Middleware Product" to mean essentially Internet Explorer (IE), Microsoft Java (M), Windows Media Player (WMP), Windows Messenger (WM), and Outlook Express (OE).

The inclusion of Microsoft Java and not Microsoft.NET is questionable; Microsoft has essentially designated Microsoft.NET and C# as the successors to Java, so on that basis one would expect Microsoft.NET to be included in the definition.

The inclusion of Outlook Express and not Outlook is questionable, as Outlook (different and more powerful than Outlook Express) is a more important product in business, and fits the definition of middleware better than Outlook Express.

The exclusion of Microsoft Office is questionable, as many components of Microsoft Office fit the Finding of Fact's definition of middleware. For instance, there is an active market in software written to run on top of Microsoft Outlook and Microsoft Word, and many applications are developed for Microsoft Access by people who have no knowledge of Windows APIs.

Microsoft's monopoly is on Intel-compatible operating systems. Yet the PFJ in definition U defines a "Windows Operating System Product" to mean only Windows 2000 Professional, Windows XP Home, Windows XP Professional, and their successors. This purposely excludes the Intel-compatible operating systems Windows XP Tablet PC Edition and Windows CE; many applications written to the Win32 APIs can run unchanged on Windows 2000, Windows XP Tablet PC Edition, and Windows CE, and with minor recompilation, can also be run on Pocket PC. Microsoft even proclaims at [www.microsoft.com/windowsxp/tabletpc/tabletpcqanda.asp](http://www.microsoft.com/windowsxp/tabletpc/tabletpcqanda.asp): "The Tablet PC is the next-generation mobile business PC, and it will be available from leading computer makers in the second half of 2002. The Tablet PC runs the Microsoft Windows XP Tablet PC Edition and features the capabilities of current business laptops, including attached or detachable keyboards and the ability to run Windows-based applications." and Pocket PC: Powered by Windows Microsoft is clearly pushing Windows XP Tablet PC Edition and Pocket PC in places (e.g. portable computers used by businessmen) currently served by Windows XP Home Edition, and thus appears to be trying to evade the Final Judgment's provisions. This is but one example of how Microsoft can evade the provisions of the Final Judgment by shifting its efforts away from the Operating Systems listed in Definition U and towards Windows XP Tablet Edition, Windows CE, Pocket PC, X-Box, or some other Microsoft Operating System that can run Windows applications.

II. How should the Final Judgment erode the Applications Barrier to Entry?

The PFJ tries to erode the Applications Barrier to Entry in two ways:

1. By forbidding retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows.

2. By taking various measures to ensure that Windows allows the use of non-Microsoft middleware. A third option not provided by the PFJ would be to make sure that Microsoft raises no artificial barriers against non-Microsoft operating systems which implement the APIs needed to run application programs written for Windows. The Findings of Fact (?52) considered the possibility that competing operating systems could implement the Windows APIs and thereby directly run software written for Windows as a way of circumventing the Applications Barrier to Entry. This is in fact the route being taken by the Linux operating system, which includes middleware (named WINE) that can run many Windows programs.

By not providing some aid for ISVs engaged in making Windows-compatible operating systems, the PFJ is missing a key opportunity to encourage competition in the Intel-compatible operating system market. Worse yet, the PFJ itself, in sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". This prohibits ISVs from using the information for the purpose of writing operating systems that interoperate with Windows programs.

III. How should the Final Judgment be enforced?

The PFJ as currently written appears to lack an effective enforcement mechanism. It does provide for the creation of a Technical Committee with investigative powers, but appears to leave all actual enforcement to the legal system.

IV. What information needs to be released to ISVs to encourage competition, and under what terms?

The PFJ provides for increased disclosure of technical information to ISVs, but these provisions are flawed in several ways:

1. Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

2. Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

3. The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces.

4. ISVs writing competing operating systems as outlined in Findings of Fact (?52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems.

5. No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ? 39).

6. Section III.I of the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs (perhaps in the style proposed by the W3C; see

patent-policy-20010816/#sec-disclosure). This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users, as illustrated by this report from Codeweavers, Inc.:

When selecting a method of porting a major application to Linux, one prospect of mine was comparing Wine [a competing implementation of some of the Windows APIs] and a toolkit called 'MainWin'. MainWin is made by Mainsoft, and Mainsoft licenses its software from Microsoft. However, this customer elected to go with the Mainsoft option instead. I was told that one of the key decision making factors was that Mainsoft representatives had stated that Microsoft had certain critical patents that Wine was violating. My customer could not risk crossing Microsoft, and declined to use Wine. I didn't even have a chance to determine which patents were supposedly violated; nor to disprove the validity of this claim.

The PFJ, by allowing this unclear legal situation to continue, is inhibiting the market acceptance of competing operating systems.

V. Which practices towards OEMs should be prohibited?

The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional 'white box' OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

VI. Which practices towards ISVs should be prohibited?

Sections III.F. and III.G. of the PFJ prohibit certain exclusionary licensing practices by Microsoft towards ISVs.

However, Microsoft uses other exclusionary licensing practices, none of which are mentioned in the PFJ. Several of Microsoft's products' licenses prohibit the products' use with popular non-Microsoft middleware and operating systems. Two examples are given below.

1. Microsoft discriminates against ISVs who ship Open Source applications

The Microsoft Windows Media Encoder 7.1 SOFTWARE DEVELOPMENT KIT END USER

LICENSE AGREEMENT states: ... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL);

... Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the addon API installed, which is often not the case.

Applications potentially harmed by this kind of EULA include the competing middleware product Netscape 6 and the competing office suite StarOffice; these EULAs thus can cause support problems for, and discourage the use of, competing middleware and office suites. Additionally, since Open Source applications tend to also run on non-Microsoft operating systems, any resulting loss of market share by Open Source applications indirectly harms competing operating systems.

2. Microsoft discriminates against ISVs who target Windows-compatible competing Operating Systems

The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by ISVs to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..." This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems."

By allowing these exclusionary behaviors, the PFJ is contributing to the Applications Barrier to Entry faced by competing operating systems.

The Preceding examples are only but a few of the potential loop-holes in the Proposed settlement. For a more complete listing, please refer to : <http://crossover.codeweavers.com/mirror/www.kegel.com/remedy/remedy2.html>

Mr. Dan Kegel has performed a great deal of research and speaks for a large number of

software developers, systems engineers, and various other information technology professionals with his misgivings. Al

so, more information can be found at:

<http://www.salon.com/tech/col/rose/2002/O1/16/competition/index.html>

[http://www.boston.com/dailyglobe2/O15/business/Microsoft\\_case\\_key\\_to\\_tech\\_s\\_future+.html](http://www.boston.com/dailyglobe2/O15/business/Microsoft_case_key_to_tech_s_future+.html)

Please take these items under consideration prior to approving the proposed settlement, as the PFJ as it stands will not only fail to achieve the goal set forth by the findings in the case; but it may in fact drive Microsoft's anti-competitive practices to an all time high.

From: Nic Simonds  
To: Microsoft ATR  
Date: 1/23/02 12:44pm  
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past,

but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Subject: Microsoft Settlement

I would like to put on record my opposition to the Proposed Final Judgment in the Microsoft anti-trust case as inadequately restrictive of Microsoft's anti-competitive behavior.

As just two examples:

1. The PFJ requires Microsoft to release internal API specifications to Independent Software Vendors only at the time the software goes into beta release. This gives inadequate time for ISVs to make their software compatible (or competitive). Further, Microsoft can easily manipulate the schedule or labeling of pre-releases (e.g., "alpha" releases) to circumvent this requirement even further.

2. Nowhere does the PFJ require Microsoft to release undocumented file formats, even though it was established in the Findings of Fact that these undocumented formats form part of the barrier to entry for ISVs. Thank you for your attention.

Subject: Microsoft Settlement

I think the proposed settlement is a bad idea. I truly believe that they have to much power in forcing us to use their products and do things their way. For example, even though they claim that you can remove IE from their new WinXP product. You really can not. Their remove mechanism that they offer only removes the ICON from the desktop.

I am also not saying that you just dissolve the company to the point where the stock market suffers. But there has to be more stringent guidelines that could be put in place that will protect the end users and Microsoft's intellectual property.

Thanks for listening.

#### MTC-00017085

From: Michael Darrin Tisdale  
To: Microsoft ATR  
Date: 1/23/02 12:43pm  
Subject: Microsoft Settlement

I have decided to write this email to voice my opposition to the DOJ's proposed settlement with Microsoft. There is one key provision in it which I feel makes many of the other provisions null and void; thereby rendering much of the agreement worthless and the market effectively more anti-competitive.

One of the key definitions in the Agreement allows Microsoft to determine to whom it will license access to APIs and the like. Section III (J)(C) allows Microsoft to reject licensors from accessing its APIs, Documentation, or Communication Protocols to those that meet Microsoft's criteria for a business: the licensor must "... (c) meet(s) reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..." Further, Section III (D) restricts the types of licensors for its "middleware" by defining independent software vendors, and others to only those that specify a direct commercial concern—in effect, a profit oriented organization. Lastly, even the US Government would be disqualified from licensing the technology for its solutions, as the US Government would not meet those requirements.

Of course, the major challenge to Microsoft today is not from businesses but from the Open Source community, one in which people do not desire to directly profit from their works. Since products like SAMBA, an interoperable version of Microsoft's file sharing system, are not from a business according to Microsoft, Microsoft would be able to kill off its primary competitor by

refusing to license any information about its protocols. SAMBA depends upon this information to make its product compatible. Without access to that information, they would be unable to continue producing their product. Strangely enough, then, Microsoft gets to determine its competitors, something I have never known any company to be able to do in its market. Only companies which meet Microsoft's standards for a business would be accepted; as these businesses would be at a clear distribution, marketing, and licensing disadvantage compared with Microsoft, the opportunity for real competition would fade away.

As a developer who uses both Microsoft and non-Microsoft products together, I have always struggled to achieve my goals as Microsoft has always hoarded its proprietary formats so that they control the information. I depend on interoperability, not single source solutions. That approach gives my clients a choice, the key advantage to a market, in their operations. If the current Agreement is approved, I am sorely afraid that I will no longer be able to offer that choice to my clients. Sadly, the market will become more monopolistic and ultimately defeat the goal of the Agreement.

I therefore do not support the approval of the Agreement, and I strongly urge you do reject it.

... M. Darrin Tisdale

#### MTC-00017086

From: Michael Bosland  
To: Microsoft ATR  
Date: 1/23/02 12:42pm  
Subject: Hi,

Hi,

I'd like to add comments to this landmark case which will greatly affect me and most other Americans.

There are many problems with the settlement the DOJ is proposing. I won't go into them here, but instead concentrate on one area that it does not address.

Microsoft has been judged in the past to have intentionally modified it's products to degrade the user experience of end users attempting to use a competitor's product. An example is the 1996 Caldera vs. Microsoft case. This example shows how Microsoft deliberately degrades it's product to both harm end users and competitors. The second harm feeds back into an even greater harm on end user by effectively destroying competition. One of the DOJ's primary missions is to ensure that competition is not illegally suppressed in this fashion.

The Proposed Final Judgement does nothing to prohibit or even discourage this behavior. Therefore the Proposed Final Judgement should be either discarded or redrafted to address this issue.

Thank you for taking the time to hear my view,

Michael Bosland

From: Brian Rudden  
To: Microsoft ATR  
Date: 1/23/02 5:45am  
Subject: Microsoft Settlement

To whom it may concern, I have read about the proposed settlement in the Microsoft

anti-trust case, and am not in favor of it in its current state. In the past, I have been particularly appalled at Microsoft because of its rampant anti-competitive and monopolistic nature. In my views, the settlement does little to correct Microsoft's past actions, and does very little to prevent (or discourage) future anti-competitive actions. Even during the proceedings, Microsoft has flamboyantly pursued markets outside of its core market (Operating systems and Applications), all the while hampering competition.

As an example: Microsoft's recent move into telecommunications, Broadband, and Internet Service, with Qwest Communications is indication enough that they have no plans to cease their anti-competitive nature. In the process, they are injuring the economy of local service providers, by making it more difficult to obtain Broadband DSL service through another provider.

I respect the ideas of capitalism and free market, however, there has to be a limit to the amount one corporate entity can control the market—before the market is no longer free.

From: Christopher Palmer  
 To: Microsoft ATR  
 Date: 1/23/02 12:44pm  
 Subject: Microsoft Settlement

To Whom It May Concern:

I am writing to express my opposition to the proposed settlement in the Microsoft antitrust trial. The current settlement proposal does not redress the actions committed by Microsoft in the past, nor stop them committing similar actions in the future.

The provisions within the current settlement only serve to formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses.

This, in my opinion, goes against the very foundation of the law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

I too want to see a settlement come sooner, rather than later, but it is wrong to reach an unjust settlement just for the sake of settling.

Sincerely,  
 Christopher T Palmer

#### MTC-00017089

From: Tony Notto  
 To: Microsoft ATR  
 Date: 1/23/02 12:39pm  
 Subject: Microsoft Settlement

Dear Sirs,

I am writing to protest the proposed settlement with Microsoft. One of the many reasons I am opposed to this settlement is that it fails to, as the court of appeals stated in their ruling (section V.D., p. 99), "...ensure that there remain no practices likely to result in monopolization in the future."

For example, the proposed Final Judgement's definition of the term "API" is overly narrow and excludes Windows APIs used by other application programs. This means that Microsoft would be able to continue to build means of interaction between its operating system and its other software packages, without having to make the specifications for that same interaction available to developers of competing software packages. Thus, Microsoft's anti-competitive practices would continue as they have in the past.

The fact that the Proposed Final Judgement does not address many of Microsoft's anti-competitive practices is very serious. Please review the PFJ in light of the comments you have received, and amend it so that it will no longer have any shortcomings that would allow Microsoft to continue its discriminatory and anti-competitive practices. You can find a much more thorough evaluation of the PFJ in Dan Kegel's essay available at <http://www.kegel.com/remedy/remedy2.html> and mirrored at <http://crossover.codeweavers.com/mirror/www.kegel.com/remedy/remedy2.html>

From: RW Hawkins  
 To: Microsoft ATR  
 Date: 1/23/02 12:44pm  
 Subject: Microsoft Settlement

I am writing in regards to the Microsoft settlement. I have been an avid computer user all my life and have seen good technologies come and go. That is just the facts of life. I am extremely discouraged however when large monopolies such as Microsoft make it all but impossible for the little guys to have any chance of success.

In particular Microsoft's historical actions to make their software incompatible such as in the 1996 Caldera v. Microsoft example is disheartening. I hope one day to be a member of a successful computer company that gives users total choice over their hardware, software and applications. I foresee a future where this is impossible if some measures are not taken against Microsoft.

Additionally I see Microsoft moving into areas where they have not been before in order to control the games our kids play, the music we listen to even the photographs we take. As a photographer I am shocked about the new digital photography software they have introduced in Windows XP for free that will do to Kodak what Internet Explorer did to Netscape, all but destroy it.

I hope you will listen to my opinions in calling for a remedy that somehow levels the

playing field for us "small guys". Any settlement must have some aspect of punishment for past regressions but more importantly imposed controls to prevent Microsoft from doing what they have done in the past in todays very different and changing environment.

Thank you,  
 Richard Hawkins

From: Steven Patt  
 To: Microsoft ATR  
 Date: 1/23/02 12:44pm  
 Subject: Microsoft Settlement

I am writing to object to any proposed settlement of the suit against Microsoft which does not deal with the future consequences of past ill-gotten gains. Microsoft has gained billions upon billions of dollars by employing tactics which have been determined to be illegal.

Our company is a successful company developing software for Palm handhelds. Microsoft, which most certainly does not have a monopoly in the handheld market, and is also for the most part (at least as far as I can tell, but I may be wrong) not using "linking" with their existing monopolies to extend their reach into the handheld market (i.e., they are not including a PocketPC handheld with each copy of Windows), STILL is using its billions in ill-gotten gains to market that product and gain market share from Palm, to the detriment of Palm, Inc. and to companies such as ours which develop software for PalmOS handheld units.

In my opinion, the ONLY equitable solution would be to confiscate (i.e., fine) ALL of Microsoft's ill-gotten gains and "level the playing field".

**MTC-00017094**

From: Scott Cuyle Fritzingler  
To: Microsoft ATR  
Date: 1/23/02 12:46pm  
Subject: Microsoft Settlement

I am writing to voice my opposition to the proposed Microsoft anti-trust settlement. The settlement is inadequate in several areas, but in particular is the disclosure of the Application Programming Interfaces (API's) in Microsoft products.

The provision of the settlement dealing with disclosure of the API's does NOT provide adequate language to enforce full-disclosure, nor does it even require full-disclosure. The language is too tightly worded such that it limits exactly what Microsoft must document to other developers. It lists specific Microsoft programs and operating systems that are required to be publicly documented in regards to the API, but this is not satisfactory.

Most noticeably missing from the API disclosure list is Microsoft SQL Server, which is their flagship database server. Microsoft has been using their desktop monopoly to leverage their server software, which has been succeeding to the detriment of competition from other server products. If allowed to continue, this illegal practice will allow Microsoft to further force its insecure server software onto consumers. What happens if most Fortune 500 businesses have to run SQL Server and a bug/vulnerability is found in that software? The core businesses that are the landmark of commerce in this country will be left vulnerable to hackers worldwide.

That would be an embarrassment to this country.

Another problem with the settlement is that, by specifying specific software names and versions, you allow Microsoft to simply rename/rebrand products after the settlement goes into effect and therefore circumvent the API disclosure protections. Consider what happens if they were to rename Windows Media Player to "Windows Media Runner" or something else? It is no longer the same official product, therefore not bound to the API disclosure protections.

I will not even go into the problems this creates in regards to Microsoft.NET. .NET is a "next generation" platform that, if not properly documented publicly, will yet again lock people into Microsoft products. This is already happening because Windows XP has .NET capabilities already included. This is simply scary.

To fix this, you would have to remove the restrictive language from the settlement and have Microsoft release the API for ALL of their operating systems, regardless of middleware/applications. By restricting API disclosure to middleware/operating-system combinations, you are giving Microsoft a way around any sort of API disclosure requirement built-into the settlement.

What people are missing through-out this trial is that an operating system is simply a foundation for computing. It provides the structure for which to run/build other applications. If Microsoft keeps secret the part of the foundation that is the strongest and uses it only for their applications (secret API's), then competitors start off at an EXTREME disadvantage. That's what this boils down to and Microsoft knows this.

To: Microsoft ATR  
Date: 1/23/02 12:43pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am taking the time to write this email to voice my concern over the proposed Microsoft antitrust settlement. I am a graduate student at the University of Pittsburgh School of Information Sciences, and also a consumer of computer products. As both an information technology specialist and a consumer, I feel that Microsoft has caused great harm, and this proposed settlement in my opinion does very little to prevent current and future antitrust violations by Microsoft. In fact, the numerous loopholes in the current agreement may very well increase Microsoft's power in certain markets.

I may not be a legal expert, but I fail to understand how this settlement falls within the realm of established crime and punishment. When somebody robs a bank, and are subsequently caught, they not only pay back all the stolen money and goods, but are fined and imprisoned. If a large company steals billions from consumers by leveraging their monopolies, they should be forced to repay their illegal gains and also divest themselves of their monopolies. This proposed settlement is hardly a punishment for Microsoft, and will allow them to continue to dominate current and new markets, adding their illegal profits to an ever-growing war chest that runs in the tens of billions of dollars now.

In my opinion, the proposed settlement is simply an illogical attempt to help the current economy by letting a large company off with a slap on the wrist. It does nothing to curb current and future illegal behavior by Microsoft, and certainly provides nothing in the way of reprimands for past illegal behavior. A much better way to help this weak economy would be to really punish Microsoft: break up their monopolies, and return their ill-gotten gains to consumers.

A settlement best serves the needs of all involved in this case. Without one, this case will continue to drag out over the next few years, with continuing antitrust violations by Microsoft. However, this proposed settlement should not be seen as a solution.

Let us not forget history. Microsoft is in this antitrust trial only because they willfully violated a consent decree that was a settlement in a past antitrust trial. Microsoft will violate this settlement 5 minutes after the signatures are dried. They are a predatory company that cannot compete without violating the law. As an American citizen, I

vote to reject this proposed settlement and replace it with one that will both punish Microsoft and restore real competition to the marketplace.

Sincerely,  
Joseph Manojlovich

From: Patrick Joyce  
To: Microsoft ATR  
Date: 1/23/02 12:45pm  
Subject: The proposed settlement to the Microsoft antitrust case does absolutely  
The proposed settlement to the Microsoft antitrust case does absolutely nothing to prevent them from continuing their illegal activities. In fact, it condones them continuing and expanding these practices.

A few examples:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional 'white box' OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

Aren't these textbook examples of anti-competitive practices? Hasn't the Justice department slapped Microsoft on the wrist for these before? The time for a "slap on the wrist" is long past. The time for real, effective punishment is now.

In addition to my vehement rejection of the proposed settlement as fair and equitable, I would call into question Mr. Ashcroft's motives in this case.

Anyone with basic knowledge of computers and the law can see how this settlement does nothing but support Microsoft's monopoly status. Certainly the Attorney General of the United States knows this as well, and a investigation into his relationship with Microsoft should take place immediately.

I would like to comment on the proposed settlement in the antitrust case against

Microsoft Corporation, as provided for in the Tunney Act. I believe the proposed settlement will operate to prevent, rather than foster, competition in the market for operating systems and applications, and will allow Microsoft to continue its prior anticompetitive behavior with little restraint. For example:

—Section III.H.3 of the proposed judgement requires independent vendors (ISV's) who offer competing middleware to meet "reasonable technical requirements" seven months before new releases of the Windows operating system, but it makes no requirement on Microsoft to—disclose—those requirements before this deadline. ISV's are thus dependent on the simple goodwill of Microsoft to voluntarily disclose those requirements, and Microsoft can prevent ISVs from meeting the seven-month deadline by simply failing to disclose the requirements in advance.

—Definition U of the proposed judgement limits the definition of "Windows Operating System Product" to a limited subset of the OS products currently offered by Microsoft. It excludes current OS products such as Windows CE, Pocket PC, and Windows XP Tablet PC Edition. This overly narrow definition allows Microsoft to maintain its monopoly on Intel-compatible operating systems simply by basing some part of its future OS development on these excluded OS products and claiming that they are exempt from the restrictions of the proposed judgement because of that lineage—even if such future products are targeted to the desktop/portable computer market currently served by the OS products restricted in the judgement.

For these reasons and others, I believe the proposed judgement will allow Microsoft's current anti-competitive behaviors to continue and will thereby prevent the entry of viable competitors into the operating systems market. The settlement is therefore not in the public interest and should not be adopted without thorough revision.

Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

- The PFJ doesn't take into account Windows-compatible competing operating systems
- Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.
- The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

- The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

- The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

- The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

- The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

- The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

- The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

- The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

- The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

- The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

- The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

- Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

- Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

- Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

- The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

- Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

- The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

- The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

- The PFJ allows Microsoft to discriminate against small OEMs—including regional 'white box' OEMs which are historically the most willing to install competing operating systems—who ship competing software.

- The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

- The PFJ as currently written appears to lack an effective enforcement mechanism. I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Microsoft must be punished for their crime and not be swept underneath carpet. Corporate and government department must learn that the law is for the people and not these large money laden groups. They are guilty and should be punished, but forced to play ball like everyone else.

Their domination of the market is not helping the consumer, but causing more trouble then it is worth. Security holes, buggy software, and lack of revealing information to developers to allow them to be at the same level as MS's products with hidden APIs and other bits of information that would allow others to release better apps.

The OS market should be rip from their hands and sold off.

Thank you and don't let our rights be trampled over....

The proposal is seriously insufficient. It assumes they will act in good faith, when history clearly shows otherwise; they have yet to admit guilt, as a most recent example! A secret three-member panel is incapable of enforcement over the world's largest software company. I am not a lawyer, and I was able to find many ways to obey the letter of the agreement, while still violating the spirit such that they could continue to illegally

monopolize large portions of the computer industry; I cannot begin to imagine what loopholes they will find. Finally, I am offended that they are being allowed to keep ALL of their illegally-obtained profits.

Subject: Microsoft Settlement

Hello

I would just like to say that I disagree with the proposed settlement.

I'm annoyed that part of the settlement is that Microsoft will be giving away millions of dollars of software to educational institutions. This is fine, but Microsoft is deciding how much it is worth, not the DOJ. Also, this is furthering the monopoly, the exact thing Microsoft was convicted of. This is like punishing a car thief by sending her out to steal more cars. This fixes nothing, and actually causes more damage.

I am also very nervous about words in the settlement which say that Microsoft is essentially allowed to discriminate against Open Source projects, vis a vis publishing of APIs.

The whole settlement document is written in such a way that there is absolutely no curtailment of Microsoft's monopolistic practices, and, frankly, it looks to me that this document actually \*rewards\* Microsoft instead of punishing it.

Sincerely,

William E. Graham

From: Andy Vander Meulen  
To: Microsoft ATR  
Date: 1/23/02 12:45pm  
Subject: Microsoft Settlement

I am 69 years old. I am the second of ten children from Dutch immigrant parents. I was born in California and moved to Washington state when I was 16 years old. My Dad and family were in the dairy business and I dropped out of high school to help my Dad on the farm he purchased at Sumas, WA. I served my country in the Korean conflict and went into the dairy business after I was discharged from the service.

I evolved into milk marketing and it has been my occupation for 30 years. I had a good understanding of milk pricing numbers but was afraid of computers. In 1984 I lost my job with the cooperative and cheese plant operation I had put together and had to start all over again. I took a class at Skagit Valley College to learn to operate a computer.

I started a new producer cooperative and began marketing their milk. I was able to learn to do pricing and spreadsheets using

Microsoft's "Works" program and I still use it today. I run this small producer cooperative from my office in my home and we have our operating costs the lowest in our area. Microsoft products are the most reasonably priced products on the market. I have made a good living for my family and I say Microsoft made that possible by lowering the cost of software and the products that are available to us consumers. My computer and my Microsoft software are the cheapest investment I have in my business and what I'm able to do with it.

We say we are a nation of "rule of law". It appears to me that we are becoming a nation of "abused by law". We had a corrupt administration who catered to the cry-baby competitors of Microsoft and a bunch of money grubbing attorney generals who are just after the money like they did in the tobacco debacle.

It is time to end all this lawyer waste of time and money and let competition determine the winners and losers. Microsoft should be applauded, not persecuted for what they have made available to us average American consumers.

In closing I would suggest the DOJ keep an eye on AOL. I can't hardly watch anything on my satellite dish but it's AOL Time Warner. If they have their way, they will control our TV, movies, music, internet, software, and computer operating systems.

Microsoft used their elbows to defend their business against a group (including AOL) who sat down together and said "Let's slay the dragon at Redmond". I say they were guilty of collusion.

I believe the settlement with Microsoft by the DOJ and nine of the states is fair to Microsoft, and we the consumers. I would ask that the Judge approve this settlement and let's all get back to work.

Respectfully,  
Andy Vander Meulen

From: Doug LaRue  
To: microsoft.atr  
Date: 1/23/02 12:45pm  
Subject: Microsoft Settlement

Dear Sirs,

I have over 15 years of experience in the electronics industry and I find it very difficult to see Microsoft get away with impeding progress every year, with producing inferior product, with jeopardizing our national security, with outright control of how we communicate. And it's not stopping there. Today they, the Microsoft Corporation is selling a computer system at a price lower than the cost of production and calling it a "game console". This "game console", running Microsoft Windows operating system, is the latest effort to control not only how we communicate but what we see and hear through our entertainment systems. They have used constantly changing file formats of it's office applications to keep out competition to the point that PLAIN TEXT is about the only common denominator left for written/electronic communications and soon they will use their billions in illegally

obtained funds to finance the control of the media formats brought into our homes via cableTV and telephone lines. They used constantly changing operating system APIs to make sure the competition in the application market was months behind them that existing product stopped working when a "new" upgrade to the operating system was released. I could go on and on about how they controlled the market and systematically eliminated competition without the consumer being able to make a REAL choice.

As you can tell, I don't think the current "settlement" addresses much of what harm has been done by the Microsoft Corporation. I'm amazed that there could be such a settlement without the majority of the States. After all the States were going to include Microsoft Office and applications in their own case but agreed to drop that for a combined effort with the DOJ. Another monopoly issue was dropped to get this PROBLEM behind us (the people of the USA) and move on. But then the DOJ settles on it's own without the States? A settlement with no teeth no less.

Just look at Section III.A.2. It allows the Microsoft Corporation to retaliate against any OEM it wants to that ships/sells personal computers which contain a competing operating system but not one of the Microsoft Corporations operating systems.

There is almost nothing in this "settlement" which restores competition and PREVENTS the Microsoft Corporation from continuing its behavior in the personal computer, business server, home entertainment, and handheld computing markets. I'm sure there are others too.

The damage the Microsoft Corporation has done has actually reduced our productivity. The IBM Corporation shipped an operating system back in 1991 which used as it's desktop foundation a technology called CORBA. The operating system was years ahead of the Microsoft Corporation in it's design and function.

Where is it today? Why were so many companies "attacked" my Microsoft Corporate employees to the point that billions of dollars could be brought to bear on them if they continued to support the superior products from the IBM Corporation? Today it is Linux and PalmOS. What about the fact that Microsoft built it's own 3D graphics system even though there was an industry standard called OpenGL? It took them more than 6 years to get something close to OpenGL's capabilities but now again, they eliminated competition because the Microsoft Corporations 3D graphics systems ONLY RUN ON MICROSOFT operating systems and is incompatible with OpenGL. Reinventing the wheel and then only allowing the new wheel to fit one buggy/cart is NOT progress.

Where is the progress if all the Microsoft Corporation does is make products/systems which will only run on their operating systems? There is a well known term for this in the computer industry. It's called:

EMBRACE/EXTEND/EXTINGUISH

The proposed settlement does NOT solve the problem or fix what damage was done.

IMHO.

From: Gaylord Holder  
 To: Microsoft ATR  
 Date: 1/23/02 12:45pm  
 Subject: Microsoft vs. DOJ Settlement

I have been a computer professional for more than 20 years, working for the US Air Force, several universities, and private companies.

When I began, Microsoft, and Microsoft products where an island of stability in the confusing chaos of PCs. By buying the operating system and office suite from the same company, one often got a more stable machine than one might have getting DR-DOS, and Word Perfect. I liked those early versions of MS-Word, and Excel.

Soon, I began hearing that Microsoft wasn't fixing bugs—not just in Word, or Excel, but in more important things—such as the compiler, or communications drivers. Developers I worked with refused to use Microsoft products because they were buggy and crashed their systems. In the '90's I started having first hand experience developing software with Microsoft products. I soon found I could triple my productivity if I developed the software on Unix platform and back ported the code to PCs. The Microsoft development environment provided no way to integrate a 3rd party editor, no way to track revisions to the code, the debugging was primitive and often wrong, and the compiler often didn't work as documented. All of these problems had been dealt with under Unix 5-7 years previously. It was a toy development environment.

Since then, Microsoft has increased its presence in my professional life. I am bombarded with MS-Word and MS-Excel attachments, my customers are required to use MS-Windows to do their jobs. At every turn, I have consistently found Microsoft software be buggy, bloated, insecure, and difficult to administer.

For the last 10 years of my professional life, Microsoft products have consistently demonstrated the function of their software is not to help my user's do their jobs, but to promote Microsoft and its commercial partners. Whether it is the Internet Connection Wizard plugging Microsoft's Email accounts, or SmartTags trying to push browsers to Microsoft sites, Microsoft doesn't

care for the person or business who bought their products, only their next source of revenue.

Microsoft has been proven to be a monopoly. It should be treated like one. Splitting the company into operating systems, applications, and networking, would break the costly, and wasteful cycle of having to upgrade the OS to run Microsoft Office and having to upgrade Microsoft Office to run on the new OS. Most of all, it would certainly Microsoft Office make compete with other Office suites on technical terms. It would certainly force Microsoft to listen to its customers in a way I haven't seen it do since the early 1980s, and it could well let loose a new wave of computer innovation.

Sincerely,

Gaylord Holder

From: Jennifer Teig von Hoffman  
 To: Microsoft ATR  
 Date: 1/23/02 12:46pm  
 Subject: Microsoft Settlement

To whom it may concern,

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Many small companies have ceased to exist because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Yours,

Jennifer Teig von Hoffman

From: Jerry W. Walker  
 To: Microsoft ATR  
 Date: 1/23/02 12:45pm  
 Subject: Microsoft Settlement

Dear Sir or Madam,

Microsoft has been convicted of breaking antitrust laws. In breaking these laws, they've hurt hundreds of companies and thousands of employees. Worse, they've hurt the general public in pushing substandard software into a market in which nearly any other software choice, no matter how much better that software might be, pits the user against compatibility with the rest of the world.

This substandard software includes Microsoft Outlook which, despite industry knowledge of effective security measures that dates back for more than a decade, still manages to distribute computer viruses

whose total damage to the US economy probably outweighs any penalty that could be imposed on Microsoft.

This is not the first time that Microsoft has been tried for such behavior. In the earlier trial, they agreed to a consent decree which they flouted. This second case comes directly from their flouting the orders of the court in the earlier case and continuing the damage to the industry and to the public that they were first charged with.

The proposed settlement does not punish Microsoft for this behavior, but rather supports their arrogant flouting of the law by pushing their substandard products into the education market with government support. Further, by specifying the "punishment" as a mandate to put so many millions of dollars of software into the schools, the court allows this criminally arrogant company to set the monetary value of their own punishment as best befits their marketing plans. They can set the value of that software at any price that pleases them.

If I were charged with assault for beating up my neighbors when they parked their cars on my street making it less convenient for me to park there, and the courts decided that to punish me they would make me paint lines anywhere I wanted on the street to mark where I would like to park, I would probably have little incentive to follow the law the next time it was inconvenient for me to do so.

The courts, we hope, provide incentives to follow the law, not vice-versa. Please reject this settlement and demand something that serves as a deterrent to Microsoft and to other corporations that choose to flout the law.

One hopes that in our democracy such companies don't obtain royal concessions for behavior that harms the populace.

Sincerely,

Jerry W. Walker

From: Joe Wright  
 To: Microsoft ATR  
 Date: 1/23/02 12:45pm  
 Subject: MICROSOFT SETTLEMENT  
 To Whom It May Concern:

I'm writing to oppose the antitrust case against Microsoft. Antitrust contradicts the free enterprise system and is a violation of the rights of business owners, their stockholders and consumers. No one is or ever has been forced to buy Microsoft products. And no one at Microsoft has forcibly stopped anyone from buying non-Microsoft products. There is a free market in software though Microsoft's competitors would like you to believe otherwise.

Consider the fact that, if I'm looking for an operating system I have a choice of Apple, OS/2, Unix and Linux among others. For word processing, I have Wordperfect and others. For web browsing, I can still get Netscape or use AOL's juvenile interface. In fact I use Netscape and like it better than MS-Internet Explorer.

Microsoft is being prosecuted for monopoly. Yet not so long ago, Netscape had

100% of the browser market and the antitrust warriors did nothing about it. If 80% or 90% of a market is considered monopolistic, than why wasn't 100%? But that would be assuming a degree of rationality and logic that is unknown to antitrust.

Of course what Netscape really had is what Microsoft now has: market dominance. As soon as IE came on the market, consumers voted with their dollars and chose it over Netscape to the point that IE became the dominant product and Netscape fell so far by the wayside that it basically went out of business, to be "saved" by AOL. Did Microsoft force it out of business? No. The sum total of consumer choices in the free market put it out of business.

Instead of focusing on, filing suits against and lobbying antitrust officials to charge Microsoft with evil acts, the gang of competitors should look at their own failure to penetrate the market. Instead of griping and enlisting the power of the government to punish Microsoft for succeeding, they should look at the reasons for their own failure. And they are failures. They put products, software and services on the market in competition with Microsoft. The market voted with it's dollars and they lost. They are losers, not because of some alleged Microsoft skullduggery, but because of the market rejected them. The market considered Microsoft products superior and theirs inferior. That's the American way. But the cabal composed of loser competitors and money grubbing attorneys general would like to subvert this system and impose force and regulation upon the free market. They want to deny Microsoft's rights to produce a product and present it to the market for sale. The want to deny consumer's rights to buy Microsoft's products on a free market. They want to force products on the market which have already been rejected by the market.

Sun Microsystems, Netscape, Oracle and now AOL want to use the predatory power of government to skew the market in their favor. They want the government to protect them from the free market. They have no interest in being competitive. They're doing all they can to get a competitor, Microsoft, choked to death by antitrust. Strangely, this is not considered a violation of the antitrust laws. It is not even considered bad conduct. In fact these are praised by many, including such institutions as the vaunted New York Times. But that's the nature of antitrust: contradiction and irrationality. When one company does something, it is praiseworthy; when another company does exactly the same thing, it is accused of being a criminal.

In fact, neither the losers nor the attorneys general believe in a free market at all. What they believe in is fascism, a political system in which there is nominal ownership of property, but under which decisions about the use of the property are made by the government. The political system in the USA today is a peculiar admixture of fascism and socialism, not the republic of limited government power that the Founders designed.

A monopoly exists only when a company has the power to prohibit competition. They only way any company can gain that kind of power is through the power of government

via regulations, exclusive licensing arrangements, tariffs and taxes. No company can achieve, much less maintain, a monopoly on the free market, without assistance from the government. No company ever has and no company ever will.

Take the case of AT&T prior to deregulation and divestiture. This was a classic case of monopoly. The arrangement AT&T had with the local, state and federal governments was such that it was illegal to sell competing products and it was illegal to connect them should you somehow obtain them. You couldn't even provide an alternative telephone directory without violating the law. There were many companies capable of providing telephones and telephone service and many who wanted to. But it was illegal for them to do so. Competition with AT&T was prohibited by law.

In no way is Microsoft like pre-deregulated, pre-divested AT&T. In no way is Microsoft a monopolist.

A company may attain market dominance through offering better products and/or lower priced products, by providing better customer service and by being aggressively competitive. But that's not monopolization. Any other company is free to produce a better product, provide better service, charge lower prices and be even more aggressively competitive and itself become the dominant company. That's the way the free enterprise system works.

Antitrust is a notorious contradiction of the principles of free enterprise involving violations of property rights on a massive scale. The history of antitrust is one of incredible irrationality and injustice. Rather than continue this immoral course of action, it should be stopped dead. Antitrust laws should be repealed.

For all the reasons cited above, I oppose the imposition of any penalties on Microsoft. They have done nothing wrong, they have violated no one's rights, they have broken no legitimate law. The case should be thrown out of court.

Sincerely,  
Joe Wright

From: Miles, Dave  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 12:45pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating systems, Internet browsers, desktop applications, application development languages, and (soon) networking markets, nor limit its ability to unfairly dominate new

markets such as game consoles, personal video recorders, and Internet service providers.

The proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. The provisions weakly attempt to prohibit the future repetition of those abuses. The provisions do not even attempt to address serious issues such as application file formats which Microsoft changes only to limit competition. This, in my opinion, goes against the very foundation of justice. If a person or organization is able to commit illegal acts, benefit from those acts, and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses, and not for the American people.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Subject: Microsoft Settlement

Dear Sir, Madam,  
I would hereby like to express my doubts about the effectiveness of the proposed settlement in the Microsoft case. I am sincerely concerned about Microsoft's position in the software market, and I don't believe the proposition lives up to the harm done in the past, nor does it provide enough of a remedy for the future. Mellow as it is, half a punishment will reduce itself to no punishment at all with a company that has the financial power Microsoft has; words will be bent, restrictions circumvented, new tricks will be learned, and legal statements adapted, reducing what's already too small a price to pay, to basically nothing. Strong, adequate measures should be taken against Microsoft—being fully accountable for their actions—so as to ensure that at least something's left after Washington lobby'ing and stretching legal phrases beyond recognition. It should not be let off easily, clearly still not having understood the message.

Thanks for listening.  
Wouter Van Hemel

Subject: Microsoft Settlement

Dear Sirs

I am opposed to the proposed settlement of the Microsoft anti-trust case. In my opinion, Microsoft used its monopoly power over the years to suppress technology that would have provided great benefit to consumers across the United States. One example of this is the "NSP" initiative that Intel proposed, but was forced to discard because of monopoly pressure tactics from Microsoft.

The proposed settlement is carefully worded by Microsoft's own lawyers to provide loopholes so that Microsoft can continue these tactics for any activity Microsoft considers important in the future. This will not foster innovation or improved technology for the user, but only tighten Microsoft's grip on access to important new technology by ordinary consumers.

Please revisit this case and form a settlement that will limit Microsoft's ability to prevent new technology and ideas from reaching consumers that do not know what they have been denied.

Thank you.

From: Gordon Tetlow

To: Microsoft ATR

Date: 1/23/02 12:43pm

Subject: Microsoft Settlement

I'm very disappointed in the PFJ that has been put forth by the DOJ to punish Microsoft for it's actions. It is no more than a slap on the wrist. In fact, I'd go so far as to say that it helps to continue and extend the monopoly power that Microsoft has over home/office computing sector. There is one simple thing in the PFJ that I believe helps Microsoft's monopoly. The PFJ allows Microsoft to raise artificial barriers to those that are interested in creating a Windows-compatible operating system. While the PFJ does mandate that MS must publish its APIs "for the sole purpose of interoperating with a Windows Operating System Product". This clause specifically disallows companies/individuals to use the information that Microsoft is compelled to disclose to create an alternative operating system which would still be able to run applications created for Windows, thus helping competition and giving consumers an alternative to a Microsoft operating system.

There are other points that I have contention with, but I do not have time to read the entire PFJ and critique them all. I sincerely hope that the DOJ does the right thing when it comes to the final judgement and gives the public a choice when it comes to home/office operating systems.

Sincerely,

Gordon Tetlow

UNIX System Administrator

Microsoft Antitrust Comments

c/o Antitrust Division

U.S. Department of Justice

601 D Street NW

Washington, DC 20530-0001

Dear Sir or Madam:

I am writing as a public comment to the proposed settlement in the case of U.S. v. Microsoft. As a background, I am employed by the University of Utah and currently work as a research scientist in paleoanthropology. I would like to comment on the settlement in terms of its effect on me as a consumer and as a researcher working with public funds. In brief, the proposed agreement does not address several distinct areas in which the illegal extension of Microsoft's operating systems monopoly harms the public interest.

One of the largest research expenditures both by universities and by individual researchers using NSF or NIH monies is computer-related technology. Currently, much of the public money spent by researchers is wasted on Microsoft products that are never used. Here in my laboratory, there are five copies of Microsoft Windows software that are sitting unopened and unused. These are software that "came with" the computers that we use in the lab, but that we do not use and have never used.

However, Microsoft has agreements with many systems vendors to package a copy of Microsoft Windows with every computer sold, regardless of whether the customer

wants it or not. Even if the customer requests that Microsoft Windows not be included with the computer, the manufacturer is still required by agreement to pay Microsoft for a copy of the software for that computer. Manufacturers do not provide discounts for systems that lack Windows. Other Microsoft software, such as Microsoft Office, is also often included by manufacturers under agreement to Microsoft, again whether the customer wants it or not.

For my own use, and in cases in the laboratory where I have the choice, I build my own computers from components, thus avoiding the unnecessary expenditure on unused Microsoft products. However, most universities, including mine and the University of Michigan where I formerly worked, have purchasing agreements with computer manufacturers, providing discounts for volume purchases, where individual computers may be requested by many different departments during the year. Small manufacturers exist who do not require the unnecessary purchase of Microsoft products, but the large manufacturers able to supply the needs of a research university are also the ones most likely to have exclusive agreements with Microsoft. Thus, universities using public money and individual researchers inside those universities are predominantly forced to purchase Microsoft products, whether they are wanted or not. The retail cost of the Microsoft Windows software, purchased with public money but unused in my laboratory, is over five hundred dollars. This is a cost imposed on the public and consumers by Microsoft's illegal extension of its monopoly.

The proposed settlement does not restrict Microsoft from pursuing exclusive agreements with systems vendors, and it does not allow any recourse for consumers or institutions who would like to purchase a computer from a large systems manufacturer without Microsoft software. There are many reasons to choose such a manufacturer instead of a smaller shop, including availability of support, rapid replacement of defective units, and volume discounts. However, consumer choice in this matter is limited by the illegal licensing used by Microsoft. I would propose that the agreement be extended to forbid these contracts, so that any consumer may choose to purchase a system without Microsoft software.

Instead of Microsoft products in my laboratory and home, I use Linux, free operating system alternative. Again, there are reasons why a consumer would choose to use a Microsoft product instead of Linux despite its zero price, including ease of use and availability of software titles. I would not expect Microsoft to provide applications software on other platforms to erode its monopoly, as some might propose. However, one aspect of Microsoft's operating systems strategy stands out as harmful to consumers, and an illegal extension to its monopoly power. This aspect is the creation and spread of proprietary standards and file formats.

Users who create content with Microsoft products often use the software to create digital copies of the content with Microsoft's proprietary formats. For example, users of

Microsoft Word save documents in “.doc” format. The encoding scheme used by such formats is secret and undocumented by Microsoft. Users who wish to use other software packages will be unable to read the complete content of documents created with Microsoft software in this way. Nevertheless, the monopoly of Microsoft has allowed it to make its proprietary file formats into de facto standards, so that many companies and universities use “.doc” format for internal correspondence, for example. This extension of monopoly power to file formats has inhibited the adoption of non-Microsoft operating systems like Linux, because no Microsoft applications product exists on that operating system to perfectly read Microsoft file formats. It has been reported that abuse of file formats may be more widespread, with applications like the web-document producing FrontPage producing content for public use that can only be interpreted by Microsoft Internet Explorer, for example, and not by alternative products like Netscape Navigator. Microsoft changes these proprietary formats with almost every new release, so that users are forced to upgrade their software in order to continue to interchange documents with other users. All of this inhibits the use of non-Microsoft operating systems and applications. Further, Microsoft has attempted to extend proprietary standards to public operational systems, such as networking protocols and interoperability software including Java. Indeed, after Sun corporation brought suit against Microsoft for illegally creating its own proprietary version of Java, Microsoft changed its interoperability strategy to a new proprietary standard that it controls. If left to extend its monopoly in this way, Microsoft will limit the ability of alternative operating systems like Linux to interact with public applications, including internet banking and secure transactions of all kinds. The public standards now used as the basis of the Internet were developed largely with public money and are free for anyone to use. If Microsoft is allowed to extend its operating systems monopoly to public Internet standards, it will limit the ability of other operating systems to use public networks.

What is worse, it will also put the security of all public computers at unnecessary risk. Public standards are free for anyone to inspect, so that security problems may be circumvented and no secret features are available to be exploited by criminals. In contrast, Microsoft's proprietary standards are secret, so that people of malicious intent can exploit secret holes to invade computer systems, causing millions of dollars in damages. No operating system platform is immune to security violations. However, in my laboratory, having five computers with continuous Internet connections, it would be a serious security risk to use Microsoft software instead of Linux. Even if the content of my computers was left unharmed by those who would break into them, they could install malicious software without my knowledge that could be used to attack computer systems elsewhere. We saw this happen many times to companies and universities using Microsoft products last year. Further, my computers cannot be

affected by e-mail and macro viruses that attack users of Microsoft Outlook and Microsoft Word through attachments with the “.doc” format. In short, the extension of proprietary formats creates an unnecessary security risk, which I cannot afford in my laboratory, and the U.S. cannot afford in the current war.

Finally, it is possible to alter operating systems like Linux to run Microsoft applications, or other applications written for the Microsoft Windows operating system, without needing the Windows software to be purchased or installed. This alternative provides a good compromise for many people, who wish to use products available only for the Windows platform, but do not wish to risk the security holes or other problems with Windows itself. However, this kind of interoperability is inhibited by the proprietary secret format that Microsoft uses to allow applications to interact with its operating system. It is necessary for applications to use undocumented features of the operating system to be useful, but no non-Microsoft implementation of these undocumented features is possible without breaking Microsoft confidentiality agreements.

I would propose that the settlement be extended to force Microsoft to publicly release the standards used to create its file formats, networking protocols, applications frameworks, and operating system toolkits. If the details of these proprietary standards were publicly available, it would be possible for programmers outside of Microsoft to provide secure implementations of public interfaces such as networking protocols. It would also be possible to write programs that could read content created by Microsoft software, and to extend other operating systems to run software configured for Windows. The proposed settlement allows for people external to Microsoft to inspect some of these proprietary standards, but it does not make the standards public. The difference is that a public standard can be implemented without fear of violating a Microsoft copyright and can be inspected by anyone who uses or wants to use Microsoft products, while a standard merely open to inspection may make any public implementation vulnerable to a lawsuit. As it stands, the agreement may allow it to continue to be impossible for a person saving his or her crucial documents with Microsoft's “.doc” format to even know how those documents are encoded, or to be able to recover those documents if the user should later choose to use non-Microsoft products instead.

Without minimally these alterations, the settlement does not address the problems I find in lay work with Microsoft's operating systems monopoly. This makes the proposed settlement a failure in addressing the harm that Microsoft has done to consumers by the illegal extension of its monopoly. I hope that the settlement will be altered to address these concerns.

From: Zachary Schneirov  
To: Microsoft ATR  
Date: 1/23/02 12:46pm  
Subject: Concerning the Settlement with Microsoft

To whom it may concern:

I believe that the U.S. government must not and cannot allow the Microsoft monopoly to continue its current business practices without some major punitive action. Microsoft sees any standard over which they do not hold total control as a clear and present threat to their Windows monopoly. Throughout the years they have repeatedly, systematically, and unabashedly set out to undermine and ultimately destroy all computing technologies that had the chance to interfere with Microsoft's stranglehold on desktop computing. Often the company accomplishes this through a policy of “embracing” a standard (in which they integrate it into one of their products) and subsequently “extending” the standard, at which point making the standard incompatible with competing products. End-users are consequently forced to use Microsoft's solution, as Microsoft has bundled software that makes use of this standard into their Windows operating system.

We have seen this occur with the proprietary Microsoft Word document format, numerous internet protocol applications including the Netscape and Internet Explorer web browsers, and we are now seeing it with digital video playback solutions—QuickTime and Windows Media Player. When Microsoft began bundling new versions of Windows Media Player that made use of new, proprietary, and patented media formats, web sites had no choice but to begin offering most of their video content in Windows Media Player format. It has become increasingly difficult to do any type of desktop computing without running into Microsoft-controlled formats and software.

If Microsoft continues with this trend (and there is no reason that they will not) it will soon become literally impossible to use any emerging technology that is not available on Windows; Microsoft will have finally taken over the entire field of computing.

This must not be allowed to happen. A strong, crippling punishment is the only solution.

Regards,  
Zachary Schneirov

From: Devon Jones  
To: Microsoft ATR  
Date: 1/23/02 12:46pm  
Subject: Microsoft Settlement

To Whom it May Concern,

I am a programmer, and computer specialist. And I heartily feel that the courts accepting the Microsoft settlement is a travesty of justice. The proposed settlement does little to mitigate the damage that the Microsoft OS monopoly does to many sectors of the computer economy. Even more damaging is the effect on the Open Source/Free Software community and businesses.

Probably the single most damaging aspect of the remedy is that it does not force

Microsoft to disclose publically the workings of it's file formats. The cornerstone of the MS monopoly is it's applications.

Those applications create a giagantic barrier to entry, and allow Microsoft to decide which Operating Systems will be taken seriously in the office. No other operating system will be able to compete on an even footing unless the file formats are made public. This will facilitate competing packages such as StarOffice, Lotus Smartsuite, and Corel Office being able to actually enter the market place, and still be able to read documents from the incredibly large installed base of Microsoft Office. Only when this has happened will competing desktop operating systems be able to even have a chance in the market.

The second most damaging issue about the settlement is that it almost seems designed to legalize the status quo of microsoft's monopoly control of the industry. Steps need to be taken in a final settlement to not only open the application business to competetion (so that situations such as that surrounding Netscape do not happen again), but to also open the marketplace to other operating systems.

Please do not allow this settlement to go through that not only keeps many of the barriers to entry that MS has created, but also errects some new berriers to entry.

thank you,  
Devon Jones  
Integware Inc.

To: Microsoft ATR  
Date: 1/23/02 12:06pm  
Subject: Microsoft Settlement

As a US Citizen, taxpayer, and technology consumer, I want to express my opposition to the proposed settlement of the Microsoft Antitrust case. The main reason for my opposition is that the proposed remedies do nothing to deprive Microsoft of the ill-gotten gain which they obtained by breaking the law. There is nothing to discourage Microsoft from breaking the law again to suit their needs. They can certainly extract large enough illicit profits to pay for the legal fees associated with a new trial. They did it before, with DOS, and they will do it again (perhaps this time with .NET). For Microsoft, violating antitrust law is a very lucrative practice. Where is the concern for law and order? The Department of Justice must insist that Microsoft forfeit ill-gotten gains which resulted from antitrust violations.

Sincerely,  
John Craig Gainesville, Florida

Date: 1/23/02 12:47pm  
Subject: Microsoft Settlement

I am not happy with the Microsoft settlement as proposed. There seem to be a number of problems with it.

One problem that bothers me is that the settlement does not do enough to limit the way Microsoft exercises monopoly power over OEMs and ISVs. Microsoft retaliates against vendors who ship hardware with competing OSs and software; they do not allow vendors to ship their software along with competing (eg. open source) software. In particular the settlement allows microsoft to retaliate against small, local vendors. As a result, vendors who ship microsoft software and Windows-compatible hardware (ie. most vendors) shy away from competing software; microsoft's competition and the market are hurt by this.

In general I feel that the settlement preserves the status quo in terms of MS's anticompetitive behavior. The goal is to have a competitive software market, in which the user has a choice of products. This goal is not served by the current settlement, which allows microsoft to continue its behavior to the customer's detriment.

#### MTC-00017124

From: Walsh, Steve (SIS)  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 12:51pm  
Subject: Microsoft Settlement

Dear Sirs:  
I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

From: Justin Miller  
To: Microsoft ATR  
Date: 1/23/02 12:48pm  
Subject: Microsoft Settlement  
To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW.,  
Suite 1200  
Washington, DC 20530-0001

Under the Tunney Act, I would like to comment on the proposed Microsoft settlement.

As a computer professional involved with the industry for the last 15 years, I can only express my dismay at the proposed Microsoft anti-trust settlement. I have watched for the last 15 years as Microsoft has relentlessly used its monopoly power to squash all possible competition, through such means as purposefully introducing incompatibilities with competing products, inadequately documenting APIs, not providing enough advanced notice to outside developers of changes in the API's such that they could modify their products to work properly on new OS versions, product dumping, and forcing illegal, anti-competitive distribution agreements on distributors, among many other tactics.

The remedy proposed by the Justice Department will not stop any of these practices. Through overly narrow, ridiculous definitions of terms like "API"; the allowance of Enterprise licensing agreements similar to OEM licenses banned by the 1994 consent decree; the failure of the agreement to prohibit purposefully introduced

incompatibilities; the failure of the agreement to require timely dissemination (i.e., months prior to release of betas) of technical documentation such that it can be ensured competing products work on new OS versions; the failure of the agreement to make allowances for open source and third-party Windows-compatible operating systems (which, under current Microsoft End-User license agreements, may not be used in conjunction with Windows systems or run Microsoft software in any way); inadequate protections against anti-competitive distribution agreements with OEM's and distributors; and, finally, the lack of any effective enforcement mechanisms, the proposed agreement will be yet another feather in Microsoft's hat. By no means is the remedy one that will "unfetter a market from anticompetitive conduct" or "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future."

As a concerned citizen I would ask that the proposed remedy be reconsidered and a more stringent and effective remedy be designed. One might ask, "Has Microsoft's monopoly hurt the public interest?" The unequivocal answer I must give is "Yes!" Many superior, better-designed, more reliable products have been released and fallen by the wayside over the years, as Microsoft has shut their makers out of the market. The next time Word crashes and you lose your document, the next time the computer eats your spreadsheet, please keep in mind that Linux and Sun's Solaris operating systems have built their reputations by going multiple YEARS between crashes, and that many people run text editors like GNU Emacs continuously for months at a time without a crash, and have never had a lost document. The reliability issues most Windows users experience has nothing to do with inherent complexity, and everything to do with shoddy software engineering. Competition in a fair marketplace is the key to improving quality, regardless of who in the end makes the software.

Sincerely,  
Justin Miller

From: Eric Laffoon  
To: Microsoft ATR  
Date: 1/23/02 12:49pm  
Subject: Preserve our future by restraining a bully

Hello,  
I've read that you are still receiving comments by law in this case. As someone who has suffered long with Microsoft I would like to say something. While the outcome of the case is decided it is meaningless without applying penalty and restriction. Perhaps there may be some restraint looking fully into their history? during the trial there were many people paraded through telling of the "trail of broken bodies" left by Microsoft tactics. The fact that they have been in antitrust litigation three times in the last decade (if memory serves) is telling. What it says is "all previous attempts to restrain illegal monopolistic behavior have failed".

Here is one brief illustration from the early 90s of what to expect. I was working on a business proposal on a friends DOS based computer and saved it to a file. I went to import it to a Microsoft word document at Kinkos. It tried to save the document to the floppy as the imported file. However the Word document was so bloated (big surprise) that it would not fit and it produced an error

dialog saying it could not be saved with a button saying "OK". But it was not okay! It was an endless loop and did not even offer me to abort. This is just plain terrible programming.

During this time Lotus Ami Pro was a PC Magazine editor's choice three years running. They achieved, if memory serves, less than 5% market share. certainly less than 10%. Finally Microsoft produced a version that beat them and Ami Pro drifted into history. Why did people choose word? Because while Ami Pro could read and write Word documents Word could not write Ami Pro. Because people are inherently too lazy to be expected to remember to select a document type when they save a file Ami Pro was considered "incompatible" when in fact it was the other way around. During this time the other prevailing attitude was that as flakey as software was you were safer with Microsoft since at least they knew the internals of Windows.

Two years later I read that the KNOWN bug that had ruined my day had been fixed in a maintenance release of the next version of Word. I encountered the problem on 1.0. I believe the release was 2.04g. Why did it take so long? Wasn't the focus on quality software? No! It was on a fractured feature set that would sufficiently impress journalists that did not actually use the programs for work... This would be read by managers who did not actually understand the programs who would then sign purchase orders. Of course none of this mattered that much since the bundled Office with everything back then. Currently I use Linux. I do so for several reasons. One is that during the 90s I computed the cost of down time from Windows and realized i could have bought a new computer every few months with the money I was losing. I also found that Microsoft software was far less efficient and more expensive than other solutions. Among those I found that free software was actually what the internet was based upon and it allowed me to have far more software than I could ever afford. I now receive documents in proprietary Microsoft formats. It is assumed everyone has them. I have to use other programs that can read them... painfully aware that mild encryption or some absurd patent (like Amazon's "One Click") could litigate away even free and open solutions. Document formats of information exchange should be free and open formats like HTML or structured XML. They should fall under standards committees so that more than one player could be there. At the very least they should be published if they are proprietary... especially if they are from a company found guilty of abusing monopoly status.

The future of our world hangs in the balance. Not since Gutenberg introduced movable type has there been such an opportunity to make such cultural and information based leaps in society. The internet offers so much to so many... but a company with total control of information formats and with the low morals and ruthlessness demonstrated by Microsoft puts that at risk. If their monopoly is codified by a limp settlement what will happen? The PC market is pretty flat and rather expensive to

pursue... but the internet, if key parts could be subverted, could be a cash resource for them like no other. If you do not serve to protect the interest of the American people (and in this case really the whole world) where shall we turn? I implore you to stop the bully.

Force them to open their file formats!

Restrict their advances into other monopolies!

Put some teeth in any review board formed!

Take action to limit their demonstrated behaviors!

Think about forcing them to make restitution to consumers. Actions must have consequences and we look to you to protect our interests.

Thank you for your attention.

Subject: Microsoft Settlement

It is clear that Microsoft has engaged in anti-competitive practices.

The only issue is what to do about it.

1. If we are to correct Microsoft's practices we MUST open the market to the competition. Microsoft should not be allowed to require a license to sell their products. This allows them to take that license away from companies that choose to sell competing products, potentially crippling these vendors.

2. Once a vendor has paid Microsoft for the OEM software to be installed on a computer it should be up to the vendor to add or subtract software from the default installation however they deem fit. This supposes that any changes to the default microsoft installation are made known to the customer that they might reverse them if they choose. Also, it allows the vendor to give their customers the best service possible—making sure everything works as it should and placing these applications where the customer might easily find them.

3. To compensate for its crimes Microsoft should be submitted a full IRS audit for which it would be stripped of its deductions during its time of poor business practices. If Microsoft is allowed to use its software to compensate for its actions the Courts should set the price of the software.

Example: Windows XP. Microsoft would say that donating this to a school is worth well over \$200. But this high price is only accepted because of the very business practices we are trying to reverse! R&D costs should not be considered either, only the cost of printing the disk.

thankyou,

Brooke Callahan

Subject: Microsoft Settlement is flawed

\*This message was transferred with a trial version of CommuniGate(tm) Pro\*

I am concerned that the proposed settlement does not sufficiently protect innovation from non-profit software developers. Robert Cringley's comment on the PBS website sums up my concern accurately: "If this deal goes through as it is written, Microsoft will emerge from the case not just unscathed, but stronger than before."

Here is what I mean. The remedies in the Proposed Final Judgement specifically protect companies in commerce—organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors—computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry. But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and freeware applications.

The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..."

So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products."

Please take action to ensure that the final settlement is stronger and more effective than the current proposal.

Subject: Microsoft Settlement

I will try to keep this brief.

I feel that the proposed settlement with Microsoft does not go far enough in curtailing the anti-competitive behavior of Microsoft's monopoly. Here are a few quick points, but in general the settlement must go farther.

Microsoft's file formats for Office documents should be disclosed, but this is not required under the proposed settlement.

Microsoft would still be allowed to discount Windows based on sales of other products, allowing them to extend their Windows monopoly into other product areas (e.g. PocketPC)

Microsoft's licensing mechanism should be restricted—currently Microsoft uses licensing agreements to prohibit their software from being used on competing operating systems. Any software they sell should be usable on any compatible operating system.

I truly hope that others who have more time are able to fill in the details a bit better, but if you need to contact me please feel free.

Subject: Microsoft Settlement

Hello,

I wish to have you note my displeasure at the Microsoft vs. Department of Justice Settlement Agreement.

As an I.T. professional for the past 8 or so years, I feel understand all issues surrounding this lawsuit and it's proposed settlement better than the average citizen.

In my humble opinion the settlement is flawed because:

1) it does not properly implement it's own proposed measures of forcing Microsoft to share in a fair and even manner APIs to competing vendors for it's middleware

2) the phrase "license on reasonable terms" in relation to Microsoft's required licensing of it's network APIs is particularly vague

3) various and sundry other detailed reasons that I'm certain you will receive in other like-minded communications

SUMMARY: I feel (as do many of my fellow I.T. friends and coworkers) that Microsoft products are indeed needed for the continued economic success of the United States. However, none of us feel that strict and specific restrictions on their corporate business practices, a strong requirement of Microsoft to share their network and application APIs, and ZERO loopholes (such as the "security and copy protections" one) are necessary for the further growth and success of the I.T. industry.

Microsoft's unconscionable behavior is inexcusable and has hurt this industry severely; this state of affairs cannot be allowed to continue. In my humble opinion, this settlement agreement is only window dressing and will not solve any problems in the long term.

Sincerely,

Brian Burrington

To: Microsoft ATR

Date: 1/23/02 4:45am

Subject: Microsoft Settlement

Dear Sir, This letter is to let you know of my opposition to the Microsoft Settlement of the anti-trust trial. I feel that the currently proposed settlement will do nothing to protect the consumer from the misuse and abuse of Microsoft's monopoly power.

Nothing in the provisions have any "teeth" to prevent Microsoft from continuing to use its established monopoly in the Operating System market to leverage and obtain a monopoly in other markets. The technical committee, while having investigative powers, does not have any enforcement powers except through a Judge—where Microsoft has proven itself willing and able to delay and appeal any final judgement for as long as possible until the product is already released to the public, competitors are bankrupt, and the damage is done. Unless the technical committee has the power to enforce the provisions (without appeal or until an appeal overrides them)—including the ability to prevent the release of a Microsoft product I am afraid that they are only a paper tiger.

There are also several other problems with the proposal relating to the Windows API, knowledge of which is—required—in order for a competitor to produce a product which competes with a Microsoft product (such as Internet Explorer and Office). While it requires that the APIs be publicized it allows Microsoft to either change the APIs just before shipping the product or to place such restrictions on the use of the publicised APIs that a competitor cannot use it without serious cost (for example having 2 separate development teams) which would need to be reflected in the final price of their product.

Microsoft's behavior since the anti-trust trial has not changed. And I totally reject the idea that the anti-trust trial is "hurting" the economy. Or "caused the dot-com crash" (as stated by a representative from my own state—Washington). Microsoft itself is hurting the economy by preventing innovation and the creation of new ideas and products due to its secret APIs (which the provisions do not fully address), changing file formats which also the provisions fail to address, OEM License "requirements" (I do not call the agreements), the EULA, and fear that "Microsoft will just steal the idea and then change their APIs so that my product will no longer work...".

What I think should happen?

1) Require Microsoft to public \*all\* APIs and file formats in a product 6—9 months before its release—and—delay the release until that time has passed after the APIs have been changed.

2) Prevent Microsoft from requiring "per-seat" licensing from enterprises (Corporations, Businesses, etc....).

3) Treat Microsoft as a "essential utility" much like the telephone company was and regulate it—or at least the portion of Microsoft which is a Monopoly (Windows and possible Office).

4) Give the technical committee the power to punish microsoft (by preventing the release of a product or by requiring documentation be publicised openly, or by changing the language of any license agreements).

Hmm... In conclusion I feel that the conduct of Microsoft during the Anti-Trust trial (introducing bogus and fraudulent

videos, lying, etc...) treated the court, and the US Justice system with contempt.

I do not feel that the DOJ should come to an agreement just for agreement sake.

That is all I have to say.

Thank you for this opportunity to I would urge the DOJ to review the Findings of Fact before signing off on this agreement and check of which if the findings the provisions fully address.

Subject: Microsoft Settlement

I am very unhappy about the MS settlement. It does not go far enough to prevent MS from doing what it has done in the past. As a developer of applications for BeOS (which is no more), MS business practices hurt me directly. MS required that Windows be the only bootable OS on a PC. So companies that agreed to place the BeOS on their system were forced to hide that choice and make the end user jump thru hoops in order to be able to boot the BeOS. I feel that this help cause the down fall of Be, Inc. and hurt me financially. As an independent developer MS has hurt my ability to earn a living.

Thanks,  
Sean Hafeez

From: David Friedman  
To: Microsoft ATR  
Date: 1/23/02 12:49pm  
Subject: Microsoft Settlement

I am concerned about certain deficiencies in the Proposed Final Judgment in the Microsoft case.

Specifically, it appears to me that the PFJ may not offer sufficient protection to development of middleware to allow Microsoft applications to interoperate with non-Microsoft operating systems, particularly Linux.

The substance of my concern is spelled out in a document available on the Web at the following URL:

<http://www.kegel.com/remedy/remedy2.html#abe>

The text below is a verbatim reproduction of the pertinent paragraph:

The PFJ tries to erode the Applications Barrier to Entry in two ways:

1. By forbidding retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows.
2. By taking various measures to ensure that Windows allows the use of non-Microsoft middleware.

A third option not provided by the PFJ would be to make sure that Microsoft raises no artificial barriers against non-Microsoft operating systems which implement the APIs needed to run application programs written for Windows. The Findings of Fact (?52) considered the possibility that competing operating systems could implement the Windows APIs and thereby directly run software written for Windows as a way of circumventing the Applications Barrier to Entry. This is in fact the route being taken by the Linux operating system, which includes middleware (named WINE) that can run many Windows programs.

By not providing some aid for ISVs engaged in making Windows-compatible operating systems, the PFJ is missing a key opportunity to encourage competition in the Intel-compatible operating system market. Worse yet, the PFJ itself, in sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". This prohibits ISVs from using the information for the purpose of writing operating systems that interoperate with Windows programs.

I am opposed to the Proposed Final Judgement (PFJ) by the Justice Department in the Microsoft case. It does not come close to addressing the harm caused to the marketplace by this monopoly. The most glaring problem with the settlement is that it only applies to Microsoft's Windows operating system, and then goes on to so narrowly define "Windows" as to exempt the majority of Microsoft's operating systems based on Windows APIs. There is absolutely no need to define it narrowly at all. All of Microsoft's potential operating systems should be covered under any settlement with the DOJ.

Subject: Microsoft Settlement

To Whom It May Concern:  
I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a

"punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Seamus Sullivan

From: Steve Speck  
To: Microsoft ATR  
Date: 1/23/02 12:51pm  
Subject: Microsoft Settlement

I am a citizen of the United States of America and the state of Florida. I have read the proposed settlement and do not believe it will do anything to prevent Microsoft from continuing to use its monopoly power in operating systems to extent monopoly into other areas.

Below are few of the many problems I find with the settlement. I am a programmer by profession and the definition of API is much too narrow, allowing many critical API's to remain proprietary. Microsoft has in the past and continues to manipulate such APIs to cause incompatibilities between Windows and non-Microsoft application programs when Microsoft decides to take over a particular application category. The agreement defines "Windows" too narrowly, the definition should include all operating systems based on the Windows API, such as Windows CE and the X-Box operating system.

Microsoft will still be able to craft license agreements that prevent Windows software from running on other operating systems. Microsoft will continue its practice of requiring enterprise customers to pay a license fee for each computer capable of running Windows, whether or not it actually does so. Such contracts with OEMs were prohibited as unfair in the 1994 settlement between Microsoft and the United States of America, and they are still unfair no matter who the customer.

Stephen Speck

Hello; I should like to express my objection to the current Microsoft settlement. Microsoft has a history of skirting the very edge of legality whenever it is to their advantage; as such, any settlement which does not unambiguously restrain their ability to illegally use their monopoly is worse than useless, as it gives the impression of restraint without actually doing so.

In particular, as long as Microsoft has access to sections of the Windows APIs that are not available to the general developer, it will be able to develop applications the latter will not be able to match.

Here, characteristically, there is the appearance of competition without its real dangers to Microsoft. Thank-you for your time, and consideration of our comments, as well as the cognizance that Microsoft are bankrolling an high-pressure "astroturf" (as in "fake grass-roots") campaign to see the settlement stay as written.

Subject: Microsoft Settlement

To whom it may concern:  
I am writing this e-mail to express my disgust at the proposed Microsoft settlement.

Specifically with regard to documenting APIs and file formats. As a software developer I have spent many hours trying to determine how Microsoft APIs function. In many cases, functionality that is built into the operating system and used by Microsoft applications is either documented poorly or completely undocumented. The effect of this is it give Microsoft application developers an unfair advantage over ISVs. A possible remedy would be to either split the company into application and operating system units or release the source code to the APIs. This would level the playing field for internal Microsoft developers and ISVs who are competing with them.

To: Renata B. Hesse

I agree with many of the reasons Dan Kegel and others have stated as to why the proposed settlement in this case is unacceptable to me as a consumer and end user of computer software. I take this time to write you about my particular concerns regarding this case.

I feel the monopoly Microsoft currently holds has hurt not only the country but the entire world with regard to the over all security and useability of the Internet. The homogeneity of Microsoft software has lead to larger numbers of virus outbreaks and "hacking" which cost billions of dollars to fix and recover from. The fix should be something that stops Microsoft from creating an environment which prohibits other vendors from entering the market. If Ford had prevented other manufacturers from entering the automobile market we could all be driving in Pintos and Explorers on bad tires!

I have also read that part of what Microsoft proposes is to give away its software to schools around the country. This is not a move to make restitution as much as to get more people using their product over the small number of competitors who might be trying to make inroads to the market. I see this as being no different than a drug dealer that gives away the first "hit" for free just to further their own business. I feel a better solution would be to make Microsoft pay for copies of competitor products and give them away to the schools.

I truly wish to see Microsoft punished properly for their crimes. I fear that they will simply use the money gained from these illegal activities to buy off the right people in our government. Please prove me wrong by making the penalties stiff and enforceable.

I wish to comment on the Proposed Final Judgment. I believe that, as written, it will not solve the problems it is intended to solve. The two largest issues are these:

\* The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft.

\* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft.

Please do not allow this settlement to proceed with these problems; I believe they will materially impact the security of the US computer networks.

Sincerely,  
Brian Sniffen, Citizen of the United States

I feel that I must comment on the proposed final judgement (pfj). I feel that there are a tremendous number of flaws with this settlement, but I will limit this complaint to the lack of enforcement capability. I feel that with Microsoft's history of repeatedly and openly defying any and all agreements it makes with the DOJ, it should be essential that in any agreement. The provisions in the pfj are incredibly toothless.

For this as well as numerous other reasons, I would ask that the pfj be rejected, and the doj should properly craft a settlement that does more to EFFECTIVELY remedy the harms inflicted by Microsoft in the past and prevent future abuses that are inevitably going to happen.

Subject: Microsoft Settlement

I don't agree with the DOJ's proposed settlement with Microsoft. Among myriad reasons, the two most important reasons to

push for a more stringent settlement and even punishment of Microsoft are:

\* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

\* The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

and

\* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

\* Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

I and others in the computer community have watched Microsoft crush innovative new companies, such as Netscape and WordPerfect, and see the government as faltering in its duty to protect consumers from the Microsoft monopoly. Microsoft was found guilty. Please take advantage of a situation that will never come around again and make Microsoft behave and play fair!

Cheers,

Bryan M. Davis

Subject: Microsoft Settlement

Thank you for the opportunity to comment on this case.

Microsoft has the capability to terminate any other competing company in the PC industry by integrating features into their own operating system. It is possible that, if Microsoft integrated not just the web browser, but a photo editor, a drawing package, the word processor and office suite, and so on, that a whole handful of large software companies that currently provide these tools would cease to exist overnight. This has been and continues to be the policy of Microsoft (i.e. Netscape and/or Java). Much of this has come to light in the trial.

The resolution seems to be a good first step. However, in five years, the entire enforcement expires. Microsoft has enough cash that it can wait five years and develop strategies in the background during that time. When this judgement expires, the same behavior will reappear, in an even more vigorous and prepared form. I am sorely disappointed in the limited term of this judgement.

Please consider extending the duration of enforcement for this judgement.

Sincerely,

RESTORE some competition in the computer field. If microsoft shared and

played nice with other vendors, OS's, Apps, Languages, Protocols, Standards the computing industry would be better for all, not just one. And to make it worse this ONE has the worst OS, Apps out there. THEY HAVE NO RELIABILITY in their software. So you always have to upgrade...what a joke. PLEASE punish Microsoft and help resotore competition to the computer industry and watch technology, innovation really explode !!!

What if it was a secret held by the biggest electric company which wire is "hot"...????

What if there was a standard (use red), but the big company said "white w/red stripe also" but didn't tell others. I don't know if this example is true but it works. See what Microsoft does?

Subject: Microsoft Settlement

As a developer for Microsoft's technologies, servers, and client systems, I have reviewed with interest the proposed settlement. I understand that there have been a number of complaints, and wished to note that I find very little to be wrong with the settlement as proposed. In fact, its terms may actually damage developers by being too harsh (for example, III.C.3 allows for alternate interfaces of "similar size and shape" on Middleware; interface continuity is something very much relied on by developers,) or unnecessarily delaying Microsoft from fulfilling obligations related to the maintenance of their software (III.D, tying the release of a Service Pack—an endeavor regularly scheduled at a six-month interval and coming due in mid-April to an effort to prepare internal documentation for external distribution that could conceivably delay the release of the Service Pack, including vital security fixes, by several months.)

I also disagree with the concept of allowing users to remove components of the operating system. Again, developers take for granted that certain portions of the system will be available, with their own unique APIs. For example, the playback of digital media through an HTML document is accomplished using an ActiveX control (a link to a small program on a user's hard drive.) If said control is not in place, or if an OEM-approved replacement does not support Microsoft's API completely, such functionality might not work. Such components would have to be added to the redistributable package, increasing install package sizes in a time where high-speed internet is still disappointingly unavailable in many areas and decreasing the amount of available space on physical install media. Alternately, developers would have to detect and code for several major API's, severely adding to development time.

However, these complaints are insufficient for me to voice disapproval for the settlement, and as such I wish to voice my approval in contrast to the dissenting comments also received.

Sincerely,

Kevin M. Lowe

Subject: Microsoft Settlement

I am writing in to contribute my opinion, as a U.S. Citizen and taxpayer regarding the proposed Microsoft settlement.

In short: this thing stinks to high heaven. It does absolutely NOTHING to repair the results of Microsoft's years of flagrant antitrust abuses, and does very little to prevent them from using the advantages they have gained from those abuses in the future. It also does almost nothing to stop Microsoft from moving into other fields and doing the same thing.

Microsoft has moved in a predatory manner with its operating system business, edging competitors out of the way by adding its own proprietary products into the operating system. The obvious case involves the conflict between Microsoft's Internet Explorer browser and Netscape's, but there are others. We have witnessed the flap over Windows XP, which was to include CD burning software and does include products like Microsoft's MSN Messenger, a direct competitor with AOL's Instant Messenger, Yahoo's Yahoo Messenger, and other messaging products. We have also seen Microsoft using the power it holds on the operating system to nudge users towards the Hotmail service and using Hotmail, one of the largest email services, forcing Hotmail users to sign up for the "Passport" service. Microsoft has also used its control of the operating system to force OEM vendors to offer Microsoft's other products like Microsoft Office, removing competitors like IBM's Lotus suite and WordPerfect from the forefront. Microsoft is also predatory in their pricing: by holding so much of the market, Microsoft is able to leverage this and force users to "upgrade" to the next OS sooner than normal, as well as at a much higher cost than a competitive market would provide. "Upgrade" packs for the home user edition of Windows XP come at \$99; the price is more than double that for a full installation disk not requiring the purchase of an older Microsoft OS. This is the only pricing scheme where the price of the upgrade is on the same level as the original purchase.

To actually solve the problems Microsoft's violations of antitrust law have caused, there

need to be heavy restrictions on Microsoft's conduct regarding the operating system, and a stop to the predatory restrictions on OEM publishing that bundle MS Office and other programs together. There need to be provisions to aid companies like Sun and Netscape, who have been harmed by Microsoft's illegal exploitation of its operating system monopoly, in regaining their lost market share to provide a truly competitive market.

The proposed settlement, by contrast, is the equivalent of sending a three-year-old to sit in the corner for 10 minutes before he goes right back to drawing on the walls. He doesn't learn a thing, and all you'll teach Microsoft is that it can get away with breaking the law. Don't let it happen.

From: Matthew Carpenter  
To: Microsoft ATR  
Date: 1/23/02 12:51pm  
Subject: Response to the proposed Microsoft settlement

To whom it may concern-

Hello, my name is Matthew Carpenter and I am from Grand Rapids, Michigan. As one who is intimately familiar with computers and related technology, I would like to express my concern about the proposed settlement in the US vs. Microsoft case. I will spare you the "techno-jargon" which I'm sure you have most likely received already. Basically, the way I read it, the settlement does not fulfill the requirements of "penalty" and indeed benefits the software monopolist.

Microsoft has been convicted of maintaining a monopoly through illegal and unfair means. Remedies need to address the illegal behaviors, their affects, and overall demand a penalty which at the very least will dissuade Microsoft and others from similar activity in the future. Please don't allow Microsoft to convince you that it is in the best interest of the public to let them off easy. They have contributed a lot to the furthering of the computer industry... but the cost has been great as well, not only for their competitors, but for the public in general. The free-market system, for all its weaknesses, is still the best thing for America. Microsoft would, in my experience, say that their contributions are great and the cost is little, but by making our choices for us, they don't allow us the chance to prove otherwise.

In my opinion, remedies must address the following things to attempt restitution for the damages, or at least to allow the damage to be healed: \*

Microsoft's underlying technologies should to be made available to everyone openly. If the "standards" which Microsoft touts (eg. the format for .doc, .xls, .ppt files, etc...) are to continue, making them "open standards" in which all parties can participate openly should allow for a little competition to build. Currently products which attempt this do a poor job due to flaws in "reverse-engineering". This should be the case going forward for old and new file-formats and

other such for at minimum of 5 years. Potentially, their file-formats would be a good thing to open to a standards body like ISO.

\* Microsoft's "innovations" should be kept under watch, to avoid their standard behavior of "extending" open-standards, which only breaks the standard. If they are to "extend" open-standards, they should be made to do so with the consent of a standards body which could limit changes between official standards timeframes, to promote interoperability.

\* Microsoft's Application Programming Interfaces(API's) should be made available completely, not in part as has been the case, to all partners and developers. This is the goal which splitting the company was to address. The "internal API's" currently include much better ways of solving a problem than the API's made available to many companies, putting everyone else at a disadvantage and allowing Microsoft Desktop and Server technologies an unfair advantage over technologies developed by anyone else.

\* Microsoft should be made to pay the costs for all of the above to be implemented, and any administrative fees for such.

To sum up the situation, Microsoft is the playground bully of the Computer Industry. They have already caused a great deal of damage to the industry, costing even more than they have contributed, in my opinion.

The resolution needs to attempt to make them "play nicely with the other children" so-to-speak, while encouraging them and any future potential monopolists to avoid incurring the ultimate damage to the American people (and the world over): using their monopoly to take away the possibility of our having other choices.

Obviously this is a difficult decision as it does not seem like a normal thing to force a company to open up its "intellectual property." But this is not a normal situation. The company in question is a monopoly whose "intellectual property" has become a commodity to information systems. A monopoly who has proven itself capable of abusing its monopoly in order to maintain it. A monopoly who through doing so has deprived us of countless technologies which may have made our lives better. A monopoly who would have us only have one choice: a choice proven to have more security and stability problems than any systems in the past. A monopoly who in doing so, artificially enlarged the number of products which require their software, because there are no other viable choices. Even if it may appear that there are beginning to be other viable options now that the lawsuit has stayed some of the more blatant illegal activities, the penalty should be made with regards to the circumstances at the beginning of the lawsuit.

Please reconsider allowing the proposed settlement to go forward. Please consider what is best for the public. Encouraging competition in a free market is what's best. Microsoft has shown that they don't have to consider what's best for us and that is why we are here now.

Thank you for your time and consideration.

Sincerely,

Matthew Carpenter

Subject: Microsoft Settlement  
Hash: SHA1  
To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Dear Renata Hesse,

Under the Tunney Act, I am writing to comment and to express my concern and dissatisfaction about the Proposed Final Judgement ("PFJ"). Among other concerns, I have a few primary concerns.

1. I am dissatisfied about the PFJ's definition of "API" (Definition A). The PFJ defines an API to mean an interface between Microsoft Middleware and Microsoft Windows. I do not understand why this definition is limited to middleware published by Microsoft. Reducing Microsoft's monopoly would be better implemented by requiring Microsoft to document, for no fee, all of its API's, including undocumented API's, between Microsoft Windows and any other piece of software.

Even the definition of "middleware" (Definition J) is unsatisfactory, due to its loopholes, and I would prefer to keep the original definition as set forth in the Findings of Fact, paragraph 28.

2. I am dissatisfied with the way the PFJ allows Microsoft to erect competitive barriers through the use of patents. Not to get into a debate on the validity of intellectual property patents, but I feel that allowing Microsoft to set the licensing fee for a Microsoft patent to even one dollar per developer erects a barrier to their use by non-Microsoft developers to develop software that will work with either Microsoft Windows or other software that works with Microsoft Windows (e.g. software developed by existing licensees).

API's, protocols, and file formats are the methods one piece of software uses to communicate with another piece of software. By allowing these methods to be patented at all chills entry, but even given an existing patent, any licensing agreement short of royalty-free chills entry as well. Microsoft cannot be allowed to select the license terms of their patents which apply to API's, protocols, and file formats. And those license terms must be royalty-free.

3. I am dissatisfied with the way the PFJ treats API's as the only method of communications between one piece of software and another. I would prefer that any mechanism of communications be included, including protocols (such as .NET and SMB) and file formats (such as Microsoft Word's .doc and Microsoft Excel's .xls). Allowing these mechanisms to remain undocumented sharply increases the entry barrier to non-Microsoft developers and to developers who are not Microsoft licensees.

Thank you for your time and effort in helping to prevent a continuation of Microsoft's monopolistic practices.

Yours,  
Robert Baruch

Subject: Microsoft Settlement: Illegal Behavior: Proven. Punishment Urges More Illegal Behavior?

Dear Justice Department,

I am truly frightened by the situation highlighted by the Microsoft Antitrust Trial. I have read the many variations of settlements that have been published and have been disturbed by the lack of force inherent in the proposed remedies. Most do nothing that would conceivably deter Microsoft from continuing its Proven Illegal anti-competitive practices and furthermore, would do next to nothing that would reasonably punish them for their illegal actions nor would it do anything to help rectify the situation (i.e. make the computing market a more competitive one).

My impression is that any settlement that Microsoft agrees to would be one that does the minimum amount of damage to their business model. My Question to you is this: would you try to come to an agreement with a murderer about his proposed sentence after being proven guilty? Would you truly let the Criminal have a say in their punishment? It strikes me as a Parent asking their child what sort of punishment they should have for doing something bad. The Child will very often opt for a punishment such as letting them watch more tv or some other action they like. It's silly.

Please do your best to be just and fair. If a corporation can be considered to possess the rights of a natural person then they should be considered burdened with the same responsibilities. Illegal actions should lead to sanctions aimed at first stopping the illegal behavior and then to a rectification of the situation. Efforts should not be wasted on appeasing the "wounded" transgressor. Please help me have faith in our government. Please do your job to the best of your abilities. I know that your position is a difficult one, but the fate of all of us, in some part, is in your hands.

Your's in seeking justice and fairness,  
Israel C. Evans.

From: stephan  
To: Microsoft ATR  
Date: 1/23/02 12:53pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I would like to state my opposition to the proposed settlement in the Microsoft antitrust trial. The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, there are no provisions that correct or redress their previous monopoly abuses. The proposed settlement only attempts to prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,

**MTC-00017171**

From: Julia Christianson  
To: Microsoft ATR  
Date: 1/23/02 12:52pm  
Subject: Microsoft Settlement

I would like to add my voice to those who are very concerned about the terms of the Proposed Final Judgement in the Microsoft case. I agree with those who believe that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

There are many areas of concern, but my greatest concern is that no part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ? 39).

I am also concerned that under the terms of the PFJ Microsoft may still impose

penalties on OEMs (large or small) which choose to provide computers loaded with a competing operating system in addition to, or in place of, Windows.

I am in charge of office automation for a mid-sized non-profit human services organization in Northern Virginia. In the face of continuing funding cuts we can simply no longer afford to run Microsoft software, and we have found open source a very reasonable alternative for our server applications. However Microsoft's refusal to make public their file formats and APIs is keeping us from making the switch to open source on the desktop. Given Microsoft's long history of questionable business practices, the only hope for us in the long term is for the Justice Department to insist upon a full set of remedies for the numerous violations of the laws of the United States identified in the Findings of Fact.

Thank you for your consideration.

Subject: Microsoft Settlement

One comment,

Bigger companies that have strong positions like Microsoft try to influence surrounding area and make it more suitable for company and its product.

One act for this is to get people to get used something. If you have been playing around with Windows from the kid it is much harder to jump to something else. So if Microsoft is allowed to "compensate" its restrictions to other companies by giving some of its product as a "free" it is not a any punishment.

Of course Microsoft is claiming that it will loose some money because the those universites/schools don't buy Microsoft's products.

That is partly true, if you check only small picture, but if you check what Microsoft is doing at the same time voluntary on console markets. They are selling consoles with loss, just to be able to sell games later with good profit. Everything that company does cannot make profit but it can still be a part of the plan.

Microsoft is also already started to move its product to centralized system. (e.g. MS Passport and yearly billing.)

If they get more companies (including schools and universities) to use their product then those will get guaranteed bills from this forward and settlement moneys will end on some time and then microsoft has managed to arrange cash cows.

If they will get people to use their system now then they will also get those people get used to it and to left their information to there.

So actually they will just create future income. So I see that court cannot agree any settlement that would support strategic goals of Microsoft.

Real punishment would be to put Microsoft to pay some other operating system installation to schools & universities

(But actually it could be favoring something so better to be just and not to favor to support any specific company)

Regards,  
JP

Microsoft's new subscription plan is flagrantly anticompetitive by preventing companies from using competing products. When the CIO signs up for Microsoft, the agreement becomes exclusive.

This is the very definition of Monopoly. To allow this to continue is a slap in the face to the rule of law.

Date: 1/23/02 12:54pm  
Subject: Support for the MS decision

I realize that you're probably getting an enormous amount of spam regarding the settlement with MS. I for one just want to show my support for a lighter sentence. I'm an entrepreneur myself, and I fail to see the justification for a harsher penalty.

Point 1) MS has a monopoly in the operating system market. No argument there.

Point 2) MS did include an internet browser with their operating system. But they never charged for it, they never released it as a separate download. It was an augmentation to the OS, not a bundling.

Point 3) Open sourcing or forcing a stripped down version of Windows offers no substantial benefit to the competitive marketplace. Yahoo currently releases a messenger which is small to download, changes all the settings to adjust to yahoo's sites, and allows yahoo fully competitive offerings.

MS has not moved to prevent this or change yahoo's offering in any way. I think this is a prime example of a fully competitive marketplace.

In summary, please don't listen to all the nay sayers. The important point is that with the observation body in place, the settlement as it currently stands will be more than enough.

From: Paul Koenigsberg  
To: Microsoft ATR  
Date: 1/23/02 12:49pm

Subject: Microsoft Settlement  
To Whom It May Concern:

As a web programmer, I am opposed to the settlement in its proposed form, the primary reason being its wording that amounts to Microsoft's complete discretion over which entities can access their Application Programming Interfaces ("APIs"). Such discretion effectively allows Microsoft to control which technologies can interact with its products, further strengthening their leverage in current and future markets.

I would also warn that this settlement, if allowed to proceed, will have damaging consequences in the long run for Microsoft and the U.S. technology sector itself. Governments, businesses, and technologists in foreign countries are watching this case with a keen interest. What they see is Microsoft's political coming-of-age, via the Bush administration, via their soft money contributions, and the leniency of the settlement. Microsoft can be perceived as having a new, close relationship w/ the U.S. government and U.S. national interests. As a consequence, and against the backdrop of a security-conscious world, foreign governments and businesses will seek non-U.S., non-Microsoft technology solutions for their critical and widely deployed applications in the name of security, as some are doing already. Domestically, companies and individuals who are privacy-conscious will no doubt step up their efforts to find alternative software solutions to Microsoft as well.

Microsoft is already in trouble with their small to medium-sized business customers in regards to their new price-gouging software licensing, costing 25 to 30% more annually in most cases. Please don't let them shoot themselves in the other foot with a settlement that rewards them for anti-competitive behavior and sends a message to the world that Microsoft is in bed with the U.S. government.

Subject: Microsoft Settlement

To Whom It May Concern:

From what I have heard of the Microsoft settlement I do not feel it will prevent future abuses of monopoly power that Microsoft has been conducting, nor do anything to even slightly make up for the past transgressions.

The idea of having Microsoft give out free copies of Windows to schools seems noble at first, but is about as ludicrous as punishing a drug dealer by having him give out cocaine to school children for free. Further spreading Windows as it is currently designed will only foster addiction as the company has a unabashed reputation for creating products that quickly become obsolete and require expensive upgrades (try typing "Hello Mom" in one of the later versions of Microsoft Office and opening it up with even a year old

copy!) Furthermore, unlike tangible assets, the giving away of "intellectual property" like Windows in bulk is virtually costless to Microsoft and is not a suitable punishment.

Windows currently has a monopoly on the desktop and any solution to restore competition will take years. However the only way that this competition could even start would be for companies and individuals to at the very least understand how to work with Windows machines. By this I mean that the APIs and protocols used to network various Windows machines must be made public knowledge FOR EVERYONE. Furthermore, resellers and others should have the right to modify purchased copies of Windows to better suit their needs and their costumers needs. The monopoly power of Microsoft allows them to implement closed systems that impair innovation and are even probably illegal to try to reverse engineer out these days. The Internet works primarily using the TCP/IP protocol, if this protocol were protected the same way the protocols Windows uses to attach to something as simple as a printer the Internet would never have become what it is today.

Microsoft continues to try to abuse their monopoly stance by squashing competing companies like Netscape and then redirecting every mis-typed web page address to their home portal. They add hooks to many of their media programs that encourage you to sign up for their Passport system with deceptive messages that make it sound like these two things are somehow related. They create new encryption protocols for the honorable goal of digital security, then ensure that software for these protocols only works under Windows rendering any other alternative operating system useless.

As I see it, the only way to stop Microsoft from abusing their power is to stop them from oppressive licensing schemes for resellers and to stop making software and protocols that only work under Windows. I'm not sure how I would punish them for their past deeds, but I think that any punishment should be designed to help those companies and individuals wronged by Microsoft's actions to succeed in creating competition against the company. I also strongly favor the idea of the creation of some sort of oversight committee to help ensure Microsoft starts acting responsibly.

Sincerely,

Robert

From: Ross J. Reedstrom  
To: Microsoft ATR  
Date: 1/23/02 12:55pm  
Subject: Microsoft Settlement

I am a research scientist in the computer and Information Technology Institute at Rice University, in Houston, TX. I have been doing research and development in the field of information technology for over 5 years. I find the Proposed Final Judgment (PFJ) to be not in the public interest, for many reasons. One principle objection I have is the usage limitations placed on the information that Microsoft Corp. (MSC) is being required to release by section II.D of the PFJ, to wit:

"for the sole purpose of interoperating with a Windows Operating System Product,"

This restriction serves to enhance, rather than remove, the monopoly MSC holds in on Intel-compatible PC operating systems, as affirmed by the Court of Appeals. It excludes a valid mechanism by which the Court could reduce MSCs monopoly: encouragement and support of ISVs and others to develop software that allows applications designed to run on the Windows family of operating systems to run on top of other operating systems, thereby directly competing with MSC in the area they hold an illegal monopoly. Such products have —not— been written by commercial ISVs, however, non-commercial efforts to develop such software have started, with great difficulty, discovering the secret parts of the Windows APIs by trial and error. One such project is WINE, designed to allow Windows applications, even MSCs own applications, to run on Linux and other Unix-like operating systems on Intel-compatible hardware. This is only one example of how the PFJ has been limited and restricted to the benefit of MSC. The finding of law is clear: the Court of Appeals affirmed it—MSC is an unlawful monopolist. Yet, the PFJ has no effective

enforcement mechanisms, even though the violator (MSC) has shown a history of ignoring and blatantly violating court judgments. The restrictions that —do— exist in the PFJ are so weak, with unusual, narrow definitions of common terms of art, such as "API" or "Middleware", such as to gut what little power they might have had.

In short, I agree with the State Attorneys General who found this settlement completely unacceptable—it does nothing to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (Court of Appeals ruling, Section V.D.) As a citizen of this country, I am disheartened that the government department whose purpose is to enforce the law of the land, whose very name is composed of one of the great moral principles our country is founded on, Justice, would offer such a complete capitulation to lawbreakers, in the name of expediency. In this time when our nation and its principles are under attack by forces who seek to deny us our fundamental freedoms, it is imperative that we stand firm, and support the principle of rule of law, in both letter and spirit. Even if the proposed final judgment fulfilled the letter of the law, which I do not believe it does, it clearly violates the spirit.

From: Kevin Fitch  
To: Microsoft ATR  
Date: 1/23/02 12:55pm  
Subject: Microsoft Settlement

I feel that the Proposed settlement is insufficient. In order to get an appropriate resolution I feel that we need to look toward a healthier segment of the technology industry: hardware. In the hardware industry there are several standards bodies that allow for interoperability and competition. These include JEDEC and IEEE. Some of the things that these bodies require includes disclosure of patents. Just look at the recent incidents with RAMBUS to see how these organisations are helpfull to maintain competition. Also these standards bodies force companies to work together to generate standards very early in the development of new technologies. This prevents the "first kid on the block" from becoming the only kid on the block.

The main area in the hardware industry where there is little competition is with CPUs. This is in my opinion a result of the Microsoft monopoly.

Kevin Fitch

To whom it may concern:

As should already be clear to justice department officials, the proposed Microsoft Anti-trust settlement appears to be a travesty, a measure that in fact remedies none of the complaints raised against the software giant while providing the comforting appearance that Microsoft has been reprimanded. I imagine that's fine with Microsoft. They know the value of publicity and no doubt PR spin-meisters are already framing a picture of a reinvented Microsoft that encourages competition and innovation above all else. The company will come out of this with renewed vigor, knowing it can even take on the federal government and win.

The losers, meanwhile, are consumers and competitors. Based on what I've seen of Microsoft's behavior in the press, the primary goal is profit derived from market domination, with innovation and quality seemingly secondary. One can't deny that Microsoft has changed the landscape, in many respects for the better, but if its strategy for retaining market share is to put the industry it has helped to define in a strangehold, it must be restrained.

How will consumers benefit? How will the tech industry benefit? The efficacy of the proposed settlement must be considered carefully in light of these two questions to ensure that it has the desired effect. The issues are quite complex, but since you are the ones tasked with understanding what's involved and evaluating the settlement proposal, I trust your decision in this will be the best one for the general public and the tech/software industry.

I'm sure you've been sent this link previously, but it summarizes key sticking points in the settlement: <http://www.kegel.com/remedy/letter.html>

I'd be wasting my time to attempt to recount the problems with the settlement when such a clear exposition of them sits right there.

Respectfully yours,

To whom it may concern:

I am writing to add my comments on the Microsoft antitrust settlement. I was not surprised when Microsoft was found guilty of engaging in anti-competitive practices. I do not know any computer professional that does not believe that Microsoft is in fact a monopoly.

Unfortunately the settlement that has been proposed seems to be a rehash of the previous ineffective measures that were levied against them 10? years ago.

I believe that the only truly effective solution is a breakup, similar to the settlement against AT&T. It is clear that Microsoft is a monopoly. Perhaps as a regulated monopoly real competitors can emerge and flourish.

Subject: Proposed Microsoft settlement  
January 23, 2002  
Judge Colleen Kollar-Kotelly  
United States District Court for the District of Columbia  
333 Constitution Avenue, NW  
Washington, DC 20001

RE: US v. Microsoft proposed final order

Dear Judge Kollar-Kotelly,

First of all, I think that Microsoft is an excellent business and an American icon, and as such they should be encouraged to act in a way that we all be proud of. They are among the best corporations in the world at taking established technologies, packaging, and marketing them to the mainstream market. They are also, as the Department of Justice has proved, adept at the illegal use of their desktop OS monopoly to manipulate the access their competitors have to the desktop market.

As a user of computer products and a US citizen, I feel it my civic duty to comment on the proposed settlement, as I feel it has shortcomings. The settlement as it stands has been obviously crafted to avoid a structural remedy, and while it proposes some strong remedies in the area of conduct, I feel they are not enough to be effective in ensuring that Microsoft will not become a repeat offender.

Where is the penalty? Microsoft has enjoyed an enormous financial windfall through their decade of illegal practices, and now they are asked to donate \$1.4 billion of obsolete hardware running Windows to schools? This has been a marketing tactic used by both Microsoft and Apple for years.

Increased familiarity with their products in the school translates to strong consumer preference in the years to come.

Surely there can be some effective penalty arrived at that will not severely damage the US economy and yet will not be merely a marketing opportunity for the. This settlement, as proposed, sends a strong message to the computing industry that it is "business as usual" and will obviously represent less of a deterrent to Microsoft than their lawyers' fees.

Under the current version of the settlement, Microsoft appears be given broad discretion to deploy intellectual property claims to avoid opening up its monopoly operating system API and file formats.

Based on their past performance, I do not believe this will be an effective solution. I think that Microsoft should be forced to standardize, disclose and license the entire set of Windows APIs and the file formats of its Office applications to any entity on a non-discriminatory basis, so that it will no longer be a secret how to interoperate with Windows. Any Microsoft networking protocols should be published in full and approved by an independent network protocol body to ensure the independence of the internet. I do not feel confidence in the

tribunal as proposed and feel it should be more independent in nature.

I hope the Department of Justice has been following the revising of Microsoft's Windows XP business liscencing scheme following undertarget acceptance by the business community. Industry is saying they will not be gouged as Microsoft moves to an ASP model. There is a similar remedy for the average consumer (ie. to stick with Windows2000), but for how long? There must be interoperability and backwards compatibility assurances included in this settlement to ensure that Microsoft does not use new applications to leverage the adoption of their new, more lucrative, revenue model.

I close in saying that I appreciate the hard work and consideration that the Department of Justice has given this matter on behalf of myself and all Americans. It is vital to the national interest that innovation and business opportunity at all scales of entry be preserved in the face of Microsoft's current domination of the desktop.

Please consider these and other criticisms of the settlement proposal, and procede as your conscience dictates, keeping in mind the trust we all place in you.

From: Ben Messinger  
To: Microsoft ATR  
Date: 1/23/02 12:55pm  
Subject: Microsoft Settlement

To Whom it may concern,

Thank you for giving me the opportunity to comment regarding the proposed DOJ settlement with Microsoft corporation. In my opinion there are many serious shortcomings in the proposed settlement. I will take this opportunity to point out only a select few.

1) The proposed final judgement does not address the issue of "file format" documentation. The DOJ identified non-disclosure of Microsoft Office file formats as an Applications Barrier to Entry (findings of fact, paragraphs 20 and 39)—by withholding file format specifications, Microsoft prevents competitors from developing applications which can read or write Microsoft Office compatible files—thus preventing the exchange or sharing of documents between Microsoft Office users and users of competitive software products. This strengthens Microsoft's monopoly by hindering the exchange of information with non-Microsoft products.

2) The proposed final judgement so narrowly defines "API" (application programming interface) that the requirement of Microsoft to disclose it's API's will be interpreted in such a way that many of the most important API's will be excluded from disclosure.

3) The proposed final judgement defines "middleware" and "Windows" so narrowly that very slight changes by Microsoft virtually guarantee Microsoft the ability to circumvent the proposed restrictions by simply altering their products slightly.

4) The proposed final judgement fails to address anticompetitive licence restrictions

currently in use by Microsoft which among other things:

a) prevent the use of certain windows components in conjunction with competing software. For example: The Microsoft Windows Media Encoder SDK (a tool for creating windows software) End User Licence Agreement states in part "... you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models ... Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (SCSL); ..."

What this means is that software developers can use the Windows Media SDK to develop their software, but they are not allowed to do so if their software is made "publicly available" under the above definition.

b) Microsoft attempts to prevent the development of software that is compatible with alternative operating system products. The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used to create Windows-compatible applications. The Microsoft Platform SDK EULA reads in part: Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..." this makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems. By allowing these exclusionary behaviors, the proposed final judgement is contributing to the Applications Barrier to Entry faced by competing operating systems.

It is my deepest hope that you will reconsider the proposed judgement, and rewrite or amend it in such a manner as to remove the many many loop-holes and inadequate provisions which will, if implemented as currently proposed, virtually guarantee that Microsoft will continue in its tradition of anti-competitive and publicly arrogant disregard for both the letter and spirit of the law.

Sincerely,

Ben Messinger

Subject: Microsoft Settlement  
Folks,

Don't let Microsoft buy their way out of this one. If we're going to pretend that we don't support monopolies, let's not support the company that everyone knows is a monopoly.

Also, please be aware, when you are reading the comments you are collecting regarding this settlement, that Microsoft is a masterful marketing machine, and that they successfully use every opportunity they get to sell their products. This includes "grass-roots" marketing, in which they "stuff the ballot box" with people who express their desire for Microsoft to be let alone to "innovate."

Anything in the settlement that enables Microsoft to further expand their customer base (through the distribution of free software licenses, etc) undermines the very aim of the case itself. While they obviously should be allowed to continue doing business, I believe it would be wise to focus more on limiting the ways in which they can use their market presence to crush competition.

Thanks for your time.

Jeffrey Johnson

**MTC-00017192-0001**

I would like to voice my opinion of the proposed settlement of the antitrust cases against Microsoft. I am a Systems engineer by profession and from the wording of this proposal various software applications that are forcefully included in all of the operating systems from Microsoft are defined totally incorrectly.

Some of these software applications are the media player, Internet explorer, notepad, wordpad as well as many others.

All of these software applications are misrepresented as middleware. Middleware programs are in the simplest term's translators nothing more and nothing less. These middleware programs take input in one form and make it available for use by any program that can fully support the API ( application programming interface ) for a universal way to exchange information between different systems. Middleware allows for systems to be changed to another manufactures software easily. This is possible because the API's to most middleware programs are made fully available to anyone wishing to make their product to be compatible.

Microsoft should be required to fully disclose to the general public on a public accessible website the entire API's the programs they want to be defined as middleware and be required to make any additions or changes available for 90 days before any microsoft program may be

released can use this change. This requirement would help in making completion possible in these areas of the market.

In closing the current proposed settlement should be rejected and rewritten leaving no loopholes or areas were the guilty defendant (Microsoft) can dictate who and what the API's can be used for.

From: Kevin Loechner  
To: Microsoft ATR  
Date: 1/23/02 12:57pm  
Subject: Microsoft Settlement

Dear Sirs:

The proposed Microsoft settlement amounts to a slap on the wrist for Microsoft's predatory business practices. This settlement does nothing but preserve the status quo, which allows Microsoft to continue exploiting their situation as before. First of all something must be done to end the "Microsoft Tax", in which OEM's are charged a licensing fee by Microsoft for each computer they produce, regardless of a Microsoft Operating System product being installed on a given machine. This fee is then passed along to consumers, who assume they are getting Windows for free with their machine. Microsoft must also be forced to open up it's APIs and document formats, so third party software companies actually are given a fair opportunity to produce a product that works as well as Microsoft's products on the Windows Operating Systems. With the control that Microsoft is given in keeping their document formats and APIs closed, no other company really has a chance to compete with Microsoft since they control the Operating System. Thank you for taking the time to take my comments into consideration.

**MTC-00017194**

From: Eugene Regad  
To: Microsoft ATR  
Date: 1/23/02 12:34pm  
Subject: Microsoft Settlement

The proposed settlement fails to meet the public interest in a very critical way:

Microsoft executives have identified Linux as its number one competitor. They vigorously used Linux before the trial court as proof of the existence of competition. The trial judge did not accept that claim as fact, but did agree the potential was there. The settlement does not even acknowledge open source as potential competition. The settlement further allows Microsoft to define what competition is (solely in the form of "viable" companies) and hence prevent or suppress open source movement competition.

It would make sense for the settlement to permit that "competitor" to actually

compete. Linux is just the name for the most prominent competing operating system kernel. Many other components make up a usable system. Many of these are also released under the same or similar "free" (GNU GPL) or "open source" license provisions.

The most useful means of encouraging competition (open source or otherwise) is to make it feasible for other parties to write, release, and sell competing or complementary products, from the kernel through all kinds of end-user applications. To this end, three provisions must be added to the settlement:

1. Microsoft must be required to publish its file formats.
2. Microsoft must be prohibited from breaking competitive products.
3. A system of financial penalties must be implemented for violations.

Item 1.

Microsoft must publish, for free use by anyone, without any license, all the file formats used by its operating systems and applications. File formats are just the parameters required to read or write a information to the hard drive, or for transmission to another program or computer. Knowledge of file formats is essential to write or use a competitive or complementary product.

All the variants of such formats must be included, and all changes must be promptly published. "Promptly" means at the moment when Microsoft management determines that a change is necessary and provides such formats to its own programmers. Publication must include posting to an internet web site accessible to all, without any license, registration, or prior consent from Microsoft. Any person must be free to copy and republish, document or comment upon the formats without any consent of Microsoft.

This does not give anyone access to the program code used for such purposes; Microsoft can still keep its programs, and methods of programming secret.

Item 2.

Microsoft has a history of breaking competitive programs by falsely claiming compliance with "standards" and adding features which prevent competitive products from working properly. The most common method is "embracing and extending" standards (ISO, IETF, etc). Embracing and extending is actually the practice of announcing support for a standard, and then adding features which are not documented, are proprietary, copyrighted or patented. These "extensions" are specifically designed to break competing products. One example is "smart quotes", which is little more than a toy feature to help incompetent writers properly close quotes. It is done by changing (corrupting) the standard ISO fonts used by the word processor to something different than the ISO standard. It shows up in unaware programs by displaying a question-mark or a garbage character. Other e& practices are much more pernicious.

The settlement should require Microsoft to announce which standards it will support, and prohibit Microsoft from claiming compliance with any standard that is not supported. These adopted standards must be

listed on the internet for open reference without registration, or prior consent from Microsoft.

Microsoft must be prohibited from "extending" any supported standard by adding features not present in the standard. It is not necessary to require Microsoft (or any competitor) to adopt any standard, or to fully support all features of the standard. For many uses, partial support is sufficient. The key to preventing unfair competition is to ban Microsoft from breaking programs which do comply with standards.

Item 3.

In light of the fact that the present case originated in Microsoft's failure to comply with an existing consent decree, DOJ should establish a schedule of severe financial penalties for violations. Otherwise, Microsoft might well find it advantageous to cause competitors to "spin their wheels" by publishing false, incomplete, or misleading information. Violations should be considered to begin with the publication of any information which is subsequently found to be false, incomplete or misleading. The longer the violation period, the greater the penalty. The violation is proved by the use of a non-published file format or the perversion of an adopted standard in any Microsoft product.

The use of these methods of encouraging competition have a number of advantages:

1. They are essentially free of financial costs, both to Microsoft and the Government. Microsoft already has to document its file formats for its own use, and almost certainly on-line. Publishing the same documentation on the internet is almost zero—cost.

There is no cost (indeed a saving) in NOT perverting the implementation of a standard.

DOJ could accept being a digitally-signed copy of each such publication, transmitted at the time of publication to a DOJ computer. The digital signature should be considered binding for purposes of determining perjury.

2. Enforcement may be simplified. It seems likely that competitors will closely monitor Microsoft's publication of file formats and standards announcements, and compare closely what Microsoft programs actually do. In both cases, compliance is only a matter of determining facts which can be recognized by any competent person.

DOJ could maintain a web site devoted to receiving documented complaints. DOJ might consult commercial and non-commercial competitors to establish a structure for entering complaint information in a way that DOJ finds useful in summarizing observations into facts.

From: Martin Gelfand  
To: Microsoft ATR  
Date: 1/23/02 12:58pm  
Subject: Microsoft Settlement

I am grateful for this chance to express my opinion concerning the Proposed Final Judgement in US vs Microsoft.

Let me put it plainly: I believe the proposed remedies are entirely inadequate, and need to be thoroughly reconsidered in order to effectively prevent Microsoft from using anticompetitive tactics to retard the development and application of Open Source software.

An lengthy discussion of the PFJ from this point of view has already been provided to your office by Dan Kegel, and is available on the WWW at <http://www.kegel.com/remedy/>

remedy2.html . Let me focus on just one item.

At work (I am an Associate Professor at Physics, at Colorado State University) and home I run GNU/Linux operating systems on my computers. A real annoyance I have to deal with on a regular basis is being sent or referred to Word, Excel, and Powerpoint files, which in many cases cannot be nicely interpreted using the software available on my computers. Much of the monopoly power associated with Microsoft lies not in its control of operating systems but in its control of the Office suite. The undocumented file formats associated with Office are a major Applications Barrier to Entry (as discussed in the Findings of Fact) and, in the absence of any guaranteed way to run Microsoft Office natively on a GNU/Linux system (WINE may work at some point in time, but there is nothing in the PFJ to stop Microsoft from working against WINE's success by various technical and legal means) there are considerable barriers to introduce GNU/Linux systems into office environments which have chosen to standardize on Microsoft's Office suite.

Requiring Microsoft to fully document the file formats associated with Office, which will allow Open Source office suite developers to more readily generate effective input/output filters for Microsoft document formats, ought to be part of any remedy for its illegal anticompetitive practices.

Date: 1/23/02 12:55pm  
Subject: Microsoft Settlement

If Microsoft has a monopoly on the Intel PC OS market, and they have abused that monopoly power, then the remedy as submitted is insufficient to curb their behavior. I find it offensive that the government, having found that a monopoly exists and that Microsoft has abused their monopoly position, is satisfied with a slap on the wrist for this firm. They have shown an inability to curb their behavior in the past and no intention of curbing their behavior in the future. This settlement should be rejected.

To whom it may concern,  
I would like to make known my concern with the "Proposed Final Judgement".  
I don't think the settlement is just, and I don't think it will make any useful change.  
In my opinion, it amounts to a warning rather than a disciplinary action or a retribution. I.e. "if you do illegal monopolization things again, you'll be in trouble". They did those things, why are they not in trouble now?

The fact that I can't buy an intel-based computer without a MicroSoft Wiindows o.s. installed makes me blood boil. Why must I subsidize MicroSoft when I have no intent of using it's operating system or other software on my computer?

MicroSoft's practices are NOT in my best interest. If I want to buy an Intel based computer, I am forced to subsidize MicroSoft. Why?

REWARDING PUNISHMENT  
Posted January 18, 2002 01:01 PM Pacific Time

I'VE RECEIVED A number of requests to address the pending (as of this writing) settlement of the civil anti-trust lawsuit against Microsoft. Under the pending agreement, Microsoft will be obligated to provide hardware and software to thousands of underfunded school districts across the country. The logic, if you can call it that, is that such schools could benefit greatly from receiving the technology they lack.

Undeniably, there is an emotionally compelling case for this. A gigantic company, found guilty of doing wrong, is ordered to help the underprivileged. "We need to do it for the children," cry the politicians. "Think of the children!"

"For the children." That's the phrase politicians in Washington use to justify an action so irrational that it cannot be justified any other way.

How can I properly characterize this solution? It is like a court ordering a convicted drug dealer to give out more free samples of heroin to underprivileged children to ensure that their poverty does not deprive them of the opportunity to become addicted.

Sure, public classrooms need more technology. And it is especially important that children who don't have as many opportunities in life get assistance. But that is not adequate justification for assigning the fox to guard the hen house.

Personally, I like the counterproposal put forward by Red Hat: Let Microsoft donate money for computing resources for underfunded schools, but let those donations go toward hardware only; then populate those machines with open-source software.

Why open source? Consider the future: What will the schools do when they need to upgrade? If you give schools Microsoft software, they will be caught in the endless upgrade cycle that has characterized life in the Microsoft world. Those upgrades will cost money, money that these targeted school districts, by definition, cannot spare.

Instead, arming schools with open-source software will have two benefits. First, it will set schools down a long-term path that they can afford. The cost of obtaining open-source upgrades is trivial. Without low-cost software upgrades, all those nice shiny computers run the risk of becoming boat anchors in short order. I'm sure someone is saying, "But open source is too difficult to administer!" Such does not have to be the case, but I'll deal with that issue in a future column.

Also, the Red Hat proposal does not reward Microsoft in the long term. If a company is

convicted of overpowering markets, why would you reward them by putting one of the few markets they don't lead under their control? This sounds a lot like a seed-unit program for education, not the penalty imposed from losing a trial.

Corporate misdeeds are supposed to earn punishment, not long-term investment opportunities. I believe we would all be better off if the courts acknowledged the difference between the two.

Would our schools be better off with open source? Let me know at pavlicek@linuxprofessionalsolutions.com, or sign on to my forum at InfoWorld.com.

#### MTC-00017206

From: Rick Romero  
To: Microsoft ATR  
Date: 1/23/02 12:57pm

To whom it may concern,

I would like to comment on the proposed settlement in general, and how it relates to Microsoft's monopoly status. In my opinion, some monopolies are perfectly tolerable. Those such as Power Companies and Water Companies, where "laying proprietary groundwork" would be too burdensome to the community to necessitate competition. Imagine competition in Water or Power, each company with its own lines. In that form, monopolies can be a good thing.

When it comes to Microsoft and technology in general, this groundwork can be reused, and competition can flourish. Microsoft has been found, in prior cases, to have tampered with that groundwork in order to pursue, and/or maintain its monopoly status. Perhaps the largest example is the Caldera case. Microsoft was accused of purposely ensuring that Microsoft Windows would not run on DR-DOS. At that time, Microsoft Windows was simply a DOS application. Any DOS application would run on any flavor of DOS, be it MS-DOS, IBM-DOS, or DR-DOS. Except in the case of Microsoft Windows, where the application would specifically check the MAKER of the installed DOS, and run based on that alone.

What has happened now, is that Microsoft has extended its Microsoft Windows application into an OS. Now that Microsoft own the OS itself, it has ensured that Microsoft Windows applications will not run on any other Operating System. This has severely hampered the OS market, because applications must be written twice, or only one platform is chosen. It's obvious that Microsoft Windows would be the OS of choice, because of its large installed base.

I feel that the proposed settlement must address this issue, for it is the root cause of Microsoft's monopoly, and the method by which this monopoly is abused. Specifically, the Win32 API (API = The "language" a program talks to the OS in.) should be allowed in competing Operating System's, without undue license restrictions. WINE is a good example of an attempt to bring that API to Linux. Odin is WINE's counterpart for

OS/2. Both of these OS's are competing with Microsoft Windows, and the availability of an alternative Operating System for the average user, would be greatly enhanced if Microsoft were to disclose much of that information to those competitors. I feel the proposed remedy doesn't touch on application compatibility as it should, to allow for competition in the marketplace on the desktop level.

Thank you for your time.

Date: 1/23/02 12:58pm  
Subject: Microsoft Settlement

I think the proposed settlement is a bad idea.

0) The definition of Windows Operating System Product appears to be whatever Microsoft wishes it to be.

1) The Proposed Final Judgement ("PFJ") doesn't take into account Windows-compatible competing operating systems.

2) The PFJ contains misleading and overly narrow definitions and Provisions.

3) The PFJ fails to prohibit anticompetitive license terms currently used by Microsoft.

4) The PFJ fails to prohibit intentional incompatibilities historically used by Microsoft.

5) The PFJ fails to prohibit anticompetitive practices towards OEMs.

6) The PFJ as currently written appears to lack an effective enforcement mechanism.

Please register my opposition to the Proposed Final Judgement.

From: Tom Jones  
To: Microsoft ATR  
Date: 1/23/02 12:58pm  
Subject: Microsoft settlement

I am a computational biologist at Washington University in St. Louis Medical School. I am in favor of ruling as strongly as possible —against— Microsoft in the current case.

Microsoft is clearly an abusive monopoly, or near-monopoly. If Microsoft is not reined in, it will continue to swing its weight around, taking all it can for itself like an arrogant, champion weightlifter in a 2nd grade lunch line.

If you do not draw lines, and demonstrate that unacceptable behavior has real consequences, then you have given every megacorporation a pass that says:

**\*\* Do Whatever You Like \*\***

As two trivial examples of how Microsoft continues to exploit their position in the market to shut out competition, even in the face of the ongoing DoJ trial:

(1) Microsoft blocked "independent" web browsers (Opera, Mozilla) from accessing their MSN site, demanding that users

download Internet Explorer to view the web site. (Oct, 2001)

Ref:

<http://news.com.com/2100-1023-274980.html?legacy=cnet&tag=tp-pr>

(2) Microsoft's April '01 deal with Qwest will move current qwest.net ISP customers over to MSN. After the transition, Netscape mail will no longer function for these customers!

"MSN e-mail is not compatible with the Netscape e-mail client"

—from: [www.qwest.net/nav4/msn/faq.html#services](http://www.qwest.net/nav4/msn/faq.html#services) Further, the

correspondence sent to qwest.net customers leads the customer to believe that they must use a Microsoft email client after the move to MSN. Anecdotal evidence suggests that persistent tech support calls may provide non-trivial solution that allows use of a non-MS email client.

Ref:

i) <http://slashdot.org/article.pl?sid=01/10/17/143230&mode=thread>

ii) personal communication with a qwest.net customer in Oregon This is only the tip of the iceberg of Microsoft's insulting, galling, arrogant, monopolistic behavior that they continue to engage in. If you crumple, and you only give Microsoft a light slap on the wrist, you are smashing a bottle of champagne over the prow of a new era of American monopolistic greed.

Punish Microsoft!

Sincerely,

Thomas A. Jones

#### MTC-00017209

From: Tod Harter  
To: Microsoft ATR  
Date: 1/23/02 1:04pm  
Subject: Microsoft Settlement

Dear Sirs:

I beg you to consider the following arguments in favor of more drastic action in regards to settling the current litigation against Microsoft. As a highly experienced software engineer, IT professional, and entrepreneur the proposed remedies are entirely inadequate.

Any engineering group, in this context Microsoft's various application development teams working on Microsoft products, gain a very substantial advantage from having a special working relationship with the developers of the underlying system software. While the proposed remedy attempts to mitigate this advantage it is only common sense that the best possible result one could hope from these remedies would be that 3rd party developers would achieve parity with Microsoft's internal developers. In fact this result is not particularly likely. The greatest source of these advantages is not in having access to privileged information. It is in fact the working relationship which exists between these two groups. Microsoft's developers would continue to have an intimate working knowledge of the processes, procedures, persons, and techniques characteristic of the operating system development teams. Many of these people

have worked closely together for many years. Any MS product development team would be bound to continue to maintain these lines of communication and understandings with their colleagues in operating system development. The result is that Microsoft would continue to gain a very substantial advantage for its own developers. They would know who to talk to, what questions to ask, how to request new features, and where to go for problem resolution. How will anyone else compete against them? Given that Microsoft has a virtually complete monopoly on desktop operating systems the result of the currently proposed remedies under these conditions amounts to allowing Microsoft to continue to leverage its monopoly into other markets. This process could have extremely dire results for the future of the entire IT industry, and more broadly for the entire economy as a whole.

Consider the following likely scenario:

Microsoft continues to dominate the desktop OS market (virtually a given). They furthermore continue to integrate their server and desktop OS products ever more tightly (a trend in the industry regardless of any monopoly situation). Given the proprietary nature of these integration technologies and protocols no other server OS vendor will be able to provide the same level of integration. This integration is a high value-add. Thus Microsoft will continue its pattern of growing dominance of the server OS market. Once a critical mass of the server market relies entirely on MS's software there will be NO incentive (indeed a huge disincentive) for MS to deploy client/server technologies which are non-proprietary and available for use by non-microsoft products. Essentially MS will own both ends of the network and will be in a position to dictate how, when, where, and at what cost these technologies are deployed and used. It is highly likely that most business process and indeed most communications technology will eventually be based on these techniques. Is it really wise to construct a public policy which eventually leads to the complete domination by one private entity of all of society's communications and IT infrastructure? Personally I can hardly imagine a more foolhardy and unwise policy, either as a business person or as a citizen of this country.

Respectfully

Tod G. Harter

Subject: Microsoft Settlement

Summary: I am against this settlement.

The current settlement fails to restrict Microsoft from capitalizing on its monopoly in the operating systems arena. Competitors face an anti-competitive environment as Microsoft continues to leverage its OS monopoly to restrict access to application development, to give software away in an attempt to price customers out of the market and to pursue restrictive licensing agreements. Please do not allow this mild

slap of the hand to masquerade as justice for what the court has already found to be anti-competitive practices.

Thank you,  
Danny Read

Date: 1/23/02 12:58pm  
Subject: Microsoft DOJ Settlement January 23, 2002 Renata B. Hesse Antitrust Division U.S. Department of Justice 601 D Street NW Suite 1200 Washington, DC 20530-0001

Dear Ms. Hesse, I am opposed to the proposed DOJ / Microsoft remedy. As a manager of a small municipal water system I am responsible for a variety of computer hardware and software systems that are used to supply water to our customers. Some of these software applications are non-Microsoft middle-ware products. I am concerned about the future viability of the companies that produce this software if Microsoft continues its anticompetitive behavior that it has exhibited. I am also concerned about future file format compatibility issues.

The settlement that the US Department of Justice reached with Microsoft will do little, if anything to remedy the many behaviors that Microsoft has been found guilty of engaging in. The oversight committee that was to be formed is too small to be effective. This group also needed sufficient resources to properly monitor and control illegal practices in a timely manner. I urge the Court to seek a settlement that would provide benefit to software customers and the public.

Thank you for your consideration.

Sincerely,  
Malcolm Fox II  
Mt. Pleasant, MI.

Date: 1/23/02 12:59pm  
Subject: Microsoft Settlement

I am a US citizen who is very concerned that the proposed DOJ settlement of the Microsoft Antitrust trial will not have any positive impact on redressing the wrongs Microsoft was convicted of. Microsoft has shown their contempt for past consent decrees, so I don't see why the new one will be any different. Additionally, at this point in time, despite their proven illegal acts, Microsoft still holds the market "rewards" they accomplished via those illegal acts. I do not see how the proposed settlement will

help restore competition in the crucial areas of desktop operating systems and office applications. At this point, I feel there needs to be an effort to \*restore\* competitive balance, not to let Microsoft continue forward without any credible competition.

Subject: Microsoft Settlement

I am personally thankful the Microsoft antitrust case has come to a satisfactory end. Microsoft has achieved an enviable position in the software industry based on quality products that have dramatically improved the quality and accessibility of modern computer technology to the public. I believe the antitrust case was fueled by parties resentful of Microsoft's success in the market. With little to offer in the way of innovation these parties sought to use the judicial force of the US government to achieve what they could not achieve through the free-market economy. As an employee in the U.S. biotechnology industry I look upon the legal precedents set in other high tech industries as a model for potential biotech industry regulations. For the US to maintain its strength in technology three requirements must be met: 1.

Protection of intellectual property 2. A free market economy 3. A supportive rather than antagonistic federal government. I believe the settlement in the Microsoft case is fair and reasonable. Had the ruling been otherwise I fear that each of these requirements would be forever compromised and we would be

witnessing the beginning of the decline in US technology leadership.

From: Timothy J. Wood  
To: Microsoft ATR  
Date: 1/23/02 12:59pm  
Subject: Microsoft Settlement

I would like to comment on the proposed Microsoft settlement, under the Tunney Act. The PFJ does not contain broad enough restrictions on Microsoft. Under this proposal, Microsoft will continue to exert monopoly power in the PC market and will use the monopoly power to gain monopolies in handheld computers (WinCE/PocketPC) home entertainment systems (X-Box), server computing (.NET) as well as other markets.

Since Microsoft has monopoly power, they should be required to expose their programming APIs, programming languages, file formats, and network protocols to use by any possible competition. The requirements need to be clear and broad to avoid having Microsoft hide behind some loophole.

The current proposal does not offer these restrictions and thus is not sufficient to dissuade Microsoft from continuing its practice of anticompetitive behavior. This proposal is not in the public interest.

Subject: Microsoft Settlement

To whom it may concern:

I am writing to give my comments on the Microsoft antitrust settlement. I believe that this settlement is counter to the interests of the American public, deleterious to the American economy, and inadequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Dear Sir or Madam: While I appreciate the fine work of our DOJ and can only imagine how difficult it must be a times I do believe that your efforts in the MICROSOFT case were mis-directed. I m old enough to remember when the first home and small office computers were made available...and how impossible is seemed to be to purchase software that would work properly with the system installed on the computer. After a while the concerted call from most consumers was why don t they make a common language that is recognizable by all (or most) computers or why can these software packages be easier to install and use. Well MICROSOFT listened...as any vendor or company intent on profitability would listen. Over time they developed the common system and the easy to install software that we now take for granted. I work for a small business I know what research and development costs are all about...MICROSOFT led the way to this common base of understanding...probably spending some big bucks to do so...and left everyone else in the dust. How do I see it? I see a lot of disgruntled tech-heads who felt that the field would never accept the MICROSOFT way...and continued on their blind path to obsolence. And then when it became apparent even to them that no one wanted their unique systems...they cried foul and looked to the government for help. Let me ask them this...who helped the mom & pop drug stores when the big chain drug stores hit the street? Now you ve got Walgreens and Osco and many others of that size all catering to our pharmaceutical needs...for less money than the smaller drug stores could ever imagine...but no one is helping them.

This in no way reflects the opinions of Southwest Gas Corporation. This is my personal opinion: GET OVER IT! I may not agree with how Microsoft was started or survives without them we would still be in the dark ages of computing. If Microsoft gives consumers bits and pieces of scaled down applications good for us. This should spur on complaining companies to strive to make a more robust product to sell us as a third party vendor. Also the government wouldnt have wasted its time and money if Microsoft didnt have such deep pockets! I deal with several different software companies and I don t hear any Microsoft employees complaining about the way they are treated either!

I believe that the Federal suit against Microsoft is completely unfounded. I

consider MSFT to be a strategic American resource that is being needlessly enfeebled by the protracted legal challenges being brought against it. The current settlement offer should be quickly approved so that Microsoft can re-focus on retaining American dominance in its commercial sector.

First let me say that from where I sit apparently some infractions were committed by MS with respect to fair trade practices. MS should be slapped down for that. Second if not for the aggressive practices of MS we would not now have the choices of programs from other software companies. They were spurned on by the might of MS and not put out of business. Competition is important on all endeavors of commerce. I feel that the courts have gone far enough with regards to the current case. The States must back off and look elsewhere for sources of income and not from MS. I have no stock or holdings in MS.

Dan Kelliher

PS...I do think the quicker this is properly resolved the sooner the economy will recover. You can almost say that our decline in the economy started when the federal and state brought suite!

Subject: Microsoft Settlement

To Whom it May Concern,

I am writing this as a technically aware consumer opposed the proposed settlement with Microsoft. Having read the settlement, I see numerous problems.

—as was the case with the 1994 consent decree, the “products” and terms are defined so specifically that Microsoft could easily change a product name, or in the case of IE change it’s versioning schema, and completely and totally bypass any restrictions this settlement seeks to enforce.

—the requirements for Microsoft’s release of documentation is entirely in favor of Microsoft. Should they choose to make a change to the documentation days before the deadline for release to ISV’s, they can then exclude any ISV that doesn’t meet the

new requirements. How is that helpful to ISV’s? Microsoft has shown in the past (see Caldera vs Microsoft) that they will “hobble” or otherwise change their product to “break” a competing ISV’s product.

—Microsoft’s new licensing agreements with Enterprise customers require them to

A) pay a yearly license fee for all of their desktops, running Windows or not, or

B) agree that in exchange for discounts on selected products, they will not use, or even test, \*any\* competing products. This is especially harmful for businesses that are outgrowing Microsoft’s SQL Server product.

Or,

C) pay full price for every desktop, running windows or not, when they choose to upgrade. There is no longer upgrade pricing separate from this “New and Improved” licensing program from Microsoft. In the interest of brevity, I will stop here. I could easily go on for several more pages, however. The main problem I have with the proposed settlement is that, again, Microsoft has managed to skew language to their benefit, get sections watered down for their benefit, and otherwise change the settlement for the purpose of expanding their monopoly into areas not specifically covered by the agreement.

Thank you for your time,

Joel C. Sadler

Subject: Microsoft Settlement

I have some comments regarding the proposed Microsoft settlement that I would like to share. In paragraphs D and E under Prohibited Conduct, the settlement states that Microsoft must make available “the APIs and related Documentation” and

“Communications Protocols”. This is good, but, if I’m reading it correctly, paragraph I (the paragraph about the licensing terms) leaves out one very important group: the open source programmers. The settlement in no way guarantees that any intellectual property licensed from Microsoft can be included in any open source software. Two things prevent this. One is allowing Microsoft to collect a royalty for use of its intellectual property.

The other is that “an ISV’s, IHV’s, IAP’s, ICP’s, or OEM’s right may be conditioned on its not assigning, transferring or sublicensing its rights under any license granted under this provision”. The very nature of open source software requires the source code written to be made publicly available, but this might qualify as transferring the IP license to anyone who receives the source code.

I have no problem with Microsoft collecting a royalty if the end product that uses Microsoft’s IP is sold for a profit. However, if all of the IP is licensed to organizations or people who are able to abide by the proposed licensing requirements, it leaves open source software with no way to interoperate with Microsoft’s products, which is the whole point of requiring that Microsoft license its IP. If Microsoft is allowed to remain a controlled monopoly, then any organization that wishes to compete on equal ground with Microsoft must be able to write software that interoperates with Microsoft’s software. I think all programmers, including open source programmers, should be guaranteed the ability to compete with Microsoft on equal ground.

Nick McKinney

Why perpetuate the endless process that allows government to intervene in the private sector. While anti-trust protection is important we must look at overall benefit Microsoft has provided to the USA economy over the past decade. Who else has demonstrated leadership in this technology beside Microsoft? Others have meager Research and Development budgets and have fallen to the superior product developed through intense R & D efforts. Why should anyone else continue to reap benefit (settlements) from Microsoft? Has the general public complained and refused to purchase Microsoft products? What would the final effect be on the USA citizens if the Government Agencies pursuing this issue forced Microsoft into ineffective management structure or even out of business? At some point the letter of the law must be compromised to ensure the effective tools are available that fuel the small-business engine as it concerns the overall economy. Large mainframe computers and their technology do not drive the economy today the way it might have when laws were written. Let it go and perhaps Microsoft will have enough financial resources to continue to provide the tools we all need. It would be a travesty of justice if state governments realized financial gain from this process.

It's appalling that Microsoft should even have to defend themselves in this frivolous display of Government Bureaucracy. Gates had more insight than the rest and should be rewarded justly for it. He built the system we all benefit from it everyday. It's called being a capitalist in an entrepreneurial society. You want to talk about anti-trust and monopoly take a look at the US postal service for God's sake. They are the worst run quasi-Government organization and have a monopoly on the delivery business yet are too bureaucratic to make a profit. The same customers (retail printers) that send them billions of dollars worth of postage every year they are now trying to unfairly compete with.

Their website offers direct mail fulfillment and printing. Talk about an area where the Government should focus time. Leave Microsoft and Gates alone and look behind your own doors first!!

I strongly disagree that Microsoft violated anti-trust regulations as they were originally structure. Microoft s actions actually aided consumers nd business by providing a universally recognized platform and standard in the computer world. Without it we would likely be faced with many incompatable programs with substantial expense required for conversion when transacting business with other companies.

The settlement goes beyond any needed redress and should either be reduced or at most let stand as is if acceptable to Microsoft.

**MTC-00017272**

From: kevin—ryan@ceilted.com@inetgw  
 To: Microsoft ATR  
 Date: 1/23/02 12:51pm  
 Subject: Microsoft Settlement

I think that the settlement did far too little to curb Microsoft s exploitation of its dominant market position. When the Mafia uses tactics like those MS uses it s called the protection racket or just plain extortion. If MS cared about maximizing technological development in PC software it would stop suppressing competition (especially by buying up competitive products only to cease all development) and embrace a competitive environment. The only reason that Windows has gone as far as it has is that MS has been able to consistently strong-arm PC manufacturers buyers just assume that whatever the manufacturers install is required for their PCs to work. If there is a next time do the job right:

Provide for the real possibility of competition in PC software instead of renewing MS s license to force manufacturers to install its OS (and only its OS). This sets the stage for PC manufacturers to agree to bundle MS s application packages because they run better under Windows than any others. Of course they run best—MS uses its inside knowledge of the OS to make sure that they do because they don t want competitors (which are necessary to maximize innovation) they want market share any way they can get it.

I am not sure why the people are allowed to comment. This is a legal issue about which 99.99% of the people know absolutely nothing. However here are my thoughts. First Microsoft products drive me nuts. They screw up at the most inopportune times and I am stuck with them because everything runs on them. There service is lousy and expensive. In fact I don t think they want to deal with customers at all.

Therefore it would be nice to see them spanked. But this lawsuit makes no sense to me at all. I do not see why it was brought in the first place. The idea of breaking up the company was so incredibly stupid that Democrats had to be involved. Bill Gates pushed his business to the hilt just as I did before going out of business. I did not break any laws and I don t see where Gates did either. If the competing internet company was not based in Orrin Hatch s state this lawsuit may never have happened. End it with the least possible damage to Microsoft because no one else can keep us going. If the settlement can get them to be more careful and thorough before sending products to the market please do so. If you can get them to be more responsive to us users please do so. None of us gain if Microsoft gets hurt.

 To: Microsoft ATR  
 Date: 1/23/02 12:51pm  
 Subject: Microsoft Settlement

I think that the opposition to the settlement is the work of competitors of Microsoft who are simply looking to gain any kind of advantage they can. Microsoft is a fine American company that should be permitted to innovate for the benefit of the consuming public. The public is in favor of this settlement and in favor of a new look at anti trust law so that truly creative companies can thrive and not be the subject of legal actions from their less innovative competitors.

Date: 1/23/02 12:51pm  
Subject: Microsoft Settlement

I am writing to express my hope that the Microsoft settlement be approved. I am a user of Microsoft Office and the Microsoft Windows Operating System and am relieved that the company will remain in one piece so that the integration of features found in these software programs may continue. Microsoft has an office near my home and they have shown a mindfulness to the community by providing free information meetings that help their customers develop computer skills. In addition Microsoft has provided free of charge resources that have helped the disabled to find employment.

After the September 11 attacks Microsoft also provided about \$10,000,000 worth of software and personnel to aid in mobilizing the recovery effort. I believe these evidences of civic responsibility should be remembered. I can be reached at my e-mail telephone and address listed above.

Sincerely

Maurice Laurence jr.

The Department of Justice as well as other agency's of the federal government should get off the backs of business let business have some air without always suffocating business so that business can keep people working and put the unemployed to work. It appears that government will not give up until it breaks both the will of the people and drains there pocket books. The only thing that government believes is right and correct is when it extorts money from the citizens and passes more laws to eliminate the freedoms that the founders of this country came here to preserve.

I believe the prior settlement between the U.S. (and other involved state governments) and Microsoft is fair and equitable and the whole affair needs closure. I agree that Microsoft should not have leveraged and embedded software and especially its own browser into its platform operating systems they were licensing and selling and those that came preloaded on new computers. CONSUMERS should have had full disclosure and opportunity to decide the use thereof accordingly. But I personally do not agree that the remedy for those receiving the settlement should be extended and I definitely have not seen anything personally yet that merits Microsoft being busted up or divided in anyway. Unless there is something new to report it is time to move on.

From: Liz Vogel  
To: Microsoft ATR  
Date: 1/23/02 1:00pm  
Subject: Microsoft Settlement

I am writing to express my opposition to the proposed settlement in the Microsoft anti-trust case.

As a computer professional, I routinely work with Microsoft products—not because they are the best for the tasks at hand, but because they are so ubiquitous in the industry as to be unavoidable. I frequently encounter novice users who think that Microsoft Windows and a computer are the same thing, who believe that Internet Explorer \*is\* the internet, who don't realize that there are alternatives to Word, PowerPoint, or Access, let alone have ever tried these alternatives. The proposed settlement will do nothing to address this monopoly of the public mind; the average computer user will still see Windows, Internet Explorer, Office, and all the rest as a package that they have no choice but to accept.

Many small companies have offered products that are superior to the equivalent Microsoft offerings. Most of these companies have been bought out or driven out of business by Microsoft's restrictive OEM licensing, deliberate introduction of "bugs" that only affect non-Microsoft software, and other unethical actions. The proposed settlement will not significantly redress these past wrongs. Many of the remaining competitors are fighting economic and even

legal battles for their continued existence—not because their products are inferior, but because Microsoft's pockets are deeper. The proposed settlement will not adequately level the playing field for these companies; indeed, depending on how some of the terminology of the settlement is interpreted, it may even end up endorsing the status quo.

Most significantly, the proposed settlement fails to provide effective enforcement options and meaningful penalties to dissuade Microsoft from continuing its anti-competitive and unfair business practices in the future.

I urge you to discard the proposed settlement, as it does not serve the public interest.

—Liz Vogel  
U.S. Citizen

I strongly disagree with the proposed settlement. Rather than detailing all the areas of disagreement in a this email, I have joined with others to co-sign the open letter at: <http://www.kegel.com/remedy/letter.html>

A far more effective set of remedies is proposed here: <http://www.gnu.org/philosophy/microsoft-antitrust.html> which contains the following main points:

1. Require Microsoft to publish complete documentation of all interfaces between software components, all communications protocols, and all file formats.

2. Require Microsoft to use its patents for defense only, in the field of software.

3. Require Microsoft not to certify any hardware as working with Microsoft software, unless the hardware's complete specifications have been published, so that any programmer can implement software to support the same hardware.

I am a free market supporter, but disagree with those that feel the free market can function without effective regulation.

Subject: Microsoft Settlement

After a very fair Microsoft settlement it is troubling to hear the continued vicious attacks by over zealous prosecutors jealous competitors and members of the house and senate. These are egotistical squabbling groups seeking more compensation and control of commerce. I have benefited from Microsoft Software I have found it to be very reasonable and most of all I like the way it minimizes compatibility problems leaving the developers the options to freely design other competitive applications consumers are looking for. Last Thursday Microsoft announced 4th earnings which included a charge of \$660 million three quarters of a billion dollars or 8 cents a share.

Friday after reporting the stock fell another 4 points. Folks that is roughly 16 billion in market value 25 times the amount of

Microsoft's earning charge. This litigation has impacted every consumer directly or indirectly. Charities retirement funds and our struggling economy. It is disgusting and shameful to allow this money to go into the pockets of the greedy ruthless lawyers. Let the consumer sort it out unnecessary lawsuits against technology is choking innovation and the consumers are paying the higher costs of all goods.

Subject: Microsoft Settlement

Whereas I generally feel that competition and commerce should be left alone and not influenced by governmental interference. I am one to go on record to say HELP in the battle against the monopolistic practices that Microsoft has implemented in it's quest to become THE computer software company.

Many offenses are already catalogued and rehased so no need to recount. MY concern here is to point the need for open source support as a basis for other products to be able to compete and yet integrate with Microsoft products. In the HARDWARE field standards allow multiple vendors to have a chance to produce components that interchangeably work in a computer. The ISSUE here should be the same open standards that give XYZ a chance to develop a better software component that can be interchanged with the Microsoft version. If I like Netscape then I should not need a tech degree to replace Internet Explorer with Netscape for a browser. I should be able to have options on the software application vendor even though we are GLAD that Microsoft did standardize Operating Systems with Windows products. No penalties to the computer vendors no pressure on me or others should prevent me from having choice enabled and allowed and that means open source access to code for developers and no exclusiveness of ALL Microsoft or NO software! Please push the accessibility for all developers and allowance for creative sources. Additionally whatever happens don't allow Microsoft to get off with simple payment to schools that allows more monopolizing practices to be launched on a new generation but rather require payment to CUSTOMERS wronged and the COMPANIES that have been harmed through the MICROSOFT practices!

Thank you.

**MTC-00017325**

From: Chris  
To: Microsoft ATR  
Date: 1/23/02 1:01pm  
Subject: Microsoft Settlement

I'm am writing to express my outrage and disapproval of the Proposed Final Judgment

in United States v. Microsoft. While I find most of the remedies proposed in this settlement with out any value as a deterrent to Microsoft's anti-trust behavior, I am greatly concerned about provisions that not only don't act as a deterrent, but will help to enhance and encourage further anti-trust, anti-competitive behavior in the future.

Specifically, Microsoft's right to appoint a member to the oversight board and that member's right to influence the selection of the third member. Where else would someone guilty of so many criminal acts be allowed to choose and pay(!) their judges and jailers! This "oversight board" has no responsibility to report their findings to the public, no resources, freedom of access, or motivation to fully investigate further anti-trust behavior, and no teeth to punish Microsoft if it happens to find that behavior. So, I have to conclude that the only function they will serve is to provide effective camouflage for continued and ongoing anti-trust and anti-competitive behavior on the Microsoft campus.

I am also appalled by Microsoft's right to circumvent requirements to disclose API and interoperability information by claiming it discloses "secret" information or by claiming the group or individual requesting the information is a legitimate business. As an Open Software developer and advocate, Microsoft's stated belief that GPL licensed software is "a cancer" and that Open Source software degrades "legitimate" software development business, would leave any reasoning person to conclude that GNU/Linux developers would never qualify, in Microsoft's opinion, to receive API or interoperability information. Since Microsoft has publicly stated that GNU/Linux is a serious competitive threat to its server business, this settlement provide a very effect method to attack and injure one more of its competitors. As one of many, many programmers that depend on Open Source Software for their livelihood, I ask you to, please, not approve this settlement. Thank you for your time, respectfully,

Chris Jackson

Subject: Microsoft Settlement

Microsoft has shown over and over that it can get away with breaking the law and only getting a slap on the wrist. In addition to Browser and Word processor issues currently under consideration Windows 3.0 had special software to prevent Borland's C compiler from running. Breaking Microsoft into a Browser company an Operating System company and a Software company is the best way to see that Microsoft does not continue

to violate the law. At least any future violation would be at the expense of other Microsoft companies in addition to the rest of the world. Microsoft loudly claims that breaking them up will result in higher prices to the consumer. One major software package has increased in price year after year under Microsoft's current monopoly—the Windows Operating System. Breaking up Microsoft would help see this trend reverse. Microsoft's predatory and illegal tactics WILL continue as long as the cost of such practices is less than the anticipated profit. In my opinion the current settlement continues this.

People who currently defend Microsoft and oppose breaking up the company have a vested interest in maintaining the status quo at the expense of the consumer and other companies attempting to engage in fair competition. I hope someone at the state or federal level will agree that the rule of law and a fair playing field is more important than Microsoft's profits.

#### MTC-00017328

From: Eron Lloyd  
To: Microsoft ATR  
Date: 1/23/02 1:03pm  
Subject: Microsoft Settlement

To whom it may concern,  
I, Eron Lloyd, an active and concerned U.S. citizen, request that the Department of Justice take more serious action in the settlement agreement against Microsoft corporation. Along with many others, which unfortunately will probably not make a stand and state their opinion, I feel that justice has NOT be served on the part of the people of this country. To me, the penalties (or lack thereof) imposed represent a mere "wrist slap", and only make it seem like the company CAN get away with more monopolistic practices and predatory business tactics, and in doing so remain above the law of the land.

Furthermore, with the near future of some of their new strategies on the horizon, we'll see these actions become more abstracted from the public's viewpoint, so the ability to raise a red flag will be nearly impossible. I foresee wider control of the Internet access market through MSN, online service and identity entrenchment with Passport and .NET, Digital Rights Management exclusive powers through the preposterous patent on DRM for operating systems given to them by our very own USPTO, market-cornering of consumer and media convergence technologies through X-Box second generation and proprietary Windows Media implementations. They want a stronghold on every major market. I do NOT want my children growing up in a Microsoft-governing information society with a single corporation trying to become the thought police.

I also dislike the fact that my government itself is almost completely reliant on Microsoft technology for its intellectual and business process property. I want to see more investment and support for open technologies and government contracts for companies developing DEMOCRATIC solutions using things such as Linux, standard networking protocols, and open hardware. On the state and local level I want to see Microsoft barred from competitive

bidding, and contracts given to local technology solutions providers.

I support the settlement recommendations presented at <http://www.kegel.com/remedy/letter.html> and stand firmly as a co-signer to these recommendations. I am angered by the fact that one of the penalties imposed is requiring Microsoft to pour more Microsoft products into our public education system. This does nothing but solidify their standing and give them another legitimate way of exposing and influencing the next generation of the consumer market. It does not teach children how to think for themselves. If you want real technological solutions for our schools, come to the communities that truly care, us, who have the future in mind.

We are all counting on you, the DOJ, to serve swift and heavy-handed justice for the good of the people, and we will hold you accountable for the final outcomes. You must represent us. Thank you.

I would appreciate this matter of U.S. vs. Microsoft to be over! Microsoft has great products and the competitors don't like the idea that they can't compete so it would appear they want to drag this out as long as possible. Enough already and let's keep moving forward in technology. Those who choose to come along for the ride will do well! Thank you for listening! Nathan Myers

From: Justin Anderson  
To: Microsoft ATR  
Date: 1/23/02 1:01pm  
Subject: Microsoft Settlement

I believe that any of the proposed settlements with Microsoft will fail to solve the major roadblocks to innovation they

currently enjoy as a majority operating system vendor. They have used their position and raw money to halt competing products in their tracks. They have historically announced products which are never released, doing so to kill interest in any startup competitor's new idea that might eventually erode Microsoft's control. Microsoft uses highly anti-competitive licensing agreements with its software application developers which prevent the feasible release of most Windows application on any competing operating platform.

There are an enormous number of further complaints I have about Microsoft and their practices, but others have said it better and more clearly, particularly Dan Kegel <<http://www.kegel.com/remedy/remedy2.html>> and David K. Every <<http://www.mackido.com/Innovation/SoftwareDevelopmentCycle.html>>.

Thank you for taking the time to consider my opinions and those of my fellow citizens. I am a computer programmer, and I sincerely believe that Microsoft's practices are what killed the economy. Hopefully we can prevent them from stifling any more great ideas.

#### MTC-00017332

From: Michael Schultheiss  
To: Microsoft ATR  
Date: 1/23/02 1:01pm  
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

\* The PFJ doesn't take into account Windows-compatible competing \* operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to

bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software. The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,

Michael Schultheiss

Date: 1/23/02 1:01pm  
Subject: Microsoft Settlement

I strongly oppose the settlement in its currently form and am of the opinion that the worst is yet to come. The following areas in particular concern me:

- blatant disregard for security
- lack of accountability for faulty software
- inflated prices of office suites, diagramming, project management and other desktop software
- lack of acceptance of existing standards (proprietary kerberos extensions for example)
- creation of new "standards" (C# programming language, VBscript as a client side scripting language)
- forced upgrades where not required
- subscription model pricing
- passport/.net security issues which are crucial given the sensitive data being held
- passport/.net anticompetitive behaviour
- increasing reliance on centralised microsoft services (passport, support, windowsupdate, etc.)
- instability on the internet (raw packets from XP, viruses, trojans)
- anticompetitive site design (barring access to popular sites like msn.com for non IE users)
- anticompetitive OEM agreements (all workstations bundled with windows without choice)
- interoperability problems (difficult to multiboot, integrate as deeply as IE, etc.)
- xbox and the related anticompetitive behaviour associated with it

I sincerely hope that a more appropriate remedy is found,

Sam Johnston

To: Microsoft ATR  
Date: 1/23/02 1:01pm  
Subject: Microsoft Settlement

I believe that the proposed settlement will not hinder microsofts illegal ways. As someone that does not use microsoft products it is very hard for me to find ways to do things that most take for granted because of steps microsoft has taken to limit who can enter markets. One such example is watching DVD's. Another example is the fact

that now microsoft is attempting to take over the set top box market along with the game console market —AND— the embeded OS market. Left unchecked we could end up living in a world were everything depends on Microsoft to provide for us. Allow me to provide some examples:

I am taking for granted that the readers of this have all used Microsoft Operating Systems such as Windows 2000, XP, and the like. Also Im guessing that you have all had times when that operating system crashes for no reason what so ever. With that in mind lets look at a possible reality when microsoft has taken over the embeded market and most/all devices require a Microsoft Windows XP Embeded OS to run (such as the computers that control reactors and the like)

Now lets assume that someone you love is involved in a car crash or something else and must be put on life support. All of the equipment used to keep your loved one alive relies on embeded tech. to work and because microsoft has killed all compatition in that market your loved ones life now relies on the fact that that microsoft product will not crash for some unknown reason. This scares me. it really does. Lets look at another example, Microsoft is currently pushing its .Net project to be —THE— company to goto when you need to establish an online ID such as what is used to identify you to your bank for online banking and to buy things online. After ALL of the security problems microsoft has had would you really want to trust all of your personal information to a system that the same people came up with? I dont. When you consider this settlement please keep in mind that for all the good (and I use the term loosly) that microsoft has done they have done much worse for the world. (Did you know that there was a time when computers did not crash many times a day?)

From: root@wt6.usdoj.gov@inetgw  
To: Microsoft ATR  
Date: 1/23/02 1:01pm  
Subject: Microsoft Settlement

This is in response to the proposed settlement of the Microsoft antitrust case.

I believe the settlement falls fall short of being an effective remedy for Microsoft's past misdeeds and does little to prevent further misdeeds in the future. By stifling in the marketplace at large the innovation that they

claim to champion, Microsoft has silenced any effective attempts to compete. This is a classic case of monopolistic behavior—not unlike that of Standard Oil, for whom the Sherman Act was written—and has got to be stopped.

The settlement needs more teeth:

1. There needs to be a stiff penalty for past misdeeds.

2. There needs to be a structural remedy that insures against future misdeeds. Microsoft has already demonstrated that it can't abide by behavioral remedies. Why should we assume they will in the future? The computer and software marketplace has become a much poorer place since Microsoft's ascendancy to monopoly status. A more effective remedy in this case could only help to reinvigorate the wasteland left in their wake.

Thank you.

Respectfully yours,  
Philip C. Pilgrim  
President Bueno Systems, Inc.

#### MTC-00017338

From: Zerafa, Doug  
To: Microsoft ATR  
Date: 1/23/02 1:01pm  
Subject: Microsoft Settlement

Here is my opinion of the Settlement, The settlement as it is written now rewards Microsoft for its illegal practices as the settlement will allow Microsoft to crush the open source movement and for profit competition. The following below are excerpts from others letters about this case. I wholeheartedly agree with the content of the following statments and present them as my own opinion : Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "...(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business. ..." This section should be reworted as "...(c) meets reasonable, objective standards established by the government (or other as yet defined independent body) for certifying the authenticity and viability of its business" The agreement provides Microsoft with a rich set of strategies to undermine the development of free software, which depends upon the free sharing of technical information with the general public, taking advantage of the collective intelligence of users of software, who share ideas on improvements in the code. If Microsoft can tightly control access to technical information under a court approved plan, or charge fees, and use its monopoly power over the client space to migrate users to proprietary interfaces, it will harm the development of key alternatives, and lead to a less contestable and less competitive platform, with more consumer lock-in, and more consumer harm, as Microsoft continues to hike up its prices for its monopoly products.

Other comments : Any remedy seeking to prevent an extension of Microsoft's

monopoly must place Microsoft products as extra-cost options in the purchase of new computers, so that the user who does not wish to purchase them is not forced to do so. This means that for the price differential between a new computer with Microsoft software and one without, a computer seller must offer the software without the computer (which would prevent computer makers from saying that the difference in price is only a few dollars). Only then could competition come to exist in a meaningful way. I personally believe that PC Manufacturers should allow customers to choose which non operating system components to install when purchasing a new PC, much like when you purchase a new car. I would like the choice of having pre-installed either Windows or Linux, Windows Media Player or Real Player or some other media player, Internet Explorer, Netscape, and / or Opera as my internet browser, AOL or MSN or other as my internet service provider. PC Manufacturers have the choice as to which of these packages they offer to consumers pre-installed at what price. The specifications of Microsoft's present and future document file formats must be made public, so that documents created in Microsoft applications may be read by programs from other makers, on Microsoft's or other operating systems. This is in addition to opening the Windows application program interface (API, the set of "hooks" that allow other parties to write applications for Windows operating systems), which is already part of the proposed settlement. Any Microsoft networking protocols must be published in full and approved by an independent network protocol body. This would prevent Microsoft from seizing de facto control of the Internet. Microsoft should also be forced to divest its holdings in Apple. This investment effectively means that Microsoft not only controls the 90% + of the PC market but the remaining market of Apple computer users.

Failure to address Ill Gotten Gains

Completely missing from the proposed final order is anything that would make Microsoft pay for its past misdeeds, and this is an omission that must be remedied. Microsoft is hardly a first time offender, and has never shown remorse for its conduct, choosing instead to repeatedly attack the motives and character of officers of the government and members of the judiciary. Microsoft has profited richly from the maintenance of its monopoly. On September 30, 2001, Microsoft reported cash and short-term investments of \$36.2 billion, up from \$31.6 billion the previous quarter—an accumulation of more than \$1.5 billion per month. It is astounding that Microsoft would face only a "sin no more" edict from a court, after its long and tortured history of evasion of antitrust enforcement and its extraordinary embrace of anticompetitive practices—practices recognized as illegal by all members of the DC Circuit court. The court has a wide range of options that would address the most egregious of Microsoft's past misdeeds. For example, even if the court decided to forgo the break-up of the Windows and Office parts of the company, it could require more targeted divestitures, such as divestitures of its browser technology and media player

technologies, denying Microsoft the fruits of its illegal conduct, and it could require affirmative support for rival middleware products that it illegally acted to sabotage. Instead the proposed order permits Microsoft to consolidate the benefits from past misdeeds, while preparing for a weak oversight body tasked with monitoring future misdeeds only. What kind of a signal does this send to the public and to other large corporate law breakers? That economic crimes pay! Please consider these and other criticisms of the settlement proposal, and avoid if possible yet another weak ending to a Microsoft antitrust case. Better to send this unchastened monopoly juggernaut a sterner message.

Thank You  
Doug Zerafa

To: Microsoft ATR  
Date: 1/23/02 1:00pm  
Subject: Microsoft Settlement  
Dear Sir/Madam:

The proposed settlement of the Microsoft case does not contribute to the expansion of options or alternatives to the Microsoft operating system or range of productivity software. The settlement amounts to a slap on the wrist; there needs to be a more suitable settlement that encourages and protects the development of non-Microsoft software solutions. Witness the proliferation of viruses and worms that affect only MS systems. As a user of both Intel and Macintosh systems, I can assure you that the Mac side of the computing world is far less affected by the proliferation of such security problems. The promotion of Microsoft's operating system and other software through minimal penalties only encourages such corporate behavior further and serves to discourage other superior software (witness Be OS) development. Please reconsider the implementation of the proposed settlement terms.

Respectfully,  
Fritz Geier

Date: 1/23/02 1:02pm  
Subject: Microsoft Settlement  
Regarding the proposed settlement of Microsoft's illegal business practices:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

I have read stories (which I believe) indicating that Microsoft is actually calling their customers telling them to submit comments on the settlement in favor of Microsoft during the Tunney Act comment period. Microsoft claims that the trial itself is the real cause of strain on the economy and that supporting Microsoft for a quick, unrestricted settlement is the best way out.

This is absurd. Microsoft is merely using its unprecedented marketing (read monopolistic) power to try and win this uphill legal battle. Because of this propaganda, the people are not being fairly represented—no one is calling Microsoft clients and telling them the other side of the story. That's simply too expensive.

This propaganda of Microsoft's may gain them popularity, but what's popular is not always what's right. I argue that this abuse of their resources to further their legal position shows us unequivocally that Microsoft will continue to abuse their position in the market after this settlement is finalized.

Date: 1/23/02 1:02pm  
Subject: Microsoft Settlement

Dear Department of Justice,

While I heartily approve of what you are doing in many, many areas (especially in your participation in the war on terrorism), I believe that the proposed "settlement" with Microsoft is a bad idea.

While the Court of Appeals affirmed that Microsoft has a monopoly on Intel-compatible PC operating systems and while the Court of Appeals affirmed that Microsoft is liable under Sherman Act for illegally maintaining its monopoly by imposing licensing restrictions on OEMs and others, by requiring ISVs to switch to Microsoft's JVM (Java Virtual Machine), by deceiving Java developers, and by forcing Intel to drop support for cross-platform Java tools, there is essentially no penalty being placed on Microsoft for this behavior. Please, please review the penalty and do something to free our computer industry from the unrestrained influence of Microsoft.

Thank you.  
Bruce Mohler

From: Morgan Hall  
To: Microsoft ATR

Date: 1/23/02 1:02pm  
Subject: Comment on Microsoft Settlement Greetings,

Thank you for the opportunity to comment on the pending Microsoft anti-trust settlement.

I am not learned in law, but I am opposed to the settlement proposed by the Department of Justice for several reasons:

1. First and most important—Microsoft's past actions have shown them not to be trustworthy. As I understand it, this case came about because they found a loophole in the earlier judgement and did violence to the spirit of it while barely following the letter. Common sense tells me that one cannot reasonably assume that their corporate culture will change in a very short time.

2. Microsoft's present behaviour shows that they are still attempting to leverage their monopoly into more and more areas.

3. Even I, a total novice in points of law, can see several glaring loopholes in the proposed settlement. For example, by declaring certain interfaces as sensitive to security breaches, it may be possible to totally disable programs such as "samba" that allow non-Microsoft software to interoperate with Microsoft software.

I would suggest that some sort of relief be crafted that would accomplish the following:

1. Ensure that non-Microsoft software could operate easily and fully (all functions work!) with Microsoft software.

2. All Microsoft file formats be fully documented and open. Thus other applications could be crafted to seamlessly interoperate with Microsoft products.

3. Establish some form of interoperability oversight body that has real teeth. A body consisting of at least five experts in the art of programming, which Microsoft has no voice beyond a single non-voting representative. Independent developers could take problems with Microsoft interoperability, documentation of interoperability, file formats, and documentation of file formats to this board. The board should have the authority, should Microsoft be recalcitrant, to stop shipments and sequester all income until the problem is resolved.

4. Establish that whatever prices Microsoft charges for software will be applied uniformly (with volume discounts as appropriate). This should include such things as co-operative advertising and other forms of non-cash remuneration to VAR's and retailers. Should a VAR (for example) be "punished" by Microsoft for using or reselling non-Microsoft products, the person or business should be entitled to at least triple damages.

I feel that unless there is a real, strong, incentive to comply, Microsoft will continue acting barely within their interpretation of the letter of the law and ignoring the spirit of it, as well as ignoring any semblance of ethical behaviour.

Thank you again, for this opportunity to comment.

Morgan Hall

From: Braz Brandt  
To: Microsoft ATR

Date: 1/23/02 1:03pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

Looking at my calendar, I took notice of today's date and the rapidly approaching end to the period allotted for public comments regarding the Proposed Final Judgement against Microsoft as negotiated by Microsoft and the Department of Justice. Realizing that I have not yet taken the time to respond to the Proposed Settlement, I feel compelled to do so now, before the period allotted expires.

I want to express my extreme displeasure with the Proposed Final Judgement, and stress to all parties involved with the review of the Proposed Final Judgement that this settlement, as currently written, does little to address the issues raised by Judge Jackson and further upheld during appeal. Indeed, the settlement can be seen as ineffectual, given the tendencies of Microsoft to frequently redefine and at times even ignore the directives of the Department of Justice and established US Laws.

Unlike many people in my line of work, I will not take the time to raise the issues that fall outside the scope of both the Department of Justice's case against Microsoft. Instead, I would like to focus on what I feel is the primary problem with the settlement, and highlight this problem as just one of several.

The Court of Appeals upheld Judge Jackson's Findings of Fact, which stated that Microsoft holds a monopoly in operating system software, and additionally, that Microsoft has used that monopoly power to stifle competition and even destroy competitors. Further, Microsoft was found to have used its tight control over the operating systems "APIs" to prevent competition with its own products, by creating an artificially high barrier for would-be competitors to overcome.

To that end, the Proposed Final Judgement should remedy this situation. Specifically, my concerns are regarding the imposed publication of Microsoft APIs. If defined and implemented properly, this action would have a significant effect not only on middleware vendors, but also on operating system developers; said developers could use those APIs to provide the underlying functionality of Windows without the currently-necessary reverse-engineering required to extract and implement these standards. As it currently stands, an operating systems developer must spend quite a large amount of time examining, studying and interpreting the API calls any application makes to the Windows family of operating systems. Once this is done, the developer can then implement and design replacement operating system services, so that these applications can run as seamlessly as possible on new, "Windows-compatible" operating systems. Obviously, the development of Windows-compatible operating systems would be detrimental to Microsoft's sales and market-share. To prevent the growth of such alternatives to Windows, Microsoft has refused to publish their Windows APIs to the public, and has taken great pains to make the reverse-engineering of those APIs a difficult task. Microsoft routinely and with great care makes changes to the Windows APIs, and

then releases products that take advantage of these new, unpublished APIs. Therefore, any development efforts invested in deciphering Windows API calls are rendered useless with each new version of Windows.

To remedy this situation, the Department of Justice has attempted to force Microsoft to open their APIs to developers. However, while the gesture is one that is welcome, its implementation leaves much to be desired. First, the proposed settlement narrowly defines APIs as the interfaces between Microsoft Middleware Products and Microsoft Windows Operating System Products. Furthermore, the settlement then further narrows the scope of "Middleware Products" to be a subset of existing Microsoft technologies— Internet Explorer, Outlook Express and Windows Media Player, for example— and "Windows Operating System" as Windows 2000, Windows XP and their successors.

If Microsoft didn't have a history of both creating/purchasing new operating systems technologies and also shifting focus away from current operating systems in favor of other technologies, these definitions might only be considered questionably narrow in scope. However, as Microsoft has shown in the past, it is more than willing to shift, redefine and create and/or purchase new technologies in order to reinforce its monopoly powers. The Department of Justice has ignored Microsoft's growing incroachment into the handheld and newly-emerging tablet PC markets, where Microsoft promotes and develops Windows CE and Windows XP for Tablet-PCs, respectively. The Proposed Final Judgement, with its narrow definition of "Windows Operating System", leaves Microsoft free to both continue its illegal and predatory business practices in the handheld computer market, but also to, at some future date, shift its operating system focus away from "Windows 2000, Windows XP Home, Windows XP Professional and their successors" to Windows CE, Windows XP Tablet-PC Edition or some third, as-of-yet undeveloped technology. Doing so would eliminate any legal requirements Microsoft would have to follow the terms of the proposed settlement. Additionally, with its narrow definition of "Microsoft Middleware Products", Microsoft isn't prevented from adopting new, emerging technologies—as it did with Internet Explorer—and incorporating them into the "operating system" to avoid the Middleware label. Furthermore, Microsoft could simply redefine these portions of Microsoft Middleware as essential parts of the operating system, and thereby refuse to publish any future APIs.

While I'm confident that the Department of Justice is interested in enforcing the Sherman Act and the Findings of Fact of the US District and Appeals Courts, the Proposed Final Judgement as currently written accomplishes neither of those goals. I hope that my brief overview of just one of the many problems with the proposed settlement brings to light the issues involved in dealing with Microsoft, a company with a history of ignoring law and judicial decree where they prove inconvenient. I also hope that the tide of company-sponsored statements, both for

and against the proposed settlement, do not drown out the concerns of consumers and computer professionals like myself.

I would like to thank you for taking the time to review my comments. I look forward to any opportunity to discuss my comments further, and welcome each and every opportunity to provide input into the fair and equitable settlement of the Department of Justice's case against Microsoft.

To whom it may concern:  
The proposed settlement, in my opinion, is woefully inadequate, and should be rejected.

As a computer professional for over 15 years, I have seen repeated examples of Microsoft using its clout (monopoly influence) in inappropriate, anticompetitive ways. This is what the court's findings of fact support. The sanctions offered in the proposed settlement may actually encourage companies to engage in these types of practices—because even when litigation is lost, the remedies will remain inconsequential and easy to circumvent—at least in the high-tech field.

I trust that this proposed settlement does not become an example of the protection from monopoly abuse we are to witness from the current judiciary. Thank you for considering my opinion,

Under the Tunney Act, I would like to comment on the proposed Microsoft settlement.

Section III(J)(2) specifies that Microsoft need not describe nor license its API to companies that don't meet Microsoft's criteria as a business—which can be interpreted as including open source projects.

The proposed final judgement also fails to address the concern that Microsoft may introduce intentional incompatibilities (as it has done in the past) into its applications that will make it difficult (or impossible) for users on non-Windows platforms to run the

software. I also encourage you to examine several other serious issues raised in the analysis at: <<http://www.kegel.com/remedy/remedy2.html>>

From: Kevin Ruddy  
To: Microsoft ATR  
Date: 1/23/02 1:04pm  
Subject: Microsoft Settlement

I am against the proposed settlement. One of the biggest failures in the settlement is that file formats remain undocumented. It is extraordinarily difficult to reverse engineer a file format to be compatible with Microsoft's constantly-shifting Office suite, for example. In order to foster interoperability between Microsoft and its competition, and to create new competition, these file formats must be available to all.

There are many additional shortcomings, and I hope the Department of Justice makes a more serious and significant attempt to curtail Microsoft's monopoly and open the software industry to additional competition, which will help the United States in countless ways. It is poorly served by Microsoft's monopoly as it stands today.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

The PFJ doesn't take into account Windows-compatible competing operating systems Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered". The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft

software patents? This can scare away potential users.

The PFJ Fails to Prohibit Anti-competitive License Terms currently used by Microsoft. Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anti-competitive Practices Towards OEMs The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. The PFJ as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anti-competitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

In summary:

The PFJ (a) does not punish Microsoft for crimes committed, (b) does not provide for restitution for its criminal actions (c) does not restrict Microsoft from continuing established criminal behavior, (d) does not restrict Microsoft from future criminal behavior, (e) ignores Microsoft's disregard for earlier consent decrees and its demonstrated contempt of the legal process as demonstrated by its flagrant misbehavior in court, (f) greatly impedes and restricts the efforts of competing systems, especially non-commercial competitors collectively referred to as "Open Source".

It amazes me that these criminals even have a say in their punishment, I can't recall any other crime where the criminals can negotiate their punishment. The PFJ is a travesty of justice.

From: Matt Curtis  
To: Microsoft ATR  
Date: 1/23/02 12:50pm  
Subject: Microsoft Settlement

To whom it may concern:  
I feel that the proposed Microsoft settlement falls short in many ways, in its goal to remedy Microsoft's monopoly position. There are many loop-holes Microsoft can use (as it surely will, given its history of outright law-breaking) to continue its exclusionary and predatory business practices. For an excellent document describing many of the problems in detail, please see Dan Kegel's comments at <http://www.kegel.com/remedy/remedy2.html>. I whole-heartedly agree with his sentiments as stated in that document. The proposed settlement does not force Microsoft to release its stranglehold—it merely forces it in some cases to use loopholes, and leaves many problems untouched. I believe that unless a much stronger solution is put in place, Microsoft will continue to hold its monopoly and the technical industry will continue to suffer. There will be no forward progress in

the computing industry as long as there is a giant to stomp out every flame of innovation that does not line its pocketbook in some way.

Subject: Microsoft Settlement

I am writing to indicate that I, as a US citizen and experienced software developer, object to the currently proposed final judgment in the United States vs. Microsoft case. My biggest objection is the lack of a requirement for clearly and publicly documented file formats. The use of undocumented file formats results in users, typically without their knowledge, being locked into using Microsoft or Microsoft approved software for accessing and sharing their data.

I have made the personal choice to not use Microsoft products. This has resulted in a significant amount of difficulty when I try to access information that other send me or to produce information that others can easily use. It causes even bigger problems when I try to access information that no one is actively maintaining and yet is in essence encrypted by Microsoft without the explicit permission of the owner of that data.

Requiring that all file formats be publically documented would significantly improve the ability for other products to compete effectively in the areas that Microsoft has been judged to engage in monopolistic practices.

From: Michael Broggy  
To: Microsoft ATR  
Date: 1/23/02 1:11pm  
Subject: Microsoft Settlement

To whom it may concern,

I have been using home computers for nearly 20 years, now, and have been increasingly frustrated as a consumer over the past decade or so whenever the idea of purchasing a new computer came up. Every system sold seems to come with a requisite "Microsoft tax" in the form of a bundled copy of Windows which I cannot refuse or get a refund for, which is extremely unfair as I never would choose to use Windows myself. Only by building my own systems from individual components can I get around this extra cost, but that often results in a more expensive system when all is said and done, as I don't benefit from volume discounts on computer components.

I haven't had the time to look into the nuances of the settlement, but I do agree with the essay written by Dan Kegel, found at <http://www.kegel.com/remedy/remedy2.html>—I have signed his petition and wanted to add my own opinion to the case, as I think capitalism is all well and good but there \*are\* rules and Microsoft has consistently sought to put itself on top by hook or by crook. Competition is \*necessary\* for progress and innovation—without it, Microsoft will seek to bleed their customers for as much money as possible without adding anything in the way of improvements with each successive version of their software.

If I were to break the law, I know I'd be punished—it seems unfair that any company or corporation can escape justice for \*any\* reason. They must be punished; they should be punished in such a way that they'd regret breaking the law in the first place and actions should be taken to ensure they could not do the same again.

Thank you for your time and attention,

Washington, DC 20530-0001

Dear Ms. Hesse,

The Proposed Final Judgement in the Microsoft Antitrust case is flawed in several ways. I will address one flaw that affects me personally. Sections III D and III E are good

sections in that force Microsoft to allow competing software developers equal access to information regarding system API's and communication protocols. However, I feel that these sections should go farther than they do in two ways.

First, file formats should be included. Microsoft has a history of using incompatible file formats for coorse users of Microsoft software to upgrade to newer versions. This same tactic same tactic can be used against competing software packages that attempt to interoperate with Microsoft products. Second, the only entities entitled to access the information made available by sections III D and III E are "ISV's, IHV's, IAP's, ICP's and OEM's". Granted that the definition provide for ISV is fairly broad (anyone involved in software development), the Final Judgement should make this information available to the general public. As it stands, PFJ excludes private citizens who do not get paid to work in the software development field. As an owner of a Microsoft Operating System, I would like to be able to create software for my own personal use that will interact with my system correctly.

Thank you for taking the time to read my comments, and for your consideration is this matter.

Gary Myers

**MTC-00017369**

From: Dan Devine  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 1:07pm  
Subject: Microsoft Settlement

Greetings,

My name is Dan Devine and I would like to voice my dissatisfaction with the current Microsoft settlement agreement between the United States of America and the Microsoft Corporation.

I believe that this settlement is lacking in the following ways:

A) It does not go far enough in preventing further illegal conduct and provides ample legal loopholes for them to continue past business practices under the guise of a settlement.

B) It allows Microsoft to benefit from past illegal practices both monetarily and through market position. Under the "Findings of Fact," it has been determined that Microsoft is a monopoly and that they have improperly used their power to maintain and expand that monopoly. The proposed settlement does not provide a concrete remedy to this situation and therefore is "not in the public interest." After viewing the proposed settlement, I was struck by the number of legal loopholes written into it. For each proposed requirement, there were options that Microsoft could use to continue thwart competition. These loopholes are unacceptable in light of Microsoft's past business practices, and would allow them to prevent competition in the future.

It is my belief that competition can be restored to the marketplace without unfairly harming/damaging Microsoft and without breaking the company into two or more smaller companies. I further believe that the alternative settlement offered by the state of California and others, is more in the public interest.

I further believe that the operating system (the software which governs the operation of electronic hardware) should either be "open sourced" for public view or be considered a "Public Utility," and be regulated as such. This belief is not taken lightly, and I would only consider it given that Microsoft controls 90% of computer operating systems. As an analogy, imagine what would happen if the "interface" for consumer and industrial electricity was controlled by private a corporation with legal protection on its specifications. Such a corporation could modify the specifications of its power at will, making competing products incompatible according to business interests. Under the "public utility" analogy, specifications on the voltage and frequency are public thereby allowing competing firms to make safe and compatible consumer devices which benefit us all. Microsoft has been shown to create deliberate roadblocks to competition through "incompatible file formats" and "degradation" of file quality on competing products. The ability of one corporation to determine the direction of desktop computing has ominous implications, and should be curbed through government oversight.

As a conclusion, I hope that the proposed settlement is rejected as not being in the public interest.

Thank you for your time,

**MTC-00017373**

From: Scott Seshier  
To: Microsoft ATR  
Date: 1/23/02 1:02pm  
Subject: Microsoft Settlement

Rather than go into the painful detail on every point where this proposed settlement falls short of protecting U.S. citizens from Microsoft's monopoly, I will instead focus on the one thing strangely absent from the proposed settlement.

Microsoft has been found to have abused its monopoly power, hurting consumers, other businesses and open source developers. Yet there seems to be no real punitive measure in this proposed settlement. If I were to have been found guilty of a crime I would not expect the judge at sentencing to say only "Don't do it again, we will be watching you." (Though in Microsoft's case this seems to be "Don't do it again, you will be paying people to watch you, who can't say whether your naughty or nice). I would expect some punitive action. That seems to be missing here. Microsoft has made billions by exploiting its monopoly position and this proposed settlement seems to have no problem with them keeping it. Most bank robbers don't get to keep their loot, why should monopolist? Without the addition of some substantive punitive action, this proposed settlement rewards Microsoft's previous misdeeds.

Let me just add one thing further. Not to long ago the Justice Department seemed to have Microsoft on its knees, from the terms of this proposed settlement things seem to be the other way round now. Any speculation as to how this could come about in such a short time, and whether any laws were broken, is left to the reader as an exercise.

Thanks you for your time and consideration,

U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Per The Tunney Act I am emailing my comments on the Microsoft Settlement.

The proposed settlement is a bad idea. It is totally and completely a pro Microsoft

Settlement; in their favor, without sufficient compensation or remedies for their violation of the Sherman Anti-Trust Act. In essence, settling for what Microsoft thinks it's own punishment should be and thus allowing them ways to circumvent and remove themselves from the penalties.

Dan Kegel provides some excellent insights into how this situation should be remedied. I offer a link to his web site for your review. <http://www.kegel.com/remedy>

I agree with his conclusion, namely that the Proposed Final Judgment as written allows and encourages significant anti-competitive practices to continue, would delay the emergence of competing Windows compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Thank you for your time and attention in these matters.

Sincerely,  
Jonathan Rippey

From: John Silver  
To: Microsoft ATR  
Date: 1/23/02 1:07pm  
Subject: Microsoft Settlement

Dear Sir or Madam:

I think the proposed settlement is bad idea. It does little to punish Microsoft, does little to insure they will "toe the line" moving forward, and does not address the substantive issues which lead to creation of the Microsoft hegemony in the first place.

The settlement is little more than a wink and a nod towards corporate malfeasance, and an abrogation of the duties of the responsible government agencies.

I thank you for your consideration.  
-John Silver

**MTC-00017376**

From: Jason Henriksen  
To: Microsoft ATR  
Date: 1/23/02 1:07pm  
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. This settlement is widely perceived as a non-punishment for Microsoft. By allowing this settlement to go forward, the government sends the message that it is ok to break corporate law because you will not truly be punished for it. Many computer enthusiasts and business people are watching this trial and will base future behaviour around the outcome. If Microsoft is given a non-punishing settlement, people will reason that it is ok to commit a crime so long as you have the clout to avoid punishment. The courts must enforce a real punishment on what has been proven to be a real crime. If the courts do not enforce a truly behaviour changing penalty on Microsoft the rule of law over corporate america will be drastically weakened. A capitolist system depends on the rule of law to ensure a level playing field and promote competition. The people of the United States have charged the justice system with ensuring fair capitolist competition. Please do not let us down.

Jason Henriksen President, Hardy Henriksen Hughes Consulting Inc.

From: Chris Jeffries  
 To: Microsoft ATR  
 Date: 1/23/02 1:07pm  
 Subject: Microsoft Settlement

Dear Sir or Madam:  
 I believe that the following passage expresses my general concerns regarding the proposed settlement between the Department of Justice and Microsoft. I am sure that if I were to more completely research the agreement I would find even more which disturbs me; however the implications outlined below are quite disturbing even when unaccompanied by the rest of the settlement.

Thank you in advance for your time.  
 Sincerely,  
 Chris Jeffries  
 Taken from Robert X. Cringely's article published on December 6, 2001, at his website

(<http://www.pbs.org/cringely/pulpit/pulpit20011206.html>):

"Those who followed the case closely will remember that one of Microsoft's chief claims during the trial was that times and the nature of business have changed, and that anti-trust enforcement ought to be different today than it was when the laws were first passed in the early part of the last century. This is a fast-moving industry based on intellectual, rather than industrial, capital, goes the argument. Sure, Microsoft is on top today (and every day since it got bigger than Lotus around 1986) but, hey, that could change in a Redmond minute. This argument evidently didn't resonate with the court, though, since Microsoft was found guilty. Keep repeating to yourself: "Microsoft is guilty."

Well, Microsoft now appears to be exacting its revenge, leaning this time on the same letter of the old law to not only get a better deal, but literally to disenfranchise many of the people and organizations who feel they have been damaged by Microsoft's actions. If this deal goes through as it is written, Microsoft will emerge from the case not just unscathed, but stronger than before. Here is what I mean. The remedies in the Proposed Final Judgment specifically protect companies in commerce—organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors—computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry. But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and freeware applications.

The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the

proposed settlement. It is as though they don't even exist.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..."

So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products.

Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only.

But wait, there's more! Under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology—even the Department of Justice itself—have no fights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows. I know, I know. The government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. It is easy to argue that I am being a bit shrill here.

But I know the way Microsoft thinks. They probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT."

 Subject: Microsoft Settlement

Dear Sirs,  
 As a US Citizen, I would like to take a moment to share my opinion on the proposed Microsoft Settlement as per my legal rights according to the Tunney Act. There are so many things wrong with this settlement that I don't know where to begin.

Although I believe that forcing Microsoft to make Window's API available to competitors is a start, the settlement gives Microsoft far too much leeway in determining who deserves this information. Why does the court assume that Microsoft will do the right thing here when they have violated the law so blatantly in the past? Microsoft could refuse to share the Windows APIs with any company it wanted. This settlement would force many companies/organizations to take Microsoft to court to get these APIs. Frankly,

these small lawsuits would be of little consequence to Microsoft. After all, litigating against the behemoth has drained the states coffers, what chance does a small to medium sized business have against it? On that topic, I am outraged that Microsoft isn't being penalized for their illegal activities. Do drug dealers get to keep the money they made from the sales of their illicit substances? No. Why is it that Microsoft made millions of dollars gauging customers on the price of their products because they were leveraging their Monopolistic power and yet get to keep every penny. Ironically, it is that money that is buying their way out of this. And don't think for a second that their donation to the schools ordered in the civil trial is a penalty. Let's face it, its an opportunity for the giant to gain market share in the only area they don't own. Here's an idea: how about Microsoft is forced to pay the states for costs associated with the lawsuit. As I see it, taxpayers have gotten screwed twice on this. Once when we were gouged on the software and again after we had to pay to take them to court to stop their terrible practices. How about we right this wrong and make them pay court costs? I could continue on for quite some time about the problems with the proposed settlement, but I believe my previous arguments are sufficient to indicate that I am very much against his settlement. thank you for your time, Mindy Billingham 532 Tibet Rd Columbus, Ohio 43202.

 To: "microsoft.atr(a)usdoj.gov"  
 Date: 1/23/02 1:09pm  
 Subject: Microsoft Settlement

To whom it may concern My Name is Jason Robinson. I am a US Citizen, age 26. Beyond those facts, no amount of justification should be necessary to accept the following as valid opinion. I do not agree with the currently proposed settlement. While it does appear to solve a few problems that led to microsoft becomming the Monopoly that it currently is, it does not propose adequate restrictions to bring back fair competition to the arena of computer operating systems, nor does it propose adequate repercussions to Microsoft for their past injustices. I am not a microsoft hater. I use their products every day just like you.....wheter we like it or not. Please provide a remedy that will provide just penalties to a company of Microsoft's size and wealth, and will restore the ability for companies and individuals to gain entry into the Operating System Market. Thank you for your time, Jason Robinson

From: Vijay Brian Gupta  
 To: Microsoft ATR  
 Date: 1/23/02 1:06pm  
 Subject: "Microsoft Settlement"

First off, I would like to have my comments listed anonymously if possible. (I imagine many folks are holding off from contacting you for fear of upsetting Microsoft) It seems to me that the proposed settlement seems to be pretty useless in preventing future abusive behavior from Microsoft. Look at this way: Microsoft is a monopoly, they have been shown to abuse

that monopoly power in the past, despite court injunctions and consent decrees. My question is, how can this really be solved without some sort of drastic measure. I.E.: Splitting up the company, or at least force them to standardize and release "ALL" APIs, protocols and file formats to the public. (No exceptions, especially security) The problem with the settlement is that it is incredibly vague, and allows Microsoft to basically go about business as usual. (They have proven through past behavior to have little concern for the intent of the law, and will bend and occasionally outright break any rules). You don't have to be a technology wizard to see this. Why does this bother me? I have been using computers for almost 20 years, and have seen the industry evolve and grow. I have known of, and followed many technologies since then, including those of Microsoft. Microsoft has systematically destroyed great technology after great technology. (More accurately, they destroy the company that invented the great technology, and "invent" it themselves). This was a way of life for them when they were a smaller player, and wasn't really breaking the rules. (It may have been consider playing dirty, but it was legal) Now that they are truly a monopoly (as proven in court) they must be held accountable for these actions. (As well as prevented from doing so in the future.) It is one thing for Microsoft to be able to spend more money on R&D to attempt to build a better product (Which invariably they seem to eventually pull off, after the innovator of said technology is destroyed or bought out). But for them to use bundling and such to extend their desktop monopoly into new areas is unforgivable. If they were required to sell these products separately like their competitors, it would keep their competitors alive longer so that thriving competition will keep products improving and the pressure on the monopolist to innovate. Not to mention, keep the incentive for innovation alive. One more point to consider in the proposed settlement is that Open Source applications and competitors are excluded from protection. (Check Section III(J)(2)... Competitors must meet Microsoft's criteria as a business for the settlement to apply. They must not bundle, they must release all API's, protocols and file formats to the public (and comply to these standards as released, only being allowed to change them if they publish the changes first.) If this is deemed too much to keep track of and non enforceable (being a drain on DOJ resources), I suggest you follow the original plan of breaking up Microsoft into separate companies. Please come up with a more equitable solution then has been proposed. (More enforceable, specific, and drastic).

Thank you,  
Brian Gupta US Citizen

From: Rick Pufky  
To: Microsoft ATR  
Date: 1/23/02 1:08pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I would like to add some comments about the Proposed Settlement for the Microsoft Antitrust case. I do not believe that the

Proposed Settlement will not effect many changes in its current state.

One area where a more fulfilling settlement could be made is in the area of Windows APIs. Currently, the definition of an API, in the Proposed Settlement, is too restrictive to be of any use. The current definition in the Proposed Settlement defines the API as an interface between Microsoft Middleware and Microsoft Windows. This definition does not include any of the other Windows APIs that are used by other applications. By changing this to include ALL Windows APIs, will open up the software field to other developers who have not previously had access to these APIs.

This is just one example of the changes that could be made to the Proposed Settlement to level the field between Microsoft and other software companies.

Thank you for listening,  
Richard R. Pufky

From: John Biederstedt  
To: Microsoft ATR  
Date: 1/23/02 1:07pm  
Subject: Microsoft Settlement

Under the provision of the Tunney Act I would like this communication to be considered to be a complaint against the proposed settlement. The proposed settlement relies on definitions which deviate from the court's finding of fact in respect to operating systems, middleware, application programming interfaces, and software. The settlement's definitions are narrow enough to allow Microsoft to utilize restrictive licensing and concealment of APIs to protect and extend its current monopoly in some cases by simply changing the versioning format of a middleware software product. Clearly, the proposed settlement will not significantly prevent Microsoft from continuing its harmful monopolistic behaviour.

The proposed settlement also does not even try to address problem of undisclosed file formats which earlier courts found to be one of Microsoft's tactics to protect its monopoly. I do not believe the proposed settlement will remedy or improve Microsoft's monopolist practices.

As a further comment, I find it disheartening that a corporation can so selectively choose its final legal remedies after violating US law.

Subject: Microsoft Settlement

Dear US DoJ,

I'm a business owner who uses a mix of closed and open sourced products, and I believe that the PFJ for Microsoft is bad for my business (10 employees), and bad for the economy as a whole. A significant percentage of the US population is employed by a small business—While I don't claim to speak for all small businesses, I imagine my situation is a common one.

I'm not a lawyer, and I can't analyze the PFJ in any legally meaningful way, but I do know what things are bad for my business.

The letter at <http://www.kegel.com/remedy/letter.html> details much better than I could many problems with the PFJ.

For example, the note "The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents" is astounding to me. As a small business, each new computer costs us about \$1,000, or about 10% of our hiring and training costs. If we add in the costs for Microsoft operating systems and applications, that number rises to about \$1,800—8% of our cost for hiring an employee go directly to Microsoft!

The straight truth right now is that there are no competitors to Microsoft in the Office arena, which offer sufficient functionality to run our company. Our business must have software that reads and writes standard Microsoft Office file formats if we are to connect with other companies. Open Source programs like StarOffice keep up with Microsoft's changing file standards as well as they can, but it's a part of Microsoft's strategy to introduce backward incompatibility in software products.

This only hurts the economy, and finally the consumer! I do not need the new features of Microsoft Office XP, in fact I would be quite content to use the features found in Office 97, or Office 95. What I do need is to be able to send and receive documents in a format other companies can understand.

If Microsoft were to open their file formats, by writing complete technical descriptions of them, other companies would be able to introduce competing products which could interoperate, thereby nullifying one aspect of Microsoft's Office monopoly in corporate America. The competition would reduce the cost of those software products, and let me put my money into things like salary and corporate giving, rather than Microsoft's multi-billion dollar cash coffers.

Thank you for your time! I would be pleased to discuss this matter with you further if you are interested.

Subject: Microsoft Settlement

Please don't allow this case to be settled without the separation of Microsoft from Windows. They can still make or break a company just by entering the market. Look at WebTV, Netscape, (Sony PlayStation soon), and numerous others.

One of the reasons Apple can't get beyond 5% market share is the applications barrier. Microsoft makes Office and Internet Explorer for the Mac...other than that there are no current enterprise applications written by Microsoft for the Mac platform or any other platform except Windows. If Microsoft had Windows taken away from them there would be no bias against which platform to develop their applications and the platforms could each compete with a level playing field. From: Charles Kerr  
 To: Microsoft ATR  
 Date: 1/23/02 1:08pm  
 Subject: Microsoft Settlement  
 To Whom It May Concern:

I am opposed to the Revised Proposed Final Judgment in the Microsoft antitrust trial. While it is an improvement over the previous proposal, the revised proposal still has many stipulations that are unlikely to be enforced.

Here are the stipulations that I find questionable, from section III, "Prohibited Conduct", of the revised proposal.

A. "or by withholding newly introduced forms of non-monetary Consideration (including but not limited to new versions of existing forms of non-monetary Consideration)" This does not address the possibility of Microsoft withholding existing forms of non-monetary considerations from OEMs for supporting non-Microsoft products.

A. 2. "shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System;" Does not address the possibility of an OEM shipping some computers without any Microsoft Operating System at all.

C. 1. "except that Microsoft may restrict an OEM from displaying icons, shortcuts and menu entries for any product in any list of such icons, shortcuts, or menu entries specified in the Windows documentation as being limited to products that provide particular types of functionality, provided that the restrictions are non-discriminatory with respect to non-Microsoft and Microsoft products." Microsoft could claim that a product that competes with their own product has a prohibited type of functionality. It's easy to take two programs that provide a similar, but not identical, functionality and add the difference to the list of prohibited functionality. To be plain, I don't see what possible positive use this condition could have. Surely if the OEM wants to add value by including software, that's should be the OEM's decision?

C. 3. "Launching automatically ... any Non-Microsoft Middleware if a Microsoft Middleware Product that provides similar functionality would otherwise be launched automatically at that time" Seems to allow Microsoft to limit middleware functionality to only the set provided by Microsoft middleware.

If a .NET competitor added extra functionality for a competitive advantage, could an OEM be restricted from bundling it?

C. 3. "provided that any such Non-Microsoft Middleware displays on the desktop no user interface or a user interface of similar size and shape to the user interface displayed by the corresponding Microsoft Middleware Product." This forces competing software vendors to follow Microsoft's lead in these type of products and again seems to restrict functionality to only that supported by Microsoft middleware.

D. It's been commented on elsewhere that this section allows Microsoft to shut out noncommercial concerns, such as Free Software projects and government agencies,

from documentation. The definition of ISV seems to be wide enough to address these concerns, but I include this point here in case my interpretation is in error.:

E. "and (ii) used to interoperate natively (i.e., without the addition of software code to the client operating system product) with a Microsoft server operating system product." This clause seems to add a loophole without any apparent benefit.

F. 2. "Except that Microsoft may enter into agreements that place limitations on an ISV's development, use, distribution or promotion of any such software if those limitations are reasonably necessary to and of reasonable scope and duration in relation to a bona fide contractual obligation of the ISV to use, distribute or promote any Microsoft software or to develop software for, or in conjunction with, Microsoft." What is the interpretation of "reasonable"? Would it be reasonable, for example, for Microsoft to place limitations on an ISV's ability to distribute Linux if the ISV entered into a contractual obligation to distribute Windows?

G. 1. This stipulation is contradictory. It claims that Microsoft may not enter into a contract that will force the other party to exclusively or favorably deal with Microsoft products as opposed to competing products. Then it says that they actually can do this as long as they can provide numbers that show it is reasonable to favor the Microsoft product. Since Microsoft has such a large percentage of the market they will always be able to produce numbers that show this. The DOJ must never let them enter into an agreement that removes the other parties right to use a competing product.

H. 3. "without first seeking confirmation from the user" The entire idea of automatically altering an OEM's configuration of icons, shortcuts, or menu entries seems to be nothing more than a way of circumventing section III C, and should be prohibited. Barring that, there should be constraints on what form this confirmation will take. Will it pop up each time Windows is booted after the first 14 days? Will it be explain the choice, or simply say "Your Windows configuration may not be correct. Would you like to correct it?"

J. 1. This clause would seem to break other interoperability clauses. How, for example, will third-party tools be able to interoperate with the Microsoft platform if the authentication protocols are closed?

J. 2. "(b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product" "(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business" "(d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface"

This condition will allow Microsoft to close off documentation from free software developers, such as Linux and its tools like Samba. These are non-commercial programs, and therefore have no "business need". Likewise, not many free projects will have the funds to comply with J.2.(d).

Moreover, this agreement only limits Microsoft's future behavior. It does nothing to punish them for past behavior that has been found to be anticompetitive.

Thank you for your time.  
 Charles Kerr  
 Software Developer

 Subject: Microsoft Settlement

The proposed settlement in the Microsoft Antitrust case, if implemented, would be an outrage. Microsoft has consistently shown contempt for the law by acting as if they are not bound by any settlements. Furthermore, the settlement would not punish Microsoft for illegal behavior they have been found guilty of, nor would it prevent any future anti-competitive actions by Microsoft.

A reasonable settlement would include the following at the minimum:

1. A fine of no less than one billion dollars, CASH, no donations to public schools in obsolete hardware and Microsoft software, which would only further Microsoft's monopoly.

2. Break Microsoft into two companies, separating the operating system portion from all other software divisions. Internet access 3. software such as "Internet Explorer" should never be considered part of the operating system.

4. Require Microsoft to make the operating system API publicly available in full.

5. Disallow the non-OS divisions of Microsoft from using hidden/non-public API features.

6. Disallow exclusive OS contracts with retailers and OEMs. This was attempted before, but was ignored by Microsoft.

7. Require Microsoft to implement uniform licensing fees and to the pricing system public (to prevent further abuses of point 6).

Subject: Microsoft settlement

Most, if not all, countries want to have companies like Microsoft. Some countries even work with their industries to develop dominate industry positions. It is bewildering to me that our government, via lobbyist money, is trying to interfere with business. This interference can only lead to higher prices to the consumer, while our legal system and other governments bleed money and resources away from business (Microsoft). In effect, our government is harming its own citizens and country while trying to ???spin??? this action as protection. Protection from what—better value, better pricing and better competition?

It is a mystery to me why the federal appeals court did not throw out the whole case Judge Thomas Penfield Jackson was involved in. This judge was prejudice against Microsoft before the case began. According to our legal system Microsoft can not even give away its product to the needy or to the schools. Who is the judicial system trying to help, the citizens or special interests? I do not believe Microsoft is harming US consumers. I do not believe business should not be run by lobbyists in the government. Allowing competing companies to, in effect, lobby the judicial system to gain advantage can only hurt consumers and our economy.

The problem is some other companies did not, and do not, compete as well as Microsoft. Microsoft is only dominate in its operating system and office software. It appears that competitors to Microsoft want an unfair advantage so they don't have to be as competitive. This harms a free economy.

Hello,  
I am writing because I believe that the proposed Microsoft Settlement is a very bad idea.

You are obviously aware of all the arguments on both sides so I won't go into them all. But basically my opinion is this... Microsoft is a convicted predatory monopolist. They have not admitted to their wrongdoing, do not seem to understand what they have done wrong and continue to figure out ways around the law to monopolize other markets. They have been convicted more than once, one would think they would learn. Because of this, a behavioral remedy is out of the question. It is too costly and difficult for the court to manage, and as Microsoft's past behavior has shown, they will work around the remedy.

A structural remedy is the only effective solution. To restore competition to this market and to stop the predatory behavior, Microsoft must be broken into competing OS and Applications companies, maybe three OS and three Applications companies. This worked in the Standard Oil case and monopolizing the computer market is equivalent to the wrong Standard Oil did in monopolizing the oil market. The computer market is as critical to our economy as the oil market was 100 years ago. It can not be left in the hands of a twice convicted monopolist for the sake of our economy. Breaking Microsoft into an OS company and an Applications company as was the previous remedy is flawed because it creates two monopolies. It is as bad as the AT&T break up which did not create competing entities with the regional Bells. The whole purpose of anti-trust laws is to restore competition. Please do this by breaking Microsoft into competing units.

From: Ralph Rodkey  
To: Microsoft ATR  
Date: 1/23/02 1:05pm  
Subject: Microsoft Settlement

I'm a Computer Science major at a small private college in Indiana, so these Microsoft hearings have a potentially serious impact on the landscape of the industry that I've chosen to spend the rest of my career in. I have several major concerns concerning the Proposed Final Judgment. First, I would love to see the middleware APIs opened, but the Proposed Final Judgment has flawed definitions that would allow Microsoft to easily re-close the APIs by changing version numbers. Second, the provisions concerning OEMs do not limit Microsoft's ability to extend its monopoly, specifically on Intel hardware. Third, and most important, no

consideration is made of any Open Source software. The PFJ only places limits on commercial operating systems. Microsoft itself has stated that Linux is its prime competitor at the moment, yet the PFJ makes no mention of limits in this area. I consider this issue to be extremely important. The developers of Open Source generally work on their own time and money, and thus have nothing approaching the resources that Microsoft can bring to bear, both financially and legally. Many cutting-edge technologies are developed through the Open Source process, and allowing Microsoft to subsume this would be a grievous hurt to the entire industry. Please consider these issues, and thank you for your time and effort.

Subject: Microsoft Settlement

Dear Sir, Madam,  
I would hereby like to express my doubts about the effectiveness of the proposed settlement in the Microsoft case. I am sincerely concerned about Microsoft's position in the software market, and I don't believe the proposition lives up to the harm done in the past, nor does it provide enough of a remedy for the future. Mellow as it is, half a punishment will reduce itself to no punishment at all with a company that has the financial power Microsoft has; words will be bent, restrictions circumvented, new tricks will be learned, and legal statements adapted, reducing what's already too small a price to pay, to basically nothing. Strong, adequate measures should be taken against Microsoft—being fully accountable for their actions—so as to ensure that at least something's left after Washington lobbying and stretching legal phrases beyond recognition. It should not be let off easily, clearly still not having understood the message.

Kind regards,  
Jannes

To: Microsoft ATR  
Date: 1/23/02 1:11pm  
Subject: Microsoft Settlement  
Hello.

I would like to add my comments to the proposed Microsoft settlement and point out that there are serious flaws in the settlement. For example, in section III A.2 it states that Microsoft shall not retaliate against an OEM for:

"shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System..." but it says nothing about shipping a personal computer without the Windows Operating system. Due to Microsoft's anti-competitive practices, it is virtually impossible to buy a computer that does not contain Microsoft Windows, yet the proposed settlement does not explicitly forbid Microsoft from continuing the retaliation towards non-windows computer manufacturers.

This is unacceptable.

Subject: Microsoft Settlement

My wife and I strongly oppose the Microsoft Settlement agreement. We believe it is the government's duty to set limits and enforce penalties against companies who practice anticompetitive practices. We are very disappointed that the government caved in on this. We suspect it was for political reasons because of the short term economic results that may occur that could reflect negatively on the current Administration. As a life long Republican, I would like to see the Justice Department enforce the rule of law so that other companies don't see this as an opportunity to do the same thing.

Sincerely,  
Jim Laurin & Alynn Laurin

Subject: Microsoft Settlement Commentary

I wish to avail myself of the opportunity made to the public by the Tunney Act and wish to comment on the proposed Microsoft settlement. The PFJ fails to prohibit anticompetitive license terms currently used by Microsoft (see e.g. The Microsoft Windows Media Encoder 7.1 SDK EULA). Microsoft currently uses and will continue in the foreseeable future to use restrictive licensing terms to keep Open Source programs from running on Windows.

Conversely, the PFJ fails to prohibit anticompetitive license terms for development tools. The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by independent software vendors to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute...the Redistributable Components...provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..."

The settlement simply does not go far enough to end unacceptably restrictive EULA terms.

Respectfully submitted  
Frederick D. Vorck

To whom it may concern,  
The proposed settlement in the case against Microsoft is unacceptable and will only serve to further their control in the marketplace. There are many experts who are more than willing to be consultants in this case who can help achieve a fair but proper settlement. If you have any questions or if I may be allowed to assist in location and talks with said consultants, please let me know. Please do not continue with the current

settlement as it is completely lacking in substance that will affect Microsoft's business practices. Thanks for your time.

Michael Spurlock

To Whom It may concern:

I am a software engineer at Hewlett Packard (my words may not represent official company position) for the past 16 years in Fort Collins, CO. I am a US citizen.

It is clear that a good attempt was made to address significant issues by the propose settlement with Microsoft.

What is equally as clear is that the settlement as written falls short of the mark at prevent MS from dancing around the letter of the settlement and still achieving the same results at they have pre-settlement. Likewise enforcement seems very weak and open to stalling tactics.

The rules are not rigorous enough and the authority/independence of the enforcement efforts is not powerful/empowered sufficiently.

Subject: Microsoft Settlement

The "revised proposed final judgement" is NOT a valid or appropriate solution to the findings of fact regarding Microsoft's monopolistic business practices. An enforcement authority, a technical committee and a single Microsoft internal compliance officer (that has no real power to change anything) is not a just/fair solution to the continuing Microsoft monopoly. The aforementioned entities will have no real power, other than to slap Microsoft on the wrist for competing unfairly. None of the changes mentioned in the revised proposal force Microsoft to compete in the free market, simply because they have become so widespread and ubiquitous. Over time, some of the changes called for in the revised proposal may help loosen Microsoft's monopolistic stranglehold on the market, but the amount of time is unknown. The only real way to encourage and bring healthy competition back to the market today is to

force the Microsoft policy/operation changes to include not just future products/services, but to include the products and services (ie. proprietary protocols) that helped them achieve the massive control over the (PC and software and services) market in the first place. Force existing and future Microsoft products to interoperate with non-Microsoft products using open, standard documented protocols. Only then can a real change be made to the existing marketplace, rather than giving Microsoft ample time to find other ways of controlling and growing around the revised proposed final judgement.

From: Jared Kidd  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 1:09pm  
Subject: Microsoft Settlement

First of all, I am NOT happy with the proposed settlement for this case. Most of the terms in this look like things that any company should follow anyway. Microsoft pushes as far as they can and when "ped on their hands" and told to back down they do so for a little while and then push again to see how far they can go this time. This settlement seems to put them back in their place and hold them there for a while. So where is the punishment? Microsoft has damaged this industry by suppressing innovation and competition, and slowly twisting standards so they will be on top with the only software that supports the "standards (according to MS)" correctly. And while all this is going on Microsoft buys some 3D patents from sgi (<http://www.theregister.co.uk/content/54/23708.html>). I know that SGI were the ones to sell them but anyone who is into 3D graphics and gaming would start to wonder what MS means to do with these patents. My guess would be to crush OpenGL, which is used on many platforms in favor of their DirectX/3D, which only works on Microsoft

operating systems. They should be punished in a way that doesn't further their monopoly.

I am not running Windows as my main operating system on my home PC but with the new ".NET" junk and them forcing it down our throats I fear that someday there will no longer be any alternative operating systems. So I sincerely ask that you rethink the settlement and come up with a more effective plan that will hopefully restore and sustain our freedom of choice.

Subject: Microsoft Settlement—Oppose

I oppose the Microsoft Settlement.  
There are many, many problems, but two key ones are:

(1) The distribution of Windows software to poor schools only serves to deepen Microsoft's monopoly while giving them a P.R. opportunity. Instead I support the RedHat proposal in which Microsoft supplies hardware and RedHat supplies the operating system software. This would be an appropriate remedy.

(2) Provisions to partially open the Windows code base are worded to exclude non-commercial software, specifically Microsoft's chief competition, Linux, from access to the code. I believe Microsoft is threatened by the GPL implementation of SMP, Samba. They plan to change the protocol enough to break Samba (thereby forcing servers to use Windows) without having to reveal their code changes to free software developers. If Windows code is to be open it should be open to all.

Subject: Microsoft Settlement

I find the Proposed Final Judgment in the Microsoft antitrust case to be a shameful sellout of all Americans. I can only hope that the reason for this is that the court is unable to understand what is being perpetrated.

For me, Microsoft's most objectionable anti-competitive practice is the "embrace, extend, eradicate" process used to subvert various public standards. Examples are the intentional incompatibilities inserted into the Kerberos security protocols, Lightweight Directory Access Protocol (LDAP), and the Hypertext Markup Language (HTML).

The HTML incompatibilities have been used to force competitive internet browser programs off the market. The court should be well aware of that.

The LDAP incompatibilities are being used to take control of internet directory services in general. Directories are specialized databases which are very useful for maintaining remotely accessible user information. The Microsoft version of LDAP is at the core of their Active Directory product and .NET services.

The more computers an organization runs, the more it has a need for a directory in order to maintain the computers and network efficiently. Most companies are forced to run Microsoft operating systems for word processing, spread sheets, or other applications. Microsoft operating systems, by speaking a special version of LDAP, force those organizations to use a Microsoft directory product (Active Directory) or a Microsoft directory service (Passport and .NET). Both of these products are designed to operate well only with other Microsoft products. The proof is that they could have used the standard LDAP protocol without proprietary extensions.

Kerberos is a transaction protocol for securing the data exchanged between computers. Controlling the security protocols and keeping them secret enables Microsoft to prevent any non Microsoft product from using the information. It was mathematically proven, back in the 1970s, that secret protocols do not lead to greater security. Subverting Kerberos must therefore support a business goal. The message is that by controlling the protocols for exchanging data, Microsoft controls who and what may access that data. That is a major threat when coming from a monopolist.

**MTC-00017439**

From: Moffitt, Garrett J  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 1:13pm  
Subject: Microsoft Settlement

To whom it may concern,

I am writing this email as a response to the Microsoft Settlement. I feel that the remedies proposed are inadequate as a way to re-establish fair competition in the software industry.

To bring back competition to a level it was 15 years ago, Microsoft must release ALL its API's in time for other companies to make the appropriate changes and make releases. The ruling, as it stand now, does not give companies enough time to make the changes required to stay competitive. Competitiveness should be about the quality of software, not about making changes that could effect up to 90% of the PCs in the US in a way that prevents competition.

Another problem with the proposed remedy is that computer manufactures will be prohibited from selling computer that have Publicly Available Software installed on it.

To create real desktop competition, Microsoft must be forced to release the

specifications to all products that are part of there Office package. These should include, at a minimum, Word, Excel, Outlook and PowerPoint. Doing so would allow business and home users a reasonable opportunity to chose what products they want to run, instead of being forced to use Microsoft's "Office".

To sum up, the only way to actually get real competition going in the computer industry is to force MS to release all there APIs in a timely manner, allow computer manufacturers the opportunity to install Publicly Available Software without penalty from Microsoft's License, and to completely open up Microsoft's "Office" product for not less then 10 year. I believe this must be done for the sake on the consumer.

Thank you for your time,  
Garrett Moffitt

Subject: Microsoft Settlement

Department of Justice Representative,

I believe the proposed settlement with Microsoft to be insufficient in protecting consumers and other businesses from the tactics of Microsoft. In brief, I believe the settlement does not go far enough to insure that future versions of Microsoft operating systems and products can not evade the terms of the settlement.

I also believe that disclosure of API's (including the Win32 API and future OS API's) and file formats (specifically Office, but not limited to the Office products) should be required and very few limits placed on their use. These are critical pieces of information for competitors to design products that interoperate with Microsoft products.

I have submitted my name electronically to be added to an Open Letter. The letter can be found at the following URL: <http://www.kegel.com/remedy/letter.html>. I endorse the recommendations presented in the Open Letter of Dan Kegel and request that the Department of Justice read and consider the options presented.

There must be more considered wording in the settlement so that Microsoft can not evade the intent of the settlement. Past history says that they will look for any loop hole to get around constraints placed upon them. They operate by the letter not the spirit of the settlement.

Thank you for your time and consideration.

From: Neil Rotstan  
To: Microsoft ATR  
Date: 1/23/02 1:12pm  
Subject: Microsoft Settlement

To whom it may concern:

As a co-founder of a small computer and network services company, which primarily

maintains networks, computers, software, and other related equipment for small businesses, it might appear that a market dominated by a single vendor would be in our favor. After all, it would mean a common platform with well-known issues that my company could quickly become experienced with and skilled at troubleshooting or preventing. However, we feel that such a situation is not at all to our advantage or, most importantly, that of our clients. Many small businesses have unique needs and very restricted budgets. Sure, it's the Microsofts, Fords, and Walmarts of the world that get all of the attention. But what really drives the business economy are the myriad small and home-base businesses operating on the hard-earned savings of a few individuals. For most of these, it's critical that they minimize the costs of their computing infrastructure while maximizing its benefit, usefulness, and performance. And let's face it: the biggest vendor is rarely the cheapest or the best. Most of my clients want to utilize alternatives wherever possible, because they're usually cheaper and better—sometimes even free and superior. Competition in the market place not only provides a better opportunity for my clients to choose a configuration of hardware and software that works best for them, it also gives my company an opportunity to provide that service. It makes everybody happier all-around.

It's easy to believe that the effect of lack of competition in the software market is limited to software. But its not: it's incredibly widespread, and very detrimental. Not only are consumers and small businesses deprived of choice, and not only is Microsoft given the opportunity to produce poorer software and charge higher prices, but it also turns services such as those offered by my company into mere commodities. After all, if everyone has the same computing configuration, and if everyone is an expert in it, then what difference does it makes who does the work? Viable choices and alternatives let my company differentiate ourselves and make our clients happier in the process.

Most of all, competition benefits those who do decide to use Microsoft products exclusively. Because once people have a viable choice, and Microsoft recognizes this, then it must suddenly work to improve the quality, price, and attractiveness of its products—something it hasn't needed to for quite a while now.

I urge you to not allow Microsoft to walk away from this and continue business as usual. As technologies continue to integrate with each other and our society, computing will become even more critical to the success and everyday life of businesses and consumers. No matter who creates the innovative products and services to bring it all to us, Microsoft will eventually note that it's profitable and leverage its monopolies to bully itself into the niche and smother the innovators and creative thinkers. And that's not good for anybody but Microsoft.

Thanks for your time,

Neil Rotstan

Under the Tunney Act, we wish to comment on the proposed Microsoft settlement. We agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents?

This can scare away potential users. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux!

(Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional 'white box' OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism. We also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,

**MTC-00017443**

From: Tim Huffman  
 To: Microsoft ATR  
 Date: 1/23/02 1:15pm  
 Subject: Microsoft Settlement

I respectfully submit my comments on the proposed settlement in the case of United States v. Microsoft Corp. Unfortunately, I feel that the proposed settlement does little to put an end to Microsoft's monopoly, and has no provisions for enforcement.

I would strongly recommend that Microsoft be forced to publicly document the API's for it's various Windows operating systems, and that it be required to make publicly available any changes to those API's at least six months before releasing software based on those changes.

Publicly documenting the Windows API's does not mean that anybody could easily replicate Windows or reverse-engineer it, but it would mean that other Independent Software Vendors (ISV's) would be able to compete on equal ground with Microsoft's own software running on Windows. This is an effective solution because while it still allows Microsoft to innovate and create new products, it also means that Microsoft cannot further leverage its monopoly by giving it's other projects unfair access to secret software code.

Thank you for your time, and thank you for considering my opinion.

**MTC-00017445**

From: John Bryan  
 To: Microsoft ATR  
 Date: 1/23/02 1:17pm  
 Subject: Microsoft Settlement

Under the Tunney Act, I need to comment on the proposed Microsoft 'settlement.

I am writing as an individual consumer, who is greatly concerned about the current and future state of the technology industry in the United States and how it can hinder or elevate the well being of everyone around the world.

That Microsoft was found to be so egregiously, blatantly anti-competitive over many years, to be brought before anti-trust charges twice now, and this most recent trial so clearly demonstrating the need for genuine significant action to be taken to stop Microsoft's continued anti-competitive practices, for which an en banc Appeals Court agreed with the Findings of Fact, and then to have this Casper Milktoast of a "settlement" at the hands of a new Executive administration, and concomittant head of Department of Justice, is itself a crime against the citizens of the United States of American, present and future.

How dare you!?! How could you!?! I can tell you I am voting anything but Republican

until this is rightly resolved. And I am an old Reaganite!! This sham of a settlement is a disgrace to the justice system at the highest level, and demonstrates that corporate power carries more weight with those that serve this country as civil servants, than the true interests of the people. I am outraged.

I most emphatically agree with the problems identified in Mr. Dan Kegels analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), summarized here:

- The Proposed Final Judgement doesn't take into account Windows-compatible competing operating systems
- The Proposed Final Judgement Contains Misleading and Overly Narrow Definitions and Provisions
- The Proposed Final Judgement Fails to Prohibit Anticompetitive License Terms currently used by Microsoft
- The Proposed Final Judgement Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft
- The Proposed Final Judgement Fails to Prohibit Anticompetitive Practices Towards OEMs
- The Proposed Final Judgement as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written ALLOWS AND ENCOURAGES SIGNIFICANT ANTICOMPETITIVE PRACTICES TO CONTINUE, would delay the emergence of competing Windows-compatible operating systems, and is therefore NOT IN THE PUBLIC INTEREST. It should NOT be adopted without SUBSTANTIAL REVISION to address these problems.

With all Earnestness, Urgency, and Sincerity,  
John Bryan

To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 1:14pm  
Subject: microsoft settlement

I am a tax paying citizen of the United States who is extremely disappointed with the proposed Microsoft settlement. This settlement may greatly hinder future development of the computer industry, and represents a great miscarriage of justice. I don't believe the settlement will restore competition in the computer industry that has been eliminated by the illegal actions and practices Microsoft has already been convicted of.

#### MTC-00017447

From: Jeffrey Polaski  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 1:14pm  
Subject: Microsoft Settlement

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo.

Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Jeff Polaski

#### MTC-00017448

From: david sowerby  
To: Microsoft ATR  
Date: 1/23/02 1:20pm  
Subject: microsoft settlement

A unanimous US Court of Appeals found that Microsoft had illegally used its monopoly position by preying on other software developers and computer manufacturers. Microsoft operated illegally, and any settlement that does not reflect this will just allow the company to continue this behavior. Unfortunately the proposed solution does not do this. In many ways it reinforces Microsofts monopoly. If they were found guilty of a crime (and they were) punish them and make sure they do not commit the same crimes in the future. This governments policy of allowing large corporations to do whatever they feel like with no worries about the law has got to stop.

Thank you  
David Sowerby

#### MTC-00017449

From: James Cheezem  
To: Microsoft ATR  
Date: 1/23/02 1:15pm  
Subject: The Microsoft settlement is unacceptable

To Whom it may concern:

After reading the proposed settlement in the Microsoft anti-trust case, I noticed many areas that do not assign damages that are in line with the damage that Microsoft has caused. As an independent software developer, I have many issues as to the quality of Microsoft's products. If I cannot have full and unfettered access to the Application Program Interface (API) of a specific operating system, I cannot use the full potential of the system that is running this OS. Therefore, Microsoft encourages badly written software by obscuring the API from scrutiny. Section J of the settlement's prohibited conduct section addresses the API and provides Microsoft a loophole to keep this important information to themselves:

In my opinion, this is the one area of the API that should be forced to be open. Given Microsoft's poor performance in the area of security in the past, they should not be allowed to hide anything behind the mantle of "security concerns."

Thank you for your time.  
James Cheezem

Date: 1/23/02 1:15pm  
Subject: Microsoft Settlement

Please reconsider the proposed final judgement with Microsoft, for the following reasons, as stated at <http://www.kegel.com/remedy/letter.html> The PFJ doesn't take into account Windows-compatible competing operating systems The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ as currently written lacks an effective enforcement mechanism.

Thank you,  
Herb Robinson

Subject: Microsoft Settlement

I must tell you that the proposed MS settlement most be changed. I've work in the Computer industry for over 15 years and the entire time I have had to put up with MS's unfair practices. I remember 10 years ago when MS was in the practice of 'Shipping' press releases for products they had not even started to develop only to stall companies from looking at competing products.

It really does not matter what you impose on MS because, just like in the past, they will not follow any rules placed on them.

They need to be stopped and be told they cannot ignore the courts as they have in the past.

From: Bill Gordon  
To: Microsoft ATR  
Date: 1/23/02 1:15pm  
Subject: Microsoft Settlement

Hello,

I'm writing to say that I believe that settling with Microsoft is a bad idea. It is clear to me that Microsoft acted in violation of the Sherman act and that action should be taken to prevent further violation. Even now, Microsoft is pursuing "business as usual" and, after a settlement, we can expect it to continue. For example, the pricing for Windows XP is ridiculous given that it is for all practical purposes functionally equivalent to Windows 2000 with a few new applications thrown in.

Just some thoughts,  
Bill Gordon  
Vancouver, BC,

From: Bill Davis  
To: Microsoft ATR  
Date: 1/23/02 1:17pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous

actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Bill W. Davis

**MTC-00017462**

From: Paul Cox  
To: Microsoft ATR  
Date: 1/23/02 1:18pm  
Subject: Microsoft Settlement

I am writing to voice support for a stonger DOJ final judgement in response to Microsoft's anticompetitive practices.

Microsoft's established domination in the desktop market is now slowly working it's way into other software markets: digital media distribution, embedded appliances, video game and television entertainment, and others. Certainly "innovation" should be permitted and even encouraged, but leveraging on an established monopoly to raise its new products and services above normal market forces is beneficial only to those who gain wealth by the enlarged monopoly. The consumer, the market, and real innovation suffers. If the remedy the court seeks does not sanction on the court's own terms, the anticompetitive practices that Microsoft continues to this day, the effort will be worst than futile. A weak final

judgement will say to Microsoft and other present and future monopolists that gaining an illegal monopoly has its collateral damage, but the effort is worthwhile and sustainable. That could have a terrible effect on our free market system.

All of the terms in the settlement should be defined purely by DOJ and not negotiated by Microsoft. The DOJ should be "breathing down their necks" for years after the settlement to ensure that Microsoft is in compliance and the burden should be on Microsoft to show immediately and completely that they have not repeated their illegal conduct. And the punishment from wavering from the law a second time should be established in this final judgement; and it should be severe, all-encompassing and swift.

Please revise the proposed final judgement based on the following issues:

- \* The PFJ doesn't take into account Windows-compatible competing operating systems
  - \* The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft
  - \* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions
  - \* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft
  - \* The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs
- Thanks for your time,  
Paul Cox

**MTC-00017465**

From: Michael Greenberg  
To: Microsoft ATR  
Date: 1/23/02 1:18pm  
Subject: Microsoft Settlement

As a programmer, the way in which Microsoft defines its APIs is incredibly important to me. The current settlement doesn't require advanced technical notification. If I am not informed of Microsoft's changes, it hurts my business.

In addition, the majority of my computers do not run Windows, though I do develop for

it (most products are in fact cross-platform, allowing the client to choose). The current settlement does not open up Microsoft document standards—which are more important to the common user than APIs—and allows Microsoft to insert deliberate incompatibilities (as it has done in the past [Word 97 to Word 2000, for instance]) forcing users to upgrade or to at least stick with the Microsoft platform. My ability to work in an environment that I choose is hindered by Microsoft's monopolistic practices, and the current settlement allocates no repair for this.

Most importantly, however, I fail to see any real method of enforcing the proposed changes. While I do not doubt the effectiveness of the Technical Committee in finding breaches by Microsoft, leaving the solution of such practices to the legal system holds no hope for reform. Already Microsoft has spent years contesting the very terms of this settlement, and it is certainly willing (and easily able) to combat every infringement lawsuit.

The above are but three of sundry reasons that the DOJ settlement must be more forceful.

Thank you,  
Michael Greenberg.

From: Achim Wengeler  
To: Microsoft ATR  
Date: 1/23/02 1:17pm  
Subject: Microsoft Settlement January 23, 2002 A.G. John Ashcroft U.S. Department of Justice 950 Pennsylvania Avenue, NW Washington, DC 20530

Dear Mr. Ashcroft,  
I would like to begin by saying that the antitrust suit against Microsoft thus far has not yet affected my business. But I don't know what the future will hold for my technology-based business if litigation was to continue. I believe that the settlement reached between Microsoft and the Department of Justice is a rational and even-handed.

Even though the settlement may seem to stifle free enterprise, it is better to settle this

case and move on to other pressing matters. The settlement implements the establishment of a three-person "Technical Committee," which will monitor Microsoft's compliance to the settlement. Microsoft has also agreed to make all future versions of its Windows operating system to be compatible with non-Microsoft software.

I strongly advise you to put an end to this money-wasting issue. It is a time of peculiar difficulty in our nation's history; it would be beneficial to cut out any unnecessary spending. It is vital that this settlement is finalized.

Sincerely,  
Achim Wengeler  
Director of Special Projects

**MTC-00017469**

From: Will Grzanich  
To: Microsoft ATR  
Date: 1/23/02 1:19pm  
Subject: Microsoft Settlement

Dear Judge,

The proposed settlement is a bad one; please reject it and have the DOJ and the states go back and draft something that will address the facts found in the District court case. A unanimous US Court of Appeals agreed that Microsoft had illegally kept its monopoly position by preying on other software developers and computer manufacturers. The bottom line is that Microsoft operated illegally, and any settlement or resolution of this case should make sure the company cannot continue its anticompetitive behavior. Unfortunately the proposed solution does not do this. In many ways, it actually reinforces Microsoft's monopoly, and does nothing to restrain Microsoft from acting illegally again in future markets.

Indeed, Microsoft has already shown they intend to continue to piggyback off their illegally obtained operating system monopoly to crush more markets. As an example, look at the "give away" of millions of dollars of development effort in their Media Player, which is unnecessarily "integrated" into WindowsXP—and is targeted at the RealPlayer product line, in order to crush it, in the same way they did the Netscape Browser. Microsoft, unlike its competitors, simply rolls the development cost into their illegally obtained monopoly operating system, and undercuts the competition unfairly. Yet the proposed settlement does not address preventing this sort of monopolistic behavior at all. Remember, developing a media player, a browser and other software costs money, and Microsoft leverages their monopoly to mask these costs while smashing competition unfairly. The Circuit court in its 7-0 decision, and lower courts found this "bundling" illegal and monopolistic, yet the settlement does not address this in any sort of meaningful fashion: it allows Microsoft to tightly integrate and bundle its media player, its web browser, and myriad other applications into the Windows Operating System, instead of competing freely against external applications.

Also, the proposed settlement contains no provisions to remedy the unlawful monopolization of the operating system;

nothing that will produce competition. Remember that the Circuit court ordered that a remedy must "unfetter the market from anticompetitive conduct... [and] .. terminate the illegal monopoly", the proposed settlement does nothing of the sort. Its attempt to open the "API" (programming interface) of the Windows operating system will merely reinforce the monopoly, not terminate it as the court called for. Also opening the API is not enough: Microsoft plans only to open a mere a subset.

Complete and full disclosure of ALL the source-code is the only "opening" that would suffice to terminate the Microsoft monopoly. Finally, the proposed settlement does nothing at all to address the issue of effective remedy along side enforcement. the proposed penalties are ludicrous—an extension of terms that they have already violated is hardly a punishment. Fiduciary penalties must be applied, as well as structural ones. Also, the solutions proposed for "competition" are heavily dependent upon Original Equipment Manufacturers for implementation—the same OEMs who are partners and part of Microsoft's business plans (Such as Dell and Compaq). In sum, this settlement is wholly inadequate, and should be rejected and the DoJ and the States should be directed to follow the rulings of the Circuit Court and lower courts when crafting a settlement, instead of ignoring the findings of fact and law, and currying favor with an unrepentant lawbreaking monopolist.

From: David Rysdam  
To: Microsoft ATR  
Date: 1/23/02 1:43pm  
Subject: Microsoft Settlement

Dear Sirs:  
I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-

enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

David Rysdam  
8 Westchester Drive

#### MTC-00017472

From: Paul Gardner  
To: Microsoft ATR  
Date: 1/23/02 1:18pm  
Subject: Microsoft Settlement

To Whom it May Concern,

The proposed settlement is a bad idea. It would enable Microsoft to strengthen it's current monopoly and enable it to do even more damage to the public interest than it already has.

For the good of everyone 3rd parties must be able to produce new and replacement software components for monopolist Microsoft's systems. Toward this end Microsoft must be forbidden from impeding the development, distribution, sale, or use of non-Microsoft components in any way, and further must be required to COMPLETELY disclose ALL component interfaces.

"Component" and "interface" should be broadly defined by the settlement, with specific instances left to the judgement of a disinterested watchdog, NOT Microsoft itself.

Sincerely,  
Paul Gardner  
Software Engineer

#### MTC-00017474

From: Boykin, Dennis  
To: Microsoft ATR  
Date: 1/23/02 1:29pm  
Subject: Microsoft Settlement

I am writing to voice my personal objection to the proposed settlement in this case. As a practicing professional in the information technology industry, I have seen first-hand the damage caused by the anti-competitive actions of the Microsoft corporation.

I have three specific areas of disagreement:

1) Lack of enforcement: The proposed remedy does not, in any fashion that I could determine, deter the Microsoft Corporation from continuing it's monopolistic practices. They have proven, time & again, that it is in Microsoft's best interests to disregard the laws of the United States, and the best interests of the industry. I see nothing in this document that forces them to change the way they do business.

2) Middleware & Interoperability: (Sections III H.3, III J, and specifically III J.2.c) does not take into account that substantial amounts of today's software is developed on a non-commercial basis by nonprofit groups and volunteers. As I read this document, open source groups have no standing, and therefore are at risk to be put out of business by the monopoly. In it's current form, this remedy allows Microsoft to INCREASE it's market dominance, and continue it's monopolistic practices.

3) Veto power: According to the proposed remedies, Microsoft does not need to make ANY API available to groups that fail to meet "reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business." This explicitly gives them a veto over sharing any information with open source development projects as they are usually undertaken on a not-for-profit basis (and therefore would not be considered authentic, or viable businesses). ANY solution that allows the Microsoft Corporation to determine who does, and who does not, qualify to receive API's is unconscionable.

SUMMARY: The Microsoft Corporation has been found guilty of anti-competitive practices; it has settled a similar case ten years ago, and now the government is allowing the guilty party to choose it's punishment? What's wrong with this picture?

I recommend that the judge reject the proposed settlement outright.

REWARDING PUNISHMENT

Posted January 18, 2002 01:01 PM Pacific Time

I'VE RECEIVED A number of requests to address the pending (as of this writing) settlement of the civil anti-trust lawsuit against Microsoft. Under the pending agreement, Microsoft will be obligated to provide hardware and software to thousands of underfunded school districts across the country. The logic, if you can call it that, is that such schools could benefit greatly from receiving the technology they lack.

Undeniably, there is an emotionally compelling case for this. A gigantic company, found guilty of doing wrong, is ordered to help the underprivileged. "We need to do it for the children," cry the politicians. "Think of the children!"

"For the children." That's the phrase politicians in Washington use to justify an action so irrational that it cannot be justified any other way.

How can I properly characterize this solution? It is like a court ordering a convicted drug dealer to give out more free samples of heroin to underprivileged children to ensure that their poverty does not deprive them of the opportunity to become addicted.

Sure, public classrooms need more technology. And it is especially important that children who don't have as many opportunities in life get assistance. But that is not adequate justification for assigning the fox to guard the hen house.

Personally, I like the counterproposal put forward by Red Hat: Let Microsoft donate money for computing resources for underfunded schools, but let those donations go toward hardware only; then populate those machines with open-source software.

Why open source? Consider the future: What will the schools do when they need to upgrade? If you give schools Microsoft software, they will be caught in the endless upgrade cycle that has characterized life in the Microsoft world. Those upgrades will cost money, money that these targeted school districts, by definition, cannot spare.

Instead, arming schools with open-source software will have two benefits. First, it will set schools down a long-term path that they can afford. The cost of obtaining open-source upgrades is trivial. Without low-cost software upgrades, all those nice shiny computers run the risk of becoming boat anchors in short order. I'm sure someone is saying, "But open source is too difficult to administer!" Such does not have to be the case, but I'll deal with that issue in a future column.

Also, the Red Hat proposal does not reward Microsoft in the long term. If a company is convicted of overpowering markets, why would you reward them by putting one of the few markets they don't lead under their control? This sounds a lot like a seed-unit program for education, not the penalty imposed from losing a trial.

Corporate misdeeds are supposed to earn punishment, not long-term investment opportunities. I believe we would all be better off if the courts acknowledged the difference between the two.

From: Phillip Padden

To: Microsoft ATR  
Date: 1/23/02 1:19pm  
Subject: Microsoft Settlement

I have read the proposed settlement and feel it does not truly represent the will of the people on this matter. From my experience most windows users belong to a camp that thinks dammed if we do dammed if we don't. They do not believe there is an adequate alternative to windows. This proposal does not face this issue at all. MS will continue to hold the power of a monopoly as long as the consumer believes they are the only thing, alternatives must be made visible to the public. Until the public believe that alternative exist MS must be watched. For this reason I suggest an amendment to the Sect "V. Termination" of the proposal. The ground for termination of the TC would not be five years with a potential one year extension, instead the ground for termination would be 5 years with a potential two year extension following the fist fiscal quarter when Microsoft's Primary OS no longer has a majority of the market. That is to say when 50 % or more of the general populace use an OS other Microsoft XX. Microsoft can still maintain the largest piece of the pie, however it's piece can not exceed 50%.

From: Rick Wittstruck  
To: Microsoft ATR  
Date: 1/23/02 1:19pm  
Subject: Microsoft Settlement

In regards to Microsoft settlement, I feel that Microsoft has clearly abused its monopoly power over the computer industry and harmed U.S. consumers. Microsoft has been found to be at fault in a court of law, and now it's time to determine the penalty. The individual consumer has little ability to protect themselves against gigantic corporations with billions of dollars in the bank. That's where the U.S. government comes into the picture.

You are the only hope of the U.S. citizen in protecting fair commerce. If the U.S. government willing lets corporations have their way (and many people already think this is happening) then the government may find someday that the great unwashed masses have turned against it. We pay taxes for a government that represents the citizens, not corporations. In the most recent presidential election, approx. 50 million voted Democratic and another 50 million voted Republican. Those are large numbers of voters, but even the combined number of voters of approx. 100 million is smaller than approx. 180 million Americans who chose not to vote.

Letting Microsoft off the hook will not do much to convince Americans that their government is OF, BY, and FOR the people, not corporate profits. The U.S. government works for its citizens, and if the courts have found Microsoft business practices harmful to citizens, then punishment is required. Do NOT backpedal, debate, or appease Microsoft. They are so feared by competitors that some refuse to comment on Microsoft's business practices! This is not the American way of doing business, by any stretch of the imagination.

Firmly believe Microsoft should be PUNISHED to the full extent,

To Whom It May Concern,  
The proposed settlement with Microsoft shows me that:

- 1)Microsoft can buy anything they want
- 2)Justice is dead in America unless you have big money to purchase it with
- 3)The executive branch of government is more interested in campaign contributions than punishing wrongdoing
- 4)The Microsoft monopoly, with government support, will continue it's stranglehold on the computing industry
- 5)The previous government "settlement" with Microsoft shows that Microsoft just says what the lawyers want to hear, and go ahead and do whatever they damn well please.

Hello,  
I'd like to take a few moments to comment upon the proposed Microsoft Antitrust Settlement as allowed for by the Tunney Act. I wish I had more time to research all of the factors that one comes across in trying to intelligently articulate an argument against the proposed settlement but my time is limited. However, having been a user/administrator of Microsoft software for over a decade, and having followed the DOJ case against Microsoft from the very beginning, as well as reading through the proposed settlement itself I have to say I have enough information to offer an informed opinion.

The proposed settlement is way out of proportion for what Microsoft has done to it's competitors, customers, as well as the computer software market as a whole. The proposed settlement is nothing more than a mere "slap on the wrist" and merely \*encourages\* Microsoft to continue its grossly blatant abuse of its monopoly powers without fear of any responsibility for its crimes. The fact that these nine states can even consider this to be a settlement is a

completely inexcusable waste of taxpayer money.

The problem has already been identified and affirmed \*twice\* in court. Microsoft IS a monopoly. The solution is to allow others to fairly compete with Microsoft so that competitive forces (i.e. consumer choice) drive the computer software market, not Microsoft's monopoly. I didn't see anything within the proposed settlement that I believed would change Microsoft enough to even make a dent in the monopoly it currently manages. Until there is some real competition in the computer market security and innovation within this market will continue to be abyssmal. Like any monopoly Microsoft only cares about its profits. As it stands, Microsoft can pretty much charge whatever it wants for it's software, the software market has little, if any input into the equation. The only way to change the monopoly's behavior is to make it unprofitable.

Again, there is nothing in this settlement that will change Microsoft's behavior because there is NO financial incentive for Microsoft to do so. I greatly urge you to reject this proposed settlement on the basis that it will neither change Microsoft's behavior nor noticeably limit Microsoft's ability to continue managing its highly profitable monopoly. To consider this agreement to be a settlement in the US citizens' best interest is a grave injustice.

Thank you for your time,

Subject: Microsoft Settlement  
January 23, 2002

As a someone who has made their living developing software for the last 16 years, most of it on Microsoft platforms, I would like to offer my opinions on the proposed settlement in the Microsoft antitrust case.

Several weeks ago I received a phone call from someone with Microsoft's "Freedom to Innovate Network." This person asked if I had heard about the proposed settlement, and after asserting that prolonged litigation would cost taxpayers money and be bad for consumers, he asked my opinion. When I declined to give it, he politely ended the call.

I write today because I believe the proposed settlement falls far short of what is necessary to restrain Microsoft and foster competition in the software industry. Moreover, I am deeply concerned about Microsoft's expanding reach even outside the industry. It is clear that their "Freedom to Innovate Network" spreads propaganda, manipulating public opinion for political gain. I expect that many of the comments you have received are the direct result of these manipulations. Will dissenting voices even be heard above the din Microsoft has created?

I do believe that prolonged litigation would be costly, and that Microsoft would fight with tenacity. Nonetheless, this fight is necessary. Not only does the proposed settlement fail to deprive Microsoft of the

fruits of their past illegal practices, it is weak on enforcement for the future. Why should Microsoft refrain from further violations? By the time violations are caught and acted upon, the damage may be irreparable to competitors and the market may be locked in to yet another Microsoft-entangled technology. As a software developer, freedom to innovate means choosing the best technology for the job. That implies choice.

Microsoft is free to innovate technology. They should not, and must not, be free to innovate new ways to skirt antitrust laws and illegally crush their competitors.

They should not, and must not, be free to manipulate any settlement to their advantage.

Respectfully,  
David John Ruske

The proposed Microsoft Anti-Trust Settlement is a very, very bad idea. I am a computer professional employed by the University of Delaware and

I feel I must write and submit my comment on the proposed Microsoft Anti-Trust settlement.

The proposed remedy to give schools more Microsoft products is an unbelievable miscarriage and wholly inappropriate way to punish a company for monopolistic behavior! This only helps Microsofts monopolistic stance, and denies the public any right to choose the educational tools for their school systems.

There are far too many loopholes allowing Microsoft the ability to declare their development API's closed or "security related" hurting all but "sanctioned" development on their products. The proposed settlement does very little to provide any remedy to the public for the actions committed by Microsoft to the public.

Subject: Microsoft Settlement

Hello,

I have been looking at the proposed settlement in the Microsoft antitrust trial and have become very concerned that it does not address important issues. In the end, this settlement fails to restrict Microsoft's anticompetitive behavior and would be a very negative outcome of this case for everyone except Microsoft. I would like to reiterate comments made by Dan Kegele in his essay that can be found at the link below: <http://www.kegele.com/remedy/remedy2.htm>

The problems identified above with the Proposed Final Judgment can be summarized as follows:

\* The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

\* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-

Box—operating systems that all use the Win32 API and are advertised as being “Windows Powered”.

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

\* The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

\* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

\* The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

\* The PFJ as currently written appears to lack an effective enforcement mechanism. Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and

would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

Please do not allow this settlement to stand in its current form as it does little, at best, to limit Microsoft's anticompetitive behavior.

Thank You,  
Matthew D. Sienko

From: Jeremy Tietsort  
To: Microsoft ATR  
Date: 1/23/02 1:21pm  
Subject: Microsoft Settlement

I would like to voice my disapproval of the proposed judgement. There are many areas where it does not serve the public interest, but I will point out one in particular.

There is no mention of remedies for the use of undocumented file formats. Microsoft uses the file format of its popular Office programs for two things. First, by changing file formats with each version, they can ensure that people using two different versions of the software will not have seamless interoperability. By doing this, if one person upgrades, then the person that they are communicating with must upgrade also.

Second, competing software currently has to figure out each version of the Microsoft file formats in order to be interoperable with Microsoft Office. This practice usually means that they are months or years behind in trying to keep up with Microsoft's ever changing format. By forcing Microsoft to publish its file formats, other competing software packages would have a chance to be interoperable and remove the current Applications Barrier to Entry.

Dear Sir,

Considering the past record of Microsoft Corporation in failing to obey agreements concerning their abuse of their monopoly position we feel that the proposed final judgement is woefully inadequate.

Microsoft has clearly abused their monopoly position in several areas and has never shown any sign of changing their behaviour. The proposed final judgement suggests a body checking Microsofts behaviour with two out of the three appointments to that body being suggested by Microsoft, and no actual power.

This is only one of the many problems with the proposed final judgement, but it is bad enough.

Yours,

Adam and Christie Morris, Milwaukie, Oregon.

To: Microsoft ATR  
Date: 1/23/02 1:14pm  
Subject: Microsoft Settlement

Hello,

I am of the opinion that the Proposed Final Judgment (“PFJ”) does not go far

enough to deter Microsoft from engaging in anticompetitive conduct. My reasons for this follow:

o The PFJ's overly narrow definitions of “API” and “Microsoft Middleware Product” is likely to result in important Microsoft interfaces remaining secret and, therefore, anticompetitive barriers.

o The PFJ does not obligate Microsoft to release information about undocumented file formats. Undocumented Microsoft file formats are a significant Applications Barrier to Entry.

o The PFJ does not obligate Microsoft to list which software patents protect the Windows APIs. The threat of infringement litigation will scare away potential users.

o In the past, Microsoft intentionally created incompatibilities to discourage the use of non-Microsoft operating systems, e.g. the 1996 Caldera v. Microsoft antitrust lawsuit. The PFJ does nothing to prohibit these kinds of intentional incompatibilities from being used to create Applications Barrier to Entry.

Best Regards,  
Bill Tonkin

**MTC-00017497**

From: dalbuc@netscape.net@inetgw  
To: Microsoft ATR  
Date: 1/23/02 1:22pm  
Subject: Microsoft Settlement

I am opposed to the current PFJ.  
The Court of Appeals found that Microsoft has a monopoly on Intel-compatible PC operating systems and that monopoly has significant barriers to entry. The Court also found that Microsoft illegally maintaining its monopoly, according to the Sherman Act, by imposing licensing restrictions on OEMs and ISVs (Independent Software Vendors).

These violations constitute a major breach of anti-trust laws and yet the punishments found in the PFJ are so weakly constructed as to amount to little more than a slap on the wrist.

First, the PFJ does nothing to aid potential competitors in the Windows OS world. The critical APIs competitors need are not required to have advance release. These competitors would not, most likely, meet the middleware requirements of having a product meet MS defined technical requirements seven months before the final beta test of a new version of Windows. So, competitors will have the burden of delivering working software BEFORE MS has to give them the information needed to do so.

Equally important, many APIs do not, or at least MS could argue they do not, meet the narrow API middleware definitions.

Second, MS is under no requirements from the PFJ to release technical information on their proprietary file formats. Formats like .doc, .xls and .ppt form the core or (respectively) Word, Excel and PowerPoint.

MS's productivity software monopoly remains wholly unchallenged in the PFJ as result of not opening these formats.

Finally, MS "broke" its own OS before in order to prevent competitors' systems from working. This references the Caldera v. Microsoft case in which MS was found to have rigged MS-DOS to prevent a competitors DR-DOS from running middleware applications without getting errors. The PFJ has nothing in it to stop such behavior from occurring again. In a monopoly setting if MS tweaks their OS to not run competitors software most people will assume there is an issue with the competition since "every thing else" runs right on MS's operating systems.

The PFJ fails to do the very things an anti-trust settlement should do—either break up a monopoly or else restrain the monopoly in such a way to create competition. From a philosophical sense, the PFJ fails because it fails to deliver the kind of competitive free market environment that gives the most benefit to consumers and instead allows a single company to define for the consumer what is progress and innovation.

The settlement must be rejected in its current form.

Sincerely,  
Craig Fisher

Date: 1/23/02 1:22pm  
Subject: Microsoft Settlement

This settlement is a bad idea . . . Let me count the ways. First it isn't harsh enough to even count as a slap on the wrist. Secondly it sends the wrong message. Thirdly it provides no remedy to any of the hundreds of companies who have been damaged or destroyed by Microsoft. Fourthly because the punishment is so weak it fails to discourage further evil by Microsoft.

Fifthly it actually helps Microsoft to cement its monopoly by giving it entrance to schools which have traditionally been the realm of Apple. Both you and I have a limited amount of time, so I'll suspend my counting of the ways at this point.

Sincerely,  
Jason Shupe

**MTC-00017500**

From: D Scott Grove  
To: Microsoft ATR  
Date: 1/23/02 11:21am  
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

From: Matt  
To: Microsoft ATR  
Date: 1/23/02 1:13pm  
Subject: Microsoft Settlement

To Judge Kollar-Kotelly and whom it may concern,

I fear the Microsoft antitrust trial is deeply misunderstood, by the prosecution and the public at large. The consequences could be dire if a settlement is reached too early and in Microsoft's favor. This case has a lot in common with the trials of the railroad monopolies. By their end, public infrastructure in the form of superhighways and was at hand. People no longer depended on the railroads as the only means of transportation cross country, and federally funded interstate roads provided an alternative to moving people and goods only by tracks. The introduction and assistance of cross country roads from the government helped resist the price fixing from the railroads and gave people a choice. Ultimately that choice resulted in heightened interstate commerce and heavy population of the west coast of the United States.

Like the railroad companies, closed source operating system companies will always gravitate towards monopolistic unified control. This is in part because of the difficulty of building a new operating system

infrastructure (building a new set of cross country tracks) and partially because it lowers the parent companies costs. Any remedy must be ongoing until the United States congress sees fit to address the cost of building, obtaining, or securing a open source software infrastructure.

Any assistance from the government helps drive back the very real market force of fear of obsolescence, which helps repair the psychological damage caused by previous competition being wholly futile. Compare the argument, "why should I buy a car when there are plenty of trains and their are no roads" to the modern application obsolescence quandary, "Why should I buy an operating system when there are no applications, and Windows is free?" (Windows is not free, but that is the public perception).

Like moving goods, only when people can choose to manipulate information in the fashion which proves most efficient for them will the free market flourish. At the least, Microsoft license terms and prices must be predictable and uniform for however long it takes for a federal infrastructure to be made readily available for use by Americans. Then the market can choose once again.

Thank you for your time.

#### MTC-00017505

From: Ben Wilson  
To: Microsoft ATR  
Date: 1/23/02 1:29pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses.

This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

To a more detailed point, there is no provision against Microsoft's non-documented "closed" file formats. One thing that will force a user into using one certain program over another is a closed format information. Let the application that uses that data be the divining point, not the format of the information.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: Helen C. O'Boyle (091)HCOA(093)  
To: Microsoft ATR  
Date: 1/23/02 1:23pm  
Subject: Microsoft Settlement  
CC: Helen C. O'Boyle [ASI]  
Greetings,

I am writing to note my dissatisfaction with the proposed remedies in the MS anti-trust case. I am a consultant who works as a software developer, network support engineer, educator and writer. My customer base generally consists of smaller organizations and/or individuals.

I am a Microsoft fan. I use their products daily, recommend them to customers, have an equity stake in the corporation and am a Microsoft Certified Systems Engineer and Developer. At the same time, I recognize that the company has occasionally overstepped its bounds in its enthusiasm to be at the top of the charts, and that enough people take substantial offense at this that unless SOMETHING is done to put an end to the arguments, the industry (and the government) will waste tremendous amounts of resources pursuing Microsoft without accomplishing anything. I therefore feel that some degree of remedy that discourages anti-competitive behavior while not constraining

Microsoft's ability to add new, innovative functionality to its products would be beneficial to both Microsoft and the other parties involved in this legal proceeding, so that all concerned can stop spending money and intellectual capital on this.

Unfortunately, I cannot support the proposed remedy as written, for a variety of reasons both in regards to exact content, and in regards to the philosophical approach it seems to be trying to take. One specific clause of the remedy document with which I personally take issue is:

#### III. Prohibited conduct

D. Starting at the earlier of the release of Service Pack 1 for Windows XP or 12 months after the submission of this Final Judgment to the Court, Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product, via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product. In the case of a new major version of Microsoft Middleware, the disclosures required by this Section III.D shall occur no later than the last major beta test release of that Microsoft Middleware. In the case of a new version of a Windows Operating System Product, the obligations imposed by this Section III.D shall occur in a Timely Manner.

The reasons I take issue with this directive are:

1. IMPRECISE SPECIFICATION OF COST. The directive does not specify a cost for this information. It is well known that MS provides access to key technologies, including Windows program source code itself (the MS Crown Jewels, to hear them speak of it) to its most significant customers. What if MS decides to limit access to the materials specified in (D), by requiring that companies spend \$200,000/yr on MS products before they can have access to this material, or by charging \$50,000 for it? Smaller shops, not having the \$ to invest in procuring details of API's that may or may not be useful in their development efforts, would be squeezed out of access to these details, thus limiting MS' potential competition to a "short list" of big businesses. (Tell me, did the AOL lobbyists, Sun and Red Hat jointly recommend this clause that carefully omitted the cost of the API information? It seems to me that it could unfairly provide a near-monopolistic advantage to those large companies at the expense of smaller ones like mine, due to a significant financial barrier of entry to the competitive information.)

2. IMPRECISE SPECIFICATION OF WHAT MS SOFTWARE IS SUBJECT TO THESE CONSTRAINTS. It leaves the door open for MS to define the boundary between Middleware and applications anywhere it chooses. So, Microsoft will use its low-level knowledge of Windows internals to build middleware-like functions into applications themselves, instead of in a separate middleware layer, and insist that those mechanisms which are part of the applications are protected as application source code, not part of the OS or

middleware. Even worse, if they embed middleware into the operating system itself, the API's that communicate between the lower levels of the OS, and the former middleware become no longer subject to disclosure.

3. IMPRECISE SPECIFICATION OF TIMELINESS. The text states that the obligations "shall occur in a Timely Manner". Who will determine what a "Timely Manner" is, and how long (and how much government/taxpayer money) will it take to do so, when Microsoft puts off providing the info? I believe that there needs to be a hard-and-fast deadline stated in the proposed remedy, that is not open for debate/re-interpretation later. For example, a more specific statement might be, "no later than the last major beta test release of any Windows Operating System product/update, and no later than 90 days prior to the final release of that Windows Operating System product/update, whichever is earlier". To get around the restriction in the original proposed remedy, Microsoft could release the "last major beta test release" the DAY before the final product is available for sale, thus giving its applications groups multiple months of head-start in using new API information, before third parties can incorporate the new API information in their own applications. In addition to nailing down the time limit involved, the remedy should recognize the ability for MS to change these API's via "Service Packs" or "Updates" to the Windows Operating System, and explicitly include the changes that result from those updates in this remedy—or things will start to slip through the cracks without being disclosed, as the court intends.

Notice that the common thread here is IMPRECISE, because it is that lack of precision that will render this portion of the remedy at best ineffective and at worst unenforceable. We've seen over and over again during this case that interpretation of even the most unambiguous statements is cause for debate by one side or the other. There's thus ample incentive to try to make the remedy as specific as possible, and as non-open to multiple interpretations as possible.

In regards to the philosophical approach that this proposed remedy seems to take. . . . Really, I (and many others in the tech community) want to see a remedy that resolves this issue for the foreseeable future, because it's a distraction. That so much of this remedy appears to specifically address the browser wars, which Microsoft won years ago, is unfortunate. Microsoft has already conquered that territory with a superior product, and most savvy users wouldn't run any browser on the Windows platform other than Microsoft's. I'm sorry if that makes AOL's investment in Netscape a bad call on their part, but it's a fact of life that bad investments sometimes happen in business (especially lately, in anything related to the Internet!).

I truly believe that full disclosure of Windows and middleware API's, and how to use them, will go a long way toward preventing something similar from happening in the future, in another application domain. With disclosure, third

parties will have the same access to timesaving pre-built functions that Microsoft's internal application developers have, and it'll be that much more challenging for Microsoft to produce an application that is leaps and bounds, months or even years, ahead of its competition, leaving the competition as far back in the dust as Microsoft left Netscape several years ago. It's still quite doable, but the bar would be raised. A company being challenged to succeed based on innovative uses of intellectual property is just the thing to create wins for consumers, and thus for the industry at large. The FUTURE, not hand-wringing over the past and trying to make something up to AOL and/or Sun that realistically cannot be made up at this point, and which was at least in part a problem to them because of their own suboptimal strategic decision-making, is what the remedy should be about. Thank you for considering my comments on this matter,

Helen C. O'Boyle

Subject: Microsoft Settlement

Pursuant to the Tunney Act, I wish to comment on the proposed Microsoft antitrust settlement. I make these comments as a software engineer with 17 experience in the field, having developed software for many applications, including Microsoft's Windows, Apple's Macintosh OS, Linux and other flavors of UNIX. These comments relate to the Proposed Final Judgement (<http://www.usdoj.gov/atr/cases/ms-settle.htm>) in US v Microsoft. I urge rejection and abandonment of the proposed final judgement, as an ineffective instrument which will have make no perceptible improvement to the state of competition in the relevant computer software industries, while potentially leaving Microsoft in a position of still greater power than without the settlement. I further suggest that at the behest of the current presidential administration, the prosecution in this case is being made (directly or indirectly) to deliberately scuttle a successful case brought against this monopolist.

This settlement is almost perverse in its empowerment of the convicted party to dictate the details of its own "punishment." Microsoft will be left in a stronger position as a consequence of this, free in most cases to selectively exempt itself from enforcement the prohibitions levied by the judgement.

The settlement does not even adequately address in its particulars the relevant list of operating systems in existence today—for example, exempting the most popular Microsoft operating systems, the Windows 95, 98 and ME series, from the definition of "Windows Operating System Product." It also excludes likely future avenues of exploitation in other sectors of the computer industry, most notably the mobile and embedded computing sectors, by ignoring all MS products in these areas, and consequently exempting them from defense,

even in this settlement's inadequate and ineffectual fashion, from Microsoft monopoly practices, both within and without.

The settlement poses a particular threat by leaving Microsoft in a stronger position than ever with respect to some of its most serious potential long-term competition, that of the Open Source movement and its products. This movement frequently arises from academic and hobbyist circles; I find it highly improbable that Microsoft would willingly acknowledge these independent engineers when exercising "its sole judgement" of fitness to receive API information as dictated by the proposed judgement. Microsoft has also in the past used cooperation with the Open Source movement as justification to discriminate against ISVs and OEMs, and would be free to continue to do so.

The settlement ignores completely Microsoft's application file formats, e.g. those used by the Microsoft Office productivity suite, despite Microsoft's historical use of these formats to advance its monopoly position.

Finally, and more generally, this settlement relies upon historical ignorance of Microsoft's practices—the antitrust case arose in part through their violation of the 1994 consent decree regarding these practices. Microsoft has displayed utter contempt and disregard for restriction of its behavior by the courts or the US Dept. of Justice, conduct agreements or not, and will in my estimation continue to do so under this settlement, under the shield of immunity afforded them by this agreement. It is profoundly illogical to award a convicted monopolist a settlement which amounts in all significant effects to a total capitulation of the prosecution's case.

Thank you for your attention.

From: Wang, Daniel  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 1:25pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am writing to express my disapproval of the proposed settlement in the Microsoft antitrust suit. As a California resident I completely support the efforts of the California Attorney General to press ahead with antitrust suit in the face of a stunning retreat from victory by the US DOJ.

Microsoft's antitrust violations are well documented in the Findings of Fact, and the proposed settlement is little more than a slap on the wrist that allows Microsoft to keep its ill-gotten gains and is full of loopholes that allow them to illegally maintain their monopoly.

Specifically I would like to point out a flaw in Sections III.D and III.E which relate to disclosure of APIs and communications protocols "to ISVs, IHVs, IAPs, ICPs, and OEMs". This complete fails to consider that much of the software that powers the Internet and one of the biggest competitors to Microsoft is free software written by individuals, non-profit foundations and government research laboratories. Apache, Samba, and BIND are three examples of such free software that need to interoperate with Microsoft and would be denied access to APIs and communications protocols under the settlement.

I urge you to reject the settlement and seek stronger remedies.

Date: 1/23/02 1:24pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,

Deron Graham

From: Jeffrey Goff  
To: Microsoft ATR  
Date: 1/23/02 1:25pm  
Subject: Comment on the Proposed Final Judgement

Among other concerns, I am concerned with the definition of "Microsoft Middleware Product" in Part VI, pgh. 28 of the settlement. According to trade papers and various public comments, it is fairly apparent to me that Microsoft intends to migrate people away from Microsoft Java to the new "Microsoft .NET" api, which, while it is at least partially documented, is not mentioned in the definition of "Microsoft Middleware Product."

While the Final Judgement may have been written before the release of .NET, this is a major omission, as Microsoft has made it clear that platform developers are strongly encouraged to move to this middleware layer. This should be included within the current Middleware product.

From: Hagerty, Edward (UK—London)  
To: Microsoft ATR  
Date: 1/23/02 1:24pm  
Subject: Microsoft Settlement

I believe that Microsoft's practices towards large users should be prohibited.

The PFJ places restrictions on how Microsoft licenses its products to OEMs, but not on how it licenses products to large users such as corporations, universities, or state and local governments, collectively referred to as "enterprises". Yet enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier US v. Microsoft antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software.

Please do not let the settlement as it stands move forward. Why have so many found it reasonable to go to such lengths to comb over the remains of Enron, while at the same time letting Microsoft spend over 20 years manipulating the software market to their gain and their gain alone?

Subject: Microsoft proposed settlement  
Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW

Washington, DC 20530

January 23, 2002

Dear Mr. Ashcroft:

I am writing in support of the recent settlement between Microsoft and the U.S. Department of Justice. Although I am a Microsoft supporter, I think their heavy-handed marketing tactics needed to be tempered to protect the consumers rights. Now that a settlement is possible, I believe that the concessions agreed upon AND the one I added, will effectively allow other vendors to promote their own products and protect consumers.

Under the terms of the settlement, Microsoft has agreed to not retaliate against software developers and computer makers who develop or promote non-Microsoft products. They have also agreed to document and disclose for use by their competitors interfaces that are internal to Windows operating system products.

Futher, I suggest microsoft be required to support by toll-free telephone all of their products for 6 months after purchase and 6 months after each upgrade. And Microsoft should be required to offer continuing support toll-free for the reasonable annual fee of \$25 (indexed for inflation).

These stipulations are more than fair and will ultimately be in the best interest of the American public. Especially the one I added. Please finalize the settlement and I thank you for your time.

Sincerely,  
James Theodore Fyffe

From: Ted Halmrast  
To: Microsoft ATR  
Date: 1/23/02 1:24pm  
Subject: Microsoft Settlement

Hello,

The Microsoft Settlement is an absolute failure on the part of our government to take to task a known monopolist. Microsoft has repeatedly throughout its career demonstrated unethical business practices including but not limited to the crushing of numerous competitors and introduction of a proprietary, rather than open standards-based, status quo for computing. Microsoft's monopolistic tendencies have done so much damage to the free market of software development that it is telling that the only products still around competing with Microsoft products are those given away for free under open source. They are effectively killing the technology industry by reducing the number of companies that can effectively compete. This is bad for the consumer because it reduces choice and innovation, this is bad for the worker because there are fewer jobs, and this is bad for the economy because there are fewer companies and innovative ideas being developed to raise the financial markets.

Microsoft is a menace which must be dealt with before it can cause more damage.

From: Roy Stogner  
To: Microsoft ATR  
Date: 1/23/02 1:27pm  
Subject: Microsoft Settlement

I am writing to register my disappointment at the proposed Final Judgement settlement in the U.S. v. Microsoft anti-trust case. The most glaring deficiency of the proposed settlement, of course, is that it is utterly ineffectual at even elaborating on the existing legal restrictions that antitrust law places on Microsoft. Doubtless the DoJ has been flooded with explanations of these problems, but I refer you to Dan Kegele's excellent essay on the subject (already submitted as a Tunney act comment, and archived at <http://www.kegele.com/remedy/remedy2.html>) as the most intelligent elaboration of the settlement's loopholes and problems which I have seen. Because Microsoft has a record of finding such technical loopholes to legal restrictions (or, failing that, ignoring the restrictions outright), it is my belief that the proposed settlement will do nothing to prevent Microsoft from continuing its current use of the Windows monopoly to

maintain and extend that monopoly market share through illegal licensing and exclusionary agreements. In order to prevent Microsoft from abusing its control over monopoly software products in the future, nothing short of uniform licensing for all its products will suffice. Microsoft must not be allowed to license its products differently to different customers, because even in the most benign cases of such special licensing it has and will continue to hold special pricing and special allowances as a bully's stick with which to control the behavior of other software and hardware companies. When I can get a Windows license via Dell computer more cheaply than I can get it from a retail store, I am coerced into buying from Dell (and other major PC assemblers), and they in turn must agree to whatever illegal restrictions Microsoft imposes or risk their very survival. Microsoft is aware of this power they have, and they use it. It must be removed. Microsoft must be required to release its software at a constant price for any customer, OEM or individual, and they must be prevented from allowing any restrictions on the use or resale of that software beyond what is allowed by copyright law. Nothing less will suffice to prevent the continued illegal exploitation of their market position. Even this restriction is necessary but not sufficient; it should be added to the proposed settlement and should not replace it.

There is one thing that I feel must be added to Mr. Kegele's comments, which in his essay was completely absent: even if the proposed settlement were completely free from loopholes, it would be insufficient. Microsoft repeatedly broke both U.S. law and court orders, and has profited to the extent of tens of billions of dollars and dozens of destroyed and crippled competitors in the process. If the only punishment they face is a set of restrictions designed to make the continuation of these acts harder, then they really have not been punished at all. The settlement against Microsoft must "deny to the defendant the fruits of its statutory violation", or it does not act as a disincentive to further violations at all.

The most direct way of enacting such a punishment is simply to fine Microsoft at a level commensurate with their criminal gains. Fortunately, Microsoft holds a cash (and cash equivalents) reserve of over thirty billion dollars, and so such a fine could be levied without requiring any business-disrupting liquidation on their part. Microsoft has repeatedly demonstrated that they are motivated by money and not by the law; they will cease illegal behavior once it becomes financially unwise, and not a moment sooner.

Roy Stogner

Subject: Microsoft Settlement

To the Department of Justice:

I am an American citizen and a long-time beneficiary of Microsoft products, and I believe as strongly as I have ever believed anything that what you have been doing to this company is wrong. It was wrong to have brought this suit in the first place. It was wrong for any judge to have ever found them guilty of anything, and it would be a grave injustice for the Department of Justice to impose a penalty of any kind.

Microsoft's only “crime” was to be too good at what it does. I use Windows 2000 every day (in fact I am using it right now),

and I can't imagine how different my life would have been the last 20 years if Microsoft had never existed or hadn't been as successful as it is. The only thing you are doing in persecuting these people, (and make no mistake, it is people you are persecuting. The company name may be Microsoft but all Microsoft is is a whole lot of people pursuing their lives and their careers to the best of their abilities), is making my life and the lives of millions of Americans who have come to rely on Microsoft products more expensive and more difficult.

How dare you be so condescending as to believe that I need your “protection” from these people? The only thing I need protection from is a government that continues to usurp more and more power while increasingly dictating how the lives of its citizens should be led.

Start doing your legitimate job of protecting my individual rights of life, liberty, property and the pursuit of happiness, and stop persecuting some of the most productive, most moral people on earth; the owners, managers and employees of the Microsoft Corporation.

From: Rich Morin  
To: Microsoft ATR  
Date: 1/23/02 1:28pm  
Subject: Microsoft Settlement

I have been working in the computing field for a little more than three decades. When I entered the field, IBM “owned the waterfront”, making it essentially impossible for any competition to thrive. Microsoft now holds that position, with even more market share than IBM held back then.

This is clearly a bad situation for the computing industry. Microsoft is able to dominate the field, while producing mediocre and dangerous (e.g., unreliable and insecure) software. They also use their power to discourage standardization efforts that would allow more competition. I am not well versed in the legal aspects of this case, so I will not try to suggest the exact shape of the settlement. Please count me as an opponent of the current proposal, however; it is FAR too lenient.

Any settlement that does not include both a breakup of Microsoft and harsh fines is inadequate to protect general computing in the United States. Microsoft has shown the way to abuse programing's natural tendency toward standardization of code and interface. They have done nothing that others can not and will not do unless sound financial disincentives are offered.

**MTC-00017529**

From: Ben Wilson  
To: Microsoft ATR  
Date: 1/23/02 1:27pm  
Subject: microsoft settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a “punishment” instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

To a more detailed point, there is no provision against Microsoft's non-documented “closed” file formats. One thing that will force a user into using one certain program over another is a closed format information. Let the application that uses that data be the divining point, not the format of the information.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Ben Wilson

 Subject: Microsoft settlement

As a technology user I have been following the Microsoft legal issues from the very beginning. Overall I see the litigations against Microsoft to have limited merit and it is time to put the current case to rest. The ongoing nature of this case is detrimental to the technology industry as well as the consumer. A swift and fair conclusion to the current issues would be a great benefit to all involved.

It is time that our country stops punishing people and the companies for which they work for doing a good job. With foreign competition and our weak economy companies that are innovative and try to make products that are easy to use should be praised not punished.

Thank you  
 Thomas A Carey

This e-mail is to confirm my support and signature on a letter written by Mr. Kegel, concerning the proposed settlement with Microsoft in the anti-trust litigation.

I would especially like to voice my concern regarding the publication and release of Windows API information. The proposed settlement makes no attempt to provide this information to the general public. This contradicts Microsoft's stand that Windows is a de-facto standard in Information Technology, as it does not allow all who wish to develop programs for Windows to do so at their discretion.

In addition, such hiding prevents others from developing competing alternatives to Windows that would run applications designed for Windows.

 Subject: Microsoft Settlement

Dear U.S. Department of Justice Antitrust Division, I am writing to express my concern over the proposed Final Judgement against Microsoft in the case of United States v. Microsoft Corp., Civil No. 98-1232.

The proposed terms of settlement do not provide sufficient safeguards that specifications for Microsoft platforms and middleware will be publicly available to me as a software developer in the IT department of a large corporation that is not a software vendor. It's important that such documentation is available to the software development community as a whole, not just selected software vendors. The corporate IT infrastructure I support is large, diverse, and largely internally developed. The quality and value of our services is driven by the availability of valid technical software information, just as for a software vendor.

Section III.D of the proposed Final Judgement states "...Microsoft shall disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product, via the Microsoft Developer Network ("MSDN") or similar mechanisms, the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product". While MSDN is an invaluable resource to software developers, I often find dissembling, biased, propagandistic, and coercive commentary in place of straightforward, unbiased technical information in its articles. Also, Microsoft is notorious for reorganizing its content to be consistent with Microsoft's market interests, deprecating and concealing legacy documentation. MSDN is a fine resource, but I am skeptical that without oversight, it could easily become simply another marketing vehicle for Microsoft.

Unbiased, detailed technical specifications for the Windows platform and its interfaces are far more helpful than market-generated literature in IT infrastructure strategy and development, especially when the market is distorted, as in this case. Publishing this information, actively monitoring its quality, ensuring it is valid and usable, and making it widely available to software developers in every setting is in the public interest.

While it may be politically expedient to settle this case as quickly as possible, it is in the interest of the software development community, the larger community of corporate software users, and of the public at large, to provide effective remedies which allow effective cooperation and competition

in the software marketplace. Attorneys General of several states, including Minnesota, my home state, are agreed that the proposed Final Settlement is inadequate.

Thank you for considering my position.

From: Richard Turk  
 To: Microsoft ATR  
 Date: 1/23/02 1:27pm  
 Subject: Microsoft Settlement

I OPPOSE the proposed final judgement. It is inadequate. I just read through the proposed settlement, and I have listed some comments below. I acknowledge that these comments could be considered nitpicky, but bear in mind that Microsoft does not have a history of operating in "good faith": they will attempt to exploit any weakness or ambiguity. Also, remember that time and money are on Microsoft's side: even if they are ultimately held accountable for a breach, it might take many months and many dollars to push the suit through the courts. The language of this agreement must be sufficiently strong and clear that violations can be determined quickly (summary judgement) by the trial court. Otherwise, Microsoft will be able to use the intervening time to extend its monopoly and suppress competition.

Problem 1. The term "Windows Operating System" is inadequate: it omits a large variety of products currently available or under development. Also, Microsoft could rename a future product to avoid this definition. (e.g. Windows CE is now PocketPC; the Xbox could become an exempt computing platform)

Remedy 1. The anti-monopoly restrictions should be placed on \*all\* Microsoft products, both hardware and software.

Problem 2. The settlement allows Microsoft to choose which companies can gain access to their APIs and protocol specifications. This will permit Microsoft to withhold information from Open Source or volunteer programmers, thus suppressing competition and consumer choice.

Solution 2. Microsoft should publish API's and protocol specifications publicly, for all developers; the notion of "legitimate business interest" should be dropped.

Problem 3. The definition of "bona fide joint venture" is not given. Without a clear indication, Microsoft can bottle up suits in court.

Solution 3. Provide a very narrow, explicit definition.

Problem 4. Section VI(U) Gives Microsoft discretion as to what comprises a "Windows Operating

System Product". Microsoft could make unreasonable claims of exclusion and then fight in court, thus delaying fair competition.

Solution 4. Either remove this section, or let the Technical Committee decide what comprises the OS.

I could come up with more specifics, but I'm sure others have done a more thorough

job. Also, it might help to create a punishment for "parole violation": if Microsoft loses a certain number or percentage of lawsuits relating to specifics of this judgement, then there would be automatic and severe monetary penalties and additional restrictions. This might deter them from using the courts as a delaying tactic.

From: Kendall Whitlatch  
To: Microsoft ATR  
Date: 1/23/02 1:27pm  
Subject: Microsoft Settlement

I feel that the proposed settlement offered by the DOJ does not adequately address Microsoft's ability to act in a monopolistic manner. There are far too many loopholes and terms have been too narrowly defined. If this settlement is implemented, I believe that we will see another scenario like this last one where MS acts within the legal boundary of the settlement, but still monopolizes the industry.

I urge you to review Dan Kegels petition and implement those fixes he addresses.

Date: 1/23/02 1:27pm  
Subject: Microsoft settlement

The proposed settlement is ridiculously lenient. It seems like people keep forgetting that Microsoft was found GUILTY and that the verdict was AFFIRMED by the appeals court. All that is at issue now is their punishment. Letting them off with the proposed slap on the wrist would be a travesty, and would irreparably harm the entire computer industry.

Microsoft must be punished severely. Their monopolistic and predatory practices must be slapped down HARD so that this time they won't come back in a few years and start pulling the same tricks. Please don't cave in. Make this criminal corporation feel the pain of justice.

Subject: Microsoft settlement

Thanks for listening.  
My primary concern with the proposed Microsoft case solution is the idea of Microsoft flooding public schools with their software, as well as Windows-based hardware, as a penalty. Their suggestion here is typically disingenuous, and a bad plan. I've made a career in public schools, where we have the strength of a variety of platforms. The Justice Dept has made great strides in pursuing this long course.

Thanks for the work.

From: Russell Hemati  
To: Microsoft ATR  
Date: 1/23/02 1:28pm  
Subject: Microsoft Settlement

Dear Sir or Madam,

I was originally very excited about a proposed settlement between the DOJ and Microsoft. I mainly thought it was a good idea since after having the crimes of the company upheld by an appeals court, I naturally assumed that this was the only way to keep the upper echelons of the company out of federal prison. Imagine my surprise when I found out that the DOJ had lost their nerve in prosecuting the most illegal monopoly of all time.

After reading the proposed settlement between the DOJ and Microsoft, I am convinced that it must be rewritten from the ground up. After 15 years of computer consulting, including developing for Windows as well as Linux and helping support those who develop on the Apple platform, I still do not consider myself to have mastered every nuance of systems integration—much less the computer market as a whole. I do, however, know enough to realize that regardless of how brilliant or qualified the lawyers who drafted this settlement are, they require more training in computer terminology and software engineering. They also require themselves to ask seriously—is this settlement. There are numerous technical problems with this settlement, the most important being that it allows Microsoft to keep the monopoly it already has and at best attempts to limit the speed at which it acquires new monopolies. Having watched Windows XP turn into a way to market Microsoft's other products (usually offered at a loss) and the sale of the X-Box—under—cost (as much as \$100), it seems that any software company (and now with the X-Box—any hardware company) that does not have the ability to sell its products under cost or give them away for free while being kept profitable by inflating the prices of other products that often the consumer cannot refuse to buy—any company that cannot do this will not succeed. Even if they can (such as the possible exception of Java), because their "competitor" is the company that they depend on to make the system that runs their program, they will not succeed because this "competitor" makes their system incompatible with yours while simultaneously offering their own alternative to your customers. Standard Oil was nailed to the wall for this, the proposed settlement is not just lenient—its SILENT!

We are nearing the point when nobody, not even the government of the US, can stand up to Microsoft. The settlement is a joke, it doesn't do anything at all about the illegal monopoly Microsoft already has (a ruling upheld by the appeals court). No other criminal I know could settle this easily after

already being declared guilty. No convicted bank robber would be told that he can keep his money and should just rob fewer banks per month.

Also, when Microsoft asked for part of its settlement to include government mandated installation of its software in one of its few last competitor's main market (schools—Apple), it demonstrated its brazen practices. Any reasonable person should be able to realize the predatory nature of such a company. Please do not let the difficulties in the economy cloud this decision. Microsoft is a very valuable company—if you have any tech related mutual funds you probably own a piece of them anyway. They have managed to hire a great many intelligent and qualified people. Microsoft—can—compete in an open market. To say that they can't compete in an open market is to say that they haven't been, since they are indeed successful. One of the reasons that the software market is so bleak is because most of the incentive for creating and then profiting from software has been and is still being sucked dry by a company that will not stop until it is the—only—technology company. A free market cannot exist without competition. If the intention of the DOJ is to do their part in restoring the computer technology market, they cannot hide behind Microsoft.

I am a capitalist. I believe in business both big and small. I also believe that we are a nation of laws. Because the DOJ is about to allow one of the most nefarious criminal entities to go free, it is in danger of presenting itself to history as only attempting to prosecute the little guy—the individuals and small companies while the big guy—the one who could influence their own pocketbooks with it success or demise—this one they are too scared to touch.

You are the United States government. You are there to protect individuals and companies. You are there to protect our free market. Do your duty and protect us. Stop the Microsoft monopoly with more than this travesty. Make them give back what they illegally took from the people, the companies, and the market. Make them give back what they took from you—the DOJ—since you are undoubtedly one of their customers and have been suffering from lack of choice and poor quality. Do your duty. Make us all proud we elected your superiors.

Russell Hemati

From: Steven Boothe

To: Microsoft ATR  
 Date: 1/23/02 1:34pm  
 Subject: Microsoft Settlement Dear Sir/  
 Ma'am, or to whom it may concern:

My name is Steven Boothe and I am a citizen of the United States since birth. I currently reside in the beautiful state of California. I am writing because I just learned that I have the opportunity (expiring Monday, January 28) to air my comments (in accordance with the Tunney Act) on the justice and efficacy of the proposed Microsoft Settlement. For this privilege to engage the judicial system I am truly grateful to be a citizen of the United States of America. So for those that may be in a hurry, in short: I find this proposed settlement appalling and disgraceful. No I do not approve. I herewith cast my vote against this proposal, and for reference, respectfully request that the shortcomings highlighted in the following paragraphs be rectified as my suggestion for how to adequately meet out justice and retain our country's dignity in this case. Here are the paragraphs of which stand out so clearly stated as the problems I whole heartedly agree need attention:

"The remedies in the Proposed Final Judgments specifically protect companies in commerce—organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors—computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry.

!!!!!!!!!!!!!!!!!!!! emphasized content below  
 !!!!!!!!!!!!!!!!!!!!!

But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and freeware applications.

The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: ". . .(c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, . . ."

So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products.

!!!!!!!!!!!!!!!!!!!! emphasized content above  
 !!!!!!!!!!!!!!!!!!!!!

Section III(D) takes this disturbing trend even further. It deals with disclosure of

information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only."

Hence: "If this deal goes through as it is written, Microsoft will emerge from the case not just unscathed, but stronger than before." Please do not allow our tax dollars and dignified judicial system to be displayed as a wasted effort by leaving this proposed settlement in a status quo.

(<http://www.pbs.org/cringely/pulpit/pulpit20011206.html>)

Thank you very much for your time,  
 Steven Boothe

A concerned husband, father, and computing professional.

From: Matt Jurach  
 To: Microsoft ATR  
 Date: 1/23/02 1:28pm  
 Subject: Microsoft Settlement

The problems identified above with the Proposed Final Judgment can be summarized as follows:

The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product— but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box— operating systems that all use the Win32 API and are advertised as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the

deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation— but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents?

This can scare away potential users.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems.

This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

The PFJ as currently written appears to lack an effective enforcement mechanism.

Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

A thorough and thoughtful proposition of remedies for the above issues has been assembled by Dan Kegel at:

 Subject: Microsoft Settlement  
 To Whom It May Concern:

I believe the proposed Microsoft antitrust settlement is counter to the interests of the American public, deleterious to the American economy, and is not adequate, given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and the spirit of our free-enterprise system. These practices inhibit competition and reduce innovation, decreasing employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The findings of fact which confirmed that Microsoft is a monopoly require strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

I do not think that the proposed settlement is strong enough to prevent Microsoft from engaging in monopolistic behavior, both now and in the future.

For more specific examples of deficiencies in the current proposed settlement, please refer to Dan Kegel's ongoing analysis at: <http://www.kegel.com/remedy/remedy2.html>

 Date: 1/23/02 1:32pm  
 Subject: Microsoft Settlement

Dear sir/ma'am,

I would like to add my disapproval to the proposed settlement with Microsoft corporation currently open for public comment. To resolve this situation with any monopoly still intact, and to leave the software industry unable to provide competition that might end such a monopoly is to do a disservice to consumers.

**MTC-00017549**

From: Andrew Haas  
 To: Microsoft ATR  
 Date: 1/23/02 1:30pm  
 Subject: Please Throw Out the Microsoft Settlement

This is a letter appealing the government to not only throw out the Microsoft settlement, but further penalize Microsoft for its anti-competitive business practices and poor quality software. Microsoft has undermined the security of the United States, wasted billions of taxpayer dollars and gone against everything this country is founded upon. What is the foundation of the United States? What has made this country so great?

If you were to ask me, I'd say it's the constitution of the U.S., the excellence of the people who founded this country, the commitment of the many men and women who have given their lives to make this a great country, and the principles they stand for.

How does Microsoft violate these principles? By their first-to-market business methodology, where they bring to market poor quality software and leverage their Windows monopoly to become dominant, they stifle competition. In so doing, they have introduced software with security holes and software that requires constant fixes and upgrades. They waste the time of millions of people.

What if the founders of the country, the writers of the constitution, brought it to market before it was ready? What if they said, "Well, this is good enough?" What if the people who fought in our world wars said, "Well, we tried to be secure. We tried to make your country secure," while all the while leaving tons of security holes? What if our intelligence organizations did a slipshod job?

The answer is our country would have fallen long ago to the forces that seek to undermine it.

Why should we reject any settlement with Microsoft and further penalize the company to the full extent of the law:

A) Microsoft's poor software quality has undermined national security.

B) Microsoft's poor software quality has wasted billions of taxpayer dollars.

C) Microsoft has shown no remorse, worse, only arrogance, and has never taken responsibility for its actions.

D) Microsoft has created a marketplace where in order to compete, companies have to follow its model of producing poor quality products and rushing them to market too quickly.

Let's look at each of these points more closely:

A) Microsoft's poor software quality has undermined national security. Microsoft software has been shown to be extremely vulnerable to viruses and have numerous security holes. In addition, it has been shown to be bug-ridden and crash often. The news is filled with reports of problems. For example, a warship had its weapons systems offline for 5 hours due to a problem with Windows. Nuclear materials have been misplaced or "lost" due to bugs in Microsoft's database software. The NSA was infected by a virus that harmed its employees ability to communicate with each other.

B) Microsoft's poor software quality has wasted billions of taxpayer dollars. As a professional software developer, I work with Microsoft products daily. Unfortunately there is no way around this, because my employers require it. I waste approximately an hour a day on slow software, bugs in software. I waste another hour due to incompatibilities in software and trying to work between Unix systems, which are used on the server side because they are stable, and Windows, which is used on the client side because of Microsoft's monopoly. If IT professionals in government waste an equal amount of time as I do, then Microsoft is costing the taxpayers billions of dollars.

C) Microsoft has shown no remorse nor taken any responsibility for their actions. In testimony before the government, Microsoft has denied all the charges against them and made it sound like the government or the taxpayer is at fault. They have made few efforts if any to fix these problems. When Windows 2000 was released, Steve Ballmer made the statement, "Windows is finally stable." Well what was it before? Microsoft was penalized by the government in the 1994 consent decree, but made no efforts to change their actions. Microsoft considers itself above the law.

D) In order to compete with Microsoft, the entire software industry has made a habit of

rushing products to market before they are done. In addition, since products built upon buggy operating systems are themselves buggy, it's almost impossible to produce very stable software that runs on Windows operating systems. It's like trying to build a house on foundations of sand—when the sand shifts the house will fall. There are numerous examples of this—Lotus Notes, Corel, Sun Java—all of these products have had problems because they were built on a buggy operating system—Windows. The Solaris versions of Java have always been better than Windows, because Solaris is a much more stable operating system. So my plea to the government is this.

If the founders of our country, and all the men and women who have given their lives to make this country the place it is had done their business the way Microsoft has, this country would have fallen long ago.

Microsoft has undermined national security and wasted billions of dollars. It has created an anti-competitive environment where companies have to produce poor quality software to compete. It has made the computer industry much harder to work in and good quality solutions hard to implement.

Please penalize Microsoft to the full extent of the law, as you would anyone who commits a crime against the people. Please do not let Microsoft's dominant position cloud your judgement. Please do the right thing.

Thank you very much,  
Andrew Haas

Subject: Microsoft Settlement

I'm very surprised that the decision to break up Microsoft was reversed. Until the OS division is separated from the other divisions of Microsoft, their de facto OS monopoly will continue to be leveraged to help them gain dominance of other markets. The currently proposed settlement does not sufficiently address the competition issues. Sincerely,

Domenico Ippolito  
Engineering Manager

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: David Cutler  
To: Microsoft ATR  
Date: 1/23/02 1:30pm  
Subject: Microsoft Settlement  
To: U.S. Department Of Justice,

I appreciate the right to speak on this issue, which I feel very strongly about. As a U.S. citizen, I believe I have a responsibility to defend the rights and freedoms we enjoy as Americans. The current settlement does not effectively prevent Microsoft from using its current monopoly in the desktop operating system market to create a monopoly in other markets. One obvious example is the browser market. I believe Microsoft should be required to offer a version of its operating systems which does not contain middleware software like Internet Explorer tied into the operating system.

Also, Microsoft should be required to remove software from its operating system which causes incompatibilities with rival companies' software. Microsoft should also be prevented from using its passport services in Windows XP to force users to use Microsoft technologies to access online services. I believe Microsoft's .NET program is their plan to completely control PC users' access to the Internet and e-commerce.

This is clearly a threat to computer users and competing companies. I reiterate that the currently settlement does not go far enough to limit and prevent Microsoft's anti-competitive and monopolistic behavior.

Sincerely,  
David Cutler

From: Rick Silton  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 1:32pm  
Subject: Microsoft Settlement

I would like to voice my position which, in brief, is that the proposed final judgment against Microsoft will not adequately prevent Microsoft from abusing its monopoly power.

There are many reasons such as those listed below, but ultimately it comes down to the fact that Microsoft is both the supplier of the monopoly operating system and a supplier of applications that use the operating system.

The Proposed Final Judgment needs to be amended because: Hurts the not-for-profit competitors (Linux, Apache, etc.) Fails to remove restrictive licensing terms to keep Open Source apps from running on Windows.

Requires that users of the APIs share their code with Microsoft. The APIs are needed to use the OS features but the OS vendor does not need to know how the applications work and so there is no need for Microsoft to have access to the code. This is especially true when they are also producing competing applications!!!

The proposal for Microsoft to donate equipment to schools must be a joke—it doesn't punish Microsoft at all and in fact takes market share away from the competitors that Microsoft has been hurting.

\* API & Middleware definitions are too narrow.

\* It does not prevent Microsoft from intentionally sabotaging Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems.

Please take these comments into consideration—Microsoft has been doing anti-competitive behavior for many years and there is absolutely no reason to believe they will stop on their own. Their corporate culture is obviously to crush the competition with no regard for fair and reasonable business practices.

Subject: Microsoft Settlement

To whom it may concern,

I do not think the Microsoft Settlement goes far enough to ensure that Microsoft's non-competitive behavior will not be allowed to continue. Of the many problems I have with the settlement, I think the most

important is the barrier to applications. It is not enough to stop at opening APIs for middleware. APIs must also be opened for applications.

While I am happy that the settlement makes an effort at keeping Microsoft from hindering the development of cross-platform middleware, it needs to ensure that there is a cost effective alternative to the Microsoft Windows operating system. By allowing Microsoft to keep its Windows APIs secret/undocumented, users who wish to use the vast majority of applications written for Intel-Compatible PCs will still be forced to use Windows. The reason that most applications are written for Windows is that there was no viable alternative; if most developers wanted to be able to make a profit selling their products, Windows is the only operating system that has an installed base large enough for the application to have enough possible customers.

The WINE project is an open-source, ongoing effort to create an environment that runs Windows applications under Linux, an open-source, free operating system. It is already possible to run many Windows applications using WINE, but not all and not perfectly. The progress is slow because much of the necessary code is under lock and key at Microsoft. Because WINE is open source, all work done to make Windows applications run in Linux also benefits other operating systems, particularly UNIX and UNIX-like operating systems.

Until Microsoft is forced to allow all developers access to its API and their full documentation, users who wish to use most applications written for Intel-compatible PCs will be forced to have a copy of Windows. Microsoft would rather keep this unfair advantage and not share the entire library of APIs, but be allowed to pick and choose. This is non-competitive behavior. Microsoft can still be allowed to innovate with respect to the layout and functionality of its operating system without keeping other operating systems from running applications written for the Windows environment.

To: Microsoft ATR  
Date: 1/23/02 1:30pm  
Subject: Microsoft Settlement

Dear sirs:

I have thoroughly read the "Proposed Final Judgement" (PFJ) in the United States vs. Microsoft, and would like to comment pursuant to the Tunney Act and its provisions for public comment.

There are several points which I would like to make concerning the PFJ. First, I believe this proposal would still allow Microsoft to manipulate licensing agreements such that Windows applications would be unable to run on non-Microsoft operating systems (OSs). If OS users are not able to run Windows applications on an OS other than one of the flavors of Windows, this provides a Application Barrier to Entry to any OS

wishing to provide a product in direct competition to Windows. Since the Windows OS and the applications running within it were determined by the Court to be distinct entities, it seems unfair that users couldn't choose to use one without the other.

Secondly, being a software professional for the last 15 years, I have seen my share of Windows and non-Windows products. On several occasions during this period, a non-Windows solution would have been the clear favorite if we could have had open access to the structure and definition of the Windows Application Programming Interfaces (APIs). The language of the PFJ limits the disclosure of Windows APIs by defining the terms "API" and "Microsoft Middleware" such that Microsoft would be able to exclude APIs used by other application programs (not expressly in the "Microsoft Middleware" definition). This would also prevent other application developers from being able to write applications to use these interfaces correctly, which would also prohibit competition.

Lastly, the wording of the PFJ specifically omits other Intel-based operating systems such as Windows XP Tablet PC Edition, Windows CE, Pocket PC, and the X-box. I don't understand why these systems should be allowed to appear under the radar of the Judgement, since many of the same applications which could run on other Windows environments could also run on these. Therefore, if Microsoft is allowed to produce applications which can run on these operating systems as well as the included Windows systems, aren't they able to gain an unfair advantage, since their applications are now by definition more universal? By excluding them and their APIs from the PRJ, aren't we allowing unfair competitive practices?

These are the main issues I am in opposition with at this time. As I continue to digest all that this agreement encompasses, I may find more to mention.

Thank you for your time and consideration.

From: Raul Miller  
To: Microsoft ATR  
Date: 1/23/02 1:21pm  
Subject: Microsoft Settlement

I'd like to comment on the judgement I've read at <http://www.usdoj.gov/atr/cases/f9400/9495.htm>:

[1] While this judgement, if it had been issued some years ago, would probably have prevented the current set of problems involving microsoft and the computer industry, I don't see that this judgement will repair the damage which has been done.

[2] While this judgment addresses some issues relevant to OEMS, ISV/IHV's, IAP/ICP's and End Users, it does not address issues of critical significance to software developers.

When developing software, one must make many choices and decisions with long-lasting consequences. In general, this means that once a decision has been made it is not changed without good reason. Microsoft's unlawful actions mean that there have been good economic reasons to make development decisions which would otherwise violate good design practices.

Resolving this issue will require documentation which is not generally available (and which may not exist) about Microsoft's operating system. It will also require dealing with issues raised by existing contracts and business arrangements with respect to software development tools and development environments. It will also require dealing with changes in software oriented training and business practices—changes which have been necessary for a business to survive in the face of Microsoft's market dominance.

Software developers are the people who are technically literate in computer languages and who are responsible for creating applications which must run on an operating system. The proposed remedy does not address software development needs in supporting competitive operating systems.

Failing to address the needs of software developers means this judgement cannot remove the barriers which microsoft has put in place with its unlawful actions. As software developers provide the software which which End Users, IAP/ICP's, ISV/IHV's, and OEMS, use on an operating system, it's extremely unlikely that any of these groups will experience economic relief from this judgement.

I recommend this judgement be rejected in favor of one which will additionally provide remedies for software developers who develop software for Microsoft and/or non-Microsoft operating systems.

To whom it may concern:

I do not think the Microsoft settlement is nearly harsh enough. Instead of attempting to correct the underlying issues (the anticompetitive practice), the settlement instead simply slaps Microsoft's hand with a fine they can easily shrug off. There will be no change in behavior from Microsoft after this settlement is implemented—none at all. All you're doing is giving Microsoft the opportunity to extend their monopoly. The whole idea behind the settlement is to stop these practices, and this settlement does nothing towards that end.

From: Nathaniel Cosgrove  
 To: Microsoft ATR  
 Date: 1/23/02 1:30pm  
 Subject: Microsoft Settlement

I find the proposed settlement with Microsoft not only inadequate, but insulting. It provides too many loopholes through which Microsoft can jump to effectively circumvent most, if not all of the provisions set forth by the settlement. For instance, in section III(J), there is a provision for Microsoft to keep all security APIs secret. An easy way to circumvent this is to add security features into every API. Please note that Microsoft recently announced an initiative to focus more on security; a move which would suggest that they are already planning such a strategy.

In the past, Microsoft has shown considerable ingenuity in circumventing such measures. For instance, the integration

of Internet Explorer into Windows to circumvent the "Consent Decree" shows their willingness to abide by the "spirit" of such an agreement.

Please do not allow this settlement to go forward.

From: Mark Ferlatte  
 To: Microsoft ATR  
 Date: 1/23/02 1:31pm  
 Subject: Microsoft Settlement

I believe that the proposed final judgment is lacking an important remedy: Microsoft should be required to provide public and open documentation on their application file formats with enough detail to allow other software developers to develop file readers and writers for those formats. In my experience as a Linux developer and system administrator, the largest remaining issue with converting a site from running Microsoft Windows and Office is the ability to work with legacy Word and Excel documents. These undocumented formats form part of the Applications Barrier to Entry (see "Findings of Fact" pp20 and pp39). If these file formats were made available, it would be possible for consumers to switch to an alternative office suite (such as OpenOffice) which could allow them to switch to an alternative operating system if it were compelling enough. This choice should be able to be made by the consumer, as opposed to any operating system or application developer.

 Subject: Microsoft Settlement

I do not like the settlement proposed with the Microsoft corp. Allowing the company to just donate some stuff (computers & software) is useless and all other elements of the settlement are bad business.

Since I don't like to just complain here is a suggestion:

1. zap Microsoft with a huge fine (10 billion)
2. Use the fine to establish a trust (oversight by dept of Education and NSF) that Microsoft staffs and operates at their expense (for say 10 years)
3. The trust has the goal of giving away as much of it's yearly earnings as possible in 1 year (say \$2000, what I pay today) scholarships to 2nd, 3rd and 4th year college students. the math... assume a 5 % rate of return from the investment market for the next 10 years ( $\$10,000,000,000 * 0.05 / 2000 = 250,000,000$  scholarships awarded per year. That's a goal of up to 250 million scholarships. If the trust could award 200 million and retain a little income to grow the thing could perpetuate. seems so simple to me, I guess I live in utopia.

 Subject: Microsoft Settlement

To whom it concerns,

I do not feel that the proposed settlement will do enough to change the practices of the Microsoft Corporation. Remember that this company used loopholes in the 1994 consent decree to continue their monopolistic practices. The final remedy needs to carefully close loopholes and include continuous monitoring and severe penalties for continued monopolistic practices. As one example, the current proposal is very specific to particular versions of Microsoft software and operating systems. What will happen to the settlement if one month after it is finalized, Microsoft changes the names of all their products?

There are many other things not addressed in the proposed settlement, I'm sure many others will do a better job explaining them than I will, but just to mention a few that concern me: Closed proprietary file formats for things such as word processing

documents, Licencing agreements that force organizations to pay for Microsoft products that they do not use, End user licence agreements that prohibit using competing software or open source software, Continued "embrace, extend and extinguish" practices where open standards are weakened by Microsoft, etc.

Thank you for your time.

From: Richard Dynes  
To: Microsoft ATR  
Date: 1/23/02 1:10pm  
Subject: Microsoft Settlement

Hi,

I've been informed that you are soliciting public feedback on the Microsoft settlement.

I'm very disappointed in the settlement between the DoJ and Microsoft. As far as I can see, it does nothing to address the proven illegal and continuing anti-competitive practices of Microsoft.

Microsoft has twin operating monopolies: Desktop Operating Systems, and Office Automation software. Microsoft used their OS monopoly to force Internet Explorer onto consumers, crushing Netscape in the process. This is not the first time Microsoft has manipulated their ownership of the OS to affect the competitiveness of competitors in other spaces: Lotus' 123 product comes to mind.

Microsoft continues this practice today: Since their office automation applications are only available on their operating system, they are using these twin monopolies TODAY to take over the mobile and palmtop computing market. You can read ads in the trade magazine InfoWorld where Microsoft proclaims PocketPC as superior because it's the only mobile computing solution where Microsoft's office automation applications run.

They are, today, using their twin monopolies to build a third: mobile computing platforms.

The proposed settlement doesn't address past OR current behavior. Allowing computer manufacturer's some freedom in what they put on the Microsoft Windows desktop merely codifies the status quo.

The proposed remedies would not have prevented what Microsoft did with Netscape, and will not prevent Microsoft from constructing further monopolies from their existing ones.

Microsoft did real harm to, and has inhibited innovation and competition in the industry. Today we have software that has security risks, defects, and instabilities, yet we truly have no alternatives, because that software is from Microsoft. The rash of viruses that have cost untold hours of lost productivity are largely Microsoft's doing, yet are accepted because there simply is no alternative.

The proposed remedy is inadequate, and I feel it is a capitulation of the DoJ to Microsoft in this matter.

From: logan@wt6.usdoj.gov@inetgw  
To: Microsoft ATR  
Date: 1/23/02 1:33pm  
Subject: Microsoft Settlement

To whom it may concern:

I'm writing to express my disappointment with the proposed settlement of the Microsoft Antitrust suit. Microsoft has repeatedly shown that it will do anything in its power to maintain their monopoly hold on the desktop operating system market and to (ab)use this monopoly to further it's penetration into other markets. Many of these abuses occurred while they were already under supervision for compliance with previous anti-competitive judgements. Indeed, Microsoft has made numerous changes in their licensing agreements since the start of this lawsuit that to further their monopoly and use their monopoly to gain advantage in other markets.

Although there is sufficient power to monitor Microsoft, the proposed settlement does not provide sufficient power to the Technical Committee to prevent further abuses by Microsoft. The Technical Committee's only recourse is to turn evidence over to the legal system. As indicated by the three years that were necessary to reach this proposed settlement, such turnaround as provided by the legal system will not protect the interests of other companies or users.

The proposed settlement does not "punish" Microsoft for their abuses. While the donation of computers to schools is a noble cause, Microsoft will hold the value of the computers donated as a tax write-off. The value of the donation is set by Microsoft, itself, and this donation allows Microsoft to push their monopolic hold on the software used by the schools.

Finally, there is no recompense in the proposed settlement to the competitors and users harmed by Microsoft's anti-competitive practices. There are some business practices that would be prohibited under the proposed settlement, but these are not broad enough to cover the expanse of abuses that Microsoft has perpetrated against its competitors and users. Additionally, the opening of APIs does not sufficiently reduce the barrier to entry into the markets that Microsoft competes in. The listing of APIs to be opened is not broad enough, file formats are not required to be open, and the method for ISVs to request access to the APIs does not fully ensure that these APIs will reach the ISVs in a timely-enough manner for them to be able to release

compatible products to their customers. In conclusion, I request that the current settlement proposal as written be rejected .

From: Hetrick, Brian  
To: Microsoft ATR  
Date: 1/23/02 1:33pm  
Subject: Proposed Microsoft settlement not in the public interest

I am Brian Hetrick, a resident of Manchester, New Hampshire. I am employed as a software engineer and have been continuously so employed for over twenty years. I believe the proposed settlement in United States v. Microsoft is not in the public interest.

Microsoft's history of predatory anti-competitive behavior is long established, and seems to be a fundamental corporate philosophy. Microsoft has routinely used its position in one area of the computer market to force entry into and dominance in other areas of the computer market. This practice of leveraging demand for one product into demand for other unrelated products has been a keystone of Microsoft's corporate strategy and behavior. I believe the only remedy for this predatory anti-competitive strategy is to break Microsoft up into a minimum of three separate companies—operating system, office products, and consumer products—to forbid collusion or "strategic cooperation" between these

resultant companies, and to forbid these resultant companies from producing products in the areas assigned to the other companies.

This arrangement would make the successes of Microsoft in one area independent from successes in other areas, and would permit competition within each of the product lines. Without a back-door mechanism to get special functionality into Microsoft Windows, Microsoft Office—to pick only one example—would have to compete on a level playing field with competitors. It would no longer be able to offer functionality unavailable to competing office suites. With Microsoft Office expanding its customer base by supporting the two highest volume platforms—Windows and Linux on Intel—Microsoft Windows would no longer be able to depend on demand for Office resulting in demand for Windows. Microsoft would be deprived of the major technique by which it has established a predatory stranglehold on the entire PC software market.

Thank you for your attention.

Sincerely,  
Brian Hetrick

I find that the proposed settlement has a number of problems. To make best use of your time, let me highlight only what I consider to be the most significant problem:

Microsoft has long used secret agreements with resellers and OEMs to limit their ability to sell and install competing products. Revisions should be made to eliminate this behavior. The further ability to leverage existing monopolies into additional market share in other areas via discounts or other coersions for OEMs based on sales of products like Pocket PC systems should be eliminated.

To: Microsoft ATR  
Date: 1/23/02 1:35pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a “punishment” instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Thane Walkup

Date: 1/23/02 1:18pm  
Subject: Microsoft Settlement

I'm writing this e-mail in response to the Proposed Final Judgement (United States v. Microsoft). I'm especially concerned about the use of the terms “Middleware”, “API”, and “Operating System Product”.

Historically, Microsoft has shown that it will go to great lengths to comply with the letter of the law, while completely ignoring the intent. An obvious example was the release of version of without IE. Other examples include embedding and spreading the IE API calls throughout the Windows DLLs, and renaming “Applications” to “Operating System components”.

The current definitions of “middleware”, “API”, and “Operating System Product” make it trivial for Microsoft to sidestep the law by making minor changes in their product, or by simply redefining what the product is. For example, by changing product version numbers or how they distribute middleware, Microsoft can completely sidestep any remedy which addresses middleware.

There are many other issues I have—such as not releasing file formats— but I have chosen to focus on these features to highlight my concern that the remedy proposed against Microsoft is essentially toothless and easily sidestepped.

Thank you.  
David Cuny

I have a problem with undocumented file format APIs. I work in a mixed platform environment of PC's Unix Boxes, X-terms, Macintoshes. The need to share documents between the platforms relies on translation software and compatible office productivity software. Changes to Microsoft Applications Document structure which are not documented greatly slow the ability to share work outside of a Microsoft world. The pushes the single platform Microsoft box solution due to administrative decisions, instead of the better task-matching diverse systems supported by research. From: Richard W. Lipp  
 To: Microsoft ATR  
 Date: 1/23/02 1:29pm  
 Subject: Microsoft Settlement  
 Greetings:

As an information technology professional, and as an American citizen, I feel it is my duty to provide comment, as provided for in the Tunney Act, on the proposed final judgement in the Microsoft anti-trust case.

In essence, my opinion is that the proposed final judgement provides so many loopholes that it provides no effective means to prevent Microsoft from continuing to engage in anti-competitive monopolistic behaviors. As one reads text of the proposed final judgement, and analysis of the proposed final judgement, one cannot help but wonder if Microsoft were allowed to write the document in whole! Specious definitions and narrow categorizations result in a document that fails to properly address Microsoft's past behavior. The result is a document that provides very few obstacles to continued monopolistic behavior, and even those are easily circumvented by the exact same sort of tactics used by Microsoft to get around past efforts to control its behavior.

Microsoft has previously used the tactic of renaming a version or product to remove it from the scope of legal agreements. Microsoft has previously used the tactic of claiming, and claiming falsely as has been shown, that a governed product is an essential part of another ungoverned product to remove it from the scope of legal agreements. Microsoft has repeatedly shown that any rules dependent on their agreeing to "play nice" are effectively worthless. Still, the proposed final judgement retains several loopholes that will allow Microsoft to use the exact same tactics again. Microsoft claims a "freedom to innovate", but the proposed final judgement does not even require them to innovate new methods of circumvention. We might as well rename the document the "New England Migratory Waterfowl Breeding Act". In the final analysis, the proposed final judgement is about as effectual in either arena.

I am against the proposed final judgment in US vs. Microsoft. I feel the damage Microsoft has done to the software and OS marketplace is incalculable, and the proposed settlement does little to correct it. I don't feel the settlement levels the playing field for competing operating systems or office software, and would like to see a much stronger penalty imposed. The proposed settlement does not sufficiently relieve Microsoft of the ability to leverage hardware and computer manufacturers unfairly against competing products, nor does it adequately open the Windows API to programmers.

 Subject: comments on Microsoft Settlement

Microsoft has been found guilty of being a high-handed monopoly. The only way to stop them is to stop them in truth. Their punishment must be severe—severe enough for Microsoft to get the message, severe enough for any other company to get the message, severe enough for the people who use their products to get the message.

We must not say "Oh, you did wrong, but gee, so many people use your products". We must only say "You did wrong. It's not acceptable. Your practices will not be tolerated." Microsoft needs more than a wink, a nod, and a slap on the proverbial wrist.

Microsoft needs to know that their type of business practices are NOT acceptable.

 Subject: Microsoft Settlement

The existing settlement proposed in the Microsoft antitrust trial is insufficient to prevent Microsoft's past conduct from continuing in the future. Such conduct harms the market, stifles new and innovative technologies, and reduces the operating systems and applications choices available to end-users.

Any acceptable settlement in this case must impose tighter restrictions and penalize Microsoft heavily for any continued anti-

competitive violations. Any acceptable settlement must also include an effective enforcement mechanism that Microsoft cannot dodge or ignore. Microsoft has been known to flagrantly ignore external authorities in past cases and this kind of corporate arrogance must be curtailed.

For the sake of customers, partners and competitors alike, please reject this proposed settlement and seek more stringent remedies against this monopolist.

 Subject: Microsoft Settlement  
 To: The United States Department of Justice  
 Re: Proposed Final Judgement in United States v. Microsoft

I have read numerous newspaper articles and web pages regarding the PFJ, most notably the DOJ's web site and Dan Kegel's web site. I am an electrical engineer writing software for a large wireless company with eight years experience in the field. I am a consumer of software for personal computers, some from Microsoft, some from other vendors, and some free and open source.

First, I want to endorse Mr. Kegel's open letter to the DOJ. <http://www.kegel.com/remedy/letter.html>

I agree with Mr. Kegel in that the PFJ is too narrow and technical to limit Microsoft's anti-competitive practices. Second, let me describe how Microsoft harms me, the consumer and citizen, and what the results of a Microsoft penalty should be.

Microsoft prevents me from buying quality software. While Microsoft has some desirable products, such as its desktop office suite, there are many that are both inferior and expensive, such as its personal internet information server. By forcing OEM into exclusive contracts, Microsoft prevents them from competing with one another to deliver the best software package to me. I would like to buy a computer with the Microsoft Office suite and the apache web server (which is

free, secure, efficient and scalable) preinstalled and configured, and I am sure that major manufacturers like Dell and Compaq would offer this combination if they could, as it's a combination frequently deployed by individuals and corporations. Microsoft prevents developers from producing quality software. In a competitive market place, software developers should win by giving consumers the most value. The fact that Microsoft applications only run on run on Microsoft Windows is a sign that the software market is less than competitive, since in a competitive market their application market would expand if applications were "ported" to other platforms. This is harmful to me, the consumer, in that it prevents me from choosing the best platform on which to run a selected Microsoft application. Likewise, it prevents developers from creating applications that run on the Microsoft platform.

Finally, Microsoft weakens the national information infrastructure. While

I credit Microsoft for making computers affordable and accessible to consumers, and hence creating a good deal of the information infrastructure, their anti-competitive practices have shielded them from the market forces that would naturally result in better software for everyone. The "nimda" computer worm is an excellent example. It was not a subtle bug in Microsoft's web server, it was more like an invitation to vandals, and it is costing individuals and their internet providers many millions of dollars. I am certain that this overlooked security hole would have been found and secured in a competitive software market. As it is, we all suffer as a result of Microsoft's arrogance.

Thank you for your consideration.

This is a "Tunney Act" comment on the proposed Microsoft settlement. If Microsoft, found guilty of a serious crime, despite their perjured testimony during the trial, is punished by a settlement so light, how can we with a straight face ever give anyone any harsh punishment? In an age where "three strikes and you're out", and no parole, and mandatory jail time, how can this settlement be justified? They were found guilty by a court. They were found guilty by an appeals court. Their appeal to the Supreme Court was denied.

Why back down now? Why, after a reasonable punishment was determined (that Microsoft be split up) is the new, "fixed" version so light?

My specified beef are

(1) Microsoft may decline to expose any particular API by declaring that it's used for "security". However, this includes most of the profitable third party industries. How can anyone inter operate with, for example, Microsoft's Exchange email server without the necessary technical details?

(2) The definition of "Windows" is absurdly narrow. Microsoft currently sells at least five different operating systems (X Box, WebTV, Windows CE, the "Windows 95" version of windows and the "Windows NT" version). Most of these are not covered. Microsoft can escape from most penalties by simply making a new operating system. Given that they have created so many operating systems in the last ten years, it's not hard to see them making more.

(3) Microsoft is not prevented from refusing to sell their OS to the different PC manufacturers. It was well documented at the trial that they have used their OS power to push other products; this is the very nature of anti-competitive behavior that should be stopped.

Thank you for listening,  
Peter Smith

From: Anthony Valentine  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 1:38pm  
Subject: Microsoft Settlement  
Ms. Hesse,

I would like to inform you of my objections to the Proposed Settlement in the Microsoft Anti-Trust case.

As a Linux user, I frequently attempt to convince people to try Linux. Very few people actually do. Most people I talk to about it say that they need Microsoft Office, and since it doesn't run on Linux, they won't try it.

I have come to the conclusion that the average person doesn't seem to care about the Operating System that runs on their computer, they care about the applications. The people I talk to say that they like what Linux can offer them in terms of cost, security and stability. However, they are willing to endure the crashes and viruses so rampant in Windows, simply because everybody else runs Office, so they have to also in order to exchange documents.

The Proposed Settlement does not require Microsoft to disclose it's Office document formats. I think that it should. This one small addition would allow people to use competing software and still be able to exchange MS Office documents. If people were able to this, most of the objections to trying Linux (or any other OS) would go away.

Openness is the key here. One of the reasons that Open Source Software is successful, is that everything is based on open standards. This openness allows anybody to write new or extend old software. The effect of this is a large number of different software packages that all do the same thing a lightly different way, giving the users a large pool of options to choose from. Which is the whole point: let the users choose what they want to run, instead of forcing them all to use one package.

I would also like to make a brief comment on the state of the economy and it's possible impact on the Settlement. I am not an economist, however some articles that I have read alluded that the Proposed Settlement is purposely lenient because the DOJ doesn't want to cripple a major US corporation in times of economic downturn. I do not know if this is true or not, however I can say that I would disagree with it if it were. Large monopolistic companies are bad for the economy (more so during an economic downturn), which is the entire purpose behind the Anti-Trust laws in the first place.

Thank you.

To Whom It May Concern:

I've been watching the proceedings of the Microsoft anti-trust case for years now, and respectfully disagree with the proposed settlement. There are too many points to address fully, so I'll just point out the one that bothers me the most.

The proposed settlement doesn't do much to foster competition in the software market. We should require Microsoft to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications, with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field. This would greatly reduce the lock-in that Microsoft has on the consumer and businesses.

As an example, Intel and AMD have been successfully competing, with great benefits to the consumer, based on the open X86 CPU instruction set. I firmly believe that creating open standards out of the core Windows infrastructure would create similar benefits to consumers.

Sincerely,  
Jeff Newquist

To: Microsoft ATR  
Date: 1/23/02 1:38pm  
Subject: Microsoft Settlement

I'll try to keep from ranting, but when it comes to this issue, that's easier said than done.

Fact: THE GOVERNMENT (for the people) told Microsoft in no uncertain terms in 1995 how they had to act to avoid BREAKING THE LAW.

Fact: They did it anyway. A judge has ruled.

Fact: Microsoft, in breaking the law, has made more money from its ILLEGAL activity than the mind can comprehend.

Fact: The settlement does NOT punish the criminal on a level equal to the profits made, and the damage done to hard working computer professionals the world over. Fact: Criminals are doing time for offenses where one person was damaged hundreds or thousands of dollars. You have criminals at Microsoft, who ran up damages into the millions or billions, and affected the livelihood of possibly hundreds of thousands of people. Why don't they do time as part of the "settlement"??? Fact: The "proposed settlement" is basically saying, "don't break the law again". Please. Give me a break, and THROW THE BOOK AT MICROSOFT! They should be treated with all the respect due a common CRIMINAL!

Sincerely,  
Ronny Smith

PS All public comment should be scrutinized very carefully to make sure it is PUBLIC comment.

Microsoft has a mighty PR team of low lives, and have been known to have financial ties to people submitting "public" comment. Just ask the LA TIMES.

Please let it be known that the decision of the Court will affect many people outside the Court's jurisdiction.

#### MTC-00017602

From:  
wolff@speakeasy.crc.ricoh.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 1:36pm  
Subject: Microsoft Settlement  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

To Whom It May Concern,  
As a professional research scientist in the IT field having given careful consideration and study to the terms of the proposed final judgment I must respectfully disagree with the conclusions of Department of Justice and

strongly urge you not to proceed with the settlement in this form. Contrary to being an effective remedy, I believe that as currently written the proposed final judgment would strengthen Microsoft's monopoly and further damage competition.

The current proposed remedy relies on the concept of "middleware" to promote competition. By defining middleware in terms of API's and other documentation published by Microsoft, the PFJ presupposes and encourages the continuance of Microsoft's dual monopoly in operating systems and applications. As the original Finding of Fact rightly pointed out, Microsoft's monopoly stems from the market need for a critical threshold of available applications before an operating system can be accepted. Likewise developers create applications only for accepted operating systems.

The current proposal frees Microsoft to continue existing dependencies and create new dependences between applications and Microsoft's proprietary operating systems. This leaves Microsoft's monopoly power intact and unfettered. In fact, the PFJ sanctions these dependencies. For example, sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". Thus information which could be used to create competition for operating systems is expressly denied from being used for that purpose.

By defining the basis of competition at the middleware layer, the PFJ guarantees there will be no competition. Microsoft has already shown that it is willing to sacrifice any revenue opportunities at this layer in order to protect the the revenues associated with both sides of the middleware where it holds monopolies on the operating system and application. Since no competitor has access to these revenue sources, and there is no chance of severing the dependence between applications and operating systems, there is no economic incentive for competition to enter. Hence there will be no competition.

To be an effective solution that benefits the public interest, any settlement must break the proprietary dependence between applications and operating systems. For example, applications like Microsoft Word must be able to run on non-Microsoft operating systems. Microsoft currently prevents these applications from being used on non-Windows platforms through a variety of technical and legal means. I believe it is possible and within scope of law for the DOJ to create remedies that accomplished this goal. However the current proposed final judgment will not achieve this and in all probability will lead to continued monopolistic practices and harm to consumers and the market.

Please note that while I am an employee of Ricoh Innovations, Inc. the opinions expressed here are solely my own and not those of Ricoh Innovations, or its parent company.

**MTC-00017603**

From: Clark McGrew  
To: Microsoft ATR  
Date: 1/23/02 1:39pm  
Subject: Microsoft Settlement

Dear Sirs,

I am writing to express my dissatisfaction with the propose Department of Justice Settlement of the Microsoft Antitrust case. The drafted settlement does little to address the core monopolization violations that were affirmed by the unanimous Court of Appeals in June 2001.

The DC Circuit Court found that a remedy should "unfetter [the] market from anti-competitive conduct" and "terminate the illegal monopoly".

This could be facilitated by Section III.D which requires that "the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product". However, the limitations in III.J seem to render the provision meaningless.

The current settlement will allow Microsoft to maintain tight control over the community which develops products that interoperate with Microsoft Windows System APIs. Further, it allows Microsoft to decide who will compete against its middleware products by requiring a "reasonable business" need for the API documentation which will allow Microsoft to prevent competition from OpenSource software (e.g. software developed in a manner akin to the Linux operating system). I suggest that Microsoft should be required to publicly document all Microsoft Windows APIs without requiring non-disclosure agreements, or undue publication fees.

Finally, the security concerns mentioned in III.J.1 provide no justification for weakening the API documentation requirements. The field of computer security has demonstrated through many years of experience that security cannot depend on obfuscation and is best maintained using well documented security measures. This section provides Microsoft Middleware with another unfair advantage to compete against third party products. I ask that III.J.1.a be struck completely.

Sincerely,

Clark McGrew

From: John R.  
To: Microsoft ATR  
Date: 1/23/02 1:38pm  
Subject: Microsoft Settlement

Good afternoon,

I am writing in response to the Proposed Final Judgement to the currently open anti-trust case against Microsoft. I have read large portions of the proposal and related information and have found numerous problems with it.

I find that it is at best, ridiculous, and at worst insulting to the American public. I'll center my complaint on a single issue in the spirit of brevity.

The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..."

This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems. I find it to be more than a bit wrong to force developers to exclude target platforms based on whether Microsoft chooses to admit that it is a compatible platform.

Please deny this proposal and move forward with a course of action that would actually eliminate (rather than complicate) the anti-competitive practices of Microsoft.

John D. Rothe

Dear Sirs,

I would like to offer a few comments on the state of the microsoft settlement.

1. I had/have a very hard time accepting the reversal of Judge Jackson. As far as his comments about microsoft executives, I agreed. The execs. that "testified" sounded like idiots that MUST have found their riches under a rock they tripped over, I.E. 'I don't understand the question'.

2. microsoft itself MIGHT, in fact, be sealing it's own fate with concepts like XP but, with their past history of total want of control of all things computer, and now internet, I fear for average users.

3. Bill Gates doesn't come across as a person that is either intelligent or compassionate. I believe "power mad" is the closest description I can imagine, it can't be about money anymore, can it?

Steve Ballmar sounds like a very unreasonable person, profit as the motive or not.

Yes, I am a LinuX user, in part because of the actions of microsoft, please don't let these people "off" to continue to treat average users the way they have in the past and indicate they will treat them in the future. A lot of consumer income hangs in the balance.

Thanks for your time, Bill Pela

To whom it may concern...

I would like to add my voice to the opposition of the settlement with Microsoft. I feel that it does very little to ensure that the anti-competitive (and illegal) behavior of which Microsoft has been convicted will not continue. I also feel that it does not properly punish Microsoft for its behavior, and that in regards to both concerns the action proposed by the nine states better serves the interests of our country.

I am a web developer; I have been aversely affected by Microsoft's illegal actions. With their ill-gotten dominance in the browser market I fear that they will feel no need to improve their products because they have no competition. Without competition, markets stagnate, and we all suffer.

I do not want to see Microsoft's anti-competitive and illegal behavior continue unchecked, and believe that the current settlement will allow just that.

Subject: U.S. v. Microsoft

Dear Sirs—

I have been in the US computer industry since the late sixties and there exists no threat to the long term American economy that approaches where Microsoft is headed. Allowing them to continue their shady practices and underhanded tactics based on monopoly and monetary power must stop. We must come down on them hard and immediately. The proposed settlement is less than a hand slap. We need some real teeth in terms of immediate penalties to aid those harmed, a prohibition of Microsoft expanding their tentacles into new areas and a totally independent mechanism for makes certain their practices are brought back into the norm of honest and fair business practices.

1) The quality and reliability of Microsoft products are at a level that would be unacceptable in any field without monopoly control.

2) Any company that choices to partner with Microsoft has brought about their own

death. Some are bought but for most, their intellectual property is usurped by Microsoft.

3) Almost no innovation is happening within the areas of Microsoft control. Companies know that every innovation they introduce will eventually be taken by the evil monopoly. For example, it is almost impossible to get venture capital for software development today. The people with the money know that Microsoft will use its power to take it for their own and then they will have to pay the costs of fighting a legal battle with the big money machine. They know historically that there is not winning, eventually Microsoft will prevail.

4) The only things that Microsoft seems to be afraid of today are truly open standards that they can not "embrace and extend" and the Linux "free and open" operating system. One should note that Linux is a essentially a product of Europe and often associated with their institutions of higher learning. There is little input from US institutions since our universities take our public money but instead of giving new technologies and software developed using this money back to the public, they sell or license them for additional income.

If these trends continue, the world will eventually need a solution to the high cost and low quality of Microsoft products. By that time, only countries like India and China or the EU will have the ability to produce systems and products independent of Microsoft's control. Such a turn of events will dramatically reduce our now dominant position in computing, networking and information engineering to that of a third rate contributor, with a heavy toll on our economy and quality of life.

Thank you for your attention,  
J. Jentink

From: Darryl Davidson  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 1:37pm  
Subject: regarding Microsoft Settlement  
To whom it may concern;

My name is Darryl Davidson. I am a computer professional, with 20 years of involvement in the industry, and I have spent a considerable amount of time monitoring this case. I'm writing to voice my grave disappointment at the settlement being offered Microsoft in their ongoing antitrust trial.

As a consumer, I've watched Microsoft repeatedly add features to their various operating systems that made for compelling upgrade sales, then abandon these features a version or two later. The price climbs, the quality stays mediocre, and the market value earned by Microsoft's monopoly has literally exploded.

If Microsoft is to be treated as a legal monopoly like many public utilities, a profit margin that is literally orders of magnitude above the cost of goods produced (hundreds of dollars retail for OS copies that cost a few dollars) needs to be a targeted, regulated outcome of their monopoly status.

If, as this settlement allows, there will be no public protections against the gouging that Microsoft is busily doing, and if the remedies presented are going to be this toothless, antitrust has become a travesty.

The remedies need to provide direct and immediate punitive damages at a level that acts as a corporate deterrent to the abusive practices Microsoft has been found guilty of. None of the remedies offered do this. This decree should be setting a new record for damages. Instead, it is less than a slap of the hand.

The remedies need to act to regain the balance and competition Microsoft has squelched though anticompetitive measures. Ignoring for a moment the patheticness of creating a 3 person board to monitor this settlement, allowing Microsoft ANY position in the regulatory board is ludicrous. One man can stymie a 3 person committee or board. Add in the lack of true, unassailable enforcement strengths given to this board, and you've nearly guaranteed we'll just be starting antitrust proceedings again in a few years.

In short, this settlement should be completely thrown out. It does nothing to remedy damages to consumers, nothing to deter anticompetitive acts in the future, and nothing toward enriching competition. It is a paper tiger, and will never accomplish a damn thing for those of us damaged by Microsoft's illegal acts.

-Darryl Davidson

PS: My only vested interests in any of these proceedings are 10 shares of Microsoft stock. I am not now, nor have I ever been, an employee of any of the primary companies involved in these proceedings. My interest is strictly as a consumer and as an industry member who empathizes with those caught in the crosshairs of large, anticompetitive corporations.

From: David Wood  
To: Microsoft ATR  
Date: 1/23/02 1:40pm  
Subject: Microsoft Settlement

As a software developer for over 10 years, and an entrepreneur in the software and media (video game) industries, I feel I must offer my comments on the proposed settlement between Microsoft and the Department of Justice.

In summary, the Proposed Final Judgment allows many exclusionary practices to continue, and does not take any direct measures to reduce the Applications Barrier to Entry faced by new entrants to the market.

It is my firm belief, and one shared with many of my colleagues, that Microsoft has, by virtue of its status as a monopoly, been a massively pernicious influence on the computer industry, and by direct result, on our nation's economy. The insulation from real challenge which Microsoft has enjoyed over the past 15 years has been felt uniformly in its products, services, and conduct toward its customers, let alone towards its competitors. Had Microsoft been obliged to compete on the basis of technical merit alone, our everyday computing experience would be staggeringly different—with a net effect of what I believe to be hundreds of billions of dollars in cumulative productivity gains.

When Bell Telephone was still the nascent nervous system of our country, regulators

saw the necessity of strong remedies, despite some now familiar scare tactics. Had they not, phone calls would cost dollars instead of cents, and the world would be a very different place; dependent on the imaginations of a single organization which is insulated from threats and fears change.

Developing a remedy for the computer industry will be even more difficult than for the telecommunications industry, and it will be even more essential.

In short:

\* While the government cannot maintain an operating system standard, or pick a winner from the marketplace, it can have a massively beneficial effect by encouraging competition through a remedy which directs Microsoft to providing some aid for ISVs engaged in making Windows-compatible operating systems.

By inducing Microsoft to make full disclosure about its products, especially its operating systems past and present, and to support competitors who wish to make compatible products, competition can be reintroduced to the marketplace. This will force developers to compete on the basis of merit, instead of through obscurity, lack of standardization, incompatibility, and patent lawsuits—the current way things are done.

The Findings of Fact (P52) considered the possibility that competing operating systems could implement the Windows APIs and thereby directly run software written for Windows as a way of circumventing the Applications Barrier to Entry. This is in fact the route being taken by the Linux operating system, which includes middleware (named WINE) that can run many Windows programs.

To the contrary, the PFJ as it currently stands, in sections III.D. and III.E., restricts information released by those sections to be used "for the sole purpose of interoperating with a Windows Operating System Product". This prohibits ISVs from using the information for the purpose of writing operating systems that interoperate with Windows programs, and it would virtually ensure Microsoft never need fear meaningful competition on the basis of technical merit.

\* The PFJ as currently written appears to lack an effective enforcement mechanism. It does provide for the creation of a Technical Committee with investigative powers, but appears to leave all actual enforcement to the legal system.

\* The PFJ provides for increased disclosure of technical information to ISVs, but these provisions are flawed in several ways: The PFJ fails to require advance notice of technical requirements, API documentation is released too late to help ISVs, many important APIs would remain undocumented, unreasonable restrictions are placed on the use of the released documentation, file formats remain undocumented, and patents covering the Windows APIs remain undisclosed.

\* The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices: Section III.A.2 allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

\* Microsoft still engages in EULA practices which discriminate against competitors, specifically any windows-compatible alternative operating system. Specifically, I provide two examples: the Microsoft Windows Media Encoder 7.1 SDK EULA discriminates against ISVs who ship Open Source applications, and the Microsoft Platform SDK EULA prohibits use of necessary components on non-Microsoft products. There are numerous others, as this is a systematic anticompetitive strategy on the part of Microsoft. The PFJ does nothing to discourage these onerous practices.

\* Microsoft's enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier US v. Microsoft antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software.

\* The PFJ's definition of API might omit important APIs such as the Microsoft Installer APIs which are used by installer programs to install software on Windows.

\* The definition of "Microsoft Middleware" (P28) is unnecessarily restrictive and contains significant loopholes, such as exclusion based simply on version numbers or distribution methods.

\* "Microsoft Middleware Product" does not include .NET, Outlook, or Office. I should note that these and other objects have been excellently detailed further at the following URL: <http://www.kegel.com/remedy/remedy2.html> I hope that these matters will be seriously considered.

Microsoft's belligerent behavior and our way-or-the-highway quality standards have been a terrible burden on our workplace, our industry, and our lives. We hope the court has the imagination to understand what better alternatives exist, and to understand the dramatic good effect that strong, intelligent, proper solutions can have. With the high costs and dramatic failures the press has recently observed, I trust the disaster of the status quo is obvious.

Best Regards,  
-David Wood

To: Microsoft ATR  
Date: 1/23/02 1:40pm  
Subject: Microsoft Settlement

To whom it may concern:

I have been watching the progress of the antitrust case against Microsoft for many years now. While I am not an expert in law, I do believe I have a valid and useful perspective as both a software engineer and American citizen. It is clear to me, and this has been proven in a court of law, that Microsoft has been engaged in anticompetitive practices for a long time. It has used its market position, obtained by bullying smaller companies, to bully more companies and increase its market share further. It has abused its power, and should be punished for its tactics and the harm it has done. Aside from reparations, there should be strong rules put in place to stimulate competition and open opportunities for others to compete in this market.

I believe, and there are many who would agree with me, that the current proposed settlement does not do enough to right Microsoft's wrongs. I will not take the time now to go over all the areas that could be improved, but simply touch on a few major issues.

1. The language for non-discrimination against OEMs that sell computers with an OS other than Windows does not seem strong enough, specifically in terms of smaller OEMs.

2. Microsoft must be forced to open proprietary APIs and document formats for Windows and Microsoft Office to stimulate competition in this area.

3. Microsoft routinely discriminates against open source software in its EULAs, disallowing open source software that operates with the Windows operating system to be shipped with certain Windows add ons that it may depend on. This creates a barrier to the market for open source software, based solely on the license for the software.

4. Microsoft has a proposal for donating some of its software to schools as reparation for past ills, but this serves as a way to increase its market share in education, at minimal cost to Microsoft. Perhaps Microsoft should pay the money it says its software is worth, and allow the schools the choice of which hardware and software platform makes the most sense.

It seems likely that unless more is done to prevent illegal practices, Microsoft will continue to have a stranglehold on the software industry, and derivatives, such as internet services. I strongly urge you to take this letter as evidence that the American

people do not agree with this proposed settlement, as for every one that communicates with you, there are probably a few hundred more who feel the same.

Thank you,

From: Steve Russo  
To: Microsoft ATR  
Date: 1/23/02 2:58pm  
Subject: Microsoft Settlement

I don't believe that the settlement is fair. We have lost many great companies because of the predatory nature of Microsoft. I have been forced to buy their operating systems with new pcs, even though I don't use their operating systems, I use linux.

I am currently in the process of signing up for the class action suit in Minnesota. Please do not let them get off of the line this easily. We cannot bring our lost companies back, but we CAN do something about the companies that are left.

Also, in my opinion, their sales will not affect our economy as much as the lost companies would have. They are being boycotted in many countries because of their practices. We are losing our market share in these remote locations because of them.

Thanks,  
Steve Russo

From: Richard Huffman  
To: Microsoft ATR  
Date: 1/23/02 1:37pm  
Subject: Microsoft Settlement

Perhaps I am misunderstanding, but how can it be a good thing to take small measures to re-introduce competition in application software while legitimizing the near monopolistic control of the operating system market that they used to get in trouble in the first place? If someone commits a robbery, do we return the weapons to him before he has even served his sentence, or at all??

Microsoft leveraged a monopoly in one market to create a monopoly in another. Shouldn't an effective remedy curtail \*both\* monopolies?

Thank you for your patience  
Richard Huffman

**MTC-00017617**

From: John B. Pormann  
To: Microsoft ATR  
Date: 1/23/02 1:40pm  
Subject: Microsoft Settlement

As a computer professional, I would like to add my comments to those being collected towards the final settlement with Microsoft Corporation. Please note that these opinions are my own and should not be construed to reflect on my employer, Duke University.

Ralph Nader and James Love put forth a number of good comments in their open letter, available at: <http://www.cptech.org/at/ms/rnj12kollarkotellynov501.html> Perhaps most critical of these points is the fact that Microsoft has repeatedly used proprietary file formats to thwart interoperability efforts with other platforms. In some cases, this

obfuscation of file formats has been extreme enough that THEIR OWN PRODUCTS have not interoperated across different versions. One particular example occurred when their MS Word 5 product could not read files created under MS Word 6. This apparently happened again between Word 6 and the Office 97 release.

By repeatedly changing file formats and NOT publishing the new formats in a timely manner (if ever), Microsoft imposes a significant hurdle upon other companies that wish to compete in the marketplace. Such competition is simply not present in the market today, with the end result that users have THEIR OWN DATA tied up in Microsoft's proprietary file format. By tying a user's data into a proprietary format, Microsoft inhibits a user's ability to move, or even test, their business operations on other vendor products. If a budget spreadsheet is in the MS Excel format, you must use MS Excel to read or analyze it, even though other, perhaps better, analysis methods could be developed outside of MS Excel. Note that this is THE USER'S DATA, not Microsoft's. This is data that could be critical to the operation of their business, and it is tied up in Microsoft proprietary file formats. Thus, the user must spend additional resources, both time and money, to regain access to THEIR OWN DATA if they switch to a competing vendor.

I suggest that additional thought be given to imposing some form of standards to Microsoft's file formats, either:

1. forcing Microsoft to only use file formats approved by an INDEPENDENT standards body; or
2. forcing Microsoft to publish their file formats, including a reference implementation, to encode and decode such formats, available in a platform-independent source code format

In either case, Microsoft's adoption or creation of a new file format should be published WELL BEFORE the sale of any new computer program so that competing vendors have the opportunity to interoperate with the standard at the time the Microsoft product hits the market.

Thank you for the opportunity to share these thoughts with you.

From: Brandon Stephens  
To: Microsoft ATR  
Date: 1/23/02 1:41pm  
Subject: Microsoft Settlement

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the

current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: tack  
To: Microsoft ATR  
Date: 1/23/02 1:30pm  
Subject: Microsoft Settlement

I disagree with the proposed settlement to Microsoft antitrust case. It contains loopholes designed to let Microsoft continue to act as

a bully and a monopolist. As we have seen that it's 1994 consent decree did not deter Microsoft from engaging in heavy handed illegal business practices outlined in the findings of fact in the current case, we must conclude that any settlement in this action may not deter Microsoft from doing so in the future.

I believe that the proposed settlement is inadequate as a means of stopping the illegal, economically damaging business practices at Microsoft corporation. By not offering any form of punishment for past illegal acts and introducing a series of loopholes, vagueness and secrecy provisions, it offers no relief from past wrongs and fails to prevent it from committing further illegal acts.

Microsoft is a convicted illegal business practitioner which has damaged our economy. It should not be allowed to get away with it or continue to do so in the future. The current settlement does nothing to address this, and will likely lead to continued illegal activity. It must not stand.

From: Gary D. Young  
To: Microsoft ATR  
Date: 1/23/02 1:43pm  
Subject: Microsoft Settlement

Hi,

I just want to comment that I feel accepting a settlement with Microsoft is a bad thing. One thing which Microsoft is known to do in the present (not legally proven, but widely known among technical professionals) is to threaten (sometimes legal) action against companies which attempt to provide alternate emulations of Microsoft's products. What this means, is that companies without the deep pockets necessary to develop something from scratch, or companies without the corporate muscle of Microsoft in pushing standards are unable to provide working alternatives. Accepting a settlement of any sort with them, only encourages Microsoft to continue the games they played with browsers, hard drive error scanning software, compression software, authentication, and other niches that reduce consumer options. If consumers having options is considered a good thing in the marketplace, decline the settlement. If consumers having no choice is a good thing, then we are all vulnerable to the same windows viruses, and all vulnerable to whatever corporate whim Microsoft may decide upon.

Gary D. Young  
US Citizen, resident of SF Bay Area, CA.

**MTC-00017626**

From: carmine mangione  
To: Microsoft ATR  
Date: 1/23/02 1:43pm  
Subject: Microsoft Settlement

The proposed Microsoft settlement must be stopped for the following reasons: It fails to address the single most significant factor in Microsoft's abuse of monopoly power: their use of file formats to limit alternatives to their products, force consumers to upgrade to the latest version, and extend their hegemony to other markets.

Microsoft's word processing product, Word, uses an unpublished, undocumented and non-standard compliant .doc format. Microsoft has changed this format no less than 5 times over the past 10 years. These changes force everyone in an organization to upgrade to the latest version of Word if a single user upgrades. These upgrades are often forced with purchase of new equipment or upgrades of seemingly unrelated components such as the operating system as Microsoft only supports the latest versions of their software.

Microsoft's half-hearted attempts to allow users save documents in previous versions fail for two reasons. First, the "save as" option often loses valuable formatting information and second, they do not change the extension name of the format as other vendors do. For example, .doc95, .doc98, and .doc00 make it clear which version a file is saved in so a user can send the correct version out. Microsoft, mysteriously saves all files as .doc. Most other vendors change their extensions when they make changes to file formats that may break older version.

The solution:

1. Require microsoft to publish their file formats and to publish and open for review any format changes through one of the independent standards bodies.

2. Require Microsoft to provide free upgrades to all previous versions of their software that will allow those versions to read any new formats flawlessly.

Thank you,  
Carmine Mangione

From: Hartley, Jonathan  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 1:43pm  
Subject: microsoft proposed final judgement

I appreciate the great amount of work that has gone into producing the proposed final judgement to date. However, the settlement in its current form seems to overlook several important issues, and as such it is inadequate in curtailing Microsoft's past and current anti-competitive practices, to the great detriment of consumers, rival technologies, and the computing industry as a whole.

In particular, I would like to see measures taken to prevent Microsoft from penalising OEMs who choose to ship PCs with other operating systems pre-installed. As far as I can see, section III.A.2 allows them to continue doing this. This practice effectively stifles any competing operating system from gaining a significant foothold in the marketplace, regardless of the merits of functionality, price or reliability that other operating systems may have to offer. Section III.B also seems to allow unfair penalizing of OEMs that choose to offer competing products.

Additionally, I would like to see steps taken to prevent Microsoft end-user licence agreements from prohibiting my choice of using non-Microsoft operating systems or products. The PFJ as currently stated does not prohibit these kinds of overly-restrictive EULAs.

Sincere thanks for this opportunity to express my views,

Jon

From: Billy Fuller  
To: Microsoft ATR  
Date: 1/23/02 1:39pm  
Subject: Microsoft Settlement

I am for the proposed settlement even though I think the case should be dismissed because the court incorrectly narrows the "industry" being monopolized to just Microsoft's customers. If the same reasoning were applied to, say, Oracle then the "industry" would then be narrowed to just Oracle's customers and, lo and behold, Oracle is then a monopoly. Like Sun. Like IBM. Like the corner shoe repair shop.

Why on earth would you limit the huge computer software industry to just the tiny sliver that runs on computers that are arbitrarily labeled desktops? A computer is a computer. Software is software. All together they are an industry. Why draw the line at just Microsoft's customers? This whole case is nothing but a sham, an unjust way of using the courts to reward the uncompetitive practices of Microsoft's rivals.

Date: 1/23/02 1:41pm  
Subject: Microsoft Settlement

The proposed settlement in the Microsoft case is a bit like assigning a fox to guard your chicken coop in that it virtually guarantees Microsoft a lock on an endless series of software upgrades that the recipients can ill afford. If they could afford the technology, they wouldn't need the handout and if they can't afford the upgrades, the computers and software will rapidly become obsolete and of limited use.

The counterproposal put forward by Red Hat makes much more sense: ie, Let Microsoft donate money for hardware computing resources for underfunded schools, then load those machines with open-source software.

Open-source software will have two benefits. First, it will set schools on a course that they can afford. The cost of obtaining open-source software and upgrades is

minimal. Secondly, the Red Hat proposal does not reward Microsoft in the long term.

The currently proposed settlement merely provides Microsoft with a guaranteed long-term cash cow instead of punishment for corporate misdeeds resulting in market domination.

Subject: Microsoft Settlement

I am opposed to the present settlement terms offered to the Microsoft Corporation as doing nothing to prevent or limit the ability of Microsoft to act as a monopoly, or to prevent or limit the ability of Microsoft to act adversely against those that it deems to be competitors or critics.

The long and well-documented history of Microsoft parallels that of many of the trusts and monopolies that it has been the policy and practice of the United States to prevent or, in the worst of cases, dismantle and separate.

Likewise, this settlement does not provide for the free market economy that it is the policy of the United States to support; by failing to actively limit the monopolistic actions of Microsoft, already determined in a court of law, the Department of Justice is endorsing the concept that "competition is bad" and that no other software developer or vendor may be able to compete with the burgeoning Microsoft structure. Consumers, as well as commercial enterprises, will be forced not to pay market prices based on competition, but prices set at already arbitrary levels that are likely to go even higher in relation to future sales.

Please do not allow the settlement to be completed as it is currently written, nor with the thrust of its offer standing in any future version of it.

With this settlement, the Microsoft monopoly will continue to stifle competition and stagnate the computer industry by closing any avenue that Microsoft does not approve of, as historical documentation clearly indicates is the Microsoft pattern of preserving itself.

To Whom it May Concern:

I would like to express my concern over the proposed settlement in the U.S. Department of Justice vs. Microsoft case. I use both open source and proprietary software, Linux being my primary operating system for work and Microsoft Windows being the choice for our family's home computers. I was brought up with both Unix and Microsoft operating systems, so I feel that I can speak objectively, at least from a technical perspective.

My reactions and recommendations are in response to the fact that Microsoft was found by the legal system to have broken the law. It grew to and maintained a monopoly by illegal means, so actions must be taken to restore a competitive environment.

I have two recommendations:

1. Force Microsoft to document their proprietary file formats. This is probably the single most effective way to restore competition. Microsoft has a stranglehold on the word processing (MS Word) and presentation (MS Powerpoint) markets, not because its products are superior but because of illegal practices. The need to read and write files in those formats is now critical for the exchange of information. If other software companies could effectively and completely import and export Word and Powerpoint files, competition would be restored.

2. Do not allow Microsoft to give software and hardware to schools as their "punishment". This proposal is a gift to them, not to the country! It is anything but punishment. Imagine all the schools that will be locked into future upgrades of Microsoft

products, and the way our youth will be conditioned to working the Microsoft way. If Microsoft truly wants to help our educational system, have them donate the money, not the software or hardware, with no strings attached.

Thank you for your attention in this matter.

From: Mark Hammer  
To: Microsoft ATR  
Date: 1/23/02 1:44pm  
Subject: Comment on Microsoft Judgement

To whom it may concern:  
This is likely to be one of the more far-reaching cases in recent memory.

I am not a lawyer. "I don't know a Habis from a Corpus," the old movie line says. However I think I know justice, and this settlement just does not feel like justice. It fails the duck test. "If it looks like a duck..."

There are several things that concern me with the proposed settlement. The first being Microsoft's past behavior.

Have they shown any inclination to respect the rule of law, except where it benefits them? Have you forgotten the arrogance they showed in Judge Jackson's courtroom? The arrogance that caused even that conservative, pro-business Reagan appointee to roll his eyes in disbelief? Have you forgotten the doctored video evidence? How about Bill Gates' taped testimony?

Have they shown any inclination in the past to honor "Gentlemen's Agreements" when it was to their advantage not to? What happened to the original agreement between Microsoft and the DOJ? What has happened to countless companies large and small that Microsoft has cajoled down the garden path, then turned and ruthlessly stabbed in the back? So what has changed? What causes the DOJ to think that Microsoft will now honor the spirit as well as the letter of your settlement? Is it just "a scrap of paper", as Churchill said about another agreement with a ruthless predator.

I am also concerned about the principle that no one is above the law. What will happen if Microsoft gets off with a wrist slap and is free to go on their merry way, especially in light of the Enron mess? What will the perception be?

At the very least, Microsoft should be forced to release to the public the programming interfaces and the data formats of all their software. This includes data packets and files. AT&T was required to provide access to their system to their competitors. Microsoft should be required to do the same.

The pre-package agreements with the OEMs are used by Microsoft to restrain trade and maintain their monopoly. A simple solution is to require Microsoft to buy back at published retail prices any software the end-user does not want that comes bundled with a computer. This must be made the responsibility of Microsoft, not the OEMs. They must not be able to duck it. This solution has the simple elegance of solving the core problem, without major upheaval.

Remember, the DOJ won, Microsoft lost. If the Government of the United States has to go down this path again, it will be a lot harder next time. That "scrap of paper" eventually led to World War II.

Sincerely,  
Mark B. Hammer

Date: 1/23/02 1:44pm  
Subject: microsoft settlement

I would like to add my name to the long, long list of those who are dissatisfied with the proposed settlement of the Department of Justice vs. Microsoft antitrust case. I am especially concerned in the light of the following: <http://www.macintouch.com/postoffice.html>

I am deeply dissatisfied in the entirety of how this case was handled. No attempt was made to convict under the Rice Anti-Organized Crime act even though the evidence presented at trial shows a long and flagrant history of criminal activities (predicate felony: copyright violation in MS DOS 1.0 and no attempt to license the plagiarized code.)

The proposed settlement does not include prison time for the officers or board of directors [of Microsoft.]

It does not include a seizure of all assets of the criminal organization [Microsoft.] It does not include a revocation of all patents and copyrights of the criminal organization [Microsoft.] It does not include a complete dissolution of the criminal organization [Microsoft.]

Furthermore, the federal government maintains software contracts with the criminal organization [Microsoft.] This is not excusable. It encourages the the criminal organization [Microsoft] to continue its activities. Revoking these contracts en masse and replacing the software with alternatives—there may be no competition, but there are alternatives—will inform your employers, the People of the United States of America, that you are actually interested in doing business with legitimate business entities, rather than criminal organizations such as Microsoft.

However, since the prosecution failed to present a case for the Rice Anti-Organized Crime Act and limited prosecution to anticompetitive practices, all of this is immaterial. Still, the settlement is not strong enough. Microsoft Corporation is wealthy enough that no monetary settlement (such as the proposal to supply schools with computers, software and training—which will only INCREASE Microsoft's position in the marketplace) will satisfactorily harm the company.

Definitions of terms such as API, Microsoft Middleware, Microsoft Middleware Product and Windows Operating System Product are not strong enough and leave too many holes for the criminal organization [Microsoft] to exploit to the continuation of the Applications Barrier to Entry (Findings of Fact, Paragraph 52.)

I hope my comments are helpful.

I feel that the proposed remedy for Microsoft's anticompetitive and monopolistic practices is inadequate in the extreme. I believe the proposed settlement not only doesn't deter Microsoft, but because of the complete lack of any realistic punishment, encourages Microsoft to continue acting in an illegal, monopolistic and anti-competitive manner.

By not prohibiting or repairing any of the staggering amount of damage caused by Microsoft's illegal conduct, such as failure to prohibit intentional incompatibilities, while lacking an effective enforcement mechanism in the actions it does require, the proposed final settlement is not even a slap on the wrist, but rather a sly wink or pat on the back.

There are so many problems with the proposed final settlement that, in my opinion, it is not in the public interest.

From: Kelly White  
To: Microsoft ATR  
Date: 1/23/02 1:45pm  
Subject: Microsoft Settlement

I am a software developer, a consumer, and a concerned citizen, and I believe that the proposed settlement doesn't go far enough in stopping Microsoft from extending their monopoly into other markets. Microsoft has crushed its competitors and in doing so can be viewed as one of the causes of the current recession.

If Microsoft is allowed to enter other markets and continue its practice of illegally crushing the competitors there, what will the future economy look like?

I ask you, why isn't Microsoft being punished for their illegal actions? How am I supposed to teach my daughter not to break the law, when Microsoft does so and is then given the blessing of the government to continue doing so? Where is justice? Why does the American government spend so many resources going after Osama Bin Laden when they don't even punish the company that has single-handedly ransacked America. Microsoft—by their illegal actions—has ruined hundreds of companies and caused the unemployment of thousands of people. What kind of faith can I put in my government when I see that this will be allowed to continue to happen?

I want consumer choice, I want to be able to purchase software and other products based on the merit that matters to me, not because Microsoft is the only choice available. Please restore this ability to me by

discarding the proposed settlement and punishing Microsoft as they need to be punished.

Subject: Microsoft Settlement

To whom it may concern,  
United States Department of Justice, Antitrust Division: You asked for public comments under the Tunney Act on the Microsoft Antitrust Settlement, well, here is my opinion.

Microsoft has already been found guilty of misusing their monopoly power. Now punish them for it! The currently proposed settlement is a joke, it does not address any of the core issues. The only way other software companies can compete with Microsoft, or even survive in its shadow, is if the API (Application Programming Interface) which Microsoft uses to write programs that work with Windows is made available to all parties, free of charge, without licensing restrictions. These interfaces are what every programmer needs to know and use if they want to write Windows software; by exercising proprietary control over the APIs Microsoft effectively controls all the software that is written for Windows and holds dominion over every company or individual programmer, like myself, who wants to innovate in the computer technology field. This is the key to Microsoft's monopoly power! And by requiring them to openly publish the Windows API's (just the programming interface specifications not the program's source code) other software companies and individual programmers will be able to compete with them on a level playing field.

Any settlement that does not require this is just a waste of time and money. It's a minimum requirement, in my opinion, for achieving competitive fairness and fostering an industry-wide environment of real software innovation. Thanks for asking (and hopefully listening.)

To: Microsoft ATR

Date: 1/23/02 1:46pm  
 Subject: Microsoft Settlement  
 Greetings,

I am writing in order to submit my comments on the Revised Proposed Final Judgement. While the settlement makes a good start, I feel it is inadequate overall and leaves possible loopholes open for exploitation. The past behavior of the guilty party indicates that it is likely to do everything in it's power to minimize the effect of the proposed settlement. This behavior includes the guilty parties behavior with respect to the last "Consent Decree" which it agreed upon with the Government as well as it's current refusal to admit guilt or even concede that it has misbehaved at all. In all respects, Microsoft behaves as an unrepentant career criminal. As such, it is not deserving of mercy from the court. I fear that the Proposed Judgement may allow the guilty party to escape relatively unscathed.

Section III, Prohibited Conduct, attempts to address the guilty parties relationship with OEM vendors. It is well known that this has been a well-used tool in the past to keep OEM hardware vendors in line. It can be expected that Microsoft will take advantage of any loophole it finds in Section III in order to continue this behavior. As such, Section III should be as simple as possible. I would suggest modifying paragraph B with two changes. First, the "schedule" of prices should be publicly available via the web. There is no reason to keep the prices confidential. The end consumers of Windows have every right to know the true value of that component of their computer. I also feel that clause 3. ("the schedule may include market development allowances...") should be stricken. Despite the attempt to close the obvious loophole, I doubt that it will prevent the guilty party from resuming past behavior. Microsoft is literally making more money than it knows what to do with. I can very well pay it's own marketing and development costs. Allowing it to make these side agreements with OEMs only serves the purpose of giving it an avenue to reward favored OEMs at the expense of other OEMs. The relationship between Microsoft and OEMs should consist of the act of selling software period. Allowing any other relationship simply opens an avenue for abuse.

Paragraph D should also be modified. While it is a good idea to require Microsoft to publish the API's used by Microsoft Middleware, there is no reason to allow the guilty party to restrict access to the "MSDN". The simply gives the guilty party an avenue to require developers to agree to licenses or terms of use. For example, access to "MSDN" now requires a "Passport" account. It is entirely inappropriate to allow Microsoft to condition access to the API's upon accepting their attempt to extend their monopoly to online authentication. Microsoft should be required to publish the API's on the web without any need for either registration or authentication.

An oversight of the API provisions is that it does not apply to file formats. One of the goals of the Judgement should be to try and restore competition to the desktop operating system market. One of the anchors of the

Microsoft monopoly which was not specifically addresses in the most recent case is the Microsoft Office product. One of the greatest stumbling blocks for potential competetors on the desktop is the need of people to be able to read and write files in the various Office formats (Word, Excel, PowerPoint, etc.) By constantly changing these formats with each upgrade and not providing comprehensive documentation on their structure, Microsoft has been able to maintain a significant barrier to entry into the desktop operating system market. By including file formats along with API's and communication protocols the Court can greatly enhance the opportunity for competing products to become established in the operating system market. Paragraph J should be stricken entirely. It has at least two fatal flaws.

One is the axiom that security thru obscurity is no security at all. By allowing Microsoft to use security as an reason to refuse to release communication protocols and APIs it encourages them to design security solutions which do not provide strong security, but rather merely the illusion of security. Given the predominance of Microsoft operating systems and the past abysmal security performance of their products, it isn't wise to provide an incentive for them produce poor solutions going foreware. The second fatal flaw, which is perhaps more important, is that this clause provides a loophole which will allow Microsoft to avoid paragraphs D thru I. Recent pronouncements from the guilty party and Bill Gates indicate that security will be given the highest priority going forward. Most significant uses of network protocols involve some amount of authentication. Digital rights management and virus protection can be incorporated into virtually all aspects of operating system functionality. In fact, these technologies work best when they are prevalent thruout the system. These facts, along with the guilty parties abuse of loopholes in previous agreements, indicates that paragraph J will likely be used as a method of invalidating paragraphs D thru I. The court should either strike paragraph J, or strike paragraph D thru J. The current agreement will end up imposing little to no restraint on the convicted party.

Section IV, while it contains a good start, falls a little short. While the Judgement contains good provisions for determining if the convicted party is complying with the Judgement, there are no clear penalties for breaking the agreement. In fact, the extent of refusing to comply with the court ordered judgment seems to be the application of more court orders. To date, court orders have not had any significant impact on the convicted parties conduct. Rather, it has managed to accumulate profits at an almost unbelievable rate. Any significant penalty should involve significant monetary fines. While the need and amount of fines for previous criminal actions could be argued endlessly, the court should at a minimum include provisions for significant fines going forward should Microsoft refuse to yield to the authority of the court. Such fines should be commensurate with the revenues and profits of Microsoft. In the most recent quarter, the

guilty party profited at the rate of about \$20,000,000 per day. Revenues were about four times that amount. In order for a fine to have any sting, I feel that at a minimum it should accrue at the rate of their profits. In other words, the Judgement should contain language which would impose a fine of at least \$20,000,000 per day that the convicted party is not in compliance with the Judgement. To date, Microsoft has employed a strategy of legal delay at almost every turn. The reason is clear: while issues are dragged out in court the damage is being done in the market. By the time the court is able to issue a remedy, Microsoft has already accomplished whatever it set out to do in the first place. By imposing significant fines, the court can discourage such delays in the future in addition to ensuring actual penalties for violation of the Judgement.

In conclusion, I hope the court takes some of these ideas into consideration before rendering a final judgement. To be honest, I am amazed at the lengths to which the Court has gone to please the convicted. The fact is that Microsoft is not simply guilty, but is a repeat offender who has shown no signs or remorse nor even acknowledged that it has broken the law. Rather than issuing a swift and severe punishment as befits such a disrespectful repeat offender, the Court seems to be bending over backwards in order the please the convicted. Quite frankly, in this day and age, I see no reason to be soft on such a criminal organization whose disrespect for the Court includes the falsification of evidence and who shows no signs of even understanding the relevant law much less admitting that the law applies to them.

From: Knipp, Eric  
 To: "microsoft.atr(a)usdoj.gov"  
 Date: 1/23/02 1:44pm  
 Subject: Microsoft Settlement

The microsoft settlement does not address the concerns of illegal and unfair practices in pushing its products onto its distribution partners. Microsoft has used its dominant position in the software market to unfair advantage, locking potential competitors out of the picture by arm-twisting and flat-out threatening its distribution partners. This has resulted in a severe imbalance in the software market, creating a scenario where Microsoft increasingly wields more power to dictate what consumers are ultimately able to buy; no longer are we in a free market where software is concerned, we are rather entering into an era where one company decides what all consumers have the privilege to buy, and now Washington is going to help them do it.

I am not satisfied with the government's handling of the Microsoft case and I want to see it revisited. Unless Microsoft is truly punished and prevented from continuing its unfair practices, I do not see a bright future for the software industry (except where Microsoft alone is concerned).

Re: Microsoft Antitrust Case

Thanks for taking public comments on these types of activities.

I think it is of value to get a feel for public opinion. Although I often value the opinions of those around me, there are certain times when the application of logic, rational behavior, and extraction and analysis of fact is quite appropriate.

Such as in cases like this, for example. The facts are that this company's key stakeholders and practices, and those of other closely related industries such as media, combined with the actions of the trading community and elected representatives have now put a substantial portion of federal, state and teacher pensions at risk.

Coupling content and the wire puts objective journalism at risk, which compromises the integrity of our country. It is time for the Judiciary to step up to the plate and fix some problems here, related with this company and some of the other trusts and associations that have cornered markets and brutalized civil liberties in the interest of policing their businesses.

There is no free market economy now. From a systems perspective, our national and global economies are now self limited, and unless the markets are tuned with proper regulation designed to actually set free Adam Smith's invisible hand, (admittedly a contradiction at first read), several national economies will self destruct. Quite probably our own will be among them.

Consider, if nothing else, the data that is coming out of our federal accounting offices. Difficult times are ahead of our nation now, for the decadence and lack of proper regulation over the last decade, particularly the lack of disciplined monetary policy. It's time to properly tune the system and work to re-establish a healthy, diverse national and hopefully a healthy global economy will follow.

Please work to bring these players in check. They are out of control and are destroying this country.

Kindest Regards,  
Dave Surina B.S.E.E.

I'd like to add my comments to the proposed Microsoft settlement as permitted under the Tunney Act. Briefly let me say that I agree with the comments made by Mr. Dan Kegel (see <http://www.kegel.com/remedy/remedy2.html>) and encourage you to have a look at his analysis. I too do not believe that the proposed settlement is in the public interest.

I believe that a competitive marketplace is better for both the consumer and for the advancement of the market. Microsoft, as a monopoly, has repeatedly worked to stifle such competition, clearly succeeding to the detriment of the market. Innovation is key to the advancement of the computer software industry, but in a stifled, monopolized market this process ceases; the word instead is co-opted as a marketing term.

I hope that you will reconsider the proposed settlement with Microsoft.

From: Rick Richardson  
To: Microsoft ATR  
Date: 1/23/02 1:46pm  
Subject: Microsoft Settlement

The current proposed Microsoft settlement is a bad idea, and flawed in many areas. It does not punish Microsoft, and it does not equalize the marketplace by providing all independant software developers access to the documentation and source code for Microsoft file formats and operating systems.

Instead, I urge you to accept the "Red Hat Proposal to Enhance Microsoft Settlement Offer By Providing Open Source Software to All U.S. School Districts". <http://www.redhat.com/about/presscenter/2001/press-usschools.html>

I believe this proposal will effect a real punishment to the Microsoft Corporation, a punishment that is sorely missing from the current settlement agreement.

In addition, this settlement proposal will have a real benefit to school districts across the nation, who will be able to focus their limited resources on computer hardware purchases.

Microsoft's current settlement proposal is completely flawed. For Microsoft it is not a donation at all. Once they've written the software, each particular copy only costs them the price of a CD—a mass-produced one at that, probably \$0.50. By making more copies of MS-Windows to give away, they essentially print money: money in the form of a tax writeoff. Each copy of MS-Windows donated to a charity gets Microsoft a \$300 tax writeoff (charitable donation) for a 50-cent disk, and serves to expand the Microsoft platform dominance.

Giving away Windows is win-win-win for Microsoft. Just be aware: using their pricing for copies of Windows distributed as part of the settlement inflates the actual value of that settlement by a factor of about 500, and helps to perpetuate their monopoly.

If you cannot bring yourself to accept RedHat's proposal as is, then consider an alternative: let Microsoft donate \$1.1 billion worth of software to the school systems. But demand that it be their competitor's software (preferably Linux and other commercially-available Open-Source software). For example, let Microsoft donate approximately 10,000–20,000 boxed sets of either RedHat, Mandrake, Suse, etc. for the existing PCs in the schools. This will put significant cash flow in the high-tech industry, help further their competitors, and actually punish Microsoft.

Subject: Microsoft Settlement

I would like to express my misgivings over the settlement in the Microsoft case. It seems to me that nothing short of requiring Microsoft to standardize and publicise it's API's and Office file formats will allow other operating systems to compete in the marketplace.

Other findings/settlements will put cash in the pockets of attorneys but do little to encourage other companies to write software that provides a functional alternative to Microsoft-authored products.

Yours very truly,

Subject: Microsoft settlement

To: Dept. of Justice

Good day. I would like to thank you in advance for considering my, and other citizens', opinions in this matter. It is rare that the democratic process is applied so directly to a specific issue. Yet in this case I do believe it to be justified. The Microsoft issue is one which affects every American, whether they are conscious of this fact or not.

It is no surprise that computer technology has become an ever increasing component of our economy. Rare is the worker in this nation that would not have some interaction with a computer on any given day.

This could refer to myself, who works in an office. It could refer to a high school kid who uses the computer register at a coffee shop or restaurant. My point being, if an American citizen wishes to work in this country, the computer is inescapable. It is a tool most every American will have to use in some capacity. Therefore, it is a tool which must be open to innovation. A tool which must be secure.

Microsoft has for too long stifled others from developing competing programs. Now, I will confess. I am not a computer guy. I don't write code. Have never opened up a computer to install anything.

Don't even subscribe to Wired. But I do know that when I have attempted to run non-MS applications with Windows, I have run into compatibility issues. When an application that does run well on MS OS, within a year or two it is beaten out of the system. I have seen the death of Netscape at the hands of Internet Explorer. I have seen WordPerfect killed by Word. I have seen this countless times with other applications. And this is not because MS products are the best. It's because I wake up one day to find I have no choice but to use Internet Explorer. My other options have been taken away, or so marginalized that in order to view web-sites, I need IE. This is not consumer choice. This is consumer blackmail. Now, I'm not here to disparage MS products. Personally I have found that they crash just as frequently as anyone else's. I'd just like to have a proper settlement that allows me to choose the crashes I like. And finally, with recent events in September, there does seem to be a national security issue here.

Regardless of how great MS might claim to be, regardless of how "saintly" there business acts, it is dangerous to have one company's code control so much of the computer market. If a foreign or domestic terrorist were to go after our computer network, what system model would you want? 90% controlled by one set of code. Only one set of code to infect. Only one set of code to find the weakness in. Or multiple codes, distributing the network across many OSes. This need not mean incompatibility. I can read a Word doc on a Mac or a PC. Yet it would be difficult to infect the Mac and the PC with the same virus/hack. Maybe not impossible, but more time consuming. We currently have loaded our target into one convenient location for any of our country's enemies. We should no better now. The military knows this kind of strategy already. Spread yourself out so that in event of attack you may lose a portion, but not the whole.

In conclusion, the current settlement with Microsoft poorly defines their software for legal purposes, does not truly prevent further monopolization of the market by Microsoft, and has no punitive measures for the damage Microsoft has already inflicted on other companies and the American people. This is unacceptable. Teddy Roosevelt did better than this last century with breaking up a newly emerged economic monopoly. I suggest we study our history on this one.

Thank you for your time and consideration of this letter.

Sincerely,  
Richard S. LaMorgese  
Citizen

From: Patrick St. Jean  
To: Microsoft ATR  
Date: 1/23/02 1:46pm  
Subject: Microsoft Settlement  
Hello,

I am writing you today in response to the public comment period on the proposed settlement. I am opposed to that settlement for various reasons, but one of the more important ones, that affects many businesses, is that the settlement doesn't ensure that Microsoft cannot use preferential licensing agreements to influence OEMs decisions to install software.

For example, I work for a large telecommunications firm that uses Windows for some of its internet needs. We have a site license with Microsoft for all of their products, but are completely unable to buy a server without purchasing another Windows license. This costs us many thousands of dollars a year. Whenever I've pressured hardware vendors to not include a license in the cost, they have refused, stating that their contract with Microsoft (signed in order to get preferential pricing) requires them to sell a license with every machine. This is bad for big business, but even worse for small ones. At least we have a large enough budget that it doesn't influence our purchasing decisions. I can't say the same for some smaller companies that I've worked for.

Please reconsider this settlement. The only one who will benefit from this is Microsoft. The consumers are going to continue to be taken for every dollar Microsoft can get until stronger protections, like the ones in the Posner Draft 18, are implemented.

Thank you for your time,  
Patrick St. Jean

From: Richard A. Milewski  
To: Microsoft ATR  
Date: 1/23/02 1:47pm  
Subject: Microsoft Settlement

Please place me on record as opposing the proposed settlement in the Microsoft antitrust case. The proposed settlement does not effectively require Microsoft to openly document the Application Programming Interface (API) of the Windows operating system in a meaningful way. If allowed to stand, this settlement will perpetuate the Microsoft practice of having a secret, documented API for use by Microsoft applications developers, and a less complete, partially documented API for use by independent software developers.

Additionally, allowing Microsoft to continue to engage in licensing agreements with large corporations that give Microsoft licensing revenue for each machine owned by a corporation that could run Windows, instead of each machine that is actually running windows, the settlement effectively imposes a tax on non-Windows computers and gives the proceeds of that to Microsoft. This artificially raises the cost of computers which do not run Windows, and those costs are passed on to the customers who use the products and services of the licensing corporations. As a consumer, I deeply resent having the cost of virtually every product I buy increased simply to subsidize the Microsoft monopoly.

Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Ms. Hesse:

I would like to add my voice to those crying out against the proposed settlement between the Department of Justice and Microsoft. I have found no provisions in the settlement that would effectively curb Microsoft's rapacious appetite and anticompetitive behaviour. My experience with Microsoft has led me to believe they will stop at nothing to own every market in which they compete: even at the expense of their customers and partners. A great example is their recent attempt to ask the court to grant them a monopoly of the education market.

As a veteran of the software industry with more than a decade (yes, in the software industry that does qualify one for veteran status) of experience building software for numerous platforms including Microsoft Windows, I have never encountered a company with such a callous disregard for right and wrong as Microsoft. I have experienced their deceitful nature while working for a "partner" organisation (Attachmate) and during a brief contract within their own Internal Tools Group. In recent years I have been party to discussions regarding new products or services that were abandoned for fear Microsoft would disapprove and try to put the company out of business. Very few of us have the capital necessary to withstand an attack by Microsoft as have Apple, Sun and Netscape. This culture of fear can not be good for any environment; nor is it good for the consumer for it stifles innovation like nothing else can.

Please consider a remedy with actual teeth that serves the consumer rather than Microsoft. Do not forget the way Microsoft mocked the original consent decree which started this whole process. What could possibly make one believe they would not mock the court again?

Respectfully,  
Jeff Watkins

Subject: Microsoft Settlement

I am writing to oppose the proposed settlement of the Microsoft Antitrust case. As a computer systems manager I have been buying Microsoft products for my users for years — not because they were good, which they generally aren't, but because there was no practical choice. I read Judge Jackson's findings of fact with great interest, and when I was done reading them was hopeful, for the first time in many years, that the computer industry had a chance to become competitive and innovative again. The findings of fact describe a repeated, continuous practice of egregious anticompetitive behavior.

The findings, along Microsoft's behavior in the trial court and all of its history make it

clear that Microsoft's rapaciousness cannot be reined in save by the strongest measures. People far better informed than I have pointed out repeatedly that Microsoft stifles innovation across large swathes of the software industry.

In the absence of competition, Microsoft has never felt any need to engage in good engineering practice, and their products have been vulnerable to the likes of code red, nimda and sircam as the result. In a competitive market, those viruses wouldn't even make the front page, let alone pose the serious threats to the economy and to national security. The findings of fact provide a solid basis for the Department of Justice to pursue a judgement that would restore competition to the software industry, which would in turn reduce the security risks posed by software monoculture. Yet the Department of Justice's proposed settlement is barely a slap on the wrist. I realize it is impossible for a bureaucracy, but the Department of Justice should be ashamed; it has not only failed in its duty in this matter, it has abdicated it.

I am a co-signer of Dan Kegel's letter, and you may find my criticisms of specific elements of the proposal there. The point I wish to make here is that the entire offer is barely worth grossly inadequate.

Subject: Microsoft Settlement

Hello,

After reading and reviewing the proposed settlement, I cannot in good faith, support it. This settlement not only does not punish Microsoft, but it could possibly give it more power in the software industry. For every clause in the settlement that appears to limit Microsoft's power, another clause gives them a loophole out of it. It is in my opinion that a much harsher penalty is necessary to curb Microsoft's illegal behavior. They have ignored one settlement very similar to this one already (which is the entire reason this lawsuit began), don't give them the opportunity to ignore a second.

January 23, 2002  
Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530

Dear Mr. Ashcroft:

I would like to see the Microsoft antitrust case resolved. I do not believe Microsoft did

anything wrong in the first place. Notwithstanding this belief, I think the terms of the settlement agreement are more than fair, and will address concerns about any perceived anticompetitive behavior on Microsoft's behalf.

For those who are of the opinion that Microsoft has acted in a predatory fashion, concessions have been made that will essentially change the way Microsoft conducts its business. Microsoft agreed to disclose its internal code information to its competitors in an attempt to increase server interoperability.

They also agreed not to retaliate against software developers who promote the competitions' software. Microsoft has really gone above and beyond what should reasonably be expected of them.

I hope to see the settlement agreement approved by the Court. Continuing with the litigation process will serve no one's best interests.

Sincerely,  
Karen Morod

From: Kevin A Sesock/cis/evp/Okstate  
To: Microsoft ATR  
Date: 1/23/02 1:47pm  
Subject: Microsoft Settlement

Dear Sir or Madam:

I am writing in regards to the proposed Microsoft Anti-Trust Settlement, and my thoughts and feelings regarding this issue. As per the Tunney Act, I am formally submitting my opinions regarding this proposed settlement, and how it will affect the IT Community, and specifically the Open Source Community at large.

As a consumer, technician, and private developer regarding Open Source and Microsoft Products, I feel that the proposed settlement between the Department of Justice and the states involved in the lawsuit, and Microsoft Co. itself, is in need of revision. It is my opinion that some parts are worded incorrectly, and may either be too burdensome in some places, and too ineffectual in others.

To generalize, I believe that the Microsoft Corporation has wronged the American consumer, business, and computer user by engaging in anti-competitive behavior, partly because of their secrecy, lack of security, and poor design, and partly because of their wild marketing and sales of products that do not meet the advertising and expectations put forth by these departments (a.k.a. false advertising). I also believe that they have been a major component in setting back the continued development of computer science, program and Operating System design, and the study and applicative use of computers in the world around us in a scientific and academic environment.

It is my recommendation, as a U.S. Citizen, concerned technician, and Open Source advocate, that the proposed Microsoft Corp. Anti-Trust Settlement be revised to include certain items. I have reviewed and thoroughly considered Mr. Dan Kegel's Proposal (this proposal is located at the World Wide Web address <http://www.kegel.com/remedy/remedy1.html> and <http://www.kegel.com/remedy/letter.html>). I

believe that these proposed changes tot the Settlement will be sufficient in ensuring that Microsoft Corp. cannot continue in anti-competitive behavior in the future, and will help to once again encourage growth and advancement in academic and business related computer and IT environments.

Thank you for your time and assistance.  
Kevin A. Sesock  
Deskside Computer Support Specialist

From: Brian "Bex" Huff  
To: Microsoft ATR  
Date: 1/23/02 1:48pm  
Subject: Microsoft Settlement

I personally believe that the antitrust settlement currently being proposed is woefully inadequate. If ever there was a monopoly that abused its power to crush competition and illegally leverage itself to move into other markets, it is Microsoft.

And now, to add insult to injury, they suggest as "punnishment" that they be forced to give billions of dollars worth of software to schools. The education market has always been Apple's core market, and this decision will allow them to get a huge stranglehold onto that market as well.

More likely than not, they will arrange a draconian lease arrangement and ensure that the schools will be forced to upgrade within 3 years. Even if the lease has no such clause, they will probably have to upgrade in that time frame anyway in order to be able to run the latest software.

This "punnishment" will simply cost the schools, the children, the taxpayers, and the government more money, it will seriously hurt Apple computers (Microsoft's only real competitor), it will enable them to get a stranglehold into a new market, and not in any way cost Microsoft a dime.

THE PROPOSED MICROSOFT SETTLEMENT MUST BE REJECTED.

Subject: Microsoft Settlement

My name is Colin Davis. I am a Computer Science Student, in Amhest, Massachusetts. I would like to start by saying I am very much against the Microsoft proposed settlement.

I am very concerned regarding the microsoft settlement. They ahve shown over and over that they are unscruplous, and will do whatever is necessary to make money, regardless of the legalities involved. They were proven guilty in the court of law. But

this settlement does not punish them at all. It ASSISTS their position. It helps them to further entrench their monopoly.

I'm not sure what the right thing to do is. Im only a student. But I would like to go on record as saying I believe Microsoft should be forced to open their APIs. This was part of the proposed states settlement.

What this means is that Microsoft would have to document, and document properly, how to access any system call that their programs use. This would stop them from using their monopoly on the desktop to help their other programs, because Everyone would have equal access to the system calls.

Early in the history of Microsoft, Microsoft Office would run much faster than competing applications, because Microsoft used system calls that no-one else was told about. This would stop that, as well as allowing Linux, and Apple Imacs to run programs written for windows.

PLEASE, however, don't accept the proposed settlement. It only further extends their monopoly.....

From: Joel Waterman  
To: Microsoft ATR  
Date: 1/23/02 1:48pm  
Subject: Microsoft Settlement

To whom it may concern,  
I feel that the proposed settlement of the Microsoft anti-trust case will do little to change the monopolistic practices of Microsoft. Any settlement which does not severely restrict Microsoft from building its products in the Operating Systems, Internet, and Applications market will do little to create a fair open computer software arena in which competitors are allowed to compete.

Windows XP has been used as an advertising platform for Microsoft products and services, and to lock out competing products. Microsoft's unfair practices (oft-referred to as strong-arm) leave precious little room for competitors in this environment.

You needn't look any further than to the open-source community for clues as to the state of the software industry. Thousands of developers donating their time and valuable skills in order to compete against the giant Microsoft. Why would thousands of computer programmers take time out of their busy lives to do for free what they easily could be paid for elsewhere? Because they want to see the project (linux) succeed in the face of MS.

Because they want an alternative to Windows. Because they aren't as naive as the typical home user who has no alternative to Microsoft, and they are not satisfied to use a product that forces them (or tries to force them) to use software inferior to that which they could write or have written...

To continue to let Microsoft bully their way around the software industry is to let that industry die a slow stagnant death. Competition and alternative is the only way to keep this huge part of the American economy thrive. Without a fair settlement of the MS case, this may not be possible. With MS allowed to compete unfairly against its rivals in Application and Internet markets by using its OS, is to allow them to squash any rival they wish. Please do not let this continue to happen.

Thank you,  
Joel Waterman

From: phutnick@peakpeak.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 1:48pm

Dear Sirs:

I am writing to express my disappointment with the proposed settlement with Microsoft.

The settlement addresses only a small fraction of the findings of fact.

Those few issues are addressed in an unenforceable manner. The economic production of this monopoly is NOT WORTH THE PRICE in innovation, progress and freedom. Always bear in mind that when Microsoft uses the word innovate they mean taking the sort of standard protocols that have allowed the internet to flourish and BREAKING compatibility with other vendors software, creating lock-in to their platform. Witness DHTML, NTLM authenticated telnet, Microsoft's "Java" implementation, the Exchange IMAP connector, Jscript (Microsoft's broken JavaScript interpreter), IE HTML extensions, the list goes on. This is separate from their practice of application, and by extension, OS lock-in with byzantine, poorly documented, constantly changing file formats and proprietary communications protocols such as ".doc" (and other Office formats), Exchange/Outlook communication, secret APIs for use only by Office and other Microsoft software, SMB, et cetera. SMB is a particularly nasty piece of work, which has clearly been manipulated for the purpose of crippling work-alike software (i.e. Samba) for the purpose of maintaining the fileserver/desktop client tie that they worked so hard to oust Novell to achieve.

The situation only looks to get worse if this settlement is finalized. Microsoft's two-way lock-in with Windows and Office is solid. They have been attempting to add a third leg. First with the server, then with the browser, now with .NET.

Microsoft wouldn't be ABLE to abuse OEMs if THEY DIDN'T HAVE A MONOPOLY. The settlement denies them one avenue of abuse of their monopoly, it doesn't address the monopoly.

Is this monopoly in the public interest? Is it necessary for interoperability? Is it needed to motivated Microsoft to continue blessing us with their "innovations"? I am 26 years old, and I can just remember my parents being forced to lease their ugly, featureless phone from "The Phone Company." Bell made the same arguments about interoperability and innovation that Microsoft makes today.

Today I have a cell phone, I pay less for the cell phone (accounting for long distance) than my parents paid for their featureless home phone. I can call Japan for less than my parents paid to call half way across the U.S. My parents suffered cross-talk, I enjoy digital quality over fibre optic lines. My parents called on a leased phone labeled "Property of Bell Telephone". If you fail, my children will compute with leased software labeled "Property of Microsoft". If you succeed, my

children will find the fact that I had to run Windows so that I could run Office so that I could open .doc attachments so that I could get a job . . . quaint.

This monopoly serves only the monopolist. It is the government's job to serve the people. If the government fails to act on the people's behalf it is failing to act as a government of the people.

DO NOT ACCEPT THIS SETTLEMENT.

Sincerely,  
Peter Hutnick  
Citizen

From: Brian Strand  
To: Microsoft ATR  
Date: 1/23/02 1:48pm  
Subject: Microsoft Settlement

The proposed final judgement (PFJ) in the Microsoft antitrust case is a very, very bad idea. Any reasonable settlement must a) end Microsoft's unlawful conduct (Microsoft's completely predictable denials of said conduct notwithstanding), and b) deny Microsoft any reward stemming from their unlawful conduct. The PFJ achieves neither of these objectives.

The restrictions placed on Microsoft by the PFJ are far too narrow and brittle to effect any changes in Microsoft's behavior.

The DOJ needs to scrap the fatally flawed PFJ and start over. The crime has been established, now is the time to determine the punishment.

Since when did the convicted criminal get to negotiate the punishment? There is no need for Microsoft to enjoy or agree with their sentence; they merely have to abide by it, subject to the usual law enforcement mechanisms.

**MTC-00017687**

From: Mike Scheidler  
To: Microsoft ATR  
Date: 1/23/02 1:49pm  
Subject: Microsoft Settlement

To whom it may concern,  
I feel that the terms of settlement outlined in the Proposed Final Judgment are grossly inadequate. They do little to punish Microsoft for its past monopolistic actions and allow too many loopholes to keep them from continuing these practices in the future.

As a computer professional with over 20 years of experience, I have seen firsthand the effect Microsoft has had on the computing environment. Through their predatory business practices, undisclosed file and interface formats (APIs), and tying of applications to the operating system, Microsoft has run its competitors out of business and practically eliminated the consumer's choice of software products in all of the major application categories. This

should never have been allowed to happen. To make matters worse, they are currently looking to extend their domination to the area of online services. For the good of the entire world, this cannot be permitted!

Any settlement in this case should do much more to punish Microsoft for its past actions. In my opinion, a harsh punishment (perhaps monetary) is essential to make them less likely to engage in predatory practices. Also, any settlement must be forward-looking enough to ensure that they can't continue to thwart healthy competition in the future. The current PFJ does neither of these.

Please reject the proposed settlement.

From: E. Jason Scheck  
To: Microsoft ATR  
Date: 1/23/02 1:49pm  
Subject: Microsoft Settlement

To whom it may concern:

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have been adversely affected over the past fifteen years because of Microsoft's business practices.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior (plus appropriate punitive actions), with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Thank you for your consideration.

From: Trey Chandler  
To: Microsoft ATR  
Date: 1/23/02 1:50pm  
Subject: Microsoft Settlement

I am writing to strongly oppose the proposed Microsoft settlement. I believe that the entire proposal is a farce as it only covers a few of the laws Microsoft was and still is breaking. There are several unlawful activities specified in the Findings of Fact that are not even mentioned in the settlement. It does not make half an effort to lower the barrier of entry for competitors. There are even exclusions in certain sections that are clear violations of the law.

Please inform the court of my disapproval of this settlement and my hope that a real punishment for Microsoft will be realized.

Thank you  
Charles Chandler

From: Nathan Hokanson  
To: Microsoft ATR  
Date: 1/23/02 1:40pm  
Subject: Microsoft Settlement

Dear Sirs,  
I am writing to you as a concerned citizen of the United States, a professional in the IT industry and a taxpayer. I am very concerned and alarmed at the apparent laziness of the Department of Justice. Microsoft has displayed monopolistic attitudes and practices for a long time. Simply slapping their hand for past behavior is not going to stop the monopolistic practices. If anything, the current settlement will send a message to the management of Microsoft that they can get away with anything for a price.

The behemoth that is Microsoft must be stopped! If Microsoft is allowed to continue to operate as in the past the market suffers, the industry suffers, the consumer suffers, and ultimately the tax payer suffers. Since your salaries are paid by the taxpayer, I would think it would be in your interests to see Microsoft's monopolistic practices curbed.

If the DOJ is not able to follow the will of the people then where do we turn for justice? The American people expect those in positions of responsibility to act responsibly. Please do so by not accepting a settlement that will hurt the economy in the long run. The American way of life is at jeopardy, even if you refuse to acknowledge that fact.

Sincerely,  
Nathan Hokanson  
Denver, CO

Date: 1/23/02 1:51pm  
Subject: Microsoft Settlement

I wish to record my objections to the Proposed Final Judgment under the Tunney Act in Microsoft Antitrust Case.

The PFJ fails to completely address many areas of conduct which Microsoft has employed to abuse and enhance their monopoly. Half-measures are being taken in many cases which leave glaring loopholes that will allow Microsoft to continue their "business as usual" stance.

One area where this is the case is the Barrier to Entry. The PFJ appears to address this section well, forbidding retaliation against OEMs, ISVs and IHVs who chose to offer or support alternatives to Windows, and ensuring that Windows allows for the use of non-Microsoft middleware applications.

However, this section falls short by not providing for a competing operating system that could run Windows applications. Indeed, sections III.D and III.E enhance Microsoft's monopoly in the desktop OS by restricting release of information on Windows APIs to "the sole purpose of interoperating with a Windows Operating System Product". This effectively precludes the existence of a competitive operating system that can work with Windows applications, and guarantees a continued Microsoft desktop monopoly. This combined with Section III.A.2, which allows Microsoft retaliation against OEMs that ship PC containing a competing OS but no Microsoft OS, amounts to no change in the Microsoft desktop monopoly whatsoever.

The PFJ also limits its scope to Microsoft Windows 2000 Professional, XP Home, XP Professional, and their successors, all of which run on Intel-compatible processors. This appears to ignore the Windows server editions, as well as Windows versions written for other processors, namely Windows CE and Windows XP Tablet PC Edition. As handheld and tablet devices become more widely used and available, Microsoft's interest and presence will be felt more strongly. Their own website makes mention of this fact at <http://www.microsoft.com/windowsxp/tabletpc/tabletpcqanda.asp> <<http://www.microsoft.com/windowsxp/tabletpc/tabletpcqanda.asp>>, noting "The Tablet PC is the next-generation mobile business PC, and it will be available from leading computer makers in the second half of 2002. The Tablet PC runs the Microsoft Windows XP Tablet PC Edition and features the capabilities of current business laptops, including attached or detachable keyboards and the ability to run Windows-based applications." By failing to address this area, the PFJ is again handing Microsoft an unrestricted monopoly for its operating system suite.

Finally, there is no effective enforcement system in the PFJ. The proposed Technical Committee has investigative powers, but enforcement is left to the judicial system, which as this case has shown, can take years in trials and appeals before a final judgment is reached. To a company with deep pockets for legal fees, and a large legal staff, this is no deterrent at all.

I urge you to re-read the Findings of Fact, look at the Barriers to Entry that were found

to exist, at Microsoft's business practices vis-?-vis retaliation against and pressure on OEMs, ISVs and IHVs, at Microsoft's anticompetitive business and development practices, and do not issue a PFJ until each finding has been fully and completely addressed.

For a far more comprehensive assessment of the PFJ, I urge you to look at <http://www.kegel.com/remedy/remedy2.html> <<http://www.kegel.com/remedy/remedy2.html>> .

Thank you for your consideration.

**MTC-00017697**

From: Jake Lauritzen  
To: Microsoft ATR  
Date: 1/23/02 1:55pm  
Subject: Microsoft Settlement

Please break up Microsoft. Microsoft continues to use their monopoly power to stifle competition and innovation by other firms. This settlement is a complete travesty. Microsoft has already violated earlier restrictions on their conduct, and it ought to be apparent to anybody by now that there is only one option: Microsoft should be broken up, AND have severe conduct restrictions imposed. they should be forced to use open file formats in all their products. they should be forced to use open networking protocols in all their products. And they should be forced to open up their development APIs to EVERYONE.

Most of all, Microsoft should not be allowed to weasel their way out of this again.  
thanks,  
Jake Lauritzen

From: Tom Price  
To: Microsoft ATR

Date: 1/23/02 1:52pm

Subject: Microsoft Settlement

The proposed settlement with Microsoft is NOT in the public interest. Rather, it seems to be a blatant attempt to create an even larger Microsoft monopoly.

Several suggestions:

1. While I support Gate's "freedom to innovate", I've also seen a number of good companies constrained from doing just that because vital information like application program interfaces (APIs) was simply withheld by Microsoft.

Microsoft should be required provide this information free, upon request, to anyone who wants it. And, there should be independent monitoring. Microsoft has demonstrated time and again that they cannot be trusted to do the right thing. If it can be demonstrated that they have developed separately-sold applications that utilize these so-called secret APIs, there should be substantial penalties, including release of the Windows source code.

To do anything less, is to hand them a government-endorsed monopoly on whatever software they choose to produce (now or in the future).

2. Make it possible to buy a computer without an operating system and without compensating Microsoft. Why should Microsoft profit if I plan to install Linux or FreeBSD?

3. The services portion of the business (MSN, Microsoft consulting, Hotmail and future "dot Net" services) should be spun off. Leaving them as part of Microsoft as we know it is particularly dangerous to the consumer. Consumer purchase of these services (and exclusion of others) might be dictated by future releases of the OS.

4. Microsoft should be required to provide unbundled releases of their OS.

5. More technical people and fewer lawyers need to be involved in the wording of this document. It is not sufficiently broad to cover future advances in the technology.

6. ALL future acquisitions, expansions of business, price increases, and changes to licensing terms should be reviewed by DOJ to determine whether they are in the public interest.

I hope that SOMETHING can be done and that this agreement as it current stands will NOT be ratified.

Thank you for the opportunity to comment.

Hello, I'm writing a quick note with some thoughts on the proposed settlement in the Microsoft case.

As a developer, I write applications every day. But I (and thousands of others) would never dare to write programs that compete directly with Microsoft, as there's no way to win that battle. The problem is that any application written by Microsoft will inevitably work better on Windows, because the Microsoft application can use parts of the Windows APIs (application programming interfaces) that no one but Microsoft knows about. Without making these APIs completely public (and the file formats of the Microsoft Office applications public as well), the playing field will never be level between Microsoft and independent software developers (me). Thank you for your time. Please don't allow this weak proposed settlement to go through.

I am contributing this comment to be considered in the case of US vs. Microsoft. As I am intimately involved in the day to day activities of maintaining a corporate network, I feel qualified to comment on the injustice that is being suggested in the Proposed Final Judgement. My daily tasks are multiplied in levels of difficulty simply because our organization attempts to use competing open source products. The number of obstacles Microsoft has placed in the way of interoperability demand that they be restricted from this type of activity in the future.

Microsoft should be prevented from imposing anti-competitive measures in their licensing agreements. I would refer to Kegel's statements as documented at <http://www.kegel.com/remedy/remedy2.html#abe> for further information regarding this particular issue.

As it is put forth, the PFJ is inadequate and will prove useless in preventing anti-competitive measures by Microsoft; measures that do not just hurt corporations trying to compete with Microsoft, but also the consumers like myself.

Thank you for your attention.

Subject: Microsoft Settlement

What were you thinking?

The proposed settlement fails in so many respects it is incredible. The agreement gives all the power to MS to decide what the agreement means.

In particular, the agreement has no sanctions to stop Microsoft from requiring that OEM customers must not offer other Operating Systems, or to stop Microsoft from being able to charge OEM customers for every unit, whether or not an OS is requested.

As a result of Microsoft's monopolistic conduct, it is now impossible to buy, for example, a Toshiba laptop, which does not have, and never had, an operating system on it. Toshiba will not remove the wincrap, and will not rebate the price, because to do so would be in breach of its contracts with Microsoft. So \*everyone\* who wants Toshiba hardware, \*must\* pay the Microsoft tax.

The settlement agreement is sadly broken, and should not be ratified.

R. G. Newbury

From: Scott Yewell  
To: Microsoft ATR  
Date: 1/23/02 1:52pm  
Subject: Microsoft Settlement

To whom it may concern,

I feel that the proposed settlement of the Microsoft anti-trust case will do little to change the monopolistic practices of Microsoft. Any settlement which does not severely restrict Microsoft from building its products in the Operating Systems, Internet, and Applications market will do little to create a fair open computer software arena in which competitors are allowed to compete.

Windows XP has been used as an advertising platform for Microsoft products and services, and to lock out competing products. Microsoft's unfair practices (oft-referred to as strong-arm) leave precious little room for competitors in this environment.

You needn't look any further than to the open-source community for clues as to the state of the software industry. Thousands of developers donating their time and valuable skills in order to compete against the giant Microsoft. Why would thousands of computer programmers take time out of their busy lives to do for free what they easily could be paid for elsewhere? Because they want to see the project (linux) succeed in the face of MS.

Because they want an alternative to Windows. Because they aren't as naive as the typical home user who has no alternative to Microsoft, and they are not satisfied to use a product that forces them (or tries to force them) to use software inferior to that which they could write or have written...

To continue to let Microsoft bully their way around the software industry is to let that industry die a slow stagnant death.

Competition and alternative is the only way to keep this huge part of the American economy thrive. Without a fair settlement of the MS case, this may not be possible. With MS allowed to compete unfairly against its rivals in Application and Internet markets by using its OS, is to allow them to squash any rival they wish. Please do not let this continue to happen.

From: Wagner Ralph  
To: Microsoft ATR  
Date: 1/23/02 1:54pm  
Subject: Microsoft Settlement

Dear Sir or Madam,

I write to you today to express that I am against the current Microsoft Settlement. It seems to me that this "settlement" is not in the best interests of the US Consumer, but rather is in the best interests of Microsoft—the convicted monopolist. Any attempts to justify this settlement in the interests of the economy are also a Red Herring. Microsoft has already affected the economy with its monopoly by destroying innovative companies and promoting self-serving proprietary standards. Given this settlement, Microsoft would pursue its utopia of a monthly Microsoft bill—akin to your monthly telephone or electric bill. There are several problems with the settlement as it currently exists, some of the points that I find particularly troublesome are:

1. The fact that no remedy is offered for the illegally obtained majority share in the internet browser market. They should not be permitted to keep the gains they have made by illegally exploiting their monopoly.

2. Any settlement that \*had\* sufficient remedies should be longer than 5-7 years, especially in the case of a repeat-offender such as Microsoft. The minimum term should be at least 10 years, with a maximum of 20. Microsoft has snickered at the US DOJ before as it walked away after a "wrist-slap" remedy (1995). Don't let it do so again.

3. The continued ability of Microsoft to "bundle" whatever it wants with the "operating system". This is exactly how Microsoft gained market share in the browser market. This practice must be stopped, and Microsoft will not do so on its own.

In closing, I would refer you to a (very short) article that addresses (most) of these concerns quite well—[http://linuxtoday.com/news\\_story.php3?ltsn=2002-01-02-002-20-OP-MS](http://linuxtoday.com/news_story.php3?ltsn=2002-01-02-002-20-OP-MS)

**MTC-00017716**

From: Matthew Jenove  
To: Microsoft ATR  
Date: 1/23/02 1:48pm  
Subject: Microsoft Settlement

Summary: The proposed judgment falls short of intended goals.

To whom it may concern:

I am concerned that the proposed Final Judgment against Microsoft fails to end its anticompetitive practices for a number of reasons:

\* Narrow Definitions of Terms

The terms "API", "Microsoft Middleware (Product)", and "Windows Operating System" are defined quite explicitly; so explicitly that it leave numerous loopholes through which Microsoft can continue many of its current practices.

\* Proprietary File Formats

One of the ways Microsoft perpetuates the dominance of its Office suite is by not disclosing the way that files (word processing documents, spread sheets) are formatted. As a consequence, if you wish to share the documents that you have created, those computer users must have also purchased MS Office. And again, when Microsoft releases new versions of Office and changes the file format, one is forced in to buying the latest Office version in order to continue to read files created by others.

\* Anti-Competitive Enterprise Licensing

Enterprise (i.e. schools, businesses, governments) license agreements often charge a fee for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. This removes any financial incentive to use alternative operating systems or software.

These are but a few of the things that appear to not be sufficiently addressed in the proposed Final Judgement. I urge the Department of Justice to review the proposed judgement and not let Microsoft continue its anticompetitive practices.

Sincerely,

Matthew Jenove  
Software Engineer

**MTC-00017717**

From: Josh Fishman  
To: Microsoft ATR  
Date: 1/23/02 1:54pm  
Subject: Microsoft Settlement

Dear Madam and/or Sir,

I'd like to register my distaste for the proposed Microsoft settlement. The proposed settlement would allow Microsoft to continue its worst practices unabated, while pretending to have paid for its crimes.

Here is a partial list of the practices which must be stopped by any real settlement or judgement:

1) Software Bundling AND Exclusion: by selectively disallowing and mandating what software is provided with a new computer, Microsoft controls which 3rd party software will be allowed to flourish.

2) Boot Loader Exclusion: by forcing Windows to boot before loading any other software, Microsoft prevents vendors from offering systems loaded with more than one operating system. Consumers who would like Windows and Linux or BeOS or OS/2 (or any other operating system) are forced to do the second installation themselves.

3) Punitive Pricing: by punishing vendors who do not load Windows on every system,

Microsoft creates an artificial barrier to entry for competing operating systems.

4) Gag Clauses: by disallowing discussion among those who own or otherwise know the performance characteristics of their software, Microsoft guarantees that the only voice heard will be that of their advertising dollar—not the voice of reason or experience.

5) Misleading Advertisements: by advertising features and / or products which do not exist, Microsoft sows fear about the viability of real products which would compete.

There are some obvious solutions to these problems:

1) Disallow Microsoft from writing contracts which prohibit OR mandate any particular software.

2) Disallow Microsoft from writing contracts which prohibit OR mandate any particular boot sequence.

3) Publish all Microsoft software prices. This will make the DoJ's job significantly easier, as all vendor pricing will be instantly available for inspection.

4) Disallow Microsoft from writing contracts with gag clauses. Declare all such clauses null and void, and allow customers to discuss their experiences with and benchmarks of Microsoft software.

5) Prohibit advertisements for products and / or features which do not exist. Enforcement would be problematic; perhaps offer a bounty to citizens, which Microsoft would pay directly, for spotting such ads? These remedies would not completely fix Microsoft. For example, the company would still be able to use its patents to intimidate competing vendors and open source projects. However, any remedy which does not address these issues is insufficient and lacking, and not worthy of this nation's Justice Department.

Thank you,

From: Edward (q)Niko(q) Nichols  
To: Microsoft ATR  
Date: 1/23/02 1:55pm  
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. As a computer professional, in the field for over 16 years, I have had the unique opportunity to watch the industry mature from novelty and hobby machines, to become a ubiquitous part of business. Much of our countries growth in the last decade is solidly attributable to computers. Sadly, I have also seen a trend of anti-competitive practices by

a few corporations. I have been affected first hand by Microsoft's criminal business practices. When the anti-trust suit against Microsoft was proven, I believed that Microsoft would be forced by law to end their unfair practices. However, the settlement reached by the government does little to address Microsoft's near monopoly powers. Specifically I find issue with the following specific points of the settlement.

On the issue of middleware replacement. The definition of "middleware" is so narrow, that it is not applicable to future version of Microsoft's operating systems. On the issue of restricting anti-competitive practices. Microsoft has continued to use restrictive licensing to prevent outside developers, specifically Open Source developers, from either creating software for Windows, or allowing for Windows software to run on another operating system. This is the key to Microsoft's ability to bend the market to its whim. And the settlement proposed does nothing at all to address these issues. Microsoft continues its practice of harming competitors. Microsoft has branched into Personal Video Recorders, Cell Phone Operating Systems, Home Automation, Home Entertainment Consoles, Cell Phone Applications, Embedded Operating Systems and many other areas. Each of these niches is already developed, and competing in a free market. There are no new restrictions on Microsoft's ability to conduct business, and I believe that Microsoft will eventually dominate and control these and many other emerging markets, based on their past behavior.

I urge the government to take a fresh look at Microsoft, and consider carefully the terms of this settlement. I believe after due consideration and review, that the terms of the proposed settlement will be found to be unsound.

Subject: Microsoft Settlement

Hello to all,

The current Microsoft "settlement" is a very bad idea.

Why should we give MS another method of strangling competition as a way to settle a case?

If we are really serious about ending the anti competitive practices of MS, this is not the way to do it.

Thank you.

Dennis Whitney

Subject: Microsoft Settlement

Dear DOJ, Of course you are seeing a large number of messages being sent in today due to a number of forums being told the deadline for comments is running out. Please do not let that detract from what I am saying.

Unfortunately, the proposed remedy that has been submitted regarding the monopoly practices of the Microsoft Corporation does not truly address the problem, but only some of the symptoms. Historically, Microsoft Corporation has taken the stance of "bundling" or "folding into the operating system" products that perform the exact same task as competitor products taking advantage of the inertia of the common user—what I like to call "My Mom Factor". My mom is frugal and doesn't understand computers very well. Going out and purchasing software that did not come with her machine is something she will do if advised by the computer professional in the family (me) that it is the only way, but downloading software from the internet is beyond her comfort level.

What this does is limit her to the software that generally comes bundled with a typical home PC (i.e. Microsoft solutions) and she won't venture beyond that range. For products to have any chance of competing within the My Mom Factor, they have to either ship with the PC or be on the shelf at the local software store and have no alternative sitting on the computer.

The proposed settlement should not allow the "bundling" of Microsoft Office or any other Microsoft products that do not specifically apply to the OS—web browsers and mail clients are not OS specific, even though there are hooks at that level to allow the other Microsoft products to interact. I would suggest looking back a few versions of Windows to Windows 3.1 to find what is specific to the Windows operating system.

Opening up all of the OS APIs so that developers can compete on the same level would also be a good move and it needs to take into account that Microsoft already has a head start in this. A real settlement should be "leveling the playing field" so that everyone is more or less equal for a while. The best example showing the current situation that I can think of is Ford builds an engine and makes it available for GM and Chrysler to use in their vehicles as well. All the vehicles perform okay and get 25 mpg.

Then Ford starts selling a new vehicle using the same engine that gets 40 mpg and go from 0–60 in 2.3 seconds. An independent investigation finds that all the vehicles weigh the same, are built from the same materials, etc. but the Ford vehicles have a special setting on the engine that lets the Ford transmission transfer power from the engine to the wheels much more efficiently. Would it be a good solution to tell Ford to pay a fine and tell about the wiring of how the engine indicates that it can run better, or should there be something more substantial?

I do ask that the DOJ please take a second look at the proposed settlement and ask the questions "How does this make it level?" and "How does it prevent the My Mom factor?" Thank you in advance for taking that second look.

From: Brian Stults  
To: Microsoft ATR  
Date: 1/23/02 1:56pm  
Subject: Microsoft Settlement

Dear Sirs and Madams:

I am writing pursuant to the Tunney Act public comment period to express my dissatisfaction with the Microsoft antitrust settlement. The proposed settlement will not prevent Microsoft from maintaining its monopoly in the computer industry. The findings of fact clearly described a pattern of corporate behavior that evidenced little respect for antitrust law or public sentiment. Though the proposed remedies themselves may be adequate, the enforcement measures will not provide enough incentive for Microsoft to fundamentally alter its behavior.

History demonstrates that Microsoft will not alter its behavior unless it is clearly in its competitive interests to do so. The proposed remedies attempt to force Microsoft to change its behavior in order to reduce its

power in the market place. This will not succeed.

The only measures that can be effective are those that immediately change the competitive landscape, and then free Microsoft to struggle for power in this new, more level playing field. I agree with the court that a structural remedy is cumbersome and not likely to be effective. A technological remedy, with objective, quantifiable measures, is the only remedy that can be both effective and in the public's interest.

The competitive advantages of an operating system monopoly are twofold. First, Microsoft negotiates from a very powerful position with OEMs and ISPs. Second, their application software can be developed with special knowledge of the operating system and (optionally) delivered with the operating system to gain better market penetration. Any remedy must address both of these monopolistic advantages.

While I do not claim to be able to construct a better remedy myself, I think it is clear that any remedy must involve forcing Microsoft to open all of its APIs and file formats. Any time two pieces of MS software communicate out-of-process, the protocol for their communication must be public. Enforcement could come in the form of a court-appointed authority that had the right to demand to see the source code of any MS-published software and compare the documented APIs to the source code. If they were not the same or if the source code is not delivered within a few days, MS should be fined 1/356th of its profit (this can be calculated after the fact at the end of each quarter) per-day until it satisfies the requirements. This would ensure that the applications of Microsoft's competitors have the same opportunity to succeed on the Windows platform as those of Microsoft itself. Microsoft may maintain its operating systems monopoly, but it will not be able to use to establish new monopolies in other market segments.

Thank you very much for reading and considering my comments.

Sincerely,

I oppose the proposed settlement. It is bad public policy and only serves Microsoft's interests.

As written, there are many ways in which Microsoft can repackaging their software to avoid meeting the definitions in the settlement.

By not including all of Microsoft's current operating systems the settlement allows Microsoft to move consumers from a covered OS to a new OS and bypass the settlement entirely.

From: Chris Storer  
To: Microsoft ATR  
Date: 1/23/02 1:57pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Subject: Microsoft Settlement

Do not let Microsoft get away with what they have done to the IT community.

They should not be allowed to sell apps and the OS in the same company period. They should be broken up into two (or more) separate \*competing\* companies.

Here's why: As long as Microsoft has control of the OS they can still strong-arm and push obtrusive proprietary technologies to corporate and home users leaving companies and individuals at the mercy of Microsoft and forced to pay exorbitant fees.

Subject: Microsoft Settlement  
The Settlement is bad.

A. it does nothing to correct the problem of Microsoft being too powerful.

B. It does not help competition, and competition bring out the best in every thing.

C. the settlement involves Microsoft give software to school for free. This helps Microsoft more then it hurt them. Think the fixed cost in developing a Microsoft product is already spent. The variable cost the Microsoft is being made to make for this settlement it less then 5 cent a CD. Plus remember be giving there software to school they are now getting free access to kids which will grow up and buy the software they used in school.

The settlement is bad because it does not hurt Microsoft at all but in the long run helps them.

From: Bernadine M Brown  
To: Microsoft ATR  
Date: 1/23/02 1:56pm  
Subject: Microsoft Case

While I do believe in free competition, I don't believe Microsoft does. It is my belief that they did in fact violate anti-trust laws and as a result we are all paying more money for inferior software. It is very bad for the consumer when there is no alternative out there. We end up paying a lot of money for software that has no decent security, that crashes computers many times/day which effects productivity, and the cost of which is getting higher and higher especially with the new licensing arrangements.

There is no incentive for Microsoft to provide anything better. Who do they have to be better than? Noone. Who suffers? The American citizen. Allowing Microsoft to bail out by providing more proprietary software to our schools only increases the monopoly. Why don't they provide books for libraries, or musical instruments or computers that run another OS. Their fine doesn't even hurt and just increases their monopoly.

This isn't free enterprise.

Bernadine M. Brown

From: Randy Strauss  
To: Microsoft ATR  
Date: 1/23/02 1:56pm  
Subject: Microsoft Settlement

I found out this morning you are seeking public comment. Please excuse me if I tell you things you already know. I am a programmer, with an masters in CS Stanford from the early 1980's. I have worked on many platforms and now have a Mac and a dual boot Windows/Linux machine. I worked at Frame Technology and stayed with FrameMaker when Adobe bought them, working on all 3 platforms though mostly on the Unix product, mostly on the UI.

To me, Microsoft is best known for lowering software standards. They didn't invent the term "vaporware" or "FUD" (fear, uncertainty and doubt), but they were the first ones to make a constant profit from selling vaporware and beta software and from using FUD to consistently stop others from penetrating a market. Companies constantly wait for MS to move in a market because they know that MS will come up with incompatible technology and everyone else will have to change. Customers would rather not change. No other company has the power to stop progress and move standards like MS.

In case you don't know FrameMaker, it is the leading professional long/technical document software. People use it to write manuals from 50-100 pages to thousands of pages. It is also used to automate the publishing of documents and forms. Though I've left Adobe, I probably shouldn't say how big the market is—but FM has always made well under \$100M/year. \$100M/year was seen as the whole market size and we had a decent piece of it. Luckily, it was always too small to attract MS attention.

Note that lots of people use Word to write manuals, because it's ubiquitous—essentially free since it either comes with most machines or is a std corp package. Yet people complain that Word is abysmal for these documents—often crashing. We successfully lured writers to use FM, but then these writers had huge problems getting content into FM. We wrote filters and partnered with filter writers, but MS is the lone DTP (desktop publisher) vendor that doesn't believe in having a decent exchange format.

Every company thinks it's important to exchange documents except MS. They kept their format not only secret, but constantly changing. At Frame, we couldn't afford bugs. Our number one goal was never, ever to lose user data. Crashing was merely horrible.

When MS came along and made crashing an everyday activity, making "Blue Screen of Death" a commonly heard phrase, we were astounded. Over the years they have consistently lowered software standards. Why could they afford to make shoddy software when no one else could?

One great example of this is in computer security. In the 1980s, all the unix companies worked on security. Leaving holes in a system wasn't an option. MS doesn't have to do that. Companies lose billions of dollars a year to viruses but still have to use MS products. Any other company would fill the holes. Sun spent huge resources to assure that Java applets wouldn't damage a computer—so you don't hear of Java viruses. MS doesn't care. It's cheaper these days to fool customers, to make buggy software that has security problems. And MS can get away with it because they've created a culture

where it's expected. Companies expect to pay a tax for virus-prevention software. Even the ones that do realize it's a cost of Windows, they can't leave Windows. (MS is the only company I know of that advertises that their software releases are "less buggy than the last one". It's absolutely astonishing.)

Adobe spends lots and lots of effort making its partners happy, people who create add-on software. Several times they avoided very good acquisitions because it would have meant competing against partners. I know Sun is also very, very careful in this area. Adobe is the 3rd largest commercial software company. Sun is huge. Yet Microsoft thinks nothing of putting their partners out of business. They certainly encourage help, but where others worry about earning a reputation of being hostile to partners, MS does not. Why can they afford to be differeng?

I was so happy when Java came along. Soon I would finally be able to write cross-platform software—same file formats, same UI software. I have two great ideas for developing innovative, useful software. But it means learning MS's very peculiar UI development environment. If MS hadn't stopped Java, I could write it once, simply. I did write an interesting game that my kid loves—but there's no point trying to sell it. Any consumer first has to download Java—and that's too difficult. Once again, MS has stopped innovation and made it harder to compete. Any decent OS manufacturer would have been happy to incorporate Java. Any OS maker who cared about innovation or quality products or making software better or better software, that is.

FrameMaker has an API so that one can write a program to control FM. Adobe had a project a few years ago to put an easy-to-use UI atop FM to make a SOHO (small-office/home-office) DTP product. The FM back-engine was superior to anything in the market. The front-end (UI) was novel and made it easy to create great documents. The only other big player in the \$250M SOHO publish market is MS, with MS Publisher. Our product was nearing alpha when MS announced a new version. Our product would still be way ahead, but Adobe didn't want to get in a marketing war with MS—they were much richer and we didn't want to compete with that bottom line.

The rumors I heard were that Adobe didn't want to be seen as a company that MS should squash. If MS wanted to, they could start buying, marketing and launching graphics products to compete against Adobe's core business. Adobe turned tail and halted the project. Customers suffered.

Early in the days of the lawsuits, I heard talk about MS being innovative. Yet only a tiny fraction of "their innovations" are really theirs. They buy innovation, kill most of it, and gut the rest. If these companies were allowed to compete and grow, we'd have much better software solutions.

I don't see how any settlement with Microsoft will change their practices. One thing I learned through 19 years in corporate environments is that a company's culture reflects management's personality. Consciously and unconsciously, Microsoft employees know how their company works.

Their attitudes are not going to change unless huge changes happen at the company. I've heard Gates talk over the years. He has grandiose ideas about bringing the world into the future, integrating with TV and appliances. He doesn't talk about doing it with others, just about what he and MS will do. MS does not have a culture of working with others, certainly not one of fair competition.

I've talked to people who worked at MS and at other tech companies. At other companies, people, even at the bottom of the ladder, talk about being part of the team, part of the vision. Not at MS. There only the programmers are part of the team. At other companies QA is central, testing is part of the foundation of software production. MS thinks nothing of alienating its QA people. Where other companies want their QA people to be full-time and really know the product, MS insisted (maybe still does?) that QA people be contractors and go elsewhere after a 2-year maximum.

Though it would help explain their shoddy products, it's still astounding.

I have been a MS stock owner at times. I'm not now. If the company would be broken up, I'd be interested again. I'd be interested in a company that wants to make a good OS. I'd be interested in a company that wants to make good products. MS just isn't that company.

MS seems to have gotten their early monopoly through fair competition and business practices. But then they abused it to develop other monopolies and lower the software standards for everyone. Requiring computer makers to bundle their software, breaking their Java license and giving their browser away free to beat Netscape were just the most visible instances. My wife worked at 3Com for years and the stories were everywhere. MS is a bully and could get away with it not because they were big, but because they had a monopoly and if you didn't put up with their bullying, you didn't play. She had tons of stories about planned conferences where MS would change the schedule at the last minute to shut out 3com or agree on a press release and then release something else. MS doesn't care about decent business practices because they can use their monopoly to cow almost all companies.

And the DOJ will only hear cases coming to court from people that tried to fight back, not the thousands of cases where people sold out, buckled under or just recognized the playing field and played along.

I remember when the anti-trust suits against IBM changed their business practices. It was wonderful for the industry and turned them into a much better company for all of us. This needs to be done with Microsoft. Bush sold us all out with the federal settlement.

I have a dual boot machine with Windows and Linux. The modem, a new, high-end modem, doesn't work for me—it almost works and others have had it work, but there's no tech support for Linux use because the vendor need only care about Windows. If it was a law-abiding monopoly, I wouldn't complain. It's not. I don't get cable TV because it's too expensive. I'd be willing to pay \$100/year for a few good channels, but

\$600/yr is much too much. Cable TV is a monopoly I resist, even though I have 2 pretty main-stream kids. At the moment I would not own Windows unless I had to. I looked for a Linux machine that would just work, but couldn't find one. Every other PC had Windows pre-installed. Because of MS's monopoly, and the ruthless, illegal ways they've kept and expanded it, there're very few choices on the market. If I can't make it work in another month or so, I'll consider spending a bunch more money and get a Mac with OSX.

MS has made choice very, very expensive. Thanks for the ear.

Your decision is our best hope at the moment.

Take care,

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET.

The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being "Windows Powered".

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create

compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

From: Holly Robinson  
To: Microsoft ATR  
Date: 1/23/02 1:58pm  
Subject: Microsoft Settlement

I strongly believe that the proposed settlement is a bad idea. It falls short of addressing key issues that Microsoft relies upon in its unfair business practices, so these will continue into the future, making the whole lawsuit pointless. The settlement must cut to the root of the problem, and not let Microsoft slither away with a slap on the wrists and no weaker for the ordeal.

Sincerely,  
Holly S. Robinson

**MTC-00017737**

From: Roger mach  
To: Microsoft ATR  
Date: 1/23/02 1:58pm  
Subject: Microsoft Settlement

After following the progress of the Microsoft anti-trust trial with great interest and hope, I have been very disappointed to see the proposed settlement, which does little or nothing to punish Microsoft for their illegal actions and may instead actually serve to further increase their market share. In short, I believe the settlement does not serve the public interest.

In my opinion, any settlement should include massive fines against Microsoft, and possibly prison time for certain corporate officers. I would even suggest that revocation of Microsoft's corporate charter would be appropriate action against a company which behaves as they do, especially given their attitude of having done nothing wrong even

after the findings of fact were upheld on appeal. It is clear to me that Microsoft will use any loophole to ignore restrictions on its business practices and therefore the penalty should not focus exclusively on such restrictions but also include substantial immediate actions such as those I mention above. It is my hope that with such penalties, the playing field will be leveled such that other competing technologies besides Microsoft's may gain market acceptance, and that in an environment of fair competition the best technology will win on its own merits.

Sincerely,

From: Matt Harrigan  
To: Microsoft ATR  
Date: 1/23/02 1:58pm  
Subject: Microsoft Settlement

Look, I'm not a lawyer. I'm not a big corporate hotshot. I'm a concerned citizen and frequent user of computers. The bottom line in all this is that while Microsoft is a big company with alot of money, and they try very hard to make decent products for consumers, they fail. Alot. As a matter of fact the machine from which this is being sent is running Windows ME, and i'll be extremely surprised if I can complete this email message before something bad happens. On the other hand, the windows environment provides an interface which is popular because of it's ease of use, so alot of applications get written for it, both by Microsoft and by companies which will eventually be bought by Microsoft. Right now, sitting next to me is a linux machine which also runs an email program called pine. It's existed for about a decade with about 15 different revisions (a relatively small number for a piece of software), and i've been using it since then. It has never crashed.

I have never lost an email from using pine. This happens for three reasons:

1. Pine is written well.
2. It sits on linux which is a stable platform.
3. It's open source, so it works on everything.

Microsoft does not make products which do not crash.

Microsoft does not support open source standards.

Microsoft does not care.

Projects like WINE, StarOffice, etc . . . will suffer greatly if Microsoft is not actively encouraged by the US government to do the right thing. This is why we have a department of justice. You broke up the bell system, you privatized airlines, now please understand that the same thing needs to be done for the computer reliant public.

Subject: Microsoft Settlement

I am opposed to the current Microsoft settlement. The following points are examples of problems that I have:

Microsoft's business practices have reduced the amount of choice available to consumers. Splitting the company into OS and Application divisions would have placed Microsoft's applications group on equal footing with other software companies but this idea was abandoned.

Why has the definition of middleware been tied to specific version numbers of Microsoft products? Just because a new version of Internet Explorer or Windows Media Player comes out does not mean the product is no longer middleware.

The same flaw as the point above exists for the definition of Operating System. Why are the successors to Windows XP not considered to be Operating Systems?

Microsoft has used it's Windows monopoly to make Microsoft Office the standard productivity suite used in business. A word processor that can not open and save a Microsoft Word document has zero chance to gain market share today. The file formats for Office files should be released to the public to insure that competing products can open and save Office formatted documents.

Microsoft should not be allowed to retaliate against OEM's that ship some computers without a Microsoft OS. If the customer wants a PC with Linux installed the manufacturer should not face higher Windows licensing prices. Microsoft should be forced to set one standard price for Windows licenses to ALL OEM's. Not just the top 20 OEM's. This price should not relate to the number of licenses purchased. Rebates should not be available to OEM's that bundle other Microsoft products (e.g. Office) with their computer. Microsoft should not be allowed to sell it's compilers with a end user license agreement that prohibits software developers from using the compiler to create software that can be run on Windows compatible operating systems. Microsoft is not prohibited from intentionally creating incompatibilities with the products of competitors in new versions of it's OS or Middleware. These are some of the problems that I have with the current Microsoft Settlement.

 Hello,

Microsoft needs to be broken up into several different companies. They have way too much power at this time and any "punishment" they are given that allows them to stay as one company will be side stepped and they will continue to squash innovation. Bill Gates has proved he is no idiot, he will do whatever he can (and believe me, he can do it) to screw the world and get more money for Microsoft. The good of the world, the advancement of technology, putting computers in schools, making software more secure, easier to use, whatever: these are means to an end for Bill Gates. This man is more powerful than the president and that is not right. End this disgusting display of control this one man has over the world as we know it and break up Microsoft.

Sincerely,  
 Paul Bradley  
 Portland, Oregon

Dear Justice Department Officer,  
 When a criminal is robbing the bank, he is not offered any settlement option. Microsoft is robbing its customers, which are the majority of U.S.A. population, and many companies.

I believe that any settlement with Microsoft, whatever it is, is morally wrong.  
 Sincerely,  
 Andrew Shuvalov

 Subject: Microsoft Settlement

Hello,  
 Under the Tunney Act, I wish to comment on the proposed final judgement (PFJ) against Microsoft.

I believe the PFJ does little to address the Findings of Fact (FoF) made by Judge Thomas Penfield Jackson and upheld on appeal. It does not define terms such as "API", "middleware", and "Windows Operating System" in a manner consistent with the FoF or accepted industry and academic definitions, allowing Microsoft to circumvent much of the PFJ. It does not provide a method for enforcing any of the outlined remedies. Most seriously, the PFJ does not encourage competition nor reduce the Applications Barrier to Entry.

I have mentioned a few of my concerns with the PFJ. I agree with the analysis and essay by Dan Kegel (on the Web at <http://www.kegel.com/remedy/remedy2.html>). I have also submitted my name for addition to the "Open Letter to DOJ Re: Microsoft Settlement" (available at <http://www.kegel.com/remedy/letter.html>) which will be sent along with a copy of Dan Kegel's essay to the Department of Justice.

 Subject: Microsoft Settlement

As a consumer of Microsoft products (forced and voluntarily) and as a citizen of the United States, I believe it is my duty to inform the Justice Department (as I'm sure many have before me) that the "Revised Proposed Final Judgement" is too weak as to keep Microsoft from continuing its monopolistic business practices and does not thoroughly punish Microsoft for its many years of antitrust activities. Many of the provisions of the settlement are a good step in the right direction, but they are not forceful enough and some require more clarification.

My specific comments are as follows:

1. In Section III, C, 4: An installation of a Windows operating system should at least ask before it re-writes the master boot record (MBR) on a hard drive. Currently, all Windows operating systems (after and including Windows 95) re-write the MBR upon installation, which disables most boot loaders for alternate operating systems, leaving only Windows bootable.

2. Microsoft should allow use of a non-Microsoft browser to download Windows update patches. Currently with Windows 98 and above, Microsoft's Internet Explorer is required to update Windows, including fixing most security holes and basic functionality.

3. After installation of a Windows operating system, activation of access to the Internet should not require deletion of the "MSN Icon" in order to not have to go through signing up for MSN's ISP. (this was still the case with Windows 98 and Windows ME)

Though I have not provided any suggestions on how to make this settlement more effective at stopping Microsoft's monopolistic practices, I am not a business person or a lawyer so my knowledge of antitrust law is somewhat limited. However, I am a software engineer and I understand that these "flaws" in Microsoft's software are not mistakes, they are purposely done to promote Microsoft software to the point of anticompetitive practices. I hope these comments will help bring Microsoft to justice.

 Subject: Microsoft Settlement  
 Sirs,

What comments need to be made? Microsoft has been found to be guilty of breaking the law. This finding has in no way altered Microsoft's corporate behavior. Microsoft has proven themselves to be untrustworthy through their actions and shenanigans during the various trials. Could any so-called remedy that merely slapped a fine (even a billion dollar fine) cause Microsoft as a corporate entity to behave ethically? I doubt it.

The best possible punishment I can think of is that they should be made to actually compete on level ground. Failing the breakup of Microsoft, I would hope that at least the closed systems (OS code, Office formats, etc) would be opened up and allows other companies to create software that could actually provide real competition.

I would hope that a settlement against Microsoft would be just that; AGAINST MICROSOFT. If Microsoft is slapped with a velvet glove, then I see no reason why someone who robs a bank should be punished. Or the corporate "leaders" of Enron.

Craig Gulow

To Whom it May Concern,

I just wanted to drop a line concerning the Microsoft settlement. I feel that most of the proposed settlements are VERY lenient and will only serve as a slap on the wrist. They definitely won't deter Microsoft's aggressive and damaging business practices in the future. I don't even understand why a settlement is being offered to a company that is clearly an anti-competitive monopoly. I feel that the only real solution will be to break them up into at least 3 parts (OS, Apps/Games, and Hardware), but I somehow doubt that will happen. They must have severe restrictions on pricing, business practices, and expansion into new markets for this entire proceeding be any sort of protection from the Microsoft monopoly.

In other words, settlement is definitely a bad idea!

Thank you listening to my opinion,

 Subject: Microsoft Settlement

To whom it may concern:

I am writing to comment on the proposed Microsoft antitrust settlement. Given the finding of facts in the Microsoft trial, I believe the proposed settlement is inadequate and will do little to change Microsoft's behavior in the future.

For instance, although the proposed settlement forbids Microsoft from retaliating at OEMs that ship computers with multiple operating systems; however, it has no provision for OEMs who ship computers with a single non-Microsoft operating system. In addition, the proposed settlement does not

force Microsoft to release information about file formats, although Microsoft's use of undocumented file formats prevents competitors from entering the market.

More troubling, the proposed settlement allows Microsoft to keep secret anything relating to security or copy protection. However, almost any API can be made to have some relation to security, so this renders many of the other provisions useless.

I hope that the proposed settlement will be rejected or amended to ensure that Microsoft does not engage in anti-competitive behavior in the future.

Thank you for your time,  
Jy-Ying Janet Chen
