I feel the proposed settlement in the Microsoft case is a poor one. Microsoft in the past has shown an aggressive desire to work around any and all structural remedies. Any person of intelligence and imagination can find many ways to work around the structures given in the proposed settlement and continue to pursue anti competitive behavior. This is why Microsoft is so agreeable to the proposed terms. Microsoft has been found guilty of engaging in monopolistic behavior. Any solution must not only prevent this behavior from occurring in the future, it must also not allow Microsoft to benefit from it's prior actions. Any less than this flies in the face of long term public interest.

Sincerely,  
W. Andrew N. Jaquysh

Subject: Microsoft Settlement

To whom it may concern,

Thank you for allowing public comments on this important subject. I support stronger sanctions against Microsoft and I think the Settlement Agreement does not and will not do anything substantial to change the status quo. Absent strong and effective measures, the monopoly that Microsoft enjoys and exploits now will only worsen, depriving us all of technological benefits we could gain from a more competitive industry.

I am particularly concerned that the process of settling this case is too heavily influenced by people who do not have a strong background in technology, and who perhaps have not spent much time thinking about the long range implications of letting the status quo go on. That sounds more negative than I had intended, my concern is that technological experts should play a significant and meaningful role in this case. It's not just legal issues that are being debated here, and I have been continually disappointed by how the states, the Justice Department, and the judges have failed to

identify and analyze the technological issues at stake in this case.

The outcome of this case can have a tremendous impact on how people use technology and how data is managed for ourselves and the future. The monopoly business practices of Microsoft have already had a significant and detrimental impact on the free exchange of information, the development of free or affordable information systems, and have placed vital information resources at risk. The settlement agreement should do something to change the way things operate now—in a fundamental way.

Subject: Microsoft Settlement

Monopolies are one of the market failures of capitalism. As such, it is one of the governments prime tasks to prevent them from forming and to dismantle them when they do materialize. The supression and elimination of monopolies is the governments duty, regardless of the immediate economic implications. This has to be done for the long term benefit of our country. Failure to do this, is the government failing to do its job. Monopolies restrict people's freedom, and to sacrifice freedom for econoic reasons is not only wrong, but against the principles of the people that created and gave their lives for this country.

Microsoft has been stifling innovation by sucking up companies that had been creating innovative technology, to bring them under the umbrella of a corporation whose main focus is to monopolize every segment of the software market, not on creating innovative and quality products. To those that truly understand technology, the inadequacies of their software is so obvious as to not even warrant debate. Only those that do not understand the technology, or that have remained ignorant, sheltered in a world where there is only Microsoft software, do not see the deficiencies in their products.

Microsoft has used a blunt and powerful instrument to monopolize the marketplace, while the proposed judgement attempts to finesse its way to correcting the problems. This will not work. Attempting to micromanage the individual issues that led to Microsoft's monopoly will fail. All that will be done is to ensure that Microsoft and their extensive resources find loopholes in the agreement that allow them to continue their illegal business practices.

I am very upset with the settlement of this case as it shows that money and lawyers, and not citizens or principles, yield the most power in this country. It is not the justice department's job to engage in economic prediction, nor base their actions on such things. The justice department should make the punishment fit the crime and not let other peripheral factors dictate their actions.

Tony Cassandra, Ph.D.

Department of Justice:

During my 25-year span as a computer professional, I have watched Microsoft grow. I continue to be appalled that Microsoft has been able to sell unreliable, defective products using the following practices:  
-Advertising non-existent products to kill legitimate competition.  
-Buying companies in order to kill them  
-Forcing large distributors to install Microsoft, only.  
-Covering defective product internals with glitter and gold.

-Licenses that give them immunity to damage from defective products.

-Large campaign contributions to buy protection from government.

The result has been:

- Many innovative companies have been destroyed.
- The world-dominant operating system (Windows) is defective,
- Users have come to expect that software crashes are normal.
- Due to licensing practices allowed in our (and other) countries, Microsoft is the only business of its size that is unaccountable for damages due to defects in its products.
- Windows is a serious threat to national security and to businesses.
- Now under investigation, they STILL continue these practices.
- Even the US government seems unable to touch this monopoly.

I ask that you do what needs to be done with Microsoft. Please protect our national security, and give technological users and innovators a chance.

Thank you for considering my view.

Sincerely,  
Reed I. White

Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. The following areas should be examined further:

1) The PFJ doesn't take into account Windows-compatible competing operating systems

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

2) The PFJ Contains Misleading and Overly Narrow Definitions and Provisions The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered";

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

3) The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft. Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

4) The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft. Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

5) The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

6) The PFJ as currently written appears to lack an effective enforcement mechanism.

These points are all discussed further at this URL: <http://www.kegel.com/remedy/remedy2.html>

Subject: Microsoft Settlement

Gentlemen,  
I appreciate this opportunity to add my voice against the Microsoft Settlement.

My one fear of this feedback process is that you will be buried by email generated by a concerted grass-roots lobbying effort by Microsoft, who are no doubt enlisting the support of "interested parties", such as

shareholders, employees, business and marketing partners, etc.

The idea that the "remedy" is to allow Microsoft to "give" their product to grade schools all over the country is a thinly veiled marketing ploy.

They are giving away hardware only, the software has strings attached. Schools are where Apple products are most competitive with Microsoft, and this plan is a way to subsidize their competitive battle with Apple. I much prefer a settlement along the lines described by the CEO of Red Hat, Fines levied against Microsoft are used to grant cash to the school systems, who can then purchase what they want, w/o strings attached. Microsoft then competes with Apple and everyone else on a level playing field, based on the cost of their bid, and the features and support it includes.

thank you

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I have a few concerns with the REVISED PROPOSED FINAL JUDGMENT (RPFJ) [found at the following web address <http://www.usdoj.gov/atr/cases/f9400/9495.html>]. On the whole, I do not believe that it will remedy Microsoft Conduct.

1. The RPFJ Section III—D release of the API has two basic issues. The release of the information is via ("MSDN") or similar is current status quo. MSDN is a subscription system—so release of such information is not readily available. The timing of the release is not competitive. It allows Microsoft (i.e. Microsoft Office) access to such APIs across its product line before other have access to it, yielding unfair advantage in software development for Microsoft in any area of competing software.

2. The RPFJ Section III—J provides an escape mechanism for the disclosure of Microsoft API, Documentation and/or Communications Protocols, by labeling such as security compromises. This broad loophole may be used to hide certain API and can place a significant burden on Enforcement Authority to oversee differences between general and security.

3. The RPFJ does nothing for opening up other areas (i.e. File Formats) where Microsoft uses its OS monopoly as an unfair advantage.

Sincerely,  
Michael D. Pritchett

To: Microsoft ATR  
Date: 1/23/02 2:02pm  
Subject: Microsoft Settlement

Dear Sirs,

I do not feel the proposed settlement agreement between the DoJ and Microsoft should be allowed to stand. Microsoft has been determined by the courts to be a monopoly in the PC browser and operating system marketplace and therefore should be held to a higher standard of conduct. I do not believe the current settlement will keep Microsoft from exploiting its monopoly status when competing in other PC application arenas. Any settlement needs to require Microsoft to fully disclose all interfaces (APIs, file formats, etc.) and to have strong enforcement support to make sure Microsoft follows these directives.

Sincerely,

Kenneth T. Smelcer

Subject: Microsoft Settlement

I am writing you to express two major concerns about the proposed Microsoft settlement.

First, Section III.J paragraphs 2(b) and 2(c) allow Microsoft to condition disclosure of API, Documentation and Communications Protocol of the authentication system on the basis of Microsoft's determination of the viability of the requestor's business and product. As I, and many others, read these clauses Microsoft could unilaterally refuse to provide any documentation to the widely used SAMBA tools since this is an open source project with neither a business nor a viable "commercial" product.

Yet this free software—of no commercial value—is widely used to replace Microsoft Windows file and print servers with Unix servers running SAMBA. The companies benefit from reduced license fees and a perceived (and probably real) increase in reliability.

With these clauses, Microsoft could unilaterally render SAMBA sites obsolete by implementing a new authentication method for file and print sharing and refusing to disclose it to the SAMBA team on the basis of the lack of a viable commercial product. This harms the interests of the SAMBA team and of countless third-party users of their software. The sole beneficiary is Microsoft itself, since it can anticipate increased licensing fees to replace the free alternatives. Given the conflict of interest, I would like to see the proposed settlement modified to accommodate legitimate open source projects in addition to viable commercial businesses. I understand and accept that there may need to be reasonable restrictions on what a legitimate open source project is to avoid it being used as an end-run around the commercial viability clause, but SAMBA and other major programs should certainly qualify by whatever criteria is adopted.

Second, more generally Section III.J paragraph 1(a) allows Microsoft to avoid disclosing APIs, documentation and communications protocols related to various security, encryption and rights management systems. History has repeatedly shown that systems with documented APIs and protocols are more secure than those that keep this

information secret. Public disclosure ensures that problems are detected AND FIXED as early as possible as the "white hats" quietly notify the responsible parties before public disclosure of the need to update the software.

Nondisclosure, in contrast, does little to slow down a dedicated attacker. The results are far more catastrophic since the "black hats" will not only attack anyway, they'll attack victims who have been lulled into a false sense of confidence by the "secrecy" around the API and protocols. Ideally, I would like to see the sense of this clause reversed. Perhaps something along the lines of:

This Final Judgement shall:

1. Require Microsoft to fully document, disclose and license to third parties any and all portions of the API or Documentation or Communications Protocols related to the anti-piracy, anti-virus, software licensing, digital rights management, encryption and authentication systems, unless lawfully directed not to do so by a governmental agency of competent jurisdiction.

2. Permit Microsoft to keep confidential the specific keys and authorization tokens used with the APIs and protocols discussed above.

Respectfully,

Bear Giles

From: Bob Steward

To: Microsoft ATR

Date: 1/23/02 2:03pm

Subject: Microsoft Settlement

Dear Sirs:

I have been saddened to see that the DoJ seems to have caved in to the demands of Microsoft in a proceeding which is supposed to be a penalty phase for them after having been ruled against in Court.

It is widely seen in the personal computer field that Microsoft's attitude and actions are obviously those on a major monopoly wielding their "big stick". From the mid-eighties on, the industry comment on Microsoft's tactics with the operating system against its competitors was "DOS isn't done 'til Lotus won't run!"

Where there used to be a large number of major competitors in such things as word processors and spread sheets, there is now essentially only Microsoft Office. Not even all die hard Microsoft cheerleaders will say that Microsoft Office is a superior product to the Lotus 1-2-3 and Word Perfect products that Office were created to compete against. So if it isn't a "superior product", why has it stamped out all other competing programs? Because of insidious "features" like proprietary formats that change with each release, requiring that everyone who exchanges documents must also "upgrade" in order to continue to work together.

They have relentlessly crushed new innovation and existing competitive products with tactics that included announcing that the features of a competitor's product would be "free" in the next release of Windows. This has had the effect of removing the financing of companies because of announcements that the next Microsoft

release would "give away" the product that a particular company had developed. Many excellent products were destroyed in the name of "competition" from Microsoft. Even startup companies with no current product for sale were destroyed by this tactic. If the word went out from Redmond that some feature would be in a future release, then the startup would be at the nearly insurmountable disadvantage of having conceived of an idea and worked to develop a feature set and screen shots in order to make an announcement to the public (and potential backers) that they were going to release a particular program, only to Microsoft suggest that this was a "new feature" to be incorporated into Windows. This announcement might or might not actually come to fruition on Microsoft's part, but it stopped the would be competition dead in their tracks since they knew they could not survive a direct frontal assault by Microsoft. Consider the Stacker vs. Microsoft case in which Stacker won a multi-million dollar judgement against Microsoft for having stolen Stacker's code for use in Microsoft's DoubleSpace drive compression, and yet Stacker was forced out of business and bought by Microsoft without Stacker ever collecting the judgement.

There are many other examples, such as the wholesale re-use of Mosaic code to create Internet Explorer and the subsequent bundling of it with Windows causing the brilliant innovator Netscape to collapse. Even today years after Internet Explorer was bundled with Windows, Netscape remains a superior product with a better user interface, but changes in Microsoft code continue to damage users of Netscape because Microsoft's Monopoly allows them to break "standards" and thus cause other products to spend large amounts of manpower to keep their code working with the latest Microsoft changes.

I personally feel that money damages alone would not effectively level the playing field for all that wish to compete for the public's computer software dollar. Rather, it would seem that Microsoft should be given a dose of their own medicine and be barred from developing or releasing ANY internet applications or in bundling applications with the operating system such that for a period of say 5 years they can not enter the market place with anything that is an internet application. This would have the effect of letting other competitors build a lively marketplace and encourage innovation and competition such that at some future date when (if?) Microsoft is allowed back into the arena, they will have to PROVE their product is superior, and not just under bid and pre-bundle to kill off their established competitors.

The plainly biased offer by Microsoft to provide a billion dollars in computer hardware and software to schools as a "penalty" is ludicrous. This only enables them to snare the next generation of computer users at an even younger age and train them up to be experienced at using ONLY Microsoft's products. Further their accounting would value the software at some "retail" price which effectively puts profit back in Microsoft's pocket. Rather if a

"sanction" like this were to go forward, the hardware should be purchased by Microsoft from non-affiliated companies, and the software should be a mix of Open Source alternatives, such that Microsoft is not further extending its monopoly at the expense of other computer innovators.

The effects of letting Microsoft "own" commerce on the internet with their ".NET" initiative and several other projects (Hailstorm) that seem aimed at REQUIRING Microsoft to be an integral partner in matters they have no business in seem pressing enough to prod even the most jaded bureaucrat into action to turn back the juggernaut which Microsoft has become to the detriment of PC users everywhere.

While much more could be said about this, I can only hope that your time will be more productively spent STOPPING the collapse of sanctions against Microsoft, so I shall rest.

Sincerely,  
Bob Steward

From: mchaney@carliseschool.org@inetgw  
To: Microsoft ATR  
Date: 1/23/02 1:56pm  
Subject: Microsoft Settlement

To whom it may concern:  
I am the system administrator for Carlisle School, a small independent school in Southwest Virginia. We have over 200 computers in active use with a variety of operating systems, most of which are versions of Microsoft Windows. I am deeply concerned about the current state of the Microsoft anti-trust settlement. We rely heavily on donations of money and hardware in order to continue to provide our students with the computing background they need for college and later in life. The biggest obstacle to my job is the lack of viable alternatives for expensive Microsoft products. The current settlement will not do anything to address the major problems that we face with our computers: Microsoft Office.

The school adopted Microsoft Office 2000 as its office suite shortly before I was hired. We would very much like to be able to look at alternatives such as Wordperfect Office from Corel, which offer better features and/or pricing that is more friendly to small

academic institutions. Unfortunately Microsoft's closed document formats make this all but impossible. If a student saves a document in Word at home they won't be able to print it out and turn it in here at school unless we also have Word. I am unable to recommend alternative products to students asking my advice on computer purchases because they need to be compatible with what we have here at school. If Microsoft's office document formats were made public, then I would be free to shop around and find the solution that best served the students' needs. I could tell students about a variety of office suites and help them make informed decisions. As it stands, I am terrified of the day when Microsoft changes its format to something Office 2000 cannot read, forcing us to deal with expensive and restrictive licenses on software that will likely not run on 65% of our machines. The current settlement does nothing to address the issue of opening up MS document formats, and therefore does little to help the students of Carlisle School.

U.S. Department of Justice  
601 D Street NW  
Washington, DC 20530  
23 January 2002

Dear Ms. Hesse:

I'm writing to comment on the proposed settlement in the U.S. Department of Justice's action against Microsoft.

I strongly feel that the tentative settlement should be rejected. It needs to be strengthened in many areas in order to restore real competition in the software marketplace.

One particular thing I would like to see added to the settlement is a requirement that Microsoft publicly document the file formats for all Microsoft Office documents, including Microsoft Outlook. In addition, Microsoft's licensing practices need to be reformed across the board. This includes their end-user licenses, site licenses, developer licenses for redistributable components

Thank you for your attention in this matter.

From: William M. Shubert  
To: Microsoft ATR  
Date: 1/23/02 2:04pm  
Subject: Microsoft Settlement

To Renata Hesse,

I am writing in regards to the proposed settlement with Microsoft. In short, I find it appallingly weak. I have been in the computer industry for over ten years now, and have seen up close what Microsoft's business practices have been. When I heard Judge Jackson's ruling, that Microsoft was not only a monopoly but had used its monopoly status to harm its competitors, I was relieved. I have long felt that Microsoft is not only willing but eager to do anything it takes to take away market share from its competitors; usually this is not a problem, in fact it may be considered admirable determination in most companies. The difference is that Microsoft's operating system monopoly (and more recently the monopolies in word processing and spreadsheets) gives it opportunities to "win" a market not by producing a better product but by sabotaging the products or marketing plans of its competitors, and Microsoft has used these techniques repeatedly, to the detriment of both consumers and the overall computer industry. This relief at Judge Jackson's ruling turned to dismay when I read the new settlement.

The new settlement, in my view, does little or nothing to prevent Microsoft from continuing its current practices. Most parts of the settlement "sound right" if you skim over it, but in fact every single part has loopholes or weaknesses that render the entire settlement ineffective. In fact, the settlement reads as if it were written by Microsoft itself, trying to find a document that would do nothing but provide a smokescreen that Microsoft can hide behind as it continues its business as usual.

What follows is a couple specific examples of problems with the settlement; I could have written many more!

First, Part III.E of the settlement states that Microsoft must provide information to others about its communications protocols. This sounds good; one of the things preventing people from switching to non-microsoft

operating systems is the difficulty of getting non-microsoft systems to work together with the existing microsoft-based computers. But when this paragraph is read carefully, it is found to be lacking; for example, the protocols must be distributed, but only under "reasonable and non-discriminatory terms." But reasonable and non-discriminatory in whose view? The free unix variants are now Microsoft's biggest competitors, but any non-disclosure or per-sale fee would be completely impossible for these competitors to meet due to their open source and freely distributed nature! Thus one of the paragraphs which will do most to enable Microsoft's current competitors to compete is made completely useless.

Second, there is absolutely nothing in the settlement to deal with Microsoft's past abuses of its monopoly status. Microsoft had been put under restrictions for its monopolistic practices before, and it was found to be still acting as a harmful monopoly, but yet it's punishment is only more restrictions? What is the point of placing restrictions on Microsoft if when they are violated the punishment is essentially nonexistent? It seems that Microsoft must be given a punishment, not out of spite, but just to ensure that this new set of restrictions will not be ignored as the previous ones were.

You've got to be joking.

The terms of the proposed "settlement" seem little more than an outright surrender. Guess that the DOJ is too worried about homeland security now to care about the fact Microsoft has established and is maintaining one of the most extensive and aggressive monopolies in decades.

Let's recall that Microsoft has been found guilty, repeatedly, by various courts and judges, of criminal violations. Let's recall that their behavior hasn't changed a bit throughout the period. Let's recall that its representatives have been caught telling outright lies to the courts. And now let's ask ourselves if extracting a promise to be better is really an effective solution. The answer should be obvious. Alas, it appears to have eluded our fine DOJ. So just in case you couldn't guess, the answer is "NO".

I'm surprised the judge would allow her intelligence to be insulted in this manner.

From: Mark J. Miller  
To: Microsoft ATR  
Date: 1/23/02 2:04pm  
Subject: Microsoft Settlement

Hello,

I am currently a 4th-year student in Electrical Engineering / Computer Science at the University of California, Berkeley. I am writing to comment on the Proposed Final Judgement in the Microsoft Antitrust case. In reading over the PFJ and commentary regarding it, I have come across many loopholes and frailties in the proposed settlement.

Chief among my concerns is the complete and total disregard for publishing file formats. I use KDE (<http://www.kde.org>) on top of a FreeBSD kernel (<http://www.freebsd.org>), and I have found it nearly impossible to interact with any sort of Windows documents. These proprietary formats have changed greatly over the years and across Windows versions, and without sufficient documentation, other applications have no way to interact with the files.

Add to this the near-complete monopoly Microsoft has in the business world, and people like me who choose not to use Microsoft products are punished severely. As I mentioned, I'm a 4th-year student, about to graduate and trying to find a job. I have been appalled at how many potential employers demand Word documents for resumes. I have also been consistently irritated by receiving Microsoft documents via email without an effective way to read them. All of this makes the cost of switching to competing products a very painful process for anybody contemplating a change.

Secondly, the PFJ does nothing to prevent Microsoft from introducing unnecessary incompatibilities to gain an edge on other products. I use Samba, a Windows-compliance package that allows my computer to transfer files to and from Windows machines on my network, but it does not work with all versions because of Microsoft's insistence on changing the protocol with each new version of Windows. Samba is perpetually playing a game of blind catch-up, because the changes occur without notification or documentation. This behavior encourages others in my situation to migrate from my preferred platform because of monopolistic reasons, and should be a target of the settlement.

Third, Microsoft licensing provisions make it very difficult for software vendors to write software that runs on platforms other than MS Windows. This produces a chicken & egg problem that discourages consumers from trying other products because of a lack of usable commercial software. Please consider these comments carefully. Microsoft is widely considered to have a hold on more than 90% of the desktop market. Microsoft has proven itself unwilling to obey the spirit of the court's ruling before—I can recall several incidents off the top of my head, such as their rigged demo of Windows without IE, their flagrant theft and broken reimplemention

of disk compression back in the days of DOS... this settlement has to be airtight. Remember that Microsoft has attained its current position by illegal means, and the results have meant poorer quality software for consumers.

Thank you for reading this.

Subject: Microsoft Settlement

I disagree with the proposed final judgement in *United States v. Microsoft*. It does not go far enough in reducing Microsoft's ability to extend their monopoly illegally. Splitting Microsoft into two companies (Applications and Operating Systems) would be an ideal solution, since it would enable applications such as Microsoft Office to be developed for alternate operating systems, allowing them to be competitive with the Windows platform.

In addition, there's a lack of an effective enforcement mechanism. Perhaps an independent committee with investigative powers would be appropriate.

Please reconsider the settlement if at all possible—as it currently stands, it will impede the progress of freedom, fail to give justice for innovations crushed by the Microsoft machine, and hurt the economy.

Please contact me if you have further questions.

From: Steve Sarette  
To: Microsoft ATR  
Date: 1/23/02 2:02pm  
Subject: Microsoft Settlement

Hello,

I'm writing to voice my opinion that the proposed Microsoft settlement is a bad idea. Any settlement that does not force Microsoft to open its file formats and its API set is a bad idea.

I've been working in the computing industry for 17 years now so I've seen a lot of the history of this thing. As I see it, the fundamental problem with Microsoft's monopoly is not the cost of their products or the "innovation" that they bring to software development. Instead, it is the control they exert over the data on the machines. After all, for most of us the data is the central point of computing. It is the reason why we use a computer in the first place.

By data I mean the word processing file that you are working on. Or your email. Or your personal/business finances, or the website that you are developing. It is that new song you wrote and want to digitally record. It is the research that you want to do online.

By allowing Microsoft to maintain an unsupervised monopoly on the desktop, we are handing them the ability to control how data is recorded, edited, and accessed. We allow them to determine how we can speak our minds, run our businesses, even build

our products. And when we do that, we give them the ability to levy a tax on, effectively, our ideas.

For example, today when people want to collaborate on a document it is not unusual for them to use Microsoft Word to do so. After all, Word is bundled with most machines that come pre-loaded with MS Windows (which is to say over 95% of all computers sold). Almost everyone has it. It is convenient to do so.

But what if I don't want to use Windows? What if I prefer to use an Apple Macintosh instead? Sure Word is available for the Mac—for a few hundred dollars.

Or what if, instead, I'm one of the millions of users of Unix operating systems and their variants? While there are plenty of products like Microsoft Word for those platforms, Word itself is not available there. Yet because Microsoft keeps its file formats a secret, the interoperability between those products and Word is difficult at best. So because 95% of the work force is using Word, the rest of us are forced to use it as well. If I want to use a Unix machine to do my job, I still have to purchase a windows machine in order to collaborate with my colleagues. Even worse, if one of my colleagues decides to purchase a new Windows machine, most likely he will receive a new version of Word on that new box. But because Microsoft does not provide compatibility even between different versions of their own products, that means everyone else will also have to upgrade Word (at no small cost) if we want to effectively continue to collaborate on documents.

Ultimately this is how Microsoft's continued monopoly and habit of bundling software with their operating system hurts consumers. I can't use a low-cost alternative to Microsoft's software because it is too difficult to make that software work with Microsoft. So my alternative is to purchase expensive hardware and software that I don't want and then forever after to be on Microsoft's upgrade path.

By the way, I already see this pattern repeating with Internet Explorer. Most website today are tuned to work best with IE. If you tend to access the web with browsers other than IE, you will find websites that do not render properly or refuse you access altogether. I wonder how long it will be before the entire web is an IE-only experience, if only because that is the most convenient, and inexpensive, thing to do? I wonder how long after that it will be before I am forced to start paying for IE upgrades?

Please reject any settlement that does not require Microsoft to open its file formats and its API set (the two are joined at the hip). The settlement should require this of all current and future Microsoft products. Further, there should be external auditing and supervision to ensure that Microsoft complies with any such settlement.

Thank you for your attention.

Subject: microsoft settlement

Microsoft abhors competition. They are bullies about it. That needs to change before we will see any improvement in the way their software works and in innovative new products that people enjoy using.

Regulate the heck out of them until their market share falls and other companies that aren't influenced by Gates/Balmer get some breathing room again. Their software isn't that great. If you had some other options you would see that.

The problem is that now they have so much money they can buy influence, stuff comment boxes like this one, and have the audacity to try to apologize by further increasing their market share in schools—one of the last bastions of hope for Apple computer. That makes about as much sense as "punishing" someone who took too many slices of pizza by making him take another slice!

Imagine the possibilities in computing if the competition weren't bought out, litigated away, or had their brain trusts stolen from under them by Microsoft. You might not have viruses, you might enjoy using your computer again, and you probably wouldn't be facing the prospects of "renting" your software through an on-line service for the sole sake of squeezing each last dime out of you to stuff the pockets of the richest man on earth.

Subject: Microsoft Settlement

I have two issues with the current Microsoft settlement:

1. Section III.E limits the disclosure of Communications Protocols to the entities described in Section III.I. This is insufficient. A provision must be made such that these Communications Protocols are fully documented and available to anyone. Specifically, the current wording excludes open source software projects.

2. A new provision regarding disclosure of file and filesystem formats should be added. By doing this, the barrier for entry for competing applications is lowered. This measure would not inhibit Microsoft's ability to innovate since the file format of an application is separate from the features of the application. Additionally, disclosure filesystem formats would promote Operating System competition by reducing the cost of switching from one Operating System to another. Finally, this disclosure must also be available anyone. Specifically, open source software projects must be included.

 January 22, 2002  
 Attorney General John Ashcroft  
 US Department of Justice  
 950 Pennsylvania Avenue, NW  
 Washington, DC 20530

Dear Mr. Ashcroft:  
 The time has come for the Microsoft litigation to come to an end. I use Microsoft's products, and am quite satisfied with what the company has done for the consumer. Continuing the litigation will only impede Microsoft's ability to continue developing new products. I would much rather see Microsoft's resources put toward research and development rather than toward legal fees. Further, I think the government has more important issues to pursue, such as the Enron affair.

The settlement agreement will achieve the goal of ensuring no future antitrust violations occur. A technical review committee will monitor Microsoft. Complaints will be lodged with the committee, and the committee may assist with dispute resolution, if that is necessary. Additionally, Microsoft has agreed to disclose its code to its competitors, and to not enter into agreements with third parties to exclusively distribute or promote Windows. I do not see how continuing the lawsuit will do any more than what the settlement agreement will achieve.

I am hopeful the Court will approve this settlement agreement. Nothing will be gained by dragging this case on further. Thank you.

Sincerely,  
 Edith Wallace

From: John Long  
 To: Microsoft ATR  
 Date: 1/23/02 2:07pm  
 Subject: Microsoft Settlement  
 To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous

actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
 John Clayton Long

From: Nikolai Barov  
 To: Microsoft ATR  
 Date: 1/23/02 6:27am  
 Subject: Microsoft Settlement

According to what I have read about the proposed Microsoft settlement, I believe it will be mostly ineffective, amounting to just a slap on the wrist.

The most damaging thing Microsoft does is to "embrace and extend" other people's technologies, as happened with kerberos and Java, and to keep their own data protocols in a constant state of flux, so that only their applications can access the data.

Not only does this cause a great deal of frustration for the end-user, but it also confirms that Microsoft's products can't stand on their own merits, and need these dirty tactics in order to compete. Here's what I would find satisfactory:

The provisions within the settlement that address the opening up of protocols should be radically strengthened. And this information needs to be made available to any interested party, not just other big companies. An inquiry should be made about the extent to which the federal and state governments can limit the money they spend on information products relying on proprietary or unpublished protocols and data formats.

This should come as a package deal as part of the settlement.

Thank you,  
 Nick Barov  
 Chicago, IL

I would like to comment on the proposed settlement to the Microsoft Anti-trust settlement. Allowing Microsoft to pay its debt to society with its own software seems to artificially inflate the true penalty they pay and increases their market share in new fields. I agree with the arguments published by Microsoft's business competitors, Apple and RedHat, which propose that the schools should receive cash and buy their own (possibly non-Microsoft) software and hardware.

From: Carlos Gonzalez  
 To: Microsoft ATR  
 Date: 1/23/02 2:06pm  
 Subject: Microsoft Settlement

I am writing to express my disappointment with the proposed settlement against Microsoft, Inc. As a long-time software developer and computer user, it has been clear to me that Microsoft has been acting as a monopoly- I was pleased to see when the government came to this conclusion as well. However, the proposed settlement does not alleviate this problem, nor does it limit Microsoft from continuing much of the same monopolistic behavior it practices today.

I feel that any settlement needs to guarantee the ability of software developers to interface with the Microsoft operating system. Specifically, I was disappointed to read the definition of API being used in the settlement, as well as the limiting of what information Microsoft needs to publish about its operating system. There exist many loopholes that Microsoft could use to ensure that a third-party developer would not be able to bring their application to Windows due to incomplete documentation.

I also feel that any settlement needs to give an OEM free reign in terms of what software and operating system they place on their hardware. Again, loopholes exist in the settlement such that Microsoft could offer discounts to OEMs that ship their software exclusively. Also, licenses to developers seem to limit what they can work on to Windows-only software. There was also the well publicized case of the Microsoft Front Page license, which seemed to prohibit someone from working on a website that was critical of Microsoft.

Again, these issues will continue to exist if the proposed settlement is accepted. Please take the time to ensure that any settlement

will actually prevent Microsoft's anti-competitive practices and will allow the computer industry to flourish. All I am asking is that two factors be considered:

1.) Developers should be able to create software that works with Microsoft's operating systems. This means they must have access to necessary documentation and be permitted to create applications which compete with Microsoft's own.

2.) Companies and individuals should be given the right to choose non-Microsoft software if they want. Locking in an OEM or a developer or a user to Microsoft-only solutions will only serve to strengthen Microsoft's monopoly. Thank you for your time.

Carlos Gonzalez

From: David Prosper  
To: Microsoft ATR  
Date: 1/23/02 2:09pm  
Subject: Microsoft Settlement

To whom it may concern,

I wish to add my voice to the growing number of people concerned with this case. I for one feel that Microsoft has committed many illegal actions in the past and it continues to do so to this day. With the release of Windows XP Microsoft has demonstrated that the findings of fact in now way mean anything to them, and they continue to follow their tried-and-true predatory business practices. Another, even greater concern lies in the privacy-or lack of it-of their customers with their integration of Passport services directly into the OS. One student who recently purchased a Windows XP laptop said to me, "They're forcing me to get one of these Passports." The incessant reminders and nags on the desktop had driven him to point of relenting and signing up for a service that he neither wanted or needed. Is this good business?

At work I use Windows NT, but at home I use BeOS, an operating system produced by a company that no longer exists. Be Inc. was a victim of Microsoft's "Bootloader" restriction on OEMs. Companies such as Hitachi and Compaq were interested in installing BeOS along with Windows in a dual-boot configuration, and such pre-installation would have had the potential to greatly expand the BeOS user base. However, after Microsoft heard of this they dispatched their legal team to each vendor that was going to offer the BeOS, and subsequently no vendor offered the BeOS (with the exception of Hitachi, who installed the BeOS but were obligated to not have a boot menu with a choice of the two operating systems, and who were fearful of even telling their customers that there was an alternative OS on their computers. Most of the customers booted into Windows without ever knowing there was an alternative). As a consequence Be Inc. bled money throughout the 90's and vainly tried to refocus their efforts in the last year on Internet Appliances before being bought out by Palm Inc..

Microsoft is an arrogant and dangerous force not only in this country but around the world. Their predatory business practices must be checked for the good of the computer industry, the economy, and society as a

whole. This cannot be achieved with a mere slap on the wrist but with a settlement or judgement that has real teeth. The settlement proposed by the nine states refusing to go with the original settlement looks very interesting...

Sincerely,  
David Prosper

Subject: Microsoft Settlement

I've written software professionally all of my life. I remember when Microsoft did not exist. In my opinion, Microsoft's practices have been predatory and unfair for decades. The settlement reached by the government with MS neither punishes MS enough nor does it provide safeguards that similar problems will not occur in the future. With MS products crashing all around us (MS servers and the new MS Windows XP are full of bugs), MS should NOT be given any advantage in the marketplace. There is a sense in which our national security depends on reliable software, and MS is not providing it. The settlement should be much more harsh, and should include specific oversight functions to ensure compliance. MS should NOT be trusted to comply.

Subject: Microsoft Settlement—Just Say No!

As a member of the computing community at large, I have to say I cannot agree with this settlement. It leaves too much power in the hands of Microsoft, and still leaves them with the leeway to continue to crush any other program that happens to get in their way. I believe in healthy competition, not the wanton destruction of companies that just might happen to have something that isn't Windows-friendly. As an avid Netscape user, I have frequently known Microsoft products and Microsoft sponsored websites to crash my system if I'm using Netscape, and the PFJ completely fails to prohibit intentional incompatibilities historically used by Microsoft. That's just one many of my complaints against Microsoft in general, but having been a web programmer in the past, it's one of my more vocal objections.

Please do not allow this to pass. Microsoft needs far more restrictions placed upon it before I will even begin to think that it has ceased to attempt to crush the rest of the computing world. Like the Bell monopoly, MS needs to be taken down, or eventually there will be nothing else left. And once there is no more competition, MS would no longer need to attempt to improve their product, leaving the public with a substandard product (which is what I consider it currently to be), and no way to improve.

From: Eric Nichols  
To: Microsoft ATR  
Date: 1/23/02 2:06pm  
Subject: Microsoft Settlement

To whom it may concern:

I recently found out that the DOJ is considering opinions from the public regarding the Microsoft anti-trust case. I have reviewed the documents related to the case. Frankly, I was shocked and dismayed by what I read. I have identified numerous serious concerns which MUST be addressed before any final settlement can take place.

To me, it appears as if the US Department of Justice has allowed Microsoft to write its own settlement. I find it difficult to believe that any judge or lawyer who knows anything at all about the computer software industry could have agreed to these terms. Note for example that under J.1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of its business". Not only does this wording blatantly leave room for abuse of the Microsoft monopoly, but it even goes so far as to place Microsoft in charge of deciding who is an authentic/viable business. This is comparable to letting a fox guard the hen house. This is never a good thing, it will always come back to bite you somewhere down the road... just look at what happened with Enron.

"The overall result is that the proposed settlement, which (make no mistake about it) would grant Microsoft its operating system monopoly, contains, statements which say that it would no longer be illegal for Microsoft to maintain its monopoly, while saying that if Microsoft wants to, it can make it easier for people to write Windows applications, but it's by no means required to do so. In short, the settlement is a travesty, an ill-advised embarrassment that flings down and dances upon the law and upon all but the most twisted notion of justice."1

From: Nathan Cohick  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 2:07pm  
Subject: Microsoft settlement

Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems. An episode from the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively. Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS. Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. The judge in the case ruled that: "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft."

That case was settled out of court in 1999, and no court has fully explored the alleged conduct.

The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1. The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software.

This should be changed in the PFJ so that Microsoft cannot use this against the non-Microsoft users.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. The settlement as it is currently negotiated has no teeth in it, and it will not restrain Microsoft's abuse of its monopoly power. Microsoft's abuse of its monopoly are still continuing. A recent example is the transfer of Silicon Graphics Inc.'s key 3D patents to Microsoft; see

<http://www.theregister.co.uk/content/54/23708.html> Silicon Graphics used to be in the forefront of producing graphics software; the movie industry is still very much dependent on Silicon Graphics software. The destruction of Silicon Graphics is connected with the tenure as chief executive officer of Richard Belluzzo, when Silicon Graphics was trying to move its software from a Unix environment to a Microsoft environment. Since then Richard Belluzzo moved to Microsoft Corp., where he became president and chief operating officer. The background to this move would be well worth investigating by the Justice Department. On Richard Belluzzo, see <http://www.microsoft.com/presspass/exec/belluzzo/default.asp> In any case, the free world, meaning the world outside Microsoft, is terrified that the patents that were handled responsibly by Silicon Graphics, might be used to corner the computer workstation and computer game markets.

I am a Linux user, and I have been using Unix or Linux for over 15 years. I prefer Linux to Microsoft software for practical, and not ideological reasons. There is a lot of valuable software that is available under Linux but not under Microsoft. This software may not have the wide market appeal of Microsoft software, but it is indispensable for technically oriented users.

If Microsoft is able to retain its monopoly position, it is likely to do everything in its power to suppress Linux and other free software, and this would be a great loss to technically oriented users. For this reason, the Microsoft settlement needs to be renegotiated, so that free software should have a chance to survive.

The main importance of free software is not that it is free; its importance is that it is written by expert programmers enthusiastic about contributing to the public good. This enthusiasm does not exist in programmers writing for a Microsoft platform. The Web site <http://linuxtoday.com/> is a good one to follow concerning the alarm created in the free software community by Microsoft's predatory practices.

From: Paul Hoehne  
To: Microsoft ATR  
Date: 1/23/02 2:11pm  
Subject: Reasons to reject Microsoft settlement

There are many technical reasons why the Microsoft settlement should be rejected and are detailed very well by in <http://www.kegel.com/remedy/letter.html>. My reasons for objection are based on the prior behavior of the defendant.

Over the years Microsoft has shown that they intend to dominate the operating systems space on both the client and the server. They have shown from their prior behavior that will: Redefine terms to avoid compliance. If something doesn't fall under a strict interpretation of the terms of the settlement, then Microsoft will deem itself not bound to the settlement on that issue.

Add non-standard extensions to standard protocols. If the industry-standard protocol is extended with proprietary, secret additions, then it no longer operates with non-Microsoft products. Use highly restrictive licensing. If something violates the license of a software vendor or service provider then non-Microsoft products can be excluded.

Use legal channels as a delaying tactic. In an industry where dominance can be established in months, they can tie up an issue for years. Install intentionally incompatible software. Use a "free" addition to the operating system that will disable, alter, or break a feature used by a competing product.

Vapor-ware to prevent competing products from gaining market share. Microsoft has often promised software in order to prevent customers from adopting software from competitors, and delivered late or not at all. Even re-engineer their products. They can make programs that are not traditionally part of operating systems an integral part of Windows, thereby tying products to the OS.

All this they can do to avoid having to comply with conduct remedies. I have no faith that the Department of Justice will be able to enforce the remedies stipulated in the settlement.

It is sad to see the DOJ adopt a settlement that will be meaningless because it is unenforceable. It would be sad to see Microsoft continue to bully vendors,

constrain developers, and use their dominant position to drive competing products from the market. However, more than just "sad", this situation is dangerous. In an age where Microsoft products are constantly being battered by security concerns, it would seem that healthy competition in the Operating Systems space would be vital to ensure that if one OS is highly vulnerable consumers have other choices available. Finally, when Microsoft avoids compliance, the credibility of the DOJ will suffer. Any law functions if the probability of meaningful enforcement is high. The defendant will avoid compliance and their behavior will diminish the effectiveness of anti-trust laws in general.

Please do more to ensure that the US software industry is not subject to the whims of the defendant. Please re-work to the settlement to provide some real effective relief against Microsoft. Please ensure that the software industry in the US is open for innovation and not dominated by a single player who can use numerous tactics to drive competitors from the marketplace.

Subject: Microsoft Settlement

I would like to go on record as opposing the current settlement with Microsoft. The settlement fails to provide substantial protections against the tactics that Microsoft has employed in the past to unfairly compete with other companies. Most specifically, though not exclusively, the settlement does not prevent Microsoft from offering discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

Date: 1/23/02 2:10pm  
Subject: No to Microsoft settlement

I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundreds, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The

market must be able to return to a state of competition.

Allowing one large company to control the internet and software made available to the masses will mean that development will be in the direction of what is good for that one company. With a diverse market, many more needs will be met and new ideas will abound.

Subject: Microsoft Settlement

To Whom it May Concern:

I object to the proposed settlement between the DOJ and Microsoft. It does not sufficiently punish Microsoft and it does too little to keep them from continuing to use their monopoly to stifle fair competition. At a minimum, Microsoft should be required to publish and maintain full specifications for their application file formats, including Word, Excel and Powerpoint. These file formats form a major part of the Applications Barrier to Entry.

Michael Thompson

From: Sean J. Vaughan  
To: Microsoft ATR  
Date: 1/23/02 1:21pm  
Subject: Microsoft Settlement

The proposed antitrust settlement will not change Microsoft's behavior and will not be good for consumers or the software industry. I am a software professional with a Computer Engineering degree from the University of Washington. As a student, I interned with Microsoft. I've worked for an Internet startup and did some consulting work with Microsoft. I currently work at the University of Washington as a lead of a Software Engineering group.

If the success of a company is to be measured by the rate of increase to shareholder value then Microsoft is the most successful company in civilization's history. They have achieved this \*because\* their highest and possibly only motivation is to increase shareholder value. In software, you get tremendous value when you have a wide base of code and are able to integrate your code in elegant ways. For example, in a web browser, you need (at least) a networking stack and a reasonable Graphical User Interface as a software foundation before you can proceed. The problem is that it is almost invariably cheaper for an operating system company (Microsoft) to own the software foundations then license this technology from another company. If the operating system company does not have some sort of monopoly on distribution this situation isn't necessarily a problem.

The problem arises because Microsoft controls the distribution channels. The cost to consumers in terms of time and money of getting software that doesn't come with the computers they buy is high. In any new software market where Microsoft has a competitor, the only thing they need to do in order to take control and destroy the market

is to put the software into their operating system. They then get to reap the future benefits of integration without the cost of competition.

This hinders competition because if a competing software company has software that becomes popular then sooner or later Microsoft will choose to enter the market. After Microsoft enters the market, the only way for a company to provide shareholder value is to sell the company to Microsoft or move into a different market.

The proposed settlement does very little to change this system.

Good Luck!  
—Sean

From: Todd Marzolf  
To: Microsoft ATR  
Date: 1/23/02 2:09pm  
Subject: Microsoft Settlement

To Whom it may Concern,

I would like to add my voice to those in adamant opposition to the proposed Microsoft Settlement. As a student with a Bachelor's degree in Computer Science and about to complete a Master's Degree in Information Systems it is painfully clear to me the extent to which Microsoft has abused the public trust with its monopoly power. Please, for the sake of us all, reject this proposal in favor of a much stronger remedy.

Today's information based society is particularly hard hit by Microsoft's crimes. The most cursory review of my day finds several obvious examples of the price that we all must pay for Microsoft's monopoly. For example; websites often display properly only under Microsoft Internet Explorer because they were created with Microsoft tools. My email accounts are regularly bombarded with spam from the latest Microsoft Outlook virus because there is no program which compete on the Microsoft platform despite Outlook's many security vulnerabilities and weaknesses. Cross platform collaboration with my peers at school is nearly impossible because Microsoft Office continues to incomparable file formats in order to lock in its customer base. When I recommend to my friends and family that they buy a prebuilt computer from a major hardware vendor I must explain that it can only be bought bundled with Microsoft Windows. These problems exist, not because of a lack of consumer demand for a solution, or lack of a willingness to pay, but because Microsoft does not allow it.

The proposed settlement does not come close to recouping the illegal gains which Microsoft has made off American consumers much less come close to penalizing Microsoft for the illegal abuses. While it is doubtful that the true losses can ever be recovered from Microsoft any settlement The beginnings of a fair settlement should include the preminent opening of all Windows and Office API's and file formats as well as a large cash payment to open source programming efforts which compete with Microsoft products. In this way Microsoft's ill gotten gains can be used for the public good.

Sincerely,  
Todd Marzolf

 Subject: Microsoft Settlement

The "solution" is anything but a solution. Russell Pavlicek said it best: "It is like the court ordering a convicted drug dealer to give out more free samples of heroin to underprivileged children to ensure that their poverty does not deprive them of the opportunity to become addicted."

Worse, Section III(J)(2) contains some very strong language against not-for-profit companies. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft (italics are mine) for certifying the authenticity and viability of its business, ..." This will kill SAMBA and other Open Source projects that use Microsoft calls. This is the only real competition to Microsoft, and they know it. How can the government protect the interests of the consumer and business users by giving Microsoft the right to set the criteria for what constitutes a business?

THIS IS MADNESS.

I, and others, implore you to rethink this settlement. At the very least, Microsoft should be broken up. Let the Office Suite company compete and the Operating Systems company compete in the real world.

 Subject: Microsoft Settlement

In my opinion as a citizen of these United States, the proposed settlement in the case of United States vs. Microsoft Corporation is not acceptable. Microsoft Corp. has an established history of violating the spirit (and occasionally the letter) of prior legal judgments. The proposed settlement leaves too many openings for Microsoft Corp. to maintain their monopoly power. In particular, the proposed settlement does little to correct the current situation with regard to the predatory pricing of Microsoft products.

Microsoft should be prohibited from using its Non-Disclosure Agreements (NDAs) with Original Equipment Manufacturers (OEMs) and corporate end users to enable it to price its software in a predatory manner. Specifically, Microsoft should be required to publish all contracts and licensing agreements which it enters to provide Microsoft software, and Microsoft should be prohibited from using any criteria except the number of licenses purchased to change the price of its software to a customer. The free market cannot be restored so long as Microsoft uses predatory pricing to lock OEMs and corporate end users in.

To: Microsoft ATR  
 Date: 1/23/02 2:10pm  
 Subject: Microsoft Settlement  
 Hello,

I wanted to voice my concern that the current settlement under discussion is entirely too lenient on Microsoft. It does not deprive them of the profits of their illegal behavior, it does not lessen the barrier to entry for small competitors and it does not restore or encourage competition in the operating system market.

I'd ask that the primary goal of the settlement be to rectify the current operating system market as quickly as possible, to bring more competition to bear on Microsoft. Please note that operating system should include any currently available operating system offering from Microsoft. I would recommend publishing the entirety of Windows XP, 2000 and CE source code, as well as all developmental code in Microsoft's possession, would most quickly level the playing field.

Thank you.

 601 D Street NW  
 Suite 1200  
 Washington, DC 20530-0001

Ms. Hesse,

I am writing regarding the proposed settlement of the Microsoft antitrust lawsuit. As a professional in the computing field, I must say that I find the current settlement unacceptable, as do a majority of my colleagues I have spoken to about the issue. The settlement does little to change Microsoft's future actions, and what few proposed remedies exist, tend to remedy situations that no longer exist (due to Microsoft's monopolistic actions).

This remedy does not penalize Microsoft for its past actions, and for all of the smaller competitors it has destroyed not out of having better products, but by leveraging its monopoly. Furthermore, the proposed settlement leaves many of the key provisions (opening of API's, which products fall under the settlement) up to Microsoft! This will allow them to simply continue their current actions, claiming that whatever they want to do is not covered by the settlement. Microsoft's actions have hurt, not helped, innovation in the computing field. At every turn, they have proved to be out for one goal only: the enlargement of Microsoft to control the entire industry. If another company proves competitive, they either buy them out, or destroy them by leveraging their monopoly (see: Netscape, the Caldera vs. Microsoft ruling, etc.) Microsoft must be kept under

close government control and scrutiny until such a time that their monopolistic powers are diminished, and fair competition can once again rule the industry.

Until a remedy is proposed that gives competition back to the industry, consumers will be hurt. Fair market competition is the cornerstone of our economy, giving companies a chance to survive on the merits and value of their products. Consumers must be protected from future abuses. I ask that the current settlement be abandoned, in favor of a truly forward-thinking settlement that frees the industry of Microsoft's overbearing shadow.

I would propose that a fair remedy entail Microsoft being required to open up ALL proprietary file formats and structures to any competitor, of any size, specifically requesting them. As well, Microsoft should only be allowed to use its sizable collection of patents for defensive purposes, not as leverage to force companies to do Microsoft's bidding. Furthermore, Microsoft must be required to provide this information into the future, and it must extend to any products that Microsoft either has created, or will create.

Microsoft's monopoly is so widespread that only sweeping actions will make a difference. For example, no sizable competitors to Microsoft Word exist as Word is a closed format, so to be compatible, you must use Word. There are no sizable competitors to Windows as specific, proprietary knowledge is closely guarded. Microsoft makes use of "secret" API calls in their OS and software applications that no other developer can use. If these problems are removed, and everyone is put back on a fair playing field, competition will bloom.

Thank you for your time reading this.  
 Sincerely,  
 Justin Scott

From: Adam  
 To: Microsoft ATR  
 Date: 1/23/02 2:09pm  
 Subject: Microsoft Settlement

Microsoft is a monopoly. There is nothing wrong with that. Microsoft is using that monopoly to strangle the rest of the computer industry. There is something wrong with that. I don't care about "punishing" Microsoft. I want to not have to think about Microsoft at all. Perhaps I should explain why.

I am a software professional. I program software for a living. I am passionate about my enterprise. I am also a patriot. I have a Degree in Computer Science from a small technical school on the Banks of the Hudson River, The United States Military Academy at West Point. I was commissioned into the Infantry and Served with the 25th Light Infantry Division in Hawaii. After my Army time, I returned to the civilian sector and began work as a programmer. My Army time not that far behind me, I was constantly reminded of things I could use my new skills to solve that would have helped in the military, everything from planning for training to recording the army physical fitness test. But there was one reason why I would not have been able to do that.

Security. You see, I was working with Microsoft technology at the time. I was writing network software for accessing an IBM based mainframe system. The clients were MS Windows machines. It became apparent that security went as far as the end of the OS/390 system. Once we were in the MS realm, we were on our own. The problem was, there was no access into the layers to ensure security. To summarize, building on a microsoft system, we were stuck with a single way to do things, and no options to do the things we needed to do.

The settlement must ensure one thing. That no one company, person, or organization have a strangle hold on an industry that is vital to interstate commerce on so many levels. The internet was a product of the US government. To turn control over to one Company would be comparable to opening Yosemite National Park to quarrying. Microsoft currently owns the client end of internet connectivity by owning both the Desktop Operating System of Choice, and the two primary Internet Client Applications, the Internet Explorer Web Browser and Outlook Email Client. This puts every other business that is dependant on those tow things, dependant on one company.

1) The settlement should provide for the splitting off of IE and Outlook from the main operating system.

2) The Mozilla Browser should be installed by default. Mozilla is available as Free/Open Source software and will not cost Microsoft anything to install. Mozilla shall be inspected by a government agency to ensure it complies with open standards.

3) The proposed distribution of MS software to Schools shall be stopped. Any financial burden placed on MS should be in straight financial terms, and not allows them to further their Monopoly.

4) MS will be required to include the Java Run Time from Sun or from IBM, or from another 3rd party with it's operating system. Java is the most powerful cross platform application framework, and this will allow people to develop code that will not tie them to the Microsoft platform.

Very Respectfully,  
Adam Young

From: Jason Lee  
To: Microsoft ATR  
Date: 1/23/02 2:18pm  
Subject: Microsoft Settlement

I would like to voice my discontent and even alarm at the proposed settlement in the Microsoft anti-trust case. The proposed settlement does little to effectively end the strongarming of other by Microsoft. Their proposed settlement (with the States Attorneys General, I believe) of donating software "for the children" only goes to show the lack of regard they have for the process, and goes a long way toward revealing the corporate mentality of Microsoft: dominance at any cost. Their history is replete with examples of shulduggery (e.g., DR-DOS, exclusivity agreements with PC makers), their current actions show no signs of changing, and the proposed settlement does nothing but maintain the status quo. The terms are often vague, and rarely have enough teeth in them to affect an adequate solution to the problem. I would strongly urge, perhaps, a structural remedy, or, at the very least, a much stronger settlement that would offer MS fewer holes to slink through, as the consent decree proves they most certainly will, if given the chance. We have before us an historic opportunity to put to rest a huge market inequity. Let us stay the course and do this right. Return fair competition back to the computer industry, lest it spread to other markets (e.g., X-Box, WebTV, .Net/Passport/Wallet). Make Microsoft a number of Baby Bills. Make them play fair.

Thank you for your time.

From: Andy Lawrence  
To: Microsoft ATR  
Date: 1/23/02 2:11pm  
Subject: Microsoft Settlement

Hello,  
Please rethink your settlement with MS... Because of their prevalence in the market, they can force people to use only MS products for communication. Because they make the best products for using a fileformat (for instance a Microsoft Word document)

which, while owned by them, is now a defacto standard for a lot of people. The problem is that Microsoft does NOT publish instructions on how to read those documents programatically, and therefore no one can complete effectively to make a competitive product.

Even in cases where they do use an freely available standard in their products, they tamper with the implementation of that standard in their products so that, once again, only their products will work with it (see Kerberos auth in Win2k, and the use of LDAP in their ActiveDirectory product). It is my understanding that they are going to now use XML (another freely available standard) in future office products for their fileformats, but that those formats will once again be modified slightly so that nothing but MS products can read/write them. There is nothing "innovative" about the results of this bending, other than as a way to lock in customers.

In short—asking for money from them (much less the idea of them \*donating\* software—which is free for them to duplicate—to schools) isnt going to change any behaviors. Requiring use of published standards (as written) and allowing one and all (NOT just commercial entities) to inter operate with their products fairly is the only way for a behavior change and a healthier computing industry.

Thanks.

Subject: Microsoft Settlement

I am writing to give my comments on the Microsoft antitrust settlement.

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement grossly fails to either redress the actions committed by Microsoft in the past, or inhibit their ability to commit similar actions in the future. Furthermore, I believe this settlement is counter to the interests of the American public, deleterious to the American/Global economy, and inadequate given the findings of fact in the trial.

Microsoft has been found guilty of illegally causing injury, and sometimes the destruction, of other corporations. If a human being destroys another human being they are either placed in prison or given a death sentence. Why are corporations not treated the same? When the state gives corporations more rights and privileges than the people, the state ceases to server the people.

I am astonished that the proposed settlement does nothing to correct Microsoft's previous actions. There is not one provision to correct or redress their previous abuses. The proposed settlement only prohibits future repetition of those abuses. If a corporation can commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice.

Justice is breaking the company up. Justice is removing the Board of Directors responsible for these actions. Justice is opening up their API code. There are lots of possibilities, some great some small, but they must be just.

Subject: Microsoft Settlement

To whom it may concern:

I find the proposed final judgment for the Microsoft antitrust case to be unsatisfactory. The PFJ would allow Microsoft to engage in clearly anticompetitive behaviors without violating the settlement. For example, there is nothing in the PFJ to prevent Microsoft from programming artificial incompatibilities that would make it difficult or impossible to run Microsoft applications on non-Windows operating systems that are able to run software that was written for Windows operating systems. This has already been done in the past by Microsoft in the mid 1990's with Windows 3.1. That case was taken to court and was ruled to be anticompetitive behavior. So the proposed settlement does not restrict out examples of anticompetitive behavior that have already been used by Microsoft in the past. This is one of many problems with the PFJ that I can see but for the sake of brevity I will leave you with the thought that it would be better to take the extra time now to make sure that your solution will accomplish its goals than to regret a hasty and ineffective settlement in the future. I implore you to reconsider the settlement now before it is too late. Thank you for your time and patience.

Subject: Microsoft Settlement

I believe the Microsoft settlement as it currently stands is completely inadequate as far as a remedy is concerned. The most troubling aspect of the remedy for myself as a software engineer, is the number of loopholes in the language referring to open API's. Microsoft is not under obligation to reveal interfaces if that interface is related to security. Unfortunately this allows Microsoft itself to determine what is or isn't a security interface, e.g. is disk access security related? What if the file has permissions attached? I think Microsoft should be forced to open all API's for their system, with oversight related to true security interfaces.

the current settlement is too easy on microsoft. they should be forced to release their source code as free software, and pay a large fine, and be broken into two companies (one for OS, one for everything else).

Subject: Microsoft Settlement

I am an American citizen and would like to voice an opinion on the proposed settlement of the Microsoft anti-trust trial. I do not believe the proposed settlement includes strong enough assurances that Microsoft will not continue to be the monopoly it has been found to be. Please consider this a vote against the proposed settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors, yet unfavorable to Microsoft.

The United States is a successful nation because its free markets encourage firms to compete for customers by producing high-

quality, low-cost goods. This system needs to be protected from monopolists who gain so much power that they can destroy the competitive nature of the markets in which they participate. Microsoft has directly used its monopolies to repeatedly extend its domination into other markets. For example it used its monopoly of the operating system market to take over the web browser market. And it is currently attempting the same "bundling" techniques to try to dominate the ISP market with its MSN service, the digital media market with its Windows Media Player product, the instant messaging market with its Microsoft Messenger product. To preserve the open market, and to promote high-quality, low-cost goods, strong actions must be taken against Microsoft to curtail the abuse of its monopoly, and eventually to reduce its market share to acceptable levels that once again allow healthy competition. I do not believe the proposed settlement adequately addresses these issues.

Thank you for your time,  
Kevin Eye  
Williamsville, NY

From: Michael D. Kersey  
To: Microsoft ATR  
Date: 1/23/02 2:12pm  
Subject: Microsoft Settlement

I am opposed to the settlement with Microsoft. Microsoft has displayed monopolistic business practices far longer than it is generally acknowledged. A story I am familiar with is a case in point:

Circa 1980, I knew a Rice University professor who, with several other professors, had a company called "Clear Lake Software". They had written specialized software (numerical processing) for the Apple Macintosh computer and were successfully selling it as a software package. Microsoft expressed an interest in buying the product and sent lawyers to "negotiate" with the professors. There was no negotiation: the lawyers offered them a fixed dollar amount for all rights to the software. When the professors, who wanted a better price, asked what would happen if they didn't sell, the lawyers told them that Microsoft would establish a team of programmers and duplicate the specialized software within a short period, eliminating Clear Lake Software's product niche from the marketplace. The professors accepted the Microsoft offer, needless to say.

If Microsoft acted this way with a company composed of a few Rice University professors, I cannot imagine how they would act against a more significant challenge in the marketplace. Microsoft must be dismantled.

Sincerely,  
Michael D. Kersey

From: Tim Bray  
To: Microsoft ATR  
Date: 1/23/02 2:13pm  
Subject: Microsoft Settlement

My name is Tim Bray. I am founder and CEO of a software company named Antarcti.ca Systems Inc. I have been in the software business continuously since 1981 and have co-founded another company, Open

Text Corporation, that is now publicly listed (Nasdaq:OTEX). I have contributed an open-source software module named "Bonnie" that is now a part of virtually every Linux distribution. Working under the auspices of the World Wide Web Consortium, I was one of the leaders in development of Extensible Markup Language (XML), now becoming a key internet standard, serving as co-editor of the specification of XML itself and one of its key supporting technologies. I currently serve as a member of the Web Consortium's Technical Architecture Group, its architectural oversight committee for Web technologies as a whole.

I have read the full text of the original judgement in the MS case, the full text of the appeal judgement, and the full text of the proposed settlement.

I consider that the proposed settlement deficient in several respects. I limit comments to areas where my expertise and experience may lend them some standing:

1. The definitions of terms such as "API" and "Middleware" are insufficiently detailed and far-ranging and would allow the defendant considerable maneuvering room to mount legal defenses for continuing the behavior found illegal. Also it is troubling that the definition of "Middleware" is not particularly consistent with those in the original court's Findings of Fact.

2. The settlement's attempt to force Microsoft to open up its APIs seems very unlikely to bring a stop to the practices in this area that were found illegal. In particular—the requirement for disclosure is much to late in the product development cycle, effectively allowing Microsoft to continue to use secrecy and manipulation of APIs as an anticompetitive weapon in the software industry.—the limitations of the use to be made of the API disclosures are too far-reaching and it is hard to understand what benefit they convey to anyone.—the undocumented binary file formats used by many Microsoft applications are in effect part of the API but are not covered by the definitions

My decades of experience in the development and marketing of software products have led me to the opinion that the veiling and manipulation of APIs has been among the primary weapons used by Microsoft to extend their Windows monopoly into the domain of other unrelated software products. I would go so far as to predict that if this problem can be cleared up, market forces and the high level of creativity in the software business would probably suffice to bring a general halt to the illegal behavior without further court intervention.

3. There is reason for strong doubt whether the "Technical Committee" will prove effective as an enforcement vehicle. Problems include:—the requirement that members not have been employed by MS or a competitor to MS in the past year doesn't work. First, it is very difficult to work for a technology company that doesn't compete with Microsoft in some area. Second, the only way to acquire the necessary insight into the business is to have worked for MS or a competitor.

—The level of compensation is not specified—what motivation does the

defendant have for providing a level of compensation necessary to attract people with the right qualifications?—the gag order on the TC members seems counter-productive. One of the most effective disincentives to continuing illegal behavior on the part of the defendant would be the threat of throwing the light of day on such practices.

Cheers, Tim Bray, Founder, Antarcti.ca Systems

From: Brent Dill  
To: Microsoft ATR  
Date: 1/23/02 2:13pm  
Subject: Microsoft Settlement

In my opinion, the Microsoft Antitrust settlement is greivously inadequate to redress Microsoft's demonstrated prior harm to the industry and economy, and does nothing to insure against further harm. Working in the IT field for the past 11 years, I have seen firsthand what Microsoft's artificial market dominance has wrought: poor quality of product, with no better choices ever coming to market, and those choices which already existed in the market have long since been driven out of business.

Microsoft now exists as the SOLE recourse for my industry, and it is woefully inadequate. A simple perusal of recent computer virus outbreaks demonstrates this—nearly every virus propogated in the past two years has done so as an exploit in Microsoft's operating systems and productivity tools. Worse, they are exploiting aspects of these tools that no reasonable piece of software should possess, and yet these softwares are not modified to remedy the threat.

Microsoft is willfully negligent in its duty, as a monopoly, to protect the consumers from the negative and inescapable effects of its decisions. If Microsoft is to have a 90% share of the computer desktop market, then Microsoft should be held 90% responsible for any problems that develop as a result of computer desktop software flaws. A proper injunction, at the very least, should allow peer or expert judicial review of Microsoft's production methods [i.e., their source code]. If Microsoft is allowed to continue their 90% stranglehold on the market, they should be forced to provide the market with a higher quality of service than the market would otherwise receive from competition.

Of course, the preferable method would be to de-couple Microsoft's NT/XP kernel development from the rest of the corporation, allowing the resulting desktop/productivity development [the IE desktop/browser and the Office productivity suite] to be developed on multiple base operating system platforms. As both the Telephony industry and California's power grid have demonstrated, a government-regulated monopoly is seldom preferable to a regulated free market.

Subject: Microsoft Settlement  
To Department of Justice: (I Think)

\*\*The following text reflects my feeling and thinking about the MS antitrust trail\*\*

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: Bill Biese  
To: Microsoft ATR  
Date: 1/23/02 2:15pm  
Subject: Microsoft Settlement

Leaving a Monopoly intact as this settlement proposes is a remedy in name only. Just because we are not talking about a tangible product like steel or petroleum, as in other historical antitrust cases, doesn't mean the DOJ should cave in and not demand the correct TRUST busting remedy that is best for the consumer.

Unbundle the Microsoft products and force Microsoft to offer them for sale separately and parts that have no competition sell that source code to highest bidders. For example force Microsoft to sell as an option a stripped down feature poor version of windows.

My monopoly cable company must offer me a cheaper 13 channel only option not forcing every consumer to buy their whole package. Thus the consumer can then shop around for functions they need from other software companies.

Unbundle the MS Office product also offering Word/ Excel/ Access etc separately saving the consumer the full spectrum cost.

And the source code for Word and the Base OS since they have no real competition should be sold as stated above.

Thanks,  
Bill Biese  
Systems Analyst/Programmer

From: Todd Kofford  
To: Microsoft ATR  
Date: 1/23/02 2:14pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I would like to comment on the Microsoft Settlement. The settlement as proposed has more legal loopholes than Swiss cheese blasted with a shotgun. Microsoft has historically displayed an unwillingness to adhere to any court-ordered consent decree, or to try and twist the actual intention of the decree to their own benefit. In other words, the only law that Microsoft respects is the Microsoft corporate agenda and culture, which is "win at all costs as long as it is good for Microsoft". Their executives during the anti-trust trial showed great disrespect and disdain for the district court and many of them blatantly lied under oath. This all goes to show that Microsoft cannot be trusted to "do the right thing" when it comes to playing by the rules (i.e., the LAW). That is why I am writing this letter.

As a person who makes his living in the IT industry, I would LOVE to see some competition restored to the industry. Microsoft could easily compete on an even playing ground and the merits of the products they produce alone, but they simply will not. No consent decree or technology expert overlooking their actions will change this. A better solution must be found! It's kind of like the NBA Champion LA Lakers saying, "OK, now we're the best! Next season we will start each game with a 25 point head start over our opponents, because we are the best and we can!". Please think again before letting this settlement be finalized.

Competition MUST be restored to the IT industry and Microsoft cannot be trusted to change on their own. Thank you for your time.

MICROSOFT IS GUILTY

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>)" I also agree with the conclusion reached by the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems. I agree with Robert X. Cringely in his article "He's Not in It for the Profit Steve Satchell for Microsoft Anti-Trust Compliance Committee!" (on the web at <http://www.pbs.org/cringely/pulpit/pulpit20011206.html>)

"...I think he should get the position. With a background in computer hardware and software that dates back to one of the very first nodes on the Arpanet 30 years ago, Steve Satchell knows the technology. He has worked for several big computer companies, and even designed and built his own operating systems. And from his hundreds of published computer product reviews, he knows the commercial side of the industry. He is glib and confident, too, which might come in handy while attempting to keep Microsoft honest. Sometimes there is a distinct advantage to being the first to apply for a job, so I think Satch should be a shoo-in for one of those compliance gigs. And the boy looks mighty fine in a uniform.

The job will be a challenge, that's for sure. The committee has the responsibility of settling small disputes and gathering the information needed to prosecute big ones. They are supposed to have access to ALL Microsoft source code, and their powers are sweeping. If it goes through, I only hope the court picks three tough but fair folks like Satch. ..."

Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW

Suite 1200  
Washington, DC 20530-0001  
Dear Sirs,  
The Problem:

Your proposed settlement with Microsoft does not address the problems for consumers and suppliers of IT products and services caused by Microsoft's illegal actions.

In fact your proposed settlement is little more than a description of the current business practices of Microsoft Corporation. Requiring Microsoft to publish the APIs to the Windows platform has been Microsoft's policy for many years. So it fails the test of whether Microsoft is being punished for its past illegal actions, and fails to control Microsoft from pursuing similar strategies in the future. Publishing APIs simply enables other software companies to build products that run on Microsoft products thereby making those products more successful in the marketplace.

**The Solution:**

There is only one remedy that will work to empower consumers of technology, to restrain Microsoft's anti-competitive behavior in future, and to protect Microsoft's ability to continue to compete in the market. That is to require Microsoft to publish the source code to their products that are deemed to be monopolies, specifically the family of Windows operating systems.

Microsoft can (and arguably should) retain full proprietary and exclusive rights to their software. Publishing the source code will allow others (including future department of Justice investigators) to inspect these products for evidence as to whether Microsoft has been using their absolute power over these products to extend their monopolies and reduce choice and raise prices to consumers.

The old saying "power corrupts, and absolute power corrupts absolutely" is applicable in Microsoft's case. They are the only ones who know what goes on inside, and have the exclusive ability to arbitrarily change products that own monopoly positions in the market such as Windows. They will use, and have used, this power to force consumers to behave in ways that benefit Microsoft corporation at the expense of consumers and other suppliers in the market. The only way to ensure they do not continue to behave this way in the future is to hold them accountable. The only way to make them accountable is to enable inspection of the code that has monopoly control over the PC market.

Please do not hesitate to contact me if you have any questions about this letter or the ideas it contains.

From: Kent Florian  
To: Microsoft ATR  
Date: 1/23/02 2:17pm  
Subject: Microsoft Settlement  
To Whom It May Concern,

I would like to take a moment to express my concern with the proposed settlement terms in the Microsoft antitrust case. As a

computer professional who has worked in the field for over fifteen years, I have been witness to Microsoft's abuses of its market position countless times. I have also seen the government attempt to put an end to Microsoft's unfair practices in the past, to no avail.

The current settlement agreement does nothing to address the harm that Microsoft has already caused in the marketplace, including companies that have folded due to uncompetitive practices and consumers that have been forced to pay for products that they are not using due to bundling agreements.

Microsoft has proven over and over again that they are not a good corporate citizen, that they are perfectly capable of finding ways around any minor restrictions placed in their path, and that they have no interest in obeying both the letter and the spirit of the law. Now is the time to hold Microsoft accountable for their abuses, not to merely shake a finger at them and tell them that they have misbehaved. If the proposed settlement agreement is accepted as it now stands, it will do nothing but reinforce the fact that it is perfectly acceptable for a monopolistic corporation to implement any abuses it sees fit, and even if they are caught, the punishment will be so minor that it will be an acceptable tradeoff. This option is just plain wrong.

**MTC-00017831**

From: Stephen Hooper  
To: Microsoft ATR  
Date: 1/23/02 2:14pm  
Subject: Microsoft Settlement

Microsoft is a monopoly. There is no doubt in my mind of that fact. It has not acted in the best interests of consumers. Again, I can say this with no doubt in my mind.

The problem I have is this: everyone (except Microsoft) seems to agree on these two statements, yet the court and the states seem to be willing to let Microsoft continue the practices that have allowed it to become a monopoly, and that have allowed it to squash any viable competition it has.

I am not a believer in retribution. I don't think we should try to take revenge upon Microsoft for acting the way it did. What I do believe in, is letting other companies that would normally be crushed under Microsoft's weight have a chance to survive and bring their products to market.

For this reason, I believe that Microsoft must have stronger regulations set to keep it in line. I do not like it, but Microsoft controls ninety percent of the worlds desktops. Without stronger regulations than those proposed, Microsoft will still be free to stifle competition by using this power base, and cause a long period of declining technical accomplishment.

Microsoft does not invent anymore. It simply refines the labour of others, markets it as Microsoft's own, and undercuts the true pioneers of whatever field it chooses to enter.

This would not be so horrible, if Microsoft were just going to let others live and die by the process of natural selection present in all business dealings, but the fact that they purposefully try to murder competition (i.e. Netscape, WordPerfect, OS/2, RealPlayer), and leave consumers with no choice but to use Microsoft products, makes it abundantly clear to me that the government must step in and level the playing field.

For that reason, I believe that Microsoft should be forced in perpetuity to release to any one who wants it, information pertaining to file formats, protocols, or any API's it has, without any charge, and without any contractual obligations against using such information.

Microsoft has taken care of killing off companies that would have given us choice in the matter of which tool to use for which job. By doing so, I believe they have taken on the responsibility of assuring us, that any tools that we need will be able to seamlessly operate in the environment they have now created, without the need to buy into using Microsofts tools.

From: Jon Yarden  
To: Microsoft ATR  
Date: 1/23/02 2:14pm  
Subject: Microsoft Settlement

I OPPOSE the Microsoft settlement on the following grounds:

1. Microsoft has a long history of UNDERMINING COMPETITION by either "buying up" and shelving competing products, or by threats of restriction of Windows licenses to PC manufacturers who use competitive products.

2. Microsoft has poured extensive money into false and misleading lobbying campaigns, including the use of DEAD PEOPLE as signatories in lobbying campaigns.

3. Microsoft willfully and purposefully distorted and misled the Justice Department in regards to the rulings of Judge Jackson in the 1990's and DELAYED final ruling until Netscape Communications and other Internet pioneers were destroyed by Microsofts marketing and bundling tactics.

I personally find the behavior of Microsoft and it's chief officers appalling and DEMAND that my government act in the interests of it's CITIZENS and pushing Microsoft for it's arrogant, willful and purposeful monopolistic behavior. BREAK MICROSOFT UP!

Subject: Microsoft Settlement  
Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
Greetings,

I am absolutely appalled at the continuing attack against Microsoft. It's disturbing that competitors airing false charges against Microsoft receive favorable treatment from the press and from many members of the United States Congress. It's even more disturbing that several states are continuing with their phone lawsuits against Microsoft.

Microsoft has revolutionized the computer business. They have made it possible for the average citizen of this country, as well as multitudes around the world, to readily gain access to computers and the world-wide network that computers offer. I'm recall the days of "DOS" and it's complexities, along with the difficulties of simply wandering around the computer world. Without Microsoft's contributions, the average citizen would never have become so computer literate; nor would we all enjoy the benefits of lower computer hardware and software prices.

It's time to call a halt to the attack on one of America's most successful businesses. There are many more issues of concern for the Department of Justice; and likewise state prosecutors. The on-going attack on Microsoft from private and governmental representatives is not only hurting Microsoft, but also hampering our country's economic recovery!

Hopefully, the U.S. Department of Justice will bring an end to the frivolous Microsoft lawsuits, issue firm punishment for any wrong-doings actually committed by Microsoft, and let the company resume their efforts of bringing wondrous products to the American people and others around the globe.

Subject: Microsoft Settlement  
To Whom it May Concern,

I wish to object to the proposed final settlement in the Microsoft Antitrust case, under the Tunney Act. While there are many points that merit reformation in the proposed final judgment, one that I find particularly odious is the definitions of several terms upon which information sharing will be based. Specifically, defining "Microsoft Middleware" as a handful of existing products rather than a generic category of software leaves open the possibility of simple renaming as an evasive maneuver that would be within the letter but hardly the spirit of the law.

I am extremely glad the DOJ is tackling this issue, but I think the proposed settlement needs much revision before becoming the final word on the matter.

Thank you for your attention and ongoing vigilance.

From: Brandon Pearce  
To: Microsoft ATR  
Date: 1/23/02 2:16pm  
Subject: To whom it may concern,

To whom it may concern,

I am quite concerned with the proposed settlement of the Antitrust case against Microsoft. After reaching the point having an established monopoly engaging in established anti-competitive practices, it seems that the proposed settlement fails to significantly curtail Microsoft's behaviors. It seems that there are many significant technical loopholes that will allow Microsoft to continue many of the practices that have led to the current situation.

For example,

1. The proposed settlement fails to require Microsoft to provide advance notice regarding technical information, while requiring middleware vendors to meet "reasonable technical requirements" seven months before new releases of Windows. How are the middleware vendors supposed to meet these requirements?

2. Many APIs would not be properly documented, as they would not meet the overly narrow definition of API in the proposed settlement.

3. The restrictions of use of the information of the APIs create unacceptable burden on ISVs developing for multiple operating systems.

4. The formats of Microsoft Office documents remain undocumented—this is probably one of the single largest barrier to entry for a competing operating systems and for Office competitors.

The list of problems with this settlement are extensive, and disturbing. If changes are not made to this settlement, it does not seem that there will be a significant change in the behavior of Microsoft.

Thank you for your time,  
Brandon Pearce

From: Jimmy Rimmer  
To: Microsoft ATR  
Date: 1/23/02 2:16pm  
Subject: Microsoft Settlement

To whom it may concern:

The settlement offer is awful.

Microsoft has built a massive Great Wall of Control around the software industry, and they guard the portcullis. To all who would pass through, these bandits put forth the following edict: No Innovation Shall Pass That Is Not Microsoft's. And all who pass through must pay a fee to the gang who runs it. The settlement offer maintains this Great Wall of Control. The settlement offer ensures that Microsoft alone decides what technology the people will be allowed to use. The settlement offer ensures that the software industry in America is not free.

The leader of the people of the land made a stand against the bandits, and defeated it—yet rather than destroy the Great Wall of Control, assuring freedom and prosperity for his citizens, will he now offer a truce to these bandits? These thieves? These self-appointed censors of ideas? More is at stake here than the jobs of American citizens. America's ability to compete with the rest of the world in software is at stake; because if we do not allow our own citizens to innovate, some other country will. And such steps are clearly beginning in Europe and Japan.

This settlement harms industry. This settlement harms individuals. This settlement harms America. We have already lost so many good ideas due to the Microsoft Bandits; how many more can we afford to lose?

From: Bear Lehenbauer  
To: Microsoft ATR  
Date: 1/23/02 2:16pm  
Subject: Microsoft Settlement

MS practices seek to hurt the company I currently work for. From sending out marketing materials to our clients that contain both false and "misleading" statements, to coding MS products to stop working with our products (DR-DOS, the NetWare Client, to name two), Microsoft attempts to crush us through devious means.

Now that MS has been found to have acquired and misused "Monopoly Power", shouldn't they suffer the penalty under law that other monopolies have been subject to? With the current settlement, we're essentially patting Microsoft on the back and "forcing" them to expand their market share in the educational arena. The settlement is weak. It's almost conspicuously set in their favor. The settlement must reduce them somehow from continuing as a monopoly.

Thanks,  
Bear Lehenbauer

From: Patrick Bowman  
To: Microsoft ATR  
Date: 1/23/02 2:16pm  
Subject: Microsoft Settlement

I am opposed to the proposed settlement for the Microsoft anti-trust case. It is not punishment, but merely a requirement that the company halt doing what it has been doing in the past. I have little doubt that, if an opportunity presents itself, Microsoft will find a loophole that allows it to continue with actions that are harmful to consumers, against the spirit of the settlement and anti-trust law, but sufficiently close to the letter of this settlement that it will be able, once again, to spend years in court while it "cuts off the air supply" to yet another market. It ultimately doesn't change anything about the marketplace and will not help consumers.

Thank you,  
Patrick A. Bowman

From: Formanek, Chris

To: Microsoft ATR  
Date: 1/23/02 2:17pm  
Subject: microsoft settlement

Why should the public like this settlement? It does not change a single thing about how Microsoft will run their business and the consumers will be the ones to pay the price. Every time we have to go and spend \$200—\$250 for a OS that is full of bugs and problems because there is no choice of OS's for us, we lose.

Here is a perfect example of why this settlement needs to be stiffer. I checked out the price for windows 98 and after over 2 yr. on the market it is still the same price as when it came out. Why is that, who does MS have to worry about concerning pricing. No one. They have bled every company out that could or would compete with them for years, it is time too stop this and allow for other company's to do their own thing and provide the consumers a choice in products at a fair price.

Chris Formanek

From: Peter Szulik  
To: Microsoft ATR  
Date: 1/23/02 2:16pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Peter L Szulik

From: Michael S. Tashbook  
To: Microsoft ATR  
Date: 1/23/02 2:17pm  
Subject: Microsoft Settlement

To whom it may concern:

This letter is in response to the proposed settlement in the Microsoft antitrust case. Please add this message to the collection of comments on this settlement, as covered under the Tunney Act.

As a citizen of the United States and a computer scientist (I am currently pursuing my doctorate at the University of Virginia), I strongly object to the proposed sanctions on Microsoft for its anticompetitive behaviors. They do not go nearly far enough in punishing Microsoft for its actions, and they completely ignore one of the main ways in which Microsoft used its power as an operating system vendor to unfairly gain an advantage in the application market. Even more disturbing is the fact that these proposed remedies have opened a significant loophole that Microsoft is already preparing to exploit to the fullest. To wit, section III(J) of the proposed settlement states, in part, that: "No provision of this Final Judgment shall:

1. Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or (b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction." In other words, Microsoft has no obligation to release their APIs to third parties. To a large extent, Microsoft was able to obtain its current anticompetitive position in the marketplace as a result of this behavior (keeping APIs secret). It should be obvious that Microsoft's in-house application developers had a significant advantage over third-party developers, due in no small part to the fact that the former had access to, and employed, undocumented API calls. If I have information that you do not, it should come as no surprise that my software will outperform yours. Requiring Microsoft to release all of its APIs to the developer community would provide everyone with equal footing, and would be a step towards correcting the current competitive imbalance.

The section quoted above should also be of concern in light of the recently-publicized memo from Bill Gates to the employees of Microsoft. In his memo, Mr. Gates stated that Microsoft would begin to place a much higher priority on security measures in their products. This is a laudable goal (especially after the continuing saga of worms and

viruses propagated by Microsoft's Outlook mail client), but it also provides an easy escape hatch for Microsoft. If Microsoft declares that the security of all of its code would be harmed by publishing API documentation (which is not inconceivable), then, under section III(J), they may keep all of their API documentation to themselves, perpetuating the circumstances (undocumented APIs) that produced the current situation.

The proposed settlement does not go far enough; in particular, it allows Microsoft to continue their monopolistic, anti-competitive behavior. For these reasons, I strongly object to the proposed settlement.

Sincerely,  
Michael S. Tashbook

From: peter allen  
To: Microsoft ATR  
Date: 1/23/02 2:15pm  
Subject: Microsoft Settlement

I oppose any settlement which is not structured so that all developers will have equal access to the underlying system. Splitting Microsoft in to two parts is a minimal way to create a situation in which the interface to the operating system will be consistently available to all.

Peter Allen

**MTC-00017848**

From: Jay A. St. Pierre  
To: Microsoft ATR  
Date: 1/23/02 2:17pm  
Subject: Microsoft Settlement

I would like to express my opinion that the proposed settlement does nothing to either punish Microsoft for their transgressions, nor prevent them from doing so again.

The fundamental problem with Microsoft is that they sell the dominant desktop operating system AND the applications that run on top of it. The only way to create a even playing field for competitors is to expose the interface between the applications and the operating system. This would truly allow for competition among applications AND among operating systems, as competitors could create either applications or operating systems that met the published standard.

In any event, just telling Microsoft that they were bad and they must not do it again is in no way going to either punish Microsoft, nor prevent a recurrence of their behavior.

-Jay St. Pierre

From: namebase@satx.rr.com@inetgw  
 To: Microsoft ATR  
 Date: 1/23/02 2:17pm  
 Subject: Microsoft Settlement

To Whom It May Concern:

I recommend the wholesale rejection of the proposed terms of settlement, and the imposition of a structural remedy. I've been using Microsoft products since 1982 in various nonprofit, public-interest, computer-related projects. My experience is that Microsoft completely ignored the public interest with respect to their versions of DOS. With the advent of Windows, Microsoft has worked with renewed energy against the public interest, in favor of maximizing its private profit.

With DOS, through version 3.3 as late as 1990, Microsoft failed to include adequate hard-disk partitioning software, failed to include memory-optimization software, and failed to include full-screen navigation software. Third parties provided this software, which ran on top of DOS. Microsoft soon realized that third-party software was able to provide a better computing experience. Rather than compete with a better product, Microsoft began moving in the direction of disallowing such software. A case in point was the DR DOS situation.

Then with the advent of Windows, Microsoft began offering competing versions of all popular desktop applications. These included spread sheets, word processors, accounting programs, and database programs. Windows was much more exclusionary in terms of the ability of third-party software houses to compete with Microsoft products. Microsoft essentially controlled the interface (the API, or Application Programming Interface) to Windows, and could use this as a club to insure that competing products were inferior, or even nearly impossible to develop.

The Internet was first recognized by Microsoft as a significant development only in 1995. Microsoft then moved in on Netscape with their own knock-off browser, in order to insure that Netscape would be unable to evolve their own APIs for the Internet. According to my logs, Netscape now has about ten percent of the browser market, while Microsoft has 85 percent. It was the other way around just about four or five years ago. Microsoft has proven again and again that they have nothing but contempt for the public interest. A structural remedy is the only remedy that will address this attitude at the level that it needs to be addressed.

From: Nicholas Robbins  
 To: Microsoft ATR  
 Date: 1/23/02 2:20pm  
 Subject: Microsoft Settlement

I feel that the settlement against Microsoft is horrendously flawed. It does not really solve anything, it only allows Microsoft to continue with unlawful practices. Everyone is hurt by a Monopoly, take me, for instance. I don't like to use Windows, I down right despise it. I still have it installed. I have to. Nothing is released on my operating system of choice. I can do almost everything I need to, but there are those few applications that I cannot use, after all, why would someone release a niche application for an OS with only %2 desktop share? So, here I am, booting into Windows for my one application, that was \$300 not very well spent. Although it does allow me to remember what a crashing computer looks like. So now the real problem. I utterly fail to understand how our legal system can allow this to occur. I was brought up believing that our legal system is the greatest in the world, how no other system is as just as the mighty U.S.. I personally don't care if the trial takes another 3 years, so long as the right thing is done.

From: Nitin Borwankar  
 To: Microsoft ATR  
 Date: 1/23/02 2:19pm  
 Subject: Microsoft Settlement is bad for competition in marketplace  
 To USDOJ,

I sincerely feel that the proposed settlement with Microsoft is not good for long term competition in the software marketplace as it a) does not effectively address past anti-competitive behavior in its proposed form, essentially allowing it to continue b) additionally promotes Microsoft market expansion in segments that currently have effective competition i.e. the education segment essentially further promoting Microsoft dominance in the marketplace.

Any remedy for criminal behavior needs also to address return of the profits due to criminal activity. While it will be difficult to calculate this amount accurately, OS monopoly leverages all of Microsofts profits so a substantial fraction of current Microsoft cash reserves e.g. 10-20 billion should not be considered excessive.

Taxes levied on cigarettes are used to promote anti-smoking advertisements. Similarly this money should go to directly strengthen market influence of competitive forces via such means as a) Informational advertisement about the negative effects of Microsoft's monopolistic behavior b) Strong support of Open Source efforts by direct grants to such projects as a. The worldwide

Linux community b. The Apache foundation c. Project JXTA d. The Wine project e) Promotion of alternative Office suites such as Hancorn Office and Star Office d) Grants to overseas organizations that promote the use of computers in education, specifically to enable the use of Linux in schools, colleges and universities in the Third World.

Subject: Microsoft Settlement

You present settlement is a joke. If this is creating an even playing field, then I am alien from Mars.

There is no competition. Microsoft dictates whatever price they want to sell their

operating systems for. The upgrades are continually overpriced and usually create more problems than they solve. If OEM's do anything that displeases Microsoft, they are threatened with some strong arm tactics. How is this possible? No competition, no threat! If others had access to secret or poorly documented Win32 API's, others could port these API's to other operating systems enabling these systems to execute Windows programs. Thus, one would not need Windows to operate a Windows programs and this would give others an opportunity to check out and use possibly a better operating system. Show you are an American and want good honest competition. Don't accept the settlement as it is right now.

Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530

Dear Mr. Ashcroft:

I am writing you today to express my opinion in regards to the Microsoft settlement issue. I feel the settlement reached in November is reasonable, and I strongly favor an end to litigation against Microsoft.

This settlement contains provisions that will make it easier for companies to compete with Microsoft. Microsoft has pledged to share more information with other companies and create more opportunities for them. This settlement will allow Microsoft the opportunity to finally devote 100% of their resources to doing what they do best—designing innovative software, rather than litigation.

I sincerely hope there will be no further action against Microsoft at the federal level. Thank you for your attention to this matter.

Sincerely,

Jack Crawford

From: Melissa Heischberg  
To: Microsoft ATR  
Date: 1/23/02 2:19pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am writing in response to the Proposed Microsoft Settlement, in accordance with the Tunney Act on public commentary. I am strongly opposed to the settlement of the Microsoft Antitrust Trial in its current form. This provisions of this settlement do not adequately restrict Microsoft from future misbehavior, nor does the settlement provide

sufficient penalty for the profit and marketshare that Microsoft has gained in the past by use of the anti-competitive practices for which they were brought to trial. Specifically, as a software developer myself, I find that the articles concerning middleware development and the release of applicable documentation to middleware developers do not outline what I would consider to be reasonable timetables and restrictions to allow competing middleware developers to create and test software that is designed for compatibility with Microsoft Operating Systems. Also, I am extremely concerned by the apparent lack of penalty being imposed on Microsoft for their past abusive business practices. I strongly feel that this settlement lacks an aspect of justice. While the court's desire to negotiate a settlement is laudable, I feel that the current proposal does disservice to those members of the american public who daily use, or develop for, Microsoft products.

Sincerely,

Melissa M. Heischberg  
Software Developer

From: DC  
To: Microsoft ATR  
Date: 1/23/02 2:19pm  
Subject: Microsoft Settlement

Preface:

The US Constitution makes it very clear that copyrights are not an inherent right, but merely a short term incentive designed to bring information into the public domain after a limited monopoly on copying is granted to the makers of a creative work.

Suggested Punishment:

It should be self evident that Microsoft has violated this trust, and as punishment the government should no longer be required to enforce their copyright holdings on the Windows NT/95,98 operating systems, Internet Explorer, and possibly MS Word.

This would be a very simple, but fair and effective punishment that would be self enforcing, require no oversight, and would provide intense motivation for this to never happen again.

Sincerely,

David Christy

Subject: Microsoft Settlement

I don't have much time in between classes and trying to keep up with life in general, but this is basically in line with my beliefs about the Microsoft settlement.

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

**MTC-00017866**

From: Jason E Seeger  
To: Microsoft ATR  
Date: 1/23/02 2:22pm

Subject: Microsoft Settlement

To Whom It May Concern:

Having been a user of micro-computers for well over 12 years, and having been acquainted with many different operating systems, web browsers, and other various software packages, I would officially like to submit my comments on the Microsoft Anti-Trust Settlement. As excerpted from the Court of Appeals Ruling "a remedies decree in an antitrust case must seek to "unfetter a market from anti competitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99)."

Many in the public realm, including the Attorney General seem to agree that any settlement must seek to remedy the anti-competitive situation which has gone on for far too long with the Microsoft Corporation. I happen to fully agree with this statement, yet I have some reservations about the Proposed Final Judgement which has been presented the public for comment.

First, much of the wording (incl. definitions and provisions) in the Proposed Final Judgement is misleading to consumers, and in certain cases is overly narrow. This provides many loopholes by which Microsoft can, and will work around in order to maintain and strengthen further their monopoly. Secondly, the PFJ does not attempt to remedy the anti-competitive licence terms which Microsoft currently includes with its software. By not providing an restrictions on anti-competitive licence terms which prohibit the entry of open-source applications for Windows, and which do not allowed Windows applications to be run on open-source operating systems. Third, many of the requirements of the PFJ will not restore competition to the included software markets. This issue deals with the requirements of releasing the APIs to other vendors so that competing products could not enter the market in time to compete with Microsoft's counterparts (i.e. Internet Explorer, Office, Media Player, etc.). Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

For the reasons outlined above, I strongly believe that new, stronger, and yes....even HARSH language needs to be drafted to truly make this PFJ meet the requirements outlined by the Court of Appeals. Many of the states involved in the settlement have proposed some more harsh penalties, and many of them are not only viable, but desirable in order to return competition to the market. It

is my sincere hope that Microsoft will not be allowed to wield its largesse and power over the DOJ. We need to send a strong message to Microsoft to let them know, that we as consumers and business do not agree with their practices, and that we feel they should be punished severely for it.

Most Sincerely,  
Jason E Seeger

The proposed settlement between Microsoft and the DOJ is a very bad idea. The lack of penalty for past misdeeds by Microsoft is going to make it look like they are getting away without paying a price. In the eyes of the common person, this just looks like the ability of a big corporation being able to buy its way out of trouble with the help of money and political connections. Please do not let the common person lose faith in the justice system.

Thank you,

From: Ness, Zoltan  
 To: Microsoft ATR  
 Date: 1/23/02 2:22pm  
 Subject: Microsoft Settlement

I am opposed to the proposed Microsoft Settlement. It is not a true penalty for Microsoft. Giving away software that costs Microsoft little beyond distribution, yet is counted at full price, reduces the penalty to literally a penny or less per dollar. Each copy costs less than one dollar to distribute, but claimed worth is hundreds of dollars for some of the software.

It also serves to further Microsoft's monopoly into an industry (education) which has traditionally had a healthy, competitive mix of personal computer alternatives (Apple, for example).

Rather than a having to live with the legal consequences of it's anticompetitive behavior, Microsoft would be given a less than token penalty AND given a DOJ mandated reason to extend it's monopoly into one of the few remaining strongholds of desktop OS competition.

Thank you for your consideration,  
 Zoltan Ness

 Subject: Microsoft Settlement

I have given this a lot of thought and I feel that your proposed settlement does NOT go far enough to protect citizens from monopoly abuse by Microsoft.

It is common saying among Independent Software Vendors that developing for the Microsoft market is like "picking up dimes in front of a steamroller"—you can make some money for a while, but if you try to pick up too many coins, Microsoft will flatten you.

I am VP of product development of a software product company that is a current Microsoft Partner (so please keep my identity confidential if possible), I was once a Microsoft Certified Solutions Developer, and I am fairly seasoned in the software dev business having written and sold commercial business software applications for over 18 years for Mainframe, DOS, Mac and all flavors of Windows—3x, 9x, NT, 2000, XP. I sat in a meeting in Redmond in 1998 where Bill Gates stated he believed it was his goal for Microsoft to someday own virtually the entire software marketplace in the US, vertically and horizontally. At that point every other software vendor would be just a custom integrator of Microsoft licensed components. (I signed a Non-disclosure before the meeting but I assume that talking to the DOJ concerning possible crimes is a protected exception).

I dont think you will be able to successfully monitor and enforce on-going compliance by Microsoft, nor do I favor splitting off the Operating Systems group in to a separate company.

I propose that you break up Microsoft into multiple fully competing "Babysoft" companies who start out with the all current Microsoft products. Consumers would instantly have something they dont have

now— choice ( as well as compatibility with their existing apps). Each "Babysoft" would then need to work hard to innovate and compete with the other "Babysofts" on price and features in order to prosper.

Thanks for your time.  
 Jim Martin  
 President, Inquisite.

Strong remedies are required to mitigate the strong findings of fault upheld by the courts.

Simple remedies are likely to appear as a political buyout. Enough damage has been set upon users though corporate neglect. The security problems resulting from the products forced upon users by unfair licensing agreements is world laughable.

Many years ago AT&T and IBM were required to submit to strong remedies. No less remedy should be prescribed in this settlement.

Under the Tunney Act, I want to add my voice to those who affirm that the settlement in the Microsoft case is woefully inadequate. The settlement will not create an environment that will prevent Microsoft from using their monopoly to stifle competition in the future, as they clearly have in the past. Unless the Microsoft applications are constrained to work under the same conditions as non-Microsoft apps (that is, by only using publicly documented APIs to the Windows (NT, XP, CE, and future OSs), Microsoft will have an unfair advantage. The most maintainable solution would be to break MS up into two companies, an OS company and an Apps company—that would ensure a level playing field.

If that is not going to be the solution, it will take on-going Federal vigilance to make sure Microsoft is not succumbing to the temptation to use the inherent advantages of making both the roads (OS) and most of the vehicles (Apps) that use the roads to its advantage, and prevent other companies from

building vehicles that work as well or better than MS's.

Sincerely,  
 Matt Morse

From: Wes Henry  
 To: Microsoft ATR  
 Date: 1/23/02 2:23pm  
 Subject: Microsoft Settlement

Hello:

I have read about the proposed settlement in the Microsoft anti-trust case, and I am not in favor of it in its current state. Please consider this a vote against the current settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors.

I do not feel the proposed settlement adequately prevents Microsoft from utilizing its monopoly status in unfair and illegal ways in the future, nor does it adequately address the gains Microsoft has received by abusing its monopoly status in the past.

Without appropriate penalties for its previous behavior, Microsoft will not be discouraged from acting similarly in the future. Likewise, without appropriate measures taken to prevent continuing

monopolistic behavior, Microsoft will not be prevented from acting similarly in the future.

So, in effect, nothing changes, and the proposed settlement amounts to nothing more than a slap on the wrist to Microsoft. The damages Microsoft has caused to the software industry, the computer industry as a whole, and to everyone and every business who uses computers in some fashion in their daily activities is incalculable.

For example: Microsoft Windows and Microsoft Outlook are the two primary weaknesses in the spread of computer viruses. It is estimated that costs of recovering from and dealing with two viruses: Nimda and Code Red just in the last year were nearly \$1 billion.

That is a very significant burden to the US and even the world economy. And represents only two of the tens of thousands of viruses that affect Microsoft Windows and Microsoft Outlook.

But it doesn't even begin to estimate the losses caused by the monopolistic destruction or assimilation of companies like Netscape and countless others who developed competitive software to Microsoft products. Innovation is what fuels the US technology marketplace and Microsoft acts counter to innovation in the marketplace. In fact Microsoft has never created an innovative product in its entire existence. Instead it simply copies the products and/or features of its competitors and then uses its monopoly powers to ram its products down the throats of consumers and drive its competition out of the marketplace.

Choice is the power consumers must have in order to keep innovation alive. Without choice, without the freedom to choose the products they want, consumers are trapped in the Microsoft monopoly.

I ask you to abandon the currently proposed settlement and think about what it is that would return the marketplace to a fair and competitive state now, and in the future.

Specifically I would like to recommend:

(1) Microsoft be split into (at least) three separate and completely independent corporations: Operating Systems / Applications / Other Products

(2) Microsoft be forced to open up the COMPLETE source code to all windows versions, with a process for review such that industry experts can inform the DOJ when they find omissions or errors in the source code released by Microsoft and have these issues resolved by the DOJ through forced compliance and additional fines for each infraction such as errors or omissions in the source code released.

(3) Microsoft be forced to release the specifications for all file formats used by Microsoft products and be prevented from using file formats which are not openly documented for a period of at least 10 years (or a period corresponding to the time Microsoft has been a monopoly, whichever is longer.)

(4) Individual policy makers within the company should be held accountable for further monopolistic actions. Hiding behind a corporate veil makes it easy for the administration to direct Microsoft to further abuse their monopoly. But being held personally responsible for directing the

company or its employees to act against the law would go further than any penalties faced by the corporation as a whole towards curtailing further abuse of the Microsoft monopoly.

A new and more fair settlement also needs to address the damages caused by Microsoft to its competitors and to its customers. Specifically, I would like to recommend:

(1) Severe fines for abuse of its monopoly position

(2) Settlement fines paid to companies like Netscape, Sun, and others who have been unfairly damaged by Microsoft in the past. Microsoft has proven themselves to be abusers of their monopoly position. And they've shown over and over again their eagerness to act unfairly or unethically in an effort to strengthen their monopoly even further. Only the strongest of actions can even have a hope of restoring the marketplace to a fair and competitive environment. Only the strongest of actions can even start to undo the wrongs caused by the monopolistic abuses of Microsoft.

Sincerely,  
Weston Henry

From: Joe Fish  
To: Microsoft ATR  
Date: 1/23/02 2:23pm  
Subject: Microsoft Settlement

Dear Sir / Madam:

Regarding the subject settlement, please be advised that there a large number of voting citizens who consider the settlement as currently proposed to be wholly unpalatable, and that, if it is implemented, we plan to express our displeasure with our votes in the rapidly approaching congressional elections.

As one employed in the IT field, I have seen the way in which the unlawful, anti-competitive nature of Microsoft's business practices have harmed nearly everyone in the community in some way, from individual consumers of electronics products, up to the behemoth-sized companies that directly compete with Microsoft for some markets (Sun, IBM, AOL-Time Warner, etc.) Unfortunately, any settlement you propose comes too late to the party. Individuals have lost jobs, products have disappeared from consumer's lists of choices while the lawyers in Washington have wrangled. As this is unquestionably the case, you at the DOJ have the responsibility to at least ATTEMPT to ensure that Microsoft will not be allowed to use the same unlawful business practices on anyone they deem unfit to make profits in the IT business.

The settlement as currently structured does, in my view, little to nothing to curtail Microsoft's previous behavior, except possibly as it relates to competing Internet Browsing technologies, of which there are now none, thanks to Microsoft. While I feel that the IDEA of a 3-person panel dedicated to reviewing Microsoft actions is a good one, they need a much broader charter of powers and clearer definition of their ability to implement corrective measures than I was able to discern from the proposed settlement

agreement. In my view, the terms, details, and especially EXCEPTIONS listed in the agreement appear to have been drafted by Microsoft's bevy of lawyers, working closely in concert with Waggoner-Edstrom and the host of other various and sundry marketeers, PR flacks, and other unscrupulous characters charged with ensuring Microsoft's continued march towards domination of all consumer spending decisions in the developed world.

Please consider the revision of this proposed agreement to be more in line with what many industry insiders consider to be a fairer solution, as detailed on this page.

Thank you for your time and attention.

From: twitchy wonderpig  
To: Microsoft ATR  
Date: 1/23/02 2:24pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I believe the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement based solely on settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Eric Byrd  
Edmonds, WA

From: Leo Hejza  
 To: Microsoft ATR  
 Date: 1/23/02 2:24pm  
 Subject: Microsoft Settlement

The settlement currently proposed in the Microsoft case does not restore competition in the computer industry, will not prevent Microsoft from continuing its illegal practices, and is not in the public interest. It should be rejected and replaced with a plan that will accomplish these objectives.

One such plan is the following: divide Microsoft into six companies. Three of the companies have full rights to Microsoft's operating system intellectual property and three of the companies have full rights to Microsoft's application intellectual property. The three operating system companies will have no choice but to compete with each other on price, capabilities, and innovation; similarly, the three application companies will have to compete. None will have a monopoly in their respective areas.

This plan is no more radical than the ATT breakup and such a plan is the only solution to the current situation with Microsoft.

 Subject: Microsoft Settlement

This is a Tunney Act response to the proposed Microsoft settlement: The proposed settlement apparently will extend Microsoft's monopoly since as part of the settlement they will have the opportunity to place their products in schools. If fountain pen dealers had a lawful opportunity to place their products in schools for the use of students and no other commercial entity had a similar opportunity, we would find that nearly all school children would continue to use fountain pens in adulthood, and pencil and ball-point pen manufacturers and sellers would suffer. It will be nearly impossible under this settlement for students to gain knowledge of operating systems and software other than that produced by Microsoft. Few students will bring their computers running other systems into class.

Microsoft has been judged to be a monopoly but the proposed settlement only aggravates and extends their monopoly position. A much better settlement will require that Microsoft give cash payments, not products, to schools so that each school can purchase a variety of hardware and software. This way the students will be exposed to other operating systems such as UNIX, Linux, MacOS, and the applications

that run on those systems. In addition this more open settlement will allow schools the freedom to use settlement funds to try other systems which may come along in the next few years.

I will be happy to answer any questions about this response. Please contact me by email.

Very truly yours,

Gentlemen,

Having been in the computer field for over 30 years, I have watched with interest as Microsoft has gained their current market position. Never have I seen a more classic case of abuse of monopoly position. I spend a good deal of my time helping clients clean up messes left by Microsoft applications that break or ignore standards set by the industry. After several versions of released code, one can only draw the conclusion that it is their intent to cause this. It can't be explained away by ignorance or stupidity on their part. Given that this arrogance is part of their corporate culture, assigning a few "code cops" is going to be as effective as having a handful of auditors to look over returns at the IRS.

They have already proven they can't be trusted—what makes you think keeping them intact will improve their policies? If you believe this is speculation, take the acid test—try and order a PC without Microsoft products on it from any major manufacturer. It isn't possible. And under your new guidelines, nothing will change.

If you haven't noticed yet, do you know how Microsoft says "Screw You!"?

 Subject: Microsoft Settlement

I would like to express my dissatisfaction with the Proposed Final Judgement (PJF) currently before your division vis-a-vis Microsoft(MS). I don't know if it is relevant, but I want to give a brief essay on why this would be unjust. Unlike some others you will be hearing from, I am no MS-hater. They usually produce software of equal or superior quality to their competitors, and for that they should be commended. More than that, if they do produce a superior products, I think that they should dominate the market. That is, as long as this superiority is not achieved by secret knowledge and manipulation of the underlying infrastructure. While monopolies such as MS enjoys with it's various Windows OS's can sometimes be (and in this case is) beneficial, they should be treated as such. In order to allow for the possibility of innovation in non-OS software, MS must be compelled to reveal—all—of the particulars on how MS OS's work. Otherwise, it is virtually impossible for MS competitors to compete, simply because MS not only holds all the cards, but is also the one with the card printing press.

This problem would have been solved if Judge Jackson's breakup had occurred. Since there will be no breakup, I dearly hope that the Justice Department will come to some sort of agreement that restrains MS's behavior, and also provides real penalties for non-conformance.

**MTC-00017889**

From: Ross Rannells  
 To: Microsoft ATR  
 Date: 1/23/02 2:25pm  
 Subject: Microsoft Settlement

Over the past 12 years Microsoft has done everything it could both legally and illegally to control the desktop computer market. They have stolen software from companies, used their monopolist position to put companies out of business and eliminated competitive software. They have used the courts to put companies out of business that have won court cases against them.

They have significantly stifled development of new software and hardware. They have even managed to bankrupt a company by declaring they were developing a competitive product that they never released, which is why there is no longer a light pen interface in DOS/Windows even though they were on the market in the early 1990.

The only software product to increase over time in the entire computer industry are those produced by Microsoft. Every other company, whether they produce hardware or software, managed to increase performance while dropping prices. Today Windows takes longer to boot, is less stable and the root cause for every major computer virus outbreak since 1990. Microsoft complete disregard for their clients and computer security has lead to a state of complete

paranoia over computer system security. Microsoft has managed to ignore the cries for more secure and more stable Operating Systems and system level software due to their monopolist position in the market. Currently the US leads the world in computer technology, that will not continue if Microsoft is allowed to keep in its monopolist position in the computer industry. The US has already fallen behind in wireless web and cell phone technology due to Microsoft's influence over new development environments. In many European and Asian countries the development of Linux and other OS's is starting. Sooner or later someone will hit on the right combination of price, features and stability. Then the US will be toped off the top position in the computer industry.

Microsoft must be dealt with now. They need severe penalties and limitation put on their ability to control the computer market. Forcing them to divest of their hardware production division, their game console division, their communications holding, and they putting a wall between the OS and other software development divisions will go along way to reinvigorating the computer industry in the United States. Additionally, making them publish the prices the OEM's pay for the OS and other software as well as eliminating the restrictions on OEM distributing other OSes would also be needed. Over the past couple years we've seen Be, NeXT and IBM eliminated from the desktop OS market even though they had superior products and were less expensive. Microsoft's exclusive agreements with OEM that limited the OEM capability to sell other systems made it impossible for the other companies to have a chance.

Microsoft was found guilty of monopolist practices and that conviction was unanimously upheld by an appeals court. Why are you allowing Microsoft to dictate the terms of the settlement. Their powers need to be limited and their abuses eliminated. If not the US will no longer be able to control the computer industry.

From: Shawn Gatchell  
To: Microsoft ATR  
Date: 1/23/02 2:25pm  
Subject: Microsoft Settlement

To whom it may concern:  
I am opposed to the settlement that the USDOJ and Microsoft have arranged. I do not believe that it prevents Microsoft from continuing to exhibit the behaviors that have supported its monopoly thus far, including bundling with its OS software that can be clearly defined as belonging to another market (Internet browsing, instant messaging, and audio/video players are among these applications). I advocate a provision that at least allows competitors' applications to receive equal visibility wherever Microsoft tries to extend its OS into other markets. It is the responsibility of a monopolist in one market to acknowledge market boundaries, rather than blur them. I am a software developer for a small company, and I am afraid of a time in the future when Microsoft bundles with their OS software for building Internet portals. I even refuse to disclose the identity of my employer in this letter for fear that Microsoft's aggressive retaliatory tactics may affect our sales and my future.

It is also inherently flawed that Microsoft's partners must pursue legal action if Microsoft discontinues a partner's contract due to the partner giving a Microsoft competitor presence on the OS that Microsoft considers undesirable. The reality is that it costs money to pursue legal action, which has a stifling effect on such action when Microsoft has such deep pockets. I would be mollified by a contract where the loser in such a dispute is required to pay all legal fees. Otherwise, litigious remedies to such disputes are shown to be inherently and unjustly favorable to the party with more money. I would also like the remedy to include language that advises injunctive relief for future suspected behaviors in order to provide timely remedies for the aggrieved.

The area of the settlement that involves monetary compensation is anticompetitive itself and laughable. The idea that Microsoft gets a mandate to distribute its own software to schools, where it has heretofore had to deal with fair competition, is ironic. If removed from the context of an antitrust settlement, it looks like an initiative from Microsoft to expand into new markets, giving away software to influence the next generation of computer users. It comes at little cost to Microsoft, as they are free to value their own software. It also does nothing to compensate those who have been damaged by Microsoft's anticompetitive action. I would rather see Microsoft continuously paying hard cash for a larger oversight committee for the extent of their lifetime as a monopoly. This remedy would more accurately influence Microsoft's behavior than a one-time charity handout.

In closing, I am shocked at the way Microsoft's unyielding arbitrators have consistently stonewalled attempts at generating fair settlement. I feel that they have taken advantage of the USDOJ's and the

US legal system's faith in the arbitration process. A judge should not be afraid to reject this settlement and impose remedies that precisely target both the monopolistic behaviors of which Microsoft was found guilty and the processes in the legal system that have been inefficient in checking these behaviors.

Sincerely,  
Shawn Gatchell

Subject: Microsoft trial Tunney Act comment

I strongly oppose the current MS/DOJ settlement. I'm sure you've received plenty of standard replies, so I'll leave out the things that I'm sure many others have already said. However, here is a suggestion you probably haven't heard yet: "Smallest useful unit"

Microsoft must divide Windows into a set of "smallest useful components" (browser, kernel, shell, media player, etc), and attach a \*single\* price to each one. Any entity (businesses, OEMs, consumers, resellers) must be allowed to purchase any number of licenses for any combination of these components, paying only for the components licensed. Licenses must be transferrable and resellable. Interfaces between components must be fully and publicly documented.

The Windows source code should be made available under NDA to a few leading computer science universities (I suggest Carnegie Mellon, MIT, Berkeley, CalTech, Stanford, and UW), whose expert faculty will be responsible for determining if Microsoft has artificially made components interdependent, and if the inter-component interfaces are sufficiently documented.

Thank you for your time.

Subject: Microsoft Settlement

Dear Department of Justice:

My Word! Please settle this case soon. This is getting ridiculous. Microsoft has expressed sincere cooperation in trying to get this matter resolved. Why not accept a reasonable proposal. In today's Wall Street Journal (1-23-02), it was implied that these continuous litigation cases is just an attempt to keep Microsoft tied up in court and prevent them from innovating. I have to agree. These other companies just can't stand the fact that Microsoft has out-innovated them. It is in the public's best interest to get this thing over with. Continued litigation and compromises is just going to make the computer a more difficult and expensive product to use.

Thank you for hearing me.

Sincerely,  
Dr. Jim Rodgers

 22 Jan, 2002

Dear Ms. Hesse,

I would like to state several of my objections to the Microsoft Anti-trust settlement as it stands as of 01/22/2002.

1. The settlement would not restrict the core way in which Microsoft unlawfully maintained its Windows operating system (OS) monopoly, namely bundling and tying competing platform software (known as "middleware") like Web browsers and Java, to the OS.

2. The settlement has no provisions to create competition in the OS market that Microsoft unlawfully monopolized, particularly through its illegal contracts with computer manufacturers.

3. The settlement has no provisions directed to new markets where Microsoft is using the same bundling and restrictive practices to preserve and extend its Windows monopoly.

4. The settlement makes no allowances for non-profit software developers. As a researcher with the Air Force Research Laboratory's Maui High Performance Computing Center, I can tell you that the majority of innovation in the software field today springs from non-profit (ie. open source) development efforts.

No settlement at all is better than a flawed settlement such as the DOJ is currently proposing. At least with no settlement, no one is fooled into thinking that the problems caused by Microsoft's past and current actions are being adequately dealt with.

Sincerely,

Carl M. Holmberg

 Subject: Microsoft Settlement

I encourage the Justice department to reject the current proposed judgement against Microsoft.

One example instance of Microsoft's anticompetitive strategies: As the network administrators for a large network in 1995, we prepared for many machine to upgrade to windows95. This would be beneficial for many reasons, not least of which was technical weaknesses of its predecessor, windows 3.1. Windows95 was not compatible with our existing tcpip stack. Fine, since windows95 came with it's own. But, being in a large environment required automatic assignment of IP addresses, something we had been doing with BOOTP for several years. Windows 95 supported DHCP (BOOTP's successor), but not BOOTP, even though DHCP explicitly provided for BOOTP support in the RFC. Therefore, to avoid moving to completely static IP assignment, a DHCP server must be setup. The only DHCP server available at the time was included in WindowsNT 3.51, which we did not have, being a NetWare shop. NT was therefore purchased, requiring specialized support classes and budgetary consideration. In effect NT was forcibly introduced, and when explanations were demanded as to why two network operation systems were required, the decision was made to move completely to NT, eliminating NetWare.

This experience was the first of several of its kind. I strongly recommend a harsher penalty for Microsoft, preferably requiring the publishing and documentation of its APIs for windows, word/excel/powerpoint/access save file formats, and the establishment of stronger strictures against this kind of behavior.

 Subject: Microsoft Settlement  
 To Whom it May Concern:

As a concerned citizen, PC consumer, and voter I would like to express my disagreement with the proposed settlement in the Microsoft case. The proposed settlement is a slap in the wrist to a monstrous monopolistic empire.

In my opinion Microsoft continues to hold the PC market hostage. Its newest operating system is so intrusive that it should not be made legal to use. It intrudes in the privacy of customers and it monopolizes the use of any type of information acquired by the OS.

The proposed judgement does not guaranties that Microsoft won't continue to maintain its current monopolistic grip of PC operating systems. Thus, the PC sector as well as the consumer suffer due to the lack of market and technological competition. It is very simple. Go to ANY computer store (Fry's, Office Depot, Dell, Compaq, IBM, etc)

What is the operating system they sell?  
 Simple: Microsoft Is it possible for them to install other operating system and sell it?:  
 NO. The market is owned by Microsoft.

Please continue litigation of the Microsoft Antitrust Case. Microsoft Corporation can't be allowed to continue as the PC monopoly that continues to be.

From: Derek Bastille  
 To: Microsoft ATR  
 Date: 1/23/02 2:29pm  
 Subject: Microsoft Settlement

To Whom it May Concern,

I am composing this email to express my strong concerns with the proposed Microsoft settlement. Unless Microsoft is reigned in more tightly than proposed in the settlement, they will continue to sacrifice all other aspects of their buisness in their quest for marketshare. This can easily be seen in several areas:

(1) Preannouncements. Whenever a potential competitor announces an upcoming product that could potentially compete with an existing Microsoft product, Microsoft will pre-announce that they have something already in the works, thus squashing the newcomer via the pre-announcement.

(2) Standards hijacking. Time and again, Microsoft has shown an unwillingness to "play nice" and use standards created by industry. Some examples are: Kerberos, Java, HTML, XML, etc. They constantly strive to lock users into proprietary Microsoft product and solutions and often use slightly modified standards to do so.

(3) Hidden APIs. Part of the antitrust ruling was devoted to the fact that Microsoft uses APIs internal to Windows to give other Microsoft projects advantages over the competition. Office is the best known example. However, recent examples of this behavior include: creating special APIs to make data transfers and syncing. easier for

PocketPC systems than for PalmOS systems, built-in APIs for Windows Media Player that disadvantage third-party media players.

In sum, all companies suffer to a certain extent from the "Not-Invented-Here (NIH)" syndrome. However, none of them have taken NIH to the level that Microsoft has where NIH is used as a way to bludgeon any potential competitors. Microsofts corporate culture is one that only believes in a zero-sum game, that is, anything less than 100% market share in every area will do.

I believe that, while Microsoft should not be forced to break up, that they need to do at least be forced to do the following:

- Publish and stabilize all APIs currently in Windows that are used by other internal Microsoft projects (Office, Money, IIS, etc). Further, any changes to these APIs must be documented for future versions of Windows.
- Ensure that all .Net APIs, schemas and protocols are fully documented and freely available.
- Reincorporate a fully functional, real java VM into Windows. Apple has done this with MacOSX, Linux has this, IBM's AIX and HP's Unix all have this. Microsoft refuses to do this solely to avoid competition with its own .Net and C# initiatives (another case of NIH running amok).

Thank you for your consideration of this letter and of my opinions.

Under the Tunney Act, I wish to comment on the Microsofts settlement's inadequacy in improving the competitive environment of the software industry. I am sure you have recieved many such comments, my main concern is with the lack of consideration for open source projects whose goal is to interoperate with the MS-Windows platform. Specifically the stipulation in the settlement (Section J.2.c) Microsoft does not need to make ANY API available to groups that fail to meet "reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business." This basically allows Microsoft to refuse to share ANY information with open source projects, as these projects are usually undertaken on a not-for-profit basis. I suggest that the language be added to the above section specifically prohibiting Microsoft from discriminating against not-for-profit open-source projects.

From: Brian Teague  
To: Microsoft ATR  
Date: 1/23/02 2:30pm  
Subject: Microsoft Settlement  
Dear Department of Justice Antitrust Division

Upon perusing the proposed final judgement for the Microsoft antitrust trial, I wish to draw your attention to what I consider a grievous omission. The proposed final judgement includes no provision that Microsoft disclose the file formats employed by such applications as the Microsoft Office suite of productivity tools. No doubt through the exclusionary practices for which Microsoft currently stands trial, the Microsoft Office suite has become the defacto standard for creation and transfer of documents in business, industry and education. The inability (or, through much trial and error, imperfect ability) to interoperate with these file formats poses a major liability to corporations such as Corel and AbiSoft who wish to offer competitive products, not to mention open-source projects such as Gnumeric and Klyx.

Even though Office 2000 claims to operate with the industry-standard XML file format, Microsoft has not released the Document Type Definition (DTD) that defines the structure of these documents. Thus, they are still not accessible by non-Microsoft applications. If your intent is truly to lower the barrier-to-entry into the desktop computing market that Microsoft has imposed, I urge you to include a provision that Microsoft disclose its proprietary file formats just as it must disclose its APIs.

From: Aaron Hall  
To: Microsoft ATR  
Date: 1/23/02 2:30pm

Subject: Microsoft Settlement

To whom it may concern:  
As a computer professional who works primarily with personal computers and low-end servers, I have severe reservations about the proposed DOJ settlement with Microsoft.

The defining characteristic of Microsoft's behavior has been that the company is able to structure products and agreements to lock customers in, in a way that they simply would not dare to do (or even be able to), if they did not have the advantage of a virtual monopoly.

For example, Microsoft has recently introduced new licensing schemes for large installations, called "Volume Licensing 6.0" and "Software Assurance". These are, essentially, subscription plans for software. Rather than paying for one license which is good indefinitely, Microsoft seeks to require one to renew the license annually. Estimates I've heard suggest that this would raise the average cost of software 25 to 30 percent, over the time a standard license would generally be in use.

There is a way to recieve discounts, called an "Enterprise Agreement". To recieve discounts, a company must agree not to use any competitive products! In order to make software upgrades affordable in the short term, a company essentially gives up any real method of transitioning away from Microsoft in the long term. This could have a devastating effect on Microsoft's competitors.

This, to me, is what anti-trust codes are supposed to prevent. Microsoft is using its monopoly position to dictate terms to its customers. (The above is just one technique. I'm sure you are hearing of many others.) It is brazenly coercing customers into abandoning any other options. I am very concerned that the current proposed settlement does not impose any real penalty on Microsoft for past and current actions such as this, and doesn't implement more than trivial safeguards against it happening again. Microsoft obviously does not take seriously the current actions against it, to be acting in such a manner as this while settlement proceedings continue.

I believe that Microsoft's monopoly advantage will serve as insulation against even the government's attempts to curb its illegal behavior, unless the DOJ implements restrictions that fundamentally change the way Microsoft does business, at least temporarily. Others can speak to specific methods far better than I.

Without significant change, I fear that Microsoft will continue to be able to force restrictions on individuals and businesses alike, and there will be very little the rest of the market (or their customers) can do to stop them.

Please take this into consideration.  
Sincerely,  
Aaron Hall

Subject: Microsoft Settlement

To whom it may concern,  
After reading the proposed final judgements in United States v. Microsoft, it is my opinion that, given the obvious nature of Microsoft's transgression, the judgement does not do enough to rectify the situation and, if implemented, might even make it worse.

There are ways the judgement could be strengthened:

(1) The definition of "Windows Operating System Product" needs to be more inclusive and far reaching. The language of the current definition could be easily circumvented with mere marketing.

(2) The release of information to ISV's needs to be broader in its statement of the purpose for the disclosure, again to insure that Microsoft does not use nomenclature to exclude information from the provision.

(3) The Prohibition of More Practices Toward OEMs needs to include some statement about computers with a non-Microsoft Operating System without any Windows Operating System Product, or the prohibition leaves anyone not doing business with Microsoft open to predatory practices. The judgement should also take into account Windows compatible operating systems, which it neglects to mention entirely. Many of the definitions are too narrow or use language that could be misleading. In addition, the judgement does not address many of the license terms Microsoft is using, even though those are anticompetitive. There is also no comment about intentional incompatibilities, which Microsoft has repeatedly used to hamper the development of competing technologies.

Even with the suggestions above, the judgement does not seem to do enough to guarantee competition in a market like the one Microsoft has created using predatory practices and I think it needs to be reconsidered.

From: Walter Wood  
To: Microsoft ATR  
Date: 1/23/02 2:31pm  
Subject: Microsoft Settlement

I am opposed to the proposed settlement between Microsoft and the DOJ. My reasons for this are several.

\* The penalty proposed is not really a penalty. It only amounts to a slap on the wrist. The behavior MS has exhibited should bring much stronger sanctions.

\* I believe MS has abused their power to stop innovation and to keep new products from competing companies from successfully coming to market.

\* While the cost of all other computing products has come down, the cost of Windows has actually gone up. For example, I purchased a new computer and Windows 3.11 in 1994. The cost was \$79.95 for the full product (not an upgrade). The cost of the equivalent product, Windows XP Professional Edition is now \$299.95. This is a price increase of 375% in eight years.

\* The percentage of the total cost of a computer that goes toward the operating system (Windows) is much higher now than eight years ago. When I purchased my first new computer in 1994 it cost \$2500 the OS was \$50 (Windows 3.1) or 2% of the total cost. You can now buy a computer for \$800 but the OS now costs \$200 or 25% of the total cost.

\* Microsoft is reported to have \$30+ billion in cash reserves while many other companies

are going under. While this is not a crime, it does indicate that they can do anything they want to anyone including consumers. The only thing that can stop them are criminal or civil penalties. If their products had competition, they would have to lower prices and they would not have this huge cash reserve.

\* Microsoft is now adding repressive features to its programs that will enable them to prevent your using the product in the future that you pay for today. The example here is Product Activation. I recently had to repair an old computer using Windows 95. I was able to reinstall the OS without a problem. With Product Activation, will I be able to do that four or five years from now? Or will MS force you to upgrade to their newest OS by denying Activation to older products? While I agree MS has a right to protect their investment, if I had a choice I would choose a product without this feature. I don't trust them at all!

From: Christy  
To: Microsoft ATR  
Date: 1/23/02 2:15pm  
Subject: Microsoft Settlement

To Whom It May Concern:  
I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: Troy Baer  
To: Microsoft ATR  
Date: 1/23/02 2:33pm  
Subject: Microsoft Settlement

Dear Judge Kollar-Kotelly:

I feel it is my responsibility as an American to object in the strongest possible terms to the proposed antitrust settlement between Microsoft and the U.S. Department of Justice. The proposed settlement does little to punish Microsoft for past wrongdoings or to curb future antitrust violations.

The settlement includes a number of loopholes which Microsoft can exploit to hamper competitors. Probably the worst of these from my perspective is Section III, Subsection J:

J. No provision of this Final Judgment shall:

1. Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of a

particular installation or group of installations of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria; or (b) any API, interface or other information related to any Microsoft product if lawfully directed not to do so by a governmental agency of competent jurisdiction.

2. Prevent Microsoft from conditioning any license of any API, Documentation or Communications Protocol related to anti-piracy systems, anti-virus technologies, license enforcement mechanisms, authentication/authorization security, or third party intellectual property protection mechanisms of any Microsoft product to any person or entity on the requirement that the licensee: (a) has no history of software counterfeiting or piracy or willful violation of intellectual property rights, (b) has a reasonable business need for the API, Documentation or Communications Protocol for a planned or shipping product, (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, (d) agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API or interface, which specifications shall be related to proper operation and integrity of the systems and mechanisms identified in this paragraph.

This is a "get out of jail free" card for Microsoft as far as API and protocol disclosure goes. By not disclosing how the security and authentication portions of Microsoft's APIs and protocols work, Microsoft is trying to hamper interoperability with their authentication methods (including Microsoft Passport as well as their bastardization of the standard Kerberos authentication library from MIT) from being implemented on other platforms such as UNIX and Linux. Furthermore, it gives them "carte blanche" to deny documentation on \*any\* API or protocol, simply by claiming it's related to security or authentication. Even worse is the fact that trying to keep something secure by not describing how it works (a technique known as "security through obscurity" in the computer/network security community) is well known as unworkable with software as widely used as Microsoft's products.

For an example of why this is a problem, consider the Samba project (<http://www.samba.org/>). This is a worldwide cooperative (and largely volunteer) open source effort to independently implement Microsoft's file and printer sharing protocols for UNIX and Linux systems. Under the proposed settlement, Microsoft could deny the Samba developers access to Microsoft's authentication protocol documentation because doing so could potentially compromise the security of their software. This may not be what the authors of the proposed settlement intended, but I would not be surprised to see it used in such a way.

Also conspicuously absent from the proposed settlement is any mention of a

mechanism by which Microsoft would be punished if they are found to be in violation of any part of the settlement. It would appear that any violations must be tried once again in court. I would submit that specification of a large fine (eg. \$1 million per day of noncompliance) would act as a significant deterrent to further antitrust abuses.

I hope that you will take these comments into consideration before enacting a final judgment in the Microsoft antitrust case. You will find a much longer commentary on the proposed settlement at <http://www.kegel.com/remedy/remedy2.html>, with which I agree almost in its entirety.

To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 2:33pm  
Subject: Microsoft Settlement

I don't feel the proposed settlement is adequate. From what I understand, the following problems are not being addressed:

1. It is well known Microsoft has intentionally "broken" their software so it wouldn't interoperate with competitors products. I don't see anything in the settlement that would prevent this from happening in the future.

2. Their end user license agreement (EULA) for some of their products states the product is only licensed for specific operating systems (all Microsoft). Applications exist to be able to run windows applications on other operating systems, but this would be illegal do to the terms of the license. If microsoft refuses to support the application on a different os that's one thing; letting them make it illegal to run it on a different operating system is clearly unacceptable.

3. The settlement doesn't go far enough in opening up API's. Not all API's need to be documented, and it doesn't even mention file systems. This kind of ties back to my first point above.

4. Not enough has been specified to prevent Microsoft from punishing vendors who offer alternatives. They would have to specify prices for the top 20 OEM's, which helps, but leaves smaller companies vulnerable. Wouldn't it be better to specify prices by volume? If you buy so many licenses, it costs X amount of dollars...

Please consider these issues before considering this settlement final.

Subject: Microsoft Settlement

Dear Sirs:

I would like to register my objection to the Proposed Final Judgement (PFJ) in the Microsoft Antitrust case.

Specifically, I object to the provision in definition U, which does not include ALL Microsoft OS products as part of the definition for Windows Operating System Product. I feel this gives Microsoft an unfair advantage in future technologies which could replace existing ones.

I also object to the PFJ's proposals to eliminate entry barriers for Independent Software Vendors. There should be no restrictions on the use of disclosed data, which should also be released at least 6 months prior to any formal release by Microsoft.

Thank you for your time.

Sincerely,

Grant Schemmel

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market, the office applications market, or the Web Browser market. This is especially important in view of the seriousness of Microsoft's past transgressions through aggressive OEM licensing, intentional "de-commoditizing" of open standards (Kerberos, java, HTML, javascript, DNS, BOOTP, etc.), introducing "Vaporware" in response to competitor products (Caldera vs. Microsoft: <http://www-cs-students.stanford.edu/kkoster/microsoft/caldera.html>), and including code in its system software for the sole purpose of producing incompatibilities (Caldera vs. Microsoft again). Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as "punishment"

instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,

Michael Mooney

From: Derek Young

To: Microsoft ATR

Date: 1/23/02 2:33pm

Subject: Microsoft Settlement

The biggest problem with this settlement is that it is taking so long. There is a lot of things Microsoft has done that is totally wrong. I could fill an entire email with things I find to be anti-competitive. Microsoft will use the defence that they just want to innovate, but I can promise you they have never ever innovated. Everything they have they stole or purchased from someone else.

At this rate, by the time the courts go through the thousands of cases there will be no chance for any competition.

Here is my suggestion that would remedy this solution. My experience is the fact I have over 15 years of programming experience. The reason Microsoft is a monopoly is that if you go to the store, all software there is for Windows. Even if a competitor made a better Operating System it would fail because there would be no programs the new Operating System could run. Here is the key tho, Microsoft ripped off Sun Microsystems and created a CLR (Command Language Runtime) to run Windows applications in. It operates almost exactly like the Java Virtual Machine. I think the reason Microsoft has gone this way is so they can make a monopoly in the embedded device market, or possibly they are paving the way so that windows can move to a processor besides the Intel x86 platform.

If Microsoft was forced to make a fully stand alone open source CLR, and then was forced to implement that CLR on other operating systems such as Linux, OS/2, FreeBSD, etc then those other operating systems could run all modern windows applications that used the CLR.

The reason the CLR implementation would have to be open sourced is because I would not trust Microsoft to release it closed source. How could I trust they would't put a worm or backdoor in it? Even worse, I doubt they would really support it that well. If it was open source we could fix bugs ourself as time went on.

This seems fair. the CLR has NOTHING to do with Windows operating system. Forcing them to open up the CLR would give us nothing in the internals of the Windows OPERATING SYSTEM. This would simply make it so people could go to the store, purchase a program and run it on almost any computer with any operating system.

Thank you for taking the time to read my letter.

Subject: Microsoft Settlement

To whom it may concern,

After reading the proposed final judgements in United States v. Microsoft, it is my opinion that, given the obvious nature of Microsoft's transgression, the judgement does not do enough to rectify the situation and, if implemented, might even make it worse. There are ways the judgement could be strengthened:

1) The definition of "Windows Operating System Product" needs to be more inclusive and far reaching. The language of the current definition could be easily circumvented with mere marketing.

2) The release of information to ISV's needs to be broader in it's statement of the purpose for the disclosure, again to insure that Microsoft does not use nomenclature to exclude information from the provision.

3) The Prohibition of More Practices Toward OEMs needs to include some statement about computers with a non-Microsoft Operating System without any Windows Operating System Product, or the prohibition leaves anyone not doing business with Microsoft open to predatory practices. The judgement should also take into account Windows compatible operating systems, which it neglects to mention entirely. many of the definitions are too narrow or use language that could be misleading. In addition, the judgement does not address many of the license terms Microsoft is using, even though those are anticompetitive. There is also no comment about intentional incompatibilities, which Microsoft as repeatedly used to hamper the development of competing technologies. Even with the suggestions above, the judgement does not seem to do enough to guarantee competition in a market like the one Microsoft has created using predatory practices and I think it needs to be reconsidered.

Subject: Settlement

To whom it may concern:

Please stop this madness.

I would like to use other operating systems, but I can't. Not because these systems are technically inferior nor user friendly, but because of technical and "cultural" restrictions that have come about due to the Microsoft monopoly. In a world of open standards and free market economies there should be no need for a monster of the size and influence of Microsoft. Take for example the IE scenario. Back in the early days of the internet, Netscape was king of the browser market. People were very satisfied with the level of ease that all of a sudden you could

browse the web. Netscape on the other hand was making money the all fashion way: producing a product that offered obvious value. Then comes Microsoft, after realizing that they were late to the latest economic and social revolution; decides to "compete" in the browser market. So what is wrong with that you say, well nothing, for the exception of how it was done. Microsoft as it has always done with most of its technologies, when out and bought a browser. But let me give you an example of the kind of negotiation that was involved in these acquisitions.

Microsoft: We want the best browser available on the market to compete with Netscape. What do you have?

Browser owner: Well, we have a product that can compete with Netscape head on. As a matter of fact, no other company can match us.

Microsoft: Can we test your technology and see your code?

Browser owner: Yes, under certain agreements.

Microsoft: No problem, after all, we are Microsoft.

Browser owner: I believe that our technology is worth \$X millions of dollars. Your company as well as any other competitor would agree.

Microsoft: We like what we see. But we are not willing to pay that much for it.

Browser owner: Sorry, but we really can't sell for less.

Microsoft: You don't understand. Since we control 95% of the OS market, what ever browser we bundle with our OS will become the defacto standard. It will only be a matter of time. Do you and your browser want to "make history" or will we have to go to another competitor and make them the history makers. What do you say? I think this is a "sweet and innovative" deal.

Browser owner: It seems like I don't have much of a choice. I either sell to you at your price and with your conditions, or I'm out of the game for good because eventually you'll control the whole market. I think the choice is clear.

This is a very simple and classic scenario of what Microsoft can do to competitors and rivals. I'm not even mentioning the fact that there were other companies that probably had better technology but due to the competing obstacle of Microsoft ceased to produce a better product. As a consumer, I'm stuck with what may be mediocre technology and with no choice or hope of making a change.

Please stop the insanity. Don't sell out. This is more than just a complicated monopoly case. The future of technology as well as our economy for the next 20yrs. is at stake.

Thank you,  
Jose Martinez

Microsoft Tunney Acts comments  
US Department of Justice

Dear Sir or Madam,

I am writing to express my opposition to the proposed final settlement of the Microsoft antitrust case. I have been a software developer for over 20 years and I am currently an executive of a start up corporation and have extensive experience with Microsoft's products as well as those of Microsoft's competitors. In addition, I have followed the trial very closely and have read the relevant documents. I would like to remind the court that the Microsoft has committed extraordinary public relations resources in an effort to influence public opinion, and ultimately, the court. Thus, it is likely that the overwhelming majority of pro-settlement comments were bought and paid for by the criminal. I trust that the court will take this into account and treat those comments accordingly.

Microsoft corporation has committed a serious federal crime. They received a fair trial, and the decision was unanimously upheld by a Court of Appeals. Microsoft has been repeatedly warned for past violations of the law and indeed the entire reason that this case is presently before the court is that Microsoft is unwilling to change their business practices to conform to the law. Microsoft is understandably reluctant to abandon those business practices as they are extremely effective and have allowed Microsoft to illegally eliminate competition and subsequently raise prices. Consequently, Microsoft has been able to make and retain extraordinary profits even despite the current recession. The Proposed Final Judgment is flawed for the following reasons:

1) It will do nothing to restore competition.

Microsoft corporation has effectively eliminated competition on the desktop due to illegal practices. Apple computer holds less than 5% of the desktop market. OS/2, as a direct result of Microsoft's violation of the law, holds almost nothing, and Linux, the only likely future competitor, has perhaps 1%. Since Bill Gates, a founder and CEO of Microsoft, publicly derided the quality of past releases of Microsoft Operating Systems products at the Windows XP launch, and has recently derided the security of all Microsoft products, it is fair to say that Microsoft's success has not been due to having a superior product. Instead, their success is due to illegal licensing terms and the application barrier to entry. The Proposed Final Judgment allows Microsoft to continue discriminatory licensing practices and to continue to maintain the application barrier to entry. In addition, the language contains so many loop holes as to be unenforceable. I propose the following language for section IIIb:

"Microsoft shall offer all of their products to all customers at the same price. Microsoft may set a lower limit on the number of copies that are purchased directly from the corporation, but may not set any terms for distributors that buy a large number of copies and redistribute them in smaller volume. Microsoft may not enter into any discriminatory Market Development Agreement" Once a Microsoft product has been legally purchased, Microsoft should have absolutely nothing to say about how that product is subsequently resold. For section IIIC, I would propose the following wording: "Microsoft shall impose no additional terms on its OEM's or distributors regarding subsequent resale of Microsoft products."

Section IIID appears to attempt to reduce the application barrier to entry, but does not do so in any way that is effective. In addition, it contains serious loopholes that would not allow developers to develop for any platform other than Windows, nor does it take into account Microsoft's other monopoly in desktop productivity software. For section IIID, I would propose the following wording: "Upon release of any Microsoft software product, Microsoft will provide complete documentation of any protocols, file formats, and APIs. In addition, Microsoft will license any intellectual property required to implement such protocols, file formats, and APIs under a royalty free and non discriminatory basis to any interested party."

In addition, section IIIJ.2 must be dropped in its entirety. The only logical reason for this provision is for Microsoft to prevent competition from GNU Public License software, which Microsoft views as its primary competitor. Microsoft should not be able to select its desired competitors.

2) It imposes no penalty on Microsoft for past violation of the law. As a direct result of illegal business practices, Microsoft has amassed a cash pile of over 35 billion dollars. Some of that money belongs to the taxpayers due to the expense of the trial. In addition, Microsoft should pay some sort of fine for past violation of the law.

3) It fails to recognize that Microsoft possesses two monopolies; one in desktop operating

systems and another in office productivity software.

I addressed this in my previous comments, but it bears repeating. The proposed final judgment deal only with Microsoft's operating system monopoly. In addition, Microsoft possesses a monopoly in desktop productivity software. To a large extent, this monopoly was also illegally obtained by bundling Microsoft office with the operating system at greatly reduced cost, and using the operating system profits to offset the loss. Once the competitors were eliminated, Microsoft raised prices. Microsoft currently views the Linux operating system as its biggest competitive threat. The largest factor preventing Linux from competing on the desktop is the lack of a 100% compatible office suite. Microsoft must publish and license their Office protocols and file formats on a non discriminatory royalty free basis. In addition, Microsoft must not be allowed to use Office licensing fees as a club to prevent operating system competition.

4) It contains no effective provisions for enforcing the judgment. The technical committee proposed would have no actual power to enforce the agreement. In addition, the committee members would have a clear conflict of interest since one of the members is chosen by Microsoft and they would be paid by Microsoft. Any violation found by the committee would still need to be brought to court before a remedy could be imposed. I would propose the following:

"The Plaintiffs will appoint a special master with the power to enforce this judgment. Microsoft shall have the right to appeal decisions of the special master at their expense. The special master and staff will be employed and paid by the Department of Justice. Microsoft will reimburse the Department of Justice for reasonable expenses incurred by the special master and staff incurred in the performance of their duties."

5) The term of the agreement is too limited.

I would like to point out that the term of the agreement is not tied to any goals. The agreement should remain in effect until there is effective competition in desktop operating system and office productivity software markets. Microsoft can hardly complain about this as if the remedy is ineffective, it hardly matters. If it is effective, it will only serve to undo the effects of past illegal conduct and this should be the goal.

Robert Weiler

To: Microsoft ATR  
Date: 1/23/02 2:36pm  
Subject: Microsoft Settlement

I would like to register my objection to the proposed settlement in the United States vs. Microsoft case.

The biggest problem I see is that the settlement is not a structural remedy. Oversight remedies have been tried against Microsoft in the past, and they have coded around them, lobbied over them, and legally maneuvered past them every time. The only thing that hasn't been tried yet, and that has a hope of working, is to break them up.

Breaking Microsoft up into OS/Applications/Other divisions wouldn't break their monopoly, but it would make it more difficult for them to use their OS monopoly to create new monopolies in other areas, which they are doing with Windows XP and WMA even as I type this. Thank you.

From: Rexford Hill  
To: Microsoft ATR  
Date: 1/23/02 2:36pm  
Subject: Microsoft Settlement

Dear Department of Justice,

I am writing to express my deep concern over the proposed settlement with Microsoft. This agreement, specifically section III(D), will give Microsoft the right to hide operating system calls that are currently used by various open source software projects like Samba. Samba is critical to my business, as it allows me to mix and match the best products (Linux for my engineer's workstations, and Microsoft servers for my back-end data storage). If Microsoft is allowed to hide their operating system calls in such a way, it will mean that I may no

longer be able to buy Linux workstations for use in my network. This would be a direct exercise of their monopoly power in the operating system market to stifle innovation in the engineering workstation market.

Please do not go forward with this fundamentally flawed settlement agreement.

I beg you to reconsider this settlement. It is a VERY bad idea. The world is watching this, and it's outcome will not only reflect on our justice system, and the integrity of our government, but will send the message to all people, both young and old, that our government does not exist to serve it's citizens, but only to defend the wealth of corporate monopolies. Even in these darks times, it becomes more and more obvious each day.

I beg off all of you to reconsider this.

Thankyou for your time,  
Concerned U.S. Citizen.

**MTC-00017976**

From: Damian Yerrick  
To: Microsoft ATR  
Date: 1/23/02 2:33pm  
Subject: The Microsoft settlement may

backfire

To whom it may concern:

The United States Department of Justice has proposed a settlement with Microsoft Corporation in the anti-trust case, the terms of which include Microsoft donating software licenses to schools. I consider this settlement a bad idea because it is highly likely to backfire and strengthen Microsoft's monopoly. For one thing, the restrictions placed on Microsoft are overly narrow.

See <http://www.kegel.com/remedy/letter.html> For another, the "retail value" of Microsoft software named in descriptions of the settlement is highly inflated, as it costs less than a dollar to press a disc, the balance attributed to the monopoly that the Congress has already granted to Microsoft under copyright law. (I consider a 95-year copyright term under the Bono Act more than a bit excessive for software that generally becomes obsolete within five years, but that's another letter for another day.)

Even worse, the proposed settlement gives Microsoft even more mindshare and more power among the most intellectually vulnerable of American citizens, namely our children. Microsoft's predatory tactics named in the findings of fact included ways of convincing consumers that no worthwhile operating system exists other than Microsoft Windows. In fact, Microsoft is willing to take a loss in order to get this point across: witness free copies of Windows XP given out at offices of the U.S. Postal Service. Exposing children to Microsoft software and only Microsoft software sends a subconscious message to children that Microsoft software is all that exists, which only serves to

strengthen the barriers to entry against other operating system publishers such as Red Hat, MandrakeSoft, Apple Computer, and Sun Microsystems. The notorious lack of security in Microsoft's Windows, Outlook, and Office product lines can potentially compromise academic integrity by encouraging students to learn to exploit security defects in Microsoft software instead of learning reading, writing, arithmetic, and some semblance of honor.

If the Department of Justice wants to punish Microsoft with damages, I suggest that these be cash damages. I'd also want to be able to study the source code of Windows in order to develop other operating systems that can run applications programmed to the Windows interface or to replace parts of Windows with independently developed modules.

Sincerely,

Damian Yerrick

From: mike stephen  
To: microsoft.atr(a)usdoj.gov  
Date: 1/23/02 2:37pm  
Subject: Microsoft Settlement

Please I beg of you to consider the separation of hardware and software from all sales of computer systems. This will put competition back in the operating system arena. Right now when you go to a store to buy a computer it already has windows preinstalled. The customer has not any choice but to buy it with windows preinstalled. Even if he/she wants to run OS/2, or Linux, he/she must pay for a copy of Windows then delete it and install their preferred operating system. This is double paying for two operating systems when only one is needed.

Separating the two purchases (the computer hardware as one, and the operating system as the other) will help to level the field from pricing fluctuations that Microsoft currently uses to maintain the position in the marketplace. A company like Compaq can be forced to "get into line" with what Microsoft wants them to do and as a result can enjoy a significant discount on purchases on Microsoft product. Separating the costs would put an end to this. If computer users want to have windows on the machines they bought, then they can purchase a copy at the time of purchasing the hardware (or later if they choose) and install it when they take the purchase home.

When we buy a car today we all realise it needs gasoline to run. We all know we are going to buy gasoline. However we buy a car from a car dealer, then we choose to buy gasoline from any number of vendors. In the computer world, it is like buying a car and buying prepaid gasoline to run the car. We might want to buy gasoline from our chosen vendor, but we already have paid for gasoline at the time we purchased the car. This method makes no sense and microsoft has screwed the marketplace with poor quality software that is both poorly designed and poorly written. Please put a modicum of competition back into the marketplace.

Separate the hardware and software sales.

I believe that the proposed Microsoft settlement is one of the worst legal blunders in recent history. I don't believe it is necessary for me to describe all of the reasons why this is the case, our industry has done a much more eloquent job of that.

If this settlement is accepted, all I can say to the victims of the disastrous fate of the computer industry is, "You brought this on yourselves."

Though I am impacted daily by the problems of Microsoft's monopoly, (most are not even recognized by this suit) I am glad for every day that goes by that my company is too small to be noticed by Microsoft. The day that changes is the day I look for a new job in a new industry.

From: D. K. Smetters  
To: Microsoft ATR  
Date: 1/23/02 2:37pm  
Subject: Microsoft Settlement

I think the current Microsoft Settlement is badly designed, and will not prevent Microsoft from continuing to extend and abuse its monopoly power. There are a wide range of specific points on which this settlement agreement fails to curb Microsoft's egregious business practices, and even where the settlement attempts to take a stand on what Microsoft can and cannot do, it presents no real enforcement mechanism.

Experience with prior consent decrees against Microsoft shows that the company will attempt to thwart the justice department in any way that it possibly can; and that therefore an effective settlement against them

must be water-tight, and easy to monitor and enforce. It must prevent Microsoft from replacing its current mechanisms to strongarm OEMs into promoting Windows and IE to the detriment of other options with new mechanisms that achieve the same effect but escape the language of the settlement. You cannot hope to do that if you don't start with a settlement that effectively limits their current illegal practices.

Please see <http://www.kegel.com/remedy/letter.html> for a well-written discussion of many of the problems of the current settlement. I believe this list only begins to cover the problems of creating an effective settlement; such an effective settlement must be constructed to not only prevent Microsoft from continuing their current offenses, it must keep them from changing the "look and feel" of their offenses slightly to escape the settlement.

Subject: Microsoft Settlement

I would like to register my disappointment of the proposed Microsoft settlement. Microsoft continues to leverage their monopoly in the PC industry in very creative and powerful ways that will eventually cause great pains for us consumers. This settlement does nothing to stop it; the US government needs to place severe restrictions on Microsoft's activities and actually enforce them. I think there is the potential for the government to accomplish some good here, but not through this current settlement.

From: Josh Litherland  
To: Microsoft ATR  
Date: 1/23/02 2:37pm  
Subject: Microsoft Settlement

I am writing with respect to my concerns with the settlement reached with Microsoft in the DoJ suit, regarding anticompetitive practices and abuse of monopoly power. I am a professional working in the field of computer network security, and I have witnessed throughout the years a host of situations in which the American public have been victimized by Microsoft's abuse of their overwhelming monopoly. Based on my reading of the proposed settlement, I feel obliged to comment that the remedies put forth thereby will be greatly inadequate to reintroduce competition into the numerous markets currently owned by Microsoft, or to mitigate the tangible damage in terms of both direct financial loss and, indirectly, through an absence of customer service, attention to security and stability and the end-user's rights of fair use.

As an alternative remedy, I favor the suggestion put forth by the honorable judge Thomas Penfield Jackson, that Microsoft be required to provide accurate disclosure of, and support for, their programming interfaces

(APIs, see Jackson's Finding of Facts), enabling third parties to develop interoperable systems with Microsoft's own offerings. This would, in my opinion as a computing professional, reintroduce customer choice into the marketplace and encourage merit-based competition, ultimately benefiting consumers through improved value offerings as well as a more rapid pace of innovation, which has been largely stifled during the period of Microsoft's unshakeable dominance.

In short, I wish to cast my voice into the pool of those who, as registered voters and as active participants in the United States economy, insist that Microsoft's transgressions be dealt with fairly, decisively, effectively, and expeditiously.

From: Jason Howard  
To: Microsoft ATR  
Date: 1/23/02 4:10pm  
Subject: Microsoft Settlement  
Greetings,

I am writing you today to express my utter distaste with Microsoft's monopolistic attitude and operating procedures. I feel that Microsoft has, in the past and also in the present, used immoral (and at times illegal) tactics to crush would be competition. Microsoft, it seems, has an almost infinite capability for destruction of ideas and philosophies that some how pose a potential risk to their bottom line.

The Microsoft set of operating systems are by far the most widely used operating systems on this planet. A large portion of the software application today run on (and only on) a Microsoft operating system. Now this in and of itself is not a bad thing as a software company (if they want to make any money) will write software for the platform in which the largest user base is possible. Microsoft became a monopoly when they decided to try and force out of business companies that are creating products that would allow average Windows users to use their windows applications on an operating system that they had no control over. Two recent events come to mind very easily: the WINE case and the Lindows case. (Lindows is being sued by Microsoft for trademark violation, claiming that Lindows could be mixed up with Windows. However what I see happening is a sort of legal bullying. Microsoft is putting shear legal force on Lindows that will make its efforts turn from its goal, writing a reasonable alternative to the Windows operating system, to simply defending itself.)

Government involvement in the software industry is a very difficult decision for me (as

well as quite a few software engineers) to make. I would not normally lean to the side of government as I feel that the government should stay out of software practices. However in this case I am willing to support the governments actions against Microsoft as they have simply become too large to affect by any other means. That said, I am very unhappy with the way in which the government is handling the case. It seems that to some degree even the United States Government can be partially corrupted by Microsoft's power.

I look forward to your reasonable solution to this unreasonable company,

Thank You,  
Jason Howard  
Software Engineer

Having only skimmed the PFJ, I cannot make a comprehensive comment on it, but I can tell right off that the definitions are far too narrow to do any good. Specifically the definitions of windows and API prevent any of the provisions from affecting the emerging markets, like ASP(.net), handhelds, webpads and set tops (x-box) I'm sure emotional pleas are being ignored in general, but I'd like to mention that im typing this despite the pain of a fresh and rather deep wound at the base of one of my fingers. This settlement is too important for the future of the country, tech industry and even human race for me to hope that the other informed people making comments will outnumber those who microsoft paid to compose wordy snail mail.

Please act out of responsibility to the common american.

As one who has struggled to keep my system(s) working, in spite of Microsofts deliberate attempts to sabotage any other OS, I disagree with the proposed settlement.

My problems with MS goes back to the days of Digital Research DOS, where every minor fix to Win 3.0 would cause it to no longer work with DR DOS until Digital Research provided a patch. In one case, and the code was actually posted on a BBS (sure wish I could have copied it) that did NOTHING but check to see if MS DOS was being used before it would start Win 3.X. This practice has continued by MS to the present day, not withstanding the legal problems that have been on-going. JAVA is a very good example that your department should use to judge that they have no intention of becoming anti everything that does not have MS income potential.

From: Lou Schmidt  
To: Microsoft ATR  
Date: 1/23/02 2:41pm  
Subject: Microsoft Settlement

Hello—  
I am a technologist and market analyst for a major telecommunications equipment vendor. Here, however, I speak for myself: The proposed Microsoft Settlement is not a good idea. It is not good for the consumer and it is not good for the United States as a whole. Microsoft must open it's API's, or we'll be going through this whole trial again in another 5 years.

By opening the API's for Windows, Microsoft will not be prevented from "innovating". Rather, the field will be open for others to innovate in the space, so Microsoft will have actual competition and a reason to fix things. I must point out that the continued existence of Microsoft as an unregulated monopoly is very dangerous for the economy of the United States; Microsoft will have no real reason to patch it's numerous security holes without vigorous competition. How much money has the U.S. economy lost from the "Code Red" and "Nimda" virusii? Despite recent announcements from Mr. Gates, Microsoft will not take security seriously until it is a competitive threat. Does the U.S. government make extensive use of Microsoft products? Do you really think they are secure?

Thank you for allowing me to comment on this settlement.

From: Chris Radcliff  
To: Microsoft ATR  
Date: 1/23/02 2:41pm  
Subject: Microsoft Settlement

I am opposed to the proposed settlement to the Microsoft antitrust trial in its current state. As it stands, the settlement would do little to remove Microsoft's monopoly hold on the Intel-based PC operating system market, let alone discourage the company from leveraging that monopoly to force competitors out of related markets. The Proposed Final Judgement doesn't take into account Windows-compatible competing operating systems. It contains misleading and overly narrow definitions and provisions, even compared to the Findings of Fact. The PFJ also fails to prohibit anticompetitive

license terms currently used by Microsoft. It fails to prohibit intentional incompatibilities historically used by Microsoft, and as currently written it appears to lack an effective enforcement mechanism. Until these problems are addressed, the Proposed Final Judgment will remain an inadequate solution. I urge you to reconsider this action.

From: Valdis.Kletnieks@vt.edu@inetgw  
To: Microsoft ATR  
Date: 1/23/02 2:41pm  
Subject: Microsoft Settlement

Dear Sirs:

I wish to register my comments regarding the proposed settlement. In particular, although the Findings of Fact, paragraphs 29 and 30, show that undocumented file formats are a barrier to entry, there is no requirement in the PFJ that such formats be documented. This is a major barrier to software that wants to compete with Microsoft Office (such as the OpenOffice software project). This means that if I wish to be able to exchange Office-format documents, I have to run a Microsoft operating system so I can use \*MICROSOFT\* Office, since the OpenOffice project cannot support undocumented features in the file format. This is an onerous burden on those of us who wish to use other operating systems (quite possibly not even on Intel-based computers) where OpenOffice would be quite suitable and able to run, if the file formats were documented. This has been \*directly\* against my interests, as it means that quite often, if I am send a Microsoft Word document, I must go and find a machine that has a Microsoft operating system on it so I can use Microsoft Word to read it (or have an entire separate computer in my already-small cubicle just for this one purpose). And the \*only\* reason I cannot open all documents with OpenOffice (which is supported on the computer that I \*do\* have) is that the file formats are not documented. In addition, I find that the proposed "Definition J: Microsoft Middleware", and "Definition K: Microsoft Middleware Product" are poorly written, and have major problems with them, allowing Microsoft to avoid any real control on its continued behavior. Microsoft should not be allowed to exempt version 7.0.0 as middleware, merely because the definition specified 7.0. I also concur with most of the rest of the points commented on by Dan Kegel at <http://www.kegel.com/remedy/remedy2.html>.

To: Microsoft ATR  
Date: 1/23/02 2:42pm  
Subject: Microsoft Settlement

Dear Ms. Hesse:

I must object to the agreement you have reached with Microsoft. As I understand it, your agreement will still force consumers to purchase only computers with Microsoft's operating systems. Being forced into purchasing something you do not want is my biggest beef with the way Microsoft has done business, and, as I understood, is a principal reason for your legal action. As a minimum, any sensible agreement should ensure that, in purchasing a computer, you can specify the operating system you want that computer to run.

Then, the price of the operating system should be charged explicitly. So, if Microsoft charges a computer maker (say, Dell) \$ 25 for Windows XP (as an example), I should pay Dell \$ 25 to give to Microsoft, \$ 5 for their profit (whatever), and \$ 10 for installing the OS (or something: installing costs time). Then, if I want Linux, I should pay Dell \$ 10 for installing Linux. And, if I prefer to do that myself, I save \$ 10. You can do it this way with memory, with extra disks, etc. Why not with the OS? Only because of anti-competitive behavior of Microsoft.

Isn't this the type of thing you wanted to address with your lawsuit?

Sincerely,  
Nino R. Pereira, Ecopulse

To: Microsoft ATR  
Date: 1/23/02 2:43pm  
Subject: Microsoft Settlement

The Federal Microsoft settlement terms are near farcical. It's bad enough that Microsoft is getting a minor hand slapping... despite the fact that the court found them to be guilty of anti-competitive practices.

You now claim to be "punishing" Microsoft by "forcing" them to expand their market share in the educational segment?!?! Ignoring the fact that this allows Microsoft to continue to pursue market share in the education segment (while claiming this is their "act of contrition"), how does this deter Microsoft from repeating this behaviour?

Make Microsoft fund an education program with real dollars (aka no stock, equipment and/or software donations). Then keep Microsoft completely out of the administration of that fund. Have non-biased 3rd parties manage the fund and allow the beneficiary schools to make the purchasing decision that's best for that educational institution.

After spending years and millions of tax dollars, this is very dissappointing.

Teh Cheng

From: Ted Bardusch  
To: Microsoft ATR  
Date: 1/23/02 2:43pm  
Subject: Microsoft Settlement

I am writing to express my concern with the proposed settlement in the Microsoft anti-trust case.

I have been a professional software developer for 24 years, in the Seattle-Redmond area. I have seen Microsoft grow from a small group in a Bellevue bank building to the huge firm they are today.

In my personal and professional opinion, Microsoft has done major harm to its

customers and to US citizens by abusing its monopoly position in the market. It has restricted choice, forced bad solutions on customers, and caused major expenditure that was unnecessary.

However I am loathe to bind the company from doing what it does do well—produce software profitably.

Therefore I suggest as a solution:

Require Microsoft to issue full specifications six (6) months before releasing any software in which they have a monopoly position (operating systems, office software, browsers). This would allow true competition while not causing any undue burden on Microsoft, and would not hinder their innovation nor their profits, unless some other firm did something better that was built on their monopoly products.

Thank you for your consideration  
Ted Bardusch  
Mill Creek, WA

**MTC-00018009**

From: Mark Connolly  
To: Microsoft ATR  
Date: 1/23/02 2:43pm  
Subject: Microsoft Settlement

I believe the remedy presented in this letter would result in dissolving a company with tremendous ability and desire to protect a counterproductive monopoly while preserving (and making stronger) the positive economic impacts of the company known for now as Microsoft. Microsoft would be partitioned into three new companies that would own:

1. The host operating systems, including the DOS-based Windows variants, Windows NT, and Windows NT followers (Win2K Professional, Server, Advanced Server, Enterprise Server, and XP). This partition would include such things as IIS, SQL Server, clustering services.

2. The network operating system, including .Net, Active Directory, MSMQ, Outlook.

3. Development environments and desktop applications. This includes the integrated development environments (Studio, etc), the team development repositories, the computer aided design tools, as well as productivity tools (Microsoft Office, etc).

For a period of seven years, each would be prohibited from getting into the others' particular domain (the ones without an operating system product at the time of the breakup would not be able to produce their own operating system, etc).

At first, these three entities would be highly reliant on each other, as each has technology required by the other. They would also have a bit of advantage over other companies for forging relationships among themselves. The fact they are separated would force more openness for design and interfaces, however, and over time this openness coupled with competitive efficiencies should result in a broader market with many players. It is possible one of these companies would not survive in the long term, but that is okay, and a reflection of real competition.

As far as for fines for past misdeeds, real dollars should be taken from Microsoft, not bartered software and hardware. Making schools recipients is fine, as long as the side

effect is not Microsoft expanding its presence in school systems. The delivery of largesse should be decoupled from the source of the largesse. A general fund should be opened for supporting education. The dollars should not be restricted to spending on technology (books and supplies are needed in too many places to worry about technology; a good fundamental education makes picking up the intricacies of using a spreadsheet a trivial exercise, while training on how to navigate the menus of a spreadsheet program does not require any real learning). Microsoft can be one of the contributors to the general fund, say one billion real dollars to start with, but Microsoft has nothing further to do with the dollars. Of course, they are welcome to contribute in the future.

From: pmitros@MIT.EDU@inetgw  
To: Microsoft ATR  
Date: 1/23/02 2:43pm  
Subject: Microsoft Settlement

I believe the current settlement is overly weak, and does not answer most of the antitrust issues relevant to the current market situation. At this point, the only real remaining competitors to Microsoft's operating systems monopoly are Macintosh and Linux. Microsoft is keeping Apple in its back pocket through its Office monopoly. The wording of the settlement does absolutely nothing to prevent Microsoft from continuing antitrust tactics against Linux. It is absolutely critical that Microsoft be forced to publically open its protocols and proprietary file formats. If getting access to the specs requires NDAs or a strong commercial presence, it is completely pointless, as free/open source software cannot respect those NDAs. NDAs do nothing to protect Microsoft's legitimate actions, as the reason for releasing those specs is so its competitors can develop competing products.

The rest of the settlement seems far too weak as well. Microsoft pushed achieved its monopoly position through illegal antitrust tactics. It continues to use illegal tactics to hold this position. It is absolutely critical that the government take real action to, at the very least, stop Microsoft from continuing these tactics, and ideally, make remedies for actions already taken. The current settlement doesn't even stop Microsoft from continuing.

Quite frankly, I'm fed up with the repeated antitrust lawsuits against Microsoft, resulting in only changes no longer relevant to the current marketplace. It's critical that the actions taken this time around be stronger, and flexible enough to match the current market; not just that of five years ago.

I would like to point out two major problems with the PFJ. The PFJ doesn't take

into account Windows-compatible competing operating systems. This is a glaring omission that should be addressed. Also, Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. The PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. The PFJ should help eliminate the Applications Barrier to Entry, not contribute to them.

Subject: Microsoft Settlement

I am writing to express my opinion that the proposed settlement is a fair and efficient means to ensure the public's interests are protected in future. It addresses the concerns of the original action, and I feel too many of Microsoft's competitors are really just trying to urge the DOJ to do as much damage to Microsoft competitively as possible, in order to bolster their own interests. The losers of a harsher settlement would be the consumer, and ultimately businesses all over the world. Please by all means monitor Microsoft's accounting and business practices/plans to make sure they are not taking unfair advantage, but also please ensure that the often very innovative work of a great company does not suffer in the process.

Subject: Microsoft Settlement

My concerns and comments regarding the final judgment of U.S. v. Microsoft:

1) MSFT should be required to allow their Internet Explorer and Office products to function seamlessly under alternative operating systems designed to operate in an x86 platform (Intel, AMD processors). Examples of alternative operating systems include Solarix x86, \*BSD, and Linux.

2) MSFT should not be allowed to load any MSFT Windows based operating system on the machines that Microsoft is donating for educational purposes. Rather, I highly encourage the government see to it that an open source operating system be used on these machines. Open source is defined as application source code being made freely available for review by anyone.

3) Exclusively for security purposes, MSFT should be required to relinquish core operating system source code to any government agency that operates any Microsoft operating system internally. Thank you for your concern and for granting me the opportunity to voice my opinion.

Respectfully,

Subject: Microsoft Settlement

Please do not allow the farce that is the Microsoft Settlement to be implemented. I am the CTO of a small business and I also do a lot of purchasing. I know firsthand the outrageous amount of money we are forced to spend on Microsoft products because of a lack of competition that has been created by Microsoft's monopolistic behaviors. Here are some of the problems I run against:

We have been trying to implement a terminal server based system in the office. We have been forced to use Microsoft products because of the interaction necessary with several of our business partners. We are way to small to be able to lead in this area, even though we know better. The problem is, it used to be that you would consider software to be about 20-30% of your overall purchase of the machine, but because of competition in the market place in hardware and monopolistic tendencies in the software domain, the cost of buying our operating system, alone, is now 50% of the system costs. I recently bought a PIII 750 Compaq Server with 2 gig ram, 3 scsi Ultra2 36 gig 10,000 rpm hard drives, raid, etc for around \$1000. To update to an older version of Windows server (Windows 2000 with 25 CAL's) will cost us over \$1000. Then if we want to do a terminal server solution, the cheapest price I have seen is \$1,400 for 20 terminal server licenses. Then we have to buy the office software to run it. The cheapest price to buy an upgrade to Office XP is \$255 each! So that would be an additional \$5,100 for 20 users. The unfortunate thing is, it does not stop there. Because of the lack of competition, Microsoft forces us to buy over

DOUBLE the licenses we need to implement the system. The problem is that we want a system that is available to our employees both in the office and away from the office. But because of the way they form the licenses you do not buy it per user but per computer. This means that we have to have a license for the office, for the home, and if they are on the road and need access in a hurry, any other computer that they end up having to use. It is a pricing nightmare and a huge strain.

As you can well imagine this puts an incredible hardship on small companies like us, esp during depressed times when we are having to cut costs in many areas. The pricing scheme is very predatory and it is obvious by looking at hardware what healthy competition does to pricing.

Please do your part to restore competition in the software industry!

I am a Canadian but the Microsoft monopoly is a global issue. The software market is so perverted by Microsoft's business practices that it will be impossible to call it a "free market" for years, regardless of the remedies ultimately imposed. The current proposed "remedy" is nothing more than a license for Microsoft to continue business as usual, which will eventually result in extension of their monopoly to nearly every aspect of the Internet infrastructure.

 Subject: Microsoft Settlement

Dear DOJ

I have been working in technology for the past 15 years, and feel compelled to write you to regarding the U.S. v. Microsoft proposed final judgment. In the early 90's there were many companies selling products to enhance and extend the computing experience. At the time I was working for InfoWorld where I was responsible for finding and reviewing these products. It was at InfoWorld that I saw these products fall to Microsoft predatory practices. Microsoft began selling their Office suite, at a loss to gain market share, and one by one competitors fell because could not match the pricing.

Undercut by so much, they had to stop making their products. Lotus, Borland and others simply got out of the business of productivity software. Microsoft made late changes in Windows 3.1 to make it incompatible with DrDos (an OS competitor) just before release. This forced users of DrDos to purchase DOS.

We at InfoWorld discovered this incompatibility, and broke the story at the time. And the list goes on....

It is clear to me, and many Americans as well as the court, that these actions by Microsoft were illegal. The current judgment against Microsoft is not sufficient to stop these practices.

I believe that any judgment that does not include splitting Microsoft into two companies, OS and Applications, is not sufficient. At the very least, however, the current judgment needs to be strengthened to provide more protection against Microsoft's ability to create barriers to ISV's creating non-Microsoft operating systems. In order to compete in the OS space ISV's will require the ability to emulate the windows API. The settlement needs to take this into account and provide some protection against Microsoft for these companies trying to compete in the OS market.

Specifically the judgment needs to be amended to ensure:

1. Microsoft provides timely notice of all API changes (at least 8 months)
2. Microsoft must document all API's used by their products
3. Microsoft must disclose all software patents that apply to the windows API
4. These requirements must be applied to all Microsoft operating system products (XP, Pocket PC, and any other current or future OS product) Without strengthening the judgment in this way ISV's will fall prey to continued predatory and monopolistic practices of Microsoft.

Thank you for your time.

From: Geoffrey  
 To: Microsoft ATR  
 Date: 1/23/02 2:44pm

Subject: Microsoft Settlement

Regarding the proposed settlement I have many concerns, but will voice the greatest failings I find in this document.

1. There is no provision/requirement that Microsoft must share/publish the Microsoft software file formats. This is in regard to, but not limited to Microsoft Office software package which includes Word, Powerpoint and Excel formats. Microsoft routinely changes these formats which makes it very difficult if not impossible for vendors of similar products to compete with the imbedded base of Microsoft Operating Systems, which use, for the most part, Microsoft Office based software packages.

2. Although there is a provision that Microsoft may not stop OEM computer manufacturers from providing dual booting Operating Systems on there machines, there is no wording that would stop Microsoft from contractually forbidding the OEMs from selling computer systems that have soley a non-Microsoft operating system.

3. There is no provision to permit a end user to sell his/her "share" of their version of Microsoft Operating Systems. An end user should be permitted to do so.

4. Microsoft licensing should not dictate what Operating System the user must used when purchasing software packages. For example, if I purchase Microsoft word, I should be able to run it on any Operating System I deem fit.

5. The continuation of Microsoft ownership of the dominant and monopolistic operating system market as well as the dominant and monopolistic Office software package (Microsoft Office) will continue to enforce Microsoft's current monopoly strangle hold on the current computer desktop. A reconsideration should be made in revisiting the possibility of breaking this company up.

6. The primary executive staff of the Microsoft corporation, which includes Bill Gates, Steve Ballmer and others that should be determined, should be removed from the control of this company. They should be barred from having any ownership, influence in any computer related business. This company has virtually destroyed the computer desktop environment. We could be so much further along, so much more productive if it were not for this innovation stifling company. 3. —

To whom it may concern:

I am strongly opposed to the Proposed Final Judgment in United States v. Microsoft (<http://www.usdoj.gov/atr/cases/ms-settle.htm>). I do not believe it will remedy the wrongs caused by the Microsoft

monopoly nor will it do enough to prevent Microsoft from continuing monopolistic behavior in the future. As an engineer and consultant who has worked for many years in the computer and software industry, I believe Microsoft's past and ongoing behavior has done and continues to do serious damage to competition and innovation in the field. It has had a negative impact on my livelihood and, worse, my ability to propose the best, most reliable and cost effective solutions for my customers and employers.

The drawbacks to the proposed settlement are many and have been well documented by many others far more articulately than I can express here. The following link is a good place to start for reading some of these opinions, the majority of which I agree with wholeheartedly (see the section "Essays"):

<http://www.kegel.com/remedy/>

Please do not let this flawed settlement turn Microsoft into an effective state sponsored private monopoly. That is the absolute \*last\* thing our down economy needs right now.

Sincerely,

<ED> —

From: Doyle Seppala  
 To: Microsoft ATR  
 Date: 1/23/02 2:45pm  
 Subject: Microsoft Settlement

The settlement must not stand. Over one hundred years ago, the combination of lawmaking (Congress) and law-defining (Supreme Court) bodies laid down the antitrust laws that say despite the fact that we are a free enterprise based society, we are not free as corporations to do whatever we like. One can draw the comparison of personal freedoms. We have pretty much free reign to do most anything we like so long as it does not harm others. I can freely walk down Main Street with an arm tied behind my back, wearing a silly look on my face, and skipping every third step. People might consider me odd, but I can do it. If I choose to do this with the added strangeness of firing a bazooka into the air every third step, I should hope that I would be rapidly stopped from endangering others.

Microsoft should have the right to bundle whatever they wish into a software package. That is their right. They should not, however, then force OEM's to make us buy that package, which is the current situation. The proposed settlement would codify Microsoft's behavior, encouraging them to require that all software sold by their partners be Microsoft software. The record shows quite clearly that this convicted monopolist will take whatever steps necessary to circumvent or eliminate any person, company, or law which stands in the way of Microsoft's goal of total ownership of all software markets, including the Internet.

Please take future generations into consideration when deciding this issue. I don't want my children to be force-fed a specific company's idea of software. I want there to be fair choice.

Thank you,  
Doyle R. Seppala

NO on Microsoft Settlement!

I do not condone the settlement with Microsoft currently under public comment. The antitrust case has been so clearly and painstakingly laid out against this company that anything short of a structural remedy would be an obvious sell-out.

Even as a conduct-only remedy, the proposed settlement is weak and ineffectual. It has been demonstrated that Microsoft achieved a leading market position with many software products through serious antitrust infringements, and not through honest business practice.

Under the proposed settlement, Microsoft would simply continue that practice with very minor changes. The OS, desktop, server, web browser, word-processing, spreadsheet, and other markets would look exactly the same in five years: barren of serious competition.

From: Roger Sinasohn  
To: Microsoft ATR  
Date: 1/23/02 2:45pm  
Subject: Microsoft Settlement

I and my family are opposed to the proposed settlement with Microsoft for many reasons. Especially concerning is the failure of the settlement to address Microsoft's potential use of intentional incompatibilities as a means to sabotage competing operating systems and applications. Microsoft has in the past used this technique to eliminate competition from Digital Research's DR-DOS operating system.

As one who spends a fair bit of time supporting computers in public schools and the teachers that use them, I have seen first-hand the problems with Microsoft's monopolistic acts. As a computer professional for over 20 years, I have seen the stagnation of innovation in the computer industry caused by Microsoft's anticompetitive practices.

Please reject this settlement and develop something which will adequately censure and penalize Microsoft while ensuring that they are unable to continue their illegal acts.

**MTC-00018030**

From: Charles Hixson  
To: Microsoft ATR  
Date: 1/23/02 2:46pm  
Subject: No.

The settlement proposed is grossly biased towards Microsoft. They should not be so rewarded for their criminal activities. The limitations imposed seem to be rather trivial considering the gross and severe and repetitive nature of the offenses. This is not the first time that Microsoft has engaged in monopolistic abuse. I don't believe that it's even the first time they have been convicted. And considering the amount of time and effort that needs to be expended to even bring such a mammoth beast to court, to impose a trifling penance is at best unwise.

A fair decision would break Microsoft into pieces, each one no larger than the largest of its remaining competitors (basically Apple Computer). I recognize that this is politically unacceptable, but this appears to be less than a slap on the wrist.

I suppose that it could be argued that Apple is basically a hardware company, in that case I would argue that the pieces of Microsoft should be no larger than the software division of Apple.

I have been quite offended by Microsofts blatant abuse of its monopoly. I've also be somewhat injured, though just how much would, I admit, be difficult to determine. But I count perhaps 1/3 of the system crashes and lost data events as injury by Microsoft. I count perhaps 1/2 of the time spend fighting and recovering from computer viruses as injury by Microsoft. They have blatantly and persistently ignored pre-existing standards of good professional practice. They have cut corners in a way that would have put a contractor out of business quite quickly. They have sabotaged their competition in markets both large and small. They have leveraged monopolies in some areas into first advantage and then monopoly in other areas. They have misappropriated code, and when the owner complained, put them out of business. Etc.

Sincerely,  
Charles Hixson

Subject: Microsoft Settlement

I am writing to comment on the the proposed final judgment in the Microsoft settlement. I do not believe that the proposed settlement addresses enough of Microsoft's practices for it to be effective. It also appears to leave "loopholes" that Microsoft can use to manipulate its business partners.

My main concern is with the mystery of the Microsoft file formats. In my mind the stranglehold Microsoft has on the format of office documents prepared with their software presents the greatest barrier to entry for alternative office products and alternative operating systems. The proposed final judgment has no provisions for the ability to reverse the damage of years of anticompetitive practices in this arena. I added my name to the petition put forth by Dan Kegel which addresses this and many other concerns about the proposed final judgment.

Thank you for your time,  
Robert Kennedy

From: Najati Imam  
To: Microsoft ATR  
Date: 1/23/02 3:47pm  
Subject: Microsoft Settlement

Perhaps the most unsettling thing I see is that due to the lack of provisions to open the market the monopoly will not be resolved. Namely, due to their present file formats not being opened competing software development companies will not be able to create software to offer to end-user companies already entrenched in Microsoft software as viable options. Due to the volume of information already stored in closed formats, unless these formats are opened the entire settlement will be for naught.

From: Andrew Abdalian  
To: Microsoft ATR  
Date: 1/23/02 2:47pm  
Subject: Microsoft Settlement

Dear Sir or Ma'am,  
Pursuant to the Tunney Act, I am addressing this letter to you to state my opinion concerning the current case pertaining to Microsoft's violations of the Sherman Antitrust Act.

I have followed this case closely, as I have been concerned about Microsoft's anticompetitive practices for years. The case seems very simple, in my estimation. Microsoft blatantly used its influence as owner of the Windows operating system (OS) to "encourage" users to switch Internet browsers from Netscape's Navigator/Communicator to its own Internet Explorer. This is only one of many in a series of anticompetitive practices:

- the theft of Apple's graphical user interface (GUI) on which Windows is based
- the threat of cutting support for the Macintosh version of its Office suite because Apple refused to stop using its QuickTime technology, which competed directly with Microsoft's own Windows Media Player.

All these and more are evidence enough that Microsoft cannot be trusted to use its influence only in accordance with the law. Now, a proposed settlement has come about which does little more than ensure that Microsoft plays by the rules. I think that this is the first step the government has taken in the right direction, but it should not be the last. In the proposed settlement, there is no section which requires that Microsoft be reprimanded in any way for the harm they have caused to the free market, competitive economy. Microsoft has spent years regaling in stomping out small upstart businesses, either by buying them out, or with such examples as Netscape, which grew too big to simply stamp out, using their operating system to effectively lock competitors out. Code in Windows was manipulated in such a way that no browser could be as efficiently implemented in the Windows operating system as internet explorer.

Stronger action must be taken against Microsoft considering its history of success and most of its gains have been enabled solely by illegal and anticompetitive means. The company must be restricted in some manner, not just slapped on the wrist and told to play nice from here on out. Microsoft has shown that it has no intention of playing nice, and that it knows how to bend the rules to its benefit. This can only be prevented through stricter restraints on the company. I leave it up to the Department of Justice to determine what these restraints entail; whether they choose to split up the company as Judge Jackson wisely recommended, or

whether they only choose to restrict its ability to market internet-capable applications as a part of its Windows software is a matter to be worked out with the states who are filing the complaint. Microsoft's proposal of "donation" of computers to underprivileged schools, which would result in Microsoft's subsequent domination of the education portion of the computer market, would completely undermine the purpose of this case. Such an act, or any variation on that theme, would strengthen Microsoft's monopoly power and allow it to muscle around the competition more than it already does. If such a remedy is achieved, another antitrust suit will surely become necessary in the near future. With taxpayers in mind, please exclude this possibility from your list of possible remedies.

Thank you for reading and considering the suggestions of the public as you come to your decision, instead of relying only on Microsoft's near-perfected tactics of presenting its own favorable—and completely fabricated—version of public opinion.

Sincerely,  
Andrew Abdalian, a concerned citizen.

From: rossi@math.udel.edu@inetgw  
To: Microsoft ATR  
Date: 1/23/02 2:47pm  
Subject: Microsoft Settlement

Dear Ms. Renata B. Hesse,  
I am writing to express my concern about the Department of Justice's proposed settlement in the Microsoft Antitrust case. There is no question that Microsoft has done irreparable harm to the US economy and US consumers by stifling or "acquiring" superior products and technologies, and limiting consumers' choices of operating systems. This matter has been decided in federal court.

Unfortunately, the settlement proposed does not effectively curb Microsoft's monopoly power. They still integrate and bundle Explorer into their operating system forcing Netscape, which is a comparable if not superior product, into an "add-on" status. The same is true with their media player product. In fact, Windows is riddled with a variety of services (called middleware) that are bundled in with their OS in an attempt to wipe out competition by reducing them to "add on" status.

The key issue is that the manufacturer of an OS is using their position unfairly to make their applications more competitive. In the past, they have hobbled their standard API's that competitors must use, and reserve more optimal "back door" subroutine calls for their own products. Developers need full access to Windows API source code. OEMs ought to be allowed to high third parties to modify Windows to suit their hardware needs. Finally, the current DOJ deal relies on OEMs to provide a competitive alternative to Windows while the settlement does nothing to restore competition as is usually the case with antitrust resolutions.

I think Microsoft makes a fine product, but their actions have caused many other fine products from ever appearing on computers.

This activity is un-American and serious controls should be placed on Microsoft to control their practices. Sadly, the settlement hardly comes close. Please serve the American people by revising this settlement.

Sincerely,  
Louis Rossi

Subject: Microsoft Settlement  
To Whom It May Concern:

I have read the current proposed settlement with Microsoft and I disagree with it in its current state. While it does try to prevent Microsoft from continuing its anti-competitive practices, it does nothing to punish them for their past actions. The mere presence of a monopoly like Microsoft damages competition. Since any plans to break up the company seem to have been abandoned at least consider altering the settlement to help level the playing field between Microsoft and its competitors.

Sincerely,

Subject: Microsoft Settlement  
Dear Sirs,

Regarding the proposed settlement in the Microsoft antitrust trial, please record my opinion that the proposed settlement does little if anything to protect consumers and businesses from the crushing forces of Microsoft, and I oppose the settlement.

The reason my opinion is significant is because I am not affiliated with any of Microsoft's competitors, the amount of money I have given to Microsoft, along with my reasons for my "change of heart". I am a computer enthusiast, and programmer. In years gone by, Microsoft courted developers, and I was eager to learn and use Microsoft technologies. I have purchased (not copied!) MSDos5.0, MSDos6.0, Windows3.1, Windows95, Windows98, VisualBasic5.0, VisualBasic6.0, VisualC++5.0, VisualC++6.0, Excel97, and Word97. I have purchased indirectly (through the purchase of new computers) additional copies of Windows98, Windows95, and Word2000. I would seem to be one of Microsoft's biggest fans. It seems that Microsoft has no real competition in the PC market, and now that they dominate, they are trying limit MY right to innovate. They also want to control my personal information and my access to online marketplaces. This must not be willing promoted!

As a citizen of the United States, I urge the Justice Department to protect me, and other consumers and businesses from the rapidly expanding monopoly called Microsoft.

Sincerely,  
Jeff Post

Subject: Microsoft Settlement

The Proposed Final Judgment in the Microsoft settlement is terribly lacking in its scope of coverage, and in its abilities adequately enforce the rules it sets. The language of the agreement is far too vague, and allows for far too many loopholes. The Judgment does nothing regulate Microsoft.NET or the C# programming language, and it also fails to mention Microsoft's latest push into the tablet PC industry and their strangle hold on the Pocket PC industry. The Judgment barely covers Microsoft's monopolistic business practice over the last five years, but it does absolutely nothing to slow Microsoft's monopolistic powers in the present and future market.

The Judgment as it stands now is an utter failure. It will do very little erode the Applications Barrier to Entry, because of its vague language, and outdated status. Also, the Judgment provides no special mean beyond law enforcement to enforce the settlement. The Judgment should at a minimum provide for a technical committee with investigative powers to ensure that Microsoft is following the new rules laid down. If this Final Judgment is agreed upon it will do nothing to hinder Microsoft's monopoly, and only lead to more legal action by Microsoft's many crushed competitors in the future.

Subject: Microsoft Settlement

According to the Court of Appeals ruling, "a remedies decree in an antitrust case must seek to "unfetter a market from anticompetitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" The wording is too broad in regard to specific vendor issues. This is an easy exploit to take advantage of. There should be a uniform pricing structure.

The proposal in no way denies the fruits of the violation to Microsoft. The company has in effect stolen billions of dollars and countless technological innovations and placed itself as the governing body of computing. These billions should be distributed back into the hands of former competing companies and the trade secret file formats used by Microsoft should be opened to the public in order to even the playing field and give other companies a fair chance this time.

With the market control Microsoft enjoys, only strict government fines in the billions of dollars at the first sign of misconduct is enough to sway Microsoft from repeating its hostile takeover of the computing world. This is in addition to fines Microsoft, in my opinion, owes for previous misconduct.

Thank you,  
Jena Perkins

Subject: Microsoft Settlement

Hello,  
I do not think the idea of having Microsoft provide their products to schools serves as a punishment, but more as a promotion.

1. Microsoft software is already heavily used in schools; this will allow them to have a larger presence.

2. This is an area Apple has tried to cater to, with special promotions to help schools afford hardware/software.

3. Software is something that can be shoveled out for free, because it is not a physical resource. (Example: Internet Explorer vs. Netscape Navigator, which was sold in commercial markets at the time) So, Microsoft is not paying for anything, even though they were supposed to be "punished."

4. The deal is only temporary, as after a few years, the licenses will expire and the schools will then have to pay Microsoft. If these schools are considered "poor," where are they going to get the money in a few years? What a nice gift.

5. The idea that introducing Microsoft software into schools to provide students with the tools used in the workplace is a joke. It is unfortunate that Microsoft software is so dominate that people see this as acceptable practice. Computer literacy is not about knowing how to use Microsoft Word; it's about knowing how to use a computer, and software/hardware diversity is an important part of this process.

Please try to find something that actually would work and not try to appease Microsoft.  
Steven Fuller

Subject: Microsoft Settlement

Dear Judge Kollar-Kotelly,  
The proposed settlement between Microsoft and the DOJ is inadequate and should be rejected.

The settlement fails to levy any fine against Microsoft. Microsoft should be forced to relinquish any ill-gotten gains from its illegal behavior. Any revenue gained from the sale of products or services that could not have been sold if Microsoft had not illegally extended and maintained its monopoly should count towards these "gains". Interest on the revenue should count too.

All of this money should be given back. It is likely that the amount is in the tens of billions of dollars. So be it. The fine must be large enough to effect a behavioral change on Microsoft's part, otherwise it will be seen as a mere "cost of doing business." Corporate

crime must not pay. In addition to the aforementioned omission, the existing terms of the proposed settlement have multiple flaws. The most significant are these two:

1. The Technical Committee put in place by the terms of the settlement would have no real enforcement authority. It cannot fine Microsoft for noncompliance. It cannot make public statements about its activities. Without either ability, it is unlikely that it will be able to change Microsoft's behavior in any way.

At best, the Technical Committee can extend the terms of the final judgement for two additional years. Since the TC's enforcement powers are insufficient, extending the duration of enforcement would be senseless and a waste of taxpayer money.

2. Microsoft may withhold technical information on "security" grounds. However, security is a pervasive aspect of technology at all levels. Thus the loophole of section J.1(a) is total.

Failing to provide an adequate punishment for a major corporate criminal will set a bad precedent for future cases, including whatever cases may emerge from the Enron debacle. No corporation, no matter how influential or economically significant, should be above the law.

Yours Truly,

Dear Sirs:

I am a Republican, voted for G. W. I like a lot of what he has done since being in office. However the Justice department seems to be in another camp. First the Microsoft debacle and then Enron and allowing them to shred documents even up to last week.

Software was my field before retiring and I can see what Microsoft has done to competition maybe better than some others. Anybody can see how arrogantly monopolistic they are, just from their public behavior. Please start doing what you are appointed to do. Take care of our business environment. Enforce the law! This is not a difficult situation to analyze, especially for good, honest, Republican lawyers.

The proposal that they donate their software to schools is so much of an "in your face" gesture that anyone should be offended.

If anyone has taken the trouble to read this, thank you.

Regards, Bob Stormberg

Subject: Microsoft Settlement

I am deeply concerned about the DOJ's proposed settlement with Microsoft. The remedies outlined in the Proposed Final Judgement (PFJ) fail to address a number of Microsoft's anticompetitive practices, and ignore completely the many venues in which Microsoft pursues, protects, and extends its monopoly:

The PFJ doesn't take into account Windows-compatible competing operating systems

The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered". The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

The PFJ as currently written appears to lack an effective enforcement mechanism.

Until these and other problems with the PFJ are corrected, its remedies for Microsoft's anticompetitive behavior are indeed no remedies at all.

From: Peter Smith  
To: Microsoft ATR  
Date: 1/23/02 2:50pm  
Subject: Microsoft Settlement

I am deeply disheartened by the actions Microsoft has taken to solidify their current market position. I feel letdown by the DOJ in their lackluster quest to impose just punishment on Microsoft. Although

Microsoft has been found to be a Monopoly, who used it's dominance to destroy their competitors, they continue with their old antics; for example, in Microsoft's latest release of Windows XP they have integrated Windows media player into the OS... sound familiar? How can Real Player and Quick Time compete with this? The DOJ must take into consideration the consumers' perspective. The consumer will use what is given to them; they won't pursue an alternative to the integrated functionality of the Operating System. How about the content providers?

Why would they use any other media utility? Once Windows XP is mainstream, Microsoft will have nearly 100% market share in the media player market... Why would the content providers use any other media utility? Furthermore, with Microsoft's dominance and potential saturation of the media market, what are users of non-Microsoft operating systems to do? How are the development communities of Open Source software and Mac OS Developers to compete? Can we allow Microsoft to embrace standards and "extend" them into incompatibility with legacy systems, furthering the divide between traditional UNIX servers and Microsoft's desperate attempt to dominate the server market (i.e. Kerberos)?

I propose this resolution that Microsoft be ordered to publish all APIs', Frameworks', Server Protocols, File Formats, or any such information (perhaps excluding the Intellectual Property that is source code) that the development community needs to interface with or create emulation of all current/future Operating Systems and their related services.

Thank You,  
Peter Smith

From: Steven Grimm  
To: Microsoft ATR  
Date: 1/23/02 2:50pm  
Subject: Microsoft Settlement

I'm writing to express my displeasure with the proposed settlement with Microsoft. It fails to address a critical issue that will allow Microsoft to continue to shut out competitors: Microsoft's tendency to use proprietary, undocumented file formats for the output of its applications and its operating system components. I believe Microsoft should be required to fully document all its file formats. This will level the playing field in many Microsoft-dominated areas.

A simple but ubiquitous example is Microsoft Word. If I compose a Word document and send it to you, you have three choices. You can read it with your copy of Word (which means you'll have to go and buy Word). You can read it in a stripped-down, but still essentially correct, form using Windows' built-in Wordpad application. Or you can try to read it with StarOffice or another competing program. I say "try" because chances are if I've done anything unusual in the document, the non-Microsoft products won't be able to interpret it correctly and will give you garbled results. This is a direct consequence of the fact that

the developers of competing applications must all reverse-engineer Microsoft's document format, and given the format's complexity, that's next to impossible to do perfectly.

Requiring Microsoft to document its file formats would allow competing developers to build tools that would interoperate with Microsoft's. And it wouldn't be a crippling blow to Microsoft; they would still be free to produce the most feature-rich, efficient software for reading their documents, and they'd be free to innovate as they saw fit, so long as the results of their innovation were made public.

There would be other important benefits as well. A lot of corporate and government documents will become lost to future historians if they're in a format that Microsoft has long since stopped supporting. Making the formats public means it will always be possible to go back and correctly decode old documents.

There are other problems with the settlement as well, but for me this one is the biggie, and without addressing this problem, Microsoft will be free to continue making minor changes to its ubiquitous file formats such that competing products don't work well enough to be usable.

Thanks for your time.

From: Ingles, Raymond  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 2:50pm  
Subject: Microsoft Settlement

Like many other developers, I am rather disappointed with the Proposed Final Judgement in several respects. I feel that it does not punish Microsoft sufficiently for anticompetitive practices, but more importantly it will not effectively prevent such practices in the future.

To list a few brief examples: (1) The definition of "API" used in the PFJ is too narrow and does not include many critical features. (2) The PFJ does not mandate the publication of Microsoft file formats, which are critical to providing interoperability with the monopoly's products. (3) The PFJ does not require sufficient advance notice by Microsoft of technical requirements and API changes.

For these and many other reasons, I wish to register my dissatisfaction with the Proposed Final Judgement as it currently stands. Thank you for your efforts on behalf of the citizens of the United States.

Sincerely,

Ray Ingles (248) 737-7300

Subject: Microsoft Settlement

As a professional computer programmer and hobbyist, I was shocked to hear about the grossly insufficient proposed settlement in

the Microsoft Antitrust case. The proposed settlement only puts a few restrictions on Microsoft which will do nothing to encourage competition.

The danger of a monopoly in the computer industry is compatibility. Software must be compatible with hardware. Programs must be compatible with the operating system. I use Windows at home, not because it's the best operating system, but because all of the programs I run are compatible with and only with Windows. Any settlement that encourages competition must at the very least address this issue.

If there were ten different operating systems on which I could run my programs, there would be competition, and Microsoft could not use its monopoly unfairly. I do not necessarily mean that Microsoft should be broken up. If they were forced to publish all of their API's (Advanced Programming Interface—the code that links the programs to the Operating System) without copyright or patent, with a clause barring Microsoft from litigation against those who use these API's to develop competing operating systems, this would be sufficient. It would allow third parties to develop ! operating systems that would run the same programs, thus encouraging competition. Microsoft would then be forced to compete on the merit of its product, which is what true competition is about.

Once again, I consider this to be the bare minimum, without even addressing the numerous other issues. Any settlement that does not at least do this much is a statement that the Microsoft is more important than the law or the free market.

Sincerely,

Todd Hadley

From: Gabriel Wilkins  
To: Microsoft ATR  
Date: 1/23/02 2:49pm  
Subject: the proposed Microsoft Settlement

This settlement is exceedingly unfair to everyone except Microsoft. Big business has no more rights than any American citizen, and we need to stop acting as if they do. Microsoft's arguments that if they are punished, the economy will suffer as a result are ridiculous: Microsoft's stranglehold on the market has already killed a vast amount of innovation as PROVEN in the findings of fact already. To allow in any manner a further stranglehold will be to delay the innovation that brings the future closer, and prove to the American people once again just how much corporate interests are the only thing that matters anymore.

The right choice, the economically sound choice, the American choice is to stand up to those who have wronged you, your friends, and your countrymen, and deal with them appropriately. This proposed settlement is not appropriate, it is limp-wristed, and plays directly back into Microsoft's original goals.

Subject: Microsoft Settlement Dear Sirs,

I am quite upset at the Microsoft Settlement that was recently announced. Why was there no mention of Microsoft's illegal agreements with system integrators to keep other operating systems from being available at boot time. This is a key component of keeping a boot heel on the neck of your competitors, and all under the guise of "trade secrets". This is no different than a street thug extorting money from a small business owner.

The true difference as the OJ Simpson trial proves is you can get away with anything, if you have enough money to buy enough lawyers and lobbyists. I am quite disappointed with this settlement in every aspect. You have sold out the American people for NO GAIN. You spent millions of dollars researching and prosecuting the this case only to fold like a spineless slug when the inevitable heat was turned up. I guess as an American I should be used to my government selling me out, but I am not. I wonder if this will be in history books as the trial that set the tone for the next century.

#### MTC-00018054

From: Bill Kristan  
To: Microsoft ATR  
Date: 1/23/02 2:51pm  
Subject: Microsoft Settlement

I oppose the proposed settlement in the Microsoft antitrust case. Microsoft has already been found guilty of antitrust violations, and any remedy should prevent them from such violations in the future. The current settlement does not prevent them from continuing to illegally maintain their monopoly in any way. Any remedy for their illegal practices must at a minimum include the following:

1. Microsoft Windows should be provided as an extra-cost option when I purchase a computer. It is currently nearly impossible to buy an IBM-PC compatible computer without also buying MS-Windows, thereby forcing me to pay Microsoft for a product I do not want. Microsoft's willingness to punish computer manufacturers for offering computers with alternative operating systems, or computers with more than one operating system preloaded, is apparently responsible for this fact, and the practice should be discontinued.

2. Microsoft's file formats should be completely documented so that other software companies can write programs that are able to read and write native Microsoft files. Although I do not regularly use the Microsoft Office package, for example, the fact that it is not possible for me to read and write the binary MS-Office files that others send me has forced me to keep a copy of the MS-Office installed on one of my computers just to allow me to read the files. Furthermore, since MS-Office file formats are frequently not backwards-compatible I have in the past had to upgrade my copy of MS-Office even though I would prefer not to own it in the first place. The "filters" that other companies write for MS-Office files vary in quality, but none are able to preserve all of the formatting and content of the files. This

is not a technical necessity, but is rather a strategy by Microsoft to induce customers to buy MS-Office instead of competing packages, and force them to upgrade when they would otherwise be content with their current version.

Making the file format API public would solve this problem. I trust that in the Government's desire for a rapid resolution to this case that it will not abandon an attempt at an effective remedy. Microsoft has already been found guilty of illegally maintaining their monopoly position, and I hope that the Government chooses to honor its responsibility to the American consumer to prevent Microsoft from continuing in their illegal behavior.

Sincerely,

From: Kevin Ruml  
To: Microsoft ATR  
Date: 1/23/02 2:53pm  
Subject: Microsoft Settlement

I am writing in to let you know my point of view on why the settlement agreement is completely inadequate. I am in the computer industry, and have my MCSE (Microsoft Certified Systems Engineer), which I received to advance my salary at my previous job. I got it shortly after entering the computer field, because Microsoft was almost all we worked with—there was some Novell, but not worth mentioning. Prominent in the MCSE training books are sections on migrating to Microsoft servers from Novell servers. It seemed pretty neat at the time that Microsoft made it so easy. As I continued on working with computers, I learned a little more about Novell, and then got into Linux.

I realized that Microsoft was really a substandard operating system for servers, but completely owned the desktop. With this they did to me what they probably do to a great many computer technicians—lead them up the Microsoft food chain to their server operating system and away from anything else. A good friend of mine did this also, but unlike him I learned more than what Microsoft told me, and learned there was more and better out there.

Most people using computers do not learn more, but just enough to do their job. They do not care, or necessarily need, to know more. So the technicians and administrators do what they are told by their bosses, who

use microsoft on the desktop and say to use Microsoft, or believe what Microsoft tells them about their products and wants to use them.

Is this a bad thing? Not necessarily, until you look at what Microsoft has done in the past. They were handed their desktop operating system monopoly by IBM, then proceeded to continually illegally maintain that monopoly.

Numerous stories, from the DRDOS issues to the more recent Netscape Navigator, show how Microsoft killed other products and companies. I think most people do not want to destroy Microsoft, just to make them compete fairly on the merits of their products. The remedies in the proposed settlement does not accomplish this. There are too many loopholes that even a simple change of terminology can get through, and not take into account possible future abuses. All remedies should take into account and apply to any new products Microsoft releases (XBOX, .NET, etc.).

So what to do? I do think that monetary punishment is necessary. Microsoft has been very successful and made a great deal of money with their illegal practices, and should be made to pay some back. How much and to whom? I do not know, but maybe free software to all U.S. government agencies for a period of time (Five years? Ten years? How long were they abusing their monopoly?) would be a good start. I am sure the U.S. government has been one of Microsoft's largest customers, if not THE largest. This would basically be giving the U.S. taxpayers, proven in court to have been harmed by Microsoft, money without all the administrative problems.

And as for remedies to keep them from abusing their monopoly in the future, I think the best idea is to simply have them reveal all Windows APIs and Office formats without discrimination. It should be published on their website for all to use freely for whatever reason. Standard "document", "spreadsheet", "presentation", etc. formats that every program uses, regardless of what company made it, would mean that the program that worked the best with the best features would do the best in the marketplace. That is competition, not trying to keep up with changes in Microsoft Office formats to keep upgrades regular. Microsoft Office is probably the biggest reason they keep their monopoly. Yes, it is available on the Mac, but the difference in price from Macs to PCs makes the difference to companies and consumers.

Also, Windows should not be pre-installed on all computers as default. A choice should be offered so that Microsoft does not get money for every computer sold. The consumer should have the choice of operating system, or none at all. Just a few thoughts.

Thank you for your time.  
Kevin Ruml

**MTC-00018057**

From: hawks@night-hawks.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 2:50pm  
Subject: Microsoft Settlement

I would like to submit my comments regarding the proposed settlement of the

case of the United States of America vs. Microsoft Corp. Action No. 98-1232 as provided by the Tunnelly Act.

In my opinion, as a worker in the computer industry for over 7 years familiar with Microsoft (MS) products as well as a large number of other Operating Systems (OSs) and products, I do not feel the proposed settlement will significantly impact MS's current monopoly or its illegal activities as a monopoly.

While the settlement does provide for the release of API's for the Windows OS and communications protocols itself, it does not provide for the release of documentation of file formats used in its other products, specifically but not limited to the Microsoft Office Suite. MS's other software products besides the OS are a very large part of why MS has become a monopoly and can use that power in an illegal manner. The vast majority of work done in the corporate world, is done using MS Office. Competing Office suites from Apple Computer, Sun Microsystems and others can not accurately and completely interoperate with electronic documents produced using MS Office due to the closed file format. Forcing MS to release full and complete documentation of the file formats used for all of its products would have no direct effect on MS's ability to market or sell such products. It would however allow competing products from other manufacturers to properly interoperate with the defacto standard for electronic documentation in the corporate workplace. This single remedy would do more to halt microsofts illegal practices than any currently listed in the proposed settlement.

The settlement also limits to whom MS must release documentation about the Windows OS and communications protocols APIs to third parties that "meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business", from Article III, section J, paragraph 2, subsection c. From the same paragraph, subsection d, the settlement proposes that any 3rd party "agrees to submit, at its own expense, any computer program using such APIs, Documentation or Communication Protocols to third-party verification, approved by Microsoft, to test for and ensure verification and compliance with Microsoft specifications for use of the API . . .". Both of these provision can very easily be used by MS to prevent Open Source Software (OSS) projects from obtaining and using APIs from MS OSs or middleware products.

OSS projects have no viable business per se, as they are written almost exclusively for the purpose of free distribution with out commercial gain. Also OSS projects are written by volunteers with out financial backing. MS can very easily use the previously mentioned articles of the proposed settlement to only "Approve" 3rd party verification that has excessive costs involved further preventing OSS projects from ever being able to provide interoperable and or competing products to MS's OS or middleware products.

The proposed settlement has more such loopholes that work solely in the favor of MS and do nothing to provide remedies for MS's

illegal actions as a monopoly. As such, it is my opinion that the proposed settlement be declared invalid by the Federal Courts and a proper remedy including the release of full and complete documentation of file formats, OS APIs, Middleware APIs and communications protocols be made public and freely available, without restrictive or exclusive licensing or verification procedures to all 3rd parties including, but not limited to ISV, HSV, OEM, OSS projects and manufacturers of competing products for the purpose of interoperability.

While further remedies may also be required to ensure MS's compliance with a final judgement and to enforce monetary or punitive damages for their past illegal actions, any final remedy that does not address the issues I have mentioned will fail to effectively alter MS's monopoly position or its continued illegal actions.

MS has a documented history of breaching previous agreements reached with the US DOJ and during the trial exhibited nothing but contempt for the trial and the legal process, including falsifying testimony and evidence.

Any and all loopholes in this settlement will be exploited by MS to further their illegal monopolistic actions. To prevent this, MS's lawyers, or employees direct or indirect should have no input on the final remedy.

Sincerely,  
Alan Palmer

To: Microsoft ATR  
Date: 1/23/02 2:50pm  
Subject: Microsoft Settlement

I consider the Proposed Final Judgment in U.S. vs Microsoft to be an ineffective remedy to Microsoft's anticompetitive behavior.

As currently written, the PFJ doesn't give developers of competing operating systems a reasonable opportunity to create compatible products; it still allows exclusionary practices against hardware retailers; it doesn't address unfair licensing practices toward enterprise customers; and it allows discrimination against users of non-Microsoft products.

I believe limiting Microsoft's power will create more competition in the computer industry and will ultimately benefit the consumer, and I hope you will take steps to make this happen.

Sincerely yours,  
Ted Chiang

To the Department of Justice  
Antitrust Division

I respectfully object to the settlement of the Microsoft case in the Tunney Act.

The best interest of the citizenry has not been served in the atmosphere of emerging technology, information is power Microsoft, the company, has been masterful at controlling the flow of information to the

general public the lack of public outcry is not due to services well-rendered but to the ignorance of the populace when full disclosure comes to light, there will be far reaching ramifications, especially if the government had the opportunity to act, but chose not to another recent prime example is the Enron case it is the government responsibility to safeguard the best interest of its citizenry and not be blinded by short term goals of one company

Sincerely,  
Edwina Chen

Subject: Microsoft Settlement

I think the proposed settlement is a bad idea because it does not require Microsoft to document all file formats Microsoft products use.

This lack of documentation of file formats (and other related communication formats such as for data transfer over sockets) is a major barrier to competition, essentially locking users into the Microsoft product suite in order to read or modify documents others generate.

Ideally, Microsoft should be required to document all file formats concurrently or before the release of new versions of products such as Microsoft Word or other Office products.

Subject: Microsoft Settlement

Although I am sending this from work, this is my private opinion. From what I've read about the Microsoft settlement, it does not remedy the monopoly. It is imperative that this one company not be allowed to maintain a stranglehold on our future.

I believe that the part of Microsoft that produces and sells Windows should be broken apart from the parts that produce and sell programs that operate in Windows. With that interface exposed to competition, there will be competition—on both sides of the interface.

#### MTC-00018063

From: Torrey Hoffman  
To: Microsoft ATR  
Date: 1/23/02 2:52pm  
Subject: Microsoft Settlement

I'm writing to express my concern and disappointment with the proposed judgement in the Microsoft Antitrust case. It seems that the Department of Justice has won the case, only to concede defeat at the end.

As a software engineer, I've watched with disappointment for years as Microsoft has leveraged their desktop operating system dominance to crush one competitor after another.

I believe that few informed purchasers choose Microsoft products on their merits alone—rather, people buy Microsoft mainly because they need to exchange Microsoft Word and Excel documents.

One way to restore competition to the market would be to require Microsoft to completely specify and fully document their Microsoft Office file formats. No changes should be allowed without several months notice and complete documentation in advance. This would allow competitors to create viable alternatives with the ability to interoperate with Microsoft, and would restore competition to an industry that badly needs it.

Please, consider a judgement which forces Microsoft to allow competitors to interoperate with their products.

Thank you for your consideration.  
Torrey Hoffman

From: Bryan Dyck  
To: Microsoft ATR  
Date: 1/23/02 2:55pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses.

This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is hardly justice, and is a severe blow to those who have suffered from Microsoft's wrongdoing!

Though the legal proceedings for the case are taking place within the United States, the course of action chosen by the Court will have an effect outside its borders. Microsoft's

products are not used only by Americans, but by computer users worldwide, including people such as myself—a Canadian citizen. I ask that the Court keep this in mind when determining its rulings—Microsoft's actions have not only harmed Americans but also people from around the world.

I applaud the Court's desire to reach a settlement in this long-running case, and I hope that desire does not lead to a rushed and possibly unjust settlement simply for settlement's sake. A wrong that is not corrected will only be compounded in the future.

Sincerely,  
Bryan Dyck

From: Paul Arndt  
To: Microsoft ATR  
Date: 1/23/02 2:52pm  
Subject: Microsoft Settlement

To Whom it may concern:

This letter is in regard to the proposed Microsoft penalties in the DOJ case against Microsoft Corporation.

I feel the US Department of Justice is doing the US public a huge disservice by not requiring Microsoft to change their UNFAIR licensing practices. I work in a large Fortune 100 Corporation and first of all, trying to decipher the Microsoft licensing is almost impossible for any normal (read non-lawyer) person to figure out. I have also called Microsoft directly with licensing questions and the Microsoft person had to get more information and return my call. Thus, even the people hired by Microsoft to handle licensing cannot sometimes figure out the proper licensing requirements are.

The fact that Microsoft is the only company that licenses software per machine rather than per user is ludicrous. They want you to license a copy of Microsoft software for any machine that could possibly run the software which includes in many cases Unix (Linux, HP-UX, Sun) workstations not even running a Microsoft operating system if you are using the Microsoft Terminal Server application. Microsoft should be forced to go to a simple per user licensing model like all other software companies that I am aware of use.

This strange licensing practice costs US corporations and small businesses billions of

dollars each year to enrich MS executives pockets. It also costs the US Government additional taxpayer money to license Microsoft Operating Systems and applications which I object to.

This practice is truly unfair and Microsoft should be penalized and made to change their licensing to a per user license model.

I realize that this will have no effect as the US Government does not care what US Citizens have to say in matters like this, but this is truly unamerican and robbing billions of dollars each year that could be spent on other things.

Thank you.

From: Charles Wheelus  
To: Microsoft ATR  
Date: 1/23/02 12:51pm  
Subject: Proposed Settlement is Unjust

To Whom it may concern:

I feel strongly that the proposed settlement is very unfair to all consumers of PC software and hardware. As a computer and Internet professional, I deal with Microsoft products on a daily basis.

Unfortunately, Microsoft has gained a position that makes it nearly impossible for any company to compete with them on a level playing field. This situation is not much unlike the "old" AT&T before they were broken up many years ago. Innovation was stifled. While there are many viable alternative operating systems available, none of them run software which was developed for Microsoft natively. This requires a software vendor to make 2 or more versions if they choose to support any other operating system costly.

This is really only a problem in the "onsumer" or desktop market (retail market). This would be like one retailer (Sears, Walmart, etc.) locking up the entire retail market and controlling the flow of goods to the consumer. Obviously this would not be good for the consumer.

I do not advocate the break up of Microsoft. Instead I believe the only real solution to this problem is to force Microsoft to release it's API (application interface) into the public domain. This would enable other companies (Sun, Apple, etc.) and operating systems (Linux) to build a API which could run Windows Applications natively on other operating systems.

I applaud and support the ongoing state and federal effort to re-introduce a truly competitive environment into the Personal Computer market.

Date: 1/23/02 2:52pm  
Subject: Microsoft Settlement

I am writing this email to voice my opinion on the Proposed Final Judgement(PFJ) for the Microsoft anti-trust lawsuit. What I found after pondering if the PFJ was truly in the public interest was that there still exist many loop holes that could lead to the same problems we are currently seeing. Although I feel there are many others one area of real concern are some of the definitions put forth, as an example consider the current definition of "Windows Operating System Product". This current definition seems to exclude both Windows XP tablet edition and Windows CE, both of which can run many of the current Win32 APIs without any changes.

My second concern is in the area of application barrier to entry, I don't feel that there has been any effort to allow for non-Microsoft operating systems to implement APIs needed to run application programs written for Windows.

By not allowing this, it would appear Microsoft would continue to be able to exclude other Operating Systems from running their application software. By continuing to not provide a way in which Microsoft applications can be run on non-Windows Operating systems, there will continue to be the same level of control on desktop environments that we currently experience.

I would like to thank you for listening to my concerns, And I sincerely hope a reasonable solution is met.

From: Adam Brown  
To: Microsoft ATR  
Date: 1/23/02 2:52pm  
Subject: Microsoft Settlement

The proposed settlement in the Microsoft anti-trust case is a horribly bad solution to the problem. In fact, it's not a solution at all. It continues to give Microsoft all of the monopolistic power they've been proven to have as well as allowing them to abuse this power just as easily as before.

What needs to be done is to force Microsoft to open up the API's to all of its programs and document formats. This way competitors can interoperate with Microsoft software and the customer can choose which program or solution to purchase based off of the quality and service behind the product.

Thank you for taking the time to hear my thoughts on this matter.

The proposed settlement is a joke. You will, in effect, be REWARDING them. They do not currently dominate the school market, your settlement will hand them the market on a silver platter.

I cannot believe that the judge actually said that a harsher penalty will be bad for the economy! Since when is economic concerns be an issue? What court would buy that as a defense? I could just see it now, Well, your honor, I know I committed murder but putting me in jail would be bad for the economy! What a load of crap.

My proposal would be to break Microsoft into at least 2 companies, force them to publish their source code, pay Netscape for every copy of their browser downloaded for free, make them ship a stripped out version of Windows, free of everything but the OS itself, and pay 15,000,000,000 in fines plus court costs.

Dan Peterman

I am writing to express my concern about the weakness in the proposed settlement in the case US vs. Microsoft. The settlement contains enough loopholes to make it barely a slap on the wrist.

While there have been many people saying that we should leave Microsoft alone, and damaging Microsoft will damage our economy, this is NOT a prudent course of action. With Microsoft as the dominant supplier of PC based operating systems we are needlessly placing our eggs in one basket. Look at the number of small to mid-size companies that were bought out or driven out of business by Microsoft. Wouldn't the economy be stronger as a whole with several competitors then one?

Microsoft tells us that as one company they can deliver a better software product. This statement goes against any study of the business world where competition among distributors encourages innovation.

Microsoft continues to use its dominate position to lock out competition. This is hurting the economy and the software market by reducing innovation.

The Internet was founded through the work of several individuals, companies and universities. They developed standards that allow computers of dis-similar hardware and dis-similar operating systems to communicate.

Microsoft is working to reduce this inter-operability by promoting its own priority file formats. These formats in general can only be read by Microsoft products, which can in general only be run on Microsoft operating systems.

While in a perfect world file formats would be developed by a standards committee and followed by software companies, I hold no illusion that Microsoft would at best drag its feet in following said standards and at worst improperly implement these standards so they could tout the superiority of their propriety formats. In this case the damage has been done and we are forced to use the Microsoft formats as the De-facto standard.

To this end Microsoft should be REQUIRED to publish its file format descriptions so non-Microsoft software can be developed to read the formats. It will only be when there are enough non-Microsoft solutions that sane universal and open standards can be developed.

Perhaps it can be argued that Microsoft has obtained its monopolistic position through legal means, I am not in a position to argue that point, however, now that they are a monopoly they must NOT be allowed to use their position to maintain it. They also must NOT be allowed to illegally profit from their position as well.

There is no need for one large company to control the software market. This is hurting business and consumers alike.

From: Jason Alexander Crosswhite  
To: Microsoft ATR  
Date: 1/23/02 2:54pm

To Whom It May Concern,  
I am very unsatisfied with the current verdict for the following reasons: Microsoft is

a monopoly. I have seen the whole industry suffer for it. I would like to see a structural remedy rather than a conduct-only remedy. I see their current arguments as more of what we have seen from Microsoft for years. You might as well have not even tried to prosecute them. Its not even a slap on the wrist. Interoperability enforcement needs to be stronger. Not only does Microsoft need to make its formats and protocols openly available (especially, for instance the file format for Word, Excel, etc.), but it needs to make it available for the open/free software community. Wording in the settlement precludes this, and open/free software is starting to be some of the only real competition to Microsoft in several areas.

There is no penalty for Microsoft's past misdeeds. This is astonishing!

Microsoft has consistently not lived by the intent or spirit of past agreements, and has consistently been a bad member in the software community. The settlement relies on elements that will play directly in to their hands: secrecy, lacking independence, and able to be influenced by Microsoft.

The provisions in J.1 and J.2 give Microsoft too much leeway. They should have to justify secrecy to a high degree. I am especially worried in this regard to the free/open software community. The internet relies on this typ of software (For instance, "bind" is free software, which is universally used on the internet to transfer domain names (like usdoj.gov) to numbers computers can understand (like 128.223.95.56). Apache is a free web server that runs on the majority of servers on the internet.). Any type of encumbrance on this community would allow the Microsoft verdict to be used—for its advantage!!!!

Please seek a better resolution to these matters. Hopefully a structural one in addition to the problems listed above.

From: Andy  
To: Microsoft ATR  
Date: 1/23/02 2:53pm  
Subject: Microsoft Settlement  
Dear Judge Kollar-Kotelly,

I am displeased with the direction of the MS anti-trust case. With the pending settlement it seems that many of the most pertinent issues will not be handled adequately.

Quoting Dan Kegel:  
"The PFJ prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:  
Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs,

including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems. By allowing these practices, the PFJ is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas."

To me this is unacceptable. Because of Microsoft's market position, allowing them to retaliate against an OEM for shipping a competing Operating System but no Microsoft operating system virtually determines that no OEM will be willing to do so. Because of Microsoft's monopoly, it would in fact be suicide for any consumer PC distributor to defy Microsoft. In particular these rules are extremely inept at protecting small business from further damage.

Thank You for your time,  
Andy Somerville  
Computer Science Student,  
Pennsylvania State University.

Date: 1/23/02 2:53pm  
Subject: RE: Microsoft Settlement

Actually I don't think it's fair to blame MS for the prevalence of WinModem style devices; rather it's shrewd marketing on the part of the device manufacturers. Said manufacturers have figured out that using the CPU as a sort of DSP lets them offload parts off their boards and make them cheaper. Nobody notices until they try to play quake online and all of the sudden their computer can't hack it :) I haven't priced modems in years but it used to be that winmodems were less than half the price of real modems, which is the only thing that explains your popularity (Intel was able to sell the 486SX for basically the same reason).

The manufacturers then don't bother to release drivers for other OS's because they see it as a waste of time—windows drivers allow them to cover 80–90% of the market with just two drivers (one for the 16-bit platforms, one for the NT family). The target audience of the Winmodem is bubba who buys his computer at Wal-mart, not sophisticated buyers.

My current complaint about Windows is the retarded way it handles TCP connections. Let one patch cable slip out for 1 second and the stupid OS drops all your net connections. Never mind that TCP/IP was \*specifically designed\* to handle transient net failures. Stupid . . .

#### MTC-00018079

From: Andy Shih  
To: Microsoft ATR  
Date: 1/23/02 2:55pm  
Subject: Microsoft Settlement

To Whom This May Concern,

I was informed that I would be allowed to submit my opinion on the current proposed settlement between the Department of Justice and Microsoft for the ongoing antitrust case by what I consider to be a reputable mailing list. Please accept my apologies if this is not the case. However, if there is even the possibility that my voice may be heard, I will most gladly take the opportunity.

I feel that none of the proposed settlements and resolutions offered so far by either side is adequate. In fact, I feel that all the proposals I am aware of so far is far from acceptable. They all lack any regulations that will require a change in the anticompetitive behavior we have all witnessed committed by Microsoft. I congratulate Bill Gates and Microsoft with their achievement in creating products that are very useful to the majority of the world community. However, to leverage that success so that no one else can follow in their footsteps and rise to achieve what we all commonly call the American Dream is simply dispicable. Using special APIs (Application Programming Interfaces) so that Microsoft products work better and faster than products made by other companies is unethical. Requiring hardware vendors to promote and use only Microsoft products is unethical. Bundling software, so that a consumer is forced to purchase is unethical. Basically, what Microsoft has done is to take away one of the most fundamental rights of not just all Americans, but all human kind. This is the inherent right to choose. By Microsoft's standards, it is either their way, or no way. That becomes the only choice. This is why whatever decision is made about the anticompetitive nature of Microsoft, this issue must be addressed.

In light of recent events, the only item of the three I have listed that I have seen addressed is the requirement by Microsoft that hardware vendors who promote Microsoft are rewarded, while those who do not are punished. However, to ignore the other two aspects of Microsoft's monopoly is to doom all of us to repeat this process all over again. To insure that the playing field is level for all, Microsoft must be forced to reveal —ALL— APIs that come with all their applications, not just their OS. In this manner, any software and hardware vendor will have the ability to create new and innovative products that will be fully compatible with any Microsoft product. This

should also not just be limited to established businesses, but the public in general. This is the most important point because at some point, any institution had to begin as an idea in the mind of an individual. Individuals must not be forgotten in this process, and be given the same rights as any established institution.

Another issue I had raised is the bundling of software. The best example of this is what Microsoft had done with their operating systems and Internet Explorer. While I think that integrating and bundling a web browser with the operating system is something useful and innovative, the fact that Microsoft made it impossible for any other web browser to achieve this level of integration is what make the practice unethical and anticompetitive. Users need choice. If Microsoft wishes to integrate a web browser into their operating system, then so be it. However, the same opportunity must be present for other web browsers as well. There would not be an issue if users were able to choose among other browsers, such as Netscape or Opera, as their web browser of choice in the operating system, the the playing field will be level again for all competitors in this arena.

Microsoft may complain about the amount of work needed to bring about these changes, but it was due to their actions that we are mired in such a state. It is the responsibility of Microsoft as a corporation to bring about the changes necessary to fix this situation. If they are unwilling or afraid of the work required, then they can leave this industry. Capitalism and a free market dictates that someone will fill the void that they leave, have no fear of that.

This is my view of how the situation with Microsoft may be resolved.

Thank you for your time.  
Sincerely,  
Andy Shih

#### MTC-00018082

From: Stefan Wasilewski  
To: Microsoft ATR  
Date: 1/23/02 2:55pm  
Subject: Microsoft Settlement

My name is Stefan Wasilewski. I am a professional in the computer industry. I am strongly opposed to the proposed settlement.

Here are some reasons why:

Microsoft holds a dominant position throughout the software industry. A remedy which deals exclusively with "middleware" is not sufficient. All Microsoft software should be covered.

There should be no restrictions on pricing or product tying. Microsoft should be left free to develop and sell its products as it sees fit. The only exception to this are the rules which cover OEMs ability to include competing products instead of Microsoft ones.

Microsoft's monopoly position is founded on its control of proprietary interfaces. Microsoft products are linked through a network of proprietary interfaces, making it difficult for competitors to produce software that will inter-operate with Microsoft software. If the proprietary interfaces were published then competitors could produce software that competed directly with Microsoft without the expensive and error-prone process of reverse engineering.

These proprietary interfaces are in the form of file formats, network protocols and APIs. All three need to be made available to competing products.

Where two Microsoft products work together the interface between them can best be made available by setting up a "Chinese wall" between the development groups responsible for them, and then requiring Microsoft to publish all the technical data that is exchanged between these groups.

Where one copy of a product communicates with other copies of the same product (such as when an MS word document is sent to another MS Word user) the file format or communication protocol should be published in a form which allows independent verification that the product conforms to the published description.

Special consideration should be taken of Open Source Software development over the questions of cost, trade secret status and patent licensing.

The "security related" exception to disclosure should be narrowed to include

only keys, passwords and similar security tokens.

From: Gregory Bradford  
To: Microsoft ATR  
Date: 1/23/02 2:56pm  
Subject: Microsoft Opinion

To whom this concerns,  
Thank you for your attention to this matter. As a California resident I am very disappointed that the US Attorney General has settled with Microsoft on such an important issue in such a minor manner.

I have many friends who have lost jobs because of Microsoft's unfair trade practices. Please be fair to my friends, give them some justice. Many of California's high tech firms, which have been very innovative (such as Netscape for example) and have brought us all great wealth, have been driven out of business or something close to that by Microsoft's monopolistic practices.

It is not in California's, or the US's interest, to let Microsoft go essentially free once again. I urge you to adequately address Microsoft's illegal practices.

Otherwise, I truly fear that our technology industry will be crippled by being handed over to a monopolistic corporation which seems to extend its reach on a week by week basis.

If you need proof of this reach please take the time go down to you local software store. It would be a safe bet that one out of every two software titles there will carry the Microsoft name. In some categories of software there is no longer any competition. Please try to buy a spreadsheet product that is not made by Microsoft. Or try to buy a piece of business presentation software not made by Microsoft. It is virtually impossible to go to your local electronics store. Microsoft has now built a large presence in palm-top computers. It is only a matter of time before Palm will be gone just like Netscape.

At your local electronics store take note of the new X-Box technology. A company even as large as Sony will have a hard time competing in game consoles when Microsoft is deliberately losing hundreds of dollars for each X-Box sold. Recently, a Morgan Stanley analyst, Mary Meeker estimated Microsoft will lose \$1 billion on the X-Box. Who can afford to lose \$1 billion dollars? A monopolist can since it can subsidize businesses that would otherwise fail. This is not in the consumer's interest.

A couple of months ago I was purchasing a digital video recorder called a TIVO. Microsoft competes with this product with their Ultimate-TV product. I was directly told by a Microsoft salesperson in a retail electronics store that I would regret my purchase because Microsoft is going to put them out of business. Even the lowest Microsoft employees understand that they hold all of the cards at the moment.

Take note of Microsoft's balance sheet. If their balance sheet is accurate, then it is a

smoking gun. Compare it to IBM's, Sun Microsystems's, Oracle's, Borland's, Corel's, Amazon's, AOL's, and other's balance sheets. Not one of these other companies has the wealth and influence that Microsoft retains. It is only a matter of time before several of those companies are forced out of business because there is no way for them to compete on an equal footing. Lastly, note Microsoft's effort's to control access to the Internet via its Passport and .Net strategies. These strategies are designed to slowly wear down the consumer into submission to Microsoft's desires. Much like Microsoft has done to the DOJ it will attempt to do with consumers. Microsoft is very patient. It is the key to their survival.

Please, do not allow them to do this. It is readily apparent that justice is not being served. It has been discarded by the Department of Justice in favor of moving on to less than adequate remedies. I urge everyone involved to carefully consider my comments, and those of others, to arrive at a conclusion to this case that will serve the interests of all.

If Microsoft is not reigned in quickly you will be buying all of your software, electronics, information services, and anything else Microsoft desires to take-over from one vendor. Think about it! This is a national crisis that can be avoided!

Thank you,

To: Microsoft ATR  
Date: 1/23/02 2:56pm  
Subject: Microsoft Settlement

Hi,

I've been programming computers for twenty-five years. And for about the last ten, I've been feeling that Microsoft has been making my life progressively more difficult. I acknowledge that some of Microsoft's actions have simply been annoying rather than illegal. However, I believe that some have been illegal. I was disappointed in the limitations in the scope of the antitrust trial to begin with. I was frustrated by the repeated delays that Microsoft used to further their monopoly. And I am further disappointed by the slap-on-the-wrist nature of the proposed settlement.

Microsoft has demonstrated time and again that they do not actually believe they are capable of doing any wrong. They have indicated that they do not believe that the US justice system has any real jurisdiction over them.

I believe that the original two-part breakup itself would have been inadequate to prevent Microsoft from illegally exercising and extending its monopolies. At this point I believe that Microsoft has three monopolies: (1) desktop operating systems (Windows), (2) office suites (Office), and (3) web browsers (Internet Explorer). And they are competing strongly in several other areas, without yet having gained dominance: (1) internet access

(MSN), (2) web site design (Front Page), (3) palmtop operating systems (Windows CE), (4) server operating systems (Windows Professional), (5) web services (.NET), (6) game systems (XBox), (7) digital video recorders (UltimateTV, now apparently being folded into the XBox), (8) computer peripherals (IntelliMouse, Natural Keyboard, etc), (9) streaming media (Windows Media Player), (10) instant messaging (Windows Messenger), (11) webmail (Hotmail), and probably many more that I'm not familiar with or not remembering offhand.

Short of massive structural remedies (I was a fan of the 4-way breakup), the only chance I see of a world not effectively owned by Microsoft is the rise of open source software (also known as free-as-in-speech software). Open source can be nearly free, which is pretty much the only price point that Microsoft cannot match in the long term. (Since once software is written, it is nearly free to duplicate, the actual price of software that will have tens of millions of copies sold can be made very small, while still being profitable, which is how Microsoft built up its billions of dollars in cash reserves.) Linux has the potential of commoditizing the desktop (and server) operating system.

Similarly, Star Office has the potential of commoditizing the office suite. (Oddly enough, to compete against Netscape, Microsoft itself deliberately commoditized the web browser. They then followed by adding various proprietary extensions, such as ActiveX controls, which have only been moderately successful so far.)

Therefore I believe that the primary focus of the settlement should be in assuring that open source software can compete fairly with Microsoft. This is done by assuring that Microsoft software is standards-compliant when possible, and that Microsoft's APIs, file formats, and network protocols are openly published. If this is done, then it follows that other proprietary software companies can compete as well. More important to me, it means that open source projects can compete. Also, it is important that computers can be shipped with non-Microsoft software installed.

The most important of many changes I would make to the settlement as proposed is this: Microsoft should be required to publish without any licensing restrictions full documentation on all file formats, network protocols and APIs used by its current software or hardware. Further, they should publish formats, protocols and APIs used by future software or hardware at least two months before the release of that software or hardware.

There should be no restrictions on this publication. It should not just be licensed to competing software companies, but just put up on a public web site and so on. There should be no restrictions due to security issues, either. There are no good reasons that, given a decent security model, the publication of format, protocol or API information should harm the security. In cases where it would, there is very little real security to begin with. To help enforce this, there should be clear and severe penalties for failing to publish.

The second major change I would make is the addition of some form of punishment for

past abuses, which does not seem to be part of the settlement at all.

From: Peter H. Putman  
To: Microsoft ATR  
Date: 1/23/02 2:56pm  
Subject: Microsoft Settlement

I agree with the decision that Microsoft has unfairly restricted competition by their "tight" and exclusionary bundling of operating systems and software.

I would prefer to see the browser software offered as a completely separate product from any operating system. In addition, I would like to see all software code removed which automatically deletes icons from the desktop, restricts hardware upgrades to a system, and establishes preferences (without asking) for navigating to Internet sites and service providers.

Per the provision of the Tunney Act I am making my voice heard. I oppose the REVISED PROPOSED FINAL JUDGMENT settlement (<http://www.usdoj.gov/atr/cases/f9400/9495.htm>) that the Department of Justice and Microsoft Corp. have reached in the case of the United States vs. Microsoft antitrust lawsuit (Civil No. 98-1232.)

**MTC-00018087**

From: Andrew Burke  
To: Microsoft ATR  
Date: 1/23/02 2:57pm  
Subject: Microsoft Settlement

The proposed Microsoft Settlement in the US vs. Microsoft Corporation suit is wholly unacceptable. In many ways it will actually HELP Microsoft maintain its monopoly. It is painfully obvious (as any annoyed Windows user knows) that Microsoft is a monopoly and its lack of competition is nothing but bad for the consumer. Microsoft has used its status to leverage company after company out of existence. It is time to put a stop to it and the proposed settlement will do no such thing.

Please reject the settlement.

Date: 1/23/02 2:57pm  
Subject: Microsoft Settlement  
To whom it may concern,

I am writing to you as an individual concerned about the illegal damage Microsoft has done and continues to do. I object to the recent settlement between Microsoft, the Bush administration, and some of the states. Clearly the settlement lets Microsoft off the hook after so many justices conspired that significant antitrust violations were made by Microsoft.

As a software developer, I want to see justice done, to restore a healthy software industry. Stronger actions must follow this conviction.

Sincerely,  
Patrick Logan

From: Josh Bauguss  
To: Microsoft ATR  
Date: 1/23/02 2:57pm  
Subject: Microsoft Settlement

To whom it may concern,  
I wish to briefly address the proposed settlement that is currently in review. I firmly believe that what has been suggested is merely a slap on the wrist for Microsoft. It will do nothing to change the face of competition in the PC software industry.

I wish to offer a little proof of this. Since they have been deemed a monopoly by our court system, they have continued their business practices. (It actually seems very apparent that they have accelerated them) In Windows XP, there is a simple feature of being able to look at zip files.

Now, zip files have become a mainstay in computing and especially with transferring files over the internet. However, just like they did to Netscape with Internet Explorer, they just effectively made compression programs by a third party unnecessary. (i.e., winzip.com, winace.com) These are two companies that I know of that do not have a bright future.

There is then the issue of Microsoft Office. It has been the standard for desktop publishing for many years now. However, these programs use file formats that are proprietary. They change this file format with every upgrade to make it nearly impossible for third party office suites to be compatible. Computing has become something that is almost second nature in today's society. There should be no reason why I should not be able to choose which operating system or which desktop office suite I wish to use.

Right now there really isn't a choice. If you want to do business and send people documents or other forms of correspondence, you are left with little choice but Windows and Microsoft Office. It has also become the norm that you must have the latest version of office in order for your documents to be viewable by others. (and likewise to view documents sent to you) I think there is a much better solution that can be worked. I don't think it would be fair necessarily to limit Microsoft's ability to do business.

However, for certain things like Word documents or DirectX, these should become Open Standards. (look where having open standards in the pc hardware industry has gotten us. There is a level of competition

there that causes great innovation and offers nothing but great benefits to consumers) It should not matter what OS or what Office suite I choose to use. If I want to write a simple letter (other than an e-mail which thankfully is open) I should be able to send that letter to anybody I choose. That person should be able to open it easily. I shouldn't have to think twice about it.

Another example I want to address is that of the gaming industry. This industry is left with little choice if they wish to make a product that has a chance to be profitable. They have been forced into writing games for Microsoft Windows and now they must use DirectX. While the DirectX standard is a good thing, such a standard should not be closed. If this were an open standard, any other OS maker could implement their own version of it. This would enable game makers to deploy their products without having to target an operating system. (and currently, if you want to make money, you MUST target Windows)

We must empower the consumer. By giving them the choice to choose which OS they use, which Office suite they use, we can recreate competition which has really been lacking in the PC industry for over a decade. No business can currently start a software product without fearing that Microsoft will only brace and extend it, make it their own, and incorporate it somehow into their OS which is the monopoly part of their business.

Microsoft can still benefit from well thought out solutions. A solution such as creating standards will make it possible for Microsoft to implement them in their own way. If consumers choose to go with Microsoft's solution, then that is good for them. However, consumers should not be forced into their choice.

Renata B. Hesse,

The settlement is wrong. It does not compensate members of the injured class. It creates new damages to innocent parties, like Apple Computer.

Please reject the settlement as it now stands and find a more effective way to punish Microsoft.

Microsoft is not taking this trial or the guilty finding seriously.

They have done little to change their business behavior. In fact they flaunt their will, in the computer trade press and in the way the do business with partners, despite their wrong doing.

They have shown little regard for past settlements. This settlement will not alter their behavior in any significant way either.

It does not provide a remedy to the injured classes.

This makes a mockery of your court and the entire process of anti-trust justice.

Thank you,

Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still

benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
G. Richard Raab

#### MTC-00018093

From: Jim Cromie  
To: microsoft.atr  
Date: 1/23/02 2:58pm  
Subject: Microsoft Settlement  
Gentlemen,

I've just read an interview with Judge Robert Bork, where he says.. <http://www.linuxplanet.com/linuxplanet/opinions/4020/2/> "My initial response was, break "em up," he replied. "A structural remedy. Dissolution into parts that could compete with each other. "But that seems to be not in the cards now; I don't think the judge is going to do that if the government doesn't ask for it, and may not do it even if the government did ask for it.

"That's not going to happen, so I think we're stuck with a behavioral remedy which would have to be—even if it tried to do something, even if it tried—hard to write because as the technology changed Microsoft has shown a great ingenuity in getting around things in the past. But whatever difficulties there would be in a properly drawn behavioral remedy, this is not a properly drawn one."

"And I think it gives it a clear road to further monopolies. They can do to all kinds of products now what they did to the browser." "What's likely to come out if it? I have no idea. It depends entirely upon how seriously the judge takes this thing. I hope she doesn't share the government's evident desire just to kick the thing away and get rid of it. This is a painful case—I don't think Judge Jackson wanted to see it again. It's a lot of work, and it's hard to understand, and if she takes the line that "if the government's satisfied, the hell with it," then it's all over. I don't know her well enough to know how she'll react."

As I'm sure you're aware, Judge Bork is not known for being a judicial activist.

There is no political axe being ground by him. The Government won their case in open court, and now it must pursue proper remedies.

According to the Court of Appeals ruling, "a remedies decree in an antitrust case must seek to "unfetter a market from anticompetitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99).

To fail to do so leaves the DOJ open to suspicions of back-room dealings between the politicians (the DOJ in this case) and the politically connected. Whether or not it happened is irrelevant, the public perception, particularly in light of the Enron debacle, will not look favorably upon a weak settlement.

Thank you.  
James Cromie

To whom it may concern:

The proposed settlement in the Microsoft antitrust case is DEFICIENT as written.

Any remedy MUST create conditions under which small companies and individuals can design and sell new software without fear that Microsoft can, at its arbitrary choosing, preempt and swamp their business with free software "integrated" into the Microsoft system.

If this condition is not met, soon the only innovation in technology will be the innovation that Microsoft permits to exist.

Subject: Microsoft Settlement

To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001 ,

I would like to take this opportunity to comment on the proposed final settlement as allowed by the Tunney Act. I have been a programmer, mostly for Windows and Unix, for these past five years. Of late I have primarily adopted the Java programming language. I am strongly against the Proposed Final Judgement, on several grounds. I feel that while it may be corrective, it is no way punitive, and Microsoft has made its empire with criminal behavior. Even if the proposed remedy halts future transgressions, it does nothing to punish Microsoft for the means of acquiring its wealth. I would like to see monumentally large fines levied against it, the government should do what they think best with the money.

I think the PFJ falls down though even with regard to reining in future bad behavior in several places, please allow me to mention a few specifically. First, in not requiring Microsoft to fully document all of its file formats, so that binary compatibility could be made much easier by competitors.

Second, in not requiring that MS disclose its software patents regarding the Windows API, this could allow them to pretend to offer a level playing field, but later they could sandbag the competition who may have sunk resources into attempting to compete in a software field owned by Microsoft patents. I'm specifically thinking of Mono and .NET here. Quite frankly if it were up to me I would require Microsoft to release all of its software patents in the most contested fields

into the public domain. If it were up to me there would be no software patents at all. All of the ones I have seen, except the patent for the RSA encryption technology, now expired, have seemed obvious. At the least, it can be seen that they are inherently anti-competitive.

Third, and I'll stop here and thank you for reading this far, as mentioned by Dan Kegel whose excellent critique of the PFJ can be found at <http://www.kegel.com/remedy/remedy2.html>, the PFJ allows Microsoft to retaliate against OEMs that ship PCs with competing operating systems, such as Linux, but without a Microsoft operating system. As I understand it, this would hurt OEMs ability to provide the public with a PC of their choice and the operating system of their choice. This is the very definition of anti competitive behavior, and I feel that a future draft should most certainly anticipate and prevent this, and that this current version of the PFJ must not be allowed to stand.

Thank you,  
Nicholas Calton

#### MTC-00018102

From: Jonathan  
To: Microsoft ATR  
Date: 1/23/02 3:00pm  
Subject: Microsoft Settlement

To whom it may concern,

The current proposal for the Microsoft settlement will not prevent Microsoft from staying a monopoly in the computer industry. Microsoft employees are spreading this around as "...a victory over the government." If the government shows they are incapable or unwilling to stop Microsofts monopoly over the software industry, who else is there to stand in Microsofts way?

Since the trial has started Microsofts grip on ISP's and hardware vendors has slowly loosened up for fear of how it would be represented in the case against them. Once Microsoft accepts the current settlement they will go back to their previous methods of forcing the industry to accept their software

and force out competitors, but it is not their previous methods the software industry is only worried about. By receiving the current settlement this will show the industry that even the government and it's laws cannot stop Microsoft's monopoly. Microsoft will be able to expand their practices beyond strict EULA's, enforcing proprietary "standards" and harrasing/buying out small companies. They will be able to stretch more laws, find more loopholes and choose more "unethical" business means knowing that the most powerful system that could have stopped them was not powerful enough.

Once again I say that the DOJ and US government should be putting a stop to Microsoft's monopoly. By forcing them to release their file formats, source code, protocols or something similar that will allow other companies to compete with them. But the current settlement simply shows that the government no longer has the power to enforce the laws that control our capitalist country.

Thank you,  
Jonathan Ard

From: Juan Lang  
To: Microsoft ATR  
Date: 1/23/02 3:01pm  
Subject: Microsoft Settlement

I would like to comment on the proposed final judgment against Microsoft. I have signed Dan Kegel's open letter, as it addressed many points I had not considered. However, I felt that adding my own words was also important.

The main problem I see with the proposed judgment is that it only seems to protect competing companies. However, this misses a key point of the software industry: competition can come from competing software products that do not necessarily produce revenue. Two key products that pose serious competition to Microsoft are Wine and Samba. Both allow Windows-compatible applications to run on non-Windows platforms. The leaders of both projects have expressed concern that their ability to continue could be significantly threatened under the terms of the proposed final judgment. The judgment does try to protect access to APIs, which could protect competing software products regardless of whether they produce revenue. However, the definitions of APIs were written such that the above mentioned products, and others, might be precluded from accessing them. I am writing this because I am concerned that without access to these APIs, the software industry itself is threatened. The company for whom I work depends on open source products in order to achieve the gross margins it does. At previous companies, this has also been true. Restricting free products'

ability to compete, as I believe the proposed final judgment does, restricts the software industry's competitiveness while enhancing Microsoft's position in the marketplace. Such an outcome is clearly not in the interest of the American public.

Sincerely,  
Juan Lang

Subject: Microsoft Settlement

I feel it necessary to take time out of my busy schedule to comment on this case which is of dire importance, especially with respect to the entirety of the computer world. The foundation of our society in this day and age, the very progress of science, rest very much upon this issue.

Microsoft is the greatest singular contributor to the means by which knowledge is distributed and disseminated across the world. Mind you, their software underlies a considerable portion of the internet, the very way by which this e-mail was delivered. By virtue of their profits alone, it is clear no other company has delivered so many essential and comprehensive software solutions. It is clear that the companies that stand to gain from any punishment of Microsoft all produced inferior products—the free market place made this abundantly clear. It would be impossible to rationally say that Microsoft prevented competition—so long as an arm of the government wasn't coercing people to use Microsoft's software. And indeed, this was not the case, the computer industry is one of the few havens from which the government had abstained taking such power, while Microsoft progressed ever higher, by virtue of it's SOFTWARE alone.

I'm certain that you will receive a great many e-mail in support of GREATER punishment from Microsoft, especially those involved in computer/technical fields. The proposition of any further damning settlement, and even of the punishment Microsoft themselves proposed is a reprehensible perversion of morality. While I am myself seeking a degree in Computer Science—I must warn you that the words of the others involved in computers do not speak for the masses for whom I so speak, and for whom Microsoft has always aimed its products. Those who are involved in computers and oppose Microsoft have agendas behind their actions, with no moral or ethical basis for their arguments. They despise Microsoft because it is TOO good, and (for some) it threatens their jobs by making it possible for even a mediocre computer technician to handle what otherwise would be a task requiring exceeding technical expertise. This is analogous to a group of mathematicians asking the government to punish Texas Instruments for making calculators because they make advanced math problems more accessible to even those of a much lesser intellectual capacity. Other's motivation may be simply that with Microsoft's continued

existence, their own mediocrity cannot stand a chance. Whatever new fields arise in the computer industry, it is sure that Microsoft will make it's best attempts pushing forth its best minds to forge onward with innovative new solutions. If, however, they are punished then those inferior solutions presented by much lesser companies will serve only to stagnate progress, and allow the mediocrities to bring the world down to their level.

I would now like to make a short analogy, and state that this is especially true because a company is not a faceless entity (as so many claim) but is a collaboration of individual minds seeking a specific objective, one which always entails fulfilling their customer's needs—by necessity of existence and motive of profit. Now considering that a company is INDEED comprised of individuals it is therefore an extension of their individual rights to pursue wealth. Thus I would say this settlement is akin in EVERY facet to finding the person of most haughty moral status, and taking them into a courtroom—and terribly decrying their deeds—NOT because they weren't virtuous deeds, indeed—I mean to say that their deeds were of the MOST virtuous type, but yet to decry them because their basking in the limelight of extreme virtue has prevented the morally inferior and lesser persons from having a chance in such light. This is the perversion of ANY settlement against Microsoft. Therefore I thoroughly oppose any and ALL settlements aside from an apology to Microsoft for the damage already caused by the likes of the United States government—not on behalf of the people, but on behalf of those who are only jealous of Microsoft's success.

Thank you.

From: Jon Rust  
To: Microsoft ATR  
Date: 1/23/02 3:01pm  
Subject: Microsoft Settlement  
To whom it may concern,

The proposed MS settlement is not nearly enough, and just completely misses some of the very reasons why MS is a monopoly. Here are just a few of my problems with it:  
+ MS apparently had a big voice in deciding what definitions be applied to API,

Middleware, etc. For example, although MS is touting their “.NET” initiative as a replacement for Java, Java and .NET are classified in completely different categories. How can that be? Outlook Express and Outlook, which are very similar products, are in different categories. Allowing them these leeways will only increase their grip on the market.

+ Entire Windows OS versions have been excluded from the official classification of Windows OS. These OS's that were excluded are so closely related, many applications can run on them and the Official Windows OS's unchanged.

+ Although undocumented file formats formed part of the Applications Barrier to Entry, no where is MS required to make file formats more open.

+ Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

There are many other shortcomings in the Settlement that need to be addressed. Please do address them, or this will just be another slap on the wrist to MS, similar to the one in the early 90's (that MS totally ignored).

Thanks,

I feel that the major problem with the Microsoft suit is that Microsoft wishes to give away free computers and software, by doing this you are giving them an open door to invade the one market where they dont have Monopoly power. Even tho I think it is a great gesture for them to offer to do this for the poor schools. I think this needs to be an industry effort more than the job of 1 company. A company that has broke the law and continues to do so.

#### MTC-00018114

From: William R. Mussatto  
To: Microsoft ATR  
Date: 1/23/02 3:01pm  
Subject: RE: Proposed Settlement

I believe the proposed settlement would encourage Microsoft to continue the behavior for which it has been found guilty. Requiring Microsoft to provide its software to schools would put the schools at its mercy since it can, at any time, render the software and hardware obsolete and unsupported. It has just done this with Windows 95 (interestingly, just after the courts removed breakup as a remedy). My recent upgrade from windows 95 to windows 2000 require extensive replacement of hardware, even though the test program, provided by microsoft assured me that no hardware upgrades would be required. Reverting to windows 95 was not an option unless I completely reformatted the hard drives. Do we want to put schools through this?

Schools are one of the few areas where Microsoft faces significant competition. The proposed settlement would allow them to increase their marketshare, thus further rewarding their monopolistic behavior. A better alternative would be to require the company to fund the computers and allow them to chose between Microsoft's competitors, specifically excluding Microsoft software. This would compensate the competitors and increase, not decrease future competition.

Unless the performance part of the settlement includes provisions to specifically block the kinds of integration which was found to be in violation of law (i.e., browser, and in the case of XP sound and multi-media) Microsoft will continue to use its

desktop monopoly to extend its reach into the area of servers. They should be required to recall XP and remove this integration, since the OS was built after they had been found guilty of the initial breach. Failure to do so again is rewarding their continued illegal activity.

The company I work for hosts web sites. The various flavors of Internet Explorer (beginning with 4.x) have difficulty connecting to a non-microsoft secure web server (in our case apache-SSL). This is because they fail to follow internet standards for this connection (timingout early, or late depending on the version). Rather than reporting that the browser failed, they report that the web site is down. I find it interesting that this failure only effects web servers who pose a significant threat to Microsoft's ability to expand into the server market.

When faced with an adverse court ruling in their case with Sun concerning java, they stopped supporting a common standard when the courts ruled that they could NOT manipulate the standard to increase their market share but had to compete on a level playing field.

I hope that you will take this into consideration.

The opinion expressed are my own and in no way reflect those of my employer. I can be reached at 276 E. Green St. Claremont CA 91711.

You are specifically enjoined not to release any personal information to a non-DOJ party. Thank you.

From: Jason D. Kelleher  
To: Microsoft ATR  
Date: 1/23/02 3:01pm  
Subject: Microsoft Settlement  
To Whom It May Concern,

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the

current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. More importantly, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions redress their previous abuses or compensate the affected parties. This, in my opinion, goes against the very foundation of law.

The provisions within the settlement only formalize the status quo in their strictest interpretation and at worst increase the monopoly power of Microsoft. None of the provisions effectively prohibit Microsoft from abusing its monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. If a person or organization is able to commit illegal acts, benefit from those acts, and then receive as a punishment instructions not to commit those acts again, there is no incentive to follow those instructions. That is not justice. While the Court's desire that a settlement be reached quickly is understandable, it is wrong to approve an unjust settlement merely for the sake of expediency.

From: Eric George  
To: Microsoft ATR  
Date: 1/23/02 3:02pm  
Subject: Microsoft Settlement

Under the Tunney Act, I would like to comment on the inadequacy of the proposed Microsoft settlement.

My largest concern is that of software compatibility between Windows-based systems and future Windows-compatible operating systems. The requirement to publish Windows APIs is flawed. As we have seen again and again, Microsoft is capable and willing to say one thing and do another, leaving the door open for "published" APIs to be irrelevant or constantly out of date.

The only way to be sure of compatibility is to require Microsoft (or another entity) to create a compatibility test suite based on the published APIs. The ability to use the "Made for Windows" logo (or other branding) would

then be dependent on conformance to the test suite, and not merely the published APIs. This test conformance would apply to Microsoft as well as competitors and would give competitive operating system vendors a true, testable baseline on which to base their products.

In addition, the test suite should be accessible by any software vendor for a minimal cost, and Microsoft should not be allowed to release a test suite and new software so quickly together as to keep competitors from utilizing the test suite. Perhaps a moratorium on software releases for a reasonable time after a new version of the test suite is released.

Please do not allow Microsoft to continue to flaunt the laws protecting consumers.

Microsoft is unlawfully using its monopoly to avoid competition, (overwriting suffix links, avoiding the dual boot). It is clear to me that Microsoft will use every tool, unethically and unlawfully to dominate every market it enters.

I feel that any claims of standardization and market cohesion are misleading, and simply rewrite history from the view the monopoly strangling any alternatives.

The proposed settlement is a clear example of using the legal wrangling to force-feed Microsoft products into the schools regardless of existing needs or educational value.

Microsoft does not deserve the overarching market position it has brutally acquired, I think we would all be better served if the Anti-trust laws were applied to the robber barons of the information age.

Keith Copenhagen  
Copenhagen Technical Services

Suite 1200  
Washington, DC 20530-0001

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

- o The PFJ doesn't take into account Windows-compatible competing operating systems

- o Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even

contributes to this part of the Applications Barrier to Entry.

- o The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

- o The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

- o The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

- o The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

- o The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

- o The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

- o The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

- o The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

- o The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

- o The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

- o The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

- o Microsoft currently uses restrictive licensing terms to keep Open Source applications from running on Windows.

- o Microsoft currently uses restrictive licensing terms to keep Windows applications from running on competing operating systems.

- o Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

- o The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

- o Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

- o The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

- o The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

- o The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

- o The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

- o The PFJ as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

#### MTC-00018126

From: James E. Flemer

To: Microsoft ATR

Date: 1/23/02 3:06pm

Subject: Microsoft Settlement

I find the proposed settlement inadequate in protecting the public interest. The terms are far to weak in several areas, providing far too many loop holes and exclusions. The definition of API and "middleware" simply do not cover all that should be. The

exclusions to "middleware" in Definition J are far too broad, specifically excluding patches, service packs, and updates from "Windows Update". The definition of "Microsoft Middleware Product" excludes Microsoft Outlook, Microsoft.NET, and Microsoft Office, three significant products that Microsoft has and will use to maintain their monopoly.

Several other topics are excluded such as the publication of all proprietary file formats, and several instances of EULA that prohibit the use of products on non-Microsoft operating systems.

Please tighten up the loop holes in the settlement. This settlement is intended to protect the public interest, but that will certainly not be the case if Microsoft can simply sidestep the stipulations of the settlement, and continue its unfair practices.

Thank you,  
-James Flemer

#### MTC-00018128

From: sharris@mail00.cdocs.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 3:05pm  
Subject: Microsoft Settlement

Ms. Hesse and Associates:

One could (and I believe some have) written enough on the proposed Microsoft settlement to fill a book. You have undoubtedly been made aware of the details of these complaints so I will keep my comments brief.

1. The proposed settlement does not address the main issue of the case — namely, that Microsoft used illegal and anticompetitive business practices to achieve and maintain a virtual monopoly. The settlement does nothing to address the damage done to the market nor does it prevent the continuance or repetition of these practices.

2. Not only does the settlement fail to address past and present behavior, but I fear that its general impotence will only encourage Microsoft and others to continue to flout the law and to seek revenge on those who have testified against them.

3. If accepted, the proposed settlement will be a public relations fiasco. The Justice Department under John Ashcroft will be seen as "soft on crime" at best. The abrupt change in direction in this case following Ashcroft's appointment may well be linked to campaign donations and presented as evidence of corruption. (There are courts other than those of law, and some of them will accept rumors as evidence). The Ashcroft administration—and by extension, perhaps the President's—will be viewed as being for sale. The software

industry as a whole already views the American court system as generally corrupt and untrustworthy, and this proposal will only strengthen that perception.

It is my hope that this travesty of a settlement will be rejected.

Sincerely,  
Scott Harris

#### MTC-00018129

From: kilroy@copland.rowan.edu@inetgw  
To: Microsoft ATR  
Date: 1/23/02 3:06pm  
Subject: Microsoft Settlement

The proposed settlement is ridiculous. I'm a Computer Science professor, and continued advancement of this field as a science requires that anyone with a good idea be able to have access to the market and get investors to support it. Microsoft's behaviour, which was found illegal (a finding which was upheld by the appeals court), has already had a significant quelling effect on those with new ideas trying to begin new companies and advance the state of the art. As proposed, the settlement will contribute nothing toward opening up the computer business further and allowing new and smaller companies to get the oxygen they need to live.

Those at Microsoft have clearly decided that they do not care about the advancement of computing as a science, or advancement of the computing industry, so long as their own profits remain in place. They would rather rule in Hell than serve in Heaven.

Please do not cave in, and allow their vision of only one operating system, controlled by only one company, to stifle the computing field. One hundred years ago, London was the most important financial center on earth. Now it is New York. If Microsoft has their way, twenty years from now it will be Tokyo. Don't make the judgment which lets that happen.

Subject: Microsoft Settlement

As a professional software developer, I am very concerned with the proposed Microsoft settlement and how it will impact the global software market.

I am concerned by the apparent lack of enforcement provisions in the current settlement. Without giving the oversight

committee the power to impose restrictions without a legal battle, we are basically back in the same position, except Microsoft has grown even bigger and exerts even more leverage to assimilate or destroy rivals.

Thank you,  
Roy Pollock

To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 3:02pm  
Subject: tunney act—settlement proposal by government

To whom it may concern:

I read, with deep horror, the DOJ-Microsoft proposed "settlement" to US vs Microsoft. Microsoft has basically killed any competition in my industry (I work as an independent consultant, constantly trying to dodge microsoft products and failing), was shown to do so both in Judge Jackson's court, and in the court of appeals, and shows absolutely no sign of changing any of their business practices to help restore competition in the industry. And yet they just might get away with a "slap on the wrist"—the DOJ has proposed a consent-decree like settlement, when Microsoft has ignored all consent-decrees in the past. In addition, the consent decree is so loosely worded that Microsoft could follow it to the letter and not change a thing about their business practices.

Anyways, I—and pretty much the rest of the computer industry not affiliated with Microsoft—implore your office to please deeply consider both the wording and the effect that the settlement would have on an industry already woefully devoid of competition. We cannot afford to have one entity run roughshod over what should be highly competitive—namely the computing infrastructure of this country. And that is what is going to happen if Microsoft is not given severe enough punishment for its crime—it will leverage its monopoly in the desktop arena and office applications to try to reach a monopoly in home computing appliances (ie: xbox), computing services (.NET), palm appliances (PocketPC), and so on. And even if they fail in doing so, their business practices in the past ensure that they will greatly harm the remaining competition—and the weak economy will only serve to help Microsoft crush the competition better, and further consolidate an already too-consolidated industry. So the settlement proposed does not go nearly far enough—the dissenting states are more on the right track.

Ed

(ps—as an independent consultant I am not affiliated with any of the parties that testified at trial. And I'd be happy to expound on the opinion mentioned—if you want, I can be reached at 650.464.2156)

Subject: Microsoft Settlement

To Whom It May Concern:

As a US citizen, I would like to express my views on the proposed Final Judgement in the United States vs. Microsoft Settlement. I have been in the software development field for 7 years. I have felt for many years that Microsoft has monopolistic market positions and tendencies, and has continued these practices even through the current anti-trust investigations. I believe that these practices have hindered innovation and hurt consumers and businesses.

In general, I think that the proposed Final Judgement is too soft on Microsoft and will not resolve the anti-trust issues at all.

In particular:

\* Section 3.A.2 of the proposed Final Judgement appears to prevent Microsoft from strong-arming OEMs that ship dual-boot machines, but offers no protection for OEMs shipping a single-boot machines that do not boot to Microsoft Windows.

\* Definition K of the proposed Final Judgement covers Microsoft's Java Virtual Machine, but does not affect Microsoft's .NET strategy. .NET, and the C# language specifically, appear to be designed to woo existing Java programmers with a minimum of new training. While C# is a documented standard, Microsoft's standard method of operation is to extend the standard with Microsoft-only features which eliminate any opportunity for inter-operability. If C# becomes as widely accepted as C++ or Java, I fully expect that there will quickly be divergent "Microsoft C#" and "Standard C#" implementations.

\* There appears to be no solution to the issue of Microsoft proprietary file formats in the proposed Final Judgement. This is huge hindrance, as more and more email attachments are being sent as Microsoft Word documents, etc. File formats were covered in the "Applications Barrier to Entry" section of the "Findings of Fact".

These are just three of the issues that I was immediately drawn to in the proposed Final Judgement. I am also very concerned with Microsoft's continuing efforts to extend their stranglehold on US consumers and businesses including: \* New Microsoft XP licensing schemes which may raise costs for US consumers and businesses. As part of the XP licensing, consumers will not be allowed to load multiple copies of XP on their own hardware. And licensing costs may increase for 59% of businesses (see article in CIO magazine, "Software Licensing Debate",

<http://www2.cio.com/research/surveyreport.cfm?id=50>)

\* Microsoft's forays into home entertainment (UltimateTV, Xbox)

\* Microsoft's new effort to be at the center of the Internet (.NET and Passport)

Thank you for reviewing my opinions. I hope that any Final Judgement in the United States vs. Microsoft trial will be carefully considered.

Subject: Microsoft Settlement

The current proposed settlement in the Microsoft antitrust case is UNACCEPTABLE. It does little to prevent the future use of their unfair and unlawful business practices, and nothing at all to punish their past arrogance and greed. Every one of the handful of antitrust trials brought against Microsoft in the last decade has established the same thing: that Microsoft, in one or another of its markets, has used illegal practices to gain an unfair advantage or force competitors out of business. I, and millions of others, are tired of paying artificially inflated prices for insecure, bug-riddled software from a \*convicted\* monopolist. We can NOT allow Microsoft off this time with a mere slap on the wrist. They have committed great wrongs and caused great harm to the PC software market; the punishment must be equally as great. They must be made to pay reparations to the system vendors and internet providers which they have entangled in dictatorial contracts, and to the businesses, schools, and individuals whom they have bilked with outrageous licensing schemes and inflated prices. Microsoft owes an immeasurable amount of its ill-gotten fortune to corporations such as Netscape, Digital Research, Stac Electronics, Symantec, and a host of other companies long since vanished—all due to MS' blatantly selfish and anticompetitive dealings. The era of Microsoft arrogance and dominance must end, and it must end NOW.

From: David Charlap  
To: Microsoft ATR  
Date: 1/23/02 3:07pm  
Subject: Microsoft Settlement

I disagree strongly with the proposed settlement that is about to be used against Microsoft. It is far far too weak to have any impact on the industry.

Microsoft has signed several consent agreements with the DOJ over the past decade, and they have violated many of them. This is not in question—it was proven in court during their antitrust hearings. Because of their past history of violating consent agreements, they can not be trusted to adhere to any new consent agreements. Your proposed remedy does nothing to change Microsoft's business practices. The people responsible for their anticompetitive behavior will remain in charge of the company, and their monopoly market position remains in place. Asking them to stop will accomplish nothing, because they have already disregarded several other past consent agreements. In other words, I believe that the proposed remedy will be completely ineffective. Microsoft will provide only token compliance with it, and will blatantly disregard any aspect that it considers overly restrictive. Any attempt by the government to prevent them from doing this will be ineffective, since all such procedures will very be time consuming. During the time it takes for the government to punish Microsoft for violating the terms of this agreement, they can run competitors completely out of business.

I believe that the only solution that will permanently curb Microsoft's repeated abuses and contempt for the legal system is to either break the company up into three divisions (operating systems, development software, and application software), or to remove all senior officers from their positions of power. I believe that the public is best served by the former remedy.

— David

To: Microsoft ATR  
Date: 1/23/02 3:08pm  
Subject: Microsoft Settlement

To Whom it may Concern:

I have read the documents associated with the Microsoft anti-trust case. As a user of a non-Microsoft operating system, I feel that more should be done to allow for the interoperation of non-Microsoft operating systems with Windows, and also with programs, particularly the MS Office Suite. I'm not sure what the best solution would be, but I have personally seen the effects of closed file formats on operating systems. I have known people who have been prevented from trying non-Windows operating systems by the fear of not being able to run MS Office. They need to run MS Office, because none of the many freely available word processing systems can properly understand Microsoft's closed file formats. If these formats were to be publicly documented, then free alternatives could support the files, and other operating systems would not be unfairly disadvantaged. In light of this, I think more needs to be done before Microsoft is let off the hook for years of anticompetitive business practices that have put so many companies out of business. That said, I want to thank you all for working diligently on my behalf in this matter. I am confident that you will be able to come up with a new agreement that better serves the public interest and that will make Microsoft play fair and allow it to succeed by excellence, innovation and competition rather than dishonest business.

Sincerely,  
Andrew Perez-Lopez

From: Ocie Mitchell  
To: Microsoft ATR  
Date: 1/23/02 3:07pm  
Subject: Microsoft Settlement

I would like to briefly state my objections to the proposed final judgement (PFJ) between the DOJ and Microsoft.

Microsoft's file formats would remain secret under the PFJ. This aids Microsoft in maintaining its monopoly and forcing users to upgrade to the latest software. Microsoft's APIs would also not be effectively opened by the PFJ. APIs that Microsoft must disclose on a reasonable and non-discriminatory basis effectively rule out any free-software, university research, or any non-commercial use of the information.

Programmers would not be able to make their own middleware to emulate a windows environment because the PFJ prevents them from using the API information provided by

Microsoft, and because the APIs are covered by several patents, which are not disclosed. Finally, Microsoft can continue to have undocumented APIs which implement "security" or "content control", and are thus too vague and widespread.

Business practices that are still allowed under the PFJ include allowing Microsoft to discriminate against OEMs that ship PCs without a Windows operating system. The PFJ requires Microsoft to offer the same terms to the top 20 OEMs, but makes no mention of smaller OEMs. Microsoft would also be allowed to offer discounts to OEMs that sold other products such as office, or pocketPC, thus extending/strengthening their monopoly into these areas.

I believe the PFJ is weak in these and other areas and it should be written to be more inclusive and not as narrowly defined. Microsoft found and exploited loopholes in the 1995 consent decree, and there is no reason to believe that they will act differently this time. Microsoft has been found guilty of violating anti-trust law, but is not being fined for this violation.

Thank you for your time,  
Ocie Mitchell  
Pasadena, CA.

**MTC-00018138**

From: greg@dignus.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 3:07pm  
Subject: Microsoft Settlement

I disagree with the "revised proposed final settlement." The prohibited conduct as it applies to OEMs has already been determined to be illegal, so prohibiting it does not change Microsoft's position in any way. They have been found in violation and simply restating the law to them will not impact them. The situation must be altered such that MS is no longer in a position to exert this form of pressure on OEMs.

The requirement of the publishing of various Microsoft APIs (III.D) through MS Developer Network is also incorrect. It allows, primarily, Microsoft to make arbitrary demands (of money, identification, and technological capability) before you are allowed to view any of their information. Also, they already publish the overwhelming majority of their APIs. The trouble is that their publications are lies ("in error", "mistaken", or "outdated", the result is the same: only Microsoft knows how it really works). Forcing more publications will not cause Microsoft to cease distorting standards with their current policy of "embrace and extend". It will not eliminate Microsoft's de facto standard status.

Such language as "timely manner" is completely unacceptable in a contract with Microsoft. MS has, in the past, demonstrated an eagerness to act in bad faith. No vagaries of language are acceptable, then. A distinct number of days needs to be allowed before they are found in violation, and once they are in violation a clear, simple, and financially lethal course of action should be described such that MS has no way out but to follow the contract. I.e., if MS ships Windows 2002 before it provides API documentation, you must not allow them to provide it in a "timely manner" before beginning to decide

whether anything should be done. Once a specific number of days elapses (say 5) from release, MS should immediately be found in violation of the agreement, their current advertising budget must be reappropriated to informing the public of the crimes MS has committed, and their product must be removed from the shelves until such time as compliance is established. Anything less and MS will NOT act in a timely manner no matter how lax your definition. They will spend years, then, in litigation to decide what should be done to them for a violation that, by the time it is settled, is irrelevant. You may note that the current lawsuit originated with Netscape, and it is nowhere near finished even though Netscape long ago disappeared.

III.E is similarly flawed. Their email product, for example, operates with protocols described in already public "Request For Comments" publications (RFCs). When asked to publish their protocols MS will simply republish these documents that are already available. However, MS does not simply follow the standard described in these documents, they embellish and distort in order to make their product more popular and then, over time, no longer interoperable. They will, in bad faith, pretend that this is an accident, or necessary for proper software evolution, but it will happen nonetheless.

The differences between the currently published standards and the way Microsoft software operates are minor enough that it would take a jury of programmers to decide if Microsoft is in compliance with its own documentation, but major enough that it renders operability with Microsoft software nearly impossible. By the time any technical audit is performed to prove that an MS product is not in compliance, the product will already have been adopted in the marketplace. Once convicted they will simply release a new version of the product that complies on the points in question and features new "accidental" features that again violate the standard.

Microsoft will act in bad faith. A "be good" document will not change anything. Punishment is imperative. My recommendation is that Microsoft lose all intellectual property rights.

Subject: Microsoft Settlement

Hello,

I am writing to register my dissatisfaction and personal objection to the proposed settlement in the United States vs. Microsoft case. I do not believe that such a settlement would be in the public interest. The Proposed Final Judgement would allow Microsoft to increase the barrier to entry for competing products by allowing Microsoft to continue implementing increasingly restrictive licensing terms for its Windows OS. This would not be of benefit to consumers, and would only serve to promote Microsoft's anticompetitive practices.

Thank you for your time,  
Ian R. Bennett

January 23, 2002  
Attorney General John Ashcroft  
US Department of Justice,  
950 Pennsylvania Ave.  
Washington, DC, 20530

Dear Mr. Ashcroft,

I am pleased to know that the federal government has reached a settlement with Microsoft. After three years of litigation, the settlement is fair to both sides and should be beneficial to consumers. The agreement is extremely comprehensive and mandates many adjustments in the way Microsoft carried out their business in the past. Microsoft has agreed not to enter into any agreements obligating any third party to distribute any portion of Windows exclusively. Also, the company has agreed not to enter into agreements relating to Windows that obligate any software developer to refrain from developing or

promoting software that competes with Windows. Finally, the government assured compliance by negotiating for the creation of a Technical Committee to monitor Microsoft's compliance. IF MERGEFIELD PARA2 But clever people like me who talk loudly in restaurants, see this as a deliberate ambiguity. A plea for justice in a mechanized society. ??

I believe Microsoft and Bill Gates have done tremendous good for the United States. Their products are used by millions of citizens and help make the economy stronger and more efficient. I commend you for your efforts to settle this case and hope no further action will be taken on the federal level.

I must say that I am very happy that Bill Gates is an American and that he was not a citizen of another foreign country as if he was, we would be sending checks from the United States to that country to purchase the excellent products that Bill Gates and Microsoft has delivered to our good citizens.

Sincerely,

Robert M. Ellis, President

But is suspense, as Hitchcock states, in the box. No, there isn't room, the ambiguity's put on weight.

Subject: Microsoft Public Comment

To Whom It May Concern:

I have read many letters and emails sent to me by friends regarding the Microsoft Settlement. This letter written by a close friend shows how I feel also. Please remember that your role is to protect us; the citizens of this nation from monopolies that constrict a free market. Take the time to revisit these issues. It would be a great loss if you did not. Thank you for your time and effort in this settlement.

Sincerely,

Prashanth S.

"I am firmly opposed to the current proposed settlement term in the Microsoft

case. The terms do not fully redress the actions committed by Microsoft in the past, nor their ability to commit similar or anti-competitive actions in the future.

Many of the provisions in the current settlement will not effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. In view of Microsoft history of anti-competitive practices correcting this is vitally important. A few issues that have been brought to my attention are:

1) The settlement does not take into account Windows-compatible competing operating systems. Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the settlement fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

2) The settlement Fails to Prohibit Anticompetitive License Terms currently used by Microsoft. Microsoft currently uses restrictive licensing terms to keep Open Source applications from running on Windows.

3) The settlement Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft. Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

4) The settlement Fails to Prohibit Anticompetitive Practices Towards OEMs. The current settlement allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Please refer to <http://www.kegel.com/remedy/remedy2.html> for other issues that must be addressed for the settlement to be fair and equitable to all interested parties.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. I implore you to look into these and the other issues before before pursuing closure on this matter."

From: Bob Weiner

To: Microsoft ATR

Date: 1/23/02 6:04pm

Subject: Microsoft Settlement

To Whom It May Concern:

I am a high-tech executive and software architect with 16-years of experience developing software on a dozen different operating systems including versions of Microsoft Windows, UNIX and Linux. I and most of the technology industry people I know feel confident that the proposed settlement of the Microsoft anti-trust case in which Microsoft was convicted of monopolist behavior will have little if any effect in preventing the corporation from continuing to pursue strategies which illegally discredit and bankrupt firms which choose to compete in its industries (eventually, anything digitally-driven). At a minimum, any settlement agreement must include the following terms if it is to prevent Microsoft from doing further harm to the once vibrant software industry in this country:

It must preclude Microsoft employees and contractors from utilizing \*any\* APIs

(application programming interfaces) prior to having such APIs announced and published in an open format, e.g. HTML, on the World-wide Web for at least one month. Otherwise, Microsoft application developers will always use their internal knowledge of new releases of Microsoft's operating systems to both add new features to their applications and make it more difficult for competitor's products to run properly as Microsoft changes the programming frameworks upon which they rely. It must not allow Microsoft any say in the enforcement of the punishment, i.e. selection of 50% of the oversight team put in place to oversee its implementation of any actions. It must include significant go-forward penalties if Microsoft is declared by the oversight team or by the judicial system to be in violation of any settlement agreement, e.g. its operating system technologies placed in the public domain. It must force Microsoft to publish all available internal documentation and APIs on all of its file and data formats for all of its programs on the World-wide web in perpetuity. It must allow royalty-free use of this information in the development of alternative technologies which read, write and execute such formats.

Without such stringent declarations the settlement will have no significant impact on Microsoft or the industries and consumers from which it has already taken considerable wealth and future opportunity.

Best regards,

Robert Weiner

From: Fen Labalme

To: Microsoft ATR

Date: 1/23/02 3:09pm

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. Please, for the sake of us all, reject this proposal in favor of a much stronger remedy. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for

settlement's sake. A wrong that is not corrected is compounded. While it is doubtful that the true losses can ever be recovered from Microsoft, a fair settlement should include the permanent opening of all Windows and Office API's and file formats so that competition becomes possible.

Subject: Microsoft Settlement

I am not a US citizen or resident, but I hope you will not discount this communication out of hand—just because I am not a potential voter in your elections.

I live and work in Australia. For years my computer operating systems of choice have been non-windows, non-microsoft systems. Because of Microsoft's business practices and our comparatively small market, it has been increasingly difficult to get the products and support I require for non-microsoft products. I DO NOT WISH TO USE MICROSOFT PRODUCTS AND FEEL STRONGLY THAT BEING FORCED TO USE THEM IS A VIOLATION OF MY BASIC RIGHTS.

The settlement you have reached with microsoft is known worldwide within the industry to be politically motivated. It is also recognised worldwide as woefully inadequate. It will make no appreciable change to microsoft practices—especially overseas out of your direct jurisdiction. The discarded solution of splitting microsoft up was never going to work. microsoft were way ahead of you there as well. I will not pretend to know of an effective solution, but I will say that if you do not act wisely and decisively now, you will be instrumental in creating an enormous rod for everyone's back—not just your own.

Please put aside political pressure if that is at all possible, and try to do what is best for ALL IT innovation, not just microsofts'. I have some hopes that a positive and forward thinking result in the US anti-trust case may convince microsoft to reconsider it's practices worldwide, or at the very least open the eyes of the technically naive public to microsofts' underhanded tactics. As it stands, every decision to date has been misinterpreted by a high proportion of the general community as a vindication of microsofts' position—flying in the face of the evidence to the contrary. That is the power of the microsoft spin-machine. That is one of the biggest challenges you face.

Good luck and regards,  
Katherine Wheeler

Subject: Microsoft Settlement

I am the IT director for James Coney Island, a small fast food chain in Houston Texas. We have been in business since 1923 and have 23 Locations in the Houston area. I Am writing because as a concerned citizen of the United States I feel I have an obligation to complain about the proposed settlement with Microsoft.

I have been in the computer industry for over 23 years and have seen the landscape change a lot over the years. I find it very alarming that Microsoft seems to get away with doing what it wants in an industry it rules with an iron fist. No where in the proposed settlement agreement do I see where Microsoft is being punished violating the Sherman Antitrust act. No where do I see any reasonable solutions that will keep Microsoft from violating the law again.

If the court really wishes to solve the Microsoft problem and allow a level playing field in the industry, it would require that Microsoft's closed binary office formats (such as Word and Excel) be opened up to everyone. In this way, the average consumer and business can freely communicate with anyone using software of their choice and not being forced to use Microsoft products.

Currently, I conduct a lot of business via Email and because of Microsoft's monopoly, I get a lot of Email attachments in either Excel or Word formats. The problem is I do not wish to use Microsoft's products. Their Monopoly status has ensured I have no choice in using tools of MY choice that I make my living and conduct business with.

Another problem is the Internet. Because Microsoft has a monopoly on the Desktop and because it illegally tied Internet Explorer into its Operating system, much of the web is being designed to view content correctly only under a Microsoft Browser. This is just wrong. No one company should have this kind of power over me.

There are many reasons to be concerned. I have yet to see any American company hated as much as Microsoft. Why is this? Their actions speak louder than words, they are so big they feel if they are above the law. Now is the time to set the example to everyone that breaking Federal Monopoly laws will NOT be tolerated. Please rethink the settlement and give this company the monitoring and punishment it deserves after having put countless competitors out of business and price gouging world wide consumers for years through illegal monopolistic, anti-competitive practices.

This HAS to stop now if the computer industry is to make any progress in the future.

Thank you  
Ron Cooper  
James Coney Island Inc.

From: Stephen Verstraete  
To: Microsoft ATR  
Date: 1/23/02 3:09pm  
Subject: Microsoft Proposed final judgement

The proposed final judgement on the Microsoft Anti-Trust issue should be thrown out as it is lacking for several reasons.

1. The Final Judgement does not constitute any admission by any party regarding any issue of fact or law. Microsoft should be bound to admit that their practices are anti-competitive.

2. In Section D, "Starting at the earlier of the release of Service Pack 1..." is faulty as Microsoft could simply get around the idea by calling Service Pack 1 by a different name.

3. Provisions should be made in section H to not only remove access to the products but remove the products wholly from the system without otherwise affecting the use and stability of the operating system.

Subject: Microsoft Settlement is a bad idea

Microsoft has broken the law. There are no realistic remedies being proposed to right the wrongs they have committed. I am voicing my complaint at the lack of a real settlement. Please re-evaluate all of the options and find a more suitable settlement that prevents microsoft from abusing its monopoly in the future.

Thank you.

**MTC-00018153**

From: B Collins  
To: Microsoft ATR  
Date: 1/23/02 3:24pm  
Subject: Microsoft Settlement

Microsoft has used its effective monopoly of the computer operating system to establish and conduct anti-competitive practices in other parts of the software industry. This has been shown to be illegal use of its monopoly power. The remedies should effectively prevent such behavior in the future, and should prevent Microsoft from profiting from its illegal behavior.

The remedies contained in the proposed settlement do not do any of these things, and will allow Microsoft to continue and expand its anti-competitive practices, to the detriment of competitors and the public. The proposed settlement should not be approved.

Much stronger remedies are required.

From: Jim McBeath  
To: Microsoft ATR  
Date: 1/23/02 3:08pm  
Subject: Microsoft Settlement

I think the proposed settlement is not effective as either a deterrent or a punishment. There is little in the settlement to prevent Microsoft from continuing their anticompetitive practices, and there is no effective enforcement of what little is there. <http://www.kegel.com/remedy/letter.html> points out quite a few problems with the settlement. There is a large sentiment out here that the DOJ has given up, "rolled over and played dead", and that Microsoft is laughing. The settlement needs to be substantially revised.

From: Jonathan Graehl  
To: Microsoft ATR  
Date: 1/23/02 3:10pm  
Subject: Microsoft Settlement

I have read and am opposed to the proposed settlement of your suit brought against Microsoft (<http://www.usdoj.gov/atr/cases/ms-settle.htm>). I feel the end result will be little more than another protracted court case five years down the line as Microsoft continues to abuse its monopoly position with little fear of meaningful consequences.

A better settlement would ensure that Microsoft's monopolies in unrelated software markets (for example, Microsoft has a monopoly or dominant position in a different category of software with each of these: Windows, Internet Explorer, Outlook/Exchange, Word, Excel, PowerPoint, Visio) cannot be leveraged to gain monopolies in new categories of software, or exclude competition from interoperating on the level of communication protocols, file formats, and application programming interfaces—especially by volunteer Open Source software. Provisions for RAND licensing of patents held by Microsoft aimed at denying interoperability are not sufficient; the licensing must be free to the public.

Technical communications between different Microsoft applications (new and existing) should be performed only through a "Chinese Wall" where APIs, file formats, and protocols are available to the public as well as to the Microsoft teams. Enforcing this would require oversight by software engineering experts—the level of detail available must be sufficient to allow interoperable products to be created without any obstacles from patents, nondisclosure, or necessity for reverse-engineering.

Any file or network communication that is sent between different installations of a Microsoft product must be publicly documented as well, in sufficient technical detail to allow, without any encumbrance, other programmers to create from those specifications a replacement for the Microsoft product that can interoperate without any

limitations compared to the original Microsoft article.

Loopholes allowing Microsoft to dictate in any way the terms of use of this technical information (including NDAs and non-royalty-free patent licensing), who to make this information available, or what information to make available would kill the benefit of this settlement, and result in another court case years down the road as Microsoft continues to illegally leverage its monopoly (to the detriment of the economy).

Regulating the price at which Microsoft may sell or bundle products would not benefit consumers, as the actual marginal cost for a copy of software is zero dollars.

I also do not believe that forcing disclosure of the source code of Microsoft Internet Explorer is necessary or fair. It would be more useful to force Microsoft to make publicly available the technical specifications for the APIs that integrate Internet Explorer functionality with basic Operating System Shell (Explorer) and its Office Suite, again, sufficient that competitors, Open Source or commercial, can offer competing browsers that can benefit equally with Internet Explorer with the web-browser integration in other Microsoft products. This would require modification of all Microsoft products that use Internet Explorer directly to use a new public API that would allow a replacement browser to fill the same role.

It is most important that Microsoft be forced to make public technical specifications that allow interoperable competition to their various products, which would have immeasurable benefits to the economy and to consumers, as real (even free) alternatives to the Microsoft monopoly will inevitably arise, and result in competition ensuring better software from Microsoft (and their competitors) for a lower price than we would see under the current, flawed settlement.

There is always the risk that no matter what the settlement dictates, Microsoft will drag its feet and intentionally provide poor quality technical information in order to continue to make it prohibitively costly to compete in its monopoly arena. An excellent concrete test of the quality of Microsoft's compliance has been proposed by Dan Kegel, which in addition to costing Microsoft more money as the quality and accuracy of their documentation decreases (thus creating a financial incentive for satisfaction of its duties), would provide great benefit to consumers by allowing them to use Microsoft Office without being forced to use Microsoft Windows (the dominance of Microsoft's Office suite in the business arena is the primary reason that many users are locked into using a Microsoft operating system): (begin quote)

I recommend that subsections 14b and 14c be struck, and replaced with a new subsection reading "Contracting with a Third Party to Enhance Wine to Support Microsoft Office. Within 60 days of entry of this Final Judgment, Microsoft must contract with one or more outside firms to enhance the Open Source Windows Emulator WINE to be able to install and run Office 2000 under Linux. The work shall continue, with new releases

of Wine occurring every 30 days, until completed, or until the expenses incurred by the outside firms reach 1 percent of the total development and marketing costs of Office 2000. The resulting enhancements to Wine shall be released under the same license used by Wine itself. Furthermore, as soon as practicable, but in no case later than 60 days prior to the date each new version of Office becomes commercially available for use with a Windows Operating System Product, Microsoft shall again contract with one or more outside firms to enhance the Open Source Windows Emulator WINE to be able to install and run the new version of Office under Linux. The work shall continue, with new releases of Wine occurring every 30 days, until completed, or until the expenses incurred by the outside firms reach 1 percent of the total development and marketing costs of the new version of Office. The resulting enhancements to Wine shall be released under the same license used by Wine itself."

Furthermore, the license agreement for Microsoft Office and all other Microsoft products sold separately from a Microsoft Operating System shall not require the user to own any other Microsoft Software or Microsoft Operating System. (end quote)

Let's not repeat the mistakes that were made in the previous consent decree, which Microsoft has made a mockery of since, by leveraging their monopoly into new territory without regard for the law. One need only look at the increased sales of their products, combined with the prices to buy them, compared to the fixed development costs, and their resulting cash reserves, to see that Microsoft is profiting at the rest of the economy's expense. Making Microsoft a government-regulated monopoly and telling them what products they can and cannot sell, for what prices, is not a good solution (although they should not be allowed to coerce OEMs into distributing software package A without software package B). The solution with the most benefit to the economy, while still allowing Microsoft to compete by producing software as well as it can, is requiring Microsoft to publish technical specifications sufficient to allow the creation of competing products (Open Source or commercial) without any impediment due to Microsoft's monopolies in several categories of software. I cannot emphasize enough that any remedy that does not allow the creation of Open Source alternatives to all of Microsoft's software components will result in higher prices and lower quality software. Microsoft should not in any case be allowed to dictate the licensing of competing products, just as we should not compel Microsoft to give away its products (or their source code).

An ineffectual settlement that allows Microsoft to continue to shut out competition, rather than beating it with a better product at a better price, will be an embarrassment for the DOJ, for this administration, and for the people.

As a professional software vendor and publisher, I'm deeply effected by this settlement. I need to support users on Windows and other operating systems. The most important thing to me is to have Microsoft clearly and publicly document Windows APIs, so I can assure that software is designed and works properly.

MS has a history of using undocumented APIs to leverage and control vendors. Causing applications to "break" and users to suffer. Eventually the vendors suffer and we all suffer.

This really has to stop. The materials need to be clearly documented and failure to comply should be punished severely.

 Subject: MS settlement offer

I'm glad you've asked the public to comment on the recently proposed settlement. While I appreciate many of the things Microsoft has done with it's monopoly position, I feel that their business tactics have hurt American competitiveness in the technology sector in two main ways:

A). Competing products do not have an opportunity to prove their worth in the marketplace in the face of the types of opposition MS generates. Most smaller companies have to close their doors in the face of MS lawyers rather than fight. And many good, income and efficiency producing ideas are lost to American business because of that.

B). There is a hidden MS tax in every computer product we build or sell. Licencing agreements force hardware manufacturers to sell a slew of Windows products with each computer, regardless of it's intended use. If I want a separte computer for just multimedia, I still have to buy Windows, MS Office or MS Works, even if I use OPenBSD or Linux. Meanwhile, someone in China can sell just the hardware itself (without the "usual" OS and Office Aps) much cheaper. Same machine, just cheaper from our foreign competitors. I mean, just from a pure marketplace analysis, you can buy a cutting edge system CHEAPER from a communist nation than from the USA (who invented the technology)! And it's primarily these restrictive licencing agreements from MS that are hobbling our market share.

The US economy needs the freedom to innovate, and the current proposed settlement does not free MS partners and competitors from thses burdens. And don't even start me on viruses, Active scripting and ports left open by default! That's just carelessness on MS's part. We need a better solution for American competitiveness.

Best,  
 Charles Landau, MPH & JD

From: Lionel Artom-Ginzburg  
 To: Microsoft ATR  
 Date: 1/23/02 3:11pm  
 Subject: Microsoft Settlement

Dear Department of Justice:  
 The proposed settlement with Microsoft is wholly unacceptable. It fails to remedy their illegal actions (a breakup of the company or loss of intellectual property rights on the offending products would be far more suitable), and places "restrictions" on them that they have already, with the release of Windows XP, ignored.

When I took Antitrust law two years ago, I was taught that Antitrust law was the mechanism which kept market competition honest, and that remedies for its violation must go to the source of the violation. The reason for the current suit was in part Microsoft's violation of an earlier consent decree. It is obvious that they do not take the law seriously, nor do they feel they have done anything wrong. (The sheer arrogance of attempting to appeal findings of fact was unbelievable.)

I suspect that because of the financial importance of the company to the American economy, the truly heinous acts they have committed are being ignored (you of all people should know how hard it is for a company to lose on rule of reason counts!). The state attorneys general are right— there is nothing here that will prevent them from the same acts in the future. They've already started. Windows 2000, ME, and XP, all released since the initiation of the suit, have all continued the monopolization of the desktop and browser market.

The provisions of the Tunney Act permit citizens to comment on proposed settlements. As I'm in the midst of studying for the Pennsylvania Bar at the moment, I don't have time for a legal analysis of this settlement. But as a consumer and former computer consultant, aside from my law degrees, I know that I must speak against it.

Sincerely,

From: DH Walker  
 To: Microsoft ATR  
 Date: 1/23/02 3:10pm  
 Subject: Microsoft Settlement

The proposed settlement is an outrageous sellout engineered for the benefit of a convicted monopolist and against the interests of computer users and America's technological future. Please reject it and require a settlement that actually addresses the facts found in the District court case.

The US Court of Appeals unanimously agreed that Microsoft had illegally kept its monopoly position by preying on other software developers and computer manufacturers. Microsoft operated illegally and greatly benefited from its illegal behavior. The proposed settlement does nothing to punish Microsoft for its past illegal behavior, nor to effectively discourage further illegal activity in the future. Microsoft has already shown that it has learned nothing from the findings against it. To take just one small example, look at the millions of dollars of development effort in their Media Player, which is unnecessarily "integrated" into WindowsXP—and is targeted at the RealPlayer product line, in order to crush it, in the same way they did the Netscape Browser. Microsoft, unlike its competitors, simply rolls the development cost into their illegally obtained monopoly operating system, and undercuts the competition unfairly. Yet the proposed settlement does not address preventing this sort of monopolistic behavior at all. Remember, developing a media player, a browser and other software costs money, and Microsoft leverages their monopoly to mask these costs while smashing competition unfairly. The Circuit court in it s 7-0 decision upheld lower courts in finding this "bundling" illegal and monopolistic, yet the settlement does not address this in any meaningful fashion: it allows Microsoft to tightly integrate and bundle its media player, its web browser, and myriad other applications into the Windows Operating System, instead of competing freely against external applications.

Also, the proposed settlement contains no provisions to remedy the unlawful monopolization of the operating system; nothing that will produce competition. Remember that the Circuit court ordered that a remedy must "unfetter the market from anticompetitive conduct . . . [and] . . . terminate the illegal monopoly". the proposed settlement does nothing of the sort. Its attempt to open the "API" (programming interface) of the Windows operating system will merely reinforce the monopoly, not terminate it as the court called for. Also opening the API is not enough: Microsoft plans only to open a mere a subset. Complete and full disclosure of ALL the source-code is the only "opening" that would suffice to terminate the Microsoft monopoly.

Finally, the proposed settlement does nothing at all to address the issue of effective

remedy alongside enforcement. The proposed penalties are so ridiculous that they call into question the integrity of the DoJ and the states that agreed to them. An extension of terms that they have already violated is hardly a punishment. Fiduciary penalties must be applied, as well as structural ones. Also, the solutions proposed for "competition" are heavily dependent upon Original Equipment Manufacturers for implementation—the same OEMs who are partners and part of Microsoft's business plans (Such as Dell and Compaq). The propaganda effort from Microsoft and its allies has been to treat this case as just another instance of government intervention in the private sector. In reality, the outcome will be pivotal in shaping American society for decades to come. Computer technology runs not just our desktop computers, the Internet and our communications system—it is rapidly becoming integrated into every aspect of life, from cellphones to news and entertainment systems to household appliances. The outcome of this case will determine whether the promise of breathtaking new technology is fulfilled and available to all, in the process keeps America at the cutting edge of development, or whether the promise fails because one company is allowed to keep stifling innovation as a means of holding onto its ill-gotten power.

The proposed settlement is so inadequate as to be an obscenity. It should be rejected and the DoJ and the States directed to follow the rulings of the Circuit Court and lower courts instead of ignoring the findings of fact and law, and currying favor with unrepentant monopolist outlaws.

An awesome decision has fallen to you. I trust you will vote for the future and for America.

Sincerely,  
David H Walker

From: Barak Pearlmutter  
To: Microsoft ATR  
Date: 1/23/02 3:11pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not in any substantial way redress the actions committed by Microsoft in the past, or inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none would effectively prohibit Microsoft from abusing its monopoly position. This is especially important in view of the seriousness of Microsoft's past transgressions.

The proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses, and that in a fashion which is unlikely to be effective. This, in my opinion, goes against the very

foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" a request to not commit such acts again, they have still benefited from their illegal acts.

That is not justice.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement merely for settlement's sake. A wrong that is not corrected is compounded.

From: Chris Bednara  
To: Microsoft ATR  
Date: 1/23/02 3:12pm  
Subject: The settlement does not go far enough and lacks the teeth to enforce what little it does.

The current DOJ settlement in the Microsoft Antitrust suite is lacking in both form and function. Microsoft clearly enjoys a monopoly in the Desktop Computer market. The evidence presented in the case clearly showed that Microsoft has repeatedly leveraged their OS dominance to both protect that position and expand their company into other non-PC/OS fields.

The settlement needs to make it IMPOSSIBLE for Microsoft to give ANY incentive or penalty to a PC manufacturer/vendor for putting a Microsoft OS on their PC's or not installing and Microsoft OS. Due to Microsoft's great power it can wield, this ban must be absolute!

The settlement must also keep Microsoft from leveraging it's OS dominance to help it's own OS interests and other software interest. This means that they need to be banned from using any API's that aren't public knowledge, banned from requiring any licensing agreement that restricts where software may be ported to, or what other software can be used on the same system with said licensed products, and banned from giving incentives to companies for agreeing to not use or publish non Microsoft products. Even in the settlements flawed form, the method of upholding the settlement is wishful thinking at best. Hard concrete punishments need to be stipulated for each infraction by Microsoft. Penalties such as LARGE financial penalties and even a real threat of company division, must be put in place. These need to be administered by Jury of some sort that is picked out of candidates that are picked from the industry.

There needs to be a procedure that is set up that makes it easy for a company to file a complaint that will be ruled on if it believes that Microsoft is abusing it's market monopoly.

Thank you,

NO!!!!!!

THE CURRENT PROPOSED MICROSOFT SETTLEMENT IS A TRAVESTY OF JUSTICE.

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

THIS IS COMPLETELY AND UTTERLY UNACCEPTABLE! WHAT DOES IT TAKE FOR YOU PEOPLE TO DEFEND YOUR CITIZENS AGAINST SUCH PROFOUNDLY OFFENSIVE MONOPOLY PROTECTIONISM? IT IS ABSOLUTELY ASinine THAT SUCH A PROVISION CAN BE FOUND IN AN OPERATING SYSTEM MONOPOLY SETTLEMENT. WHO WAS BRIBED? WHO WAS WEAK? WHO WAS EXASPERATED?

Back to the drawing board, people.  
SUCH PROVISIONS PROMOTE AND EXTEND MICROSOFT'S POSITION AS A MONOPOLY.

FOR THE GOVERNMENT TO ACCEPT SUCH PROVISIONS INDICATES THAT THE MICROSOFT MONOPOLY IS SANCTIONED BY THE UNITED STATES GOVERNMENT. THIS PROVISION (AMONG OTHERS) MUST BE REMOVED.

From: Bob  
To: Microsoft ATR  
Date: 1/23/02 3:14pm  
Subject: Microsoft Settlement  
To whom it may concern:

The Proposed Final Judgement (PFJ) in United States v. Microsoft Corp., Civil Action No. 98-1232 fails to properly address Microsoft's behavior. There are so many problems with it, I feel it is a disservice both to the public and Microsoft. Philosophically (but not paradoxically), Microsoft would be better served by having their behavior modified more dramatically. They will produce better product and be a better company for it. The public gains by having better product at lower prices.

The PFJ is most emphatically NOT in the public interest. Nonetheless, here are some of the problems:

There is no monetary penalty. Microsoft has broken the law. You cannot put a legal fiction in jail, nor would it be appropriate to apply the death penalty to it (dissolve the corporation). The only penalty left is the language Microsoft understands—money.

There is no discussion of enforcement. The technical committee has reporting powers only. Given Microsoft's penchant for stalling and delay tactics, this is unacceptable.

The PFJ doesn't take into account Windows-compatible competing operating systems. The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces. No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented

Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" paragraph 20 and paragraph 39).

Microsoft is not required to disclose which of its patents cover the Windows operating system. This should be changed to allow potential competitors to determine whether they are violating Microsoft patents.

Microsoft's End User License Agreements (EULAs) often times contain provisions that prohibit companies from using Microsoft's tools to develop software that competes with Microsoft. This should be addressed.

Microsoft's EULAs discriminate against software that is free. Free as in cost, and free as in liberty. For an example, see the Microsoft Windows Media Encoder 7.1 SDK EULA.

Microsoft's EULAs prohibit the use of software written (using Microsoft tools) by third parties on anything but a Microsoft product. This is wrong. Similarly, Microsoft products that might run well on a Windows emulator are not permitted to do so, according to Microsoft's EULAs.

ISVs writing competing operating systems as outlined in Findings of Fact (52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information.

Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems.

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Why does section III.B only cover the "top 20" OEMs? This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products. Small businesses drive the American economy, yet Microsoft is free to penalize them to their heart's desire.

Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

Section III.J.1.a offers Microsoft a blanket exception to disclosing anything, under the guise of security. Security through obscurity is rarely effective. In this case it allows them to argue for continued behavior of the kind that has already been declared illegal. Unless I've parsed all the competing word negation in section III.J.2 wrong, section III.J.2 allows Microsoft to condition release of information on spurious terms. E.g. (b) "reasonable business need". This allows Microsoft to cut out someone doing pro bono work. (c) allows

Microsoft to set the standards, except they've already proven their criteria for licensing is illegal. All of section 2 needs rewritten or better, thrown out.

Section IV.B.9 is unreasonable. This action is a public procedure, Microsoft was convicted through the use of public money, and the long term results should be available to the public. There is no justification to keep the results secret. The United States Government of the people, by the people, for the people brought this action.

Definition J is wrong. All code should be covered, not just "major version[s]". Major versions are a fiction made up by marketing departments.

Definition K covers product that existed when the action started, but fails to address new software released before the final judgement is entered. Again, all Microsoft products should be covered. Nothing is stopping Microsoft from taking a product that already exists, gutting it and rewriting it with code that again demonstrates illegal behavior, but is not covered by the PFJ. As another example, the PFJ covers Outlook Express, but not Outlook. Why is Microsoft Office excluded?

Definition U unnecessarily restricts "Windows Operating System Product" to a few pieces of software. Cover all Microsoft code, not just software that runs on machines the size of a large block of wood. My personal "organizer" is a personal computer. It is much more powerful than desktop machines from ten years before it. It has an operating system, RAM, ROM, static storage, communications, a keyboard, a screen; in short, every element that defines a personal computer. Microsoft is powerful. Using that power to jump from Intel-compatible systems to something else would be one way out of the PFJ.

Please throw out this judgment and direct the plaintiffs to come up with something stronger. Microsoft (the defendant) should have little say in the matter. They are guilty, adjudged so in a proper court of law.

Bob Schulze

To: Microsoft ATR  
Date: 1/23/02 3:13pm  
Subject: Microsoft Settlement

Good Afternoon,  
Please forgive the retransmission of the enclosed note. I was obliged to exit the internet and therefore did not "proof" my letter. Herewith is a corrected version.

Vance  
Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
Greetings,

I am absolutely appalled at the continuing attack against Microsoft. It's disturbing that competitors airing false charges against Microsoft receive favorable treatment from the press and from many members of the United States Congress. It's even more disturbing that several states are continuing with their phony lawsuits against Microsoft.

Microsoft has revolutionized the computer business. They have made it possible for the average citizen of this country, as well as multitudes around the world, to readily gain access to computers and the world-wide network that computers offer. I recall the days of "DOS" and it's complexities, along with the difficulties of simply wandering around the computer world. Without Microsoft's contributions, the average citizen would never have become so computer literate; nor would we all enjoy the benefits of lower computer hardware and software prices.

It's time to call a halt to the attack on one of America's most successful businesses. There are many more issues of concern for the Department of Justice; likewise state prosecutors. The on-going attack on Microsoft from private and governmental representatives is not only hurting Microsoft, but also hampering our country's economic recovery!

Hopefully, the U.S. Department of Justice will bring an end to the frivolous Microsoft lawsuits; issue firm punishment for any wrong-doings actually committed by Microsoft, and let the company resume their efforts of bringing wondrous products to the American people and others around the globe.

Sincerely,  
C. Vance Shannon,

From: Afam Agbodike  
To: Microsoft ATR  
Date: 1/23/02 3:13pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I do not believe that the settlement proposed in the Microsoft antitrust case sufficiently addresses the crimes that have been committed against the American people. I feel that the settlement does nothing to punish Microsoft for what they have already done, and is not strong enough to stop them from doing it in the future.

Microsoft has already shown that they will honor only the letter of the law, not the spirit, and therefore the settlement should be much stronger to ensure they have no loopholes to work around. Ideally I believe Microsoft should be heavily fined and broken into several parts, which are then government regulated for the next 3-5 years.

Thank you for reading my letter.

Sincerely,  
Afam Agbodike

I think that Microsoft needs a more strict judgement than the proposed settlement. They were reprimanded in much the same way in the mid-90's, and this just amounts to another slap on the hand for their illegal business practices. If the proposed settlement goes through, they will be back to their old ways in a matter of years. Thank you for your time.

George Lunsford

From: Aaron S. Brewster  
To: Microsoft ATR  
Date: 1/23/02 3:13pm  
Subject: Microsoft Settlement

This settlement is bad news. Microsoft will not change it's practices until others are allowed to truly compete with them. Force them to open the APIs and allow organizations like WINE and Lindows to continue developing operating systems that run windows code. Competition is what will break the Microsoft monopoly, not donations of windows based computers or fines or even breaking Microsoft up into smaller companies.

Concerned,

I oppose the proposed final judgment. It is lame. Please require much more from Microsoft. For one thing, please require anti-monopoly restrictions on ALL Microsoft products. Not just "Windows Operating System" because they can simply repackage products under different names (i.e. "Windows CE" has been renamed to "PocketPC"). Remember that Microsoft has a history of not operating in good faith.

Hello..

I am writing to voice my vote AGAINST the proposed Microsoft Settlement. I do not think it goes far enough in keeping Microsoft from abusing the power that they obtained through their Windows monopoly. It is a monopoly simply because all they have to do is include a piece of software in Windows, and nobody can do anything to compete with that. Who is going to seek out other software that you would have to pay for if Windows gives it to you free. And for each person that they get in their camp that way, thats another person that the entire industry can no longer compete for.

It doesn't even have to be that they include something in Windows. With their Passport service, they could control the identifying information like account numbers, names and password, for every user of Windows. Then charge other websites to access that data. The ones that decide to pay, stay in business. The ones that don't pay, don't stay in business because Microsoft's customers move to other areas.

Their new licensing plan for Windows XP gives significant discounts to users if they agree not to use any other products by competing companies. This is the same thing they did with IBM and other PC

manufacturers. They told them if they didn't install competing products on their PCs with Windows, that Microsoft would charge them less for each copy of Windows. But if they did put competing products on the PCs, Microsoft would charge them significantly more, thus making that companies PC non-competetive with other companies.

Their control of Windows gives them too much power and too much control over the marketplace. Restrictions must be put in to place that control this power that they have so that other companies can flourish in their own right, and have an equal playing field, not a field dictated by Microsoft.

The settlement does not go far enough! The public needs more.

Thank you,  
Johnathan James

Subject: Microsoft Settlement?  
microsoft.atr@usdoj.gov  
Subject: Microsoft Settlement

The proposed Microsoft settlement is a bad idea. Please do not allow it to move forward in its current form.

Microsoft is once again using the terms of an agreement to wipe out competition. Specifically, because Microsoft maintains an operating system monopoly, Section III(J)(2) will leave Open Source projects such as Apache, Samba, and Sendmail very vulnerable to Microsoft's predatory practices. Because under the terms of this agreement, Microsoft would not be forced to describe or license protocols that affect companies that don't meet Microsoft's criteria as businesses. This would effectively allow Microsoft to write code in such a way as to make it impossible to use with Open Source code, thereby forcing users of Microsoft operating systems to use only software that Microsoft creates itself or allows non-competitors to create.

Microsoft is doing what it has done many times in the past. It has squashed competitors through tactics of intimidation, buyout, and outright theft. Now it is attempting to reverse the initial verdict which declared unequivocally that they were a monopoly, back to their advantage.

As a taxpayer, I find it disgusting that Microsoft is allowed to act in such a cavalier manner toward the US justice system. They continually display an arrogance that shows they have no regard for the law. Please, do not allow them to remap the playing field to their advantage. It is not in the interests of the United States for one company to exert so much control over the electronic infrastructure of our country—as ongoing and extremely alarming security problems with Microsoft products demonstrate.

Under the Tunney Act, we wish to comment on the proposed Microsoft settlement.

Just two comments regarding this settlement.

1. Irreparable damage has been done to the industry as a whole due to Microsoft's actions. The last decade being the greatest potential growth years of an American Industry, is now lost forever. Numerous unnamed commercial entities shall never ever prosper in light of Microsoft's past behavior, as well as the proposed future behavior.

2. If Microsoft is allowed to remedy this case as proposed, then we American citizens can only assume that once again "money can buy anything".

From: Brad Bleier  
 To: Microsoft ATR  
 Date: 1/23/02 3:17pm  
 Subject: Microsoft Settlement

In light of the coming expiration of the comment period, I feel compelled to write. Microsoft has proven to be one of the greatest impediments to innovation in recent memory. Mr. Gates has demonstrated that he, and his company are flout laws of the first order, having largely disregarded the first consent decree, and continuing their anti-competitive behavior even during the course of litigation. Were a criminal accused to demonstrate so complete a lack of remorse, most judges would apply maximum punishment. In fact, Mr. Gates even at the time declared that the earlier consent decree would have very little effect on Microsoft, and that only a few of his employees even needed to read it. Now the Department of Justice has elected to permit a far too conciliatory settlement with a company that clearly has no intention of abiding by the law. Without substantive enforcement, the conduct of Microsoft will not change.

The Department of Justice should also consider further investigations of Microsoft. For example, Microsoft perpetrated a fraud on the market recently, selling Windows XP as a purportedly "secure" operating system. While they continued this fraudulent sales pitch, Microsoft knowingly, and with malice, suppressed information regarding substantial security flaws. The ostensible purpose for this failure was that public information might suppress sales.

At the very least, the Department of Justice should end Microsoft's predatory use of litigation. If Microsoft is to be let off the hook after such egregious findings of fact have been upheld on appeal, they should not be heard to take any action against other companies. Microsoft has obtained, purchased or otherwise developed software and process patents that may be used in a predatory manner against its competitors. Microsoft is not a competitive company. Whatever their current protestations, there is nothing Bill Gates and Microsoft fear more

than a truly free market. Their current crocodile tears over the government demands should not be believed, and Microsoft should be put to the proof. Please consider real remedies, not poorly and incompetently drafted settlements that would prove meaningless.

Best wishes,

Date: 1/23/02 3:15pm  
Subject: Microsoft Settlement

I find the current draft of the Microsoft settlement to be grossly in the defendant's favor.

The items that concern me most are:

1. The current settlement prohibits competitors from using the proposed release of API documentation. Use of the APIs should be completely open. The current definition of API is too narrowly defined.  
2. The term "Windows" is used too narrowly.

3. The current settlement fails to prohibit Microsoft from inserting intentional compatibilities into its software.

4. The current judgment allows Microsoft to retaliate against OEMs who install operating systems other than Microsofts

5. From Dan Kegels comments: Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

6. ALL network APIs and protocols should be released to the public with no restrictions

7. All application file formats should be released to the public with no restrictions

From: Kenneth P. Stox  
To: Microsoft ATR  
Date: 1/23/02 3:17pm  
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement.

I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

From: Lee R Boynton  
To: Microsoft ATR  
Date: 1/23/02 3:23pm  
Subject: Microsoft Settlement

To whom it may concern,

I am a senior software engineer, and have been in the business for 20 years. I have extensive experience both using and programming for Microsoft products, as well as many alternative platforms, and am well aware of the problems that Microsoft's anticompetitive behavior has caused.

I am upset by the proposed settlement with Microsoft. I believe it doesn't address Microsoft's anti-competitive behavior in any substantial way.

The definition of terms like "Middleware Product", "Microsoft Middleware Product", "Windows Operating System Product", and "API" are defined so narrowly as to be useless for enforcement—Microsoft can easily reposition new software to fit whatever category they choose. In the case of "Middleware Product", the definition excludes precisely the new ".Net" technology while including its competitor "Java". The ".Net" technology is by far the most important middleware for Microsoft at this time. The definition of "API" doesn't even include all of the Win32 API itself, which is hard to understand. I do not see how a competing yet compatible operating system could be safely constructed with the current definition. The definition of terms like these are well understood to be much broader by the industry.

Other problems include omissions of things like file formats (a significant barrier to entry for alternative office applications), unreasonable restrictions on the use of released documentation, non-disclosure of patents covering the Win32 API, and lack of any timeliness requirements for released information.

Overall, I don't feel that the settlement imposes much of any real penalty for Microsoft, and in fact encourages much of the same anticompetitive behavior that I think should be addressed. As a developer, Microsoft's grip on the industry appears to be stronger after this settlement, not weaker, and I think as such would not be a fair resolution to the illegal behavior Microsoft has demonstrated.

Sincerely,  
Lee Boynton

**MTC-00018190**

From: Bill Dueber  
To: Microsoft ATR  
Date: 1/23/02 3:14pm  
Subject: Microsoft Settlement

I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Repeated findings of anticompetitive behavior have not changed Microsoft's activity; their file formats and APIs are still closed, and incursion into yet more markets in which they could leverage their monopoly continues unabated.

Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Thank you for your time.

January 23, 2002  
Attorney General John Ashcroft  
U.S. Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530-0001  
Dear Mr. Ashcroft,

If I am correct, it has been generally accepted that the free enterprise system allows for the creation of competitive products or services that will replace older

similar products. This is true in all aspects of American commerce, and the IT industry stands as one excellent example of this. There is a seemingly endless variety of innovation and product upgrades available to the consumer.

But here I get a bit confused.

It appears as if Microsoft's competitors have so far been unsuccessful in their attempts to create a better line of products than Microsoft has. Many of them have tired in their efforts to do so through the front door of competition, and have instead formed an alliance with the federal government to shut Microsoft down through the dubious charge that Microsoft has violated some antitrust law. Forget that most consumers have any number of choices other than Microsoft products, and forget that most consumers actually prefer the simpler integration that Microsoft products provide with its OS.

This entire lawsuit has been odious from the beginning. This should have been dismissed long ago. However, now that there is a settlement in place, one that regulates virtually every facet of Microsoft's work, so that there is no doubt that Microsoft is playing fair. I am hoping that it will be accepted and sustained. Let's all put this mess behind us.

Sincerely,

Mark Schoenbaum

From: Casey Gordon  
To: Microsoft ATR  
Date: 1/23/02 3:18pm  
Subject: Microsoft Settlement

Hello,

I am a US citizen who is concerned about the proposed Microsoft settlement. I do not work for Microsoft nor any of its competitors. I have worked in computer support and computer related industries for over 10 years, using Windows, Mac OS, and Linux.

I believe the proposed settlement is inadequate and inappropriately designed. I don't believe it will restrict Microsoft's anti-competitive practices, nor do I believe it serves the public interest.

I have watched over 10 years time, as Microsoft has destroyed its competitors through:

- 1) licensing restrictions.
- 2) deliberate introduction of software incompatibilities to disable competing products ("Windows ain't done till Lotus won't run"—this is an old running joke among everyone I know in computer support).
- 3) leveraging income derived from sales of Windows and Microsoft Office to finance "free" software such as Internet Explorer and Windows Media Player, software that is intended to displace competitors such as Netscape and Real.
- 4) false claims of integration of software i.e. MS Internet Explorer and MS Windows. These programs can be installed and uninstalled as separate products and exist as discrete unintegrated applications (IE), such as IE for the Mac operating system.

Anyway, I believe the proposed Microsoft settlement has the following flaws:

The settlement fails to prohibit intentional incompatibilities historically used by Microsoft.

Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the settlement fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

The settlement supposedly makes Microsoft publish its secret APIs, but it defines "I" so narrowly that many important APIs are not covered. The settlement supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. This has been a common practice of Microsoft's—write new software to avoid old agreements.

The settlement fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before deadlines, and not informing ISVs until it's (practically speaking) too late.

The settlement does not require Microsoft to list which software patents protect the Windows APIs. This leaves software developers in limbo as to whether they are infringing on Microsoft software patents.

The settlement doesn't require Microsoft to release documentation about the format of Microsoft Office documents.

In conclusion, I urgently request the reconsideration and restructuring of the proposed Microsoft settlement

Thank you,

Casey Gordon

Subject: Microsoft Settlement

As a avid user, consumer, and developer of computer resources for the past twenty years, I strongly urge the Department of Justice to \*reject\* the current Microsoft settlement. Please seek to craft a much stronger resolution, not only appropriate to the crimes that they have already been found guilty of, but also \*without\* the current loopholes that allow the company to continue their monopolistic practices by redefining their primary development focus.

The current resolution specifically mentions "Security" as a development focus that is immune to further disclosure. And, as has been leaked to the media, Bill Gates has already had the gall to officially recommend that this be the company's focus for the next phase of their software enterprises.

During the entire resolution of the case that you have brought before the courts, Microsoft has continued to flaunt its superior market position and wealth, purchasing rights and patents to software standards in broad areas. The only thing that has changed is their rhetoric and their massive public relations effort to appease the citizenry and appeal to the taxpayer that your efforts are wasteful. Such a response is appalling and a flagrant abuse of free speech to quench protection afforded to the average citizen provided by your offices.

Thank you for your efforts on this case to date, but I do strongly urge you to reconsider the current proposal for the health of the entire computer and information technology industry.

From: Michael Kale  
To: Microsoft ATR

Date: 1/23/02 3:22pm  
Subject: Microsoft Settlement

I am a US citizen and I live in Seattle, WA. I oppose the current Microsoft settlement. It does not do enough to ensure competition in the computer industry, which is of utmost importance. Competition is the single most important thing which ensures that consumers win. Competition spurs innovation, lower prices, more consumer friendly products, and a whole slew of things that nine out of ten people would agree are a benefit to everyone.

If Microsoft is allowed to abuse its monopoly power to further squish its competitors, the consumer will lose big time.

I can go into much detail about —why— I think the current settlement does not do enough to ensure competition, but I want to make sure that someone on the other end of this email is actually reading this message and wants to listen to what I have to say. If so, please write back and I will be happy to oblige. Until then, the most important objection I have is that the settlement does not force Microsoft to open up it's networking protocols and API implementations. Internet standards are what allow computers from many different vendors to talk to each other and work together. Microsoft would like to ignore computing standards and only allow windows machines to talk to windows machines. This creates "lock-in" where it becomes very difficult to operate a heterogeneous computing environment with more than one type of computer. Thus, once you have windows machines, it becomes very difficult to have any OTHER kind of machines, and competition is hampered unnecessarily.

Thanks a lot for your time,  
Michael Kale

I am a software developer and I am against the proposed settlement with Microsoft. I feel that any solution that does not open up Microsoft's file formats and middleware communication protocols is unacceptable. These closed and proprietary formats are a very large impediment to interoperating between Microsoft and non-Microsoft systems. Without opening these formats, Microsoft's monopoly on the desktop will continue to exclude competitors from having a viable chance of challenging Microsoft's products. Thank you for accepting my input.

The "settlement" is a joke, although not a funny one. Microsoft was found guilty of abusing it's monopoly power and now you are allowing them to entrench themselves

even more with this wholly inadequate method of "punishment."

Everyone who actually understands the workings of Microsoft and their products KNOWS how mediocre and downright dangerous their practices and products are. They outright LIED to and tried to deceive a federal judge in the courtroom, to say nothing about what they do daily to the American public and corporations who, for whatever misguided reasons use their products and services.

Talk about contempt—repeated, deliberate, organized, blatant and conspiratorial contempt. And you roll over and offer your soft underbelly for Bill and company to scratch and say "nice doggy."

Shame on you!

Do your duty, scrap this "settlement," and instead punish them, to the FULLEST extent of the law.

Thank you.

The proposed settlement for the MicroSoft antitrust case isn't even a slap on the wrist. It is blatantly a gift from the government to MicroSoft, handing them the education market segment currently held by Apple and (in universities) other various operating systems. MicroSoft has been judged —guilty— of being a monopoly. They should be punished for their business practices, not rewarded!

From: Brian Wood  
To: Microsoft ATR  
Date: 1/23/02 3:21pm  
Subject: Microsoft Settlement

The proposed final settlement between the United States and Microsoft Corporation is a terrible blow to the information technology industry. Microsoft, a company found guilty of violating U.S. anti-trust law, has held fast and diluted what's left of justice in this country into a settlement that provides a vehicle for continuing their monopoly.

Knowledge is power, even more so in the I.T. industry. Microsoft has demonstrated time and time again, that it will withhold documentation, embrace and extend protocols and standards, to keep its competitors incompatible and in the dark (Caldera DR-DOS and the Kerberos implementation in Windows 2000 are two examples that come to mind).

Section J of the settlement specifically provides Microsoft the ability to withhold the inner-workings of its operating system and other products from anyone. Wheres the settlement part here? This allows Microsoft to go on, as they always have, documenting only what they feel like, when they feel like. This keeps other companies and groups (such as Wine, the windows emulator project for Linux) in the dark on certain portions of the Windows API, and prevents Wine from ever becoming a fully compatible emulator, and thus a viable alternative to the Windows operating system. Microsoft should be REQUIRED to document ALL portions of its operating system, from the APIs to the communications protocols. Only when competitors can produce compatible alternatives, can a competitive marketplace be re-established.

Microsoft must not be allowed to continue to withhold information from their competitors (including non-profit organizations, open source projects, etc). To allow them to continue to withhold information is no settlement at all, but a protection of their existing monopoly.

Subject: Microsoft Settlement

To Whom it May Concern,  
Regarding the Microsoft settlement, I have read the proposed settlement and I do NOT believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

The current proposal is not nearly strong enough to protect the long-term interests of

this country's businesses and consumers. Failure to increase the penalty will merely encourage Microsoft to continue its anti-competitive practices and ensure that a non-competitive climate will exist and stifle innovation for future generations as well.

Thank you for your time.

To whom it may concern,  
I have been working in the information technology field for 14 years and have become very concerned about your proposed settlement in the Microsoft anti-trust case.

It is widely believed by those in the information technology field that the proposed settlement is completely inadequate. It will do little to punish Microsoft for its plainly illegal conduct in the past, and virtually nothing whatsoever to prevent future violations of antitrust law. As a consumer, it infuriates me to be forced to pay for increasingly expensive software that diminishes in quality with each release. I applauded the Clinton administration's investigation of Microsoft. Their case was an effort to protect consumers and promote economic growth by restoring fairness and competition to the computer industry. Now that the DOJ is under new management, it has essentially abandoned its pursuit of Microsoft, suggesting that the DOJ no longer has any concern for either economic growth or the public good.

The United States is a successful nation because its free markets encourage firms to compete for customers by producing high-quality, low-cost goods. This system needs to be protected from monopolists who gain so much power that they can destroy the competitive nature of the markets in which they participate.

I urge all parties involved to reconsider the proposed settlement.

Microsoft deserves more than a slap on the wrist for its destructive abuse of its monopoly power. More importantly, American consumers need to be protected against future abuses.

Very Sincerely,

From: Carter Butts  
To: Microsoft ATR  
Date: 1/23/02 3:16pm  
Subject: Microsoft Settlement

I am writing to express my opposition to the proposed settlement in the Microsoft antitrust trial. As a scientist, I spend much of my time developing data analysis software for multiple platforms, including both UNIX and Microsoft Windows Operating Systems. My work is thus directly affected by the current proceedings, and I am concerned that a judgment be reached which is in the best interests of myself and other science and technology professionals.

I am particularly concerned that the Proposed Final Judgment does not adequately address the problem of Independent Software Vendors who ship Open Source applications. The Microsoft Windows Media Encoder 7.1 SDK EULA, for instance, states in part that

“. . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (CSL); . . ."

This and other similar EULAs severely limit the potential for software makers to build Open Source software which is compatible with, or which makes legitimate use of, Microsoft tools. Since scientific software is often "Publicly Available" as per the above definition—in keeping with the duty of scientists (especially those with public funding) to make their work available to American government, business, and academic institutions—it follows that such behaviors on the part of Microsoft serve to impair the ability of the scientific community to meet its public responsibilities. Given the finding of fact that Microsoft holds a monopoly on Intel-compatible PC operating systems, it is especially important to guarantee that Microsoft will not be able to use its monopoly power to control Independent Software Vendors. The Proposed Final Judgment does not succeed in accomplishing this.

The United States Department of Justice was in the right to take action against Microsoft initially, and—as a taxpayer—I

certainly hope they will see that justice is served. The Proposed Final Judgment, however, is insufficiently strong to prevent the abuses which resulted in the initial action, much less the potentially actionable practices already proposed by Microsoft in the coming years. A strong judgment, possibly including the breakup of Microsoft, is the only viable means of restoring the benefits of free competition to the American software industry.

From: Dennis E. Hamilton  
To: Microsoft ATR  
Date: 1/23/02 3:23pm  
Subject: Microsoft Settlement

I am concerned that the proposed Microsoft Settlement does not accomplish the desired remedy. I find that it essential that any remedy require Microsoft to publish complete documentation of all interfaces between (independently usable or substitutable) software components, all communications protocols, and all file formats.

My greatest concern is about the proprietary file formats that users currently use to record their content and to interchange information with other parties. The importance of common formats in interoperability among enterprises and different computing communities, and the dependence on these formats in the preservation of electronically-originated information, has created a barrier to entry for competing products. It has also created a hazard for those who rely heavily on these formats in order to interchange information with other users. As some users are motivated to upgrade Microsoft products, other users in the community are ultimately forced to upgrade in order to continue to participate. Likewise, as support for the software that operates with older versions of the formats is withdrawn, users are not assured of a way to continue to operate with their own information and to preserve their investment in recorded information, except by converting of later versions.

This form of the "network effect" in which product choices are made by users to ensure their continued ability to interwork in an extended community also creates barriers to substitution, even for the purpose of preserving usability of content that is the user's own.

I agree that the functionality, features, and overall appeal of Microsoft products is valuable and a symbol of competitive approach to the market. My concern is that the barriers to substitution erected by the reliance on proprietary formats has contributed to a monopoly position due to the nature of electronic documents and information and the necessary mediation of software for their use. Without separating the formats from specific, proprietary software for operating with them, the public interest is ill-served and there is no opportunity for competitive innovation now that such a monopoly exists.

Converting to a competitive product with a different proprietary format is not viable in most situations, since it neither advances interoperability and inter-usability of the information nor assures the continued usability of already-recorded electronic information. It is not a meaningful substitution.

To: Microsoft ATR  
Date: 1/23/02 3:25pm  
Subject: Microsoft Settlement

Dear Sir or Madam,  
I would like to comment on the proposed settlement of the United States vs. Microsoft antitrust lawsuit.

The first point that we must not lose sight of is that the Microsoft Corporation willingly committed a series of very serious crimes that cost the citizens of the United States a great deal of money and affected untold numbers of lives. A crime was committed; punishment must be metted out such that the behavior of the entity is modified so the offense is not repeated. The current settlement does not do so. The settlement was largely written by Microsoft and is geared towards minimizing the financial losses of Microsoft, while maximizing future profits. Hardly a punishment designed to modify behavior.

Microsoft has never admitted that it engaged in criminal behavior. Given that the proposed settlement does not make it unprofitable to engage in illegal behavior in the future, it is reasonable to assume Microsoft will continue to engage in criminal behavior in the future. The proposed settlement seems to place numerous restrictions on Microsoft's business practices, but the restrictions really just force Microsoft to act in a legal fashion. In short, where is

the pain? We send a person to jail when he or she commits a crime in hopes that they person will learn to modify their behavior and not commit crimes in the future.

We do not tell the person "do not rob banks" and let them go. How does the proposed judgment ensure that Microsoft's behavior—its corporate culture—is going to be modified? The settlement does not even provide for monitoring the weak restrictions it seeks to implement.

The only reasonable solution to the Microsoft problem is to break the company into separate pieces. By breaking Microsoft into pieces, the individual companies will be forced to compete with other companies. The settlement implementing the breakup will not have to delve into arcane details such as "what is an API" and "what is middleware". Market forces alone will dictate what the Microsoft companies will have to document and disclose in order to remain competitive in an open market. Good punishment is simple, straight forward and directly addresses the crime. Microsoft manipulated the market, let the market decide the punishment.

Remember—everyone thought the telephone system was going to collapse when the breakup was ordered back in the 80s. And, for a few years, the benefits were few and far between. Now days, I am not sure how cheap I can make a long distance call; the price is dropping faster than I can keep up with. A breakup of Microsoft will cause pain in the technology sector in the short term. In the long term, it will bring great benefits in the same way that diversity in any system brings great benefits. Dear DOJ,  
I would like to urge you to consider the comments of Dan Kegel and others concerning the Microsoft trial settlement. An excellent resource concerning many informed opinions is the following site:

<http://www.kegel.com/remedy/>  
The PFJ as written only helps extend Microsoft's monopoly. It is not sufficiently broad and it does not allow for the entrance of true competitors into the software playing

field. In particular, I would like to stress the importance of allowing and enforcing a "Window's compatibility", so that other operating systems, without fear of retaliation, could run programs using the Windows API's. This would easily allow for a variety of operating systems to viably enter the intel-compatible market (Mac OS X and Linux) as competitors to Microsoft's current unjust reign over the desktop.

Again, please consider this.

Subject: Microsoft Settlement

Hello  
Although I am not a U.S citizen I feel that I have to strongly object to the proposed settlement which is between the U.S. Government and the Redmond giant which is Microsoft.

Over here we find that in daily business and personal life we are pressurised by the careful brainwashing methods that MS UK and their parent company use on both our business community and on the home user community. It doesn't stop there. It is a known thing that Bill Gates is Priminister Tony Blair's friend. We are clearly told that the recent 50 deal between MS and our National Health Service "saved the tax payer a great deal of money". At the same time the Ministry od Defence who have an agreement with the U.S Government to use cruise missiles with the Royal Navy were allowed to use one licence for the whole of their network. Why is it that Microsoft ripping off the poorly and infirm and elderly people of this country?

It has reached the point where people are seen to be social outcasts if they do not use Microsoft software. For me; someone who believes that other people should be allowed to make their own choice, this is intolerable.

Since I am myself someone who wore the Royal Air Force uniform back in the 1980s I find it to be wholly unacceptable that a multinational monopoly that has been found to be in breach of some serious federal laws should be let off with a slapped wrist or something similar. I do hope that the U.S Government will reconsider the present intention to let Microsoft get away with all kinds of things that are normally associated with organised crime and at an international level.

Thank you

Dear DOJ

The currently proposed Microsoft settlement is a bad idea. I urge you to accept the alternate settlement proposed by the plaintiff states rather than the current Proposed Final Judgement. As a system administrator, my daily job is directly impacted by the anti-competitive practices that have characterized the Microsoft corporation. I believe that the Proposed Final Judgement contains misleading and overly narrow definitions and provisions, fails to prohibit the anticompetitive license terms currently used by Microsoft, and fails to prohibit anticompetitive practices towards OEMs. Considering the harm that Microsoft's anti-competitive practices have done to the innovation of new and competing operating systems, the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

Lisa Bogue

From: David A. Chappel  
To: Microsoft ATR  
Date: 1/23/02 3:23pm  
Subject: Microsoft Settlement  
Dear Judge Kollar-Kotelly;

I would like to make a few comments regarding the proposed settlement. Today there is plenty of cynicism regarding the legal system. It is a commonly held belief that if one has enough resources, then one can "buy" success in court given sufficient legal resources. I will leave the correctness of this to others. I would like to address erosion of the legal system by the perceptions created by this settlement; then I would like to address the economic ramifications of the precedent set by this settlement.

For a legal system to operate successfully, there must be a "buy-in" to the belief in the "fairness of the system" in resolving disputes, or criminal cases. If individuals and companies do not commonly accept this principle then they will find other avenues to settle claims, and the rule of law will be damaged.

I fear that for many this proposed settlement will add weight to this popular belief. In short, allowing Microsoft to settle the claim that it abused its monopoly by donating software (possibly using the donation as a tax deduction) to needy schools. While I do not dispute the need of the schools, it truly a clever ruse Microsoft is playing with the \*compliance\* of the Department of Justice. Given Microsoft has

abused its monopoly, the punishment ought not to be that it must increase its market share in the educational market. Remember that software has nearly zero marginal cost and so it will cost Microsoft very little. This sends a perverse message to other companies and individuals who may consider breaking the law or a contract. For those that have substantial resources the message is "I won't be held accountable" and for those without the resources it is "I wouldn't be held accountable if I was wealthy—so the law is unfair." To those on the front lines charged with enforcing laws the message is "Do not waste our resources by enforcing rules against those with substantial resources of their own." Correct or not, these messages damage the legal system by eroding the notion of "one law for all" that makes individuals participate in the shared belief in law, and that breaking the law is not respectable.

There are also ramifications for our economic wellbeing. If expected penalties for abusing a monopoly are deemed less than the benefits derived, it will only encourage more monopoly abuses. This will lead to fewer firms in markets and less innovation as a whole, as the large impede the innovative. Please note that there is no reason to assume that this precedent will be limited to the technology sector.

While public comments are to be limited to the settlement, I feel I must also express my disappointment with the DOJ. It appears that the DOJ has rightfully embraced a new set of priorities after September 11th, however it is not sufficient to ignore those responsibilities unrelated to terrorism.

Fighting Microsoft in court and in "public court" may be expensive and may not be politically expedient, but it is extremely important for efficient functioning of markets. Budgetary demands to the DOJ are small in comparison to the economic cost which would be incurred by this settlement.

Furthermore, those companies which enjoy a monopoly are typically those companies with the resources to fight a prolonged legal battle. If the DOJ is unwilling to expend the resources to fight a large company, then how can it expect to fulfill its mandate? It is as if the municipal police declare that they will uphold the law against speeding but will charge only those who drive slow cars.

It is my hope that the DOJ renews its resolve in upholding and enforcing these important laws. I hope that those within the DOJ are given sufficient resources to negotiate from a position of strength, so that those that those who break the law are sufficiently punished. This is the only way to ensure that others are deterred.

Thank you for allowing my participation.

Date: 1/23/02 3:27pm  
Subject: Microsoft Settlement  
Hello.

I would like to register my objection to the proposed settlement in the Microsoft case. The settlement is barely a slap on the wrist to a corporation that has been found guilty of using anti-competitive practices to dominate the software market. Not only is the proposed settlement much too weak, it will have virtually no effect on Microsoft's anti-competitive practices and as a result, competition in the operating system and application software markets will continue to decline. This is bad. Monopolies are bad. And the interests of American society demand the proposed settlement be rejected and replaced with a settlement that punishes Microsoft for its illegal activities, and regulates the corporation in ways that will restore competition in the operating system, browser, and application software markets.

Thank you,

From: Gene Olson  
To: Microsoft ATR  
Date: 1/23/02 3:25pm  
Subject: Microsoft Settlement

In the Microsoft Settlement, the most important provision is the disclosure of Operating System and Middleware APIs, and disclosure of proprietary Communication Protocols.

As stated in the settlement, there are no provisions to require Microsoft to completely and openly publish enough information so that competitive systems (eg OS/2, Linux, WABI, Wine) can effectively emulate these interfaces.

Microsoft is highly motivated to keep these interfaces secret, and their past actions have shown conclusively that they will misrepresent, delay, and litigate endlessly to prevent effective competition in this area.

The only practical remedy to this is to require Microsoft to publish source code for all such software and communication

interfaces. History has shown repeatedly that source code analysis is the only universally effective method for publication of such information. This is especially true in cases where the disclosing party has a proven reputation for, and a continuing business interest in, keeping the information secret.

Therefore I object that the judgement against Microsoft cannot be effective or enforceable unless Microsoft is required to provide source code to all Application, Operating System and Middleware APIs and all Communication Protocols.

Dear Sirs,

I am a citizen of the United States and a resident of Lakewood, Colorado. I am writing to express my concern with the proposed settlement, which your office is considering with Microsoft. In my opinion, this settlement does not go nearly far enough to either repair the damage done by Microsoft or to prevent future violations.

Microsoft's anti-competitive behavior is not simply aggressive advertising. Their behavior is potentially more damaging to the US marketplace and economy than were Archer-Daniels-Midland's effort to fix the prices of agricultural supplies in recent years. Microsoft forces computer hardware vendors to sign exclusive marketing agreements, meaning that the vendors are unable to sell competing operating systems. When I was shopping for the two computers, which I use at home, several major manufacturers, including Dell and Gateway, were unable to sell me a computer with Linux installed, and even were unable to sell me a computer with no operating system installed at all. Even though I had no intention of using Microsoft Windows, I was forced to pay the prices of two Microsoft software licenses. If Microsoft did not have a monopoly position within the meaning of the Sherman Act, then they would not be able to abuse a monopoly position and I would not be forced to pay a "Microsoft Tax" every time I buy computer equipment.

Now try to imagine the cost of this "Microsoft Tax" to a small business, a poor family, or a school—all entities which usually operate on a shoestring. And imagine the cost of their newest operating system, Windows XP. When you buy a reasonably-modern computer from a major manufacturer, it is quite easy to do so for

well under \$1000. And of the components of that computer, the Windows XP license the one for which you're charged a Microsoft Tax, whether you'll use it or not—is the most expensive. A licensing fee, charged only because the recipient is an abusive monopoly, is more expensive than a fast and powerful processor or a large hard drive.

Microsoft has also signed other exclusive deals with other service suppliers. These are deals which worked to customers' detriment and which would not have been possible save for Microsoft's monopoly position, and which serve no purpose but to stifle competition. A prime example is the Microsoft Network's deal with Qwest. Under this deal, all Qwest DSL customers are forced to either use the Microsoft Network as their internet service provider, or to pay large "transfer fees" and suffer service outages. And Qwest has a monopoly on DSL in its service area, being the telephone company for most of the western United States. In other words, if a person wishes to have DSL high-speed internet access, he must either pay Microsoft a monthly subscription fee or pay a rather large fee to Qwest, a fee sufficiently large to deter most customers from using other providers. Furthermore, Microsoft has announced, last autumn, that all Microsoft Network users MUST use Microsoft's internet software to connect to the internet. They must use Outlook and Internet Explorer. I count four web browsers (IE, Netscape, Mozilla, and Opera) and four popular email programs (Outlook, Eudora, Lotus, and Pegasus) available for Microsoft Windows 85,98, NT, and 2000, but only the ones from Microsoft are acceptable.

The internet currently uses certain standards for email, the Standard Mail Transfer Protocol and the Post Office Protocol. The interoperability on which the internet is based requires that these two universal standards be followed. All of the mail software which I have named above is fully standards-compliant. Similarly, World Wide Web standards are defined in the Hyper-Text Transfer Protocol. All of the web browsers named above are compliant with that protocol.

In other words, Microsoft had no reason to require the use of Outlook and Internet Explorer. No reason, except to lock their competitors out. I did not elect any members of Microsoft's board, or any of their officers. I was never offered an opportunity to vote. Microsoft is not an agency of the Federal government or of the State of Colorado. Why, then, is this company allowed to use their monopoly power to tax me? Why are they allowed to use their monopoly position in software to leverage a monopoly in DSL internet access and to lock competitors out of the market?

That Microsoft is an abusive monopoly has been proven. I limit myself to the examples above, rather than explaining about undocumented programming interfaces and the "Embrace, Extend, and Extinguish" methodology, only because of concern for your time.

The only way to end their abuse and allow competition to exist is to break the company up, and to force open their code and APIs. As long as Microsoft is allowed to exist, they

will continue to acquire power and to abuse it.

Sincerely,  
Mike S. Medintz

From: Scott Francis  
To: Microsoft ATR  
Date: 1/23/02 3:26pm  
Subject: Microsoft Settlement

I am very disturbed by the proposed anti-trust settlement in the Microsoft v DOJ case. In spite of Attorney General Ashcroft's words to the contrary, this settlement is neither "strong" nor "historic", and amounts to little more than a slap on the wrist to Microsoft. More importantly, it does nothing to reduce the barrier to entry that Microsoft has erected in the operating system and applications market.

The proposed ruling will do nothing to make it easier for a competitor to Microsoft to release a product designed to run on Windows and compete with Microsoft's own applications. We have seen how this scenario played out in the past—Microsoft either crushed its competitors (Corel's WordPerfect suite, for instance), absorbed them (WebTV, purchase of SGI's image patents, etc.) or changed existing standards just enough to exclude competitors (Kerberos comes to mind).

Any ruling that does not —force— Microsoft to allow competitors in the application field fair and unrestricted access to the Windows source code (and more importantly, user base) without Microsoft attempting their famous "embrace and extend" tactic (see previous paragraph), will ultimately have no effect on the reality of the Microsoft monopoly. Microsoft will continue to hold the home computing market, and the majority of the business computing market, in a stranglehold, locking people into inferior products, preventing them from exercising free choice among a variety of options, and generally preventing innovation and growth in the computing industry.

I do not wish to see the Internet go the way of the desktop computing landscape. If Microsoft is allowed to proceed unchecked, with "business as usual", they will eventually consume the Internet as well (Hailstorm/.NET comes to mind). Thanks for your consideration.

Subject: Microsoft Settlement

23 January 2002

To Whom It May Concern,

Being a computer professional, I strongly disagree with the settlement terms outlined by the Proposed Final Judgment.

I feel the language of the PFJ is insufficiently succinct, leaving a number of significant and critical loopholes that may be used to easily evade compliance with the PFJ. Furthermore, I feel that many essential provisions are absent from the PFJ, allowing

a number of significant anticompetitive and exclusionary practices to continue.

Many of these missing provisions may seem overly-specific, frivolous, or even damaging to Microsoft's right to protect its self-interest. But on the contrary I believe, as do many others, that through its anticompetitive practices Microsoft has in fact coerced OEMs, IAPs, and ISVs into giving up THEIR right to protect their self-interest by instituting punitive, frivolous, or overly-specific licensing agreements which prevent them from exploring those Microsoft-competitive products and services which could have in fact enhanced the quality of the licensees' product. To remedy such an offense, and to prevent its reoccurrence, a thorough and well-worded set of restrictions and requirements is called for, if not to promote competitive experimentation, at least to ensure that no way exists for such anticompetitive practices to ever again be used.

Mr. Dan Kegel has compiled an excellent collection of resources on the PFJ, amongst which is his own essay, "On the Proposed Final Judgment in United States v. Microsoft." I would like to refer the reader to these resources for opinions on the missing provisions I mentioned earlier, in the hopes that those more informed than I may better explain the importance of those provisions.

Mr. Kegel's resources page may be found at: <<http://www.kegel.com/remedy/>>. His essay, "On the Proposed Final Judgment in United States v. Microsoft", may be found at: <<http://www.kegel.com/remedy/remedy2.html>>.

Thank you for your time.

Subject: Microsoft Settlement  
Dear Sir or Madam

I have watched with great interest and nervousness the proceedings of the case dealing with Microsoft Corp and the Antitrust charges against that company. Sadly, the decisions being made have once again shown why the people should distrust the government and those in charge making decisions that affect us all as computer users and taxpayers. It also tends to indicate how uninformed those people are in technology matters.

As one law enforcement officer commented to me, "Why do you think they call it the "Criminal Justice System"?" It is now painfully obvious why it is referred to as that considering the judgements rendered on the Microsoft case. There have been too many mistakes made, evidence very critical to the guilt of Microsoft left out and letting Microsoft even deciding their own punishment in this case! I think heavy punishment should be rendered both financially & criminally to Microsoft and quickly. Why should a case of such obvious guilt be allowed to continue any further and why has there not been a speedy resolution?

I also do not think Microsoft should be allowed to regain any financial restitution thru taxes or other illegal means for the fines levied, if any ever are!

I hope the US government will soon wake up to their failure to institute correct punishment to Microsoft. The US citizens grow tired of the government failing to protect their rights and allowing big business and criminals to make the decisions for everyone.

Thank you for your time.

Date: 1/23/02 3:26pm  
Subject: Microsoft Settlement

I feel that the proposed Microsoft settlement is not in the best interests of the consumer, and I oppose it. Although there are many problems with the settlement, the one that I am most concerned about is with sections III.F and III.G. Although these sections purport to prohibit exclusionary licensing practices by Microsoft, it fails to cover a class of ISVs that I am particularly concerned about, namely, ISVs that ship open source applications. One example of this is contained in the End User License Agreement for the Windows Media Encoder 7.1 Software Development Kit. That EULA reads, in part . . . you shall not distribute the REDISTRIBUTABLE COMPONENT in conjunction with any Publicly Available Software. "Publicly Available Software" means each of (i) any software that contains, or is derived in any manner (in whole or in part) from, any software that is distributed as free software, open source software (e.g. Linux) or similar licensing or distribution models . . . Publicly Available Software includes, without limitation, software licensed or distributed under any of the following licenses or distribution models, or licenses or distribution models similar to any of the following: GNU's General Public License (GPL) or Lesser/Library GPL (LGPL); The Artistic License (e.g., PERL); the Mozilla Public License; the Netscape Public License; the Sun Community Source License (CSCL); . . .

If an ISV chooses to publish their application under an open source license are specifically prohibited by this EULA from distributing the associated APIs of the Windows Media Encoder with their application. This places the onus of getting the API, installing it, and verifying it on the end user, in effect leaving the Applications Barrier to Entry in place for ISVs using this licensing model. Therefore, I feel that until the Final Judgement addresses this issue, it should not be enacted as written.

From: Andrew Williams  
To: Microsoft ATR  
Date: 1/23/02 3:26pm  
Subject: Microsoft Settlement

Dear sir/madam,

I am opposed to the leniency of the settlement agreement with Microsoft. My reasons for this are as follows:

(1) The only penalty that is apparent is one that Microsoft has "agreed" to or would agree to. This is hardly appropriate for a company with a history of breaking such agreements.

(2) There is no apparent requirement for "probation". That is, a process whereby Microsoft can demonstrate its rehabilitation quantifiably to the US DOJ, and to its "citizens".

(3) Microsoft has made no realistic offers of damages to aggrieved parties, and shows no inclination to be realistic in damages. The only offer made was one that was of commercial benefit to Microsoft, which was (luckily) rejected. To my mind there are only two valid remedies:

(1) That which Judge Jackson required—The breaking apart of Microsoft into separate entities, one for operating systems, and another as an applications provider.

This would also take into account the effect of Microsoft's .net strategy, which is not open but restrictive, where Microsoft controls not only the .net standard, but access to it.

(2) That Microsoft is forced to publish ALL the APIs with documentation for its operating systems without any "preferred customer" options in the same time space that they provide them for their own Microsoft developers.

This means that applications developers would not have the lag, or technical barriers that are currently imposed upon them.

These two remedies I would favour do not include redress for the financial and other damage caused to those affected by Microsoft's illegal behaviour. However, I would think that those aggrieved in this would have access to financial redress directly. Mind you, it might be appropriate that the US DoJ mandates to Microsoft that they provide redress to the named parties (such as Sun, Netscape etc).

I thank you for your consideration of this submission.

Regards

Andrew Williams

From: Roger Atkinson  
To: Microsoft ATR  
Date: 1/23/02 3:27pm  
Subject: Microsoft Settlement

Dear Sir or Madame,

I might be just one person who has a comment on this settlement but I am also a person who works Full Time in a Sr. IT

position. I work every day to research and justify the direction and expenditures that my company decides to allocate in its IT endeavors. I feel compelled to comment on this very important issue not only as an IT professional but also a personal user of computing systems.

I have been using Microsoft products as well alternatives for well over the past 10 years. During this time it has been increasingly impossible to find alternatives to Microsoft's products and when an alternative does exist, it usually is not around for much longer having been pushed out of the market place by Microsoft's predatory practices. Once the alternative is squashed, the product from Microsoft quickly becomes over priced according to current market practices.

I feel very strongly that Microsoft should be punished to the full extent of the allowable law for its violations and any remedy should include the complete remittance or discount to those who have been hurt the most by Microsoft. Not only should the individual customers be given rebates or immediate relief from the high prices that Microsoft has imposed (as a result of their illegal Monopoly) but businesses as well should have recourse to recoup the damage that has been done to them.

I can say with complete honesty that my company has entered into a Corporate Licensing Agreement with Microsoft, not because they wanted too, but, because there either wasn't an alternative Enterprise solution available or the solutions available were not solvent due to being pushed out of the IT market place. Shame on them! Shame on the courts for not righting this wrong in a manner that allows the both the customers of Microsoft and the Companies harmed by Microsoft to get some relief.

Sincerely,  
Roger K. Atkinson

Date: 1/23/02 3:26pm  
Subject: Microsoft Settlement

To Whom it May Concern

In my opinion, the proposed settlement between the US Justice Department and Microsoft, Inc. is a woefully insufficient remedy. Microsoft has engaged in a decade of anti-competetive behavior, and found guilty as such. In addition to severe restrictions on future marketing and licensing activities, Microsoft must be forced to cease the practice of "bundling" of unrelated software applications, and furthermore, Microsoft should be required to pay TREBLE DAMAGES to every corporation that it has unfairly harmed through its illegal practices.

Subject: Microsoft Settlement

OLE—LINK2OLE—LINK1Greetings,

I am writing to express my opinion on the proposed settlement to the Microsoft Antitrust case.

I feel the proposed settlement is nowhere near as harsh as it should be. For years Microsoft has been cramming their software down the throats of large corporations, small businesses, and the individual consumer while using its financial muscle to knock out any competitor that represents even the smallest bit of threat. Right now it is impossible to purchase an IBM compatible desktop PC or laptop PC that does not have a version of windows pre-installed on it. Microsoft tells PC manufacturers that if they do not sell \*ALL\* of their PCs with windows on them, they cannot sell \*ANY\* of their PCs with windows on them. This does not give the consumer a choice about how to use the PC they are paying for, it also increases the price of that PC dramatically because the price of the license for Windows (and usually Office) is built into the cost of the PC. About one year ago I purchased a laptop form Compaq and was forced to have it pre-installed with Microsoft Windows ME(Millennium Edition) and Microsoft Office 2000. I had no intention of running Windows on the laptop when I purchased it, but had to pay for the licenses anyway. I think that if this settlement is accepted it will do little if anything at all to stop Microsoft's illegal practices. I urge you to reject the current proposal and come up with a new settlement that will show Microsoft that citizens of this country have had enough of their schemes.

Many great ideas for changes to the proposed settlement are available at the following web site.

From: David Hallowell  
To: Microsoft ATR  
Date: 1/23/02 3:25pm  
Subject: Microsoft Settlement

I've have been involved with computers for many years and have seen the anti-competitive business practices first hand. Microsoft always talk about innovation, however they have done the most in the history of computing to stop other companies innovating.

Therefore I believe the current settlement with MS is a BAD idea, Microsoft needs strict legal sanctions, the current settlement gives them little more than a slap on the wrist.

Microsoft's latest operating system (Windows XP) carries on the current Microsoft practice of using bundling to try and kill off their competition. MSN Messenger is integrated into Windows XP in such a way that there is no obvious way to remove it, the only way to remove it is to do an internet search for an undocumented file to edit—this is beyond the skill of an average user.

As a person who does not use Windows, and instead prefers to use an open source operating system (Linux), I find it difficult to operate in a world without Microsoft software. I often get documents sent to me in the proprietary Microsoft Word format, I can't listen to online radio stations because most of the broadcast in Windows Media Format, I can't communicate with Windows using friends who have signed up with MSN Messenger. The reason that most people use Windows is that it has such a stranglehold on the market, it's difficult to use anything else unless you make a big sacrifice with interoperability with Windows users.

Many people are working on products which make it easier for users of other systems to work with others, however Microsoft make this task difficult by changing file formats, and modifying protocols.

Microsoft is effectively a bully-boy, they have the money to get what they want and don't care who they crush to get there. They have caused an untold amount of damage on the industry.

Therefore, any punishment should take into account this damage and must also set out clear guidelines for how they should behave in the future. If they break any of the guidelines in the future the punishment should be a lot harsher.

Ultimately we need all the protocols and document formats opened up by Microsoft. The Microsoft Office document formats have become so commonplace that people just assume that your computer can read them and people are surprised when they get emailed back by myself informing them that

I don't have any software that can read the Microsoft Office formats easily.

In the consumer electronics world we have VHS which means that all video recorders are manufactured to the VHS standard, therefore you can go to the local video rental shop, place a tape in any VCR and it'll work correctly, you don't have to buy a particular brand VCR, as long as it's VHS it'll work.

Microsoft Office has become the "de-facto" standard, therefore the file formats should be opened in all past and future versions, this will allow anyone to write an office suite that can read MS Office formats. This would mean office software manufacturers would be competing on quality and features, rather than MS relying on a lock-in to their file format.

As provided by the Tunney Act, I wish to comment on the proposed Microsoft Antitrust settlement.

I feel this settlement is insufficient in its attempt to curb Microsoft's unfair and illegal practices. Most significant, in my opinion, is the way in which it fails to limit several specific anti-competitive strategies employed by Microsoft, including (but not limited to) designing intentional incompatibilities between Microsoft and competing softwares, and retaliatory practices against OEM's which do not exclusively use Microsoft operating system software.

Please consider this a definite and emphatic objection to the current settlement.

Washington, DC 20530-0001

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I have read over the proposed Microsoft Settlement, and am NOT in favor of it, in its current state.

I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

\*The PFJ doesn't take into account Windows-compatible competing operating systems

\*Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

\*The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

\*The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

\*The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

\*The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

\*The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being "Windows Powered".

\*The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

\*The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

\*The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

\*The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

\*The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

\*The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

\*Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

\*Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

\*Microsoft's enterprise license agreements (used by large companies, state governments,

and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

\*The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

\*Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

\*The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

\*The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

\*The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

\*The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

\*The PFJ as currently written appears to lack an effective enforcement mechanism.

Also, when Microsoft stops providing bug fixes for a product, they should be required to open-source that product. The customers who purchased that product have a reasonable right to expect Microsoft to provide them with fixes for problems, or to provide them with the means to fix it themselves. I feel this is true of all software products—once the copyright holder stops supporting that product, within 5 years they should lose their copyright on that product, and should be required to make the source code for that product available to anyone who purchased it.

In being found guilty of violating antitrust law, Microsoft was found guilty of harming American—consumers—. The consumers are the ones that need redress, not just businesses.

One of Microsoft's chief claims during the trial was they faced plenty of competition, and they pointed to Free and Open Source Software as an example, and yet under Section III(J)(2) and Section III(D) of the PFJ, not-for-profit organizations have no rights at all. Under provisions to release the APIs of Microsoft products, Microsoft is given discretion as to who they will release information: namely, "viable businesses", with Microsoft being able to interpret that as they wish. Thus, the manner in which APIs would be revealed are limiting to Microsoft's main competitor: Free and Open Source Software ("Free" defined as "without restriction" not "free of cost"). This software is created largely by individuals in informal and generally noncommercial cooperation. This is a very significant movement, and provides great potential benefits to American consumers. It is essential that this pro-consumer movement be helped by the settlement. Every consumer who purchased Microsoft products should have access

(without cost) to the APIs needed to interact with those products. I feel the APIs should be made fully public.

Also, due to Microsoft's deals with computer sellers requiring them to make a payment to Microsoft for every computer they sell, I cannot purchase a computer from any large seller without paying for a Microsoft operating system, even if I want the computer without any operating system. This seems wrong to me, and reminds me of the kind of deals made by Standard Oil.

Finally, the main concern I have is that the PFJ seems to only limit the future behavior of Microsoft. I do not see any—punishment—. If I commit a crime—whether it is jay walking or murder, or a more abstract crime like embezzlement or libel—the court will—punish— me for that act. Where is the corresponding punishment for Microsoft? If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a “punishment” instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

Dear Department of Justice,  
I am a former customer of Microsoft's I have seen all too well how their software takes the power away from the user and gives it right back to Microsoft. An unfortunate poster-child for this is their new Windows XP operating system, so much that persons that purchase this software must register sensitive information with the evil corporation just to unlock the softwares full functionality.

I implore you to press on and under no uncertain terms make very sure they cannot be allowed to dominate users computer environments. I couldn't install Netscape properly in my version of Windows 98 at first, as windows deemed to not accept it as my primary browser. Worse yet, I could not use the functionality of some Java programs, .asx streaming media, and other important media features without something related to IE (Internet Explorer) or WMP (Win. Media Player) popping up to interrupt my usage of the Netscape browser.

Computer operating systems are meant to serve the user, not work against them. Their new “Anti-Piracy” measures do nothing to stop piracy while turning away control of the users computer to hackers and media companies.

I must emphasize my concern for the electronic media world in general if Microsoft be allowed to continue it's evil ways. They dominate the industry in a way so burdensome that companies are afraid to ship computers without Windows. . . afraid users will bulk at the unfamiliar. Competition is necessary and vital. Do all Americans a great service, cage the beast, and reopen the market.

Thank you for your consideration,

January 23.2002  
Attorney General John Ashcroft  
US Department of Justice,  
950 Pennsylvania Ave.  
Washington, DC, 20530  
Dear Mr. Ashcroft,

I am pleased to know that the federal government has reached a settlement with Microsoft. After three years of litigation, the settlement is fair to both sides and should be beneficial to consumers. The agreement is extremely comprehensive and mandates many adjustments in the way Microsoft carried out their business in the past. Microsoft has agreed not to enter into any agreements obligating any third party to distribute any portion of Windows exclusively. Also, the company has agreed not to enter into agreements relating to Windows that obligate any software developer to refrain from developing or promoting software that competes with

Windows. Finally, the government assured compliance by negotiating for the creation of a Technical Committee to monitor Microsoft's compliance.

I believe Microsoft and Bill Gates have done tremendous good for the United States. Their products are used by millions of citizens and help make the economy stronger and more efficient. I commend you for your efforts to settle this case and hope no further action will be taken on the federal level.

I must say that I am very happy that Bill Gates is an American and that he was not a citizen of another foreign country as if he was, we would be sending checks from the United States to that county to purchase the excellent products that Bill Gates and Microsoft has delivered to our good citizens.

Sincerely,  
Robert M. Ellis, President  
CC: Representative Ric Keller

Under the Tunney Act, I wish to comment on the Microsoft settlement's inadequacy in improving the competitive environment in the software industry. Some serious shortcomings relate to:

(1) Middleware The current language in Section H.3 states “Microsoft Middleware Product would be invoked solely for use in interoperating with a server maintained by Microsoft (outside the context of general Web browsing)” does nothing to limit the company's ability to tie customers and restrict competition in non Web-based networked services under .NET, as they fall “outside the context of general Web browsing”. Microsoft has already begun abusing its desktop monopoly to tie customers int .NET revenue streams and set up a new monopoly over the network.

Part 2 of the same section states “that designated Non-Microsoft Middleware Product fails to implement a reasonable technical requirement...” essentially gives Microsoft a veto over any competitor's product. They can simply claim it doesn't meet their “technical requirements.”

#### (2) Interoperability

Under the definition of terms, “Communications Protocol” means the set of rules for information exchange to accomplish predefined tasks between a Windows Operating System Product on a client computer and Windows 2000 Server or products marketed as its successors running on a server computer and connected via a local area network or a wide area network.” This definition explicitly excludes the SMB/CIFS (Samba) protocol and all of the Microsoft RPC calls needed by any SMB/CIFS server to adequately interoperate with Windows 2000. Microsoft could claim these protocols are used by Windows 2000 server

for remote administration and as such would not be required to be disclosed. The Samba team have written this up explicitly here:

<http://linuxtoday.com/news—story.php3?tsn=2001-11-06-005-20-OP-MS>

### (3) General veto on interoperability

In section J., the document specifically protects Microsoft from having to “document, disclose or license to third parties: (a) Portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of anti-piracy, anti-virus, software licensing, digital rights management, encryption or authentication systems, including without limitation, keys, authorization tokens or enforcement criteria”

Since the .NET architecture being bundled into Windows essentially builds “anti-piracy, anti-virus, software licensing, digital rights management, and authentication systems” into all levels of the operating system, ANY API, documentation, or communication layer can fall into this category. This means that Microsoft never has to disclose any API by claiming it’s part of a security or authorization system, giving them a complete veto over ALL disclosure.

### (4) Veto Against Open Source

Substantial amounts of the software that runs the Internet is “Open Source”, which means it’s developed on a non-commercial basis by nonprofit groups and volunteers. Examples include Apache, GNU/Linux, Samba, etc. Under section J.2.c., Microsoft does not need to make ANY API available to groups that fail to meet “reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business.” This explicitly gives them a veto over sharing any information with open source development projects as they are usually undertaken on a not-for-profit basis (and therefore would not be considered authentic, or viable businesses).

These concerns can be met in the following ways:

(1) Middleware: Extend middleware interoperability with a Microsoft server to ALL contexts (both within general Web browsing as well as other networked services such as those being included under .NET).

(2) Interoperability: Require full disclosure of ALL protocols between client and Microsoft server (including remote administration calls)

(3) General veto on interoperability: Require Microsoft to disclose APIs relating to “anti-piracy, anti-virus, software licensing, digital rights management, encryption, or authentication systems” to all.

(4) Veto against Open Source: Forbid Microsoft from discriminating between for-profit and nonprofit groups in API disclosure.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegele’s analysis (on the Web at

<http://www.kegele.com/remedy/remedy2.html>), namely:

ù The PFJ doesn’t take into account Windows-compatible competing operating systems

ù Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

ù The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

ù The PFJ supposedly makes Microsoft publish its secret APIs. but it defines “API” so narrowly that many important APIs are not covered.

ù The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines “Microsoft Middleware” so narrowly that the next version of Windows might not be covered at all.

ù The PFJ allows users to replace Microsoft Java with a competitor’s product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft .NET with competing middleware.

ù The PFJ supposedly applies to “Windows”, but it defines that term so narrowly that it doesn’t cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertized as being “Windows Powered”.

ù The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

ù The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

ù The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

ù The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

ù The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

ù The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

ù Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

ù Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

ù Microsoft’s enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system -even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

ù The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

ù Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

ù The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

ù The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

ù The PFJ allows Microsoft to discriminate against small OEMs—including regional “white box” OEMs which are historically the most willing to install competing operating systems—who ship competing software.

ù The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

ù The PFJ as currently written appears to lack an effective enforcement mechanism. I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Subject: Some Comments on the Microsoft Settlement (per Tunney Act)

Respectfully Addressed to the Department of Justice,

I am deeply disturbed by the proposed settlement to the ongoing antitrust action against Microsoft. I understand that the Tunney Act provides me with an opportunity to offer my own comments to the court. Commenting on the situation is important to me as I am a veteran computer programmer who’s seen daily the fallout from Microsoft’s rough-shod trampling of fair play and innovation in the software industry.

I am concerned that the proposed settlement does not provide adequate

deterrence to future monopolists who practice illegal anti-competitive behavior. Microsoft has shown nothing but contempt for the lawful process followed by the DoJ and the legal system in examining this matter. They have blatantly lied in the courtroom, offered rigged demos (!), and attempted to take advantage of the lack of technical expertise shown by some witnesses, most of the lawyers, and each of the judges. Outside of the courtroom, they have continued to flout the law.

What's worse is that Microsoft's strategy appears to have worked. They have stalled, lied, distracted, and manipulated the legal system as well as the American public, all in an effort to delay the resolution of their case until the beginning of a more corporate-friendly presidency. How can America have faith in a Justice Department whose direction is so clearly influenced by political interests? Is there truly no justice at Justice?

I am a partner in an early seed-stage venture capital firm, specializing in investing in the very early stages of software companies. As such, I am an expert on the issues faced by small software companies as they grow and compete in this market. Under the Tunney Act, I wish to comment on the proposed Microsoft settlement based on this experience.

I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://>

[www.kegel.com/remedy/remedy2.html](http://www.kegel.com/remedy/remedy2.html)), namely:

a.. The PFJ doesn't take into account Windows-compatible competing operating systems

a.. Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

b.. The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

a.. The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

b.. The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

c.. The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

d.. The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

e.. The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

f.. The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

g.. The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

h.. The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

i.. The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

c.. The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

a.. Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

b.. Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

c.. Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system— even for computers running competing operating

systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

d.. The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

a.. Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

e.. The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

a.. The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

b.. The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

c.. The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

f.. The PFJ as currently written appears to lack an effective enforcement mechanism. I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest.

I also agree with Ralph Nader's letter at <http://www.cptech.org/at/ms/rnj12kollarkotellynov501.html>, who like myself finds the agreement wanting in several other areas. I find it astonishing that the agreement fails to provide any penalty for Microsoft's past misdeeds, creating both the sense that Microsoft is escaping punishment because of its extraordinary political and economic power, and undermining the value of antitrust penalties as a deterrent.

The PFJ should not be adopted without substantial revision to address these problems.

From: Senour, Alethea  
To: Microsoft ATR  
Date: 1/23/02 3:32pm  
Subject: Microsoft Settlement

To Whom it May Concern,

Regarding the Microsoft settlement, I have read the proposed settlement and I do NOT believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them.

The market must be able to return to a state of competition.

The current proposal is not nearly strong enough to protect the long-term interests of this country's businesses and consumers. Failure to increase the penalty will merely encourage Microsoft to continue its anti-competitive practices and ensure that a non-competitive climate will exist and stifle innovation for future generations as well.

Thank you for your time.

From: jkm@patriot.net@inetgw  
To: Microsoft ATR  
Date: 1/23/02 3:31pm  
Subject: PFJ comments

Please note that I have also signed the petition found at <http://www.kegel.com/remedy/letter.html>. I do not have the time or endurance to wade through and analyze a wordy piece of legalese, so I am basing my comments on the various stories in the mainstream press.

I have been using MS products since the late 80s and Linux since approximately 1994 and "open source" software since 1992. I have also been a professional programmer and systems administrator for over 10 years.

Since MS was found guilty in a court of US law, and the original penalty was breaking MS into separate companies, I want to state that I am not in favor of breaking up Microsoft for a couple of reasons, primarily because it would not fix any problems. What would stop the two or three new companies from colluding and sharing practices that would be detrimental to other companies ability to compete fairly? If a company that has shown itself to blatantly ignore the previous judgement against them, and has discovered new and illegal non-competitive practices in the meanwhile, would you trust them to play fair in the future?

Microsoft's proposed settlement not only avoids the issue of guilt, but it also avoids any penalty and even goes so far as to further entrench Microsoft as the only viable OS. Being the richest company in the world, their offer to donate software and hardware

(mostly software, which costs them nothing and gains them everything) is hilarious. If an individual were to be found to be guilty of 1st degree murder in a court of law, but happened to have enough money to delay the end result as long as Microsoft has, and then successfully bartered for a trivial penalty, our justice system would be considered a complete joke. Never before has one company held so much power. The various Windows operating systems and applications are used by a substantial majority of the worlds population. If another company innovates in any way that might threaten Microsoft, one of three things happens:

(1) They buy the company. Very simple and when you have as much cash as Microsoft, the money it takes is very small.

(2) Embrace and extend. This is the practice of taking a publicly available API and adding proprietary functionality that is unavailable to everyone else. For example, this was done with Kerberos, a package that provides secure network authentication.

(3) They create their own version and give it away for free. Just to name a few: Internet Explorer(a), Windows Media Player, and IIS (the web server software).

(a) Granted, Netscape did not help their case by failing to innovate or improve their product during time frame between version 3 and version 4 of their respective internet browsers, during which the usage scale shifted from Netscape to Microsoft.

Back to my point concerning the power of Microsoft. Due to how MS licenses their products and hides some if not all of their APIs, they have the ability to create software with which no one else may interact. Some examples include the NT file system (NTFS) and the Windows Media Player audio and video formats, and the windows file sharing protocol.

The first and third examples above actually have projects that are attempting to reverse engineer how they work, but that work is slow and tedious. Currently, the Samba project has been successful implementing the file sharing protocol, but the efforts to reverse engineer NTFS seem to be stalled at reading, but not writing, the NT filesystem.

Personally, I believe the best solution is a mix of opening the APIs and assuring that Microsoft does not engage in additional anti-competitive practices. The future of computing will parallel the future of our economy, and no one company should have such a majority vote in how it develops.

There may be better arguments, both in terms of eloquence and research, but the underlying theme of Microsoft's guilt and lack of pennance still remains.

Sincerely,  
Kevin McFadden  
McLean, Virginia

To whom it may concern,

These comments are being submitted in regard to the Microsoft Anti-Trust case as a public comment allowed under the Tunney Act.

I will be brief.

The settlement as proposed offers no remedy alleviate Microsoft's aggressive and monopolistic practices. What the settlement amounts to is not so much a slap on the wrist, but a giant giveaway, allowing Microsoft to not only continue their anti-competitive and anti-free market practices, but actually gives them leverage in markets that currently don't already own lock, stock and barrel (i.e. the education market).

Subject: Microsoft Settlement

To Whom It May Concern:

I am the principal of a consulting and software development company in Boston, Massachusetts. I am writing to express my concern about the Proposed Final Judgement in the Microsoft AntiTrust suit. There are many problems with the PFJ as it now stands, and they are summed up nicely in Dan Kegel's open letter (to which I am a co-signer).

I am particularly concerned with the following four issues:

1. The PFJ fails to require Microsoft to release Middleware API documentation in a timely manner to competing Middleware vendors.

2. The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces.

3. Restrictions the PFJ places on use of information about Microsoft's undocumented APIs

4. Although the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs Thank you for allowing me to voice my concerns with this settlement.

From: John Queenan  
To: Microsoft ATR  
Date: 1/23/02 3:32pm  
Subject: Microsoft Settlement

To whom it may concern,

I am a long time computer user and programmer. For purposes of fair disclosure, I'll say that I am primarily a Macintosh user, however, the realities of the computing profession naturally have forced me to work in other computing environments including Windows variations as well as open unix environments.

I must strongly oppose the proposed settlement against Microsoft. I find it to be entirely unacceptable.

Please consider postponing preliminary approval of the proposed settlement. The

settlement as written would be a killing blow to any non-Microsoft technology.

I echo Apple CEO Steve Jobs:

"The centerpiece of Microsoft's proposed \$1 billion civil antitrust settlement is their donation of Microsoft software, which they value at \$830 million, to our schools," said Jobs. "We think people should know that the actual costs to Microsoft for this donated software will likely be under \$1 million. We think a far better settlement is for Microsoft to give their proposed \$1 billion—in cash—to an independent foundation, which will provide our most needy schools with the computer technology of their choice."

Personally, I find even this to be unacceptable and not punitive enough. But it would suffice if no other options were available.

Rather than being shown a variety of operating systems and technologies, generations of students will experience a Microsoft-controlled computing experience. (This is already happening thanks to other anti-competitive practices with OEMs in business, home and education markets!) Students will train using Microsoft-centric programming tools and techniques and then when confronted with competing technologies and methods they will find them lacking if they do not flawlessly interact with the Microsoft systems. They also might lack features that Microsoft enjoys due to them having access to Windows APIs that outside developers don't.

Microsoft can also steal features from the competition and give it away. This effectively makes third-party developers "outside Research and Developers" for future Microsoft products (assuming they aren't bought outright by Microsoft). (Apple Computer was often called "R&D South" by Microsoft employees; A quick glance at Windows Media Player shows how Microsoft wants to kill both Apple's QuickTime player and Real networks RealPlayer—it apes the look and feel and functionality of each). And since Microsoft can choose to smother a technology merely by making it incompatible, the student will for an unjustly negative opinion of the competing technology.

Furthermore, the student will then taint all judgements and assessments of software and computer purchases at home and work as well as when they start businesses. The "taking what you learn back home" factor is huge: siblings and parents will be urged/forced to use Microsoft products, as students rarely are taught the bigger picture of operating systems and programming concepts, but rather are sold only the Microsoft specific way of doing things.

Additionally Microsoft corrupts open standards such as web languages and introduce features that only work on Windows systems. As a web developer I have found this to complicate my job immeasurably and it forces me to give up using the open standard and instead adopt the Windows versions. Microsoft has smothered hundreds of innovations by either copying it outright (then giving it away for free), buying it and repackaging as it's own or making it incompatible with other OSes.

This settlement is a slap on the wrist.

Sincerely,  
John Queenan

#### MTC-00018253

From: Nick Bauman  
To: Microsoft ATR  
Date: 1/23/02 3:20pm  
Subject: Microsoft Settlement

I'm a software developer with 6 years of experience in the field. I have found, in my experience, that the most successful and valuable systems developed in my lifetime are ones that promote implementation choice and integration choice. In short, without choice, there can be no innovation.

Microsoft's overall approach toward software development is the antithesis of this, promoting exclusionary and lock-in tactics. If the Department does not change its current tack with Microsoft regarding the anti-trust case, it will be sending a message that strangling innovation for the enrichment of the few is a good thing.

In particular, the Proposed Final Judgment allows many exclusionary practices to continue, and does not take any direct measures to reduce the Applications Barrier to Entry faced by new entrants to the market. The Court of Appeals affirmed that Microsoft has a monopoly on Intel-compatible PC operating systems, and that the company's market position is protected by a substantial barrier to entry (p. 15). Furthermore, the Court of Appeals affirmed that Microsoft is liable under Sherman Act § 2 for illegally maintaining its monopoly by imposing licensing restrictions on OEMs, IAPs (Internet Access Providers), ISVs (Independent Software Vendors), and Apple Computer, by requiring ISVs to switch to Microsoft's JVM (Java Virtual Machine), by deceiving Java developers, and by forcing

Intel to drop support for cross-platform Java tools.

The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1.

The Proposed Final Judgment as currently written does nothing to prohibit certain kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software.

I suggest that the DoJ revisit this judgement and provide language and means to compel Microsoft to maintain non-restrictive licensing. Also, the Proposed Final Judgment doesn't take into account Windows-compatible competing operating systems either. The Proposed Final Judgment should take steps of forbidding retaliation against OEMs, ISVs, and IHVs who support or develop alternatives to Windows.

Subject: Microsoft Settlement

I'd like to register my protest at the proposed settlement. Microsoft is getting off lightly, and I cannot see that the proposed settlement is going to seriously hamper its drive to monopolize the computer industry. As far as I can tell, all the things that ought to have been done to break Microsoft up and end its monopoly, haven't been done. Microsoft has proved that it can thumb its nose at our anti-monopoly laws, indeed, at our whole legal system, and come out unscathed. There ought to be some things that money just can't buy.

From: Roger Dickerson  
To: Microsoft ATR  
Date: 1/23/02 3:33pm  
Subject: Microsoft Settlement

To Whom it May Concern,

I am against the settlement between the Department of Justice and Microsoft as it is currently designed. Microsoft has in the past used its operating systems monopoly to either enter new markets or run its competitors out of other markets. The best known example, and one that was established by the court, was Netscape in the browser wars. Since Microsoft Internet Explorer was bundled with Windows, Netscape Navigator could not compete even though it was freely downloadable. Most consumers will not go to the trouble to consider other options when a software package is included in the price they paid for their operating system.

Here are some more examples:

Microsoft included WordPad beginning with Windows95. This simple word processor only uses the file formats used by Microsoft Word. Now Lotus has left the office productivity business and Wordperfect is a shadow of its former self; both of the competing suites were much less expensive than Microsoft's.

Microsoft added networking and server capabilities to its operating systems, beginning marginally with Windows for Workgroups 3.11 and in earnest with Windows NT 3.1. Now Novell is a shadow of its former self even though its products were consistently faster and more stable than Microsoft's.

Now, after being found guilty of abusing its monopoly, Microsoft has released WindowsXP. This new product includes software for authoring CDs (competition: Roxio, Nero), updates to the Windows Media Player (competition: RealAudio, RealVideo, Apple Quicktime, WinAmp, etc). What will this bundling do to

Microsoft's competitors? Furthermore WindowsXP will tell the user to join Microsoft's new Passport service—multiple times—during and after installation. This will give Microsoft the user base needed to leverage web commerce sites to pay Microsoft to let them use Passport.

The current settlement agreement, it seems, will not do much to alter Microsoft's behavior. Microsoft will continue to use its monopoly drive its competitors out of business or into obscurity, and it will use its monopoly to force its way into new markets like Passport which will make the entire World Wide Web into a giant revenue stream for Microsoft.

I hope you will reject the current settlement and instead produce remedies that will punish Microsoft for what it has done and prevent it from doing so in the future.

Sincerely,

Roger Dickerson

Subject: Microsoft Settlement

As a computer programmer in charge of various staff members for my company I find it distressing that Microsoft's monopolistic practices haven't been curbed. Although having a large corporation set standards has

traditionally been a better alternative to smaller companies coming out with a wide array of disparate products and standards Microsoft's influence on the computing landscape has become manipulative to the point of damaging future technologies. I am a Visual Basic programmer (and a Java programmer also) and actually hold no "religious" fever for the downfall of Microsoft, they make good products, but they shouldn't be allowed to continued their business practice of adopt and extend for every product that threatens their profits.

Please don't let this chance to reign in Microsoft's business practices pass by.

Date: 1/23/02 3:33pm

Subject: Microsoft Settlement

To Whom It May Concern:

As a programmer and IT professional, I have been following the anti-trust case against Microsoft quite closely. It is hard to believe, after all the evidence presented during the trial, that the currently proposed settlement is even being considered. I think Microsoft demonstrated very well after the last anti-trust suit against them that they will not abide by the spirit of an agreement, but only by the letter (and even that is arguable). Microsoft reduced the previous consent decree to a meaningless and ineffective piece of paper simply by changing their contracts with OEMs slightly. It had no significant effect whatsoever on their business practices. With that in mind, I believe that any settlement with Microsoft must be made air-tight. I like the idea of a committee to oversee Microsoft to ensure compliance with the eventual terms set either by a settlement, or by the court. I simply can't see any reason why Microsoft should be allowed to select any of the people that will make up the committee, though. Microsoft is utterly unrepentant and quite ruthless. It would be folly to give them any opportunity to set the committee up for failure.

As for the terms of the proposed settlement, I believe that they will not adequately address the situation in a manner that will allow competition and innovation to thrive in the industry. Specifically, there are 2 areas that concern me the most:

1) Microsoft's APIs, File Formats, and Protocols.

The complete documentation for these must be made public. Any future changes must also be made public in a timely manner. This should allow other companies to produce products that can compete with

Microsoft's products by removing a major barrier to entry, namely that no company can afford to convert all of its existing documents into a new format in order to take advantage of a non-Microsoft office suite or other applications. Currently anyone using Microsoft products is effectively "locked in" to those products because they cannot be easily converted to another format. While some programs exist that can read and write documents in Microsoft's formats, they are not entirely compatible and often fail on complex documents due to a lack of complete documentation available from Microsoft. Network effects are a particularly difficult barrier for companies seeking to enter a market dominated by another. Anything that can be done to reduce this barrier can only help to create more opportunity in the market. Microsoft has apparently inserted a clause in the current proposed settlement that would allow them to refuse to publish a format, protocol, or API if it would be a security risk. Since virtually all of

Microsoft's formats, protocols, and APIs have some security component to them, I'm afraid they will use this clause to effectively nullify that portion of the settlement.

Security features should work regardless of whether their mechanism is known or not. If this clause remains in the settlement, it should be modified to give the decision-making power to the oversight committee or to the court, and such decisions should be expedited so that Microsoft cannot introduce further delays to the application of remedies in this case.

2) Microsoft's Business Practices.

Microsoft must not be allowed to enter into deals with OEMs, ISPs, or other businesses that would create disincentives or prohibit those companies from offering non-Microsoft products or services to their customers. Since the vast majority of the desktop computing world currently uses Microsoft products, OEMs, ISPs, and others must be able to offer those products to consumers. To allow Microsoft to continue to take advantage of that situation by prohibiting those companies from offering alternatives, either by outright prohibition, or by economic disincentive, is to allow Microsoft to continue to hold the industry hostage.

If these concerns are addressed by the eventual settlement or court ruling, they should remove most of Microsoft's ability to abuse its monopoly power to the detriment of the industry. I feel that a healthy IT industry should consist of competing products from a variety of companies, all able to interoperate with each other, with no single company able to leverage its dominance in one area to bolster its position in another.

Respectfully,

Subject: Unacceptable Microsoft Settlement Terms.

Dear Ms. Hesse:

The proposed settlement in the Microsoft anti-trust case is completely unacceptable. It is particularly disturbing that the settlement seems to be little more than a sales contract for Microsoft products in the schools, while exempting their anti-competitive behavior from sanction. It is little wonder that Judge Jackson was infuriated with the behavior of this company.

I urge you to work for a more substantial penalty for Microsoft, one that would be fair to everyone, both to their competitors and, more importantly, to the American public.

Thank you for your time.

Sincerely,  
Michael Tesch

To: Microsoft ATR  
Date: 1/23/02 3:34pm  
Subject: Microsoft Settlement

I am writing to comment on the Proposed Final Judgment (PFJ) in the Microsoft anti-trust case. I do not believe that the PFJ is an adequate response to Microsoft's anti-competitive practices; indeed, it gives Microsoft considerable leverage against what various internal memoranda (such as the notorious "Halloween Document") have indicated it considers its most serious competition, to wit, Open Source software.

The definitions in Part VI of the PFJ differ in many ways from those in the Findings of Fact, to the considerable benefit of Microsoft. For instance, Definition J ("Microsoft Middleware") as written permits Microsoft to evade designation of its products as middleware simply by changing the version numbering and/or distribution schemes, and Definition K ("Microsoft Middleware Product") excludes numerous Microsoft products that fit the definition of middleware given by the Findings of Fact (including Microsoft.NET and C#, which Microsoft has designated as its choice to replace Java). Furthermore, Definition U excludes several families of Microsoft operating systems, such as Windows CE and Windows XP Tablet PC Edition; programs written for Windows 2000 can in many cases be made to run unchanged on these operating systems.

The worst feature of the PFJ, however, is that it permits Microsoft to stifle competition from the Open Source sector. ISVs writing operating systems that compete with Windows Operating Systems Products cannot use the information that the PFJ forces Microsoft to disclose—its use is strictly limited "for the sole purpose of interoperating with a Windows Operating System Product." This excludes several extant products, such as WINE.

It is clear that the PFJ will not serve the desired purpose—to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (Court of Appeals ruling, section V.D, p. 99). It must be extensively revised.

Under the Tunney Act, I would like to comment on the Proposed Final Judgement (PFJ) for the case of United States v. Microsoft. In short, I believe the PFJ to not be in the public's best interest—it is not nearly punitive enough in punishing the Microsoft for the anticompetitive practises it has been found by the court to have engaged in, nor is it comprehensive enough in preventing Microsoft to continue to engage in wrongdoing.

A good summary of many specific deficiencies, all of which I agree with, can be found in Dan Keigel's open letter:

Subject: Microsoft Settlement

Renata B. Hesse,  
(Antitrust Division)

I would like to take advantage of the public comment period on the proposed Microsoft settlement to raise a few points.

The current proposed settlement is wholly inadequate. It merely formalizes the status quo. It does not penalize Microsoft for past transgressions in any meaningful way, nor will it prevent them from abusing their monopoly in the future. It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

I have likewise been very concerned with how this settlement was reached. It was done hastily and with little long-term thought. It is more important that we come up with a—correct—and—effective—remedy, than a quick "resolution". Any proposed remedies must include open, complete, and full disclosure of all of the following Microsoft technologies: APIs (Application Programming Interfaces)—especially to their operating systems; document file formats; and wire protocols. Said disclosures must apply not only to existing technologies, but any future releases as well. Failure to implement such a provision will allow them to continue to leverage their monopoly power.

Furthermore, any remedy imposed must consider the Open Source / Free Software movement that has gained momentum over the last several years. (For further reading, see <http://www.opensource.org> and <http://www.gnu.org>.) Perhaps more than any other phenomenon, Open Source Software represents a real, credible threat to Microsoft's monopoly. The current proposed settlement fails to address Open Source Software at all and in fact contains language that could seriously undermine it. The example I am thinking of is the proviso where Microsoft would have to disclose some information to other commercial entities. This implicitly suggests that they

could happily keep that same informatino secret from the Open Source community, making it difficult (if not impossible) for them to write software that could interoperate with Microsoft's. This is not acceptable. (Not coincidentally, the government could set a good example by replacing Microsoft software with Open Source alternatives.)

Perhaps the greatest abuse that Microsoft is capable of is using the government-granted protections on its intellectual property as a way to bludgeon competitors. If Microsoft is allowed to use it's patents, copywrites, or trademarks as a means of preventing other people from publishing software that could interoperate with—or replace—Microsoft's software, then the government will end up being the largest part of the problem. With that in mind, a provision should be put in place which explicitly states that Microsoft be allowed to use it's patents for defense only.

The world is watching. Numerous other countries have announced their intent to pursue Microsoft under their own antitrust laws, including Austrailia, Japan, and the European Union. (Some have even begun already.) Many countries are waiting to see what actions the US will take, and then follow suit. We can set a good example by coming up with an effective, just, long-term solution. The current proposed set of remedies are inadequate; we cannot afford to set a bad example. Please keep in mind that Microsoft has a world-wide influence and that we must act with that in mind.

Much of the discussion regarding a settlement has been couched in the need for aiding our slumping economy. I would submit to you that the current economic slump has occured not in spite of Microsoft, but \*because\* of Microsoft. I have personally both seen and experienced the deleterious effect that Microsoft has had on this industry. In the state of Utah where I live, numerous people (including myself) who work in the Information Technology industry have lost there jobs precisely because Microsoft has used their monopoly influence to crush them. Examples include: Novell, DriverSoft, WordPerfect, and Caldera. This is far from a complete list. The damage done by the Microsoft monopoly is neither theoretical nor anecdotal; it is real and tangible. If we make a hasty settlement now for the sake of the economy, we will be gambling on a dubious short-term gain and ensuring continued long-term pain.

Don't soft-pedal this one. Executives at Microsoft have demonstrated that they are not repentant for their past misdeeds. Witness how they have continued to leverage their monopoly power by bundling Windows Media Player in the most recent release of their Windows XP operating system. The sole reason for this was to crus Real, the only real competition they have in streaming media. Microsoft executives are not honorable people. Witness how they falsefied evidence and perjured themselves in federal court durring the hearings. They have publicly rejected the assertion that they are a monopoly. And have insinuated that whatever remedies the government imposes, they can "work around" them so as to

continue with Business As Usual. Whatever remedies are put in place, you must assume that Microsoft \*will\* violate them and be prepared to enforce the remedies by levying additional fines and punishments. Thank you for your time. I hope you will consider sincerely the points I have raised.

**MTC-00018299**

From: leon@mcall.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 3:28pm  
Subject: Microsoft settlement

The settlement leaves out any remedies that address Microsoft's ability to impose a tax on every personal computer sold. When I purchased my first PC year's ago I could not find one PC distributor that would sell a machine without Microsoft's operating system preinstalled.

Even thought I had no intention of running Microsoft's software, I had to pay the tax. The situation has changed very little, in today's market place the vast majority of distributors of PC's require you to pay the Microsoft tax.

Software should be a separate purchase leaving the consumer the ability of running other operating systems if they choose. And preventing Microsoft from requiring personnel computer manufactors and distributors to license their software for every machine sold, through the use of volume discounts and other methods.

The fact that the settlement does little to force Microsoft from revealing the API's (Application Programming Interfaces) and document formats insures that the behavior the settlement is supposed to correct will continue on into the future. Microsoft only has to claim that by doing so threatens their intellectual property or that it comprises the security of their software and this information will not be available.

Some mechanism or process to insure that they do not hide behind this clause to simple disadvantage the competition.

Also the panel that will supervise this settlement is strongly influenced by Microsoft, in their ability to choose who sits on it. Isn't this to much like the fox supervising the hen house?

#### MTC-00018301

From: Isaac Wedin  
To: Microsoft ATR  
Date: 1/23/02 3:38pm  
Subject: Microsoft Settlement  
I am writing in opposition of the proposed Final Judgment resolving the antitrust case against Microsoft.

There are many problems with the settlement, but I am specifically concerned that the judgment does nothing to address the existing barriers to entry for competing office software suites. Competition will only occur in the market for PC operating systems when office suites and programs (like StarOffice, Gnumeric, and Abiword) for competing operating systems (like Linux) can reliably open and make changes to files created using the industry-standard office suite, Microsoft Office.

Microsoft should be required to publish the full details of the file formats used by all of the programs in Microsoft Office, but most importantly Microsoft Word and Excel.

Sincerely,  
Isaac Wedin

From: jeff  
To: Microsoft  
ATR.tunney@codeweavers.com@inetgw  
Date: 1/23/02 3:40pm  
Subject: Microsoft Settlement

I find any settlement in the Microsoft Antitrust case insulting. So I must voice my position about the current settlement and let it be known I am strongly against it. Microsoft was found Guilty of being a Monopoly and continue to operate as one to

this day. Microsoft's OEM licensing that restricts PC manufacturers from installing other OS'es alongside any Microsoft OS should be enough on it's own to land them in serious legal trouble, but somehow it doesn't. Microsoft is in the buisness of killing companies first, inovating and delivering product second. This behavior should not be allowed. I don't want to wake up one morning to be told I can't brush my teeth because my license on my Microsoft toothbrush has expired, and I can't by a non-Microsoft toothbrush because they aren't built with trusted hardware.

Jeff Buttars  
jbuttars@onyx.boisestate.edu

#### MTC-00018303

From: Justin Deri  
To: Microsoft ATR  
Date: 1/23/02 3:39pm  
Subject: Microsoft Settlement  
To Whom It May Concern,

As a software developer and therefore a frequent computer user, I'm very concerned about the DOJ's Proposed Final Judgment (PFJ) with regards to the Microsoft Settlement. Although there are many other issues, I've outlined my highest priorities below:

—The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents. No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ? 39).

—Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. Many Windows APIs, including Media Encoder, are shipped by Microsoft as add-on SDKs with associated redistributable components. Applications that wish to use them must include the add-ons, even though they might later become a standard part of Windows. Microsoft often provides those SDKs under End User License Agreements (EULAs) prohibiting their use with Open Source applications. This harms ISVs who choose to distribute their applications under Open Source licenses; they must hope that the enduser has a sufficiently up-to-date version of the addon API installed, which is often not the case.

—Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by ISVs to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute . . . the Redistributable Components . . . provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product . . ." This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems. —Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. As the 1996

Caldera v. Microsoft antitrust lawsuit demonstrates, it is a valid concern that as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-Microsoft operating systems, just as they did earlier with Windows 3.1.

—Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. —The PFJ as currently written appears to lack an effective enforcement mechanism.

Sincerely,  
Justin L Deri  
Cambridge, MA

#### MTC-00018305

From: Kyle R Krom  
To: Microsoft ATR  
Date: 1/23/02 3:38pm  
Subject: Microsoft Settlement

I am strongly opposed to the currently proposed settlement in the Microsoft case, and I will be very brief in explaining some of my reasons. (Disclaimer: My opinion is my own, and does not represent that of BASF Corporation) I make my living as an administrator of UNIX systems and a developer of UNIX applications. Working with alternative operating systems is very challenging; not out of necessity, but because of anti-competitive behaviour from Microsoft. Microsoft's monopoly forces companies (and even government agencies) to use Windows operating systems and other Microsoft software applications. Any competing operating systems and applications must therefore be compatible with Microsoft's software in order to be accepted in a corporate environment. According to the Findings of Fact, Microsoft exploits this situation by knowingly producing artificial Barriers of Entry, in order to prevent competitors from being able to produce Microsoft-compatible products. This behaviour severely inhibits the ability of developers to innovate new products. Nobody has any interest in a new software application, if it is incompatible with Microsoft's widespread software.

In an attempt to remove the Barriers of Entry for Microsoft competitors, the settlement proposes that Microsoft should be forced to publish some of its products' API's. This is a fine idea, but it is implemented poorly. For example, the list of affected middleware specifically includes Microsoft Java (which Microsoft intends to discontinue) but not Microsoft.NET (which Microsoft is hailing as the successor). It includes Outlook Express, but not the more commonly used

Outlook. It includes free software such as Internet Explorer and Media Player, but not Microsoft Office (in fact, even the file formats for Office documents will not be published—how can a competing office suite survive if it cannot even reliably read and produce Microsoft Office compatible documents?). Also, the settlement affects current Microsoft operating systems such as Windows 2000 and Windows XP, but not their “next-generation” operating systems such as Windows CE or Pocket PC. On the whole, it seems that the Barriers of Entry to Microsoft’s major applications will remain quite intact. There are several minor loopholes in the settlement, with major implications. For example, the last paragraph of Definition J in the settlement goes out of its way to create a loophole whereby new versions of middleware products can avoid being affected by these restrictions, simply by failing to adhere to a specific version numbering system. I have to wonder whether such portions of the agreement were written solely by Microsoft’s executives and ignored by the Department of Justice! Microsoft has certainly set numerous precedents of finding loopholes in previous anti-competitive restrictions; don’t provide them with new ones.

I am also concerned about how the settlement’s measures will be enforced. What will happen if Microsoft violates the current agreement? Another trial that drags on for years, costs millions of dollars, and concludes with another poorly constructed settlement that contains no actual punishment?

Microsoft’s behaviour is anti-competitive, anti-innovative, and anti-cooperative. It hurts software developers, and consequently it hurts consumers. If the Department of Justice refuses to punish this behaviour, it should at least prevent the behaviour from continuing. The current settlement proposal does not.

Subject: Microsoft Settlement

As the time for comment draws to a close, I wanted to mention that the news bits, rumors and “facts” as they have been presented to the public regarding the Microsoft case have distressed me. Overall, I believe that Microsoft has not been given a

punishment that is fit for their activities. Further, the idea that Microsoft would like to offer their own software as retribution for their activities is ludicrous.

I went to school at the School of Information, University of Michigan, where we studied topics related to information science, public policy and economics. In fact, one of the graduate degrees is entitled “Information Economics, Management and Policy.” A great deal of academic and real world experience has shown that corporations that sell software/information respond differently to the traditional (in terms of companies that sell a physical product) rules of business. I will refrain from starting a tutorial, but wanted to note that it costs nothing for a software company to give away copies of their software.

Punishment, in general, is generally best when it falls in between what the accused and the accusers publicly state. In that light, Microsoft’s idea of punishment is definitely at the low end. Further, it is important to note that Microsoft was not willing to give away cash money, access to software source code/APIs or any other item that would actually cause them pain.

With that said, I admit that I am not a lawyer. I will not assume the knowledge to dole out the appropriate punishment, but simply offer my viewpoint that Microsoft should be punished in a manner that does not let them escape their misdeeds.

Thank you for your time and efforts.

From: Andrew Kuan  
To: Microsoft ATR  
Date: 1/23/02 3:36pm  
Subject: Microsoft Settlement

I do not agree with the proposed settlement in the Microsoft antitrust case. The original proposal from Judge Jackson to split Microsoft into two separate companies, one of which creates application software and the other of which creates operating system software makes much more sense. The root of the problem with Microsoft’s monopoly is that they have a conflict of interest: Microsoft provides the operating system for which both they and their competitors develop applications. While the existence of monopoly conditions in the operating system market is not inherently bad, Microsoft unfortunately abuses its monopoly in order to force competitors in the application software market out of business.

This is anti-competitive, anti-innovation, and counter to the interests of American consumers.

Again, I am very much against the current terms of the proposed settlement as they do little to prevent Microsoft from abusing their monopoly power and engaging in anti-competitive practices again. The call to split Microsoft in two should be reconsidered.

Sincerely,  
Andrew Kuan

#### MTC-00018310

From: Will Berry  
To: Microsoft ATR  
Date: 1/23/02 3:44pm  
Subject: Microsoft Settlement

To whom it may concern,

My name is Will Berry and I am a natural-born US citizen from Atlanta GA. The purpose of this e-mail is to contribute my comments on the proposed settlement between Microsoft Corporation and the US Department of Justice, pursuant to the Tunney Act. I am not pleased at all with the terms of the proposed settlement. I believe the proposed settlement is in effect a license for Microsoft to continue to break the law.

Thanks to the efforts of the DOJ, many States, and others, Microsoft has been found by the courts to be a predatory monopolist with no regard for responsible behavior in a competitive market. Microsoft has done severe, if not irreparable, damage to the operating system and browser markets.

They have strong-armed their operating system distributors, similarly to the offenses of Standard Oil with the railroad companies, coercing them not to sell competing operating systems, or forcing them to pay for MS Windows even if the computer does not ship with MS Windows. (This practice has even become known in high-tech culture as the “Microsoft Tax”.) They have strong-armed Apple Computer and others by influencing which features and software are included in their products, to the inherent harm of the consumer. And this is a telling thing: they continue to deny that they have done anything wrong. As Microsoft has demonstrated over and over again, they will be exactly as responsible in the market as the government forces them to be, not a bit more. Microsoft must be held accountable for its actions. Let me be clear: Microsoft will not stop breaking the law until and unless they are \*punished\*. This proposed settlement will not punish Microsoft; it will enable them.

The “Technical Committee” provided for in the settlement is a farce. Why would Microsoft choose one of the three members? Why would the committee not have power to enforce the settlement or levy fines, as opposed to simply monitoring the situation? The details of this arm of the proposed settlement are riddled with flaws. If the court accepts this, then the committee will become a shield for Microsoft when (I do not say “if”

Microsoft continues its illegal business practices. After all, if the committee approves....

This is not punishment; it is government endorsement of Microsoft's behavior. The settlement allows Microsoft to withhold technical information from any individual or organization, as long as they say they do not certify the "authenticity and viability of its business". This is a gaping loophole, allowing Microsoft to continue its old practices by labeling its products and other organizations differently. Furthermore, when Microsoft continues its illegal acts, it will be harder to sue them because they will be abiding by the settlement agreement! This is not punishment. It is government approval to break the law. Why does the settlement not force divestiture of certain Microsoft ventures? Why does the settlement not fine Microsoft one red cent? Why is the Technical Committee not allowed to disclose its findings to the public? Why does the settlement not punish Microsoft? Why do you think Microsoft is so happy about the settlement?

If you ask me, the Windows and Office divisions of Microsoft should both be ordered divested, and no Microsoft employees or board members or their families should be allowed to manage or serve on the boards of the new companies or own more than 0.1% of their stock for twenty years. Failing that, Microsoft should at the very least be fined half of its gross revenue for the next ten years. That would at least be punishment. At least that would cause them to think twice about repeating their egregious abuses of our free market economy.

Think for a moment on Microsoft's "warnings" of what would happen should actual punishment be levied against them. They say the market will suffer if they are punished. Even if their predictions are true, which I doubt, is this not an implicit admission of their pestilence? For Microsoft IS the market, and therefore to punish Microsoft is to directly damage the market. Or at least they say so. This is all the more reason to punish them harshly, and allow the market to repair itself. After all, they did break the law.

This nation passed Anti-Trust legislation to prevent exactly this sort of phenomenon from occurring.

Standard Oil was damaging its market, and in doing so was damaging the entire nation's economy.

Microsoft is following in its footsteps; the courts have found this to be true. The Sherman Act was passed because the free market itself cannot repair this kind of damage; the government must intervene to keep the market healthy. Microsoft's behavior cannot continue!

I say to the Courts, to the States, and to the Department of Justice: Do not let Microsoft get stinking rich from their illegal, atrocious business practices. Do not let crime pay for them. This responsibility falls squarely on your shoulders; the public is depending on you to protect us from these predators.

Do your job; reject this settlement!  
Will Berry  
Atlanta, GA

From: James Morgan Harrison  
To: Microsoft ATR  
Date: 1/23/02 3:42pm  
Subject: Microsoft Settlement

To whom it may concern,  
I feel that the proposed settlement with Microsoft is not a sufficient remedy for their actions. Microsoft is and continues to be an oppressive monopoly. Even after repeated ruling and decisions by this and other courts, Microsoft has continued with the same business practices. Microsoft executive have yet to concede that Microsoft is actually a monopoly or that its actions have been in any way wrong.

I personally feel that many of Microsoft's actions have been detrimental to the computer industry and potentially many other industries. There are many quality products that are not able to enter the market because of Microsoft's dominance. In addition, there have been many smaller companies either bought-out or run out of business by Microsoft's actions.

Microsoft forces its will on OEMs and others by preventing or discouraging them from making or selling products with or for non-Microsoft systems. The proposed settlement does not go far enough to either remedy Microsoft's previous actions or to ensure me that Microsoft's practices will be stopped. There are many sections and definitions that are very narrow or ambiguous and could potentially be completely circumvented by later Microsoft products. In addition, certain intellectual property such as file formats are not required to be disclosed. I feel that Microsoft's proprietary file formats have allowed them to gain dominance any other areas, such as office applications, since competing applications are not able to easily convert documents in the Microsoft format.

I feel that these anti-trust actions are the last any only mechanism left to prevent or erode the Microsoft monopoly. Many companies have tried and failed to compete with Microsoft in a "fair" open market. If the Department of Justice and the US Government can not or will not require a stronger settlement, then there will be little hope for any other company to challenge Microsoft in the future.

While I understand the court and Microsoft's desire to settle and prevent further legal cost and hassle, I do not think that agreeing to this settle for the sake of settlement is acceptable. I ask that the Department of Justice reconsider this settlement in favor of a more strict and carefully worded decision.

Thank you for your time and consideration.

From: Gary Hale  
To: Microsoft ATR  
Date: 1/23/02 3:42pm  
Subject: Microsoft Settlement

I believe the settlement proposed by the Department of Justice is flawed and will do

very little to improve competition in the software industry. It is full of loopholes that will allow Microsoft to continue its past behavior in maintaining its monopoly, and will actually protect it from future action.

The proposed settlement is poorly written, and insufficient means of enforcement are provided.

If you consider how few companies in the computer industry have stood up against the monopolist and maid their voices on this matter known, it becomes clear that they are all afraid to fight back. This is how a monopolist maintains their monopoly.

The proposed settlement is not in the public interest.

From: Mark Greene  
To: Microsoft ATR  
Date: 1/23/02 3:43pm  
Subject: Microsoft Settlement

Dear Sirs:  
I am writing in regard to the proposed settlement of the Microsoft anti-trust case, under the authority granted by the Tunney act for public comment.

I believe that the proposed settlement is both insufficient in scope and unfair in its particulars. It neither punishes Microsoft for having engaged in monopolistic behaviors, nor does it remediate the environment in order to prevent those behaviors from continuing. For Microsoft to be allowed to, essentially, garner more public good will by "donating" money to an organization they help create is both hypocritical and ridiculous. It is my hope that the court will reconsider but the punitive and rehabilitative aspects of the settlement.

Thank you for your time and attention,  
Mark Greene

Subject: Microsoft settlement

I am 19 and am running linux now and it is much better than windows. Linux is not a corporation, a brand, or even an independant entity so much as it is the foundation of a new way to compute. An open, extensible, publicly owned foundation upon which anyone can "embrace and extend", in true meaning of the phrase. Linux is freedom. Winston Churchill once said that Americans always do the right thing after they have exhausted all other options, Americans will choose freedom in the realm of computing.

Make microsoft's punishment a punishment. Cold hard cash speaks volumes and is another expression of freedom, saying, here I am, worth, spend me as you may. Microsoft offers oppression and control, aid in liberation.

Thank You,  
Jonathan Robinson.

 To: "microsoft.atr(a)usdoj.gov"  
 Date: 1/23/02 3:44pm  
 Subject: Microsoft Settlement

I do not support the proposed settlement, as it does not solve the bottom line of this case: It does NOT prevent/punish Microsoft for bundling everything in its OS for free. As we progress in our technology, who knows whatever else Microsoft may be willing to bundle with its Windows operating system? Just look at what it has now:

- 1—a web browser
- 2—a mail client
- 3—an all-encompassing media player

Those are the major components. How are software developers to create their own versions of any of the above, if it all comes free with Microsoft's OS? There \*is\* no competition as it is. I'm surprised other multimedia player vendors are not actively suing Microsoft as it is.

If the proposed settlement does get approved, we will just allow Microsoft to continue on with its anti-competitive practices. I'm sure we will see another anti-trust case, but with another product like the Netscape web browser as its main example.—d

From: Ryan Cole  
 To: Microsoft ATR  
 Date: 1/23/02 3:44pm  
 Subject: Issues with the Microsoft Settlement  
 Dear DOJ,

After some review of the proposed Microsoft Settlement, I have found fatal weakness in it. They are as follows:

1. Definition A should state that an API is simply an interface between applications and the operating system. Narrowing this definition is not only inaccurate, but opens a pandoras box of loop holes for Microsoft.

2. Definitions J and K are also too narrowed, so much so that they exclude their real meanings. Middleware is simply software, or a part of software, that mediates between an application and a network. Microsofts .NET strategy will tend to combine OS updates, middleware, and end-user applications. Anything other than an accurate definition, accounting for the fact that middleware can exist as parts of other programs, will not pertain to many soon to be released products and be too easily circumnavigatable.

3. Definition U should simply state "Any operating system produced by Microsoft."

4. While Section III.I is very helpful, it should go further to require Microsoft specifically explain which software patents protect the Windows API.

5. While this settlement makes an attempt to protect OEM's from Microsoft, unfortunately too many loop holes still exist, leaving OEM's, especially smaller OEM's, subject to retaliation. Anything short of consistent per unit published prices period, will allow for such retaliation.

6. No tricky licenses! Microsoft needs to be restricted to licensing practices that do not dictate the operating platform the product is to be used with, restrict free software development, or otherwise restrict a products use to hinder Microsoft competitors.

7. Consistent and published file formats. When Microsoft changes file formats, it stifles competition and innovation, while forcing their own users to upgrade by way of sheer market leverage. Properly designed file formats rarely need to be changed or overhauled, and surely not with every product release. Storing information is quite straightforward, yet Microsoft surely has succeeded in innovating ever more complex ways to store it. Restricting file format changes and forcing Microsoft to publish existing ones is necessary. This would greatly benefit the exchange of information, and helping to solve one of the most common issues faced by Microsoft and non-Microsoft users alike.

Thanks for your careful consideration of these issues,  
 —Ryan

From: Jonathan Mayer  
 To: Microsoft ATR  
 Date: 1/23/02 3:44pm  
 Subject: Microsoft Settlement  
 To: Renata B. Hesse

Antitrust Division  
 U.S. Department of Justice  
 601 D Street NW  
 Suite 1200  
 Washington, DC 20530-0001

Under the Tunny Act, I would like to comment on the proposed Microsoft settlement.

I am very disappointed in what I perceive as the DOJ losing its nerve and snatching defeat from the jaws of certain victory in the Microsoft anti-trust battle.

When I was young, brilliant software engineers were able to create new products and turn these innovative products into billion dollar industries. Borland, Autodesk, Lotus, and Oracle are only a few examples—a list of examples that should have included Netscape. Their example inspired me to follow in their footsteps into what looked to be a bright new dawn.

Today, instead of a vital, innovative, freely competing software economy, we have a captured "economy in a bottle." We have an economy in a bottle, where the ants inside struggle with each other for survival, while Microsoft securely tightens the lid.

Software engineers are still free to invent brilliant ideas and start companies, but we live at Microsoft's leisure. At best, a successful software company will be acquired and integrated into Microsoft. At worst, the penalty for success is to be imitated and undermined by a company with gross competitive advantage: a stranglehold on the tools and standards that are the gateways of our industry.

Microsoft is running the game, setting the rewards of the game, and is guaranteeing that no company will ever grow to the point that allows them to upset the software hierarchy that Microsoft dominates. They have repeatedly demonstrated their ability and willingness to abuse their market control to put down competitors that grow too "uppity." If the legal remedy against Microsoft's monopolistic dominance of the software industry fails (as it is about to do), there will never be a second chance. The software industry, which could have been America's most vital and powerful industry, will wither and spoil. The power of information technology to revolutionize productivity, communication, and quality of life on earth cannot be underrated. Leaving that power in the hands of a demonstrably abusive monopolist is a betrayal of the law, a betrayal of the capitalist system, and a betrayal of our future.

The proposed settlement agreement fails in every way to remedy this problem. Microsoft can not be tamed or trained to behave itself—it must be unseated from the reigns of power.

Thanks for listening.

Sincerely,

Jonathan Mayer <jmayer@guck.net>  
 Mountain View, CA.

From: Erwin, Christopher  
 To: "Microsoft.atr(a)usdoj.gov"  
 Date: 1/23/02 3:44pm  
 Subject: Opposed to the Settlement

I am opposed to the settlement offered by the DOJ in the Microsoft case. I am a data analyst by profession and a computer programmer by hobby. I would like to start my own software company, but I feel that it would be foolish to do so because of one fundamental cause: software business that is successful today will be Microsoft's business tomorrow.

The findings of fact in the Microsoft case are not in dispute. Microsoft is a monopoly and they use their monopoly power illegally to stifle competition and invade new markets. Why should I risk innovation in the face of such a foe?

The proposed settlement will do nothing to redress Microsoft's past crimes, and the restriction on future behavior are so minor as to allow Microsoft to select the majority of it's own regulating body. Furthermore, Microsoft will be allowed to re-frame it's business practices in the name of "security" and be basically immune from the conditions of the settlement. A real penalty would redress the past illegal behavior and prevent such behavior in the future. The current settlement does neither.

As an aside, who settles a trial in the penalty phase? Is that a little like forfeiting when you've already won?

Subject: Microsoft Settlement

It seems to me that allowing Microsoft to "settle" for a free (to them) "solution", in which they get access to a market (schools) which has been a weak point for them so far, is contradictory to the spirit of the lawsuit. It would give them MORE control over the industry, MORE sway over children, whose mindsets haven't yet frozen, and would end up getting Microsoft that much more mindshare/marketshare.

The settlement where Microsoft gets to do this is VERY bad, should not be accepted, and would be a serious miscarriage of justice if it were to go through.

I'd like to see them split into four pieces: Operating systems, Office, Internet, and the rest. None of these companies could cooperate with the others except through public documentation for 20 years. If that makes them fail, too bad.

Subject: Microsoft Settlement

Dear Sirs,  
The proposed Microsoft settlement is a poor idea. After reading up on the final proposal, I was surprised and discouraged to find that it is too lenient, contains too many loopholes, and would allow the company to continue to lock-in users rather than allowing choice and competition. It is not without reason that half the states involved in the case are still pushing for heavier penalties.

Do not forget that Microsoft is a repeat offender. A federal district court and an appeals court have both affirmed that Microsoft is a de facto monopoly and that it has abused its monopoly profits and market position to engage in anticompetitive ways even after an earlier antitrust case. Microsoft has clearly shown that comprehensive remedies and strict enforcement are necessary to hold it accountable for and to prevent further unlawful and predatory behavior.

**MTC-00018325**

From: C. Michael McCallum  
To: Microsoft ATR  
Date: 1/23/02 3:47pm  
Subject: Microsoft Settlement

I hereby go on record as against the proposed DOJ Microsoft settlement. The reasons are many.

Such figures as Judge Robert Bork and Ralph Nader have said it would EXTEND, not reduce Microsoft's monopoly (which is of course, a finding of fact). Enough reason for me is the fact that the settlement does not appear to meet the requirement to "unfetter a market from anticompetitive conduct". Many important APIs will go undocumented.

Microsoft is not required to disclose technical requirements of new releases in advance.

Middleware vendors will learn of API documentation too late for effective coordination.

Patents remain undisclosed.  
I see many more things wrong with this proposed settlement than right.

I urge the rejection of this settlement.

Respectfully,

From: Christian Walker  
To: Microsoft ATR

Date: 1/23/02 3:45pm  
Subject: Microsoft Settlement

As per the Tunney Act, please consider the following in regards to the proposed microsoft settlement: It does not sufficiently compensate consumers for our loss due to lack of competition.

A more appropriate and punitive response would be to require, at a minimum, that Microsoft allow hardware vendors to sell computers WITHOUT forcing consumers to buy Microsoft software, and without any fees for doing so.

In my experience with software developers, and VC funding, there is widespread belief that creating a product that in any way competes with Microsoft now, or where Microsoft may want to go in the future, will result in anti-competitive behavior on the behalf of Microsoft.

This has drastically hindered software advances in the US, and abroad.

Subject: Microsoft Settlement

Greetings. I am writing to oppose the terms of the tentative settlement of the Microsoft Antitrust case. I Believe that the settlement will not reduce or stop Microsoft Corporation's anti-competitive practices. One specific aspect with which I take issue is the fact that The PFJ does not require

Microsoft to release documentation about the format of Microsoft Office documents. I am a technology specialist for a public school district. In my job I support systems both with and without Microsoft office. The lack of documentation of Microsoft Office's file formats makes it very difficult to find good ways to get our office software to intercommunicate. The decision by Microsoft Corp. to keep their file formats proprietary and closed is a clear attempt to discourage the use of other Office suites by leveraging the large market share enjoyed by Microsoft Office. If a competing suite will not read Microsoft file formats, its users are at a competitive disadvantage since they may have their communication with Microsoft Office users obfuscated. Thank you for your time and for your consideration of this matter.

Subject: Microsoft Settlement

To whom it may concern, ladies and gentlemen: Living in Seattle, I have been bombarded with the superficial news reports of Microsoft monopolistic tendencies. These reports do not even come close to the actual nefarious activities to which Microsoft people resorted to squash competitors. The tactics can only be called restraint of trade.

There are widely circulated, via the net, stories of loading the Windows operating system with "poison code" to render useless the application products of other companies. People I know who worked at Microsoft as temps, can relate incredible tales of directives from top management to sabotage the ability to use with Windows, any product which might compete with Microsoft Word and Excel.

Microsoft management has consistently bragged about their innovations. They have not innovated anything! They buy, purloin and out and out steal code from other products, then use their huge economic clout to push Microsoft product on users. They have purchased potential competitors and either buried that technology, or turned it into a Windows/Microsoft application which sucked.

To punish Microsoft by "forcing them" to provide hardware and software to schools is to put the fox into the hen house. It gives them the opportunity to monopolize one area of computer use they have never been able to crack. One would have to wonder how much the person who instituted such a "penalty" was getting paid by Microsoft. If the computers they were required to donate were made by Apple, or used either the Mac or Linux OS, then Microsoft would still be able to donate "Office for the Mac", which, incidentally, is the best piece of non-buggy software Microsoft has ever marketed.

To sum up: Microsoft is predatory, and similar to a sex offender, it has proven it will repeat and continue to be predatory unless stopped by a stronger power; a company so

steeped in monopolistic practices, it no longer deserves to exist as a whole; and to give them yet another heretofore unavailable market as a form of "punishment" would be the height of uninformed stupidity or insider payoff.

I urge the Department of Justice, and the presiding judge, to make it abundantly clear that these monopolistic, predatory practices will not be tolerated by punishing Microsoft with harsh consequences.

I would prefer to see the company split into two separate entities.

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Please enforce (and interpret) the law as it is written. As a citizen, I expect nothing more and nothing less from the judicial branch of my Federal government. Thank you.

Sincerely,

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully

redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Subject: Microsoft Settlement

Honorable servant of the public,

As a computer user, systems administrator, and software developer, I have come into contact with all manner of Microsoft applications; in fact, I use one now as I write you. Drawing upon my experience as a whole, I can say that if any automobile manufacturer sold a car which performed as poorly and failed so miserably to live up to the expectations of the consumer as Microsoft products have, I am confident that the US government would have taken decisive action against such a company. If that company were using its investments in the oil companies and tire manufacturers to leverage its product, at the expense of competitors, this act would result in considerable punitive damages imposed and enforced by the federal government.

The situation described above is a perfect analogy to the current stranglehold the Microsoft corporation has on the software market today. Microsoft has ownership of the source code to Windows, the most prominent operating system (OS) in the world (which is not a crime in and of itself), and by consequence, has the ability to determine who can develop content for it, and what kind of content may be developed. The Internet Explorer browser is the most common tool used to view the vast world wide web, with some counts reporting 70% usage by the world's PC users. This much may be attributed to good business management and favorable circumstances; the rest of the Microsoft success is due to its usage of market share in one market to advance itself in another market.

Microsoft's premiere productivity package, Office, consists of a word processor, professional e-mail tools, a spreadsheet application, and many other items. Office seems like a good product, and indeed it is a good combination, which is why there are so many other packages just like it (Corel's Office and Sun Microsystems' Star Office to name just two). The reason the other suites have failed or hold considerably less market share is not that they offer less to consumers, it is because they are unable to utilize the features of Windows to their fullest extent and gain in performance, speed, and reliability the way Microsoft Office is.

While Microsoft releases enough information to software developers to create applications for Windows, it does what many feel to be the bare minimum. This information, known collectively as the Windows API (Application Programmer

Interface), is the key to making Windows applications at all, let alone making them work well. When one sees a Microsoft application running and a third-party application running, one can see that the Microsoft application is able offer more (whether it be with bells and whistles or with performance gains) than the competitor. This is not thanks to a more competent development staff at Microsoft (indeed, Microsoft applications have consistently been shown to be extremely vulnerable to remote exploitations of every manner, even of the most simplistic kind, known as a buffer overflow which can be prevented with some of the most basic programming techniques), but because of what amounts to insider information: the team making the application can talk to the team who made the OS at the water cooler. It is even rumored that Microsoft developers utilize a hidden API not made publicly available but kept hidden and for the use of only Microsoft developers.

If a high barrier-to-entry in the software business were not bad enough, Microsoft has done nothing but perpetuate its hold over businesses and end-users by making it difficult to switch from Microsoft products. The Microsoft Office package, being thoroughly popular among users of Windows, uses formats for saving files created by the user which cannot be read (or can be read from on a limited basis) from or written to by other applications. While it is not illegal to use proprietary file formats, it is highly suspect that Microsoft ought to be able to claim such protections on file formats it has made pervasive only by preventing competitors from making truly comparable products. In other words, if Microsoft is going to prevent competitors from making equally (if not greater) reliable and functional products, it ought to at least allow those competitors to use the file formats it intends to make a standard out of.

Another consequence of Microsoft's market dominance is that consumers no longer know what a good application or a good OS is. How can one know what a good application is when there is only one application for whatever need they have; going back to the automobile analogy, how can one know how a good car is supposed to run when there is only one car manufacturer in business? Indeed, how can one know how a good computer should run when there is only one way to operate a computer, Windows. Microsoft client and server software have been riddled with holes since the very beginning; by their own admission the writers and implementers of many recent mass attacks, viral and otherwise, have done so with the intent to show to the end-user community that Windows is extremely vulnerable. Even Microsoft's newest OS,

Windows XP, was found to have a massive exploit built into its network architecture which allowed an attacker to execute any command on the remote machine. It was not until the FBI became involved in warning users about this critical security risk that Microsoft released a patch for this exploit; there are still a great deal of security holes in many Microsoft products which are, to date, unpatched. Windows' reliability and

stability is highly questionable, and at times it appears as if certain portions of the OS were not thoroughly tested. Ask a Windows user at any level of competence what pressing the control, alt, and delete keys simultaneously does to the computer and they will tell you that it is the oft need combination which allows him/her to shut down a program which has failed or halted. Ask them what an illegal operation is and before they tell you of drug smuggling cartels and mafia crime syndicates they will tell you that it is a vague reference to the crash of an application. Ask then what Scandisk is and they will tell you it is the program which necessarily runs after Windows itself has performed an illegal operation and cannot be rescued by the three button combination mentioned above. The fact that common users, not needing to know anything about a computer's internal operation to send and e-mail or bring up a web page actually knows what these things are should say something about the general reliability of the OS.

Microsoft may claim that its proprietary way of handling itself is necessary to its business model, and to the success of its products, but that is most certainly untrue. Red Hat and VA are two among many companies who have made a business off of a product which they offer for free download to their users: Linux. The Linux community is the exact opposite of the Microsoft conglomerate: the software developers have full access to the code base (known as open source) so that they may access whatever information they need; the users are presented with software developed by the community which is functional and may be improved upon by anyone who has the motivation and the knowledge; the security is tight as a consequence of the opened source code, since the community at large may scrutinize any program and report any bugs or possible vulnerabilities and then easily submit a patch for general distribution. With the Linux community the bottom line is not expressible in dollars, and so the community may concentrate on greater things that attempting to cover-up known issues with the software in order to keep customers.

To be sure, Microsoft has been and still is playing a game for years in which it is the only competitor. The pawns are users and third-party developers alike, and it's weapons are denial, ignorance, lawsuit, acquisition, and monopoly. The only way to let other competitors in and to give them equal footing to compete with Microsoft is to allow them full and complete access to the API code base of past, present, and future incarnations of Windows, that which is the common denominator for all PC based software development, and which has been the focal point of Microsoft's leverage in the software marketplace. In addition, forcing Microsoft to open and adhere to standards for file formats such as its Word format for word processing would be another equally important step in ensuring that Microsoft plays fair.

To open the API code base would require diligence on the part of enforcement authorities, but the software development community would be more than willing and

able to play the role of watchdog. The software developers of the world would finally be able to have an unobstructed view of the platform for which they have been developing, which would allow them to come up with truly new and innovative ways to use the OS to get the task done, instead of being reduced to using only Microsoft approved tools. Once again software development would be about creating new and productive software; destabilizing Microsoft's monopoly would only be a side-effect of the rejuvenation of an industry now plagued by limited availability and a giant competitor who makes all the rules.

In no way do I advocate the total opening of a key piece of intellectual property owned by Microsoft, just the availability of enough to make sure that anyone who wants to develop software can do so without being hindered because he/she does not have the resources to write the software the way they want to. A distinction should be noted between the API and the entire source code to Windows: the API is that portion of Windows necessary to third-party developers for writing effective code. The extent of the code released should be determined by a panel to whom full access to Windows source code is given. This panel should consist of accomplished software developers in the development community; those who work for Microsoft as well as those who work for their competitors, those who program for Linux, and most notably, those who have already begun working on deciphering the API without Microsoft's help.

The last group I speak of includes the programmers of a project which began before the DOJ lawsuit was filed: the Wine project, most associated with the CodeWeavers company. Wine is a project to emulate Windows and allow for Windows applications to be run on a variety of other OSes, including Linux and Sun Microsystems' Solaris. These programmers have worked diligently on a way to destabilize Microsoft's monopoly and lower the "switching-cost" (the cost of switching from one company's product to that of a competitor's) of Windows.

Monetary damages cannot be used against a giant who is sitting on top of tens of billions of dollars in assets, but to force it to share a little of its knowledge can be infinitely more beneficial if the proper information can be extracted. To the end-user the outcome of this case may not represent much of a change, since the average user has only been interested in computing since the late 90s, but to those of us who have been using computers long enough to have seen the decline of the software market and an associated decline in the overall quality of software in general, this case has to potential to bring back to computing a bit of integrity and more importantly, opportunity. It is with this in mind that I implore your honor the judge to consider the opening of the Windows API to be the way to cut the root of the problems which have stifled true creativity and innovation within the developers community. Jesse Dhillon.

 Subject: Microsoft Settlement

I believe that the settlement with Microsoft is a very bad idea. Considering what they stand accused of, there should be no settlement, only a serious penalization that would render the company less able to engage in such monopolistic practices. Please be determined and relentless in your pursuit of justice. You have my support, and the support of many people I know.

[Text body exceeds maximum size of message body (8192 bytes). It has been converted to attachment.]

I believe the proposed antitrust settlement will not restore significant competition to the software industry.

I believe that Microsoft should be required to fully disclose and document its Office file formats and Windows APIs so that 3rd parties could make competing and compatible applications. This proposal is fully articulated by Scott Rosenberg (scottr@salon.com) of Salon magazine at: <http://www.salon.com/tech/col/rose/2002/01/16/competition/>

The article is included below for completeness.

Thank you,

 Chips ahoy

AMD competes with Intel, and the public wins. The right Microsoft antitrust settlement can bring the same energy back to the software market.

By Scott Rosenberg

Jan. 16, 2002 [The personal computer industry may be in its worst slump in history, but you wouldn't know it by following the news from the processor wars. Over the past two years, Intel and AMD have unleashed an incredible competitive cycle in Silicon Valley. In case you missed it, last week these two chip companies offered dueling releases of new flagship processors: Intel unveiled its fastest Pentium 4 yet, running at 2.2 gigahertz and built with a new 13 micron process that crams even more transistors into an even smaller space. AMD, extending the huge success and popularity of its Athlon line and the Athlon's most recent and powerful incarnation, Athlon XP, announced the XP 2000—a chip that actually runs at 1.67 gigahertz but, third-party tests show, nearly keeps up with the 2.2 GHz Pentium 4 in most tasks (and even surpasses it in some). What's going on here is simple: Good old-fashioned competition drives engineers to continue to work miracles. Intel, the market-dominating behemoth, has always pushed new, improved products out the door faster—and dropped prices more readily—when it feels the breath of a credible competitor on its neck. For many years the

competition was feeble, but that changed when AMD's Duron and Athlon chips began giving Intel a run for its money—and, for a time in 2001, actually bested Intel for the fastest personal-computer chip title. Today, these two companies keep spurring each other on, and consumers win big. For most of us, that's all we need to know: Computers keep getting faster and cheaper. The details are of interest only to the legions of hardware nuts, high-performance system geeks and chip-overclocking fans who flock to the Web's hardware review sites. Right?

Well, the gigahertz specs may indeed be only geek fodder, but the other details of the Intel-AMD rivalry should be of keen interest to a much bigger crowd. That's because the competitive heat driving the processor market puts the relative frugidity of another part of the computer business into bold relief. I refer, of course, to the business of designing personal-computer operating systems—a business that Microsoft has dominated for years and that, according to the confirmed verdict of our federal courts, it now monopolizes.

What if Microsoft were challenged as strongly on its home turf as AMD is now challenging Intel? What innovations, improvements and price reductions would the public enjoy that it doesn't, today, thanks to the Microsoft monopoly? This is the big question that hangs over the continuing struggle to find a meaningful outcome to the endless Microsoft antitrust saga. And the AMD/Intel analogy is worth pursuing to try to find some answers. Microsoft and its supporters, of course, maintain that the monopoly label is misplaced. After all, can't you buy a Macintosh without buying Microsoft Windows? Can't you obtain a PC and fire it up with any of a dozen versions of Linux or other Unix-style operating systems?

Sure you can—and each of those operating-system alternatives has its partisans. But for use by individuals on their personal desktops, Microsoft Windows holds the overwhelming market share—by nearly every estimate, over 90 percent. Is that simply because Windows is superior to the alternatives? There are certainly people who believe that; and, to be sure, with the release of Windows XP last year, Microsoft finally moved its flagship operating system off the aging and increasingly unstable code base it had inherited from its infancy and onto the relatively more reliable Windows NT/Windows 2000 core.

But how much faster might Microsoft have achieved that improvement if it was racing a tough competitor? And how much more incentive might the company have to produce more secure, less virus-vulnerable products today? The historical record is quite clear (and the antitrust trial record is just as clear): The central reason Windows has maintained and extended its market share over the years is not product superiority but a concept economists call “lock-in.” Once you have all your data and all your software applications on one operating system or “platform,” moving to a different one is painful—it takes time and effort and money (as economists say, your “switching cost” is high). Over the years Microsoft has not had

to push harder and faster to improve Windows because it knew that its customers were unlikely to make a fast switch to a competitor.

Now, that picture would be very different if you could somehow reduce or eliminate those switching costs. What if competing operating systems could seamlessly and interchangeably run the same programs and utilize the same data files that Windows does?

Here's where the Intel/AMD analogy comes in handy. These manufacturers compete to provide chips that can run the same computer programs—known loosely as “x86 compatible” code—and that retain compatibility with hardware like expansion boards and peripheral devices. If you needed to write different versions of each piece of software and manufacture different versions of each piece of accompanying hardware—one that would work with Intel's chips and one that would work with AMD's—the whole competitive market would disappear. The weaker player (presumably AMD) would vanish and—presto!—Intel would have a monopoly as tough as Microsoft's.

This relatively level playing field in the x86-compatible processor business did not come about by sheer happenstance. The semiconductor industry is marked by a Byzantine pattern of patent cross-licensing agreements; they provide permanent employment for legions of lawyers, and laymen seek to understand them only at great peril. What's important about them, however, is not how they came about but that they work.

Now that the federal courts are trying to figure out an effective remedy for Microsoft's abuse of its monopoly powers, the competition between Intel and AMD provides a valuable model. How would one go about enabling Microsoft's rivals to compete with it as effectively as AMD is competing with Intel? The key here is something known as the Windows API (or “applications programming interface”) — the set of instructions that Windows programs use to “talk to” the operating system. The Windows API has long been a murky issue: Microsoft has always provided some information to independent developers—it has to if third-party Windows programs are going to work. But Microsoft can and does muck around with the API, changing things that break competitors' products, anytime it wants to. And rumors have long buzzed, without ever being nailed down, that Microsoft's own developers take advantage of so-called hidden APIs that non-Microsoft coders can't use. The Justice Department's proposed antitrust settlement with Microsoft seems to demand that Microsoft do more to open up its APIs to competitors. But the fine print makes it clear that Microsoft could pretty much continue with business as usual. A more effective remedy would be one that required Microsoft to standardize and publicize the entire set of Windows APIs and the file formats of its Office applications (another key to Microsoft's monopoly “lock-in”)—with the express goal of allowing competitors to build Windows software applications, and operating systems, that compete with Microsoft on a level field.

Such a plan would require careful oversight and enforcement, since Microsoft could easily engage in all manner of foot-dragging. If Microsoft set out to be uncooperative, it could release the API information slowly, in deliberately confusing ways, or in a "Good Soldier Svejk" fashion -assiduously following the letter of the court's order while flagrantly violating its spirit. (There's precedent here: This is precisely how Microsoft behaved during the trial when it told the court that, sure, it would supply a version of Windows with Internet Explorer removed from its guts, but gee, sorry, then Windows wouldn't work.)

Now, I can already hear the howls from the Microsoft corner that this plan is evil and un-American because it forces Microsoft to give up some of its intellectual property. Well, yes. Microsoft is in court as a repeat offender; the current antitrust suit, in which a federal district court and an appeals court have both affirmed that Microsoft is a monopoly and that it has abused its monopoly powers, arose out of the failure of a previous consent-decree settlement of an earlier antitrust case. At some point, having repeatedly violated the law, Microsoft needs to pay a price, or it will continue with its profitably anticompetitive ways.

There's no reason to think the Justice Department's proposed settlement will work any better than the consent decree of last decade did. And financial penalties can hardly wound a company that is sitting on a cash hoard of tens of billions of dollars. But intellectual property—that's something Bill Gates and his team really care about. Requiring them to divulge some of it in order to restore competition in the software market might actually get them to change the way they operate. With Microsoft's APIs and file formats fully standardized, documented and published, other software vendors could compete fairly—which, after all, is what antitrust laws are supposed to promote. We might then be faced with a welcome but long unfamiliar sight: a healthy software market, driven, as today's processor market is, by genuine competition.

The Justice Department settlement is currently in a public comment period mandated by a law known as the Tunney Act. Through Jan. 28 the public is invited to send in comments on the proposal. (You can also e-mail them, with "Microsoft Settlement" in the subject line.) I'm sending this article in, and I encourage readers to file their thoughts as well. What good is open government if we don't use it?

Dear Sir,

I am an up an coming computer programmer and what has made it easy is the support I have in the Linux community (GPL, OpenSource.) Open Source software is the key to spreading knowledge and education. The ability of being able to copy, distribute, and even change the source code without being prosecuted is a nice plus. The Open Source community will never be able

to compete with Microsoft because we are not a single huge corporation. We are made up of many small companies, gamers, hackers, administrators, programmers, trouble-shooters, graphic artist, webpage designers, young and old. Sir we need the governments protection to continue our way of life that MS would love to see destroyed (ie: The Halloween Document.) We cannot fight MS, but they can fight us, they are big and they have money and computers in Washington. Ask anyone who knows anything, if you want a secure server or network, use UNIX or Linux. If you want to pay for a bugs and compromised security, get MS windows.

My feelings are very strong on this subject, and I don't have a lick of money invested in any computer software or hardware company. I just believe that Microsoft has become too powerfull for it's or anyone else's own good.

Sincerely,  
Jason C. Zalva

Washington, DC 20530-0001  
DoJ,

I am opposed to a settlement with Microsoft, and as a citizen of the United States of America I would like to make my opinion known under the Tunney Act comment process.

Microsoft was found by the court to be an illegally maintained monopoly. The government needs to enforce sufficient penalty for this finding, which the proposed settlement does not accomplish. The computer industry has been at the mercy of Microsoft's illegal activities for far too long. Only swift legal action can restore healthy competition and real innovation to this industry.

In my opinion the DoJ should force Microsoft to:

1. Be split into two companies, OS & Application businesses
2. Office file formats (.doc .xls .ppt) be made open source so that other software companies can compete in this market by interoperating with the existing MS Office monopoly.
3. Provisions be made to stop the predatory pricing used by Microsoft (IE, MSN, MediaPlayer etc., cannot be given away for "free" in the OS)
4. Microsoft server protocols be made open source, so that other operating systems can communicate.
5. Microsoft internet protocols (.Net, IE, etc) be made open source so that other operating systems can interoperate properly.
6. Microsoft must publish the prices it charges it OEM's for windows.

From: Elizabeth Eisenmann  
To: Microsoft ATR  
Date: 1/23/02 3:48pm  
Subject: settlement

I am opposed to the settlement of the Microsoft antitrust suit as is presently proposed.

In the first place, the financial outlay involved in donating using PCs to school system represents a flea bite in comparison with Microsoft's assets. Punishment for a crime is supposed to involve a meaningful penalty.

In the second place, this "donation" will serve to undermine competition further in the education market. It can hardly escape notice that Apple Computer is the leader in this field at present, largely on the merits of its user friendly features and incentive programs for teachers and students. Microsoft would love nothing better than to drive a wedge into this market with its "free samples." If Microsoft truly wants to benefit underprivileged school systems, let them make a substantial monetary donation and allow the schools to make their own choices.

In the third place, there is NO future incentive in this settlement for Microsoft to behave differently than in the past. This company has not been content to simply capture a huge market share and reap incredible profits. They want it all. This settlement is a politically motivated slap on the wrist, a giveaway, and a disgrace.

Subject: Microsoft Settlement

As a taxpaying citizen and a user of computers since 1983, I am appalled by the possibility that the Microsoft anti-trust case may be settled with little more than a wrist-slap and a punishment that only increases Microsoft's market share.

Over the last 20 years, I have watched Microsoft use its monopoly in Operating Systems to drive out any competing products. Gone are the days of multiple vendors with multiple products providing customers a choice. Now almost every area of computing is dominated by Microsoft products whether it be word processors,

spreadsheets, programming interfaces, web browsers, email clients, and many others genres. They have done this by hiding their API's, altering their operating system, and using other "dirty tricks" to ensure that their competitor's software breaks and their's works.

As a citizen, I am insulted by many of the possible remedies involved. The most dangerous being the proposal for Microsoft to provide software to school children. While I agree that it is essential to have computers in every school. Providing Microsoft-only computers only drives out Apple and limits student's exposure to other forms of computing, eventually training them to be the next generation of Microsoft consumers.

Microsoft has proven itself as being harmful to the computing industry with its many alterations of open standards such as Java and Kerberos to reinforce their monopoly on the desktop.

My suggestion for settlement is two-fold. First, to increase the use of computers in schools, I recommend that Microsoft donate the hardware so that Linux can be installed on the machines. As an Open-Source operating system, Linux is far more useful in an educational setting both for its inexpensive installation and maintenance costs, and because students can better understand how computers function. Secondly, Microsoft should be banned from using any proprietary standards for data files and must be forced to open its existing standards. The ability to properly open, read, edit, and save a document should not require software that is controlled by one organization. .doc, .xls, .ppt, are some prime examples. In addition, Microsoft must release and can no longer perform the type of corruptions to HTML, Java, Kerberos, and other systems that they have done in the past. Thank you for the opportunity to present my opinion.

Subject: Microsoft Settlement

I am writing with regards to the proposed settlement of the Microsoft antitrust case. I've used Microsoft's Internet Explorer & Netscape's browser for many years; each has its own advantages & disadvantages, that is why I use both for different purposes. As a consumer, I have the ability to decide for myself which product suits me best—I am not a helpless victim & I don't want your help. I have been & continue to be appalled by the fact that the "Justice Dept" has intruded into the sphere of private business transactions at the behest of its unsuccessful competitors. A dangerous precedent is set whenever any business enlists the help of the government (which is ultimately backed by physical force) to stifle their competitors instead of competing in the realm of the free market.

It is completely irrelevant whether Microsoft bundles its browser with

Windows—it is their product, their property. They are guilty of no fraud or physical force—if the consumer doesn't like Internet Explorer or the Windows operating system for that matter, there are many alternatives available on the market.

The application of antitrust laws against successful businesses can only lead to continued corruption (i.e. congressman demanding "protection money") and economic disaster as shown in many other countries.

Unfortunately America has strayed far from its original charter. Hard work & success is no longer lauded, but punished at the altar of "fairness". If the "Justice Dept" has its way, it won't be long before Microsoft is further punished for being a successful company & therefore having the resources to hire the best software programmers. After all, in the twisted logic which passes for today's "fairness" doctrine, isn't it unfair that a smaller company can't afford to offer the same compensation package as Microsoft?

From: Craig Burgess  
To: Microsoft ATR  
Date: 1/23/02 3:51pm  
Subject: Microsoft Settlement  
To Whom it may concern:

I am writing in opposition to acceptance of the proposed settlement in the matter of the US v. Microsoft antitrust case.

In short, the anticompetitive practices in which Microsoft has consistently engaged throughout its corporate history are unlikely to be changed short of a remedy which specifically and precisely addresses the manifold issues relating to the company's predatory behavior.

Microsoft have demonstrated unwillingness to be bound by restrictions which should have been imposed by the 1995 consent decree, the spirit of which was promptly circumvented by the company. That circumvention led to the company's antitrust conviction. Any settlement which Microsoft willingly accepts must now be suspect; the company's legal team has found a loophole which will be exploited—just as the provisions of the 1995 consent decree were exploited. Microsoft claims that its success depends upon the "freedom to innovate" and I must question what "innovation" means to Microsoft. The company's history shows that it defines "innovation" as "finding new ways of securing a monopoly stranglehold on all phases of digital technology."

I have been a user of PC computers and, necessarily, Microsoft's products, since the introduction of the PC computer. Whether I have been harmed by Microsoft practices over that period of time is certainly open to interpretation. That I have benefited from the success of Microsoft is unquestionable but those benefits probably could have been realised through the successes of other companies.

We can never know. It appears to me that Microsoft is poised to become the sole arbiter

of and single point of access to "digital technology" from desktop computing to content delivered through broadband Internet connection.

It is my opinion that it is not in the interest of the development of digital technologies to cede control of those technologies to a single corporate entity which I fear will happen if effective restraints are not imposed on Microsoft.

I trust that others, who are both more knowledgeable and more eloquent, will address these matters and I urge that their arguments be given careful consideration.

From: Andy Longton  
To: Microsoft ATR  
Date: 1/23/02 3:50pm  
Subject: Microsoft Settlement

I am deeply concerned with the current Proposed Final Judgment (PFJ) and request at a minimum a specific and limited change to the PFJ in section III.J (1).

After careful reading of the PFJ I am convinced that as-is it will do nothing to effectively remedy any of Microsoft's documented past or similar present and future illegal behaviors as shown in the Findings of Fact (FOF). At worst the PFJ sanctions and even encourages some of Microsoft's worst vices. Other companies may take the provisions of the PFJ as a green light to act similarly and cause additional harm to the consumer.

As a business owner with over 12 years of professional experience in the software industry, and as a user of products by Microsoft and talented persons outside of Microsoft, I know that Microsoft is inherently untrustworthy. Evidence of this can be found in the ineffectiveness of the first Department of Justice anti-trust trial, the proceedings and dishonest actions during both the first and second anti-trust trials, and the FOF from this second anti-trust trial.

In addition to whole heartedly agreeing with and being a co-signatory to the Open Letter composed by Dan Kegel and others (<http://www.kegel.com/remedy/letter.html>), here is my additional specific recommendation;

Section III.J (1)

This section allows Microsoft to unilaterally designate any API, software module, or source code as integral to security. Because of that one loophole, the remaining PFJ becomes largely ineffective. Microsoft officer Bill Gates" recently made a publicized announcement that security is now the single top priority at Microsoft. As such, all software and APIs could sweepingly be designated as dealing with security and therefor could not be disclosed unless Microsoft wishes to.

Mr. Gates" statement should raise direct concern with the DOJ that if Section III.J is not substantially changed, Microsoft will take immediate and public advantage of it to thwart any other condition of the PFJ including any software changes needed by OEMs to customize the Windows desktop. Additionally, any interoperability between Microsoft products and other non-Microsoft products will touch on something Microsoft decides is a security issue—allowing Microsoft to potentially retaliate in court against those other products or to simply deny or change those interfaces as it did against both Lotus and Digital Research (now Caldera).

In addition, the whole concept of secret security devices has been thoroughly refuted. Security professionals find dubious value and quite a bit of harm in what is well known as "security through obscurity".

Security through obscurity is a bad idea simply because if the design of a security device isn't available for investigation, intentional and unintentional defects in the design can't be easily identified and fixed. Worse yet, unethical groups or individuals will discover any weakness and that person or group may not have the public's best interests at heart. Terrorist or organized crime groups would have the motivation to discover these secret weaknesses and exploit them— further harming the public.

To emphasize this: Microsoft is well documented for leaving in "backdoors" and other security defects that are not changed till they cause public embarrassment and loss of sales to Microsoft. Some well known security faults still exist in shipping Microsoft products, but do not receive wide spread publicity. Because of that, Microsoft does not fix these defects. W

ith section III.J of the PFJ, Microsoft would have even less of a reason to fix these defects or to remove any current "backdoors"—now or in the future.

While there are other areas of the PFJ that can be as troublesome as section III.J (1), this is the section that causes me the most concern.

Subject: Dissatisfaction with proposed

Microsoft settlement

Dear Department of Justice representative,  
I am writing to voice my dissatisfaction with the proposed Microsoft settlement.

The courts have found that Microsoft is a monopoly. The proposed settlement does not work toward ending Microsoft's monopoly. It seems that the proposed settlement will merely encourage Microsoft to become a "nice" monopoly. A real remedy will end the Microsoft monopoly and returns the company to having a more normal roll in the evolution of computer technology. Truly ending the Microsoft monopoly will allow real competition and innovation to return to this important sector of our economy.

Thank you for considering my comments.

Sincerely,  
Preston S. Gabel

From: Leilah Thiel  
To: Microsoft ATR  
Date: 1/23/02 3:50pm  
Subject: Microsoft Settlement  
Dear Sir or Madam,

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses.

It is my sincere hope that the court will continue to work to find a stricter settlement. I find Microsoft's business practices to be absolutely abhorrent, and am hoping that a settlement can be found that will correct some of the damage they have done.

Sincerely,  
Leilah N. Thiel

From: Eric J Larson  
 To: Microsoft ATR  
 Date: 1/23/02 3:51pm  
 Subject: Microsoft Settlement

To whom it may concern,  
 I would like to complain about the antitrust settlement for Microsoft. With regard to releasing APIs and information I believe this should be reconsidered. Without access to Microsoft documentation it is a means of restricting third party software makers from writing code that functions with grace and efficiency within the platform. Microsoft would then have a means of writing programs that can be integrated into the OS that other business could never achieve. While security is important it is not something that comes by not releasing information but rather by writing better code that includes precautions toward security. I

also believe financial penalties should be applied along with restructuring of the company. Consumers are put in a position where the OS does not allow them simple means of gaining the software they would like. While OEMs should have the option of placing software on their machine it should be up to the OEM to include things like Windows Media Player and Internet Explorer. The OEM should also have the ability to decide how much these products are integrated into the OS, giving OEMs the ability to have the operating system customized for their customers if they so desire. While I realize it might be too late to mention some of these points I simply wanted to voice my opinion and disagreement with the settlement.

Thank you for giving me that opportunity.  
 Sincerely,  
 Eric Larson

**MTC-00018361**

From: Mick Magill  
 To: Microsoft ATR  
 Date: 1/23/02 4:46pm  
 Subject: Microsoft Settlement

To Whom It May Concern:  
 As a Windows, Solaris, Mac, and Linux administrator, I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

 Subject: Microsoft Settlement

Dear Sir or Madam:  
 I am deeply disturbed by the weaknesses of the Proposed Final Judgement (PFJ) in the United States v. Microsoft. This PFJ fails to deal with many of Microsoft's exclusionary practices, and deals ineffectively with others. For example, consider that Microsoft discriminates against ISVs who ship Open Source applications. The Microsoft Platform SDK EULA states: "Distribution Terms. You may reproduce and distribute . . . the Redistributable Components. . . provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product. . ." (<http://www.kegel.com/remedy/remedy2.html#isv>, visited 1-23-02) As a second example, Section III.A.2 allows Microsoft to retaliate against an OEM that

includes a non-Microsoft Operating System but no Microsoft Operating System. This fails to address the entire problem.

I request that this PFJ be either scrapped or drastically re-written to address these issues, as well as many others.

To: Microsoft ATR  
Date: 1/23/02 3:54pm  
Subject: Microsoft Settlement

Dear Sir/Madam,  
Please consider this commentary under the Tunney Act before accepting any settlement.

I am a programmer and a concerned citizen. It seems very clear that the Department of Justice failed to probably prosecute Microsoft for its shameless illegal practices of coercion and incompleteness. They simply use their size and influence on the market to disrupt any clear standards for sharing information and conducting commerce on the web. When there are no standards in place, the only alternative is to purchase all Microsoft products. They don't even need to write stable or secure software because they can assure it's necessity by causing confusion and fear in the marketplace. Please don't let us down. Throw out this settlement and go back. This is too important to loose.

There should be no settlement considered that does not break Microsoft into at least two separate companies.

Yours Truly,  
Stephen Wragg

From: James Poplar  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 3:52pm  
Subject: Microsoft Settlement

There is no competition in an environment given by our current state of business with Microsoft. As a security researcher, I feel that were some company's take responsibility for issues with their software, Microsoft is such a clunky beast it feels it should not care. I would imagine that if business goes on like usual, this will not change.

The practices of the Microsoft company upset me to no end, and the list of abuses I cannot even begin to describe due to the horrific amount that I would have to type before you.

. . . Fixing the online poll to favor .net technology on ZDNet was a recent on that sickened me.  
. . . Slandering the open source community was another.  
. . . The hostile attitude toward open disclosure for security violations in software is another one.  
. . . Forcing the market to comply with the pitiful and poorly coded protocols is another. (UPnP, PPPTP)

I would like to see Microsoft answer for what they have done to the market and the consumers. I feel that something should be done, to make the computing community advance, like force peer review of Microsoft's code, force Microsoft to accept liability for security as well as faulty software, and to educate their programmers in better programming techniques. If I were to code the way they have in the past, I would most likely be caught in a lawsuit myself. It angers me that Microsoft has no liability when it is evident they indeed KNOW about problems and treat them like PR problems and nothing more.

The internet appliance from Compaq is a grand example of their lack of commitment to their consumers, and the rash of .net passport problems is another. I have heard time and time again MSN Internet Access horror stories, and I am sick and tired of people feeling helpless in the face of Microsoft simply because of the size of the company and the ease they seem to "always get away with murder".

This is my feeling on the subject, and I do NOT want Microsoft giving software to schools, as that has the opposite effect that

people seem to think it has. GIVING software to schools increases the consumer base, and again makes Microsoft net more customers. After all, if you have been using an OS or software suite through school, what will you use when you finally leave said institution?

Thank you.

Date: 1/23/02 3:52pm  
Subject: Microsoft Settlement

Dear Sirs:

I am writing to give my comments on the Microsoft antitrust settlement. I believe this settlement is counter to the interests of the American public, deleterious to the American economy, and not adequate given the findings of fact in the trial. Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

Subject: Microsoft Settlement  
Greetings.

The proposed settlement, although a step in the right direction, does not meet the needs of the average computer user.

This settlement would allow Microsoft to continue to abuse its monopoly power; essentially allowing it to retaliate against companies that don't provide a copy of Windows with the hardware (a major complaint all through the case). Also, the numerous Microsoft representatives on the oversight committee makes it much more likely that violations of the settlement would go unnoticed or unpunished. This is unacceptable. Please review the terms of the settlement and reach a deal where

Microsoft's anti-competitive practices can be stopped.

Regards,  
Dusty O'Connell

Subject: Microsoft Settlement

Please do not allow the settlement to go through. Its not even just a slap on Microsoft's wrist.

They should pay cash out to the different parties not simply (cheaply) offer MS software and old computers.

I agree that the actual value of the proposed settlement is in the \$50 million range not in the \$1 Billion range.

Subject: Microsoft Settlement

I think the proposed settlement is a bad idea. Microsoft has been unfairly tilting the market to their own advantage for countless years. We need to make sure that we level the field.

Additionally, if taxpayer's funds are helping to support code development and research, then the source code should be made freely available to all citizens (and possibly others as well).

Freely available source code will allow the community of American programmers to truly progress, instead of having multiple groups churning away redundant code. It would also allow for a peer-review process which is currently sorely lacking.

Dear Ms. Hesse,

I just wanted to take a moment and urge you NOT to penalize Microsoft for the "crime" of successfully competing against rival companies. Our antitrust laws are hopelessly muddled and in my opinion should be done away with completely. While I realize that isn't in your power, you will certainly be sending a message by how you choose to deal with Microsoft. Send the right message: that America believes in free enterprise and letting the market—not the bureaucrats—dictate how successful a company can become.

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to Microsoft antitrust settlement proposal. After reading the proposal, it is readily apparent that the provisions do not fully address the well-documented past practices of Microsoft; there are no means of redress for those aggrieved.

The proposal simply prohibits Microsoft from executing its predatory practices; this is the antithesis to justice! Please address compensation/repatriation for those who have been wronged by the illegal and predatory practices of Microsoft.

I fear that the EU will be much more harsh in its assessment of MS practices, and the current DOJ settlement will pale in comparison. What will it say about the effectiveness and impartiality of the USDoJ?

Thank you kindly for your time,  
Allan Jones

From: Jerry Prather  
To: microsoft.atr(a)usdoj.gov  
Date: 1/23/02 3:55pm  
Subject: Microsoft Settlement

Dear Sirs:

I do not agree with the terms of this settlement. Microsoft has properly been found guilty of being an illegal monopoly and they are to atone by giving away old computers and software that will further lock our children into their monopoly? That hardly sounds like a punishment to me.

I've heard it argued that no damage has been done to consumers. I represent at least one case where damage —has— been done by Microsoft's actions. I was a PC user back in the old DOS days and owned many DOS software packages. When Windows 3.1 came out, I started upgrading my old applications, because I accepted Microsoft's marketing that this was the wave of the future and things would be better. The Windows applications were a disaster compared to the old DOS applications. I'm talking about less stability, slower operation, and altogether a poorer product. I tossed the new stuff and went on using the tried-and-true DOS applications. Hence, I was damaged to the amount of that software by Microsoft.

I next learned about OS/2 (Version 2.1) put out by IBM. As advertised, it was a better DOS than DOS and a better Windows than Windows. Native OS/2 applications were superb in performance. Even in these early days, operating system stability was much better in OS/2 than in Windows. And OS/2 could truly multi-task—a feature I use constantly—and was multi-threaded to boot. (Currently my system reports 28 processes and 136 threads running at the same time.)

But, except for some hard-headed people like me that insist that their operating system deliver speedy, reliable, non-crashing service, OS/2 is hard to find. OS/2 was driven out of the market by Microsoft's pre-load agreements with the major computer manufacturers. Even the small computer shops have been lured into Microsoft's camp by being assured that their sales people and technicians only have to learn one operating system.

How am I hurt by this? First, because of Microsoft's monopoly, it's become uneconomic to develop native software for OS/2. I much prefer native OS/2 software, but I find that I have to program what I want that isn't already available—and once I get it working I have no financial incentive to polish the program for commercial or shareware sale. Secondly, the computer hardware industry has taken to building cheap stuff (Windows printers, Windows modems, etc.) which saps the power of the CPU—and, for the reasons stated above, an OS/2 user can't get drivers for the hardware anyway.

Yes, I've personally been hurt by the Microsoft monopoly and the government should take strong, punitive action against Microsoft.

Sincerely,  
Jerauld S. Prather —

From: John Endicott  
To: Microsoft ATR  
Date: 1/23/02 4:07pm  
Subject: Microsoft Settlement

To Whom It May Concern:  
I am vigorously opposed to the proposed Microsoft settlement, mainly because it allows Microsoft to continue the same practices of which they were found guilty. The current proposal does not provide adequate reparations to those injured by Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Even after being found guilty of illegally maintaining and extending its monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Please consider this a vote against the current settlement, as well as a vote to seek a settlement that is more favorable to Microsoft's competitors, yet unfavorable to Microsoft.

Sincerely,  
John Endicott

The Microsoft case is a perfect example of the worst kind of action expected out of Washington.

You take a brilliant young man who has a vision no one else has and you allow him to unleash his talents upon the world. He changes the world in a way no one that was possible. He gives the people of the world a gift that they still cannot properly appreciate. His creations give rise to an "information superhighway" that allow people all over the world to do miraculous things. It reminds me of a story of a great architect who has defend his creations against those who use his ideas and then denounce him for those ideas. He utters a line near the end of the story: "Thousands of years ago, the first man discovered how to make fire. He was probably burned at the stake he had taught his brothers to light."

What response can we expect from this? If we eliminate the incentive to be successful in this country by punishing the most successful members of our society, then the weakest will not be pulled by the strongest; the able will descend into mediocrity by the weight of the incompetent. This is the grand image we want to project of America? Of course it is not. We've spent every day since September 11 trying to show the world that we will not go gently into the night. We say that we will fight until the battle is won. And yet, our hypocritical government continues to condemn its greatest producers on one hand and then hold them up for the world to see on the other. This kind of dichotomy can only exist in the chimera that is our government. This many headed monster that seeks to engulf us with its growth every passing year cannot be allowed to continue.

Microsoft is a powerful company that does everything it can to perpetuate its dominance. What else is it supposed to do. Do we really want them to simply give handouts to the rest of the computer industry so that they can catch up? There is nothing to stop a small upstart company from coming along and doing what Microsoft itself did twenty years ago. Michael Dell had a vision to dance with the big boys, and he, too, started with nothing but an idea that everyone around him called ridiculous. Does Larry Ellison really need the government's help to defeat Microsoft? If this is true, than who should the government's attack really be focused on?

To: Microsoft ATR  
Date: 1/23/02 3:56pm  
Subject: Microsoft Settlement

The proposed settlement is not a useful and appropriate remedy for the problems caused by Microsoft's abuse of monopoly powers.

Specifically, the settlement does nothing to address the needs of software developers who have been forced to work against Microsoft's privileges.

Any effective remedy must remove the barriers which Microsoft erected through unlawful actions.

At a minimum, Microsoft must:  
—be required to compete on a fair and level playing field with all other software developers. This requires Microsoft to accurately and completely divulge all Application Programming Interfaces (APIs), Application Binary Interfaces (ABIs) and all document interchange formats and protocols, and to make these specifications public at the same time that any Microsoft product which uses them is released.

—be required to pay a restitutional fine proportionate to the excess profits Microsoft made as a result of their illegal actions.

—be required to pay a punitive fine proportionate to Microsoft's current net worth.

—be ineligible to sell or give any Microsoft software product to any Government entity for a period of time equal to the period of time in which Microsoft committed illegal actions.

—be held on probation for 10 years, during which time any further illegal activity by Microsoft would result in the immediate suspension of Microsoft's corporate charter.

From: James Green  
To: Microsoft ATR  
Date: 1/23/02 3:54pm  
Subject: Microsoft Settlement

Hello,  
I would like to make a few comments on the proposed anti-trust settlement with the Microsoft Corporation. I hope you are receiving many other comments on this, so I will keep my comments as brief as possible. I work in the computer industry, and have experience with a wide variety of desktop computer platforms, operating systems and applications. I work for a small software/hardware development company, and have seen the results of Microsoft's monopoly in many degrees.

While I use Microsoft products where appropriate, I have seen many occasions where I have been denied a choice, or a choice was removed from me, due to the so-called "interoperability" that Microsoft's products use. This interoperability is in actuality a "crowbar" attempt to force users who use one Microsoft application to adopt other Microsoft applications as well. This has been shown in the findings of fact in this anti-trust trial. While I applaud the findings of fact, I am worried about the proposed settlement. There are many reasons for this, which can be found in several well-written articles on the Web. But the most worrying

element for me is that much of the focus is on disclosing Microsoft APIs. There are three problems with this approach:

1. The proposed settlement is too narrowly focused. It leaves many essential APIs undisclosed, and doesn't allow for necessary (and timely) documentation of those that are disclosed. Furthermore, some of these APIs (e.g. Microsoft Java) will soon be discarded by Microsoft in favor of newer technologies (e.g. .NET) which aren't covered by the settlement. It is likely Microsoft will simply abandon many of the covered APIs to avoid these restrictions.

2. There are many unreasonable restrictions placed on the use of the APIs. Because the Windows APIs remained licensed (and the patents covering them aren't even disclosed), developers run the risk of unintentionally violating the terms of their license when developing software for other operating systems. This divides the world into Windows developers and non-Windows developers, which is contrary to the intentions of the settlement.

3. Essential file formats remain undocumented, forcing users wishing to share documents to use the same application. This is perhaps the biggest crowbar in Microsoft's arsenal from a user's standpoint. I myself have found it necessary to purchase Microsoft products I did not wish to use, merely because I needed the ability to open files created by others.

Thank you for your time. I hope my opinion is of some use.

From: Michael Percy  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 3:57pm  
Subject: Microsoft Settlement

To Whom It May Concern,  
I believe the proposed Microsoft settlement does not adequately address the concerns layed out by Judge Jackson or the Appeals court for eliminating Microsoft's anti-competitive behavior in the marketplace. The largest issue that stands out in my mind is that the settlement failed to address the growing issue of Open Source Software (OSS) competition for Microsoft. Microsoft's licensing terms include clauses for prohibiting the installation of OSS by ISVs and OEMs, as well as the use of Microsoft's Software Development Kits (SDKs) to develop software with an Open Source License. Moreover, Microsoft punishes those who install a competing Operating System

(OS), such as Linux, in addition to or instead of a Microsoft OS.

Microsoft considers its OEM licenses (which enforce the above) a "trade secret" and is not required to disclose the details of those licenses. The proposed settlement does nothing to address any the above issues, especially as they apply to small or local OEMs. If this behavior continues, the court has not done its job in assuring an end to Microsoft's anti-competitive behavior.

Washington, DC 20530-0001

I would like to express my disapproval of the Proposed Final Judgment for the Microsoft settlement. The PFJ fails to Prohibit Anticompetitive License Terms currently used by Microsoft -Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. -Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

-Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.)

I also disagree with the proposal of Microsoft donating Microsoft products to schools this only helps them lock out competitors. They should be required to donate money that can be used for the purchase of any vendors hardware and/or software for a solution that best fits the needs of the school.

Sincerely,  
Michael Perik, Batavia, Illinois; Software Engineer

To: Microsoft ATR  
Date: 1/23/02 3:59pm  
Subject: Microsoft Settlement

Hello,  
I'm writing about the proposed settlement for the Microsoft antitrust case, in accordance with the Tunney act. The proposed settlement is far too lenient on Microsoft, and should be re-evaluated. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely: Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

Thanks,  
—Jason Swartz

**MTC-00018394**

From: DJ Hagberg  
To: Microsoft ATR  
Date: 1/23/02 3:55pm  
Subject: Microsoft Settlement

The current settlement as proposed by the US Department of Justice and Microsoft at best is ineffectual and at worst grants Microsoft power to pursue its monopoly in even more aggressive ways. It must NOT be accepted in its current state—severe behavioral or structural remedies are warranted.

With the current settlement, Microsoft is free to pursue lock-in contracts with computer vendors, withhold documentation on protocols critical for interoperability with free software (under the guise of a vague "security-critical" term), expand their Internet Service Provider business, MSN, to the exclusion of non-Microsoft operating systems, and expand their customer lock-in through the Passport system. This remedy also gives NO rights to one of the most viable alternatives to Microsoft's lock in—the Open Source and Free Software organizations responsible for the creation of Linux, Apache, and SAMBA. As a matter of fact, these organizations are \*explicitly\* excluded in section III(J)(2). In fact this settlement gives Microsoft more power to exclude free and open software from their market. The proposed settlement is no remedy. This must be changed. My recommendations would include:

- Ceding control of /all/ Microsoft Office file formats to an open, \*royalty-free\* standards body such as W3C.

- Ceding control of /all/ Microsoft networking protocols and related network data formats to an open, \*royalty-free\* standards body such as W3C.

- The above file formats and networking standards shall be available on-line on Microsoft's website, accessible by any standards-compliant web browser, unencumbered by registration, royalty, or other protection clauses.

- Regular, independent standards-compliance reviews of Microsoft products against the publically-available standards. The above regulations leave the software field open to competition, on platforms other than Windows, and provide a competitive

marketplace and a standards-compliant base upon which both free and commercial can compete for customer's mindshare and wallets.

**MTC-00018396**

From: Greg Martin  
To: Microsoft ATR  
Date: 1/23/02 3:58pm  
Subject: Microsoft Settlement

Hello,  
This letter is my set of comments about the proposed settlement as part of the Tunney Act comment process.

**FUNDAMENTAL PROBLEM**

The fundamental problem with the settlement is that Microsoft is completely out of control abusing its market monopoly, engaging in repeated and clear practices of product tying by using its monopoly position in operating systems to destroy other markets and eliminate competition, and the settlement does nothing to address this.

At a fundamental level Microsoft has grossly overstepped the bounds appropriate for an operating system product, and has been for several years the single biggest anti-competitive force in the computer industry.

**WHAT IS AN OPERATING SYSTEM?**

The crux of Microsoft's abuses involves overstepping the definition of an operating system; I suggest this definition: "An operating system abstracts computer hardware and provides a consistent interface for application programs to utilize." An operation system enables applications. A more generous definition of the operating system could perhaps be expanded to include "the minimal set of utilities required to maintain the computer hardware."

**THE BLOODY TRAIL**

A casual reading of the trade press for the past 10 years reveals numerous companies devastated by Microsoft's decision to include successful "applications" in its "operation system", effectively destroying the markets in the process and eliminating future competition.

Examples of destroyed markets:

- 1) File managers
- 2) Disk defragmentation
- 3) Disk compression
- 4) WWW browser
- 5) E-Mail clients
- 6) Media players (currently being destroyed)

The first three examples could perhaps be covered by the minimal set of utilities to

maintain the computer hardware, although there are considerations of a competitive market for computer hardware maintenance utilities.

The last three examples are most could not appropriate for an operating system.

**A REPEATED PATTERN**

Microsoft has consistently followed the pattern of defining API's (which is a valid function of an operating system and is pro-competitive) and then bundling "free" applications which destroy markets (not a valid function of an operating system and intentionally anti-competitive). Furthermore, having both control over the operating system and early access to this information for application development gives Microsoft an unfair advantage over competitive applications that simply can't be overcome. All talk of a "Chinese wall" separating the operating system development and application development is joke that not even Microsoft bothers to tell any more. This situation is grossly anti-competitive.

**FALSE BENEFITS**

Microsoft justifies bundling in terms of consumer benefit; consumers do benefit to some degree in the short term by getting applications for free.

However, in the long run consumers are hurt because:

- 1) Markets are destroyed
- 2) Competition is stifled
- 3) Choice is removed

Furthermore, every "free" application given to the consumer is fundamentally illegal because it represents monopoly product tying; applications should not be in the operating system (see definition above).

**WWW BROWSER EXAMPLE**

Microsoft claims Internet Explorer is a fundamental part of the operating system that can't be removed and still have a functional product. The company may have constructed its product in such a way that this is true; however, it still represents illegal tying of application and operation system.

Microsoft is free to define API's to include in its operating system, which it did liberally in its drive to embrace the Internet. API's fall into the consistent interface for application programs, and are pro-competitive. However, as soon as Microsoft bundles an application to take advantage of the API's the line is crossed and the behavior becomes anti-competitive. Applications and operating systems are separate products, and should not be mixed in an anti-competitive way.

**VOLUME LICENSES**

One abuse of monopoly power that was not even mentioned during the trial was clauses in volume licenses that explicitly prevent dual-installation of another operating system co-existent with the Microsoft operating system. This is a gross and particularly glaring abuse of monopoly power designed to stifle competition.

**FAILURES OF THE SETTLEMENT**

The settlement fails in numerous ways:  
1) Microsoft has grossly overstepped the bounds of an operating system and repeatedly and illegally tied applications to

its operatin system; the settlement does nothing to address this fundamental transgression.

2) Microsoft's behavior has been grossly anti-competitive, severely abusing its monopoly market power; the settlement does nothing to address this.

3) Microsoft has illegally destroyed numerous markets and illegally stifled competition in methodical and repeated ways; numerous companies have suffered or been destroyed, unknown others have been intimidated out of markets or prevents from forming in the first place, and the entire competitive landscape of the computer industry has been negatively affected by Microsoft's actions; yet the settlement contains no punitive actions against Microsoft.

4) The settlement does not go far enough in curbing Microsoft's monopoly power in dictating terms in business dealings such as volume licensing deals.

#### PERSONAL OPINION OF A YOUNG AMERICAN

My personal opinion is that the settlement is a bad joke. It sends the message that if you are a successful company somehow perceived as beneficial to the country then you can run roughshod over the law consistently and methodically and still escape punishment. The settlement represents behavior of the government that disillusion young Americans. I hope the Department of Justice will reconsider this ill-advised settlement and take actions to restore fair competition to the computer industry.

I am writing with comments on the proposed Microsoft settlement. I am concerned that the settlement reached by Microsoft and the Department of Justice is neither a sufficient punishment for the illegal practices uncovered in trial, nor adequate compensation to the victims of those practices such as myself, nor does it provide a good remedy that will prevent further illegal actions by Microsoft. I am sure that the public comments will generate many different views on the proposed settlement and possible remedies. I will confine my comments here mostly to things that have impacted me personally. Looking at how I use computers, I can see the explicit negative effects that Microsoft's illegally maintained monopoly has had on my work.

I have two points I would like to make. First, the monopoly that Microsoft has built and maintained through illegal actions has had direct, and negative effects on my work. Since I am unable to personally recover damages from those ill effects, I expect that the courts will act very strongly to punish Microsoft, and to aggressively find ways to prevent further damage. The second point is that any agreement that allows Microsoft to continue with the practices it has used over the last ten years will likely seriously affect and delay innovation in software development in the future, as it has in the past decade.

#### Section one: The effects on my work

I work as a physics researcher doing experimental high energy physics. Currently, I am a graduate student at the University of Minnesota. My research is supported by a Department of Energy grant, and my studies are partly supported by the State of Minnesota. In the course of my work I do a lot of computer programming for my data analysis, and also use the computer to write my thesis.

Practically none of the work I do involves any product designed by Microsoft. Almost all the programming I do and applications I use are done on one of several flavors of UNIX (Compaq's Digital Unix and GNU/Linux). By itself, this is not very interesting. A different, non Microsoft Windows, system happens to be appropriate for my work. But Microsoft's illegally maintained monopoly on the Windows and Office market has prevented some applications that should have been available to me on UNIX systems from being available. By this, I don't mean "should" in principle, but several companies have made efforts to produce software that runs on multiple platforms, and have failed.

One primary example is Microsoft Office, the dominant office suite. For writing a Ph.D. thesis or doing serious numerical calculations, MS Office is an inappropriate choice. But for simple letters, and for small spreadsheet calculations, these are excellent tools. We are all aware of this, practically everyone who uses a computer has used a word processor or spreadsheet. Microsoft used to have several competitors in this category, and over the last 10 years all but two seemed to have died away. Of those, one (Corel's WordPerfect) made an effort to provide their product for Unix machines. Only recently have a couple new products appeared which might soon fill this gap. And these are products that have been standard on Windows and Macintosh machines for over ten years. There is no technical reason why it has taken so long, it is simply because the companies' inability to overcome Microsoft's monopoly has prevented them from extending their product line to where I work. The cost to me is lost time, the inability to use documents from people who use Microsoft Office, and the need to purchase a different, separate computer to run these programs.

To further this example, my wife also works in scientific research. She has worked on Unix machines and with other non-Microsoft products before, though not as extensively or as totally as I do. When a federal grant gave her enough money to

upgrade the computer she uses for daily work, she chose to get one with Windows installed, even though she will still require a different computer for other tasks. The reason is because she felt she needed immediate access to Word and Excel, even though these items are only half of her work. Again, these are products that the computer industry would almost certainly have provided if it hadn't been for Microsoft's illegal practices.

My point: if Microsoft had not illegally maintained its monopoly, these common, ubiquitous computing products would have been available for this other, non-Microsoft operating system before now, and one or more companies would be still thriving businesses and good employers because they offered it for Unix or other operating systems. My work would be faster, less expensive, and more effective, and it would have cost less to the Department of Energy and the State of Minnesota, as well as to me personally: thousands of dollars and thousands of hours for just one worker.

Example number two. For many years Microsoft has illegally prevented computer hardware makers from installing an alternate operating system on the hardware if they had an OEM agreement with Microsoft. The main publicly known example of this is BeOS, though I don't think the DoJ formally investigated this prior to its anti-trust suit, and judging by the settlement, they are probably not investigating this now. There is no technical reason why two operating systems could not be present on one machine; indeed, in the past four years several alternate OS's such as Sun's SPARC, GNU/Linux, and the late BeOS appeared and run on the same hardware that Windows uses. If computer manufacturers had been allowed to install one or more of these along with Windows, a wider group of people might have tried and used them, more useful programs might be available for them. If one or more of them offered important benefits that Windows didn't offer, they likely would have attracted a wide following, at least among users who would benefit. In my case, the GNU/Linux system is very similar to the Unix systems that I had been using all along for my research.

My point: if Microsoft had not illegally maintained its monopoly, these alternative ways of using a computer might have been more easily available to a wider group of users. Those alternatives that were actually better than Windows, at least for some uses, would be widely available today. The jungle of computer operating systems and applications and uses would be much more diverse, much richer than it is today. Furthermore, software makers would develop programs, applications, and tools in such a way that they run on more than one type of computer or operating system.

Section two: The effect on the software industry as a whole I would like to reiterate and extent this last point, with one important conclusion. In the past couple years, several alternatives to Microsoft Windows and Microsoft Office and other web browsing and multimedia applications have appeared and are challenging Microsoft in its primary market. Some of these products appeared

before Microsoft made one of their own, while some came later. Some offer the same functionality while some offer more. In a marketplace free from an abusive monopoly, these products would compete on their own merits and on their ability to interact well with other programs. In the case of an abusive monopolist, they are denied equal access to the consumers and to information to make them interact with other programs, in particular they can not enter the market of the monopolist. It is very telling that the most successful path to competing with Microsoft has come from the "Open Source" community. Products such as GNU/Linux, Sun's StarOffice, the Apache webserver, Samba, and several initiatives by IBM are all developed in a not for profit way. These individuals and companies are in some cases are hoping for an indirect profit by selling hardware, or service, or something else, but these basic foundations are available for free or for very low cost. This strategy is working, so far, because Microsoft uses illegal monetary incentives to suppress competition, and these products are substantially immune to those efforts.

Had Microsoft simply been an accidental or legal monopoly, it would have a wider variety of successful competitors. Apparently, the most successful way of competing with an abusive monopolist is to offer products that are immune to the illegal financial-based actions of that monopolist. In effect, the competing products must be nearly free to customers. The fact that we see exactly this kind of competition, and the fact that we are seeing it from companies that are otherwise very profit-oriented (such as Sun and IBM) strongly suggests that Microsoft's illegal monopoly has had a substantial and ongoing effect on the software business, beyond what an ordinary monopoly would have.

The field of computers, software, and information technology is rapidly changing. There are new ideas appearing all the time, and older ideas and programs evolve and improve. If allowed to flourish, many of these new ideas will be commonplace in just a few years. As indicated here, and in the case presented by the DoJ in the anti-trust trial, and through many other examples, Microsoft has acted illegally to prevent individuals and companies from competing against its own products, and today's computing existence is poorer because of it.

If the proposed settlement is not made stronger, or if a much stronger remedy is not put into place, then only one group of individuals and companies will be able to compete: those that are able to offer their products substantially for free. This seems an unfair choice, because it limits software production to huge companies with other non-software products, or to individuals who have absolutely no motivation for profit. While both these groups are wonderful in themselves, the bulk of innovation in American business has come from individuals and companies in between: small start-ups, people who start a company out of their garage or basement, medium sized companies who can quickly respond to the changing needs of a small, select market. The result will be unnecessary lost time and

greater expense for people who use software to accomplish real things, like scientific research, running a business, searching for information, and everything else that we use computers for.

Section three: Changes to the settlement and other possible remedies The strongest possible remedy, of course, is one that would dissolve Microsoft and its assets. Presumably, their cash could go to the government and be put into education or something to help the next generation of software developers. Microsoft's program code could then be put into the public domain, and different companies can compete to offer improvements to it, or take things from it for use in their own products, thus distributing it to all takers. This probably would cause a little turmoil, but would in the long term (and short term, remember how quick innovation in computers can be) be very good for everybody. Even a lesser remedy of breaking apart the company into separate units does not seem unreasonable, if it is well considered. But assuming that these very strong remedies are deemed too much, here are ways of improving the proposed settlement instead.

The proposed settlement is inadequate on several counts. The remedy should include a large monetary penalty, on the order of the billions of dollars companies and individuals have lost trying to compete against Microsoft's unfair practices, or the billions of dollars individuals have lost in productivity because the market could not accommodate their needs efficiently. This amount must also be this large, because if it is not a substantial portion of Microsoft's tens of billions of dollars of illegally gained cash reserves, then it is not really a punishment, nor does it deter other potential abusive monopolies (or Microsoft itself) from further illegal activities. At the very least, the federal government itself is owed much of this money, as in my case, a Department of Energy researcher. I estimate several thousands of dollars in computer equipment and time could have been spent on other things in my case alone. Whether a monetary penalty can also be extracted for the benefit of individuals and companies that have also suffered, and how that benefit should be redistributed to them, should also be more fully explored. The remedy needs to include an independent group to monitor Microsoft to make sure that their illegal activities do not continue, and possibly to investigate all the forms that these activities took. This group needs to have the influence and power to immediately act if they uncover problems, not just a powerless series of recommendations. Because of the enormous pace of software innovation, a delay of six months in enforcement is uncomfortably long, a delay of more than a year is unacceptable. Very strong powers should be explicitly granted to such a committee.

The ideas in the settlement about opening up API's and pieces of code to allow other programs to work correctly with Microsoft's programs is a good one, but someone needs to carefully look for and close loopholes in the agreement (or make sure that a different remedy does not have such loopholes) that might permit Microsoft from not fully

complying. In light of their illegal practices, no aspect of how their products interface with other programs or a users data, should be hidden from any programmer or potential competitor, whether they are part of a for-profit company, or an open source developer. There must be no exceptions, either for what information is available or who gets it. As written, the settlement includes many unnecessary or dangerous exclusions. In principle, this is a purely punitive measure; an ordinary company would be allowed to choose what parts of the inner workings and interfaces of its products should be available to collaborators or competitors. Historically, many have chosen to make much of this information available in hopes of gathering many independent developers to extend and improve their product.

In the case of an illegal monopolist, there is no gain to be had by sharing this information. Thus, this is an important part of the solution, and its details need to be as strong as possible. It has been reported that the law allows for such punitive measures to be applied, even in the sometimes murky area of intellectual property, patents, and copyright, when a crime has been committed, as it has in this case.

Subject: Microsoft Settlement

To whom it may concern,  
I would like to offer my opinion that the proposed anti-trust settlement that Microsoft Corporation has reached with a number of Plaintiffs in this case is grossly ineffective. As a network administrator at a private corporation, I am forced on a continual basis to deal with issues caused by inferior Microsoft products that we are forced to use because they are so wide spread. This proposed settlement will do little to nothing to resolve the real issues in this case, and Microsoft will continue to act in ways that make competition impossible.

Thank you,

The proposed settlement is a step in the right direction but it is shortsighted with it's remedies to stop Microsoft's illegal practices. Two major flaws are: easy to circumvent definitions of compliance and lack of regulations in regard to Restrictive License Terms. I do not think that the settlement will fix the Microsoft's illegal practices and I do not support it.

To Whom It May Concern,  
I feel that the Proposed Final Judgement (PFJ) in the Microsoft anti-trust case will not truly fulfill its purpose. The PFJ contains misleading and overly narrow definitions and provisions. These narrow definitions provide large loopholes Microsoft will be able to exploit to continue their anticompetitive practices.

It also fails to prohibit intentional incompatibilities historically used by Microsoft. This will be used again and again to prevent new products from being able to compete in the software domain. It was used with DOS, and will likely be used again against Linux-based applications.

I hope that you will at the very least re-work the PFJ so that it covers the loopholes people have already found. Without doing that, Microsoft will have free reign to do what it has historically done in the past, and the antitrust case will have only been a waste of my money (as a tax payer).

sincerely,

TJ

I have serious problems with the suggested settlement as currently published. Many of the terms have been defined so narrowly that Microsoft could well avoid the supposed restrictions entirely.

The failure to require advanced notification of possibly drastic changes in the Windows operation system structure and design also makes the supposed "restrictions" which require disclosure of API's and other information to allow compatible software to be written for much of the operating system allows Microsoft to use their "current" system, and publish information on it, while designing a secondary, incompatible system, and suddenly releasing it as the "final version" and breaking all the existing middleware. This again, defeats the entire purpose of the settlement restrictions.

The fact that patents are not properly addressed is another problem I have with the

settlement as published. The failure to require disclosure at the very least of which patents apply to the Windows Operation System, removes any use of any "compatibility" information, because implementing it, could end up being illegal due to patent infringement.

I'm sure you've recieved many well-worded, and much longer-winded comments about the settlement, but these are the two largest problems I have with it currently. Thank you for taking the time to read this.

Subject: I'm opposed to the settlement

As a long-time computer hobbyist and amateur programmer (I have been playing with computers for about 25 years now) I am strongly opposed to the proposed settlement in the US v Microsoft antitrust case.

Microsoft has gone from "one more software company" to THE software company, and this is not healthy for an industry which is as fast-growing and innovative as the computer industry should be. I say that it should be fast-growing and innovative, but unfortunately Microsoft's view is that anything that is bad for Microsoft is bad for the industry and this is not the case. Many promising technologies and companies have come and gone because Microsoft either bought them out to make them disappear or "cut off their air supply" in the infamous words of the Netscape trial.

Microsoft in its current form is bad for the future of the computer industry in the USA and throughout the world. This proposed settlement is bad for the future of the computer industry as it will simply give Microsoft a pass to continue to squash anyone who looks like a competitor. How many companies have not brought a new innovation forward simply because "if we do, Microsoft will kill us"? We will never know the answer to that question.

I am not a US citizen. I am Canadian. However, I hope that my comment will be taken into consideration because the computer industry is world-wide and Microsoft's influence is (unfortunately) worldwide as well.

As a software developer with over 20 years' experience, and as the owner of a small software business, I'd like to comment, pursuant to the Tunney Act, on the Proposed Final Judgment in United States v. Microsoft. The proposed settlement attempts to impose restrictions on Microsoft in order to limit Microsoft's ability to engage in further monopolistic practices. The settlement can be expected to fail to provide effective remedy. It strikes me that the situation is similar to the ongoing race between those who write software viruses and those who are trying to protect our computer systems against them. A vulnerability is discovered and a number viruses are released exploiting the vulnerability. Security experts discover the virus and rush to find ways to stop the spread of the virus and to eliminate the vulnerability. Unfortunately, the virus authors have a head start. If they are able to release a strong enough virus it will be able to cause significant damage and massively reproduce before being detected. Even more time is needed and more infections occur before effective countermeasures can be developed and distributed. Meanwhile other people throughout the world are busy looking for new vulnerabilities to exploit and new ways to propagate and cause damage.

The proposed settlement attempts to identify ways in which Microsoft can be regulated based upon today's software and practices. But software is dynamic. Today's software is different than software written five years ago. Many key technologies have developed during that short time. For example, during that time Microsoft has developed the .NET platform and has reoriented the architecture of its products around that platform. We can expect that trend to continue. Indeed, the proposed settlement provides incentive to Microsoft to come up with new technologies and new procedures that allow it to get around the limitations imposed by the proposed settlement. If the settlement requires disclosure of APIs on a given date, Microsoft will have incentive to redefine the interface between its products so that the interface falls outside the definition of "API". They will also have incentive to be sure that the APIs change to include new or modified services shortly after disclosure.

The proposed settlement establishes a situation similar to one where a team of security experts is brought together to build software that will detect and disable all known viruses as of a given date and then go home assured that there will be no more outbreaks in the next five years. The proposed settlement assumes that a Technical Committee of three people could keep up with all the changes made by the thousands of Microsoft employees. Might we

also assume that a small committee with no power to take action would similarly provide protection against any new viruses that crop up, despite the efforts of the experts to plug the known vulnerabilities? Anyone with any experience in the field would know that there is no way to know or to fix all the vulnerabilities, nor to anticipate all possible attacks. While the team was working and after they went home others would be continuing looking for new ways to cause mayhem.

The proposed settlement establishes a framework and invites Microsoft to turn its massive corporate resources toward finding a way to get around the framework. Effective action is needed to terminate the illegal monopoly, deny Microsoft the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future. The proposed settlement can be expected to be totally ineffective. Any solution must be as nimble as the monopolist and in light of past monopolistic practice, must truly enable the competition.

**MTC-00018412**

From: Barry King  
 To: Microsoft ATR  
 Date: 1/23/02 4:02pm  
 Subject: Microsoft Settlement TWMC:

The remedy is far too little, too late. Microsoft's lucrative practices of strongarming ISVs and OEMs are far less important for the future than what it plans to do with distributed component such as those it plans to base the company on using C# and .NET. These future products have not been addressed by the remedy, but are merely continuations of a code base which has been used by Microsoft to maintain a stranglehold over innovation and commerce, directly harming the U.S. public by providing shoddy, insecure software at an egregious total cost of ownership. Because these initiatives have no name at this point, more emphasis must be placed on intellectual property principles and less on specific product. Intercompatibility is the principle which must be upheld, not niggling issues of bundling and product licensing of such-and-such version of Windows or Internet Explorer. Either Microsoft must be forced to use public standards of process intercommunication or it must be forced to show the exact behavior of the software it releases to developers. As defined in the remedy, a documented API is not broad

enough for this issue. Complete APIs must be disclosed, including implementation and optimization issues.

However, enforcement of this will be impossible given the scale of the task. With hundreds of components being built in new ways and platforms than can be predicted in specific terms, there is no way that this remedy will address the monopolistic practices Microsoft WILL perform in the future. The remedy will be unenforceable given the role of the TC as outlined by the remedy, no matter how many consultants the TC can hire on Microsoft's dollar. Even if the TC does the job perfectly, it will not fix what is broken at Microsoft: the company's total lack of commitment to quality and responsibility.

Furthermore, by restricting the access to Microsoft source code to the TC (and, presumably the TC's staff) no means are given by which open-source programmers can ensure their code has not been stolen by Microsoft in violation of the licensing agreements. The courts are not prepared to handle this sort of dispute, and no open-source (or for that matter, closed-source) competitor can afford to go against Microsoft in court. A way outside of the court system must be found to solve this problem, and this remedy is not it.

In the end, the court has two choices to properly settle this. Either convert substantial amounts of Microsoft's Intellectual Property to the public domain as de-facto standards or force the company to rework its products to function well on competitor's operating systems, specifically those competing operating systems most used by the U.S. public, namely Linux and Mac OS.

From: Fromhold-Treu, Rene  
 To: Microsoft ATR  
 Date: 1/23/02 3:59pm  
 Subject: Microsoft Settlement  
 Dear Madam/Sir,

I am writing in response to the DOJ's announcement to settle with Microsoft in the Department's long-running anti-trust suit.

There are many reasons why this settlement is a terrible idea (please see <http://www.kegel.com/remedy/> for more arguments about it), but my primary concern is that in its current form, the settlement will essentially put MS in the same position it was a couple of years ago: under scrutiny by some third-party (at that time, I believe it was the DOJ) that can protest actions by MS, but that does not have the ability to impose any

lines that have any sort of impact on MS. And, just as it has always happened in the past, MS will use every available opportunity to strengthen its grip on the personal desktop, as well as data processing in general.

The only way to prevent MS from strangling the computing market is to separate its OS (including its .NET initiative) from its other products. In its current form, the settlement will only weaken the American software industry, not strengthen it.

From: Tyler Johnson  
To: Microsoft ATR  
Date: 1/23/02 4:02pm  
Subject: Microsoft Settlement

Dear Friends,  
I would like to comment on the Proposed Final Judgment in United States v. Microsoft.

As a software engineer with 10 years of experience programming web and middleware applications, I feel that the Proposed Final Judgment: a) completely fails to address the underlying conditions that caused the action in the first place; and b) reflects a naivete of the technical issues at hand by the parties negotiating the settlement. Because the Proposed Final Judgment focuses on specifics, for example narrow definitions of product classes (i.e. "middleware") and even naming product release numbers and product names, the settlement guarantees that by the time the settlement is signed and approved by all relevant parties it will be out of date. Simply put, the computer industry moves far faster than the legal and policy world where these negotiations are taking place. Thus, the approach taken in the Proposed Final Judgment is fundamentally flawed and should be abandoned. Instead of defining specifics the settlement should stick to generic definitions of software types and business practices. The will prevent Microsoft from simply renumbering and/or renaming products to escape complying with the Proposed Final Judgment. In particular such a settlement that Microsoft provide full and complete documentation of all file formats, APIs, networking and storage protocols, etc.

Thank you for your attention in this matter. I hope you take my request to completely scrap the current Proposed Final Judgment and general approach taken in defining the settlement seriously.

From: Julesa  
To: Microsoft ATR  
Date: 1/23/02 4:05pm  
Subject: Microsoft Settlement

I would like to object to the proposed final judgement in the Microsoft antitrust case. I believe the proposed settlement falls far short of punishing Microsoft for their illegal past behavior, and will fail to prevent illegal behavior in the future.

The judgement does not mention anything about limiting Microsoft's behavior in regard to newer products such as the Xbox and .Net technologies. It has been established that Microsoft has repeatedly abused its power upon gaining a significant share of a given market. Microsoft will attempt to extend its monopoly into home entertainment systems and Internet commerce technologies. I believe the settlement must address Microsoft's behavior in these areas.

Because they have significantly overcharged consumers for their products for several years now, they have a large war chest which will give them the resources to outcompete other players in any market they choose to focus on. How do you remedy that? It's a tough question, but simply placing limits on what Microsoft can do with specific products, especially just their older ones, is surely insufficient. They will simply develop new products (perhaps using ideas from old ones) which don't fall under the judgement's restrictions.

A revised judgement should include an effective enforcement mechanism, unlike the proposed final judgement. It should require that Microsoft publish the specifications to file format standards such as Word, Excel, and Powerpoint documents, and allow anyone to write a program that can read these formats. That would allow consumers to use whatever product they like to communicate with each other. It should limit what Microsoft can do in ANY market, not just markets in which they have already crushed the competition illegally. Thank you for your time.

From: Jason Sharpee  
To: Microsoft ATR

Date: 1/23/02 4:11pm  
Subject: Microsoft Settlement  
To whom it may concern,

I recently lost a bid on a service contract with a company, because Microsoft consulting services were able to "sweeten the deal" by providing "courtesy" licensing of their products along with their services. That does not put me on an even playing field to compete in my market, because Microsoft is willingly leveraging their other dominant markets to gain the advantage in the services industry. This, in my opinion, is the definition of a corporate monopoly.

I do not see the proposed settlement addressing these and many other issues I have, and I consequently disagree with it.

Subject: Microsoft Settlement

I am very concerned that Microsoft is continuing to use its monopoly to stifle innovation and competition.

There is an application barrier level for all programmers and competing companies that forces a company to write products that run on the dominant OS. In this case that is MS Windows. This gives MS an incredible advantage and places it on a level with the road network, the electricity grid and other essential services. Sadly, MS has used this power to restrict fair entry for other companies, such as Netscape, Real Networks, Java (a programming language), Dr Dos. The "Court's Findings of Fact" in the previous civil case against Microsoft section III, B is the most relevant. As a Software Engineer I can assure you that because of its scale, Microsoft IS the playing field, however, it is anything but fair.

Subject: Microsoft Settlement

To whom it may concern:

I am writing in response to the call for public comments on the proposed settlement between the Department of Justice and nine states and the Microsoft Corporation.

I have used Microsoft products at work for the past twelve years. The company that I work for has spent hundreds of millions of dollars upgrading software to keep up with Microsoft's current offerings. There is no difference in my productivity now versus ten years ago with three or four generation older equipment. In fact I have had some of the greatest data losses just in the last few months which would have cost my company thousands of dollars had we not had backups stored in a separate location.

My point is that I have not seen one hint of innovation from this company and because of its monopoly, very little innovation in the software market.

In order to restore serious competition we need a serious settlement, not a slap on the wrist.

The following link contains a proposal that I fully support: <http://www.kegel.com/remedy/remedy2.html> We desperately need to restore competition in this country or the rest of the world will do it for us! What brand of car do you drive?

From: misuba  
To: Microsoft ATR  
Date: 1/23/02 4:03pm  
Subject: Microsoft Settlement

The proposed settlement fails to require Microsoft to release the specifications for the format of Office documents, which are rapidly becoming a lingua franca and are one of MS' most powerful tools for breaking open standards. Stated more specifically, no part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ?39).

I think the proposed settlement is far too lenient, full of loopholes like this one, and leaves Microsoft with the power and money to make even more egregious anticompetitive moves, and get away with it. It's a bad idea.

Date: 1/23/02 4:04pm  
Subject: Microsoft Settlement  
Dear Sir or Madam:

Per the conditions of the Tulley Act, I wish to register a comment against the current proposed settlement with the Microsoft Corporation. While I think many of the measures indicate good intentions on the part of those drawing up the settlement, in its current state the settlement will serve little purpose except to be a token gesture in the general direction of the problems it was meant to solve.

In the interest of brevity, I will not go into specifics concerning the legion of shortcomings the current settlement contains. Suffice to say that it is my earnest and heartfelt opinion that a great deal more work needs to be done before this settlement would actually be capable of reaching its stated goals.

Sincerely,  
J. Clifton Bullard

Subject: Microsoft Settlement

The proposed settlement \*is\* a bad idea, as it is not only a travesty of justice (how many millions of \$\$'s spent getting a guilty conviction, to settle for a wrist slap?), but basically tells Microsoft that they can do whatever they want, as there no rule of law, at least not one that applies to them.

And no, this is not a form letter, nor did I cut and paste any of it.

"What? In riddles?" said Gandalf. "No! For I was talking aloud to myself. A habit of the old: they choose the wisest person present to speak to; the long explanations needed by the young are wearying."—"Lord of the Rings", JRR Tolkien. [dbishop@micron.com](mailto:dbishop@micron.com)

From: Thomas Humphrey  
To: Microsoft ATR  
Date: 1/23/02 4:05pm  
Subject: No to Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Thomas Humphrey 9630 Keeler Ave.

From: J. Hess  
To: Microsoft ATR  
Date: 1/23/02 4:14pm  
Subject: Microsoft Settlement

In my opinion the proposed settlement is a bad idea, because it fails to address the full scope Microsoft's anticompetitive practices, the remedy is so specific to Microsoft's current software product that it will soon be obsoleted in many respects, Restrictions Microsoft is allowed to place on providing information required to use their software and operating system APIs and the generous allowances they are made such as using their own MSDN network (A Microsoft product)

rather than an independent party to handle the distribution of information render the remedies useless for encouraging competition or discouraging their practices. Moreover, the proposed settlement doesn't seem to have any significant enforcement device—as they reached this point, clearly it's necessary.

The proposed settlement looks like a "Get out of jail free card" for Microsoft and the remedy appears to be mostly non-substantive. —James Hess

From: Adam Bender  
To: Microsoft ATR  
Date: 1/23/02 4:06pm  
Subject: Microsoft Settlement

I firmly believe that the Proposed Final Judgement in the Department of Justice's Anti-trust case against Microsoft is nothing more than a slap on the wrist. Microsoft has for years engaged in anti-competitive, and often illegal, business practices, they have used their position as an undisputed monopoly of operating systems and software to produce sub-mediocre software that compromises the security and productivity of the United States government and private citizens, and cares about nothing more than increasing its profits at the cost of bearing any resemblance to an institution with a conscience. However, I would like to point out a specific problem with the PFJ. It makes no provisions to stop Microsoft's stranglehold on OEM computer manufacturers with regards to the operating systems that are installed on new PC's. A customer seeking to buy a computer without a Windows operating system (OS) will have to search very hard to find one, because Microsoft will not license Windows to any PC manufacturer that sells any PC without that OS. Therefore, if that same company also wanted to sell computers with Windows, it would have to pay much more for it, and thus would be driven out of business from competitors who comply with Microsoft's demands.

I believe that any and all measures to eliminate the death grip that Microsoft has on our country should be enforced

Subject: Microsoft Settlement

I am a consultant with a strategy consulting firm, primarily serving high technology companies. On reviewing the Proposed Final Judgement in United States v. Microsoft (PFJ), I strongly believe that the PFJ is an ineffective remedy for Microsoft's unlawful conduct. My first major concern is that the language of the PFJ provides opportunities for Microsoft to continue its activities, even while conforming to the letter of the agreement. My second major concern is that the PFJ does not provide coverage for non-commercial software developers—a potentially significant source of innovation and competition. I urge that the PFJ not be accepted as is.

Thank you for your consideration,

Peter Low

I would like to voice my displeasure with the performance of the U.S. Dept. of Justice in its case against Microsoft. I cant imagine that you would let Microsoft supply "low income schools" with computers with they're operating system and software installed on it. As a parent of two I am unhappy with our local school districts decision to use Microsoft products exclusively. No doubt their decision was based in large part by Bill Gate's grants (bribes) to help purchase the software in the first place. It now forces me, as a parent to go out and purchase Microsoft products for my computers at home so that my kid's homework will be compatible with "Microsoft Word 2000" format. Also the school district has to expend a considerable amount of resources to keep all the licenses up to date on there thousands of machines.

As you can see, "giving" low income schools "Microsoft products" will result in more financial hardship as the schools will have to pay licensing fees to Microsoft to keep the systems current and the parents in these schools will be compelled to bye Microsoft products for the home. Not much of a punishment for a company accused of running a monopoly. This will just ensure more future customers.

The best alternative I have heard so far is the one proposed by RedHat inc., maker of an open source operating system. Let Microsoft spend all there fines in buying just

the hardware for the schools and take Red Hat up on there offer of providing, free of charge (including future updates) the operating system and technical support for these "low income schools".

The proposed settlement is bad idea. It just tells Microsoft to keep abusing it's monopoly while making it sound like it's doing something else.

**MTC-00018436**

From: rcg@wt.bc.ca@inetgw  
To: Microsoft ATR  
Date: 1/23/02 4:09pm  
Subject: Microsoft settlement—please restrict Microsoft from excluding "free software"

Without long explanations, I am concerned about Microsoft's licensing restrictions that exclude all other operating systems. Microsoft have effectively excluded developers who use Microsoft development products from writing software that could be run on non-Windows systems (i.e. Linux+WINE). This, in effect, extends MS's OS to include all applications written for it. Since Microsoft also maintains market dominance in development suites (because of it use of undocumented OS API calls to its monopoly OS), Microsoft has a means (when combined with the licence distribution agreement) to effectively restrict Microsoft developers to Windows only products. Additionally, even developers using non-microsoft development products could inadvertently violate the MS distribution agreement if they buy and include components from other vendors in their product.

For example: Suppose I want to write a spreadsheet program that will run on both Windows and Linux. In order to avoid any licence concerns I use Borland's development suite, Delphi. I also purchase a "Excel import filter" from ABC company and use it in my product. I would be unaware if ABC company created the component I purchased with a Microsoft development suite. Thus, I could be violating MS's distribution agreement. Additionally, MS can use the "redistribution agreement" to restrict services to only those running their operating systems. (See, MSNBC's download restrictions..)

Finally, there remains concern over patent infringement for Windows compatible operating systems. In order to avoid patent infringement, any company or person needs to know the what patents he/she could be violating. It would seem reasonable that clone operating system makers should be able to have access to the list patents that Microsoft holds in relation to its operating system. Without this the threat of a possible lawsuit from Microsoft (I hear that they are very difficult to deal with in court) could scare off financial investment and thus virtually eliminate competition on the

desktop. Please take note of the finding of fact in regard to what makes a viable operating system alternative.

In order to effectively protect the consumer, any agreement needs not only to address the past concerns but to provide guidelines that protect the future. When this court case began, there was no viable alternative to Windows, but today it appears that soon there will be. Microsoft has realized this and has been taking measures to eliminate it. In my opinion, the proposed agreement falls short of protecting consumers from Microsoft's business practices and thus having a choice of operating systems in the future.

Please consider my comments in your deliberations. Freedom is choice: fair and equal choice.

Richard Giroux  
Network Engineer

Date: 1/23/02 4:09pm  
Subject: Microsoft Settlement

I think the proposed settlement with Microsoft is a very bad idea. Dan Kegel, whose petition I signed, outlines many of the problems in great detail, but I wanted to add one example specific to my own experience. I have spent the last three years working for two different start-ups here in Seattle. It is rare for a week to go by without someone saying "Well, let's hope Microsoft doesn't do X," "cause if they do there goes that part of our business." This company is so huge, with so many resources, and such a vast scope of what "fits" into Windows, that no one is safe from them. I work with dedicated, talented programmers and testers, with years of experience in the field. We have chosen, in some cases with a related loss of income, to work for anyone other than Microsoft, because of our concerns with what they are doing to computing, and to preserve some choice for consumers and businesses in the world of software.

All that said, we all worry any time we hear something new from across the lake. We never know what they will decide to implement next that will take away our ability to exist. You can be better than Microsoft technically, but you can't compete with "free," and no one else has their brand name and marketing budget. As long as Microsoft has the freedom to break the rules with impunity, the marketplace of ideas in terms of computer software will suffer. Even if Windows continues to dominate the desktop, which seems highly likely, at the very least it would be nice if people other than Microsoft's applications developers had

an honest shot at selling product and making a go of things.

Thank you very much for your time.

I am disappointed in the proposed settlement with Microsoft. The findings of fact starkly demonstrate how anti-consumer Microsoft has been, but this settlement does virtually nothing to halt these anti-competitive practices, or to punish them for all these previous acts. At a minimum, the API's need to be opened up, and security vulnerabilities should be required to be made public. The break-up ruling still seems much more fair than any other solution I've seen.

#### MTC-00018440

From: Redman  
To: Microsoft ATR  
Date: 1/23/02 4:10pm  
Subject: Microsoft Settlement

The settlement is clearly not in the public's interest. I've listed some of the key problems below: The proposed settlement:

(1) does not prevent Microsoft from bundling application software into its operating system. Illegal bundling and tying practices are not in the proposed settlement.  
2) relies too heavily on equipment manufacturers to promote more competition.

3) does not cover the new generation of applications. Since the settlement applies only to products that were in use from 1995-98, it won't stop Microsoft from repeating anti-competitive practices with current and future products. By simply re-packaging old software, they can continue past practices.

(4) lets Microsoft decide which products are part of the Windows operating system and which are applications. Many Microsoft applications have been integrated into the OS in the past, blocking competitive applications, and the proposed settlement will still allow this.

(5) gives Microsoft control over many enforcement decisions, essentially putting them in charge of the keys to the safe!

(6) would not require Microsoft to comply with computer industry standards, or prevent the company from undermining or altering standards, even when the intent is to deliberately deceive competitors.

(7) would allow Microsoft to disable competitive software products, effectively sabotaging any competition. Secret hardware specifications are not in general Microsoft's doing, but they are a significant obstacle for the development of the free operating

systems that can provide competition for Windows. Require Microsoft not to certify any hardware as working with Microsoft software, unless the hardware's complete specifications have been published, so that any programmer can implement software to support the same hardware.

1. Commenter is submitting to you this public comment in the matter of the proposed settlement in District of Columbia in United States v. Microsoft Corporation, Civil Action No. 98-1232.

2. This comment is written in response to the information published Wednesday November 28, 2001, in the **Federal Register**, Vol 66, No. 229, on pages 59452-59476 inclusive. This comment is being delivered by electronic mail to the electronic mail address specified in the Federal Register, "microsoft.atr@usdoc.gov", and to the electronic mail address specified on the Department of Justice website, "microsoft.atr@usdoj.gov", before the sixty-day deadline of Friday January 25, 2002.

3. Commenter Satchell has been a professional software and system developer since 1971, and a professional writer of non-fiction magazine articles about the computer industry and its products since 1984. He has fulfilled a number of roles during his 30-year career: programmer, architect, project manager, software test manager, quality assurance test programmer, benchmark writer, product reviewer for publication, and magazine technical editor. During his career he has been a voting member of the Association for Computing Machinery (ACM) and an associate member of the Institute of Electrical and Electronic Engineering (IEEE). For virtually all of his professional career, his work on software and system products, product components, and documents and articles has been for resale or for general publication.

4. Commenter Satchell is not a lawyer, nor has he received any legal training. This Comment was composed by Commenter exclusively, with no input or review by any lawyer or paralegal. Therefore, Commenter assumes that the contents of this Comment will be interpreted by the reader(s) according to non-legal English language usage.

5. In the context of this comment, the term "refer to the Revised Proposed Final

Judgment submitted to the Court on November 6, 2001, and reprinted in the **Federal Register**, Vol. 66, No. 229, starting in column 2 of page 59453; the term "CIS" shall refer to the Competitive Impact Statement submitted to the Court on November 15, 2001 and reprinted in the **Federal Register**, Vol 66, No. 229, starting in column 1 of page 59460.

## A. Summary of Comments

6. The Commenter believes that the RPFJ as published does meet the needs for a suitable remedy according to the letter of the original Complaint, the Findings of Fact, and the Conclusions of Law (as amended by the Appeals Court)

7. The RPFJ falls short in several areas in serving the public interest as required by the Tunney Act in 15 U.S.C. 16(e)(2).

8. The RPFJ does not meet the public interest requirement of 15 USC 16(e)(2) by failing to define the scope of the remedy to cover all portions of the software marketplace as it existed in 1999, as it exists today, and as it is reasonably expected to exist over the life of the RPFJ.

9. This failure to include the entirety of the software marketplace leads directly to an explicit narrowing of choice available to the consumer of software products to those products produced by commercial enterprises, of Defendant-mandated size and structure to have standing (as defined in the RPFJ) in any complaint of violation, and in some cases that meet Defendant-imposed requirements on business structure and success.

10. The original Complaint, filed by the United States, limits its discussion of the software marketplace to a subset of that marketplace, the large-company commercial sector. There is no substantive discussion, recognition, or consideration of the alternative commercial sector, the cooperative sector, the in-house sector, and the non-commercial sector of the software marketplace in the original Complaint.

11. Unlike virtually every other product marketplace in the United States, the computer software marketplace has significant segments that sell, rent, lease, or license software products for consideration other than money. This marketplace segment has a long history dating back to the 1950s, when computers were first introduced into the economy. The distribution of software without the direct exchange of money is still commonplace today. In some cases, the exchange is by barter, however informal. In other cases, the exchange is without any commitment on the part of the receiver in any way; at the extreme, software is put into the public domain, to be used by anyone in any way without limitation. The RPFJ specifically excludes this segment of the market from consideration and protection from violations by the Defendant.

12. The development of software products by software cooperatives has a long and distinguished history. Products produced cooperatively continue to increase in market share. Although I have not seen a "code of guiding principles" for software cooperatives published in the cooperative-software community, the guidelines published by the National Rural Electric Cooperative Association are astonishing parallel to the

long-held and well-developed principles that guide software cooperatives. See the Web page <<http://www.nreca.org/coops/special.html>> for the seven guiding principles espoused by NRECA. The RPFJ specifically excludes software cooperatives from consideration and protection from violations by the Defendant.

13. The software marketplace includes software products developed by or on behalf of a single corporation or company (including those not directly involved in computers or software sales in any way) exclusively for its internal use; the intent of such software product development is to enhance the competitive stance of the company in the company's marketplace. During the 1950s, 1960s, and 1970s the in-house software product and the custom software market represented the majority of the software marketplace. A good example of such "in-house" software product is the software used by insurance companies to capture customer information quickly and calculate the best insurance rate, with a minimum of delay, for that customer. This market segment remains strong today, and yields a measurable revenue benefit for the organization putting such software in place, but because there is no direct link between "sales" of the software and profit, the degree of harm is very difficult to calculate. This is another market segment ignored and unprotected by the terms of the RPFJ.

14. The RPFJ as published in the **Federal Register** makes clear that Defendant Microsoft would be permitted to continue to discriminate with regards to API and network protocol disclosures against authors and entities not meeting Defendant-mandated guidelines for business methods, structure, and level of sales.

15. The texture and composition of the software marketplace continue to change and expand at a rapid pace, far faster than traditional commodity or service industries. In particular, there is a growing trend toward locating applications not on end-user computers, but on servers operated by Application Service Providers (ASPs). Microsoft has announced its intentions to enter this market as part of its dot-NET initiative. The RPFJ fails to meet its public interest requirement by not addressing any aspect of this growing trend.

16. The development cycles for software are very, very short. Software products have cradle-to-grave lifetimes that are measured in months, and some classes of software have useful lifetimes that are measured in intervals as short as hours. Time is the enemy of developers, and very few projects go smoothly in the best of circumstances. The RPFJ recognizes this fact to some extent, but the 30-day response time to all complaints of violation injects a delay that can be fatal to a software project.

17. An alternative complaint process is proposed in this Comment. The basis of the proposal is the establishment of a triage system to quickly dispatch the majority of complaints that are trivial to resolve.

18. In addition, the publication of a "Frequently Voiced Complaint," analogous to the "Frequently Asked Questions" or FAQ that is a staple of Web sites, would reduce

the number of complaints that would need to be handled individually by Microsoft, the Technical Compliance Committee, and the Plaintiffs, and can serve to eliminate complaints that would otherwise be filed.

19. Commenter does not attribute these failures and shortcomings in the RPFJ to incompetence or connivance on anyone's part. Instead, Commenter recognizes the difficulties the Courts face applying traditional anti-trust law to the software industry. After extensive searching, Commenter has found no anti-trust case in which the affected market has had such a large number of non-commercial and cooperative components as the software industry has.

#### B. The Original Complaint Fails to Describe the Entire Software Marketplace

20. The term "software" is the generic label used by practitioners in the computer industry to refer to programs that are loaded into computers, when required, in order to instruct the computers how to perform a specific task desired by their users. A program is an ordered list of instructions readable by the computer, telling the computer hardware (in conjunction with instructions permanently recorded in the computer—"firmware") exactly how to accomplish the task desired by the user.

21. A programmer is a person who creates the lists of instructions that comprise a program, and further determines that the lists of instructions are correct. These lists can be created directly, through intermediate tools that in turn generate lists of instructions, or through interpreters that take lists written in a representation different from that used directly by the computer hardware. Programmers also make extensive use of previously written lists of instruction—program fragments (functions and subroutines)—to reduce the effort of creating a complete list of instructions for the computer.

22. The basic principles of programming are simple enough that many practitioners writing programs today were able to teach themselves how to do it, usually in conjunction with a specific set of tools for writing programs. The costs associated with programming have been low enough for the past 30 years that hobbyists and students of the craft proliferated and continue to proliferate. Many professional practitioners today started out as hobbyists.

23. The history of the computer industry as we know it today is littered with stories about the effects of hobbyists, students, and researchers on the growth and maturing of the industry, far too many to relate here. The interested reader is referred to the book *Hackers: Heros of the Computer Revolution* by Steven Levy (1984, Doubleday, ISBN 0-385-19195-2) for a full discussion of the impact of the hobbyist on the software industry and the software marketplace; the contents of that book are incorporated into these Comments by reference. This book is now available in paperback.

24. There is an initial investment when entering the software marketplace, although the amount of that investment, large in the 1960s, had dropped to under US\$300 today. Some early programmers reduced their initial

investment by renting time from others, resulting in significant savings over buying the equipment outright. This rental extends to students using University computer systems (for a lab fee) to learn their craft.

25. The actual process of programming is about as difficult and incrementally expensive as writing an essay or brief (small program) or book (large program).

26. For small utility programs and specialty software sold commercially, the cost of marketing, fulfillment, and technical support exceeds, in some cases by orders of magnitude, the cost of initial creation. In short, distributing a product through the traditional retail channel can incur such high costs that the expense prices the software out of the market. The industry responded by developing alternative means of distribution and compensation, means that eliminated the overhead involved in using a traditional sales channel.

27. Among hobbyists, students, researchers, and in-house programmers, many programs were created and distributed without any monetary compensation. The compensation was in the form of credit, and written credit for the creation of the program and modifications to the programs were distributed as part of the program. This is very much like the practice in academe with regards to published papers. The means of distribution varied based on the product audience. Any money paid for such software covered the cost of the media, the cost of copying of the software to that media (as much as \$25 in the 1970s for computer time), and the cost of shipping—also very much like academic paper distribution.

28. Many "free" programs were created and given away by commercial concerns, who originally developed these code fragments to solve specific problems, and thought others could make use of the fragments to solve similar problems. Some of this code was copyrighted, with permission to use without royalty but with credit to the author. Some of this code was donated to the public domain.

29. Several telephone-based systems of networks, the Bulletin Board Systems (BBS) and the Unix UUCP network, reduced the cost of distribution still further and enhanced the exchange of programs and program fragments for the "monetary unit" of credit, not dollars (or francs or pounds or whatever). The growth of commercial nation-wide bulletin board and messaging services such as CompuServe, The Source, BIX, and Prodigy further decreased distribution costs. The Internet today continues to provide a low-cost means of distributing programs of all kinds.

30. Researchers have created a number of useful programs in support of their research efforts. Many university and research institutions have collected these programs and made them available—usually for the cost of duplicating the software onto a medium such as punched paper tape or magnetic tape, later floppy disks, and today CD-ROMs—for anyone who wants them. Some of these programs have restrictions against commercial sale without proper license. The most notable "program" distributed in this way (via magnetic tape, in

1972) was the Unix Operating System, created by Ken Thomson and Dennis Ritchie at Bell Labs in Murray Hill, NJ.

31. The well-established practice of sharing programs without cost gave the early software publishing industry headaches. The time and cost of preparing a program for sale through a traditional distribution channel would cause the publisher to raise the sale price to recoup this cost. The increased price for retail-channel software had an inevitable result given the hobbyist nature of the customer base: for every copy of software sold, there was a good chance that one or more "pirate" copies would be made and used by another person.

32. The marketplace developed an alternative to the traditional retail channel. In 1983, PC World Magazine founding editor Andrew Fluegelman wanted to distribute his program "pc-talk", a terminal emulator program he developed for the IBM PC, but without the headaches and overhead of dealing with the retail channel. He created a concept he trademarked "Freeware", in which users can give Mr. program to friends to try out, and if a friend liked it and continued to use the program that new user would send \$15 to Mr. Fluegelman in payment for the program. This led to the creation of an alternative commercial software marketplace generically referred to as "Shareware".

33. Large software projects are almost never written by a single person, but instead are written by a group working in coordination. A group of students and researchers at the University of California at Berkeley added networking as we know it today to AT&T's Unix system and distributed it under the name "Berkeley System Distribution", or BSD. This development (along with the replacement of AT&T code to eliminate copyright conflicts) later became the core of commercial operating systems, most lately the core of Apple Computer's OS X, as well as the core of freely-distributed version of operating systems.

34. There has been a growing trend in group development of software toward cooperative development of software programs by a number of people unrelated by company affiliation, employment, contract, or even country of citizenship. The "apache" Web server program is one such example of a cooperatively developed program, and is very widely deployed on the planet. This trend is the "software for credit" market paradigm writ large, but the added benefit for the participants in co-operative software projects is that each participant gets to use the entire package for the "price" of contributing to its creation.

35. Co-operative efforts have a significant history, tracing back to before 1985 and the original development of the software used by the CompuServe Information Service. H&R Block sold computer time on its DEC PDP-10 computers to hobbyists using the trade name "micronet"; a number of the users of that service wrote a messaging system in Fortran to permit them to conduct conversations on H&R Block's computer system. Eventually, H&R Block spun this activity off as a separate business, and handed the maintenance and feature

enhancement of that software to a professional group of programmers.

36. In today's computer environment consisting of millions of computers (PC, Macintosh, and others) in homes, schools, businesses, corporations, and government, people tend to lose sight of the fact that the software marketplace started as a custom craft business. Owners of computers had a team of programmers, operators, and consultants to tend the Great Beast, to teach it the tricks the company wanted, and to wring as much usefulness out of the "hunk of iron"—especially when the computer cost millions of dollars initially. Even today, there is a very large market consisting of inside-employee programmers and consultants who tailor software products, write "glue" programs, and in some cases create entire custom systems to accomplish the same goal; i.e., make the computer work for its owner.

37. The applications provided in the software marketplace cover a wide variety of needs, with some of those needs being so specialized that the number of units that can be distributed into the target market is very small. Target markets measured in thousands of units are common, and target markets numbered in the hundreds, while not common, are by no means unheard of. These smaller markets are important despite their size; just how many oil refineries or nuclear reactors do you think there are, for example, to which to sell specialty monitoring programs?

38. Several government institutions have specific needs for computing. A number of government institutions employ and retain significant numbers of programmers working on projects that provide substantial benefits for the citizens of our country. To name just a few at the Federal level: NSA; NASA; IRS; the Census Bureau; NIST; DoD; and DoJ. These and other federal departments, bureaus and organizations are part of the software marketplace. One example shows how this sector of the marketplace has a large impact on the overall software market: a commercial product, the dBASE data base product, had as its base the "RETRIEVE" database system and the follow-on "VULCAN" system developed at the Jet Propulsion Laboratory. The release of the dBASE package by Ashton-Tate opened a marketplace for database package on micro-computers that still rages today, even as Ashton-Tate is long gone from the software market arena.

39. It's clear, then, that the software marketplace consists of a wide range of different types of entities, be they companies, organizations, or individuals. These entities may be classified using several different rules. One classification is by business organization: commercial enterprise, internal development department, co-operative, cottage enterprise, consultant, research organization, government, and hobbyist. Another way to classify an organization is by its target market: mass-market, niche market, custom-software market, and not-for-resale (internal use). Finally, the entities can be ranked by revenue or by user ("seat") counts.

40. A complete list of the players in the software marketplace is far broader than the list that appears to be implied by the description in the original Complaint and

reflected in the definitions of Section IV of the RPFJ. In the commercial marketplace, you have at least (a) the commercial developers of operating systems, (b) the commercial mass-market applications providers, (c) the commercial niche-market applications providers, (d) the commercial developers of custom-designed and -developed applications, and (e) the consultant. In the noncommercial marketplace, you have at least (f) the corporate in-house developers who create corporation-specific applications, (g) the hobbyist, (h) the researcher (computer and non-computer), (i) the research organizations (again, computer and non-computer), (j) departments of the United States government (DOD, NIST, NASA, and others) who create specialized software and systems, (k) software cooperatives developing competing operating systems, (l) software co-operatives developing mass-market and niche-market applications, and (m) volunteers developing software for not-for-profit organizations. Also included in the software market are the providers of turnkey systems such as database systems, and embedded-computer products for a wide range of industries. (Your modern furnace, microwave oven, and your automobile all have computers, for example.)

41. At paragraph 61, the original Complaint states "The first Internet browser widely used by the general public was Netscape Navigator, which was introduced into the market in 1994." That is inaccurate. The first web browser made available to the general public was "lynx", written by Lou Montulli at the University of Kansas and made available to the public in 1993, and ran on a large number of Unix-based computer systems. The University of Illinois National Center for Supercomputing Applications released the graphical browser "mosaic" November 1993; Spyglass, Inc. resold "mosaic" in the commercial market starting August 1994. In contrast, Netscape Navigator didn't appear as a product until December 1994.

42. The original Complaint describes only a portion of the software marketplace as it existed in 1999 and is expected to continue to exist during the life of the Final Judgement.

C. The RPFJ Fails to Meet the Public Interest Because It Does Not Serve the Entire Software Market

43. As a consequence of the tunnel vision of the original Complaint and subsequent documents, the RPFJ as published in the **Federal Register** applies only to a portion—not the whole—of the software market as it existed in the year 1999.

44. From the Finding of Fact dated November 5, 1999, comes this definition of "Operating System": "... a software program that controls the allocation and use of computer resources (such as central processing unit time, main memory space, disk space, and input/output channels). The operating system also supports the functions of software programs, called "applications," that perform specific user-oriented tasks." (paragraph 2)

45. From the viewpoint of a computer application and its author(s), an operating system is only as good as the set of

applications programming interfaces (APIs) it provides to the programs running within the computer in conjunction with that operating system. The development of applications for a particular operating system is vital to the marketability of that operating system. The better the APIs, the better the applications, and the better the applications the more attractive the operating system is to the market. Not just "commercial applications," but all applications.

46. Therefore, the relevant software market that the RPFJ must address is the whole of all entities that write application software, and particularly all entities that write software for the Windows operating system and that interoperate over a network with systems running the Windows operating system.

47. Protections against anti-competitive restraint by a monopoly must be extended to all sources of applications, not just some sources, particularly when the monopoly provider of the operating system also is a provider of applications, as Defendant Microsoft is.

48. Of all the software market players mentioned earlier, only the larger and well-funded commercial developers and applications providers have the resources and the money-based claims of harm to initiate and participate in anti-trust actions against an operating system company using its monopoly power to control the market. Small commercial companies, non-software corporations, universities, most government departments, software cooperatives, and hobbyists don't have the resources (money, legal talent, and situation) to launch an effective action against a monopoly, and in many cases are unable to prove any harm inflicted by illegal activities by the monopoly because of the legal requirements defining "harm".

49. Instead of relieving it, the RPFJ exacerbates this situation. Section III(D), taken in concert with the Definitions of the abbreviations used as defined in Section VI, clearly demonstrates that the only measure of participants in the software marketplace is by software sales revenue.

50. Also in the RPFJ, Section III(E) incorporates by reference Section III(I), which permits Microsoft to avoid licensing government, research, and co-operative software enterprises, and particularly those enterprises that don't receive revenue for development or distribution of their software products. As a consequence of the ability to refuse licenses, it is a reasonable inference that disclosure of the APIs and Communications Protocols necessary to interoperate with Windows Operating Systems software could also be withheld.

51. Further to the point, Section III(J)(2) can be used by Microsoft to block disclosure of APIs and communications protocols, required by any development of server software that interoperate with Microsoft Windows Products and provide authentication services to Microsoft Windows Products, by entities unable to pay the royalties and meet the other requirements. This specifically affects software co-operatives, consultants, and researchers. Not only does this result directly

in loss of choice to the consumer, but it can also slow down the pace of advancement of the art in the industry as a whole.

52. By being able to lock out researchers and small developers from effective relief from anti-competitive actions, Microsoft is able to negatively affect independent research into and independent development of improvements in computing on the Windows platform, and the marketing of those improvements to the general public. This places an undue burden on researchers and developers, and serves as a limit to the market and results directly in loss of choice to the consumer.

53. By being able to lock out software co-operatives, government, and hobbyists, Microsoft is able to artificially raise the cost of implementing certain classes of software product to the point that it is economically infeasible for products in those classes to be developed and deployed. This is particularly important given that Microsoft also sells applications as well as operating systems, and, by its withholding critical information on its monopoly product, block the offering of competitive applications. This restraint again results directly in loss of choice to the consumer.

D. The RPFJ Lets Microsoft Continue To Discriminate Against Authors of Application Software and Network Systems

54. The RPFJ is not the result of bad workmanship. Comparison of the RPFJ with other proposed Final Judgements that have been entered over the years shows that this proposal is very much like the other proposals in general—only the details differ. The other judgements examined pertained to commodities (Alcoa), consumer goods (Standard Oil) and integrated services (AT&T). In each of these cases, the cost of entry to the marketplace was substantial for all players, and there was no significant non-monetary component to any of the markets affected by the companies in question.

55. The cost of entry into the applications software marketplace is very low, on the order of the cost of entering the business of auto repair, plumbing contracting, or door-to-door sales franchise.

56. The cost of entry into the operating systems software marketplace, on the other hand, is very high because of the complexity of developing device drivers, resource managers, and applications services that attract applications programmers to develop software.

57. The success of an applications program in competition with similar applications depends on the skill of the author. In particular, the author's understanding and knowledge of the applications program interface (API) of the operating system is crucial to the performance and utility of an applications program to its user.

58. Suppression of information about APIs by the operating system vendor to an applications author, especially the hiding of performance-accelerating APIs, would lead directly to putting that author at a disadvantage to an author that is fully informed.

59. Any discrimination by a monopoly operating system vendor against authors by business method, size, or exclusivity means

that customers of software lose choice in applications software for that operating system.

60. The discrimination allowed by the RPFJ against significant participants in the software industry leads directly to limitation of choice for the consumer. It's not enough that the Final Judgment protect large companies against the actions of Microsoft; the Final Judgment needs to protect all providers of applications software for the Windows operating system in order to provide maximum choice for the consumer.

61. The problem of choice restriction is more critical when it comes to network products being able to interoperate with Windows operating systems clients. Companies have not deployed parallel networks for more than two decades, and are not about to do so now—it's too expensive for organizations to install, maintain, and administrate multiple networks in that manner. Therefore each and every node, regardless of hardware or software, needs to be able to function together in order to serve the needs of the customer.

62. Discrimination against certain providers of network implementations means, again, reduced choice for the consumer, and potential network disruption when two mutually antagonistic implementations exist on the same network.

63. The RPFJ lets Microsoft legally discriminate against participants in the marketplace, to continue to do the same actions against some participants in the software marketplace, actions that have been found to be illegal.

64. In the Findings of Fact and in the Conclusion of Law there is no discussion as to the necessity of Microsoft continuing to discriminate against portions of the software industry in order for Microsoft to compete in the marketplace.

E. The RPFJ Does Not Anticipate the Changing Software Market

65. The software marketplace moves very, very quickly, and so any remedy should anticipate likely movements in the software market. It should also take statements made by Defendant in ensuring that any Final Judgment will apply to the software marketplace in the near future, "near future" defined as the expected life of the Final Judgement.

66. One change taking place in the software marketplace today is the migration of software from an end user's computer to a network-based synergy between the user's computer and a remote network-connected server, with the software residing on the server. The paradigm of this form of software execution is different from the currently common "client-server" configuration: In client-server software, a software package installed on the user's computer is called up and executed, and as required the software package would exchange data with a remote server computer. In the new paradigm, the software is not installed onto the user's computer, but instead is installed on an "application server" run by an applications server provider (ASP; not to be confused with "active server pages"). During the course of running the program, small pieces of the program are transferred to the RAM of the

user's computer "on demand" and execute on the user's computer. When the user exits from the program, all traces of the program are removed from the user's computer.

67. The details surrounding this trend with respect to Microsoft Windows on both the desktop and on the server, as embodied in its dot-NET XML Web services architecture, are still being developed; the technology is still in its infancy. Section III(F)(ii) of the RPFJ contains language describing a restriction that would, in a strict reading, permit Microsoft to avoid disclosing certain communications protocols between client and server operating system components when the server operating system implements it natively but the client requires that certain software be installed by the user, or even perhaps automatically as an "update."

68. Another trend in the software marketplace is the growth of time-based licenses, sometimes referred to as subscriptions. In this model, the user subscribes to use the software for a specific period of time, and renews the subscription when the current one expires. This form of software sale is common for software that changes regularly; a good example is income-tax filing software.

69. The current draft of the RPFJ does not address these known trends in the software market, nor how Defendant is prevented from using its monopoly power inappropriately to block software development with the Windows operating system or interoperability with the Windows operating system.

70. The direct result is that consumers will be able to obtain software products that seamlessly interoperate with Windows operating systems only from Defendant and those companies that meet Defendant's business and success requirements. Again, the consumer is deprived of choice that he or she would otherwise enjoy if an all-inclusive Final Judgment were in place.

F. The RPFJ Does Not Adequately Serve the Software Market's Need for Speedy Resolution of Complaints of Violations

71. The enforcement provisions in Section IV of the RPFJ, along with the commentary in IV(B)(2) of the CIS, shows that the Department of Justice recognizes that the pace of software development is much faster than in the traditional manufacturing sectors, and understand the need for a procedure to permit companies in this fast-paced industry to obtain relief from violations without the delay inherent in a Court-mediated action.

72. The RPFJ, at Section IV(D)(c), states that Microsoft will have 30 days to resolve or reject a complaint. As a matter of practice in professional software development, project schedules are broken down into tasks that can be completed in a small number of days. In multi-person projects, the tasks are highly interdependent, such that a delay in one task being done by one person can severely impact the ability of the software team to complete the project by the deadline—that task, and any complaint of violation associated with the task, quickly becomes a part of the "critical path" for the project and a huge risk for the project as a whole.

73. For the non-commercial and low-capitalization developer, the lack of any

avenue or timely resolution has a more disastrous effect: the developer must work around the lack of information (or the inaccurate information, or the withheld information), must seek the use of another operating system (good luck!), or must give up on the project altogether. Many research projects have a finite amount of time allocated to them, and any hitch in the setting up of a project means the research is not completed. While there is no monetary harm, the non-monetary harm to the public interest can be large indeed—what would happen if a researcher was unable to complete an experiment that would provide a sure cure for cancer?

74. The RPFJ's dispute procedure is too cumbersome for an industry that can produce a usable product in very short time intervals. As an example, Commenter has developed commercial software that, from initial design on a restaurant napkin to first installation, required 120 man-hours and was installed at a customer site eight days from "go."

75. This unnecessary opportunity for delay is against the public interest by delaying product completion by smaller companies in the face of violations by Defendant. This takes away consumer choice when two companies (one large, one small) are offering competing applications, and the large company gets to market faster because of the actions of the Defendant.

#### G. Proposals to Enhance Enforcement Provisions

76. Commenter proposes that a tiered approach may be preferable, designed to minimize the effort on the part of the Technical Committee and on the part of Microsoft. Many complaints will be without merit due to the complainant not understanding the Final Judgment and not understanding the obligations Microsoft has under the Final Judgment. Some will be nuisance complaints, to be disposed of as quickly and as inexpensively as possible. Some complaints will be duplicates of prior complaints, so the same answers can be provided at a considerable savings in time to all. Finally, some complaints (one would hope few in number) will require investigation and negotiation and thus require some time and attention from the Technical Committee and the Microsoft Compliance Officer.

77. The Technical Committee staff and the Microsoft Compliance Officer staff can perform triage on complaints as they are received, said triage being completed quickly and in no case later than 48 hours after receipt of the complaint. In some disclosure violation cases, the matter can be resolved simply and quickly by staff recognizing (by precedent) that Microsoft needs to provide the information required by the Final Judgment to the complainant; this is particularly true of violations that are caused inadvertently, by clerical error, unintended withholding of information due to system or media failures, or obvious misunderstandings by Microsoft employees. In this manner, many complaints can be resolved quickly with a minimum of fuss and delay; done quickly, the complaint can be turned around in hours, not days.

78. The same triage process can also speed the determination whether a particular

complaint has no potential merit, weeding out the obvious losers very quickly and with little effort expended, and again eliminating delay for the complainant getting an answer to his problem, even if it's a negative one.

79. Once the complaint has been passed through triage as a complaint with potential merit, the process is as currently described in the RPFJ.

80. Commenter proposes a change in requirements for disclosure. One way to reduce the number of complaints filed is for the Microsoft Compliance Officer to be required to publish a list of "Frequently Asked Questions" as part of the Web page described in the RPFJ Section IV(D)(3)(b), based in part on complaints received by the Compliance Officer and based in part by complaints anticipated by Microsoft. The format of the questions and answers is up to the Officer, and subject to review by the Technical Committee and by Plaintiffs for accuracy.

#### H. Conclusion

81. Any Proposed Final Judgment is a balancing act. The PFJ needs to reflect both the needs of the Defendant to continue to compete effectively in the market, while protecting the industry from inappropriate activity by monopoly participants.

82. The RPFJ achieves the appropriate balance for other large commercial software providers.

83. The RPFJ fails to achieve the appropriate balance when the rest of the software market is considered. The legal discrimination against software providers that do not follow the classic retail software model puts alternative-business-model providers, inside-system developers, and not-for-profit developers at a significant disadvantage.

84. The original Proposed Final Judgment included breaking up Microsoft into multiple companies along functional lines: at least into an operating system company and an applications program company. This option also fails the balance test, in that Microsoft would then be forced to break up its development team, significantly hurting each daughter company's ability to compete. More importantly, the break-up option also suffers from the defect that it would harm the industry as a whole as existing contracts would have to be renegotiated with haste.

85. The Revised Proposed Final Judgment can be better balanced, and as an added benefit simplified, by removing all of the exceptions to the disclosure provisions contained in it. This lets all participants—from single-person programming firms to multi-billion dollar enterprises—enjoy protection, under the modified RPFJ, from inappropriate action by Microsoft. Microsoft's ability to compete on inventions (patents), features, timeliness of delivery, and integration across the product line would not be impaired, and therefore an appropriate balance is maintained between healthy competition and anti-competitive actions.

From: Ron Trenka  
To: Microsoft ATR  
Date: 1/23/02 4:12pm  
Subject: Microsoft Settlement

My name is Ron Trenka and I am the Senior Programmer for a web agency. I am sending this in response to the Tunney Act's provision for public comments upon the Microsoft Settlement.

#### About Browsers

In regards to the argument that "Microsoft gives its browser (IE) away for free. How does that hurt consumers?", it is a false statement. IE has code built-in that make it "work better" with the Microsoft OS. It encourages the user to work on an MS platform to get the full "user experience". It also is not free.. not by a long shot. While the consumer doesn't pay for the browser, the providers do. When I started out at the beginning of the DotCom craze, nearly all the machines serving web pages were Unix/Linux based. Now, nearly all the machines are Microsoft NT based. Why? Its not a price issue. The hardware costs run about the same. Its not the price of software. Webserver software for both Unix and NT are both free (for Unix Apache is the most popular, while IIS is included in the NT platform). It is because the NT platform includes proprietary software that makes IE display pages better and faster.

So Microsoft's dominance expanded into the server market largely by their inclusion of "free" software on the consumer platform. Free for the consumer, perhaps, but not for the businesses.

Microsoft also has been guilty of their "Embrace and Extend" policy of various software standards, taking open standards and corrupting them into Microsoft-only standards. Java is the most visible of this (and the basis for Microsoft losing the Sun vs. Microsoft lawsuit, for which Microsoft has excluded Java from their OS, effectively killing it), but others exist. As a programmer for the web, I deal with this every day. We must have machines with all versions of Windows and IE, in addition to the other browsers to insure that our clients all see the same things. The cost for this testing must be passed on to our clients. Microsoft continues to receive criticism from the W3C for lack of following the published standards.

The Department of Justice has proposed a settlement that does not address any of these issues. It does not prevent Microsoft from adding more proprietary "features" into nor does it stop MS from tying it more tightly to Windows. Nor does it prevent MS from tying other software packages to their OS. It does not prevent MS, for example, making their Office Suite of software part of the OS, effectively locking out other word processors & spreadsheets from Windows (why pay for it when it is "free"?).

The only really effective way of preventing this is to come up with a definition of an OS and force Microsoft to remove IE from the OS and include it as a separate piece of software that can be installed and removed at the user's choice. There is no reason why they can't continue to include the software with their Windows OS, but they must allow computer vendors to include other browsers (such as Mozilla or Opera). They must also acknowledge that it is software and not part of Windows (or any OS), treat it accordingly and prevent tying in the future.

#### About Security

Over a billion dollars last year was spent to fix security holes in computers running Microsoft's OS. A billion dollars. Microsoft's response? "We'll get it right next time." No liability for their obvious (and admitted) repeated mistakes (the same security hole that was in 95 was released in 98, then 2000 and now in XP..). No recourse for businesses but to hire large IT staffs to keep up with the numerous patches and hot fixes that Microsoft continuously releases. And yet people with Windows are still constantly victims of virus attacks. Microsoft needs to be held liable for these lapses that the world is constantly paying for. The DOJ settlement proposal addresses none of this.

#### About Innovation

As found in the Finding of Facts, Microsoft has constantly been an opponent of innovation, contrary to their self-proclamations. If someone comes out with a software or idea that threatens Microsoft's "vision of the world", they browbeat, threaten, purchase or "embrace and extend" the idea out of existence. Look at WebTV. A couple of years ago, they were an up and coming company allowing consumers to browse the web on their TV set without the need for a computer. Microsoft purchased them and now where are they? Another threat gone. The DOJ Settlement does not address this. Other companies cannot compete with Microsoft as they do not have access to the Windows APIs. The DOJ Settlement touches on this, however the loopholes are so large as to be able to drive a truck through. All Microsoft need to do is claim a "security concern" and they can refuse to divulge the API. Given Mr. Gates recent memo to Microsoft employee to make security their #1 priority, I view this loophole with a great amount of suspicion.

#### In Conclusion

In general, the DOJ's settlement doesn't address any of the things that Microsoft was found in violation of; releases Microsoft from liabilities for their actions; and does nothing to prevent Microsoft from continuing those same actions in the future. I urge you to reject the settlement in favor of something more stringent.

Washington, DC 20530-0001

Dear Ms. Hesse,

I am writing to express my strong disagreement with the terms of the proposed Microsoft settlement. I have watched this story (in its various iterations) for the last several years, and have become increasingly concerned with the power Microsoft holds over the computer industry, and the lack of oversight or meaningful controls placed on them.

The main problem with the settlement is that is so narrowly crafted with respect to the meaning of API's, middleware, and other terms, that it is effectively meaningless. To craft legislation that requires Microsoft to allow a competing Java middleware layer, when Microsoft has advertised its intention to move everything to ".NET" is a good example of the poor thought that went into this document. This would be analogous to a car company agreeing that "all cars must permit the 9-track tape player to be replaced with a competing 9-track tape player", when the company is already shipping vehicles with cassette tape players.

In short, the current settlement is fatally flawed in its intent to regulate Microsoft's behavior with respect to system integrators, software developers, and end-users. Please revise this document to strengthen the protections.

Subject: comment on proposed final judgement

As a professional programmer, I would like to comment on the proposed final judgement in the Microsoft anti-trust lawsuit. Over the past ten years or so, Microsoft has used its monopoly in the operating systems market to

lock out competition in business software and programmers software. It wasn't so long ago that Lotus sold the leading spreadsheet, Borland sold the leading programming language software, Word Perfect had the best selling word processor, Netscape had the biggest market share in Web browsers, dBase sold the most spreadsheets, Qualcomm Eudora was the most popular email, and so on. How did Microsoft effectively eliminate all of these competitors, all of whom had seemingly insurmountable head starts? They have done this by a variety of anti-competitive practices that have now been judged to be illegal. It has taken years for the judicial system to reach this conclusion and all during this time Microsoft has continued to exploit its monopoly position. Now the proposed final judgement fails to split Microsoft's operating system and applications businesses. The company will surely find ways to evade the letter of any restrictions placed on it while continuing to monopolize all aspects of the computer business. The proposed final judgement is too soft on Microsoft.

Subject: Microsoft Settlement

Public comment to the Court regarding whether the settlement offered by Administration and some states is in the public interest :

—I am totally disinterested in the case except as a consumer using personal computers at home and work.

—I am not a lawyer, do not work for Microsoft or any of its competitors, do not make decisions about operating system purchases where I work (Philips Semiconductor Division), and have no predisposition about anti-trust laws .

—I believe the entire effort to prosecute Microsoft in the name of supposedly injured consumers was unjustified and destructive. As a consumer, I was never injured and the prospect of being injured

in the future is nil, based on the extraordinarily innovative software industry in the US and abroad.

- As a user/consumer during the entire period August 1981 to today, I experienced the “bad old days” of incompatible operating systems and wildly proliferating applications programs. So the standardization resulting from Microsoft’s success came as a godsend to me personally and all my colleagues at work.
- Any impartial financial analysis of the costs saved and new business transactions facilitated in the US economy and the world by this standardization would be colossal. Everyone is in their debt. Microsoft’s huge revenue and earnings are essentially compensation for this vast benefit, not the ill-gotten gains their competitors claim.
- The parties who orchestrated the entire mistaken prosecution were the competitors.

Therefore I oppose any attempt to make the Settlement terms harsher. The worst result would be a breakup of the company or restriction on Microsoft’s freedom to integrate whatever software they think they can sell me. I will judge for myself whether I want to buy and use their integrated products.

From: David—Greene@mapinfo.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 4:13pm  
Subject: Microsoft Settlement

I am writing to express my concern with the proposed settlement terms in the Microsoft antitrust case. I have been involved in computer technical support and programming for a number of years now, mainly on computers running Windows operating systems.

One of my particular concerns is the fact that Microsoft will not be required to disclose key information about its widely-used Microsoft Office file formats and other proprietary file formats. These formats are so widely used in the US business and academic community that they form an important part of the Applications Barrier to Entry (see Findings of Fact 20 and 39). The process of building competing applications—or even applications designed to interface seamlessly with Microsoft Office software!—becomes very difficult if these common formats can not be supported, both for reading and writing.

In general there is no reason for these formats to be proprietary except for the express purpose of raising the Applications Barrier to Entry! A classic Word document, for example, is equivalent to a particular sequence of formatted characters; in many cases (in the absence of Word macros or other application-specific information) it can be mimicked exactly by a Rich Text Format document.

However, if Word crashes or there is a write error on a hard drive changing just a few bytes of a Word file, it is often very

difficult to recover even a fraction of the original text and formatting—which can mean a loss to the user of hours or days of work, even though the file is almost completely intact (only a few bytes altered). This problem is basically due to the fact that Word format is obfuscated—it works correctly only when everything is exactly right.

This may not be a deliberate design decision on the part of Microsoft, but in general Word will not read a Word file correctly if there is anything “suspicious” about the format. This is exactly what is needed to raise the Applications Barrier to Entry, given that the file format is not published; it would be very difficult to write an application that could read and write Word format flawlessly, without access to Word file format information.

Similar arguments apply to requiring Microsoft to publish—all—relevant information about Windows API functions that developers might need, either to interface with the Windows operating system or to produce other operating systems that run software written for Windows. The Applications Barrier to Entry is unnecessarily raised by withholding this type of information. Making this information available must be part of any appropriate settlement of the Microsoft case.

Thank you for your time and attention.

Subject: Microsoft Settlement

As a private citizen, I feel the proposed Microsoft settlement is a very bad idea.

Starting when I used to work in a small company doing DOS-based local area network software, to now when I work in a graphics-related company, I've seen various signs of Microsoft's anti-competitive behavior. These are things I've seen myself, not things mentioned in the news. These are specific pieces of code which had no purpose in and of themselves other than to make life difficult for competitors. The proposed settlement will do nothing to make Microsoft more competitive. At most, I feel it will be equivalent to a slap on the wrist. At the very least, there needs to be stricter, more enforceable punishments for cases where Microsoft steps out of line.

Sincerely,  
Warner Young

From: mel  
To: Microsoft ATR  
Date: 1/23/02 4:34pm  
Subject: Microsoft Settlement

I find the settlement with Microsoft troubling in many ways, for instance section III.A.2 seems specifically to allow the continuation of one of the worst of MS's practises. However rather than criticise the many legal points I suggest that a fine solution could come in the the terms and conditions of the remedy.

Microsoft atoning for past misdeeds by insinuating even more of their software into key positions such as schools and public service institutions is mind boggling. Why not require Microsoft to purchase hardware for these institutions, with open source operating systems and software instead? Perfectly viable alternatives (superior in our view) exist.

Date: 1/23/02 4:14pm  
Subject: Microsoft Settlement

To whom it may concern:

I am writing to urge you to reject the proposed settlement of the anti-trust suit against Microsoft Corporation. The proposed settlement:

(1) would not prevent the central ways Microsoft was found to have illegally maintained its Windows monopoly,

(2) does nothing to restore competition in the OS market, an express Court of Appeals requirement for a Microsoft remedy,

(3) has no provisions directed to Windows XP and other new endeavors of Microsoft to extend and protect its monopoly to new markets in the future, another express Court of Appeals requirement for a Microsoft remedy,

(4) contains no provision for any punitive damages against a firm which has been found to have illegally abused its monopoly power, and

(5) provides for an oversight body with so little real power to restrict Microsoft's future behavior, or to react to future transgressions, as to be essentially useless.

Thank you.

Date: 1/23/02 4:16pm  
Subject: Microsoft Settlement

Dear Sirs,

I am sorry to see the settlement that is being discussed at this time. I personally wished that there would be no settlement for Microsoft and that they would be subject to the judgement of the courts and their own folly. I have read the settlement and a fair number of essays on the matter. Something nags at me every time I read through sections of them. The settlement does not seem to hinder Microsoft in any way that it was before the trial.

Forgive me if my writing seems to be lacking in an understanding of legal issues. But, many of the terms used in this settlement seem to be either lacking a true definition or are only partial in their description of the issues. As pointed out, I'm sure, by professionals with much more experience than I, it would be quite easy for Microsoft to circumvent the restrictions made in this settlement. I have complete faith in Microsoft to try it and I honestly believe that Microsoft will end many of the disputes over this document repeatedly in a courtroom.

Here is a link to one such essay by Dan Kegel: <http://www.kegel.com/remedy/remedy2.html> I'm sure the author has already submitted this essay to you. He says it far better, and with many years more experience than I could. It's been eight years since I first started working with computers professionally. Every year there seems to be less professionals who aren't cornered by Microsoft products or are left with Microsoft as the only choice in a field of products.

Sincerely,

Subject: Microsoft Settlement

Dear Sirs;

I want to respond to the settlement solutions I've read about in the Microsoft anti-trust case.

I have an observation to make—the most simple solution to the case would release the consumer from the affects of the monopoly as well as level the playing field for competition.

Simply require Microsoft to publish the full specification of their software data file formats prior to release. The software data formats—when a consumer creates a document and saves it—should be owned by the consumer. An open format would ensure that “upgrades-for-the-purpose-of-revenue-generation” would cease to require the consumer to upgrade applications because of compatibility and allow the software publishers to position their products against Microsoft effectively—the software publisher who truly creates a better mouse-trap would get the sale.

If this isn't done, the monopoly will continue.

Thank you for your time.

**MTC-00018463**

From: Mieusset, Jean L.  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 4:17pm  
Subject: Microsoft Settlement

I think the proposed settlement in the Microsoft antitrust trial is not adequate, and I would like to voice my opposition. The proposed settlement does not fully address Microsoft's past actions, and fails to set limits to future abuses. For example, according to the terms of the settlement, Microsoft Corporation is

- not prohibited for creating incompatibilities within its application programs, a definite loss for the consumer.
- not prevented from pressurizing OEM vendors to ship systems with Microsoft operating systems or system software components only.
- allowed to replace of Java with .NET, itself not being replaceable within the system.

It is also unclear what the enforcement of the settlement terms, as written, will be. The proposed Microsoft settlement is, in my opinion, not adequate, and should be revised to curb some of this anticompetitive behavior, harmful to the consuming public.

To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 4:18pm  
Subject: microsoft settlement

I think the settlement is a bad idea. The main concern is fair competition. The only way to allow fair competition is to force open standards and force them to abide by these published standards.

**MTC-00018467**

From: Kathy A. Graff  
To: Microsoft ATR  
Date: 1/23/02 4:16pm  
Subject: Microsoft Settlement

I am concerned that the proposed settlement is not strong enough to discourage Microsoft's anticompetitive practices, in particular the threat to open source software. I have been earning my livelihood as a Perl programmer for several years. I used Microsoft's BASIC and QuickBASIC in the early 1990's because it was cross-platform, but lost clients and income when Microsoft discontinued support for the Macintosh version.

Businesses and "just plain folks" are afraid to use anything other than Microsoft products because of the perception that Microsoft is a monopoly, nothing can change that status, and they will be hurt if they don't plan along. This is despite higher support costs for Microsoft products. None of this is good for business in general let alone the software or operating system industries.

Hello,  
From my understanding of the Proposed Final Judgement of the Microsoft case, it is not mandatory for Microsoft to "open-up" their file formats. I cannot afford to purchase Microsoft Office (\$480) so my ability to communicate and share information is limited, especially when communicating with the corporate world (sending resumes, etc).

Thanks for your time,  
Sanjay Linganna

**MTC-00018470**

From: Josh Glover  
To: Microsoft ATR  
Date: 1/23/02 4:20pm  
Subject: Microsoft Settlement  
To Whom it May Concern,

My name is Josh Glover, and I am a Computer Science student at The College of William and Mary in Virginia. I feel strongly that Microsoft, in its current incarnation, is bad for the computer industry, higher education, and technology in general. The strongarm tactics of the Microsoft Corporation have kept advancements in technology from becoming available to the public, and made the simple act of trying to run a network or write a webpage a nightmare.

What I mean by this is, Microsoft's implementations of many of the RFC-based standards have been decidedly non-standard. In the "best case", they add extensions that people come to depend on, thus making the standards seem inferior. This would not be such a bad thing (one could argue that it is technological Darwinism), except for Microsoft's apparent disdain of many standards-making bodies. In the worst cases (and MIT's Kerberos Project leaps to mind), Microsoft's implementations of standard protocols are "incompatible" with the actual standards, effectively disallowing standards-based communication. The Internet is only possible through a set of standard protocols, and if Microsoft is allowed to continue in its current behaviour, it could actually gain control of the Internet itself.

Microsoft hurts the consumer in the same way, by effectively taking away the choice of the consumer. When I recently bought a laptop computer from Dell, I was forced to pay several hundred dollars for bundled Microsoft software (the operating system and the Works "productivity" software) that I did not want and have never removed from the shrink-wrap. Even worse, I cannot legally sell this software to anyone else, due to licensing. This type of "Microsoft tax" alone should make it obvious that Microsoft is a monopoly.

Also, Microsoft's goals are to strengthen its monopoly, not to provide a service. In a free market, the best products should theoretically win. But when a giant company controls a sector of the market and is actively

branching out, as in Microsoft's case, good products are stifled and the consumer loses. In the very specific case of the software market, Microsoft's refusal to "care" about bugs and deficiencies in their software because they are too busy trying to increase their control over the wallets of the world. This wastes millions of hours of time for people all over the world who want working, quality software. Now, the biggest problem with the proposed settlement is that Microsoft would be donating computers "RUNNING THE WINDOWS OPERATING SYSTEM" to education. This is not a punishment! This is like a "loss leader" marketing strategy. This is how Microsoft got to where they are today. So-called charity is not the answer. If Microsoft is fined a dollar amount, they should have to pay "IN CASH"! This is only fair to the taxpayers all over the US who have been harmed by Microsoft's anti-competitive practises.

Thank you,  
Joshua M. Glover

From: David Bezold  
To: Microsoft ATR  
Date: 1/23/02 1:22pm  
Subject: Microsoft Settlement

I am writing to express my opinion that the present DOJ settlement with Microsoft does not go far enough to prevent Microsoft's Monopolistic business practices.

I have spent my entire career (25 years) as an embedded software developer. I was writing software before the MacIntosh, before Microsoft, and before SUN. I have watched the development of the software engineering discipline—a discipline devoted to "engineering" software. Remember, an engineer is someone who is "skilled in the principles and practice of any branch of engineering" (Webster's Revised Unabridged Dictionary (1913)).

A professional engineer must have the skill to produce reliable, working designs. If they do not, they are not allowed to practice their craft. If a civil engineer consistently designs bridges that fail, that engineer will lose his/her clients to another civil engineer (and will likely be sued)? If an embedded software engineer writes software that controls a television, and that software contains bugs

that causes the television to consistently fail to operate, the engineer will likely lose his/her job?

The world's largest software company consistently produces software that makes computers crash and misbehave. Yet this company maintains some of the largest profit margins and growth anywhere in the world economy? Why is that? That company is a monopoly. There is no competitor who will profit from Microsoft's poor engineering.

The current DOJ settlement does not go far enough to solve this problem. It must take actions to make it possible for real competitors to Microsoft to come into the marketplace. Competition is what spurs innovation in our economy. As long as there is no competition in the PC operating system marketplace, we will continue to have computers that crash and misbehave, to the detriment of all consumers.

Subject: Microsoft Settlement

Dear Good People at the Department of Justice,

I am writing to you today to express my dismay at one of the remedies discussed in the proposed settlement for Microsoft's anticompetitive actions. This remedy states that Microsoft will not be allowed to retaliate against Original Equipment Manufacturers (OEMs) who sell PCs that can run either Windows or another operating system. This, in effect, forces OEMs to sell Windows to their customers, whether they want it or not. In the past, an OEM customer who wanted a prebuilt computer to run Linux (or FreeBSD, or any other non-Microsoft operating system) had to buy a Windows PC, delete Windows, and then install the new operating system. This has been half-seriously referred to as the "Windows Tax". With the remedy in place, the customer does not have to install the new operating system, but still must pay for and delete Windows from the PC. The "Windows Tax" is still in place! The language of the agreement should be changed so that OEMs cannot be punished by Microsoft for selling PCs that only use a non-Microsoft operating system.

Thanks,

It is my personal recommendation that the United States does NOT settle its antitrust case against Microsoft. Doing so would allow Microsoft to further bend computer users

over and practically convince users to handcuff their wrists to their ankles.

I am strongly opposed to the Microsoft settlement that is currently being considered. It calls into question why we should be proud to call ourselves Americans when the legal system can be bought and manipulated by one powerful company.

This settlement forces me to unwillingly surrender my rights to a fair and arbitrary legal system. I am ashamed of it. Specifically, I am opposed to the amount of control that Microsoft has in administering the terms of the agreement. Too many grey areas and judgement calls are left wide open as potential loopholes. They have been found guilty in a court of law, and shouldn't be their own guard. More importantly, I am opposed to the gag order of the 3 person oversight committee. Without a voice, there is no way that the can do their job effectively. Finally, I am opposed to the shortsightedness of this agreement. It does nothing to curb Microsoft's illegal use of its Monopoly on the desktop to corner other markets. Innovation is stifled, and Americans loose. I respectfully urge you to throw out the proposed agreement, and see that true justice is done.

With respect,  
Matthew J. Clark

From: Peter A. Peterson II  
To: Microsoft ATR  
Date: 1/23/02 4:23pm  
Subject: Microsoft Settlement

Hello,  
My name is Peter A. Peterson II, and I work as a system administrator and technician in the Chicagoland area, and I want to register my displeasure with the Microsoft Settlement. To anyone in the industry, it is clear that Microsoft calls the shots, especially in the consumer market, and more and more in the server and production market, and even now with their entrance into the home market through things like the Xbox and their new initiatives into creating "standards" (i.e. corporately controlled, revenue-generating systems) like the .NET initiative, as well as the near-total universality of the Internet Explorer browser—Microsoft is and has a monopoly on some of the most vital portions of the information economy.

If this monopoly is to be regulated, then real, effectual penalties MUST be effected on

the company. I don't hate Microsoft—a lot of their products are very good, and to a certain extent, they have gotten to where they have because of the quality of their products. But good products, or at least better products have become only products, where competitors cannot afford to actually be competitive with Microsoft.

And this says nothing of their draconian business practices in many realms. Even now Microsoft is crafting their proposals and plans to grow even larger and more powerful than they already are—what kind of control over the information industry are they going to be given? No, the penalties against Microsoft must have meaningful significance. I don't know enough to say what that would be, nor am I necessarily supporting the idea of dividing the company—but in doing so, there is a clear, definite punishment and regulations to enforce the interactions between the companies. But with simple fines and reparations made, we only force Microsoft to give back a small portion of the money that they have extorted from businesses, consumers, and other industry players, and their business practices will continue. Please consider an alternative punishment for Microsoft.

Yours,  
Peter

Subject: Microsoft Settlement

To whom it may Concern:  
I am the Assistant Director for Curriculum and Registration at the University of Arizona. Among my job duties is the charge to automate paper-driven processes or make those processes which are automated more efficient. Throughout my tenure I have relied on the ubiquitous presence of the personal computer to succeed at this charge, and because I work at a publicly funded university, budgetary concerns are of paramount importance in the solutions which I pursue. Because many of the institution's administrative computing

resources (PCs) have Microsoft software on them when they arrive from the manufacturer, I have been a frequent user of Microsoft products. However, I have also taken full advantage of other vendors' products when they have provided an appropriate balance of value and cost. In fact many of my most successful projects have benefited from using some very high quality, non-Microsoft software which is available at no cost to the user. I have followed the Microsoft antitrust case with some concern, especially because the Department of Justice has chosen not to break up the corporation for its anticompetitive practices. What I fear most from the result of this decision is that it will ultimately compromise my ability to do my job, because it has the very real potential to severely constrain the availability and quality of free software available for the personal computer.

Microsoft operating system products, browser products, and other software products are very successful because they are tightly integrated; that is, they work well with each other. However, over the years I have observed that these same products have tended not to work so well with other, non-Microsoft products. Performance lags, crashes, and constrained functionality are all symptoms of the interaction of Microsoft products with those developed by another vendor. In fact the dark side of this integration is evident in the recent virus attacks. Many of these attacks exploit the high degree of interoperability of Microsoft products to destroy systems and propagate this destruction to other computers.

I am a layman and cannot begin to understand the intricate details of why this might be so, but it is reasonable to conclude that such integration is only possible because developers of various Microsoft products communicate heavily with each other, and make design changes to accommodate these various products under a unified corporate strategy.

As Microsoft has grown as a company, its survival has depended less and less on interoperability with the products of other vendors. Breaking up the company would have required that communication vital to interoperability be by necessity more open. However, because Microsoft will continue to develop its various products under a single corporate identity it is critical that they be required to communicate to other vendors in the industry any design criteria which will impinge on the relative interoperability of a non-Microsoft product with a Microsoft product.

Providing the industry with a level developmental playing field, as conceived through interoperability of Microsoft and non-Microsoft products, is the only possible hope of eliminating Microsoft's anti-competitive practices. It is certainly not in the company's best interests to do this, and therefore it will be critical that such interoperability be required and enforced by any solution implemented by the Department of Justice.

As it stands, I fear that the proposed settlement falls short of providing for this level developmental playing field. The devil is in the details, as they say, and from my

understanding the scope of the proposed settlement is too narrow to prevent Microsoft from using its inherent internal communication to its own advantage and to the disadvantage of those vendors who want to develop products to compete with, yet still function with, Microsoft products.

The settlement between the Department of Justice and the Microsoft corporation can only truly benefit consumers to the extent that it adequately supports the letter and spirit of free enterprise between Microsoft and its competitors, and this is only possible to the extent that Microsoft be strictly prohibited from using its market share advantage and internal communication opportunities to undermine the interoperability of other products with Microsoft products. It is my sincere hope that the Department of Justice further revises its proposed settlement to ensure the success of such prohibitions.

Sincerely,  
Thomas C. Bourgeois, Ph. D.

Under the Tunney Act, I wish to add my comments on the proposed settlement of the Microsoft anti-trust case. I believe that the proposed final judgement (PFJ) is flawed, and fully agree with the problems seen in it by Dan Kegel (found at <http://www.kegel.com/remedy/remedy2.html>). Microsoft has been found guilty of a crime and as a result, they should be punished. They also should make reparations to those injured by their criminal actions. Unfortunately, the PFJ does not fully redress those actions that have been committed by Microsoft in the past, nor does it inhibit their ability to commit further acts in the future.

Because of Microsoft's business practices, hundreds (if not thousands) of small businesses have ceased to exist. Where are the provisions for reparation? The PFJ does "nothing" to correct Microsoft's illegal actions. It only prohibits the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as their only "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

We do not smack the hands of bank robbers, murderers or rapists and tell them "don't do that any more". In this case, Microsoft isn't even getting their hands slapped! While it would likely be impossible to find all the people and companies who

were forced out of business by Microsoft's illegal monopoly, making reparations to those hurt by Microsoft impossible also, Microsoft should be penalized for breaking the anti-trust law. The PFJ does not do that.

The Court's desire that a settlement be reached quickly is a good intention, but it is wrong to reach a settlement just for the sake of reaching one.

Sincerely,

To: Microsoft ATR  
Date: 1/23/02 5:29pm  
Subject: Microsoft Settlement

The proposed Microsoft settlement is shameful in its omissions, loopholes and simple ignorance of the importance of this case. It doesn't do anything to punish Microsoft for their illegal behavior (of which they have been convicted!) nor does it do much stop them from monopolizing other markets in the future.

The only thing it does do is to essentially prevent them from taking over the markets they've already taken over, and its loopholes and poor definitions do a poor job of even that.

Microsoft cannot be let off this easily, or it will continue to prevent innovation and competition in our computer industry. This is the government's chance to restore freedom to software developers and it is essential to do it right. Otherwise we will only prolong the sad track record of nearly zero major improvements in the field. There are more details in this assessment of the proposed remedy: <http://www.kegel.com/remedy/remedy2.html>

From: Bill OConnor  
To: Microsoft ATR  
Date: 1/23/02 4:26pm  
Subject: Microsoft Settlement

Hello,  
Below is a copy of a letter written by Ralph Nader concerning the MS anti-trust case. I'm sending a copy if it to you because it reflects my sentiments about the case. I have experienced first hand Microsoft's virtual blackmail of software developers and feel that it is definitely not in the consumers best interest to perpetuate the current state of affairs.

An analogy might be to think of the operating system as being much the same as the carrier standard for television. Suppose that CBS or NBC owned the NTSC Standard. How many competing television stations would we have today? ONE! The operating system provides the basis from which all the other software is built. When one company controls the OS it is able to leverage that position into control of the Software is built upon it. Hence the market dominance of MS in the desktop productivity market with Office.

The current concessions made by the company are for things they no longer intend to dominate or already dominate to the extend it would be too costly for any other company to try and dislodge them. The government is behind the power curve while MS intends to use the same tactics to dominate software designed for the internet with its .NET initiatives. The remedies must include provisions to prevent the monopolistic behavior in the future as well as punishment for past behavior. Industry standards must be promoted for inter-operating system communications so the non-Microsoft OS's and Applications can compete and communicate with those developed by Microsoft. It should be apparent just how much of a monopoly MS does have on the operating system business by the very fact that it's closest competitor (Linux) is given away for free under a public license. Just think how difficult it would be for a company to try and charge money for an OS. I have yet to think of one example in any other industry where that would be the case. If Honda decided to give Accords away for free how many people would buy Fords or GM's. Why don't people just flock to the free OS if we have such a truly competitive situation. The answer is obvious, it isn't truly competitive.

Just one more voice.

William OConnor

Judge Colleen Kollar-Kotelly  
United States District Court for the District of  
Columbia  
333 Constitution Avenue, NW  
Washington, DC 20001

RE: US v. Microsoft proposed final order

Dear Judge Kollar-Kotelly,  
Introduction

Having examined the proposed consent final judgment for USA versus Microsoft, we offer the following initial comments. We note at the outset that the decision to push for a rapid negotiation appears to have placed the Department of Justice at a disadvantage, given Microsoft's apparently willingness to let this matter drag on for years, through different USDOJ antitrust chiefs, Presidents and judges. The proposal is obviously limited in terms of effectiveness by the desire to obtain a final order that is agreeable to Microsoft.

We are disappointed of course that the court has moved away from a structural remedy, which we believe would require less dependence upon future enforcement efforts and good faith by Microsoft, and which would jump start a more competitive market for applications. Within the limits of a conduct-only remedy, we make the following observations.

On the positive side, we find the proposed final order addresses important areas where Microsoft has abused its monopoly power, particularly in terms of its OEM licensing practices and on the issue of using interoperability as a weapon against consumers of non-Microsoft products. There are, however, important areas where the interoperability remedies should be stronger. For example, there is a need to have broader disclosure of file formats for popular office productivity and multimedia applications. Moreover, where Microsoft appears to be given

broad discretion to deploy intellectual property claims to avoid opening up its monopoly operating system where it will be needed the most, in terms of new interfaces and technologies. Moreover, the agreement appears to give Microsoft too many opportunities to undermine the free software movement. We also find the agreement wanting in several other areas. It is astonishing that the agreement fails to provide any penalty for Microsoft's past misdeeds, creating both the sense that Microsoft is escaping punishment because of its extraordinary political and economic power, and undermining the value of antitrust penalties as a deterrent. Second, the agreement does not adequately address the concerns about Microsoft's failure to abide by the spirit or the letter of previous agreements, offering a weak oversight regime that suffers in several specific areas. Indeed, the proposed alternative dispute resolution for compliance with the agreement embraces many of the worst features of such systems, operating in secrecy, lacking independence, and open to undue influence from Microsoft.

#### OEM Licensing Remedies

We were pleased that the proposed final order provides for non-discriminatory licensing of Windows to OEMs, and that these remedies include multiple boot PCs, substitution of non-Microsoft middleware, changes in the management of visible icons and other issues. These remedies would have been more effective if they would have been extended to Microsoft Office, the other key component of Microsoft's monopoly power in the PC client software market, and if they permitted the removal of Microsoft products. But nonetheless, they are pro-competitive, and do represent real benefits to consumers.

#### Interoperability Remedies

Microsoft regularly punishes consumers who buy non-Microsoft products, or who fail to upgrade and repurchase newer versions of Microsoft products, by designing Microsoft Windows or Office products to be incompatible or non-interoperable with competitor software, or even older versions of its own software. It is therefore good that the proposed final order would require Microsoft to address a wide range of interoperability remedies, including for example the disclosures of APIs for Windows and Microsoft middleware products, non-discriminatory access to communications protocols used for services, and nondiscriminatory licensing of certain intellectual property rights for Microsoft middleware products. There are, however, many areas where these remedies may be limited by Microsoft, and as is indicated by the record in this case, Microsoft can and does take advantage of any loopholes in contracts to create barriers to competition and enhance and extend its monopoly power.

#### Special Concerns for Free Software Movement

The provisions in J. 1 and J.2. appear to give Microsoft too much flexibility in withholding information on security grounds, and to provide Microsoft with the power to set unrealistic burdens on a rival's legitimate rights to obtain interoperability data. More generally, the provisions in D. regarding the sharing of technical

information permit Microsoft to choose secrecy and limited disclosures over more openness. In particular, these clauses and others in the agreement do not reflect an appreciation for the importance of new software development models, including those "open source" or "free" software development models which are now widely recognized as providing an important safeguard against Microsoft monopoly power, and upon which the Internet depends.

The overall acceptance of Microsoft's limits on the sharing of technical information to the broader public is an important and in our view core flaw in the proposed agreement. The agreement should require that this information be as freely available as possible, with a high burden on Microsoft to justify secrecy. Indeed, there is ample evidence that Microsoft is focused on strategies to cripple the free software movement, which it publicly considers an important competitive threat. This is particularly true for software developed under the GNU Public License (GPL), which is used in GNU/Linux, the most important rival to Microsoft in the server market.

Consider, for example, comments earlier this year by Microsoft executive Jim Allchin: <http://news.cnet.com/news/0-1003-200-4833927.html>

"Microsoft exec calls open source a threat to innovation," Bloomberg News, February 15, 2001, 11:00 a.m. PT

One of Microsoft's high-level executives says that freely distributed software code such as Linux could stifle innovation and that legislators need to understand the threat. The result will be the demise of both intellectual property rights and the incentive to spend on research and development, Microsoft Windows operating-system chief Jim Allchin said this week.

Microsoft has told U.S. lawmakers of its concern while discussing protection of intellectual property rights . . . "Open source is an intellectual-property destroyer," Allchin said. "I can't imagine something that could be worse than this for the software business and the intellectual-property business." . . . In a June 1, 2001 interview with the Chicago Sun Times, Microsoft CEO Steve Ballmer again complained about the GNU/Linux business model, saying "Linux is a cancer that attaches itself in an intellectual property sense to everything it touches. That's the way that the license works,"<sup>1</sup> leading to a round of new stories, including for example this account in CNET.Com: <http://news.cnet.com/news/0-1003-200-6291224.html> "

Why Microsoft is wary of open source: Joe Wilcox and Stephen Shankland in CNET.com, June 18, 2001.

There's more to Microsoft's recent attacks on the open-source movement than mere rhetoric: Linux's popularity could hinder the software giant in its quest to gain control of a server market that's crucial to its long-term goals

Recent public statements by Microsoft executives have cast Linux and the open-source philosophy that underlies it as, at the minimum, bad for competition, and, at worst, a "cancer" to everything it touches. Behind the war of words, analysts say, is evidence

that Microsoft is increasingly concerned about Linux and its growing popularity. The Unix-like operating system "has clearly emerged as the spoiler that will prevent Microsoft from achieving a dominant position" in the worldwide server operating-system market, IDC analyst A1 Gillen concludes in a forthcoming report.

. . . While Linux hasn't displaced Windows, it has made serious inroads . . . ]  
 . . . In attacking Linux and open source, Microsoft finds itself competing "not against another company, but against a grassroots movement," said Paul Dain, director of application development at Emeryville, Calif.-based Wirestone, a technology services company.

. . . Microsoft has also criticized the General Public License (GPL) that governs the heart of Linux. Under this license, changes to the Linux core, or kernel, must also be governed by the GPL. The license means that if a company changes the kernel, it must publish the changes and can't keep them proprietary if it plans to distribute the code externally . . .

Microsoft's open-source attacks come at a time when the company has been putting the pricing squeeze on customers. In early May, Microsoft revamped software licensing, raising upgrades between 33 percent and 107 percent, according to Gartner. A large percentage of Microsoft business customers could in fact be compelled to upgrade to Office XP before Oct. 1 or pay a heftier purchase price later on.

The action "will encourage—force" may be a more accurate term—customers to upgrade much sooner than they had otherwise planned," Gillen noted in the IDC report. "Once the honeymoon period runs out in October 2001, the only way to 'upgrade' from a product that is not considered to be current technology is to buy a brand-new full license."

This could make open-source Linux's GPL more attractive to some customers feeling trapped by the price hike, Gillen said. "Offering this form of 'upgrade protection' may motivate some users to seriously consider alternatives to Microsoft technology." ...

What is surprising is that the US Department of Justice allowed Microsoft to place so many provisions in the agreement that can be used to undermine the free software movement. Note for example that under J.1 and J.2 of the proposed final order, Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of its business," while at the same time it is describing the licensing system for Linux as a "cancer" that threatens the demise of both the intellectual property rights system and the future of research and development.

The agreement provides Microsoft with a rich set of strategies to undermine the development of free software, which depends upon the free sharing of technical information with the general public, taking advantage of the collective intelligence of users of software, who share ideas on improvements in the code. If Microsoft can tightly control access to technical

information under a court approved plan, or charge fees, and use its monopoly power over the client space to migrate users to proprietary interfaces, it will harm the development of key alternatives, and lead to a less contestable and less competitive platform, with more consumer lock-in, and more consumer harm, as Microsoft continues to hike up its prices for its monopoly products.

Problems with the term and the enforcement mechanism

Another core concern with the proposed final order concerns the term of the agreement and the enforcement mechanisms. We believe a five-to-seven year term is artificially brief, considering that this case has already been litigated in one form or another since 1994, and the fact that Microsoft's dominance in the client OS market is stronger today than it has ever been, and it has yet to face a significant competitive threat in the client OS market. An artificial end will give Microsoft yet another incentive to delay, meeting each new problem with an endless round of evasions and creative methods of circumventing the pro-competitive aspects of the agreement. Only if Microsoft believes it will have to come to terms with its obligations will it modify its strategy of anticompetitive abuses.

Even within the brief period of the term of the agreement, Microsoft has too much room to co-opt the enforcement effort. Microsoft, despite having been found to be a law breaker by the courts, is given the right to select one member of the three members of the Technical Committee, who in turn gets a voice in selecting the third member. The committee is gagged, and sworn to secrecy, denying the public any information on Microsoft's compliance with the agreement, and will be paid by Microsoft, working inside Microsoft's headquarters. The public won't know if this committee spends its time playing golf with Microsoft executives, or investigating Microsoft's anticompetitive activities. Its ability to interview Microsoft employees will be extremely limited by the provisions that give Microsoft the opportunity to insist on having its lawyers present. One would be hard pressed to imagine an enforcement mechanism that would do less to make Microsoft accountable, which is probably why Microsoft has accepted its terms of reference. In its 1984 agreement with the European Commission, IBM was required to affirmatively resolve compatibility issues raised by its competitors, and the EC staff had annual meetings with IBM to review its progress in resolve disputes. The EC reserved the right to revisit its enforcement action on IBM if it was not satisfied with IBM's conduct.

The court could require that the Department of Justice itself or some truly independent parties appoint the members of the TC, and give the TC real investigative powers, take them off Microsoft's payroll, and give them staff and the authority to inform the public of progress in resolving compliance problems, including for example an annual report that could include information on past complaints, as well as suggestions for modifications of the order that may be warranted by Microsoft's

conduct. The TC could be given real enforcement powers, such as the power to levy fines on Microsoft. The level of fines that would serve as a deterrent for cash rich Microsoft would be difficult to fathom, but one might make these fines deter more by directing the money to be paid into trust funds that would fund the development of free software, an endeavor that Microsoft has indicated it strongly opposes as a threat to its own monopoly. This would give Microsoft a much greater incentive to abide by the agreement.

Failure to address Ill Gotten Gains

Completely missing from the proposed final order is anything that would make Microsoft pay for its past misdeeds, and this is an omission that must be remedied. Microsoft is hardly a first time offender, and has never shown remorse for its conduct, choosing instead to repeatedly attack the motives and character of officers of the government and members of the judiciary. Microsoft has profited richly from the maintenance of its monopoly. On September 30, 2001, Microsoft reported cash and short-term investments of \$36.2 billion, up from \$31.6 billion the previous quarter—an accumulation of more than \$1.5 billion per month.

It is astounding that Microsoft would face only a "sin no more" edict from a court, after its long and tortured history of evasion of antitrust enforcement and its extraordinary embrace of anticompetitive practices—practices recognized as illegal by all members of the DC Circuit court. The court has a wide range of options that would address the most egregious of Microsoft's past misdeeds. For example, even if the court decided to forgo the break-up of the Windows and Office parts of the company, it could require more targeted divestitures, such as divestitures of its browser technology and media player technologies, denying Microsoft the fruits of its illegal conduct, and it could require affirmative support for rival middleware products that it illegally acted to sabotage. Instead the proposed order permits Microsoft to consolidate the benefits from past misdeeds, while preparing for a weak oversight body tasked with monitoring future misdeeds only. What kind of a signal does this send to the public and to other large corporate law breakers? That economic crimes pay!

Please consider these and other criticisms of the settlement proposal, and avoid if possible yet another weak ending to a Microsoft antitrust case. Better to send this unchastened monopoly juggernaut a sterner message.

Sincerely,

Ralph Nader James Love

From: Henry Stilmack  
 To: Microsoft ATR  
 Date: 1/23/02 4:25pm  
 Subject: Microsoft Settlement

I am writing to register my objection to the proposed Microsoft settlement. I do not believe the current proposal serves the interest of promoting competition or provides an adequate remedy for the impact of Microsoft's past business practices on the

American consumer. Specifically, I believe the current proposal will only further stifle competition by giving Microsoft an advantage in penetration of the educational market under the guise of a settlement. Permitting Microsoft to settle the matter by delivering Microsoft products to school systems, which traditionally tend to favor other vendors (e.g., Apple), would be tantamount to state-sponsorship of the extension of Microsoft's monopoly.

Instead, Microsoft should be required to make payment in cash, and then permit the school systems to direct the use of these funds in the (hopefully technical) areas of their choosing. Furthermore, I believe the amount of the settlement is grossly inadequate to remove the incentive for Microsoft to continue its practices. I believe Microsoft will treat the settlement as a "cost of doing business", much as any other "administrative overhead". Finally, I believe the settlement should include requirements for Microsoft to provide open access to interfaces between its products, and to provide an unbundled version of Windows (no Internet Explorer, no Windows Media Player, etc.). These actions are needed to afford competitive products, including open source alternatives, with an environment in which they can compete on a level playing field with a competitor which controls the prevailing desktop operating system technology. Without true, timely and open access to interoperability information, the barriers of entry for alternative commercial and open source products will be too high to overcome the leverage held through its desktop operating system monopoly. To truly avoid a recurrence of past practices, an oversight committee of some sort is truly needed. Your attention to this matter is greatly appreciated.

Sincerely

Henry Stillmack

From: Gary Goldberg

To: Microsoft ATR

Date: 1/23/02 4:26pm

Subject: Microsoft Settlement.

Hello. I am the president and chief operating officer of Digital Marketing, Inc, a small business dedicated to web hosting and network consulting in operation for eight years, since 1994, in Maryland. I have followed the Microsoft antitrust case closely, both as a general member of the user community and because of a direct connection between Microsoft policies and my business operations. (We use both Linux and Windows NT/2000 to host web servers, and we have found less opportunities to use competing platforms and tools in our work because of companies like Netscape being forced to the sidelines by Microsoft actions in the last decade.

I believe the settlement with Microsoft the Department of Justice has forged, to be weak

and ineffective at addressing the wrongs Microsoft Corporation has perpetrated on the computer-using community, and will encourage Microsoft executives to continue their methods in the future. While I object to many provisions of the settlement, one in particular directly effects my operations—when Microsoft packs on unneeded and undesired additional products into their operating system in order to prevent competitors from developing competing products, it reduces my opportunities to choose and utilize those competing products on behalf of my clients. It also decreases the reliability and increased the resources my machines need to offer services to my clients, increasing downtime and increasing expense, making it harder for me to compete.

I believe the existing Microsoft settlement to be weak and ineffective, doesn't fairly address either past wrongs or discourages Microsoft Corp from similar behavior in the future, and represents a waste of the enormous money, time and energy expended over the last seven years to rein in a convicted monopolist organization. I appreciate this opportunity under the Tunney Act to register my opinion, and I urge the presiding Judge in this case to reconsider and to not accept the settlement as currently drafted. Thank you for your time.

Sincerely,

Gary Goldberg

Subject: Microsoft settlement

I would like to take a moment to express my dissatisfaction with the proposed settlement in the Microsoft anti-trust case. Without going into great detail expressing each individual concern, I would like to outline one specific concern. Please understand that I do this to save both the reader and the writer time and it is not meant to suggest that I find the remaining provisions to be adequate.

Section III.A.2. appears to specifically allow Microsoft to retaliate against any OEM computer vendor that ships computers with a competing operating system but with no Microsoft operating system. I can see no reasonable reason that Microsoft should be permitted to retaliate against any OEM vendor for shipping a customer order as per a customer's request. If I purchase a computer from a vendor and request that they load Linux on it, I can see no reason that I would want to pay the extra fees incurred in having a competing Microsoft product installed. If the computer came configured in this way, I would have to pay more and I would have to reconfigure the computer anyway thus eliminating any value offered by the vendor.

I hope that the proposed settlement is not allowed to pass with its current shortcomings and shortsightedness. I am very appreciative of the fact that the legal system has stepped up to the plate to attempt to do something about these real and pressing issues.

Thank you for your time,

Shane Baker

Stroudsburg, PA.

Antitrust Division

U.S. Department of Justice

601 D Street NW

Suite 1200

Washington, DC 20530-0001

Dear Sirs and Honorable Judges of the United States Department of Justice:

I write this letter regarding the Revised Proposed Final Judgement (PFJ) in the Antitrust Lawsuit of Microsoft Corporation. I am an Information Technology Specialist serving the Salvation Army for its Divisional Headquarters in Cincinnati, Ohio. As such, an employee and resident in the state of Ohio, and a customer of licensed software from Microsoft and other manufacturers throughout the IT industry, I find myself significantly effected by this judgement. In accordance with the Tunney Act, my comments are entered for public record within the 60 day period allowed.

While this PFJ does an effective job of tying the hands of the government from opening Microsoft's trade secrets, it does an inadequate job of bringing Microsoft's behavior in line with the law, and fails to impede Microsoft's anticompetitive behavior with rival software manufacturers and organizations, nor even impede its adversarial role against its own partners and customers. In short, I think it does customers like myself a disservice by encouraging continued anticompetitive behavior in Microsoft. The greatest failure of the PFJ is its discrimination against users of non-commercial software. Be it Free Software, Open Sourced, Shareware, Public Domain binaries, Web Applets, this PFJ permits Microsoft to advance its own interests above the freedoms of the customers found to suffer from an anticompetitive market. The American public and scientific communities are providing people the freedom to actually own software that cannot be legally wrested from them, while Microsoft's licenses keep ownership, control, and choice out of the public's hands.

In light of Microsoft's illegally obtained monopoly, the people must be permitted the freedom to create their own alternatives... Such is the cycle of history, democratizing a technology which has allowed dominant power to rift "haves" from "have nots."

In section III.A under Prohibited Conduct, Microsoft's behavior against OEMs is regulated, almost. The same section quickly excuses Microsoft to "enforcing any

provision of any license with any OEM or any intellectual property right that is not inconsistent with this Final Judgment." I must emphasize the wording "any license," for it is by their licenses that Microsoft exercises their power to discriminate and exclude freedom. While they must be free to innovate, what is at issue is their much exercised "freedom to inundate."

Further under section III, parts D through G further regulate behavior of Microsoft from monopolizing middleware and communications protocols of its Windows products, almost. Yet this regulation is conditionally invalidated by the phrase, "This Section does not apply to any agreements in which Microsoft licenses intellectual property in from a third party." So by licensing, even if at no cost to Microsoft, and at the discrimination of all others, Microsoft could indeed continue to monopolize protocols with minimal formality. With such careless qualification of the DoJ's regulation, it is a wonder why there is any wording of regulation at all.

Under III.J.1, the monopolization of proprietary formats is thrown out with "J. No provision of this Final Judgment shall... Require Microsoft to document, disclose or license to third parties: (a) portions of APIs or Documentation or portions or layers of Communications Protocols the disclosure of which would compromise the security of... software licensing, digital rights management, encryption or authentication systems,..." Again, I must restate that software licenses are the contracts by which the customers' freedoms are being arrested.

The remaining sections of enforcement are inconsequential without the repair of behavioral regulation.

I would like to see them further regulated from "Content Discrimination," a practice by which their client applications, such as Internet Explorer, do willingly replace the data from the internet, such as an error 404 web page which may or may not be customized to a web server's extreme capabilities or needs, substituting content of Microsoft's own choosing. This has profited Microsoft's self-serving goals, such as promoting their MSN network services, but it violates the efforts of the web server to provide customized content to the service of the customer, which I view as a blatant impropriety of rights to Freedom of Speech in the publishing world of the internet.

Another example of Microsoft's content discrimination, and of licensing abuse, can be viewed at <http://www.vcnet.com/bms/departments/dirtytricks.shtml>. It summarizes the targetting of a business opponent in discrimination of emails from bluemountain.com through a beta program of Microsoft Outlook. While they are free to disclaim behavior of such a program in that stage of its development, it is clearly an abuse of trust when free speech is expected to be delivered.

Please do the computing public a favor by striking down this disservice of a settlement. Thank You.

Joel Nye  
IT Specialist  
The Salvation Army

From: Thomas McElroy  
To: Microsoft ATR  
Date: 1/23/02 4:26pm  
Subject: Microsoft Settlement

I think that having MS interjected into the schools as a part of their reparations is madness. Schools are one of the few places that other operating systems have an opportunity to gain momentum and exposure. MS would happily PAY to have this happen... Not to mention the fact that it will hurt MS's competitors. I think that's an important part of any settlement plan: It should in NO way hurt MS competitors. It should force MS to make reparations to the other companies in the industry on the order of magnitude of the damage it has caused.

Some things to consider would be having reparations paid to all the companies whose software could not be sold because MS was forcing them out of business by charging nothing. The services/companies that immediately spring to mind are Real Networks, Netscape, Yahoo, Mapquest, Nullsoft, AOL (AIM), ICQ, Sony and Nintendo. In addition, I think that MS should be open to lawsuits due to damages from their software. I don't for the life of me understand how, in every other field of law, it's not possible to sign one's rights away, except in software. If I buy a car, the mfg can't enforce a contract saying I will not sue for damages due to a defective product, and yet, somehow, MS depends on this protection every moment to stop people from suing for damages related to the innumerable security holes and flaws. MS needs to be seriously shaken and changed. This settlement does NOTHING to bring that to being, and possibly takes steps backwards.

Thanks,  
Thomas McElroy

601 D Street, NW., Suite 1200  
Washington, DC 20530-0001

Dear Ms. Hesse:

As a senior member of the Iowa House of Representatives who has focused on education and economic development policy, I have followed with considerable interest the proposed settlement in the Microsoft

case. I am vitally interested in the creation and deployment of technology that empowers consumers and encourages business expansion. I believe such technology deployment has potential to foster growth in the non-metropolitan areas of the State of Iowa, which is the type of district that I represent.

It is my judgment that the proposed settlement in the Microsoft case is good for Iowa. I am writing, therefore, to lend my support to that settlement and to ask for your assistance in bringing about resolution of this case.

Respectfully submitted,  
Philip Wise

Subject: Microsoft Settlement

To whom it may concern my name is Jon Park and I have been reading the news concerning this settlement and I feel what Microsoft wants is what Microsoft gets LITERALLY they seem to have every one of influence on their payroll/side (please choose the word you like best). I agree that Microsoft could be dealt with harshly recently the made a statement to the effect that software pirates/crackers/virus writers are terrorists of sorts and will do what it takes to protect us from them. Has any one thought that maybe their practices of running out the competition by any means possible (I would like to bring to point the fact they lied to the courts on whom they were in contact with during proceedings) borders if not cross that line that defines terrorism. Or are business terrorist tactics ok as long as money is made and no physical harm is committed to any persons. They seem as big a threat to the health of our economy, face it any strings they decide to pull effects us all, from centralizing computer platform development to serve their software only—to pulling the plug on a contract with a video game supplier because they decided to enter the market, I am sure the Japanese market didn't respond well to that.

I just had a thought the slogan for Microsoft should be "We want more" sounds like them doesn't it. Most companies compete not run over to earn success and notariety.

I vote for harsher punishment.  
Thank You  
Sincerely,  
Jon Park

From: Leo Sell  
To: Microsoft ATR  
Date: 1/23/02 4:27pm  
Subject: microsoft settlement

The proposed settlement, is outrageous in  
many ways, but none more than the "wolf in  
sheep's clothing" that the school-related  
aspects represent.

Surely the proposal that as part of the fine  
or relief, Microsoft pay to provide Microsoft-  
centric hardware and software to schools  
must have been written by Microsoft folks.  
DOJ was hoodwinked. This "relief" is clearly  
designed to shove Microsoft's monopoly into  
the one sector left that it is not dominant—  
the schools. In supporting this, DOJ is  
playing right into Microsoft's hands, and this  
aspect will most certainly do injury to one of  
the few parties in the marketplace that offers  
a hale alternative to the Microsoft monopoly  
of desktop software—Apple Computer. Apple  
has long been the stronger presence in the  
nation's schools.

Apple has developed an operating system  
that, with some time and resource, could be  
ported to use on Intel-based machines. A  
better remedy might be to make MS create a  
fund from which schools could draw money  
/ grants to purchase the SCHOOL'S CHOICE  
of software and hardware.

A further suitable remedy might be to  
require MS to provide funding to Apple to  
port OS X to Intel-based machines.

Date: 1/23/02 4:28pm  
Subject: Microsoft Settlement

I am against the currently proposed  
settlement with Microsoft. They have shown  
them selves to be a law breaker many times  
over. Given Microsoft's past behavior  
towards "consent decrees", I believe that  
they will continue their standard operating  
procedure w/o regards to the fact that they  
been proven to be a monopoly.

Microsoft should be punished for breaking  
the law. They should pay consumers of their  
products from the over 30 billion dollar war  
chest that they have illegally collected. We  
must take advantage of this opportunity, or

else the US will be back in court five years  
from now.

Sincerely  
Bernhard H. Damberger

Subject: Microsoft Settlement  
To Whom it May Concern:

My name is Stephen Gilbert, and I am an  
Associate Professor in Computer Science at  
Orange Coast College in Costa Mesa. As a  
Computer Science professional responsible  
for training future generations of computer  
programmers and software designers, I would  
like to comment on the proposed settlement  
between Microsoft and the Department of  
Justice.

Simply put, I think that the settlement is  
not in the public interest; it does nothing to  
separate Microsoft the platform developer  
and owner from Microsoft the application  
developer. In my opinion, the proposed  
remedy provides no punishment for past  
illegal acts and no incentive to avoid  
committing such acts in the future.

To: Microsoft ATR  
Date: 1/23/02 4:42pm  
Subject: Microsoft Settlement

I am writing because I feel the my voice  
should be heard in some important matters.  
I know very little about business and I know  
very little about microsoft specifically. I do  
have experience in dealing with microsoft  
products and other products as well. I read  
through the proposed settlement in the  
Microsoft Antitrust Trail. I don't have any  
specific points to argue as far as the  
settlement goes. I think it gives Microsoft no  
punishment for doing anything illegal and it  
does nothing to prevent them form doing  
anything illegal in the future. It will not  
remedy an of the issues the Microsoft has  
been found guilty of. This can't be allowed  
to happen. The laws as far as Antitrust issues  
were made for a reason and microsoft has  
broken them in the past and is doing it still.  
The government of the United States of  
America should do something to stop this  
and they aren't. they are accepting what  
microsoft has proposed no matter who  
actually proposed it. Why would any  
company propose something in the bad  
interest? I feel very strongly that this is an  
unfair proposal and I object.

Subject: (no subject)  
DOJ Public Comment

I am writing to express my opinion  
regarding the Department of Justice's case

against Microsoft. I am firmly opposed to any  
actions being taken against Microsoft. Any  
remedy proposed under the guise of the anti-  
trust laws will amount to fascism, where  
property is property in name only. Microsoft  
has a moral right to do as it chooses with its  
own property and amount of penalization of  
Microsoft will abrogate that right. The  
government, by adhering to the dictatorial  
anti-trust laws, is engaged on a witch-hunt  
for success. Any company that has achieved  
success by the voluntary choices of  
consumers is a potential victim while  
companies that achieve success by  
government decree (e.g. US Postal Service)  
are safe from the clutches of bureaucrats. It  
is revolting to see that when the American  
dream finally comes true for someone (Bill  
Gates), the government and envious  
competitors insists on creating a nightmare to  
follow.

From: Darrell King  
To: Microsoft ATR  
Date: 1/23/02 4:28pm  
Subject: Microsoft Settlement

Thank you for your careful and  
conscientious work in addressing the issues  
involved with Microsoft Settlement. I can  
only guess at the amount of work involved  
in picking through such a tangled landscape.

As I read about the proceedings, I am left  
with a single concern: have we ended the  
problem? As a small an owner of both Red  
Hat Linux and several Microsoft Operating  
Systems, I am very familiar with using both  
in my daily business.

I've often been concerned with the  
situation where Open Source products can be  
built for Windows (Apache, PHP, MySQL),  
but those dedicating to porting in the  
opposite direction are frustrated by an  
inability to easily carry a Windows-based  
product to a Linux environment. I have to  
wonder if any settlement is complete that  
does not address this issue in a realistic and  
final manner.

In my opinion, the fundamental issue here  
is not the protection of intellectual property.  
Of course Microsoft should be allowed to  
make a profit and protect it's ability to do so.  
I think, however, that having such a tight  
lock on the most fundamental piece of  
software a computer uses, the operating  
system, is too much control. If the Windows  
OS is the best, people will buy it, but no one  
should be forced to just because it's the only  
viable alternative. Both Mac and the Open  
Source fronts have put forth good efforts, but  
they are up against wall when they face  
compatibility issues regarding application  
written to run on Windows.

My solution? Make sure that the Windows  
API is available for use by developers who  
wish to integrate software with alternative  
operating systems. If the consumers can run  
their favorite programs on several different  
operating systems, the threat of monopoly  
ceases to be.

Thank you,  
Darrell G King

From: Steve Tow  
 To: Microsoft ATR  
 Date: 1/23/02 4:30pm  
 Subject: Microsoft Settlement

I wish I had proper remedy for this monopolist, but I don't. What I can say is that the need to pull out all the stops in order to contain this predator is absolutely necessary. The evidence against MS is stacked to the ceiling. There is no real question they did multitudes of things wrong in terms of fair competition. From false incompatibilities to strong arming vendors from shipping anything but microsoft products. It's all there and obvious. They have made a mint out of manipulating or simply screwing six ways from Sunday any company or competition if it had a chance to make a buck, squash that competition, or generally help MS at the cost of others. This monopoly would be acceptable if it were a company doing it through legal and ethical means. Just being a monopoly is not a problem if it is acquired. It is a problem if it is stolen from the hands of others.

In the years they spent building..er..stealing..this sector of the market they also hindered innovation to an alarming degree. I think anyone in the know in the OS department knows that a close look at Win95 vs WinXP reveals nothing but an evolution of face lifts with virtually no new features or technology. What have they done over the 7 years? Well, add new decorations, things like DVD and media players (things that don't take 7 years given their workforce), and last but not least, spent hours upon hours coming up with a way to make sure they can milk their already financially strained customers for more money. Regardless of BG's pseudo-victim-esque cries of "I need the freedom to innovate!", there has been nothing but a near halt of real innovation in the MS camp and none from any other camp because MS has eliminated the competition that could breed innovation...

I am a technological purist. I don't give a f\*ck about the all mighty dollar. I just want to see true innovation in a free market. It might be deemed too dramatic to say that this hinderance of innovation might keep me from setting foot on Mars before I die, but this could very well be true and cannot be discounted. As long as MS is making \$\$, they won't really care about techology and innovation. They are a marketing company, not a technical company...

The sad truth is that regardless of my attitude towards the money vs innovation, the final factor may be the money. Money buys people, opinions, and even court cases. The many so-called "experts" that are surely making a case for the other side of this debate are certainly well paid to give those opinions. I would like to think that the one thing this corporate bully could not buy or manipulate is the American judicial system. Only time will tell on that. Don't let it happen....

Please put some serious restraints on this beast before they get away and start eating up competition once again...

From: jcastle@in-system.com@inetgw  
 To: Microsoft ATR  
 Date: 1/23/02 4:29pm  
 Subject: Microsoft Settlement

I am opposed to the proposed judgement because it does not require Microsoft to provide sufficient documentation in a timely manner to allow competing middleware providers to be successful. Microsoft would be required to publish the APIs, but not until the associated Microsoft product is in beta testing. That means any competing solution would always lag in the market place and be at a disadvantage.

And the judgement specifically disallows the use of such published information for the use of developing competing operating systems; that restriction only serves to hinder competing products and to enhance Microsoft's monopoly.

I am also opposed to the proposed judgement because it allows Microsoft to use licensing terms to prevent OEMs from providing competing operating systems or applications in addition to Microsoft products from doing so. That forces OEMs to choose between offering Microsoft products OR competing products. No OEM can afford to drop the dominant Microsoft products, so they effectively are prevented from offering competing products. Therefore, the proposed judgement is flawed and does not serve the public interest.

 Dear Microsoft Settlement:  
 The Microsoft settlement simply will encourage Microsoft to continue the same

king of monopolistic practices that destroyed countless new high-tech companies. The DOJ settlement is a watered down slap on the wrist that does nothing to punish Microsoft for stifling competition, stealing technology, and strong-arming business partners to advance MS products. Don't let the DOJ waffle on this and therefore sell out the American people it PURPORTS to represent. We don't care if the government gets any money out of this, unlike the DOJ (it seems). What we want MS to do is DESIST their extortionist and raider business practices, open their operating systems in a fair and consistent fashion, and above all COMPENSATE all the business owners, shareholders, and principles of the myriad of businesses they ruined.

As a 20-year veteran of the technology industry, I can speak for most of my peers when I say that the DOJ settlement is nothing short of a highly-suspect kow-tow to Microsoft. Please make DOJ DO THEIR DAMN JOBS instead of sucking up to Bill Gates.

Sincerely,

Subject: Microsoft Settlement

Dear Sirs:

The proposed settlement between the Department of Justice and Microsoft is a complete travesty of justice. The definitions of certain key terms (cf: API) are significantly different from the definitions used in the Finding of Fact. This allows a proven unscrupulous company to violate the spirit of the settlement with the letter of the settlement.

Microsoft would also be able to get away with a slap on the wrist, and a charge of "sin no more." We have seen that this is ineffective, as Microsoft was in this exact position about four years ago. Microsoft is also free to engage in their monopolistic behaviour by keeping secret key data formats, and interface details. This is similar to selling someone a car(data) and a chauffeur(application), but refusing to tell them how any of the controls(format, interface) work. The only way to drive the car is to use the company's chauffeur.

If the settlement is allowed to go through in its current form, the American people will suffer further from the monopolistic practices of Microsoft.

Sincerely,  
John H. Robinson, IV  
San Diego, California

To whom it may concern:

I feel very strongly that Microsoft should not be allowed to "get away" with the settlement as proposed. As a long-time veteran of the technology industry, I have struggled against the oppression of Microsoft's stranglehold on the market. Today I own a small IT services company, and our ability to do business is stifled on a daily basis by Microsoft's bad products and anti-competative practices. We have worked hard to eliminate MS software from our office but, alas, it is nearly impossible to do so and still remain competitive.

The settlement, as proposed, is more of a prize for Microsoft than it is a punishment. They "spend" very little money (the sticker value of software has nothing to do with its cost to produce) and in exchange they get to break into a market they have traditionally had trouble entering, that of our educational system.

Please do not allow them to get away with this nonsense; deny them this so-called "settlement."

I oppose the current Microsoft settlement. Microsoft has a verticle monopoly in the software industry. They control the operating system market. That control gives their application developers an advantage in time to market, in the use of special undocumented features, and in the ability to force installation by users. Because of their market dominance in the operating system, they are able to push application vendors out of niche markets.

They continue to pursue a strategy of pushing vendors out of the market through incorporation of functionality into their operating system. Consider the examples of internet messaging and multi-media presentation. In both cases, Microsoft bundles applications that have nothing to do with the operating system into the operating system distribution. This leverages Microsoft's monopoly of the operating system into other markets. If Microsoft is allowed to continue this practice then AOL instant messenger and Real Media will have a very tough time remaining in the market. Their problems will not be a result of the relative

merits of their product, but rather a result of Microsoft's dominance of the operating system market.

If the operating system portion of Microsoft's business was operated as a separate company, the likely result would have been that Netscape, Real Media Player, and AOL Instant Messenger would have been licensed by the operating system developer for bundling in OEM distributions. Other competitors could have challenged the Netscape, Real Media, and AOL dominance by either developing a better product and marketing it to the operating system vendor, or developing an equivalent product and licensing it to Microsoft for less money. In this way, competitive markets would still exist and Microsoft would still be able to deliver a high level of functionality in a single bundle.

I am concerned about the proposed Microsoft settlement for a couple reasons:  
—Their donation to school systems is a flagrant attempt to force out one of their strongest competitors in that space—Apple Computer.  
—The language used to protect for-profit businesses will not help non-profit organizations! Microsoft's \*other\* big competitor is the Open Source movement. To leave this language unchanged would be as good as a Get Out Of Jail Free card.

My comments about the Microsoft Antitrust Case:

I believe the Microsoft monopoly has had a detrimental effect on the internet, effectively transforming the internet from an open, standards-based communication system to one that is a proprietary, Microsoft-based system under their control. In essence, Microsoft now partially controls communications on the internet and world wide web and their influence is growing. If this is not corrected, then there is a good possibility that Microsoft could largely or completely control communications and interactions on the internet and world wide web. Presently, Intel or AMD based computers comprise about 90% or more of the personal computer market in the US. Microsoft has a monopoly in this market, and the vast majority of Intel/AMD computers

run the Microsoft operating system and the Internet Explorer web browser. Thus, most web designers make websites for Microsoft based systems and browsers. However, Microsoft-generated web documents and Microsoft-based browsers rely on proprietary features (eg, non-ISO characters, proprietary javascript implementations, etc) which do not conform to web standards and can't be emulated using web-standard browsers, such as those available for Linux and FreeBSD. Browsers for these systems are based on reading web documents which are designed to open standards, and will render pages designed for the proprietary standards of Internet Explorer poorly if at all. The net effect is that if you own an Intel/AMD computer, you cannot fully access the worldwide web and internet unless you run the Microsoft operating system on your computer. This has a real manifestation in my life. There are many commercial sites where I have tried to make on-line purchases and couldn't because my web-standard browsers (I use three different browsers under Linux) could not read the web page because it was designed for Internet Explorer. There are also many government and official sites I have tried to visit that did not render properly and thus prevented me from obtaining useful information. The problem is getting worse, and in the last six months I have noticed problems at many more sites than in the past.

I believe that it is essential that the U.S. Courts involved in this matter create an agreement which prevents Microsoft from having a monopoly on the internet and world wide web. As general suggestions, as a minimum Microsoft should make the complete source code of their web browser, Internet Explorer and subsequent editions, open to the public. The operating system source code that is relevant to computer networking should also be disclosed. Furthermore, Microsoft application programs should by default generate web documents which are designed to open web standards, such as those espoused by the Worldwide Web Consortium ([www.w3c.org](http://www.w3c.org)).

I wish to express my objection to the proposed settlement in the Microsoft case. The scope and wording seem to be carefully constructed so as to not actually effect much change in the way Microsoft does business, and in particular to cripple free software efforts to work against the monopoly power that MS seems fully intent on wielding for all time, with no regard to the consumer.

I am strongly opposed!

Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue NW  
Washington DC 20530

Dear Attorney General Ashcroft:

I write today to encourage the Department of Justice to accept the Microsoft antitrust settlement. A settlement is available, the terms of which are fair and compliance is assured. The government needs to accept the settlement and move on.

Many people think that Microsoft has gotten off easy, in fact they have not. In order to settle the suit, Microsoft has agreed to terms that extend well beyond the products and procedures that were actually at issue in the suit. Microsoft has, for example, agreed

to set up a technical committee that will assure that Microsoft is in compliance with the settlement. The settlement is fair and compliance will be a boost for the economy. The government needs to accept the settlement and move on. Microsoft and industry need to move on. Please accept the Microsoft antitrust settlement.

Yours truly,

The settlement as worded, is a bad idea. I believe it lacks the teeth to be fully enforced. Even if enforced fully, it doesn't really inhibit Microsoft from continuing their unfair, monopolistic, anti-competitive tactics. Worse yet, it does not punish Microsoft at all for —illegal— acts committed in the past.

Repeating—it doesn't punish an evil doer for wrongs committed (and of which they have been found legally guilty). This simply amazes me.

Subject: MS settlement

I understand that you are soliciting comments on the Microsoft settlement. I buy software from them; doesn't almost everyone? I'm quite reluctant to go into detail, but I think Justice's direction with MS is easily the most disappointing and dispiriting development of the Bush administration.

Please do not give my email address to Microsoft or its agents, including its counsel. They have my user profile in several places, and I don't want to be denied the ability to upgrade or purchase new MS software in the future. I will also not sign this note. I'm a lawyer, and not to be confronted by one's accusers is repulsive to me, so this quasi-anonymous post goes directly against my grain. But, the consequences of retaliation by MS are too great.

That's how I feel.

January 23, 2002

To Whom It May Concern:

This brief e-mail is intended to voice my concern over the Proposed Final Judgment in United States v. Microsoft. I believe the proposed settlement is not in the interest of the US public for a number of reasons including: (i) the definition of API is far to

restrictive and should include such additional interfaces as Microsoft Installer APIs, (ii) the definition of Windows Operating System Product is far too restrictive and should include any current or future Intel-compatible operating system which is derived from Microsoft's existing Windows 2000/NT/XP/etc. code base, and (iii) there is no practical method of enforcing the settlement. These are just the three most significant issues I believe exist in the settlement; there are a number of other issues.

From: Richard Tidd  
To: Microsoft ATR  
Date: 1/23/02 4:23pm  
Subject: Microsoft Settlement

I find the currently proposed settlement in the Microsoft antitrust case disturbing. Simply, it is thoroughly ineffectual. Microsoft has a long history of stifling innovation in the software industry through its anti-competitive practices. An appropriate settlement would restore competition to the operating system, browser, and office applications sectors of the software industry. The leverage that Microsoft currently holds in these areas prevents the necessary competition that leads to innovation.

Subject: Microsoft Settlement

Dear Sir,  
I am a US citizen in San Francisco and I would like to express my concern at the Proposed Final Judgement. As a software engineer, I have been keeping tabs on the DOJ

vs. Microsoft trial from the beginning. I have seen their corporate bully tactics in the courtroom and in the industry and I am appalled that the Proposed Final Judgement does nothing to address this. It is clear that Microsoft is a monopoly and has used their position in the past to leverage their market and even eliminate some promising new technologies. The Proposed Final Judgement should have some effect in terms of leveling the playing field as well as punishing Microsoft for engaging in monopolistic practices. My personal opinion is that they should release the source code to their Windows operating system as they have closed their internal APIs in order to create a system of dependence. Thus third parties are wholly reliant upon Microsoft's "kindness." Please do not allow this to happen. Recently there was a fantastic CPU called Alpha which was owned by Compaq and sold to Intel. This technology was years ahead of Intel's own processors but Intel is not buying it to improve upon it but so that it goes away quietly. I understand that better technologies don't always win, but Microsoft has used their monopoly to quash other promising ideas. Please do not agree to the current Proposed Final Judgement but improve upon it. Thank you for your time.

Sincerely,  
Mitch Lee

From: WizSupport.com  
To: Microsoft ATR  
Date: 1/23/02 4:38pm  
Subject: Microsoft Settlement

To whom it may concern;

My name is Peter Petersen. I am a professional in the IT field. I am a Certified Professional in both Apple and Windows PC technologies; I make my living fixing problems in other folks' computer hardware and software. I have been involved as a professional in the computer industry in one aspect or another for several years now; I have, in the past, been involved in PC hardware and software sales as well as retail management. Most currently I am engaged as an entrepreneur, starting my own computer repair/tech support business dealing with PC Wintel and Macintosh hardware and software. I am writing to voice my opinion on the Microsoft Antitrust Settlement proposal.

As an IT professional, I have seen the computer industry take shape from the early days of hobbyists building Heathkit PC's from parts, to the rise (and fall) of the IBM PC, to the move toward mainstream that the PC software industry took in the early 1990's, through the explosion of the World Wide Web that brought the internet out of the realm of students, educators, government agencies and hackers, and into the public mainstream. I have seen Microsoft's rise to dominance as a company and have often ruminated on what shape our industry would have taken if Microsoft had not been the dominant, aggressive business they are. To the contrary of what I'm sure the pro-microsoft people are saying, the technological world would not have ground to a halt without Microsoft. In fact it is my belief that the exact opposite would have occurred; our

technology level over all would be at a much higher level than it is now if there were no Microsoft.

One of the most telling examples of how Microsoft's business practices have shaped our current state of technology is in the world of consumer software and home PC peripherals. I have been in this industry long enough to remember the way computer manufacturers did business before the "Microsoft Way" became commonplace. It went something like this: 1) Company X designs and writes software code (or builds printer, scanner, etc). 2) Software is tested and tested; bugs in programs are found and fixed. 3) Program or device works and is 100% satisfactory before it ever hits store shelves. 4) If, for some reason, there are problems after it reaches the marketplace, they are handled by a qualified support staff who are fully trained to address problems with that device or program. This process sometimes means a product is late getting to the marketplace, but it almost always works once it gets there. Now: Enter Microsoft, who is self-admittedly more concerned with meeting product deadlines than meeting quality standards. Microsoft develops a similar product to Company X, but they spend less time and money on quality assurance. As a result, their product arrives at the marketplace sooner and costs less to consumers. Company X is forced to cut corners in order to compete. The first thing Company X cuts out of their budget is their lengthy Quality Assurance process; that way they'll be able to at least keep up with Microsoft's deadline.

Nevermind that they now are releasing a knowingly-imperfect product ahead of schedule. But in order to compete with Microsoft's lower price, they are also forced to cut their post-purchase support; which means the chances of the imperfections being fixed after the product leaves the store shelves are also less. Most manufacturers have no choice but to rely on automated telephone menus or ambiguous FAQ web pages instead of live people talking customers through their problems; if a program has serious flaws the manufacturer might release a version update patch. In any other industry a company would be in serious trouble if they knowingly released a product before it was ready for consumer use. Nowadays, however, most computer software and hardware manufacturers are doing just this because it is the only way they're able to compete with a company that gives away their product or forces it on people as an integrated part of their operating system. It has become an accepted business practice in the computer industry to release products regardless of their flaws, and it's my opinion that this would be vastly different without the dominance of Microsoft in the picture.

Some of the Microsoft rhetoric I have heard contains words like "Innovation". Clearly, Microsoft's definition of this word is a different one than that which the rest of the English-language-speaking world uses. Microsoft has never innovated anything—even their first official operating system product, MS-DOS, was purchased from Seattle Computer Works before being licensed to IBM for use in the first IBM

Personal Computer. I'm sure by now you've heard all of the stories about Windows being modeled after the Macintosh operating system; Microsoft's other "flagship" product, Office, is made up of components that had their beginnings in other programs as well. Excel wasn't the first spreadsheet program; that honor goes to VisiCalc. MS Word is not the first graphical word processor; many companies developed similar products for the (pre-Macintosh) Apple II and Commodore 64 platforms before IBM PC's were even sophisticated enough to handle such graphics-intensive products. Even the concept of an "Office Suite" of programs is borrowed from AppleWorks, a venerable integrated software package that also hails back to the early Apple II days. In the entirety of Microsoft's impressively-large catalog of software products, there is not a single one that is based on an original Microsoft idea. They all have their roots in products that were first conceptualized at other companies. Most of those companies are now either out of business or have been purchased outright by Microsoft and "brought into the fold".

It has been argued that any punishment of Microsoft would have devastating effect on our economy. I believe this is not true; if anything the economy would be stimulated by such an action. If Microsoft were forced to compete on an even level with other companies, they would find it necessary to spend the money and time necessary to insure their product's quality before releasing it; this would give other companies a chance to do the same. The industry's overall quality of products would increase, and the amount of jobs at every tech-sector company would increase as companies would hire more employees to bolster their Quality Assurance departments. It would also give an edge to companies developing alternative operating systems like Linux which would allow them to gain a more competitive market share.

One possible alternative to an outright breakup of the company would be an injunction requiring them to freely distribute the source code to their operating system and browser products. This would put them on even footing with Open-source operating systems (Linux, FreeBSD) and Browsers (Opera), and would guarantee fair business practices by effectively removing the operating system/browser integration war from even being an issue. Microsoft could still charge \$300 for their Office products if they wanted to, but there wouldn't be any way they could financially exploit their dominance in the operating system market; they wouldn't automatically get \$100 for every PC sold as is the case currently. This in turn would change the incentive in developing operating systems from one of profit to one of functionality and stability—which would eventually translate to better products.

Thank you for taking the time to read; in parting I urge you to do whatever is necessary to limit Microsoft's ability to suppress the computer industry's overall quality by forcing other companies to adopt Microsoft's poor quality standards in order to stay competitive.

Sincerely,

Peter Petersen

The attached letter is offered as support for the settlement planned for the Microsoft anti-trust case.

January 23, 2002  
Attorney General John Ashcroft  
U.S. Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530-0001

Dear Mr. Ashcroft:

The purpose of this letter is to show my support for the settlement planned for the Microsoft anti-trust case. In my opinion, the legal action taken was unnecessary and cost the taxpayers' millions of dollars. As a result, the opportunity to compromise should be accepted without further delay.

It is my understanding that Microsoft has taken several actions with this deal that should satisfy its opponents. They will offer competitors the opportunity to operate their software within the Windows platform; in addition, Microsoft will provide unprecedented access to its internal interfaces and server protocols. Competitors will also enjoy the ability to license Microsoft's intellectual property as well.

I believe that this agreement was mediated fairly and will help Microsoft's rivals compete with Microsoft over market share in the coming years. Please allow this deal to proceed, so that Microsoft can focus on what they do best ... creating great technology.

I thank you for your time.

Sincerely,  
Carl Johnson

From: Keith Bierman  
1532 Norman Av  
San Jose, CA 95125  
Software Developer

The PFJ is inadequate. Since the DoJ won the case on it's merits, I find it amazing and disappointing that the PFJ essentially leaves Microsoft both free to continue using the same tactics and essentially free from any meaningful penalty.

<http://www.kegel.com/remedy/letter.html> provides a short list of things that are wrong with the PFJ. I am sure that there are many more things wrong with it (actually, having read the PFJ a few dozen times, I couldn't see where to start. There is so little that is right).

I urge the DoJ, the Court and the Executive Branch to reconsider this ill-advised settlement. Anti-trust and fairness aside, please consider the dire long term consequences to US security if this monopolist continues to gain market share and eventually take over the server marketplace (displacing mainframes, etc.). Public posturing aside, this Monopolist has consistently left gaping security holes, hidden the evidence, stonewalled researchers and otherwise imperiled that fraction of the computing population dependent upon their services.

A monoculture is always dangerous for an ecosystem. A flawed computer OS monoculture will imperil our nation.

Your attention in this matter is appreciated.

Keith Bierman

Microsoft Settlement U.S. Department of Justice

Dear Microsoft Settlement U.S. Department of Justice: The Microsoft trial squandered taxpayers' dollars, was a nuisance to consumers, and a serious deterrent to investors in the high-tech industry. It is high time for this trial, and the wasteful spending accompanying it, to be over. Consumers will indeed see competition in the marketplace, rather than the courtroom. And the investors who propel our economy can finally breathe a sigh of relief.

Upwards of 60% of Americans thought the federal government should not have broken up Microsoft. If the case is finally over, companies like Microsoft can get back into the business of innovating and creating better products for consumers, and not wasting valuable resources on litigation.

Competition means creating better goods and offering superior services to consumers.

With government out of the business of stifling progress and tying the hands of corporations, consumers—rather than bureaucrats and judges—will once again pick the winners and losers on Wall Street. With the reins off the high-tech industry, more entrepreneurs will be encouraged to create new and competitive products and technologies.

Thank you for this opportunity to share my views.

Sincerely,  
Jose Rodriguez

I want you to know how much I object to the proposed settlement regarding Microsoft being a monopoly and using that monopoly to unfairly eliminate competition. I'll just quote Russell Pavlicek's article from InfoWorld.com, as he's summed it as well or better than I can. I hope you will read it and understand how this is not only NOT punishment, and NOT just a slap on the wrist for MS, but actually a boon to them.

VERY sincerely,  
Richard W. Ernst  
rich.microsoft@rernst.com

RUSSELL PAVLICEK: "The Open Source"  
from InfoWorld.com,  
Wednesday, January 23, 2002

I'VE RECEIVED A number of requests to address the pending (as of this writing) settlement of the civil anti-trust lawsuit against Microsoft. Under the pending agreement, Microsoft will be obligated to provide hardware and software to thousands of underfunded school districts across the country. The logic, if you can call it that, is that such schools could benefit greatly from receiving the technology they lack.

Undeniably, there is an emotionally compelling case for this. A gigantic company, found guilty of doing wrong, is ordered to help the underprivileged. "We need to do it for the children," cry the politicians. "Think of the children!"

"For the children." That's the phrase politicians in Washington use to justify an action so irrational that it cannot be justified any other way.

How can I properly characterize this solution? It is like a court ordering a convicted drug dealer to give out more free samples of heroin to underprivileged children to ensure that their poverty does not

deprive them of the opportunity to become addicted. Sure, public classrooms need more technology. And it is especially important that children who don't have as many opportunities in life get assistance. But that is not adequate justification for assigning the fox to guard the hen house.

Personally, I like the counterproposal put forward by Red Hat: Let Microsoft donate money for computing resources for underfunded schools, but let those donations go toward hardware only; then populate those machines with open-source software.

Why open source? Consider the future: What will the schools do when they need to upgrade? If you give schools Microsoft software, they will be caught in the endless upgrade cycle that has characterized life in the Microsoft world. Those upgrades will cost money, money that these targeted school districts, by definition, cannot spare.

Instead, arming schools with open-source software will have two benefits. First, it will set schools down a long-term path that they can afford. The cost of obtaining open-source upgrades is trivial. Without low-cost software upgrades, all those nice shiny computers run the risk of becoming boat anchors in short order. I'm sure someone is saying, "But open source is too difficult to administer!" Such does not have to be the case, but I'll deal with that issue in a future column.

Also, the Red Hat proposal does not reward Microsoft in the long term. If a company is convicted of overpowering markets, why would you reward them by putting one of the few markets they don't lead under their control? This sounds a lot like a seed-unit program for education, not the penalty imposed from losing a trial.

Corporate misdeeds are supposed to earn punishment, not long-term investment opportunities. I believe we would all be better off if the courts acknowledged the difference between the two.

From: Russell Schoof  
To: Microsoft ATR  
Date: 1/23/02 4:39pm  
Subject: Microsoft Settlement

This message is to express my opposition to the proposed settlement of the Microsoft antitrust case. My opposition is based on two primary concerns:

1. I see nothing in the settlement that will have the practical effect of restraining Microsoft from continuing its predatory monopolistic practices. I am particularly concerned that those who currently provide the only credible competition to Microsoft in operating systems—Open Source developers of products such as Linux and FreeBSD—receive no protection whatsoever. Does the Department of Justice actually believe that Microsoft will not direct the immense power of its many billions of dollars at these projects in order to destroy them?

2. Giving Microsoft software to schools will further its monopoly by allowing the company to do precisely what it is not supposed to do: give away its software and thereby drive away competition (from Apple, which currently has a substantial share of the educational market), and later force the schools to pay to upgrade to future versions.

I have been a user of Microsoft productivity and development software for fourteen years, and I have made a living from it as an independent consultant. I am now in the process of moving myself and as many of my clients as I can to non-Microsoft products. I do so because the other software is of higher quality and value, and because I have grown to despise this company that does all it can to lock users into its increasingly mediocre products, then extorts money from them by forcing an unending stream of unnecessary upgrades. In dealing with the company as a customer, I have become convinced that Microsoft management is, in the end, interested solely in money and the power that large quantities of it brings to gain ever more.

From: Jeffrey Walls  
To: Microsoft ATR  
Date: 1/23/10 4:32pm  
Subject: Microsoft Settlement  
Regarding: Microsoft Corporation Antitrust Litigation Settlement Agreement, MDL Docket No. 1332

Dear Honorable Judge Frederick Motz,

The reasons why I feel that the settlement is unfair and does not properly compensate the plaintiffs for the charges they have filed against Microsoft in their civil suits are the following.

The final outcome of the settlement will be a very large program aimed at training our students attending the underprivileged K-12 schools and their teachers on how to use Microsoft software.

This program is designed to guide the teachers on how to use Microsoft software in their education curriculum. The computers purchased through this program will be limited to those which are certified by Microsoft. This means that these computers will be configured to run Microsoft software.

The settlement excludes completely the ability for rival software companies from providing software and services to these underprivileged K-12 schools, which compete directly with Microsoft's own software products in the PC software market place.

The fact is there is a budding new software industry based on free software otherwise known as GNU or Open Source software. The term free applies to both free in cost and free as in freedom. This new software industry is based on software written by many programmers working together through loosely tied collaboration using the communication tools provided by the Internet. (e-mail, file transfers, web browsing).

These same tools of communication and methods of collaboration which the Internet provides, are the ones which we wish for the students of the underprivileged K-12 schools to take advantage. This is due to the fact that this is the same modality by which our scientists use to achieve the latest advances in science and technology.

I am also very much aware that Microsoft is working to try and stop this new software industry based on GNU/Open Source

software. This GNU/Open Source software industry is one of Microsoft's biggest concerns since it threatens its dominance in the personal computer software market. The current settlement is structured to directly shut out this segment of the software industry.

I am also aware that countries around the world are starting to use GNU/Open Source software since it is freely distributed (as in zero cost and without distribution restrictions) across the world through the Internet. One segment of this world population who is taking a keen interest in this software are the schools in these foreign countries because it provides a way of upgrading their computer systems with little or no cost.

I would like the students of the underprivileged K-12 schools to be given a chance to take advantage of the benefits of this GNU/Open Source software provides, as are the students in countries around the world. This can only be done by changing the settlement terms of this class action suit.

I would like for you to act in the following matter in regards to this case.

Ensure that the plaintiffs understand our concerns regarding their settlement with Microsoft. Ensure that the attorneys representing the plaintiffs, in this civil class action suit, inform their clients that there are no provisions in their settlement to allow for free and open competition for the needed software products used to upgrade the computer systems for these underprivileged K-12 schools.

I have recommend that you change the terms of the settlement such that Microsoft have no say what so ever in how the money of the settlement be spent. This should be accomplished by having Microsoft donate cash grants to the underprivileged K-12 schools which were targeted in the original settlement. The size of the individual grants should be in proportion to the number of students enrolled in the school. The schools should then be directed to spend the money on computer hardware, software, networking infrastructure and Internet connection bandwidth for systems used by the teachers and students, as they best see fit for themselves. I emphasize that these funds be restricted to upgrading the IT infrastructure just mentioned, used directly in the classroom environment. These would be upgrades to system used in general class rooms, libraries, science labs, computer clubs or which ever other teaching forum the school has developed for the teaching of their students. The role of the Foundation, as created in the settlement agreement, should expend its efforts to ensure this funding policy be enforced.

Furthermore, in order to ensure that Microsoft has no part in directing how the settlement funds be spent, the Foundation created to manage the settlement funds should be made up of people from our leading science and education institutions. Examples of the people who should be sought to sit on the blue ribbon board of this foundation would be the head of the National Science Foundation, the head of the National Academy of Sciences, the Presidential Science Adviser, directors of our national

laboratories, presidents of our renown universities, heads of teachers unions, the Secretary of Education, the Secretary of Commerce or other people who have great knowledge of both education, its advancement and the free and open market system upon which the strength of this country is founded. The task of forming a search committee for these board members should be given to you, Honorable Judge Motz, or someone to which you delegates this task.

I wish to thank you for your time and your assistance with this important matter.

Subject: Microsoft Settlement

The Micorsoft settlement is not thorough enough, in my opinion, to keep MS from doing what they are doing to competitors now. It will simply take them a few more days to push out other Operating Systems or software browsers from the market by controlling how the core OS deals with 3rd party software. They need to be made accountable for their lack of support to other vendors who can not sell their products because MS has not made it a priority to help other companies work on a level playing field. By allowing 3rd party vendors to flounder, they can keep their own products in the consumer's homes.

Subject: Microsoft Settlement

I have been involved in the use of computer software for many years now, from long before the domination of the PC by Microsoft. The standardization of software API's is a good thing, but in my opinion Microsoft has brought the software platforms to a mere shadow of what could have been achieved had the programming interface to their OS been truly open. Too many good products have gone by the wayside as MS brought out their own version, often poorly implemented. The WWW is a prime example. I truly dislike the IE explorer, however, the MS implementation of Java has forced web pages to support multiple implementations of Java, with the result often that the only one which works is the one for IE.

This behavior \*must\* be stopped. What does it truly show if the US wins an antitrust suit and then gives a stamp of approval to the same behaviors? In my opinion, the original court order to break up MS didn't go far enough.

Please take the appropriate action with this settlement. Don't let the public down this time.

Subject: Microsoft Settlement

I have been a software engineer developing commercial products for over thirty years. Microsoft is not the first company to dominate my industry by competing unfairly; IBM monopolized the hardware and software market in the mainframe era. Whenever any company dominates the computer industry, innovation suffers. We see only the products that they bring to market and we are denied the progress which comes from competing ideas as embodied in competing products. I enjoy working in software products where there is free competition; my customers get better products because of it. Microsoft has already been found to have indulged in

anticompetitive practices. The plan proposed by the 9 states seems to have some hope of moderating Microsoft's behavior in the future. The plan proposed by the DOJ seems most unlikely to change anything. I would like to see the plan proposed by the states become the judgment enforced by the courts; that might help to restore competition in the personal computer software industry and benefit us all.

From: Paul Cory  
To: Microsoft ATR  
Date: 1/23/02 4:40pm  
Subject: Microsoft Settlement

I object to the proposed Microsoft settlement, on the grounds that it will not effectively inhibit the company's anti-competitive practices. In fact, some of the remedies will actually remove competition from the market. To wit: "Microsoft will license on reasonable terms the network protocols needed for non-Microsoft applications or operating systems to connect to Windows servers."

This allows Microsoft to charge for its basic networking protocols, shutting out Open Source, volunteer produced software, as well as small ISVs. For example, SAMBA is software that allows non-Microsoft operating systems (linux, Mac OS X, OpenBSD, and so on) to connect with Microsoft servers using the Microsoft protocols. SAMBA is an volunteer, Open Source software product: it has no money to pay license fees, no matter how "reasonable." To really open the marketplace, the above quoted section should read: "Microsoft will make the details of the network protocols needed for non-Microsoft applications or operating systems to connect to Windows servers freely available in the public domain in a timely manner. Timely manner means the details will be published publicly six months before such protocols are incorporated into official versions of any Microsoft product."

This would allow anybody, including volunteer projects, to create software to connect to Windows servers. In addition, it prevents Microsoft from delaying the release of the information for competitive advantage.

This is only one example of the many holes, omissions and otherwise questionable provisions of the proposed settlement. A more complete list is available at: <http://www.kegel.com/remedy/remedy2.html>. If the proposed settlement is accepted in its present form, it will not open the marketplace. It will only serve to improve Microsoft's monopoly position, and leave the customer with less choice and higher prices than before.

Sincerely,  
Paul Cory

Date: 1/23/02 4:47pm  
Subject: Microsoft Settlement

To Whom It May Concern,  
It's already happening. Microsoft is attempting to compromise the very integrity of our local, state, and Federal Governments through promises of free and discounted products and services. Is it not clear through past presedent and behaviour that Microsoft is not just a ruthless competitor, but unyielding to the most basic of American Tradition, Principles or Business Morality? Microsoft will not yield in it's endeavor to dominate and control. Ever. There seems no limit to the size of the Microsoft appetite for wealth and power. Nor does there seem any limit to the business, or geographical domain of Microsoft desire. Do We, as Americans, really want to be responsible for creating another global monopoly like DeBeers? Is this in the best interest of either the American people, Innovation, or the Global Economy? I think not.

Microsoft is a convicted corporation. They are a company found guilty in US court of law of serious offenses against the American Public. From past behaviour, indications are that it is highly likely that Microsoft will continue to violate US Law, and trod on American Values. They should be prosecuted accordingly.

January 23, 2002  
Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Dear Ms. Hesse:

I am writing on behalf of the over ten thousand Minnesotans who are involved in the Taxpayers League of Minnesota to express our opinion on the Department of Justice's proposed settlement with Microsoft.

The Taxpayers League of Minnesota has always held the position that pursuing the antitrust case against Microsoft was not in the public interest. Our position has been based on the judgment that the harms to consumers claimed were wholly speculative, while the harm to Microsoft, its shareholders, and the overall economy of pursuing the case are actual and clearly visible. It is our belief that antitrust cases should not be pursued simply to protect competitors in a marketplace, but solely to protect consumers from harm.

We believe that it is in the interests of taxpayers, consumers, stockholders, and Americans interested in the long-term health and vigor of the economy to settle the Microsoft case as quickly as possible. Regardless of the original merits of the antitrust case against Microsoft, it is now clear that continuing to pursue this case will serve no useful purpose. There can be no doubt that the economy functions best when the marketplace, not policymakers, dictates outcomes. We strongly believe that while it is in the public's interest to ensure a competitive marketplace, in practical terms the monopolies that are most destructive are usually created by government, rather than those regulated out of existence. Microsoft's dominance in one or two segments of the

software market has been created not despite, but rather because of a strongly competitive marketplace that has served consumers well. It is a serious mistake to use the coercive powers of government to punish businesses for their success within the marketplace.

The overwhelming preponderance of the evidence suggests that consumers have benefited substantially from Microsoft's competitive business practices. Software is far more flexible and reliable every year, and consumer choice has expanded exponentially due to the ubiquity of home computing and access to the Internet-developments which could not have occurred without Microsoft's relentless innovation and competition in the marketplace.

By almost any reasonable measure, the value delivered to consumers by the computer industry has skyrocketed over the past 20 years-leading to one of the fastest rates of adoption of any new technology in history. It is simply absurd to suggest that the dominance of Microsoft in the personal operating systems market has hurt consumers, when the evidence to the contrary is overwhelming. It would be difficult to argue that the expansion of the internet or home computing could have occurred as quickly as they did without the innovations pushed by Microsoft-including the integration of tcp/ip and Internet browsing capability into the operating system.

The assertion that Microsoft is a destructive monopoly is, in our judgment, rather arbitrary and capricious. Microsoft is clearly not a monopoly in the software business in general. It is not even the dominant player in the operating system market in general-in fact, flavors of UNIX still dominates the server market. In fact, Microsoft's dominance in operating systems is confined to the home computing market, and even there it is confronted with strong competition from Apple Computer's Mac OS X, and the freely distributed Linux operating system.

It is clearly in the nation's interest to resolve this case as quickly as possible. As long as there is substantial uncertainty in the software marketplace, competition and innovation will be inhibited, and the incentive to invest will be reduced. At a time of increased economic uncertainty and reduced business investment, it is vital to remove this drag on the American economy.

Thank you for the opportunity to comment on this matter,

Linda Runbeck,  
President,  
Taxpayers League of Minnesota.

Subject: Microsoft Settlement

Hello;

I am a graduate student at UC Davis, who uses a variety of computing platforms (Mac OS 9/X, Solaris, Linux, Windows) and I am very concerned about Microsoft's monopoly. I think their business practices are extremely harmful, with the lack of competition in both the OS market and the applications (e.g. Office) market being very detrimental to me as a consumer—denying me a choice while raising the cost to me of doing research. There are also clear indications that they are planning to throttle emerging markets with extortionist licensing policies, e.g. the .NET initiative, which threaten to prevent possibly very beneficial competition before it even gets started.

I encourage you to take the necessary steps to punish Microsoft for their clear and willful violations of the Sherman act, and structural steps to prevent future abuses of their market power.

Thank you,  
Bill Gilliland  
Davis, Ca

Washington, DC 20530-0001

[Reprinted with permission of the original author: Brian Koppe, Buffalo Grove, IL]

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. It is my understanding that the purpose of the Proposed Final Judgement should be to reduce, as much as possible, the Applications Barrier to Entry. In other words, make it the market more open to competition from other products. After reading the Proposed Final Judgement and multiple essays on its problems and benefits, I have noticed many things that I take issue with. However, I'd like to focus on one in particular. This problem is in the issue of Microsoft End User License Agreements (EULA). It has been shown that Microsoft creates EULA's that place anticompetitive restrictions on the user, and that Microsoft has intentionally created incompatibilities to keep users from using Windows applications on compatible operating systems that are not Windows. One example of this is in the license agreement for the Microsoft software, NewsAlert—offered by MSNBC. In that license it says, "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.]. ..." Users of competing operating systems, such as Linux, which are capable of running some Windows applications are not legally capable, under

this restrictive license, to use this program. One suggestion as to how restrictive licenses such as this should be forced to be changed is for the excerpt above to be re-written as follows: "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system." In the past, it has been shown that Microsoft places technical barriers on competition as well. The 1996 Caldera v. Microsoft case shows how Microsoft added code to its product so that, when run on a competing operating system (DR-DOS in this case), it would give the user an error. As I'm sure you can easily look up, the judge ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." Unfortunately, with the Proposed Final Judgement as it stands, there is no language to prohibit these restrictive licenses nor is there language to prohibit future intentional incompatibilities.

Therefore, in its current state, the Proposed Final Judgement assists Microsoft in continuing these actions and does not succeed in opening the Applications Barrier to Entry. In closing, I would like to add my support for Dan Kegeles's essay, "On the Proposed Final Judgement in United States v. Microsoft," located at <http://www.kegeles.com/remedy/remedy2.html>, which is the source of the facts I have included in this letter. I would also like to add my support for his suggested amendments to the Proposed Final Judgement, which are described near the end of his essay, and to the alternate settlement proposed by some of the plaintiff states and located on the website for the National Association of Attorneys General at <http://www.naag.org/features/microsoft/ms-remedy-filing.pdf>.

Sincerely,  
Bree Baskin

As a practicing lawyer completely uninvolved with the antitrust case against

Microsoft, I firmly support the proposed settlement for the following reasons:

1. It is in the best interest of the consuming public;
2. It is a saving to the taxpayers by bringing to an end this expensive litigation;
3. It creates an even "playing field" for Microsoft's competitors who were primarily responsible for bringing pressure on the Department of Justice to initiate the original litigation against Microsoft.

This letter is written by a private citizen who believes wholeheartedly in the free enterprise system.

Subject: Microsoft Settlement

I am writing to express my strong disapproval with the proposed Microsoft settlement. The proposed settlement fails to protect consumers and competitors, and fails to punish a convicted monopolist. Basic economics teaches that monopolies extract capital from consumers which otherwise would be available to them in a free market. This money needs to be returned to the public, even if through fines paid to the FTC. The proposed settlement does not do this.

Of the many problems with the settlement, I can comment on the problems with Definition J of Microsoft Middleware. By extending its operating system to include functions which are clearly in the application domain, Microsoft in the past killed competition by using their monopoly to obsolete legitimate applications from third parties. This allows them to remove a competitor in their application business without having to compete in the open market. Definition J is contrary to all established definitions of middleware which would protect consumers. Instead it allows multiple "loop holes" for Microsoft to use to continue their illegal and anti-competitive behavior. Middleware is a set of API's that allow a clear distinction between application and operating system. Simply changing version numbers, or sending code as an update, does not change this definition. Yet Definition J allows both obvious and blatant loopholes to allow a non-standard, and favorable to Microsoft, definiti! on of middleware. This must be changed if their is to be any attempt at a fair settlement.

Re: Microsoft Settlement

The settlement purposed for case United States v. Microsoft is not acceptable to me as a consumer. Microsoft's anticompetitive actions over the past decade have forced consumers to accept poor quality software in order to use desired quality software. If it were possible to choose the operating system platform on hardware purchased at the consumer and business level, the consumer would do so. A settlement must robustly support the entry of alternative operating systems in the market at Microsoft's expense. There must be a level-playing field for the consumer to make a judgement about which product to purchase. I make these statements solely on my personal opinion. I do not speak for my employer or any other individual or entity. I do speak as a consumer and computer professional.

Thank you,  
Barbara O'Connell

From: James Kelly  
To: Microsoft ATR  
Date: 1/23/02 4:46pm  
Subject: Microsoft Settlement

Sirs,  
The proposed settlement is not going to be successful. What needs to be done in its place is to require Microsoft to support an open, standards-body-based document-interchange format for all of their office productivity applications, rather than allowing them to continue to control the office productivity market through their control of de-facto "standard" document formats. This will allow real competition in the office productivity suite market. Also, there needs to be an appointed, single, powerful, special master: one knowledgeable individual with the experience to understand Microsoft's evasive tactics and the power to force their compliance with the terms of the settlement.

From: Michael Cole  
To: Microsoft ATR  
Date: 1/23/02 4:45pm  
Subject: Microsoft Settlement

Hello, my name is Michael Cole. I live in San Francisco California. I am writing about the proposed Microsoft Settlement. I am against the proposed settlement. I think the settlement is weak and changes very little with regards to Microsoft's ability to bully

OEM's. Microsoft has shown little good faith in the past and the proposed settlement depends heavily on that good-faith. The publishing of documentation about the API's does VERY little to limit their monopoly. These API's can change at any time and don't even need to be documented well. How exactly does requiring a monopolist to publish how their product works equate to a remedy for their monopoly? In closing, I think the settlement has very little teeth and will, in the end, only secure Microsoft's position as a monopolist by providing a way for them to say "look, I follow these rules, I CANT be a monopoly" Please consider a more permanent, structural change to the company—a settlement that does not rest on their good-faith.

Best regards,  
Michael Cole

Date: 1/23/02 4:46pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. In particular, I am concerned that the PFJ fails to prohibit anticompetitive license terms currently used by Microsoft. For example: Microsoft created intentional incompatibilities in Windows 3.1 to discourage the use of non-Microsoft operating systems. A portion of the 1996 *Caldera v. Microsoft* antitrust lawsuit illustrates how Microsoft has used technical means anticompetitively. Quote from <http://www.kegel.com/remedy/remedy2.html>, Dan Kegel's essay on the PFJ: "Microsoft's original operating system was called MS-DOS. Programs used the DOS API to call up the services of the operating system. Digital Research offered a competing operating system, DR-DOS, that also implemented the DOS API, and could run programs written for MS-DOS. Windows 3.1 and earlier were not operating systems per se, but rather middleware that used the DOS API to interoperate with the operating system. Microsoft was concerned with the competitive threat posed by DR-DOS, and added code to beta copies of Windows 3.1 so it would display spurious and misleading error messages when run on DR-DOS. Digital Research's successor company, Caldera, brought a private antitrust suit against Microsoft in 1996. (See the original complaint, and Caldera's consolidated response to Microsoft's motions for partial summary judgment.) The judge in the case ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." That case was settled out of court in 1999, and no court has fully explored the alleged conduct. The concern here is that, as competing operating systems emerge which are able to run Windows applications, Microsoft might try to sabotage Windows applications, middleware, and development tools so that they cannot run on non-

Microsoft operating systems, just as they did earlier with Windows 3.1. The PFJ as currently written does nothing to prohibit these kinds of restrictive licenses and intentional incompatibilities, and thus encourages Microsoft to use these techniques to enhance the Applications Barrier to Entry, and harming those consumers who use non-Microsoft operating systems and wish to use Microsoft applications software." The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 4:48pm  
Subject: Microsoft Settlement

I am opposed to the proposed Microsoft Anti-trust settlement. There does not appear to be anything within the settlement that

"denies to the defendant the fruits of its statutory violation" as required by the Court of Appeals. There are also a great many technical terms within the proposed agreement that are not defined, and others that are too narrowly defined, leaving the door wide open for interpretations that would render the settlement meaningless. Bill Gates' own deposition showed an amazing willingness to stretch the meaning of ordinary language beyond all reasonable comprehension. Please review his video deposition while thinking about what he might think the language of the settlement means to him. The bundling of Internet Explorer into Windows seemed to me to twist the meaning of the terms in the original consent decree, and the Justice Department thought so too.

The proposed settlement does very little to actually lower the barrier to competition and nothing to penalize the company for its misconduct. No doubt, Microsoft has already reaped billions of dollars additional revenue due to their illegal conduct, and the resulting additional strength of their monopoly position from their illegal conduct will not be diminished by the proposed settlement. It appears to be a sweetheart deal given to an un-repentant corporation that knowingly engaged in criminal conduct. There is also very little likelihood that Microsoft's future behavior will actually conform to what the Justice department thinks it is agreeing to. I expect that there will be endless litigation about the meaning of terms like "middle ware", just as all ordinary terms like "bundled", "integrated" etc. were disputed in the trial court. Minor modification to the proposed settlement will do little to fix its problems. It must be scrapped in favor of one that will actually serve to increase competition in the marketplace and really deprive Microsoft of the fruits of its illegal conduct.

Date: 1/23/02 4:45pm  
Subject: Microsoft Settlement  
Sir:

I do not agree with the proposed Microsoft settlement. It does not address any of the issues at hand in a significant fashion.

Letting the current settlement stand amounts to nothing less than complete capitulation on the part of the government. Once, there was a vibrant, competitive desktop software industry. Now, the desktop is dead and stagnant. People are, for the most part, forced to use Microsoft's substandard crapware because the great MS used their monopoly to crush anyone else writing software for the desktop. They did it with Netscape, with Wordstar, with a thousand other apps they thought might threaten their profits. The desktop is dead because Microsoft likes it that way. Now you're probably being deluged with jerks writing on the behest of Sun or Microsoft, saying that they're Writing Out of Civic Concern (while their manager prods them on). I am not writing for either of those reasons. I am writing you because I am Damn Well Pissed Off. I am angry because my mother reboots her PC three times a day in order to do her accounting practice, and it doesn't occur to her to find something better or get something better because theres NOTHING ELSE. I am angry because Microsoft is the sole Ma Bell in a country that cant have an MCI or a Supra Telecom or a Sprint because Ma Bell owns all the copper wires, all the terminals, and all the equipment attached to it, and buries anyone who tries to introduce a competing product with its monopoly power. I am angry because whenever someone comes up with a Windows-compatible operating system, Microsoft sues them, and the government complacently looks at this blatant anticompetitive behavior and does nothing. Bill Gates said it himself—"better doesn't matter." Dont let Microsoft get away with this crap. Read Dan Kegel's open letter here: <http://www.kegel.com/remedy/letter.html> and learn why Microsoft does not deserve your pity.

January 22, 2002  
Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530  
Dear Mr. Ashcroft:

The intention of this letter is for me to go on record as being a supporter of the settlement that was reached between Microsoft and the Department of Justice. I was never supportive of the antitrust settlement against Microsoft in the first place, but am relieved to see that the lawsuit has been settled.

The government now has the ability to turn its attention to more pressing issues, and can stop wasting taxpayer dollars on the pursuit of Microsoft. Both sides involved have spent way too much time and money on this, and I hope that the settlement will be the answer

that we need. The economy is in the dumps, and one thing that could have a positive affect on that is a healthy Microsoft. Microsoft has agreed to enhance its communication with competitors so that everyone in the industry will be able to produce a product that is compatible with Windows. This will enhance the market and stimulate the economy.

I support the settlement, and hope that it is approved as soon as possible.

Sincerely,  
Chris Bengtson

From: Robert McNeill  
To: Microsoft ATR  
Date: 1/23/02 4:45pm  
Subject: Microsoft Settlement

Microsoft has been predatory in their practices, ranging from threatening retailers if Windows was not pre-installed on computers to their practice of using secrets of the operating system to advance their own Office and Language products. They threaten those who would allow Microsoft's own products to work on other operating systems and try to force them out of business. Their harassment has gone on long enough. It's time to end this. No settlement where Microsoft is allowed to further their kingdom by giving away copies of it's products will solve the problem. If the company is not broken up into separate entities to allow fair competition, at least force them to stop suing people who make products that could potentially undermine their marketing domain. Force them to open up all the features of their product to allow fair competition. This case has gone on too long and has cost the tax payers and Microsoft's competition too much money. Please end this soon and stop Microsoft from advancing their

kingdom by suing everyone who tries to compete with them.

Robert McNeill

Subject: Microsoft Settlement

The proposed settlement with Microsoft is an ineffectual slap on the wrist. If accepted, it will be a horrible blow to the future of the technology industry in the United States. Regardless of what they claim, Microsoft innovated very little technology in the course of it's history. Microsoft has stolen ideas, bought and crushed innovators, and done it's best to squeeze the lifeblood out of truly innovative competition. It's a guarantee that if Microsoft does it, someone else did it better, sooner. MS-DOS, Windows, DirectX, IIS, XBox, and .Net are all examples of technologies that were done better, sooner, by other companies, but were forced out of the market by Microsoft's predatory tactics.

As a computer professional, with a computer science degree, in my experience I have found that a Microsoft solution is invariably technically inferior to it's competitors. I have also found that, with ever increasing regularity, I am forced to use the Microsoft solution because of incompatibility issues that have no technical justification, but are in place only to discourage the use of competing products.

This nation was built on innovation and the ability to produce the best products. Our future in the world economy depends on it. The currently proposed DOJ settlement will ensure that we are only able to progress at a pace that Microsoft dictates, and in a manner with which they approve. If this settlement is accepted, I will lose a lot of respect for the judicial system. I could draw no other conclusion but that the judicial system completely catered to Microsoft's interests, regardless of law, and at the expense of the progress of technology and free enterprise.

 Date: 1/23/02 4:49pm  
 Subject: Microsoft Settlement

I am a technical consultant based in Tennessee. I have been using microprocessors since my Cornell undergraduate project in 1973. I probably was the first student at Cornell to design a microprocessor into a piece of equipment. I would like to comment on the proposed settlement of US vs. Microsoft. I do not believe it solves the illegal anticompetitive actions of Microsoft in two important areas:

1. Dual boot of operating systems.
2. Availability of source code to the "free software" community.

1. Dual Boot. All computers have the ability to have multiple operating systems (OS) resident on their hard drives. As the computer is booting it can ask the user which OS he/she wants to use. This is very common among technically savvy users at the present time. Unfortunately, MS has limited its OEMs from offering this on the systems that they sell with Windows preinstalled. This the kind anticompetitive action that effectively keep the less technical user from experimenting with other operating systems. I believe that MS should be prevented from restricting its licensees from offering dual boot systems.

2. Availability of source code and protocols. MS has said that they will allow businesses to view its source code and protocols. The problem is that MS gets to decide on its own who a legitimate business is. The free software movement is one of MS's principal competitors. If MS is allowed to shield its code and protocols from the writers of Apache, Linux, etc. then they will not, in reality, be disclosing this information to the people who can best use it for competitive products. I believe that a body other than MS should be the gate keeper to the code and protocols. This body should be independent of MS and be under the control of the court.

Thank you for your consideration.

 Subject: Microsoft Settlement

I am opposed to the proposed settlement in the Microsoft antitrust trial. As an eight year veteran of the computer industry who has worked for both competitors and advocates of Microsoft, I feel that the proposed restrictions are too narrow in scope and will do little to prevent Microsoft from maintaining and expanding its monopoly. I believe this will have an ongoing negative impact on the consumer and is thus not in the public interest.

To improve the proposal, I would suggest adding specific rights of interoperability to free software projects. These projects are some of Microsofts key competitors, but appear to be almost forgotten by the currently proposed settlement. I also do not believe the

current provisions for enforcement are adequate, and that an oversight committee with real powers of enforcement should be added rather than sending further violations back to the courts where they may take years to be resolved.

Subject: Microsoft Settlement

I am writing to express my extreme displeasure with the conditions of the Microsoft Settlement.

Specifically, three sections are lacking:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems.

Additionally, Microsoft has continuously acted in a manner contrary to both the law and previous settlements/court agreements. I strongly urge the Department of Justice and the Courts to enforce a much stricter settlement with Microsoft.

Sincerely,

Kenneth J Curtis Jr

To: Microsoft ATR

Date: 1/23/02 6:02pm

Subject: Microsoft Settlement

I strongly oppose the settlement proposed between several of the states and federal government with Microsoft. Although I do not necessarily agree that the original court-imposed remedy—a breakup—is warranted, I do believe that substantial sanctions and reasonable oversight are called for in this matter.

Neither is provided for fully in the settlement. I believe that the federal government—which represents all those hurt by Microsoft's criminal actions; but especially people like me, who live in a state where the attorney general refuses to protect the citizens from that criminal organization—should rejoin the states who recognize the inadequacy of the proposal.

Further, I believe that the government should step in and try to prevent the ludicrous proposal for settlement of numerous private suits, that would actually allow Microsoft to extend its monopoly.

Subject: Microsoft Settlement

As a developer for open-sourced software, I am extremely concerned about the recent proposed settlement to the landmark anti-trust case against Microsoft Corporation. I feel that the settlement does not go far enough in providing a remedy for the incalculable damage Microsoft's illegal business practices have caused the industry I work in, nor does it adequately address Microsoft's continued anti-competitive behavior, and that it fails to provide a solution that helps to reduce Microsoft's ability to do further damage, even in the light of Microsoft's complete lack of acknowledgement or contrition. Particularly troubling is the idea that allowing Microsoft to place thousands of computers running its operating systems and other software in front of students in public schools is somehow a solution to its stranglehold on the desktop industry rather than a way to increase Microsoft's dominance. Microsoft has been shown to have acted illegally. The software industry needs the protection of the Dept of Justice from further abuses, not a free license for Microsoft to continue its anti-competitive behavior.

Date: 1/23/02 4:56pm

Subject: Microsoft Settlement

To Whom It May Concern: The proposed settlement is a bad one; please reject it and have the DoJ and the states go back and draft something that will address the facts found in the District court case. A unanimous US Court of Appeals agreed that Microsoft had illegally kept its monopoly position by preying on other software developers and computer manufacturers. The bottom line is that Microsoft operated illegally, and any settlement or resolution of this case should make sure the company cannot continue its anticompetitive behavior. Unfortunately the proposed solution does not do this. In many ways, it actually reinforces Microsoft's monopoly, and does nothing to restrain Microsoft from acting illegally again in future markets.

Indeed, Microsoft has already shown they intend to continue to piggyback off their illegally obtained operating system monopoly to crush more markets. As an example, look at the "give away" of millions of dollars of development effort in their Media Player, which is unnecessarily "integrated" into WindowsXP—and is targeted at the RealPlayer product line, in order to crush it, in the same way they did the Netscape Browser. Microsoft, unlike its competitors, simply rolls the development cost into their illegally obtained monopoly operating system, and undercuts the competition unfairly. Yet the proposed settlement does not address preventing this sort of monopolistic behavior at all. Remember, developing a media player, a browser and other software costs money, and Microsoft leverages their monopoly to mask these costs while smashing competition unfairly. The Circuit court in its 7-0 decision, and lower courts found this "bundling" illegal and monopolistic, yet the settlement does not address this in any sort of meaningful fashion: it allows Microsoft to tightly integrate and bundle its media player, its web browser, and myriad other applications into the Windows Operating System, instead of competing freely against external applications.

Also, the proposed settlement contains no provisions to remedy the unlawful monopolization of the operating system; nothing that will produce competition. Remember that the Circuit court ordered that a remedy must "unfetter the market from anticompetitive conduct... [and] .. terminate the illegal monopoly", the proposed settlement does nothing of the sort. Its attempt to open the "API" (programming interface) of the Windows operating system will merely reinforce the monopoly, not terminate it as the court called for. Also opening the API is not enough: Microsoft plans only to open a mere a subset. Complete and full disclosure of ALL the source-code is the only "opening" that would suffice to terminate the Microsoft monopoly.

Finally, the proposed settlement does nothing at all to address the issue of effective remedy along side enforcement. the proposed penalties are ludicrous—an extension of terms that they have already violated is hardly a punishment. Fiduciary penalties must be applied, as well as structural ones. Also, the solutions proposed for "competition" are heavily dependent upon Original Equipment Manufacturers for implementation—the same OEMs who are partners and part of Microsoft's business plans (Such as Dell and Compaq). In sum, this settlement is wholly inadequate, and should be rejected and the DoJ and the States should be directed to follow the rulings of the Circuit Court and lower courts when crafting a settlement, instead of ignoring the findings of fact and law, and currying favor with an unrepentant lawbreaking monopolist.

From: Patrick Waites

To: Microsoft ATR  
Date: 1/23/02 4:50pm  
Subject: Microsoft Settlement

I think the proposed settlement is a bad idea. Here is my reasoning why. In the early 90's there were three major competing desktop operating systems: Microsoft's Windows, IBM's OS2Warp, and Apple's Macintosh. Then Microsoft launched into there current business plan and killed all competition. OS2Warp is dead, Macintosh has lost major percentage points in the market and very little if any other products have appeared. During all this Microsoft continues to reign and grow. There is Linux, but the average user will not use Linux. The learning curve is too high. Microsoft's business practices stifled the market from presenting competing Operating systems. Developers only write software for Microsoft. Other existing operating systems cannot run software written for Microsoft unless it is recompiled and modified. Even with sanctions made against Microsoft, Developers will still only write software for Microsoft. There are not any other Operating systems that can run these programs. That means that MS Windows will still be the only Operating system for people to use. The only way to stimulate competition in the market again is to some how make it possible for other operating systems to be created that can run software written for Microsoft and still be just as easy to use. There are not many if any candidates for this. I do not see how the current proposal will help this issue. All it does is slap Microsoft in the wrist and allow them to still be the only game in town.

From: Frank Iacovino  
To: Microsoft ATR  
Date: 1/23/02 4:56pm  
Subject: Microsoft Settlement

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely: \*The PFJ doesn't take into account Windows-compatible competing operating systems <http://www.kegel.com/remedy/remedy2.html#abe> Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. \*The PFJ Contains Misleading and Overly Narrow Definitions and Provisions <http://www.kegel.com/remedy/remedy2.html#def.a> The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. <http://www.kegel.com/remedy/remedy2.html#def.j> The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. <http://www.kegel.com/remedy/remedy2.html#def.k>

The PFJ allows users to replace Microsoft Java with a competitor's product— but

Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. <http://www.kegel.com/remedy/remedy2.html#def.u> The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box— operating systems that all use the Win32 API and are advertised as being "Windows Powered". <http://www.kegel.com/remedy/remedy2.html#info.requirements>

The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. <http://www.kegel.com/remedy/remedy2.html#info.timing> The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. <http://www.kegel.com/remedy/remedy2.html#info.use> The PFJ requires Microsoft to release API documentation— but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. <http://www.kegel.com/remedy/remedy2.html#info.formats> The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents. <http://www.kegel.com/remedy/remedy2.html#info.patents> The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents?

This can scare away potential users. \*The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft <http://www.kegel.com/remedy/remedy2.html#isv.oss> Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. <http://www.kegel.com/remedy/remedy2.html#isv.atl> Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. <http://www.kegel.com/remedy/remedy2.html#enterprise> Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux!

(Similar licenses to OEMs were once banned by the 1994 consent decree.) \*The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft <http://www.kegel.com/remedy/remedy2.html#caldere>

Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. \*The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs <http://www.kegel.com/remedy/remedy2.html#oem> The PFJ allows

Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. <http://www.kegel.com/remedy/remedy2.html#oem> The PFJ allows Microsoft to discriminate against small OEMs — including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software. <http://www.kegel.com/remedy/remedy2.html#oem.mda> The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. <http://www.kegel.com/remedy/remedy2.html#enforcement> The PFJ as currently written appears to lack an effective enforcement mechanism.

I also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,  
Frank Iacovino

The proposed settlement with Microsoft is the worst antitrust "remedy" I've ever heard of. It looks like it was written by Microsoft and submitted to the DoJ for their rubber stamp. All it does is give Microsoft a huge tax break now, and an even stronger stranglehold on future computer users.

The only way to bring any level of competition back to the computer environment is to break Microsoft up into, at the very minimum, two separate companies... one for the OS and one for the applications. That way, the OS side cannot mandate the inclusion of applications (like Internet Explorer) to stifle competition, and the application side has a genuine incentive to produce applications for other operating systems, like a port of Office to Linux.

Date: 1/23/02 4:57pm  
Subject: Microsoft Settlement

This settlement is a disgrace. Not only does it not effectively dismantle the giant Microsoft Corporation, it allows them to basically operate the exact same manner with only a few modifications to their corporate structure. I use multiple platforms including Windows and other Microsoft Products, so this is not a biased submission. Yet again Microsoft will be able to buy their way through this, thus eliminating the effective competitive market that the antitrust laws were established to protect. A much harsher penalty needs to be sought.

Subject: Microsoft Settlement

I am an American citizen and a former Marine from the state of Washington (currently residing in British Columbia, Canada) and I oppose the settlement reached between Microsoft and the Department of Justice in the current federal anti-trust case presented against Microsoft. Microsoft is not accused of the vast majority of illegal actions that company has committed, they are not punished for the few illegal actions that they admit to performing, they promise to only cease those illegal actions that are no longer profitable for them, there are no mechanisms in the settlement to enforce Microsofts' compliance should they decide to once again perform the aforementioned currently unprofitable illegal actions and the wording of the settlement gives Microsoft free reign to commit further anti-competitive actions against their business rivals. Given the fact that Microsoft has violated the previous consent decree they entered in 1994 there should be no reason for the US Department of Justice to believe that Microsoft will abide by a settlement that can be interpreted as not pertaining to Microsoft at all and has no enforcement mechanisms even if it is applied to Microsofts' actions. I am grateful for the Tunney Act which allows me to make my opinion known in regards to this settlement the DOJ is attempting to inflict upon both the American people and the world. I am opposed.

From: Bediako George  
To: Microsoft ATR  
Date: 1/23/02 4:58pm  
Subject: Microsoft Settlement

Dear Mz. Hesse and to whom it may concern, My name is Bediako George and I am a developer of server side applications using a variety of languages on a variety of operating systems. I currently make my living working for a small start up in the DC Metropolitan area. Like most people in the software industry I have been following the saga of the Microsoft Antitrust case with great interest. I believe I have a lot of background knowledge as to the particulars concerning this case. I also have a very good understanding of operating systems, large application development, proprietary software manufacturing, and open source development.

I am writing to express my dissatisfaction with the current proposal to allow Microsoft to pay for it's past indiscretions by provided "free" software to schools. I fail to understand how this punishes Microsoft for the following reasons: 1> Software has a massive initial development cost associated with its creation. After this initial cost the price for creating a new copy is minimal if not negligible. In fact it could be equated to the price of copying the software to a popular form of persistent media (A compact disk for instance). To allow Microsoft to "get of the hook" for the mere cost of a several hundred thousand CDs and equate this to the market value of their software is silly.

2> This "punishment" only serves to increase Microsoft's stranglehold on the operating system and applications business. By allowing Microsoft to grant their software to schools you are shutting out other legitimate software vendors, thus further choking the desktop software market.

3> Any secondary goal involving teaching computers science to children to facilitate technical learning in our schools will not be achieved. Largely because Microsoft's proprietary operating system OS is a secret. In much the same way as you would not expect a auto mechanic apprentice to learn about engines on Ford motor car with it's hood welded shut, you would not expect students to learn about application development with closed, secretive proprietary code. Since the source code of Microsoft's operating system is a secret, students will not be able to learn about the inner workings of an OS. For these reasons I think the proposed settlement is a bad idea. There has been much arguing back and forth about what Microsoft should do.

After much thought on this matter I have come to the conclusion that there is really only one way to punish Microsoft and make sure it doesn't happen again. Here is my suggestion:

1> Require Microsoft to pay a fine of 1 billion dollars. This fine should be viewed as a fine and not as a donation. In other words Microsoft should not be allowed to use this fine payment as a public relations advantage. When the fine is paid the money could then be donated to the schools or something equally worthwhile.

2> Require Microsoft to expose the META language surrounding it's Word and Excel document formats. Require Microsoft to publish proposed changes to its format immediately.

I think the combination of these two points will sufficiently punish Microsoft for it's past

indiscretions as well ensure that it's monopolistic behaviour does not continue in the future.

Regards,  
Bediako George  
Software Developer

Subject: Microsoft Settlement

More needs to be done to stop Microsoft becoming the sole owner of computer technology and software. It has reached the point where business says.... "No body gets fired for buying Microsoft products". I believe a lot more needs to be done to address this situation.

(1) Force Microsoft to provide versions of its OFFICE and OTHER non-operating system products on other platforms. -Word, Excel, PowerPoint, Access, SqlServer, Project, MSMoney, Encarta for Linux, MacOSX, etc.

(2) Force Microsoft to STICK with a STANDARD. Instead of grabbing a standard then modifying it to become proprietary.

(3) Stop customers from having to purchase a machine with Windows pre-installed. A lot of vendors only offer machines with a version of windows installed, regardless of the fact you already have a license or would like to run linux or other operating system.

(4) Force Microsoft to implement other vendors standards in their operating system. Ie. They MUST include JAVA, FLASH, SHOCKWAVE, etc... By DEFAULT. NOT as an OPTIONAL download.

Public Feedback as allowed and required under the Tunney Act.

The Proposed Final Judgement has many flaws, given it's stated goal of preventing Microsoft from further abusing their monopoly power and punishing them for their violations of the law that they have already been convicted of, that were upheld by the appeals court. Many of these problems have been noted by legal scholars, lawyers, judges, and laypeople, including such people as judge Robert Bork. But perhaps the single largest problem with the proposed judgement is that it entirely lacks any method of enforcement or punishment for violation of the agreement. There is no mention of any sort of fine, penalty, or other recourse if the agreement is violated, other than extending the agreement for an additional two years, with the same lack of enforcement.

Lest it be forgotten, much of the current anti-trust case against Microsoft came about because Microsoft ignored previous settlements and agreements and continued the illegal and unethical extension of their monopoly, into other areas and by squashing or buying up any potential competitors, and keeping the barriers to entry as high as possible.

Given Microsoft's long history of abuses, intentionally "breaking" their software so other vendors' software no longer worked properly, using their desktop monopoly to gain footholds into other markets, such as the web browser market, changing file formats or portions of code to deliberately make other vendors' applications incompatible with Microsoft's, their restrictive licensing agreements with OEMs, their license agreements with companies that charge by computers that could run Windows, not that actually do, their blatant disregard for the law and earlier settlements, and their misleading and outright false testimony in the original trial, any agreement that is in the public interest must have clearly defined penalties and strict enforcement guidelines, along with rules that actually address the past history of Microsoft and will prevent future abuses. In all these ways, the current Proposed Final Judgement fails.

For more in-depth and complete coverage of the flaws of the Proposed Final Judgement, the webpage <http://www.kegel.com/remedy/remedy2.html> is a very good source.

I highly object to the settlement. In short, I agree with the article from Infoworld (RUSSELL PAVLICEK: "The Open Source" from InfoWorld.com, Wednesday, January 23, 2002). Require Microsoft to provide hardware and money for software, but —DO—NOT—allow them to provide any Microsoft software or hardware to the schools. They do not need to control yet another market. Have they not done enough harm already? In fact, they continue to do even more harm, seemingly ignoring the DOJ case altogether.

Subject: AOL-what a bunch of money  
grubbers

It's beyon my comprehension that any judge or jury could find AOL's latest case against Microsoft anything but vicious manipulation of the justice system. They have calculated this move from the moment they purchased Netscape, but have done NOTHING to improve Netscape to enable it to compete in the marketplace. Look into the resources they took away from Netscape after it was bought. This current move is ludicrous and just an attempt to further complicate matters for a terrific company (Microsoft) that is always looking out for their customers. It's time for the DOJ to put competition back in the marketplace, let customers decide what services they want from companies. Geez if Netscape was worth its salt, people would happily spend a few bucks to purchase it. I'd like to point out that there are plenty of other browsers available in the marketplace, not everyone cares to or does use IE. These charges from AOL are outlandish and should be thrown out.

From: Derek Petersen  
 To: Microsoft ATR  
 Date: 1/23/02 8:16pm  
 Subject: Microsoft Settlement

I am at work and have little time to write. However I think it is totally ridiculous what Microsoft has gotten away with. They've wiped out competition ruining various markets. Netscape had an almost 80% market share using no "dirty methods" (making their browser available the same way as all others). Microsoft then bought a browser from a company called "Mosaic", Mosaic agreed to sell it to Microsoft only if Microsoft agreed to pay Mosaic royalties for the product (at the time most browsers were being sold). So what does Microsoft do? They release it for free. Just like John Rockefeller and the oil companies. Microsoft was the only one who could afford to release the browser for free at the time so people started switching over to that. Microsoft was able to simply absorb the cost, while at the same time screwing Mosaic. Then Netscape decided to offer their browser for free (destroying any chance of making a profit). Microsoft was unable to persuade people to use their browser over Netscape or others. At this point it was about 70% NS, 25% IE. So in the next version of their operating system Microsoft not only included Internet Explorer with it, they integrated it so deeply that users would be unable to remove the product even if they didn't want to use it. Especially forcing their way into the market using their monopoly of the OS market. A few years later it went from 70/25 in Netscape's favor, to about 90/5 in Microsoft's favor. Then it caused anti-trust issues and they were deemed an illegal monopoly due to their actions. So what do they do when they release their latest OS (WindowsXP)? They do the same exact thing, but even to a greater extent. That is like robbing a bank after getting out of jail for shop lifting. Which is pretty much sticking your tongue out at the courts saying "haha, you can't get me!". I hope that you take action which will help this matter. The settlement with the DOJ was embarrassingly lenient. Microsoft came up with harsher settlement terms in the past than what the DOJ settled with. I have already written much more than I planned or really had time to. Please excuse the spelling or grammar errors I may have made. I am trying to type this ASAP as I do not have much time right now.

Thank you,  
 Derek Petersen  
 Please take these thoughts into consideration...

From: Fred Fenner  
 To: Microsoft ATR  
 Date: 1/24/02 2:29am  
 Subject: Microsoft Settlement

To whom it may concern, The settlement proposed in the case against Microsoft (MS) will \*not\* resolve the problems that prompted the case. This case was not about saving Sun Microsystems and Netscape from the abuses of MS. These two companies have both in their own way tried to do what MS has in abusing its monopoly position in the

market. Netscape was well on its way to destroying all other web browsers when MS came along and did the same to them, so I have ZERO sympathy for Netscape. Sun's efforts to control Java while trying to make it a "standard" are contradictory at best. The problem that needs to be addressed in the MS antitrust settlement is "how do we make the market more competitive?". Breaking up MS won't work because you'll have 2+ "baby Bills" out there pulling the same shenanigans. The antitrust suit against IBM was dropped (for good reason), because IBM had reforming its practices enough to make the case irrelevant. MS has proven time and again they have zero respect for the "rule of law", and figure they can get away with anything through delay tactics, PR, and huge campaign donations.

The current MS "abuse of monopoly" is no longer a Windows problem, but is an OFFICE problem. The Office Suite product line is the MS cash cow, and MS used Windows to create its Office monopoly. MS has control of the desktop OS market, and only time can erode their commanding market share there. The key to getting MS to behave is force them to make MS-Office run on at minimum 3 other Operating Systems with the same exact functionality as the Windows version for 10 years. Next they must also be forced to stop giving discounts on Windows to OEMs that "play ball" by not promoting non-MS products. If MS wants to make a donation to the schools as part of any settlement, then it should be "hardware only" for any monetary value. If they also want to donate the software, then it must be completely free and include unlimited usage licenses. This will allow schools to decide if they want MS products for free or Open Source products at the same price.

 Subject: Microsoft Settlement Objection

I object to the Proposed Final Judgment in United States v Microsoft Corp, Civil Action No. 98-1232 (CKK) also now referred to as "Track I", and would like to express those objections herein. Under the Antitrust Procedures and Penalties Act (15 U.S.C. ? 16(d), the "Tunney Act"), the court is required to consider public commentary before accepting any settlement.

I should preface my comments by saying that I am a long-time user of Microsoft Windows, Internet Explorer, and Microsoft Office; in fact, I'm using them to research the subject and write this message. Everyone can agree that Microsoft is a very successful corporation, and I am not against businesses being profitable. I draw the line at a company demonstrating themselves to be arrogant and beyond reproach, even bordering on flippant, when faced with the scrutiny of the United States Department of Justice. Microsoft is this company. They have shown time and again, regardless of any finding or judgment, that they will continue to do as they please.

Although you are probably familiar with the following points, they illustrate how

Microsoft has shown no intention of acting lawfully: \*Microsoft and the Justice Department signed a consent decree in 1994 limiting Microsoft's actions until the year 2000. Even though later upheld by U.S. District Judge Thomas Penfield Jackson in 1995, Microsoft essentially ignored it. Result: The competing Netscape browser is all but gone today, left with a dwindling market share. Consider this alongside a later discovery that various Microsoft software code had the phrase "Netscape engineers are weenies!" hidden inside. \*Regarding Case No. 2:96-CV-645 B; Dist. of Utah—Central Div., Caldera Inc. v Microsoft Corp., the court ruled in 1996 that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." The resulting settlement was confidential. \*DoJ wanted to fine Microsoft \$1 million a day in 1997 for bundling Internet Explorer with Windows 95, in violation of the consent decree. A preliminary injunction was issued against Microsoft, who appealed and then offered computer makers old or "broken" version of Windows 95 without Internet Explorer. DoJ asked that Microsoft be held in contempt for failing to obey the order. Which brings us to 2002. Ostensibly, the purpose of this action is to punish Microsoft for breaking the law, and keep them from violating it again. But simply making them sign something, promising they will no longer operate illegally, in no way prevents them from actually doing it, as evidenced above. As stated in United States v E. I. Dupont de Nemours & Co, 366 U.S. 316, 232 (1966), the Court of Appeals said, "The suit has been a futile exercise if the Government proves a violation but fails to secure a remedy adequate to address it."

Worse yet, the Proposed Final Judgment (PFJ) is flawed in several ways. The two items that concern me most are:

1. The "Findings of Fact ? 28" define "middleware" to mean application software that itself presents a set of APIs which allow users to write new applications, without reference to the underlying operating system. Yet Definition J defines it in a much more restrictive way, allowing Microsoft to exclude any software from being covered by the definition, merely by changing product version numbers. For example, if the next version of Internet Explorer were named "7.0.0" instead of "7" or "7.0", it would not be deemed Microsoft Middleware by the PFJ.

2. ? III. A. 2. of the PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System (OS) but no Microsoft OS. Is it a coincidence that Dell quietly stopped offering Linux as an operating system choice on its build-to-order systems in August 2001? If a company of Dell's size can't offer a competing OS, who can (or will)? This would curtail consumer choice, since not everyone has the technical prowess (nor necessarily the time) to install a different operating system. This is especially true of users who, for the first time, are just beginning to use computers and the Internet.

Before acting on the Proposed Final Judgment, I implore you to consider a fair alternative. The settlement sought by State of

New York, et al., in Civil Action No. 98-1233 (CKK) also known as "Track II", before the U.S. District Court for the District of Columbia, is a good starting point. The States' proposal is different from the PFJ as a whole, but it contains many elements similar to those of the PFJ, with small yet critical changes.

Very truly yours,

Your Honors,

The Microsoft settlement should severely penalize Microsoft for its antitrust activities because it has created situations such as this: Bank of America is dropping of support for Quicken on the Mac platform. Not because of technical problems nor because Mac's 5% user group don't utilize Bank of Americas services but because Microsoft owns 95% of the market share. How can an alternative company thrive if services don't support its 3rd party software? If there isn't some regulation to this monopoly there will be no other alternatives to computer operating system other than the black-market where customers will totally be taken advantage of.

 Subject: Microsoft Settlement

To whom it may concern:

I understand that the public has until January 28th to comment on the proposed settlement of the Microsoft Antitrust trial...

with this in mind, I will try to keep this email brief, while expressing my full opinion on the matter. I am also urging my friends and associate to express their opinions on this matter. After watching this case for the past few years, very closely, I would like to register these comments on the proposed settlement. In my opinion, the proposed settlement is more than fair to the Department of Justice and the 9 settling states, and is in fact, a very gracious and extensive concession by Microsoft. Considering the following points, I would say that no harm was done to other companies, or to consumers, and that Microsoft is going far beyond what should be expected of them as far as settling this dispute...

1.. Netscape was purchased for a very healthy price (by America Online), and the stockholders of Netscape made great fortunes on it's acquisition. Netscape is still a functioning company with the support of the entire AOL/Time-Warner conglomerate.

2.. Consumers continued to get more value and features, while paying less for their computer operating system and applications.

3.. Netscape didn't think twice about Microsoft as a competitor until Internet Explorer 3 came out and was reviewed as being a competitor to Netscape Navigator. Even at that point, Netscape didn't get worried about their share in the browser market until Microsoft released IE4, which was reviewed as a much more stable, much more full-featured, and much easier to use product.

4.. Microsoft didn't invent the free distribution of a browser, Netscape did, and offered it for download from their website from the beginning. It appears to me that using a similar distribution method and pricing structure cannot be construed as using unfair distribution methods.

5.. Every other Operating System on the market ships with an Internet Browser, Linux, Solaris, Several \*nix variants, even IBM OS/2 ships with an Internet Browser.

6.. There are other companies out there that remain profitable in the Internet Browser market place, the Opera Internet browser is an example.

7.. Internet Explorer has shipped with Windows since Windows 95 was released. While it was inferior to Netscape Navigator, it was an Internet Browser supporting the HTML specification. (I still have my original Windows 95 CD, and it installs IE2 with it).

8.. This case was brought on primary through the backing of three companies, who are in fact, 3 fierce competitors to Microsoft in several key areas of Computer and Communications technology... If not for the lobbying and pressure made by these three companies, the Government would not have brought up this issue, and the public would not be watching millions, if not billions of their tax dollars being spent on this case.

1.. Sun Microsystems, who is competing with Microsoft in the Server, Software Development, and E-Commerce Market. 2.. America Online, who is competing with Microsoft in the Online Services and Internet Browser Market 3.. Oracle Corporation, who competes with Microsoft in the Applications and E-Commerce Market.

9.. The continued pursuit of this issue depresses the stock market and the economy as a whole.

It is a constant drain on technical, legal, and clerical resources throughout the companies involved, the Federal Government, the Governments of all of the states involved, and countless other organizations that are merely sitting on the sidelines reporting on every word and phrase issued regarding the case. All of these resources would be much better used creating something instead of destroying something. With that said, I urge you to agree to and support the proposed settlement, and allow this issue to be put to bed, so that the country, the economy, and the citizens of the United States can return to productivity and profitability.

Thank you very much for your time, and God Bless American and the Capitalist System.

 Subject: Unhappy with proposed DOJ settlement

I had such hopes that my government was going to stick by its principals and put a final end to the illegal and unethical business practices of an unrestrained giant, namely Microsoft Corporation. Unfortunately, it would appear as though the Department of Justice is for sale to the highest bidder.

As American consumers, we look to our government to responsibly regulate businesses—particularly when those businesses are conducting illegal activities (as Microsoft has been found to be practicing for some time). I believe my biggest concern is for our nation's future. Microsoft's terribly inferior products—and their status as an unrestrained and unregulated monopoly—combine to constitute a serious risk to our nation's security (in terms of information infrastructure due to virii, security failures, etc.) and its position as a technological leader. Governments around the world are beginning to say "NO!" to Microsoft's monopoly and are embracing Linux, BSD Unix, and other Open Source alternatives. We are destined to become technologically moribund if the DOJ's settlement prevails.

I am agianst the government in this case agianst Microsoft. Everyone knows microsoft is a monopoly, So what. We made then a minopoly. What about AOL,The biggest and the worst service , I had them ,They started Kicking me off line without any notice. I could be in the middle of this Email and suddenly I would be off line, I finally

complained to them after being kicked off line 10 times in one day. The first person I talked to Asked me how the weather was, and to check with my phone company. After a few months of this I complained again. This time The lady who answered me back, Must have gotten tired of me complaining as she sent me a email That filled a complete page on my email,telling all the details of how everything worked and all the possible causes of my problem. She was being an ass, is this how they treat their customers.? I emailed her back and said after I complete a college course to learn how to decipher her message, I would give her a better answer, but until then ,if I was kicked off the internet once more without First asking me if I wanted to contunie as they had previously done.Then I would no longer use the service, I am now using Msn, and I can tell you that i can spend an hour or more on line , Be inactive and still not get kicked offline. I get a cd in the mail everyone one or 2 months, 11 last year offering free hours on AOL.,Turn on your tv and Aol is all over it with ads, How do they pay for these mailings and ads, they raised their price for Aol, Now they are suing Microsoft. I hope TED Turner who now owns Netscape, and Aol. And Comp USA, and The alanta Braves and who knows what,loses, because he is as much of a monopoly as anyone in this country. Microsoft gave Macintosh \$150 million dollars to keep them from going under, and now they are doing pretty good. What is Ted Turner trying to do, If he wins and destroys Microsoft, He can then Bring in his own System and will own the stores that sell them. Does he own a system, "Whos trying to Buy linux"

 Subject: Microsoft Settlement

I believe the proposed settlement is a bad idea and will not be effective in promoting competition in the software industry. I have owned and used computers since 1983. I have a Bachelors of Science in Computer Engineering Technology from Southern Polytechnic State University and have been professionally involved in selling, programming, and administration of computer for 14 years. Over this time I have seen Microsoft rise from the producer of a BASIC programming language found in most small home computers of the early eighties, to the producer of the ubiquitous MS-DOS operating system, to the producer of the market dominating Windows operating system. The popularity of Microsoft software can be most attributed to the popularity of the IBM PC platform. In many ways this platform was not the most technically advanced of its time, but, because IBM made it an open architecture that other companies could copy and build upon, it soon dominated the industry. Riding on the coattails of this dominance was Microsoft. When other operating systems of comperable capability and price were created (such as Digital Research's DR-DOS), Microsoft used its dominance to make its software incompatible with the alternative operating

systems.Later, when the Internet became popular, Microsoft bundled their browser with their OS, which in itself, is not unreasonable, but, they then used their position to threaten PC manufacturers to not install Netscape, a competitive product. The result of this is the current situation where the Microsoft web browser has a vast majority of the market share, since its the only browser most users ever see.

The danger for the future is that unless something is done to limit Microsoft's ability to use its market dominance as a weapon to destroy competitors, the day will come when Microsoft will be the only choice in computing. In this world, innovation would be dead. Currently, there is hope, just as the IBM PC open hardware platform allowed competition to flourish in the hardware realm, so do open source technologies like the GNU/Linux operating system, the OpenOffice office suite, and the Mozilla web browser make the possibility of true competition in the software world possible with no one company controlling the market. But, there is a great danger that these technolgies will become useless due to the fact that Microsoft has such an overwhelming presence in the desktop arena. The majority of documents in most businesses are stored in proprietary Microsoft Office formats that are very difficult to reverse engineer and are constantly changing. The Mozilla web browser is in danger of being unable to view much of the content of the web due to proprietary extensions such as ActiveX controls and the .NET initiative.

Linux is unable to make headway due to the fact that the two forementioned applications cannot fully interoperate with the proprietary Microsoft technologies. What should be the remedy? Microsoft should not be broken up. Such action would be ineffective. Forcing them to open source their operating system or to port their proprietary software to other platforms would do nothing to increase competition. The remedy is simple: Microsoft must make their document formats, Application Programming Interfaces, and protocols openly available to the public. This is how the Internet flourished early on, and it is how computing can remain innovative and competitive in the future.

Thank You for the opportunity to comment,

 Subject: Microsoft is \*GUILTY\*

As a network engineer with over 10 years of experience in the computer industry, a dyed-in-the-wool republican and laissez faire businessman, I'd like to submit my comments regarding the shameful Proposed Final Judgment in United States v. Microsoft and to urge you to reject this settlement for the garbage it is.

Microsoft is GUILTY of monopolistic business practices. You can't sugar coat this, and anything that doesn't reform or cut the heart out of those practices, not to mention

punishes the company monetarily, fails to solve the problem. Very little of what I've read in the Proposed Judgment affects Microsoft's \*\*\*confirmed\*\*\* monopoly status. It doesn't punish MS in any way by removing the ill-gotten profits obtained through illegal activities. Even the provisions designed to keep MS from abusing their monopoly status in the future are weak and full of loopholes, even going so far as allowing MS to \*define\* who their competitors are! Microsoft is GUILTY of monopolistic business practices. The findings of fact demonstrate that Microsoft has abused its market leader status in ways that caused hundreds, perhaps thousands, of small companies to cease to exist. As much as I hate the level of regulation in business as a general rule, those rules are sometimes \*necessary\*. Break them up, fine them back to their pre-monopoly levels, force their API's open, or whatever makes the most sense to REPAIR the market they've ASSUALTED. Just please do not allow them to continue their ONSLAUGHT on the American people.

Thanks for listening!

Sirs:

I strongly object to the proposed settlement of this case. Part of our Judicial System's function is to deter law breaking. While not actually able to stop criminal behavior directly, the penalties that Courts assign act as stern examples of what awaits offenders. This case has gone on for many years and the ultimate decision was that Microsoft was guilty. In these many years the defendant has shown little regard for the gravity of the situation in which it was involved. In fact part of the charges that this company was found guilty, was that it had disregarded a previous court order regarding OEM practices and Internet browser bundling. During these many years this disregard of a previous court order, Microsoft has reaped great financial rewards as it crushed competition with illegal activity. This cavalier attitude toward the authority of our Judicial courts is in itself offensive and dangerous behavior in a lawful society. Surely much sterner consequences should await any such offenders with such attitudes in a Federal Courts! As a parent I know that defiance in the face of correction or discipline is itself a grave problem. If I am lenient and ignore such defiance my children receive little motivation to modify their behavior. As our country's institution of wise elders that mete out correction and discipline to our society, I would hope that the court is like minded.

I am writing to say I consider the current proposal for the Microsoft Settlement to be inadequate. I am not a zealot, and I don't hate Microsoft. I don't think Microsoft is evil, or anything like that. I think that they are a monopoly. A monopoly that has acted illegally. Having acted illegally, it is necessary that Microsoft be punished. Without punishment, there will not be justice.

I have been reading through the finding of fact: <http://www.usdoj.gov/atr/cases/f3800/msjudgex.htm> In doing so, I have come across some interesting quotes that piqued my interest, such as: 143. Decision-makers at Microsoft worried that simply developing its own attractive browser product, pricing it at zero, and promoting it vigorously would not divert enough browser usage from Navigator to neutralize it as a platform. <...snip...> If Microsoft was going to raise Internet Explorer's share of browser usage and lower Navigator's share, executives at Microsoft believed they needed to constrict Netscape's access to the distribution channels that led most efficiently to browser usage. Such anti-competitive activities as this, and a wide

variety of other things can not go ignored and unpunished. Among other things, I work as a programmer. Recently, I have started working in Java. (the language from Sun Microsystems). In researching various aspects of Java for work, I have been reading extensively about Microsoft's infamous battles with Sun. At one point, I found the whole thing kind of amusing, but quite frankly, Microsoft's actions, especially regarding Java, have hurt my ability to work effectively on projects in Java. It isn't funny. It hurts programmer's ability to work, unless they work only on Windows and IE specific projects. Also, because Microsoft used anti-competitive strategies to market Internet Explorer, and IE became to most commonly used browser on the web, my company's website is optimised for IE. Because IE is in many ways incompatible with various standards, "optimising" our website for IE has forced us to make it largely incompatible with other browsers. Thus, the incompatibilities in IE force users to use IE to browse our website (and many others). This makes it very, very difficult for other browsers to gain popularity. Such anti-competitive practices are hurtful to the economy, individuals, corporations, and as long as I am forced to work in IT, my sanity.

Once again, I wish to make it very clear: The current settlement is \*not adequate.\* I strongly hope that the DOJ puts some proverbial smack down, and opens up an equally proverbial can of whoop ass. (please excuse my somewhat crude references.)

**MTC-00018631**

From: Phillip Pollard  
To: Microsoft ATR  
Date: 1/23/02 5:03pm  
Subject: Tunney Act comment  
To whom:

After having spent years of my professional career mired in the frustration and problems created by Microsoft's business practices, I hope that the settlement between Microsoft and the DOJ reaps true benefits. The sad fact of the matter is that Microsoft's sole purpose of actions in the past few years have been solely to maintain a monopoly. Again and again, actual innovation, progress, and quality was throw to the wayside in favor of profits. The US Government, in its wisdom at the turn of the century, realized that a monopoly's only purpose was to make money, and did not have the beneficial effect that the free market creates. I do not, for the slightest bit, feel that Microsoft has shown a hit of remorse in this case. It is blatantly a monopoly. A fact painfully know by those in a tech world. As I look over the details of the Proposed Final Judgement I see many a loophole that it would very happy and flagrantly use to continue its poor practices. The definitions of Windows and such terms as API are INCREDIBLY limiting. And even if the judgement is ammended to be appropriately broad, I am sure that Microsoft will invent or tease some technical excuse to change a name and make it different. The fact of the matter is as long as Windows maintains a closed grip on it's Application interfaces to the OSes there will be no competition. The monopoly base needs to be broken at it's heart. Windows should be

made an open source product, including it's API. Microsoft can more than healthily compete as an Applications manufacturer.  
Phillip Pollard

To: Microsoft ATR  
Date: 1/23/02 5:03pm  
Subject: Microsoft Settlement

To our ministers of justice:

I strongly disagree with the settlement proposed in the antitrust case against Microsoft. It says to me, "Here, Microsoft, you did a lot of illegal, unfair and very un-American things to get your business where it is, but we're going to let you keep all the spoils you've accumulated. From now on though, don't do that anymore!" I say bull. A lot of consumers and businesses were unfairly treated by Microsoft, and no matter what my foreign friends keep telling me, "screw everybody to make a buck" is NOT the American Way. The only way we can send that message and keep true to what we stand for is to make sure that Microsoft is forced to /redress/ its past wrongs (symbolically, if actual redress isn't possible thanks to how much time has passed). And then, further, we have to impose very strict rules AND ENFORCE THEM. Per Microsoft, since their behavior was so wildly counter to what the American people deserve, I would like to see language in the settlement specifically mandating regular audits and government checks to make certain the rats aren't at it again—why should we trust them?

As far as the rest of the settlement, for pete's sake, let's stand up as citizens and lawmakers and make sure these businesses know that they do NOT have a Constitutional right to make a profit!! They have a right to operate a business, so long as they do it LEGALLY, fairly and appropriately as determined by the rules set down by the citizens who buy their product. Personally, I would have liked to see Microsoft's Corporate Charter revoked, swiftly and permanently, along with that of every other corporation who thinks they can abuse the people and ignore their laws. But that's me.

Sincerely,  
Mrs. Marie Lyle

Subject: Microsoft Settlement

To Whom It May Concern:

I would like to record my dissatisfaction with the proposed Microsoft Settlement. It simply does not go far enough in ensuring competition in the computer operating systems, middleware and applications markets that Microsoft dominates. In particular, the settlement defines key terms such as "API" and "middleware" so narrowly as to make any imposed restrictions almost meaningless. Also, the enforcement provisions of the settlement do not appear to have any powers to fine or otherwise punish Microsoft if it does break the terms of the agreement (short of involving the US legal system again).

For a more detailed analysis that agrees with my views, please refer to Mr. Dan Kegel's analysis at <http://www.kegel.com/remedy/remedy2.html#enforcement> I believe the outcome of this procedure should do nothing short of enabling true competition in the Operating Systems, Middleware and Applications markets. The settlement as proposed does effectively nothing to alleviate the monopoly powers that Microsoft has shown itself only too willing to abuse.

Thank you for your consideration.

Date: 1/23/02 5:06pm  
Subject: Microsoft Settlement

Dear Department of Justice:

Regarding the Settlement with Microsoft, please hear my voice. I feel this Microsoft settlement is a bad idea and in the poorest taste. The egregious abuses by Microsoft in the past and present have destroyed more than just a few promising small businesses. Microsoft is a predatory entity and has destroyed and prevented more innovation than ever they brought to the light of day. They also continue to play very shady and unethical if not illegal games (e.g. the Kerberos protocol) with many entities who are the real source of so many innovative ideas which power the modern computing world. The Settlement as it stands does not really address the problems of predatory behaviour by Microsoft in the past and present, neither punishing nor preventing future abuses. I realize that not every question has an easy answer, however, I feel that neither the issues involved in this case, nor Microsoft's guilt/liability have been adequately judged. Please, as the official judicial center of the nation our government stands to protect, do not let Microsoft off with the slap-on-the-wrist settlement that has been proposed. It is inadequate.

Sincerely, voter and American,  
George Mealer.

From: Patricia Rupe  
To: Microsoft ATR  
Date: 1/23/02 5:06pm  
Subject: Microsoft Settlement  
To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice

I believe that Microsoft is a dangerous monopoly and should be divided. They are ruthless in their pursuit of buying and destroying any competitor that gets in their way. I also feel that the exclusion of non-profit organizations from the sharing of source code and specifications by Microsoft is a serious mistake. Why should Microsoft be the one to define what constitutes a "viable business" and not the Justice Department. Eliminating companies like Linux and Apache, to name a couple, only diminish the quality of the products we as consumers have access to. The Justice Department had Microsoft on the ropes and then backed down. It has been apparent for many years that Microsoft is a monopoly and something should have been done long before now about applying the antitrust laws to break them up.

Can you imagine the trouble the entire nation would be in if this monopoly is allowed to continue as it is currently structured? Computers have become a large part of everyone's lived and are in the majority of households and businesses in the United States and in parts of the world. We rely heavily on the operating system, internet, networking, security, etc. to keep up with both personal and business related information. Having one company basically controlling all aspects of this information and technology is extremely scary. Microsoft has yet to adequately address security issues. Every time they release a security enhancement, they immediately follow it up with several fixes to the enhancement that bandaids the holes caused by their latest release. You could drive a semi-truck thru the holes in their security infrastructure.

Every release of every product from Microsoft is riddled with major and minor "bugs". I cannot fathom the number of people that Microsoft employs just to deal with fixing problems in each of their products. One would think that competition would force Microsoft to at least try to produce better quality products, but they are so large and powerful that any company that dares to produce a better quality product is taken over or driven out of business by Microsoft. So, in the end, everyone loses except Microsoft. I resent having to pay several hundred dollars for a product or product upgrade that is riddled with bugs. I cannot begin to count the number of hours, days, and in some cases, weeks that I and my husband have spent on our computers trying to recover data or wiping everything out and reloading the operating system and all the applications that we use because of bugs in Microsoft products. As long as they are allowed to remain a monopoly, I do not have any hope of this ever changing. I am including some comments from Robert X. Cringely (<http://www.pbs.org/cringely/pulpit/pulpit20011206.html>) on the subject of the Microsoft Antitrust suit that I

wholeheartedly agree with. You have probably received a copy of these comments from Mr. Cringely and others, but in case you haven't, here they are. The proposed Microsoft/DoJ settlement states that as part of the deal, there will be a three-member committee stationed at Microsoft to make sure the deal is enforced. I think Steve Satchell should get the position. With a background in computer hardware and software that dates back to one of the very first nodes on the Arpanet 30 years ago, Steve Satchell knows the technology. He has worked for several big computer companies, and even designed and built his own operating systems. And from his hundreds of published computer product reviews, he knows the commercial side of the industry. He is glib and confident, too, which might come in handy while attempting to keep Microsoft honest.

Complaints about the proposed settlement, itself: Those who followed the case closely will remember that one of Microsoft's chief claims during the trial was that times and the nature of business have changed, and that anti-trust enforcement ought to be different today than it was when the laws were first passed in the early part of the last century. This is a fast-moving industry based on intellectual, rather than industrial, capital, goes the argument. Sure, Microsoft is on top today, but that could change in a minute. This argument evidently didn't resonate with the court, though, since Microsoft was found guilty. Well, Microsoft now is leaning this time on the same letter of the old law to not only get a better deal, but literally to disenfranchise many of the people and organizations who feel they have been damaged by Microsoft's actions. If this deal goes through as it is written, Microsoft will emerge from the case not just unscathed, but stronger than before. Here is what I mean. The remedies in the Proposed Final Judgement specifically protect companies in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry. But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and freeware applications.

The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist. Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and

authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business. ..." So much for SAMBA and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products. Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHVs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only.

Also, under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology—even the Department of Justice itself—have no rights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows. The government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. I think Microsoft probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT. Department of Justice showed through the case little understanding of how the software business really functions. But they are also complying with the law which, as Microsoft argued, may not be quite in sync with the market realities of today. In the days of Roosevelt and Taft, when these laws were first being enforced, the idea that truly free products could become a major force in any industry—well, it just would have seemed insane.

Thank you for the opportunity to submit comments related to this extremely serious and sensitive issue. serious and sensitive issue.

I disagree with the settlement. I am just an individual user who desires to enjoy using my computer. I do not want to use Microsoft software, but to communicate with friends, it seems you have to use microsoft software. I like to use OS/2 and Linux, but because of the tight agreements that Microsoft has with hardware manufacturers it is hard to get drivers for the new hardware released. It seems that Microsoft sets the requirements and hardware manufacturers built to their specifications. Thus you have winmodems, winprinters and about everything win. To me that is a great loss. I enjoy using the internet. As I understand it, the government, military,

with universities designed and built it to open standards for vital communications. Now with its power, money and PROVEN BY COURT MONOLOGY Microsoft is trying to close it down into it's own little domain. They need to be stopped.

As a individual user it looks to me like the simple solution would be to punish those found guilty. It is done every day in regular courts of law. The guilty do not get to set the punishment, why should Microsoft who was found guilty of being a monopoly have any say in what it's punishment is. They have proven by their actions that they cannot be trusted.

Make them open up formats, so that any programmer with the ability and desire can write a program to read Microsoft documents and let competition begin in earnest and see who wins. Make any access to the internet open with no private must use my operating system to again access to it.. Thank you for listening, I think Microsoft hinders inovation more than promotes it.

Just a computer user,  
Dennis Hayes

i do not believe the settlement is fair, especially if Microsoft was found guilty of monopolistic practices. when the phone company was found to be a monopoly it was busted up into the "baby bells", a mini monopoly at the state level until recently. and when IBM used monopolistic practices and its clout to bully merchants and end-users into purchasing its products it was busted up and fined. microsoft should not get off with a stern "no no no" and then be allowed to pay this debt by giving away their software to schools and public organizations, thus extending its monopoly. please consider this and come up with a more just settlement that doesn't let Microsoft off easy or allow them to expand their empire.

To whom it may concern,  
Having studied the proposed settlement with Microsoft, I am astonished that it provides no credible relief from Microsoft's anti-competitive practices. Microsoft and its allies have damaged and held back progress and growth of the computer software industry with significant negative effects on the US economy. Microsoft has become too powerful and is clearly too unscrupulous to be rendered harmless as long as it stays a single company. Not only would a broken up Microsoft relieve the problem to our industry, it would probably reward Microsoft stockholders with increased value. It could be a win-win. The current proposed settlement is at best win-lose—a win for Bill Gates and a loss to the American people whose rights are entrusted to the care of the US Department of Justice.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I agree with the problems identified in Dan Kegel's analysis (on the Web at <http://www.kegel.com/remedy/remedy2.html>), namely:

\* The PFJ doesn't take into account Windows-compatible competing operating systems \* Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. \* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions \* The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. \* The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. \* The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. \* The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered". \* The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. \* The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. \* The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. \* The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents. \* The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users. \* The PFJ Fails to Prohibit Anticompetitive

License Terms currently used by Microsoft \* Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. \* Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. \* Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.) \* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft \* Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems. \* The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs \* The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. \* The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software. \* The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. \* The PFJ as currently written appears to lack an effective enforcement mechanism.

We also agree with the conclusion reached by that document, namely that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

Sincerely,  
James Salsman

If you let Microsoft profit from abuse of monopoly power, I fear that will encourage other companies to do the same. Those other companies will reason that the profits (to them) of their misuse of power exceed any costs (to them). This is inefficient. I like the fact that in the US, we let individual corporations, instead of the government, make most of our decisions about how human effort is allocated. But this only works if the goals of the corporations are at least close to the goals of the country as a whole. Monopoly maintenance by OEM licensing agreement is good for the company and bad for the country. It is also illegal. So why are we letting Microsoft profit from it, and teaching other companies that the cost of breaking the law is less than the profits from breaking the law?

Stan

I would like to object to the terms of the Proposed Final Judgment. The largest barrier to entry for competing Desktop Operating Systems is file format compatibility. As a technical support analyst for several law firms I watched each of them painfully transition from WordPerfect to Microsoft Word simply because they needed the ability to easily exchange documents with clients, most of whom used Microsoft Office. I have also seen many small business forced to go through expensive upgrades to the "latest and greatest" version of Microsoft Office because their clients have done the same, and the new version has a different file format, making it difficult for the business to exchange documents with the client. Please consider forcing Microsoft to open the file formats for Office, so that businesses and individuals are not forced to purchase expensive upgrades, containing features they may never use, just because "everybody is doing it".

After reading hundreds of pages of documents related to the Microsoft Settlement and many more in previous years, I think it is critical that the US not accept too soft a settlement for Microsoft's illegal, corrupt, and unfair business practices. Microsoft continues to this day to force clients into exclusive, anti-competitive contracts, they own the rights to a lynchpin in the digital infrastructure and they are using this to continually gather more and more monopolies. As a monopoly portion of the infrastructure, Microsoft should be required to document and provide openly readable source code for their communication protocols, APIs, as well as for many of their underlying operating system components. Microsoft should not be allowed to create exclusive contracts by which clients who want to buy or use products which are part of the monopoly are required to buy and use only Microsoft products for other applications. This is a common requirement and one that is in place with large companies such as Amazon.com. Microsoft has shown itself willing to be as

manipulative as any business can be, ignoring the fact that it has a unique and monopolistic position in the future of our planet. Strong measures must be put in place to force Microsoft to properly open their APIs & protocols so that real competition can begin in building a more robust digital infrastructure: one that is not wholly owned and controlled by the whim of a single for-profit business entity. Please add additional measures to the current settlement to improve enforcement of the API requirements and add Publication of Protocols to the requirements in this settlement,

thank you,

 Subject: Microsoft Settlement

I think the economy has gone through enough and it is time to leave Microsoft to their own business, which they happen to do very well. The idea that Microsoft should pay damages to AOL/Time Warner is completely ridiculous. By making the IE browser free they enhanced competition and the beauty of it is, we live in a capitalistic society, which makes this possible. Microsoft makes quality software that I'm sure even government employees use. Bill Gates is a true businessman and he and Microsoft should not be punished for the skill and competence they portray in the way they run their company.

**MTC-00018655**

From: Derek Deeter  
 To: Microsoft ATR  
 Date: 1/23/02 5:11pm  
 Subject: Microsoft Settlement

To Whom It May Concern: I don't think the proposed Microsoft Settlement goes far enough to remedy the monopolistic situation. I agree with the statements put forward in Dan Kegel's Web Page ( <http://www.kegel.com/remedy/remedy2.html> ) and also his Open Letter to DOJ Re: Microsoft Settlement , with which I also agree. The proposed settlement does not go far enough in its remedies to properly address solutions to the current situation.

In addition, I would also like to add that I find that Microsoft's practices have stifled operating system and application competitiveness to the point where they are growing larger by the day at the expense of competitors. Netscape was one of the first casualties and the list goes on—there should be some penalty to be paid for causing these casualties, and this does not seem to be addressed by the current settlement.

A proposed part of the settlement being considered was forcing Microsoft to supply schools with computer systems and software, but I believe this would be rewarding them for their behavior—it is quite well known that in order to promote software, giveaways to the educational sector produce loyal supporters of that software when they graduate to the commercial sector—this

would be a bonus to Microsoft a few years from now, and thus would seem to be a reward rather than a punishment. I would recommend against such a proposal if it is or will be considered again.

Microsoft is so large that it can adopt a standard (HTML is a good example), then change it to its own benefit without validation by the HTML standards group. An additional part of the settlement should say that Microsoft must abide by the published standards of the owning technical committees and that any infractions are punishable by (fill in penalty here). This is another example where browsers can not be competitive—if execution of a standard is not consistent across applications, Microsoft has the benefit of providing more utility by bypassing standards or even promoting misuse of standards. By its sheer size it is able to not only get away with this, but exacerbate the problem.

In addition, Microsoft products when going from version to version (such as Office Products), utilize updated output file formats which are incompatible with those from old products. This in itself is a normal practice, but as a monopolistic remedy I would suggest that for an interim period, Microsoft be forced in their new products to also write the older file formats to maintain compatibility and allow competing products to be used without penalty of constant upgrades.

From: Christopher Bare  
To: Microsoft ATR  
Date: 1/23/02 5:11pm  
Subject: Microsoft Settlement

My suggestion is that Microsoft be required to open up its proprietary file and disk formats. Formats for MS-Office files, and the NTFS file system should be made public and freely usable. Future versions should be required to be backwards compatible. This would allow competing software to interact easily with Microsoft software. In spite of what Microsoft would probably claim this is NOT technically difficult. Monopolies come about due to barriers to entry of competing products. A helpful remedy would be to reduce some of those barriers. We must reward those who provide useful products, and Microsoft has certainly done that. But, we should not lose sight of the fact that the ultimate purpose of our whole economic model is to provide maximum benefits to the participants.

Opening Microsoft file and disk formats would go a long way towards allowing competing products to exist in a Microsoft dominated world, which is an essential step in bringing about true competition.

From: Frodo Underhill  
To: Microsoft ATR  
Date: 1/23/02 5:12pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Patrick W. Neckolaishen

Subject: Microsoft Settlement  
Attorney General John Ashcroft  
US Department of Justice, 950  
Pennsylvania Avenue, NW  
Washington, DC 20530-0001

Dear Mr. Ashcroft:

With as many important issues that this country has to deal with, I was surprised that so much valuable time had been expended on litigating this case against Microsoft. Microsoft has, in my opinion, maintained its position of leadership in the IT industry more from the quality and reliability of its software, rather than any overbearing marketing strategies that it may have employed in its business practices. It is good that the case has been settled, in that the focus of the settlement encourages Microsoft to maintain better relations with its OEMs and software developers, as well as preventing them from exerting any undue harshness toward any computer maker that would want to install their competitor's software onto its computers. I am therefore writing in support of the settlement and hope that it will be sustained successfully throughout the review process.

Sincerely,  
Che Jie Hsu  
Chief Consultant

From: user5  
To: Microsoft ATR  
Date: 1/23/02 5:13pm  
Subject: Anti-Trust Settlement

I am a strong proponent of a free-market society, however I also understand that certain entities have in the past, do at present and will in the future take advantage of the laws in existence as well as jumps in technology to advance the interests of the entities to the detriment of the American People. President Theodore Roosevelt understood this and observed the ravages of unrestricted mining and de-forestation of our lands. He also understood how the collusion between the Railroad, Steel and Coal barons exacerbated the problems. Both he and the United States Courts acted accordingly. The purpose of Anti-Trust legislation is to protect the national interests as relates to Public Safety, National Security and the rights of the people to pursue their own wealth and happiness. National Security does not simply relate to Department of Defense issues. When our economy suffers, so does the ability of the nation to raise itself up to provide for a defense. If we are weakened fiscally, we are weakened defensively.

Microsoft Corporation has used its influence with manufacturers to make its own desktop program virtually the sole desktop on personal and business computers around the world. It is my belief that they also incorporate data into the desktop program to cause competitors data management systems to crash. I have had, in personal, corporate and government service, the absolute pleasure of working with systems that are not of Microsoft origin. When not linked into Microsoft programs, they seem to run flawlessly. I have also had the misfortune of being forced in my government employment of having to use Microsoft applications which crash, lose data or are so extraordinarily complex as to have to have expensive training to learn to accomplish tasks that were relatively simple to initiate with old programs like D-Base III, Corel Word-Perfect and Lotus Approach (The relative Microsoft Applications being Access, Word and Access). To give you an example, the Commonwealth of Pennsylvania uses the Lotus programs Approach and Dominoe to track Pennsylvania Drivers' records. In all other State Agencies we are required to use Microsoft Office applications. From personal experience in the Department of Corrections, computer users need continuing re-education

in Microsoft products just to keep abreast of the changes (changes I may add only in the way one must use the product, not improvements in efficiency or additional uses). There are several problems associated with having so much of the nations' business conducted through a sole source as well. With the millions of lines of code embedded in the programs being utilized by virtually every office and home in America, either the management or individual programmers could implant a time bomb of sorts to wipe out the entire nations computing capability at a given time or to mine information detrimental to individuals, corporations or the nation from computers around the country. I want to keep this short and readable, so I will close this letter with my feelings on the proposed settlement; I do NOT support it. There is plenty of precedent which the Department of Justice and the Courts should be able to rely upon and the appropriate arguments made to justify eliminating the restraint abilities that Microsoft has made against its competitors ability to bring their products to market. Even if the elimination were to be for a limited time and of sufficient strength to allow competitors to get their products onto the same machines with Microsoft Products so that the consumer could decide, I would be much more pleased. There is no denying that Microsoft is a monopolistic entity and uses the advantage it has gained to restrict the competition. No intelligent individual could determine otherwise. There is also no denying the potential hazards such a monopoly poses to the security of our nation and to the privacy rights of citizens and the nation.

Thank you

From: John Bonevich  
To: Microsoft ATR  
Date: 1/23/02 5:13pm  
Subject: Microsoft Settlement  
To Whom It May Concern:

I oppose the proposed settlement in the Microsoft antitrust trial. The proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts.

That is not justice, not for the victims of their abuses and not for the American people.

Sincerely,  
John Bonevich

From: Carl Brown  
To: Microsoft ATR  
Date: 1/23/02 5:12pm  
Subject: Microsoft Settlement

I am opposed to the proposed settlement. It does nothing to correct the wrongs that have been done. It actually increases Microsoft's strangle hold on the desktop software market. While the donation of hardware is good, it should be required that no Microsoft software be included. If it is, then the future upgrade path for these schools, who by definition can not afford it, involves putting money directly back into Microsoft's already bulging pockets. Microsoft has acted like a drug dealer for years, and this is just another example of this behaviour. The first hit is free, then after that they have another lifelong addict.

Furthermore, a "donation" of software costs Microsoft no more than the cost of reproducing CD's, while they can claim settlement value of the maximum retail price per unit. Allowing their own software to form any part of the monetary value of the settlement is quite simply giving them a license to print money. As part of a settlement of a case in which they have already been found guilty, this is completely ridiculous, at the very least. Open source software has virtually no upgrade cost. But more importantly, if students learn on proprietary systems, all they can ever learn to be is computer operators. They can never learn how software really works because they can't look under the hood. Open source software is an unquestionably superior learning tool. The settlement proposal should either be thrown out completely, or extensively reworked, to ensure that Microsoft gets no long term gain from a settlement which should be giving them a large long term loss.

From: Kerry Crouse  
To: Microsoft ATR  
Date: 1/23/02 5:12pm  
Subject: Microsoft Settlement

To whom it may concern,

I firmly believe Microsoft is quite guilty of monopolistic practices. While I don't believe inclusion of additionally features into the operating system, (such as Internet Explorer) is particularly monopolistic, forcing computer distributors and manufacturers to include what they want don't want (or not include what they do want) seems to me to be symptoms of a monopoly. Selling a previous version of an operating system at substantially more money to force vendors to use a new operating system and users to use a newer operating system (whether anyone wants to or not) is, to me, another symptom of a monopoly. At one time, Microsoft offered free support for MS-Office products. Since the competition is no longer there, the free support is not there. The lack of free support

seems to be more than just a coincidence. While I do believe Microsoft's competitors, in their statements about Microsoft, exhibit quite a bit of envy at Microsoft's position, there is also truth in what they say. While I think that breaking up Microsoft into separate companies, (3 or 4) would be appropriate, I don't think a breakup in and of itself would stop Microsoft from being monopolistic. The agreements Microsoft sets up with distributors and customers should NOT be allowed to be exclusive for Microsoft. Companies should not get discounts for using only Microsoft software. Getting a discount for using above a certain number of Microsoft packages or dollar amount is reasonable only as long as the discounts apply to everyone everywhere.

Thank you for your consideration of this letter.

Subject: Microsoft Settlement

After reading the proposed settlement details, I am very very concerned about the situation. I think this settlement is a very bad idea and does not take into consideration the rights of consumers and competing companies. This settlement makes it nearly impossible for a small business or group of programmers to come up with software that will run with windows without having to pay royalties. The bottom line is that Microsoft needs to conform to "Standards" and these standards need to be open to the public. If this doesn't happen it will stunt the creativity of computing and will hold us down for another 10 years.

From: Alex Levy  
To: Microsoft ATR  
Date: 1/23/02 5:14pm  
Subject: Microsoft Settlement

Dear sirs,

I am writing to oppose the settlement proposed for the anti-trust trial against Microsoft. The settlement, as it stands, would allow Microsoft to continue anti-competitive practices against its largest competitor: open source software. This is software that is developed by a community, rather than a commercial organization, and projects developed in this way would not be eligible to benefit from the proposed remedies. << Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business >>—Robert X. Cringely I implore the courts to reject any settlement that would allow Microsoft to continue its anticompetitive practices against any

software system, whether it be commercial or not.

Thank you.

Subject: Microsoft Settlement

While I am normally an extreme pacifist, I am finding it very difficult to not feel angered by this proposed settlement to the Microsoft case. I have followed the case against Microsoft for years, since the monopoly it holds over desktop operating systems impacts my work on a daily basis. To find that the proposed remedy contains almost no controls over the future practices of a company that has twice been convicted of illegal actions seems shocking. That there are no punishments included in this makes me wonder why it is called a “remedy” for the illegal things they were convicted of doing. How can this be? I urge you to reconsider this proposed remedy, and to find a solution that does actually punish Microsoft for what it has done, and draw some guidelines to regulate how it operates in the future.

Thank you,

Subject: Microsoft Settlement

I am not in favor of the Microsoft Settlement. The last time there was an agreement—the consent decree—they didn't bundle, they integrated. Microsoft and their lawyers have insured that they can continue the worst of their monopolistic practices. At best, I may have to wait years for access to vital information while whatever board appointed argues whether I need access, and by the time they decide it will be irrelevant—I have no fast appeals or the equivalent of an injunctive relief. Second, they have added “Digital Rights Management” as something they can completely avoid saying anything about—even under NDA or other similar structure. Then they can simply add some DRM to Word, Excel, IE, and every part of the operating system—much as they did the oil-and-water DLLs so Internet Explorer couldn't be removed from Windows. Also, if I write a driver, and say support Apple or Linux, they could simply refuse to sign my windows drivers and not give a reason—The drivers could be better than any of theirs, but they could argue length, quality, “we're too busy, but should have them signed in 2007”. Go back and reread the emails and the documents made public after the Caldera (DRDOS) antitrust suit—Microsoft isn't trustworthy so you need a very broad or structural agreement. Anything with Microsoft written loopholes will mean all the effort which has been spent up to now will be in vein. Declaring defeat when you have won the case would be a terrible waste of the

taxpayer dollars spent thus far— those costs are sunk, and the DOJ won. Now use that victory.

Subject: Microsoft Settlement  
To Whom It May Concern,

As a career software engineer, I must say I am extremely dissatisfied in the proposed settlement in the Microsoft Antitrust Settlement. There are no penalties for the antitrust behavior that Microsoft has exhibited in the last 10 years. In fact, the proposed settlement goes to further Microsoft's exposure in a place it historically has been second to it's only consumer competition, Apple. I believe that the settlement does not go far enough to punish and in fact furthers Microsoft's monopolistic practices.

To whom it may concern,  
Really there is only one player in the desktop operating system business—Microsoft. All many people are asking for is an alternative to Microsoft. That alternative would be in the form of a product (Linux) and leverage (to pressure Microsoft to make better products/services at reasonable prices). With a monopoly as huge as Microsoft, it is ironic, but also logical, that the only real competition could come from grass roots and not business.

Microsoft should make it's code for things like .doc files made public so that documents written with MS Word can be read accurately on machines running Linux. Microsoft should port MS Office to Linux. A decision to use a non-MS operating system should not cut the user off from all other MS products. Microsoft's insulting interpretation to the DOJ's charge of monopolism was to deepen the monopoly by giving away software. They did not "give away" anything - they are cultivating clients. They are selling complete dependence on Microsoft products. Use Microsoft or do without computers is no choice at all. Things that are important to me:

1. Quality operating system. One thing that ensures quality is choice. Some MS products are good but many have many problems—where is the incentive to improve if Microsoft makes the only viable x86 OS around? I would rather make my living having clients tap into the many and varied resources that Linux has to offer, than having them endlessly re-boot MS operating systems.

2. Choice of operating system without changing hardware. Apple needs different hardware. On x86 hardware the only real choices (other than old/unsupported OS/2) are Windows and Linux. Microsoft is working hard to ensure that Linux is not a choice, by buying up the Internet and making it inaccessible to any platform other than Windows.

3. Competitively priced operating system. Their cheapest OS is a hundreds of dollars (out-of-time with the present economy)—Linux's cheapest OS is free. Miscellaneous complaints: Microsoft recently purchased SGI 3D technology which could be used to pressure hardware vendors to drop support

for OpenGL. Not so recently, Microsoft threatened to withdraw support for MMX if Intel did not drop NSP software development MS possibly introduced error codes into—and possibly sabotaged—Apple's Quick Time media. playback software.

Thank you.

From: Whitney Williams  
To: Microsoft ATR  
Date: 1/23/02 5:16pm  
Subject: Microsoft Settlement

I believe that the proposed settlement of the antitrust case against Microsoft is a bad idea, and I request that the United States not settle. In the findings of fact in this case (which are no longer disputed), the court found that Microsoft clearly exercised monopoly power; I am dismayed that they might be allowed to do so without substantive penalty. Reading the proposed settlement, I saw nothing more severe than behavioral restrictions of the sort which Microsoft has repeatedly circumvented and violated outright in the past. I found particularly audacious the proposal that Microsoft should be allowed to introduce its product into schools. Gaining market share by selling to schools has, since long before Windows was written, been Apple's most successful strategy. Even now, education is the only market where Apple can still compete with Microsoft. Would it not be the very definition of predatory pricing to allow Microsoft to give away operating system software into this market? As a Microsoft Certified Professional, I see first hand how monopoly power has degraded the quality of Microsoft's products. I see first hand how they raise technological barriers to interoperability to raise barriers to entry in application software markets. As an American, I am appalled that Microsoft's flagrantly criminal behaviors may go without remedy. I am dismayed that my government would back away from a legal challenge to a company whose deep pocket has already crushed so much opposition, and I wonder why I pay taxes if not to protect American industry from predators like Microsoft. This is the single most important issue on which I will vote in the years to come.

Thank you for considering my opinion.

Dear Attorney General John Ashcroft:  
Attached is a letter expressing my opinion on the pending settlement of the Microsoft case. I appreciate your consideration.

January 23, 2002  
Attorney General John Ashcroft  
US Department of Justice  
950 Pennsylvania Avenue, NW  
Washington, DC 20530  
Dear Mr. Ashcroft:

I am writing to voice my support for the pending Microsoft settlement. After an

extensive legal action, it's definitely time to close this case and get back to focusing on more pressing issues.

My understanding of this case leads me to believe that the terms agreed upon even exceed the original Justice Department complaint. Microsoft has pledged to open up options for computer makers to configure Windows with the software programs of their choice and will create unified terms, conditions, and prices for licensing its operating system.

To reject the opportunity for settlement now will just draw all parties into further distraction and do nothing to help the economy. Thank you for your time and attention.

Sincerely,  
Howard Roth

**MTC-00018680**

From: David David  
To: Microsoft ATR  
Date: 1/23/02 5:15pm  
Subject: Microsoft Settlement  
Attention: Renata Hesse, Department of Justice:

I wish to express my views on the Microsoft case as invited by the Department. There are several points I would like to make in support of Microsoft:

- I resent the government's characterization of me and other computer users as helpless victims who cannot choose the software that is useful to us. Further, I do not think that the government has any right to decide what can be in my computer.
- I resent the idea that a successful business and its products are a threat to me or anyone else, and I have yet to hear any meaningful or rational argument why they should be considered as such.
- I resent the fact that the complaint against Microsoft originated not with individual consumers, or with Microsoft's partners, but with Microsoft's unsuccessful competitors. This alone should be sufficient to dismiss such a case entirely and without further consideration. Failed businesses must not be allowed to set the rules for the markets in which they have failed.

—For politicians to try to protect some businesses from others is a dangerous policy. Continued arbitrary application of the incomprehensible antitrust laws against successful businessmen can only lead to corruption and economic disaster as shown in many other countries and in many periods of history.

—Finally, and most importantly, Microsoft's creators and investors have a fundamental right to their property, and to trade it voluntarily with anyone and on any terms they wish. It is the government's job to protect this right, not to take it away. The whole situation is really alarming to anyone who understands this issue. Thanks for your attention and I hope that these points will be considered.

Sincerely,  
David Antonacci  
Los Angeles, CA

To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. It is my understanding that the purpose of the Proposed Final Judgement should be to reduce, as much as possible, the Applications Barrier to Entry. In other words, make the market more open to competition from other products. After reading the Proposed Final Judgement and multiple essays on its problems and benefits, I have noticed many things that I take issue with. However, I'd like to focus on one in particular. This problem is in the issue of Microsoft End User License Agreements (EULA). It has been shown that Microsoft creates EULA's that place anticompetitive restrictions on the user, and that Microsoft has intentionally created incompatibilities to keep users from using Windows applications on compatible operating systems that are not Windows. One example of this is in the license agreement for the Microsoft software, NewsAlert—offered by MSNBC. In that license it says, "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of the operating system for which the SOFTWARE PRODUCT was designed [e.g., Microsoft Windows(r) 95; Microsoft Windows NT(r), Microsoft Windows 3.x, Macintosh, etc.]. ..." Users of competing operating systems, such as Linux,

which are capable of running some Windows applications are not legally capable, under this restrictive license, to use this program. One suggestion as to how restrictive licenses such as this should be forced to be changed is for the excerpt above to be re-written as follows: "MSNBC Interactive grants you the right to install and use copies of the SOFTWARE PRODUCT on your computers running validly licensed copies of Microsoft Windows or compatible operating system." In the past, it has been shown that Microsoft places technical barriers on competition as well. The 1996 Caldera v. Microsoft case shows how Microsoft added code to its product so that, when run on a competing operating system (DR-DOS in this case), it would give the user an error. As I'm sure you can easily look up, the judge ruled that "Caldera has presented sufficient evidence that the incompatibilities alleged were part of an anticompetitive scheme by Microsoft." Unfortunately, with the Proposed Final Judgement as it stands, there is no language to prohibit these restrictive licenses nor is there language to prohibit future intentional incompatibilities. Therefore, in its current state, the Proposed Final Judgement assists Microsoft in continuing these actions and does not succeed in opening the Applications Barrier to Entry. In closing, I would like to add my support for Dan Kegell's essay, "On the Proposed Final Judgement in United States v Microsoft," located at <http://www.kegell.com/remedy/remedy2.html>, which is the source of the facts I have included in this letter. I would also like to add my support for his suggested amendments to the Proposed Final Judgement, which are described near the end of his essay, and to the alternate settlement proposed by some of the plaintiff states and located on the website for the National Association of Attorneys General at <http://www.naag.org/features/microsoft/ms-remedy-filing.pdf>.

Sincerely,

From: David A Golden  
To: Microsoft ATR  
Date: 1/23/02 6:15pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I wish to register my opinion that the proposed Microsoft settlement is insufficient as currently constructed to effectively ensure a free and competitive PC market. In reading the text of and various commentaries on the settlement, I am struck by the number of loopholes left in the settlement due to improper or misleading definitions of "API", "Microsoft Middleware", and "Windows Operating System Product". Acceptance of the settlement with such loopholes would leave it effectively without teeth. I encourage the DOJ to review any number of well-reasoned criticisms available on the web, written by technical experts rather than lawyers, and which offer a "common sense" understanding of the limitations of the remedy as currently constructed. (One excellent such resource is: <http://www.kegell.com/remedy/remedy2.html>) I urge the DOJ to withdraw its consent to the proposed settlement.

Sincerely,  
David A Golden

Subject: Microsoft Settlement

I am writing in support of EVERY legitimate business in this nation to operate in a legal climate that does not interfere with how they wish to promote or distribute their products. For a nation such as the United States to even have laws such as the Anti-Trust on the books, is a disgraceful because every petty dictator has laws such as these that are used to intimidate and punish those who dare to be innovative and successful. Calling Microsoft a monopoly is a viscous equivocation of terms. Any reasonable person recognizes the difference between domination of a market because: 1) a company has created a product that is in great demand due to low price or simply because consumers want it (a natural monopoly based on free exchange of goods and services), and 2) a state sanctioned monopoly where government power is used to maintain a company's economic position (such as the expensive ferry monopoly in Hawaii backed by the government fiat).

It is unfortunate that our founding fathers did not include a separation of state and business similar to the separation of church and state. Much of the turmoil and corruption in government plus the billions wasted by business yearly would stop.

Leave Microsoft alone to pursue it's business in peace and freedom.

Subject: Microsoft Settlement

I am sending this e-mail to voice my opposition to the Microsoft Settlement on the grounds that it does not do enough to correct the illegal monopolistic activities that Microsoft has been convicted of. The

following points written Dan Kegel in his Open Letter to DOJ Re: Microsoft Settlement are examples of the weaknesses in the settlement.

\* The PFJ doesn't take into account Windows-compatible competing operating systems \* Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry. \* The PFJ Contains Misleading and Overly Narrow Definitions and Provisions \* The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered. \* The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all. \* The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware. \* The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered". \* The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs. \* The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible. \* The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows. \* The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents. \* The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users. \* The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft \* Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows. \* Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems. \* Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running competing operating systems such as Linux! (Similar licenses to OEMs were once banned by the 1994 consent decree.) \* The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft \* Microsoft has in the past inserted intentional incompatibilities in its

applications to keep them from running on competing operating systems. \* The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs \* The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system. \* The PFJ allows Microsoft to discriminate against small OEMs— including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software. \* The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas. \* The PFJ as currently written appears to lack an effective enforcement mechanism.

From: Matt Radway  
To: Microsoft ATR  
Date: 1/23/02 5:16pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement contains narrow wording that does not inhibit Microsoft's ability to commit anticompetitive actions in the future.

In particular, Sect III(J)(2) must be changed to require Microsoft to license its APIs, Documentation, and Communications Protocols to Non Profit Organizations. There are many NPOs that need this information because of their role as maintainers of software projects. The Apache Foundation is responsible for Apache, the main competitor to Microsoft's Internet Information Server (IIS). Likewise, Samba is a system that allows alternative operating systems share files with Microsoft operating systems. Samba must use Microsoft APIs in order to accomplish its tasks. There are many Non-Profit Organizations that perform similar functions, and are too numerous to be mentioned here. Section III(D) also excludes Non Profit Organizations from information regarding the APIs for incorporating non-Microsoft middleware. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a

settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Date: 1/23/02 5:19pm  
Subject: Microsoft Settlement

Hi,

I'd like to officially speak against the proposed settlement. There are many many reasons for this not to be the right approach nor the proper handling of the case. I'm sure there will be no lack of forthcoming arguments by people more suited to address this case. The most important thing is to require Microsoft to publish complete documentation of all interfaces between software components, all communications protocols, and all file formats. This would block one of Microsoft's favorite tactics: secret and incompatible interfaces. Thank you for your time and attention.

Sincerely,  
Christopher Parry

**MTC-00018694**

From: Keith McCall  
To: Microsoft ATR  
Date: 1/23/02 5:17pm  
Subject: Microsoft Settlement

I have been personally affected by Microsoft's monopolistic practices. For example I was required to buy Windows with a computer system, even though I bought the system to run Linux-based software applications. When the first computer required replacement, I was again required to buy Windows with a computer system, even though I did not wish to use Windows at all.

Due to the pressure Microsoft has been able to apply to most major computer hardware vendors, it is exceedingly difficult to avoid paying for an unwanted Microsoft product. Today most major computer hardware vendors are simply distributors for Microsoft's monopoly. Again and again, Microsoft has used it's near total operating

system monopoly to foist inferior products on the marketplace. Netscape is, in my opinion, a superior product to Microsoft's Explorer, allowing greater control of security and "cookies", for example. Yet even offered free and downloadable, Netscape has great difficulty competing when Microsoft Explorer comes pre-installed.

Furthermore, I am again personally affected by Microsoft's monopolistic practices, since they use their uncompetitive advantage in the web browser market to make further gains in other markets by introducing proprietary code as additions to Java. More and more, this means that Netscape is unable to completely display web content generated by a Microsoft product. Microsoft's practices are harming my ability to use the web browser of my choice.

Microsoft's willingness to obey the laws against abuse of it's monopolistic position is most clearly illuminated by their staged and provably false demonstrations of Explorer's "integration" into the Windows OS; Microsoft can not be trusted not to abuse any advantage they can manufacture. The current settlement is a slap on the wrist that does nothing to rectify the monopoly and abuse of monopoly which Microsoft has perpetrated for years. Worse yet, this settlement practically rewards Microsoft for breaking the law: it allows them to unfairly make inroads into education—one of the few markets left where Apple computers make up a major market share and Microsoft doesn't have monopoly power.

Far from serving as a punishment preventing monopolistic behavior, the proposed settlement will enable Microsoft to leverage its monopoly power even more, dramatically increasing its penetration of a market segment that has heretofore resisted its total control.

I can only conclude that this settlement will harm me as a consumer.

**MTC-00018697**

From: Brian Dellert  
To: Microsoft ATR  
Date: 1/23/02 5:18pm  
Subject: Microsoft Settlement

My name is Brian R. Dellert. I live in Prior Lake, MN. I am an independent software developer. I am opposed to the proposed settlement in the Microsoft antitrust trial.

I worked at Microsoft during 1997 and 1998 as a contractor on the help system. During that time, the help system was changed in a way that would cause a previously working application to crash when it attempted to look up a keyword in the index. In fact, following Microsoft's own published documentation on this feature would cause your application to crash.

This change was made for the Microsoft Office team in order to allow support for their famous paper-clip. The "advantage" of this change was kept completely internal in undocumented API calls. As for the disadvantage (the crash), internal teams were given support to work around the crash. External companies were left with no support, no information, no accurate documentation, and a help system that did not work as advertised.

The settlement does nothing to prevent this type of anti-competitive behavior. The teams responsible for the products that go into Microsoft Windows will continue to give

preferential treatment to Microsoft's applications division, even if it causes applications written by its competitors to quit working. The most recent example was Apple's QuickTime, which was disabled by an upgrade to Microsoft's now dominant web browser, Internet Explorer (also known as "IE").

To quote a CNet article on the problem: Brad Mathis, a network security engineer from Evansville, Ind., blamed the problem on Microsoft.

"Being a security-conscious person, I try to stay updated with the latest service packs," he wrote. "Unfortunately, SP2 for IE 5.5 was a service pack with a hidden agenda. It may have had a security fix or two in it, but was also designed to remove non-Microsoft product compatibility."

[http://news.com.com/2100-1023-271653.html?](http://news.com.com/2100-1023-271653.html)

legacy=cnet&tag=dd.ne.dht.nl-sty.0 Note that "SP2 for IE 5.5" refers to "Service Pack 2 for Internet Explorer 5.5".

QuickTime directly competes with Microsoft's media player. The proposed settlement would be completely ineffective in preventing the type of anti-competitive behavior which Microsoft uses to extend its Windows monopoly into new areas. I ask you to reject the settlement.

From: Michael Cole  
To: Microsoft ATR  
Date: 1/23/02 5:05pm  
Subject: Microsoft Settlement

Hello, my name is Michael J Cole. I live in San Francisco and I would like to comment on the proposed antitrust settlement. I am against the settlement for many reasons. Mostly I am against the settlement because for the settlement to be effective, it requires large amounts of good faith on the part of Microsoft. This is an unreasonable assumption based on Microsoft's past and present actions and the failure of the settlement will cause an unfair burden on the american public.

In addition, there is no punishment for Microsoft's past behavior. I find this amazing and can't begin to understand what political and economic power it would take to have such a HUGE violator of anti-trust laws have NO punishment actions taken against them.

In closing, I think the settlement will be ineffectual in stopping Microsoft's monopoly. They will just change how they operate their monopoly. In the end it will cause more harm to the american public because Microsoft will be able to comply with the settlement and say "Look, I can't be a monopoly, the court says so!"

Best regards and good luck in this difficult action,

Mike

#### MTC-00018699

From: Christopher Wassman  
To: Microsoft ATR  
Date: 1/23/02 5:18pm  
Subject: Microsoft Settlement

To Whom It May Concern:  
First of all, I am opposed to the proposed settlement in the Microsoft antitrust trial. I

do not feel that the current proposed settlement fully punishes the actions committed by Microsoft in the past, nor does it inhibit their ability to commit similar actions in the future. This troubles me greatly, as it should trouble all Americans.

The US Department of Justice should also be made aware of the "freedom to innovate" campaign by Microsoft is specifically aimed at "buying" public opinion in this case. This massive effort by Microsoft will undoubtedly result in increased support of Microsoft's monopolistic practices. If Microsoft's competitors had the same money and distribution medium that Microsoft already possesses, through its monopoly, to advertise and buy public opinion then there would be little issue for the DOJ to decide upon. But that's just the point, there is a monopoly here, Microsoft is a monopoly, and the current settlement amounts to very little to Microsoft and will do very little to break up this monopoly nor to balance the playing field whatsoever.

The majority of the provisions within the settlement only formalize the status quo. Furthermore, none of the provisions will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most importantly, the proposed settlement does nothing to correct Microsoft's previous actions. Also, there are no provisions that correct or redress their previous abuses. They only try to prohibit the future repetition of those abuses. This is not right. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. The current settlement is not justice, not for those people and corporations who have suffered from the abuses of Microsoft and not for the American people in general. While the Court's desire that a settlement be reached is well intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is a wrong that is compounded two-fold. I urge the Court to not accept this settlement agreement.

Thank you for your time.

From: Darren Daubenspeck  
To: Microsoft ATR  
Date: 1/23/02 5:18pm  
Subject: microsoft settlement

I'm in favor of strong punitive damages against Microsoft as part of the monopoly settlement, partly for this reason:

1. The PFJ fails to require advance notice of technical requirements Section III.H.3. of the PFJ requires vendors of competing middlewares to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require

Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middlewares simply by changing the requirements shortly before the deadline, and not informing ISVs.

But also because of MS's products have permeated our society so completely. I'm against socialism, but I'm in favor of governmental controls over a company who controls such a large share of the software for doing business in this society

Subject: Microsoft Settlement

The findings of fact in the Microsoft vs. Department of Justice trial show that Microsoft holds a monopoly, that their monopoly was gained illegally, and that it has been used to illegally leverage monopoly power. While the proposed settlement does place limited controls on how Microsoft can leverage that power, I feel it is not an effective measure to prevent future illegal conduct.

Additionally, it in no way strips Microsoft of the power they've illegally gained, and therefore provides no opportunity for competitors to gain a foothold in Microsoft dominated markets. It is for these reasons that I am opposed to this settlement.

From: jack herndon  
To: Microsoft ATR  
Date: 1/23/02 5:22pm  
Subject: The ill gotten gains of microsoft

Microsoft's illegal threats to cut off contracts if a company offers other types of operating systems is a direct violation of anti-trust laws. Just because the threats have silenced many companies is no reason to throw out the evidence of such events. Because Microsoft's threats hindered the selling of other people's products it is

without a doubt that Microsoft is now able to over charge the public with their newest operating systems. Windows XP is horribly over priced simply because they have created such a monopoly that people are afraid to sell other operating systems. Please do what is right for the American people, regardless of the current economic status it is your job to uphold the law and act in the interest of the American people. I ask you to re-evaluate your ruling and no longer act in fear of the economy, it can and WILL stand tall.

From: trinko  
To: Microsoft ATR  
Date: 1/23/02 5:22pm  
Subject: Microsoft Settlement

As a computer professional, although my Ph.D. is in Physics, I find the proposed settlement completely unacceptable. While I could write a long treatise on the problems with Microsoft I think the basic problem can be summarized via one example. When a Texas based computer manufacturer wanted to put Netscape on the desktop instead of Internet Explorer—because that's what customers wanted—they were told by Microsoft that if they did so they couldn't include Windows with the computers. That's functionally equivalent to telling that company that they couldn't sell PCs anymore. This tactic and variants thereof allowed Microsoft to take over the browser market. The Microsoft business model is to use their OS monopoly to drive competitors out of business and then sell low quality, low security, intrusive products at high prices. No settlement that doesn't prevent this will benefit the American consumer.

I supported George Bush's campaign with my time and money because I believe in free markets. But free markets require competition. In the absence of competition some form of regulation is required. Microsoft has no competition and hence needs regulation. The only viable solution I can see is to break Microsoft up into at least two companies. One company can make huge profits selling the OS for 90% of the world's computers while the other can make huge profits selling applications and services. The key problem with the current DOJ settlement is that it doesn't limit the ability of Microsoft to use it's OS monopoly to gain monopolies in other areas. The situation is similar to that which might occur if the local water supply company also sold washing machines. Now if that water supply company was nice everything would be fine. If it were run by Microsoft executives however it would not allow competitors washing machines access to water and after hounding by the DOJ it would allow access to water but only after the home owner went through a complex and time consuming procedure that required the skills of a professional plumber. Needless to say few consumers would go through the hassle and would instead buy the "approved" monopoly backed washer.

Microsoft has a proven track record of limited concern about ethics, security, consumer privacy, and product quality. The current DOJ settlement will allow Microsoft to continue to reduce consumer choice, increased consumer cost, and reduce consumer product quality because it doesn't prevent Microsoft from using its OS monopoly to establish monopolies in other areas. Microsoft has shown that it will try and circumvent any limited solution and will continue to strive to force out of business competitors. Only a dramatic severing of the OS from other Microsoft business units will force Microsoft to compete on the basis of the quality and cost of their products.

Dear sir/madam,  
I live in a small village called Wijk en Aalburg in the Netherlands. I am a software engineer, employed by a small computer company in Delft. Also, I study Biology in the city of Utrecht. I am not a United States citizen, so I'm not sure how you will regard what I have to say. If I only comment on what I see then perhaps my opinions might still be of some value. I hope you will be able to use them.

Others have commented on many aspects of the settlement. Much of the text seems reasonable. I see two minor points which might need some improvement.

Point 1: Under I.1. "All terms, including royalties [...] reasonable and non-discriminatory."

I would like to refer you to a discussion on RAND (Reasonable and non-Discriminatory) licensing as has been proposed for the world wide web consortium (The organization which sets standards for the world wide web). <http://www.w3.org/TR/2001/WD-patent-policy-20010816/> Note especially objections made by some of the w3c contributors. To wit: rand is not non-discriminatory. It discriminates directly against Open Source and Free Software projects. These projects simply cannot use or pay for such RAND licensing due to their legal structure. The arguments that could be made here are very similar to those stated in the w3c discussion. Here are some arguments of my own: Royalty Free (RF) Licensing has been proposed as an alternative, and overcomes this weakness.

Why are Free Software and Open Source Software important? There are two arguments based on reason, and one is based on simple demonstration:

(1) The free software operating system Linux is considered by many to be a somewhat important competitor to Microsoft. It is distributed under the GNU general public licence (GPL) which is a distribution license. Allowing Microsoft to discriminate against such competitor would not be fair. It could also hardly be called non-discriminatory, of course.

reference: [www.gnu.org](http://www.gnu.org)  
(2) As far as I know, original implementations of RFC 791 (Internet Protocol) and RFC 793 (Transmission Control Protocol) were released under the university of California's "Berkeley Software Distribution" License. This is a free software license. These 2 protocols form the heart of the current day Internet. The implementation was left Royalty Free, and hence all parties adopted it. Also, since the original source was open, all parties could learn from it, and the TCP/IP system was quickly adopted worldwide. This is very important.

references: IETF RFCs can be obtained from many sources. Here is one on the world wide web.: <http://www.ibiblio.org/pub/docs/rfc/rfc791.txt> <http://www.ibiblio.org/pub/docs/rfc/rfc793.txt>

(3) Quite simply put: The Simple Mail Transfer Protocol (RFC821) is royalty free, to the best of my knowledge. This protocol is used to transmit E-mail across the Internet. If it were not for SMTP, and if it were not for its royalty free status, I would not have been able to send this message. <http://www.ibiblio.org/pub/docs/rfc/rfc821.txt>

A possible solution to the shortcoming in I.1. (and similar problems with related points under I) would be to allow for Royalty Free licensing of at very least the data interchange formats used by Microsoft.

As an aside: Requiring Microsoft to submit their data formats (such as word and excel) to the International Standards Organization (ISO) might improve the situation further. Such standards organizations argue that good standardization has demonstrably improved economic gain, and stimulated competition between all parties concerned. I think that even Microsoft might actually gain from such an action in the long run. I see nothing wrong with this, because such gain would result from fair competition.

Reference: [www.iso.org](http://www.iso.org)

Point 2: Under J it is said that Microsoft may not disclose information about security systems, and may set almost any requirement when sharing security information with a security vendor.

I am a programmer, not a certified computing security professional. However, I have learnt much from such security professionals. I will try to summarize their point of view as best as I can. Please don't hold any minor errors or omissions I make against me. For a more comprehensive discussion of security, you could try looking at the scientific literature on this subject. Obtaining advice from a Data Encryption Scientist might be somewhat rewarding.

Open knowledge of algorithms and methods is a requirement for truly strong security. This seems reasonable to me. After all, if one knows of a certain weakness, one can compensate for it and prevent people from exploiting it.

If a hostile element was to be the only person to know a weakness in a security system, then that person would certainly be able to exploit that weakness. Further, security systems which are put up for public review can quickly be assessed for potential weaknesses, and these weaknesses can be repaired. No such process can be used for systems which are kept secret. A second slight problem which some people have brought up is that there might be a weakness here. People might state "security concerns" as an excuse to sidestep what they are required to do under I in some situations. In fact this does not seem very hard to do from a technical perspective.

In short, section J on the whole might have some weaknesses. It might be a good idea to gain advice from one or more security experts (such as perhaps a professor teaching about data encryption, or people employed by a government security agency) to determine if this is indeed the case. hopefully this is of some use to you,

sincerely,

Kim Bruning,

Anjelierstraat 47,

4261 CK Wijk en Aalburg,

The Netherlands.

From: Kyle Wheeler  
To: Microsoft ATR  
Date: 1/23/02 5:22pm  
Subject: Microsoft Settlement

The proposed Microsoft Settlement has got to be the worst conceivable idea possible. One wonders what exactly this proposed "remedy" is exactly supposed to do. Can you honestly believe that requiring Microsoft to give software and hardware to the one market that it has yet to make much headway in is a REMEDY for monopolistic practices? It is obvious this would merely give Microsoft a foothold and cement it's monopoly in yet another market.

Kyle Wheeler

From: Michael McLaughlin  
To: Microsoft ATR  
Date: 1/23/02 5:22pm  
Subject: Microsoft Settlement

I believe that the proposed settlement is a bad idea. The following is a section by section diagnose of problems I found within the proposed settlement.

S III.A. Paragraph 1. The three conditions specified for which Microsoft cannot retaliate do not allot an OEM to ability to ship some of its computers with only a non-Microsoft Operating System. I feel that condition 2 should be amended to read: 2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, (b) will boot with more than one Operating System, or (c) includes only a non-Microsoft Operating System; or

S III.A. Paragraph 2. Should it so desire, Microsoft can easily terminate a Covered OEM's license in two months by finding 3 minute faults in the OEM's implementation of the license's requirements despite good faith efforts of the OEM to remain in bounds of the license.

S III.C. Paragraph 1 Condition 3. An OEM license should be free to have any software it deems beneficial to the user and the user's computing experience launch automatically regardless of the existence of a similar Microsoft product.

S III.D. Paragraph 1. The requirement that the APIs released be used for the sole purpose of interoperating with a Windows Operating System Product severely restricts the actions of those individuals and groups involved in allowing programs written for a Microsoft Operating System Product run on a non-Microsoft Operating System. These people will be opened up to potentially bankrupting litigation to ensure that their product(s) does(do) not come to market through the claim that they infringed on the terms laid out in this statement. The requirement that the APIs be used for the sole purpose of interoperating with a Windows Operating System Product restricts competition instead of enriching it. Additionally, Microsoft has begun to create products that are integrated with the operating system but are not the operating system. Examples of this are the Internet Explorer web browser and the Windows

Media Player. These programs which are becoming essential through Microsoft's perseverance provide their own APIs which remain potentially uncovered by this clause due to their circumspect nature. This clause should be modified to include operating system components in addition to the operating system itself. Also, this clause specifies a Windows Operating System Product, whereas earlier portions specify Microsoft Operating System Products. This and subsequent clauses should be modified to use the term Microsoft Operating System Product in order to attain consistency and also to ensure that a new non-Windows operating system comes to market which could then technically continue with the behavior which this clause is seeking to remedy. Finally, the term Timely Manner at the end of this clause is potentially open to abuse. The definition of Timely Manner should be altered such that the time frame of release is better defined. The current definition seemingly relies on current Microsoft practices which are easily alterable to corrupt the intentions of this paragraph. This paragraph is seriously flawed in my opinion and will achieve none of its objectives due to the massive loopholes and inconsistent statements and naming conventions layed out above and continued in discussions further in this statement.

S III.E. Paragraph 1. This statement suffers from the same problem enumerated in the beginning of the above discussion of S III.D. Paragraph 1. The requirement of sole purpose once again opens individuals and groups up to potentially bankrupting law suits which would seek to silence them and prevent the release of products competing with Microsoft products.

S III.F. Paragraph I Condition 1. This entire condition is potentially inconsistent with and voided by other sections of this proposed settlement due to the conditions laid out above regarding S III.D. Paragraph 1 and S III.E. Paragraph 1. The requirement of APIs being released for the sole purpose of interoperating with a Windows Operating System Product means that an ISV developing a replacement for certain functionality in a Windows Operating System Product is open to coercion through lawsuits claiming they misappropriated the published APIs regardless of whether ISV determined the APIs through their own efforts. Microsoft would not technically be retaliating for the ISV or IHV breaking any of these conditions but rather for them misappropriating the information Microsoft published and therefore would effectively entirely circumvent the purpose of this clause.

S III.F. Paragraph 1 Condition 2. This entire condition is subject to the same potential problems and flaws laid out regarding S III.F. Paragraph I Condition 1.

S III.H. Paragraph 2 Condition 1. This condition allowing a Windows Operating System Product to invoke a Microsoft Middleware Product to connect to a Microsoft maintained server fails to take into account Microsoft's current .NET business plan in which computers will continually be accessing Microsoft maintained servers in order to undergo their normal operation. Not

allowing specifically for OEMs to override this ability by setting a non-Microsoft Middleware Product with similar functionality the ability to be launched instead of the Microsoft Middleware Product in essence grants license to Microsoft to continue the undesirable practices sought to be remedied here by way of new technology. Microsoft should be required to allow non-Microsoft Middleware Products with similar functionality to be launched instead of Microsoft Middleware Products at the sole discretion of the OEM or the end user to connect to Microsoft maintained servers.

S III.H. Paragraph 4 Condition 5. The word "it" in the following except, "a license to any intellectual property rights it may have," is ambiguous and therefore makes this section incomprehensible and open to interpretation which could lead to undesirable consequences.

S III.H. Paragraph 5. This paragraph potentially eliminates any requirements laid out in S III.D. Paragraph 1, S III.E. Paragraph 1, and other sections due to Microsoft's potential ability to claim that its APIs are part of its intellectual property. This grants entirely too much freedom of interpretation to Microsoft and if this paragraph is necessary to this potential remedy, it should be rewritten to take into account all of the proposals set forth in this document.

S III.J. Paragraph 1 Condition 1. Microsoft is allowed far too much freedom of interpretation by this condition. Determining what should not be released due to security restrictions should be lodged in the hands of an independent body that does not answer to Microsoft in order to ensure that everything required to be released to ISVs, IHVs, IAPs, ICPs, OEMs, and others is released. The potential for Microsoft to deem that something which it is valuable for it to retain sole access to is a potential security compromise is too great to be ignored.

S III.J. Paragraph 1 Condition 2. Microsoft is, again, allowed too much freedom of interpretation by this condition. Competitors can easily be excluded by any one of these conditions at Microsoft's sole discretion. Verification that a person or entity applying for access to any API, Documentation, or Communication Protocol that is determined to be kept secret due to security concerns should rest with an independent body due to the potential for abuse of power.

S IV.B.2.a. The time period of one year should be lengthened to two years in order to better ensure that a TC member is completely free of any allegiances. S V.B. The one-time extension of two years should either be lengthened to five years or else the extensions should be allowed to be indefinite. This section currently fails to exhibit the seriousness of the nature of Microsoft acting to breach this agreement. The naming and formatting conventions used in the proposed settlement lack uniformity, which weakens the document as a whole. I strongly disagree that this proposed settlement is enough to keep Microsoft from engaging in anti-competitive behavior. I believe that monetary damages should be imposed in addition to a corrected version of this document (as I have outlined above).

Thank you for your time.

Subject: Microsoft Settlement

I think the proposed settlement is a bad idea. It fails to prohibit Microsoft from much of the illegal behavior it has been found guilty of.

**MTC-00018712**

From: Drew Wright  
To: Microsoft ATR  
Date: 1/23/02 4:08pm  
Subject: Microsoft Settlement

I am writing to register my objection to the proposed Microsoft settlement. I do not believe the current proposal serves the interests of promoting competition or remedying the impact on the American consumer.

Specifically, I believe the current proposal will stifle competition by giving Microsoft a leg-up on competitors under the guise of a settlement. Permitting Microsoft to settle the matter by delivering Microsoft products to school systems, which traditionally tend to favor other vendors (e.g., Apple), would be tantamount to state-sponsorship of the extension of Microsoft's monopoly. Instead, Microsoft should be required to make payment in cash, and then permit the school systems to direct the use of these funds in the (hopefully technical) areas of its choosing.

Furthermore, I believe the amount of the settlement is grossly inadequate to remove the incentive for Microsoft to continue its practices. I believe Microsoft will treat the settlement as a "cost of doing business", much as any other "administrative overhead". Finally, I believe the settlement should include requirements for Microsoft to provide open access to interfaces between its products, and to provide an unbundled version of Windows (no Internet Explorer, no Windows Media Player, etc.). These actions are needed to afford competitive products, including open source alternatives, with an environment in which they can compete on a level playing field with a competitor which controls the incumbent desktop operating system technology. Without true, timely and open access to interoperability information, the barriers of entry for alternative commercial and open source products will be too high to overcome the leverage held through its desktop operating system monopoly. To truly avoid a recurrence of past practices, an oversight committee of some sort is truly needed.

Your attention to this matter is greatly appreciated.

Sincerely,  
Andrew ("Drew") Wright

From: Carlson, Christopher W.  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 5:20pm  
Subject: Microsoft Settlement

Sirs:

I am writing to register my disapproval of the proposed Microsoft settlement. It in no

way properly addresses the amount of damage caused to the software and computer industry by Microsoft over the years and, as that company's continued blatant anticompetitive behavior illustrates, does not serve to restrict any further violations of antitrust law.

If Microsoft is not regulated in some meaningful way, the market will never become competitive again. In the absence of an environment which allows (much less fosters) effective competition, consumers will continue to suffer and potential competitors will continue to suffer. Furthermore, if heretofore unknown problems within Microsoft were to destroy that company after it had erased competition, the impact on our economy would be devastating.

Please do not allow the Settlement to pass as is. It is insufficient, ineffective, and an insult to everybody who has been affected in an adverse way by Microsoft's immoral and illegal business practices.

Thank you.

Signed,  
Christopher W. Carlson

From: Robert A Nesius  
To: Microsoft ATR  
Date: 1/23/02 5:23pm  
Subject: Microsoft Settlement

To whom it may concern,

I'm writing to express my disappointment with the proposed Microsoft Settlement currently under consideration. There are many reasons for this, which will be well documented in the formal, open letters I've seen submitted for consideration. The final analysis leads one to conclude that really these proposed remedies will not substantively change Microsoft's behavior and business practices in any such way as to mitigate the effects of these behaviors in the future.

Moreover, there is no consequence or penalty for Microsoft's proven wrong doings beyond an attempt to modify Microsoft's future behaviors.

I strongly urge this settlement proposition be denied.

Subject: Microsoft Settlement

I find the proposed Microsoft settlement ludicrous. How does one rectify a predatory monopoly which has leveraged and crushed its way into more and more markets/segements by giving them leverage into yet another market? Microsoft is traditionally weak in the Education market. <insert sarcasm > Wow, they're willing to leverage into it as a "settlement" of antitrust litigation. <end sarcasm> Ha!

How about forcing a reasonable EULA, forcing the offering of Windows without Explorer, and making them liable for security holes and glitches — other consumer companies cannot get away with selling a defective product.

To whom it may concern:

The settlement that the Department of Justice reached with Microsoft is totally inadequate. Microsoft is a predatory monopoly that has repeatedly broken the law, and the settlement makes it look like the Justice Department caved in and threw a fight that the government had already won. If this settlement goes through, then the only lesson that Microsoft will have learned is that it doesn't have to follow the same rules, laws, and moral standards that the rest of us do, and that would be a sad thing to have to explain to our children.

The U.S. government already looks like a patsy for big corporate interests with all the juice and help that Enron was getting for its money. Do we really want to suck up to Microsoft as well?

Microsoft's illegal threats to cut off contracts if a company offers other types of operating systems is a direct violation of anti-trust laws. Just because the threats have silenced many companies is no reason to throw out the evidence of such events. Because Microsoft's threats hindered the selling of other people's products it is without a doubt that Microsoft is now able to over charge the public with their newest operating systems. Windows XP is horribly over priced simply because they have created such a monopoly that people are afraid to sell other operating systems. Please do what is right for the American people, regardless of the current economic status it is your job to uphold the law and act in the interest of the American people. I ask you to re-evaluate your ruling and no longer act in fear of the economy, it can and WILL stand tall.

Under the Tunney Act, I wish to comment on the Microsoft settlement. Specifically, I believe it fails to penalize Microsoft for past illegal behavior, and therefore does nothing to restore any sense of balance to the marketplace.

Microsoft has already gained dominance in the marketplace, and altering its behavior now (while necessary) does nothing whatsoever to address these past transgressions. While I believe it would be difficult to appoint restitution to specific companies in a case like this, a large penalty paid to the government would address the specific heart of the matter: microsoft would not be allowed to keep its ill-gotten gains.

From: Todd Kadrie  
To: Microsoft ATR  
Date: 1/23/02 5:27pm  
Subject: Microsoft Settlement

As a Network Administrator with 15 years of experience supporting software which runs on Microsoft, Netware and Linux operating systems, I'd like to offer my comments related to the Proposed Final Judgment in United States v. Microsoft.

The proposed final judgement does not address what I view as some of the issues that most directly have impacted both the companies that I have worked for and myself personally and professionally. A specific

example of a clearly illegal practice which would be allowed to continue unchecked is covered in Section III.A.2. of the Proposed Final Judgment. This portion of the PFJ effectively allows Microsoft to retaliate against OEM's that choose to ship computers with free or inexpensive alternative operating system like Linux or BeOS, even when they include no Microsoft OS at all. The growth and wide-spread ability of alternative Operating Systems like Linux and BeOS operating systems have been severely hampered by Microsoft's exclusionary agreements with OEM's.

From my own experience, I have no interest or need to buy a computer with a copy of any version of Microsoft Windows pre-installed, but under Microsoft's exclusionary contracts, I have had to buy all of my computers with a Microsoft OS bundled at an additional fee, and then had to go to the trouble of removing the Microsoft OS and then installing a preferred alternative like Linux or BeOS.

In addition the enforcement of the provisions of the PFJ clearly lack real enforcement power or "teeth". Instead of leaving enforcement to the legal system, with it's clear lack of understanding of technical details or real implementation, a much more effective and suitable solution would be the establishment of a Technical Committee with investigative powers and the ability to enforce it's findings.

Considering these and other problems, it is my contention that the Proposed Final Judgment not only allows but encourages anticompetitive practices to continue, and actively delays the growth and wide-spread adoption of competing operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted in it's current form.

Thank you,

#### MTC-00018728

From: James Marca  
To: Microsoft ATR  
Date: 1/23/02 5:26pm  
Subject: Microsoft Settlement

Hi,

My name is James Marca. I am a graduate student in Civil Engineering at UC Irvine. I object on many points to the propose Microsoft Settlement, and as a citizen of the State of California, I am quite happy that my State Attorney General is one of those pushing for a stronger settlement. In short, I believe the federal government caved. I believe that the Republican party has been swayed by the money, as well as its traditional sweet spot for big business. Unfortunately, the Enron debacle demonstrates vividly that the free market and self-regulation is not good enough at stemming the worst excesses of corporate greed. Allow me to digress slightly.

Microsoft is an aggressive, smart company, who are quite capable of crushing competition in all forms. When Netscape came out with their Navigator browser and the WWW was essentially brand new, I was working in Boston at a consulting firm. When

we finally got Internet access at our desks, it was a revelation. My friend and I had a long running email exchange about what this new medium meant. I remembered Marshall McLuhan's book, *The Medium is the Massage*, which I had read as an undergraduate when I was working on my senior (engineering!) thesis. For several months I read that random pages from that book, and thought about how McLuhan was really describing the Internet, not electricity and television. I proposed to my friend (a programmer in Palo Alto) that we should leverage hypertext to create a browsing platform, not just for display, as Netscape was doing, but for running programs like spreadsheets and word processors. My friend wrote back saying forget it, Netscape was already pushing that front, and they had a huge head start.

At the time, I was sick and tired of Windows applications crashing. The thought of an alternative operating system was really appealing to me, as my company had just converted to MS Office, disallowing the use of Lotus and WordPerfect in the name of corporate standardization. Right before I went back to graduate school, I was working on a document with our publication department in which many spreadsheet figures were embedded in an MS Word document. That sucker crashed if you made two changes. So to proof-read the document, edit the WYSIWYG elements, and so on, we had to open it up, make one change, save, close, reopen, change, save, close, and so on. When I got back to grad school, I found LaTeX, then later Linux, and I no longer use Microsoft products. (YAY!)

I told you that story so I could tell you this one. I am not a lawyer, and I cannot decipher many of the details of the proposed settlement. Therefore, I have read through many of the comments that are available on the Internet. One of the best is by Robert Cringely, available at: <http://www.pbs.org/cringely/pulpit/pulpit20011206.html> If I may, I'd like to quote from that document, starting with the seventh paragraph:

Here is what I mean. The remedies in the Proposed Final Judgment specifically protect companies in commerce—organizations in business for profit. On the surface, that makes sense because Microsoft was found guilty of monopolistic activities against "competing" commercial software vendors like Netscape, and other commercial vendors—computer vendors like Compaq, for example. The Department of Justice is used to working in this kind of economic world, and has done a fair job of crafting a remedy that will rein in Microsoft without causing undue harm to the rest of the commercial portion of the industry. But Microsoft's greatest single threat on the operating system front comes from Linux—a non-commercial product—and it faces a growing threat on the applications front from Open Source and freeware applications. The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the

proposed settlement. It is as though they don't even exist.

I would add that the biggest competitor to Microsoft Word, in the academic market, is LaTeX and TeX, a public domain text layout system. Again, free software.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ... " So much for Samba and other Open Source projects that use Microsoft calls. The settlement gives Microsoft the right to effectively kill these products.

Section III(D) takes this disturbing trend even further. It deals with disclosure of information regarding the APIs for incorporating non-Microsoft "middleware." In this section, Microsoft discloses to Independent Software Vendors (ISVs), Independent Hardware Vendors (IHWs), Internet Access Providers (IAPs), Internet Content Providers (ICPs), and Original Equipment Manufacturers (OEMs) the information needed to inter-operate with Windows at this level. Yet, when we look in the footnotes at the legal definitions for these outfits, we find the definitions specify commercial concerns only.

But wait, there's more! Under this deal, the government is shut out, too. NASA, the national laboratories, the military, the National Institute of Standards and Technology—even the Department of Justice itself—have no rights. It is a good thing Afghanistan is such a low-tech adversary and that B-52s don't run Windows.

I know, I know. The government buys commercial software and uses contractors who make profits. Open Source software is sold for profit by outfits like Red Hat. It is easy to argue that I am being a bit shrill here. But I know the way Microsoft thinks. They probably saw this one coming months ago and have been falling all over themselves hoping to get it through. If this language gets through, MICROSOFT WILL FIND A WAY TO TAKE ADVANTAGE OF IT.

My fear is that one day I will buy a computer whose motherboard BIOS requires me to run Microsoft's latest subscription-based operating system, which will in turn only allow me to run Microsoft's subscription-based office suite, and Microsoft's subscription-based compiler will be the only one that can take advantage of Microsoft's proprietary windows API. Paranoid, perhaps. But this laptop that I am typing on came with Windows ME. Only Windows ME. I loaded up Slackware Linux 8.0 immediately, and had no problems, and yet Sony was unable to sell me this laptop without Windows ME, due to licensing restrictions from Microsoft. The only laptops I could find with Linux on them were very expensive models from IBM—out of my budget. So I was \*forced\* to pay Microsoft for a copy of windows that I \*do not\* use. I had no recourse, other than not buying the laptop.

Back to applications and APIs. There is no way to take a LaTeX document and save it as a Word document, since there is no public documentation of the Word file format, and reverse engineering that format might be illegal (if I understand the restrictions of the DMCA properly). So if I want to work with co-workers on a document, I am forced to save as RTF, or rich text format. Luckily the good folks at AbiWord and OpenOffice have developed utilities to read Word documents and convert them into editable text. But there is no reverse, save as Word option.

There is nothing in this settlement that will make my situation easier, and plenty that will make it worse. At home I am going to set up a Samba file server and printer gateway, so that my wife and I can both use the new printer without switching cables and so on. Samba has been in danger from Microsoft for some time. About a year ago, Microsoft engaged in some textbook embrace-and-extend (the same way they snatched html from Netscape) with the Kerberos authentication system, thus forcing the Samba guys to play catch-up with Windows 2000. I can't find details on that situation, but I did find this older Samba document, from the Samba.org website:

The Future Windows 2000 looms on the horizon like a lazy animal peaking its head over the edge of its burrow while trying to decide whether or not to come out. No one is exactly sure about the kind of animal it will be when it does appear, but folks are fairly certain that it will have teeth. Because of their dominance on the desktop, Microsoft gets to decide how CIFS will grow. Windows 2000, like previous major operating system releases, will give us a whole new critter to study. Based on the beta copies and the things that Microsoft has said, here are some things to watch for:

CIFS Without NetBIOS. Microsoft will attempt to decouple CIFS and NetBIOS. NetBIOS won't go away, mind you, but it won't be required for CIFS networking either. Instead, the SMB protocol will be carried natively over TCP/IP. Name lookups will occur via the DNS.

Dynamic DNS Microsoft will implement Dynamic DNS, a still-evolving system designed by the IETF (Internet Engineering Task Force). Dynamic DNS allows names to be added to a DNS server on-the-fly.

Kerberos V Microsoft has plans to use Kerberos V. The Microsoft K5 tickets are supposed to contain a Privilege Attribute Certificate (PAC), which will include user and group ID information from the Active Directory. Servers will be looking for this PAC when they grant access to the services that they provide. Thus, Kerberos may be used for both authentication and authorization. Active Directory The Active Directory appears to be at the heart of Windows 2000 networking. It is likely that legacy NetBIOS services will register their names in the Active Directory.

Hierarchical NT Domains Instead of isolated Domain Controllers, the NT Domain system will become hierarchical. The naming system will change to one that is remarkably similar to that of the DNS.

Whatever the next Windows animal looks like, it will be Samba's job to help it get along

with its peers in the diverse world of the Internet.

And of course, Microsoft's job is to try to kill the Samba effort, so that they can sell more licenses to software.

I fail to see how the proposed settlement addresses Microsoft extending its monopoly to the Internet, which is dominated by free software at the moment, nor how it addresses the attempts by Microsoft to preserve its dominance of the desktop market, where the only credible alternative is Linux and programs written for Linux. In fact, the settlement appears to allow Microsoft at best to ignore and at worst actively litigate against (for reverse engineering, etc) its largest potential competitor—free software.

You have not required MS to open up their APIs to all comers, only to commercial entities. Open source projects, on the other hand, open their source to all comers, Microsoft included. So Microsoft (or any commercial company) can look at the Apache code, the Samba code, and so on, and take the best features that they see.

You may think this is silly, that commercial companies have better code than free software advocates, and so on. But consider this interview with Donald Knuth, inventor and programmer of TeX, from <http://www.advogato.org/article/28.html>

Q: I noticed, for example, that in the proprietary software market for publishing, that systems are only today acquiring features that have existed in TeX for a long time, for example whole-paragraph optimization. There's a big to-do about Adobe InDesign, which finally...

A: They finally implemented the TeX algorithm.

Q: Did they implement the TeX algorithm?

A: Yeah, that's what they said.

Q: Did you talk to the people?

A: I met three of four of them at the ATYPI meeting in Boston in October, but that was after I had heard about it, that some friends had found this in the documentation.

The fertile development environment envisioned by free software pioneers such as Richard Stallman and Eric Raymond is happening in the open source world. I have often opened up perl and C++ source code to learn about better ways to do things in my own code, and when I take snippets I credit the source, and make sure that my own code is at least as open (GPL2 or Artistic licenses being my personal favorites). But the transfer of ideas and techniques appears to be a one-way street from the free software world to the proprietary software world. Companies like Microsoft take. And then in the settlement they don't even have to open up their APIs to free software programmers! APIs are NOT code. They are just hooks into compiled code. So I can't see the crappy or excellent source code with an API, I just get to see the advertised \*capabilities\* of compiled code. And yet Microsoft does not have to share this with me, because I am not a viable commercial entity.

Why does this matter? Because I am the future of this country, as is my office mate, my advisor, undergraduates I work with, and as is my 18 month old daughter. I share my knowledge with these people, and I encourage them to learn and share back.

I am developing a peer-to-peer traffic information and control system which I hope will be open to all. I call it the Autonet. I pride myself on the idea that it may become ubiquitous, and so I wrote the term and the ideas in my notebook last year. But otherwise I have made no effort to hide my ideas, because I feel what I am doing will be best served if everybody has a hand in it—many hands make light work, but also many eyes can watch big brother. But my system has to run on Linux. I dare not base any of my code on Microsoft tools and APIs, because they can pull the rug out from under me at any time. I am not a commercial entity, but I am an academic, and a programmer of modest expertise. I can develop useful tools and products, and I will do so for Linux. However, who will use my code if MS kills Linux, if it becomes illegal to reverse engineer APIs, if Lindows is crushed and prevented from marketing a Linux within Windows setup (or whatever it is they've got going over there). And when computers are plonked in cars (they are beginning to pop up now), you can bet that MS will try to get all of them to run Windows. If my ideas are the best thing going, they will steal my ideas and release a featureful extension of my APIs, and they can legally withhold their extensions to my API from me! Of course, that is a far off and improbable future, but you proposed settlement is weighing heavily in my mind. Why should I bother with this innovation, if it will get extended and stolen by Microsoft? Why should anyone try to break the rules, if the legal rules are written and enforced to the advantage of the entrenched monopolies?

I do hope you back out of this embarrassing sell-out of a settlement. Failing that, I hope that my attorney general is able to get a much stronger settlement in effect for California residents.

Thank you for your time on this rambling letter.

[jmarca@translab.its.uci.edu](mailto:jmarca@translab.its.uci.edu)  
ps, as I am about to mail this off, I did one more search on Google for the Samba stuff I remember. Here is one link of many that turned up in my search (type Kerberos Samba embrace extend)

<http://techupdate.zdnet.com/techupdate/stories/main/0,14179,2582875,00.html>

The article points out that Microsoft did nothing legally wrong, since they exploited a hole in the BSD-style license. But there is the smoking gun of trying to kill Samba by taking and not giving back.

james

This settlement is a sham.

A settlement like this tells me that the government should never have sued in the first place. This has been a complete waste of money. The whole point of the anti-trust lawsuit was to force Microsoft to alter its behavior. Now, it has a carte blanche from the government to do just about whatever it pleases.

This is SHAMEFUL.

I am writing to express my concern that the Proposed Final Judgement is ineffective, allows anti-competitive practices to continue, is excessively vague or overnarrow and should NOT be adopted without substantial revisions to address the following problems:

The PFJ doesn't take into account Windows-compatible competing operating systems

The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

The PFJ as currently written appears to lack an effective enforcement mechanism. Details of which are at: <http://www.kegel.com/remedy/remedy2.html> I am also indicating that I will be a co-signer of Dan Kegel's Comments

Thank you for your time and attention,  
Christopher W. Gee

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I think the proposed settlement is bad idea, especially because of the requirements for Microsoft to release API documentation too late to help ISVs.

Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

I do not support the Settlement as it currently reads.

From: Jerry Tompkins  
To: Microsoft ATR  
Date: 1/23/02 5:54pm  
Subject: Microsoft Settlement

It is patently absurd and morally abhorrent that Microsoft should get off with the inane settlement agreed to by the DOJ. What do I tell my kids and grandkids? It's morally OK if you're a huge corporation to get away with numerous activities which are morally wrong? I'm a registered Republican and consider myself a conservative. I have always been supportive of free enterprise in business.

But Microsoft's actions have nothing whatsoever to do with the conduct of a business in a free enterprise system. They have strangled an industry which is at the heart and soul of our nation's economy. They are demonstrating they can not only squash competition but even step on our government as if it were some irritating bug and nothing more.

Anyone with an IQ of 90 and enough sense to avoid voting for Liberal Democrats knows what an evil empire Microsoft truly is.

Disgusted.

Subject: Microsoft Settlement

To whom it may concern,  
I am writing to express my displeasure of the proposed Microsoft settlement as allowed by the Tunney Act. I have been a computer professional for over 10 years and I have

witnessed first hand the rise of the Microsoft monopoly and the damage it has caused to the computer industry. I feel that the settlement as it stands now does not go far enough to redress this damage. The definitions of "API" and "middleware" as detailed in the settlement, are so narrow that they become meaningless in today's computer market. Also, by allowing Microsoft to set the terms for licensing it's API to developers, the settlement allows them to lock-out many Open Source and Freeware developers who would be working on projects in a non-profit manner.

I hope that the Department of Justice will re-examine this settlement and come up with a better solution that truly opens the computer industry up for healthy competition.

To: Microsoft ATR  
Date: 1/23/02 5:30pm  
Subject: Microsoft Settlement

I just wanted to add my input on the weak settlement in the Microsoft Anti-trust case. Allowing such a weak remedy for the blatant violations of this monopolistic tyranny provides one more proof of the general consensus that you get only as much justice as you can afford to buy! As you are probably aware, since the settlement offer Microsoft has been aggressively pursuing their aggression in new areas.

I urge you to reject the settlement offered as not in the public interest. Any remedy should sting at least to the extent that the perpetrators are able to gauge the pain that they have inflicted on others.

**MTC-00018738**

From: Phil Smith  
To: Microsoft ATR  
Date: 1/23/02 5:31pm  
Subject: Microsoft Settlement

In my opinion, the entire issue regarding the settlement is unjust, un-American, and undue. Microsoft saying that Microsoft acted in an anticompetitive manner is similar to saying that Ford, GM, and Chrysler act in an anticompetitive manner towards RCA, and Motorola when it comes to installing radios in their cars. The browser is a part of an operating system much the same way that a radio is these days a part of a car yet I do not see any antitrust law suits being served to "the big three".

Also, the real reason why Netscape lost to Microsoft had nothing to do with co-mingling

code or bundling a product that should be free to begin with. It had everything to do with smart marketing and strong business partnerships. That's not anticompetitive, that's intelligent business. On the whole, the damages due to Netscape should amount to the total salaries of its CEOs, CTOs, and board members for allowing such gross negligence and bad business tactics to go on without proper remedy. The entity responsible for Netscape's demise is none other than the people who failed to run their business properly.

I have always believed that it is not the place of the American Government to prop up dying business—Certainly, our President will have a lot to answer for if it ever comes to light that he helped to support Enron during it's fall. Or perhaps Enron should simply start suing all those other power utility providers? With much disgust for the entirety of the 2-year debacle that is nothing more than a repeat of the antitrust case regarding Windows 95/98, I sign this letter in protest to the state's settlement as it stands. Further I will say that destroying Microsoft is of no help to our economy, or to the computer industry. If the legal system must pick an entity to pick on, I say go after AOL-Time-Warner.

**MTC-00018743**

From: Mark T. Stapleton  
To: Microsoft ATR  
Date: 1/23/02 5:29pm  
Subject: Microsoft Settlement

As an engineer with many years of experience using Microsoft's operating systems, from DOS forward to Windows 2000, and many years of experience using and utilizing resources on the Internet, I am strongly opposed to what I consider to be a weak and toothless settlement between the DOJ and Microsoft Corporation.

It is clear that Microsoft has violated basic business ethics, as well as the letter of the Sherman Antitrust Act, and that it's continued unregulated dominance is not in the interest of consumers and competitors. This is not my conclusion, but of the Court of Appeals. It is also clear to me personally that Microsoft continues, despite the judgement already passed down, to use practices that are unfair and unethical. Web sites built with Microsoft applications don't work with Netscape Navigator and other Internet browser software. The Windows ME and Windows XP platforms released since the judgement both compromise personal security on the Web by design, not by accident or by error.

A failure to act more strongly than currently planned will simply encourage this irresponsible behemoth to continue making changes to products which are more self-serving than useful, and more in it's own interest than in the public interest or in the interest of the United States government. Please don't be satisfied to let things stand as is. You would be doing the entire country, and indeed the world, a big disfavor.

From: David Ahl  
To: Microsoft ATR  
Date: 1/23/02 5:30pm  
Subject: Microsoft Settlement

I believe that the proposed Microsoft settlement is severely flawed, for the following two reasons:

1. Although it makes an effort to allow software developers more access to Windows APIs than they have had in the past, Microsoft has and will continue to control the computer industry through the use of its own technologies and file formats, unless specific provisions are made to stop it. Microsoft Office, for instance, uses "closed" (unpublished) file formats for word processing, spreadsheets, etc., forcing users to purchase their products or else struggle with complicated and imperfect file translation programs. Or Microsoft's Passport user id system, which has the effect of forcing internet users into using windows to access certain webpages or net services. For the sake of users and competing technology companies alike, all of Microsoft's file formats and all other restrictive technologies must be "open": fully published and documented.

2. Although the court found Microsoft essentially crippled Sun Microsystem's Java by using writing its own software and, as of Windows XP, failing to even include Java support in their operating system, no provisions were made to include a standardized version of java (or a version of java at all!) in the settlement.

Sincerely,  
David Ahl

**MTC-00018745**

From: Lance Simmons  
To: Microsoft ATR  
Date: 1/23/02 5:31pm  
Subject: Microsoft Settlement

I use the Linux operating system. There are many programs designed for Windows which I can in fact run under Linux, using WINE, a Linux-native re-implementation of the Windows API.

Microsoft, however, includes language in the EULA for some of its software, such as the MSNBC News Alert program, which prohibits me from running the software under any operating system other than Windows. It seems manifestly unjust that I should be legally bound to run software only on the operating system for which it was originally designed. Given that I can make the software run using my preferred operating system, it seems absurd that Microsoft should have the power to license the software to me only on condition that I do not do so. I believe that Microsoft has deliberately designed some of its EULA's for operating-system-independent software in such a way as to unfairly reinforce its monopoly in the market for operating systems. I hope you will take this into account as you go forward with the Tunney Act proceedings.

Sincerely,

Lance Simmons

January 23, 2002

To Whom It May Concern:

The proposed Microsoft Settlement should be accepted and this case should be ended once and for all. I have used Windows products since the late 1980s and find it remarkable that the government of my country brought this suit in the first place and inconceivable that a group of only nine states refuse to let it end. The current settlement more than adequately penalizes Microsoft in a way that will be beneficial to it's competitors. In other words, if there ever was a lack of competition in the computer software market, this settlement will restore it.

I personally enjoy the convenience and cost effectiveness of having an operating system that can do multiple things. Some would like to freeze in time the definition of what is and what is not an operating system and that is ridiculous. The world does not stand still, it is always moving, and the world of technology moves twice as fast. I can't imagine a current day operating system without a graphical user interface or one without the ability to connect with and understand the Internet. Tomorrow it may be electronic commerce or digital media that we cannot do without. The needs of computer users change and the operating system must be able to change with them. The current settlement allows Microsoft to continue to improve and evolve their operating system as our needs dictate, while providing it's competitors with all the information and opportunity they need to create products that compete with Microsoft's own. It further gives the computer manufacturers the power to place any of these competing products right along side of, or in place of Microsoft's offerings. Competitors will have the information they need to create great products and the access they need to get those products in front of consumers. And to make sure all goes as planned, the settlement even includes a provision for a panel of

independent monitors to make sure everything is as it should be. I cannot see how either the remaining nine states or even Microsoft's competitors could request anything more. The goal of this case is not to destroy Microsoft, but to help it's competitors and one assumes, by extension, us consumers. That goal is achieved with the current settlement, so please do not let things go any further.

I fear that for some, this case has turned into a contest where the only acceptable outcome is total "victory", defined as the complete deconstruction of Microsoft. As an American I am proud that our country leads the way in the computer software field. These feelings of pride are probably similar to how people felt about the American automotive industry in the 1950s and 1960s. Please do not let the personal feelings and ambitions of a small minority destroy that.

Sincerely,  
Greg Fonda

Subject: Microsoft Settlement

Please punish Microsoft. They are using their \$34 BILLION in cash to force their version of the internet on the rest of the world. Whatever they did in the browser area, they are doing again in the online digital video format area. They are buying portions of digital media content streaming companies, and telling them to only use their version content and abounding the other formats.

Microsoft uses closed proprietary standards and not open standards. Look at Sun Microsystems and Apple, they both use open standards for networking and web services, but not Microsoft, this is how they will force their .NET strategy on everybody. Then it will be too late before the Justice Departments realises what happened. Then when the Justice Department tries to do anything, they will be accused of harming the economy. Microsoft needs to be stopped before they cause their damage with their .NET closed internet standards. Look what they did to JAVA. They took an open standard, modified it so it would only work with their systems, breaking an open standard. They are bullies and they do not play fair. Look towards Sun Microsystems as a role model for how computer companies should be behaving.

From: Steve Nelson  
To: Microsoft ATR  
Date: 1/23/02 5:31pm  
Subject: Microsoft Settlement  
Department of Justice

I am deeply concerned about the apparent failure of the government to deal in a meaningful way with the Microsoft monopoly and the weakness of the proposed settlement. This company has not changed its behavior or attitude in any significant way since this entire case began. It should be obvious to anyone that the issue is no longer about the Netscape Browser. Recently I concluded several transactions on Ebay and, much to my dismay, I was forced to enter a Microsoft Passport number to complete the process. Just watch, soon there will be a "Microsoft Tax" on all significant Internet monetary transactions. Too many companies know they will lose out in the marketplace if they resist Microsoft's agenda.

Microsoft should be forced to open up its operating system source code. It should be limited in its ability to make company acquisitions for at least eight years. Its continued use of the well-worn bundling trick (remember IBM?) to freeze out the innovations of competitors must be stopped. Is my government big enough and technically competent enough to take this company on and make a real difference in the market place?

Subject: Microsoft settlement

I cannot understand why Microsoft is being let off so easily. If there was more competition we would have much more reliable operating systems to use. I feel the settlement doesn't go far enough to impose just penalties on Microsoft, and they'll go back to their old ways of crushing competition, which is bad for American business. I feel they should open up their APIs and early access programs to all developers, not just those they want to with, as that is unfair competition.

Sincerely  
Armand Mathieu

 Subject: Microsoft Settlement

I have worked in the computer industry for eight years. Countless times, in ways large and small, I have seen how Microsoft has used its monopoly control over operating systems to prevent competition from other providers of applications and services. This has pervasive effects throughout the industry, affecting nearly every software and hardware provider, in turn affecting us all as direct and indirect users of computer systems. These effects are corrosive to healthy competition, resulting in poorer-quality software and hardware products.

Speaking specifically as a professional interaction designer, concerned with making products easier for people to use, I can say that Microsoft commonly creates technology limitations intended to support their monopoly power that result in making computer systems harder to use. Microsoft's monopolistic practices are thus directly harmful to consumers.

I have followed the many legal challenges to Microsoft in past years with some attention. Microsoft has repeatedly ignored or worked around behavioral remedies, and I was hopeful that the court would embrace a structural remedy. I was disappointed when I learned that the court would pursue a behavioral remedy instead; reviewing the current proposed final settlement, it is clear to me that it is completely inadequate to prevent future violations of both the letter and spirit of anti-trust law. In fact, I expect that in practice the settlement will effectively give Microsoft license to continue and perhaps even expand many key monopolistic anti-competitive practices, as many commentators have predicted. I strongly urge the court to reconsider its settlement in favor of a much more vigorous remedy. I believe that a structural remedy is appropriate, but even a more strongly framed behavioral remedy could be a dramatically more appropriate response.

From: Chip Richards  
 To: Microsoft ATR  
 Date: 1/23/02 5:31pm  
 Subject: Microsoft Settlement

I would like to add my voice to those opposing the current form of the Proposed Final Judgment in United States v. Microsoft. I have been in the computer business since 1974. I have seen the growth of the computer industry from its relatively esoteric origins into the commercial giant it is today. Computers are how I make my living, so this subject, and this settlement, are understandably of great interest to me.

Microsoft has done some good things for the computer industry and for other businesses and individuals who depend on it. I used to have a very high opinion of the company and its products; I even applied for a job there at one time. But over the years, I have seen them change from a source of benefit for world commerce into a distinct liability.

Were I a lawyer, I'd write a brief addressing the specifics of the settlement. But I'm not—as a software engineer, I can only speak about the world as it looks through my lenses. And I know a lead weight when I see one. I can tell when commerce is in a stranglehold. I can see that overall technological progress has slowed, and is threatening to stop entirely. And Microsoft is at the heart of all of it. I have nothing but personal evidence to offer; I doubt if anyone has the time to read all the tales I have to tell about Microsoft's negative effects on my colleagues and their businesses, so I won't waste time putting them here.

And I can't argue that it's only the USA which is hurt by Microsoft's unchecked control of computer software, and indirectly, hardware, technology. It's pretty much the whole world. So we're not falling \*behind\* anyone else, we're just falling. Are you reading this on a Microsoft system, or was it printed from one? Did the purchasers of that system have a choice? A \*real\* choice? Does that tell you anything? If a small company tried purposely to impede other companies and enterprises, they'd no doubt fail. But Microsoft has the reach and the clout to make their wishes become reality, time after time.

If the last two centuries have taught us anything, it is that technological progress, in general, benefits everyone. The only sure thing I can say today is that everything in my heart and my mind, and all my experience, is telling me that Microsoft is intentionally impeding the progress of computer technology in the name of profit. Their power over us has increased, and is increasing, exponentially. Curb it now, before the option no longer exists.

I want you to know how much I object to the proposed settlement regarding Microsoft being a monopoly and using that monopoly to unfairly eliminate competition. I'll just quote Russell Pavlicek's article from InfoWorld.com, as he's summed it as well or better than I can. I hope you will read it and understand how this is not only NOT punishment, and NOT just a slap on the wrist for MS, but actually a boon to them.

I will stand as a co signer of Dan Kegel's comments.

Joel Leland Oceanside, CA  
 Small Business Owner

"To be enterprising is to keep your eyes open and your mind active. It's to be skilled enough, confident enough, creative enough and disciplined enough to seize opportunities that present themselves...regardless of the economy."—  
 Jim Rohn

RUSSELL PAVLICEK: "The Open Source" from InfoWorld.com, Wednesday, January 23, 2002

I'VE RECEIVED A number of requests to address the pending (as of this writing) settlement of the civil anti-trust lawsuit against Microsoft. Under the pending agreement, Microsoft will be obligated to provide hardware and software to thousands of under funded school districts across the country. The logic, if you can call it that, is that such schools could benefit greatly from receiving the technology they lack. Undeniably, there is an emotionally compelling case for this. A gigantic company, found guilty of doing wrong, is ordered to help the underprivileged. "We need to do it for the children," cry the politicians. "Think of the children!"

"For the children." That's the phrase politicians in Washington use to justify an action so irrational that it cannot be justified any other way.

How can I properly characterize this solution? It is like a court ordering a convicted drug dealer to give out more free samples of heroin to underprivileged children to ensure that their poverty does not deprive them of the opportunity to become addicted.

Sure, public classrooms need more technology. And it is especially important that children who don't have as many opportunities in life get assistance. But that

is not adequate justification for assigning the fox to guard the hen house.

Personally, I like the counterproposal put forward by Red Hat: Let Microsoft donate money for computing resources for under funded schools, but let those donations go toward hardware only; then populate those machines with open-source software.

Why open source? Consider the future: What will the schools do when they need to upgrade? If you give schools Microsoft software, they will be caught in the endless upgrade cycle that has characterized life in the Microsoft world. Those upgrades will cost money, money that these targeted school districts, by definition, cannot spare.

Instead, arming schools with open-source software will have two benefits. First, it will set schools down a long-term path that they can afford. The cost of obtaining open-source upgrades is trivial. Without low-cost software upgrades, all those nice shiny computers run the risk of becoming boat anchors in short order. I'm sure someone is saying, "But open source is too difficult to administer!" Such does not have to be the case, but I'll deal with that issue in a future column.

Also, the Red Hat proposal does not reward Microsoft in the long term. If a company is convicted of overpowering markets, why would you reward them by putting one of the few markets they don't lead under their control? This sounds a lot like a seed-unit program for education, not the penalty imposed from losing a trial.

Corporate misdeeds are supposed to earn punishment, not long-term investment opportunities. I believe we would all be better off if the courts acknowledged the difference between the two.

Subject: Re : Microsoft Settlement  
To whom it may concern

With regard to the Microsoft Antitrust case, I am expressing my total support for the prosecution of MS and their questionable business practices. Microsoft have slowly taken on a progressively more aggressive stance to controlling 100% of the market and it needs to stop now. Inferior software products that take away all of a user's freedom of choice and independence are a sick joke. Apart from the fact MS products are behind the ball, full of security holes and are basically a piece of advertising software that (tries to) override any piece of third party software that would compete with an MS product. Open source needs to be made more public, so money-grubbers like Bill Gates won't get their way, and everyone gets a fair crack at the market, and the PC industry, especially since most 'family' computer users just want a PC that works, not takes advantage of their lack of knowledge.

Burn, Microsoft, Burn.

Subject: Microsoft Settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Microsoft is singularly responsible for me buying 5 computers and a lot of software over the last 15 years. This benefited Microsoft but also the computer makers and many software companies besides Microsoft Without Microsoft providing LOW COST and user friendly software, I and millions of others wouldn't even be using computers today.

Now the government inspired by Microsoft competitors and politicians from their states wants to punish the company that built our great high tech system. Certainly Microsoft has a monopoly but only because their competitors could not compete. Ask Me I know. I tried to buy other operating systems and there were no good ones available and there was nothing available for anywhere near the price of windows. When is the government going to tell these complainers to build better products and they wouldn't have to worry? All this from a guy who doesn't even like Microsoft, but lets be fair, they did a hell of a job and don't deserve the screw job the government is providing.

Please settle and let the world move on.

Date: 1/23/02 5:36pm  
Subject: Microsoft Settlement

I do not think that the proposed Final Judgment has really even acknowledged the issues involved. It would be better for the DOJ to drop the case, instead of accepting this "I'm tired and I want to go home" band-aid, because dropping the case would not establish precedent, to the undoing of future cases. If you truly consider Microsoft to be guilty of anticompetitive practices, please adopt effective (i.e. expensive) remedies. This is my personal opinion, and is not to be taken as representative of Intel's or any other entity's position.

Thanks  
Ron McNew  
There seems to be much confusion about what we mean when we use the word "art". I have a recommendation. We eliminate the word "art" and replace it with "work" and develop the following descriptions:

1. Work that goes beyond its functional intention and moves us in deep and mysterious ways we call a great work.
2. Work that is conceived and executed with elegance and rigor we call good work.
3. Work that meets its intended need honestly and without pretense we call simply work.
4. Everything else, the sad and shoddy stuff of daily life, can come under the heading of bad work.—Milton Glaser

#### MTC-00018765

From: John Econopouly  
To: Microsoft ATR  
Date: 1/23/02 5:35pm  
Subject: Microsoft Settlement

Summary: I am against the proposed settlement. It is a slap on the wrist that Microsoft will easily outmaneuver.

I have 15 years experience as a software developer, on numerous platforms, including Windows. I believe the proposed settlement is completely unfair—while it eliminates some of the anticompetitive practices that Microsoft is guilty of, it does not go far enough, allowing many to continue, and allowing too many loopholes for Microsoft to avoid the rest. Ultimately it will lead to an even stronger monopoly at ever-greater expense to consumers and innovation. Microsoft's stance throughout the trial, and previously—their disregard for the law—should have been a strong clue that far more drastic measures than these are required to

avoid (and police) further illegalities—if there is any loophole at all, they will find it and use it. Even if there were no loopholes—well, a better enforcement mechanism will be needed.

Some specific problems I find with the PFJ: Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems—e.g. they purposely broke their applications on DR-DOS. I don't see anything to keep them from doing that again.

"API" is defined so narrowly that many important APIs are not covered. "Windows" is defined so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

Subject: Microsoft Settlement

Hello,

I was recently made aware of my rights under the Tunney Act to voice my opinion regarding the proposed settlement of the Microsoft anti-trust trial. I would like to state, in no uncertain terms, that I am opposed to the terms of the settlement as they stand now.

How is it that a company can abuse its monopoly position (as I understand, Microsoft was found guilty of this crime) and then be allowed to maintain that monopoly? How is it that the only punishment for someone who breaks this law is they are told they can no longer break it?

I am particularly incensed that Microsoft may be allowed, as part of its "punishment," to force its software on schoolchildren (another generation of captive customers) thereby making it that much easier to perpetuate its monopoly for decades to come. The fact that Microsoft will only point to this as some act of public good is even more appalling.

I do not want to sound maudlin, but how, in the years to come, do I explain this to my young children? Perhaps it won't matter, because if this settlement is allowed, they may have no other legal choice than to use Microsoft software anyway.

Microsoft has proven, through repeated action in and out of the courtroom, that it has no respect for the government of the United States. If this is truly "government of the people, by the people, and for the people," then I can only presume that their lack of respect extends to me.

Please reconsider this settlement. Microsoft must be truly punished for what it has done to true, healthy competition in the computer industry.

Thank you for your time.

Date: 1/23/02 5:32pm

Subject: Microsoft Settlement

Hi. I actually like Microsoft, and I think it's a good idea to settle the DOJ case. But NOT before asking Microsoft to face the many charges against them, and stop to think about them like the smart people they are. Charges, as my rabid colleagues point out, like: Have you ever been burned by a Microsoft product that did not act the way it was supposed to? How about a 3rd party product that did not work on a MS operating system like it was supposed to? Have you ever read the EULA for Frontpage? Did you know that you are NOT allowed to use Frontpage to create sites that say anything negative about Microsoft? Have you ever read the EULA for Visual C++? Did you know that you are not allowed to use Visual C++ to create an application that works on a non-MS operating system? Do you not like these things and do you not like Microsoft's non-competitive ways and plans for world domination?

My colleague, who is a very very smart programmer, is obviously upset. And Microsoft, he has a point. Why do you act in a way that makes people who buy your product not like you? Is this a healthy attitude, discouraging your customers? Everytime you decide to start plotting for world domination, you lose. In fact, the smartest idea you had was your original idea—to license an operating system, rather than selling it outright. Brilliant! Brilliant idea! God, I wish I'd thought of it.

So many times you make great products! So many successes, like Visual Basic, etc., are an American tradition. You change the world with your innovation, and your organization. You take a topic like an e-book, and you step over the many fumbling people out there waving sketchy business plans, and you run down the field with it. My Pocket PC—I love my Pocket PC. I want a Tablet PC. I want to leave desktop computing behind, and go mobile and wireless! My Internet Explorer, my Outlook Express... Microsoft, you can be the American Dream in motion.

But some things you do are really embarrassing to the tradition of great computer software.

1. You began the tradition of charging customers for mistakes you made in your software, by cutting out free technical support, and 1-800 numbers. Shameful. Why don't you go sit by Ron Lay for 15 minutes and think about this. Why don't you stick up for your products by saying, "We bet we can handle the volume, because we know we designed it well." Well, OK, I know that's a lot to ask. But surely you could give away a little tech support? Even in jail you get one phone call free.

2. You hide everything in .dlls so that our computers are black boxes. So when they act up, we have to pay to call you, to find out it's a "known problem". Tsk, tsk. Would it be so terrible to tell us what it is, and what it does?

3. You release buggy software, when if any company has the money to thoroughly check their software, it's gotta be you. I know that perfection is probably unattainable, but come

on—the FBI has to send America a memo on your point releases now?

4. I always thought it was fine that you include Internet Explorer with Windows. If Netscape made an operating system, they would have too! But do you have to throw tantrums and punish your partner vendors for wanting to include Netscape in their specs? What's next—do you want your own third-world country to control like some tinpot leader? Get over it, Microsoft. Stop being so infernally petty—you're the 600 lb. gorilla. Choose to be handsome about it. Let your vendors make their own decisions, and you can thus concentrate on making IE continually world class. Microsoft, you're golden, because you had, and continue to have, great ideas. And you're smart. You don't need to "kill" the competition. In fact, you need competition in the United States—it's the law. When Apple was going belly-up, you had to prop them up. Because you need competition. The world is moving toward application servers, mobile connectedness everywhere, personal robotics, and an information and learning universe. There is opportunity to be excellent. To even—sometimes—do the right thing. Hackers will continue to plague you, because hackers follow what everybody has—what everybody uses. And right now, that's Microsoft. Microsoft, grow up. Does IBM continually act like the kid who wants ALL the pizza at the party? Well, yeah, probably. But they're more subtle about it. Please. While you have those dreams of grandeur and glory, remember to use finesse.

Subject: Microsoft Settlement

Dear Sirs,

Under the comment period required by the Tunney Act, I would like to register my opinion on the proposed settlement of the landmark Microsoft Anti-trust case.

This settlement is not acceptable. Microsoft is a vicious monopolistic predator that has stifled innovation in the computer industry for years and this settlement will not address or correct any of the past abuses, nor will it discourage future abuses. On the contrary, as we have seen, this has just emboldened MS that they can do anything without serious repercussions. I urge you to revisit the facts of the case and the trial record. They outline a track record of anti-trust abuses unlike any ever seen before. I recommend a hefty punitive fine, and the requirement that Microsoft publish its product API's to the general public. Microsoft has made billions of dollars on its monopoly, and continues to squeeze its clients for every dollar. Fair competition must be restored to the Industry if America is to retain its pre-eminence in the computer technology field.

Sincerely,

Jeff Carnell

Subject: Microsoft Settlement

hi doj. I think that the settlement with microsoft is unfair to the public. economic experts estimated that the monopoly effect added &20.00 dollars to the cost of each copy of the Windows operating system. the antitrust laws provide for triple damages. this means that a fair settlement would require microsoft to refund \$60.00 to each purchaser of their os. they have the records to enable them to do this. furthermore the settlement as proposed does nothing to prevent further abuse of their monopoly. the company has a long history as an antitrust scofflaw and ignoring rulings that are the least bit ambiguous.

do your job and protect the public interest. untie explorer and outlook from windows. unless the entire package is free it is stupid to accept their position that ie is free with the system. for certain they are deducting the costs of development from the income from windows. this means they are charging for it.

sincerely,

peter gillespie

p.s. lest you think i have a financial interest in this case i have never purchased or owned a computer capable of running windows or dos and when i get a new mac the first thing i do is delete all of the microsoft programs that come with it. this greatly improves stability and reduces vulnerability to viri on the internet. pg

From: Brett I. Holcomb  
To: Microsoft ATR  
Date: 1/23/02 5:34pm  
Subject: MS Case

As a Taxpayer I am disgusted that the Bush administration is letting Microsoft off the hook. I have been a long time support of Bush and the Republican party but this is not acceptable.

It has been proved without a shadow of doubt that MS attempted to gain a monopoly and used any means, including illegal ones to do that. IBM tried the same thing in the 70's and spent many years paying for the mistake. MS needs to be punished or they will continue to extend their monopoly. I am a supporter of free enterprise and have opposed restrictions imposed on business by the Democrats but when free enterprise becomes a monopoly that can control all aspects of our lives it is time to stop it—that's what the antitrust laws are for. MS broke them and needs to be penalized.

Brett I. Holcomb

**MTC-00018772**

From: Diana Brager  
To: Microsoft ATR

Date: 1/23/02 5:38pm  
Subject: Microsoft Settlement

Let me first say that I watched in horror as the justice department pursued legal action against Microsoft under Anti-Trust laws. Microsoft is not a monopoly. This case had no merit in the courts. A political agenda was created to show a company what will happen if they do not contribute heavily to the candidate's political campaigns. I believe another word for this is extortion. The states saw "Tobacco Settlement" size dollars added to their state budgets. The companies that pressured the justice department to take action against Microsoft weighed in heavy on the political campaigns for "favors". These companies asked the court to do what their own ineptness could not do. They wanted my tax dollars to be used to destroy a company that has provided so much innovation to the technology world.

1. As a consumer, I have not been hurt by Microsoft. Past experience that required me to learn software without a common base was more difficult and required extensive training. When Microsoft developed the Windows operating system it made learning new programs refreshing.

2. Literally, hundreds of new companies were created. These new companies had a base to build their programs and market their technology. If the software was written to operate on Windows operating system it had certain common features that made it easy to learn and helped the production time on my job.

3. As to the MSN internet explorer being bundled with software on new computers, it is a matter of preference. My husband and I have had numerous Internet Service Providers. They have each displayed their own home page as the default. Personally, we enjoy the MSN format. Quickly and easily we changed the home page on our computer from the Internet Service Provider home page to MSN home page. This could readily be done in reverse if someone does not want MSN. It is not an issue of monopoly. MSN does not have to be used if the consume does not want it use. There are many options.

It is for the above reasons as well as many others, I believe the Microsoft settlement is more than fair. When we have:  
—Companies crumbling around us  
—Thousands of workers being added to the unemployment rolls daily  
—Cries for the need to rebuild America

Why would the justice department want to weaken and perhaps destroy a successful company that has helped 100's perhaps 1000's of smaller companies have Microsoft to thank for their beginning and put 1000's of American's to work? Please do not take this farce further. We have wasted too much of America's money and time attempting to tear down a company built with the pioneer spirit that made America the finest country on this planet.

Thank you for your time and attention to my opinions.

The proposed settlement is a bad idea. Microsoft has already shown that they don't abide by the spirit of consent decrees. A more lasting solution is needed, like breaking up the company.

**MTC-00018774**

From: Phoenix Barca  
To: Microsoft ATR  
Date: 1/23/02 5:37pm  
Subject: Microsoft Settlement

In the 1980s, when AT&T was taken before the justices and found to have abused its monopoly and caused harm to the consumers, the justices ordered AT&T to break up and to share its technology with other long distance service providers. Because of that decision, consumers today now enjoy lower cost, more efficient, better long distance service.

The same should be done to Microsoft. For the past decade, Microsoft has illegally used its monopoly to shut many of its competitors out of "its" playing field of the Operating Systems industry. Microsoft, like AT&T, does not offer a better, higher quality service or product. Instead, it uses its position to fix OS prices and gouge the consumer. This is exactly what AT&T did in the 1980s. AT&T was punished with far more than a mere slap on the wrist. Why should Microsoft be treated any differently for the same behavior? It makes no sense.

Also, monopolies are dangerous to the consumer and to the government. A recent example is the Enron disaster. Imagine if Microsoft were left alone to maintain and abuse its monopoly, only to one day crash and go bankrupt. The effects and damage would be catastrophic on the US economy and the IT industry.

Subject: not good enough!

As a consumer I find myself forced into using solutions that rely on substandard Microsoft technology more and more. Ignoring the fact that their products are of poor quality, their monopoly is obviously having a negative affect on competition in the marketplace. The settlement, as it stands, isn't nearly enough. Much more has to be done to protect my rights as a consumer.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement.

Briefly, I feel the proposed settlement is a bad idea. I agree with the problems identified in Dan Kegel's analysis. This analysis is available at the following URL: <http://www.kegel.com/remedy/remedy2.html>

I also agree with the conclusion reached by Kegel's document. Specifically:

- The Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue.
- The settlement would delay the emergence of competing Windows-compatible operating systems.

Therefore, the settlement not in the public interest. It should not be adopted without substantial revision to address these problems.

From: Kimberley Burchett  
 To: Microsoft ATR  
 Date: 1/23/02 5:38pm  
 Subject: Microsoft Settlement

I am a senior-level programmer, having worked in this industry for the past seven years.

I object to the proposed microsoft settlement because, while it does require microsoft to release details of their protocols and file formats, it allows them to obstruct the process of gaining access to that information. Specifically, the requirement that the would-be competitor "ask" microsoft for the information (thereby tipping off microsoft to the existence of all competition ahead of time), and that the competitor have a legitimate "business" reason for asking, present too high a barrier to entry.

Microsoft knows that a significant portion of the competition that they face will come from open-source developers. It is probable that the difficulty in gaining access to this information will deter many would-be competitors from even bothering, given that these developers will be working on their own initiative, without pay, and without any legal force should their requests be ignored.

I once worked on an open-source project that examined java class files. The microsoft java compiler had the ability to embed additional information in the class files that it produced, and I wanted my product to be able to gain access to that information. Microsoft made a cursory attempt at documenting their format, but specific numbers were omitted—these numbers were necessary in order for my tool to be able to recognize the microsoft-specific information at all. I sent an email to the named contact for their specification, requesting clarification. I received no response. As I was but a single individual, I had no ability to command their attention.

I suspect that microsoft would similarly "actively neglect" any future specifications that they might be required to be released by this settlement. Making the specifications public on a website would be EASIER for them than only releasing them upon request. And I expect that making them public would provide a greater incentive to make them comprehensive as well.

I object to the proposed settlement for several reasons.

1) It does not change any of the anticompetitive behaviors because the focus is too narrow. Forcing ms to allow other

implementations of java is irrelevant to MS strategy. It specifically excludes non-commercial software ("Open Source") from consideration for open API's. This is crucial, because open source projects are the most significant competition MS has.

2) It doesn't really punish MS for its actions. Remember: MS has been found guilty.

 Subject: Microsoft Settlement

This settlement is unfair... Do not let Microsoft buy their way out again... For example: Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

This is one example of many that is unfair...

Thank you

 Subject: Microsoft Office(TM) monopoly

What is being done related to the Microsoft monopoly for office-suite software? Surely, Microsoft must have 99.5+% market share for their Excel and Word office productivity applications? It is said that the reason they included PocketWord and PocketExcel with the PocketPC operating system on their handheld devices is due to their interest in preserving the Desktop PC "Office" dominance, and preventing the encroachment of other comers in that segment. Why is this not being investigated or discussed?? Why are you not speaking to Corel (WordPerfect Suite) or IBM (Lotus SmartSuite) about MS' anticompetitive actions related to Office productivity software?? (comments of an individual concerned citizen)

Subject: Microsoft Settlement—Bad Idea

Dear Sirs:

As a citizen of the United States and an avid computer user, I find the proposed settlement of the Microsoft anti-trust case to be horrific. The proposed settlement does little if anything to curb the anti-competitive practices of Microsoft. It does not punish them for breaking the law. In fact, it may even further their almost exclusive monopoly. I do not understand why the government would undertake a massive legal effort costing large sums of our taxpayer dollars, win the resulting case and then ask for such a paltry penalty. This settlement will not protect me as a consumer (OS cost per user keeps going up), me as an independent software developer (don't make to good a product or Microsoft will integrate a clone in the OS, a la InternetExplorer, or Window Media Player or ...), nor me as an investor (Netscape being the most famous example).

So please reconsider this "Settlement". It will not help anyone other than Microsoft. Allow us to return to the days where the best product at least has a change of success.

Thank you,  
Bill Hawe

From: edfagerb@ganymede.or.intel.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 5:44pm  
Subject: Microsoft Settlement

Dear Sirs:

I would like to make a few comments about the DOJ's proposed settlement with Microsoft.

In the past I have worked for several companies that have been directly damaged by Microsoft's anti-competitive behavior: WordPerfect, Novell, and Corel. Early on in the computer industry you bought a computer and then you bought the software to put on it. Then came the age of OEM bundling. At first it seemed like a great idea but then big companies with commanding market share started leaning on OEMs to bundle more of their software and less of their competitors. WordPerfect, Lotus 1-2-3, and Netscape all died as a result of just this sort of tactic by Microsoft.

Even the Intel division I used to work for was sent into a tailspin by Microsoft bundling pieces of SMS (previously a completely separate product) into Windows 2000. The LANdesk Management Suite group employs about half as many people as it used to because they are losing market share. SMS didn't get any better it just got a better distribution channel.

Now with the release of Windows XP there is a new list of targets. RealNetworks is the one that comes most readily to mind. I can tell you that if I had any of their stock I would have already sold it. The audio and video streaming stuff that Microsoft has bundled in to XP is directly aimed at taking them out.

So as I see it, Microsoft has done two sorts of anticompetitive things. One, use their Windows monopoly to force OEMs to bundle Word/Excel/etc. They killed WordPerfect and Lotus with that one. Two, bundle things like their worthless browser into Windows which gives them a tremendous distribution advantage. They killed Netscape with that one.

So where in the proposed settlement is this sort of behavior prevented in the future? No place I can see. And where in the proposed settlement is redress for all the companies (I have only named a couple of the largest) that Microsoft has killed with their anticompetitive behavior? It isn't there. So what sort of a proposed settlement is this? A pretty lousy one. One that holds every bit as much weight as the 1995 consent decree which they were wiggling around and flouting before the ink was even dry.

And what of the highly vaunted "right to innovate"? Well, the government tried to reign Microsoft in and failed (for whatever reason) and now what little or even big company is going to go up against a company that wields its monopoly power with such might that not even the government can stop them? Only the very foolish. The only innovation we will see is what Microsoft decides to give us. And all the great ideas that could have been will never be.

In short, the DOJ has failed us. The settlement should be thrown out and the judge should impose a remedy. Judge Jackson did some stupid things but he saw Microsoft for what they are and his remedy would have gone a long way towards preventing further occurrences. I would like to see prevention—and—redress addressed in any settlement or imposed remedy. Justice demands nothing less.

Sincerely,  
Eric Fagerburg

I have been gainfully employed in the computer software/hardware sector for 21 years. Prior to that I earned my Bachelor of Science in Computer Science at the University of Washington, Seattle, Washington in 1978. I was accepted into the University of Washington's Computer Science Ph.D. program and continued graduate studies there for an additional three years.

The University of Washington campus is directly across from Microsoft; Lake Washington with its Evergreen floating bridge separates the two. With Microsoft so close and being a student in the Computer Science department, needless to say, Microsoft was a topic of discussion even way back in those days.

Unlike the current discussions of Microsoft in the news, back then the mention of Microsoft was usually in the context of a joke. Microsoft's DOS and Basic were so inferior to numerous other operating systems and languages, it truly was a joke. But, it has never ceased to amaze me how Microsoft could market and sell—and the tactics that they used... They undermined competition one after another, year after year. I have watched Microsoft from the early days. Regarding the Microsoft Settlement, I think Dan Gillmor's column in the San Jose Mercury News on Friday November 2, 2001 says it best. He titled that column "A Fraudulent, Cynical Settlement." Quoting from that column: "This deal, assuming it takes hold, is not even a wrist slap. It's a love letter to the most arrogant and unrepentant monopolist since Standard Oil." Full column can be accessed at <http://web.siliconvalley.com/content/sv/2001/11/02/opinion/dgillmor/weblog/index.htm>

I won't delve into the issues of this settlement, many others have done that and have spoken exquisitely—I would only be repeating them. Rather, I am voicing my opinion as an expert in this field. I have had my own consulting business in Silicon Valley since 1984. I have personally worked with over a dozen different operating systems. (Stopped counting OS's after I got to 16, could probably think of a few more...) I have worked with a multitude of different computer languages. I have watch competition strive in various fields and watch competition be choked to death in others.

I have watched businesses be born... and watched businesses die... I will unequivocally state that the terms of the Microsoft Settlement are not in the best interests of the public, not in the best interests of business competition, and without hesitancy should be rejected.

Thank you.

To Whom it may concern:

I am very upset by the actions taken by Microsoft with regard to the anti-trust laws of this country. Their inexcusable actions have cost businesses millions in lost time and security breaches due to problems they themselves have created and ignored. Meanwhile they have silenced those who seek to rectify these problems. This kind of business should not be able to survive, let alone prosper in a capitalistic society. The way they have survived is by breaking anti-trust laws, regulations, and prior commitments to uphold their own self-interest. The time to stop them is now. Punish this company properly, they have proven the will not abide by laws nor agreements in the past, what is to make us think that they will in the future?

As a concerned citizen of this nation, I felt it my duty to let my voice be heard.

Subject: Microsoft Settlement

This is a brief note to register my concerns with the settlement phase of the anti-trust case against Microsoft. Since Microsoft has seen fit to use it's considerable desktop OS advantage in a monopolistic maner, it is only fitting that steps should be taken to provide more competition in this arena. Microsoft has given no indication of any contrition and has shown no signs of changing any of the practices in question. At the very least they should return their ill gotten gains.

If Microsoft wants to truly let the customer decide, then make them open up all of their internal OS API's. Require them to use the same programming interfaces for their applications as their competitors. Have them provide a modular OS where the user can choose to replace the pieces that do not provide fair value. Competition means that there are credible choices.!

Thank you for your time.

Subject: Microsoft Settlement

Dear Sirs,

I am a computer developer and intimately familiar with Microsoft's products and procedures. I do not support the current proposed settlement as I believe it will provide no protection from future illegal actions by Microsoft and provides no justice for those illegally affected by them in the past.

Even since this trial began Microsoft continues to make business decisions with the obvious goal of using their monopoly power to illegally force others out of the marketplace. The examples of this are numerous, and I will gladly supply a lengthy list if you wish. They continue to show their disrespect for the American legal system believing themselves to be beyond your reach.

Please reconsider this "deal" and give us justice and a world where we can compete with Microsoft in a marketplace where everyone doesn't use Microsoft products simply because they were illegally dumped into their lap.

Only a corporate culture of such powerful elitism and confidence in their own immunity to reality could be responsible for the patently ludicrous statements that they have recently issued against the Open Source community. The only people threatened by the Open Source movement are Microsoft.

They fear they may have to compete with something for the first time in many years and they know that can't succeed without their monopoly powers. Take away Microsoft's ability to leverage their monopoly and the market will make the right decisions.

From: Dave Booth  
To: Microsoft ATR  
Date: 1/23/02 5:43pm  
Subject: Microsoft Settlement

As an individual IT professional I am writing this to include my personal comments in the responses to the proposed Microsoft antitrust settlement. These comments are mine and do not necessarily represent the opinion of my employer.

Since before the Windows operating system was available I have been a user of Microsoft products. In some areas they excelled, in others they were easily surpassed by others. Over my career in IT I have personally observed ever-higher barriers raised to interoperability between Microsoft products and those of other software producers. This resulted in the creation of the current monopoly situation enjoyed by Microsoft and has, in my opinion, been primarily responsible for its continuation by allowing Microsoft to stifle competition through simply changing their APIs and protocols faster than they could be reverse-engineered to compete. I am very disappointed to note that the proposed settlement leaves far too many loopholes to

inspire any confidence that this will not continue.

In particular the provisions of section III.J.1 are too broad. Anti-piracy or software licensing concerns are a valid exception in the context of this section but security, encryption or authentication methods that rely on obfuscating their mechanism for their effectiveness are fundamentally flawed, to the extent that it could be viewed as fraudulent to classify them as "secure". This being the case, disclosure of the mechanism by which these APIs or Communications Protocols operate should not place Microsoft at any disadvantage—The competitor they seem to most fear, namely open-source software, discloses all these mechanisms and yet still has a better security record than all of Microsofts products. On the other hand, allowing Microsoft to eclude these APIs and Protocols from disclosure allows them to prevent interoperability between their software and others by a very simple stratagem. It does a third-party program very little good to be able to work with files in a Microsoft-derived format if it is impossible to authenticate to the server on which they reside without using the Windows OS.

In addition, one provision which assumes a greater significance in the light of this loophole is absent from the proposed settlement. This is the demonstrated strategy of "Embrace and Extend," used by Microsoft to gain control over hitherto open standards. In this strategy Microsoft publicly adopts an agreed standard that is already in use within the IT community and begins to market products that conform to that standard. Future releases of these products "extend" the standard with Microsoft-proprietary additions which gain market share due to Microsofts ubiquity rather than through the accepted and proper process of review. The eventual result is that Microsoft has dictated a change in the standard and in the process ensured that other products that comply with that standard are no longer perceived as fully functional. It is imperative that some prohibition on this behaviour is included in the final settlement.

On this basis I strongly urge the rejection of this proposed settlement.

Yours sincerely,

J D Booth

From: Pierre Scotney  
To: "microsoft.atr(a)usdoj.gov"

Date: 1/23/02 5:49pm  
Subject: microsoft settlement  
To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Pierre Scotney

From: Brandon Bidewell  
To: Microsoft ATR  
Date: 1/23/02 5:47pm  
Subject: Microsoft Settlement

I am extremely disappointed in the proposed final judgment (PFJ) that the Department of Justice has signed with Microsoft. The fact that many plaintiffs in this case are not party to the PFJ is a clear sign that the PFJ is unacceptable. It's been more than 5 years since the DoJ first took Microsoft to task; is the Department of Justice going to cave in now? If the PFJ is the most that Microsoft would concede then this issue should have been left to the judge to settle.

Microsoft's monopoly is travesty of free markets, and the PFJ is a travesty of justice. Any settlement with Microsoft that imposes conduct restrictions is doomed to fail. As Microsoft has done in the past, it will freely violate the law and taint the competitive landscape to its sole benefit. Assuming that laws could somehow be meaningfully enforced upon Microsoft, the PFJ contains many vague and incomplete terms and statements that will cause Microsoft to redefine its actions and restructure itself to avoid complying with the PFJ. In simplest of terms, if Microsoft was interested in following the law it would have done so.

The PFJ makes a half-hearted attempt to get Microsoft to voluntarily comply with the law and creates a limited structure meant to regulate Microsoft through further court action (IV.(A)(4) "The Plaintiffs shall have the authority to seek such orders as are necessary from the Court to enforce this Final Judgment"). Given the current status of the case, the courts should be acting now to enforce the law. One would hope that future misbehavior by Microsoft could be effectively thwarted by something besides the threat of future court action. Past actions have proven Microsoft to be a determined monopolist that is unable to self-regulate and unwilling to be regulated. This type of vague agreement would have been reasonable 5 or 10 years ago. Microsoft cannot be expected to act reasonably and within the law.

The only option that remains is to remove the monopoly from Microsoft, thus preventing all possible unlawful actions by Microsoft. Either Microsoft is split up and effectively competes with itself or Microsoft forfeits control of its monopoly to remain a single organization. Given the uncertainties that would be involved in breaking up Microsoft and Microsoft's certain resistance to this, the forfeiture to the public domain of Microsoft's software code and patents is necessary and reasonable. This is a sure and equitable solution given that Microsoft would retain all of its employees and its cash from which it can then freely innovate and create new products.

Now is the time to free the software market from the dominance of Microsoft. Anything less will continue to strengthen Microsoft to the disadvantage of all but Microsoft employees/shareholders.

I recommend that you review the following document before forming an opinion as the need to dismantle the monopoly Microsoft has created: [http://usvms.gpo.gov/findings\\_index.html](http://usvms.gpo.gov/findings_index.html)

Subject: Microsoft Settlement

Dear Sirs;

I agree with Matthew:

"While we applaud Microsoft for raising the idea of helping poorer schools as part of the penalty phase of their conviction for

monopolistic practices, we do not think that the remedy should be a mechanism by which Microsoft can further extend its monopoly," said Matthew Szulik, CEO of Red Hat.

"Through this proposal all of the states and all of the schools can win, and Microsoft will achieve even greater success for its stated goal of helping schools. By providing schools with a software choice, Red Hat will enable Microsoft to provide many more computers to these schools. At the same time, the schools can accept this offer secure in the knowledge that they have not rewarded a monopolist by extending the monopoly.

My own thoughts...

Microsoft could reduce its prices across the board, they could still operate at a profit. The penalty should be something that makes a difference to Microsoft, the amount should be more like 30 billion dollars—that is Microsoft's reserve. It could be a combined thing, new hardware for schools using the Red Hat software proposal and the rest in reduced prices until the 30 billion has been spent...

It is my informed opinion that III.J.2.(b,c) allows Microsoft to restrict access to it's various API's unfairly. Namely, "has a reasonable business need ..." and "meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business..." It is simply not the case that all software development is driven by business, or hopes of profit as it were. There is a very thriving community of developers who develop "Open Source" or "Free Software" (see definitions for <http://www.gnu.org/philosophy/free-sw.html>>Open Source</a> and [http://www.opensource.org/docs/definition\\_plain.html](http://www.opensource.org/docs/definition_plain.html)> Free Software</a>) applications.

Allowing restriction of system interoperability is clearly anti-competitive; allowing discriminatory licensing to Microsoft's various API's based on the organization that a developer is affiliated with will do just that. Microsoft will use this clause to its advantage in continuing its unfairly gotten monopoly by disallowing access to it's API's to any entity that isn't a "viable" business, i.e. Free Software & Open Source developers.

Please enforce a much stronger remedy than what is currently being proposed. The current remedy will have no effect at best, and might even be harmful due to selective interpretations of the rules. Microsoft has damaged the industry greatly by consistently squelching innovation, producing inferior products and illegally destroying competition.

The breakup was indeed the best proposed remedy by far. It would be best for consumers, the industry and even Microsoft itself (although it is easy to see why senior management would be loathe to give up their little fiefdoms).

Date: 1/23/02 5:48pm  
Subject: Microsoft Settlement

I felt that I would not feel right complaining about the outcome of this trial unless I were to at the very least make my thoughts known.

And my thoughts are that Microsoft has used its powers both legally and illegally to make inroads into markets it has no business in. It used Windows to crush Netscape, it has been using its unique positions to wage a war on RealPlayer, it is now using its position with Windows XP to make a global authentication system which they get money for.

They are not held liable for the billions of dollars of damage caused by them crushing other businesses instead of focusing inward to fix security problems. The kinds of damage caused recently are the direct result of Microsoft spreading itself too thin, and even now its best solution is to issue a memo and trying to squelch security professionals.

Now Microsoft has entered my industry—the video game industry—through their

inroads in controlling Windows. They control the graphics in Windows, they make a Windows machine, and they have the money FROM that to operate at a huge loss to generate revenue. They give away Internet Explorer and Windows Media Player for free, full featured, because they can leverage it from the operating system sales and make strategic partnerships with contents providers. Both inroads made to prevent competition they MAY have.

They are a juggernaut that must be stopped. Split up, heavily taxed, or held accountable for the billions of dollars of loss.

They are able to raise and lower prices at will, and are adopting a subscription based service for upgrades that consumers DO NOT WANT. They give out their development tools for free, but will crush anyone using their tools to compete with mere numbers of programmers and the ability to put things on the desktop. They are a juggernaut who show no signs of letting up or letting others compete.

Thanks for your time.  
Jack Mathews

Dear Sir/Madam,

I believe that this settlement is one of the worst things that you can do to American consumers and the economy. You are allowing a convicted monopolist to continue to do what it has always done, crushing any and all competition, only now, it has the weight of the law. Passing this law would mean AT&T should not have been broken up years ago.

Please go with the 9 states that are not onboard this gravy train for Microsoft. Please do not go forward with this crazy idea of legalizing the crushing of a monopolist's competitors.

Thank you very much.

Tai

Subject: Microsoft Settlement

I am sure you've received many mails about the inadequacies of the proposed settlement. It does not pro-actively and positively ensure that ANY application from ANY size Company is protected from the monopolistic and anti-competitive practices of Microsoft.

Furthermore, it does not guarantee alternate OS provider's the ability to make Microsoft applications compatible with alternative Operating Systems. The special master(s) onsite in Redmond MUST have enforcement authority to make Microsoft play fairly against any other competitor. These four guarantees (1: any size competitor

is relevant 2: MS OS plus 3rd party applicatios 3: Competitor OS compatability w/Microsoft applications 4: ENFORCEMENT AUTHORITY for the Special Master.) are necessary! The settlement, as proposed, will not satisfy the law because it will not stop the monopoly practices! All else would be fair game, in my book.

Don't let them kill the culture of innovation and Garage capitalism!

From: Stewart J. Stremler  
To: Microsoft ATR  
Date: 1/23/02 5:51pm  
Subject: Microsoft Settlement

Of the innumerable complaints possible with the Microsoft settlement, only a couple will be made here, with the understanding that this is not the sole complaint this writer has with the proposed settlement. In part III, section J ("No provision of this Final Judgment shall:"), both points seem to be an obvious evisceration of the suitability of the proposal. It effectively asserts that Microsoft's policy of not disclosing essential information to potential competitors if it doesn't want to.

The one caveat, where they apparently CAN (by my interpretation) be forced to reveal details of their APIs "if lawfully directed not[1] to do so by a governmental agency of competent jurisdiction" would apparently give them sufficient ammunition to protest long enough to /change/ the API or details to be revealed.

Further, in 2(b), it says "meets reasonable, objective standards established by Microsoft"—certainly, any such standards will, by the fact that they are being established by Microsoft, NOT be "objective", but necessarily "subjective". It is not in the best interests of Microsoft to be objective.

[1] This is the second negation of a double-negative, the first being the heading of

section J, that begins "No provision". However, this is a long ways, textually, between the negatives, which does not aid clarity.

Subject: Microsoft Settlement

I am not an attorney nor do I use Intel-based computers. I am an experienced computer user who favors Apple-based machines. I am forced, as well, to use computers based on Microsoft operation systems.

I believe the settlement proposed is an unfair resolution to the findings that show the damage that Microsoft has done over the years in establishing themselves using monopolistic business practices. As a result of their tactics "standards" (common procedures) have been developed that limit users, in a practical sense, in the choice of computer solutions available. Frequently these procedures have be derivations of concepts developed elsewhere (yes, often at Apple, but at Netscape, Sun and in numerous small ventures).

I believe that, because of the findings of fact, Microsoft should be required to place their operating system in the public domain and then be allowed to compete in making improvements and applications and services if they so choose. The price of monopolistic behavior should be the loss of proprietary ownership.

Date: 1/23/02 5:57pm  
Subject: Microsoft Settlement

May it please the court:  
The following section, offset by the text "COMMENTS FOLLOW", is to be entered in the record under the public comment period required by the Tunney Act(15 USC 16), in the case (United States vs. Microsoft).

The proposed settlement "Stipulation and Revised Proposed Final Judgment (11/06/2001)" has several shortcomings not addressed by the court's judgement, but which still stand as important issues.

My comments here address, in my view, the most important shortcoming. As cataloged by the Court of Appeals in this case, one of the important anticompetitive, exclusionary acts that Microsoft has used to bolster application barriers to entry is the withholding of critical technical information regarding the format and design of application file formats (eg. Word, Excel, Access documents.) In the Remedial Proposals by the several States [Civil Action No. 98-1233 (CKK) (State of New York, et.al., v. Microsoft)] 14.b. contains the following text: ... all technical information required to port Office to other Operating Systems (INCLUDING BUT NOT LIMITED TO FILE FORMATS)... [emphasis added]

For the courts to have declared certain actions on the part of Microsoft anticompetitive, and then not address that type of behavior in the final disposition is unforgivable, and such judgment is not in the public interest.

The Court of Appeals in this case held: "a remedies decree in an antitrust case must seek to 'unfetter a market from anticompetitive conduct,' to 'terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future.'"

Microsoft, 253 F.3d at 103 (quoting Ford Motor Co. v. United States, 405 U.S. 562, 577 (1972) and United States v. United Shoe Mach. Corp., 391 U.S. 244, 250 (1968)) (citation omitted).

Given the findings by the Court of Appeals and the above quoted stipulation, allowing Microsoft to continue it's practice of non-disclosure of file formats must be seen as "likely to result in monopolization in the future."

Without demand of remedy by court to have full public disclosure of file formats intended for interchange of information between individuals would leave the public in the same place as it was before this case—with Microsoft holding the monopoly in applications, by way of the lack of independent software vendors being able to read and write Microsoft-proprietary application file formats. I thank the court for its attention to this important matter.

Marc Tamsky  
Citizen of California,  
United States of America.

**MTC-00018829**

From: Christopher Adam Telfer  
To: Microsoft ATR

Date: 1/23/02 5:51pm  
Subject: Microsoft Settlement

I am writing to submit my comment regarding the proposed settlement with Microsoft. I find that there are many problems with this settlement. One in particular causes most of the stipulations placed in this settlement to be completely ineffective at preventing any of the abuses that the settlement seeks to curb.

Section VI: U. "Windows Operating System Product" means the software code (as opposed to source code) distributed commercially by Microsoft for use with Personal Computers as Windows 2000 Professional, Windows XP Home, Windows XP Professional, and successors to the foregoing, including the Personal Computer versions of the products currently code named "Longhorn" and "Blackcomb" and their successors, including upgrades, bug fixes, service packs, etc. The software code that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion.

Allowing Microsoft to have full authority over what is and isn't part of the Operating System allows them to control when many of the stipulations of the settlement come into play and when they don't. A significant portion of the antitrust trial centered around whether Internet Explorer could be removed from the Windows. Microsoft contended that it could not because it was "part of the operating system". The courts found otherwise. This is a historical example of where, if Microsoft had full authority to name what was part of the operating system and what wasn't, it would have abused the legal process and avoided just judgement for its offenses.

This clause should be removed. At the very least, a third-party panel of authorities in the computing field should be used to make such a determination if it ever comes into question.

Subject: microsoft settlement

Microsoft has monopolized the computer life of American citizens. Why Gateway, Dell, IBM, Compaq and most computer companies are lured into Microsoft's net, YES, the internet, boggles the mind. Virtually, no computers are available, without Microsoft's system. The public is held hostage by this company. If a consumer wants to read a "JAVA" page, they're forced to download a Java enabler. Microsoft is forcing anyone who wants to visit a Java page, to take the time to download a program, which could have been included if Microsoft didn't want to monopolize the browser world. Microsoft made it as difficult as possible to use Netscape too.

Awaiting a decision in Washington as to their punishment, Microsoft has the audacity to make AOL as inconvenient as possible with Microsoft XP, in a sickening attempt to force AOL subscribers to switch to MicrosoftNet. No matter the size of a monitor's screen, XP will only allow an AOL screen to a maximum 6x4" screen. Microsoft has dealt low blows to Sunmicrosystems, Linux, Netscape, and now is assaulting AOL.

WHY ARE ALL NEW COMPUTERS LOADED WITH XP?

How does Microsoft manage to force their product on all computer companies?

Why does the consumer have no choice but to accept Microsoft products?

Why isn't Microsoft punished as severely as the punishment they've "enforced" on all competition?

Hello,

I sincerely believe that the proposed Microsoft settlement will not restore competition in the software market. There are numerous reasons why this is the case, some of which are listed at <http://www.kegel.com/remedy/letter.html>.

Please reconsider the proposal.

Gerd Flaig.

Subject: Microsoft Settlement

Please register my OPPOSITION to the proposed Microsoft Settlement. It bears all the pentalty of a slap on the wrist, and all the teeth of the 1995 consent decree, which has fallen well short of its intended consequence. The proposed settlement is, in my opinion, inadequate protection for consumers and competing businesses against Microsoft's abuse of its monopoly position over the PC operating system market. It is inadequate protection for consumers and competing businesses as Microsoft continues to leverage its existing monopoly into other markets; office software, web browsers, the Internet itself and its protocols, consumer and gaming electronics, to name but several where I believe Microsoft's dominance has allowed it to exercise undue and unfair advantage.

Microsoft has repeatedly shown that its left hand will continue to do what it pleases, while its right shakes hands in agreement and compliance.

Throughout the trial, Microsoft proved that it is willing to mislead and obfuscate to maintain its position, as if it were playing a game with no rules and high stakes. I do not believe that any settlement which is fundamentally based on the concept that Microsoft is willing to play nice can or will be successful.

I encourage the United States Department of Justice to dismiss the proposed settlement, and encourage the Plaintiffs to seek a serious and enforceable remedy. Thank you.

Sincerely Yours,  
Douglas Rau

Subject: Microsoft Settlement

To whom it may concern,  
As a tech-savvy voter with an elementary understanding of logic I am opposed to the settlement offer proposed by the USDOJ. Allowing Microsoft multiple loopholes for which they can keep middleware applications in their operating systems is not strict enough for a convicted monopolist who has been found to be involved in many unfair and illegal business practices. Microsoft uses their operating system to unfairly gain market access in unrelated or partially related products and services. To exploit one's market position to increase sales is smart business, to exploit one's market position to deny other companies access is illegal and morally repugnant.

This settlement offer is not consistent with the findings of the court or the facts at hand. It is a transparently political scheme and should be investigated as such.

I hope you loose a lot of sleep over this matter,

-Daniel

Good Afternoon,  
As a person working in the technology field, it is practically impossible to go a day without hearing something about the battle currently raging in DC. Before today I resigned myself to be a casual observer. That was, until, I felt the time was approaching when you would have to weigh in with a decision. I would like to commend you on a valiant effort.. Microsoft, I'm sure, was a suprise. They didn't appear to be as cunning or underhanded as the Bells, but certainly held their own. Mostly because our government was not ready to deal with monopoly in such a new industry. An industry which is still forming. Next, let me say that public opinion is not good right now. Had the 9 states not protested, there would certainly have been a backlash. Which brings me to my point. I cannot even begin to imagine the amount of information you have to sift through on a daily basis, so I thought I would summarize what the tech community sees as the issues, and what it ignores:

First, The Browser War is Dead!...and has been for some time. We have all moved on. I realize that it was at the core of the anti-trust suit, but it does not need to be part of the settlement. I, like many others have been running alternative browsers on Windows for years. Infact, this letter is being written in Opera, which easily matches if not surpasses IE in all respects.

Second, Who has really been hurt? The public?...sure, but more than that, the

competition. Why not repay them. Strip some cash from Microsoft and distribute it to the three major Linux Distributions, to Netscape, to Opera, to Apple, to anyone who can prove they have felt a negative impact in business. Provide money for advertising new, non-Microsoft technology. Whatever you do...DO NOT allow them to donate Windows PCs to schools. I'm sure you also see this as a win/win for Microsoft as well as we do. Cash, however, would be great. Keep in mind that most Linux users are running the OS on machines 5 years or older. The OS is free, and the machines to run it can be collected for pennies at local charities. A much better deal for all concerned.

Next, the OEM agreements need some retooling. Microsoft has such a strangle hold on consumers, because PC manufacturers are forced to build either Windows only machines, or Windows free machines. A move to curtail their OEM agreement would be a big step in the right direction. Finally, the Wine and Lindows projects. Both are moving to create an alternative OS for running Windows applications. Support of this effort would truly give users a choice. There would effectively be an alternative to Windows, without sacrificing windows applications. All we want is a level playing field. As much as Microsoft threatens the stifling of innovation, you must stand firm. Ask yourselves what measures can we put in place that would put Microsoft back under the control of the market rather than vise versa. I hope this helps.

Thanks for your time,  
Chris Gregan  
Portland, OR

This "settlement" will not prevent Microsoft from exercising it's monopoly power, nor does it promote a competitive environment. This settlement also allows Microsoft to remain forcing OEMs to ship it's proprietary, non-removable (therefore forced on the consumer), middleware applications. This settlement does not do enough to limit Microsoft's power.

Subject: Microsoft Settlement

I believe that the DOJ proposed settlement with Microsoft is shameful.

I'm a computer consultant and I'm constantly struggling to provide clients the best solutions for their data processing needs. Beecause some of them have used Microsoft applications & operating systems, getting my customers data out of Microsoft's encrypted and proprietary formats is often so difficult (and expensive) that they are trapped with Microsoft. Microsoft could not get away with this in a healthy software market. The Software market is not healthy because Microsoft has engaged in predatory and illegal business practices for so long, that is now too dangerous to try to compete with

Microsoft. It's not about the quality of your software, but how big your legal department is.

The proposed DOJ settlement is flawed for the following reasons: It would not prevent Microsoft from engaging in the same illegal behavior that it was found guilty of.

I think the proposals of the nine States that are disagreeing with the DOJ settlement have a more suitable remedy:

Microsoft must sell operating systems without any applications.

Microsoft must be prevented from prohibiting (via punitive pricing contracts) computer manufacturers and computer users from offering or using alternative and co-existing operating systems and applilcations available to their customers.

Microsoft must be forced to license the Office suite of applications to competing operating systems in order to compensate for past illegal conduct.

Microsoft must be forced to publish the encoding format of its applications. Microsoft encrypts data in documents so that competing applications cannot read them.

Microsoft must be fined for overcharging consumers and business's. The cost of all software has dropped except MS operating systems.

Microsoft must not be allowed any role in determining the criteria of compliance with any settlement, this is shameful and must not be allowed. A panel of computer scientists should settle technical questions and issues.

I also think that Assistant Attorney General Charles A. James should resign in shame from the DOJ and just get a job with Microsoft, it would be much more honest. It's quite clear that he is not interested in looking out for the public interest.

Subject: The Microsoft Settlement

I would like to comment briefly on the Proposed Final Judgment in the US. v. Microsoft case.

There are a number of significant flaws in the PFJ as it currently stands, but I wish to focus on a few key issues:

1) The conduct of Microsoft during the trial: Microsoft and its attorneys repeatedly falsified evidence that was presented in court. The most egregious example was a faked videotape that Microsoft claimed showed how Windows 98 was impaired by the removal of Internet Explorer. In fact, Windows 98 is not impaired by such removal; yet rather than admit that to the court, Microsoft chose to not only lie, but to present evidence that they knew had been faked. Subsequently, they produced another videotape that purported to show that Windows 98 was faster than Windows 3.1 at accessing the internet; however, the machine running Windows 98 had been equipped with a faster modem. Microsoft employees and executives were repeatedly evasive and deliberately misleading while giving

testimony, often contradicting their own email evidence. This culminated in the videotaped deposition given by Bill Gates, where he was evasive to the point of asking for definitions of the words "concern," "complete," and "we."

2) The PFJ completely fails to prohibit the kind of anticompetitive behavior (specifically the elimination of Netscape as a competitor to Microsoft, and more broadly the elimination of the browser as an operating system-independent platform) that formed the original basis for U.S. v. Microsoft.

3) The whole investigation came about when it was discovered that Microsoft was not complying with the terms of the 1994 consent decree.

4) The PFJ has no effective enforcement mechanism whatsoever.

5) Given the history of the case and the absence of an effective enforcement mechanism, there is ample evidence to suggest that Microsoft will, once the PFJ is signed, ignore the terms of the PJJ and continue with their unlawful anticompetitive behaviors and practices.

Unfortunately, Microsoft continues in attempting to ignore the will of the courts; their recent attempt to settle a number of class-action lawsuits involved donating \$1 billion of software and hardware to schools across the nation. Unfortunately, such a settlement had nothing to do with the merits of the case and simply would have extended Microsoft's reach into a market where they have not been traditionally successful. Judge Motz correctly ruled that the proposed settlement in that case was actually beneficial to Microsoft and not beneficial to the plaintiffs.

I believe that the PFJ, as currently written, fails to provide an appropriate remedy for Microsoft's actions, as laid out in Judge Jackson's Findings of Fact, and, in fact, has the potential to actually be beneficial to Microsoft. Moreover, it utterly fails to address the question of the public good—unless one believes that monopolies, anti-competitive behavior, and predatory pricing practices are in the public good.

Sincerely,  
paul frankenstein

I am given to understand that, under the Tunney Act, the DoJ will take note of commentary upon this settlement from third parties. Although not a citizen of the US, I would like to record that this apparent whitewash totally negates the excellent work that has been put into exposing the monopolistic practices of Microsoft, and am astounded that it has been permitted. Unless the decision is reversed, and a REAL penalty imposed upon Microsoft, their monopolistic position will become even more firmly established. This is THE LAST CHANCE to stop this.

I am an ardent user of IBM's OS/2 operating system; a piece of software that was consistently undermined and ruined through Microsoft's unethical practices (not the least

of which was their overcharging software developers for compilers and other software tools unless they undertook to develop purely for Windows, even though virtually the same source code could have been compiled to run properly under OS/2). OS/2 was (and still is) infinitely superior to Windows of any flavour; yet IBM have virtually allowed it to die, because they have recognized they even they cannot afford to compete. I am pleased that Serenity Systems International have negotiated a licensing scheme by which they are selling updated (and very usable) versions of OS/2 under their eComStation branding, but this does depend upon IBM continuing to develop and improve OS/2—something which they might well decide to forget altogether if Microsoft are allowed to get away with their illegal activities.

Subject: Microsoft Settlement

This will be a short letter, as I'm sure you have many to go through. Let me say up front that as a computer user, Database Administrator, and IT professional, I feel very strongly that the proposed Microsoft Settlement will do nothing to punish past monopolistic practices, or to prevent future violations of anti-trust law.

Most importantly, what the settlement fails to address is that Microsoft is already entrenched in a dominant, monopolistic position, achieved in large part through unfair business practices.

Creating a Technical Committee may (or may not) help with future problems, but does nothing to fix what has already transpired.

Lastly, I would point out that much of Microsoft's monopoly is maintained through mechanisms not mentioned in the settlement. For example, Microsoft Word is the dominant word processing software mainly because its file format is proprietary and controlled by Microsoft—and changed frequently, so that no other program can reliably use it. If a standard file format were enforced, competing products would have a chance to co-exist and interoperate with Word; something that just cannot happen today.

I urge you in the strongest possible terms to reject this settlement and seek stronger action against Microsoft.

Subject: Microsoft Settlement

As it is written, I am unhappy with many aspects of the Proposed Final Judgement against Microsoft.

Hypothetical situation #1:

I'm a mechanic who has routinely worked on Ford cars, among many others. With my many years of experience, I've come up with an idea for a product that car drivers may want to purchase and install in their car—maybe a sensor that monitors gas flow and emissions and automatically tunes the engine while it is being driven. I've tested my prototype, and (knowing that it meets relevant EPA requirements) I'm ready to mass-produce this product and introduce it to potential customers.

\* The specs for Ford's engines are openly available. \* I am allowed to use my Sears Craftsman tools to create this product. \* Although this product was originally designed and built for a Ford, I am allowed to sell this product to Chevy owners if they should choose to buy it and install it on their Chevy. My product may become obsolete if Ford changed their engine specs on future models. Ford may even incorporate a similar device into their future models. But I would not expect Ford lawyers to sue me over my product's initial release.

Hypothetical situation #2: I'm an Independent Software Vendor who has routinely worked on Microsoft Windows computers, among many others. With my many years of experience, I've come up with an idea for a product that computer users may want to purchase and install in their computer—maybe a piece of software that monitors the way I "drag and drop" items between my various applications and automatically anticipates when I may want certain items. I've tested my prototype, and (knowing that it includes an add-on "redistributable component") I'm ready to mass-produce my product and introduce it to potential customers.

\* The proposed judgement allows Microsoft to continue to hide much of the API (Application Programming Interface) that would make it possible for this product to run under the Windows Operating System. In fact, the judgement's narrow definition of "API" does not even cover many aspects of the real API that third-party applications must address.

\* The proposed judgement allows Microsoft to completely ban this product if it has been developed, even in part, using non-Microsoft tools from GNU, PERL, SCSL, any flavor of Linux, or any other "Publicly Available Software".

\* The proposed judgement allows Microsoft to specifically ban the use of this product on any non-Microsoft Windows-compatible operating system. Isn't this proposed judgement supposed to \*reduce\* Microsoft's illegal anti-competitive practices?

I feel that the proposed settlement in the Microsoft Anti Trust suit is letting them off too easy. MS has been found guilty of using their monopoly powers illegally by

integrating the IE web browser. It still continues today. They have extended it by making the MS Update site the only place to go to get software updates and then that site REQUIRES the use of IE in order to update Windows 9x and newer. If they have other methods available, they have been working hard to keep normal users from finding it.

It is my understanding that Section III.A.2. of the proposed settlement allows Microsoft to "punish" OEM's who ship a computer with anything other than the Windows operating system. The effect of this sort of behavior is evident in the fearful behavior of IBM when it was trying to establish OS/2 as an alternative to Windows at the same time that it wanted to offer Windows to those who chose it. The upshot of this, in my case, is that on two of the last three computers I purchased, I was forced to purchase Microsoft Windows, an operating system I never put into use on those those copmuters (except, of course, the first time I turned the computers on). In short, the apparently weak settlement proposal from my Department of Justice does nothing to address the manner in which Microsoft's monopolistic behavior has damaged me.

Thank you very much.

Dear Sirs:

I find the proposed Final Judgement inadequate. It does not redress the monopolistic actions committed by Microsoft, nor does it inhibit their ability to commit similar actions in the future. It makes no attempt to address "ill-gotten gains" garnered by microsoft through its anticompetitive practices, even though the company's illegal tactics have placed it in a very advantageous position. In order to make anticompetitive behavior unprofitable, there should be substantive punishment. But more importantly, there seems to be little in the proposal to prevent future abuses.

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. Clearly—these issues are problems: The Proposed Final Judgement (PFJ) prohibits certain behaviors by Microsoft towards OEMs, but curiously allows the following exclusionary practices:

Section III.A.2. allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

Section III.B. requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs, including important regional "white box" OEMs, if they offer competing products.

Section III.B. also allows Microsoft to offer unspecified Market Development Allowances—in effect, discounts—to OEMs. For instance, Microsoft could offer discounts on Windows to OEMs based on the number of copies of Microsoft Office or Pocket PC systems sold by that OEM. In effect, this allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas, such as office software or ARM-compatible operating systems. By allowing these practices, the Proposed Final Judgement is encouraging Microsoft to extend its monopoly in Intel-compatible operating systems, and to leverage it into new areas.

Thanks for your time.

**MTC-00018861**

From: Brian Reuter  
 To: Microsoft ATR  
 Date: 1/23/02 5:59pm  
 Subject: Microsoft Settlement

The proposed settlement is inadequate. While it addresses Microsoft manipulation of OEMs to stifle competition, and it ostensibly allows users to remove offending software, it still leaves Microsoft in a position where it continues to be anti-competitive. To ensure it has no competition, Microsoft can and will begin to license its non-standard proprietary APIs only to companies which Microsoft approves of, while scorning any company that may compete with Microsoft applications. Such a situation is equally harmful to independent software vendors, or companies which may vie to compete in the same market.

There is no other adequate settlement than to divide Microsoft into an operating systems company, and an applications company each with separate ownership and a separate board of directors. Any collusion between applications and operating systems will by its nature produce a situation where an outside vendor cannot possibly compete with Microsoft. The Microsoft Operating Systems company, further, should be required to publish for free (or a nominal charge for material) all API and system functions with complete documentation (including errata, secret functions etc.) for any party interested, without any legal agreement required. Further, the Microsoft Operating Systems company cannot enter into any agreement with an outside company in which information not otherwise available publically is disclosed. My opinions are my own, and independent of my company.

The proposed final judgement is bad. It will not restrain Microsoft from its chosen path of anti-competitive business practices. I am convinced significant improvement of Windows will diminish and the PC computing experience will become increasingly restrictive, intrusive, and dissatisfying for the end user. Computer professionals will have to increasingly be upgrading, re-installing and repairing damage to PC functionality because of poorly written code.

If cars crashed as often as Windows PCs do in normal configurations, it would be suicidal to drive to work. If banking computer systems were as susceptible to hackers as your home PC's financial records, we would have to put cash inside the mattress at home. The point is that a decent company can make a safe and reliable computer system, while Microsoft doesn't. Dan Kegels comments on the proposed Final Settlement undoubtedly raise mostly valid issues. The PFS is UNACCEPTABLE! I believe Microsoft

will not agree to ANY meaningful settlement, so plan on using an dictatorial fending of judgement, and use an unbending judge determined to give competition to Microsoft to administrate this edict and keeping a talented and committed persons of the Judges choosing to be the "teeth" and bite. I still think breaking the company up in to Operating systems and Applications divisions and perhaps a new products (with exclusion of anything derived from the Windows user interface). Feel free to spend my tax dollars to accomplish this, but do it right and plan on a continuous fight until Bill Gates retires.

Rob Coen, computer professional since 1979.

P.S. My views haven't changed any more than Microsoft's in the last 10 years.

From: dmarker@speakeasy.net@inetgw  
 To: Microsoft ATR  
 Date: 1/23/02 5:45pm  
 Subject: Microsoft Settlement

As a computer professional, I would like to voice a piece of my opinion regarding the proposed settlement to the Microsoft trial. I am wholeheartedly disappointed that such brazen attitudes and disregard for the law and the public should be permitted to go unpunished. I do not believe that the restrictions and remedies planned out in the settlement will be any assistance to preventing Microsoft from further breaking the law and abusing their position of power. With the growing pressure from Microsoft to use their software in ever increasing roles, the danger of insecurities in their software are mounting daily. Viral plagues have swept over the world's mail and web servers (regardless of the software installed) over the past several months that have cost countless hours and dollars. They have used anti-competitive practices as a monopoly to exclude other vendors from the market. They have been often accused (and with rather well documented evidence against them) of maliciously going out to financially destroy competitors and steal or reverse-engineer their intellectual property. They have been caught blatantly lying in court on this very case with their "simulation" of uninstalling Internet Explorer. I do not feel that any of the remedies presented will effectively change their long-term strategies in any way. For a single example, the two "top ten" lists for OEM sale of Windows effectively legitimizes the entire pricing scheme that MS used to squeeze our competing licenses from desktop sales. Furthermore, although I personally detest long legal forms, I dread that Mr. Gates, who quibbled over the definition of "hit team" and "jihad" as used in his internal memorandums will find the legal restraints rather slippery. The legal system does not appear to cope well with rapidly evolving markets and definitions. However, much of the case involves questions on the legal definitions of "Operating System" and "Browser" yet the judgement relies very heavily on the definitions of "middleware", "retaliate", and "reasonably necessary". With this going on, the remedy still gives the definition of "operating system" back to Microsoft with the line: "The software code

that comprises a Windows Operating System Product shall be determined by Microsoft in its sole discretion." I strongly recommend that the resolution to this case undergo major revisions. I personally think the section regarding the TC has very positive points, even though it has received much criticism. I would push a bit further in trying to extend their scope of investigation, probably by tightening the non-disclosure contract, and use this as a basis for giving the final few steps of access to the software. If they can review all of the (normally private) contracts and question anyone in the company, why should their access to the software source code be limited by an agreement made (and from what I understand, alterable at will) by Microsoft? Finally, there is one major section lacking from this proposed remedy. There does not appear to be any restitution. This seems to be one large nothing from the Federal Courts. Merely a "Don't do that again" approach. As much as I would like to see several zeros of corporate accounts be redirected to organizations like the Electronic Frontier Foundation, I realize that this at best a questionable act. I think that a series of financial penalties based on a percentage of the gross corporate earnings should first be applied to the company, with even stronger penalties prepared in advance, ready for the possibility that Microsoft may decide to continue to test the mettle of the court system.

Sincerely,  
 Dan Marker

There are alternatives. Don't blame Microsoft because you didn't buy one. Linux is in the stores except it currently isn't as user friendly. Mac's are around but they advertise in the back corner.

Please count my name as another US citizen, residing in the state of Minnesota, as

being opposed to the proposed Microsoft antitrust settlement. I have been using computers professionally since 1980, and I do not feel that Microsoft has been acting in my, or my company's (Tringa Press) best interests, for at least several years. "Donating" proprietary Microsoft products to secondary schools seems particularly ill-advised, especially at a time when we're moving towards a more open, global economy. We now have a chance to train our future information workers in the use of tools whose primary aim is productivity and empowerment, not pleasing investors.

Subject: Microsoft Settlement Concerns.

To Whom it May Concern:

I am writing to voice my opinion on the proposed Microsoft settlement. I do not believe that the proposed settlement settles anything. Microsoft will go effectively unpunished, and will not lose any ability to engage in the activities that brought them to this point. While the relevance of the latter may not be important, the former, I believe, is. No company should be allowed to use anticompetitive practices to keep other businesses from having a chance.

As an example, take "PC compatible" hardware. If someone buys a "PC compatible" system, he has the option of running Microsoft's Windows, Sun's Solaris x86, Linux, or BSD on the machine. For a while, we saw major vendors ship Linux machines, but those aren't advertised anymore, and are only still available from a select few major vendors. As of this writing, featured business PCs on the following vendor's websites have no way to order a machine without some version of Microsoft's Windows operating system: Dell Gateway Compaq IBM Sony Is it possible that all of these vendors have policies that make it unfeasible for them to install another operating system on their PCs, or even not load an operating system at all?— Certainly not. Microsoft has used their market power to arrange that any PC purchased from any reputable manufacturer is required to also buy Windows, whether they need it or not. Any "settlement" between Microsoft and the people of the United States of America should require that Microsoft is not able to use such strongarm tactics and is punished for using these tactics in the past.

From: Chase Caster  
To: Microsoft ATR  
Date: 1/23/02 6:01pm  
Subject: Microsoft Settlement

The proposed Microsoft Settlement is unfair to all those who wish to write (and use) similar software to that which Microsoft uses. The Windows operating system is written in such a way that it is difficult to use anything other than Microsoft software

for much of what computers are most used for. And because of that, not only are outside applications hard to find and use, but other operating systems are nearly impossible to come by because Windows is designed to be incompatible with them. If we let Microsoft keep their monopoly, we will be doing a great injustice to the computing world.

**MTC-00018869**

From: Matthew Schmidt  
To: Microsoft ATR  
Date: 1/23/02 6:00pm  
Subject: Microsoft Settlement

I think there are serious flaws with the Microsoft settlement as currently proposed by the government and Microsoft. While I feel that more drastic measures are fully appropriate (like opening Windows source code and Office file formats), there remain problems even given the more moderate type of conduct remedies included in this order. Along those lines, the proposal by the dissenting states is far more effective.

Section III.H, for instance, allows users to remove Microsoft Middleware from the computer. It would be more reasonable to have Microsoft sell a version of Windows without the middleware, giving consumers a choice in the matter and allowing competition in the various areas. Once Microsoft gets a piece of software into Windows, there is little reason for people to go out and buy a separate equivalent piece—even if the independent software would be better value.

Also, section IV calls for a technical committee to oversee Microsoft's conduct. The TC has very little power to force compliance on their own, however. They are also prohibited from testifying in court—excluding from deliberation the most qualified witnesses. The TC must have the power to fine, and preferably also the right to testify in court. Finally, there is an expiration date of five years on the agreement. None of the conduct required of Microsoft is onerous or unusual—it describes the bare minimum (if that) of fair and responsible behavior. The expiration date—if included at all—should be significantly farther out.

Pluralitas non est ponenda sine necessitate.

I think it is very important to punish Microsoft for blatantly illegal constraint of trade. While I realize the importance of the company, I also was one of those Bell System employees who saw our structure dismantled for a whole lot less reason. The tentative settlement is laughably easy on Microsoft, and I wonder why a split of the company into three parts: operating systems, software applications, and internet is not in order.

From: Frank Tobin

To: Microsoft ATR  
Date: 1/23/02 6:00pm  
Subject: Microsoft Settlement

I am writing to give my comments on the Microsoft antitrust settlement. As Bachelor of Computer Science and an independent Open Source/Free Software software developer for the past 5 years, working on community, commercial, and internal products for the Unix/Linux platform, I am acutely aware of the problems caused by the illegal Microsoft monopoly. I believe that the proposed settlement does not fully address the goals it set out to accomplish, and allows for many loopholes to be exploited in the future.

First, I believe that many provisions of the proposed settlement do not carry the foresight needed to deal with easily foreseeable problems that will arise. To live in the information world, one needs to not only have a good grasp of the "now", but also the issues of "tomorrow". The proposed settlement does a fair job of addressing many issues that one can point to today, but many of the terms and definitions are too strict, not capable of handling the rapid morphs in technology that are inevitable. The terms, definitions, and specific products listed in sections such as Section III: D need to be loosened, or else many loopholes will be exploited.

My second main concern is Microsoft's exclusionary licensing, which goes beyond those issues addressed in Section III.F and III.G. There is a large and growing number of Open Source and Free Software pieces of software being community-developed and freely available with source. However, licenses such as the Microsoft Windows Media Encoder 7.1 SDK EULA strictly prohibit bundling with Open Source and Free Software. This is an excellent example of Microsoft leveraging its monopoly not only against commercial competitors, but also \*community\* software projects. This is a clear example of the anti-consumer and anti-community behavior that Microsoft has repeatedly shown over the past several years, and not specifying provisions to prohibit is unacceptable. I am also a co-cosigner of the open letter at <http://www.kegel.com/remedy/letter.html>, since I believe the issues that it brings up are also my concerns. In summary, it also concludes that the Proposed Final Judgment is not in the public interest, for the most important reasons I have already stated, and more. Please do the right thing by amending the settlement so that it keeps tighter reins on Microsoft, and thus allowing the market to develop in a freer fashion, unchained from Microsoft. I am in favor of the changes recommended at: <http://www.kegel.com/remedy/remedy2.html#fix>

To let the current settlement stand would be gross negligence for the health of the community and market.

To: Microsoft ATR  
Date: 1/23/02 6:00pm  
Subject: Microsoft Settlement—Not Strong Enough

To Whom it May Concern,  
I am writing to register my disagreement with the proposed settlement in the

Microsoft case. I feel that this company is incapable of restraining itself, and will take advantage of any loopholes in the settlement to the greatest extent possible. If there was any doubt about its behavior before, its actions during and since the trial make this abundantly clear. Who can forget, for example, the doctored video tape shown to the judge by Microsoft. And since the trial there are numerous examples of further anti-competitive behavior. Just in the last couple of weeks I've seen the following items reported:

1. Microsoft is suing a company making a Linux-based operating system that will run Windows applications, (Lindows—see <http://www.lindows.com>). Microsoft says that consumers will confuse the name Lindows with Windows. Huh? It seems more likely they are trying to hurt a potential competitor by piling on legal bills and problems.

2. Microsoft has filed a motion to bar the public and the media from seeing depositions related to the case, (these depositions having been opened by court order). Article on the subject at <http://dailynews.yahoo.com/h/nf/20020110/tc/15719-1.html> What are they trying to hide?

3. Microsoft recently tried to rig a poll at ZDNet, (story at <http://news.zdnet.co.uk/story/0,,t269-s2102244,00.html>), to make it appear as though their .NET initiative was gaining massive ground. It's a lie designed to try to convince IT people to start using their product.

If these don't seem to be a big deal, consider that I found these three items for the last two weeks just from a quick search on a website, (<http://www.slashdot.org>). The number and type of items from the last two weeks is the norm, not the exception. If you want to see more examples of their bullying and dishonest tactics, go to slashdot and search. You'll find many, many more. Microsoft has done everything it can to prevent competition. It has broken the law and has demonstrated that it will continue to do so, as well as lie and manipulate wherever possible. The government is the only entity capable of restraining them. Please, for the sake of businesses trying to innovate and make a living, for the sake of freedom of choice for the American consumer, assume that Microsoft will try to subvert any settlement and will continue its monopolistic practices. Fashion a new settlement that doesn't give them any wiggle room—one that assumes the worst in terms of their future behavior. They have proven, and continue to prove, that this is the only reasonable course of action.

Sincerely,  
Jeffrey Mitchell

From: Maverick  
To: Microsoft ATR  
Date: 1/23/02 6:03pm  
Subject: Microsoft Settlement  
Hello,

Some of my professional associates pointed me to this email address as a place where I could voice my concerns over the severely lacking Microsoft Settlement. In essence, the proposed settlement as it stands will do nothing to remedy the damages caused to the computing industry by Microsoft, and does nothing to punish them for doing it. Dan Kegel has written an excellent analysis of the weaknesses in the PFJ here: <http://www.kegel.com/remedy/letter.html> I have also asked to have my name added to those listed below. I don't have the time to cover every problem in detail (and I suspect you may no have time to read it), so I will only cover what seems to be the least obvious and most overlooked way in which Microsoft extends and maintains their strangle hold on the industry: Proprietary file formats. Few would argue that Microsoft Word document files have become the de facto standard document exchange format. Most of my clients send me documents in Word format, and most expect to receive them in Word format. That has been the norm for every company I've been employed by, and every client I've worked for. What happens when someone sends another a document in Word Format (or Excel, PowerPoint, etc, etc)? The sender is not only making the assumption that the receiver has purchased a Microsoft Operating System and purchased a copy of Microsoft Word, they are assuming that they have CURRENT versions of both. It is a well documented fact that different version of the same Microsoft products produce files that are not readable by differing versions of the same product. And the same version of a product doesn't run on all versions of Microsoft's operating systems. Thus forcing all users in to an constant cycle of upgrades of both their operating system and office product. The proprietary nature of the formats, along with their constant alteration prevents a third party from reverse engineering the format to produce a competing product. By the time that they can produce a product that can accurately read and write a Microsoft Office file, there is a new version of Office on the market that isn't compatible, and thus making their product's ability moot. I hope that this has shed some light on the concerns of the case, and helps lead to a remedy for the damages caused by Microsoft.

Thank you for your time,  
Steven Edwards

Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

From: David Hirsch  
To: Microsoft ATR  
Date: 1/23/02 6:05pm  
Subject: Microsoft Settlement

I deplore the proposed settlement in its current state. Microsoft, through its illegal monopoly, has poisoned the current Operating System and software market, and continues to take anti-competitive steps designed to preserve its monopoly; the proposed settlement is so weak as to be useless in correcting this behavior.

Microsoft's previous conduct with respect to settlements to which it has agreed shows that a strong enforcement mechanism must be put in place, one that will cripple Microsoft's ability to behave in an anti-competitive fashion. The current settlement must not include any distribution of Microsoft products to right previous wrongs—that only helps Microsoft retain its monopoly status. Rather than providing software or hardware to schools, the Court should calculate the RETAIL value of these products, and make Microsoft give the money directly to the schools instead. The court should take steps to ensure that any actions taken apply to future versions of Windows, including Windows CE, Windows XP, and Windows NT, Pocket PC, etc. and any descendants of these operating systems. These steps should include the release of all APIs (the current definition of API in the settlement is too narrow, and would allow the remedy to be skirted by Microsoft) to software developers. The remedy should provide assurance that Microsoft will continue to develop and release versions of its main software packages for the Macintosh OS. Perhaps a requirement that the top-selling 40 percent of non-operating-system software must be released for Macintosh within 9 months of its release for a desktop Windows OS.

From: Radu Filip  
To: Microsoft ATR  
Date: 1/23/02 6:07pm  
Subject: Microsoft Settlement

My name is Radu Filip, and I'm working for a dot-com company located in US and I would like to express my opinion about the anti-trust case against Microsoft and about the proposed settlement.

Like many other peoples, I'm concerning about monopoly held by Microsoft in desktop software and they way they behave in doing business. Concrete, as an end-user and as person involved every day with IT world, I have "problems" with the following issues, that comes from Microsoft monopoly.

For each problem I will address bellow, I'll explain it shortly, I'll try to give and example, I'll try to suggest a remedy and explain how it can prevent further monopoly situation.

(1) Closed file formats

No one has the right to make me "hostage" of their software. No matter what product I'm

using, I should be able to either buy nother product or to develop my own one in-house that should be able to work with the files made with the old product. For example, if I'm using Microsoft Office and I create with it a lot of documents or spreadsheet files, I should be able to quit anytime using Microsoft Office if I want, in favour of StarOffice, for example, and continue to use the documents and spreadsheets I have been created. In order to do this, the specifications regarding the format (how data are recorded into files) of my documents and spreadsheets must be freely available so that other programs be able to interpret these documents. This opening of sepecifications should apply to all kind of files, made by various applications, not only by Microsoft one. Companies can compete by developing products with various features, not by making their users hostages. Users should be able to interchange data anytime they wish, no matter what programs we're using. A goo dexample for this one is the web, where various web servers that runs on a multiple types of computers and operating systems, are serving various web browsers (Netscape, Internet Explorer, Opera, Konqueror, etc.) that also runs on mutiple platforms. This is possible because the format of web pages of freely available, as well as te way (the protocol) the browsers and servers are using in order to deliver these pages. Any webmaster can choose any websever he wish, and any user can use any browser he wish. This is freedom.

(2) Closed protocols

No one should have the right to make me "hostage" of their software systems by hidding way their programs are communicating. If me, as a user I own a Linux computer and a Windows one, I should be able to interconnect them in any way I wish, no matter who programmed Linux and who produced Windows, in the same way I can use two diffrent cars I own or two TV's and so on. Protocols are "communication languages" used by programs or devices to communicate, in order to provide a service. This service can be e-mail, web, accessing filesystems etc. Protocols (or standards) are in every program and in every device. For example, because of Microsoft monopoly, I'm not able to read MY OWN data stored on a Microsoft filesystem from a Linux operating system, if I have both of them installed and I run Linux. This is happens because Microsoft is interested to lock up their users by preventing them to use a diffrent operating system. And this is not normal, since their programs should do WHAT I NEED, not what Microsoft NEEDS. The same is for communication protocols. If they build a mail server like Exchange, then if I own a copy of Exchange I should be able to use ANY client program to access it, not only Microsoft programs. Thus, like for file formats, all major protocols should have specifications freely available, so other programmers be able to build their own programs to intercommunicate with the existing one. One example is Microsoft SMB protocol used to sharing files between computers in a local network. They lock up this protocol so only windows computer can share files, computers with other operating

systems being unable to join in sharing files. They kept hidden the specification and change them over time so other operating systems cannot do the same. But me, as USER, I HAVE ALL RIGHT to share MY FILES between MY OWN COMPUTERS, no matter what software I'm using. It's my right to do so. Like we have or or many public standards for TV broadcasting, like we have Web to share information, like we have driving on right side on the roads, we should be able to have access to specification of every major protocol used, so we do not become slaves of one corporation or one organization.

(3) Extension of public protocols

This is a way for companies like Microsoft to transform public protocols into closed ones, by adding their own closed extension, undocumented. They motivate this by "addig featured and value to customers". In fact, they add this extension to justify their behaviour to be the only one to develop programs that use that features. This is also a danger because public protocols like Web, E-mail or worse, TCP/IP (protocol used all over the Internet to send data between computers), can become property of one single organization. They can impose the adoption of this proprietary extensions by using their monopoly on desktop market with Windows, and by making new versions of Windows the only products that support their extensions and let others alternatives outside. Since this extensions are subject of technical details, irrelevant for the large public, the market cannot see the danger to adopt this owned standard and this way large numbers of customers become hostages without their knowledge. For example, they can alter the HTTP, protocol used to deliver webpages from server to web browsers, by adding some "features" in away that only their Internet Explorer (currently about 75% of web browsers market) with be able to deal only with their IIS (web server) so every other web browser or web server will be out of game and this way, they will be able to own the web and will control the information that flows through it. Should be freedom to speak controlled by someone? One bad example could be Microsoft Passport, a software feature build only in Internet Explorer and that can be used only with websites serverd by Microsoft Web Servers (IIS). There is no technical reason for this exclusive behaviour, it's only a "feature" to make peoples using their software only and exclude the others. Me, as programmer, I cannot build or modify a webbroser that use Passport Services, because I don't have specifications of Passport. This force me as user to use Microsoft Internet Explorer to read MY mail on MSN, for example. And this means NO CHOICE, being a way to take control over web. There is nothing wrong in improving standards, but major standards should always have free specifications available to anyone.

(4) Imposing Microsoft software by using Windows monopoly First of all, when I'll buy a new computer I should be able to CHOOSE what operating system and applications are included or even to CHOOSE to NOT BUY any operating system at all. Right now, because of Microsoft way to impose deals

with computers manufacturers, I HAVE NO CHOICE but to buy a Windows version with every new computer, even if I'm planning to use completely different operating systems like Linux, sold buy companies like RedHat. Why, as customers, I'm forced to pay for something I don't need?

When I buy a new computer, I should be able to choose:

—if I want Windows or other operating system or any operating system at all  
—if I want other Microsoft applications that comes with Windows or not, by choosing alternatives (like StarOffice instead of Microsoft Office or by using Netscape instead of Internet Explorer as web browser and so on) or I don't want any application at all (this should apply to EVERY operating system or application, not only to Microsoft) Also, not only customers, but every dealer of computers should be able to be free to choose whatever operating systems or applications want to pre-install on computers he sell. Also, customers should be able to accept or refuse this software offerings when buy a hardware (a computer).

(5) Driving users to Microsoft websites and services

This is another form of locking up customers to Microsoft products and it's derivative on the way they impose their software. In current situation with forcing users to buy Windows with every computer and using by default only Internet Explorer that drives users only to Microsoft related sites and services like MSN, the real threat is to use this monopoly to become a hegemony, by making Microsoft not only control the software we're using in every computer, but also to control what we see and hear. This way, the George Orwell's 1984 novell has a real chance to hit the reality. What is the difference between a totalitarian regime that controls all what we're doing by law and a private, commercial monopoly that control what we're doing via tools (software) we're using? No one, they are the same, a single exclusivist group controlling everything by a method imposed to every one. This is no democracy and no freedom.

Conclusions

(A) From user point of view

(a) Every single user must be able to choose what operating system or application to use (if he want some) when buying a new computer; this require freedom to users and sellers to choose applications to install on new computers

(b) Every single user must be able to switch applications and keep using the same documents as before or be able to convert them; this require freely available specifications for data formats (files, filesystems)

(c) Every single user must be able to use any operating system or program he want, in order to deal with other operating systems or applications that offer services (local, on a network or over the Internet); this require freely available specifications to all major protocols that are parts of the core services of the Internet

(B) From software companies point of view

(a) Every program must be able to use user's data made with other programs and be

able to intercommunicate with other programs, so programs (and vendors) compete on feature and support level, not on lock-in "improvements" and "innovations"; this require open specifications for file formats and protocols

(b) Every software vendor should be able to make deals with hardware manufacturers, without being slaves of one single central software vendor that controls the markets and our lives; this require to avoid exclusive deals made by Microsoft that exclude others players to compete

(C) From government point of view

(a) Maybe it is a good idea to create an Agency that regulate IT markets in the same way as for Stock Exchange or other markets; this way, the competition will have a neutral referee, not like today when one player is also referee in the game

(b) Anti-trust law should specify that companies that own a certain amount of market share should be prohibited to use particular business methods like exclusive distribution of their products, in order to let smaller companies to compete. Each situation like this should be mentioned in anti-trust law and supervised by an Agency (maybe the same as for (C.a))

(c) Major (most common wide used) data formats and protocols should be put under the development of independent non-profit organizations (like W3C for web) that manage their evolution. Anti-trust law should specify when a certain data format or protocol become wide used and in what condition the company that originally develop it should put its specifications under independent organization management. An Agency should take care this to be respected.

(d) The anti-trust law should impose software vendors to conform to public specifications and an Agency (the same as for C.a) should take measures according to this law to assure all programs and services are using this common open protocols. These proposals (on point C) should help to prevent situation like this, when a single company tries to control all IT world using it's monopoly on user desktop market, threatening our freedom.

Thank you for patience to reading this, Radu Filip

Subject: Microsoft Settlement

Your proposed settlement with Microsoft will make Neville Chamberlain sit up in his

grave, smile, and pat you on the back. Unfortunately, MS just doesn't care what the court nor the Justice Department decides. They have shown continued disregard for agreements banning specific tactics and behaviors. Your proposed settlement isn't even a slap on the wrist. In effect, it's a victory for MS. There are some remedies that would help all injured by MS illegal maintenance of its monopoly. I leave the specifics of damages to the court, however, I do know one thing which would help the 'rest of the world' compete more effectively with MS. Require MS to disclose fully the file formats MS applications and OS create and update. MS would have to consent not only to disclosing these formats, but to provide public detailed specifications when changes occur. If competitors can make precisely the same end product (an Excel file, Word) etc, they can engineer competitive methods to create these exact files. It sounds trivial, but it would help considerably.

E. Moore

From: Colgan, Matt, ITD  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 6:13pm  
Subject: Microsoft Settlement

Hello—

I would like to comment on the proposed settlement of the Microsoft Antitrust suit.

It stinks. Most prosecutors pride themselves on getting a more stringent penalty for those who are convicted as a result of their efforts. The DOJ appears to have broken with that tradition. Some articles stated that the DOJ's offer to Microsoft was less of a penalty than what Microsoft themselves were offering before they were found guilty. This decision weighs very heavily on the future of the computing industry and innovation. Microsoft continues to be a baleful force to crush innovative new companies and products. Venture capitalists hesitate to fund software startup companies due to the looming threat of Microsoft's unfair competition. The settlement as it stands will serve to strengthen the entrenched, non-innovating, but highly profitable Microsoft corporation, at the expense of consumers and prospective innovators. I would suggest that a minimal punishment for the crimes Microsoft has been found guilty of would include a statement of culpability, and plausibly contrite statements by the directors of the company. If such statements are not forthcoming, the directors of the company should be forbidden from running the daily operations of the company.

Thanks,

Matt Colgan

Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW Suite 1200  
Washington, DC 20530-0001  
Greetings,

I am writing regarding the proposed settlement of the antitrust action against Microsoft Corporation. I am very concerned that the settlement appears to do nothing to restore a competitive marketplace for operating system software or to punish Microsoft for their past misbehavior. There is nothing in the settlement regarding publishing Microsoft's Application Programming Interfaces ("APIs") or document formats. These steps, combined with substantial penalties for failing to provide accurate and complete information, could result in real competition in the software industry.

Microsoft's lack of contrition and commitment to "business as usual" is demonstrated in their every action: the proposed addition to Internet Explorer of "smart tags" that change the content of displayed web pages, the onerous new licensing and "activation" requirements of Windows XP, the brazen attempt to settle some of the many civil lawsuits against them while at the same stroke expanding their monopoly into the education market. Considering Microsoft's past practices and the outsized profits derived thereby, some sort of punitive damages would seem to be in order.

The proposed settlement is a bad deal for the American software consumer and for the software industry in general. I'd like to see a settlement that includes a requirement for documentation of all Microsoft APIs and document formats, with suitable enforcement and penalties for lack of full disclosure.

Sincerely,  
Deke Clinger

From: battle@pobox4.mot.com@inetgw  
To: Microsoft ATR  
Date: 1/23/02 6:04pm  
Subject: Microsoft Settlement

I think the proposed (largely by Microsoft itself) settlement of the Microsoft antitrust case is a joke.

Bill Gates describes it as "fair". I DO NOT WANT a remedy that the offender accepts as "fair". How many convicted criminals regard their prison sentences as "fair"? I want a remedy that will make (particularly Bill Gates) whine to the press about "punishment". Microsoft deserves to be punished. I want a remedy that will cause suffering on the part of Microsoft, in reasonable balance to the amount of suffering that its monopoly abuses have caused to their competitors and to the rest of the computing industry in general. In particular, their rival, Netscape, was driven out of business by the anticompetitive practices of the Microsoft monopoly. Any "remedy" that falls short of at least threatening Microsoft's present monopoly position is clearly insufficient.

In my understanding, a remedy for monopoly abuse is supposed to do three things:

1) Punish the offender, primarily by depriving them of the gains obtained by their illegal actions. The proposed "settlement" does nothing to relieve Microsoft of the market power they have gained by eliminating the Netscape Corporation and cornering the internet browser market. An appropriate remedy might be to require that Microsoft withdraw their Internet Explorer product from the market. This product brings Microsoft no revenue, and their sole purpose for purchasing it, releasing it, tying it into Windows, and illegally leveraging their Operating System monopoly to establish its dominance in the browser market was to destroy Netscape Navigator. It seems only fair to deprive Microsoft of the browser market monopoly obtained via Internet Explorer by depriving them of the product itself. Also, all the claims the defendant made about Explorer being "irremovably integrated into the Windows operating system" are perjuries. As a professional software engineer I can assure the court that, if ordered to do so, there is no technical barrier that would stop Microsoft from removing Explorer from Windows.

2) Repair the damage done to the market by the monopoly's actions. It would be pretty much impossible, now, to restore Netscape Navigator to the position it held before Microsoft set out to destroy it. The elimination of Internet Explorer would at least open up the browser market for the several other products in this area to be able to compete on the basis of their relative merits, without Microsoft shaping the playing field to favor its browser.

3) Insure that the monopoly abuse does not recur. I do not believe that the proposed 3-person panel would be able to effectively monitor the abuses of the multibillion-dollar Microsoft monopoly. In my opinion, the only way to stop their already escalating abuse of their monopoly in the internet browser market would be to take that illegally obtained monopoly away from them, again by forcing Microsoft to withdraw Explorer from the browser market. I sincerely hope that the court will NOT approve the proposed settlement as it now stands. Microsoft should be regarded as a repeat offender in the abuse of its Operating System monopoly, and penalized accordingly and quite harshly. The proposed settlement more closely resembles "dinner and a movie" than any sort of "punishment", and completely fails to address the issues which are supposed to be the goals of a monopoly abuse remedy.

In an effort to assist the court in the development of an appropriate remedy in the Microsoft case, I would again suggest that Microsoft be ordered to withdraw the Explorer product, and be forbidden from re-entering the internet browser market for at least the next five years. Penalties for disobeying these orders (and you may rest assured that they will be disobeyed) might best take the form of billion-dollar fines, to be paid to the Free Software Foundation, which is Microsoft's sole credible competitor and the last entity on this planet that the

Microsoft Empire would want to see its money go to support. While elegantly simple in concept, its effect on Microsoft would be to positively end its present and illegally obtained monopoly in the internet browser marketplace, and prevent the otherwise inevitable future abuses thereof. I believe that this is the most appropriate and fair penalty for their actions. It is also a remedy that would be effectively enforceable in the real world. A breakup of Microsoft into separate Operating System and Application Software companies would be simply impossible to administer. A triumvirate panel would be most ineffective, as it would lack the authority and probably the will to impose the severe, indeed draconian, sanctions that will clearly be required to force the offender to modify its illegal and immoral, but nonetheless quite profitable, business practices.

Will Bill Gates like this? I think not, which is exactly what I want. You need to ask yourself who you are working for, Bill Gates and the Microsoft Empire, or the general public?

To whom it may concern,

I am writing as a software developer with 20 years of experience developing applications under Windows and Unix. I request that you firmly apply remedies that will stop Microsoft's anti-trust behavior. Their tactics force people such as myself to join their camp or else. Windows developers have endured years of faulty products and operating systems environments that in my opinion have significantly impeded the state of technology simply because it has taken 2-3 times longer than it should have to develop products in the windows environment. Look how quickly Linux has developed technical equality with any and all Microsoft operating system products. They have finally built a reasonably stable product but during their tenure have learned to control product development such that a stand-alone developer (such as myself) is locked into their upgrade cycles and over-priced tools.

My recommendation is to closely evaluate all current and future product releases for antitrust violations, put the products before a peer review and make Microsoft pay the tab for the review process.

Thanks for your time and hard work.

From: toby  
To: Microsoft ATR  
Date: 1/23/02 6:07pm  
Subject: Microsoft Settlement

The proposed final judgment is seriously flawed, incomplete, and insufficient. The proposed remedies are largely unenforceable, do not adequately address the unlawful exclusionary actions, and will not likely

provide Microsoft sufficient motivation to correct its ingrained corporate culture of anti-competitive behavior. By themselves, the security loopholes around the full disclosure of "middleware interfaces" and server protocols are enough to render this proposed final judgment ineffective. As Microsoft is slowing learning, and as COB Bill Gates stated just this week, security MUST BE integral to their products ("middleware" and operating systems) and services (server protocols) to be reliable. To permit non-disclosure of aspects of these interfaces and protocols when there are security considerations is to make both requirements meaningless.

I would also like to specifically object to the structure of the onsite enforcement monitors. None of these three experts should be Microsoft employees, current or past. All three should be appointed by the court, and maintain no financial interest in Microsoft. As officers of the court, they need the ability to legally binding enforcement decisions.

The Tunney Act: A confession of shame, and a call to action  
Introduction

My name is Jeremy White, and I am the CEO of CodeWeavers, the company most associated with the Wine project. Three years ago, I chose to refocus my company around the Wine project because I believed that Microsoft's stranglehold on the market was sucking all of the joy out of the computing field. For those of you who don't know, Wine is a project that makes it possible to run Windows application on Linux. If Wine were complete, then the combination of Wine+Linux would represent an effective competitor to the Microsoft Operating System Products. The Department of Justice and Microsoft have reached a tentative settlement of the United States vs. Microsoft antitrust lawsuit. It is widely believed that the proposed settlement does a very poor job and that it is critical that those of us who feel this way participate in the Tunney Act comment process. Under a law known as the Tunney Act, the court is required to consider public commentary before accepting any settlement. As you can imagine, many people have contacted me to ask for my help and input on the Microsoft case, and the Tunney Act proceeding in particular. I've met with attorneys here in Minnesota, as well as with

the law firm that is handling the case for the states. I've spoken with wide range of people regarding this case. My Shame I have not yet submitted any comments to the Tunney Act comment process. I haven't even really engaged myself in the problem, at least not beyond responding politely to those that call me. Why this sucks I'm probably the U.S. citizen most involved in the Wine project, and if I haven't acted, then who will? I've heard a rumor that there are no shortage of comments from folks 'encouraged' by Microsoft. Apparently, there are also a number of Sun/Java encouraged comments. But not much else. Bottom line: if we don't speak out now, we let Microsoft buy this one. What we should do Presumably, you're reading this page because you care as much as I do. If you're a U.S. citizen, now is the time to act. If you're not a U.S. citizen, forward this to a U.S. citizen you know.

It's easy. Here are two ways to help:  
The easy way to do the 'right' thing  
1. Open an email window to microsoft.atr@usdoj.gov (with a subject of 'Microsoft Settlement').  
2. Read through some of the many comprehensive resources on this case and the Tunney Act proceedings:

- a. Dan Kegel's excellent collection of resources (mirror is here).
3. Pick your favorite problem with the proposed judgement. One is fine; hopefully a lot of people will be doing this.
4. Compose a simple, polite, email describing the problem and how you feel about it.
5. Send the email, and if you like, bcc (important do not cc) us at tunney@codeweavers.com.

6. [Optional, but nice] Print your letter out (maybe reformat it a little), and mail it to: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW Suite 1200  
Washington, DC 20530-0001  
The truly easy way to at least add your voice

1. Send email to microsoft.atr@usdoj.gov (with a subject of 'Microsoft Settlement') saying that you think the proposed settlement is bad idea (type only 3 words, if you must). What counts is the number of complaints.
2. Send email to petition@kegel.com indicating that you will stand as a co signer of Dan Kegel's comments. Please give your city, state, title, and affiliation. Send it now. The comment period closes Monday morning (the 28th).

By the time you think to come back to this page, it will be too late.

Subject: Microsoft Settlement  
Hello:

I wanted to comment on the penalties to be imposed on Microsoft. I believe that the negative externalities of the Windows OS are extensive and have burdened the public unnecessarily. Had there been more competition in the market there would have been an economic incentive for Microsoft to make its products easier to configure and maintain. The general absence of ease-of-use in the Microsoft product lineup has come at a cost of millions of man-hours to our nation and the world. The penalties imposed on the Microsoft Corporation should focus at least in part on reimbursing the public for these losses—this reimbursement should be straightforward, originate in the form of monetary compensation from Microsoft, and be paid to various public institutions.

To: Microsoft ATR  
Date: 1/23/02 6:07pm  
Subject: Microsoft Settlement  
To Whom It May Concern,

We disagree with the proposed settlement in the Microsoft antitrust case. We are particularly concerned with provisions that do nothing to enable open source ("free") software to compete effectively with Microsoft. We say "enable" because Microsoft's monopolistic, anticompetitive practices have largely prevented not only traditional software businesses but also free software from maintaining a viable position in many areas of the market. Thus it would be misleading to suggest that anyone's ability to compete should be "protected," since there is currently little to protect. Some relevant discussion of the effect of the settlement on open source software can be found in the following documents. We agree strongly with the viewpoints expressed in these documents. November 5, 2001 Letter from Ralph Nader and James Love to Judge Colleen Kollar-Kotelly regarding the USDOJ/ Microsoft proposed settlement. <http://www.cptech.org/at/ms/rnj12kollarkotellynov501.html> Robert Cringely column concerning the settlement. <http://www.pbs.org/cringely/pulpit/pulpit20011206.html> Some suggestions from Richard Stallman concerning possible remedies. <http://www.gnu.org/philosophy/microsoft-antitrust.html> We will also be co-signing the following letter from Dan Kegel: <http://www.kegel.com/remedy/letter.html> Microsoft has been found guilty of antitrust violations. To support the public's interest in the critically important areas of computing and networking, Microsoft must be punished and their monopoly must be dismantled. To quote Robert H. Bork, former U.S. Solicitor General and Appellate Judge (see <http://www.procompetition.org/headlines/120701.html>) I continue to believe that a

divestiture of Microsoft would have been the most efficient way to restore competition but barring divestiture, the settlement must be greatly strengthened to prevent future anticompetitive practices by Microsoft and hopefully to reverse at least some of the effects of their past and present anticompetitive practices.

From: Mike Wexler  
To: Microsoft ATR  
Date: 1/23/02 6:06pm  
Subject: Microsoft Settlement

The current settlement doesn't seem to address one of the keys issues of their monopoly. The fact that Microsoft owns the API that most commercially available software uses. If I want to from TurboTax or Finale or any number of commercial programs for PCs. I have to buy Microsoft Windows. There are several groups trying to create competitive/compatible operating systems: WINE (<http://www.codeweavers.com/home/>), LindoeX (<http://www.lindows.com>), Wind/U (<http://www.bristol.com/windu/index.html>). In order to level the playing field for these and other projects. The Final Judgement should include the following provisions:

1. Notify vendors of technical requirements in advance.

Section III.H.3. of the PFJ requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows, yet it does not require Microsoft to disclose those requirements in advance. This allows Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

2. Release API documentation earlier.

Section III.D. of the PFJ requires Microsoft to release via MSDN or similar means the documentation for the APIs used by Microsoft Middleware Products to interoperate with Windows; release would be required at the time of the final beta test of the covered middleware, and whenever a new version of Windows is sent to 150,000 beta testers. But this information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

3. Document all important APIs.

The PFJ's overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces.

4. Remove Restrictions on the Use of the Released Documentation

ISVs writing competing operating systems as outlined in Findings of Fact (?52) sometimes have difficulty understanding various undocumented Windows APIs. The information released under section III.D. of the PFJ would aid those ISVs—except that the PFJ disallows this use of the information. Worse yet, to avoid running afoul of the PFJ, ISVs might need to divide up their engineers into two groups: those who refer to MSDN and work on Windows-only applications; and those who cannot refer to MSDN because they work on applications which also run on non-Microsoft operating systems. This would constitute retaliation against ISVs who support competing operating systems. If we are truly trying to create a competitive environment. Why not have them release the windows API documentation as freely available extex. So that anybody trying to create compatible operating systems has free access to the specifications. Note, they would still need to implement the APIs. This just means the specifications would be publish. It should be required that these specifications be in enough detail to run all of Microsoft's products and the top 100 non-microsoft commercial applications.

5. Fully Document File Formats

No part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry (see "Findings of Fact" ?20 and ?39).

6. Document protocols.

The protocols used to communicate between clients and servers should be fully documented. So that applications from diverse environments can interoperate with microsoft clients and servers. This would keep Microsoft from leveraging monopoly in one environment (desktop OS, Browser) to other environments (Server OS, Web Server).

7. Disclose which patents covering the Windows APIs.

Section III.I of the PFJ requires Microsoft to offer to license certain intellectual property rights, but it does nothing to require Microsoft to clearly announce which of its many software patents protect the Windows APIs (perhaps in the style proposed by the W3C; see <http://www.w3.org/TR/2001/WD-patent-policy-20010816/#sec-disclosure>). This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users, as illustrated by this report from Codeweavers, Inc.:

When selecting a method of porting a major application to Linux, one prospect of mine was comparing Wine [a competing implementation of some of the Windows APIs] and a toolkit called "MainWin". MainWin is made by Mainssoft, and Mainssoft licenses its software from Microsoft. However, this customer elected to go with the Mainssoft option instead. I was told that one of the key decision making factors was that Mainssoft representatives had stated that Microsoft had certain critical patents that Wine was violating. My customer could not risk crossing Microsoft, and declined to use

Wine. I didn't even have a chance to determine which patents were supposedly violated; nor to disprove the validity of this claim.

The PFJ, by allowing this unclear legal situation to continue, is inhibiting the market acceptance of competing operating systems.

Dear Sir:

I am writing to you to show you my support for breaking MS into two parts for the following reasons:

1. It is a good way to stop MS to kill competitions in computer industry. MS is a monopoly and has been killing new innovations. They have been using MS OS for PC to push their own products and to kill other products. Netscape is one of them. There will be more and more products to be killed by MS.

2. MS claims that their product is better. Because of their monopoly and powerful marketing and financial system, no other competitors can survive and produce better products. For example, MS word is the only word process people are using now. It can be better. However, MS is not in the hurry to improve it.

3. Once MS is broken into two parts. They have to compete harder and better products will be produced.

Thank you  
Kent Zhang

Under the Tunney Act, I am complaining about the final judgement against Microsoft. Among its more serious problems:

—There is no enforcement mechanism except further slogging through the courts, which will take many years. In the meantime, Microsoft will continue its anticompetitive practices.

—The judgement allows Microsoft to retaliate against small OEMs who ship computers without Microsoft operating systems.

—Competitors are prohibited from making Windows-compatible operating systems.

—The judgement allows use of licensing terms which would prohibit running Microsoft and open-source software together at the same time This judgement is basically a sellout to Bill Gates. If passed, the government would effectively be using its legal force to prop up Microsoft's monopoly, instead of encouraging competition (as is the stated purpose of the judgement).

As a computer programmer for more than 15 years, I am very concerned with the proposed Microsoft settlement. It still allows Microsoft to block software developers from creating programs that can run on Windows-compatible operating systems other than Microsoft Windows. Your settlement must forbid Microsoft from limiting the new applications to its only operating system. Your meaning of API is narrow meaning that Microsoft does not have to release documentation about all APIs between applications and operating system. Your settlement must be modified to expand the meaning of API to include all interfaces between operating system and applications.

I am puzzled at why your settlement does not allow the software developers to use the API documentation to create a new operating system so that the products from Microsoft can run on it. What is good about your settlement if no one can write a new operating system that is compatible with Windows-related products?

Your settlement must require Microsoft to identify which of the Windows APIs are covered by its patents. How can your current settlement be helpful if Microsoft keeps the software developers guessing which API is covered by which patent?

Subject: Microsoft Settlement

Dear Sir or Madam,

I feel that the proposed settlement with Microsoft does not go far enough. They should not get a free ride just because the judge said some things which lead some to question his impartiality. I am a conservative and usually against most anti-trust cases, but I believe that Microsoft has too much power. They are bullies. They steal good ideas from every other company in the industry, make an inferior version, and then use their power to eliminate the originators of the idea and force consumers to buy their inferior goods. If Microsoft is not weakened severely, they will continue to infect every aspect of the technological industry and bully the competition out of the market. Breaking up Microsoft's empire is imperative to the health of the tech industry, and therefore—the economy. Please do not group this case in with the rest of the trash from the Clinton Administration and Reno Justice Department. Go at them full bore.

Subject: Microsoft Settlement

I am writing to comment on the recent proposed settlement of the Microsoft antitrust case. For several reasons, I feel the current settlement is insufficient, and will in fact stifle competition further. However, the only aspect I will comment directly is on the non-disclosure of file formats by Microsoft. By not forcing Microsoft to disclose their file formats, the PFJ will maintain a very high barrier to entry into markets currently dominated by Microsoft. The reason is simple: people today exchange documents among computers every day, and if you don't have the MS applications, most likely you won't be able to read said documents. If the file formats are open, then any ISV can write an application to read and/or modify documents produced using MS software.

This would, in effect, make competition based on the quality of software, independent of market dominance.

Thank you for your time.

To: Microsoft ATR  
Date: 1/23/02 6:10pm  
Subject: Microsoft Settlement

To whom it may concern:

It is my great disappointment in the ineffectual settlement of the United States vs. Microsoft antitrust lawsuit. Microsoft has demonstrated it's tactics of bullying and coercion in every business field that it has enter. The operating system market, the office suite market, the Internet browser market, the Internet service provider market, and if past history is any indication, the multimedia and gaming markets as well will fall victim. Why do we have laws for matters of antitrust if the Department of Justice is not going to see them through and take appropriate legal action? The settlement terms are both ambiguous, and thereby easy to navigate around, and the stand to offer Microsoft a better market position. If corrective action is not taken,

soon we will may very well have no choice but to use whatever Microsoft decides we will using, and pay obscenely high prices for it. As a United States citizen, a taxpayer and a voter, I am direly concerned that all the time and taxpayer expense in regards to United States vs. Microsoft will have been for the EXCLUSIVE benefit of Microsoft and it's stockholders. That's not justice, that's collusion.

Sincerely,  
David W. Bradford

From: Joseph Lazzaro  
To: Microsoft ATR  
Date: 1/24/02 2:07am  
Subject: Microsoft Settlement

To whom it may concern:

As a system administrator and programmer for a small web-related company, I am very concerned that the proposed Microsoft settlement will prove ineffective in preventing the monopolistic behavior that has hindered the growth of viable Microsoft alternatives. Furthermore, I believe that it will in fact help to further Microsoft's unfair dominance of the operating system and PC applications market. Of particular concern is any plan that would have Microsoft place Microsoft-based computer systems and software in schools. While I agree that our schools require attention in this regard, I feel that this will a) not punish Microsoft for their proven illegal behavior as it is of no real cost to them (the software, once written, incurs no cost to distribute), and b) enforce Microsoft's dominance by training future generations in a Microsoft-centric manner, as students would not see and appreciate alternatives.

Another concern is that by not breaking up Microsoft into an Operating System arm and an Applications arm, APIs remain closed and the opportunity for competitive, interoperable software is greatly hindered. This will allow Microsoft to continue to extort the public with forced upgrades to read arbitrarily changed file formats. The consumer public is, in a very real sense, held hostage by the hold that Microsoft has on these APIs. I have seen the damage the Microsoft Monopoly has caused first hand in my field of work, but it is my hope that with the continued perseverance of the Department of Justice in the rightful prosecution of this criminal behavior, some relief is attainable.

Thank you.  
Joseph Lazzaro

Date: 1/23/02 6:08pm  
Subject: Microsoft Settlement

There are many problems I see that the proposed settlement does not cover that I believe are of the utmost importance. I would like to point out one that has plagued me. I develop software for internal use for Case Western Reserve University's School of Management. I enjoy using the Microsoft product Visual C++. However, I am prevented from doing so because of the End User License Agreement for Visual C++. In the EULA, it states: "You may reproduce and

distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product" Therefore, I cannot use it because I am forced into only deploying the software on MS operating systems and the faculty, staff, and students who use non-MS operating systems (MacOS X, MacOS 9.x, a Linux distribution, a BSD distribution, etc.) would not be able to use it. Additionally, there are other clauses in MS's EULA's like the one in Frontpage (the web site editor) that disallows you from using it if you create web sites that may say negative notions about Microsoft. And, then, of course, there are all the 3rd party software vendors who depend on interoperability with Windows—these vendors need more open API's to compete with their MS competitive counterparts. I just hope that everything undergoes a more thorough review before a settlement is reached. A review that involved a heavy edit to the current proposed settlement.

Subject: Microsoft Settlement

To whom it may concern:

I am a software developer and a senior in Computer and Information Science program at the University of Oregon. Laissez-faire economics works in many other industries, but not in computing. Computers, being precise machines, allow vendors to "close" their standards, and without being able to reverse-engineer anymore, settling the Microsoft case in the proposed manner is a horrible idea. They have a long history of stifling development with software that is easily cracked, bullying opponents, and overcharging for their services via closed standards and overt political practices. Please don't allow them to continue for the sake of our industry. Everyone can play together, work together, and play and work fairly and still make money and provide great service. Their practices are underhanded and should be punished. But fundamentally, the government needs to realize that open computing standards are what creates a laissez-faire computing industry, which is what is best for the developers and the consumer.

To: Microsoft ATR  
Date: 1/23/02 6:13pm

Subject: Microsoft Settlement

I would like to cast my vote against the proposed settlement. It is entirely too lax and makes it too easy for Microsoft to lock out competition without any fear of retribution. A number of changes should be made to the settlement in order for it to have the desired effect (i.e., the prevention or at least dampening of Microsoft's anticompetitive practices). An extensive analysis of the proposed judgement's weaknesses can be found in the essay, "On the Proposed Final Judgment in United States v. Microsoft" by Dan Kegel, located at <http://www.kegel.com/remedy/remedy2.html>, along with proposed alterations to strengthen its effect. I fully support these propositions and hope they are incorporated into the final judgement.

Subject: Microsoft Settlement

As an example; if I had built a car wash, and right next door a large oil company built a convenience store selling gas and a car wash in back, and then started giving away car washes, no one could stay in business with that type of competition. They could run anyone out of business. I think there is case law where companies have to charge for a service like this. This is the same with Microsoft. By allowing them to add programs and give them away, where is the incentive to get into the software business. I think this is unfair, anticompetitive, anti-innovation, and more importantly, unlawful. Improve your product, fine, how about adding stability and security.

But to add a browser, why? Why didn't they add a personal accounting program, or give away a spreadsheet program. Because they were out to destroy another company, not improve their product. The ruling is 7 to 0, and that has to have some weight to do something substantial.

Thanks for this forum,  
Respectfully submitted,  
Steve Panasuk

From: Grant W

To: Microsoft ATR

Date: 1/23/02 6:11pm

Subject: Microsoft Settlement

I write to tell you how important it is to find a better agreement on the Microsoft Settlement. I feel the proposed solution is much too lenient. Though the courts have determined that Microsoft performed anti-trust actions in the browser field, the decision has little weight. The Microsoft browser is used by over 80% of the marketplace—the competition can never be restored. I suggest that the DOJ solution realize the conclusion that allowing the software giant to remain as one unit will forever give them the ability to lock out the competition. All companies must use Microsoft's product for an operating system. Microsoft is also their biggest competitor. This is a conflict of interest, which you have the opportunity to rectify. Please ensure Microsoft releases operating code to public-domain at the same time they release to their other product line sections. History has shown this to be a very effective way for them to remain ahead of their competition.

Best Regards,  
Grant Willison

Subject: Microsoft Settlement (Please Read)

Hello—I would like to take some of my valuable time and write to you. I say valuable in that we all only have 24 hours in our day in which to work (eg. Provide for our families), Live (spend quality time with our families & friends), and rest (so we can do the first two above. Work by far takes up a majority of our lives these days especially in the current economic situation we are facing. We are also all more conscious of our time this days since the 9/11/2001 tragedies that took thousands of lives in a matter of seconds.

This country has been based on hard work on innovation, not LAW SUITS. I believe 100% in the value of the Department of Justice to look out for 'consumers' NOT 'companies'. Microsoft (more than any other in the technology industry, has brought value to 'Consumers' and companies. I'm not an attorney and don't know the specific details on the Anti-Trust laws but when I read in the paper that AOL/Netscape are courting states to continue this lawsuit (eg. Not spending resources on innovating products and services for consumers...) is absolutely appalling and wrong.

Please focus the remainder of this case on doing what 100% right for consumers, not

padding the pockets of companies that would rather spend valuable resources courting states to sue rather than innovate their products for the good of consumers and our country. Please write back and let me know that someone human read this.

Thank you.

Subject: Microsoft Settlement

To whom it may concern,

I am opposed to the proposed settlement in the Microsoft case in its current form. The settlement falls far short of what will be required to "level the playing field" in the personal-computer software industry, particularly in the realm of operating systems. For example, the requirement that Microsoft disclose its operating-system application programming interfaces must have more teeth and a more effective enforcement mechanism before any competing system such as Linux will have a fair competitive opportunity. Microsoft should also not be allowed to hide behind "security" to keep its APIs secret; an independent reviewer should be empowered to determine what is a legitimate security concern and what is stonewalling.

Thank you very much,  
Katherine Holcomb

**MTC-00018926**

From: Timothy John Webb  
To: Microsoft ATR  
Date: 1/23/02 6:16pm  
Subject: Microsoft Settlement

I truly believe that Microsoft is manipulating the government and trying to get the most beneficial settlement they can get. They no doubt have a monopoly and will do everything in their power to keep it that way. Personal computer users at home especially have no choice but to buy Microsoft products, and when Microsoft chooses to not support their version, they are forced to upgrade, costing hundreds of dollars to you regular American citizen. On top of that, each new distribution of Microsoft products, especially the windowing environment unfairly called Windows, is more bulky and buggy than the previous release. If a user is satisfied with their current software, they should not be forced to upgrade to something more resource demanding. This creates a need to upgrade the hardware so that the programs may run more smoothly with the additional unwanted features that take up valuable space. As long as MS holds their monopoly, all major releases of software will either be strictly Windows 98/2000/NT/XP and, if lucky, a release for Apple computers as well. Be informed, though, that Apple is much different from MS and should not be considered something that voids the Monopoly. Apple makes their hardware and software specific for each other. If a consumer buys an iMac, they also get the Mac operating system. Typically Apple products and MS products are not interchangeable. For an IBM-compatible computer, the choices are: Microsoft Products, and Microsoft Approved Products. As a consumer, I hate to be locked into the Microsoft cycle. It is not an easy task to eliminate Microsoft products from my

computer. If I do, I lose the "priveledge" to 99.99% of all distributed software. I walk into my local retail store and can not find a single program that does not say that it REQUIRES MS Windows 98/2000/NT/XP. Notice that this no longer includes Windows 95. This means all the consumers who are happy with 95, some of whom I know, MUST upgrade if they want to run the latest software. And MS upgrades are not free, and not cheap. Bottom line is that if the Government says you have a monopoly, you must split. Or you must cease these unfair business practices and do such and such to fix the existing reprecussions, MS should follow without whining. Instead, they carry it out as long as possible, pull every string they can, put in conditions that will help them more than hurt them, and insist on their conditions. Justice must prevail, DO NOT give the citizens of this country, dedicated to freedom, the perception that the judicial system will bend over backwards for billionaires. Where is our freedom of choice for computer products?

To: Microsoft ATR  
Date: 1/23/02 6:16pm  
Subject: Microsoft Settlement

To whom it may concern: It's time for this case to end. Microsoft is clearly not a monopoly (there are several alternatives, some free, some more expensive) and companies like Netscape which have fallen on hard times have done so of their own accord. To wit, Netscape didn't release a single browser product for upwards of nearly four years... to compete, you actually have to compete! AOL doesn't even use Netscape—which they own—in their own products. The software industry is the most dynamic, fast-moving, innovative industry in the world, from where I sit. Yes, Microsoft is the big dog, but there are several alternatives (Linux, Macintosh) that shouldn't get a leg up just because Microsoft has been more successful. Please end this trial now, and let the markets decide. Good ideas will win out, and it's not the government's job to help those who can't keep up. I was not asked nor paid by Microsoft to send this message—just a concerned taxpayer.

From: Todd Papaleo  
To: Microsoft ATR  
Date: 1/23/02 6:20pm  
Subject: Microsoft Settlement

The way Microsoft is imposing its Passport strategy on consumers is not only audacious, but unwelcome. I am a Macintosh user, and I frequently exercise my choice to not use Microsoft products because of several reasons:

They're not necessarily the best, in that they're often burdened with a cumbersome and cryptic interface.

They presume too much (under the guise of assisting the user) about the work I want to accomplish, resulting in wasted time dealing with tedious streams of dialogue boxes and "wizards".

They, in short, dictate how I should interface with my machine to do my work, because they have a prescribed plan, and anyone or anything that doesn't figure in is deemed irrelevant.

It became painfully apparent that there is no escaping Microsoft's .NET strategy when I logged on to their Mac product website to download a trial version of Office v.X for Mac OS X. I was required to create a Passport identity in order to download it. Other users are forced to adopt a Passport identity when registering the full product. If they choose not to, they don't receive the benefits of registration.

This is like saying, "You can run, but you can't hide. And if you run, you'll just die tired. We'll get you." I don't like the fact that even though I am actively avoiding using their products and services, I run into them sooner or later. I now know that if I ever want to use Office X, my Passport will be more important than my actual purchase of the product. I do have a Passport, but I got it two years ago when it made sense to have a Hotmail account. Now, this once innocuous mail service is part of a grander scheme to control my work and my life.

Microsoft consistently imposes their technology on the rest of the world, casting international standards to the wind, under the pretense of making technology better. In actuality, they are assuring their role in the world of technology by instituting new web protocols that fuel their dissemination of the Explorer browser, and the technologies they build into it "for a better user experience". This is but ONE example.

Other companies diligently adhere to international standards of technology in order to make the best products they can. But when a new version or service pack of Windows throws the world a curve ball, they are all forced to catch up or face the consequences. I work on PCs at work, and my computing experience is usually horrible to fair on any given day, generally because of security holes and malfunctioning Microsoft products that do not allow the average reasonable user enough latitude to know what they're doing or how to remedy a potentially disastrous situation.

Instead of adding features to ensure a "better user experience" (as opposed to a sharp stick in the eye), they ought to concentrate on making a secure and usable product where I don't need a MSCE certificate to set up my mail. I'm surprised that the world has not brought a class-action suit against them for all the pain, suffering and financial catastrophes that have resulted from them not crossing their t's and dotting

their I's when they're putting out an operating system. Their reasoning must be it's better to get people's money now, and promise to issue a patch whenever some hacker exposes a blatant security flaw.

If they want 95% of the world, the least they could do is make it so their stuff works as advertised, and doesn't shower the people with promises of a better this and more exciting that. They have great responsibility to us, they are supposed to make it so we want to use their product.

The reality is we're forced to if we want to be in business, and even then our business transactions are constantly at risk because of their lackadaisical approach to security.

The sole purpose of Microsoft is to make money on anything that they become involved with, including internet and computer companies. I don't want them to go away, I just want them to play fair and compete on their own strengths instead of turning the tables every 6 months.

Sincerely,  
Todd Papaleo

From: James Forrester  
To: Microsoft ATR  
Date: 1/23/02 6:08pm  
Subject: Dear Sir / Madam,

Dear Sir / Madam,

I am a senior software engineer at a financial company. Microsoft's retail business practices notwithstanding, their integration of new features and functionality in to their software has helped this company deliver a highly profitable web product which has weathered current economic conditions and has created many jobs. The time-to-market that is achievable with their software is second to none, and their .Net initiative is giving developers of all backgrounds an equal playing field in which to ply their trade- developers who may otherwise have found their positions marginalised. These low barriers to entry have unsurprisingly created an environment where competitors struggle to compete, but in closing let me say this: Microsoft's illegal activities represent one sphere of their operations; one which must now clearly face remedies to its sales and marketing practices. However the Microsoft that millions of developers deal with every day is innovative, responsive, and exciting. Any remedy adversely affecting that portion of the company would harm those members of the public- the software architects, trainers, trainees, managers, developers, administrators and consultants— who have worked so hard to make their companies the very best at what they do, using Microsoft software.

Best regards,  
James Forrester

Subject: Microsoft Settlement

Dear D.O.J.,

As a concerned citizen, investor, and stock holder of not only Microsoft, but other companies, I am fed up with this continual legal battle against Microsoft.

In the first place, it is my opinion that every company has a right and obligation to its employees, stock holders and the consumer to produce the best possible products. Complete with new innovation. Every company in the world strives for market dominance, including AOL and Sun Microsystems. The facts are that Microsoft got the job done and now those cry babies are attempting to use every sleazy “legal” means at their disposal to attempt to gain what they couldn't in fair business. In my opinion, it is not the governments business to interfere with business and as such this trial is a travesty of justice. It should be done such that, let each of these “poor abused” companies bring civil suit, provided that they can show beyond any doubt that they have been wronged and not just a victim of their own weak business practices. This whole mess reminds me of small children who, when loosing a game, runs to tell Daddy the others are cheating. As a consumer, I applaud Microsoft for putting together a truly integrated operating system. One where all of the components are integrated to work together, eliminating the finger pointing of days gone by in the software industry. I have tried Netscape and found it lacking. I prefer Microsoft's browser. I had AOL as my internet provider, but since it wasn't compatible with some of the online programs (non Microsoft) I use, I made a conscious decision to change. Therefor, these companies claim that Microsoft has harmed the consumer is a large load of malarky. I, like every other consumer, had the opportunity to use Netscape and AOL, but chose not to. I wasn't forced to use Microsoft, I simply found it to be better than the competition. They harmed themselves and the consumers by not providing appropriate software that fit the needs of all consumers, not just their narrow band of selected few. My heart bleeds for them that they've lost market share. TOUGH, that's business. If they can't stand the heat, get out of the kitchen.

As an investor, I am enraged that this mess has been allowed to continue. It is no secret that Microsoft's ups and downs fairly well dictate the ups and downs of Wall Street and the stock markets. In these times of economic uncertainty, let's call it by its real name—RECESSION, what consumers, investors and the everyday working people do not need is some more downturn of the stock markets. I believe it can fairly be stated that anyone who had investments in the stock market after March of 1999 has lost and lost big. In

my own case, I lost well over 50% of my retirement funds. I guess I should sue somebody to recover what I've lost too, Huh. One of the major catalysts of that crash was the beginning of this legal battle between the DOJ and Microsoft. Further dragging it down was the cyclical weakening of the general economy and then add to it a period of uncertainty over who was the President. Now add Sept. 11. Isn't it time to get off Microsofts back and let the economy recover. I say it is!!!! In my opinion, Microsoft has made a much larger offer to settle than I would have considered fair, but still the crybabies of the world will not be satisfied unless Microsoft is ruined and completely gone. The question then is, who will they blame for their own mismanagement when again they fail and someone else is King of the Internet? So, tell me, WHO has harmed the citizens of this country, I give you AOL, Sun Micro. and the States Attorneys General, that's who. Therefor, I emlore you to put an end to this nonsense and let the country get on with trying to recover.

Sincerely,  
Ron Oxford

Subject: Microsoft Settlement

To whom it may concern:

This letter's purpose is to comment as allowed under the Tunney Act upon the proposed final judgement in the Microsoft anti-trust case. If I have sent it to the wrong address or it reaches you in error, please forward it to the proper address.

I disagree with this proposed settlement. As an open-source programmer, I am especially disheartened by the leniency with which Microsoft gets off in terms of releasing information on their APIs. This settlement is unacceptable, because it doesn't even require that they say which are patented! This is a nightmare to anyone creating a competing implementation, because they don't know what they can and cannot emulate. At the very least, the settlement must be modified to force full disclosure of the patents.

Further, it doesn't require full disclosure of their APIs! (Definition K defines “Microsoft Middleware Product” to mean, in short, Internet Explorer, Microsoft Java, Windows Media Player, Windows Messenger, and Outlook Express.) This is, again, unacceptable. Take a person creating a game on Windows to compete with any of Microsoft's. By allowing Microsoft to keep some of their DirectX APIs secret, the potential competitor is forced to use only the functions Microsoft chooses to release. What if Microsoft kept certain functions to themselves that were faster or better than those they released? The competitor's game is locked into being of lower quality. I would support full disclosure of every API Microsoft has created, in a simple and easily understood format. Further, many of their simpler APIs, such as Windows Messenger and Windows Media Player, should also be disclosed in source code.

I hope my comments will be useful to you, and I hope you will reconsider what is a very poor settlement. As a citizen, I feel this current settlement is little more than a slap on the wrist to a company that has done real wrong, and has hurt both its competition and its consumers. Thank you for your time.

Sincerely,  
Brian Pepper

From: Dave Owen (Los Angeles)  
To: “microsoft.atr(a)usdoj.gov”  
Date: 1/23/02 6:23pm  
Subject: Microsoft Settlement

I will be brief, as I assume you receive thousands of letters on this subject per day.

Microsoft has, at various times:

—eliminated OS competition (DR-DOS, BeOS)

—eliminated Software competition (Netscape)

It has done this not by creating a better product for a fair price, which would be applauded by myself and many others. It has done this by using its” position as a very large, very powerful monopoly to create licensing impediments, create artificial technical incompatibilities, and give away free products until competition was eliminated. Licensing impediments: BeOS, an extremely viable desktop OS for the x86 platform, could not be pre-installed on x86 computers by vendors on their OEM products. Why? Microsoft's OS licensing agreements with these companies forbade it. With Windows as the dominant platform, OEMs could not afford to ship x86 computers without Windows. Licensing impediments: Netscape, a pioneer in the browser market, could not be pre-installed on x86 computers by vendors on their OEM products. Why? Microsoft's OS licensing agreements with these companies forbade it. With Windows as the dominant platform, OEMs could not afford to ship x86 computers without Windows. Artificial technical incompatibilities: DR-DOS was a direct competitor to MS-DOS before Windows 3.1 hit the market. Windows 3.1 was not an operating system; it was a piece of separate software called a “window manager” that runs on top of an operating system. Windows 3.1 was fully compatible with both DR-DOS and MS-DOS. In order to prevent people from using Windows with DR-DOS, they programmed a module in Windows to detect DR-DOS. If DR-DOS was detected, it threw error messages—not “Windows is not compatible with DR-DOS” error messages, but random cryptic messages that could not be traced or fixed. Microsoft tech support staff told customers that DR-DOS was not truly MS-DOS compatible (it was) and that DR-DOS was causing the error messages. Giving away free products: This is well-documented with Netscape, and I will not rehash it here. In a nutshell, then, Microsoft has a proven history of eliminating competition by manipulating their operating system and software holdings. Without splitting the company in two, this pattern will continue.

Consider: Internet Explorer WAS a piece of software; now Microsoft claims it is part of the operating system. Windows Explorer

WAS a piece of software (windows 3.1); now Microsoft claims it is part of the operating system. It is likely a matter of time before software like MSN, Office, MSN Messenger and others are "part of the operating system", and software such as AOL, WordPerfect, AOL Instant Messenger and others are "incompatible programs" that cannot be shipped with OEM products or installed and run on Windows" computers. Did I say I would be brief? Sorry about that—it's a very complicated subject after all.

Subject: Microsoft Settlement

Regarding the proposed Microsoft settlement:

I, among many others, disagree with this settlement as being far too lenient on Microsoft. One remedy that should be enforced is the opening of Microsoft's document and networking standards to the public. Microsoft used illegal means to achieve monopolistic status on the computer desktop, and they use their proprietary office document and network authentication schemes to help maintain this status. Forcing Microsoft to open these standards (such as the exact makeup of Microsoft Word .DOC files, Excel .XLS files, SMB authentication, etc) will help promote competition, as other vendors can implement support for these standards.

Right now, business owners are almost forced to purchase MS Office products because Office file formats are the de-facto standard around the world. Otherwise, their ability to exchange information with other businesses is severely compromised. This kills competition, and benefits no one but Microsoft. By allowing open access to these de-facto file standards, other application developers can support them natively, thus promoting competition in the application industry. Competition means better quality, which may even cut down on the number of computer viruses and exploits, as Microsoft would be forced to subject their products to much better quality control (or risk losing market share). There are other remedies I would like to see taken against Microsoft, but the above is one of the best choices. It doesn't impact Microsoft directly, nor does it require a lot of governmental oversight, but it WOULD greatly increase competition and prevent Microsoft from relying on proprietary standards to illegally maintain a monopoly.

From: Gary McDaniel  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 6:18pm  
Subject: Microsoft Settlement

I am opposed to the proposed Microsoft settlement because will not adequately punish them for their anti-competitive behavior nor will it keep them from continuing to stampede over competitors through anti-competitive, not to mention illegal, strategies. Our own federal courts found the guilty. Adding to the proliferation of the Windows operating system by giving Microsoft access to countless school computers doesn't seem like punishment to me. Please find an appropriate punitive response.

Thank you,  
Gary McDaniel

From: Stephen McNicholas  
To: Microsoft ATR  
Date: 1/23/02 6:21pm  
Subject: Microsoft Settlement  
Department of Justice:

I wish to add my comments to the Microsoft Settlement. I don't believe that the existing settlement is sufficient. Yes, Microsoft has done some good things (including making it easier for most people to use computers). However, I believe that Microsoft is a monopoly in the operating system, office suite, and browser markets, thus allowing them to consistently overcharge their customers. With Microsoft's new licensing restrictions, they are going to be able to gouge their corporate customers. (As you know corporate IT departments tend to standardize their systems.. Since they have been locked into Microsoft products for some time, they may not be able to easily switch to other products.) There is a solution.. Its called the WINE project ([www.winehq.com](http://www.winehq.com)). WINE is an open source implementation of Microsoft API for Unix based systems.. API is the interface between the operating system, and the software that the user really wants to use. In plain english, it allows Unix based systems to run Microsoft programs. As you know, Linux is an open source (free, in both the meanings "free beer" and "free to read the source code and modify"), and has been touted as a potential competitor of Microsoft. Linux has come a long way from its beginnings, and even offers some powerful GUIs (for examples, see [www.gnome.org](http://www.gnome.org) and [www.kde.org](http://www.kde.org)), and some powerful office suites ([www.openoffice.org](http://www.openoffice.org), [www.koffice.org](http://www.koffice.org), etc.) As a remedy, Microsoft should be forced to publish their API publicly, completely, and accurately. Note that Microsoft does not have to publish the source code.. Instead, they can just document how it all works. Moreover, Microsoft should be forced to document their closed file formats. for example, the .doc format used by Microsoft word. this would allow others to develop programs that can

easily read Microsoft Word documents. I believe that a combination of the WINE project and Linux would be an extremely powerful competitor to Microsoft.

thank you.

Subject: Microsoft Settlement

To Whom It May Concern:

I feel strongly that the decision reached by the U.S. Department of Justice in this case against Microsoft is little more than a "slap on the wrist" to a company that has been forced to pay out millions of dollars to various competitive companies in the past 15 years for their clearly negligent violations of patents, copyrights, nondisclosures and license agreements. Microsoft has such a blatant history of unethical behavior. Who is actually going to hold them accountable for this judgment? They will ultimately find a way to keep issues tied up in litigation for years to come, rather than do the right thing for the computer industry... allow fair competition to thrive. I anticipate that in the next five years, the United States will be forced to bring further antitrust action against Microsoft again, due primarily to their violation of user privacy issues that are just now beginning to surface. Fair competition breeds true innovation. In my opinion, Microsoft should be forced to split their company into smaller divisions, and give the rest of the world the opportunity to create and innovate for larger marketshare.

From: Gregory Peker  
To: Microsoft ATR  
Date: 1/23/02 6:22pm  
Subject: Microsoft Settlement

To whom it may concern,

I have used both linux and windows in the past and have discontinued using linux for two reasons. Incompatibilities with hardware and lack of software. First of all, in linux, not all my equipment inside my computer work properly due to a lack of correct drivers. Windows, on the other hand, provides a wealth of drivers. A problem with alternative OS" is that they lack necessary software. I am a web site designer and in linux, there is a huge deficit of programs I use (i.e.. Photoshop, dreamweaver, flash). I am not saying that Windows is very good, Microsoft can do a lot better, but I'm saying is that before you make a decision as to Microsoft's future, consider the alternatives. Linux, Solaris, and other similar operating systems are very good for servers because they provide the stability and protection needed. They are open source so IT officers can change part of the operating system to accommodate their requirements. One big problem that I have with Microsoft is their use of their proprietary technology. Some examples are, IIS (it's capability to serve ASP), SQL, and etc. Microsoft has a lot of

these proprietary technologies which force users to switch to their operating system. I think there should be a committee set up in Microsoft, payed for by Microsoft and hired by the government. This committee would assist Microsoft into deciding what to do so they don't get into any antitrust cases again. Some things they should do is to open the source code to some of Microsoft's code. Perhaps, open source Windows 3.11 and older. Those operating systems are obsolete and no one uses them anymore. Then in a few years, open source to the Windows 9x operating system, and continue doing this when the technology becomes obsolete. As a web site designers, I work with ASP and SQL very often. I would prefer running the server's under LINUX, but the only programs that serve ASP in LINUX are not as good as IIS. Microsoft should be forced to create an alternative to IIS for the LINUX platform. I am not a Windows enthusiast, nor am I a LINUX enthusiast. Both operating systems have a lot of potential, but for two completely different segments. Windows is more for the new computer user or someone who is not very good at computers. LINUX is for those computers geeks who know how to use the DOS like ROOT found in LINUX. I would prefer to run LINUX, but because of my software development requirements, can't. One thing that could be useful is the development of LINDOWS (found at [www.lindows.com](http://www.lindows.com)) which could be a good alternative to LINUX. This would not stray customers away from Windows, but provide people with a much larger choice of operating systems. If lindows can live up to its reputation, I wouldn't mind setting up a dual-boot system again. I won't get rid of Windows, but I will use it less. Most people will still use Windows because it will most likely be the only Operating System available in pre-built systems (i.e.. dell, gateway, Compaq, alienware, and etc.).

Subject: Do not settle the deal as it is presented

I believe the settlement does not help schools as much. Microsoft should donate money in the form of cash rather than in the form of inflated used computer price. This only help Microsoft to increase its influence on high schools. Schools should have right to say how the money is used and what equipments/software are needed. No need for microsoft to give them over-priced equipments and softwares that they may not need.

Subject: Microsoft Settlement

How do I put this...What a joke of a case this is turning out to be and what a joke of a resolution as well. Microsoft wants the money but doesn't even want to listen (unless you pay them too) when you want to tell them what is wrong. They said the IE4

doesn't do anything if it is integrated or just installed. They already signed saying they wouldn't do certain things yet they do. They use their muscle to push other people out of business when they find something they like and now they want everyone to go through them to write drivers or programs. Why don't we just hand Bill and Steve the US and just sit back and take the whole length of this up the ass. Yes, I think that is a good way to put, just take the whole length of this up the ass. The entire way this has been handled is just poor. Microsoft has lied to the people and should be punished. I think the company should suffer to being split, having a total of 3 people on the inside is going to accomplish nothing. Their will be enough red tape for them to go through that they will probably never get to the issues that serious computer geeks/professionals care about.

But then again, go ahead, let Microsoft have it easy, and use their own products to run the governments' systems. Meanwhile, I will make a push for something like linux (and so will others, it has already started) and I will try to make sure that everyone understands that the government backed down when they shouldn't have and that Microsoft is more worried about making the money more than producing well written software.

I am completely thankful for what Microsoft has brought to home computing but they cannot be the only company to do this. Business in AMERICA is what it is because of free competition, Micro\$oft wants to push everyone out of the way. That is wrong and companies in the past that have attempted to do so have been dealt with. Now is time to deal with Microsoft.

A citizen of these United States

Subject: Microsoft Settlement

Public Comment:

Microsoft has abused its monopoly with Windows Operating System and has engaged in hugely anti-competitive business practices. The settlement proposal offered by Microsoft is, in a word, a joke. They propose to give schools free software and refurbished PC's, which would do nothing more than expand their already ludicrous marketshare. This would be particularly detrimental to the likes of Apple Computer, AOL/Time Warner (Netscape Internet Browser), and all other competing products.

Microsoft must be be punished severely for its years of anti-competitive practices, whether by settlement or court decision. At the minimum, a very large fine (or cash donation to schools) should be imposed. To be effective, this amount must be at least \$750 million. Microsoft should also issue a "statement of intent" as a press release, admitting wrongdoing and promising change. As further punishment, Microsoft should be required to list alternatives to its Windows Operating System/Explorer with any donation (to any school) it makes. This would guarantee a fair and balanced settlement and ensure the school's choice of hardware and software. In particular, Microsoft should be forced to mention "Apple/Mac OS", "Netscape" and even the "Linux" OS.

Thank you,

Scott Walter

Gentlemen:

I oppose the Microsoft settlement agreement. This is a large, subtle, multi-faceted issue about which one could write volumes. I will state my objections as succinctly as possible. The agreement provides no penalty for the misbehavior that the courts have found.

The agreement provides for only weak oversight for enforcement of the agreement.

The agreement contains enormous loopholes which would enable Microsoft to work around the spirit of the agreement and therefore to bypass the weak remedies provided.

The agreement offers inadequate safeguards against Microsoft's monopoly power.

 To: Microsoft ATR  
 Date: 1/23/02 6:24pm  
 Subject: Microsoft Settlement

Microsoft has been given too much leeway ever since they first began publishing Windows 95 versions with Internet Explorer touted everywhere from the startup screen to system support. The delays they have caused in the legal process have granted them further monopoly powers, ignoring the cases brought against them by not only the DOJ but by states and many different individual companies. It is time to give Microsoft the justice they deserve, and that is not something which is part of their proposals for settlement (which would extend their monopoly even further and take over as much as possible of the school market, which has previously been dominated by Apple). No fine considerably less than one trillion dollars or any series of promises will have any effect on their dangerous and obviously illegal practices. Microsoft must be forcibly broken in such a way that it cannot extend its monopoly into the server and security markets as it is now attempting with Passport. Don't let Microsoft do what it has done to Netscape and WordPerfect again. Don't let their ludicrous arguments that justice is going to cost taxpayers money and stifles "innovation" keep the DOJ from dealing justice to them.

From: Eric Smith  
 To: Microsoft ATR  
 Date: 1/23/02 6:24pm  
 Subject: Microsoft Settlement

I am writing today in regards to the proposed Anti-trust settlement between the US government and Microsoft corporation. I believe that this proposed agreement short-changes the American public by allowing Microsoft to continue with its current anti-competitive practices. For instance, the overly narrow definitions of "Microsoft Middleware Product" and "API" means that Section III.D.'s requirement to release information about Windows interfaces would not cover many important interfaces. Without the ability to understand these APIs, many application developers for competing platforms and products are unable to make their products interoperable with Microsoft's. This interoperability requirement is penultimate to other developers, as Microsoft currently has a monopoly in the Operating System business, and compatibility is the only way to sell products. I strongly believe that this proposal needs to be seriously rethought, with tougher actions taken against Microsoft.

Sincerely,  
 Eric Smith

From: Kevin M. Squire  
 To: Microsoft ATR  
 Date: 1/23/02 6:27pm  
 Subject: Microsoft Settlement

Dear Sir/Madam:

I have some concerns about the recent DOJ/Microsoft settlement that I'd like to share. Specifically, the settlement does not prevent Microsoft from discriminate against open source software, potentially one of Microsoft's greatest competitors.

I am a Ph.D. student and researcher who depends on non-Microsoft operating systems (mainly GNU/Linux) for my work. My research involves programming on PC's and an embedded system (in a robot) for which running Microsoft Windows is neither much of an option, nor is it desirable. For day to day tasks, the sheer ubiquity of Microsoft Operating Systems and Microsoft-specific data formats (specifically Word and multi-

media formats), and the extreme difficulty in reading these formats under Linux, often means that I have to find another machine from which to handle documents from colleagues or on the web. This is annoying.

A few companies and open source groups are working on ways to run MS Windows programs under Linux and other non-Microsoft operating systems. Specifically, an open source group ([www.winehq.org](http://www.winehq.org)) and a company called Codeweavers ([www.codeweavers.com](http://www.codeweavers.com)), among others, are working on versions of Wine, a Windows Emulator. This project, as it matures, has the potential of providing serious competition to Microsoft, by allowing users to use non-Microsoft operating systems, yet still use MS Windows-based products. Other open source projects, such as AbiWord ([www.abisource.org](http://www.abisource.org)) and KWord (<http://www.koffice.org/kword/>), attempt to read or translate Microsoft Word documents.

The DOJ/Microsoft settlement tries to encourage competition, yet fails to do much at all to benefit important competitors such as the above-mentioned projects. One potential benefit would be to allow access to Microsoft APIs and file formats to such open source projects. This would help these projects flourish and offer more viable choices to consumers. Another, more important consideration, would be to include open source projects in the list of ISVs against which Microsoft should not discriminate. For example, both the Microsoft Windows Media Encoder 7.1 SDK EULA, and the Microsoft Platform SDK EULA prohibit redistribution of (normally distributable) components with publicly available software or on non-Microsoft operating systems, respectively. Nothing in the DOJ/Microsoft agreement prohibits this discrimination, which again, has the potential to limit competition from open source projects.

While the DOJ/Microsoft settlement does somewhat address Microsoft's anti-competitive behavior, I hope that you consider using this opportunity to modify the settlement such that it encourages more competition from open source projects, and by closing potential loopholes that Microsoft could use to engage in anti-competitive behavior in the future.

Thank you for your time.

From: Victor R. Cardona  
 To: Microsoft ATR  
 Date: 1/23/02 6:19pm  
 Subject: Microsoft Settlement

The proposed Microsoft-DOJ settlement is flawed. Although the drafters of the settlement clearly wanted to restore a measure of competition to the software market, they have instead allowed Microsoft to extend its control over that market by allowing Microsoft to define certain key terms used in the settlement.

Microsoft has shown its contempt for the law in the past by virtually ignoring a consent decree, falsifying evidence during the 1998 antitrust trial, and sending letters supposedly written by deceased people in order to convince the states' attorneys general that they should accept the proposed settlement. They have already been found guilty of illegally maintaining a monopoly by two separate courts. They're behavior since those rulings shows no sign of change. They should not be allowed to dictate the terms of their settlement. Please reject the proposed settlement.

Sincerely,  
Victor R. Cardona

From: Vartan Piroumian  
To: Microsoft ATR  
Date: 1/23/02 5:54pm  
Subject: Proposed Final Judgement: United States versus Microsoft Dear Sir or Madam,

As per the Tunney Act I am writing to express my considerable dismay at the Proposed Final Judgement (PFJ) in the case of the United States versus Microsoft. My motivation for writing is to give you a perspective on the dangers of allowing Microsoft to escape justice through the inadequate terms of the PFJ. I hope to encourage you to draft a much more comprehensive, precise, unambiguous settlement that adequately curbs Microsoft from further hurting the American people as well as citizens of many other countries.

I am a professional software engineer, and I am very well versed in the technical details that surround all of the issues in the Findings of Fact, Competitive Impact Report, and other official documents related to this case. This letter is not the appropriate forum to discuss all of these technical issues. Nevertheless, I would like to point out the crux of the issue at hand.

I believe the important question for the citizens of the United States, in the spirit of the motivation behind the laws that prohibit monopolization in our country, is: "Does this settlement address the best interests of Americans?" My answer is a resounding and unequivocal NO! The myriad ways in which Microsoft relentlessly pursues absolute domination through unethical, immoral and illegal activities will continue to hurt Americans as it has already done! The fact

is that Microsoft software is inferior in many regards to alternative offerings that are available to the general public at lower cost. Yet consumers are not aware of this fact because they have never been given a chance to see alternative offerings, which are not allowed to compete in a fair, competitive environment.

Microsoft has intentionally created a vicious cycle—which will be perpetuated by your currently proposed PFJ—that prohibits consumers from ever seeing alternative software solutions. Microsoft has intentionally created an anti-competitive operating environment in which OEMs, VARs, and so forth are discouraged—even threatened—from even exposing alternative software to consumers. Moreover, they create unfair competition by restricting access to their platform and by creating proprietary application programming interfaces (APIs), file formats, network protocol extensions, and so forth. Moreover, they have intentionally broken the compatibility of other vendors' software. The result is a vicious cycle in which consumers are more and more convinced that Microsoft software works better than anything else.

Other vendors can't compete on equal footing because of their disadvantage in software development, sales, deployment and exposure. The consumers' experience is that only Microsoft software is compatible with the Microsoft platform and environments. Consumers are therefore discouraged from using alternative software. This decision further increases Microsoft's stranglehold on the market, perpetuating the cycle.

After more than fifteen years, simple, common Microsoft office applications still contain a plethora of bugs. Consumers in all walks of the private, commercial and high-tech sectors complain bitterly about the lack of quality and reliability of Microsoft products. They get inadequate technical assistance, pay increasingly more for their products, and are subject to tighter licensing fees that lock them into increasing dependency on Microsoft products.

Furthermore, innovation from other companies continues to be stifled. Therefore, consumers and professionals alike are condemned to further suffer the inferior status quo. How is all this in the best interest of Americans?

The average American thinks Microsoft is wonderful because they've never been given the chance to see any alternative solutions. Only you, the government, can remedy this situation. Create an environment that truly fosters fair competition. Give vendors a chance to compete on equal footing. Then let the market decide. Isn't that the main tenet of a free market, capitalist economy?

Subject: Microsoft Settlement

Hello,

Please don't fail to recognize Microsoft's misuse of power in this industry. The current settlement only rewards Microsoft by allowing them to further expand their monopoly into the education market. The Xbox is nothing more than a ploy for Microsoft to secretly merge their way into the PC industry. Mark my words, you will see office applications and a keyboard and internet and .NET for the Xbox. It will continue to sell for \$300 and put companies like Gateway and Compaq out of business. Microsoft is dangerous, and abusive with their power—do not fail to recognize this.

If you want to make a difference consider having Microsoft purchasing new Apple iMacs or iBooks for schools and allow Microsoft to bundle Microsoft Office with these computers, at OEM pricing.....

Thanks,  
Dave

To: Microsoft ATR  
Date: 1/23/02 6:28pm  
Subject: Microsoft Settlement

I wish to emphatically state my opposition to currently proposed remedy with respect to the Microsoft settlement. The remedy as proposed will do nothing to curb the predatory practices that have been employed, and will continue to be employed, by Microsoft. Just as we have multiple paths in our highway system and the internet for national security reasons, allowing Microsoft to continue to operate in the forced monopolistic control it currently enjoys removes all of that security by forcing a single point of failure in our electronic enterprise, especially so with respect to government actions resulting in the forced use of only operating systems and office suites from Microsoft, products which are

inherently unstable, and the prime carriers of computer viri.

David C. Johanson, Ph.D.

From: Rich Jones  
To: Microsoft ATR  
Date: 1/23/02 6:27pm  
Subject: Microsoft Settlement

As a Linux user, I am opposed to the way that Microsoft is placing a stranglehold on my ability to use an operating system of my choosing. The proposed settlement offers methods for businesses (ISV's and OEM's, to name a specific few) to gain protection from Microsoft's monopoly dealings and some limited recourse. While I do not feel that these provisions go far enough, a greater harm may be done by specifically naming types of corporations either for profit, or non-profit.

The danger is that Microsoft will remain unchecked against open, free collaborations without corporations or legally recognized institutions to stand directly behind. A few examples come specifically to mind:

1) The Ogg Vorbis music format. Ogg Vorbis is a non-commercial alternative to the MP3 and Windows Music Format (WMF), both of which give me serious restrictions with what I legally can and cannot do with their formats, and, in my opinion, offer lesser performance. Ogg Vorbis is technically the superior of both of these formats, but you will NEVER see a Microsoft brand music player work with Ogg without sterner restrictions by the government. Why? Microsoft has no need for the superior format, since its adoption by the large Windows user base would lessen Microsoft's ability to control how users use their systems. If Ogg Vorbis fails and falls out of use without either a serious technical jump by MP3 or WMA, then it will be the fault of the US Justice Department for not ensuring it's ability to compete based on it's merits.

2) The Linux kernel. As it stands now, Linux has many corporations, both for profit and non-profit, that stand behind it and struggle to ensure it's future and success. However, when Linus Torvalds began the kernel, there was no such organizations. Microsoft has seen competition by Linux, and left to it's own devices, will squash all new similar forms of competition now that it's eyes have been opened by Linux's success. How many similar technological innovations will be squashed by Microsoft if the Justice Department does not afford them equal rights of a corporation?

Please reconsider your current progress of maintaining the status quo.

From: Darin S. Ramzinski  
To: Microsoft ATR  
Date: 1/23/02 6:26pm  
Subject: Microsoft Settlement

I don't agree with the proposed settlement for the following reason: The PFJ places restrictions on how Microsoft licenses its products to OEMs, but not on how it licenses products to large users such as corporations, universities, or state and local governments, collectively referred to as "enterprises". Yet enterprise license agreements often resemble the per-processor licenses which were prohibited by the 1994 consent decree in the earlier US v. Microsoft antitrust case, in that a fee is charged for each desktop or portable computer which could run a Microsoft operating system, regardless of whether any Microsoft software is actually installed on the affected computer. These agreements are anticompetitive because they remove any financial incentive for individuals or departments to run non-Microsoft software.

From: Rich Latour  
To: Microsoft ATR  
Date: 1/23/02 6:30pm  
Subject: Microsoft Antitrust Settlement-You Must Answer to History Ladies and Gentlemen,

While an owner of a significant amount of Microsoft common stock, I feel that having had their day in court and been found guilty that appropriate and meaningful remedies against Microsoft must be put in place. This includes restitution to the victims of the illegal actions such as Netscape, etc. and structural changes to prevent future misdeeds by Microsoft.

Prior to having been found guilty, Bill Gates and company were openly derisive of the concerns of public officials about complaints of unfair practices from much smaller businesses than Netscape. In at least this case, those claims have been proven true. We cannot allow companies because of their size and political influence of their owners to consider themselves and their actions above the law and public interest.

You must take the hard road and protect the public. Seize a line from a Hollywood movie and remember the ideals you had when choosing a law career. Your family and grandchildren are watching.

**MTC-00019031**

From: Robert Shallenberg  
To: microsoft.atr(a)usdoj.gov  
Date: 1/23/02 6:30pm  
Subject: Microsoft Settlement

I think that the settlement contains nothing at all that will constrain Microsoft from their anticompetitive practices. It should be much more restrictive:

—Disallow integration of browser, mail, and other such programs with the operating system.

—Prevent Microsoft from intimidating pricing policies calculated to prevent manufacturers and dealers from selling systems with alternative or no operating systems.

Separate the software division from the operating system division, as was suggested in the previously proposed settlement, and

allow technical merit to govern software use rather than unfair advantage.

As the situation in operating systems now stands, the country is practically in a state that—if it were agriculture it would be termed a monoculture, and this is a dangerous situation. In an agricultural monoculture system, a single germ or virus can wipe out an entire food supply. In this corresponding operating system “monoculture” the recent wave of computer virus plagues have the same cause—it should be noticed that only Microsoft operating systems and programs were both the source and the prey of the virus infections. (Note that as a user of an “alternative” so-called “legacy” system, I have not had a single virus in the past 8 years.)

Please make any settlement reached have some real remedies for the already legally established (and long enduring) criminal monopolistic business practice of the Microsoft Corporation.

Thank you for your efforts to these ends.

From: Eva Kalman  
To: Microsoft ATR  
Date: 1/23/02 6:30pm  
Subject: Microsoft Settlement is BAD

The current Microsoft settlement is not just. It perpetuates their monopoly. If you're in the software business or information technology, you must be satisfied to “buy Microsoft” or write add-on products that aren't too successful, otherwise you're afraid for your job or business. The way things are going, the only people who will get paid for writing (bad) software are Microsoft employees ; everyone else, such as the Open Source advocates, have to volunteer and write software for free.

From: Brian Beveridge  
To: Microsoft ATR  
Date: 1/23/02 6:29pm  
Subject: 'Microsoft Settlement'

To Whom It May Concern:

As a computer user (a PC network running Windows products) I have followed with great interest the anti-trust suit against Microsoft. The outcome of this process will determine my options as a computer user, and my costs as a business person. At present, I am forced by Microsoft's market domination, to use not only the Windows Operating System, but Microsoft's suite of office products, as well.

I believe that MS has used non-compatibility with competing products as a strategy with which to dominate the PC computing marketplace.

I believe, from experience working with software developers, that MS has used it's dominant marketing position to stifle the success of small developers, while quickly coming to market with poorly designed adaptations of new ideas.

I believe that the terms and definitions in the proposed agreement are overly specific

and will allow MS to bypass the anti-competitive restrictions within months, simply by releasing new product.

In summary, I believe that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, would delay the emergence of competing Windows-compatible operating systems, and is therefore not in the public interest. It should not be adopted without substantial revision to address these problems.

From: J. David Eisenberg  
To: Microsoft ATR  
Date: 1/23/02 6:30pm  
Subject: Microsoft Settlement

I believe the proposed settlement is a bad idea for the following reasons:

1) Although Microsoft may not alter its commercial relationship with an OEM for shipping a competitive product, they may provide “Consideration to any OEM with respect to any Microsoft product or service where that Consideration is commensurate with the absolute level or amount of that OEM's development, distribution, promotion, or licensing of that Microsoft product or service.” What, then, prevents Microsoft from determining that an OEM who works —only— with Microsoft products may get a very large rebate for every system shipped, but that OEMs who use competitive products get no rebate, as their promotion is certainly not the at the same level? Effectively, this creates a mechanism whereby Microsoft can still financially punish any OEM that ships competitive software.

2) There seems to be no explicit listing of actual consequences for violation of any of the agreement, other than “the plaintiffs will investigate this behavior.”

From: steve

To: Microsoft ATR  
Date: 1/23/02 1:34pm  
Subject: Microsoft Settlement  
Greetings All,

As someone who personally experienced Microsoft's casual dismissal of customer bug concerns regarding their Foxpro 2.0 databases in 1994 I find this all deeply unsettling.

The specific incident I refer to is a classic example of MS inaction. Microsoft knowingly shipped it's initial Foxpro in a state that caused it to eat it's database when one tried to exercise preventative maintenance during a re-index. This sounds minor until you realize that they encouraged the use of the database nationally by the United Way, and in the process the United Way lost their donor data DBs. Casual estimates are that the United Ways lost over 70 million in contributions in that year due to this. There is no way to measure the amount of suffering that remained unaddressed due to MS's callousness.

Microsoft not only encouraged software they knew was broken to be used, but also refused to provide any fix for the bugs in a timely fashion. In conversations with their technical support, the United Way vendor for whom I worked, Hewitt-Anderson, was told not only that they had no fix, but had no plans to release any fix until a the next version of Foxpro, which had no planned release date. Cold comfort for hundreds of United Way branches. The company feels that it is too powerful and prevasively deployed to need to respond in any way to problems it creates, or to even create products would survive in a true market environment.

The only real fix to to break that power down to the point to where Microsoft feels that quality software and addressing customer concerns are once again important for it's survival.

The settlement is a waste of the taxpayer money and civil servant effort put into the case thus far. It fails to address the illegal restrictive agreements forced onto OEMs that was the heart of the actual Netscape case. It fails to address the OS information shared only with internal programmers (an extremely underhanded and amusing unsuccessful attempt to make up for the fact that non-microsoft programmers were consistently producing leaner faster applications). It fails to address the predatory pricing practices that unfairly restrict consumer purchasing choice by punishing those who don't promise to purchase only the MS software. It fails to address that Microsoft lack of concern has created National security problems in systems deployed by the government...Are we going to point to your settlement as a point when the government had a chance and failed to prevent a possible cyber pearl harbor?

The current settlement is only in the interest of the Microsoft management and lawyer teams. Ultimately even their employees, as US citizens, will suffer from the issues arising from the lack of due diligence to product quality and security that it luxuriates in as a monopoly.

Don't give up the good fight!  
Steve

To whom it may concern:

I am writing you to comment on the proposed Final Judgement against Microsoft corporation. I am providing my comments in accordance with the Tunney Act.

I believe that the proposed Final Judgement is, in general, too lenient. In particular, I disagree with section III(J)(2), which allows Microsoft to decide with which parties to share information about certain APIs. I believe that this provision will allow Microsoft to hinder competition from small businesses, not-for-profits, and individuals, by refusing to disclose information about certain APIs. Furthermore, this provision would allow Microsoft to continue to abuse its monopoly position by impartially disclosing information about certain APIs. I urge you to amend the settlement to require Microsoft to make publicly known and to freely license the APIs covered by Section III(J)(2).

Please file my comments, and a response to them, with the court, as required by the Tunney Act.

From: root@copland.udel.edu@inetgw  
 To: Microsoft ATR  
 Date: 1/23/02 6:29pm  
 Subject: Microsoft Settlement

Dear Sirs:

I am writing to express my "opposition" to the Microsoft antitrust settlement.

I believe this settlement is counter to the interests of the American public, deleterious to the American economy, not adequate given the findings of fact in the trial, and most important, does not remedy the harm inflicted on consumers by the low-quality, inefficient products that only a Microsoft monopoly could successfully market.

Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation. (Just imagine how many working people are struggling with the infamous "blue screen of death" an any give moment of any day!)

Microsoft's monopolistic practices cause the public to bear increased costs and deny them the products of the innovation which would otherwise be stimulated through competition.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do not think that the proposed settlement is strong enough to serve this function.

A settlement that would suitably punish Microsoft and also remedy that harm that they have done would be to require them to place the source code for all of their operating systems under the General Public License and make it freely available to those who can make it into a productive solution to workplace needs.

Thank you for considering my remarks.

From: Robert Maxwell Case  
 To: Microsoft ATR  
 Date: 1/23/02 6:32pm  
 Subject: Microsoft Settlement

Dear Sirs:

I'm a software developer with a cutting edge product that I fear could be "embraced and extended" by Microsoft along the lines of the Netscape scenario. I was a user of the Mosaic browser and switched to Netscape as soon as it was released. Although I never paid the \$39 price for the "stable" version, I was fully prepared to do so as it was so much better. I also had communication with the Mosaic browser development team prior to Microsoft's licensing of their technology. I was online the day Microsoft announced that Internet Explorer (Mosaic) would now be free, forcing Netscape to abandon charging

for their product. I was angered at once because Microsoft used its monopoly position in operating systems and ability to "write off" development costs to so obviously subvert a competitor with a superior product. As a result, Netscape could not maintain market share and eventually was sold.

Am I and countless other developers to infer from the apparent "slap-on-the-wrist" settlement that Microsoft merrily may continue to operate in this fashion in the future, depriving us of remuneration for our development efforts? I've read that DOS, Excel, Word, Internet Explorer, Outlook Express and other Microsoft products were all developed not at Microsoft, but by independent developers. It is clear to me that Microsoft is not an innovator but an exploiter.

To my mind, the best remedy going forward is something akin to two children sharing a piece of cake: one cuts and the other chooses. In a timely fashion, Microsoft should choose which business it wants to be in: operating system software or application software, and then divest themselves of the business not chosen.

Sincerely,  
 Robert Maxwell Case

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I work for a company that produces software which operates on multiple platforms including Windows, and am also an end-user of several Microsoft Operating Systems, Middleware and Applications both at work and at home.

The Court of Appeals affirmed that Microsoft (MS) has a monopoly on Intel-compatible PC operating systems, and that the company's market position is protected by a substantial barrier to entry, and that Microsoft is liable under Sherman Act 2 for illegally maintaining its monopoly. According to the Court of Appeals ruling, "a remedies decree in an antitrust case must seek to 'unfetter a market from anticompetitive conduct', to 'terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future'".

Like all those found guilty of a crime, Microsoft need to be punished for their actions—ideally in a way that attempts to restore competition and undoes the damage inflicted on the consumer by their

anticompetitive behaviour. MS has profited greatly from their behaviour, and the fruits of their illegal actions must be denied to them.

Previous court ordered remedies have shown that Microsoft willfully ignores and attempts to circumvent any restrictions placed on them by careful selection of the language used in these remedies, and stalling with continued appeals such that by the time a resolution occurs, there is no surviving competition.

Microsoft show no signs of remorse or attempts to change their pattern of behaviour. Indeed, while conceding certain points on existing Operating Systems (OS), they are careful to ensure that applications (such as Microsoft Office Suite) and future products such as .NET are excluded from any restrictions. It is clear from their pattern of behaviour that they will attempt to monopolise these markets, and that nothing but the most severe restrictions on their behaviour will have any effect.

Since many of the companies adversely affected by Microsoft are no longer operating due to the illegal monopoly, it is hard to make reparation to them. Rather, the remedy must seek to redress the harm done to the consumer, and to prevent Microsoft continuing to use its illegally gained market dominance to monopolise new markets. It is apparent that Microsoft traditionally gains dominance in a new market by tying sales of one product to sales of another—for example, the bundling of Microsoft Office with Windows, and the intimidation of Original Equipment Manufacturers (OEMs) to ensure that this continues to the exclusion of competitors. Their willful circumvention of previous court restrictions, which violate the spirit if not the exact letter of the agreements, indicate that MS must be given no latitude in which to avoid punishment. The only option remaining if this is true, is a structural remedy.

**Structural Remedy:** The existing MS corporation must be split into at least 5 separate companies, each of which is barred from operating in the other 4 areas or joining with one of the other companies for a period of not less than 10 years. The company should be split along the following lines:- Operating Systems, Computer Programming Languages (must include .NET and C#), Applications (such as MS Office), Hardware (including XBox), and Internet Services (MSN, Hotmail etc). Microsoft continually use their monopoly position in each of these sections to dominate others—and must be denied the opportunity to do so in the only method it appears that will work. It is imperative that the .NET be split from all other services, since it is clear MS intends to use this to tie in future applications and services and 'lock out' competing products. Previous anti-trust cases which have resulted in large corporations being split extensively detail prohibitions on these individual companies.

It is clear that despite all evidence pointing to a structural remedy as being the only solution, the courts are unlikely to impose such a remedy. Whether or not this is implemented, the following aspects of MS illegal behaviour must be addressed.

**Consumers Overcharged and Require Compensation:** In addition to monopolising

markets, the consumer has been harmed by Microsoft products being overpriced than would have occurred had competition been available. Once again, Microsoft must be denied any profits from their illegal activities. The consumer must be recompensed for this, and so a substantial cash fine should be levied against MS, which would then be divided amongst all registered users of Microsoft products. This fine should be no less than 1 billion US dollars—note that MS currently have cash reserves of over \$35 billion and this is increasing rapidly—it is a small fine to MS.

Should this not prove to be practical, then MS should still be fined, but with the money going to the purchase of computer and computer related hardware for schools, colleges and charity groups. MS should not be allowed to provide software for these systems, and alternatives such as Apple computers or free software such as Linux must be used instead. This will not only return some benefit to the consumer, but prevent further harm done to MS competitors.

**Applications Barrier to Entry:** Significant barriers exist to competing products in the marketplace due to Microsofts illegal monopoly. These must be eroded and removed in the following ways: By forbidding retaliation against OEMs, Internet Access Providers (IAPs), Independent Software Vendors (ISVs), and Independent Hardware Vendors (IHVs) who support or develop alternatives to Windows.

All APIs and file formats (MS Word, MS Excel, MS Access, MS Powerpoint, MS Outlook and Outlook Express, WMP—the Microsoft Middleware Products) should be available to ISVs and HSVs. File formats should be open and available for public viewing at no cost. Any changes made to APIs and file formats must be announced and specified a period of time must have passed before these changes are implemented (e.g. 180 days for APIs and 90 days for file formats). Current definitions of APIs allow MS to avoid releasing documentation on many important interfaces. File formats, while an important barrier to entry, are currently not included in the proposed settlement and must be publicly disclosed.

**Wording of the licence agreement for ISVs accessing APIs and documentation shall state that it will solely be for the purpose of interoperating with a Windows Operating System Product or with application software written for Windows.** Current phrasing limits this to OS only. Definitions of requirements for companies or individuals to access APIs should be publicly available and independently enforced—MS should have no say in this part of the decision process.

All patents covering the Windows APIs must be disclosed. Currently those ISVs producing Windows-compatible operating systems are uncertain if they are infringing on Microsoft software patents.

**Wording of the current proposed final judgement should not prevent ISVs using released APIs to make alternative OSS compatible with Windows based OSs.**

**Forced Upgrades Must be Stopped:** MS abuses its monopoly position by forcing consumers to upgrade from older products to

newer ones, at substantial cost. Since there is now no effective competition due to the illegal actions, the consumer has no alternative but to go with MS products. By altering file formats in latest releases that are incompatible with older versions, and by removing older products from sale, MS force the consumer to upgrade.

To prevent this, file formats for all Office Applications and WMP must be publicly available at no cost to allow alternatives to be developed. This is mentioned in detail above. To prevent the removal of older products that are still viable applications, Microsoft must continue to support older products for at least 15 years after their introduction. MS may choose not to support the software during this time citing that it is not a useful product, in which case it is allowed to do so but must make the entire MS source code to the application publicly and freely available. Under these circumstances, users may maintain and compile the software themselves. This will apply to operating systems as well as middleware and applications.

**Prohibiting practices towards OEMs:** In addition to current restrictions in the Proposed Final Judgement (PFJ), Microsoft must be restricted against reprisals for OEMs that sell PCs with a competing OS but no Microsoft OS. The PFJ requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs if they offer competing products. There should be selected 'groups' of OEMs of varying sizes, for example OEMs 1–20, 21–100, 101–1000, 1001+, and in those bands prices must be uniform and published on all MS OS, Applications, and Middleware products. Market Development Allowances (discounts) to OEMs must be fully disclosed in public. Discounts may not be given in one product (e.g. Office Applications) due to sales in another product (e.g. OS). This will prevent MS using its OS dominance to move its monopoly into other areas.

**Enforcement:** MS will attempt to circumvent all remedies to the best of their ability. Strong, independent and effective supervision of MS is necessary, and a panel of several industry experts (chosen by the courts and complainants, with minimal input by MS) must be allowed full and unfettered access to MS documents. They will be provided with support staff, and be paid for by MS at competitive rates given their experience. This panel should have the ability to force release of MS documentation and source code, and delay the release of products until compliance is complete. Any undisclosed APIs discovered should result in a large cash fine. Current proposed enforcement allows no incentive for MS to comply with the remedy.

Some of the above stated remedies may seem extreme, but given the magnitude of the MS corporation and the extent to which it has broken the law, the remedies must be of a similar magnitude. As stated in the first few paragraphs, the intent of any remedy is to restore competition, terminate the monopoly, deny the benefits of the illegal actions, and prevent such abuses from occurring in the

future. Due to the uncooperative nature of MS, the remedy must be decisive and strongly enforced.

While MS has already done considerable harm to the consumer by its illegal actions, there are many future markets in which MS can gain a further monopoly—and exacerbate the problem. They must be prevented from doing so. If an individual commits a crime where the public has been illegally overcharged that individual will be fined, and perhaps imprisoned—and certainly would be if he was a repeat offender shown to ignore previous court orders. Microsoft must be no different, or justice will not be done, and will not be seen to be done.

From: Elijah Menifee  
To: Microsoft ATR  
Date: 1/23/02 6:32pm  
Subject: Microsoft Settlement

I believe that the proposed settlement will NOT solve the problems arising from Microsoft's monopoly. The proposed settlement does not take into account ISVs working on competing Operating Systems that would be interoperable with Microsoft Products. In sections III.D. and III.E. of the PFJ the api information that microsoft would be required to release uses "for the sole purpose of interoperating with a Windows Operating System Product". This does not allow ISVs to use the released information to write a more secure Operating System to run Microsoft Middleware/Microsoft Applications on. This only allows competition in the Application/Middleware market, leaving Microsoft a Monopoly in the Operating System Product market. I think many of Microsoft's product offerings are good products, such as the Office suite. I however do not currently use such products because I personally find that the Microsoft Operating System is not flexible or secure enough for my day to day work. One ISV that I am aware of (Lindows.com, Inc.) is attempting to write a competing Operating System, that would allow me to run the Microsoft Office on a more flexible and secure OS. The PFJ as it stands would specifically exclude them from using the microsoft released APIs to interoperate with the Windows Application Products that I would like to use. In my opinion the PFJ needs to be modified to exclude the clause "for the sole purpose of interoperating with a Windows Operating System Product", and replaced with a phrase similar to "for the purpose of interoperating with a Microsoft Product".

Subject: Microsoft Settlement

To all concerned, I find the proposed terms of the settlement unsatisfactory. Considering that Microsoft has been found GUILTY on several counts, I expect substantial remedies. Your proposed settlement does not constitute a remedy, in my opinion. Microsoft has demonstrated a will to "bend", and even ignore the law in the past. In light of these repeated offenses, a more serious remedy is in order.

Subject: Microsoft Settlement  
Renata B. Hesse  
Antitrust Division  
U.S. Justice Department

Dear Ms. Hesse:  
I am writing to you to urge the Justice Department not to settle the anti-trust law suit with Microsoft.

I am a software engineer with over twenty years of experience. I currently work for a financial trading company working on trading software. So when I write that I strongly believe that Microsoft is a major anti-competitive force in my industry, I am writing to you without direct financial interest in the outcome of the law suit. I would like to see a software industry where there are more diverse software choices. A vigorous pursuit of the anti-trust suit against Microsoft will produce this result.

I could write at length discussing how Microsoft's past actions and current undertakings strangle competition through their sheer size in the market place. But given the number of e-mails I'm sure you will get on this topic, such a long missive would probably be out of place. I would be happy to comment at some future date if it would be of interest to the Justice Department.

Rather than go on at length I will simply request again that the US Justice Department not settle their anti-trust case with Microsoft.

Thank you for your time.  
Yours,  
Ian Kaplan

Washington, DC 20530-0001

I wish to express my opinion on the Proposed Final Judgment in the Microsoft Antitrust case. I believe that the Proposed Final Judgment is not just and the USDOJ

should reject it. My reasons for this belief can be summarized as:

1. It does not do enough to punish Microsoft.
2. It does not do enough to promote competition against the Microsoft monopoly in operating systems and application programs. I would like to see a remedy that did more to ensure that the entire Microsoft Windows API is fully documented for anyone who is interested in it. This should also apply to all file formats used by Microsoft programs (Windows, Word, Excel, etc). Because of Microsoft's dominant position in the market and its anticompetitive practices, all Windows APIs and all Microsoft file formats should be considered open standards. Microsoft should be allowed to add to and extend these standards, but all additions and extensions must be openly documented in a timely manner. There must be no hidden or secret APIs or file formats that only Microsoft or its partners are able to use. We must do this in order to promote competition in operating systems and applications. From what I've read about it, the existing settlement is too limited and full of loopholes to be effective in this regard. For example, it does not stipulate that Microsoft publish its file formats.

The success of the Internet is a good example of the societal benefits that come from open software standards. Although my familiarity with this case is limited to what I've heard/read in the media, I feel that my 15 years of experience as a software engineer in the computer industry gives me a good basis for understanding at least the technical issues involved in this case.

Thanks for hearing my opinion.  
Gary Von Colln

Subject: Microsoft Settlement  
Microsoft Monopoly Conduct Remedies—  
Mitigation Concerns  
Ladies and Gentlemen:

This case demands firm guarantees protecting Free Market competition from classic suppression by monopolistic opportunism. In other words:

1. As an existing monopoly Microsoft should be prevented from making exclusionary or secret contracts with customers. These contracts only serve to perpetuate unfair monopolization of market competition and suppression of alternate sources of innovation. Today it is virtually impossible to buy a commodity PC from even one of the dominant vendors with a non-Microsoft Operating System without the unit cost of the Microsoft Operating system being included. Furthermore, Microsoft licenses even prevent selling a machine with their Operating System co-installed by the PC vendor even when all normal licencing costs have been paid.

2. As an existing monopoly of Office Application and Operating Systems Microsoft should be required to publish comprehensive interface documentation on the standards their monopoly has created.

This documentation is needed for both commercial and non-commercial entities to be able to write competitive software able to run "MS-Windows" software (i.e. Linux+Wine) or manage "MS-Windows" networks (i.e. Linux+Samba). Leaving the door open for fees, delays, or restrictive licenses on this important information is a crushing blow to the struggling attempts to develop even limited options for consumers in the hope of re-invigorating Free Market competition.

In the American Democracy we ask our Government and Judiciary to protect our freedoms and opportunities, and I hope that the lure of autocratic wealth and power don't outweigh in interests of the people.

Sincerely,  
Jonathan A. George

From: Robert Edwards  
To: Microsoft ATR  
Date: 1/23/02 6:32pm  
Subject: Microsoft Settlement

To whom it may concern:

I'm writing to protest the proposed settlement of the United States vs. Microsoft antitrust lawsuit. It is my understanding that by Section III(J)(2), not-for-profit organizations are not considered in the settlement, as they are not considered businesses by Microsoft's criteria. But as I'm sure you are aware, internal Microsoft documents indicate that Microsoft feels that some of its bigger threats come from open-source projects such as GNU/Linux and SAMBA. To allow Microsoft to shut out projects such as these effectively limits Microsoft's competition and increase its market dominance, which clearly flies in the face of the goals of the antitrust lawsuit. Furthermore, many for-profit organizations which I am sure Microsoft would consider businesses, such as Red Hat, are value-added resellers of what are at root open-source projects. Section III(J)(2) would unduly harm these businesses, further limiting Microsoft's competition.

Thank you for your consideration in this matter, and I hope that you find it within yourself to reject Microsoft's self-serving settlement proposal.

Sincerely,  
Robert Edwards

#### MTC-00019050

From: Kenny Pearce  
To: Microsoft ATR  
Date: 1/23/02 6:34pm  
Subject: Microsoft Settlement

To whom it may concern:

With regard to the proposed settlement of the Microsoft anti-trust case and the period of public comment required under the Tunney Act, I believe that the current proposition fails to address many issues in Microsoft's conduct. I would like to draw your attention to one such issue which, in addition to failing to be addressed by the proposed settlement was, to my knowledge, never addressed in court at all.

Microsoft's license for its Windows operating system prevents PC manufacturers from utilizing a capability of many pieces of software, including LILO, the Linux LOader, which is called "dual-boot". This allows a PC to have two operating systems installed, and then ask the user which to use on startup. At one point, Microsoft threatened to revoke its license agreement with certain PC manufacturers who sold computers pre-installed with a dual-boot between MS Windows and BeOS. This stifles competition in the operating system market terribly, and is probably part of the cause of BeOS's demise as a PC operating system.

Additionally, many users of the Linux operating system on PCs use dual-boot technology to allow them to use Windows programs natively, as emulation is very slow on some systems, and does not work with all MS Windows programs. If manufacturers were allowed to sell dual-booting machines with Windows and Linux it would greatly encourage users who are discouraged by the Linux's reputation of being difficult to install to try using it, increasing Linux's ability to compete. This would also allow companies to make a profit in the sale of pre-installed Linux PCs, which many believe is currently impossible.

Because of Microsoft's actions, users who today wish to use Linux on a PC must buy what Microsoft terms a "naked PC", that is, one without any operating software, or else pay for an expensive (\$100) license from Microsoft which will never be used. In the case of so-called "naked PCs", such systems are difficult to find and Microsoft is reputed to have offered computer retailers "incentives" for reporting the personal information of purchasers of these systems. Ostensibly, Microsoft believes that the only valid reason for purchasing a computer without an operating system would be to install one illegally in violation of the license agreement. Obviously, this is not the case and most likely these actions by Microsoft are intended to stifle the possible competitor they see in Linux.

Please consider these issues in your upcoming decision.

Thank you,  
Kenny Pearce

#### MTC-00019052

From: richard  
To: Microsoft ATR  
Date: 1/23/02 6:35pm  
Subject: Microsoft Settlement

I am worried about the following

provisions of the proposed final judgement:

III. Prohibited Conduct A. Microsoft shall not retaliate against an OEM by altering Microsoft's commercial relations with that OEM, or by withholding newly introduced forms of non-monetary Consideration (including but not limited to new versions of existing forms of non-monetary Consideration) from that OEM, because it is known to Microsoft that the OEM is or is contemplating:

1. developing, distributing, promoting, using, selling, or licensing any software that competes with Microsoft Platform Software or any product or service that distributes or promotes any Non-Microsoft Middleware;
2. shipping a Personal Computer that (a) includes both a Windows Operating System Product and a non-Microsoft Operating System, or (b) will boot with more than one Operating System; or

Specifically, the word "retaliate" leaves some wiggle room for Microsoft and is not defined in the terms listed at the bottom of the PFJ. My Webster's Unabridged dictionary (1996) says that retaliate means "To return the like for; to repay or requite by an act of the same kind; ". Would, I don't know, buying the offending company, and firing everyone in it, be considered a retaliation, in the strict, dictionary sense of the word? Nope. And that's how Microsoft will read it too. As long as they do something else bad, that is not "an act of the same kind", they are free and clear to continue their monopolistic controls. This one word, really guts all of section III in regard to OEM's and ISV's (where retaliate is used again). This is nitpicking. But this is Microsoft, and nitpicking is all I have.

Thank you for your time,  
Richard Still

From: Will Dinyes  
To: Microsoft ATR  
Date: 1/23/02 6:35pm  
Subject: Microsoft Settlement

The settlement proposed for the Microsoft Anti-Trust case does little to prevent further

transgressions. I find it laughable that one of the proposed measures does not stipulate that the federal government itself cease use of products manufactured by a convicted monopoly unless said monopoly is disbanded. The government has in the past been able to effectively disband a monopoly. Bell telephone and Standard Oil come to mind. The primary recourse that I would like to see is that, at the very least, Microsoft be prevented from purchasing or maintaining a controlling interest in any other company for a period of 10 years. Force them to license or develop technology as many other companies, such as Apple Computer, now do. Make them stand on their own merits, rather than allow them to continue to conscript the work done by other innovators in technology. Microsoft's tentacles reach well beyond the computer desktop. Many other enterprises are now being actively attacked by Microsoft, including video game consoles, internet service providers, and various forms of media delivery.

I fear that the only possible way to prevent further anti-trust activities is to revoke Microsoft's charter entirely, seize the company's assets and redistribute them to companies working in the individual sectors of technology that have been irrevocably harmed by the actions that Microsoft has taken. This is, after all, what we do to other convicted felons. Microsoft's debt to society must be paid somehow. The proposed settlement does not do enough.

**MTC-00019056**

From: J.C.  
To: Microsoft ATR  
Date: 1/23/02 6:38pm  
Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by

Microsoft's anti-competitive behavior. Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices.

Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of it's competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Thank you for your time.

Subject: Microsoft Settlement

As a software professional of 20 years I STRONGLY object to the proposed settlement in the Microsoft antritrust cast. Microsoft's predatory practices have been ruinous for software industry creativity and reliability. Microsoft has effectively squelched competition in most markets it has entered. I do not believe the settlement contains penalties or remedies commensurate with the level of anti-competitive activity carried out by Microsoft.

Particular points:  
Microsoft's current "middleware" efforts (Microsoft.NET and C#) do not seem to be covered at all by the agreement.

The definition of "Windows Operating System Product" seems to omit important Microsoft products.

Microsoft continues to include licencing terms on it's software components which are clearly meant to suppress the emergence of Operating Systems or Middleware that might compete.

 Subject: Microsoft Settlement  
 To Whom it May Concern,

Considering the original findings of fact by Hon. Judge Jackson, the current proposed measures against Microsoft Corp. actually do extremely little to correct the problem at hand: Microsoft Corporation has illegally built and maintained a monopoly on computer operating systems.

The proposed measures cannot hope to stem Microsoft's aggressive tactics. Please consider an end to the monopoly when redrafting the measures to be taken.

Thank you,  
 Glen Canaday  
 Clearwater, FL

**MTC-00019066**

From: Brian J. Brondel  
 To: Microsoft ATR  
 Date: 1/23/02 6:38pm  
 Subject: Microsoft Settlement

I'm writing to express my disapproval for the proposed settlement for the antitrust case against Microsoft. The settlement is totally inadequate and completely incongruous with the magnitude Microsoft's illegal actions outlined in the Court of Appeals ruling.

The Appeals ruling calls for a remedy that will "unfetter a market from anticompetitive conduct", "terminate the illegal monopoly", "deny the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99). The Proposed Final Judgement fails in all these respects. It fails to significantly impact Microsoft's behavior because of considerable exceptions, unnecessarily narrow definitions, and generally incomplete conduct remedies. Microsoft will easily circumvent the terms of the Proposed Judgement as it is currently written, to continue its illegal practices and harm the free market.

I am further disturbed by the lack of any penalties for Microsoft's actions in the past. If you count up the extra profits Microsoft has garnered from its ill-gotten market share over the sales history of Windows, you find that Microsoft has acquired some \$3-8 billion through its violation of the Sherman Antitrust Act. Clearly, even after expenses from court and remedies, Microsoft's offenses were remarkably profitable, while Microsoft's prosecutors suffered great expense in seeking out justice. Should Microsoft be allowed to profit at the United States' expense, and at the expense of their laws? pOnce again, I'm very disappointed by the lack of force in the Proposed Final Judgement. I urge you to carefully review and modify the terms of the settlement before proceeding. For a more complete analysis of the Proposed

Judgement, I refer you to Dan Kegel's "On the Proposed Final Judgment in United States v. Microsoft." I'm certain that we can arrive at a settlement that's both effective and fair.

From: Bert Han  
 To: Microsoft ATR  
 Date: 1/23/02 6:38pm  
 Subject: Microsoft Settlement

The currently proposed settlement restricts free trade. A true sign of monopolistic practices, is when companies no longer have to innovate, and force consumers to use products which lack quality.

Microsoft's products consistantly are released in poor condition. The only time where Microsoft has to innovate is when they are under direct competition. And to help them win, they'll use illegal procedures to thwart their competitors. If you'll notice, after they "win" their products will start to, well, suck. plf America is to truly stay ahead of the economic market, we need innovation, not bloated, anticompetitive actions. It won't help us to compete with emerging markets.

 To: Microsoft ATR  
 Date: 1/23/02 6:36pm  
 Subject: Microsoft Settlement

Dear Sirs,  
 I write you to add my voice to the those opposing the current settlement proposal. As near as I can tell, it will have no perceptible effect on Microsoft's behavior, and violates the principles of transparency which are paramount in the Justice system. "Justice must not only be done, but it should be seen to be done."

The object of the settlement should be to reduce or eliminate the occurrence of illegal monopolistic behavior on the part of Microsoft, which should then make it possible for other corporations to enter the market without being blasted by the MS monopoly. The current proposal seems to be putting the cart before the horse, enforcing actions which should be the result of improved behavior by Microsoft. By being overly specific, this proposal leaves far too

much room for Microsoft to engage in new infringing behavior.

The proposal also lets's Microsoft decide too many of the later details, such as the terms of the agreements the TC (Technical Committee) has to sign, and the definition of a protooco (See the SAMBA projects objectionsfor details). This is an open invitation to Microsoft, who has abused such loopholes before.

The TC should be allowed to discuss the Committees actions with the public, without revealing MS trade secrets. However what constitutes an MS trade secret should be decided by a third party or the Trade Secrets acts and subjected to scrutiny.

What I would like to see as a result of this proceedings is a Microsoft competing on a leveled playing field. I don't want to see the company destroyed, though breaking it up into viable pieces would not bother me. Four pieces come to mind: Applications including the web browser, Services, Operating Systems, and Hardware. But that is incidental. Please reconsider this dangerously flawed proposal.

Regards,

I believe that the proposed settlement of the recent Microsoft case is not sufficient. Particularly in regards to the OEM part of the settlement.

I believe that OEM's should be able to put any OS they like on computers they sell without fear of reprisal from any company Microsoft or others. This should apply to OEMs of any size and Microsoft should not be able to "kickback" discounts to OEMs based on volumes of other Microsoft products sold.

Thank you for your time.

The Proposed Final Judgment is NOT in the public interest

\*The PFJ doesn't take into account Windows-compatible competing operating systems

\*Microsoft increases the Applications Barrier to Entry by using restrictive license terms and intentional incompatibilities. Yet the PFJ fails to prohibit this, and even contributes to this part of the Applications Barrier to Entry.

\*The PFJ Contains Misleading and Overly Narrow Definitions and Provisions

\*The PFJ supposedly makes Microsoft publish its secret APIs, but it defines "API" so narrowly that many important APIs are not covered.

\*The PFJ supposedly allows users to replace Microsoft Middleware with competing middleware, but it defines "Microsoft Middleware" so narrowly that the next version of Windows might not be covered at all.

\*The PFJ allows users to replace Microsoft Java with a competitor's product—but Microsoft is replacing Java with .NET. The PFJ should therefore allow users to replace Microsoft.NET with competing middleware.

\*The PFJ supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

\*The PFJ fails to require advance notice of technical requirements, allowing Microsoft to bypass all competing middleware simply by changing the requirements shortly before the deadline, and not informing ISVs.

\*The PFJ requires Microsoft to release API documentation to ISVs so they can create compatible middleware—but only after the deadline for the ISVs to demonstrate that their middleware is compatible.

\*The PFJ requires Microsoft to release API documentation—but prohibits competitors from using this documentation to help make their operating systems compatible with Windows.

\*The PFJ does not require Microsoft to release documentation about the format of Microsoft Office documents.

\*The PFJ does not require Microsoft to list which software patents protect the Windows APIs. This leaves Windows-compatible operating systems in an uncertain state: are they, or are they not infringing on Microsoft software patents? This can scare away potential users.

\*The PFJ Fails to Prohibit Anticompetitive License Terms currently used by Microsoft

\*Microsoft currently uses restrictive licensing terms to keep Open Source apps from running on Windows.

\* Microsoft currently uses restrictive licensing terms to keep Windows apps from running on competing operating systems.

\* Microsoft's enterprise license agreements (used by large companies, state governments, and universities) charge by the number of computers which could run a Microsoft operating system—even for computers running Linux. (Similar licenses to OEMs were once banned by the 1994 consent decree.)

\*The PFJ Fails to Prohibit Intentional Incompatibilities Historically Used by Microsoft

\* Microsoft has in the past inserted intentional incompatibilities in its applications to keep them from running on competing operating systems.

\* The PFJ Fails to Prohibit Anticompetitive Practices Towards OEMs

\* The PFJ allows Microsoft to retaliate against any OEM that ships Personal Computers containing a competing Operating System but no Microsoft operating system.

\* The PFJ allows Microsoft to discriminate against small OEMs—including regional "white box" OEMs which are historically the most willing to install competing operating systems—who ship competing software.

\* The PFJ allows Microsoft to offer discounts on Windows (MDAs) to OEMs based on criteria like sales of Microsoft Office or Pocket PC systems. This allows Microsoft to leverage its monopoly on Intel-compatible operating systems to increase its market share in other areas.

\* The PFJ as currently written appears to lack an effective enforcement mechanism.

Considering these problems, one must conclude that the Proposed Final Judgment as written allows and encourages significant anticompetitive practices to continue, and would delay the emergence of competing Windows-compatible operating systems. Therefore, the Proposed Final Judgment is not in the public interest, and should not be adopted without addressing these issues.

To: Microsoft ATR  
Date: 1/23/02 6:49pm  
Subject: Microsoft Settlement

To whom it may concern,

I am writing to express my great dissatisfaction with the proposed settlement of the United States vs. Microsoft antitrust lawsuit. The settlement neither restores balance to the markets which Microsoft has illegally monopolized over the past 20 years nor imposes punitive measures commensurate to the public cost of the company's criminal activities.

Only by striving to achieve the following goals will the settlement serve justice:

1. The disassembly of Microsoft's ability to dominate markets through its command of the computer desktop.

2. The return of illegally gained profits to the affected markets and their participants—to Microsoft's consumers and competitors.

I encourage those dealing with this matter on the behalf of the United States of America to re-consider the settlement, to have strength and fight harder for what is right.

Thank you for your time in considering my input.

Subject: Microsoft Settlement

My comments about the proposed Microsoft settlement:

I'm deeply concerned about the powers Microsoft has to force America and the world to use its software and protocols within its operating system. I feel that the only way to allow other operating systems and software to compete with Microsoft is to severely restrict the ability of Microsoft operating systems to force/influence users to also use other Microsoft software. The law must be clear in dictating this so that there is no way to skirt around the imposed settlement. The only good solution that I have heard that would achieve this consumer-friendly settlement is a split of the company into two

separate companies. It is very important to note that this would NOT have a large financial impact on Microsoft (certainly no more than the gains Microsoft has made through its monopoly already), and would still allow both the operating systems and applications divisions of Microsoft to "innovate" independently. Of course, this simple settlement would give all companies access to the same Microsoft operating system information that the future Microsoft applications divisions would have, thereby allowing all companies to compete more fairly to create the best products.

Thank you- I strongly recommend a split of Microsoft's operating systems and applications divisions.

From: Sam Kerner  
To: Microsoft ATR  
Date: 1/23/02 6:38pm  
Subject: Microsoft Settlement.

Dear Sir or Madam,

I am writing to express my disappointment in the proposed outcome of the US DOJ's case against Microsoft. I do not see how the proposed settlement solves the problem of Microsoft's flagrant abuses of its monopoly power. Specifically, I believe a panel of people monitoring Microsoft's behavior will be of no consequence. Microsoft entered a consent decree that was supposed to curtail its behavior, but it was ignored. They have shown that if they wish to violate an agreement with the DOJ, they are willing to go to court to get out of complying with it. What makes anyone think they will not do the same thing if the monitoring panel's judgment is not to their liking?

For the DOJ to have taken this case to the point where Microsoft has been found guilty and then settle with a remedy that is as weak as the one proposed is shameful. An effective remedy would have meant unprecedented opportunity for the computer industry, as companies would no longer be forced to comply with Microsoft's anti-competitive contracts and undocumented APIs. If this settlement goes through, the computer industry will continue to be in the doldrums, and brilliant ideas that could have made our lives better and our economy stronger will continue to be crushed by the anticompetitive steamroller that is an unfettered monopolist, made more bold and dangerous by the knowledge that the laws of the United States do not apply to it.

Sam Kerner

To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

I am writing to comment on the Proposed Final Judgement in the Microsoft anti-trust case.

The current judgement calls for very limited restriction of Microsoft's actions, actions which are the subject of the suit and which have been found to be in violation of US anti-trust law by a federal district court and a federal appeals court.

Those actions have severely hindered competition in the computer software industry. Any settlement must aggressively address the reestablishment of competition in this important and crippled industry.

The keys to software competition are the API's and file formats used by Windows operating systems and productivity software. Without access to those sources of Microsoft's monopoly, other companies cannot effectively compete.

A settlement which restores competition to computer software will be concerned primarily with:

- \* enforcing equal and open access to the W32 APIs and Microsoft Office file formats (standardization, publishing, and documentation)

- \* and the right of competitors to sell compatible operating system and productivity products based on those APIs and file formats.

A secondary concern with the PFF is language which addresses competing "commercial" vendors. The fear of many is that this language fails to protect not-for-

profit software projects from anti-competitive behavior. As not-for-profit computing has been equally harmed by Microsoft's anti-competitive practices, the PFS must explicitly grant not-for-profits equal remedy and protection.

Finally, it is appropriate that the company be pushed for its illegal activity with fines. Fines should be set as a reasonable percentage of Microsoft profit for the period since the company violated its prior consent decree with the court to the present.

Thank you for considering my concerns,

From: Suresh Bazaj  
To: Microsoft ATR  
Date: 1/23/02 6:43pm  
Subject: Microsoft Settlement

Honorable Judge Kollar-Kotelly,  
I would like to share with you my experience in dealing with Microsoft products for the last 20 years. My first experience with Microsoft products was in the early 80's when I purchased a Radio Shack PC with DOS. Overall, it was an OK product until I purchased my first Apple Macintosh in 1985. What a world of difference. For the next 11 years (until 1996), I only purchased Apple Macintosh due to its ease of use. I still remember when I bought the first Macintosh Performa for my 11 year old in 1995. We got home from the store around 10 PM. I was tired, yet my son insisted that I help him unpack and set the computer on his desk. He took care of the rest and had fun with it for many hours while I was sound asleep. My children used the computer for more than 5 years.

Unfortunately, my options to buy anything but Microsoft were severely restricted as the 90's rolled along. So, I finally broke down and bought a Windows '98 PC in 1999. I was glad that I did not have to live through the torture of going through many versions of Windows (1.x, 2.x, 3.x, Windows '95 and then Windows '98). While it does not do everything that I can do on a Macintosh, it has been a reasonably stable system.

So, I now have 3 WIN '98 laptops and one WIN '98 desktop in my household—essentially every member of the house has his/her own PC. We are all reasonably OK with and are able to do most of what we need to do. However, here is my FRUSTRATION. As a monopoly, Microsoft feels that it can whip out a new product whenever it wants to and stop supporting the existing product. Since I bought my first WIN '98 PC, there has been WIN 2000 (several versions of it), WINDOWS ME (in 2001) and now WINDOWS XP (in 2002). Most (if not all) these new products require new hardware

and often new application software, in addition to the new Operating System. Well, I just cannot afford to throw fully functional and useful machines in the trash can every year. How would you feel if the plumbing and electricity industry followed the same model. You have a leaky faucet or fused bulb. Well, you better upgrade to entirely new plumbing and electrical system in the house since last years model is no longer in production and supported. I hope you get the point. I urge to reject the DOJ settlement that does not do anything to foster competition and help the consumers.

Respectfully,  
Suresh C. Bazaj  
40792 Tirso Street  
Fremont CA 94539

From: Michael J. Hauan  
To: Microsoft ATR  
Date: 1/23/02 6:43pm  
Subject: Microsoft Settlement

Just my two cents—  
I am a physician, an ethicist, and an informaticist. I welcomed the courts' conclusion that Microsoft has abused its monopoly position.

I am dismayed that the Justice Department is not using the clear conclusions of law to take substantive steps in protecting both all consumers and producers of potentially competitive products. In particular, the proposed settlement provides inadequate recourse for those (e.g., in open-source software development projects) that Microsoft doesn't consider legitimate businesses. It seems Microsoft can refuse them access to APIs and other important operating system information on its own recognizance. Given their record of flagrant violation of both the spirit and letter of the law, this is indefensible.

I oppose the proposed settlement vehemently.

Sincerely,  
Michael J. Hauan, MD, MPH, MTS, MA

From: Grunloh, Robert  
To: "microsoft.atr(a)usdoj.gov"  
Date: 1/23/02 6:47pm  
Subject: Microsoft Settlement

I believe the proposed DOJ settlement with Microsoft is essentially a sellout, and would urge the Court to toss it out and follow some of the recommendations of the 9 remaining States.

I've worked in the computer field for 10 years, starting as a supporter of Microsoft and gradually becoming disenchanted as I saw them stifle, control, buy, or kill numerous innovative products and technologies over the years. Working in this field under Microsoft's growing control of all software, indirectly much hardware, and soon all access points to the Internet (our present-day "commons") is increasingly oppressive. They are like a cancer, wanting control, growth and marketshare at all costs, yet producing only the minimal bland product in return. Publicly-funded agencies each year funnel millions of dollars to them because they have no good alternatives, and MS software is licensed at higher cost, and more

restrictively, each year even as hardware gets cheaper and cheaper (there is competition in the hardware business, still).

Please enforce the law and give them a meaningful punishment. Look back to their skill at finding loopholes in the first consent agreement under Judge Sporkin, and then take a fresh look at the current proposal.

Thanks.

From: Oded Helman  
To: Microsoft ATR  
Date: 1/23/02 6:39pm  
Subject: Microsoft Settlement

Well I'll be short, I think that after the years or trial put into the fact that Microsoft broke the law, the settlement that was achieved is so vague that it is quite probable that that Microsoft will continue to do what they have been doing even during when the Trial was going on, and that's bullying the Computer Industry to have it their way, it's not the fact that they bundled applications with their OS, but the fact that they terrorize Hardware Manufactures and even competing platforms (i.e. Apple) to include their

software and not include other software which might be better or face the punishment of not getting Microsoft software at all. For example Microsoft threatening Apple to include only Internet Explorer and not Netscape Communicator or Microsoft will stop developing Office for the Mac. Another example is that Apple uses their OS power to make 3rd party Apps to malfunction, for example competing apps to Office which Microsoft even have a bigger monopoly then in the OS business, or causing Quicktime to malfunction so people will use Windows Media Player and the list goes on.

I don't know what is the right answer, maybe splitting the company to 2, 3, more other companies which are not allowed to have the same Executives, board of directors and main share holders is the answer, maybe the answer is not allowing by law to Microsoft executives, to be a part of Microsoft anymore, make them sell all their stock and they are not to be allowed to work for the Company, maybe the solution is to not allow the Microsoft Executives to be part of the Computer Industry world anymore... what I am sure of that the settlement that says Microsoft promises to behave and not to be punished is not the answer, because if that will be the case we will be back at this point in 5-10 years.

**MTC-00019091**

From: Kiani, Tal  
To: Microsoft ATR  
Date: 1/23/02 6:45pm  
Subject: Microsoft Settlement

No to the proposed settlement! The public will not be served if one company is allowed to have total control over our information infrastructure.

The current proposal for the Microsoft settlement will not prevent Microsoft from staying a monopoly in the computer industry and from continuing to abuse and extend this monopoly. Quite simply, the punishment is not economically severe enough for it to affect Microsoft's behavior.

There is no incentive for them to change the behaviors that led to the court's conclusion in the Findings of Fact that they have abused their monopoly powers and have ignored the previous remedies from the earlier Consent Decree. They will most likely ignore or circumvent the presently proposed settlement because it will be cheaper for them in the long run to litigate for years and then settle with the government once their competitors have been unfairly driven out of business and they have expanded their monopoly into new areas. Please note that this is not conjecture-this is exactly what they did after the last Consent Decree!

Frankly, its hard to blame Microsoft for choosing this route because it makes the most economic sense—it is up to the government to fashion a remedy that addresses past harm and penalizes Microsoft severely enough for past wrongs so that it will make economic sense for Microsoft to behave properly in the future—the threat of severe punishment will outweigh the potential gain from abusing their monopoly powers.

A proper remedy should force Microsoft to release their file formats for Office and Internet Explorer because these are now

industry standards, as well as require them to release source code and protocols that will allow other companies to compete with them. Additionally there must be substantial financial penalties imposed (think 10's of Billions of dollars) in order to redress past financial harm they have caused to many companies in the industry. Anything less is an effect slap on the wrist, because of the 100s of billions of dollars of ill-gotten rewards they have enjoyed. If you only fine them 1 billion, they will continue with their monopolistic ways that let them make 10-100 times that- why shouldn't they? We need penalties that make a difference to Microsoft management.

The remedy will not be a simple proposition, but that should not be expected in a case of this magnitude, and of this much importance. We are all counting on you to do the right thing for the good of our society.

Thanks in advance!

Subject: Microsoft Settlement

I'd like to comment on the judgement I've read at <http://www.usdoj.gov/atr/cases/f9400/9495.htm>:

[1] While this judgement, if it had been issued some years ago, would probably have prevented the current set of problems involving microsoft and the computer industry, I don't see that this judgement will repair the damage which has been done.

[2] While this judgment addresses some issues relevant to OEMS, ISV/IHV's, IAP/ICP's and End Users, it does not address issues of critical significance to software developers.

When developing software, one must make many choices and decisions with long-lasting consequences. In general, this means that once a decision has been made it is not changed without good reason. Microsoft's unlawful actions mean that there have been good economic reasons to make development decisions which would otherwise violate good design practices.

Resolving this issue will require documentation which is not generally available (and which may not exist) about Microsoft's operating system. It will also require dealing with issues raised by existing contracts and business arrangements with respect to software development tools and development environments. It will also require dealing with changes in software oriented training and business practices—changes which have been necessary for a business to survive in the face of Microsoft's market dominance.

Software developers are the people who are technically literate in computer languages and who are responsible for creating applications which must run on an operating system. The proposed remedy does not address software development needs in supporting competitive operating systems.

Failing to address the needs of software developers means this judgement cannot remove the barriers which microsoft has put in place with its unlawful actions. As software developers provide the software which which End Users, IAP/ICP's, ISV/IHV's, and OEMS, use on an operating system, it's extremely unlikely that any of these groups will experience economic relief from this judgement.

I recommend this judgement be rejected in favor of one which will additionally provide remedies for software developers who develop software for Microsoft and/or non-Microsoft operating systems.

Subject: Comments on settlement in Microsoft antitrust case

Your Honor,

I am a computer software professional with 30 years experience. I live in Winchester MA.

The software industry has been suffering through lack of competition for a long time now. Without choice there is little need for innovation. I am very disturbed that even though many hardware companies compete to make the hardware better and less expensive. There is effectively one operating system and application software company, Microsoft, and they have become less and less willing to advance technology unless they see a competitor. They are, however, always willing to increase price by more than inflation from release to release. It is very difficult to purchase a non-Apple desktop or laptop system without also purchasing a Microsoft operating system. There is effectively no choice.

What we have now is an industry that has grown stagnant and a company, Microsoft, that has grown rich. I am sure that business and economics professionals can lay out the damage to the industry in great detail. So I won't even try.

I appeal to you to return competition to the software industry and to return the monopoly profits to the consumers. Laws have been broken and people have suffered. Please find a way to prevent further unlawful behavior and find a way to compensate victims.

I offer some ideas that I think would work.

- 1) Remove the current officers, executives and board of directors of Microsoft and render thier stock nonvoting. Prevent them from participating in the computing industry in any capacity for at least 5 years.

- 2) Divide the company into perhaps 4 new companies. Each company would be the largest in its business sector and would enjoy the strength that comes with its size. It would not, however, enjoy a monopoly in that sector:

- a) Operating systems, tools and utilities (include the browser)

- b) Application software—office suites etc.

- c) Internet services (no software development or sales, no hardware product sales)

- d) Hardware—xbox game console, keyboards, mice, internet appliances, set top boxes, etc.—products with embedded software only, no services.

- 3) Make all file formats and communications protocols public standards that may be implemented by anyone without royalty and do not permit future private protocols and file formats.

- 4) Vacate all Microsoft contracts that limit a companies ability to deal with other companies. E.g., prevents a hardware OEM from selling some systems with non-Microsoft OS or even dual boot systems or prevents a software company from porting software products to other systems.

- 5) Require Microsoft to rebate all their monopoly derived profit directly back to consumers. Double the amount as a damages. There is a lot at stake here. There are few opportunities to effectively deal with monopoly behavior. This is an opportunity to get competition back into the software industry and still permit an important and major corporation, Microsoft, to participate as a significant force. Everyone, even Microsoft, will win if you can reestablish competition and prevent future unlawful behavior.

With the utmost respect for yourself and our judicial system,

Most sincerely,

Philip Cameron

Subject: Microsoft Anti-Trust Case Settlement

Your Honor,

Thank you for allowing public comment on the settlement of this case. I, as many professionals in the Silicon Valley, have been closely watching the Microsoft vs. United States anti-trust suit. I do not believe the proposed settlement goes far enough to punish Microsoft for their predatory and anti competitive behaviors.

Microsoft has shown no change in attitude or corporate policy to alter its monopolistic practices. The release of Windows XP in its current configuration is proof of their arrogance and disregard for the law. They behave as if the judgment against them has no meaning or is nothing more than an unwarranted scolding.

Before I was consultant I was an employee of General Electric and Hewlett Packard. These two companies always stressed the importance of the law and went to great lengths to insure they and their employees were not engaging in anti competitive

practices and were operating within the guidelines of the law. If there was an activity within these companies that gave the slightest outward appearance that it might be viewed as being questionable in the eyes of the law it was immediately addressed. I have been appalled at the apparent lack of any similar practice within Microsoft.

I believe the original breakup order was the correct remedy for this case. In fact it may not have gone far enough. A break up of the company into three business units, one for operating systems, one for Internet applications and the last for business applications may eventually be needed before the decade is over.

There is a saying amongst my colleagues here in Silicon Valley that summarizes the power Microsoft wields in the computing business world. "Bring up the Windows OS and open any application, behind any button you push there is a dead company."

Respectfully,

Do not let MicroSoft get off the hook so easily. They have gained billions of dollars for selling crappy substandard software to masses who don't know anything about computing. Many companies from IBM, Apple, Sun, SGI, commodore, Be, Netscape and others have been victimized by Microsoft and Intel. Many technologies that could have been, have been shut out by Microsoft and Intel.

Don't let companies get off easily for the "sake of technology". Don't let consumers suffer from lack of choices just for the microsoft's "right to innovate". Especially when Microsoft have stifled every competitor's innovation and resources. Microsoft has hurt everybody else in order for them to gain money, power and influence. Which is it? The sake for technology or the sake of the consumers like you and me???

Subject: Microsoft Settlement

Leave Microsoft Alone! Microsoft has done nothing but consistently produce a wonderful product and sell it at an affordable price. That is by its nature, competitive. That they GAVE AWAY an internet browser does not damage consumers—we now get for free what we once had to pay for. They offer huge discounts on their operating system licenses to retailers that only sell the Microsoft OS. Where I come from this is simply called GOOD MARKETING! This lawsuit was drummed up by "competitors" that want to cripple Microsoft since they are unable to compete on their own.

Sincerely,  
Chris McKenzie

To whom it may concern:

As a software developer with over a decade of professional experience I am writing to comment on the Proposed Final Judgment (hereafter "PFJ") in the United States v. Microsoft case.

The PFJ permits Microsoft's exclusionary practices to continue, allows Microsoft to maintain its monopoly through continued protection of the substantial barrier to entry to the operating systems market for Intel-compatible computers (the "Applications Barrier to Entry"), and allows for Microsoft's use of its customary exclusionary licensing regime to restrict the actions of OEM and independent software vendors (ISVs). This reality is in direct contrast with the intent of the PFJ, which the Court of Appeals states "must seek to 'unfetter a market from anticompetitive conduct', to 'terminate the illegal monopoly, deny to the defendant the

fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future" (section V.D., p. 99). Further we must ask whether the PFJ is in the public interest.

Below I enumerate some of the many serious problems with the PFJ.

- The PFJ fails to prevent Microsoft from raising or maintaining artificial barriers (in many cases these artificial barriers have already been erected) against non-Microsoft operating systems which implement the APIs and/or middleware necessary to run application programs written for Windows. As was discussed in the Findings of Fact, competing operating systems, such as Linux with its "Wine" compatibility layer, could leverage an interoperable version of the Windows APIs to run software written for Windows and thereby lower the Applications Barrier to Entry.
- The PFJ omits Microsoft Office, Microsoft Outlook, Microsoft.Net and C# from the definition of "Microsoft Middleware Product". These are the most significant middleware components in Microsoft's stable of products. Their absence in this definition exposes a fundamental flaw in the PFJ's middleware-related provisions.
- The overly narrow PFJ definitions of "Microsoft Middleware Product" and "API" means that many important APIs would remain undocumented, thereby eliminating the ability of third parties to interoperate with software written for Windows or to compete with Windows due to the Applications Barrier to Entry.
- The PFJ includes no requirement for documentation of Microsoft file formats, which were shown in the Findings of Fact to compromise a significant part of the Applications Barrier to Entry. Microsoft regularly changes proprietary file formats making interoperability impossible and further raising the Applications Barrier to Entry for competitors.
- The PFJ does not require Microsoft to disclose which patents protect the various Windows APIs, thus making it impossible for consumers, ISVs, and competitors to determine whether a competing operating system or middleware implementation infringes Microsoft patents. This state of affairs helps Microsoft maintain the Applications Barrier to Entry.
- Under the terms of the PFJ Microsoft is allowed to retaliate against OEMs who ship Personal Computers which contain a competing Microsoft operating system but no Microsoft operating system.
- The PFJ allows Microsoft to retaliate against smaller OEMs who offer Personal Computers with competing software installed. The large body of "white box" OEMs, as well as other brand-name small OEMs, serve a critical function in the market for server systems where potential Microsoft competitors such as Linux and FreeBSD have the best chance of making headway.
- The PFJ fails to curb Microsoft's use of unconscionable and/or exclusionary End-User License Agreements (EULAs). Microsoft uses these EULAs to prohibit the use of certain services and applications on Microsoft-compatible operating systems.

- The PFJ does nothing to address intentional incompatibilities introduced by Microsoft to exclude competitors (e.g., Caldera) from the operating systems market.
- Under the terms of the PFJ enforcement is left to the legal system, while the Technical Committee has too little power to effectively oversee future Microsoft anti-competitive practices.
- Oversight of Microsoft practices is remanded to a small group whose makeup is at least equally determined by Microsoft. Microsoft has been found to be in violation of anti-trust law, and yet has been allowed to construct the PFJ enforcement terms to ensure that the Technical Committee will be ineffective in its oversight role. The proposal as negotiated does little to change the illegal behavior of which Microsoft has been convicted, nor does it address the multitude of anticompetitive abuses committed since the issuance of the Findings of Fact. The PFJ amounts to a wrist-slap which will fail to materially alter Microsoft's behavior, promote competition, or penalize Microsoft for past transgressions. While this proposal is fundamentally flawed, any acceptable proposal must additionally perform the following functions:
- restrict Microsoft from retaliating against all OEMs, ISVs, Internet Access Providers (IAPs), and competitors
- define operating system and middleware components in such a manner as to correspond to the reality regarding the importance of high-profile components in Microsoft's current and future plans
- require Microsoft to disclose, sufficiently in advance to allow middleware vendors and interoperators to reasonably implement necessary compatibility changes, complete documentation on Microsoft APIs, file formats, and patent protection information for all versions of the Windows operating system and all Windows middleware components
- prohibit Microsoft from implementing incompatibilities designed to keep its applications and services from being run or accessed on competing operating systems.
- provide oversight which is more transparent to regulators and consumers
- provide an oversight body which has more human and technical resources, and bar Microsoft from influencing the make-up of the body.

The Proposed Final Judgment in the United States v. Microsoft case is fundamentally flawed and does little to “unfetter [the] market from anticompetitive conduct”, fails to terminate Microsoft's illegal monopoly, and preserves intact countless practices which will maintain and extend the Microsoft monopoly in the future.

This proposal is most definitely not in the public interest.

Sincerely,  
Rick Bradley

From: David Merrill  
To: Microsoft ATR  
Date: 1/23/02 7:37pm  
Subject: Microsoft Settlement

Greetings,

I hold a doctorate in Computer Science, and have been deeply involved in the software industry since its very beginnings in about 1983. I have been a user of Microsoft operating systems and application software for nearly 20 years now, and I have followed the industry very closely, especially Microsoft's unscrupulous and illegal activities against competitors.

This industry used to be vibrant, exciting, and dynamic. New and innovative products entered the market constantly, and there was lively competition in all product markets. Once Microsoft started signing exclusive deals with OEMs, that market started to die, and today it exists only in the UNIX and Linux markets.

I very much appreciate that the DOJ took on antitrust proceedings against Microsoft. After watching one competitor after another run out of the market by using OEMs, APIs and protocols as weapons, I hoped that finally the company would be forced to compete solely on the merits of its software, which alone are enough for it to maintain a strong position in the market—but not a monopoly.

Unfortunately, the proposed settlement, while it does address some anticompetitive behavior, does little to stop the primary weapons which Microsoft uses. The language and definitions are so narrow in scope that they would be easy for any competent software engineer to work around. I know I certainly could, and I am sure that Microsoft has engineers equally as talented.

It has “loophole” written all over it. Here are just a few: There is no provision for making access to .NET and other future services open—only Windows itself. In the next generation of its software, Windows will no longer be the lynchpin, but instead will be replaced by .NET as the “chokepoint”. Any settlement which does not include future, even currently unannounced products is insufficient. Otherwise, all it takes is a single new piece of software, upon which other software is made to rely in the most trivial way, and we're back where we started.

The only API Microsoft is force to make public is the “Windows API”, and only that small part of the API which is used by middleware. That doesn't include many of the important parts of the API, which would be required to develop Office software, network protocols, and multimedia, such as installation routines, access to the Windows Registry, etc. There is no requirement that file formats be documented, yet they are the primary way Microsoft maintains its monopoly in Office software. This is such a glaring omission I don't understand how it could have been overlooked, but apparently it was.

There is no requirement that any information be shared with nonprofit and volunteer organizations such as the developers of Linux, even though Linux is Microsoft's strongest potential competitor. This alone is a huge, gaping loophole.

The latest versions of some Microsoft software carry EULAs (End User License Agreements) which specifically state that they cannot be run on other operating systems than Windows. Could they be more

brazen? And yet there is nothing in the agreement which prevents this—nor has the DOJ addressed the issue despite its prima facie anticompetitive nature. There are dozens, perhaps hundreds, of other ways, large and small, that Microsoft threatens and bullies anyone else who tries to enter their markets, few of which are addressed in the agreement. These are but a few. A much longer list is contained in the longer document by Dan Kegel, a software engineer with as much time in the industry as I have.

I wholly endorse, support, and concur with his views, which have also been submitted for your review.

To: “microsoft.atr(a)usdoj.gov”  
Date: 1/23/02 6:46pm  
Subject: Microsoft settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a “punishment” instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
William Cinnater

I am writing to comment on the Proposed Final Judgment in the Microsoft anti-trust case.

The current judgment calls for very limited restriction of Microsoft's actions, actions which are the subject of the suit and which have been found to be in violation of US anti-trust law by a federal district court and a federal appeals court.

Those actions have severely hindered competition in the computer software industry. Any settlement must aggressively address the reestablishment of competition in this important and crippled industry.

The keys to software competition are the API's and file formats used by Windows operating systems and productivity software. Without access to those sources of Microsoft's monopoly, other companies cannot effectively compete.

A settlement which restores competition to computer software will be concerned primarily with:

- enforcing equal and open access to the W32 APIs and Microsoft Office file formats (standardization, publishing, and documentation)
- and the right of competitors to sell compatible operating system and productivity products based on those APIs and file formats.

A secondary concern with the PFJ is language which addresses competing "commercial" vendors. The fear of many is that this language fails to protect not-for-profit software projects from anti-competitive behavior. As not-for-profit computing has been equally harmed by Microsoft's anti-competitive practices, the PFS must explicitly grant not-for-profits equal remedy and protection.

Finally, it is appropriate that the company be punished for its illegal activity with fines. Fines should be set as a reasonable percentage of Microsoft profit for the period since the company violated its prior consent decree with the court to the present.

Thank you for considering my concerns,

From: James Kennedy  
To: Microsoft ATR  
Date: 1/23/02 6:43pm  
Subject: Microsoft settlement

I am writing in response to the request for comments in the USDOJ vs Microsoft case, in accordance with the Tunney act I ask that such a settlement be rejected.

I have read the proposed final judgment. Since I am not a lawyer, I can't claim to have a full understanding of it's contents. It seems however that it provides very little in the way of actual penalties against Microsoft or guarantees that Microsoft will not continue to do business in the same manner that they always have. In fact the proposed final judgment seems to be nothing more than the proverbial "slap-on-the-wrist". In fact, it appears more like something Microsoft themselves wrote instead of any form of real penalties as should be proposed when someone has BROKEN THE LAW.

I urge you to instead consider the alternate proposed final judgment submitted by the states, including my home state of Kansas, that have rejected the USDOJ proposed final judgment. Their proposal provides for real penalties and will discourage Microsoft from continuing with the business practices that they've used up to this point...even after the last anti-trust case against them was settled. This will provide for a fair and competitive market for all consumers who buy and use computer products.

From: dcjohan@patriot.net@inetgw  
To: Microsoft ATR  
Date: 1/23/02 6:48pm  
Subject: Microsoft Settlement

I am writing to state my absolute dismay at the proposed settlement in the Microsoft anti-trust case. As it stands, not only does Microsoft avoid any penalty of any kind, but the company gains an even greater stranglehold on the computing world. A company who uses its extreme wealth and apparent political advantage to destroy anything that does not represent a direct profit for itself, and a company which is in apparent violation of investment laws in addition to that with which it has already been found guilty, is now about to be handed over the keys to the world wide web of which it has contributed absolutely nothing but now desires to control.

The biggest competitor to Microsoft Internet Information Server is Apache, which comes from the Apache Foundation, a not-for-profit. Apache practically rules the Net, along with Sendmail, and Perl, both of which also come from non-profits. Yet not-for-profit organizations have no rights at all under the proposed settlement. It is as though they don't even exist.

Section III(J)(2) contains some very strong language against not-for-profits. Specifically, the language says that it need not describe nor license API, Documentation, or Communications Protocols affecting authentication and authorization to companies that don't meet Microsoft's criteria as a business: "... (c) meets reasonable, objective standards established by Microsoft for certifying the authenticity and viability of its business, ..."

Were it not for the not-for-profit, i.e. open source community, there would not be a

world wide web as we know it today. All of the commerce we so fully enjoy would not be available today. Yet we do enjoy what the www can provide and all this was done without the predatory manipulations. Now, as a penalty for its behavior, the courts are proposing to not only do nothing to stop the predatory practices of Microsoft, but to literally hand over the potential to totally manipulate the web for their own benefit. Absolutely unbelievable!! Please carefully reconsider the proposed "remedies" in the case, stop the current proposal, and return to the drawing board to construct a truly fair penalty for Microsoft, one that benefits the tens of thousands who have been harmed by the Microsoft predatory practices and one that truly penalizes Microsoft for its continued predatory behavior!

University Professor

**MTC-00019112**

From: J. Tuttle  
To: Microsoft ATR  
Date: 1/23/02 6:50pm  
Subject: Microsoft Settlement

Dear Sir or Madam,

I am writing as both a concerned citizen and as an end user of much computer software, both Microsoft's and others", to express my discontent with the proposed settlement of United States v. Microsoft. I am most concerned about certain proposals that Microsoft has allegedly made which would have millions of dollars of Microsoft software and solely-compatible hardware placed in public schools. The education market is one of the few where Microsoft is not dominant (or at least where it faces the greatest opposition), and it is outrageous that Microsoft might be allowed to further its monopoly over operating systems as part of any deal with the Government.

Microsoft should not be encouraged to foist its products on the few markets that it does not monopolize as part of any settlement, and any efforts it makes in this direction should harm, rather than help, its negotiating position, both in and out of court.

If Microsoft wishes to show that they are sincere in wanting to help this nation's underprivileged children, they should take the amount of money that their proposed program would require, and spend it instead solely on products from competing companies, or on unpatented, free operating systems like GNU/Linux.

Any settlement with Microsoft should be strong enough to send a message to both Microsoft and to other companies who might emulate Microsoft that anticompetitive practices that hurt the consumer (and, by extension, the American economy) will not be tolerated. Computers and the Internet have become too important both to our economy and to our society in general to allow a single company to gain even a partial monopoly over them. Without a strong message now, there is little doubt that Microsoft will find new and different ways to attempt to monopolize the Internet, and eliminate or absorb whatever stands in the way.

Thank you very much for your time.  
Sincerely,  
James W. Tuttle

Alfred J. Chiesa  
31222 Countryway  
Farmington Hills, MI 48331  
Alfred J. Chiesa  
31222 Countryway  
Farmington Hills, MI 48331

My comments are going to be short and to the point. I have been a long time Microsoft software user and switched about 7 years ago to Apple when I started to realize how they competed with their competitors in the software industry. This was about the time when Netscape was the standard web browser and sold their browser on line for \$29.95. I was very pleased with the product and thought the price was fair for a yearly subscription price. Then Microsoft launched its web browser Internet Explorer, IE. IE was not as developed as Netscape was, at the time, but the intriguing thing about IE was that Microsoft was able to offer it for free. I downloaded the browser and began to use it and before you know it, I let my Netscape subscription lapse and became a dedicated IE user. Then a few years had passed and I missed my Netscape browser. They had discontinued development of the product, made the program open source, and eventually sold it to AOL. The current offering is not as robust as the earlier versions and now I have been trying to find an alternative to IE but no one has a browser that is capable of running all of the necessary plug-ins needed to view today's graphic intense websites.

I believe that since Microsoft has an obligation as a company to promote competition and innovation in the industry. Not by acquiring and incorporating other companies technology but making available their software products to other platforms. If people choose to use Linux, Solaris, or Macintosh as their platform of choice, they should make available their software to the users of these platforms. This, in my mind, would allow individuals to lessen their dependency on using only Microsoft products and promoting growth in these alternative platforms, for example Linux, and would allow developers to compete in furnishing products for this emerging market. As long as Microsoft makes its programs a "Windows Only" solution, nothing in this industry will change. You will see more innovative technology fall by the wayside, like the Be OS, that primarily failed because of the lack of applications.

I am pleased with my choice of switching to an alternative operating platform, Apple, and I am writing this plea on a Microsoft product written specifically for the operating environment. I hope that in future years I will be able to make the same choice, maybe with a new and even more impressive system, because like in all things in nature diversity is what fosters new and innovative changes to happen

From: Samuel Herschbein  
To: Microsoft ATR  
Date: 1/23/02 6:49pm  
Subject: Microsoft Settlement

I recognize the importance of a strong economy for the strength of our nation. I also recognize that our Constitution and laws protect us from being taken over (politically and economically) by groups with their own agendas.

As a computer professional since 1980 and a Macintosh user since 1986, I have watched Microsoft use its corporate strength to ensure its success without due regard to the law. Your case addressed some of these issues, many other actions have not been brought to justice.

Part of the proposed settlement is for Microsoft to donate equipment and software to schools. Apple Computer has dominated in this market, in spite of Microsoft's best efforts to compete. The proposed settlement will allow Microsoft to take over this market, contradicting the verdict and the principle of competition.

Please do what is just and legal. This trial has many parallels to the "robber barons" of the last century. They postured themselves as victims of an interfering government, Microsoft has done the same. They even had the audacity to question the DOJ and try to turn public opinion against you and the government on their web pages. Personally, I see that as a version of "jury tampering."

One thing must be remembered: the law has been broken, a verdict has been made, and the punishment should fit the crime. In light of the Enron failure, I believe that many people will be looking to the government to control this unmitigated greed that thinks it is OK to break our country's laws to get what they want.

Thank you,

From: Igor

To: Microsoft ATR

Date: 1/23/02 6:50pm

Subject: Microsoft Settlement

Dear Sirs,

As a user of computer products and technologies, and being an IT professional, I am deeply worried about the growing influence of Microsoft Inc. in the global marketplace. Microsoft has through the sheer weight of its market domination sought to gain even more influence and power.

Its treatment of Netscape, which it saw as a powerful competitor for its Windows platform, has been widely documented and is exemplary of the ruthless nature of the way Microsoft conducts business.

Although Microsoft is in the business of making money and although they should be free to follow their own course, this should not include the right to hinder its competitors to the point where they cannot compete on equal terms. The very fact that Microsoft dominates the desktop and through this expedient alone can control who can and who cannot weave his products seamlessly into the Windows mesh is proof enough that competitors are not working on a level playing field. The odds are indeed very heavily stacked in favor of Microsoft when it comes to defending its interests on the desktop.

Furthermore, I find there is a deeply offensive character to the way Microsoft is trying to buy its way out of this court case. Not only is it offering a compensation for its conduct which would not cost the company a lot of money (the value of their offering is an arbitrary sum since they don't have to pay themselves full value for the products they'd be offering the schools), but more damning than anything else, providing the schools with more of its products, thereby guaranteeing a larger user base by creating future marketshare, they are circumventing their conviction for offending against the Sherman Act. And they are doing it in such a way as to negating the conviction and turning a defeat into a court ordered victory. This is the equivalent of allowing a thief to sell back at full price the stolen item to his victim, and forcing the victim to accept. Every fraud, every gangster, every con artist will DEMAND to be tried by this court. A conviction is better than winning the case.

If this settlement is allowed to stand as it is, the court is giving the wrong signal to everybody who intends to defraud, embezzle or steal from his neighbour. Every company will seek to defend its claim in this court because a settlement will be in its favor. In a judicial system that relies heavily on precedent, this is the most dangerous precedent of all. To compound the injury, Microsoft has never offered its shareholders a dividend in the profits and it has done so solely for the purpose of evading superior taxes of 39% on income from dividends in favor of the lesser tax amount of 20% for

profits on selling stock. Microsoft has an enormous amount of cash money at its disposal. The law states that a company should have sufficient means to conduct its business but Microsoft has more cash than any other company on the planet. This is money that it has won through exploiting its monopoly very effectively. This way the company keeps winning. Not only is it convicted of a monopoly and is it subsequently rewarded with a settlement that perpetuates its monopoly, the money it has made it wants to keep for itself and its largest shareholders, among which its co-founder and chairman William H. Gates III.

Through its refusal to offer a dividend to its shareholders it evades taxes that are rightfully due to the State and thus to the general public.

How can it be that Microsoft which is convicted for being a monopoly gets to keep the spoils from exploiting that monopoly, withholds taxes from the State and gets the most favorable settlement in a court case in the history of the judicial system? What message is sent here to the regular tax payer who does not have an army of legal geniuses at his disposal, who has to do an honest day's work for a modest income and who sees that convicted companies get away scotfree and with a golden deal to boot?

I want to close by saying that I do not begrudge Microsoft its money, or William H. Gates III his status as richest man on the planet. Although I do not scoff at the possibilities that an abundance of money allows, I have found other riches in life that money will never buy. I fully realise this is cliché but I mean it from the bottom of my heart. What worries me here is that if Microsoft gets away with its business practices and does not get a very stern signal, it will just keep doing what it has always done. When someone receives punishment that in real terms amounts to no punishment at all, he does not see the need or feel compelled to change his ways, and isn't that why punishment was meted out in the first place? I think this is true for Microsoft as well. It is also a very bad signal to other companies that perpetrate these and likewise felonies that when they should ever face the wrath of justice they should not worry too much. And for what that implies I worry very deeply indeed.

I am sure you will rule wisely and serenely. I have confidence in the law because it is the protector for those who cannot protect themselves.

May God bless you.

Ignace Van Caneghem

Subject: Microsoft Settlement

I think that Microsoft is getting off with a slap on the wrist, if even that. They were found to have broken many laws, and I believe that their abuses go far beyond what the court found. They should be dealt with sternly, in a way that will prevent future abuses. They have not changed their ways, and unless they are severely penalized and watched over by someone with real power over them, they will continue to ruin innovative companies by putting them out of business or just stealing their technology. They are basically above the law, as they can outspend anyone in court (and it seems they even did that with the US government, as they are getting off with nothing more than a stern warning.) Any settlement that Microsoft is willing to negotiate is too easy on them. Please do not settle with them. Roy Franz

From: Michael Williams

To: Microsoft ATR

Date: 1/23/02 6:52pm

Subject: Microsoft Settlement

I am opposed to the settlement.

Microsoft has irrevocably altered the evolution of information technology, both in the technical sense and the social sense. So have other entities: Apple Computer, Bill Joy, Vincent Cerf, etc., etc. Microsoft, however, has provably done so through technological piracy and unethical and illegal(!) business practices. The result has been the unprecedented growth of the indisputably rapacious monster, Microsoft, at the ever increasing cost to us at large. I find the

defense of Microsoft based on the benefit it has created through a unified environment to be utterly ludicrous. The loss of national productivity due to the use of Windows alone should be an indictable crime.

Given what has been \*proven\* in court, the proposed settlement offers a truly lame and ineffectual punishment. It is just plain unacceptable. I apologize to the reader if this seems polemical. Thorough and even-handed analyses supporting this point of view abound (e.g. by GCSF, Inc). The message that this settlement would send to everyday people like myself, is that money has a heavy hand, indeed, in our judicial system.

#### MTC-00019126

From: Daniel Nichols  
To: Microsoft ATR  
Date: 1/23/02 6:51pm  
Subject: Microsoft Settlement

Dear Attorney Generals, Judge Colleen Kollar-Kotelly,

I would like to forward my comments on the Anti-Trust case against Microsoft. I have forwarded several articles about Microsoft's practices to Attorney General Tom Rielly and other Attorney Generals not settling the anti-trust case with Microsoft. I believe these states, companies that Microsoft has harmed, and the World pc user community has been severely harmed by the anti-competitive practices that Microsoft has done and will continue to do without strong restrictions.

Please let me state this again. We have already seen that Microsoft does not care about users, security, and robust applications.

I would first like to say that by allowing Microsoft to give its software to school districts as punishment is no punishment at all.

I am writing this email on a computer at Pensacola Junior College in Pensacola,

Florida. I also use the computers at 2 locations at West Florida Regional Library in Pensacola. There are no other computers, non-windows, for students and the community to use. All the computers have Windows operating systems (OS). All have Microsoft's Internet Explorer (IE) Browser installed. At the public library, the Bill Gates Foundation donated computers to the Library system, which in turn runs only the software Microsoft gives them. Some of the computers have AOL's Instant Messenger installed on them at the community college. So, while Mr. Gates donates his software, he has people indoctrinated on his products.

I don't believe Microsoft will adhere to or follow minor restrictions placed against the company. I don't believe that Microsoft will in any way change the company's practices anytime soon unless severe restrictions are in place.

I have been reading technology news for several years now. Microsoft has teamed up with Bristol and other companies coming up with new technologies. Microsoft then backs out of the deal holding part of the copyright and threatens to sue if they use it in an attempt to compete against Microsoft.

Another issue about the Anti-Trust case is that Microsoft wants to keep documents sealed from the court case. Why? If it is not trademark secrets, what is MS afraid of; the public seeing the true company plans (or the true company) and not liking what they see. I don't think that the court should seal the documents. If the documents harm Microsoft's image, let them live with what they have practice. Don't let them hide behind secrecy.

In the last year there have been major flaws in Microsoft software that proves that the company does not care about the consumer and is only thinking of the bottom line. Let me point out the following:

Two business analyst recommended in late 2001 that companies using Microsoft's Internet Information Server(IIS) should think about an alternative server product due to attacks and security flaws in the product.

During a system crash, Office XP and IE was found to "grab" information and send it back to Microsoft for operating system "crash analysis." This "bug" or problem was found at the Los Alamos Laboratory. (I hope no one sent nuclear secrets to Microsoft, we'll have a whole new set of problems to worry about.) (Its the year 2002 and Microsoft has made Billions of dollars over the years and NOW they are getting concerned about security issues.) In November or December of 2001, there was a report of Microsoft's SQL database having a significant vulnerability.

Windows XP was released in Sept 2001. 2 months later, in December 2001, it was reported that there was a major vulnerability that would allow a Windows XP computer to be taken over from 2500+ miles away. This was supposed to be the most stable and attack proof operating system for users.

The same vulnerability found in Windows XP was found to be in Windows 98 and ME and there were suggestions that Microsoft knew about these exploits and still released Windows XP. Microsoft implemented the Active Directory authentication service for Windows. This would lock the company to

Microsofts service. There would be no reversing the procedure if you found out later that you did not like the way the service directory performs. You would have to do a complete deletion and start over with your organizations computers, printers, servers, users id and passwords, etc. But, some of Microsofts competitors raised interoperability questions and Microsoft restructured Active Directory to accept the Light-Weight Directory Access Protocol. (Seems weird when you look at it like that, Microsoft had the capability to use competing protocols all the time?)

Limiting servers on a directory service—re-pricing issues—Window 2000 users cry foul There are three new limitations on the proposed XP Server license: two processors only; no Application Mode Terminal Services operation; and a limitation of two Servers per Active Directory forest. This has caused howls of protest from the existing Windows 2000 users because they can see a whole new level of financial pain. Here's a typical scenario. Your headquarters has Advanced Server but your 100 regional offices are equipped with Server. You need a local server on each site, but you want them all in one Active Directory forest for easy management and control.

In the proposed repackaging, every one of those regional Servers will have to be upgraded to Advanced Server at a cost of more than 1000 each. Before anyone leaps up and presses the panic button, be clear that these are proposed packages. There is no indication that they will end up in production, or that it will be the same case for select customers as for shrink-wrap. <http://www.vnunet.com/Analysis/1126600>

I have used Microsofts Works home productivity software. In 1997-1998, I tried to help a friend with a resume. He had typed it on Microsoft Works and I went to the Junior College to format it and print it on a laser printer. At that time Microsoft did not have a file reader for its own home productivity product to be read by MS Word 97. It would appear that Microsoft marketed Microsoft Works on pcs to be sold for home use. Then, when you brought a file in MS Word 97 format home, MS Works could not read it and the same for Works to Word 97. So the users wanting to read and edit files in MS Word 97 would have to go out and buy the \$125 plus Version of Word 97 for their home use. In March or April of 1998, Microsoft released a file reader for Word97, Excel 97, and I believe Power Point to view files on a pc without the original application. File incompatibility for revenue purposes? During the first Anti-Trust hearing in 1994-95 and later there were documents and suggestions about Microsofts Windows 3.1 OS having hidden code. <http://eathestate.org/03-07/MicrosoftPlaysHardball.htm>

Microsoft plays hardball: Of course, this is not new behavior for the software giant. In 1991, Microsoft employees launched an exceptionally dastardly plan to kill another competitor, DR DOS. DR DOS sales threatened MS-DOS, the early predecessor to Windows 95 that established Microsoft's operating system monopoly. DR DOS sales were on the rise—they doubled from \$15

million in 1990 to \$30 million in 1991. They soared again to \$15 million in the first quarter of 1992 alone. Then disaster struck.

Microsoft was writing Windows 3.1, an important upgrade to the hugely popular Windows 3.0. In September 1991, a plan was hatched to use this upgrade to kill DR DOS. In an email discovered by the Dept. of Justice, the head of Windows development and Microsoft VP David Cole wrote, "aaron had some pretty wild ideas after three or so beers—earle has some too." The plan was to plant code into Windows which would "put competitors on a treadmill" and cause the system to "surely crash at some point shortly later." In order words, Windows would intentionally bomb if it detected DR DOS.

At this time, many computer vendors were considering switching from MS-DOS to the superior, cheaper DR DOS. Microsoft was especially concerned about IBM. Wooing these PC vendors was crucial to the future success of DR DOS, as was the good will of "early-adopters" (i.e., technically savvy users who drive new trends in the computer industry). These vendors and early-adopters were also the same people who received a Christmas "beta" pre-release of Windows 3.1. They discovered—to their horror—that using DR DOS would cause vague system errors to pop up in Windows 3.1; they dumped DR DOS in droves.

More links to windows 3.1 error codes:  
<http://www-cs-students.stanford.edu/kkoster/microsoft/caldera.html>

<http://www.insecure.org/myworld.html>  
 And lets not forget what Microsoft is doing with its monopoly in Europe and the EU trying to rein Microsoft in. It would seem that not just the US and pc users are having a hard time trying to convince Microsoft of competing fairly. It is not in the companys corporate plan. This article suggests that we hold companies liable for security breaches in their products. I guess you should ask Microsoft to re-write their end user license agreements EULA while you have their attention. <http://news.com.com/2100-1023-821266.html>

In the end of 2001, a system security expert warned Microsoft of a severe vulnerability in Windows software. Microsoft waited for 8+ days to issue an alert. The security researcher released the problem to responsible teams. Microsoft labeled him an extremist. Only after the security researcher released the problem did Microsoft acknowledge the problem. The last comment I want to make is this. You should want to buy the product not be forced to buy the product. If you are forced to buy the product, the company can make a product without much improvement and the quality of that product will suffer. I hope that I have highlighted some new information or reiterated some information for your review. Does Microsoft have the best products or is that the only choice?

Thank you,

From: Wilson, John G  
 To: "microsoft.atr(a)usdoj.gov"

Date: 1/23/02 6:53pm  
 Subject: MS settlement

By not thoroughly punishing MS, you are not thoroughly condemning their actions. MS has publicly claimed they haven't done anything wrong. What makes the DOJ think MS won't find other ways to illegally leverage their monopoly? MS has often been humiliated in public by the sloppiness of various aspects of their software. A public slap on the wrist, some fines, and an order to stop the illegal activity that they never should have done in the first place is NOT going to make them change their ways.

If such a weak punishment as the proposed punishment is put in place, what will other companies aspiring to gain monopolies think? Maybe they will think, "all we have to do is gain a monopoly, because once we do, nobody will want to stop using our products, and we'll be so rich that monetary fines won't phase us".

Look at all the things MS has: money, customers, influence, power. They also have responsibilities to the computer industry unlike any other company. MS has thoroughly abused all that they have been given. MS should not be allowed to continue to wield such power over the industry. I don't know how to take away what MS has illegally gained (and hence no longer deserves), but the current settlement does not go far enough.

From: Steve Dzemidzenka

To: Microsoft ATR  
 Date: 1/23/02 6:54pm  
 Subject: Microsoft Settlement.

Hello,

I want to express my opinion about Microsoft monopolistic advantage. I truly believe that Microsoft has a huge advantage over any of its competitors. Having Windows and giving away add-ons for free, they kill a lot of products which are better, but charging for those products cannot be justified when Microsoft's products are free. Microsoft can afford to give add-ons for free and having Windows as the most powerful distribution channel possible, they take unfair advantage. Operating system is the foundation of every piece of hardware. No hardware can run without it. The company which controls operating system controls a lot of things. I truly believe that the operating system should be owned by independent third party which will provide the core set of operating system functionality to anybody who needs it on equal terms. This business is self sustaining and MUST be split away from Microsoft. This will insure that Microsoft does not have unfair advantage for other add-on product distribution by dictating Windows's terms of use. I hope my government realizes all the seriousness of the situation and takes the proper steps to bring the spirit of competition back to the industry.

Thank you in advance

 Subject: Proposed Microsoft Settlement

To Whom It May Concern:

I am strongly opposed to the proposed settlement in the Microsoft antitrust trial. I believe that the settlement does little to punish this convicted monopolist and even less to restore balance to the competitive market.

It is blindingly obvious to me that the weak provisions in this settlement will serve only to embolden this company that to date has shown no remorse nor admitted any wrongdoing. One need only to look to the proceedings in Judge Jackson's courtroom to see how this monopolist views the judicial system. They lied. I mean just out and out lied. They faked evidence and then lied about that when caught. This company believes that they are above the law and can do as they wish. That is wrong. This settlement reminds me of Britain's appeasement of Germany prior to 1939. Please do not become known as the "Neville Chamberlin" of the electronic age.

Sincerely,  
 Joe Harbert

**MTC-00019133**

From: Ken Beal  
 To: Microsoft ATR  
 Date: 1/23/02 6:54pm  
 Subject: Microsoft Decision

Settling with Microsoft will not solve the problem that was created by Microsoft's

predatory business practices, nor will it bring back the companies whose carcasses litter Microsoft's past.

I think there's one very specific thing that can be done to make the situation more competitive. After all, competition is the goal, right? The more companies competing for customers, the better the effort each company will put forth, and the slimmer the margin each company will skim. In the past, the OS portion of a computer purchase was small, like \$60 of \$3,000. These days it's more like \$90 ? but of a much smaller purchase, as full-featured computers can be purchased for \$700 these days. Even if the cost of Windows had stayed the same, rather than risen, the cost of Windows as a percentage of the cost of the computer would have risen.

My solution: declare illegal the contracts that Microsoft forces OEMs to sign, in order to get preferred pricing. These contracts enforce that the OEM cannot customize the computer; cannot put any third-party applications that compete with Microsoft's offerings (which these days are almost any third-party applications!); and what's worse, eliminate the OEMs ability to sell a computer with more than one operating system on it. There was a Hitachi computer sold recently with the Be OS, but it was hidden; the customer had to jump through some difficult technical hoops to enable it. Be OS's founder, Jean Louise Gasse, announced that he would provide the OS for free to any computer manufacturer (OEM) who would ship it. Only one OEM did, Hitachi, but in a form that was rather unusable to most consumers.

If the Department of Justice does one thing and one thing only, it should be to eliminate Microsoft's OEM contracts. Force Microsoft to sell Windows at a specific price for a specific number of units (i.e., a customer purchasing 10,000 licenses could get a better deal than a customer purchasing 10 licenses; however, an OEM who agrees to ship only Windows XP and Office XP should not get a better deal than an OEM who prefers to ship Windows XP with Netscape and StarOffice, assuming they're purchasing the same number of licenses. Or a computer equipped with Windows XP and Red Hat Linux). My point is Microsoft is selling a product. They shouldn't get the right to dictate how that product is used or configured when the OEM then sells it to the end user. There are many examples of this in other industries (i.e., Ford or GM may purchase radios from Blaupunkt or Sony, for installation in their vehicles; and often, the auto manufacturer removes the faceplate and replaces it with one with their logo). To take the auto metaphor further, Ford sells a car to its dealer. The dealer then adds decals and metal logos with the name of the dealership to the back of the car, before selling it to the end user.

Obviously, Microsoft would want the OEM to not make changes to the Windows OS code, as that may destabilize the operating system and lead to crashes. However, when an OEM sells a computer, the contract they have with Microsoft forces the OEM to pay Microsoft for a Windows license, even if the computer was configured with a different OS! This reduces competition, because an

OEM figures, if I have to pay for it anyway, I might as well ship it. If an OEM was free to sell computers configured however they wanted, and only pay for the parts included when that computer includes those parts, then I would say we have reached a fair settlement.

There are many, many other problems with the settlement, but if the OEM contract issue is resolved, the market will help correct the rest of the problems.

Thanks for listening,  
Ken Beal

Subject: Microsoft settlement

Sirs:

I am an avid computer user since learning about them in my high school in 1972.

I am also a member of the Armed Services of the United States of America, and have witnessed firsthand the tears of frustration at using an incompetent software suite foisted upon the country by Microsoft.

This is NOT a benevolent monopoly as ATT was. This is an evil, greedy, incompetent corporation which stops at NOTHING to extend and prevail it's dominance.

Witness:

Bill Gates, Microsoft, et alia working diligently behind the scenes to control and steer the COMCAST/ATT broadband merger, so as to completely stifle any potential competition from AOL Time Warner.

My industry-standard, world-standard computer software is today increasing finding internet sites which do not function properly due to Microsoft's blatant highjacking of such standards with proprietary "flavors" which are known only by Microsoft, and which overtake the world internet by their monopoly stranglehold. (Java, C++, VisualBasic, FTP, html, and TCP/IP)

The self-imposed, self-proposed "penalty" offer (truly, THIS IS A PATHETIC ATTEMPT TO MAKE A COMPLETE MOCKERY OF THE JUDICIAL SYSTEM) to pay off foul deeds against the consumers of America and the world, by "donating" used systems containing Microsoft products EXCLUSIVELY to public schools. Is there no one in government today who can see that this is a thinly disguised attempt to POISON the minds of schoolchildren and pull them into the Hell that is Windows(tm)????? Unix, OS/2 (killed by Microsoft) even Linux, are far, far, far better operating systems than Microsoft Windows. ANYONE who uses a computer extensively and dares to compare will see this in a micro-second.

To close, I add the thoughts of a commentator I read at Linuxplanet.com, with which I am in COMPLETE agreement:

\* Any remedy seeking to prevent an extension of Microsoft's monopoly must place Microsoft products as extra-cost options in the purchase of new computers, so that the user who does not wish to purchase them is not forced to do so. This means that for the price differential between a new

computer with Microsoft software and one without, a computer seller must offer the software without the computer (which would prevent computer makers from saying that the difference in price is only a few dollars). Only then could competition come to exist in a meaningful way.

\* The specifications of Microsoft's present and future document file formats must be made public, so that documents created in Microsoft applications may be read by programs from other makers, on Microsoft's or other operating systems. This is in addition to opening the Windows application program interface (API, the set of "hooks" that allow other parties to write applications for Windows operating systems), which is already part of the proposed settlement.

\* Any Microsoft networking protocols must be published in full and approved by an independent network protocol body. This would prevent Microsoft from seizing de facto control of the Internet.

PLEASE: Stop this monster run amok.

PLEASE: protect Americans and others from this criminal hegemony.

PLEASE: decide in favor of the American Way of Life which has worked so well for hundreds of years—a fair, open, and LEVEL playing field for business.

Do the right thing.

Please.

sincerely,

From: John Davies  
To: Microsoft ATR  
Date: 1/23/02 6:55pm  
Subject: Microsoft settlement

It is my feeling that the suit against Microsoft should be settled in terms agreed to by the Dept. of Justice. It appears to me that the suit is being prolonged by Microsoft's competitors in spite of favorable terms to consumers. The prolongation of this suit is wearing thin. I would urge all parties to settle.

Sincerely, John R. Davies, M.D.

From: BudasBrother  
To: Microsoft ATR  
Date: 1/23/02 6:57pm  
Subject: Microsoft Settlement

To whom it may concern,

Below I have listed the top 10 reasons Microsoft is a Monopoly and why that's not a positive position for the computer industry as a whole;

01. Microsoft is smothering the IT Industry.

Microsoft's habit of taking fledgling computing platforms/applications and integrating them into the behemoth that is Microsoft, in doing so they are killing the small developer community. Microsoft is in fact slowing the IT industry by smothering the small developer. It is the small developer, the late night programmer or the back yard developer, the uni student, etc that come up with the new applications. These are the people that have a problem and solve it using their PC, with the solutions eventually moving into the mainstream if popular. As opposed to Microsoft who seems to be continually trying to find a new problem for their solution. Just look at the advances within the IT Industry over the last 20 years, how many were invented by Microsoft??? A few examples;

-GUI with Mouse type control (First display by Xerox, first adapted by Apple)

-All major Application Groups, from Word Processor to Graphics, non first developed by Microsoft.

-Multi Tasking stable OS—First on the desktop Amiga, 20 years ago. -Internet—University based invention

-Instant Messaging—Not Microsoft

-Hotmail—MS blew alot of cash on this one to get in early.

Without the smaller more creative developer these new applications, new solutions are being created less often. Without these advances the IT industry will slow. The reasons to upgrade and continue the cycle will become less and less. By using the strategy of buying or smothering small developers Microsoft has given the whole industry a full frontal lobotomy, with a piece of barbed wire. If this seems a little paranoid, it is all spelled out in Microsoft's .Net strategy. The plan for total control.

02. Microsoft—Lawyer University

Microsoft's use of the legal system to intimidate competition, is destructive to the industry. It also makes a mockery of the legal system when a company can bank roll its own laws. I think it very irresponsible for MS to use the Legal system as a defensive manoeuvre for its market. I see the legal system as being a way of defence, not attack. There are a couple of good examples of this at the moment, the License agreement every user unknowingly agrees to, the legal attack on Lindows.

03. If Microsoft were my child.

If MS were a child someone would have put him on Ritalin years ago. They're behaviour is irresponsible and they never let anyone play with their toys.

04. My personal favourite piece of MS false advertising.

Microsoft's "FREE" software bundles. If they do include any software with the OS

and the user has paid thru the nose for the OS how can anything included with the OS be called free. Especially when you consider the work you have to put in removing all of these free pieces of software to put on the ones you want.

05. Locking Users in the Dungeon of MS

This argument has been made many times but it must be said again. By locking users into their specific brand of application (usually slow and buggy) they are limiting the user. The greatest example is Win XP. I feel sorry for users of IRC and Messaging other than Microsoft Messenger. Microsoft will say tactic is to allow quicker and more stable user experience. But the truth is that alot of the alternatives are better written with better options, that if installed would probably be quicker and smoother. Can anyone answer how I uninstall Windows Explorer from windows. Explorer is not my favourite file util but do I install the file util I like then use Explorer to start it. Does this seem a little silly to only me??? This is also effecting the small developer and IT Company.

06. Microsoft doesn't Listen.

The direction of the IT industry is driven by the consumer being given options and the most popular one wins, its a basic but honest system. The IT industry does still operate this way but with Microsoft running their monopoly instead of the people making the decision, they have taken it upon themselves to decide what it is we want. I guess until we stop giving them money hand over fist they may be justified in there position!!!!

The only way things will really change is if people get sick of MS's behaviour and move to another OS, give it 5 years.

07. Microsoft is bleeding everyone dry.

At the end of the day when all is said and done I think that really, the most destructive thing Microsoft is doing to the industry is simply bleeding it dry. The outrageous prices they charge, annual upgrades, courses and the rest of the charges you incur if you want to have any commercial contact with Microsoft are now responsible for a large percentage of the commercial running cost of any IT services within a company. If we were to take Microsoft's annual income and set-up a series of smaller companies with more specific direction you would be able to set-up 1000's of companies. The combined input into the computer industry as a whole would be far greater than Microsoft itself provides. I also infer that because the smaller companies could be more specific the quality of services/products would rise.

Yours Sincerely

Athol Courtenay (aka BudasBrother)

Subject: Microsoft Settlement

Greetings,

My name is Michael S. Toohey and I want to protest the Proposed Final Judgement that will be handed down in the Microsoft Anti-Trust Trial. There are many items wrong with it and I beg the court to reconsider it. Microsoft continues to utilize business practices that allow it to "snake" around the law. Slapping Microsoft on the wrist is something that should not be done again. Microsoft will "snake" away from the Final Judgement by focusing away from the Operating Systems in Definition U of the PFJ and focus on other items in a monopolistic manor. These tactics will hinder innovation for other devices, hence hindering the productivity of the American People.

Thank You for your time.

From: Chris Lawrence  
To: Microsoft ATR  
Date: 1/23/02 6:58pm  
Subject: Microsoft Settlement

/To Whom It May Concern: /

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future. /

/The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions. /

/Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. /

/While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded. /

/Sincerely,/

/Christopher Lawrence/

From: McCombs, Peter  
 To: "microsoft.atr(a)usdoj.gov"  
 Date: 1/23/02 7:00pm  
 Subject: Microsoft Settlement

I am writing in regard to the proposed Microsoft Settlement, as allowed under the Tunney Act, and in hopes that this opinion might be considered prior to the final acceptance of settlement terms as they stand at this time.

I am a professional engaged in the development of computer software, and have no strong complaint against Microsoft from a technical perspective. However, I have noticed a marked decline in the quality of computing in general, and particularly in the decreasing ability of my fellow citizens to employ technology creatively and constructively in their daily lives. This I attribute to the increasing stranglehold that Microsoft maintains on the computer desktop market.

I applaud the Findings of Fact, and agree with the courts that Microsoft's actions cannot be considered lawful and must be remedied. However, it is apparent to myself, and many in my profession, that the proposed settlement falls far short of addressing the problem. It must do more to reduce the barrier of entry for applications developers so that they might be able to develop competing software on the Microsoft platform, as well as on other computing platforms.

Please reconsider the settlement in favor of stronger penalties.

 Subject: Microsoft Settlement

I believe Microsoft should set aside money to be managed by an independent entity to be distributed to the nation's poorest schools rather than the donation of software. The donation of software would not be a punishment at all as it would not cost Microsoft any money at all to donate the software (as it already does to many colleges). Furthermore, the donation of Microsoft software which is mostly oriented to Microsoft's Windows platform would encourage schools to favor that platform and further entrench Microsoft into a sector they do not already dominate. This would in fact be rewarding Microsoft for breaking the law and not be a punishment. I strongly urge you to not allow this to happen. Thank you for your time.

Nick Grande

I am concerned about the implications of the proposed Microsoft antitrust settlement on consumers like me. Notably, in the proposed settlement, the definition of a competitor is limited to a for-profit business. However, for example, the largest competitor for Microsoft's network software is the freely distributed Apache software. I feel that such "open source" applications will be a valuable resource for consumers, and that, in the least, they should be included in the definition of "competitors."

Thank you,  
 Kyle Bittinger

 To: Microsoft ATR  
 Date: 1/23/02 7:03pm  
 Subject: Microsoft Settlement

I am writing to express my disagreement with the proposed Microsoft anti-trust settlement. After reviewing the proposal, it is my belief that it is insufficient to curtail Microsoft's unethical business practices which are hurting the computer industry.

One particular change I recommend is that Microsoft be required to publically release on the Internet full documentation for all of it's API's and file formats, such as those used by Microsoft Office. This would allow competitors to create software that is compatible with Microsoft's.

I would also like to suggest that you do not allow Microsoft to exclude Open Source software from any settlement that is reached. One of the proposed settlements from MS would require MS to release documentation \*ONLY\* to "Registered Businesses" This would exclude open source developers, who frequently release software for free that needs to be compatible with Microsoft APIs.

 x55238  
 carson.kotay@gateway.com  
 11410671:6051783

My main concern here is that I do not want a Microsoft operating system forced upon me. I do not want to be forced to pay for something I will not use and will immediately wipe when I receive my new PC/laptop. I do not mind if companies will not provide an alternative OS as long as they will be able to provide NO operating system, at my discretion. We should not now, or ever, be forced to pay for what we do not want simply because of a "licensing agreement" forced upon a PC manufacturer by a monopolistic company such as Microsoft.

Second point, I do not believe that allowing Microsoft to continue to have a competitive advantage over other software companies by sharing information before new releases with other Microsoft "divisions" but not outside companies. This is one of the main reasons that Borland's compilers are no longer #1—Microsoft shared pre-release information with their compiler "division" (what a joke) which allowed them to be on the market with support for new revisions of the OS before anyone else, offering them a distinct competitive advantage.

Third point, the inclusion of software such as Windows Media Player and Internet Explorer are extremely anti-competitive. The answer from Microsoft about "integration with the OS" was once bunk, but now that they've been given time they HAVE integrated such software with the OS and there is no way to remove it without a

complete rewrite of the OS. While it may not be possible to reverse the damage that has been done, it can be prevented. I take no issue with Microsoft developing and selling such software, but it should NEVER be included with the OS. The operating system should be ONLY an operating system and nothing more. Offering the products on an additional CD for free is fine, as long as other companies have the same opportunity. Let them offer it like AOL— on unsolicited free CDs.

Thank you,  
Lori MacVittie

**MTC-00019151**

From: Daniel Harrington  
To: Microsoft ATR  
Date: 1/23/02 7:01pm  
Subject: Microsoft Settlement

I am writing this letter to express my concern for what appears to be the lenient treatment of Microsoft resulting from the anti-trust trial. As an intentional user of non-Microsoft software, I find that the company continues to exercise its influence over software acceptance in virtually every arena, and this activity continues blatantly, even after the findings from the anti-trust trial.

The recent release of the Windows Media format (predominantly post-trial) provides an excellent example of how pre-trial behavior continues unchecked. Just a few years ago, Apple's Quicktime was the predominant multimedia format. This was followed soon afterwards by streaming solutions by companies like Real. The Microsoft analogue, Windows Media format, has been available for a comparatively short time, and yet has drawn quick acceptance, primarily due to its rampant availability. Testimony from the trial shows that this sort of activity was planned, and one can see from the dominance of Internet Explorer that similar results are inevitable in the multimedia realm without some sort of intervention.

Microsoft has become a monopoly. Definitive steps must be taken to check their influence on the software industry and allow for competition in this realm. I would encourage that steps be taken to even the playing field, with less concern to the effects that such steps might have on Windows users as a whole. While appropriate measures might have short-term negative effects on the company and the nation, these temporary issues should only be seen as direct results of the monopoly itself—and as beneficial steps in the long run.

The nation's attention to this issue is clearly an indication of how important it has become. Similarly, the outcry from non-Windows users should provide some sense of how fragile their futures may feel under the threat of a company like Microsoft. Marginalization happens easily and quickly in the software industry (note companies like Lotus and their 1-2-3 spreadsheet and Ami word processor, former competitors and leaders in their respective fields). Please move quickly to preserve an open arena for large and small software companies alike.

Sincerely,  
Daniel Harrington

The proposed final judgement in the U.S. vs. Microsoft case, is insufficient to prevent future abuses of monopoly position, and fails to deny Microsoft the fruits of their illegal activities. Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I work for a company that produces software which operates on multiple platforms including Windows, and am also an end-user of several Microsoft Operating Systems, Middleware and Applications both at work and at home.

The Court of Appeals affirmed that Microsoft (MS) has a monopoly on Intel-compatible PC operating systems, and that the company's market position is protected by a substantial barrier to entry, and that Microsoft is liable under Sherman Act 2 for illegally maintaining its monopoly.

According to the Court of Appeals ruling, "a remedies decree in an antitrust case must seek to "unfetter a market from

anticompetitive conduct", to "terminate the illegal monopoly, deny to the defendant the fruits of its statutory violation, and ensure that there remain no practices likely to result in monopolization in the future". Like all those found guilty of a crime, Microsoft need to be punished for their actions—ideally in a way that attempts to restore competition and undoes the damage inflicted on the consumer by their anticompetitive behaviour. MS has profitted greatly from their behaviour, and the fruits of their illegal actions must be denied to them. Previous court ordered remedies have shown that Microsoft willfully ignores and attempts to circumvent any restrictions placed on them by careful selection of the language used in these remedies, and stalling with continued appeals such that by the time a resolution occurs, there is no surviving competition.

Microsoft show no signs of remorse or attempts to change their pattern of behaviour. Indeed, while conceding certain points on existing Operating Systems (OS), they are careful to ensure that applications (such as Microsoft Office Suite) and future products such as .NET are excluded from any restrictions. It is clear from their pattern of behaviour that they will attempt to monopolise these markets, and that nothing but the most severe restrictions on their behaviour will have any effect.

Since many of the companies adversely affected by Microsoft are no longer operating due to the illegal monopoly, it is hard to make reparation to them. Rather, the remedy must seek to redress the harm done to the consumer, and to prevent Microsoft continuing to use its illegally gained market dominance to monopolise new markets. It is apparent that Microsoft traditionally gains dominance in a new market buy tying sales of one product to sales of another—for example, the bundling of Microsoft Office with Windows, and the intimidation of Original Equipment Manufacturers (OEMs) to ensure that this continues to the exclusion of competitors. Their willful circumvention of previous court restrictions, which violate the spirit if not the exact letter of the agreements, indicate that MS must be given no latitude in which to avoid punishment. The only option remaining if this is true, is a structural remedy. Structural Remedy:

The existing MS corporation must be split into at least 5 separate companies, each of which is barred from operating in the other 4 areas or joining with one of the other compnaies for a period of not less than 10 years. The company should be split along the following lines:—Operating Systems, Computer Programming Languages (must include .NET and C#), Applications (such as MS Office), Hardware (including Xbox), and Internet Services (MSN etc).

Microsoft continually use their monopoly position in each of these sections to dominate others— and must be denied the opportunity to do so in the only method it appears that will work. It is imperative that the .NET be split from all other services, since it is clear MS intends to use this to tie in future applications and services and "lock out" competing products. Previous anti-trust cases which have resulted in large corporations being split extensively detail prohibitions on these individual companies.

It is clear that despite all evidence pointing to a structural remedy as being the only solution, the courts are unlikely to impose such a remedy. Whether or not this is implemented, the following aspects of MS illegal behaviour must be addressed.

#### Consumers Overcharged and Require Compensation:

In addition to monopolising markets, the consumer has been harmed by Microsoft products being overpriced than would have occurred had competition been available. Once again, Microsoft must be denied any profits from their illegal activities. The consumer must be recompensed for this, and so a substantial cash fine should be levied against MS, which would then be divided amongst all registered users of Microsoft products. This fine should be no less than 1 billion US dollars—note that MS currently have cash reserves of over \$35 billion and this is increasing rapidly—it is a small fine to MS.

Should this not prove to be practical, then MS should still be fined, but with the money going to the purchase of computer and computer related hardware for schools, colleges and charity groups. MS should not be allowed to provide software for these systems, and alternatives such as Apple computers or free software such as Linux must be used instead. This will not only return some benefit to the consumer, but prevent further harm done to MS competitors.

#### Applications Barrier to Entry:

Significant barriers exist to competing products in the marketplace due to Microsofts illegal monopoly. These must be eroded and removed in the following ways:

By forbidding retaliation against OEMs, Internet Access Providers (IAPs), Independent Software Vendors (ISVs), and Independent Hardware Vendors (IHVs) who support or develop alternatives to Windows.

All APIs and file formats (MS Word, MS Excel, MS Access, MS Powerpoint, MS Outlook and Outlook Express, WMP—the Microsoft Middleware Products) should be available to ISVs and HSVs. File formats should be open and available for public viewing at no cost. Any changes made to APIs and file formats must be announced and specified a period of time must have passed before these changes are implemented (e.g. 180 days for APIs and 90 days for file formats). Current definitions of APIs allow MS to avoid releasing documentation on many important interfaces. File formats, while an important barrier to entry, are currently not included in the proposed settlement and must be publicly disclosed.

Wording of the licence agreement for ISVs accessing APIs and documentation shall state that it will solely be for the purpose of interoperating with a Windows Operating System Product or with application software written for Windows. Current phrasing limits this to OS only. Definitions of requirements for companies or individuals to access APIs should be publicly available and independently enforced—MS should have no say in this part of the decision process.

All patents covering the Windows APIs must be disclosed. Currently those ISVs producing Windows-compatible operating

systems are uncertain if they are infringing on Microsoft software patents.

Wording of the current proposed final judgement should not prevent ISVs using released APIs to make alternative OSs compatible with Windows based OSs. Forced Upgrades Must be Stopped:

MS abuses its monopoly position by forcing consumers to upgrade from older products to newer ones, at substantial cost. Since there is now no effective competition due to the illegal actions, the consumer has no alternative but to go with MS products. By altering file formats in latest releases that are incompatible with older versions, and by removing older products from sale, MS force the consumer to upgrade.

To prevent this, file formats for all Office Applications and WMP must be publicly available at no cost to allow alternatives to be developed. This is mentioned in detail above.

To prevent the removal of older products that are still viable applications, Microsoft must continue to support older products for at least 15 years after their introduction. MS may choose not to support the software during this time citing that it is not a useful product, in which case it is allowed to do so but must make the entire MS source code to the application publicly and freely available. Under these circumstances, users may maintain and compile the software themselves. This will apply to operating systems as well as middleware and applications. Prohibiting practices towards OEMs:

In addition to current restrictions in the Proposed Final Judgement (PFJ), Microsoft must be restricted against reprisals for OEMs that sell PCs with a competing OS but no Microsoft OS. The PFJ requires Microsoft to license Windows on uniform terms and at published prices to the top 20 OEMs, but says nothing about smaller OEMs. This leaves Microsoft free to retaliate against smaller OEMs if they offer competing products. There should be selected “groups” of OEMs of varying sizes, for example OEMs 1–20, 21–100, 101–1000, 1001+, and in those bands prices must be uniform and published on all MS OS, Applications, and Middleware products. Market Development Allowances (discounts) to OEMs must be fully disclosed in public. Discounts may not be given in one product (e.g. Office Applications) due to sales in another product (e.g. OS). This will prevent MS using its OS dominance to move its monopoly into other areas.

#### Enforcement:

MS will attempt to circumvent all remedies to the best of their ability. Strong, independent and effective supervision of MS is necessary, and a panel of several industry experts (chosen by the courts and complainants, with minimal input by MS) must be allowed full and unfettered access to MS documents. They will be provided with support staff, and be paid for by MS at competitive rates given their experience. This panel should have the ability to force release of MS documentation and source code, and delay the release of products until compliance is complete. Any undisclosed APIs discovered should result in a large cash fine. Current proposed enforcement allows

no incentive for MS to comply with the remedy. Some of the above stated remedies may seem extreme, but given the magnitude of the MS corporation and the extent to which it has broken the law, the remedies must be of a similar magnitude. As stated in the first few paragraphs, the intent of any remedy is to restore competition, terminate the monopoly, deny the benefits of the illegal actions, and prevent such abuses from occurring in the future. Due to the uncooperative nature of MS, the remedy must be decisive and strongly enforced.

While MS has already done considerable harm to the consumer by its illegal actions, there are many future markets in which MS can gain a further monopoly—and exacerbate the problem. They must be prevented from doing so. If an individual commits a crime where the public have been illegally overcharged that individual will be fined, and perhaps imprisoned—and certainly would be if he was a repeat offender shown to ignore previous court orders. Microsoft must be no different, or justice will not be done, and will not be seen to be done.

Subject: Microsoft Settlement (aka hang-em)

I have read the proposed settlement and find it delusional/insulting. Why should Microsoft be rewarded for business practices that were found illegal, and why should Microsoft be allowed to retain the fruits of illegal actions.

Additionally Microsoft's conduct during the trial if committed by a common citizen would land that citizen in jail (tampering with evidence, faking evidence, Microsoft's counsel lying/misleading a federal judge).

So yes, you should consider this a vote against the current settlement. -Monty Walls

Date: 1/23/02 7:07pm  
Subject: In Opposition to the Proposed Microsoft Settlement

I do not believe that the proposed Microsoft Anti-trust settlement as it is written is in the public's best interest. Considering Microsoft's history of anti-competitive behavior, I do not feel that the settlement is harsh enough or will effectively curb the wreckless power that Microsoft wields.

I would like to see competition in the Operating System market. As a consumer, I want to be able to choose an operating system based on such factors as price, security, ease of use, and stability. Currently, the only factor I have in choosing my operating system is the applications that will run on it. As the majority of commercial software is developed for Microsoft Windows operating systems, it is clear that Microsoft API's have become an industry standard. As a standard, Microsoft must publicly release documentation for all its API's so that Windows compatible operating systems may be created. Otherwise, competition in the operating system market will never exist. Microsoft must also be prohibited from using restrictive licensing terms and intentional incompatibilities, as it done in the past for would-be competitors. Though the issue of a competitive operating system market should have been a key part of any Anti-trust case against Microsoft, the proposed settlement does not address it at all.

In addition, I feel the proposed settlement lacks a means to enforce itself.

Sincerely,  
Eric M. Schatz

**MTC-00019166**

From: Kevin Heater  
To: Microsoft ATR  
Date: 1/23/02 7:09pm  
Subject: Microsoft Settlement

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot

commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,  
Kevin Heater

Subject: Microsoft Settlement

Hello,

While I am not a U.S. citizen the effects of Microsoft (MS) as a U.S.-based company does have influence on my everyday life.

As a 25-year-old student in the Netherlands I can say that:

(1) I'm not very financially self-sufficient (in other words: I haven't the money to pay for software)

(2) For all the work I'm required to do I need MS software products and third party software that ONLY works with the MS Windows operating system (OS)

(3) There's no way to use proprietary-format documents on MY CHOICE of office-productivity software but MS Office. Hence the need to borrow a computer elsewhere or make "illegal" copies of it.

In a nutshell what I am trying to say is: I want CHOICE! I want the freedom to choose for myself again what I work with without it being thrust upon me by my employer/educator/otherwise. MS and its platform is so ubiquitous, so omnipresent it's sickening and revolting.

The only place I can decide for myself HOW I do what I need to do is at home where I successfully use other (free) operating systems such as FreeBSD, Linux, OS/2, BeOS.

I actually enjoy using 3 different internet browsers.

But because MS Internet Explorer (MSIE) is used by 70% (or was it 90?) of the world's browsing public AND has many proprietary (thus: secret) formatting working inside, more and more websites only cater to the MSIE-using public (it's simple economics) leaving the rest out in the cold.

This includes more and more GOVERNMENT websites for which citizens pay yet many can't use as we are denied acces for not using a "correct browser".

If only the MS strongarm tactics would cease for a while, the world+dog would realise how counter-productive this situation is. Sadly, most new computer users and businesses and retailers are as complacent as they are gullible MS consumers.

I WANT CHOICE!

Thank you very much for the opportunity to comment.

Sincerely,  
Mike Neman

Subject: Microsoft Settlement

Indeed, Microsoft has pulverized many of its competitors. And not by having better products, mind you, or by merely pursuing its own success, but by actively limiting its competitors' chances of success. I hope that the subtleties of these differences in approach will not be lost on you; therein lies the whole concept of "unfair business practices".

The proposed settlement does little to reverse or repair this damage; if Microsoft should be forced to donate to needy schools, it should be forced to donate its competitors' software and hardware solutions exclusively. This will increase its competitors' market share and help make inroads toward fairer competition in Microsoft's markets.

Thanks for your time and attention.  
Sincerely,  
Michael Ebert

As an engineer who has watched with surprise the continuing business practices of Microsoft corporation, I am shocked to find that the proposed settlement between the United States and Microsoft lacks any remedy whatsoever. In fact, the settlement seems to condone Microsoft's behavior. The settlement legitimizes anti-competitive behavior that cripples the open source community—widely regarded as the primary force capable of competing with Microsoft. Also, I do not believe a board of 3 people will be capable of impartially overseeing the business practices of Microsoft. I believe another remedy, that is not subject to manipulation by Microsoft, should be found. The compromise of some of their intellectual property should be the price they pay for over a decade of anti-competitive behavior.

Sincerely,  
Matthew Helsley

From: Don Krause  
To: Microsoft ATR  
Date: 1/23/02 7:09pm  
Subject: Microsoft Settlement

I strongly disagree with the proposed Microsoft settlement, where Microsoft will provide 1 billion dollars of equipment and software to under privileged schools.

The big problems are:

1> That is traditionally an Apple Computing Stronghold. How is letting Microsoft push out it's LAST major competitor in the market where Microsoft is weakest, punish Microsoft's anti-competitive behavior?

2> The so-called "donation" of software to these same under privileged schools, is going to lock them into the HIGH DOLLAR cost of yearly upgrades, and with Microsoft's new "Open License" program, it will cost these schools millions in yearly support fees. How does forcing these under privileged school to pay Microsoft millions of dollars each year punish Microsoft for it's behavior?

Please reconsider this settlement, as it only BENEFITS Microsoft. Don Krause, ph: 909.799.8327 Systems Administrator, page: 909.512.0174

Subject: Microsoft Settlement

Dear Renata B. Hesse,

I think the proposed Microsoft settlement is a bad idea. As a Linux user and a Windows user I am concerned that the settlement does not sufficiently redress the fact that Microsoft has used both restrictive licenses and intentional incompatibilities to discourage users from running Windows applications on Windows-compatible competing operating systems. I am an independent scholar and my field of expertise is not computer science, but I depend on my computer system to give me secure and reliable operations. I can no longer depend on Windows alone to accomplish this. One of my main concerns has to do with future compatibility of new documents and archives of documents. Many Microsoft documents are specific to Windows and cannot be opened under other systems. Worse, developers who wish to create portable systems cannot even be assured they will receive information needed to develop those systems because no part of the PFJ obligates Microsoft to release any information about file formats, even though undocumented Microsoft file formats form part of the Applications Barrier to Entry. Moreover, information would almost certainly not be released in time for competing middleware vendors to adapt their products to meet the requirements of section III.H.3, which states that competing middleware can be locked out if it fails to meet unspecified technical requirements seven months before the final beta test of a new version of Windows.

From: Raj Singh  
To: Microsoft ATR  
Date: 1/23/02 7:10pm  
Subject: Microsoft Settlement

I feel that the proposed settlement is much too weak because it does not address Microsoft Office, Microsoft .NET, or security protocols. Microsoft Office

A large part of my many people (myself included) feel that they must own and run a Microsoft operating system is to communicate with Microsoft Office users. The file formats for Office documents should be open and available. Security

Many in the developer community are worried about being shut out of developing

applications that work with Microsoft operating systems and applications because they won't have access to the security protocols being used. The settlement addresses transfer protocols, but needs to better address the authentication and encryption of the messages being transferred. Microsoft .NET

I run a software company that builds Web services as its business. We have a small software niche, and therefore need to interoperate with software from other companies. We happen to deploy our services on machines running Unix operating systems. This means we are afraid of being unable to interoperate with Microsoft .NET services, which might destroy our business, or force us to be .NET developers. This is the most important hole in the settlement, as Microsoft executives have stated that they expect .NET to be the future of all application deployment.

Thank you for the opportunity to comment on the proposed settlement.

From: Miles Johnson  
To: Microsoft ATR  
Date: 1/23/02 7:12pm  
Subject: Microsoft Settlement

I am opposed to the proposed settlement in the Microsoft antitrust trial. I believe this settlement is not adequate given the findings of fact in the trial. The courts have repeatedly tried to change Microsoft behaviour. The past attempts have not worked. The proposed settlement is just more of the same. The provisions within the settlement only formalize the status quo. In the past Microsoft has benefited greatly by ignoring the letter and spirit of judicial decrees. The proposed settlement again attempts to improve their behaviour by decree. It did not work before. It will not work now. In order to be effective, I believe that a solution should include serious structural and punitive components. The proposed settlement lacks both of these elements. To be just, it must punish past law-breaking. To be effective it must change Microsoft or its environment so that it will stop damaging the interests of the United States. At the very least, something has to change so that Microsoft is not richly rewarded every time they break the law. The proposed settlement is unjust, incomplete and non-functional. While the Court's desire to achieve a settlement is well-intentioned, it is wrong to adopt a non-functional settlement just for settlement's sake.

From: Michael Turk  
To: Microsoft ATR  
Date: 1/23/02 7:12pm

Subject: Microsoft Settlement

Regarding the Microsoft settlement, I don't believe that the current proposal provides adequate reparations to those injured by Microsoft's anti-competitive behavior.

Hundred, even thousands, of small companies have ceased to exist over the decades because of Microsoft's business practices. Similar to the settlement against AT&T, Microsoft should become a government regulated Monopoly, until its market share drops to an acceptable level (40%, for example, assuming one of its competitors is now also at 40%). This must be true for all Microsoft product lines, before regulation is lifted.

Even after being found guilty of being an illegal monopoly, Microsoft's behavior has not changed. Regulation of their behavior, with the threat of severe criminal penalties for failure to comply, is the only remedy that I can see will curtail them. The market must be able to return to a state of competition.

Imagine the damage to the United States if Microsoft were to fail, as Enron failed. The risks of a monopoly are greater than merely the loss of competition.

Suite 1200  
Washington, DC 20530-0001

Dear Ms. Hesse:

I would like to comment on the proposed Final Judgment in United States v. Microsoft, as provided in the Tunney Act.

I find that the proposed judgment is insufficient by a large margin to restore healthy competition in the computer operating systems and software application markets, so it is not in the public interest and should not be affirmed by the court.

The proposed Final Judgment attempts to remedy Microsoft's established illegal anticompetitive practices by prohibiting particular forms of conduct involving overly restrictive licensing terms, terms that vary in order to reward those who accept and punish those who contest a Microsoft monopoly, and terms that make switching to competing products more difficult or more costly. It also prohibits certain forms of retaliation against OEMs who support products competing with Microsoft's products. It also requires Microsoft to disclose APIs and communication protocols for its products under certain circumstances and for certain purposes.

It is inherently difficult, and perhaps impossible, to remedy Microsoft's particular forms of illegal anticompetitive behavior through conduct remedies. Both the underlying concepts in which conduct remedies are defined, and the particular

anticompetitive techniques used by Microsoft change far too rapidly, and Microsoft itself has far too much influence on those changes, for them to serve in the foundation of effective conduct remedies.

The remedies in the proposed judgment refer to concepts of "API," "operating system," "middleware," "application," "platform software," "top-level window," "interface elements," "icons," "shortcuts," "menu entries." The definitions of these concepts are not robust and timeless. Compared to concepts in other branches of business and engineering they are relatively ephemeral, controversial, dependent on rapidly changing technological context, and subject to deliberate manipulation by Microsoft. For example, an "operating system" in the 1960s was a software system to organize the basic functionality of a computer, and it contained little or no user interface code. In the 1970s "operating systems" often contained substantial collections of utility applications and rudimentary interactive user interfaces called "shells." In the 1980s, the X Window system was created as a form of what is now called "middleware" to provide a graphical interactive user interface, used widely in conjunction with Unix operating systems. Apple and Microsoft created similar graphical interactive user interfaces, but defined them to be parts of their operating systems, rather than additional middleware. In the near future, distributed and network computing are likely to make it quite difficult to determine the boundaries of a single operating system. In the past, Microsoft appears to have deliberately manipulated the boundaries of such conceptual categories to create and preserve a monopoly position, and I expect it to continue such practices in the future. The proposed judgment provides definitions that narrow these already problematic concepts even further, making them even more vulnerable to deterioration due to technological change and to manipulation by Microsoft.

Furthermore, the particular conduct requirements in the proposed judgment are far too narrow. Every one of the requirements is weak in some way. For example, consider the requirement to "disclose to ISVs, IHVs, IAPs, ICPs, and OEMs, for the sole purpose of interoperating with a Windows Operating System Product ... the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product." Microsoft and other software vendors like to treat their Applications Product Interfaces (API) as intellectual property. But in good engineering practice these are key parts of the warrantable specifications of a product. This holds in particular for operating systems and middleware, which by their nature are especially intended for, suitable for, and often useless without interaction with other software products. APIs define the quality of that interaction, but they do not provide it. The implementation of an API in program code (which is naturally protected by trade secret, copyright, and patent law) provides the quality of interaction defined by an API. Without access to the complete API, the licensor of an operating system cannot

employ the system freely in the way that good software engineering practice suggests. With complete public access to an API, a software company may still protect its implementation of the API, which contains the real value that it has created. Keeping an API secret does not correspond to keeping the inner workings of a product secret. Rather, it corresponds to keeping the precise function accomplished by that product secret.

So the public interest calls for the widest possible dissemination of API documentation. But the proposed judgment explicitly calls for disclosure of APIs "for the sole purpose of interoperating with a Windows Operating System Product," and only the "APIS and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product." This excludes the use of information about the API to provide competitive platforms for running Windows-compatible software. Keep in mind that Windows-compatible software does not necessarily come from Microsoft. Microsoft benefits from the value added to its operating system products by a large number of less powerful software houses that create Windows-compatible software. By holding the Windows operating system API secret, Microsoft in effect keeps crucial information about other companies' software applications secret, denying those applications the value added by competing operating systems on which they may run.

Compare the Windows market (and the preceding DOS market) to the Unix/Linux/Posix market. Microsoft uses secret and changeable APIs to effectively eliminate competition to provide alternative operating systems running Windows applications. A competing operating system must use different APIs, and therefore cannot support all of the same applications. By contrast, the Posix standard is a completely public API for Unix/Linux. Various companies, such as Sun Microsystems, compete to provide different implementations of the Posix API. Consumers may run Unix/Linux applications on any of these operating systems.

Similarly, in the hardware market for processors, the specification of the x86 instruction set architecture (the hardware analog to a software API), is public. As a result, AMD competes with Intel to implement that architecture, with immense benefit to the public interest. Similar publication of standards in the overall functionality of personal computers led to the immensely beneficial competition among makers of IBM-compatible PCs. The failure to disclose Windows operating system APIs destroys the possibility of similarly beneficial competition among vendors of operating systems.

Very similar considerations to those raised above for APIs apply to communication protocols (for which the proposed judgment provides limited disclosure) and to file formats (not covered in the proposed judgment). Note that Adobe made full public disclosure of its PostScript and PDF formats, compared to Microsoft's secrecy regarding Word formats, and that this disclosure served the public interest immensely by promoting

the wide availability of PostScript and PDF printers and viewers.

There are many other detailed shortcomings of the proposed Final Judgment, including the remaining conduct restrictions and the enforcement methods. I expect that other correspondents will treat some of them.

Sincerely yours,  
Michael J. O'Donnell

Subject: Microsoft Settlement

I'd like to say that I feel that the Proposed Final Judgment conditions of this case are too weak and to specific and that they will allow microsoft to continue to bully and threaten others in the OS and software business. To weak, in the lack of any listed punishments for violation, or ways in which they(the proposed restrictions) will be enforced. Too specific in that it still leaves loopholes open by which microsoft will still be able to NOT release information that would allow competitor to freely compete. Further more, microsoft continues, (even during the anti-trust hearings) to sue, and bully competitors who should be protected by this settlement. The proposed settlement would let microsoft off easy and allow them to continue to threaten others in ways the are not always clear. In some case the very threat of MS is enough to bring down competitors. I feel that the proposed settlement does not go far enough and should be rewritten to include future OS, software, and prevent MS in any way, shape, or form from preventing others from competing.

P.S. make sure to avoid logical flaws(ex. requirements that others must meet but that MS may change at any time)

Peter Osheroff

Subject: Microsoft Settlement

I find the proposed Microsoft Settlement totally inadequate and contrary to the best interests of the citizens of the United States. It secedes the entire Personal Computing industry to Microsoft. At a minimum any settlement should require unbundling the software from the PC hardware and prohibit vendors from requiring the purchase of a Microsoft operating system with their products. I don't do Windows why do I have to pay for it and subsidize a monopoly.

Subject: Microsoft Settlement

Please help consumers and the economy by restoring competition in software. If I want to use some alternative to Microsoft products I must first buy a computer with Microsoft products on it, then remove it, then install the alternative software. But of course no new competitor can ever arise to challenge Microsoft on those terms. If I make product X and somebody must give Microsoft \$100 before they can even try my software how can I possibly compete against that? IBM was investigated for anti-trust but never convicted. Still they were not allowed to pre-install their software onto their computers.

That was a wonderful remedy. Banning pre-loads let sunshine down to the forest floor; An opening for new companies to grow up and innovate. IBM had been overly conservative, obsessed with forclosing distribution channels to their competitors rather than producing inexpensive and innovative products for regular people.

Banning IBM software pre-loads made an opportunity for Microsoft. Now Microsoft has grown to be as oppressive as IBM ever was. They seem obsessed with blocking the growth of upstart companies rather than developing anything of their own. New versions of Windows haven't offered consumers anything to get excited about. Banning Microsoft pre-loads would set the stage for the "next Bill Gates" to come in and do something new and exciting that will capture the public imagination and fire the economy. That certainly won't happen until the government gives the current Bill Gates an ultimatum—"Lead, Follow or get out of the way ." Simply preventing the emergence of competitors might be good for his bottom line, but it isn't innovation and it doesn't do much for the rest of us who don't happen to live in Redmond. Consumers must have alternatives available to them as an option. The only way to guarantee that is to ban software pre-loads. IBM survived this penalty and Microsoft will too. Allowing continued Microsoft software pre-loads would be a government sanctification of Microsoft's monopoly and a blessing to go forth and stangle more innovative babes in the crib like Netscape.

My Opinion for what it is worth I hope that the book is thrown down HARD against Microsoft and the extremely monopolistic practices they have used to stifle innovation and restrict trade with their products.

I feel that the best remedy would be to disintegrate Internet Explorer, Outlook Express, Microsoft Messenger, Office and any number of other programs from Windows, and second, to publish every hook, API and call used to integrate Internet Explorer, Office, Microsoft Messenger, Outlook Express and every other program Microsoft has bundled with it's operating system.

Again, My opinion for what it is worth.

From: Niemi, Timothy  
To: 'microsoft.atr(a)usdoj.gov'  
Date: 1/23/02 7:11pm  
Subject: Microsoft Settlement

Dear Sirs,

I am writing to you because of my concern over severe inadequacies in the Proposed Final Judgment in the Microsoft Antitrust case. I am a software engineer and have been in this business professionally for 13 years. I believe that Microsoft's behavior has stifled innovation and competition, and has hindered much needed progress in the software industry. The flaws in the settlement are so obvious that I feel that I would be wasting my time in discussing

them. My honest opinion is that these flaws are intentional and that the justice system has therefore failed miserably and intentionally. I don't mean to be rude, that's just the way it looks to me.

I will propose an alternate remedy for some of the technical problems. The business problems require addressing as well but that is not my area of expertise. Requiring Microsoft to document all of their API's is a good first step and I will expand on this idea. Microsoft's monopoly power is derived from their control over computing standards especially document standards. In my experience companies purchase new versions of Microsoft software not because it is the best software but because these companies have a legacy of documents in the various Microsoft formats, Word, Excel etc. If there were a competing product with 100% compatibility, I assure you these companies would not hesitate to switch if they believed the competing software was a better deal. As it is, companies have no real choice in upgrading their software. Even if there is a competing product with better performance and even a better price, the issue of document level incompatibility makes these products a non-choice. Requiring Microsoft to rigorously document and publish the internal format of their documents would provide a level playing field for competition. Competing word processor XYZ with 100% MS Word compatible document formats would be a very attractive product for many consumers and businesses. These document formats change with each new version of Word, therefore the formats would need to be finalized and released well ahead of any new version of Word. Otherwise competitors will be playing a never ending game of catch up and Microsoft will always be one step ahead.

It is worth noting that networking standards are also being manipulated by Microsoft. This is an area ripe for corporate exploitation and it is in the public's best interest that this area not be controlled by a single entity. Similar safeguards need to be in place in this area. In closing I would just ask that you please consider carefully what is in the public's best interest. If the situation continues unabated, we can all look forward to continuing decades of unreliable, low quality consumer level software. Home computers can and should be as reliable as any other home appliance. Why is it that our expectations of performance in this area are so much lower than that of other home appliances?

Sincerely,  
Timothy Niemi

Subject: Microsoft Settlement

Dear Dept. of Justice,

I feel that the suggested remedy to Microsoft's monopolistic behavior is counterproductive, and actually serves to further their stanglehold on the computer industry.

Microsoft has plenty of two things: money and software. Asking them to give up either will have no impact on their behavior.

Here is the solution I support—proposed by Red Hat, Inc:

Microsoft had proposed that, in settlement of class-action claims of price-gouging, the company donate computer hardware, software and support to 14,000 poor school districts throughout the United States. Under the proposed settlement, a substantial part of the value provided to schools would be in the form of Microsoft software.

The Red Hat's alternative proposal includes the following:

- \* Microsoft redirects the value of their proposed software donation to the purchase of additional hardware for the school districts. This would increase the number of computers available under the original proposal from 200,000 to more than one million, and would increase the number of systems per school from approximately 14 to at least 70.

- \* Red Hat, Inc. will provide free of charge the open-source Red Hat Linux operating system, office applications and associated capabilities to any school system in the United States.

- \* Red Hat will provide online support for the software through the Red Hat Network.

- \* Unlike the Microsoft proposal, which has a five-year time limit at which point schools would have to pay Microsoft to renew their licenses and upgrade the software, the Red Hat proposal has no time limit. Red Hat will provide software upgrades through the Red Hat Network online distribution channel. A Win-Win Approach

The Red Hat proposal achieves two important goals: improving the quality and accessibility of computing education in the nation's less-privileged schools, and preventing the extension of Microsoft's monopoly to the most-vulnerable users.

So I heard today that AOL is suing MS for basically the same things that the DOJ did. They want monetary damages and they want to uncouple internet explorer from windows. The irony of this is that 2 years ago, AOL bought Netscape, which has always been IE's leading competitor in the browser market.

BUT—AOL continued to use IE, not Netscape, as the browser presented to its subscribers. Yet they want financial compensation from Microsoft for “killing” Netscape by integrating IE with Windows, even though AOL themselves have some 33 million subscribers who they force to use IE over their own

Netscape browser. Now how much sense does this make to you?

Subject: Microsoft Settlement

I would like to add my name to the list of citizens opposed to the settlement with Microsoft. It is a victory for a company that disregarded the law, and still practices with a monopolistic attitude. As an individual citizen, I would not be allowed to snub my nose at this country's laws as they did. And had I broken the law, I would not be offered a tap on the wrist such as has been offered. Their actions were wrong, and the settlement rewards their actions by having no reasonable deterrence by penalizing them sufficiently. They will continue to arrogantly defy the laws of the land, and this settlement encourages such action even on a simple profit basis. The penalty has to be large enough to discourage such actions in the future.

January 23, 2002  
Judge Colleen Kollar-Kotelly United States District Court for the District of Columbia  
333 Constitution Avenue, NW  
Washington, DC 20001

RE: US v. Microsoft proposed final order  
Dear Judge Kollar-Kotelly,  
Introduction

I have read the proposed consent final judgment for USA versus Microsoft. As an American and a taxpayer, I am quite disturbed by the proposed settlement.

It would seem the US Department of Justice allowed Microsoft to place many provisions in the agreement that can be used to undermine the free software movement. Under J.1 and J.2 of the proposed final order, Microsoft Corporation can withhold important technical information from third parties simply based on the idea that Microsoft does not certify the “authenticity and viability of its business,” yet it turns right around and describes the licensing system for Linux as a “cancer” that threatens the end of both the intellectual property rights system and the future of research and development. Wouldn't this licensing freedom simply allow R&D to flourish?

This proposed agreement provides Microsoft with a plethora of strategies to undermine the development of free software. Free Software depends on the free sharing of technical information with the general public, taking advantage of the collective intelligence of the users, who collaborate on improvements in the code. If Microsoft can strangle the access to technical information under a plan sanctioned by the court, and then use its monopolistic power over their clients to migrate users to proprietary Microsoft interfaces, it will stunt the development of any competitors. People would be locked in with Microsoft with no alternatives, as Microsoft continues to hike up its prices for its inefficient products. The movie industry is even known to joke about Microsoft products. A recent space film showed several astronauts gaining control of their craft only after the entire system was “rebooted” due to unknown problems with the software! Consider what Eric Raymond said about the way Microsoft products operate: “Millions of people think that it's right, it's normal to have an operating system so fragile that it hangs and crashes three or four times a week and has to be rebooted every time you change anything deeper than the wallpaper. (Expletive deleted), we knew how to do better than that in 1975!”

In the Halloween documents, published widely on the net, Microsoft executives sent internal memorandums to key personnel suggesting they “dig deeply” into their

customers” computer networks and eliminate any applications of Linux or Unix they found there. I believe the proposed settlement does not address this issue.

Microsoft is also given a very short period wherein they would be required to monitor themselves. Five years is hardly a flash when you consider the case has been in court for at least eight years already. And even within the brief period of the term of the agreement, Microsoft has full license to influence the enforcement effort. Microsoft, despite the courts” decision that they were indeed operating illegally, is given the right to select one member of the three who would be on the Technical Committee>

That person would then help in selecting the third member. The committee is sworn to secrecy, denying the American public any information on Microsoft's compliance with the agreement. They are even PAID by Microsoft, working inside Microsoft's headquarters. It has been suggested that the public won't know if this committee spends its time playing golf with Microsoft executives, or investigating Microsoft's anticompetitive activities. Its ability to interview Microsoft employees will be extremely limited by the provisions that give Microsoft the opportunity to insist on having its lawyers present. One would be hard pressed to imagine any enforcement that would do less to make Microsoft accountable for its actions in the past, which is probably why Microsoft accepted its terms.

In its 1984 agreement with the European Commission, IBM was required to affirmatively resolve compatibility issues raised by its competitors, and the EC staff had annual meetings with IBM to review its progress in resolve disputes. The EC reserved the right to revisit its enforcement action on IBM if it was not satisfied with IBM's conduct.

The court could require that the Department of Justice itself or some truly independent parties appoint the members of the TC, and give the TC real investigative powers, take them off Microsoft's payroll and give them staff and the authority to inform the public of progress in resolving compliance problems. Include an annual report that could address complaints, as well as suggestions for modifications of the order that may be warranted by Microsoft's conduct. The TC could be given real enforcement powers, such as the power to levy fines on Microsoft. The level of fines that would serve as a deterrent for Microsoft would be difficult to fathom, since they have revenue of over one billion dollars a month! But one might make these fines more proactive by directing the money to be paid into trust funds that would fund the development of free software, an endeavor that Microsoft has indicated it strongly opposes as a threat to its own monopoly.

Completely missing from the proposed final order is anything that would make Microsoft pay for its past misdeeds, and this is an omission that must be remedied. Microsoft is not a first time offender, and has never shown remorse for its conduct. They simply repeatedly attack the motives and character of officers of the government and members of the judiciary to justify their

means to the ends. After its long history of evasion of antitrust enforcement and its extraordinarily anticompetitive practices recognized as illegal by the entire DC Circuit court, it is amazing they should be told to monitor themselves as discipline for not monitoring themselves! In one article I read recently, I noticed a settlement of one of the cases against Microsoft included allowing Microsoft to provide the schools across the country with free computers and software. Hmn. Tell a company with a monopoly they can insert their products into the last arena of their competitors. MacIntosh provides the government with computers for schools across the nation; I am sure Microsoft would love to displace them! Someone isn't thinking clearly in DC.

Please consider all the criticisms of the settlement proposal and please take the time to educate yourself about the ramifications of another weak disciplinary action against Microsoft. I believe the public wants more from its court system.

Thank you for your time.

From: George F. Nemeyer  
To: Microsoft ATR  
Date: 1/23/02 7:20pm  
Subject: Microsoft Settlement

I wish to take extreme exception to the proposed Microsoft settlement terms. In particular, the current settlement provisions make a laughing stock of "oversight" of anti-competitive, monopolistic practices of which Microsoft has been found guilty. The continuing stifling of competition by Microsoft's "innovation" which is their catch phrase for taking third-party ideas and

folding them into their monopoly-positioned Windows operating system has continued. They all but killed Netscape, and are now poised to do the same thing with media players, photo processing, and other "applications".

Additionally, the terms of the settlement do not address the issues of Open Source software interoperability or alternative platform/OS interoperative software development. Microsoft will still be allowed to corrupt existing and developing programming standards into "proprietary" Microsoft mutations. They have done this already with a number of Internet standards, most notably with the Kerberos security suite which they plan to use in their .NET initiative. Any satisfactory settlement \*MUST\* ensure that open source and commercial competitors are provided with low-level programming details sufficient to preclude further Microsoft monopoly entrenchment. The current provision which allows Microsoft itself to define which companies are "legitimate competitors" means they may simply ignore any other than those playing on their terms. It's a farce.

I urge you to reject the current settlement terms and seek a solution which provide real teeth in dealing with Microsoft's continuing anti-competitive practices.

George Nemeyer

Subject: microsoft settlement comments

To whom it may concern:  
these should be the minimum requirements for a settlement. a.. Any remedy seeking to prevent an extension of Microsoft's monopoly must place Microsoft products as extra-cost options in the purchase of new computers, so that the user who does not wish to purchase them is not forced to do so. This means that for the price differential between a new computer with Microsoft software and one without, a computer seller must offer the software without the computer (which would prevent computer makers from saying that the difference in price is only a few dollars). Only then could competition come to exist in a meaningful way. a.. The specifications of Microsoft's present and future document file formats must be made public, so that documents created in Microsoft applications may be read by programs from other makers, on Microsoft's or other operating systems. This is in addition to opening the Windows application program interface (API, the set of "hooks" that allow other parties to write applications for Windows operating systems), which is already part of the proposed settlement.

a.. Any Microsoft networking protocols must be published in full and approved by an independent network protocol body. This would prevent Microsoft from seizing de facto control of the Internet. I then point out that if the national interest is at issue, as I believe it is and as the judge has suggested it is, it is crucial that Microsoft's operating system monopoly not be extended, and in this I quote the study released a year ago by

the highly respected Center for Strategic and International Studies, which pointed out that the use of Microsoft software actually poses a national security risk. In closing, I say that all are surely in agreement that the resolution of this case is of great importance, not just now but for many years to come. This suggests a careful and deliberate penalty is far more important to the health of the nation than is a hasty one.

a.. And the porting of the office suite and other Microsoft Development suites (vb, visual studio, etc) to other platforms such as Mac, Solaris. and Linux.

Subject: Microsoft Settlement

Dear Sir or Madam,

I'm sending you this email to add my voice to the many voices asking to be heard regarding the Microsoft Settlement. While I do appreciate the efforts and hard work of your department in this matter, I do believe some key points have been missed. These points have been explained in great detail by Mr. Dan Kegel in his "Open Letter to DOJ Re: Microsoft Settlement" (<http://www.kegel.com/remedy/letter.html>). I have co-signed that letter also.

From my perspective as a software developer and as a decision maker in my organization, I have experienced the effects of Microsoft's anti-competitive practices first hand throughout my career. Through it's dominance, Microsoft has established it's proprietary APIs, Communication Protocols, and File Formats as global standards. Yet these global standards are still 100% under Microsoft's control. Many efforts to compete with Microsoft in serious fields have had to fight a technical uphill battle only to be thrown off by a change in the API or a new "feature" incompatibility.

Microsoft claims that it's competitors are using the legal system instead of competing on the technical level. In reality that is exactly what these competitors are asking for; opening up the APIs, the Communication Protocols and the File Format standards will level the playing field. It then becomes a matter of pure technical superiority that determines market share dominance and not marketing, entrapment, or intimidation muscle. That will unleash the industry's potential energy and benefit the economy and the American people.

With kind regards  
Ahmad Baitalmal

**MTC-00019249**

From: Justin White-Lowther  
To: Microsoft ATR  
Date: 1/23/02 7:23pm  
Subject: Microsoft Settlement

It is my opinion that the proposed settlement of the Microsoft anti-trust case is a wholly inadequate remedy to such anticompetitive practices as have been established by the court. Particularly egregious is the failure of Section III.A.2 to forbid retaliation against OEMs which ship personal computers including a single non-Microsoft operating system; this allows Microsoft to use its market dominance to force the inclusion of Microsoft operating systems on all personal computers produced by an OEM. The OEM must then choose between including and supporting two operating systems on every system or the Microsoft operating system only. As the former choice will often be relatively expensive and impractical, this section will, while nominally allowing competition, sanction the occurrence of said "competition" upon uneven terms, effectively reinforcing the established monopoly.

For this reason, I strongly urge the rejection of this proposed settlement.

Justin White-Lowther

Subject: Microsoft Settlement

To whom it may concern.  
I feel that you are caving in to whatever political pressure has been brought to bear regarding the pitiful settlement in the Microsoft case. Microsoft has been found (and upheld in appeals) to be a predatory monopolist and all the DOJ is doing is slapping them on the wrist and allowing them to continue to buy/steal/lie/cheat to gain market share in new markets and retain control in their existing markets. Past experience with Microsoft should show you that Microsoft will squirm around any rules that are invoked and not have to follow anything but their own instinct for domination of any market that they want. I feel that you should step back and listen to people that are not on Microsoft's payroll (including the politicians) and force some harsh penalties on them. Microsoft is not responsible for the economy and is not the sole support for the IT industry. Bringing competition back into the market will have a greater and more meaningful impact on the industry than allowing Microsoft to continue their dominance. Do not allow Microsoft to continue bundling anything they want into the operating system especially when its sole purpose is to gain market share from others. We are not crying for more capabilities (which also translate into more security holes for hackers)—we want an operating system that is stable and will allow us to get the best software out there to use on it!

Your current settlement stinks!

 Subject: Microsoft Settlement

I would just like to say that I have read about the proposed settlement, and I am not in favor of it in its current state. The proposed Settlement would have little effect upon the business practices of Microsoft. If adopted in its current form the result will be no change to the behaviour of Microsoft, and yet another prolonged court case in another year or so. I don't feel the settlement levels the playing field for competing operating systems or office software, and would like to see a much stronger penalty imposed. The proposed settlement does not sufficiently relieve Microsoft of the ability to leverage hardware and computer manufacturers unfairly against competing products, nor does it adequately open the Windows API to programmers.

So, any effective settlement must concentrate on opening up the markets that Microsoft has effectively closed by its use of proprietary interfaces, file formats, protocols and strongarming OEM's. I urge you in the strongest possible terms to reject this settlement and seek stronger action against Microsoft.

 To: Microsoft ATR  
 Date: 1/23/02 7:29pm  
 Subject: Microsoft Settlement  
 To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general.

While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Sincerely,

To whom it may concern,  
 The DOJ's proposed settlement with Microsoft is ridiculous. The only thing that giving Microsoft Software to schools will do is to entrench Microsoft even further in the marketplace. They're in an unassailable position now, why make it worse for competition. Everyone in this industry knows that if you capture education, then those same people will eventually become decision makers who dictate purchase of your software.

Please reconsider this mess before it's too late. Microsoft is getting off with less than a slap on the wrist; they're getting off with federal enforcement of their marketing plan to become even more entrenched in education.

With good wishes,

From: Jason Scheirer  
 To: Microsoft ATR  
 Date: 1/23/02 7:30pm  
 Subject: Microsoft Settlement  
 To Whom It May Concern,

As a young professional in the computer industry, and as having been a personal computer user for most of my life, I have watched competitors wither and disappear from the industry as Microsoft's actions have locked users into a proprietary Windows environment. I have a few problems with the Final Judgement:

B.1: Microsoft already bundles several different language display abilities with certain newer versions of Windows such as 2000 and XP. Allowing them to charge different royalties on each version, though making sense to cover costs for translation and technology adaptations, does not with an already multilingual system. This could encourage the company to split apart their language versions of Windows again. A decision like this is not beneficial to consumers, especially students of mutliple languages who do not have the budget to buy a more expensive version, or separate expansion pack, of Windows when it currently does not require such an additional purchase for additional linguistic capability.

E: Along with communications protocols, there should also be a stipulation that opens file format standards and perhaps a regulatory industry committee to keep the standards comaptible and open through the industry. A major reason that so many people use MS Office, aside from the OEM bundling, is because a closed set of file formats (such

as Word's) make it difficult, if not impossible, to use a competing product such as Wordperfect without the application having to reverse-engineer the format. This forces the ownership of the product to exchange documents, which has caused me to buy and continue to upgrade Word though I use a competing Word Processor to be able to interchange documents with friends, family, professors and co-workers.

H.1: Microsoft should make it possible to completely remove parts of its software from the operating system if a competing technology provides similar functionality at system startup.

J.2: Require any API extension to be approved back to Microsoft. This still gives them an exclusive right to control and oversee all OS proceedings, and quite possibly reject "non-compliant" extensions by a third party which it may interpret as a threatening or competitive technology without needing to legally justify that it is not simply violating section one of the prohibited conduct, but trying to "maintain standards compliance".

Also, many hobbyists and not-for-profit organizations now are major suppliers and developers of software which competes with Microsoft. These non-businesses will not be technically able to be eligible for a "business need" to access such software. These not-for-profits are a driving force of the industry as well as indispensable tools to industry professionals: examples include the Apache group and Sendmail. Also please keep in mind that organizations may now be not-for-profit in the environment because of fear of being edged out of the industry by Microsoft's past and present practices. From the real world, many security holes from these open and not-for-profit systems have been found and have resulted in stabler, more secure applications due to open APIs and source code in some instances. For the sake of national security, perhaps some of the Microsoft APIs should be completely open to allow for outside-the-company advances in its security, which seem necessary in light of recent events with IIS worms running rampant as well as the global climate, with the U.S. being threatened by stealthier enemies, including ones who may exploit holes in the most used Operating System in the United States as a form of terrorism.

From: James DuWaldt  
 To: 'microsoft.atr(a)usdoj.gov'  
 Date: 1/23/02 7:33pm  
 Subject: Microsoft Settlement  
 Ladies and Gentlemen,

I am writing under the Tunny Act to express my dissatisfaction with the proposed settlement with Microsoft. In particular, I believe that:

1. Microsoft should be required to publish the specifications of its file formats and should explicitly agree to not prosecute anyone who reverse-engineers them. This will allow competitors to emerge for, in particular, Microsoft Office, which currently owns approximately 90% of the office software market.

2. Microsoft should be required to publicly disclose the signature and functionality of any operating system interface used by any of its applications, without any form of reciprocity from anyone for any reason whatsoever. All should be able to see it; the notion that Microsoft can withhold technical information from third parties on the grounds that Microsoft does not certify the "authenticity and viability of [the third party's] business" is unnecessary (and, ironically, perhaps even an unfair burden on Microsoft).

3. There should be some sort of monetary penalty for past misdeeds. For example, it has been proposed that Microsoft should give approximately 1 billion dollars worth of equipment and software to poor schools but it has been (correctly, I believe) noted that this will harm competitors. Therefore let Microsoft simply give the schools money, with no requirements attached to its use. Schools can buy computers, repair buildings, whatever, on the theory that the schools will know their needs better than Microsoft. Thank you for taking the time to read my response. I hope there is something useful in it for your consideration.

 Washington, DC 20530-0001

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I do not believe that the currently proposed settlement will be effective in restraining the anti-competitive practices of the Microsoft corporation nor do I believe this settlement is in the public's interest.

In particular I believe that the proposed remedies have been drafted too narrowly to effectively erode the current barriers preventing independent software vendors from competing with Microsoft products.

Additionally the Proposed Final Judgment does not appear to have an effective enforcement mechanism. Considering Microsoft's history of violating decrees and their behavior during this proceeding this seems a grave oversight.

I am very impressed with the revisions that have been made to the proposed settlement. The Department of Justice has done a fine job closing many of the loopholes that troubled me in previous versions. I have full faith and confidence in your ability to craft a document that will dramatically improve the software market. I am an independent consultant who has provided advice and service to over one-hundred companies. I have no loyalties to any vendor or system. I am engaged in the practice of seeking out the best solutions for my clients. To that end I have recommended solutions based on products from Microsoft, Novell, Cisco, Apple and others as well as unix solutions including linux, FreeBSD, OpenBSD and Solaris. In many cases I have advised clients to standardize on Microsoft products even though the Microsoft offering was dramatically inferior and more costly than alternatives. The dominance of Windows combined with Microsoft's history of intentional barriers to interoperability (as demonstrated in Caldera v. Microsoft) made Microsoft the only safe choice. I have often counseled clients that while a system would work today Microsoft could make changes to their operating system that would shut down their network. An example (if memory serves) was Windows Service Release 1 (SR-1) which had extensive problems with Novell products. While Microsoft soon released a fix (SR-1a) the cost of the resulting downtime was huge.

The only remedy that I see being effective is to require Microsoft to publish the specifications of all their API's and file formats. Unfortunately this would force Microsoft to compete fairly and I doubt they would go along. I have persuasive arguments for how this would not unfairly hurt Microsoft and would generate a new renaissance among programmers. But since I don't think it will happen in my lifetime I will stick to more practical solutions in this letter.

I would like to suggest two more loopholes to address.

Part III, Section D reads in part: "Microsoft shall disclose ..., for the sole purpose of interoperating with a Windows Operating System Product ... the APIs and related Documentation that are used by Microsoft Middleware to interoperate with a Windows Operating System Product."

I see two problems with this sentence.

The phrase "for the sole purpose of interoperating with a Windows Operating System Product" should be struck. This does not allow projects such as WINE <<http://www.winehq.com/>> and Lindows <<http://www.lindows.com/>> that are designed to create alternate environments for ISV's. This is a huge loophole which is also present in Section E.

The limitation of the proposal to "Middleware" is arbitrary. If anything this is a battle that has already been fought and won by Microsoft. The products defined as

"Microsoft Middleware Product" in section IV does not address vital technologies such as .NET, C# or even Outlook (as differentiated from Outlook Express, which is a different product with a similar name.) While there is a provision that could apply the "Middleware" definition to anything Microsoft trademarks that clause is very broad and would not be enforceable.

Even if an ISV (college student in his dorm room) decided to fight Microsoft's lawyers the war would be over before a judge saw the case. In most cases (such as the lawsuit Microsoft currently has against Lindows) the mere threat is enough to stifle competition. Part IV Section J reads:

"Microsoft Middleware" means software code that

1. Microsoft distributes separately from a Windows Operating System Product to update that Windows Operating System Product;
2. is Trademarked;
3. provides the same or substantially similar functionality as a Microsoft Middleware Product; and
4. includes at least the software code that controls most or all of the user interface elements of that Microsoft Middleware.

Software code described as part of, and distributed separately to update, a Microsoft Middleware Product shall not be deemed Microsoft Middleware unless identified as a new major version of that Microsoft Middleware Product. A major version shall be identified by a whole number or by a number with just a single digit to the right of the decimal point.

I am not a lawyer, but this section disturbs me for two reasons. "Microsoft Middleware" is distributed separately from the Operating System. All of the products listed in Section K are distributed with the Operating System. Are they "Microsoft Middleware" or not? If their status depends on an alternative distribution method can Microsoft make any product immune to this proposal my only bundling it with Windows? Frankly I'm confused. It seems to me that the status as "Microsoft Middleware" is determined by version number. By this definition Windows XP is not a major revision! If the first release of a new browser is "Internet Explorer 12.00000000000000" is it a major revision?

I thank you for taking the time to read all the way through this. I know I am not a great writer.

If you wish to hear more of my opinions you can respond by email or call me at (650) 274-7755.

Sincerely,  
Dan Wright

Microsoft should be punished.

I am very concerned by the current settlement proposal. When someone is found guilty of a crime, justice is only done when the felon has been punished to the extent that they have seen the error of their ways and will no longer continue to be a threat to old or new victims.

Microsoft continues to admit no wrong doing. It is very unlikely that they will change their practices because what they have brought to the technology industry is not innovation, despite their claims, but ruthless appropriation of new technologies. They have used a myriad of illegal practices to enter niche markets. By leveraging their capital, their marketing propaganda abilities, and system software monopoly, Bill Gates' offering to the technology industry is more like Attila the Hun than Edison. Microsoft lays siege and destroys any would-be competitors through brute force. Until they are bound by some legal power, they will continue to act in this manner.

The current settlement does nothing to change Microsoft's behavior, in fact, as many industry analysts have attested, it will probably only extend their monopoly to new markets. This wrong must be corrected in such a way that competition in the industry is restored.

Thanks.

-c!

From: George Czerw  
To: microsoft.atr  
Date: 1/23/02 7:34pm  
Subject: Proposed Microsoft Anti-trust Settlement

As a 30 year veteran in the networking side of the computer industry, I have watched as the Microsoft Corporation has been allowed either buy out or bury (beginning with the Digital Research Corporation and continuing through IBM's attempt to collaborate on OS/2, the Novell Corporation's marketing of NetWare and Netscape's marketing of its own Netscape Web browser) hundreds, if not thousands of what used to be innovative, independent software companies. Outside of stealing or buying the technologies developed by others, the Microsoft Corporation has done little in the way of true, original innovation, and in my opinion, Microsoft's financial success has been dependant upon allowing its arrogant, deep-pocketed, overbearing Marketing Department to blitzkrieg its competitors, threaten computer hardware vendors into offering nothing but Microsoft's own operating system, and otherwise bamboozle both the government and the general public into believing that Microsoft's bloated, ill-conceived, poorly designed, poorly performing and security-vulnerable software is the best software offering in the world.

I find it appalling, laughable, and sickening (yes, all three at once) that both the Bush Administration and the DOJ would take a position which suggests that a "just penalty" would be to allow the Microsoft Corporation to convert millions or billions of its dollars for the purpose of providing computer hardware and its own computer software to the US primary and secondary educational systems. You people must be daft, for those educational systems are among the few markets which have always been dominated by the Apple Computer Corporation, and in which the Microsoft Corporation has never been able to gain a significant foothold, despite its best efforts.

It is past time that the Federal Government and the White House stopped shamelessly pandering to those special interests, corporations and individuals who are large campaign contributors and begin listening to and protecting the interests not only of the general public but also of the corporations and businesses who have not agreed with or contributed to the coffers of the party in power.

The only thing that the Microsoft Corporation understands is brute force, and it deserves no less a penalty than that which was given to Standard Oil and AT&T.

For the good of this country and its citizens, break Microsoft up into small pieces

and do it now! Only then will the nation see some true innovation and competition in this nation's software industry.

From: Doug Matthews  
To: Microsoft ATR  
Date: 1/23/02 7:29pm  
Subject: Microsoft Settlement

Dear United States Department of Justice,  
As a US citizen and computer programmer, basically someone who has a lot riding on the health of the technology industry in the US, I want to let you know how I feel about the proposed settlement with Microsoft. I do believe that the best thing for any industry is free and fair competition. And I do believe that at the beginning of the personal computer era Microsoft was a great catalyst for bringing the power of computers to the masses, their focus on the customer was second to none and their success is a testament to their hard work and smart management. However, Microsoft's recent behavior in the market place is no longer beneficial to consumers because they have monopoly power and have shown that they are not afraid to use it.

Unless the settlement with Microsoft is reworked I'm afraid it will send the wrong message; that it is OK to play fast with the law as long as you have enough cash and enough lawyers to fight the court cases long enough. I am particularly worried about them forcing contractual restrictions on hardware vendors and also keeping those vendors from innovating above and beyond the standard Windows desktop.

I would like to believe that some kind of oversight of Microsoft will work, but again, call me cynical, but Microsoft is big, powerful, very rich and not afraid to take on a fight, even with the US government.

This really is one of those big, important cases that will shape the course of history, definitely the history of the technology industry. I really do wish that a "hands off" approach would work in this situation, but

I honestly don't see that happening here with Microsoft, they are a monopoly and have to be treated as such. Did they break the law? I believe the answer is yes. Is the proposed remedy an appropriate punishment? I believe the answer is no, it is more a slap on the wrist and won't stop there anti competitive behavior. This is one time where we truly need the government to step in and right the wrongs.

Sincerely,  
Doug Matthews

Under the Tunney Act, I wish to comment on the proposed Microsoft settlement. I was shocked and dismayed when I heard the proposed settlement offered by the Justice Department. It had weaker remedies than even the US Appeals Court had already

declared as sensible. Microsoft is in court as a repeat offender. The current antitrust suit, in which a federal district court and an appeals court have both affirmed that Microsoft is a monopoly and that it has abused its monopoly powers, arose out of the failure of a previous consent-decree settlement of an earlier antitrust case.

Microsoft must not be given another wrist slap and allowed to expand even further its monopolist ways. It is now extending its monopoly into the entertainment, news, game software/hardware, cableTV and Internet. Combine this with their huge cash reserves (which the SEC should be looking into as to why they are not distributing it as dividends to their shareholders) they will be able to control public opinion and the politician's wallet/mindshare. If they are not stopped now, they will shut down innovation in every key sector of our economy. To quote Dan Gilmore, Technology Columnist of the San Jose Mercury News:

“Sellout” isn't too strong a word to describe the U.S. Justice Department's settlement with Microsoft. Neither is “dangerous.” This deal, assuming it takes hold, is not even a wrist slap. It's a love letter to the most arrogant and unrepentant monopolist since Standard Oil. It's an invitation to keep on plundering and whacking competition in the most important marketplace of our times, the information marketplace. ...

The settlement not only doesn't even force the company to stop doing what eight federal judges found illegal, but it provides no penalty for the illegal acts. Locking in the ill-gained profits of crime—bank robbers wish they could get such dispensation.” —

From: Field, Alan  
To: “microsoft.atr(a)usdoj.gov”  
Date: 1/23/02 7:36pm  
Subject: Microsoft Settlement

To whom it may concern,  
I am a Software Quality Assurance Engineer with over 10 years of experience in this industry, and I believe that the currently proposed settlement does not do anything to level the playing field for Microsoft competitors or to punish Microsoft for leveraging its monopoly. In order to improve the settlement, it should include the following provisions:

1) Microsoft must document any API used to integrate an application with the operating

system—I don't have a problem if Microsoft bundles additional applications with their operating system. I DO have a problem when they add additional private APIs to their monopoly operating system so that these applications can act in an integrated way with the operating system. This allows the bundled applications to have advantages that no third-party software developer can duplicate. This is an unfair advantage that Microsoft has used in the past and will continue to use under this agreement.

2) Microsoft must publish the specifications for their document formats—Many people use Microsoft applications because their colleagues or friends use these applications and send documents from these applications. If the user wants to use different applications, he usually can't because he can not use his existing documents in a non-Microsoft application. To make matters worse, Microsoft does not document their file formats, so third-party developers must reverse engineer these formats. Since most software companies are smaller than Microsoft, this causes a drain on their R&D departments, and is a substantial barrier to entry in the Office Productivity market segment. Microsoft should document their file formats, so that a computer user's data to restore choice to the Office Productivity market.

3) Microsoft must not be allowed to prevent hardware manufacturers from installing alternative operating systems—This provision will help to increase competition in the operating systems market. The contracts that Microsoft signs with hardware OEMs in the past has prevented these OEMs from either installing other operating systems on the machine or altering the boot process to allow launching another operating system. This basically killed the BeOS. The barrier to entry in the operating system market is large, and this makes it even harder to compete. If you can't get the product installed on your hardware when you buy it, how will you ever appeal to a normal computer user?

4) Microsoft should pay a big fine!—Currently Microsoft has a huge amount of cash on hand. Cash that is ill-gotten gains from abusing their monopoly power. They should be fined as an example to other companies that the anti-trust laws are still considered important in this country.

In conclusion, I don't think the current settlement agreement improves competition or punishes Microsoft for their wrongdoings. Please try to remedy this.

Thanks for your time,

Dear USDOJ:

I do not support the proposed final judgment. Microsoft has been ruled a monopoly, and significantly more must be done to end the illegal monopoly than what the DOJ currently proposes. There are many highly qualified experts in the legal and technology professions who have strongly criticized specific proposals in the DOJ's settlement. I believe that these expert's opinions have not been included, and they deserve greater representation.

Thank you for your time.

From: Mike Myers  
To: Microsoft ATR  
Date: 1/23/02 7:33pm  
Subject: Microsoft AntiTrust settlement

Just a quick note weighing in on the proposed remedies to the Microsoft AntiTrust case.

As a previous owner of a software development firm that was forced to sell out to Microsoft, I can verify first hand that Microsoft; IS a monopoly, HAS a monopoly, ABUSES its monopoly. I thought that was acknowledged legally, in a Federal Court, none the less. Then I read about the “slap on the wrist” measures that the DOJ has agreed to in their proposed settlement. Surely the suppression of rival technologies, suffocation of emerging technologies via FUD press releases, and heavy handed licensing practices warrant far greater remedies than what is proposed in the current settlement. The talking heads say that the DOJ ultimately went soft because of the potential damage to our economy that truly effective penalties would have caused. Well that approach marginalizes the massive damage to innovation and entrepreneurial pursuits that Microsoft's business practices have already caused over the last decade. I urge you to reconsider, withdraw from the current proposed settlement, and work to formulate something that truly sends a stern message to the officers of this criminal corporation. Business as usual at Microsoft should no longer be swept under the rug, shrugged off as the activities of a company that just got “a little aggressive, a little over-competitive.” Their policies and attitudes, both towards their competitors and their customers, more resemble a local thug shaking down local

businesses for protection money, rather than a respectable member of the business community.

Thank you for your kind attention,  
Michael Myers

To Whom It May Concern:

I am opposed to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does not fully redress the actions committed by Microsoft in the past, nor inhibit their ability to commit similar actions in the future.

The vast majority of the provisions within the settlement only formalize the status quo. Of the remaining provisions, none will effectively prohibit Microsoft from abusing its current monopoly position in the operating system market. This is especially important in view of the seriousness of Microsoft's past transgressions.

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefited from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

Subject: Microsoft Settlement

Under the Tunny Act, I would like to comment on the Proposed Settlement in the Microsoft case.

As far as I can see, the settlement does absolutely nothing to stop the behavior which started the case. During the period that the case was being heard, Microsoft has, in fact, increased this behavior. Furthermore, their reckless release of very poor software has lead to increasing security problems for the whole of the internet, including non-Microsoft systems. This has increased to the point of being a threat to the national security. If the Proposed Settlement goes into effect, Microsoft will be free to continue to increase their hold on the market, not thought customer desire, but by

manipulation of technical standards to drive competitors out.

Sincerely  
James S Wadell

From: Roger Rasmussen  
To: Microsoft ATR  
Date: 1/23/02 7:38pm  
Subject: Concerning the proposed MS vs. DOJ settlement

To: Renata B. Hesse  
Antitrust Division  
U.S. Department of Justice  
601 D Street NW  
Suite 1200  
Washington, DC 20530-0001

I have been following the Microsoft vs. DOJ trial since its beginning. As a professional software developer I have followed desktop computer technology for many years, I've seen many competing and often technologically superior competitors slowly be snuffed out of the market because of the unique position Microsoft has by controlling the operating system that everyone else must build upon. In the early days, there were competing versions of DOS from other companies, competing office suite software, and other types of software that never saw the light of day for very long in the consumer marketplace because of the stranglehold Microsoft has had on PC and hardware developers. Microsoft's deal with OEM's have always been exclusionary, threatening to pull licensing for Windows if the manufacturer decides to offer other operating systems or software that directly competes against Microsoft. Because DOS/Windows has always held the lions share of the market any PC manufacturer that refused to go with Microsoft's wishes suddenly would find themselves at a big competitive disadvantage. The average PC consumer is used to having everything pre-installed because they don't want to bother themselves or are afraid to attempt it. Microsoft understood this and realized that by controlling the OEM, they could effectively control the software people would use. Microsoft continues to use these strong-arm tactics today even while the litigation is proceeding. PC manufacturers have always had to bow to Microsoft's wishes on what to pre-install because if Microsoft revokes the manufacturers' ability to pre-install Windows, consumers would go elsewhere. This effectively forces PC manufacturers to do Microsoft's bidding.

A truly open, competitive environment is one where systems are open and understood and the foundations to build a great computing experience are available on an

equal basis to everyone wishing to compete. Also, a truly open market would allow equal access to software vendors seeking to have their products pre-installed on consumer systems. Microsoft has been able to put itself into a position where it can determine the reach of its competitors and always tilt the balance in its favor by owning the underlying operating system that is the foundation for building the software we use today.

The idea of allowing Microsoft to provide computers and its software to poor schools is noble, but it only serves to further Microsoft's monopoly power and make more people dependent on its technology. A modified form of this, such as providing Macintosh's would make more sense. In any case, the only real way to fix the problem is to force Microsoft to open up its platform (file formats, API's, etc) and end its exclusionary licensing practices so that other software companies products can compete on an equal footing.

I hope the final settlement will include a serious resolution to the stranglehold Microsoft has on PC manufacturers. This I believe is the only true way to allow competing operating system platforms, as well as applications software to be presented to a wide audience. The manufacturers themselves should be able to license and install what they believe to be in their own competitive interests, not Microsoft's.

Sincerely,  
Roger Rasmussen

Subject: The microsoft settlement is inadequate]

Dear Sir,

It is my opinion that the current settlement in the Microsoft vs. DOJ antitrust suit is inadequate. It does nothing to redress the past grievances committed by Microsoft nor is it structured to prevent further abuses by them. All it does is enshrine the status quo. Clearly the anti trust laws that are in place are meant to do more than this and a strong U.S. economy requires far more. How can America stay at the forefront of technology if Microsoft is allowed to stifle technical innovation simply by leveraging its overwhelming size? While the DOJ might find this settlement to be adequate, it is clear that they are not well informed enough (or unbiased enough?) to reach a settlement that redress past and prevents future grievances. Please consider this a vote AGAINST the settlement and on that is in favor of a

decision that is AGAINST Microsoft's interests.

Thank You,

Subject: Microsoft Settlement  
to whom it concerns:

I am writing this e-mail in the hopes that you will represent the voices of millions of Americans who cry out for justice in this matter. The morale amongst most of my fellow citizens is at an all-time low for obvious reasons. The corruption in our government and its links to shady corporations such as Enron and the Carlyle Group, has all but ruined our faith in this country's declining integrity. We look to you to restore some of that lost faith. It is plain to see that Microsoft has been operating as a vicious monopoly for years without so much as a slap on the wrist. Their proposed settlement, which was gratefully rejected, was a clear indication of the company's disregard for our anti-trust laws. With the audacity of a spoiled child, they have successfully wiped out much of their competition, leaving only scraps of the market share to be divided amongst the more tenacious surviving entities such as Apple, Netscape, etc. The biggest fear is that Microsoft's greed is so contagious that it will corrupt the minds of those deciding their fate in the end. I sincerely hope that this is not the case and that you will help to destroy their tight circle of corruption. I am not entirely against Microsoft. I use quite a few of their products everyday and find them to be invaluable resources. Regardless of this fact, they should rely only on the quality of their products and the presentation thereof to finance themselves without indulging in unethical and downright immoral business practices to suppress their competition. It is my understanding that this is not the only suit brought against them. As AOL and Netscape file their claims, I trust that you will do what is right in the eyes of this great nation and not give in to the sway of these greedy monopolizers.

thank you for listening

Subject: Microsoft Settlement

Hello,  
Being an expert computer user since the mid 1980's I have watched Microsoft turn from a beneficial software company who thought of the customer first to a monopolistic, ego driven corporation seeking to make more money than they actually need. The last Microsoft operating system I purchased was Windows 98. Now I run Linux and find it to be a blessing being as 95% of the software is free and extremely more dependable than anything from Microsoft. It is my opinion that Microsoft needs to be split into two companies and the two companies CANNOT work with each other directly.

The most important thing is that the operating system company cannot bundle Internet Explorer with the system software—leave that up to the commercial software half

of Microsoft. In my copies of SuSE Linux there are numerous browsers included with an install: KDE's Konqueror, Opera, Netscape, Mozilla, and Lynx. This allows me to choose which browser I want to use and allows the browser companies to have fair and unbiased views of their customers. On the other hand Microsoft pretty much runs the browser business for win32 operating systems and its either IE or crippled installs of Netscape. Unfortunately Opera isn't proclaimed much due to Microsoft's overwhelming market presence.

It is in the opinion of this system administrator, technology guru, and unbiased operating system user that Microsoft be split in half and allow for better market competition.

Jake Loewen

From: Peter Bombard  
To: Microsoft ATR  
Date: 1/23/02 7:38pm  
Subject: Microsoft Settlement

Dear Sir/Madam:  
I am strongly against the proposed settlement with Microsoft. While I agree that breaking up the company is not the right answer, almost none of what is in this settlement appears to actually remedy the previous behavior of Microsoft or prevent the future repetition of that behavior.

This settlement appears to do little more than capitulate to Microsoft while providing only an appearance of remedy.

Unlike the Findings of Fact, the settlement defines "API" (Application Programming Interface) in such a way that Microsoft would be able to avoid full disclosure on the most important APIs they control. The definition in the settlement needs to be returned to the language of the Finding of Fact. Unlike the Findings of Fact, the settlement defines "Middleware" in such a way that Microsoft would be able to exclude any software from being covered by the definition. The definition in the settlement needs to be returned to the language of the Finding of Fact.

Important software packages from Microsoft that were included in the Finding of Fact are excluded by the settlement, such as Microsoft Office or the full version of Microsoft Outlook. The software packages that were identified in the Finding of Fact as contributing to Applications Barrier of Entry need to be included in the settlement.

The settlement defines a "Windows Operating System Product" to be only

Windows 2000 Professional, Windows XP Professional, Windows XP Home and all of their successors. This ignores other versions of Microsoft windows that can be leveraged through their monopoly, as non-Intel hardware is leveraged in the marketplace currently occupied by Windows XP Home.

The settlement does not require any advanced notice of technical requirements, but requires vendors of competing middleware to meet "reasonable technical requirements" seven months before new releases of Windows. Microsoft could then change their requirements shortly before release and not notify said vendors. The settlement needs to require Microsoft to provide vendors with advanced notice of technical requirements, specifically in time for them to achieve the seven month deadline.

The settlement mandates that API documentation for release far too late in the process to be of help to vendors of competing products and certainly not in time for them to meet the seven months prior to release deadline. Vendors need access to this information much sooner. The settlement needs to require Microsoft to provide vendors with advanced access to API documentation, specifically in time for them to achieve the seven month deadline.

Important APIs and file formats would not be covered by this settlement and would render the utility of such requirements in question without their inclusion.

Undocumented file formats are included in the Applications Barrier to Entry in the Findings of Fact and are an important component in Microsoft's ability to maintain their monopoly. The settlement needs to be brought in-line with the findings of fact.

The settlement places unnecessary restrictions on the access of released information by competing vendors and would serve to reduce the resources of any vendor that developed for operating systems other than Microsoft's. The settlement MUST not be used to create further barriers to entry; these restrictions must be eased.

The settlement does nothing to address Microsoft's discrimination against vendors who support non-Microsoft operating systems and in fact allows Microsoft to specifically act against vendors who ship systems with ONLY non-Microsoft operating systems. I believe this is wrong and not in the public's interest. I believe that language specifically protecting the ability of vendors to ship only systems without any Microsoft operating system installed should be included.

The settlement allows Microsoft to discriminate against vendors who ship Open Source Applications. I believe this is wrong and not in the public's interest. I believe that language specifically protecting the ability of vendors to develop for both Microsoft and Open Source applications should be included.

The settlement allows Microsoft to discriminate against vendors who target Windows-Compatible operating systems. Additionally, the settlement allows Microsoft license to restrict end users from using Windows-Compatible operating systems. I believe this is wrong and not in the public's

interest. I believe that language protecting the ability of both vendors and end users to work with Windows-Compatible operating systems should be included.

These highlight my major disagreements with the settlement and I hope will suffice to express my concern with the proposal. There is little or nothing that I can find in the document that actually appears to serve to truly remedy the behavior that was identified by the Finding of Fact and upheld by the Court of Appeals. I believe this settlement is bad and does not serve to further the Public interest.

Thank you for your time.

Sincerely,  
Peter W. Bombard

**MTC-00019309**

From: Zach Johnson  
To: Microsoft ATR  
Date: 1/23/02 7:40pm  
Subject: Microsoft Settlement

The proposed settlement is bad idea. I have several issues with the Microsoft settlement, as outlined below:

(1) The Microsoft Platform SDK, together with Microsoft Visual C++, is the primary toolkit used by businesses to create Windows-compatible applications. The Microsoft Platform SDK EULA says: "Distribution Terms. You may reproduce and distribute ... the Redistributable Components... provided that (a) you distribute the Redistributable Components only in conjunction with and as a part of your Application solely for use with a Microsoft Operating System Product..."

This makes it illegal to run many programs built with Visual C++ on Windows-compatible competing operating systems.

By allowing these exclusionary behaviors, the Proposed Final Judgment is contributing to the "Applications Barrier to Entry" faced by competing operating systems. That is, through illegal practices Microsoft is stifling other operating systems such as Linux and FreeBSD by limiting their software libraries. Linux and FreeBSD use middle-ware called WINE to run software created for Windows. If Windows software is bound by the above license it then becomes illegal to use this software with WINE.

(2) The Proposed Final Judgment supposedly applies to "Windows", but it defines that term so narrowly that it doesn't cover Windows XP Tablet PC Edition, Windows CE, Pocket PC, or the X-Box—operating systems that all use the Win32 API and are advertised as being "Windows Powered".

(3) Microsoft Corporation makes both the operating system Windows and software which runs in Windows such as applications and video games. Because this corporation created the operating system, it gives them a significant advantage in designing software for that operating system, not to mention the fact they can integrate their software into the operating system installation. This is unacceptable.

I myself design software for Windows, often applications or games which directly compete with software written by Microsoft. If they wished to put their competition (that's me) out of business they would simply need to ship the Windows operating system with their version of the software pre-installed. Allow me to give you a specific example. Microsoft recently started marketing their MSN Messenger software. MSN Messenger is an Instant Messaging program that allows users to chat on the internet. I have recently

created an Instant Messaging program of my own which offers new and unique features not available with MSN Messenger.

Unfortunately for me, computers running Microsoft Windows often come with MSN or MSN Messenger pre-installed onto the Windows desktop. If they aren't pre-installed then their corresponding webpages are often linked to. Microsoft exploits the fact that they created the operating system and gives their software an unfair advantage. Microsoft should not be allowed to place any software, or links to software, on the Windows desktop. The items that appear on the desktop should be free for computer manufacturers to decide, such as Gateway, Dell, and Compaq. Even better would be to break Microsoft Corporation into two entities, one for Operating Systems and one for Software. Beyond this I also agree with Dan Kegel whose views can be seen here: <http://www.kegel.com/remedy/>

Thank you,  
Zach Johnson Minneapolis, MN

Most important, the proposed settlement does nothing to correct Microsoft's previous actions. There are no provisions that correct or redress their previous abuses. They only prohibit the future repetition of those abuses. This, in my opinion, goes against the very foundation of law. If a person or organization is able to commit illegal acts, benefit from those acts and then receive as a "punishment" instructions that they cannot commit those acts again, they have still benefitted from their illegal acts. That is not justice, not for the victims of their abuses and not for the American people in general. While the Court's desire that a settlement be reached is well-intentioned, it is wrong to reach an unjust settlement just for settlement's sake. A wrong that is not corrected is compounded.

I also cannot resist to comment that one form of solution I haven't seen in the public commentary has been to enforce that Microsoft, or every software maker possibly, to openly and freely publish the interfaces for interoperating with their software. To be precise, this would mean publishing APIs and File Formats (namely Microsoft Office file type formats and Win32 API). This remedy is extremely easy to produce technically and removes the possibility of illegal "binding". Anyone with enough technical experience can build a competing product and Microsoft (or any business) does not have to give away the source code to their products.

Subject: Microsoft Settlement

Hello,  
I'd like to take this opportunity to express my dissatisfaction with the currently proposed Microsoft settlement. I feel it falls profoundly short of denying Microsoft the fruits of activities which were determined to be illegal, and does even less to prevent it from engaging in the same basic activities in the future. As for denying them the fruits of illegal activities, it would be a very arduous task to determine the full extent to which portion of their dominance in dozens of areas resulted from only illegal activities used to protect the Windows monopoly, much less what the ill-gotten gains are worth and how to deny them to Microsoft. As far as preventing illegal conduct in the future—I fully believe the only way to achieve that is no longer allow them to bundle \*anything\* in their operating system software beyond that which would be required for any other piece of software to communicate with the computer's hardware. That means no Internet Explorer, no MSN, no IM, no Office, no solitaire, no \*anything\* can be sold in the same package, license, or sale of the Windows operating system. If they want to sell all those other products, even ones which "integrate" themselves with the OS during installation—they must be sold, promoted, serviced, and priced separately. And that the API calls which the OS makes available for software to interact with it must be published publically, in such a manner that even Microsoft's own engineers and designers cannot retrieve ANY information concerning the current or future API calls from any other source than the one publically available to all other companies writing software designed to run on the Windows platform. And that any violation of that chain of information whatsoever be treated with the same severity as the illegal use of insider information.

I don't know if Microsoft can ever be denied the fruits of their illegal activities (short of forcing them to trade all their stock

and cash reserves) for all of Netscapes stock and cash reserves)—but it is vital to the present and future of technology that the no longer have the ability to sabotage the efforts of every other company by exploiting secret information of the current Windows API, and secret information about the future Windows API which will disable or destabilize current software. I can't begin to describe to you how incredibly frustrating it has been to deal with Microsoft's API sabotages of existing software over the last 10 years; not can I begin to imagine the amount of innovation and productivity which has been sacrificed by the companies forced to deal with acts instead.

If you can't make Microsoft give back what it has stolen from the technology industry with it's illegal conduct, please at least find a settlement which forces Microsoft to compete on the \*legal\* marketing and technical merits of the products. We'll all be the better for it (even Microsoft itself).

Sincerely,

Subject: Microsoft Settlement

As an experienced application developer, I do not feel the current proposed final judgement in United States vs. Microsoft adequately meets the criteria required by law. In addition, I do not believe the proposed settlement will have enough of an impact on the market to allow the level of competition to promote proper growth.

I believe lack of competition is the most significant threat. It has been proven repeatedly that lack of competition prohibits growth. The breakup of the Big Bell is the classic example of this taught in institutions of higher education. I believe there are practices by Microsoft that should be looked at beyond their monopolistic packaging. For instance their outrageous new licensing agreements. They are also capitalizing on market by not providing proper information to the hardware extraction layer. They own the only product on the market with complete hardware extraction (SMS) and it (like many of their other products) does not function properly.

Thank you for your time,

From: Nathan Ricci  
To: Microsoft ATR  
Date: 1/23/02 7:39pm  
Subject: Microsoft Settlement

The proposed final settlement simply does not do enough to remedy the monopolistic practices of Microsoft. While some of the remedies are potentially helpful, they contain loop-holes which I doubt will go unused.

In particular, this settlement does nothing to stop Microsoft from engaging in anti-competitive practices against software vendors who create alternative implementations of Microsoft APIs. Although the settlement does require MS to release documentation on their APIs for "Microsoft Middleware" (which, by the way, is rather narrowly defined), this documentation can only be used to interoperate with Microsoft Operating System products, not to create an alternative to an MS OS. If the settlement forced Microsoft to allow these documents to be used for alternative-implementations of these APIs, it would greatly help in restoring competition to normal level.

#### MTC-00019315

From: Greg Wittmeyer  
To: Microsoft ATR  
Date: 1/23/02 7:54pm  
Subject: Microsoft Settlement

To Whom It May Concern,

As a software developer, I have a special understanding of Microsoft's criminal activities.

#### API DOCUMENTATION

I work very closely with Microsoft's APIs, and it is very clear that Microsoft wants to make it as difficult as possible for anyone else to write software. Even a non-programmer can see that the documentation for the Windows APIs is very spartan. A programmer working with the documentation will quickly discover just how bad the documentation is. There are typos, inaccuracies, omissions, and broken hyperlinks. I can provide an extensive list of examples if you like. Microsoft is clearly doing this on purpose to stifle competition—their own programmers would never be able to use such shoddy documentation.

#### PREDATORY PRACTICES

- Microsoft gives away Internet Explorer to hurt Netscape.
- Microsoft has used every dirty trick in the book to hurt Java, and they have been largely successful. Java is a threat to Microsoft's monopoly on operating systems.
- Microsoft introduced code into Outlook Express in order to hurt Blue Mountain Arts, who rejected Microsoft's attempts to buy them.
- Service Pack 3 for Windows NT 4 changed the operating system's communications protocols, making it incompatible with Samba. Simultaneously, they removed all technical articles relating to Samba from their website. There is no conceivable justification for this.
- Microsoft uses the Business Software Alliance to blackmail companies into signing exclusive contracts with Microsoft. The list goes on and on. It is obvious that Microsoft uses its monopoly position to hurt competition.

#### SOLUTIONS

Microsoft should be forced to release the source code, and their internal documentation, to all of its operating systems. This would give other software developers at least a fighting chance at competing with the behemoth.

Bill Gates should be forced to give up all ownership and participation in Microsoft.

Microsoft's behavior is a direct reflection of Bill Gates' personality. Because they are guilty of so many criminal activities, all Microsoft management should receive the same penalty. Microsoft's behavior and reputation has damaged the entire software industry. Microsoft's direct actions have clearly been illegal. But their infamous reputation has been very damaging as well. Disgruntled users pirate software because of their hatred for Microsoft, and unfortunately this dissatisfaction extends to other software developers. Because of Microsoft, people see software companies as rich and greedy, and this justifies their piracy. As a result, piracy is rampant. As a remedy, Microsoft should be forced to pay a large fine, which should be used to pay off the income taxes of software developers.

The DOJ has a horrible record on breaking up monopolies. Breaking up Standard Oil made Rockefeller vastly more wealthy. Breaking up Southwestern Bell simply turned one big monopoly into smaller, local monopolies. Monopolies can only be stopped by competition on a level playing field. Please do not repeat your past mistakes by giving Microsoft a slap on the wrist. It currently appears that the DOJ is going to completely cave in to Microsoft. That would be a great disservice to the human race, and a shame from which you would never escape.

In the absence of communism, evil greedy corporations are the biggest threat to our society. Microsoft is the greediest, most evil company the world has ever seen. There is no penalty that will make up for Microsoft's atrocities, so it is imperative that you punish them to the maximum extent possible.

Sincerely,

Greg Wittmeyer

From: Avery Wilkins  
To: Microsoft ATR  
Date: 1/23/02 7:43pm  
Subject: Microsoft Settlement

As written, the Microsoft antitrust settlement proposed by the Department of Justice is utterly toothless and will be ineffective in preventing further monopoly abuses by the software giant. If this settlement is accepted, as a taxpayer I will be shocked that the expense of this trial will have resulted in nothing but more abuses and wasted money.

Please consider that any ineffectual solution to Microsoft's multiple, ongoing, and remorseless monopoly abuses will be no better than simply dropping the case.

All parties to this legal action assert that it is important to conclude this matter as soon as possible, but any solution that doesn't go to the root of the problem will merely result in another repeat of legal action in the future. In short, we'll be back where we started, only with more abuses and more companies (including—but not limited to!—Microsoft) injured or destroyed in the process.

How this outcome would be beneficial to the technology industry, consumers, the economy as a whole, or even Microsoft itself

is not clear; in the long run, Microsoft's abuse of their monoculture will even be detrimental to themselves.

The current agreement makes no bold moves to block Microsoft's unrelenting desire to weasel themselves through legal loopholes towards further abuses. Rather, it expressly allows them to continue using the tools they have long employed to extend their monopoly. By way of analogy, this agreement will be as laughably ineffectual as an umbrella built out of chicken wire: it doesn't do a thing to keep the hapless user from getting soaked.

If this is the best possible solution to Microsoft's proven monopoly abuses, then the entire trial, and the hearings and consent decrees before it, were an enormous waste of public dollars, and are furthermore a waste that is destined to be repeated.

As a United States taxpayer, and someone subject to the Microsoft monopoly, I'm outraged that this is what it has all come down to.

Don't settle without a worthwhile agreement.

Avery Wilkins

Date: 1/23/02 7:33pm  
Subject: Microsoft Settlement

I am a computer professional. In no way do I understand the intricacies of the law. Nonetheless I feel obliged to comment on the pending settlement in the Microsoft anti-trust case.

As a computer professional it is very clear to me that 1) Microsoft is a monopoly and 2) that Microsoft has abused its position to its advantage and that both the consuming public and Microsoft's competitors have suffered grievously as a result.

The proposed settlement does nearly nothing to prevent future abuse much less reverse the abuses of the past. In the interests of a free market and free competition please discard the proposed agreement and develop a new agreement which takes significant real action to punish Microsoft and discourage further similar action on Microsoft's part. Renewed competition (and genuine innovation) is needed but will not happen under the proposed settlement.

Thank you.  
John Small

From: Harrison Rigby  
To: Microsoft ATR

Date: 1/23/02 7:46pm  
Subject: Microsoft Settlement

The settlement reached between the DOJ and Microsoft is, in the opinion of this citizen, an inadequate conclusion to the biggest anti-trust case of all time. Microsoft said that it disagreed with the verdict reached by Judge Jackson. This much, we expected. Microsoft then said that it disagreed with the Judge Jackson's interpretations of the applicable laws, and even with the existence of some of the laws themselves. The Federal Appeals Court, while rebuking some of Judge Jackson's behaviors, agreed with most of his findings and confirmed the validity of the laws involved.

The DOJ's decision to not pursue Judge Jackson's harsh penalties against Microsoft gives the company a free pass to continue its obviously illegal practices and predatory behavior and sets a precedent under which Microsoft and other monopolies may hide in the future. Here's my suggestion regarding how to make the settlement more fair: Require that Microsoft open up all the API (application programming library) interfaces to, and within, the various versions of the Windows operating system. It's widely known that there are special calls within these libraries that are known only to Microsoft and that give Microsoft's product developers special advantages (Microsoft denies this claim). Given that DOJ's decision affirms Microsoft's monopoly position and will make the Microsoft Windows operating system a defacto standard for many years, we who must work in this software environment, and who must compete against Microsoft, wish to work on an even-playing field. It's not fair for those who control the common environment to control the rules, as well as the score, as fully as they do.

Please, open up the APIs so that our general economy, my small company's customers, and its stockholders may benefit from the improved products that will result when all developers are allowed access to the many currently hidden features within these libraries.

Proper? Fair? Equitable?

I think not...

Should we fine monopolists by helping them extend their monopoly?

I think not...

Paying via software donation to educational institutions just entrenches them deeper into the system. I sure hope when I get caught with my hands in the cookie jar, I will be able to send out a few million in software. It will be easy considering the way software is distributed these days. I'd rather send out 3 billion in licenses than pay a \$1000 fine in cash. :-)

This is a very short-sighted and unknowledgable decision. I hope it is reworked or there will have been no reason to go through the whole charade...

From: George Czerw  
To: microsoft.atr  
Date: 1/23/02 7:45pm  
Subject: Microsoft Settlement

As a 30 year veteran in the networking side of the computer industry, I have watched as the Microsoft Corporation has been allowed either buy out or bury (beginning with the Digital Research Corporation and continuing through IBM's attempt to collaborate on OS/2, the Novell Corporation's marketing of NetWare and Netscape's marketing of its own Netscape Web browser) hundreds, if not thousands of what used to be innovative, independant software companies. Outside of stealing or buying the technologies developed by others, the Microsoft Corporation has done little in the way of true,

original innovation, and in my opinion, Microsoft's financial success has been dependant upon allowing its arrogant, deep-pocketed, overbearing Marketing Department to blitzkrieg its competitors, threaten computer hardware vendors into offering nothing but Microsoft's own operating system, and otherwise bamboozle both the government and the general public into believing that Microsoft's bloated, ill-conceived, poorly designed, poorly performing and security-vulnerable software is the best software offering in the world.

I find it appalling, laughable, and sickening (yes, all three at once) that both the Bush Administration and the DOJ would take a position which suggests that a "just penalty" would be to allow the Microsoft Corporation to convert millions or billions of its dollars for the purpose of providing computer hardware and its own computer software to the US primary and secondary educational systems. You people must be daft, for those educational systems are among the few markets which have always been dominated by the Apple Computer Corporation, and in which the Microsoft Corporation has never been able to gain a significant foothold, despite its best efforts. It is past time that the Federal Government and the White House stopped shamelessly pandering to those special interests, corporations and individuals who are large campaign contributors and begin listening to and protecting the interests not only of the general public but also of the corporations and businesses who have not agreed with or contributed to the coffers of the party in power. The only thing that the Microsoft Corporation understands is brute force, and it deserves no less a penalty than that which was given to Standard Oil and AT&T.

For the good of this country and its citizens, break Microsoft up into small pieces and do it now! Only then will the nation see some true innovation and competition in this nation's software industry.

From: Andrew Carpenter  
To: Microsoft ATR  
Date: 1/23/02 7:48pm  
Subject: Comments on the proposed  
Microsoft Settlement

I wish to register my opposition to the proposed settlement in the Microsoft antitrust trial. I feel that the current proposed settlement does little to redress the past actions committed by Microsoft, nor does it adequately seek to prevent them from committing similar actions in the future. Much of the settlement does not even appear to correct the situation; in some places it actually codifies Microsoft's ability to continue its current practices. Little in the settlement will effectively prohibit Microsoft from abusing its monopoly position in the operating system market. Microsoft must receive an adequate penalty for the charges it faces. The simple fact that it is publicly declaring its happiness with the current proposal and resisting any attempts to change it should be warning enough that it will ultimately be ineffective.

I urge the court to seek another remedy. If a settlement cannot be found that meets requirements, please do not allow a settlement to take place, and instead proceed with appropriate legal penalties.

Sincerely,  
Andrew Carpenter

Hi:

I would appeal to the Department of Justice to also consider whether Microsoft did indeed torpedo IBM's OS/2 operating system. It should be determined if this is true:

Excerpt from a web article:

"It hasn't been that many years since Microsoft first felt brave enough to stab its benefactor/partner in the back, as Microsoft did during the OS/2 saga. And fewer still since Redmond demanded that IBM drop the competing operating system from its product line by refusing to grant IBM a preload license for Windows 95 until 15 minutes prior to its launch, and raising the price for the license by 700 percent when they did grant it." [http://www.idg.net/ic\\_790548\\_1794\\_9-10000.html](http://www.idg.net/ic_790548_1794_9-10000.html)

Thank you for your consideration in this matter.

Sincerely,  
Jonathan Drews

Subject: MICROSOFT clearly has misled  
AMERICA

Not just Big Corporations but simple everyday little people. People who had jobs working at Microsoft's competitor businesses. Everyone is Lied to and Misled and then forced to accept whatever Microsoft's dictates. For over 10 Years they(Msft) has not let anyone interfere with a hard disk boot loader program. The program easily could have enabled other Systems and functionality as far back as 1993/94. They Never once let the Builders of P.C's choose whatever OS they wanted to sell to everyday people.

Now look, Microsoft almost certainly must run on everyone's PC in order to have a operating system work right. Work right with what? Office and utility programs Microsoft Hogged Down when they put them out of business.

Who out of business? Word Perfect, Borland, Officewriter(Back in 1993/94) when MS-Office trumped all businesses and coerced PC builders to bundle the applications for FREE, And letting the builders Saver every Dollar they made off of each American that bought their P.C. Operating Systems: Microsoft has put Be Incorporated(BEOS) out of work. Va Linux (LNUX) is practically dead too.

Nobody on the planet will ever be able to build something better than Microsoft. For if they do, they either get Bought out by Msft, OR, Microsoft partners as friends with them, Steals their ideas, reverse engineers the code and ShaaaZaaam, Guess what happens next. They Build a Quote "BETTER APPLICATION mousetrap" and by the way HIDE their API or application program interfaces software engineers NEED in order to interface with Running code anything New some else Wants to invent for the P.C.

This Please Mr. Government, Is outrageous Monopolistic business practices, No matter

what Microsoft says, THEY ARE WRONG. Microsoft is Wrong for Destroying Ingenuity, Courageousness, Bravery, and Sheer AMERICAN WAY mentality. They are so wrong that Most people now Hate the company and are only buying their Wares because THEY(Msft) IS the Only game in town left now. All others are out of business, or So about to be Broken that they can't hardly make it Quarter to Quarter.

No, It is not the economy, It is Microsoft that has Caused this economy to Die. That is not to mention, Browser programs even. Just Simply Boot Loader locked down Code and Operating Systems.

Please do something Now. Else Foreign governments will, And it won't Be pretty, I can say that much. This country will stand to lose far more than little programs and code running in WINDOWS OS's. We America, will lose trust, friendships, economies of scale, products etc to France, Germany and Asia. They go around everything Microsoft Sells and then what happens? Revenue Loss, to the Max, Tax bases destroyed and MILLIONS of people out of WORK. HERE in the USA including Millions of 50 and over baby boomer types. THIS WILL BE YOUR PROBLEM NEXT my friends.

Believe IT !  
Thank You.

From: Anthony Boyd

To: Microsoft ATR  
Date: 1/23/02 7:54pm  
Subject: Microsoft Settlement

As a former employee of Borland, a company which at one point sued Microsoft because they had hired away over 35 programmers with obscene offers (million dollar signing bonuses, other incentives that made it impossible for Borland to keep up), I believe that Microsoft's anti-competitive practices are counter to the law and spirit of our free-enterprise system. These practices inhibit competition, reduce innovation, and thereby decrease employment and productivity in our nation.

The finding of fact which confirmed that Microsoft is a monopoly requires strict measures which address not only the practices they have engaged in in the past, but which also prevent them from engaging in other monopolistic practices in the future.

It is my belief that a very strong set of strictures must be placed on convicted monopolists to insure that they are unable to continue their illegal activities. I do NOT think that the proposed settlement is strong enough to serve this function.

From: Colin Wier  
To: Microsoft ATR  
Date: 1/23/02 7:55pm  
Subject: Microsoft Settlement

To whom it may concern:

As a college student, I have a real problem with the deal that was crafted by the DOJ in regards to Microsoft. In the case of my generation, we have a growing number of concerns with computers in general. First and foremost, there is the recent labeling of any sort of computer infractions as a terrorist act. But that is another topic altogether.

In regards to Microsoft, this company in my mind, has completely overstepped its bounds. After being proven a monopoly they are escaping with what seems to be a complete slap on the wrist. When AT&T was considered a monopoly it was split up into tiny units, each independent of the other. Same with Standard Oil.

For years I have been a user of Microsoft Windows OS's. Every time I find more problems. However, due to their market position, I am unable to use tools that I need because of the way that Microsoft has created their software. If I am trying to install a program that I had used before on my Win98 machine, then install the same on Win2000, in my experience it fails about 80% of the time. This forces me to replace my perfectly good program with a brand new expensive one. This tool that I use to program C++ is also made by Microsoft. I eventually threw both of these away. Now I am running a Linux computer because of the problems that I have been having.

That is just one example, but I am sure that you know of many more. My only concern in the capacity that I am a student engineer (and very poor) is that I can not afford to pay the inflated prices for software that breaks

down on a daily basis, has introduced a number of security issues to my computer, and also fails to work with previous versions. I have trouble affording bills, and I have precious little patience and faith with companies whose bottom line are more money than I can imagine.

I ramble on, but please, please, please incorporate stiffer punishment than the current proposed system.

Also, allow code to be looked at on a individual basis. Open source will, no matter what any Redmond sponsored scientist says, allow a person to fix their own on a more expedient basis and tie up security holes faster than the patches given out two months or more after they are found.

Sincerely:

A concerned US citizen

Department of Justice:

Microsoft has contributed billions and billions of tax revenues to the United States Treasury, much of it earned in foreign countries. Further, its contirbution to the economy of this country is without precedent.

Millions of American rely upon its software for their daily work, and play. Microsoft, although it has been declared a monopoly by the courts, has not abused its monopoly. Who could calculate any damages that it might owe (to whom?) as to what its software should have cost if it were not a monopoly?

The only true competition is Linux software, that will not run the various applications that Windows will run. I work for a federal agency, and its work and efficiency without Microsoft software. In short, it would grind to a halt without their current software, and further development of same. Polls show that the majority of American people support Microsoft in this litigation.

Please do not abuse your job to see that justice is done for the benefit of all Americans, not just to competitors who wish to have the same sales and earnings that Microsoft has—to be another Microsoft.

Subject: Microsoft Settlement

To whom read this,

I am a 18 years old consumer who purchases and enjoy Microsoft products. I wish to make a statement about the antitrust cases against Microsoft by Department of Justice.

My statement: I buy Microsoft products according to my own choices. I buy Microsoft products because the softwares provide me what I want: a word program, an excel file, an email bookkeeping system, an easy to use operation system, and consumer service. Those are why I buy Microsoft products. Microsoft did not force me to buy their

products. I choose to buy freely. Microsoft softwares allow me to complete my tasks without a difficult. I don't see how Microsoft been cheating me because I am receiving benefits from Microsoft products and no negatives. I find it unhappy that the Department of Justice is attacking Microsoft for provide good products.

What did Microsoft do? Being monopolist? I wish to remind you that monopoly means: 1. Exclusive control by one group of the means of producing or selling a commodity or service, 2. Law. A right granted by a government giving exclusive control over a specified commercial activity to a single party. Those definitions are from [www.dictionary.com](http://www.dictionary.com) <<http://www.dictionary.com/>>. Now I want to make you see that Microsoft is not a monopoly.

Is Microsoft a monopolist? No. Why? There are other competitors in the software market. There is Sun Microsystems, Apple, Corel, IBM OS/2, Oracle, and hundred of Linux software distributors. Is Microsoft alone? No. The market is an oligarchic, a normal form of market that exists all over the world.

Is Microsoft a monopolist? No? Why? There is no law that says "Microsoft is the only producer of software for the computer and no company or a person shall compete with Microsoft." Therefore Microsoft does not possess any illegal monopoly.

I don't feel being robbed by Microsoft. Microsoft and I made a mutual agreement. I want softwares. Microsoft gives me softwares. I buy softwares. Microsoft gets money from me. I got 2 and Microsoft got 2. So we are even. I wish to remind you that the complaints against Microsoft did not began with the consumers or partners of Microsoft but the Microsoft's competitors. When the competitors saw Microsoft is being successful due to their excellent products, what they do? They go to the government and ask them to punish the winner. That is cheating. The competitors don't want to compete with Microsoft because they want to do it in easy way by ask the government to intervene and pull Microsoft down. The government is doing the competitors' dirty works. That is not a free market but an element of socialism: government does works for businesses. Where is free competition? The freedom to compete against each other without government's helps? Government's job is to protect property rights and individual freedoms. I don't see anything in the US Constitution says, "Congress shall make law punishing the businesses for being successful" or "Congress may help business crushing their competitors" or lastly, "Congress shall regulate businesses."

I am proud to be the citizen of the freest country in the world and proud to hold the greatest degree of individual freedoms. But I do have the freedom to buy any software product from any provider I want to. I do not ask anyone to make that choice for me. I specifically did not ask the government to make that choice for me. It is mine to make. What products I want is mine to decide not the government. The government's job is to protect my right to buy any software from any provider not to trample my right to buy a product. United States of America is freest country where excellence, success, hard

working, and intelligence is rewarded not punished like our relatives in another side of Atlantic Ocean. But right now, William Bill Gates III is being punished for making wonderful products for people like me to buy and enjoy. What crime did Bill Gates did? The crime is being successful? The crime is being clever? The crime is to win the competition? The crime is selling a product? What crime? Antitrust laws do not promote competition but to punish winners. I want my right to buy any software from any provider to be respected and I mean it. So, I ask you to respect my right to buy and Microsoft's right to sell. It is a free country not totalitarianism or am I missing a totalitarian revolution that took over America government?

Thank you and I expect Microsoft to be pardoned and the government to apology for violating my right to buy and Microsoft's right to sell.
